Caesar, in his letter to the Julian family at Rome, for various eulogistic expressions on his assignees. Pliny (7, 9) informs us, that the first who bore the name was so called, quod caelo mortuus matris utero natus fuerit. Festus derives it from caesaries, cum quae matri ventre proderint. Others, because the first of the name slew an elephant, which was called Cæsæ in Punic, as Servius informs us (ad . Ep., 1, 290). The derivation of Pliny is generally considered the best. The nobility of the Julian family was so ancient and so illustrious, that, even after it obtained the imperial dignity, it needed not the exaggration of flatterers to exalt it. Within thirty years after the commencement of the republic, we find the name of C. Julius on the list of consuls, and the same person, a natural son of the same name, is said to have been one of the Decemvirs by whom the laws of the twelve tables were compiled. It numbered, after this, several other individuals who attained to the offices of praetor and consul, one of whom, L. Julius Caesar, distinguished himself in the Italian war by a great victory over the Samnites, and was afterward murdered by order of Marius. Another, of the same line, C. Julius Caesar, the brother of Lucius, was eminent as a public orator for his wit and pleasantry, and perished together with the former when Marius and Cimna first assumed the government.—The most illustrious of the name, however, was C. Julius Cæsar, born July (Quinlilis) 10th, B.C. 100. His father was C. Julius Caesar, a man of praetorian rank, and is recorded by Pliny (7, 53) as a remarkable instance of sudden death, he having expired suddenly one morning at Pisa while dressing himself. C. Cæsar married Aurelia, of the family of Agiellens, and bore her thirty children, of whom Cæsar was born the subject of the present sketch. From his earliest boyhood Cæsar discovered extraordinary talents. He had a penetrating intellect, a remarkably strong memory, and a lively imagination; was indefatigable in business, and able, as we are told by Pliny, to read, write, hear, and dictate, at one and the same time, from four to seven different letters. When the party of Marius had gained the ascendency at Rome, Cimna gave his daughter Cornelia a small legacy to Caesar. The letter was also farther connected with the popular party through the marriage of Julia, his father's sister, with the elder Marius; yet, although thus doubly obnoxious to the victorious side, he refused to comply with the commands of Sylla, to divorce his wife; and being exposed, in consequence, to his resentence, he fled from Rome, and baffled all attempts upon his life, partly by concealing himself, and partly by bribing the enemies of Sylla to kill him. Sylla, on this occasion, proceeded upon, according to Suetonius, to spare him at the entreaty of some common friends. A story was afterward common, that Sylla did not pardon without great reluctance; and that he told those who sued in his behalf, that in Cæsar there were many Mariuses. Had he indeed thought so, his was not a temper to have yielded to any supplications to save him; nor would any considerations have induced him, to exempt from destruction one from whom he had apprehended so great a danger. After this, the young Cæsar proceeded to the court of Nicomedes, king of Bithynia, and on leaving this monarch, of whose intimacy with him a scandalous anecdote is recorded, he went to M. Municius Thermus, then praetor in Asia, who intrusted him with the command of the fleet that was to blockade Mytilene. In the execution of this trust Cæsar distinguished himself in a high degree, although at a very tender age. He first visited Rhodes, and studied eloquence for some time under Apollonius Molo, from whom Cicero, about the same period, was also receiving instruction. (Sueton. Jul., c. 4.—Cic., de Ciar. Or., c. 91.) On the way thither he was taken by pirates, and was detained by them till he collected from some of the neighbouring cities fifty talents for his ransom. No sooner, however, had he recovered his naval force, and set out on his own sole authority in pursuit of them. He overtook the pirates, and captured some of their vessels, which he brought back to the coast of Asia with a number of prisoners. He then sent word of his success to the proconsul of Asia, requesting him
to order the execution of the captives; but that officer being more inclined to have them sold as slaves, Caesar crucified them all without loss of time, before the proconsul’s pleasure was publicly known. Such conduct was not likely to recommend him to those in authority; and we are told that on several other occasions, he wished to act for himself (Vell. Patr., 2, 67.—Sueton., Jul., 4), and even to take part in the war which was now renewed with Mithridates, without any commission from the government, and without submitting himself to any of the regular officers of the republic. These early instances of his lawless spirit are recorded with admiration by some of his historians, as affording proofs of vigour and greatness of mind. He now returned to Rome, and became, in succession, military tribune, quaestor, and aedile. At the same time, he had the address to win the favour of the people by affinity, by splendid entertainments, and public shows; and, trusting to his popularity, he ventured to erect again the statues of Marius, whose memory was hated by the senate and patricians. In the conspiracy of Catiline he certainly had a secret part; and his speech in the senate, on the question of their punishment, was regarded by many as an actual proof of this, for he insisted that death, by the Roman constitution, was an illegal punishment, and that the property merely of the conspirators should be confiscated, and they themselves condemned to perpetual imprisonment. Soon after this he was chosen pontifex maximus, and was about to go as governor to Farther Spain; but his creditors refusing to let him depart, Crassus became his security in the enormous sum of eight hundred and thirty talents. It was on his journey to Spain that the remarkable expression fell from his lips, on seeing a miserable village by the way, "that he would rather be first there than second at Rome." When he entered on the government of this province, he displayed the same ability, and the same unscrupulous waste of human lives for the purposes of his ambition, which distinguished his subsequent career. In order to retrieve his fortune, he completely renewed the whole military reputation, and to entitle himself to the honour of a triumph, he attacked some of the native tribes on the most frivolous pretences (Dio Cass., 37, 52), and thus enriched himself and his army, and gained the credit of a successful general by the plunder and massacre of these poor barbarians. On his return to Rome he paid off his numerous and heavy debts, and, in order to gain the consulship, brought about a reconciliation between Pompey and Caesar, when at Romans, and provided Rome into two great parties. He succeeded in his design, and that famous coalition was eventually formed between Pompey, Crassus, and himself, which is known in Roman history by the name of the First Triumvirate. (Vid. Triumvir.) Supported by such powerful assistants, in addition to his own popularity, Caesar was elected consul, with M. Calpurnius Bibulus, confirmed the measures of Pompey, and procured the passage of the legislation of the Cisalpine Gauls among the poorer class of citizens. This, of course, brought him high popularity. With Pompey he formed a still more intimate connexion, by giving him his daughter Julia in marriage; and the favour of the equestrian order was gained by releasing them from a disadvantageous contract for the revenues of Asia, a step which the senate had refused to take in their behalf; and thus the ablest and most powerful body of the people, alienated from the aristocracy at the very time when their assistance was most needed. When the year of his consulship had expired, Caesar obtained from the people, by the Vatian law, the government of Cisalpine Gaul and Illyricum, for five years, with an army of three legions. As the law then stood, the disposal of such commands was vested in the senate alone; but that body, wishing, no doubt, to increase the weight of Caesar’s employ, gained a repudiation of the city, added to his government the province of Transalpine Gaul, and voted him another legion. After marrying Calpurnia, and adopting the daughter of the Capitoline Jupiter (by whom he had been divorced by him in consequence of the affair of Clodius), Caesar repaired to Gaul, in nine years reduced the whole country, crossed the Rhine twice, passed over twice into Britain, defeated the natives of this island in two battles, and compelled them to give hostages. The senate had continued his government in Gaul for another period of five years; while Pompey was to have the command of Spain, and Crassus that of Syria, Egypt, and Macedonia, for five years also. The death of Crassus, however, in his unfortunate campaign against the Parthians, dissolved the triumvirate. About this same time, too, occurred the death of Julia, and thus the tie which had bound Pompey so closely to Caesar was broken, and no private considerations any longer existed to allay the jealousies and animosities which political disputes might enkindle between them. The power of Pompey, meanwhile, kept continually on the increase; and Caesar, on his part, used every exertion to strengthen his own resources, and enlarge the number of his party and friends Caesar converted Gaul into a Roman province, and kept governing it with policy and kindness. Pompey, on his side, elevated Caesar’s enemies to the consulship, and prevailed upon the senate to pass a decree requiring Caesar to leave his army, and resign his government of Gaul. The latter declared his willingness to obey this mandate, if Pompey also would leave aside his own authority, and descend to the ranks of a private citizen. The proposition was unheeded, and a second decree followed, commanding Caesar to resign his offices and military power within a specified period, or to declare an enemy to his country, and at the same time appointing Pompey commander-in-chief of the armies of the republic. An open rupture now ensued. The decree of the senate was negatived by two of the tribunes, Antony and Cassius (Cæs., Bell. Civ., 1, 2, sqq.); the senate, on the other hand, had recourse to the exercise of their highest prerogative, and directed the consuls for the time being "to provide for the safety of the republic." This resolution was entered on the journals of the senate on the seventh of January; and no sooner was it passed, than Antony and Cassius, together with Curio, professing to believe their lives in danger, fled in disguise from Rome, and hastened to escape to Caesar, who was then at Ariminum by the sea, and delivered the resolution to the senate. (Civ., Ep. ad Fam., 16, 11.—Plut., Vit. Cæs., c. 31.) It appears, from one of Cicero’s letters (ad Att., 7, 9), written a few days before the first of January, that he had calculated on such an event as the flight of the tribunes, and on its affording Caesar a pretext for commencing his rebellion. When it had actually taken place, the senate, well aware of the consequences to which it would lead, began to make preparations for defence. Italy was divided into districts, each of which was to be under the command of a separate officer; soldiers were ordered to be everywhere levied, money was voted from the treasury to be placed at Pompey’s disposal, and the two Gauls, which Caesar had just been summoned to resign, were bestowed on L. Domitius and M. Considius Nonianus. When Caesar was informed of the flight of the tribunes, and of the subsequent resolutions of the senate, he assembled his troops, and made full preparations for revolt. He intimated that he disdained the tribune character, and, on the attempts of his enemies to despise himself of his dignity, by forcing him to resign his province before the term of his command was expired. He found his troops perfectly disposed to follow him, crossed the Rubicon, and, seizing on Ariminum, the first town of importance without the limits of his province, thus declared himself in open rebel-
tion against the state. At Ariminum he met the fugitive tribunes, introduced them without delay to his army, and, working upon the feelings of the latter by a powerful harangue, soon made himself master of Italy without striking a blow, as Pompey, taken by surprise through the sudden withdrawal of the hostile army and the arrival of troops to meet him, had left the city with the senators, consuls, and other magistrates. Levying an army thereupon, with the treasures of the state, Caesar hastened into Spain, which he reduced to submission, without coming to a pitched battle with Pompey's generals. He next conquered Massilia (Marseille), and then, returning to Rome, was appointed dictator by the praetor M. Emilius Lepidus. Meanwhile Pompey had collected an army of troops of which his rich was hastened to Epirus, with five legions, by land. After various operations, which our limits prevent us from detailing, the rival commanders met in the plain of Pharsalia, and Caesar gained a decided victory. Pompey, fleeing to Egypt, was basely murdered there, while his more fortunate antagonist, hastening likewise to the East, came just in time to give an honourable burial to the body of his opponent. After several years, while the intrigues between his sister Cleopatra, Caesar marched against Pharnaces, king of Pontus, son of Mithridates the Great, and finished the war so rapidly as to have announced the result to his friends at home in those well-known words, "veni, vidi, vici" ("I have come, I have seen, I have conquered"), so descriptive of the celerity of his movements. Returning to Rome, after having thus composed the affairs of the East, Caesar granted an amnesty to all the followers of Pompey, and gained by his clemency a strong hold on the good feelings of the people. He had been appointed, meanwhile, consul for five years, dictator for a year, and tribune for life. When his dictatorship had expired, he caused himself to be chosen consul again, and, without changing the ancient forms of government, ruled with almost unlimited authority. Then came the campaign in Africa, where the friends of the republic had gathered under the standard of Catil and other leaders. Crossing over against them, Caesar engaged in several conflicts against these new antagonists, and at last completely defeated them at the battle of Thapsus. Fresh honours awaited him at Rome. The dictatorship was again bestowed on him for the space of ten years, he was appointed censor for life, and his statue was placed by that of Jupiter in the capitol.—From the date of Caesar's return from Africa to the period of his assassination there is a interval of somewhat less than two years, and even of this short time nine months were engrossed by the renewal of the war in Spain, which obliged him to leave Rome once more, and contend for the security of his power against the sons of Pompey at the point of the sword. (Vid. Munda.) He enjoyed the sovereignty, therefore, which he had so dearly purchased, during little more than one single year; from the end of July, A. u. c. 707, to the middle of November—nearly a year and half less than two years, and even of this short time nine months, owing to the reformation of the calendar which he introduced during this interval; and again from October, 708, to the Ides of March in the following spring. When Caesar again entered Rome after conquering the sons of Pompey, he was made perpetual dictator, and received the title of imperator with powers of sovereignty. The appellation also of "Father of his Country" was voted him; the month in which he was elected was called Quintilis, was now named Julius (July), in honour of him; money was stamped with his image, and a guard of senators and citizens of equestrian rank was appointed for the security of his person. He was allowed also to wear, on all public festivals, the dress worn by victorious generals at their triumphs, and at all times to have a crown of laurel on his head. He continued, meanwhile, to conciliate his enemies, and to heap favours on his friends. Lavages were also distributed among the populace, shows of various kinds were exhibited, and everything, in fact, was done to call off their attention from the latter. Murder and the assassination of Sertorius had successfully been achieved. The gross and impious flattery of the senate now reached its height. The statues of Caesar were ordered to be carried, along with those of the gods, in the processions of the circus; temples and altars were dedicated to him, and priests were appointed to superintend his worship. These things he received with a vanity which affords a striking contrast to the contemptuous pride of Sylla. He was a wise and powerful minister of the state, but, in contemplating with childish delight the gaudy honours with which he was invested, it was a part of the prize which he had coveted, and which he had committed so many crimes to gain; nor did the possession of real power seem to give him greater delight, than the enjoyment of these forced, and, therefore, worthless flatteries.—We now come to the closing scene, his assassination. Various causes tended to hurry this misfortune. He had owed his victory to no other than the sword; he was safe, by receiving them without rising from his seat when they waited upon him to communicate the decrees which they had passed in honour of him. He had given equal offence to numbers in the state by assuming so openly not only the patronage of the ordinary offices, but the power of bestowing them in an unprecedented manner, in order to suit his own policy. On one occasion, too, as he was sitting in the rostra, Marc Antony offered him a royal diadem. He refused it, however, and his refusal drew shouts of applause from the people. The next morning his statues were adorned with diadems. The tribunes of the people took them off, and imprisoned the persons who had done the act, but they were deposed from their office by Caesar. These and other acts, that declared but too plainly the ambitious feelings of the man, and his hankering after the bauble of royalty, gave rise to a conspiracy, of which Ceas Cassius was the prime mover. Caesar, having no suspicion of the danger which threatened him, was forming new projects. He resolved to subdue the Parthians, and then to conquer all Scythia from the Caucasus to Gaul. His friends gave out, that, according to the Sibylline books, the Parthians would be conquered only by a king, and the plan proposed therefore was, that Caesar should retain the title of dictator with regard to Italy, but should be saluted with that of king in all the other conquered countries. For this purpose a meeting of the senate was appointed for the 15th (the Ides) of March; and this was the day fixed upon by the conspirators for the execution of their plot. Caesar, it is said, had been often warned by the augurs to beware of the Ides of March (Plut., in Vit., c. 63, —Stueten., in Vit., c. 81); and these predictions had probably wrought upon the mind of his wife Calpurnia, so that, on the night which preceded that dreaded day, her rest was broken by feverish dreams. For the morrow, the morning of fear, he was strong enough that she earnestly besought her husband not to stir from the house. Himself, we are told, felt a little unwell, and being thus more ready to be infected by superstitious fears, was inclined to comply with Calpurnia's wishes. His delay in attending the senate alarmed the conspirators; Decimus Brutus was sent to call him, and, overcome by his persuasions, he proceeded to the place, accompanied by his friends, Marcus Tullius Cicero, a Greek sophist, who had admitted himself into the houses of some of the conspirators, and had there become acquainted with some facts that excited his suspicions, approached him with a written statement of the information which he had obtained, and, putting it into his hand, begged him to read it, immediately, as it was of the last importance. Caesar, it is said, tried to look at it, but was

283
Cæsar.

prevented by the crowd that pressed around him as he passed along, and he still hold it in his hand when he entered the Senate on the next day. In the Senate, the conspirators gathered more closely around him, and L. Titius Cimber approached him as if to offer some petition. Cæsar seemed unwilling to grant it, and appeared impatient of farther importunity, when Cimber took hold of his robe and pulled it down from his shoulders. This was the signal for attack. The dagger of Cæsa rose the lead, and Cæsar at first attempted to force his way through the circle that surrounded him. But the nine conspirators rushed upon him, and were so eager to share in his death that they wounded one another in the confusion of the moment; and when, moreover, he saw Junius Brutus among the number, Cæsar drew his robe closely around him, and, having covered his face, fell without a struggle or a groan. He received three-and-twenty wounds, and it was observed that the blood, as it streamed from them, bathed the pedestal of Pompey's statue. No sooner was the murder finished, than Brutus, raising his gory dagger, turned round to the assembled senate, and calling on Cicero by name, congratulated him on the recovery of their country's liberty. But to preserve order was hopeless, and the senators fled in dismay. (For an account of the events immediately subsequent, vid. Antonius and Brutus.)—Cæsar died in the 56th year of his age. In his intellectual character he deserves the highest rank among the men of his age; as a general, moreover, it is admitted he was without superiors. If we turn from his intellectual to his moral physiognomy, the whole range of history can hardly furnish a picture of greater deformity. Besides being excessively addicted to gross sensuality, never did any man occasion so large an amount of human misery with so little provocation. In his campaigns in Gaul he is said to have destroyed one million of men in battle (Plut., Vit. Cæs., c. 15.—Compare Plin., vii. 25.), and to have made prisoners a million more, many of whom were destined to perish as gladiators, and all were torn from their country and reduced to slavery. The slaughter which he occasioned in the civil wars cannot be computed; nor can we estimate the degree of suffering caused in every part of the empire by his spoliations and confiscations, and by the various acts of oppression which he tolerated in his followers.—Was, then, his assassination a lawful act? Certainly not. The poem of Lucan is a justification of the deed. It involves in it so much of dissimulation and treachery, that, whatever allowance may be made for the perpetrators, when we consider the moral ignorance of the times in which they lived, their conduct must never be spoken of without open condemnation. (Encyc. Metrop., Div. 3, vol 2, p. 156, seqq.—Encyc. Amer., vol 2, p. 379.)—As an historical writer Cæsar has been compared to Xenophon. Simplicity is the characteristic of both; though in Cæsar perhaps it borders on severity. We have from the pen of the Roman commander seven books of commentaries on the Gallic war, and three of the civil contest. His style is remarkable for clearness and ease, and its most distinguishing characteristic is its perfect equality of expression. It has been affirmed, by some critics, that Cæsar did not write the three books of the civil war, and even that Suetonius was the author of the seven books of commentaries. If this were the case, it would be Cæsar's title to the authorship of the Commentaries as they stand in the editions, though he does not vouch for his accuracy or veracity on all occasions. The opinion that the extant commentaries are not Cæsar's may possibly have arisen from a confusion of circumstances between two works. It is believed that he wrote Ephemerides, containing a journal of his life; but they are lost. Servius quotes them, as does also Plutarch. Frontinus likewise seems to refer to them, since he relates many of Cæsar's stratagems not mention in the commentaries, and must in all probability have read them in the journal. (Mulkin's Classical Dictionary of Disputing Names, seqq.)—Cæsar wrote his commentaries, has been frequently agitated. Guisard (Mem. Crit., 539) is in favour of the common opinion, that they were written shortly after the events themselves, 1. Because Cæsar, in his Brutus, a work written before the civil war, speaks of the commentaries of Cæsar. 2. Because, if Cæsar had written his commentaries after the civil war was ended, there would not have been a lacuna after the sixth book, to be supplied by Hirtius. 3. Because Cæsar had little leisure at his disposal after the civil war.—Cæsar wrote other books, especially one on the analogies of the Latin tongue. A few fragments remain, which do not impress us with a very high opinion of this performance. It was entitled De Analogia, and was written, as we are informed by Suetonius, while Cæsar was crossing the Alpes, on his return to the army from Hither Gaul, where he had been to attend the assembly of that province. (Suet., Jul., 56.) In this book, the great principle established by him was, that the proper choice of words formed the foundation of eloquence (Cicero, Brut., 72); and he cautioned authors and public speakers to avoid as a rock every unusual word or unwonted expression. (Aut. Gall., 7, 9.)—There were also several useful and important works accomplished under the eye and direction of Cæsar, such as the graphic survey and the whole Roman empire, which had been, the Romans hitherto had done almost nothing for geography, considered as a science. Their knowledge was confined to the countries they had subdued, and these they only regarded in the view of the levies they could furnish and the taxes they could endure. Cæsar was the first who formed more exalted views. Ethicus, a writer of the fourth century, informs us, in the preface to his Cosmographia, that this great man obtained by a geometrical survey and measurement of the whole Roman empire was committed to three geometers. Zenodorus was charged with the eastern, Polycletus with the southern, and Theodotus with the northern provinces. Their scientific labour was immediately commenced, but was not completed till more than thirty years after the death of him with whom the undertaking had originated. The information which he obtained from the history of the Seven Years' War, in Egypt, enabled him to alter and amend the Roman calendar. The computation he adopted has been explained by Scaliger and Gessendi, and it has been since maintained, with little farther alteration than that of the style introduced by Pope Gregory. When we consider the imperfections of all mathematical instruments in the time of Cæsar, and the total want of telescopes, we cannot but view with admiration, not unmixed with astonishment, that comprehensive genius which, in the infancy of science, could surmount such difficulties, and arrange a system that experienced but a trifling derangement in the course of sixteen centuries. Although Cæsar wrote with his own hand only seven books of the Gallic campaigns, and the history of the civil wars till the death of his great rival, it seems highly probable that he revised the last or eighth book of the Gallic war, and communicated information for the Hither Gaul, the Aulularia, and the expedition, which are now usually published along with his own commentaries, and may be considered as their supplement or continuation. The author of these works, which nearly complete the interesting story of the campaigns of Cæsar, was Aulus Hirtius, one of his most zealous followers and most confidential friends. The eighth book of the Gallic war contains the account of the renewal of the contest by the states of Gaul after the surrender of Alesia, and of the different battles that ensued, at most of which Hirtius was per-
sonally present, till the final pacification, when Caesar, learning the designs which were forming against him at Rome, set out for Italy. Caesar, in the conclusion of the third book of the civil war, mentions the commencement of the Alexandrean. Hiirtius was not personally present at the reception of the honours of this Egyptian, to which Caesar was involved with the generals of Ptolemy, nor during his rapid campaigns in Pontus against Pharnaces, and against the remains of the Pompeian party in Africa, where they had assembled under Scipio, and, being supported by Juba, still presented a formidable appearance.

He collected, however, the leading events from the conversation of Caesar, and the officers who were engaged in these campaigns. He has, however, in part, limited the style of his master, and the resemblance which he has happily attained, has given an appearance of unity and consistence to the whole series of these well-written and authentic memoirs. It appears that Hiirtius carried down the history even to the death of Caesar: for in his preface addressed to Balbus, he says that he had brought down what was left imperfect from the transactions at Alexandria to the end, not of the civil disorders, but of the preservation of what was left of the life of Caesar. This latter part, however, of the Commentaries of Hiirtius, has been lost. It seems now to be generally acknowledged that he was not the author of the book De Bello Hispanico, which relates Caesar's second campaign in Spain, undertaken against young Cneius Pompey, who, having assembled, in the ulterior province of that country, those of his father's party who had survived the disasters in Thessaly and Africa, and being joined by some of the native states, presented a formidable resistance to the power of Caesar, till his hopes were terminated by the decisive battle of Munda. Dodwell, indeed, in his Dissertation De auctore Belli Gallici, &c., maintains, that it was originally written by Hiirtius, but was interpolated by Julius Celsus, a Constantinopolitan writer of the sixth or seventh century. Vossius, however, whose opinion is the one more commonly received, attributes it to Cn. Opllius, who wrote the Lives of Illustrious Captains, and also a book to prove that the Egyptian Cæsarion was not the son of Caesar. (Dunlop's Roman Literature, vol. 2, p. 191, seqq.) The best editions of Caesar's Commentaries are, the magnificent one by Dr. Clarke, fol. Lond., 1712; that of Cambridge, with a Greek translation, 4to, 1727; that of Oudendorp, 2 vols. 4to. L. Bat., 1737; that of the Elzevirs, 8vo. L. Bat., 1635; that of Oberlin, Lips., 1819. The text of Archbald and Lemaire, Paris, 4 vols. 8vo, 1819-22.—II. The name Caesar became a title of honour for the Roman emperors, commencing with Augustus, and at a later period designated also the presumptive heirs to the empire. (Vid. Augustus.)—III. The twelve Caesars, as they are styled in history, were Julius Caesar, Augustus, Tiberius, Caligula, Claudius, Nero, Galba, Otho, Vitellius, Vespasian, Titus, Domitian. These succeeded each other in the order named, which constitutes the true line of the Caesars, however, terminated in Nero.

Caesar's Augustus, a town of Hispania Tarraconensis, now Saragossa, so called from its founder, Augustus Caesar, by whom it was built on the banks of the river Iberus, on the site of the ancient city Subduba. It was the birthplace of the poet Prudentius. (Itrid., Hist. Eymol., 15, 1.—Mannert, Geogr., vol. 1, p. 428.)

Cæsarea, I, the principal city of Samaria, situate on the northern coast, in the plain of the Elims and Eumenes, called Strato's tower. Who this Strato was is not clearly ascertained. In the preface to the Novels it is stated that he came from Greece and founded this place; an event which took place probably under the reign of Seleucus, the first king of Syria. The first inhabitants were Syrians and Greeks. (Joseph., Ant. Jud., 20, 6.) It was subsequently made a magnificent city and port by Herod, who called it Cæarea in honour of Augustus; and it now began to receive Jews among its inhabitants. Frequent contents hence arose in consequence of the diversity of faiths that prevailed within its walls. Here the Roman governor resided, and from this, the city in which there was also a Roman colonia, it had the additional title of Colonna prima Plautia (Ulpian, 1, de cens.) In later times it became the capital of Palatinum Prima. This city is frequently mentioned in the New Testament. Here King Agrippa was smitten, for neglecting to give God the praise when the people loaded him with flattery. Here Cornelius, the centurion, was baptized; and also Philip, the shoemaker, of the Antiochene church, and here Agabus, the prophet, foretold to Paul that he would be bound at Jerusalem. (Acts, 8, 10.) The modern name of the place is Kaisarich. It was the birthplace of Eusebius. (Joseph., Ant. Jud., 1, 6.) Ad Argeum, the capital of Cappadocia, called by this name in the reign of Tiberius, previously Mazaca. It was situate at the foot of Mount Argaeus, as its name indicates, and was a place of great antiquity, its foundation having even been ascribed by some writers to Messach, the son of Japhet. (Joseph., Ant. Jud., 1, 6.) Philostorgius, however, says it was first called Mazza, from Mosoch, a Cappadocian chief, and afterward Mazaca. (Strab., 530.) The modern name is Kaisarib. This city, as Strabo reports, was subject to great inconveniences, being ill supplied with water, and destitute of fortifications. The surrounding country was also unproductive, consisting of a dry, sandy plain, with several volcanic pits for the space of many stadia around the town. Yet it is worthy of remark, that in modern times, travellers are struck with the great quantity of vegetables offered for sale in the market of Kaisarib, and it is said that there is no part of Asia Minor which surpasses the neighbourhood for the quality and variety of its fruits. (Kinnert's Travels, p. 103.—Cramer's Asia Minor, vol. 2, p. 118.)—IV. Philippi, a town on the northern confines of Palestine, in the district of Trachonitis, at the foot of Mount Pangaeus, and near the springs of the Jordan, now called Leshem, Laish, Dan, and Panases. The name Panesas is supposed to have been given it by the Phoenicians. The appellation of Dan was given to it by the tribe of that name, because the portion assigned to them was "too little for them," and they therefore "went up to fight against Leshem (or Laish, Judg., 18, 29), and took it," calling it "Dan, after the name of Dan, their father." (Josh., 19, 47.) Eusebius and other writers say, that Dan: from the different places, though near each other; but most writers consider them as one place, and even Jerome himself, on Exc. 48, says, that Dan or Leshem was afterward called Panesas. Philip, the tetrarch, rebuilt it, or, at least, embellished and enlarged it, and named it Cæsarea, in honour of the Emperor Tiberius; and afterward Agrippa, in compliment to Nero, called it Agrippa. According to Burerham, it was the site in which Peter and John were called Strato's tower. (Joseph., Ant. Jud., 18, 3—Id., Bell. Jud., 1, 16.—Sozom., 3, 21.)—V. Insula, now the isle of Jersey.
C.assius ARN. placed by Ptolemy near the Tanais, in what is now called the country of the Don Cossacks. They are supposed to have been erected in honour of some one of the Roman emperors by some neighbouring prince; perhaps by Ptolemy, in the reign of Tiberius. Near the source of the Tanais Ptolemy places the Alexander Arc, which see. (Strab., 493.—Tact., Ann., 12, 15.—Dio Cass., 9, 8.—Mannert, Geogr., vol. 4, p. 158.)

Cæsarium, now Tours, the capital of the Turiones. (Amm. Marcell., 15, 28.—Greg. Turen., 10, 19.—Sulp. Sever., Dial. 3, 8.)

Cæsaromagus, I. now Beauvais, the capital of the Bellovaci. (Anton., Itin.)—II. A city of the Trinobantes in Britain, answering, as is thought, to what is now Chelmsford. It lay 28 miles north of Londinium. (Anton., Itin.) The Feuinger Table calls it Baromacii.

Cæsia silva, a forest in Germany, in the territory of the Istavrones and Sicambri. It is supposed to correspond to the present forest of Hessewald. (Tact., Ann., 1, 50.—Brotier, ad Tact., l. c.)

Cæso or Kæso, a Roman prænomen, peculiar to the Fabian family. Thus we have Cæso FaBIIus in Livy (3, 43), and Cæso Quintius in the same writer (3, 11). In ancient inscriptions it is more commonly written with an initial K.—The latter of the two individuals just mentioned was the son of L. Quintius Cincinnatus, and opposed the tribunes in the voyage of the Lex Terentilla. He was brought to trial for this, and also for the crime of homicide that was alleged against him, but escaped death by going into voluntary exile. (Livy, 3, 11, seqq.)

Cæcinius, a river of Italy in Bruttium, near the Epizephyrian Locri, and at one time separating the territories of Locri and Rhegium. It is noticed by ancient writers for a natural phenomenon which was observed near its mouth, by which the cicadas on the Locrian side were always chirping and musical, while those on the opposite side were as constantly silent. The Cæcinius is supposed by Romanelli to correspond to the Amendola, which falls into the sea about ten miles to the west of the Cape Spartivento. (Cramer's Anc. Italy, vol. 2, p. 413.)

Cæc., i. a companion of Æneas. (Virg., Æn., 1, 189; 1, 410; 6, 526.) II. A river of Myisia, falling into the Ægean Sea, opposite Lesbos. On its banks stood the city of Pergamus, and at its mouth the port of Elea. It is supposed by some to be the present Girmast. According to Mannert, however, its modern name is the Mandragorai. (Pliny, 5, 30.—Mela, 1, 18.—Virg., Georg., 4, 370.—Ovid, Met., 15, 277.)

Caieta, a town and harbour of Latium, southeast of the promontory of Circeo, which was said to have received its name from Caieta, the nurse of Æneas, who was buried there. (Virg., Æn., 7, 1.) This, however, is a mere fable, since Æneas never was in Italy. Equally objectionable is the etymology of Aurelius Victor, who derives the name from kaietum, to burn, because the fleet of Æneas was burned here: as if the Trojans spoke Greek! Strabo (233) furnishes the best explanation. It comes, according to him, from a Laconian term (kaiërra), denoting a hollow or cavi- ty; in allusion, perhaps, to a reeding of the shore. It is now Gaeta. The harbour of Caieta was considered one of the finest and most commodious in Italy. Cicero laments on one occasion that so noble a port should be subject to the depredations of pirates even in the open day. (Proleg. Man.—Compare Florus, 1, 16.)

Caius and Caia, a prænomen very common at Rome to both sexes. In this word, and also in Caelia, the German cognates are like G. with Quintil. (1, 77) C, in its natural position, denoted the name of the male, and when reversed that of the female: thus, C was equivalent to CAIUS; but Q to CAIA. Female praenomina, which were marked with an inverted capital, were, however, early disused among the Romans. If there were the two, to distinguish them by major and minor added to their names; if there were more than two, they were distinguished by their number, Prima, Secunda, &c. Thus we have, in the first case, Tullia, the daughter of Cicero, Julia, the daughter of Caesar; and in the second case, Fausta, Cornelia Minor, &c.

Caius, y. Virid. Quintus, II.

Calabria, the part of Italy occupied by the ancient Calabrians. It seems to have been that portion of the Iapygian peninsula extending from Brundisium to the city of Hydruntum, answering nearly to what is now called Terra di Lecce. Its name is supposed to have been derived from the Oriental "Kalab" or pitch, on account of the resin obtained from the pines of this country. It was also called Messapia and Iapygia. The poet Ennius was born here. The country was fertile, and produced a variety of fruits, much cattle, and excellent honey. (Virg., G., 3, 425.—Horat., Od., 1, 31; Epod., 1, 27, 1.—Plin., 8, 48.)

Calaguris. There were two cities of this name in ancient Spain, both of them in the territory of the Vascones. One was called Calagurris Fibularensis, the other Calagurris Nasacra. The moderns are not yet decided which of these two cities answered the present Calahorra and which to Loharre. It is generally thought that Calagurris Fibularensis is the modern Calahorra, but Marca is in favour of Loharre, and his opinion appears confirmed by Livy. (Petr. de Marca, 2, 28.—Liv., fragm., lib. 91, ed. Bruns., p. 27.)

Calamin, a very celebrated statuary, and engraver on silver, respecting whose birthplace, and the city in which he was brought up, no certain information is given. The period when he flourished appears to have been very near that of Phidias. From the account given of his works by the ancient writers, he would seem to have been one of the most industrious artists of antiquity, for he executed statues of every description, in bronze, marble, and in gold blended with ivory. Cicero and Quintilian refer to his productions as not sufficiently valued, though superior in this respect to those of his predecessors. (Cic., Brut., 18, 70.—Quintil., 12, 10.—Siliq., Diet. Att., 3, s. v.)

Calanus, a celebrated Indian philosopher, one of the gymnosophists. He followed Alexander from India, and, becoming unwell when they had reached Persia, he desired to have his funeral pile erected. Having offered up his prayers, poured libations upon himself, and cut off part of his hair and thrown it into the fire, he ascended the pile, and moved not at the approach of the flames. Plutarch says, that, in taking leave of the Macedonians, he desired them to spend the day in merriment and drinking with their king, "For I shall see him," said he, "in a little while at Babylon." Alexander died in Babylon three months after this. Calanus was in his eighty-third year when he burned himself on the funeral pile. (Cic., de Div., 1, 23.—Arri., et Plut., in Alex.—Elian, V. H., 2, 41, 5, 6.—Val. Max., 1, 8.)

Calauria, an island in the Sinus Saronicus, opposite the harbour of Trozene in Argolis. It obtained its greatest celebrity from the death of Demosthenes. Before that event, however, it was a place of great note and sanctity. Neptune was said to have received it from Apollo in exchange for Delos, agreeably to the advice of an oracle. (Éphor. ap Strab., 374.) The temple was, held in great veneration, and the sanctuary accounted an inviolable asylum. Seven confederate cities here held an assembly somewhat similar to the Amphiictyonic council, and joined in
sacrifices to the god. Strabo names Hermi-
one, Epidaurus, Εἰγινθ, Athens, Αθήναις, Nauplia, and the
the Minyan Orchomenus. Argos subsequently repre-
sented Nauplia, and Sparta succeeded to Prasie. (Strab., l. c.) In this sanctuary Demosthenes, who
had rendered himself obnoxious to the Macedonian
sovereign, concealed himself in a small island in the
harbour. Here he swallowed poison and terminated his exist-
ence. (Plut., Vit. Dem.orth.—Pausan., 2, 33.) A
monument was raised to this great orator within its
peribolus, and divine honours were paid to him by the
Calaurians. According to Strabo, the island of Cala-
rea was four stadia from the shore, and thirty in cir-
cuit. It is now called Poro, or the "ford," as the
narrow channel by which it is separated from the
mainland, and which weather boats are passed on.
The temple of Neptune was situated at some dis-
tance from the sea, on one of the highest summits of the
island. Dodwell observes (Class. Tour, vol. 2, p. 276),
that no single column of this celebrated sanctuary is standing, nor is the smallest fragment to be
seen among the ruins.

Calchas, a celebrated soothsayer, son of Thestor. He
had received from Apollo the knowledge of future
events, and was appointed, according to their de-

den for the Trojan war, nominated him their high-

priest and prophet. Among the interpretation of events
imputed to him, it is said he predicted that Troy could
not be taken without the aid of Achilles; and that,
having observed a serpent, during a solemn sacrifice, 
glide from under an altar, ascend a tree, and devour
nine young birds with their mother, and afterward be-
come itself changed to stone, he inferred that the
singe of Troy would last ten years. He also foretold
that the Grecian fleet, which was at that same time
detained by contrary winds in the harbour of Aulis,
would not be able to sail until Agamemnon should
have sacrificed his own daughter Iphigenia. Calchas
also advised Agamemnon, during the pestilence by
which Apollo desolated the Grecian camp, to restore Chry-
seis, as the only means of appeasing the god. He
was consulted, indeed, on every affair of importance,
and appears to have often determined, with Agamen-
non and Ulysses, the import of the oracles which he
expounded. His death is said to have happened as
follows. After the taking of Troy, he accompanied
Amphilochus, son of Ampharais, to Colophon in Ionia.
It had been predicted that he should not die until he
found a prophet more skilful than himself: this he
experienced in the person of Mopous. He was unable to
remove the dangers which pursued him by his pres-
tain fig-tree; and when Mopous mentioned the exact
number, Calchas retired to the wood of Claros, sacred
to Apollo, where he expired of grief and mortification.
—Calchas had the patronymic of Thestorides. (Hom.,
II., 1, 69, &c.—Kisch, Agam.—Europ., Iphi.-Pau-
san., 1, 43.)

Caledonia, a country in the north of Britain, now
called Scotland. The ancient Caledonians comprehen-
sed all the territory which lay north of the
Firth and Clyde. It was never completely sub-
due by the Romans, though Agricola penetrated to
the Tay, and Severus into the very heart of the
country. The Caledonians are supposed to have derived
their name from the Celtic words Gael Dun, implying
"the Gael (Gauls) of the mountains;" i. e., "High-
landers." These Gallic tribes were driven into Scot-
land, from Britain, by the conquests of the Belgic or
British race. (Compare Adelung's Mithradites, vol.
2, p. 78.)

Cälen-tum, a city of Spain, in the country of Bati-
ca, supposed to correspond to the modern Carte.
la. The ancient place was famed for making bricks
so much lightness that they floated upon the water.
(Plin., 35, 49.—Vitruv., 2, 3.) This was also done
at Massilia (Marseille) in Gaul, and at Pitane in
Asia. (Vitrux, l. e.) According to a modern author-
ity, the same kind of bricks are made in Italy, "de una
singulartissima specie di mattone." (Fabraoni,
Dissert., Venezia, 1797, 8vo.)

Calètes, a city of Campania, to the south of Tea-
nuncus and of Apennines. According to Livy (v. 10), it
was originally belonged to the Ausones, but was captured
by the Romans, and colonized (A.U.C. 421). The Ager
Calenus was much celebrated for its vineyards. (Vid.
Falerum.)

Calétes, a Belgic tribe in Gaul, north of the mouth
of the Sequana, and inhabiting the peninsula which
that river makes with the sea. Their territory is now
le pays de Caux, forming a part of Normandy, in the
north-west of France. Draco, in his De Bellis Ira-
mentia, says that it was Juliobona, now Lillebonne. Strabo calls them Kalétov, and hence on D'Anville's Map of Ancient
Gaul they are named Caléti. Ptolemy, in the other
hand, gives Kalértov. They appear to have been
ranked among the Armoric states, if in one part of his Commentaries (B. G., 7, 75) we read Calètes for Cadètes.
They could easily have been connected with the
Armoric tribes by commercial relations and
affinity, and yet have belonged, by their position, to
the Belgic states. (Lemaire, Ind. Geogr. du César, p. 529.)

Op., vol. 4.

Caligula, Caius Cæsar Augustus Germanicus, son
of Germanicus and Agrippina, was born A.D. 12,
in the camp, probably in Germany, and was brought
up among the legionaries. (Sueton., Vit. Calig., 8.)
Here he received from the soldiers the surname of
Caligula, from his being arrayed, when quite young,
like a common soldier, wearing a little pair of
caulige, a kind of shoe or covering for the feet used
chiefly by the common soldiers. This was done in
order to secure towards him the good-will of the
troops. Caligula himself, however, disliked the ap-
ellation in after days, and preferred that of Caius
Cæsar, which is also his historical name. Upon his
father's death he returned from Syria, and lived with
his mother till her exile, when he removed to the
residence of Livia Augusta, his great-grandmother,
whose funeral oration he delivered in public, while he
still wore the praetexta. He afterward remained in
the family of his grandmother Antonia until his
twentieth year, when, being invited to Caprea by
the emperor, he assumed the dress proper to manhood,
but without the customary ceremonies. In the court
of his grandfather, his naturally severe and dangerous

temper appeared in a spriite compliance with the caprices
of those in power, in a wonton love of cruelty, in an
untried curiosity, and in the most abandoned and
unprincipled debauchery; so that Tiberius observed,
that he was breeding a second Phaethon for the de-
struction of the world. (Sueton., Cal., c. 10.)

Tiberius had, by his testament, appointed his two grand-
sons, Caius Cæsar and Tiberius Gemellus, the latter
the son of Drusus, joint heirs of the empire. The
first act of Caligula, however, was to assemble the sen-
ate, for the purpose of declaring the invalidity of the
emperor; and this being readily effected, and the Tiberius
Gemellus being declared too young to rule, Caius Cæsar
Caligula was immediately proclaimed emperor.
This appointment was received with the most unbounded
joy both at Rome and in the provinces, and the con-
duct of the new prince seemed at first to promise one
of the most auspicious of reigns. But this was all,
dissimilation on his part; a dissimulation which he
had learned under his wily predecessor. Tiberius, for Caligula
his grandson, is supposed to have assumed the appearance of mod-
eration, liberality, and justice, till he should be firmly
seated on the throne, and freed from all apprehension
lest the claims of the young Tiberius might be revived
on any offence having been taken by the senate.
He interred, in the most honourable manner, the remains
of his mother and of his brother Nero, set free all state
prisoners, recalled the banished, and forbade all prosecutions for treason. He conferred on the magistrates free and independent power. Although the will of Tiberius had been declared by the senate, to be null and void, he fulfilled every article of it, with the exception only of that above mentioned. When he was chosen consul, he took his uncle Claudius as his colleague. Thus he distinguished the first eight months of his reign by many actions dictated by the profoundest hypocrisy, but which appeared magnanimous and noble, to the eyes of the world, when he fell, on a sudden, dangerously ill, in consequence, as has been imagined, of a love-potion given him by his mistress Milonia Casonia (whom he afterward married), with a view to secure his unconstant affections. On recovering from this malady, whether weary by this time of the restraints of hypocrisy, or actually dargened in his intellect by the inflammatory effects of the potion which he had taken (Jut., Sat., 6, 614), the emperor threw off all appearance of virtue and moderation, as well as all prudential considerations, and acted on every occasion with the mischievous violence of unbridled passions and wanton power, so that the tyranny of Tiberius was forgotten in the enormities of Caligula. (Senecc., Consol. ad Helc., 9, c. 779.) The most exquisite tortures served him for enjoyments. During his meals he caused criminals, and even innocent persons, to be stretched on the rack and beheaded; the most cruel torments were invented. In the madness of his arrogance he even considered himself a god, and caused the honours to be paid to him which were paid to Apollo, to Mars, and even to Jupiter. He built a temple to his own divinity. At one time he wished that the whole Roman people had but one head, that he might be able to cut it off at a single blow. He frequently repeated the words of an old poet, Oderint damne me mortuus. One of his greatest follies was his building a bridge between Baiae and Puteoli, in imitation of that of Xerxes over the Hellespont. He himself consecrated this grand structure with great splendour; and, after he had passed the night following in a revel with his friends, in order to do something extraordinary before his departure, he caused a crowd of persons, without distinction of age, rank, or character, to be seized, and thrown into the sea. On his return he entered Rome in triumph; and he said, that he had conquered nature herself. After this he made preparations for an expedition against the Germans, passed with more than 200,000 men over the Rhine, but returned after he had travelled a few miles, and that without having seen an enemy. Such was his terror, that, when he came to the river, and found the bridge obstructed by the crowd upon it, he caused himself to be passed over the heads of the soldiers. He then went to Gaul, which he plundered with unexampled rapacity. Not content with the considerable booty thus obtained, he sold all the property of his sisters Agrippina and Livilla, whom he banished. He also sold the furniture of the old court, the clothes of Augustus, Agrippina, &c. Before he left Gaul he declared his intention of going to Britain. He collected his army on the coast, embarked in a magnificent galley, but returned when he had hardly left the land, drew up his forces, ordered the signal of battle to be sounded, and compelled the sea to fill their helmets with shells, while he cried out, "This booty, ravished from the sea, is fit for my palace and the capitol." When he returned to Rome he was desirous of a triumph on account of his achievements, but contented himself with an ovation. Discontented with the senate, he resolved to destroy the greater part of the members, and the most distinguished men of Rome. This is proved by two books which were found after his death, wherein the names of the proscribed were noted down, and of which one was entitled Gladius (Sword), and the other Pugilis (Dagger). He became reconciled to the senate again when he found it worthy of him. He supported public brothes and gaming-houses, and received himself the entrance-money of the visitors. His horse, named Incitatus, was his favourite. This horse he made one of his priests, and, by way of insult to the republic, declared it also consul. It was kept in an ivory stable, and fed from a golden manger; and, when it was invited to feast at the emperor's table, gilt corn was served up in a golden basin of exquisite workmanship. He had even the intention of destroying the poems of Homer, and was on the point of removing the works and images of Virgil and Livy from all libraries; those of the former, because, as he said, he was destitute of genius and learning; those of the latter, because he was not to be depended upon as an historian. Caligula's morals were, from his youth upward, abominably corrupt. After he had married and repudiated several wives, Casonia retained a permanent hold on his affections. A number of conspirators, at the head of whom were Chreaea and Cornelius Sabinius, both tribunes of the pratorian cohorts, murdered him in the 29th year of his age, and the fourth of his tyrannical reign, A.D. 41. (Cresner, Hist. des Emp. Rom., vol. 2, p. 1, seqq.—Encycol. Americ., vol. 2, p. 405, seqq.—Encycol. Metropol., div. 3, vol. 2, p. 434, seqq.)

CALLAICI or CALLAEI, a people of Spain, in the north-west part of the country. They inhabited what is now Gallicia, together with the Portuguese provinces of Entre-Douro-y-Minho and Tras-l-os-Montes. (Eutrop., 4, 19.—Sil. Ital., 3, 352.—Plin., 3, 3.—Inscript., ap. Gruter.)

CALLAE or CALAE, a seaport town of the Callaici, at the mouth of the Durius. It is now Oporto. From Portus Callae comes, by a corruption, the name of modern Portugal. (Sil. Nat., 12, 525.—Vell. Paters, 1, 116.)

Callias, a rich Athenian, who offered to release Cimon, son of Miltiades, from prison, into which he had been thrown through inability to pay his father's fine, if he would give him the head of Elpinice, Cimon's sister and wife. Cimon consented, but with great reluctance. He was afterward charged with having violated the terms of his agreement with Callias, which was looked upon by the Athenians as adultery on his part. Elpinice had the head of another woman. The custom of marrying sisters at Athens extended, according to Philo Judaeus, only to sisters by the same father, and was forbidden in the case of sisters by the same mother. Elpinice was taken in marriage by Cimon, because, in consequence of his extreme poverty, he was unable to provide a suitable match for her. The Lacedaemonians were forbidden to marry any of their kindred, whether in the direct degrees of ascent or descent; but in the case of a collateral it was allowed. Several of the barbarous nations seem to have been less scrupulous on this head; the Persians especially were remarkable for such unnatural unions. (C. Nep. et Plut. in Civ.)

Callicolae, a hill in the district of Troes, deriving its name (καλλίς κολύμνος) from the pleasing regularity of its form, and the groves by which it seems for ages to have been adorned. It is mentioned by Homer in the 2nd book of the Iliad (v. 58 and 151). Stрабов uniform us, from Demetrius of Scepsia, that it was ten stadia from the village of the Ilians (Ἰλιανός), which would make it forty stadia from Troy itself. It was situate to the northwest of this city, near the banks of the Simois. (Compare Le Chevalier's Map of the Plain of Troy, and the note of Heyne to the 282d page of the German translation of Le Chevalier's work on this subject. Compare also Carle's Travels, vol. 3, p. 119, Lond., 8vo ed.)

Callirícetes, I. an Athenian, who caused Dion to be assassinated. (Vid. Dion I.)—II. An officer in
trusted with the care of the treasures of Suss by Alexander. (Curt., 5, 2.)—III. An architect, who, in conjunction with Ictinus, built the Parthenon at Athens, and who undertook also to complete the long walls termed αἰγέλυ. (Plut., Vit. Perel., c. 13.) He appears to have flourished about Olympia, 80 or 85. (Sillig, Diet. Art., IV.) A sculptor, distinguished principally by the minuteness of his performances. He is mentioned as a Lacedaemonian, and is associated with Myrmecides by Ælian. (V. H., 1, 17.—Compare Galen, Adhort. ad Art., c. 9.) In connexion with this artist he is said to have made some chariots which could be covered with the wings of a fly, and to have inscribed on a grain of the plant zeaemum some verses of Homer. (Plin., 7, 21.) Galen, therefore, well applies to him the epithet πολυμαχίας of Athenaeus; however, relates that he engraved only large vases (11, p. 782). The age in which he lived is uncertain. (Sillig, Diet. Art., s. v.)

CALLICRATIDAS, a Spartan, who succeeded Lysander in the command of the fleet. He took Methymna, and routed the Athenian fleet under Conon. He was defeated and killed near the Arginusae, in a naval battle, B.C. 405. He was one of the last that preserved the true Spartan character, which had become greatly altered for the worse during the Peloponnesian war, by the habit which the Lacedaemonians had contracted of fighting beyond the limits of their country. The enervating climate of Ionia had also contributed very much towards producing this result. (Xen., Hist. Gr., 1, 6, 1, seqq.—Diod. Sic., 13, 76. —Id. ib., 13, 99.)

CALLIDRÔMUS, according to Livy (36, 15), the highest summit of Mount Ætna. It was occupied by Cato, with a body of troops, in the battle fought at the pass of Thermopylae, between the Romans, under Acilius Glabrio, and the army of Antiochus; and, owing to this manoeuvre, the latter was entirely routed. (Compare Pliny, H. N., 4, 7.)

CALLIMACHUS, 1. a native of Cyrene, descended from an illustrious family. He first gave instruction in grammar, or belles-lettres, at Alexandria, and numbered among his auditors Apollonius Rhodius, Eratosthenes, and Aristophanes of Byzantium. Ptolemy Philadelphus subsequently placed him in the Museum, and from this period he turned his principal attention to poetic composition. He lived, loaded with honours, at the court of this prince, where his abilities were greatly admired. The small number of pieces, however, that remain to us, out of eight hundred compositions, is sufficient to show him to be a cold poet, wanting in energy and enthusiasm, and making vain efforts to replace by erudition the genius which nature had denied him. These productions compel us to subscribe to Ovid's opinion in relation to him, "Quamus ingenio non valet, arte valet." (Amor., 1, 15.) The principal works of Callimachus were as follows: 1. Elegies. These were regarded as his principal title to renown. The Romans, especially in the Augustan age and after, held them in high estimation; they were imitated by Ovid and Propertius. Among the Elegies of Callimachus two in particular were celebrated, one on the tresses of Berenice, queen of Ptolemy III., which Callistus has either translated or imitated; and the other, entitled Cydippe, to which Ovid alludes (Rem. Am., 1, 380), and which he has imitated in his 20th Hec-roid. We have only some fragments remaining of the elegies. 2. Alcaei. "Causes," i. e., a poem, in four books, on the causes of various fables, customs, &c. Some fragments remain. 3. Acrae, or "Acraea," an heroic poem, the subject of which was the hospitable reception given to Theseus, by an old female, when he was proceeding to combat the Marathonian bull. Some fragments remain. 4. "Idom., the "Ibis," a poem directed against one of his pupils, accused by him of ingratitude, named Apollonius Rhodius. It has not reached us. The Ibis is a bird, whose habits taught man, it is said, the use of clysters. We know not the reason why Callimachus gave this appellation to his en-emy: it was done in ridicule, probably, of some personal deformity, or else from some resemblance which Apollo non bore to this bird in the "Ibis" of his irradiated master. It is in imitation of Callimachus that Ovid has given the title of Ibis to one of his poems. 5. Hymns. Of these we have six remaining; five in the Ionic dialect, and the sixth in Doric. The subject of this last is the bathing of the statue of Minerva. According to the commentators, the Doric dialect was preferred for this poem, because Callimachus composed it at Argos, where, during a certain festival, the statue of Minerva was bathed in a river. Of these six hymns which we have from Callimachus, that addressed to Ceres is the best. The one in honour of Delos is in the epic style, like the hymns of the Homerides. 6. Epigraphs. Of these we possess seventy-four, which may be regarded among the best of antiquity. The grammarian Archibius, the father, or, according to others, the son of Apollonius, wrote a commentary or exegesis (ἐξηγήσεως) on these epigrams and Marianus, who lived under the Emperor Anastasius, is regarded as the first interpreter of Callimachus. He is the author of Hymns to Iambe and choraliambs. Strabo refers to them, and some fragments remain. —Such are some of the principal poetic works of Callimachus. We have to regret the loss of several prose works, which would, no doubt, have thrown great light on various subjects connected with the antiquities of Greece. Such are his Commentaries, or Memoirs (Ὑπομνήματα); his work entitled Κτίσεως νήσων καὶ πόλεων: "The setting of islands and founding of cities," his "Wonders of the World," Συμβάσεις, or ἀναμνήσεις τῶν ἐκ ἑών ἄνω τῶν γῆς καὶ τοιούτων ὀνόματων καὶ γενεαλογιῶν, &c. Callimachus did not want detractors, who occasioned him that species of torment to which the vanity of authors exposes them, and, at the same time, renders them so sensitive. A certain grammarian, named Aristophon, wrote against one of his productions; and there exists, in the Anthology, a distich against Callimachus, by Apollonius the grammarian, which is often erroneously ascribed to the author of the Argonautics. —Among the editions of Callimachus may be mentioned that of Ernesti, Lugd. Bat., 1761, 2 vols. 8vo, and that of Blumfeld, Lond., 1815, 8vo. Brunck gave also a revised text in his Poetae Gnomici. (Schöll, Hist. Lit. Gr., vol. 3, p. 107, seqq.)—II. A celebrated artist, whose attention was directed not only to statuary, but to engraving on gold and to painting. (Plin., 34, 8.) On account of the elegant finish of his works in marble, he was styled by the Athenians κατάτεχνος. (Vitr., 4, 1, 10.—Compare the remarks of Sillig, Diet. Art., s. v.)

CALLÍRÖKE, one of the Muses, daughter of Jupiter and Mnemosyne. She presided over epic poetry and eloquence, and was represented holding a close-rolled parchment, and sometimes a trumpet. She derived her name from her beautiful (silver-toned) voice, ἀρφαὶ σαρώτα ἀργοὶ. Callippe bore to Cresus, king of Lydia, a son named Linus, who was killed by his pupil Hercules. (Apollod., 1, 3, 2.) She had also by the same sire the celebrated Orpheus. Others, however, made Apollo the sire of Linus and Orpheus. Hesiod (frag. 97) says, that Urania was the mother of Linus. (Vid. Mus., and consult Müller, Arch. Acad. der Künst, p. 594, seqq.)

CALLIPATRÆ, daughter of Diogoras, and wife of Callimachus the athlete. According to the common ac-count, she went with her son, after the death of her husband, to the Olympic games, having disguised herself in the attire of a teacher of gymnastics. When her son was declared victor, she discovered her sex in the joy of the moment, and was immediately arrested, as women were not allowed to appear on such occa-
C A L

sions. The punishment to which she was liable was to be cast down on a precipitous and rocky height, but she was pardoned in consequence of the peculiar circumstances of her case. A law, however, was immediately passed, ordaining that the teachers of gymnastic exercises should also appear naked at the games. (Pausanias, 5, 6, 5.)—From an examination of authorities, it would appear that the story just told relates rather to Berenice (Φερείνια), the sister of Callipitrus. (Consult Bayle, Dict., s. v. Berenice, and Siebelis, ad Pausan., l. c.)

Calliphon, a painter, a native of Samos, who decorated with pictures the temple of Diana at Ephesus. Two of his works were taken from the Isid. (Pausan., 5, 19.)

Callipolēs, I. a city of Thrace, about five miles from Αγγοσπόταμως. Its origin is uncertain: a Byzantine writer ascribes its foundation and name to Callias, an Athenian general (Jo. Cinnamus, 5, 3), while another derives its appellation from the beauty o the site. (Agathias, p. 5, 155.) It is certain that we do not hear of Callipolis before the Macedonian war, when Livy mentions its having been taken by Philip, the last king of that name (31, 16.—Compare Plin., 4, 11). From the Itineraries we learn, that Callipolis was the point whence it was usual to cross the Hellespont to Lamprocus or Abydos. The modern name is Callipoli, and it is from this that the Chersonese now takes its name as a Turkish province. (Cramer's Anc. Greece, vol. 1, p. 330.)—II. A town of Sicily, north of Catana, now Gallipoli.—III. A city of Calabria, that is, the Sin. Tarentinum, Callipoli. According to Dionysius of Halicarnassus (17, 4), it owed its foundation to Leucippus, a Lacedæmonian, who erected a town here with the consent of the Tarentines, who expected to be put in possession of it shortly after; but in this hope they were deceived; and on finding that the Spartan colony was already strong enough to resist an attack, they suffered Leucippus to prosecute his undertaking without molesta-

tion (Dion. Hal., frag. ed. Angelo Mai, Mediol., 1816.) Mela styles it "urbs Graia Callipolitis" (2, 4). The passage in which Pliny names this town is corrupt. (Plin., 3, 11.—Cramer's Ancient Italy, vol. 2, p. 317.)

Callirhoë, I. a daughter of the Scamander, who married Tös, by whom she had Ilus, Ganymede, and Assaracus. (Ib., 20, 231) —II. A daughter of Oceanus and Tethys, mother of Geryon, Echidna, Cerberus, and other monsters, by Chrysaor. (Hesiod, Theog., 237.)

Calliste, an island of the Αἰγεαν Sea, called also Thera. (Vid. Thera.)

Callistēia, Beauty's rewards; a festival at Lesbos, during which all the women presented themselves in the temple of June, and the prize was assigned to the fairest. (Athenæus, 13, p. 610, a.) There was also an institution of the same kind among the Párrhasians, made first by Cypselus, whose wife was honoured with the first prize. The Eleans had one also, in which the fairest man received as a prize a complete suit of armour, which he dedicated to Minerva. (Athenæus, l. c.—Casaub. et Scheeckh, ad loc.)

Callisthēnês, a native of Olynthus, the son of Hero, Aristotel's sister. He was placed by the Stagirite about the person of Alexander, as a kind of in-

structor, or, rather, companion of his studies, and accompanied the monarch into India. He gave of
domestic affairs and the genealogies of his native country, his boldness of speech, and was eventually charged with being implicated in a conspiracy against Alexander. According to the common account, he was mu-
tilated, and then carried along with the army in an iron cage, until he ended his days by poison. Polyten, however, wrote in his history of Alexander, that he was first tortured and then hanged. Callisthenes does not deserve the name of a philosopher, which some have bestowed upon him; he appears, on the contrary, to have been little better than a mere sophist. He wrote a history of Alexander's movements which has not come down to us but which, from the remarks of ancient writers, does not appear to have possessed even the merit of exactness in ordinary details. (Plut., Vit. Alex.—Polyb., 12, 23.—Sainte-Croix, Examen, &c., p. 34, seqq.—Id. ib., p. 169, seqq.)

Callistō and Callisto, called also Helice, was daughter of Lycaon, king of Arcadia, and one of Di-

Anna's attendants. Jupiter saw her, and assuming the form of Diana, accompanied the maiden to the chase, and they were suddenly joined. She long concealed her shame; but at length, as she was one day bathing with her divine mistress, the discovery was made, and Di-

Anna, in her anger, turned her into a bear. While in this form she brought forth her son Arcas, who lived with her in the woods, till the herdsmen caught both her and him, and brought them to Lycaon. (Vid. Arcas.) Some time afterward she went into the teme-

nus, or sacred enclosure of the Lycaean Jove, which it was unlawful to enter. A number of Arcadians, among whom Arcas was then soon born, were looking about to see that Jove snatched her out of their hands, and placed her as a constellation in the sky. (Apollo'd., 3, 8.—Ovid, Met., 2, 401, seq.—Id., Fast., 2, 155, seq.—Hygin., fab., 177.) It was also fabled, that at the request of Juno, Tethys forbade the constellation of the bear to descend into her waves. This legend is related with great va-

riety in the circumstances. According to one of these versions, Arcas, having been separated from his mother and reared among men, met her one day in the woods, and was on the point of slaying her, when Jupiter transferred the mother and son to the skies. (Kight-

ley's Mythology, p. 425, seq.)

Callistrotus, I. a celebrated orator of Athens. Demosthenes, having heard him plead on one occa-

sion, was so charmed by his eloquence that he aban-

doned all his other studies, and betook himself to or-

atory. He was employed on several occasions as an ambassador, but eventually met with the common fate of popular leaders, and was exiled. Retiring upon this to Thrace, he founded Datum in that country. (Plut., Vit. Demosth., c. 3.—Sclæz, Peripl., p. 27.)—II. A sophist, who lived, as Heyne thinks, a little be-

fore the elder Philostratus, towards the close of the second century of our era. We have from him a de-

scription of fourteen statues, written, it is true, in the style of a rhetorician, but still containing many details of a curious and interesting nature, as regards the history of ancient art. (Heyne, Opusc., vol. 5, p. 190, seqq.) The work accompanies the writings of Philostratus, and is found in all our editions of the latter.—III. A Roman lawyer, who lived during the time of Severus and Caracalla. (Biogr. Univ., vol. 6, p. 555.)

Calor, a river of Italy, which rose in the mountains of the Hirpini, passed Beneventum, and joined the Vulturinus. (Lav., 24, 14.)

Calpe, in the most southern parts of Spain, opposite to Mount Abyla on the African coast. These two mountains were called the Pillars of Hercules. Calpe is now called Gibraltar, from the Arabic Αιγβελ Ταρικ (i. e., "the mountain of Tarik." This Tarik was a Moorish general, who first led the Moors into Spain, A.D. 710.) For some remarks on the eymology of the name Calpe, see Abyla.

Calpurnia, I. a daughter of Lucius and Julius Caesar's sister. At the time previous to her hus-

band's murder, she dreamed that he had been stabbed in her arms. According to others, she dreamed that the pinnacle had fallen, which the senate, by way of ornament and distinction, had caused to be erected on Caesar's house. (Plut., Vit. Cat., c.) After Caesar's death she intrusted Antony with his private treasure, which amounted to four thousand talents, and also with
the private papers of the dictator. (Plut., Vit. Att., c. 15.) — II. Calpurnia Lex, passed A.U.C. 604, against extortion, by which law the firstquesto perpetuain was established. (Civ. in Verre, 4, 25.)—II. Another, called also Acilia, concerning bribery, A.U.C. 686. (C. pro Mar. et.)

Calpurnius, a writer of mimes, not to be confounded with the pastoral poet of the same name. (Bähr, Gesch. Rom. Lit., vol. 1, 118.)—II. A Christian in the time of Hadrian and Antoninus Pius, from whom we have fifty-one Declamations remaining. (Bähr, ib., p. 567.)—III. A Latin poet, a native of Sicily, and contemporary of Nemesianus, lived during the third century of our era. In the earliest editions of his works, and in all but one of the MSS., eleven eclogues pass under his name. Ugoletus, however, at a later period, guided by this single MS., undertook to assign four or the similares, placed by him. In this he is wrong, for the tone and manner of these pieces show plainly that they all came from one pen. Such was the opinion of Ullius (Prof. ad Nemesian., Eclog., p. 459.—Id. ad Nemesian., Cyneget., v. 1, p. 314), with which Burnmann agrees (Poet. Lat. Min., Prof., p. **4), and which Wernsdorff at last has fully established. (Poet. Lat. Min., vol. 2, p. 15, seqq.) The Eclogues of Calpurnius are not without merit, though greatly inferior in elegance and simplicity to Virgil's. They are dedicated to Nemesianus, his protector and patron, for he himself was very poor. In the time of Charlemagne these pieces were placed in the hands of young scholars. The best editions are found in the Poetae Latini Minores of Burmann, Lugd. Bat., 1731, 2 vols. 4to, and of Wernsdorff, Altemb., 1760-1799, 10 vols. 8vo. (Bähr, Gesch. Rom. Lit., vol. 1, p. 301.)

Calvus Corn.Licinus, a Roman, equally distinguis hed, and a poet of great capacity. He is mentioned with praise by Cicero (Brut. 81.—Ep. ad Fam., 7, 24.—Id. ib., 15, 51). He was also the friend of Catullus, and two odes of this author's are addressed to him, in which he is commemo rated as a most delightful companion, from whose society he could scarcely refrain. The fragments of his epigrams which remain do not enable us to judge for ourselves of his poetical merit, as his former career of popularity has been alluded to by Ovid among the licentious writers. (Horat., Serm., 1, 10, 19.—Dunlop's Rom. Lit., vol. 1, p. 540.)

Calycadnus, a large and rapid river of Cicilia Trachis, which rises in the central chain of Taurus, and, after receiving some minor tributary streams, falls into the sea between the promontories of Zephyrium and Sarpedon. It is now the Giou-kou. (Plin., 5, 27.—Strab., 9, 38.—Ambr. Marcell., 14, 25.)

According to Strabo (693) between Cape Lectum and Tenedos, but not to be found in that direction. In Choiseul-Gouffier's map they are laid down between Tenedos and Sigurseu.—II. A group of islands, lying off the coast of Caria, to the southeast of Leros. One of the number was called Calymna. (Hom., II., 2, 676.) Herodotus informs us (7, 99), that the Calydians were subject to Arte misia, queen of Caria. Calymna, in modern charts, is called Calymnos and the surrounding group Kapperi and Carabagkler. (Cramer's Asia Minor, vol. 3, p. 218.)

Calypso, a city of ^Etolia, below the river Euen us, and between that stream and the sea. It was famed in Grecian story on account of the boat-hunt in its neighbourhood (vid. Meleager), the theme of poetry from Homer to Statius. We are told by mythologists that Oeneus, the father of Meleager and Theseus, was a son of Calydon and the mother Aegina settled in Pleuron. Frequent wars, however, arose between them on the subject of contiguous lands; a circumstance to which Homer alludes. (II., 9, 525, seqq.) From the same poet we collect, that Calypso was situated on a rocky height. (II., 2, 640; 13, 217.) Its territory, however, was ample and productive. (II., 9, 577, seqq.) Some time after the Pelop onnian war, we find Calydons in the possession of the Achaeans. It is probable that the Calydons themselves invited over the Achaeans, to defend them against the Aetarnians. (Xen., Hist. Gr., 4, 6, 1.—Phaen., 3, 10.) Their city was, in consequence, oc cupied by an Achaean garrison, until Epaminondas, after the battle of Leuctra, compelled them to evacuate the place. (Diod. Sic., 15, 57.) It was still a town of importance during the Social war (Polyb., 4, 65.—Id., 5, 95), and as late as the time of Caesar. (B. Civ., 3, 35.) But Augustus accomplished its downfall by removing the inhabitants to Nicopolis. According to Dodwell, there are yet to be seen here the remains of a city, and its acropolis, composed of magnificent walls, constructed nearly in a regular manner.

Calvyscois, a name of Deiânia, as living in Cal ydon. (Ovid, Met., 9, 112.)

Calymna, an island of the Aegae, southeast of Leros. (Vit. Calydon, II.)

Calypso, a daughter of Atlas, according to Homer. (Od., 1, 52.—Ibl., 7, 245.) Hiiodor, however, makes her an ocean-nymph (Theog., 339), and Apollodorus a Nereid (1, 2). Like Circe, she was a human-speaking ocean-nymph, with attendant nymphs on an island named Ogygia, in the midst of the ocean. Her isle presented such a scene of sylvan beauty as charmed even Mercury, one of the dwellers of Olympus. (Od., 5, 72.) Calypso received and kindly entertained Ulysses, when, in the course of his wanderings, that hero was thrown upon her domains after his shipwreck. She detained him there for eight years, designing to make him immortal, and to keep him with her; in the meantime the parts of the West were ravaged by Juno; until Jupiter, who was her husband, herdsman of the cattle of Atlas, and his chief companion, came to her and threatened to take away her lover. She was at length forced to consent to his departure. She gave the hero tools to build a raft or light vessel, supplied him with provisions, and reluctantly took a final leave of him. — The name Calypso means "the Concealer," the poet, after his usual manner, giving her a significant appellation. As regards her island, Homer seems to have conceived Ogygia to lie to the southeast of the parts of the West from all other isles and coasts; and he thus brought his hero into all parts of that sea, and informed his auditors of all its wonders. (Keightley's Mythology, p. 274, seq.)

Camalodunum, the first Roman colony in Britain, established under Claudius. Its situation agrees with that of the modern Maldon, according to Cluver and cellarius. (Tacit., Ann., 12, 32.—Id. ib., 14, 91.)

Camacum, a city of the North, 17 Belgie Gae, east of Nemetacum, now Cambrey (Cammeric) Camarina, a city of Sicily, near the southern coast, on the river Hippariss. (Sokol. ad Pind., Ol., 5, 19.)

Camarena, a city of the modern Maltese, according to Cluver and cellarius. (Tactit., Ann., 12, 32.—Id. ib., 14, 91.)

Cramer's Anc. Gr. N., 7 Belgie G. Camarina, a city of Sicily, near the southern coast, on the river Hippariss. (Sokol. ad Pind., Ol., 5, 19.)

It was originally founded by a colony from Syracuse, but, proving subsequently disobedient, it was destroyed by the parent state, and the ground on which it stood was sold to Hippocrates, tyrant of Gela, as a ransom for some Syracuse captives. Hippocrates rebuilt the city; but his successor, Gelen, after having obtained the sovereignty of Syracuse, transferred the inhabitants of Camarina to the former city, and thus again was Camarina destroyed. (Herodot., 7, 156.)

Dissensions in Syracuse enabled the Gallienses to rebuild Camarina; according to Timaus, in the 824 Olympiad, but according to Diodorus at the end of the 79th. This city, however, seemed destined to be still unfortunate. It again suffered from the elder Gelaen, and was abandoned to become a wilderness. When Timoleon, after the overthrow of tyranny, gave peace to the whole island, Camarina again received. (Diod. Sic., 16, 82.) It suffered once more, however, in the contest between Carthage and Agathocles; and finally, in the first Punic war, was severely
punished by the Romans for having admitted Carthaginian troops into its walls. From this time it remained an inaccessible city. In the neighbourhood of the place, on a low island, elevated at high water, but when the tide fell it became a marsh. This marsh yielded exhalations which produced a pestilence, and the inhabitants consulted an oracle whether they should drain it. Although the oracle dissuaded them, they drained it, and opened a way to their enemies to come and plunder their city. Hence arose the proverb, from the words of the oracle, αὐτὸς ἴσαριπώτα, "mors et Camarina," applied to those who, by removing one evil, will bring on a greater. Nothing now remains of this city but some ruins, and the name Camarana, given by the natives to a town and a neighbouring marsh. (Virg., Enn., 3, 701.)

CAMBUNI MONTES, a chain of mountains forming the southern boundary of Macedonia, and separating that country from Thessaly. (Lis., 42, 53.—Id., 44, 2.)

CAMYTÉS, I. an early monarch of the line of the Achemenides, the successor of Tissæus, who was himself the successor of Achæmenes. He must not be confused with Cambyses, the son of Cyrus, who was, in fact, the second of the name in the line of Persian kings. (Herod., 7, 11.—Consult Bähr and Larcher, ad loc.)—II. A Persian of good family, but peaceful disposition, to whom Astyages, king of Media, gave his daughter Mandane in marriage. (Vid. Astyages.)

The issue of this union was Cyrus the Great. (Herod., 1, 45.—Id., 1, 107.)—III. The son and successor of Cyrus the Great, ascended the throne of Persia B.C. 530. Soon after the commencement of his reign, he undertook the conquest of Egypt, being excided to the step, according to the Persian account as given in Herodotus (3, 1), by the conduct of Amasis, the king of that country. Cambyses, it seems, had demanded in marriage the daughter of Amasis; but the latter, knowing that the Persian monarch intended to make him his wife, but his concubine, endeavoured to deceive him by sending her to his husband, the daughter of his predecessor Apries. The historian gives also another account beside this; but it is more than probable that both are untrue, and that ambitious feelings alone on the part of Cambyses prompted him to the enterprise. (Compare Dahlmann, Herod., p. 148.—Cruizer, ed Herod., I. c.) Amasis died before Cambyses marched against Egypt, and his son Psammenites succeeded to the throne. A bloody battle was fought between the Persians and Egyptians on the border of Egypt, and the Egyptians were put to flight, after which Cambyses made himself master of the whole country, and received tokens of submission also from the Cyrenaens and the people of Barca. The kingdom of Egypt was thus conquered by him in six months. Cambyses now formed new projects. He wished to send a squadron and subjugate Carthage, to conquer Ethiopia, and to make himself master of the famous temple of Jupiter Ammon. This object he did not think of in his conditions, however, did not take place, because the Phœnicians, who composed his naval force, would not go to attack one of their colonies. The army that was sent against the Ammonians perished in the desert; and the troops at whose head he himself had set out against the Ethiopians were compelled by hunger to retreat. How far he advanced into Ethiopia cannot be ascertained from anything that Herodotus says. Dionysius Siculus, however, says Cambyses had reached 67 degrees of latitude as far as the spot where Meroë stood, which city, according to this same writer, he founded, and named after his mother. His mother, however, was Cassandana. Josephus (Ant. Jud., 2, 10, 2) makes the previous name to have been merely changed by Cambyses to Meroë, in honour of his sister. (Compare Strabo, 790.) Both accounts are untrue. (Vid. Meroë.—After his return from Ethiopia, the Persian king gave himself up to the greatest acts of outrage and cruelty. On entering Memphis he found the inhabitants engaged in celebrating the festival of the re-appearance ofApis, and, imagining that he had arrived at the appointed time, he gave the signal to commence an attack. Astyages, taking advantage of the supposition that Apis was himself the object of the Macedonian's rage, forced him to his apartments, and, after a severe struggle, engaged the sacred bull to be brought before him, stabbed him with his dagger, of which wound the animal afterward died, and caused the priests to be scourged. (Herod., 3, 27, seqq.)

Cambyses is said to have been subject to epilepsy from his earliest years; and the habit of drinking, in which he now indulged to excess, rendered him at times completely furious. No relation was held sacred by him when intoxicated. Having dreamed that his brother Smerdis was seated on the royal throne, he sent one of his principal confidants to Persia, with orders to put him to death, a mandate which was actually accomplished. His sister and wife Atossa, who lamented the death of Smerdis, he struck with a blow of his foot, which brought on abortion. (Herod., 3, 30, seqq.)

These and many other actions, alike indicative of almost complete insanity, aroused against him the feelings of his subjects. A member of the sacerdotal order called the Magi availed himself of this discontent, and, aided by the strong resemblance which he bore to the murdered Smerdis, as well as by the exertions of a brother who was also a Magian, seized upon the throne of Persia, and sent heralds in every direction, commanding all to obey, for the time to come, Smerdis, son of Cyrus, and not Cambyses. The news of this usurpation reached Cambyses at a place in Syria called Ebataba, where he was at that time with his army. Resolving to return with all speed to Susa, the messenger was in the act of mounting his horse, when his word fell from its sheath and inflicted a mortal blow in his thigh. An oracle, it is said, had been given him from Butus, that he would end his life at Ebataba, but he always thought that the Median Ebataba was meant by it. He died of his wound soon after, B.C. 522, leaving no children. (Herod., 3, 61, seqq.)

Ctesias gives a different account. He makes Cambyses to have died at Babylon of a wound he had given himself on the femoral muscle, while shaving smooth a piece of wood with a small knife. (Ctes., Excerpt. Pers., § 12.) According to Herodotus (3, 66), Cambyses reigned seven years and five months. Ctesias says eighteen years; but there must be some error in this. Clemens of Alexandria gives ten years. (Clém. Alex., Strom., 1, p. 385.)—IV. A river of Asia, which rises, according to Pompianus Mela (3, 5), at the foot of the Mong Ctenius. It is a mountain of Carnium, at the vicininity of the sources of the Cyrus. After flowing through Iberia and Hyrcania, it joins the Cyrus, and the united streams empty into the Hyrcanian Sea. (L. Martiniere (Dict. Geog.) remarks, that there is no river in modern times answering to this description of the Cambyses. "Vossius thinks that Mela intended to designate the Araxes, but the sources of this river are too far distant. Hardouin, suspecting that Ptolemy confounds the Cambyses with the Araxes, says he believes it to be the same with the Soana of this geographer: he goes, however, too high towards the northern extremity of Albania. (Hardouin, ad Plin., 6, 13, not. 7.)

CAMERINUM, a town of Umbria, on the borders of Picenum. It was a Roman colony and a city of some note, and must not be confounded with the Cameret near Strasburg, an error into which Cluverius fell. (Bat. Ant., 1, 35; Th., 2, 27; Th.: name is Camerino. (Cas., Bell. Civ., 1, 15, Cic. ad Attic., 8, 12.—Ptol., p. 62.) Appian calls it Camerina. (Bell. Civ., 5, 50.—Cramer’s Anc. Italy, vol. 1, p. 262.)

CAMERTA, a town of Umbria, between Tuder and Ameria. (Strab., 227, seq.—Consult the remarks of Cramer, Anc. Italy, vol. 1, p. 274.)

CAMILLA, queen of the Volsci, was daughter of Metelsus, and wife to Mecurdillus. Her father, who reigned at Priver-
num, having by his tyranny rendered himself odious to his subjects, was by them expelled from his dominions, and forced to take refuge from their fury in the lonely woods. Here he bred up the infant Camillus, the sole companion of his flight; and, having dedicated her to the service of Diana, he instructed her in the use of the bow and arrow, and accustomed her to the practice of martial and sylvan exercises. She was so remarkable for her swiftness, that she is described by the poets as flying over the corn without bending the stalks, and skimming over the surface of the waves without wetting her feet. Attended by a train of warriors, she led the Volsci to battle against Eneas. Many brave chiefs fell by her hand; but she was at length herself killed by a soldier of the name of Aruns, who, from a place of concealment, aimed a javelin at her. Diana, however, who had foreseen this fatal event, had conjoined mishaps to render the vengeance of Camillus more complete than if he had been slain in the combat by the arrows of the goddess. (Virg., Aen. 7, 803, seqq.—Id. ib., 11, 532, seqq.—Id. ib., 11, 648, seqq.) Tasso has applied this story of Camillus to Clorinda (B. 12, stanza 20, &c.).

Camillus (L. Furius), a celebrated Roman, called a second Romulus, from his services to his country. After filling various important stations, he was, in a short time, called to the supreme command, and the name of interrex, which had been used for the space of ten years resisted the Roman arms, he encountered at last the displeasure of his countrymen, and was accused of having embezzeled some of the plunder of this place. Being well aware how the matter would terminate, Camillus went into voluntary exile, although his friends offered to pay the sum demanded of him. During this period of separation from his country, Rome was taken by surprise; and three others whom the Romans were to avenge the death of Camillus, and Aruns was slain in his flight from the combat by the arrows of the goddess. (Virg., Aen. 7, 803, seqq.—Id. ib., 11, 532, seqq.—Id. ib., 11, 648, seqq.)

The story, however, was common among the Romans, that the gold which had been paid was recovered, and it is said to have been kept in the capitol, in the sanctuary of Jupiter (Plin., 33, 5), until the time of Crassus's sacrifice, and increased to double the amount by the addition of plunder. Yet, even according to Livy himself (5, 50), this Capitoline gold was no proof of it, and was rather collected from the treasures of different temples, which it was impossible to separate in order to restore them; and even the duplication might prove a replacing, according to custom, for the payment of the war-taxes. Livy thought it shocking and insufferable that the existence of Rome should have been purchased with gold; hence his narration, according to which the arrival of Camillus arrested the payment, is poetically consistent. Besides the bitter truth of Polybius, there are two other series of events which do not destroy the truth of the story. Gauls with the gold, but do not allow them to have derived any advantage thereby. Of the first class apparently is that of Pliny, already adduced; it is found most distinctly in Diodorus. According to him, Camillus recovered the ransom, and almost all the remaining booty, when relieving one of the allied towns which was besieged by the Gauls. (Diod., 14, 117.)

The other story seems to have deemed it sufficient for the honour of Rome, and the Gauls did not carry home the gains of their victory. It deposes as a witness to the unplausible truth revealed by Polybius. On its authority Strabo relates of the Cætiniacs, that they defeated the Gauls on their return from Rome, and wrested from them the booty which they were carrying off. (Strabo, 220.) Diodorus also has the story of a victory gained by this nation over the Gauls that were returning from Apulia; he blends the two accounts together. Rome, if the Juv. Hist., vol. 3, p. 292, Walker's transl.—Compare the remarks of Arnold, Hist. of Rome, vol. 1, p. 547, seqq.)

Camirus, a town of the island of Rhodes, on the western coast. It derived its name from a son of Cercaphus, one of the Heliadæ. We learn from Diodorus Siculus (5, 57), that Juno Telchinia was worshipped here. Pisander, the epic poet, was a native of Camirus. The place retains the name of Camirius. (Crémère's Asia Minor, vol. 2, p. 257.)

Campania, a district of Italy, below Latium, and for some time separated from it by the river Liris. All ancient writers who have treated of Italy bear witness to the frequent change of inhabitants which Campania more particularly has undergone in the course of its history. Attracted by the fertility of its soil, the beauty of its climate, and the commodiousness of its havens, successive invaders poured in and possessed each other until the superior ascendency of Rome left her the undisputed mistress of this garden of Italy. From these repeated contentions arose, as Strabo asserts, the fiction of the battle between the gods and giants in the Phlegrean plains. The true solution of this tradition, however, it may be observed in passing, refers itself to some early and tremendous volcanic eruption, since it would seem that there is a source of volcanic fire, at no great distance from the Faliscan territory, and the Latium of Fortunatus (Campania in Travel, p. 123, Am. ed.)—It is universally agreed that the first settlers in Campania with whom history makes us acquainted are the Oscans. (Antiochius Syrac. ap. Strab., 234.—Plin., 3, 5.) Even when the Oscan name had disappeared from the rest of Italy, the Oscan
language was retained by the inhabitants of Campania, though mingled with the dialects of the various tribes which afterwards obtained possession of that prize country. Of these, the next to be mentioned are the Tuscanians, who are stated to have extended their domination at an early period both to the north and south of that portion of Italy, which is considered as more properly belonging to them. When they had effected the conquest of Campania, that province became the seat of a particular empire, and received the federal form of government, centred in twelve principal cities. (Strabo, 3, 3, 3, 25.—Seneca, Nat. Lib. 1. 1.)—Puteoli, Marcello, formed by Flor., Silv., 1. 61—Polyb. 2. 2—Gell. 6. 10.—

CONCERNING THE LAND TO WHICH MARTIUS FELT APPLYING THE PRIZED DISTRICT, WHICH HE HAD FORMED OF IT. (Flor., Silv., 1. 61. Polyb. 2. 2.)—It is from this period that we must date the origin of the Campanian nation, which appears to have been thus composed of Oscans, Tuscanians, Samnites, and Greeks, the latter having formed numerous colonies on these shores. About eighty years after, the Romans gladly seized the opportunity of adding so valuable a portion of Italy to their dominions, under the pretence of defending the Campanians against their former enemies the Samnites. From this time Campania may be regarded as subject to Rome, if we except a short interval in which the brilliant successes of Hannibal withdrew from it the inhabitants from their allegiance; an offence which they were made to expiate by a punishment, the severity of which has few examples in the history, not of Rome only, but of nations. (Liv., 26, 14, seqq.)—The natural advantages of Campania, its genial climate and fertile soil, so rich in various productions, are a favourite theme with the Latin writers, and elicit from them many an eloquent and animated tribute of admiration. Pliny, in particular, styles it, "Felix illa Campania, certamina humana voluptatis!" (Cramer's Ancient History, vol. 2, p. 143, seqq.)

CAMPARESE, a beautiful female whom Alexander bestowed upon Apelles. (Vid. Apelles.)

CAMPY, I. CANINI, plains situate in the country of the Mesiates, in Cisalpine Gaul, whose territory corresponded to the modern Val di Misocco. (Amm. Marcell., 15, 10.)—II. DIOMEDES, the plains in Apulia on the coast of the Adriatic, and the Candeans were settled there. (Livy, 10, 24, 42.—Liv., 25, 11.—Strab., 383.)—III. LABORINI, a name applied to the district between Cuma and Putoile, now Terra di Lavoro. The modern name is probably derived from the ancient. (Plin., 3, 5.)—IV. RAUDII. (Vid. Raudii Campi.)—V. TAURASINI, a name given to the territory of Taurasia, in Samnium. Pyrrhus was defeated here by Dentatus. The name is often incorrectly given as Campi Arusini. (Flor., 1, 18—Frontin., Strateg. 4, 1—Oros, 4, 5.)

Campauros Martius, a large plain at Rome, without the walls of the city, where the Roman youths performed their gymnastic exercises. Public assemblies were often held here, magistrates chosen, and here, too, audience was given to such ambassadors as the senate did not choose to admit within the city. The bodies of the dead were also burned here. The Campus Martius, as we learn from Liv. (2, 5), was large enough for the use of the Roman people, to which was consecrated with the remaining property of that king after his expulsion, was dedicated to Mars. But Dionysius of Halicarnassus affirms (5, 13) that it had been consecrated before, but, having been seized by Tarquin, was recovered afterward by the people. And this account is more probable, as Festus quotes a law of Numa in which mention is made of the Campus Martius (s. v. Silvatarit), and Livy himself seems to allow the name to be as ancient as the reign of Servius Tullius. (1, 44.) In the Latin poets we generally find it designated under the simple name of Campus. The Campus Martius existed in the principal situation of modern Rome. In the reign of Augustus, when the city had extended itself far beyond the lines of Servius Tullius, a great part of the Campus Martius was enclosed and occupied by public buildings, more especially by the great works of Agrippa. A considerable expanse of meadow was left open, however, at that time, as we learn from Strabo (236), who has accurately described its situation and appearance. It was then that the youths of Rome engaged in martial sports and exercises, while the neighbouring waters of the Tiber afforded them a salutary refreshment after their fatigue. Strabo also informs us, that the Campus Martius was surrounded by many porticoes and sumptuous buildings. These were principally the structures erected by Agrippa. In times posterior to the age of the geographer, we find that Nero constructed baths in this part of the city. (Cramer's Ancient History, vol. 1, p. 486.)

CANARI, the largest of the cluster of islands called by the ancients Beate and Fortunate Insulae, and now Canary Islands. Pliny says, that this island derives its name from the number of very large-sized dogs which it contained, and that two of these were brought over to Africa for King Juba. (Plin., 6, 32.—Vid. Fortunatins Insulae.)

CANDACE, a name given to the queen-mothers in Meroë, in Ethiopia. Some females of this name appear in history, but they seem to have been mere queen-regents, governing during the minority of their sons. Some ancient authors, however, state, that it was customary for the Ethiopians to be governed by queens called by the name of Candace. (Compare Plin., 6, 29, but especially Eusebius, Hist. Ecc. 2, 1: κατά το πάντων άήτων υπό γενεατού τού διώκει επίσης τών βασιλευμένων.) Suidas speaks of a Candace who was made prisoner by Alexander the Great; but this appears to be a mere fable. — A Candace, blind of one eye, made an irruption into Egypt during the reign of Augustus, B.C. 20. She took and pillaged several cities, but Petronius, the prefect of Egypt, pursued her, penetrated into her dominions, which he pillaged in turn, until she restored the booty which she had carried off from Egypt, and sued for peace. (Dio Cass., 54, 5.—Plin., 6, 29.)— Mention is also made in the sacred writings of a queen of Ethiopia named Candace. (2 Esdr., 27.—Concil. Caesareum ad loc.) There is a gloss given by Alberti (Gloss. N. T., p. 213), in which it is said that the Ethiopian had no particular or individual name for their kings, but styled them all "sons of the Sun," whereas the queen-mother they called Candace, as above. Now in the Lydian language Candalewas was an appellation for Hercules, or the Sun. (Bühler ad Herod., 1, 12.) Possibly, therefore, the word Candace, in the ancient Ethiopian, may be of cognate origin with Candaleus in the Lydian language, the sounds of which word were apparently the same, and may signify "a daughter of the Sun."

CANDAVILA, a district of Macedonia, bounded on the east by the Candavian mountains, supposed by some to be the same with the Communion Montes of Livy, and the Canavulis Montes of Ptolemy. (Strab., 323.—Lucan, 6, 331.)

CANDAULES, a monarch of Lydia, the last of the Heracleidae, deposed by Gyges at the instigation of his own queen. (Concil. Herod., 1, 7, seqq.) His true name appears to have been Myrsilus, and the appellation of Candaules to have been assumed by him as a title of honour, this latter being, in the Lydian language, equivalent to Hercules, i. e., the Sun. (Bühler ad Herod., 1, 12.)

CANEPOHORI (Κανεπόφοροι), a select number of virgins of honourable birth, who formed part of the procession in the festival called Dionysia, celebrated in...
honour of Bacchus. They carried small baskets of gold, containing fruit and various sacred and mysterious things. (Clem. Alex. Protr., p. 19. — Aristoph., Acharn., 241, seqq.) They wore around their necks a collar of dried legs. (Compare Aristoph., Lysistr., v., 204, and Ménesth. du Paganisme, vol. 2, p. 87, with the note of De Sacq.)

Caniculae dis, certain days in the summer, preceding and ensuing the heliacal rising of Canicula, or the dog-star, in the morning. The ancients believed that this star, rising with the sun, and joining his influence to the fire of that luminary, was the cause of the extraordinary heat which usually prevailed in that season; and accordingly they gave the name of dog-days to the eight weeks of the hottest part of summer. This idea originated with the Egyptians, and was borrowed from them by the Greeks. The Romans sacrificed a brown dog every year to Canicula, at its rising, to appease its rage. (Consult remarks under the article Sirius.)

Candia, a reputed sorceress at Rome, ridiculed by Horace. (Epod. 5.)

Caminatae, a people of Germania Superior, of considerable size, living with the Batavi, and inhabiting the western part of the Insula Batavorum. The name is written differently in different authors. (Vell. Paterc., 2, 105.—Plin., 4, 15.—Tacit., His. 4, 15.)

Caninius, C. a consul along with Julius Caesar. Q. Fabius Maximus, the regular colleague of Caesar in the consulsip, died on the last day of his official year, in the morning, and Caesar caused Caninius to be elected in his stead, although only a few hours remained for enjoying the consulsip. Caninius, therefore, was chosen consul at one o'clock P.M. on the 31st December, and held office until midnight, the end of the civil year, and commencement of the calendar year. As we may suppose that the newly-appointed consul would hardly retire to rest before midnight, we can understand the jest which Cicero uttered on this occasion, that Rome had in Caninius a most vigilant consil, since he had never closed his eyes during the period of his consulsip. This mode of conferring office was intended to conciliate friends, for the individual thus favoured enjoyed, after his brief continuance in office, all the rights and privileges, together with the honorary title, of a man of consular rank. (Cic., Ep. ad Fam., 7, 30.)

Canne, a small village of Apulia, situated about five miles from Canusium, towards the sea, and at no great distance from the Aulius. It was celebrated for the duel which the Romans fought against the Gauls (whom the latter called the Bretoni). Hannibal tells us in his 'memoirs' that, as a town, it was destroyed the year before the battle was fought, which took place May 21st, B.C. 216. The citadel, however, was preserved, and the circumstance of its occupation by Hannibal seems to have been regarded by the Romans of sufficient importance to cause them considerable uneasiness and annoyance. It commanded, indeed, all the adjacent country, and was the principal southern depot of stores and provisions on which Hannibal intended to depend for the approaching campaign. The Greek writers, especially Polybius, use the name in the singular, Kova. There is an exception to this, however, in the 15th book, c. 7 and 11, where the plural form is used by the historian just mentioned. — The decisive victory at Cannae was owing to three combined causes: the excellent arrangements of Hannibal, the superiority of the Numidian horse, and the skilful manoeuvre of Hasdrubal in the centre, leaving his veterans to lead the van of the Romans, while he employed the heavy horse, divided into small parties, in repeated attacks on different parts of the Roman rear. The Roman army contained 80,000 infantry and 6000 cavalry, the Carthaginians 40,000 infantry and 10,000 cavalry. Hannibal drew up his forces in the form of a concave crescent, having his centre thrown forward before the wings. He commanded in the centre in person, and here he had purposely stationed his worst troops; the best were posted at the extremities of each wing, which would enable them to act with decisive advantage as bodies of reserve: they being, in the rear of the other forces. Hasdrubal commanded the left wing, Hannibal the right. On the Roman side, want of union between the two consuls, and want of spirit among the men, afforded a sure omen of the fortune of the day. Emilius commanded the right, Varro the left wing; the proconsuls Regulus and Servius, who had been consuls the preceding year, had charge of the centre. What Hannibal foresaw took place. The French army of the Roman camp, with the superiority in numbers, at length broke his centre, which, giving way inward, his army now assumed the shape of a concave crescent. The Romans, in the ardour of pursuit, were carried so far as to be completely surrounded. Both flanks were assailed by the veterans of Hannibal, who were armed in the Roman manner; at the same time the cavalry of the Carthaginians attacked their rear, and the broken centre rallying, attacked them in front. The consequence was, that they were broken to pieces. The two consuls, together with Emilius the consul, were slain. Varro escaped with 70 horse to Venetia. The Romans lost on the field of battle 70,000 men; and 10,000 who had not been present in the fight were made prisoners. The Carthaginian loss amounted to 5500 infantry and 200 cavalry. Such is the account of Polybius, whose statement of the fight is much clearer and more satisfactory than that of Livy. Hannibal had been ordered immediately to Rome after the battle, in which city all was consternation. But a defence of his conduct may be found under the article Hannibal, which see. (Polyb., 3, 113, et seqq.—Liv., 22, 44.—Flor., 2, 6.—Plut., Vit. Hannib.)

Canopicium (or Canoscium) ostium, the westernmost mouth of the Nile, twelve miles from Alexandria. Near its termination is the lake Madie or Maahid (de-noting, in Arabic, a passage), which is the remains of this branch. This lake has no communication with the Nile, except at the time of its greatest increase. It is merely a salt-water lagoon. The Canopic mouth was sometimes also called Nevarasticum Ostium and Herbacleostium Ostium. (Herod., 2, 17.—Diod. Sic., 1, 33.—Plin., 5, 10.—Mela, 1, 9.)

Canopus (or Canobus), a city of Egypt, about twelve miles northeast of Alexandria, and a short distance to the west of the Ostium Canopicum. The Greek writers give the name as Kanopicus (Kanopic); the Latins, Canopus. The form Kanojus occurs also in Scylax (p. 43), but the reference there is to the island and formed by the mouth of the Nile in this quarter. — Canopus was a very ancient city, and most probably of Egyptian origin, since we are informed by Diodorus Siculus (1, 33) that each mouth of the Nile was defended by a fortified city, and since the Ionian Greeks, who came first to this quarter, were only allowed the use of it, and the name of their city was transferred. When and where the name of the place arose is unknown. It came, very likely, from the brilliant star Canopus, which one beholds, even in the southern regions of Asia Minor, on the edge of the horizon, but which was seen to rise in full splendour by a spectator on the coast of Egypt. The Greek writers, however, not knowing any better derivation for the name, deduced it from that of the pilot of Menelaus, who was said to have been called Canopus. Canopus has been variously interpreted here. Herodotus makes no mention of this legend, but Scylax speaks of a monument in this quarter which Menelaus, as he informs us, erected here in memory of his pilot. Previous to the founding of Alexandria, Canopus must have been a very important place, since it formed the chief centre of communication between the interior of Egypt and other countries lying to the
north. It sank, however, in importance after Alexander was built, and merely retained some consequence from its temple and oracle of Serapis, which latter was consulted during the night, and gave intimations of the future to applicants while sleeping within the walls of the structure. The festivals, also, that were celebrated at this temple, drew large crowds of both sexes from the adjacent country, and exercised an injurious influence on the morals of all who took part in them. Canopus, in fact, was always regarded as a dissolute place, and amidst all the grandeur of its features Alexander arose, it was much frequented by the inhabitants of the capital for purposes of enjoyment and pleasure, the temperature of the air and the situation of the city being spoken of in high terms by the ancient writers. (Amm. Marcell., 22, 16.) The festivals of Serapis ceased on the introduction of Christianity, and from that period history is silent respecting Canopus. The French savans and some traces of the ancient city a short distance to the west of the modern Aboukir. (Mannert, Geogr., vol. 10, pt. 1, p. 541, seqq.)

Cantabria, a warlike and ferocious people of Spain, who long resisted the Roman power. Their country answers to Biscay and part of Asturias. Augustus marched in person against them, anticipating an easy victory. The desperate resistance of the Cantabrians, however, induced him to retire to Tarraco, and leave the management of the war to his generals. They were finally subdued by Scipio Africanus, and the country decreed to be sold as slaves. Most of them, however, preferred falling by their own hands. The final reduction of the Cantabri was effected by Agrippa, A.U.C. 734, after they had resisted the power of the Romans in various ways for more than two hundred years. (Liv. Eutp., 48.—Flor., 4, 12.—Plin., 3, 2.—Horat., Od., 3, 8, 22.)

Cantium, a country in the southeastern extremity of Iberia, and called Kent. The name is derived from the British word cant,signifying an angle or corner. (Consult Adlocut. Gloss. Med. et Inf. Lat., vol. 2, p. 133, s. v. cantu.)

Canulcia lex, a law proposed by C. Canuleius, tribune of the commons, A.U.C. 310, and allowing of intermarriages between the patricians and plebeians. (Liv., 4, 1.)

Canusium, a town of Apulia, on the right bank of the Sele, about six miles from its mouth. The origin of Canusium seems to belong to a period which reaches far beyond the records of Roman history, and of which we possess no memorials but what a fabulous tradition has conveyed to us. This tradition ascribes its foundation to Dionede, after the close of the Trojan war. Perhaps, however, we should see in Dionede one of those Pelasgic chiefs, who, in a very distant age, formed settlements in various parts of Italy. Canusium appears to have been in its earlier days a large and flourishing place. It is said by those who have traced the circuit of the walls from the remaining vestiges, that they must have embraced a circumference of sixteen miles. (Pratilli, Vita Appia, 4, 13.—Romanelli, vol. 2, p. 265.—Compare Strabo, 28.) The splendid remains of antiquity discovered among the ruins of Canusa, together with its coins, establish the fact of the Grecian origin of this place. Antiquaries dwell with rapture on the elegance and beauty of the Greek vases of Canusa, which, in point of size, numbers, and decorations, far surpass those discovered in the tombs of any other ancient city, not even excepting Nola. (Milingen, Peintures Antiques des Vases, &c.)—Horace alludes to the mixed dialect of Ocean and Greek, in the expression employed by him, "Canusini more bilinguis." (Sat., 1, 10, 30.)—It is stated, that the small remnant of the Roman army, which escaped from the slaughter of Cannae, took refuge here. Livy records the generous treatment they experienced on that occasion from Busa, a wealthy lady of this city (22, 59). Philostratus in forms us (Vit. Sophist.), that Hadrian colonized this place, and procured for it a good supply of water, of which it stood much in need, as we know from Horace. (Sat., 1, 5, 90.) The same poet complains also of the grittiness of the bread. (Cramer's Anc. Italy, vol. 2, p. 292.)

Capaneus, an Argive warrior, son of Hipponous. He was one of the seven leaders in the war against Thèbes (nd. Adrastus), and is often alluded to by the ancient poets as remarkable for his daring and impetuosity. Having boasted that he would take the Theban city, in spite of even of Jove, this deity struck him with a thunderbolt as he was in the act of ascending the ramparts. When his body was being consumed on the funeral pile, his wife Evadne threw herself upon it and perished amid the flames. Aesculapius was fabled to have restored Capaneus to life. (Apollod., 3, 6, 9.—Id., 3, 6, 7.—Id., 37, 2.—Id., 9, 10, 3.—Etch., Sept., c. Theb., 427, seqq.—Heyne, ad Apol., 3, 6, 3.)

Capella, a king of Alba, who reigned twenty-six
years. (Consult, however, the remarks under the article ALBA.)

Capitellus, a lofty mountain and promontory at the southeastern extremity of Eubea, where Nautilus, king of the country, to avenge his son Pala- medes, put to death through the false accusation brought against him by Ulysses, set a burning torch in the darkness of night, which caused the Greeks to be shipwrecked on the coast. It is now called Capo d’Oro, and, in the infancy of navigation, was reckoned very dangerous on account of the rocks and whirlpools on the coast. (Eurip., Troad., 88. — Id., Hel., 1136. — Virg., Aen., 11, 260. — Ovid, Met., 14, 481. — Pro- pert., 4, 1, 115.)

Capito, I. the uncle of Paterculus, who joined Agrippa against Cæsarius. (Vell. Patrc., 2, 63.) II. Fonteius, a Roman nobleman sent by Antony to settle the difficulties with Augustus. (Horat., Serm., 1, 5, 32.)

Capitolinus, I. a surname of Jupiter, from his temple on Mount Capitolinus. — II. A surname of M. Manlius, who, for his ambition in aspiring to sovereign power, was thrown down from the Tarpeian Rock, which he had so nobly defended. — III. Mons, one of the seven hills on which Rome was built, containing the citadel and fortress of the Capitol. Three ascents led to this prominent citadel from the 15 steps of the Tarpeian Rock, which was probably on the steepest side, where it overhangs the Tiber. (Compare Tacit., Hist., 3, 71. — Liv., 5, 46. — Plut., Viti. Camill.) 2d. The Clivis Capitolinus, which began from the arch of Tiberius and the temple of Saturn, near the present hospital of the Consolatione, and led to the citadel by a winding path. (Ovid, Fast., 1, 261.) 3d. The Clivus Aayli, which, being less steep than the others, was on that account the road by which the triumphant generals were borne in their cars to the Capitol. This ascent began at the arch of Septimius Severus, and from thence, winding to the left, passed near the ruined pillars of the temple of Concord, as it is commonly but improperly called, and from thence led to the Intermontium. The Capitoline Hill is said to have been previously called Saturnius, from the ancient city of Saturnia, of which it was the citadel. Afterward it was known as Mons Tarpeius, and finally it obtained the appellation first mentioned, from the circumstance of a human head being discovered on its summit, in making the foundations of the temple of Jupiter. (Varro, L. L., 4, 8.) It was considered as forming two summits, which, though considerably depressed, are yet sufficiently apparent. That which looked to the south and the Tiber was the Tarpeian Rock or citadel; the other, which was properly the Capitol, faced the north and the Quirinal. The space which was left between these two elevations was known by the name of Intermontium. — IV. An appellation said to have been given to an individual named Petilius, who had been governor of the Capitol. (Compare the scholiast on Horace, Sat., 1, 4, 94.) It is also related, that he was accused of having stolen, during his office, a golden crown, consecrated to Jupiter, and that, having pleaded his cause in person, he was acquitted by the judges, in order to gratify Augustus, with whom he was on friendly terms. One part, at least, of the story is incorrect, since the Capitolini were a branch of the Petilian family long before this time. (Compare Vaiiulat, Num. fam. Rom., vol. 2, p. 222.) What degree of credit is to be attached to the rest of the narrative is uncertain. — (Consult V. Wieland, ad Horat., 1, c.) — V. Julius, one of those latter Roman historians, whose works form what has been termed the Augustan History. He lived during the reign of Diocleian and Constantine the Great, and we have from him the lives of Antoninus Pius, Marcus Aurelius, Verus, Pertinax, Albinus, Macrinus, the two Maximines, the three Gordians, Maximus, and Balbinus. He wrote other lives also which have not reached us. The greater part of his biographies are dedicated to Diocleian and Constantine. His works show carelessness and want of proper arrangement. (Bähr, Gesch. Röm. Lit., vol. 1, p. 464. — Möller, Dissert. de Julio Capitol., Aldtort, 1689, 4to.)

Capitolium, a celebrated temple and citadel at Rome, on the Tarpeian Rock. The foundations were laid by Tarquinius Priscus, A.U.C. 139, B.C. 615. The walls were raised by his successor Servius Tullius, and Tarquinius Superbus finished it, A.U.C. 231, B.C. 533. It was not, however, consecrated until the third year after the expulsion of the kings. This ceremony was performed by the consul Horatius. It covered 5 acres, was 200 feet broad, and about 215 long. It consisted of three parts, a nave sacred to Jupiter, and two wings or aisles, the right sacred to Minerva, and the left to Juno. The ascent to it from the forum was by a hundred steps. The magnificence and richness of this temple are almost incredible. All the consuls successively made donations to the Capitol, and Augustus bestowed upon it at one time 2000 pounds weight of gold. The gilding of the whole arch of the temple of Jupiter, which was undertaken after the destruction of Carthage, cost, according to the account of Plutarch, 104,000 pounds, of which 52,000 were of brass, covered with large plates of gold. The inside of the temple was all of marble, and was adorned with vessels and shields of solid silver, with gilded chariots, &c. The Capitol was burned in the time of Sylla, A.U.C. 679, B.C. 84, through the negligence of those who kept it, and Sylla rebuilt it, but died before the dedication, which was performed by Q. Catulus, A.U.C. 675. It was again destroyed in the troubles under Vitellius, in December, A.D. 69; and Vespasian, who endeavoured to repair it, saw it again in ruins at his death. Domitian raised it again for the last time, and made it more grand and magnificent than any of his predecessors had, and spent 12,000 talents in gilding it. — The ordinary derivation of the term Capitolium is deservedly ridiculed by a modern tourist: — "It was in digging the foundation of the temple of Jupiter Capitolinus that a human head was found, which, according to their account, was the head of Mons Tarpeius, and that the name of the temple was derived from him. But this is to be emblazoned of future empire. The hill, in consequence, which had been originally called Saturnius, and then Tarpeius, was now denominated Capitolitus (Caput Oci), because this head, it seems, belonged to somebody called Tullius or Olarius, though how they knew the man’s name from whose site I never could discover." (Rom. n. the Nineteenth Century, vol. 1, p. 179.) Equally unfortunate is the etymology assigned by Noe, who deduces Capitolitus from caput (τοῦ) πτόλεμος, where πτόλεμος is the old form for πόλεως, and which old form, in the process of time, dropped the π instead of the τ! (Etymol. Handwörter, vol. 1, p. 128.)

Cappadocia, a country of Asia Minor, bounded on the north by Galatia and Pontus, west by Phrygia east by the Euphrates, and south by Cilicia. Its eastern part was called Armenia Minor. The term Cappadocia, under the Persians, had a more extended meaning than in later geography: it comprised two satrapies, Cappadocia the greater and Cappadocia on the Pontus Euxinus. The first satrap of the greater Cappadocia was a member of the royal family of Persia, and a kind of hereditary succession seems to have prevailed, which the great king probably allowed, because he could not prevent it. The founder of this dynasty was named Anahaspis. (Ramus, Hist. Phil., Cod., 244, p. 1157,) was one of the seven conspirators who slew the false Smerdis. Datames, the grandson of Anahaspis, was the first regular sovereign of this Cappadocian dynasty; and after him and his son Ariamnes, we have a long list of
princes, all bearing the name of Ariarathes for several generations. (Vid. Ariarathes.)—Cappadocia was surrounded on three sides by great ranges of mountains, besides being indented by others forming the gentle peninsula. Hence its mineral productions were various and abundant, and a source of wealth to the country. Strabo specifies the rich mineral colour called Sinople, from its being exported by the merchants of Sinope, but which was really dug in the mines of Cappadocia: also, onyx; crystal; a kind of white agate, employed for ornamental purposes; and the lapis specularis: this last was found in large masses, and was a considerable article of the export trade. The champagne country yielded almost every kind of fruit and grain, and the wines of some districts vied with those of Greece in strength and flavour. Cappadocia was also rich in herds and flocks, but more particularly celebrated for its breed of horses; and the onager, or wild ass, aboundcd in the mountains towards Lycaonia. (Strab., 533, seqq.)—Herodotus informs us, that in the days of Cyrus and Croesus the people commonly known in history by the name of Cappadocians were termed Syrians by the Greeks, while the Persians employed the more usual appellation. (Herod., 1, 72.—Id., 7, 72.) A portion, moreover, of this same nation, who occupied the coast of Pontus and Phaphagonia, about Sinope and Anzus, long retained the name of Leucosyri, or white Syrians, to distinguish them from the more swarthy and southern inhabitants of Syria and Palestine. (Strab., 544.) The origin of the Cappadocians, therefore, unlike that of most of the other nations of Asia Minor, was of Asiatic growth, unmixed with the Thracian hordes which had overrun Phrygia and all the western part of the peninsula. (Cramer's Asia Minor, vol. 2, p. 105, seq.)—The Cappadocians bore among the ancients the character of volatility and faithlessness. They were also made the subject of sarcastic remark, for having refused freedom when it was offered them by the Romans, and for having preferred to live under the sway of kings. (Justin, 38, 2.) There was nothing, however, very surprising in this refusal, coming, as it did, from a people who knew nothing of freedom, and who had become habituated to regal sway. Their moral character is severely satirized in the well-known epigram, which states that a viper bit a Cappadocian, but died itself from the poisonous and corrupt blood of the latter!—The Greeks and Romans found in this country few towns, but a number of strong castles on the mountains, and large villages in the neighbourhood of celebrated temples, to which the latter served as a kind of fortress. Most of these villages became cities in the time of the Romans, when this people had destroyed the castles and strongholds on the mountains. (Mannert, Geogr., vol. 6, pt. 2, p. 216, seq.)

CAPPADOX, a river of Cappadocia, bounding it on the side of Galatia, and falling into the Halys. (Plin., 6, 3.)

Cabra, a mountainous island, south of Baleares Major or Majorca, round about which it abounds in numerous goats (capra, capra). The modern name is Cabrera. (Pliny, 3, 6.)—II. One of the Fortunate Islands, or Canaries. Some make it the modern Palma, but it answers rather to Gomera. (Mannert, Geogr., vol. 10, pt. 2, p. 638.)

Capreae, an island off the coast of Campania, situated near the promontory of Minerva. It is now Capri. This island is chiefly known in history by the name of its infamous debauchee. (Sueton., Tib., c. 42, seqq.—Tacit., Ann., 6, 1.— Dio Cass., 58, 22.)—Tradition reported, that this island was first in the possession of the Teleboan, who are mentioned as a people of Greece, inhabiting the Echidnadoes, a group of islands at the mouth of the Acheulius, in Arcarnania; but how they came to settle in Capreae no one has informed us. (Compare Schol. in Apoll. Rhod., Argon., 1.) Augustus was the first emperor who made Capreas his residence, being struck, as Suetonius relates, by the happy presage of an old decayed tree that had been struck by a thunderbolt. Not long after, he obtained the island from the Roman politicians, by giving them in exchange that of Ischia, which belonged to him. (Suet., Aug., 92.) Tiberius was led to select this spot for his abode, from its difficulty of access, being cut off from all approach, except on one side, by lofty and perpendicular cliffs. The mildness of the climate and the beauty of the prospect, which extends over the whole bay of Naples, might also, as Tacitus remarks, have influenced his choice. He caused twelve villas to be erected, which he is supposed to have named after the twelve chief deities. (Tacit., Ann., 4, 67.) The ruins of the villa of Jove, which was the most conspicuous, are still to be seen on the summit of the cliff looking towards Sorrento. It is probably the same with the Arc Tiberis of Pliny (3, 6.)—The island of Capri, at the present day, abounds so much with various birds of passage, but especially with quails, that the greatest part of the bishop's income arises from this source. Hence it has been called the "Bishopric of Quails." In bad years the number caught is about 12,000, in good years it exceeds 60,000. The island is surrounded by steep rocks, which render the approach to it very dangerous. In the centre the mountains recede from each other, and a vale intervenes, remarkable for its beauty and fertility. The climate of the island is a delightful one; the lofty rocks on the coast keep off the cold winds of winter, and the seashore tempera the heat of summer. (Malte-Brun, Geogr., vol. 4, p. 240, Brussels ed.)

Capsa, a town of Libya, in the district of Byzacium, north of the Palus Tritionis, surrounded by vast deserts. Here Jugurtha kept his treasures. It was surprised by Marius; and was destroyed in the war of Caesar and Metellus Scipio. It was afterward rebuilt, and is now Cafasa. Sallust (Bell. Jug., 94) ascribes the origin of this place to the Libyan Hercules. Diodorus Siculus also (4, 19) speaks of a large city, called Hecatontypos, from its hundred gates, and which was founded in a fertile spot in the desert by Hercules; as he was proceeding from Libya to Egypt. Hannibal is said to have taken this city during the first Punic war. (Diod., 2, 24, exc. 1.—Compare Polyb., 1, 73.) Mannert identifies Hecatontypos with Capsa, and strives to elucidate the fabulous ascribing to the place an Egyptian origin. (Mannert, Geogr., vol. 10, pt. 2, p. 636.) General Shaw derives the name of Capsa from the Punic captosa, "a bolt," "bar," or "rudder." (Phren. Mon., p. 421.)

Capua, a rich and flourishing city, the capital of Campania until ruined by the Romans. Its original name was Vulturnus, which was changed by the Tyrrhenians, after they became masters of the place, to Capua. This latter name was derived from that of their leader Capys, who, according to Festus, received the appellation of "Caenus" from his gigantic and enormous goats (capra, capra). The modern name is Cabrera. (Pliny, 3, 6.)—II. One of the Fortunate Islands, or Canaries. Some make it the modern Palma, but it answers rather to Gomera. (Mannert, Geogr., vol. 10, pt. 2, p. 638.)

Pelagian descent. Capua deeply offended them by opening its gates to Hannibal after the victory of Car-
na. The vengeance inflicted by the Romans was of a most fearful nature, when, five years after, the city
again fell under their dominion. Most of the senators and nobles were murdered; the greater part of the
remaining citizens were sold into slavery, and by a decree of the senate the Capuani ceased to exist as
a people. The city and territory, however, did not become thereupon deserted. A few inhabitants were allowed
to remain in the former, and the latter was, in a great measure sold by the Romans to the neighbouring
communities. Julius Caesar sent a powerful colo-
ny to Capua, and under the emperors it again flourish-
ed. But it suffered greatly in the following ages,
and was about to fall into a state of desertion by a
later age; so much so, in fact, that the Bishop Lan-
dulfus and the Lombard Count Lando transferred the
inhabitants to Cassilium, on the Vulturnus, 19 stadia
distant. This is the site of modern Capua. (Man-
nert, Geogr., vol. 9, pt. 1, p. 701, 766.)
CAPYS, I. a Trojan who came with Æneas into Ita-
y, and, according to the common, but erroneous, ac-
count, founded the city of Capua. (Vit. Capus, I. II.
A.D. 191.)—II. a Dacian of Asculum, by a daughter of the Simoüs.
The son of Anchises by Themis. (Ovid, Fast.,
4, 33.)
CAR, I. a son of Phoroneus, king of Megara. (Paus-
an., 1, 40.)—II. a Son of Manes, and regarded by
the Carians as the patron of their race. (Herod., 1,
171.—Strab., 693.)
CARACALLA, Antoninus Bassianus, eldest son of the
Emperor Severus. His name Caracalla was derived
from a species of Gallic enchanter, which he was fond
of wearing; that of Bassianus from his maternal grand-
father. Caracalla was born at Lugdunum (Lyons),
A.D. 188, and appointed by his father his colleague in
the government at the age of thirteen years. And yet
he is said, even at this early age, to have attempted his
father's life. Severus died A.D. 211, and was suc-
ceded by his two sons Caracalla and Geta. These
two brothers bore towards each other, even from infan-
cy, the most inveterate hatred. After a campaign against the Caledonians, they concluded a disgraceful
peace. They then wished to divide the empire be-
 tween them; but their design was opposed by their
mother, Julia, and by the principal men in the state,
and Caracalla now resolved to get rid of his brother,
by causing him to be assassinated. After many un-
successful attempts, he pretended to desire a recon-
ciliation, and requested his mother to procure him an
interview with his brother in her own apartment:
Geta appeared, and was stabbed in his mother's arms,
A.D. 212, by several centurions, who had received or-
ders to this effect. The prætorian guards were pre-
vented upon, by rich donations, to proclaim Caracalla
sole emperor, and to declare Geta an enemy to the
state, and the senate confirmed the nomination of the
soldiers. After this, the whole life of Caracalla was
only one series of cruelties and acts of extravagant fol-
lies. All with his brother in their children being slain.
The historian Dio Cassius makes the whole number of
victims to have amounted to 20,000. (Dio Cass.,
77, 4.) Among those who fell in this horrid butchery
was the celebrated lawyer Papian. And yet, after
this, by a singular act of contradiction, he not only put
to death many of those who had been concerned in the
murder of his brother, but even demanded of the sen-
ate and praetorians that among the gods. His pattern
was Sylla, whose taste he imitated and adopted.
Like this dictator, he enriched his soldiers with the
most extravagant largesses which extortion enabled
him to furnish. The augmentation of pay received by
them is said to have amounted to 280 millions of
sterlings a year. As cruel as Caligula and Nero, but
weaker than either, he regarded the senate and people
with equal hatred and contempt. From motives of av-
range, he gave all the freemen of the empire—the right
of citizenship, and was the first who received Egyp-
tians into the senate. Of all his follies, however, the
greatest was his admiration of Alexander of Macedon.
From his infancy he had read the monuments of
the great conqueror, and from his earliest years coped him in everything which was easy to imitate.
He had even a Macedonian platoon of sixteen thou-
sand men, all born in Macedonia, and commanded by
officers bearing the same names with those who had
served under Alexander. Convinced, moreover, that
Aristotle had participated in the conspiracy against
the son of Philip, he caused the works of the philo-
sopher to be burned. With equally foolish enume-
ration, he declared that he had been born from a
human mother, and the son of Priam, the hero of the
deeps veneration. He went to Illyr to visit the
grove of Homer's hero, and poisoned his favourite
freedman named Festus, to imitate Achilles in his grief
for Patroclus. His conduct in his campaigns in Gaul,
where he committed all sorts of cruelties, was still more
degradating. He crossed over the Rhine in 'o the coun-
tries of the Catti and Alemanni. The Catti defeated
him, and permitted him to repass the river only on
condition of paying some vast amount for the use of
the land of the Alemanni as an ally, and built several fortifications. He then called togeth-
the young men of the tribe, as if he intended to
them into his service, and caused his own troops to
separate and cut them in pieces. For this barbarous
exploit he assumed the surname of Alem-
nicus. In Dacia he gained some advantages over the
Goths. He signed a treaty of peace at Antioch with
Artabanus, the Parthian King, and demanded. He invited Abgarus, the king of Edessa, an
ally of the Romans, to Antioch, loaded him with
chains, and took possession of his estates. He exer-
cised the same treachery towards Vologeses, king of
Armenia; but the Armenians flew to arms and re-
pulsed the Romans. After this Caracalla went to
Alexandria, to punish the people of that city for ridi-
culing him. While preparations were making for a
great massacre, he offered a vast sum to Serapis, and
visited the tomb of Alexander, on which he left his
imperial ornaments by way of offering. He afterward
devoted the inhabitants for several days and nights to
plunder and butchery, and seated himself, in order to
have a view of the bloody spectacle, on the top of the
temple of Serapis, where he conspired the dagger
which he had drawn, some years before, against his own
brother. His desire to triumph over the Parthians in-
duced him to violate the peace, under the pretense that
Artabanus had refused him his daughter in marriage.
He found the country undefended, ravaged it, marched
through Media, and approached the capital. The Par-
thians, who had retired beyond the Tigris to the moun-
tains, were preparing to attack the Romans the fol-
lowing year with all their forces. Caracalla returned
without delay to Mesopotamia, without having even
seen the Parthians. When the senate received from
him information of the submission of the East, they
creed him a triumph and the surname of Parthicus.
Being informed of the warlike preparations of the Par-
thians, he prepared to renew the contest; but Macrinus,
the prætorian prefect, whom he had offended, assassi-
nated him at Edessa, A.D. 217, on his way to the
temple of Lunus. His reign had lasted more than six
years. It is remarkable, that this prince, al-
though he did so much to degrade the throne of
the Caesars, yet raised at Rome the lustre of the most
splendid epochs of the empire. Magnific-
ent tresses, born his name, and among other mon-
uments of lavish expenditure was a triumphal arch,
which on the representation of the victories and achieve-
ments of his father Severus. Notwithstanding his
crimes, Caracalla was deified after death by a decree
of the senate. (Dio Cass., 132, 1, seq.—Spartian,
399)

CARACATES, a peole of Germany Prima, in Belgic Gaul. Their country answers now to the diocese of Mainz. (Tacit., Hist., 4, 70.)

Carausius, king of the Silures in Britain, a people occupying what is now South Wales. After withstanding, for the space of nine years, the Roman arms, he was defeated in a pitched battle by Ostriorius Scapula, and his forces put to the rout. Taking refuge, upon this, with Cartismandus, queen of the Britgantes, he was betrayed by her into the hands of the Romans, and led to Rome. Great importance was attached to his capture. O Claudius, who was emperor at the time, augmented the territories of Catiscannus and to Carausius's subjects were decreed to Ostriorius. This exploit was compared to the capture of Syphax by Scipio, and that of Perses by Paulus Emilinus. The manly and independent bearing, however, of the British prince, when brought into the presence of the Roman emperor, excited so much admiration, that his fetters were removed, and freedom was granted him, together with his wife and children, who had shared his captivity. Some time afterwards, he sent him back to his native island with rich presents, and he reigned there for two years after, remaining during all that period a firm friend to the Romans. (Tacit., Ann., 12, 53, sqq.—Biogr. Univ., vol. 7, p. 103.)

Caralis, or, with less accuracy, Caralis, a city of Sardinia, founded by the Carthaginians, and soon made the capital of the island. It is supposed to correspond to the modern Cagliari, but it reached, in fact, farther to the east than Cagliari, up to the present Capo St. Elia. This we learn from Polyb., who speaks of the city and promontory of Caralis together. Claudian also alludes to the long extent of the place. "Tenditur in longum Caralis," &c. (Bell. Gall.; 570) Its harbour, which afforded a good shelter against the winds and waves, rendered it always a place of importance. (Mannert, Geogr., vol. 9, pt. 2, p. 490.)

Carassus, I, a promontory of Paphlagonia, now Kareni, facing Cri-Motopen (Capo Crete), in the Tauric Chersonese. (Strab., 545.—Plin., 6, 2.)—II. A city near the promontory of the same name. (Syllav., Peripl., p. 34.—Plin., 6, 2.)

Caratus, a descendant of Temenos the son of Hercules. According to Justin (7, 1), Velleius Paterculus (1, 6), Pausanias (9, 40), and others, he killed Argos, his native city, at the head of a numerous body of colonists, and, arriving in Æthiopia, a district of Macedonia, then ruled by Mithradates, obtained possession of Edessa, the capital, where he established his sway, and thus laid the foundation of the Macedonian empire. Considerable doubts, however, arise, upon looking into the accounts of Herodotus and Thucydides, as to the authenticity of the adventure ascribed to Caratus. (Consult remarks under the article Macedonia.)

Carausius, a native of Gaul, born among the Manna, possessed many abilities, and attracted the notice of Maximian, who gave him the command of a squadron against the pirates. He proved, however, unfaithful to his trust, and too much bent on enriching himself. Maximian thereupon gave orders to put him to death; but Carausius, apprized of this in season, retired with his fleet to Britain. Here he succeeded in gaining over, or else intimidating, the only Roman legion that remained in the island, and finally proclaimed himself emperor. He formed the Carausian and DIOCLETIAN to acknowledge his authority, which he maintained for the space of seven years. He was assassinated by Allectus. (Crever, Hist. des Emp. Rom., vol. 6, p. 177, 202.)

Carbo, the surname of a branch of the Papirian family at Rome. Several distinguished men bore this name, among whom were, I. Caesus, a Roman orator, the contemporary and friend of Tiberius Gracchus, was accused of seditionous conduct by L. Crassus, and committed suicide by swallowing cantharides. (Cic., Brut., 27, 43.---Id., Or., 34—Id., Ep. ad Fam., 9, 21.) He was thought to have been convinced in the death of the younger Africans. (Cic., Or., 2, 40.—Ep. ad Fam., t. c.)—II. Caesius, son of the preceding, was three times consul, and at last proconsul in Gaul. He was a partisan of Marius, and was put to death by order of Pompey, at Lilybaeum, in Sicily. Consult, as regards the singular attachment to life which he displayed, the account given by Valerius Maximus (9, 13).

Cattbion (Κατσβιόν), the Greek name of Carthage.

Cardia, a town in the Thracian Chersonesus, at the top of the Sinus Melanis. It was destroyed by Lysimachus when he founded Lysimachia a little south of it. It derived its name from being built in the form of a heart. It was also called Hexamilium, because the isle surrounded it here about six miles across. It was afterward rebuilt, and is now Hexamita. (Plin., 4, 11.—Hist., 2, 2.—Solrn., c. 10.—Plut., 3, 12.—Herod., 7. 66.)

Cardichii, a warlike nation in Gordyene, a district of Armenia Major, inhabiting the Montes Carduchi, between the Tigris and Lake Arissia. Strabo says that in his time they were called Gordyaei. Pliny (6, 12) and Quintus Curtius (4, 10) both make mention of the Montes Gordyi, but the former writer elsewhere (6, 17) informs us that the Carduchi were called in his time Cordeci. The modern Kurds are regarded as the descendants of this ancient people. (Xen., Anab., 3, 5, 16, &c.—Consult Kruger, ad loc.)

Cardia, a country of Asia Minor, to the south of Ionia and Lydia, from which it was separated by the course of the Maeander. In extent it was the least considerable of the divisions of the peninsula; but, from the number of towns and villages assigned to it by the ancient geographers, it would seem to have been very populous. The corresponding division of the Turkish provinces, in modern geography, is called Muntechesa. Cardia was a fruitful country, and produced, like the surrounding regions, wheat, oil, wine, &c. The Carians were not considered by Herodotus and other early Greek historians as the aboriginal inhabitants of the country to which they communicated their name. Herodotus, himself a native of Caria, and who must therefore be allowed to have been well acquainted with its traditions, believed that the people who inhabited it had formerly occupied the islands of the Ægean, under the name of Leleges; but that, being reduced by Minos, king of Crete, they were removed by that sovereign to the continent of Asia, where they still, however, continued to be his vassals, to serve him more especially in his maritime expeditions. At this period, says the historian, the Carians were by far the most celebrated of the existing nations: they excelled in the manufacture of arms, and the Greeks were indebted to them the invention of crests, and the devices and handles of shields. (Herod., 1, 171. —Compare Anacr. et Alc. ap. Strab., 661.) The Carians appear to have been, at an early period, great pirates, and it was for this reason, doubtless, that Minos expelled them from the island, while he was glad, at the same time, to avail himself of their skill and enterprise for the aggrandizement of his own empire. The account which the Carians themselves, however, gave of the origin of their arms is a mere formal affinity with the Lydians and Mysians, for they made Lydus and Myers the brothers of Car, the patriarch of their nation. (Herod., 1, 171.—Strab., 659.) Hence it is not unreasonable to suppose, that as Thrace and Macedonia furnished those numerous tribes, which, under the several names of Leleges, Caucones, and Peleges, spread...
themselves over the shores of the Aegon and the islands of that sea, the Carians therefore must have belonged to the same great family, since they are founded by the best authorities with the Leleges. It is difficult to say what nation inhabited Caria before Minos had removed thither the people from whom it took its name, and it is not improbable that the Phrygians occupied a portion of it. For we know that they had colonized Rhodes and other islands off the coast, and Athenaeus remarks (4, p. 174) that certain poets had applied the name Phrynice to Caria. The Carians appear to have offered but little resistance to the Greek settlers who successively established themselves on their coast, and to have been gradually confined to the southern chiefly, and to the valleys of those streams which are tributary to the Manander, towards the borders of Phrygia and Pisidia. We find them also yielding to the superior ascendency of the Lydians, under the dominion of Alyattes and Croesus. (Nic. Damasc., p. 243.—Herod., 1, 28.) On the overthrow of the Lydian empire they passed under the Persian sway. The policy of the sovereigns of Persia was, to establish in each subject or tributary state a government apparently independent of them, but still connected with them. This was a great guarantee that the people would everywhere be brought under the control of the court of Susa. It was to this system that the dynasty of Carian princes, who fixed their residence at Halicarnassus, owed its origin. A sketch of their history will be given in the account of that city. From the Persian Caria passed to the Macedonian sway. At a later period, it appears to have been, for a time, annexed to the kingdom of Egypt. (Polyb., 3, 2.) It next fell under the dominion of Antiochus; but, on his defeat by Scipio, the Roman senate bestowed this part of the conquered monarch's territory upon the Rhodians. It was afterward overrun, and occupied for a short time, by Mithradates, but was finally annexed by the Romans to the proconsular province of Asia. (Cramer's Asia Minor, vol. 2, p. 163, seqq.)

CARINA, a street of Rome, where Cicero, Pompey, and others of the principal Romans dwelt. From the epithet lauta, which Virgil applies to the Carina, we may infer, that the houses which stood in this quarter of ancient Rome were distinguished by an air of superior elegance and grandeur. (Enn., 8, 361, seqq.) The name Carina is derived, as Nardini not improbably supposes, from the street's being placed in a hollow between the Colline, Esquiline, and Palatine hills. (Cramer's Asia Minor, I, 12, 1; II, 182, seqq.)

CARINUS (M. Aurelius), eldest son of the Emperor Carus, who gave him the title of Caesar, and rank of Augustus, together with the government of Italy, Illyricum, Africa, and the West, when he himself was setting out with his second son Numerianus, to make war against the Persians. Carus, knowing the evil qualities of Carinus, gave him this charge with great reluctance, but he had no alternative, as Numerianus, the emperor's younger son, was unable to resist his elder brother, was too young to hold so important a command. As soon as Carinus entered Gaul, which his father had particularly charged him to defend against the barbarians, who menaced an irruption, he gave himself up to the most degrading excesses, discharged the most virtuous men from public employment, and substituted the vile companions of his debaucheries. On hearing of the death of his father he indulged in new excesses, and, from this time, his courage and his victories merit praise. He defended the barbarians who had begun to attack the empire, among others the Sarmatæ, and he afterward overthrew Sabinius Julianus, who had assumed the purple in Venetia. He then marched against Dioclesian, who had proclaimed himself emperor after the death of Numerianus. The two armies met in Messia, and several

CARMENIA, a country of Asia, between Persia and Gredosia, now Kerman. Its capital was Carmania or Kerman, southeast of Persepolis. (Plin., 6, 22, seqq.—Solin., c. 104.—Arrian, Exp. Asl., 6, 28.)

CARMENES, a god of the Syrians, who was worshiped on Mount Carmel. He had a temple at Sidon, and was regarded as a deity very similar to the Carmines or Muses. That she was an ancient Italian deity is clear, for she had a festival and a festival. (Cic., Brut., 14.)

CARMENES and CARMENIUS, according to the old Italian legend, a prophetess of Arcadia, mother of Evander, with whom she was said to have come to Italy. Her first name is said to have been Themis, and the appellation Carmenta, or Carmenis, to have been given her from her delivering oracles in verse (Carmes.—Compare Kruze, Helles, vol. 1, p. 444, in note). Carmenta seems, in fact, to have been a deity similar to the Carinæ or Muses. That she was an ancient Italian deity is clear, for she had a festival and a festival. (Keightley's Mythol., p. 532.)

CARMELITAE, a festival at Rome in honour of Carmen, celebrated the 11th and 15th of January. (Vid. Carmenta.—Ovid, Fast., 1, 461.)

CARMELITANIS PORTA, one of the gates of Rome in the neighbourhood of the Capitol. It was afterward called Scelerata, because the Fabii passed through it in going to that fatal expedition where they perished. (Verg., Aen., 8, 338.)

CARNÆDES, a philosopher of Cyrene in Africa, founder of a sect called the third or New Academy. The Athenians sent him with Diogenes the Stoic, and Critolaus the Peripatetic, as ambassador to Rome, B.C. 155. Carneades excelled in the vehement and rapid, Critolaus in the correct and elegant, and Diogenes in the simple and modest, kind of eloquence. Carneades, in particular, attracted the attention of his new auditors by the subtilty of his reasoning and the fluency of his language. Before Balga and Cato the censor, he harangued with great variety of thought and copiousness of diction in praise of justice. The next day, to establish his doctrine of the uncertainty of human knowledge, he undertook to refute all his former arguments. Many were captivated by his eloquence; but Cato, apprehensive lest the Roman youth should lose their military spirit in the pursuit of Grecian learning, prevailed on the senate to send back these philosophers, without delay, to their own schools. Carneades obtained such high reputation at home, that other philosophers, when they had dismissed their scholars, frequently came to hear him. It was the doctrine of the New Academy, that the senses, the understanding, and the imagination fre
frequently deceive us, and therefore cannot be infallible judges of truth; but that, from the impression which we perceive to be produced on the mind by means of the senses, we infer appearances of truth or probabili-
ties. He maintained, that they do not always corre-
spend to the real nature of things; and that nothing is
infallible method of determining when they are true or
false, and consequently that they afford no certain cri-
terion of truth. Nevertheless, with respect to the
conduct of life, Carneades held that probable appear-
ances are a sufficient guide, because it is unreasonable
that some degree of credit should not be allowed to
those witnesses who commonly give a true report.
He maintained, that all the knowledge the human
mind is capable of is derived from sense, but that is
impossible to prove generation.

(Enfeldt's Hist. Phil., vol. 1, p. 254, seq.—
Cic. ad Att., 12, 23, de Orat., 1 et 2.—Lactant., 5,
14.—Val. Max., 8, 8.)

CARNÉA, a festival observed in many of the Grecian
cities, but more particularly at Sparta, where it was
first instituted, in honour of Apollo Carneus. (Vid.
Carneus.) It commenced at Sparta on the seventh
day of the month named after it Carneus (Καρνέως),
which was in the Athenian Megaléthnion, or a part of our August and September. The celebra-
tion lasted nine days and, according to some, was
an imitation of the manner of living, and the discipline
used, in camps; for nine semides (tents) were erected;
in every one of which nine men, of three different
tribes, three being chosen out of a tribe, lived for the
space of nine days, during which time they were ob-
dient to a public crier or herald, and did nothing with-
out express directions from him. Hesychius tells us,
that the priest, whose office it was to attend to this
solemniy, was named οὐράφις, and he adds, in another
place, that out of every tribe five other ministers were
elected, and called Καρνέωια, who were obliged to con-
tinue in their function four years, during which time
they led a life of celibacy. At this festival, the
musical numbers called Καρνέωιοι ὁμοί were sung by
musicians, who contended for victory. The first prize
was won by Terpander. (Atheneus, 14, p. 685, e.—
Compare Coraini, Pált. Attic., 3, p. 41.—Sture, ad
2, p. 215, seqq.)

CARNÉUS, an epithet applied to Apollo. According
to the common account, the name was derived from
Carus, an Acamanian, who was instructed by the
god in the art of divination, but was afterward slain
by Hippotes, a descendant of Hercules. Apollo, in
revenge, sent a plague upon the Dorians, to avert
which they instituted the festival of the Carneus. Va-
rious other accounts, equally unworthy of reliance, are
given. The epithet Carneus evidently refers to the
prophetic powers of the god, and the certain fulfill-
ing of his predictions; and hence it is clearly related
to the Greek verb χαράω, "to accomplish." (Compare
Schol. ad Theocr., 5, 83.—Manso, Sparta, vol. 1, pt.
2, p. 218.)

CARÑYTER, a powerful nation of Gallia Celtica,
known even before the time of Caesar, and mentioned
by Livy (5, 34) among the tribes that crossed the
Alps in the time of Tarquinius Priscus. And yet
they are numbered by Caesar (B. G., 6, 4) among the
clients or dependents of the Remi. Their country
was the principal seat of the Druids, and lay to the
southwest of the Parisii. It answered to the modern
departments d'Évreux-et-Loir and du Loiret. Autri-
cum, now Charité, was their chief city. (Lemaire,
Ind. Geogr. ad Carine, s. v.)

CARNULUM, a city of Pannonia Super-
ior, on the Danube, opposite the mouth of the Ma-
rus. It became a place of importance in the war
with the Marcomanni, and here the emperor Marcus
Aurelius took up his residence for some years, and
made it a central point from which to direct his op-
erations against the Marcomanni and Quadi. It was
plundered and destroyed by the barbarians in the
fourth century (Ammian. Marcell., 30, 5), but was
afterward rebuilt, though it never attained to its pre-
vious flourishing condition. The ruins of this place
are well told by Petronell and Alenburg, on the Danube. (Velt. Paterec., 2,
109.—Pline, 4, 12.—Eutrop., 8, 6.—Spartan. Sec.,
5.—Mannert, Geogr., vol. 3, p. 657.)

CARRIÓN, a long chain of mountains in the north-
ern parts of Dacia, called also Alpes Bastarnica, now
the range of Mount Kreapack. (Ptol., 3, 7.)

Carpóteus, an island in the Mediterranean,
between Rhodes and Crete. The adjacent sea received
this name from its fertility, but its first
inhabitants were transplanted here by Minos from
Crete; and an Argive colony was afterward added to
them. (Diod. Sic., 5, 54.) Carpathus was two
hundred stadia in circumference, and, according to
Strabo, had four towns. In this he is wrong; since
Pliny and Sclavus speak merely of three; and even
this is a large number for so small an island. The
chief place was Nisyros. The Turks call the island
of Carpathus the present name of Mars Carpathum, but its first
name was Capucania. (Plin., 4, 12.—Sclavus, p. 38.)

CARNAI and CARNAI, a town of Mesopotamia, near
which Crassus was killed. It lay to the southeast
of Edessa, and was a very ancient city. It is supposed
to be the Charran of Scripture, whence Abraham
departed for the Land of Canaan. (Compare Well's
Sacred Geogr., s. v. Charran.—Calmet's Dict., vol. 5,
p. 323.) According to Kinneir, a modern traveller in
that quarter, Charran, or, as it is now called, Harren,
is peopled by a few families of wandering Arabs, who
have been fed thither by a plentiful supply of good
water from several small streams. It is situated in
36° 52' north latitude, and 39° 5' east longitude,
in a flat sandy plain. (Lucan, 1, 104.—Plin., 5, 24.
Eutrop., 6, 18.—Anam. Marcell., 23, 4.—Jornand,
de regn. Success., p. 22.—Zosim., 3, 12.—Joseph,
Ant. Jud., 1, 7, 19.)

CARSALO, a town of the Equi, on the Via Velaria.
It became a Roman colony after the Equi had been
finally reduced. (Liv., 10, 3.) It was sometimes se-
lected by the senate as a residence for illustrious state
officers and hostages. Ovid (Fast., 4, 683) describes
the adjacent country as cold, and unfit for raising ol-
ives, but good for grain. The ruins of the place still
retain the name of Carsaloi. (Crammer's Ant. Ital., vol. 1,
p. 324.)

CARTLIA, a city of Hispania Bética, the position of
which has given rise to much dispute. It does not ap-
ppear, however, to have been the same with Calpe.
D'Audville places it at the extremity of a gulf which
the mountain of Calpe covers on the east; but Man-
wert, more correctly, at the very extremity of the strait
below Algeciras. (Mannert, Geogr., vol. 1, p. 305.—
Compare Ubert, Geogr., vol. 2, p. 345.)

CARTHAG., a town in the island of Ceos, whence
the epithet of Carthiades. (Oid. Met., 7, 368.) It
was situated on the southeastern side of the island,
and is now called Syrakos. (Compare the French Strabo,
vol. 4, p. 164, not.)

CARTHAGINENSICI, the inhabitants of Carthage.
(Vid. Carthago.)

CARTHAGO, a celebrated city of Africa, the rival,
for a long period, of the Roman power. It was
founded by a colony from Tyre, according to the
common account, B.C. 878. Some suppose, how-
ever, that the city was more than a hundred years
since it was once founded, and in the time of the
first Carthaginian war, the Carthaginians sought to
remove the difficulty presented by the several accounts respecting the
building of Carthage, by referring them to different epochs. (Heune, Excerpt., 1, ad En., 4.—Vol. 2, p. 543, ed.
Lips.) According to this view of the subject, Car-
thage was originally settled by Tyrutes and Carchedon,
CARTHAGO.

meetings. The kings or suffetes, and the generals of the republic, were elected by the people in their public assemblies; but bribery was so usual that Aristotle considered those high distinctions as saleable at the time when he wrote. When the suffetes and the senate could not agree about any proposed enactment, the people had the right of deciding between them. The senate possessed the chief power, both legislative and executive. The presiding officers of the senate and the chief civil magistrates were the suffetes: the Greek writers call them kings, and the Roman historian, Livy, compares them with the consuls. They were elected from the richest and noblest families (Aristot., Polit., 2, 81); we suppose the number was two, like that of the kings of Sparta and consuls of Rome: any farther conjectures about them may be ingenious, but they will also be useless. The generals of the army in Carthage resembled that of Sparta: the judges of these two great systems of full and complete cognizance of all civil and criminal cases, without the aid of jurymen. (Aristot., Polit., 3, 1.)

The court of the one hundred was the supreme tribunal of Carthage, and the account of its origin, given by Justin (18, 7), is rendered more probable by Aristotle's comparing this body with that of the Spartan Ephori. Such a tribunal as this could be converted by favourers to an instrument of the whole system, and a few bold leaders into a real court of inquiry, and thus make them the avenues of the commonwealth; and, if we believe Livy (33, 46), the lives and property of the citizens were disposed of according to its caprice. Any injury, real or imaginary, done to one of the body, was an offence against the dignity of the whole college. Hannibal overturned the throne of the inquisitors, and destroyed this tyrannical and dangerous tribunal. This body was not chosen by the people, but by courts called Pentarchies: we know nothing more of these latter courts, except that they had cognizance of very important cases, and enjoyed the privilege of supplying the vacancies that happened in their own body. The members of the court of one hundred retained their place for a long time, though originally not for life. (Aristot., Polit., 2, 8.) Our materials will hardly admit any farther development of the constitution of Carthage. In the decline of the state, we know from Aristotle that the influence of a few rich families in obtaining possession of places of importance, and the union of several distinct offices in one person, contributed materially to hasten the end of the political system. (Heeren's Ideen, vol. 2, pt. 1, p. 118 seqq.—Long's Anc. Geogr., p. 97.)

2. Religion of the Carthaginians.

The religious faith and ceremonies of the Carthaginians appear to have been at bottom, the same with those of the mother country, Phœnicia. Hence the general denominations for their divinities betray a strong resemblance between the two nations. Thus we have Elios, Alamin, and, in the feminine, Alonoth; Baal and Baalath; Melech and Malechah; Don for Adon. (Plaut., Pasuvi., 5, 1, 15.—Compare Bellermann, vol. 1, p. 45, and vol. 2, p. 15.) These appellations, given to the deities of Carthage as well as to those of Phœnicia, expressed in both countries the majesty of those all-powerful beings, and the dominion which they exercised over men. It was to the sun, however, that the Carthaginians more particularly devoted the revenue of the mission of their city, and the whole system of their religious power, that the Carthaginians, after the example of the nations of Canaan, offered peculiar adoration. They styled him Boal or Moloch, "the lord," "the king," and also Belsamem, "the lord of heaven." This supreme deity they worshipped with a reverence so profound as scarcely ever to dare to pronounce his true name: they contented themselves in general with designating him as the "Ancient One," "the Eternal." (Augustin. De Consensu Evangel., 1, 36.—Vol. 3, p. 11, et. Pasuvi.—Compare the expression, "Ancient of Days," in Daniel, 7, 9, 13.) The Greek writers translated Baal by Kpovoc, and the Romans by Saturnus, no doubt on account of the common reference which those divinities had to the idea of time. The images, as well as the titles of the Sun-God, were the same, to all appearances, both among the Phœncians or Canaanites, and the Carthaginians.

The date of the erection of the statue of Cronus (Saturn) at Carthage, coincides in general with the account given by the Jewish Rabbins of that of Moloch in Canaan. (Diod. Sic., 20, 14.—Selden, de Diis Syriis, 1, 6.) Both were made of metal; both had the arms extended, with a kind of furnace, or inner cavity, below, into which children were thrown to be destroyed by fire, as an offering to this horrid idol. In process of time, when the Carthaginians, as in the case of many nations, made conquests abroad, they worshipped the gods of those places as their own; and thus the statues of Cronus and Moloch became almost identical. They were both mighty, and had a fire in their mouths. Both were supposed to destroy children by fire, and to retain their souls in their mouths, where they were afterwards devoured by fire. It is possible even Baal and Cronus may be considered as identical. Baal, Baalophantes, Baal, Baalath have already been translated into the Greek name Cronus, with the Roman name Jupiter. The Ramble of the Rabbins was, perhaps, the same as the Carthaginian Carment. (Compare Münster, Religion der Karthager, p. 17, seqq.—Id., über Sardische Idolé, p. 8, seqq.) Various animals were consecrated to Baal, as to all the great divinities of paganism. Oxen were sacrificed to him, and he himself bore attributes of a bull. A Phœnician medal, which has come down to us, displays the image of a god, like the Jupiter of the Greeks, seated on a throne, and having the head of an ox. The inscription is Bani-Thorse. Payne Knight (Inquiry into the Symbol., &c., p. 31—Class. Journ., vol. 23, p. 226) compares the name Thor, given to the bull among the Phœnicians, according to Plutarch (Vit. Sull., 17), with the god Thor of Scandinavian mythology, the head of whose image was that of a bull. Horses were also dedicated to the Sun, and their blood shed at his festivals. (Münster, Religion der Karthager, p. 14, seqq.—Winkle, op. cit., 2d ed. (4th ed. of Bassi d'Olnie, 23, 11.) It is also very probable that the elephant, an animal so renowned among the ancients for the species of worship which it was said to offer to the sun and moon (Elian,
H. A., 7, 4—Pitts, 8, 1), was held sacred to Baal. One thing at least is certain, that in Africa these pious animals were in some degree connected with the worship of Ammon; and the coins of Juba, king of Mauritania, display on one side the head of Jupiter Ammon, and on the other an elephant. (Eckhel, Doctr. Num. Vet., vol. 4, p. 154.)—To the Sun-God, as monarch of the skies and supreme generative force, the ancient Jews, as the succeeding Greeks kar' e' xov, as the queen of heaven, and the principle of fecundated nature. This divinity makes her appearance under various forms and different names in almost all the religions of Asia. (Compare Nouveau Journal Asiatique, vol. 1 (1828), p. 11, seqq.—Creuzer's Symbolik, par Guigniaut, vol. 2, p. 232.) At Carthage, as in Syria and Phoenicia, she appears to have borne the name of Astarte or Asaroth, which corresponds to the idea of the sovereign of the heavens and the stars. Thus the Greeks called her, in their language, Urania, and the Romans the "Celestial Goddess." This deity was worshipped in numerous temples at Carthage, along the coast of Africa, at Malta, and in the other isles of the Mediterranean, as also in Spain, near Gades; and her rites were no less voluptuous in their character than those of Mylitta at Babylon, of Astarte in Asia Minor, and of Venus Armida in Cyprus. Münster, Rel. der Karthager, p. 80, 1, 2, 3. Shortly after Baal and Astarte, was placed, among the national divinities of Carthage, Melkarth, the "king of the city," the tutelary deity of the parent city of Tyre. (Münster, ibid., p. 36, seqq.) Wherever the Phoenicians penetrated, the altars that were raised in honour of this god, and the various traces of his worship, testify the high veneration which this people entertained for him. The Tyrians, for instance, regarded him as their common protector; they adored him as a king of divine mediator; as a sort of sacred bond, uniting them one with another and with their common country. The symbol of the victorious course of the sun, and identical, in this respect, with the Grecian Hercules, he naturally became, for these hardy navigators, the celestial guide of their distant expeditions, and, consequently, the god of commerce. (Creuzer's Symbolik, cit., vol. 2, p. 172, 3, 4.) In this way he was in some measure assimilated to another deity, Sumus, whose Phoenician name recalls the Son of Egypt. (Compare Bellermann, über Phemic. Münz., 1, p. 25.) A similar alliance existed at Rome between Hercules and Mercury, both deities being considered as the gods of riches and abundance. Melkarth was, in effect, like the Grecian Hercules, the same with the sun. The Tyrians raised, in his temple at Gades, an altar of unguent (Bustae at Dionys. Perieg., p. 453), and it is in a point of view directly analogous, that Nonnus calls Hercules the conductor of the twelve months. (Dionys., 40, 338.) Every year they kindled at Carthage, as at Tyre, and probably in all the Phoenician colonies, a large pyre in honour of Melkarth, whence an eagle was let loose, as a symbol, like the Egyptian phoenix, of the sun, and of time renewing itself from its own ashes. This scene was transferred by the Greeks to Mount Etna, where Hecules, in consuming himself on the funeral pile, celebrates his apotheosis after the accomplishment of his twelve labours. (Dio. Chryseotom., Orat., 33—Vol. 2, p. 23, 23, ed. Reiske.) The worship of a Hercules, distinct from the one of Thebes, was continued, and even to the last periods of paganism, in Carthage and in all the Phoenician cities.—Omitting the mention of other and less important divinities of the Carthaginians, we will content ourselves with assigning the following marks on the religion of this people. The character of the Carthaginian religion, like that of the nation which possessed it, was melancholy even to cruelty. Terror was the animating principle of this religion; a religion thirsting after blood, and environed with the most gloomy and appalling images. When we vie the abominations, the voluntary tortures, and, above all, the horrid sacrifices which it imposed as a duty on the living, we are not astonished that the dead should appear in some degree actual objects of envy. I silenced the most sacred sentiments of human nature; it degraded the minds of its votaries by superstitions in turn absurd and repulsive, and I answer to the inquiry, what moral influence such a religion could have exercised over the people who professed it. The portrait which antiquity has left us of the Carthaginian character is hence far from being a flattering one. By turns impious and servile, melancholy and cruel, inexorable and faithless, egotistical and covetous, it would seem as if the spirit of their religion had conspired with the jealous aristocracy that weighed so heavily upon them, and with their purely commercial and industrious habits, to close their hearts to every generous emotion and every elevated thought. Their system of belief may have contained some noble ideas, but their practice of that system served effectually to obscure these. A goddess presided over their public councils (Appian, Bell. Pun., p. 81, ed. Toltius); but these councils or assemblies were held during the night, and history informs us respecting some of the terrible measures that were agitated therein. The god of the solar fire was the patron deity of both Carthage and Tyre, and gave an example of great enterprises and hardy labours; yet his brightness was often stained with blood, and every year human victims were immolated at his altars as at those of Baal. Wherever the Phoenicians, or the Carthaginians after them, carried their commerce and their arms, not only at particular periods, but in all critical conjunctures, their high-toned fanaticism renewed these sanguinary sacrifices. In the blackest hour of Carthage, when the victory gave him in vain the Greeks established at Carthage, endeavour, by mild and pacific influence, to put an end to these inhuman rites (Timaus, Tauromen. ap. Schol. in Pind., Pyth., 2, 3.—Münster, Rel. der Kärth., p. 25); the ancient barbarity constantly reappeared, and maintained itself even in Roman Carthage. At the commencement even of the third century of our era, traces of this frightful mode of worship were still found to be practised in secret. (Tertull., Apol., 9.) From the year of Rome 655, all human sacrifices had been prohibited; but the emperors more than once found themselves under the necessity of making this prohibition a more binding one. Still, however, the evil was not completely eradicated; and we see, even at Rome, the worthless Elagabalus immolating children in the course of his magic ceremonies. (Dio Cass., 79, 15.—Creuzer's Symbolik, par Guigniaut, vol. 2, p. 235.)

3. Carthaginian Language and Literature.

An account of the language and literature of Carthage will come in more naturally when treating of the Phoenicians. To this latter head, therefore, we refer the reader.

The first period of the history of Carthage extends to the beginning of the war with Syracuse, from B.C. 878 to 450. Carthage extended its conquests in Africa and Sardinia, carried on a commercial war with the people of Marseille (Massilia) and the Etruscans, and concluded a commercial peace with Rome, B.C. 509. The Carthaginians then directed their chief attention to the conquest of Sicily, with which country they were in future to have a still closer connexion, leading to the beginning of their war with the Romans, B.C. 265. When Xerxes undertook his campaign into Greece, the Carthaginians made a league with him, and the object of this arrangement was to crush at once both Sicily and Greece. The Carthaginians, Q q

305
however, were defeated at Himera by Gelo, king of Syracuse, and obliged to sue for peace, and to abstain from offering human sacrifices. In the war with Hiero, the next king, the Carthaginians conquered the cities Selinus, Himera, and Agrigentum. Dionysius the elder obtained the victory by the death of Gelo. Himera had delivere d Syracuse and Sicily by the yoke of tyranny, the Carthaginians were peculiarly unfortunate. Contagious diseases and frequent mutinies reduced the strength of the city. When Sicily suffered under the tyranny of Agathocles, Carthage engaged in a war with him, and was soon attacked and severely pressed by the usurper. After the death of Agathocles, Carthage once more took part in the conflict. Syracuse, suffering then under the hands of Dionysius with their auxiliaries the Mamertines. The Romans took advantage of these troubles to expel the Carthaginians from Sicily, although they had previously received assistance from them in the war against Pyrrhus, king of Epirus, in Sicily and Lower Italy. Here begins the third period of Carthaginian history, embracing the thrice-repeated struggle for dominion between Rome and Carthage, in the interval between 264 and 145 B.C. The first Punic war continued 23 years. The second was about 149 years after Carthage was subdued. By the peace (B.C. 241) the Carthaginians lost all their possessions in Sicily. Upon this, the mercenary forces, whose wages could not be paid by the exhausted treasury of the city, took up arms. Hamilcar Barcaus conquered them, and restored the Carthaginian power in Africa. Notwithstanding the peace with Carthage, the Romans took possession of Sardinia in 229, where the mercenary troops of Car thage had revolted. Hamilcar, who was at the head of the democratic party, now undertook the conquest of Spain, whose rich mines tempted his countrymen. For the success of this enterprise, within 17 years, Carthage was indebted to the family of Barcas, which could boast of the glorious names of Hamilcar, Hasdrubal, and Hannibal. To secure the possession of this acquisition, Hasdrubal founded New Car thage (Carthagena), the most powerful of all the Carthaginian colonies. The second Punic war (from 218 to 201 B.C.), notwithstanding the abilities of the general, ended with the subjugation of Carthage. Hannibal, neglected by his countrymen, and weakened by a victory that cost him so much blood, was obliged to leave Italy, in order to hasten to the assistance of Car thage, which was threatened by the Romans. The bat tle of Zama resulted in favour of the Romans. The battle of Zama resulted in favour of the Romans. The battle of Zama resulted in favour of the Romans. The battle of Zama resulted in favour of the Romans. The battle of Zama resulted in favour of the Romans. The battle of Zama occurred in the same year in which the Romans were masters of Spain. In times of difficulty Carthage occasionally applied for loans to foreign countries. In the Punic war, the impoverished republic asked as a favour from the rich Ptolemy Philadel phus, king of Egypt, the loan of 2000 talents, which the prudent Greek declined. It cannot be considered that this was a useless offer, as the employment of money was necessary because the only profit that could arise from it would be the use of the money and the non-payment of the interest and principal; and this kind of profit would necessarily cease, as in the case of some modern states, when the character of the borrower was known. (Hec ron, Ideen, vol. 2, pt. 1, p. 148.—Long's Anc. Geogr., p. 98.)

The district of Byzacium, in the province called Africa Propria by the Romans, and the island of Sar dinia, were the grain countries of Carthage: this commercial town derived its supply of bread from remote
parts, like Athens, Corinth, and other large cities of Greece. Sicily was much frequented by the Phoenician merchants; and the rich emporium of Syracuse, in times of peace, saw its port crowded with African vessels. Oil and wine were imported from Sicily; both of these articles were produced in Africa, but it is probable that the supply was insufficient. Strabo (898) speaks of a contraband trade on the coast with the Carthaginians, through the port of Charax; the Phoenician merchant brought wine, and received in exchange the precious silphium. The treaties with Rome preserved in Polybius, and the remarks of Aristotle in his Politics, prove the active commerce of the Carthaginians and their jealousy of foreign rivals. The Etruscans, who had built towns in Campania, were probably rather pirates than merchants: they procured the wares which they had to exchange for other commodities by robbing vessels on the sea, or the towns of the coast. The Carthaginians, as has already been remarked, had commercial treaties with the Etruscans, who, from the nature of their profession, could furnish them with most of the articles that the Mediterranean produced. In return, their African friends gave them slaves, precious stones, ivory, and gold, the produce of the vast continent behind their city. Malta, and the islands surrounding the land of Carthage (Gades), were Phoenician possessions: cloth for wearing apparel was manufactured in Malta, and probably from a native cotton. The wax of Corsica was also an article of commerce: the natives of the island were prized for making excellent servants. (Diod. Sic., 5, 13.) The little island of Athalia or Ilivs, now Elba, has furnished iron ore from the remotest historical period; the foreign trader and the merchant of Carthage purchased the ore when it was smelted, and deposited it in the hands of their countrymen for farther improvement. Majorca and Minorca exchanged nules and fruit for wine and female slaves; the latter article these rude islanders were always ready to purchase. The precious metals of Spain have been frequently sluded to; some of the mines appear to have been public property, while in other cases the merchant procured gold-dust from the natives by an exchange of certain articles which were not in use by them. In supposing that the Phoenicians or the Carthaginians visited the northern shores of Europe; but, as direct evidence is wanting, it is not necessary to assume that the tin and the amber which they sold to the world were brought by their own ships from the Scilly islands (Cassiterides) or the coast of the Baltic. The trading towns established on the shores of Mauritania seem to have been intended to form a commercial connection with central Africa: the carriers of the desert would bring the products of Soudan to the small island of Cerne, the most southern of the colonies established by Hanno. The Carthaginians supplied them from the stores in Cerne with earthen vessels, trinkets, and ornaments of various kinds. There was also a fishery on this coast, according to the book of wonders ascribed to Aristotle (c. 148). The fish was salted and carried to Carthage, where it commanded a high price. As regards the distant voyage of Hanno, we feel some curiosity to know whether it was useful in establishing a trade on the gold coast of Africa; and our admiration of the extensive knowledge of Herodotus is increased, by finding in his history the only extant information on this obscure subject. In the fourth book (c. 146), he tells us, on the authority of some Carthaginians, that merchants from that renowned trading town, after passing through the straits, went as far as across the ocean, where they procured gold from the natives by barter. Where they landed at the spot which the natives frequented, it was their practice to lay their wares on the shore and return to their vessel after raising a smoke. The inhabitants, seeing this, would come down to the coast, place a quantity of gold near the commodities, and retire. The Carthaginians then would leave the ship, and examine what the natives had left in exchange: if it was sufficient, they would take the gold, leaving their own merchandise in its stead; if they were not satisfied, they gave the gold-possession an opportunity of adding to the deposite of precious metals by returning the wares, and so on by Carthage, till the bargain was closed, and, it is added, neither party ever wronged the other. This story of the Carthaginians must not be considered as a mere fiction: it may have received some slight alterations, but the outline of it bears the marks of truth. A modern traveller (Höst), quoted by Heeren (Icden, vol. 2, pt. 1, p. 182), describes in a similar way the mode of exchanging commodities between the people of Morocco and the negroes on the borders of Negroland. A caravanserai goes once a year from Sus, one of the four divisions of the empire of Morocco, across the terrific waste of the western Sahara: tobacco, salt, wool, with woollen and silken cloths, are the articles which they carry. Gold-dust, negroes, and ostrich-feathers are given in exchange by the blacks. The Moors do not enter the Negroland, but meet the blacks at a place on the frontier, and conclude the bargain without witnesses. The mode of commerce of the negro's language renders this the only mode of conducting their mercantile transactions.—Carthage, in time of war, maintained a large army and navy: nay, even when she was not engaged in foreign struggles, her distant colonies required the residence of a garrison and the occasional visits of a navy. The writers on the Punic wars have left us information on the military and naval force of the republic, which is in general similar. This was the hundred dock-yard, which may be the city of Carthage (Appian, Bell. Pun., 96). There were two ports or havens, an outer one, intended for merchant ships, and an inner basin, which was separated from the other by a double wall. A small but elevated island in the centre of the inner haven commanded a view of the sea. The admiral of the navy resided here. Two hundred and twenty ships of war were generally laid up in this dock-yard, with the necessary stores for fitting them out on a short notice. In the vessel which was armed, the ships of Carthage were only triremes (Diod. Sic., 2, 16), but they afterward built vessels of a much larger size, in imitation of the Macedonian Greeks. The war-ships of the Romans and the Carthaginians in the first Punic war (Polyb., 1, 2) carried nearly five hundred men: each Roman vessel contained one hundred and twenty soldiers and three hundred seamen. The Carthaginian ships had about the same number of men on board. In one engagement the Carthaginians collected a fleet of three hundred and fifty ships, manned, according to the computation of Polybius himself, by more than one hundred and fifty thousand sailors and soldiers. We find extravagant and apparently improbable estimates of numbers in all the Carthaginian wars in Sicily, and in their sea-fights with the Romans. The sailors or rowers were slaves, purchased by the state for this service: the complement of a quinquereme was about three hundred slaves and one hundred and twenty fighters. In ancient naval tactics, to move in any direction with celerity, to break through the enemy's line, and to disable or sink his ships, were the evolutions on which victory depended. Sometimes a number of ships were wedged together, and the soldiers fought on the decks as if it were a land battle, but with this important difference, that an escape was not so easy for their captives. Their quarters was prodigious, sometimes amounting to ten, twenty, or even thirty thousand men. The sea-fights described by Thucydides and Polybius, particularly in the first book, are minute, and we believe, generally faithful accounts by the
CARTHAGO.

two great historians of antiquity. The command of the fleet was usually separated from that of the land forces by the Carthaginian general (Polyb., II. 34.), who possessed the direction of both. The military force of Carthage consisted principally of hired troops, collected from all the nations with which the state had commercial connexion. Only a small part of the citizens of Carthage could be employed in military service. The mercantile occupations of the majority would not allow them to neglect their business for foreign conquests, or the defence of remote possessions. It was for the purpose of maintaining an economical plan, to make a bargain with nations who had nothing to dispose of but their bodies, and with this saleable commodity to provide for the defence of their colonies or to acquire new possessions. But the distinguished families of Carthage served in the armies of the state, and from this class all the commanders were chosen. In times of danger, all the citizens would necessarily arm themselves to repel an attack on the metropolis; but we are now speaking of the ordinary constitution of a Carthaginian army, and this neither admitted nor required a large number of Carthaginian citizens. A Punic army was like a congregation of nations: the half-naked savages of Gaul stood by the side of the wild Iberian; the cunning Ligurian, from the Alpine or Apennine mountains, met with the Lotophagi of Libya; and the Naxomness, the explorers and guides in the great desert, half-bred Greeks, runaways, and slaves, formed the army, or, as it were, the commercial empire of Carthage. These Troops of Carthaginian and Libyan-Punic origin were in the centre of the army: on the flank the numerous Nomadic tribes of western Africa wheeled about on unsaddled horses guided by a bridle of rushes. The Balearic slingers formed the vanguard, and the elephants of Ethiopia, with their black conductors, were the movable castles that protected the front lines. According to Polybius (1, 6), it was considered politic to form an army of such materials, that difference of language might prevent a mutual understanding among several nations, and remove all danger of a general conspiracy: but there are disadvantages also, which arise from the want of a medium of communication, and these were developed in the later periods of the republic. When Xerxes led the nations of Asia against the Greeks of the land of Hellas, a Carthaginian armament was despatched to subjugate the western coast of the Syrtic Sea. The mountain range of the Asiatic shore (Herodot., 7, 61) contained the food of all the nations in his extensive empire, and even some beyond it, who served for money. The Punic army was composed of the tribes of the western world and of the African desert, and the two armies combined would have exhibited specimens of nearly all the tribes of men that were then known. We became intimately acquainted with the nature of a Carthaginian army from the extant narrative of Polybius. In the opinion of this soldier and historian, the cavalry of Numidia formed the strongest part of the army, and to their quick evolutions, their sudden retreat, and their rapid return to the charge, he attributes the success of Hannibal in his great victories. (Polyb., 3, 12.) Another cause may be assigned for the losses of the Romans, without at all impeaching the opinion of Polybius on the Numidian cavalry. The Romans frequently crossed the Syrtic Sea at Carthage in the winter, and when both happened to be together in the field, they commanded alternately, day by day. At the fatal battle of Cannae, the ignorance and presumption of Varro were associated with the better judgment and calm valour of Memmius; the single unshackled energy of the great Hannibal was more than a match for this unfortunate combination. We can readily admit the possibility of the large armaments which the rich commercial city of Carthage is said to have equipped, but we perhaps shall find it necessary to detract something from the numerical estimates of Diodorus, which he took from the careless and credulous Ephorus, or from Timaeus (Festus, 822), who may not have been much better. To form some idea of the naval and military force of Carthage, even in time of peace, we must recollect that their foreign trading ports were maintained by garrisons, and that, in the short interval of peace, it was necessary to support a force sufficient to meet the probable danger of war. Three hundred elephants were kept in the capital of Carthage, which contained, also, stalls for four thousand horses, with accommodations for their riders, and for forty thousand foot soldiers besides. (Herren, Ideen, vol. 2, pt. 1, p. 250, seqq.—Long's Anc. Geogr., p. 98, seqq.)

6. Inland Commerce of Carthage.

Writers who have discussed the commercial relations of Carthage, seem scarcely to have supposed the existence of an extensive caravan-trade with central Africa and other parts of the continent. But if we compare the position of the modern towns of Tripoli, Tunis, and Algiers, with that of Carthage, and consider the nature of their commerce at the present day, we cannot doubt that similar circumstances would, in ancient times, produce corresponding results. This probability is increased and strengthened by a few passages in the works of Herodotus. The commodities of Central Africa, of the desert, and of the region of Beledalgerid, must necessarily create a caravan-trade, either from the coast, or from the caravan trade of the Berbers, to the banks of the Niger. These commodities are black slaves, male and female, from the countries south of the Sahara; salt from the great saline deposits in the desert; and dates from the region bordering on the north side of the great sandy waste. These three things have in all ages been considered articles of necessity by the inhabitants of the Tripoli and Tunis coasts, or those connected with them by commercial relations. Gold is seldom found by the merchants of the contintal Nile, but by digging the earths in the neighbourhood of the Kong, or Mountains of the Moon, south of the great river Niger. Ivory is also another article of luxury, which the central countries furnish to the merchants of the sea-coast. The native tribes of the Sahara are the carriers of the desert, for which occupation they are peculiarly adapted by their nomadic life, and the possession of numerous bands of beasts, which are merely carriers for the rich merchants settled at the different trading ports, while some of them, who possess a capital, purchase commodities on their own account, and frequently acquire considerable wealth. The direction of this traffic across the desert has probably changed very little: the great emporiums of commerce on the shores of the Mediterranean and in Lower Egypt, are nearly in the same position, and the caravan-routes across the Sahara are determined by the unchanging physical circumstances of this extensive sandy waste. The caravans choose those times for their route at which springs of water can be found to refresh the men and animals, and to furnish them with a sufficient supply during their journey from one halting-place to the next. It appears from the narrative of Herodotus, that the people between the two Syrtic were the carriers of the desert. The enemy of Carthage might intercept the traffic, or they might meet the caravan near the smaller Syrtis, and receive from it their slaves, their gold and precious stones, in exchange for manufactured articles, for wine, oil, or grain. The immense consumption of slaves in this commercial and military republic, would render a slave-trade necessary to its existence, and from no place could they be procured in such number as from the inexhaustible slave-magazines of the African continent. When we affirm that the Carthaginians were engaged in commerce with the na-
tions of Central Africa, we do not mean to say that it was a direct commerce, though it is possible it might have been in some degree. The tribes between the two Syrtic travelled to Garama, and the army great resting-place might be a depot for commodities, they could procure from this town the products of remote lands which the Carthaginians desired to possess. The towns on the coast of Byzacium would be the market for the caravans of Garama, and places of the greatest importance for the commerce of Carthage. It does not appear that the wares and products of Central Af-
rica were carried by the caravans any farther than the towns near the Syrtic, and in the desert; thus the connexion of Carthage with the nations of the interior appears to have attracted little attention.

Carthago nova, a well-known city of Hispania Tarraconensis, situate on a little distance above the boundary line between Tarraconensis and Baetica. It was founded by Hasdrubal, the Carthaginian, who succeeded his father, Hannibal, B.C. 242. (Polych., 2, 3.—Mela, 2, 6.—Strab., 158.) It was taken by Scipio Africanus during the second Punic war, and, on falling into the hands of the Romans, it became a colony, under the title of Colonia Vicius Julia Nova Carthago (Florae, Med. de Esp., vol. 1, p. 316.) The situation of this place was very favourable for commerce, since it lay almost in the middle of the southern coast of Spain, which had hardly any other harbours besides this along its whole extent. (Polych., 10, 10.—Id., 3, 39.—Strab., 156.) In Strabo's time it was a very important place, and carried on an extensive commerce, and in the mountains not far to the north of it were the richest silver mines of all Spain. The governor of the province of Tarraconensis spent the winter either in this city or Tarracon. (Strab., 167.) The modern Carthage is but a small trade-place of the ancient city. (Uebri, Geogr., vol. 2, p. 400, seqq.)

Carviles, I. one of the four kings of Cantium (Kent), who, at the command of Cassivelaunus, made an attack on Caesar's naval camp, in which they were repulsed and lost a great number of men. (Ces., B. G., 5, 22.)—II. The first Roman who divorced his wife during the space of six hundred years. This was for barrenness, B.C. 251. (Val. Max., 2, 1, 4.)—III. Of this name; according to Plutarch (de quaest. Rom., p. 54), first introduced the alphabet into the Roman alphabet, C having been previously used for it. This was nearly 500 years after the build-
ing of the city. (Compare Quintilian, 1, 7, 23.—Tert. Maur., p. 2402.—Id., p. 2410.—Mar. Vict., p. 2469.—Dion., p. 417.—Serv. ad Virg., Geogr., 1, 194.—Schneider, L. G., vol. 1, p. 233, seqq.)

Carus, a Roman emperor, who succeeded Probus. He was slain by the latter, Prasertian prefect, and after his death was placed on the throne by his successor, A.D. 282. Carus created his two sons, Carinus and Numerianus, Caesars, as soon as he was elevated to the empire, and, some time after, gave them each the title of Augustus. On the news of the death of Probus, the barbarians put themselves in motion, and Carus, sending his son Carinus into Gaul, depart-
ed with Numerianus for Illyricum, in order to op-
pose the threatened invasion of the Goths and Ital-
y. He slew 16,000, and made 20,000 prisoners. Proceeding after this against the Persians, he made himself master of Mesopotamia, and of the cities of Seleucia and Ctesiphon, and took in consequence the surnames of Persicus and Parthicus. He died, however, in the midst of his successes, A.D. 283. (Vid. Aper.) His whole reign was of not more than sixteen or seventeen months. Carus was deified after his death. According to Vegetius, he held a middle rank between good and bad princes. (Veget.,

Car.—Id., Prob. c. 24.—Id., Carin., c. 10, seqq.—Bustis, Mem. de l'Acad. des Insérpt., &c., vol. 13, p. 45, seqq. Carus, L. a village of Arcadia, near the sources of the Aroanous. (Pausan., 8, 14.)—II. A small town of Laconia, to the north of Scillaia. (Pausan., 3, 10.) It appears from Pausanias (8, 45), that the Caraytas were formerly attached to the territory of Tegaea; and it is clear from Xenophon (Hist. Gr., 6, 5, 25), that it was a border-town. At the latter of these two places a festival was observed in honour of Diana Carystia. (Vid. Carystus.)

Carystus, the Carystians of Cyme (II.). It is said, that they joined the Persians upon invading Greece, and that, after the expulsion of the invaders, the Greeks made war upon the Carystae, took their city, slew all the males, carried the women into sla-
vory, and decreed, by way of ignominy, that their images should be used as supporters for public edifices.

Hence the Caryatides of ancient architecture. No trace of this story, however, is to be found in any Greek historian, and no small argument against its credibility may be deduced from the situation of the Carystus, within the Peloponnesus. A writer in the "Museum Criticum" (vol. 2, p. 402) suggests, that these figures were so called from their resembling the statue of άρτημας Καυπίας, or else the Laconian virgins, who celebrated their annual dance in her temple; and he refers to Pausan., 3, 10.—Lucian, Salt., 10.—Plut., Vit. Artax. (Compare Winckelmann, Ant. Kunst., des Alterthum., 4, p. 225.—Visconti, Mus-Pio-Clement, vol. 2, p. 42.—Bähr, ad Ctes., p. 230.)

Carystus, I. a city of Eubea, on the seacoast, at the foot of Mount Oche. It is now known by the name of Castel-Rosso, and was founded, as we are told, by some of the Doryphs, who had been driven from their country by Heracles. (Thucyd., 7, 57.) This place was principally celebrated for its marble, which was esteemed, and much used by the Romans in the embellishment of both public and pri-

cate edifices. (Tibull., 3, 13.—Compare Plin., 4, 12.—Id., 36, 7.) We learn from Strabo (445), that the spot which furnished this valuable material was named Marmaritum, and that a temple had been erected there to Apollo Marmaritum.—II. A town of Laconia, belong-
ing to the territory of Eigya. Its wine was celebrated by the poet Alcmene, as we are informed by Strabo (444), this information being corroborated by Gruter, vol. 3, p. 224.)

Carca, P. Servilius, one of the conspirators against Cæsar, and the individual who inflicted the first blow. He had been attached to the party of Pompey, but had-submitted, and received a pardon from Cæsar. Plut.

arch states, that Casca gave Cæsar a stroke upon the neck, but that the wound was not dangerous, as he was probably in some trepidation at the time. Cæ-

sar, turning around, caught hold of his dagger, crying out, at the same time, "What art thou doing!" (Plut., Vit. Cæs., c. 66.)

Carcellius Auleus, a writer of great erudition and talent in the time of Augustus. (Horat., Ep. ad Pis., 371.—Val. Max., 8, 15, 1.)

Carolinum, a city of Campania, on the river Vul-
turnus and the Appian Way. It is celebrated in his-
tory for the obstinate defence which it made against Hannibal after the battle of Lake Trasimene. Livy says that, immediately after the battle, Livy divided the town into two parts, and that the one on the right bank was occupied by the Roman garrison, while the other was in posses-
sion of the Carthaginian army, which was thus enabled to cut off all supplies, except such as might be con-
veyed down the stream; by this means the brave handful of soldiers who defended the town were at last forced to surrender. (Livy, 20, 17, seqq.—Val. Max., 7, 6.)

This town appears to have been in existence in the time of Strabo (249); but Pliny, who wrote some
time after, speaks of it as being reduced to the lowest state of insignificance. (Plin., 3, 5.) It is, however, mentioned by Ptolemy (p. 66). The modern Caspia is generally supposed to occupy the site of Casilinum. (Fratelli, Via Appia, 2, 12, p. 257.—Cramer's Anc. Italy, vol. 2, p. 199.)

Cassius, the last town of Latium on the Latin Way, according to Strabo (298). It was a large and populous place, and its site is now partly occupied by the modern town of San Germano. According to Varro, its name was derived from Cassum, an Ocean word, answering to the Latin Vetus. The same writer informs us, that Casinum originally belonged to the Samnites, from whom it was conquered by the Romans. (Var., L. L., 6.)

Casinos, 1. a mountain on the coast of Africa, near the Palus Serbonis (Herodot., 2, 6), and, according to Strabo (758), three hundred stadia from Pelusium. The Illus Antonión, however, makes the distance between it and the latter place 320 stadia. (Compare Larcher, Hist. d'Herodote, Table Géographique, vol. 8, p. 101.) On this mountain repose the remains of Pompey, and here also Jupiter, surnamed Casius, had a temple. (Compare remarks under the article Asia.) Mount Casius forms a promontory called at the present day Cape El-Cas.—II. Another in Syria, below Antiochus, south of the Garden Mountain. Pline, in a style of exaggeration, asserts, that at the fourth watch (three o'clock A.M.), the rising sun could be seen from its top, while the base was enveloped in darkness. (Plin., 5, 22.) The African appears to have been named after the Syrian mountain. (Manner, Geogr., vol. 10, p. 493.) As regards the etymology of the name Casius, consult Ritter, Vorhalle, p. 465, and compare remarks under the article Asia.

Caspian Gates or Passes, the Caspian gates or pass, a name belonging properly to a defile near Théran, in ancient Media. Morier (Second Journey through Persia, &c., chap. 23) names it the pass of Charvar. (Compare Sainte-Croix, Examen des Hist. d'Alex., p. 658, seqq., and 862, ed. 2d.) It is vaguely applied by Tacitus and some other ancient writers to different passes of Mount Caucasus. (Mallet-Brun, Geogr., vol. 2, p. 19, Brussels ed.) For the Caucasian Gates or Passes, see Caucasus.

Caspia, a nation dwelling along the southern borders of the Caspian Sea, and giving name to it, according to Ritter. (Erdkunde, vol. 2, p. 599, seqq.) They appear to have been at one time a powerful commercial people, and to have occupied, in the time of the Persian dominion, the country answering to Ghilian and Derbend. Their name is supposed to have been derived from the term Casp, signifying "a mountain." (Ritter, l. c.) Gatterer is wrong in placing them between the Sea of Aral and the northeastern shore of the Caspian, from which quarter, according to him, they advanced into the country of the Sarmate, and afterward, in the first century of our era, emigrated into Europe. (Consult Bähr, ad Herod., 3, 95, and compare Ptol., 7, 1.—Mela, 3, 5.)

Caspian Mare, a celebrated inland sea of Upper Asia, deriving its name either from the Caspi or its shores (vid. Caspian), or from Casp, "a mountain," in allusion to its vicinity to Caucasus. According to the latest astronomical observations and local measurements, it extends from north to south, in a longitudinal direction, nearly all of equal width, excepting a contraction which occurs at the encroachment made by the peninsula of Apheron. The northern end forms a large bay, turning round from the north to the northeast, and approaching to the basin of the Sea of Aral. The length of the Caspian may be estimated at 760 miles, in a line drawn from north to south, that is, from the bay of Kolpinskom, on the west of the river Ural, to Balsfoosh. This line, however, crosses the peninsula of Karagan. Its smallest width is 113, and its greatest width 275 miles. The situation of this sea, though now well known, was not ascertained a hundred years ago. The ancients laboured under a general mistake of its being a Gulf of the Northern Ocean, and this was not corrected till the second century of our era. Ptolemy re-established the fact, which had been known to Herodotus, and perhaps to Aristotle. The Caspian Sea was then restored in the maps to the form of a lake or inland sea, separate on all sides from the northern and every other ocean. But, instead of having its longest diameter in a direction from north to south, it was described as longest from east to west. One reason for this view of it was, that the Northern Ocean was still thought to come much nearer to it than it did, and not to leave room in a northerly direction for the dimensions of this sea, the total extent of which was pretty well known. Besides this, the Sea of Aral, being imperfectly known, was considered as a part of the Caspian Sea. This notion is shown to have been entertained by the opinion which the ancients had of the mouth of the river Oxus. (Vid. Oxus.)—The level of the Caspian Sea is much lower than that of the ocean or the Black Sea. Olivier makes a difference of 64 feet. Lowitz, whose researches seem to have been unknown to that learned traveller, makes it only 53. The north and south shores of this sea are marked by a series of spurs and promontories, which ascend from the shore, added to the facility of their motion along the surface of the water, exercise a powerful influence in varying the level of the water at the opposite extremities. Hence its variations have a range of from four to eight feet, and powerful currents are generated both with the rising and subsiding of the winds. It has also been said to be subject to another variation, which observes very distant periods. We are told, that since the division of the Sea of Aral between Persia and the Russian territory to the north, this a fact which might deserve to be better ascertained. The depth of this sea is inconsiderable, except at the southern extremity, where bottom has not been found at a depth of 2400 feet. (Sainte-Croix, Examen des historiens d'Alexandre, p. 701.) Pallas and others have indulged in the geological speculation first advanced by Varenius, of the former existence of a much greater water extent in this sea than at present, by the union of it with the Palus Moetis, or Sea of Asos, along the low grounds, abounding in shells and saline plants. But of such an extension not the slightest historical trace is to be found in any creditable author. The ideas of the ancient geographers respecting a great extension of this sea to the east have no relation to this supposed strait. The voyage of the Argonauts would not be at all explained by such a strait, and requires no such explanation.—But what becomes, it may be asked, of all the water which so many rivers pour into the Caspian Sea? Do they flow into two subterranean communications, which connect this sea with the Persian Gulf, and which some travellers pretend to have seen? (Struy's Travels, p. 126.—Avril, Voyages, &c., p. 73.) Tunnels of this kind have at all times been considered by the judicious as purely imaginary. (Kastanpifer, Amanti. Exot., p. 254.) The willow-leaves found in the Persian Gulf do not require to come from Ghilian, or any other part of the Caspian shore, the banks of the Euphrates being sufficient to furnish them. The waters of the Caspian Sea, like those of the ocean, give off their superfluity by evaporation. This evaporation has been considered as established by the extreme humidity of the air in Daghestan, Shirane, Ghilian, and Mazanderan; but no such phenomenon, as these are required for the deduction. Round the mouths of the rivers the water is fresh, but becomes moderately salt towards the middle of the sea, though less so than that of the ocean. In addition to the usual ingredients of seawater, it contains a considerable quantity of subhuric

310
CASSANDER.

The northwest winds are said to diminish the saltiness, and to increase the bitterness of the water. The powerful phosphorescence of the thick, muddy waters of the Caspian Sea is remarked by Pallas. The black colour which they assume at a great distance from the shore is nothing more than the effect of the depth, and owing to the same optical cause which makes the ocean appear comparatively dark and blue instead of light green, in deep places where the colour of the bottom does not intermix itself with the natural colour of the water.—It would serve little purpose to enumerate all the names which have been given to this sea. The "Caspian" is one of the most ancient, and this name is only common to the Greek and Latin languages, but enters into the Georgian, the Armenian, and the Syriac. (Wahl, Asien, vol. 1, p. 679, seqq.) The Jewish Rabbinic permutation for it, Khosoghoom Denghizzi, is variously translated, but no probable etymology is assigned. The Byzantine and Arabian writers call it the Sea of Khazar, after a powerful nation; and the Russian authors, instead of an aristocratic rule, the name of Gualenaskoi or Shwalenaskoi-Moré, after the Shawlis a Slavonian people, not much known, that lived on the Volga. The name given to this sea in the Zendavesta is, however, worthy of remark. That apocryphal work, which is full of old traditions, calls this sea Tenkekat Dalit, or "the great water of the judgment." Perhaps Noah's flood, as described in some of the Eastern traditions, might have a connexion with a sinking of the earth, which had destroyed the inhabitants of an extensive country, and converted it into this remarkable sea. (Malte-Brun, Geogr., vol. 2, p. 130, Brussels ed.)

CASSANDER, son of Antipater. A short time before the death of Alexander, he crossed over into Asia for the purpose of defending his father against the accusations of Olympias; and when, after the decease of the Macedonian monarch, Antipater was appointed regent, his son received from him the command of the Asiatic horse. The ambitious views, however, of the young Cassander, induced his parent to bequeath to him no share in the government, and Cassander, therefore, wishing to annul the arrangements which his father had made at his death, gave Nicanor the command of the garrison in the Munychia at Athens, by means of secret orders, before the news of his father's death could reach him. This, he thought, would be an important stronghold. He then crossed over into Asia, in order to secure the co-operation of Ptolemy and Antigonus. During his absence, Polysperchon sent an army into Attica, and issued a decree for the re-establishment of democracy in all the Greek cities, in place of the aristocratic forms of government which had been brought in by Alexander. This edict had all the effect which Polysperchon intended, and the city of Athens, instead of upholding the rights of the individuals who were at the head of their affairs. The Athenians, likewise, put many persons to death, in the number of whom was the celebrated Phocion, but could not dislodge the garrison from the Munychia. Cassander, having returned with troops and vessels, which he had obtained from Antigonus, seized upon the Piraeus, and compelled the Athenians to submit once more to the Athenian rule, at the head of which he placed Demetrius the Phaleran. He then went into Macedonia, where he had many partisans, and conferred the reins of government on Eurydice and her husband; and, after this, returning to the Peloponnesus, he drew many of the Grecian cities over to his side. While he was occupied with the siege of Tegea in Arcadia, Polysperchon, in order to check the influence of Eurydice, advised the recall of Olympias, the mother of Alexander, into Macedon, where it was intended that she should once more enjoy a share of that authority in the government, of which, during the regency of Antipater, it had been necessary to deprive her. Polysperchon had soon reason, however, to repent of this step; for Olympias, Grillus, and the Macedonian soldiery, and thirsting for revenge, returned to the Macedonian capital only to gratify her worst feelings and disturb the tranquillity of the state. A powerful rivalry soon arose between the two queens, Olympias and Eurydice; and the former, having acquired a momentary ascendancy over the affections of the Macedonian soldiery, drove out Eurydice and Aridus, and afterwards, on getting possession of their persons, pardoned them and made friends with them. But the rage of the inexorable Olympias was not supported by an adequate force. The presence of Cassander in Macedonia; who flew thither to avenge the death of Eurydice, struck terror into the aged queen, and she shut herself up in the city of Pydna. After a long resistance, this strongly-fortified place fell before the arms of Cassander; Olympias was put to death, and the victor married Thessalonica, half-sister of the conqueror, and she, who had been brought up with other children of the royal family, had, by the capture of the place, fallen into his hands. The nuptials were celebrated in a style of the greatest magnificence, and the active governor chose to mark his accession to power by building Cassandræa on the Isthmus of Pallene, and by restoring to its ancient splendour the city of Thebes. Aspiring now to the throne, he found powerful opponents in Antigonus and Ptolemy, who, in order to strengthen their side, proclaimed liberty for the whole of Greece, and this country became, in consequence, the theatre of war, which was terminated at last by a treaty, B.C. 311. The conditions of this treaty were, that, until Alexander, son of Roxana, should be of age, Cassander was to hold the government of Macedon and Greece, Lyssimachus that of Thrace, Ptolemy that of Egypt, and Antigonus that of Asia. The death of the young Alexander was, without doubt, one of the secret conditions of this league, for Cassander caused him to be put to death not long after, together with his mother Roxana, and no attempt was made by the other contracting parties to punish him for the deed. Polysperchon, moreover, influenced by Cassander, put to death Hercules, son of Alexander and Barsine. The race of Alexander being thus extinct, Antigonus assumed the title of king, in which he was imitated by Ptolemy, Lyssimachus, and Cassander, and these three soon found themselves to be despatched by a magnate, and Antigonus and his son Demetrius, who aimed at nothing less than reuniting under their sway all the countries once ruled over by Alexander. Antigonus having lost the battle of Ipsus, B.C. 301, and Demetrius being too feeble in point of resources to make any effectual opposition, Cassander found himself the tranquil possessor of Macedonia. He did not, however, long enjoy the fruits of his labours, but of a sudden he fell a victim to the malady indicated in the melanges pediculares. He had by Thessalonica three sons, Philip, Antipater, and Alexander. It is difficult to form a true opinion of the character of this prince. The Greek writers have not done justice to him, since they regarded both him and his father Antipater as foes to popular freedom. We cannot refuse him, however, the praise of valour and of considerable talents for government. He was a brave and capable soldier, and loved his own land, and could repeat from memory a large number of his verses. Still, however, no excuse can be found for his conduct towards the mother and the children of Alexander. A grasping ambition alone was the inciting cause to these acts of bloodshed.—His son Philip succeeded him, but died the same year with his father. Antipater, his second son, put to death his own mother, for having, after the decease of Cassan-
der, favoured, as he thought, the interests of his brother Alexander. The latter, with the aid of Demetrius, sought and obtained a neophyte, then war was upon him for this; but when about to become reconciled to him, was treacherously slain by Demetrius, his own ally; and Antipater was afterward put to death by his own father-in-law Lysimachus. (Justin, 13, 4, 18.—Id., 14, 6, 12.—Id., 15, 2, 3,—Id., 16, 2, 1, &c.—Didot. Soc., 18, 3, seqq.—Id., 18, 54, &c.)

**Cassandra**, daughter of Priam and Hecuba. She was beloved by Apollo, and promised to listen to his addresses, provided he first showed her the knowledge of futurity. This knowledge she obtained: but she was regardless of her promise; and Apollo, in revenge, determined that no credit should ever be attached to her predictions. Hence her warnings respecting the downfall of Troy, and the subsequent misfortunes of the race, were disregarded by her countrymen. When Troy was taken, she fled for shelter to the temple of Minerva, but was exposed there to the brutality of Asp, the son of Oileus. In the division of the spoils she fell to the share of Amagonem, and was assassinated with him on his return to Mycene. (Vid. Agamemnon.) Cassandra was called Priamemis from her father; and Cassandra, as the sister of Alexander or Paris.—Lord Bacon considers this fable to have been invented to express the inefficacy of unseasonable advice: "For they," affirms the great philosopher, "who are conceited, stubborn, or untractable, and do not listen to the advice of Apollo, the god of harmony, so as to learn and observe the indications and measures of affairs, the sharps and flats of discourse, the difference between judicious and vulgar ears, and the proper times of speech and silence, let them be ever so intelligent, and ever so frank of their advice, or their counsels so good and just, yet all their endeavours, either of persuasion or force, are of little significance, and rather hasten the ruin of those whom they advise. But, at last, when the calamity of the event has made the sufferers feel the effects of their neglect, they too late reverence their advisers as deep, foreseeing, and faithful prophets." (Apollod., 3, 12, 5.—Virg., Aen., 2, 324.—Bacon, De Sap. Vet. 1.)

**Cassandre**, a city of Macedonia, on the neck of the peninsula of Pallene. It was founded by Cassander, and he transferred to it the inhabitants of several neighbouring towns, and, among others, those of Poitidan, and the remnant of the population of Olymnia. Cassander also transferred to this city by an agreement of the Macedonian cities in opulence and splendour. (Didot Soc., 19, 52.) Philip, the son of Demetrius, made use of the place as his principal naval arsenal, and at one time caused a hundred galleys to be constructed in the docks of that port. (Liv., 28, 8.) Pliny speaks of Cassandre as a Roman colony (4, 10). From Copious we learn that this city at length fell a prey to the Huns, who left scarcely a vestige of it remaining. (Ibid. Pers., 2, 4,—Id., de Edid., 4, 3.—Nord. Greg., vol. 1, p. 150.—Cramer's Anc. Greece, vol. I, p. 246.)

**Cassia lex** was enacted by Cassius Longinus, A.U.C. 649. By it no man condemned by the people or deprived of military power was permitted to enter the senate-house.—II. Another, that the people should vote by ballot.—III. Another, called also frumentaria, proposed by Cassius Longinus, and Cassius Theodosius, and hence sometimes termed Lex Cassiae Terentia. It ordained, as is thought, that five modii of grain should be given monthly to each of the poorer citizens, &c. It was passed A.U.C. 690. (Sall., Hist. frag., p. 974, ed. Cort.)

**Cassiodorus Magnus Aurelius**, an eminent statesman, orator, historian, and divine, who flourished during the greater part of the sixth century, under Theodoric, Amalasuntha and her sons Athalaric, Theodor and Vitiges, by all of whom he was honourably employed, and held in high estimation. He was a native of Scylacium in Magna Graecia, and descended from a noble family. He was born at Herculaneum in the kingdom of the Ostrogoths under Odoacer. In 514 he was sole consul, and afterward commander of the praetorian guard and secretary of state. It is in this latter capacity that he composed his twelve books of public epistles, or Variorum (Epistolam), libri xii, consisting of various writings and ordinances prepared by him from time to time for the Ostrogothic kings. They are the most valuable of his works now extant, and give a considerable and curious insight into the history and manners of the age in which he lived. The style is considered by Gibbon to be quaint and declamatory, while Tiraboschi characterizes it as possessing a barbarous elegance. During the whole of his continuance in office, he was the patron of learning and of learned men, till the impending dissolution of the Gothic kingdom in Italy induced him to retire from public life to the enjoyment of a learned leisure in a monastery of his own founding near his native place. Here he divided his time between the study of the Scriptures and other religious writings, and the construction of various mechanical contrivances, such as water-clocks, sundials, curious lamps, &c., and is said to have lived in his retirement till 575, when his decease took place in his ninety-sixth year. His writings were of various descriptions; all his orations, highly celebrated in their day, are lost; as also is his history of the 6th century. His last writing, the bridgemen by which Jornandes is, however, still extant. His devotional tracts, consisting of a "Commentary on the Psalms," "Institutions of Divine and Human Letters," "Commentaries on the Epistles of St. Paul," "On the Acts and Apostolical Epistles, and the Apocalypse," &c., were composed by him in his seclusion. The edition of his works that we possess are that of Gravina, Colen., 1650, 8vo; that of Garet, Rotom., 1673, 8vo; that of Faubert des Maristes, Paris, 1685; 2 vols 4to; and that of I. A. Muratori, Veron., 1736, fol. The last is the best. (Scholl, Hist. Rom. Lit., vol. 3, p. 174 and 328.—Id., vol. 4, p. 114.—Bähr, Gesch. Rom. Lit., vol. 1, p. 602.)

**Cassiope and Cassiopia**, I. wife of Cepheus, king of Ethiopia, and mother of Andromeda. Having offended the Nereids by her presumption in setting herself before them as regarded beauty, Neptune, sympathizing with the anger of the sea-maidens, laid waste by the Jovian wind and storm the Phaeacian coast. 

...
moderns, together with a part of Cornesall. The term Cassiterides is derived from the Greek Κασσιτε-
ρερος, tin. The tin was obtained by the islanders from the main land, and afterward sold to strangers. Solinus (c. 22) mentions these islands under the name of Silurum Insula, and Sulpitius Severus (2, c. 51) under that of Silvia Insula. (Mannert, Geogr., vol. 2, p. 239.)

Cassellaeanus, a monarch over part of Britain at the time of Caesar's invasion. His territories were separated from the maritime states by the river Thames or Thames. He commanded the confederate forces against Caesar. In Dio Cassius the name is incorrectly written Κασσελλαυς, which Reimar changes in the text to Κασσελλαυνος, but, in a note, thinks that the true form is Κασσελλανος. (Reim. ad Dion. Cass., 40, 2.) Polybius refers to travel in the provinces with greater comfort and dignity. Even during the last campaign of Caesar in Spain, Cassius wrote to Cicero, saying that he was anxious that Caesar should be vic-
torious, for that he preferred an old and merciful master to a new and cruel one. (Cic., Ep. ad Fam., 15, 19.) He also, together with Brutus, was appointed one of the praetors for the year 709 (Plut., Vit. Brut., c. 7 —Cic., Ep. ad Fam., 11, 2, et 3), at a moment in which he was entirely disconcerted with Caesar's government; and he is said to have been the person by whose intrigues the first elements of the conspiracy were formed. Cassius had married Junia, the sister of Brutus, and it was partly through her means that he made his approaches, when seeking to gain her over and induce him to join in the plot. After the assassination of Caesar, Cassius, togeth-
er with Brutus, raised an army to maintain his country's freedom. They were met by Octavius and Antony at Philippi. The wing which Cassius com-
mmanded being defeated, he imagined that all was lost, and killed himself, B.C. 42. Brutus gave him an honourable burial, and called him, with tears, the last of the Romans. (Vid. Brutus.)—II. Parmenio, so called from his having been born at Parmo in Italy, was a Latin poet of considerable talent. He sided with Brutus and Cassius in the civil war, and obtained the office of military tribune. After the defeat of the republican forces he retired to Athens, and was put to death by Q. Varius, who had been sent for that purpose by Octavius. (Schol. ad Horat., Ep. 1, 4, 3.) He must not be confounded with the satirist to whom we have been a very rapid and poor writer. (Horat., Serm., 1, 10, 61.—Schol., ad loc.) Ruhnken inclines to the opinion, that the person sent by Octavius, to put to death Cassius of Parma, was not Varius, but Varus, a commander of his, and the same individual to whom Virgil alludes. (Ruhn. ad Vell. Paterc., 2, 83.) III. Hemina, an early annalist of Rome, who flourished about A.U.C. 699. (Vases. de Hist. Lat., 1, 165, c. 29, 1, 7, 4, 8, 23, 5.) Bede gives Cassellaeanus. Julius Celsus (p. 60) has Cass-
ellenius, and in another place (p. 61) Cassellaeanus. Cambden makes Cassellaeanus equivalent to Cassii-
orum princeps. Cassius makes mention of the Cassi (whom Cambden calls Cassi) in a part of his Com-
memorials. (Cass., B. G., 5, 11.—Id. ib., c. 21.—Reim., l. c.)

Cassius, I., C. or C. Cassius Longinus, one of the confederates against Julius Caesar. Even when a boy he is said to have been remarkable for the pride and violence of his temper, if we may believe the anec-
dotes recorded of him by Plutarch (Vit. Brut., c. 9) and Valerius Maximus (3, 1). He accompanied Cras-
sius into Parthia as his questor, and distinguished him-
self, after the death of his general, by conducting the wreck of the Roman army back to Syria in safety. At the beginning of the civil war he was one of the tribunes of the people. We find him after this com-
manding the Syrian squadron in Pompey's fleet, and infesting the coasts of Sicily. A short time before the battle of Pharsalia he had burned the entire fleet of the enemy, amounting to thirty-five ships, in the harbour of Messana. The news of Pompey's defeat, however, deterred him from pursuing his advantages, and, re-
signing the contest, he submitted to Caesar in Asia Minor, when the latter was returning from Egypt into Italy. Cassius, on the contrary, was very time-
es. He had intended to assassinate the man whose clemency he was consenting to solicit, had not an acci-
dent prevented the accomplishment of his purpose. (Philipp., 2, 11.) He was not only spared by Caes-

Cassius, II. Brutus an orator, was called Brutus. He was a friend of the cross, an orator of the cross, and...
now Montcassæl, northeast of St. Omer in France.—

VII. Castellum Turinentinum, in Picenum, now Torre Segura. (Pomp. in Civ., Epit. ad Fam., 8, 12.)

Castriana, a town of Thessaly, on the coast of Magnesia, northwest of the promontory Sepias. It is noticed by Herodotus in his account of the terrible storm experienced by the fleet of Xerxes off this coast (7, 183.—Compare Strab., 443.—Plin., 4, 9). The name is written by Steph. Byz. Kastoravica (Castaina), and in the Elymnol. Mag. Kastoravía (Castania).

—Cramer's Anc. Greece, vol. 1, p. 424.)

Cassus and Pollux (in Greek, Kastor and Polydeukes), twin brothers, the latter the son of Leda and Jupiter, the former of Leda and Tyndarus. (Vid. Leda.) The earliest exploit of these twin heroes, who were born at Amyclae in Laconia, was the recovery of their sister Helen from the hands of Theseus, whose mother, Æthra they dragged into captivity. They took part in all the great undertakings of their time, were at the Calydonian hunt, accompanied Heracles against the Amazons, sailed in the Argo, and aided Peleus to storm Iolea. Pollux was the most distinguished pugilist, Castor the most experienced charioteer of his day. Mercury bestowed on them the fleet steeds Phlogius and Harpagus, the offspring of the harpy Podarge: Juno gave them the swift Xanthus and Cyllarus. The brothers fell into the same offence which they had punished in Theseus. Being invited to the wedding-feast by their cousins Idas and Lynceus, the sons of Aphareus, who had married their cousins Phoibe and Hilaëra, the daughters of Lycippus, they became enamoured of the brides, and carried them off. Idas and his brother pursued them. In the conflict Castor fell by the spear of Idas; and Pollux, aided by the thunder of Jove, slew the two sons of Aphareus. (Schol. ad ii., 3, 243.—Schol. ad Pind., Nem., 10, 112.—Hygin., fab., 80.) Another account says, that the first heroes joined to drive off the herds of the Areōdæiæ. Idas was appointed to divide the booty. He killed several and, dividing it into four parts, said that one half of the prey should fall to him who had first eaten his share, and the remainder to him who next finished. He then quickly devoured his own and his brother's part, and drove the whole herd to Messene. The Dioscuri (Διόσκουροι, Ιονᾶς' sons), as Castor and his brother were called, made war on Messene. Driving off all the cattle which they met, they laid themselves to 'eke out their lives by plunder. But Jupiter, hearing that the vision could penetrate the trees and the rocks, ascended the top of Taygetus, and, looking over on the Peloponnesus, saw them there; whereupon he and his brother hastened to attack them. Castor fell by the spear of Idas; Pollux pursued the slayers and, coming up with them at the tomb of their father Aphareus, was struck by them in the breast with the pillar belonging to it. Unrewarded by the blow, he rushed hard on the Dioscuri. But Jupiter, who at the same moment, struck Idas with a thunderbolt. Schol. ad Pind., Nem., 10, 114.—Tzetze, ad Lyophr., 511.) Pollux was insensible for the loss of his brother; and, on his prayer, gave him the choice of being taken up himself to Olympus, and sharing the honours of Mars and Minerva, or of dividing them with his brother, and for them to live day and day alternately in heaven and under the earth. Pollux chose the latter, which he did with Castor. (Pind., Nem., 10, 105, seqq.—Schol. ad Theocrit., 22, 137, seqq.—Apollod., 3, 11, 2.—Tzetze. ad Lyophr., 5, 11.—Ovid, Fasti, 5, 699, seqq.—) The remarkable circumstance of the two brothers living and dying alternately, leads at once to a suspicion of their being personifications of natural powers and objects. This is confirmed by the names in the myth, all of which seem to refer to light or its opposite. Thus, Leda differs little from Leto, and may therefore be regarded as darkness: she is married to Tyndarus, a name which seems to be of a family of words relating to light or darkness. (Possibly these names may have been a Pelasgic word akin to the German sünden, and the Anglo-Saxon sünden, whence the English sinner. The children of Leda by Tyndarus or Jupiter, that is by Jupiter-Tyndarus, "the bright god," are Helen, "brightness" (Ela, light), Castor, "adorn" (καινος, to adorn) or "regulate," and Polydeukes, "devious" (δειβος, δειβως). In Helen, therefore, we have only another name for Selene, or the moon; the Adornor is a very appropriate name for the day, whose light adorns all nature; and nothing can be more apparent than the suitableness of Deiveúl to the night. It is rather curious, that, in the legend, Helen is connected by birth with Polydeukes rather than with Castor. —Another explanation of this myth views the brothers as sun and moon, to which their names and the form of the legend are equally well adapted. Welcker, who adopts this latter opinion, makes Castor the same as Astor (Strary), and Polydeukes the same as Polydeucus (Lagistus). This latter etymology will remind us at once of the Latin form of the name Pol-lux, and is much better, as far as we can hazard an opinion, than the other derivation for the name Polydeuces given above. (Welcker, Tril., p. 130, 220, 271.) To proceed to the other names of the legend, Idas and Lynceus, that is, Sight and Light, are the children of Aphareus or Phareus, that is, the Shiner (Φαινων); and the two daughters of Lycippus or White-horsed (an epithet of the Dioscuri, Eurip., Hel., 639), are Phobe, Brightness, and Hilaera, Joyful (Xiphoec), which last is an epithet given to the moon by Empedocles. (Plut., de Fac. in Orb. Lunae, 2.) In the Cypria they were called the daughters of Apollo. (Pausan., 3, 16, 1.) —That these were original divinities is demonstrated by their being objects of worship. The Dioscuri were also called Anaeus (Anaeus or kings, and had their temples and statues. They were represented generally as two youths on horseback, each holding a spear in his hand, and their heads surmounted by a circular cap, fabled by the poets to be a half egg, in allusion to the circumstances of their birth, but referring evidently to the cosmogonical egg, and forming an additional proof, if one were needed, of the truth of our explanation of the legend. The Dioscuri were also identified with the Cabiri, and were regarded as the protectors of ships in tempests (Eurip., Orest., 1803.—Id., 1539.—Id., 206.) —Id., 729.—Id., 1008.—Id., 1461.) The name Castor, now termed, was ascribed to them. They were also said to be the constellation of the twins. (Keightley's Mythology, p. 430, seqq.)

Castriæ, a term of frequent occurrence in ancient geography, and generally indicating the site of some Roman or other encampment. From the winter quarters of the Romans, strongly fortified according to established custom, and presenting the appearance of citadels in which they could, if necessary, have had their origin; in England particularly those, the names of which end in cester or chester. —The principal places indicated by the term castra are as follows: I. Castra ad Garmnum, now Caistre, on the Garonne in France.—II. Castra Constantinæ, now Coutances, on the river Soule in Normandy.—III. Castra Cornelia, a city of Africa, in the neighbourhood of Utica, where Scipio pitched his first camp with Castra Gellah. (Plin., 5, 4, 5; 9, 1, 7.)—IV. Castra Explorat., now Netherby, on the borders of Scotland. —V. Castra Hannibalis, now Castletelle in Calabria. —VI. Castra Indeorum, a place in Lower Egypt, now Jehovah. —VII. Castra Traiana, a place in Dacia, now Ribnik in Wallachia.

Castriæ, a term of frequent occurrence in ancient geography. The principal places thus designated are
as follows: I. Castra Novum, a town of Ethuria, south of Centum Cellae, and situate on the coast. It is now Santa Marinella. D'Anville, however, makes it correspond to the modern Torre Chiaramuccia.—II. Castra Inui, a place on the coast of Latium, between Antium and Arles. (Virg., Æn., 6, 776.) According to Livy (I, 5), Inui was the guardian of the Senate's treasure. III. Castra Almus, Livius, called Chalus in France, in the department of Upper Vienne. Here Richard I. of England died.—IV. Castrum Sedunum, now Sion in Switzerland. It was also called Civitas Sedunorum. (Casab. ad Suet., Vit. Aug., c. 58.)

Castruló, a town of Hispania Baetica, on the Bética, west of Corduba. Now Cáziona. (Plut., Vit. Sert.—Livy, 24, 41.)

Catabathmus, a great declivity, whence its name, Karyupa, those who were separating Cyrenaica from Egypt. It is now called by the Arabs Akabet-assalám. Some ancient writers, and in particular Sallust, make this the point of separation between Asia and Africa. There was another Catabathmus in the Libyan nome, called paretus, as this was styled magnus. It lay southwest of Pariontonium. (Sallust, Jug., 17 et 19.—Plin., 5, 5.)

Cataonia, a name given by the Greek geographers to the smaller cataract of the Nile (Cataretas Minor), and intended to indicate the loud noise occasioned by the fall of the waters (κατα, and δοντος, a heavy, crushing sound). It was situate in the Thebaïs, at Dodoca-schenus, to the south of Elephanta, and near Phila. (Cic., Som. Scip., c. 5.—Plin., 5, 9.—Senec., Quast. Nat., 4, 2.) The ancients believed that the neighbouring inhabitants were deprived of hearing by the constant roar of the waters! (Cic., l.c.)

Catana, a city of Sicily, on the eastern coast, at the base of Ætna, and a short distance below the river Asis and the Cyclopum Scopuli. It was founded by a colony from Chalcis in Eubea, five years after the settlement of Syracuse. Catana, like all the other colonies of Greek origin, soon became independent of any foreign control, and, in consequence of the fertility of the surrounding country, attained to a considerable degree of prosperity. It does not appear, however, to have been at any time a populous city; and hence Hiero of Syracuse was enabled without difficulty to transfer the inhabitants to Leonini. A new colony of Peloponnesians and Syracusans was established here by him, and the place called Ætna, from its proximity to the mountain. (Diod. Sic., 11, 49.—Pind., Pyth., 1.)

—After the death of Hiero, the new colonists were driven out by the Syracusans, and the old inhabitants from Leonini. The same, and, recovering possession of the place, changed its name again to Catana. We find Catana after this possessed for a short time by the Athenians, and subsequently falling into the hands of Dionysius of Syracuse. This tyrant, according to Diódoros Siculus, 14, 15), sold the inhabitants as slaves, and gave the city to his mercenary troops, the Campani, to dwell in. It is probable, however, that he only sold those who were taken with arms in their hands, and that many of the old population remained, since Dionysius afterward persuaded these same Campani to migrate to the city of Ætna. (Diod. Sic., 14, 58.) Catana fell into the power of the Romans during the first Punic war. (Plin., 7, 60.) The modern name is Catania, and the distance from it to the summit of Ætna is reckoned thirty miles. (Mannert, Geogr., vol. 9, pt. 2, p. 287.)

Catania is a city of Sicily in the southern part of Cappadocia. The inhabitants were of Cilician origin. It answers now to the canton of Aldeuleu, in the pachalic of Adana. (Compare Mannert, Geogr., vol. 6, pt. 2, p. 222, seq.)

Catapaxte, I. a river of Pamphylia, falling into the sea near Attalia. It derived its ancient name from its impetuousity. Now Dódenas. II. A river of Asia Minor, the same with the Marsyas. (Compare Larcher, Hist. d'Héroïtes, vol. 8, p. 104. —Table Géographique, and the authorities there cited.)

Cathaëa, a country of Asia, the precise situation of which is doubtful. Mantner places it northeast of the Mali, in the vicinity of the Hydroses. The chief town was called Douris, or, according to some, Douris. The great-grandfather, M. Sergius Silus or Silo, distinguished himself greatly in the second Punic war, and was present in the battles of Ticianus, Trebis, Trasymenus, and Canna. Pliny (7, 29) speaks of his exploits in a very animated strain. —The cruelty of Catilina's disposition, his undaunted resolution, and the depravity of his morals, fitted him for acting a disloyal part. Many of his confederates, it is said, were of no little note; among them was Quintus Cicero (de Petit. Cons., c. 23) to have been fallen by his hand; and, according to Plutarch (Vit. Syll., c. 32.—Vit. Cic., c. 10), he had assassinated his own brother during the civil war, and now, to screen himself from prosecution, persuaded Sylla to put him down among the proscribed as a person still alive. He murdered too, with his own hands, his sister's husband, a Roman knight of a mild and peaceable character. (Q. Cic., de Petit. Cons., c. 3.)

One of the most horrid actions, however, of which he was guilty, would seem to have been the killing of M. Marius Gratidianus, a near relative of the celebrated Marius. Sylla had put the name of this individual on the list of the proscribed, whereupon Catiline entered the dwelling of the unfortunate man, exhausted upon his person all the refinements of cruelty and insolence. He stripped him of his garments, and, as the man, according to Livy (I, 5),"...fell down and died instantaneously..." and, with his bloody head in triumph through the streets of Rome, and brought it to Syllas, as he sat on his tribunal in the forum. When this was done, the murderer washed his hands in the lustral water at the door of Apollo’s temple, which stood in the immediate vicinity. (Sext., de fr., 3, 18.)—Catiline was peculiarly dangerous and formidable, as his power of dissimulation enabled him to throw a veil over his vices. Such was his art, that he could persuade the Turritine and his existence, down to the last of the extreme Syracusan, to the Roman youth, he gained the friendship and esteem of the severe Catulus. Equally well qualified to deceive the good, to intimidate the weak, and to inspire his own boldness into his depraved associates, he evaded two accusations brought against him by Clodius, for criminal intercourse with a Vestal, and for monstrous extortions of which he had been guilty while prosopis in Africa (A.U.C. 697). He also had the additional merit of being a faithful husband to his wife and his son. A confraternity of many young men of high birth and daring character, who saw no other means of extricating themselves from their enormous debts than by obtaining the highest offices of the state, having been formed, Catiline was placed at their head. This eminence he owed chiefly to his connexion with the old soldiers of Sylla, by means of whom he kept in awe the towns
near Rome, and even Rome itself. At the same time he numbered among his adherents not only the worst and lowest of the rousing populace, but also many of the enriched and men of eurythm, f渔船 favourite audisation. Pompy was pursuing the victories which Lucullus had prepared for him, and the latter was but a feeble supporter of the patriots in the senate, who wished him, but in vain, to put himself at their head. Cassius, who had delivered Italy from the gladiators, was now striving with mad eagerness after power and riches, and, instead of opposing, countenanced the growing influence of Catiline, as a means of his own aggrandizement. Caesar, who was labouring to revive the party of Marius, spared Catiline, and, perhaps, even encouraged him. Only two Romans remained determined to uphold their falling country—Cato and Cicero; the latter of whom alone possessed the qualifications necessary for the task. The conspirators were now planning the elevation of Catiline and one of his accomplices to the consulship. When this was effected, they hoped to obtain possession of the public treasures and the property of the citizens, under various pretexts, and especially by means of a proscription. It is not probable, however, that Catiline had promised them the liberty of burning and plundering Rome. Cicero had the courage to stand candidate for the consulsip in spite of the impending danger. But in the degree of which he was perfectly aware. Neither insults nor threats, nor even riots and attempts to assassinate him, deterred him from his purpose; and, being supported by the rich citizens, he gained his election, B.C. 65. All that the party of Catiline could accomplish was the election of Caius Antonius, one of his accomplices, as colleague of Cicero. This failure, however, did not deprive Catiline of the hope of gaining the consulsip the following year. For this purpose he redoubled the measures of terror, by means of which he had laid the foundation of his power. Meanwhile he had lost some of the most important members of his conspiracy. Antony had been prevailed upon or compelled by Cicero to resign his consulship. Piso, who had been killed in Spain, Italy, however, was destitute of troops. The veterans of Syria only waited the signal to take up arms. This signal was now given by Catiline. The centurion Manlius appeared among them, and formed a camp in Etruria. Cicero was on the watch, and a fortunate accident disclosed to him the counsels of the conspirators. One of them, Cæcilius Metellus, terming himself entirely by a manly reputation, Fulvia by name, and had acquainted her with their plans. Through this woman Cicero learned that two knights had undertaken to assassinate him at his house. On the day which they had fixed for the execution of their plan, they found his doors barred and guarded. Still Cicero delayed to make public the circumstances of a conspiracy, the progress and resources of which he wished first to ascertain by himself from his fellow-citizens, in general terms, of the impending danger. But when the insurrection of Catiline was made known, he procured the passage of the celebrated decree, "that the consuls should take care that the republic received no detriment." By a decree of this kind, the consuls or other magistrates named therein were, in accordance with the custom of the state, armed with the supreme civil and military authority. It was extremely difficult to seize the person of one who had soldiers at his command, both in and out of Rome; still more difficult would it be to prove his guilt before those who were accomplices with him; or, at least, were willing to make use of his plans to serve their own interests. He had to choose between two evils—a revolution within the city, or a civil war; he preferred the latter. Catiline had the boldness to take his seat in the senate, known as the home of the em-
cause of the aristocracy, yet the chance of resisting him was not so hopeless as to dismay a set of despe-
rate conspirators, who, in their calculations, had be-
A rent been well advised. The policy of the Epi-
bureus, and made a large portion of human felicity con-
sist in the pleasures of the table. According to Manos
(Schriften und Abhandlungen, p. 59). Cato appears to
have had for his prototype one Marius, a Roman
knight, famed for his acquaintance with the precepts
of the culinary art. (Consult Heindorf, ad Horat., l. c.)
—The scholar cited by Cruiquius makes Cato to
have been an Epicurean, and to have written on "the
Nature of Things," and "the Sovereign Good." With
this account Acron and Porphyry agree. Cicero,
moreover, speaks of the Epicurean Cato, from Insur-
a, as of a writer who had died only a short time pre-
vious. (Cic., Ep. ad Fam., 15, 16. — Compare Quin-
til., 10, 1.) Still, however, the explanation we
have given suits better the spirit of Horace's satire; and,
besides, Cato had died some time before, and was
almost entirely forgotten. (Heindorf, l. c.)
Henceforward Porcius became the great object, rendered
illustrious by M. Porcius Cato, a celebrated Roman,
surnamed Censorinus, in allusion to the severity with
which he discharged the office of censor, and hence
commonly styled, at the present day, "Cato the Cen-
sor." Other surnames were, Priscus, "the old," and
Major, "the elder," both alluding to his having pre-
ceded, in the order of time, the younger Cato, who
continued in office under Tiberius and Caligula.
The subject of the present
sketch was born 232 B.C., at Tusculum, of ple-
bian parents. His family were in very moderate cir-
cumstances, and little, if anything, was known of it,
until he himself made the name a conspicuous one.
His father left him a small farm in the Sabine terri-
itory, and here the first years of his youth were spent.
The state of public affairs, however, soon compelled
him to take up arms for the defence of his country.
The enemy, who had crossed the Rubicon, had
invaded Italy. Cato, therefore, served his first
campaign at the age of seventeen, under Fabius Maxi-
mus, when he besieged the city of Capua. Four
years after this he fought under the same commander
at the siege of Tarentum, and, after the capture of this
place, became acquainted with the Pythagorean Near-
chus, who initiated him into the principles of that
system of philosophy, with which, in practice, he had
already been familiar. The admission granted, Cato
returned to his farm. Near this stood a cot-
tage belonging to Manius Curius Dentatus, who had
repeatedly triumphed over the Sabines and Sammites,
and had at length driven Pyrrhus from Italy. Cato was
acquainted frequently to walk over to the humble
abode of this renowned commander, where he was
struck with admiration at the frugality of its owner,
and the skilful management of the farm which was
attached to it. Cato, therefore, having purchased the
farm for a very moderate price, the owner having
emulated his illustrious neighbour, and adopt him as his
model. Having made an estimate of his house, lands,
slaves, and expenses, he applied himself to husbandry
with new ardour, and retraced all superfluity. In
the morning he went to the small towns in the vicinity
to plead and defend the causes of those who applied
him for assistance. Thence he returned to his fields
where, with a plain cloak over his shoulders
in winter, and almost naked in summer, he laboured
with his servants till they had concluded their tasks, after
which he sat down along with them at table, eating
the same bread and drinking the same wine. Valerius
Flaccus, a noble and powerful Roman, occupied an
estate in the vicinity of Cato's residence. A
witness of the virtues and talents displayed by him, he
persuaded the young Cato to remove to Rome, and
promised to assist him by his influence and patronage.
Cato came accordingly to the capital, with an obscure
name, and with no other resources but his own talents
and the aid of the generous Flaccus; but by the purity
of his morals, the austere energy of his character, his
knowledge of the laws, his fluency of eloquence, and
the great ability that marked his early forenoon,
he soon won for himself a distinguished name. It
was in the camp, however, rather than at the bar, that
he strove to raise himself to eminence. At the age of
thirty he went as military tribune to Sicily. The next
year he was chosen questor, and was attached to the
army which Scipio Africanus was to carry into Africa,
at which period there commenced between him and that
commander a rivalry and hatred which lasted un-
till death. Cato, who had returned to Rome, accused
Scipio of extravagance; and, though he failed in sup-
porting his charge, yet his zeal for the public good gain-
ed him great influence over the minds of the people.
Five years subsequent to this, after having been already
adile, he was chosen praetor, and the province of Sar-
dinia fell to him by lot. His austere self-control, his
integrity and justice, while discharging this office,
brought him into direct and warm conflict with
almost every person of influence. Here too it was
that he became acquainted with the poet Ennius, who
was then serving among the Calabrian levies attached
to the army. From Ennius he acquired the Greek
language, and, on his departure from the island, he
took the bard along with him to Rome. He was final-
ly elected consul, B.C. 193, and his colleague in office
was Valerius Flaccus, his early friend. While consul
he resigned the office, but frustrated only the
scheme of the famous Opian Law (mid. Opiae Lex),
and soon after this set out for Spain, which had attempted to shake
off the Roman yoke. With newly-raised troops, which
he soon converted into an excellent army, he quickly
reduced that province to submission, and obtained
the honours of a triumph at Rome, though there is but
too much reason to believe that he had justly exposed
himself, in the eyes of a candid historian, if such
one could there have been, to the charge of perfidious
conduct and cruelty. Hardy had Cato descended from the triumphal char
it, when, laying aside the consular robe and assum-
ing the garb of the lieutenant, he accompanied, as
such, the Roman commander Sempronius into Thrace.
He afterward placed himself under the orders of Ma-
nius Acilius, the consul, to fight against Antiochus,
and carry the war into Thessaly. By a bold march
he seized upon Callidromus, the richest sum-
mit of Thrace, and thus decided the issue of the
conflict. For this signal service, the consul, in the
excess of his enthusiasm, embraced him in the presence
of the whole army, and exclaimed that it was neither
in his power, nor in that of the Roman people, to
award him a recompense commensurate with his de-
serts. Acilius immediately after this sent him to Rome
to communicate the tidings of the victory. Seven years
subsequently he obtained the command of a
standing army, of which the opposition of a large part of
the nobility, who dreaded to have so severe an in-
pector of public morals, at a time when luxury, the
result of their Asiatic conquests, had driven out many
of the earlier virtues of the Roman people. He ful-
filled this trust with inflexible rigour. Some of his
acts, it is true, would seem to have proceeded from
that pugnacious bitterness which must be contracted
by a man engaged in constant strife and invective:
but, for example, he took away his horse from Lu-

317

D Highered by Microsoft}
clitus Scipio, and expelled Manilius from the senate for saluting his wife at what Cato deemed an improper time. Still, however, most of his proceedings when censor indicate a man who aimed, by every method, at keeping up the true spirit of earlier days. Hence, though his measures, while holding this office, caused him some obloquy and opposition, they met in the end with the highest applause, and, when he resigned the censorship, the people erected a statue to him in the Forum, with an honourable inscription, testifying his faithful discharge of the duties of his office. Cato's attachment to the old Roman morals was still more plainly seen in his opposition to Carneades and his colleagues, when he persuaded the senate to send back these philosophers, without delay, to their own schools, through fear lest the Roman youth should lose their martial character in the pursuit of Grecian learning. The whole political career of Cato was one continued warfare. He was continually accusing others, or made the subject of accusation himself.

Livy, although full of admiration for his character, still does not seek to deny, that Cato was suspected of having excited the accusation brought against Scipio Africanus, which compelled that illustrious man to retire from the capital. He was also the means of the condemnation of Scipio Asiaticus, who would have been dragged to prison had not Tiberius Gracchus干预 interfered. As for Cato himself, he was fifty times accused and once stood. He was eighty-five years of age when he saw himself compelled to answer the last accusation brought against him, and the exordium of his speech on that occasion was marked by a peculiar and touching simplicity: "It is a hard thing, Romans, to give an account of one's conduct before the men of an age different from that in which one has himself lived."—The last act of Cato's public life was his embassy to Carthage, to settle that country's fate, as it suited his republicanism. This voyage of his is rendered famous in history, since to it has been attributed the destruction of Carthage. In fact, struck by the rapid recovery of this city from the loss it had sustained, Cato ever after ended every speech of his with the well known words, "Pratera consens Carthaginam esse delendam" ("I am also of opinion that Carthage ought to be destroyed") Whatever we may think of his patriotism in this particular, there is no denying his rough simplicity, since the ruin of Carthage, by removing all dread of a once powerful rival, only tended to accelerate the downfall of Roman freedom itself. Cato died a year after his return from this embassy; in the eighty-fifth year of his age. —Although frugal of the public revenues, he does not appear to have been indifferent to riches, nor to have neglected the ordinary means of acquiring them; nay, if Plutarch speaks truly, some of the modes to which he had recourse for increasing his resources were anything but reputable. Towards the end of his life he was fond of indulging in a cheerful glass, and of inviting daily some of his neighbours to sup with him at his villa; and the conversation on these occasions turned, not, as one might have supposed, chiefly on rural affairs, but on the praises of great and excellent men among the Romans. He was twice married, and had a son by each of his wives. His conduct as a husband and father was equally exemplary.—Cato may be taken as a specimen of the Sabino-Samnite character. If his life be regarded as that of a mere private man, it offers only celerity and rigour: it presents, however, a wholly different aspect if one contemplates him as the representative of the early Italian popular character. Many features of this same character strikingly resemble the modern. Who does not, in Cato's vehement bitterness, retrace a leading feature of the modern Italian, so vehement and implacable when his feelings are once irritated? Who knows not that in Italy is most frequently to be found the strange combination of grovelling cupidity and boundless indifference towards external goods? As to what regards the first point, we need not, as in other cases, betake ourselves to Plutarch's collection of anecdotes; we can judge of it from Cato's own work on husbandry and household economy. At the very outset of the book, he sees nothing to find fault with in a respectable man's endeavouring to enrich himself by trade; for profit and gain appear to him an important object to be attained upon the mercantile profession as to hazardous in its nature. —While we recognise with pleasure, even in Cato's generation, the old Sabine discipline in the simplicity of life, rural employments, and social cheerfulness of the Roman country nobleman, yet we perceive with horror that the treatment of slaves, even in ancient Italy and according to old Roman manners, was still more degrading to humanity than in Greece. Cato bought slaves like hounds or foals, when they were young, in order to sell them again when grown up; he treated them exactly like hounds or foals; used them well, because they had a money value, but otherwise viewed them merely as live-stock, not as persons. This, however, we find less surprising, since, even in his warlike undertakings, Cato opposed rigour and cruelty, as genuine Roman policy, to Scipio's mildness. His advice, however, to the farmer, as to the mode in which old and sickly products are treated, is calculated to give good feeling. He classes them with old and worn-out iron implements, and recommends them to be sold: "Ferramenta vetera, servum senem, servum morbosum, et si quid aliud supersit vendat." (R. R., 2, p. 12, ed. Bp.)—Among the literary labours of Cato, the first that deserves mention is the treatise De Re Rustica" (“On Agriculture”). It appears to have come down to us in a mutilated state, since Pliny and other writers allude to want of books and fragments delivered by him in this book, which are nowhere to be found in any part of the work now extant. In its present state, it is merely the loose, unconnected journal of a plain farmer, expressed with rude, sometimes with almost oracular, brevity; and it wants all those elegant topics of embellishment and illustration which the subject might have so naturally suggested. It consists solely of the dryest rules of agriculture, and some remarks upon the subject: the cakes and wine. Servius says, it is addressed to the author's son, but there is no such address now extant. The most remarkable feature in this work of Cato's is its total want of arrangement. It is divided, indeed, into chapters, but the author apparently had never taken the trouble of reducing his precepts to any sort of method, or of following any general plan. The hundred and sixty-two chapters, of which this work consists, seem on many rules committed to writing, as the daily labours of the field suggested. He gives directions about the vineyard, then goes to his corn-fields, and returns again to the vineyard. His treatise, therefore, was evidently not intended as a regular and well-composed book, but merely as a journal of incidental observations. That this was its utmost pretension, is farther evinced by the brevity of the precepts, and the deficiency of all illustrations or embellishment. Of the style, he of course would be little careful, as his Mem-
would be highly interesting, as proceeding from one who was equally distinguished in the camp and forum. A good many of his orations were in dissuasion or favour of particular laws and moeurs. His readiness and pertinacity, and his bitterness in speaking, he completely wore out his adversaries (Liv., 39, 40), and earned the reputation of being, if not the most eloquent, at least the most stubborn, speaker among the Romans. Both Cicero and Livy have expressed themselves very fully on the subject of Cato's orations. The former admits that his "language is antiquated, and some of his phrases harsh and inelegant: but only change that," he continues, "it was what distinguished him. Number and cadence—give an easier turn to his sentences, and regulate the structure and connexion of his words, and you will find no one who can claim the preference to Cato." Livy principally speaks of the facility, asperity, and freedom of his tongue.—Of the book on military discipline, a good deal has been incorporated into the work of Vegetius; and Cicero's orations may be considered as the want of those of Cato. But the loss of the seven books, De Originiis, which he commenced in his vigorous old age, and finished just before his death, must ever be deeply deplored by the historian and antiquary. Cato is said to have begun to inquire into the history, antiquities, and language of the Roman people, with a view to counteract the influence of the Greek taste introduced by the Scipios. The first book of the valuable work, De Originiis, as we are assured by Dionysius, Neeps, in his short life of Cato, contained the exploits of the kings of Rome. Cato was the first author who attempted to fix the era of the foundation of Rome, which he calculated in his Originiis, and determined to have been in the first year of the 7th Olympiad, which is also the estimate followed by Dionysius of Halicarnassus. The second and third books treated of the origin of the different states of Italy, whence the whole work received the name of Originiis. The fourth and fifth books comprehended the history of the first and second Punic wars; and in the two remaining books, the author discussed the other wars of the Romans till the time of Servius Galba, who overthrew the Lusitanians. The whole work exhibited great industry and learning, and, had it descended to us, would unquestionably have thrown much light upon the early periods of Roman history. There is a passage, which, in the light of Italy, Dionysius of Halicarnassus, himself a sedulous inquirer into antiquities, bears ample testimony to the research and accuracy of that part which treats of the origin of the ancient Italian cities.—Cato was the first of his countrymen who wrote on the subject of medicine. This was done in a work entitled "Commentarius quo medetur Filio, Seres, Familiaribus." In this book of domestic medicine, duck, pigeons, and hare were the food he chiefly recommended to the sick. His remedies were principally extracted from herbs; and colo-west or cabbage was his favourite cure. (Pliny, 20, 9.) The recipes, indeed, contained in his work on agriculture, show that his medical knowledge did not exceed that which usually exists among a semi-barbarous race, and only extended to the most ordinary simples which nature affords.—Aulus Gellius (7, 10) mentions Cato's Libri quadragesimales, et Libri ad Angemmatam (De Officiis, 1, 29), the first example, probably, of that class of works which, under the appellation of Ana, became so fashionable and prevalent in France.—The only other work of Cato's which we shall here mention is the Carmen de Mortibus. This, however, was not written in verse, as might be supposed from the title. Precepts, imprecations, or prayers, or any set formula whatever, were called Carmina. Miled, however, by the title, some critics have erroneously ascribed to the censor the Distichae de Moribus, now generally attributed to Dionysius Cato, who lived, according to Scaliger, in the age of Commodus and Septimius Severus. (Plut., Vit. Cat. Maj., vol. 7, p. 399, seqq.); in his Roman Literature, vol. 2, p. 16, seqq.)—The pretended fragments of the Originiis, published by the Dominicans, Nanni, better known by the name of Annaeus Viterbiensis, and inserted in his Antiquitates Varia, printed at Rome in 1498, are spurious, and the imposture was detected soon after their appearance. The few remains first collected by Riccobonius, and published at the end of his Treatise on History (Basle, 1759), are believed to be genuine. They have been enlarged by Ausonius Popma, and added by him, with notes, to the other writings of Cato, published at Leyden in 1590.—The best edition of the work on Agriculture is contained in Gesner's Scriptores Rei Rusticae, 2 vols. 4to, Laps., 1735.—II. Marcus, son of Cato, the censor, by his first wife. He distinguished himself greatly in the battle of Pydna, against Perseus, king of Macedonia, and received high eulogiums from Paulus Emiliius, the Roman commander in that occasion, whose daughter Tertia he afterward married. He died while filling the office of pretor. (Plut., Vit. Cat. Maj., c. 20 et 24.)—III. Salonius, or, as Plutarch calls him, Salonius (Epulonios), son of Cato, the censor, by his second wife. This second wife was the daughter of one Salonius, who had been Cato's secretary, and who, at the time of the marriage, a member of his retinue. Salonius, like his half-brother Cato, was dies, died when Praxiphanes, son of an individual who had profited by his disgrace, to appropriate to himself all the property of the former. Suetonius, who has preserved some account of him, mentions two other poems of his, one entitled Lydia, the other Diana, and also a third work, probably in prose, called Indignatio, in which he gives an account of his misfortunes. These three works are lost. (Scholl, Hist. Lat. Gr., vol. 1, p. 152.)—IV. Dionysius, born in the age of Commodus and Septimius Severus, and who is regarded as the author of the Distichae de Moribus. (Scholl, Hist. Lat. Gr., vol. 1, p. 154.)—V. Marcus, surnamed Ulicensia, from his death at Utica, was great-grandson to the censor of the same name, and born B.C. 93. A short time after his birth he lost both his parents; and was brought up in the household of his uncle on the mother's side. Even in early life Cato displayed a maturity of judgment and an inflexible firmness of character far above his years; and Sarpedon, his instructor, being accustomed to take him frequently to the residence of Sylla, who had been his father's friend, the young Cato, then but fourteen years of age, struck with horror at the bloody scenes that were passing around him, asked his preceptor for a sword, and declared he would fight. His affecting and manly exposition was clearly displayed in his strong attachment to Cæpio, his brother by the mother's side, as may be seen by a reference to the pages of Plutarch. Being appointed to the priesthood of Apollo, he changed his residence, and took his share of his father's estate; but, though the fortune which he thus received was a considerable one, his manner of living was simpler and more frugal than ever. He formed a particular connection with Apianus of Tyre, the stoic philosopher, made himself

319
CATO.

well acquainted with the tenets of this school, and ever after remained true to its principles, pushing them even to the extreme of austerity. His first appearance in public was against the tribunes of the people, who wished to remove a column of the Porcian Basilica, or Hall of Justice, which incorporated their benches. This Basilica had been erected by his great-grandfather the censor, and the young Cato displayed on the occasion that powerful and commanding eloquence which afterwards rendered him so formidable to all his opponents. His first campaign was in the war against Spartacus, as a simple volunteer, his half-brother Catipho being a military tribune in the same army; and he distinguished himself so highly, that Gellius, the prator, wished to award him a prize of honour, which Cato, however, declined. He was then sent as military tribune to Macedonia. There he learned that Catipho was lying dangerously ill at Ænos in Thrace, and instantly embarked for that place in a small passage-boat, notwithstanding the roughness of the sea and the great peril which attended the attempt, but only arrived at Ænos just after Catipho had breathed his last. Stoicism was here of no avail, and the young Roman bitterly lamented the companionship of his early years. According to Plutarch, there were some who condemned him for acting in a way so contradictory to his philosophical principles by being involved in the dangerous perils of the latter part of his life; and the Romans, who a short time before had brought him by Cassar, in his work entitled "Anti-Cato." It was there stated, that, after all the lavish expenditure in which Cato had indulged in performing the funeral obsequies of Catipho, and after having declined repayment from the daughter of the latter, he nevertheless passed Catipho's ashes through a sieve in search of the gold which might have melted down with them! When the term of his service in Macedonia had expired, he travelled into Asia, and brought back with him the stoic Athenodorus to Rome. He was next made questor, and discharged with so much impartiality the duties of this difficult office, and displayed so much integrity in its various details, that, on the last day of his quastorship, he was escorted to his house by the whole assembly of the people. So high, indeed, was the opinion entertained by his countrymen of the purity of his mind and conduct, that when he died, his body was carried to Rome by the adile Messius, Cato happened to be a spectator, the people, out of respect for him, hesitated about ordering the dancers to lay aside their vestments, according to long-established custom, nor would they allow this to be done until he had departed from the theatre. (Val. Max., 2, 10, 8.) When the conspiracy of Catiline was discovered, Cato supported by every means in his power the acts of Cicero, and was the first that gave him publicly the honourable title of "Father of his Country." Opposing after this the ambitious movements of the first triumvirate, they managed to have him removed to a distance, by sending him out as governor of the island of Cyprus. Having executed this trust with ability and success, and having deposited in the treasury nearly seven thousand talents of silver, he again took part in public affairs at Rome, and again continued his opposition to the triumvirate. When, however, the rupture took place between Pompey and Caesar, he sided with the former, and was left behind by him at Dyrrhachium to guard the military chest and magazine, while he pushed on after Caesar, who had been forced to retire from the siege of that city. Cato, therefore, was not present at the battle of Pharsalia. On receiving the news of this event he sailed to Cercyra with the troops under his orders, and offered the command to Catipho, who was the son of his half-brother Catipho, where he hoped to meet with Pompey, but on reaching Cyrene he heard of his death, and was also informed that Pompey's father-in-law, Scipio, had gone to Juba, king of Mauritia, where Varus had collected a considerable force. Cato immediately resolved to join them, and, in order to effect this, was compelled to make a long and painful march across a desert region, in which his troops suffered severely from hunger, thirst, and every hardship, but which privations his own example enabled them manfully to endure. After seven days of suffering his force reached Utica, where a junction between the two armies took place. The soldiers wished to have him for the general, but he yielded to what he conceived to be the superior claims of Scipio, who held the office of proconsul; and this fault on his part, of which he soon after had reason to repent, accelerated the ruin of the cause in which he had embarked. Scipio having wished, for Juba's gratification, to put all the inhabitants of Utica to the sword, Cato strenuously opposed this cruel plan, and accepted the command of this important city, while Scipio and Labienus marched against Caesar. Cato had advised them to protract the war; but they hazarded an engagement at Thapsus, in which they were entirely defeated, and Africa submitted to the victor. After vainly endeavouring to prevail upon the fragments of the conquered army, as they came successively to Utica, to unite in defending that city against the conqueror, Cato furnished them with all the ships in the harbour to convey them whithersoever they chose to go. The day came, when,moth to himself for some time in reading the Phaedon of Plato, a dialogue that turns upon the immortality of the soul. He endeavoured at the same time to lull the suspicions of his friends, by seeming to take a lively interest in the fate of those who were escaping by sea from Utica, and by sending several times to the seaside to learn the state of the wind and weather. At last, the day arrived, when the ship that was to carry him was ordered to set out; and, the hour coming, he retired to his own apartments, and employed himself for some time in reading the Phaedon of Plato, a dialogue that turns upon the immortality of the soul. He endeavoured at the same time to lull the suspicions of his friends, by seeming to take a lively interest in the fate of those who were escaping by sea from Utica, and by sending several times to the seaside to learn the state of the wind and weather. He at last ordered the ship that was to carry him to be prepared. The night being franked, he sailed for Utica, and, the wind blowing strongly against him, was lost in the tempest and flung into the sea. On the morrow, the sailors, giving up the ship, went on shore, but Cato, who was still living, was washed on board, and, in a few hours, he was found dead. His last words are stated by Livy to have been "I wish to be buried in my native land."
CATULLUS.

and praise; and his name has become a favourite theme of panegyric in modern times, as that of the most upright and persevering defender of the liberties of Rome. (Plat., Vit. Cat. Min.—Biogr. Univ., vol. 7, p. 405, seqq.—Encyclop. Metropol., Div. 3, vol. 2, p. 261.)—VII. M. Porcius, son of the preceding, was spared by Caesar, but led a somewhat immoral life, until he effaced every stain upon his character by a glorious death at Philippi. (Plat., Vit. Cat. Min., c. 73.)

CATTI OR CHATTI (Χάττος, Strab.—Χάττα, Pltol.—Catti, Tacit.—Chatti, Plin.), a powerful nation of Germany, little known, however, to the Romans, since that people, though they made some incursions into their country, never had a fixed settlement therein. Caesar knew nothing more of them than that they lived in the vicinity of the Ubii, and that in the interior a wood called Bacenis separated them from the Cherusci. Tacitus describes them more closely, and assigns the Decumates Agri for their southern boundary, and the Hercynian forest for their eastern. The country of the Catti would seem to have comprehended the territory of Hesse and other adjacent parts. The name Catti or Chatti, and the more modern Hessen and Hessen, appear to be identical. (Compare Wern. Geograph., Landesgesch. vol. 2, p. 224; Niebuhr, Geogr., vol. 3, p. 183, seqq.) A fortress of the Catti, called Castellum, still bears the name of Cassel; but their capital Mattium is now Marburg.

CATULLUS, Caius Valerius, a celebrated poet, born of respectable parents in the territory of Verona, but whether in the town so called, or on the peninsula of Sirmio, which projects into the Lake Benacus, has been a subject of much controversy. The former opinion has been maintained by Mattii (Verola Illustrata, pt. 2, c. 1) and Bayle (Dict. Hist., art. Catullus), and the latter by Gyraldus (De Poet., dial. 10), Schöll (Hist. Lat. Rom., vol. 1, p. 310), Fuhrmann (Handbuch der Class., vol. 1, p. 187), and most modern writers. The precise period, as well as place, of the birth of Catullus, is a topic of debate and uncertainty. According to the Eusebian chronicle, he was born A.U.C. 868, but according to other authorities in 667 (Saxii Obstal, vol. 1, p. 148). In consequence of an invitation from Manlius Torquatus, one of the noblest patricians of the state, he proceeded in early youth to Rome, where he appears to have kept but indifferent company, at least in point of moral character. He impaired his fortune so much by his extravagance, that he complains he had no one " Fructum qui veteris pedem grabati, in collo sibi collocare possit."

This, however, must partly have been written in jest, as his finances were always sufficient to allow him to keep up a delicious villa on the peninsula of Sirmio, and an expensive residence at Tibur. With a view of improving his pecuniary circumstances, he adopted the usual Roman mode of re-establishing a diminished fortune, and accompanied Caius Memmius, the celebrated patron of Lucretius, to Bithynia, where he was appointed praefectus of that province. His situation, however, was but little bettered by this expedition, and, in the course of it, he lost a beloved brother who was along with him, and whose death was lamented in verses never surpassed in delicacy or pathos. He came back to Rome with a shattered constitution and a lacerated heart. From the period of his return to Italy till his decease, his time appears to have been chiefly occupied with the prosecution of licentious amours in the capital or in the solitude of Sirmio. The Eusebian chronicle places his death in A.U.C. 696, and some writers fix it in 705. It is evident, however, that he must have survived at least till 708, as Cicero, in his Letters, talks of his verses against Caesar and Mamurra as newly written, and first seen by Caesar in that year. He had satirized the dictator, who revenged himself, like a man of the world and a man of sense and good temper, by asking the satirist to sup with him. The distracted and unhappy state of his country, and his disgust at the treatment which he had received from Memmius, were perhaps sufficient excuse for shunning political employments; but it may have been when we are told with some regretting that he was merely an idler and a debauchee. He loved Clodia (supposed to have been the sister of the infamous Clodius), a beautiful but shameless woman, whom he has celebrated under the name of Lebia, as comparing her to the Lesbian Sappho. Among his friends he ranked not only most men of pleasure and fashion in Rome, but many of her eminent literary and political characters, as Cornelius Nepos, Cicero, and Asinius Pollio. His eminences seem to have been as numerous as his loves or friendships, and competitions in poetry or rivalry in gallantry appears always to have been a sufficient cause for his dislike; and where an antipathy was once conceived, he was unable to put any restraint on the expression of his hostile feelings. His poems are chiefly employed in the indulgence and commemoration of these various passions. They have been divided into lyric, elegiac, and epigastic. The elegiacs exhibit his general style, but to which all cannot with strictness be reduced. He seems to have been the earliest lyric poet of Latium, notwithstanding the claim of Horace to the same honour. Much of his poetry appears to have been lost: the pieces that remain to us exhibit, in singular contrast, the sensual grossness which is imbibed from depraved habits and loose imaginations, together with gleams of sentiment and taste, and the polish of intellectual cultivation. They turn with disgust from the coarse impurities that sully his pages, may be inclined to wonder that the term of delicacy should ever have been coupled with the name of Catullus. But to many of his effusions, distinguished both by fancy and feeling, this praise is justly due. Many of his amatory trites are quite unrivalled in the elegance of their playfulness; and no author has excelled him in the purity and neatness of his style, and the spirit of intellectual cultivation. They breathe the higher enthusiasm of the art, and are colored with a singular picturesqueness of imagery, increase our regret at the manifest mutilation of his works. No one of his poetical predecessors was more versed in Greek literature than Catullus, and his extensive knowledge of its beauties procured for him the appellation of Doctus: unless we understand by the term in question, not "learned," but rather knowing and accomplished; what the old English writers generally signify by "cunning," as "cunning in music and the mathematics." Catullus translated many of the shorter and more delicate pieces of the Greeks, an attempt which hitherto had been thought impossible, though the broad humour of their comedies, the vehement pathos of their tragedies, and the romantic interest of the Odyssey, had stoutly resisted the transformation. His stay in Bithynia, though little advantageous to his fortune, rendered him better acquainted than he might otherwise have been with the productions of Greece; and he was therefore, in a great degree, indebted to this expedition (on which he always appears to have looked back with mortification and disappointment) for those felicitous turns of expression, that grace, simplicity, and purity which had so much charmed the Romans. His stay in Bithynia, though little advantageous to his fortune, rendered him better acquainted than he might otherwise have been with the productions of Greece; and he was therefore, in a great degree, indebted to this expedition (on which he always appears to have looked back with mortification and disappointment) for those felicitous turns of expression, that grace, simplicity, and purity which had so much charmed the Romans. es to himself are all Greek; and even in the versiona
tion of his odys we see visible traces of their origin.
Nevertheless, he was the inventor of a new species of
Lestry, poetry; and as he was the first who used such a
variety of measures, and perhaps invented some that
were new, he was amply entitled to call the poetical
volume which he presented to Cornelius Nepos Lepid-
sum Novum Libellum. The beautiful expressions,
too, and idioms of the Greek language, which he has so
carefully selected, are woven with such art into the
texture of his composition, and so aptly paint the im-
passioned ideas of his amorous muse, that they have all
the freshness and unintermitted hues of originality.
The best editions of Catullus are, that of Vulpis, Patav.,
4to, 1737, and that of Döring, Lips., 8vo, 1788,
reprinted in London, 1820. The works of this poet
have also been frequently edited in conjunction with
those of Tibullus and Propertius, of which the best
edition is perhaps that of Morell, Paris, fol., 1604.
(Bähr, Geach. Rom. Lit., vol. 1, p. 253, seqq.—
Schiöll, Hist. Lit. Rom., vol. 1, p. 296, 316, seqq.—
Lit., vol. i, p. 454, seqq.)

catuIus, Q. lutatIus, i. a Roman naval com-
mander, famous for his victory over the fleet of the
Carthaginians, consisting of 400 sail, off the Égates
insula; forty of the Carthaginian vessels were sunk,
seventy taken, and the remainder dispersed. This
celebrated victory put an end to the first Punic war.
(Vid. Égates Insulae.)—II. A celebrated Roman,
the colleague of Marius in the censorship, who jointly
triumphed with him over the Cimbri. He was con-
demned to death by Marius, during the tyrannical sway
of the latter, and suffocated himself in a newly-plastered
room by the steam of a large fire. (Plut., VIt. Mar.
—Vell. Paterec., 2, 22.)

catusges, a Gallic nation, dwelling among the
Cottian Alps. (Pline, 3, 20) Their capital was Ca-
turiges, traces of which are found, according to D'An-
ville, at Chorgers, between Gap and Embrun, in the
departement des Hautes-Alpes. (Lemaire, Ind. Geogr.
ad Cax., p. 228, seq.)
caucasus, the name of the highest and most exten-
sive range of mountains in the northern part of Asia,
and which the ancients erroneously considered as a
continuation of the chain of Taurus. According to
Strabo, it extended from the Euxine to the Caspian
Sea. It divided Albania and Iberia towards the south,
from the level country of the Sarmates on the north.
The mountains of the Caspian side, according to some,
seventy, and according to others, 300 different
nations, who spoke various languages, and lived in a
savage state. The breadth of this chain, according to
the best Russian authorities, is about 400 miles be-
 tween the mouths of the Don and Kooma; about 756
between the straits of Caffa and the peninsula of Ap-
skeren; and about 350 between the mouths of the
Phasis and the city of Derbend. The etymology of
the name of this mountain chain, and the situation
of it, is not agreed upon; the most probable opinion
is that which connects it with the Asi, the early divi-
sions of Asia. (Vid. Asl.) The range of Caucasus
cannot be compared with the Alps in point of eleva-
tion, though in resemblance it may, as the middle of
the chain is covered with glaciers, or white with eter-
nal snows. The highest summit is only 5900 feet
above the level of the Black Sea. The two principal
passages of Caucasus are: one through the ancient
country of the Caucasian and Albanian gentry.
The first is the defile which leads from Mordok to
Tiflis. It is the narrow valley of four days' journey,
where, according to Strabo, the river Aragon, now
called Arakvi, flows. It is, as Pliny calls it, an
enormous work of nature, which has cut out a long
opening among the rocks, that an iron gate would
be almost sufficient to close. It is by this passage that
the barbarians of the north threatened both the Roman
and the Persian empire. It is now called Dariel.
The Albanian pass of the ancients was, according to
Cassius, a new one, the pass of Darbed along the
Persian Sea. Later and better authorities sanction the
belief, however, that it was the same with the Sarma-
tian pass, and coincides with a defile passing through
the territory of Ooma-khan, along the frontiers of Da-
ghestan, and then traversing the district of Kargham-
shahie. (Malte-Brun, Geogr., vol. 2, p. 12, Brus-
sela ed.)

caucana, a people of Paphalagonia, who occupied
the coast of the Euxine from the Maryandies as far
as the river Parthenus. Some pretend that they were
of Arcadian origin, in common with the Pelasgi, and
roamed about like this latter people (Strab., 345),
while, according to others, they were of Scythian ex-
traction. (Strab., 542.) A portion of these Caucanes
have been said to have passed into Greece, and occupied
a territory in the division of Elis, called Coele, or "the
hollow." Another part settled in Triphylia. Elis. It is
of the latter that Herodotus speaks (1, 147; 4, 148.
Compare Larcher, Hist. d'Herod., vol. 8, p. 106.
Table Geographique).

caudium, a city of Samний, the position of which
is not perfectly agreed upon by antiquaries: most of
them, indeed, place it, with Holstenius, who examined
the whole of this tract, with great accuracy, at Arpoia.
But D'Anville assigns it a situation a few miles farther
towards Beneventum. In the vicinity of Caudium
was the famous defile called the Caucones, where the
Roman army was compelled by the Samnites to pass
under the yoke. The present valley of Arpoia is
thought to answer to this pass. (Cramer's Ancient
Italy, vol. 2, p. 243.)

caudonia or cauldon, a city of Brutium, in lower
Italy, on the seacoast, a short distance south of Cocin-
tum Promontory, and between that and the Zephyri-
ian Promontory. It was one of the earliest colonies
founded by the Achaeans on these shores (Strab., 281.—
Scymn., C. v. 317), and the name originally, perhaps
was Aulon. (Steph. Byz., s. v. Aulon.) That
it held a distinguished rank among the republics of Mag-
na Gracie we may collect from Polybius (2, 39), who
records its alliance with Crotona and Sybaris. It
was razed to the ground by Dionysius of Syracuse, who
removed the inhabitants to his capital (Diod. Sic., 14,
106), but it must have arisen again from its ruins,
since, during the war with Pyrrhus, it espoused the
cause of the Carthaginians. The town was afterwards
abandoned and pillaged by the Mamertini, who were the allies of the Romans. (Pausan., 6, 3.) The town was
subsequently occupied by the Brutii, who defended it
against the Romans during the second Punic war.
The siege was raised by Hannibal. (Liv., 27, 12 et
15.—Plut., Vit. Fab. Max.) Banio, and the other
Calabrian topographists, fixed its site at Castro setere
but the opinion of the best-informed antiquaries is in
favour of Altino. (Cramer's Anc. Geogr. of Italy, 1.
Caucones, a city of Caria, at the foot of Mount Tarbe-
lus, west of the Sinus Glaucus. It appears that it
had been the capital of a people, whom Herodotus regarded
as differing from the Carians in some important
particulars, and possessing more of the character of an
independent nation. (Herod., 1, 172.) This city, though
possessing the advantages of a good harbour and a very
fertile territory, was nevertheless reckoned particularly
unhealthy during the summer, so that the pres-
sive heat, and the abundance of fruit was also prejudicial
to the health of its inhabitants. Under the Byzantine
emperors, Cauconus formed part of Lycia. (Hieroc. p.
685.—Compare the Acts of Councils and Notitiae.—
Geogr. Sacr., p. 248.) The site of Cauconus is now
occupied by a small town and seaport named Kaifrus
or Kheugus, about four miles to the south of the en-
trance of the Calbis into the sea. (Cramer's Asia.

393
Cebrenna Mons, a range of mountains in Gaul, commenced in the territory of the Volcae Tectosages, running thence in a northern direction into the country of the Rusnæ, communicating by a series of chain-like mountains of the Arverni to the northwest, while the main range pursues its course towards the northeast and north, connecting itself, in the former direction with Mount Jura, and in the latter with Mount Vogesus (Vosges). The modern name of the range is the Cerennes, in the departments of l'Ancreux, la Lôtère, and l'Arètche. (Cas., B. G., 7, 4 and 56.) Fliny calls this range Cebenna (3, 4); Poliony, Strabo, and the Greeks generally, it Kystiuvon longæ. Avenus (Or. Marit., 614) calls the adjacent region Cimente. (Compare Wernsdorff, ad loc.—Lemaire, Index Geogr. ad Cas., s. e., p. 229.)

Cebes, I., a Greek philosopher, and disciple of Socrates, and also one of the interlocutors whom Plato introduces in his dialogue entitled Phaedon. He was born at Thebes, and composed three dialogues, called Heldomè (Thélomos), Phrynichus (Opóvócos), and Pmazer, or the Picture (Píaugo). The last is the only one which has come down to us. It is commonly cited by its Latin title Cebetis Tabula (i. e., picta), and is a moral sketch or picture of human life, written in a pleasing and simple style. Some critics have raised doubts as to the authenticity of this little work. It breathes, indeed, a very pure vein of morality, but is not composed, as they think, in the true spirit of the Greek school, and are disposed, therefore, to regard it as the work of some stoic, perhaps Cebes of Cynosura (No. II.), who wished to show that happiness consisted in the practice of virtue. But it is expressly attributed to Cebes by Lucian (de Mercede Conduct., c. 42), and after him by Tertullian (de Praecept. adv. Haret., c. 39), Diogenes Laertius (2, 125), Chalcidius, and Suidas. Wolff was the first among the moderns who ventured to call in question this testimony of the ancients, and he was followed in the same side by the Abbé Sevin (Mem. de l'Acad. des Ins., &c., vol. 3, p. 75.—Compare the dissertation of Garnier, in the same collection, vol. 49, p. 455.) No work of antiquity has met with a wider circulation. It has been translated into almost all the modern languages, even into the Arabic. (The best editions of Cebes are, that of Schweighaeuser, Argent., 12mo, 1806, and that of Thiome, Berol., 8vo, 1810, with German notes of Gottsched, 1718.) Ed. Chevrez, vol. 2, 945.—II. A philosopher of Cyzicus, who lived in the time of Marcus Aurelius. (Compare Athenaeus, 4, p. 156.—Ed. Schvich., vol. 2, p. 109, and Garnier, Dissert. sur le Tableau de Cebes.—Mem. de l'Acad. des Ins., &c., vol. 49, p. 455.)

Cebrenna, a city of Troas, capital of a small district named from it Cebrenia. This district was separated by the Scamander (the Simois of Homer) from the territory of Scepsis, as Strabo informs us, and the Cebrenians and the people of Scepsis were almost continually at war, until Antigonus removed the inhabitants of both places to Antigonia, afterwards Alexander the Great. (Strab., 597.) According to Ephorus, the Cebrenians were descended from the Cýtisios Gymn. (Ap. Harpocr., s. v. Kytjpcra.) Xenophon affirms that it was a place of great strength. (Hist. Gr., 3, 1, 14.) The site is called at the present day Kutchalan-tepe. (Cramer's Asia Minor, vol. 1, p. 119.)

Cebres, a river of Mysia, flowing into the Danube, and separating Upper from Lower Mysia. It is now either the Ischia, a small Bulgarian stream, or the Zibric. (Die Cass., 51, 25.)

Cecrops, the name of Athens, in honour of Cercrops, its first founder. (Vid. Cercrops.)

Cercópides, a name given to the Athenians by the poets, as the fabled descendants of Cercrops. (Vid. Cecrops.)

Cercrops, according to the Attic legend, an autochthon or indigenous personage, and the earliest monarch of the country, after Ogyges. His form was half human, half that of a serpent. In his days, it is said, the gods became animated with such a desire of living among men that they came to seek men for their own residence, or, as the expression seems to mean, particular deities were worshipped with especial homage in particular cities. It was at this time, therefore, that Minerva and Neptune strove for the possession of Attica. The question was to be determined by the natural principle of priority of occupation. It was asserted by Neptune, that he had appropriated the territory to himself, by planting his trident on the rock of the Acropolis at Athens, before the land had been claimed by Minerva. He pointed to it there standing erect, and to the salt-spring which had then issued, and was flowing from the fissure of the cliff, that had opened for the reception of the trident. On the other hand, Minerva alleged that she had taken possession of the country at a still earlier period than had been done by the rival deity. She appealed, in support of her claim, to the olive, which had sprung at her command from the soil, and which was growing near the fountain produced by the hand of Neptune from the same place. Cercrops was required to attest the truth of her assertion. He had been witness of the act, and testified accordingly; whereupon the twelve gods, according to one version of the fable, but, according to another, Cercrops himself, decided in favour of Minerva, who then became the tutelary deity of Athens. (Apollod., 3, 14, 1.) Cercrops married Agraulos, daughter of Actæus, and became the father of three daughters, Pandrosos, Herse, and Agraulos. After a reign of many years, spent in introducing among his subjects the blessings of civilization, he died, leaving the kingdom to Cranaus, another autochthon. (Apollod., l. c.)—Thus much for the fable, which has become in our histories so much grave matter of fact. The truth appears to be, that the whole series of Attic kings who are said to have preceded Theseus, including perhaps, even Theseus himself, are mere fictions, owing their existence to misunderstood names and false etymologies, to attempts to explain ancient customs and religious rites, and to a wish to exalt the antiquity of a nation or a family by giving it a founder in a remote age. At the head of the list of Attic kings is commonly placed Ogyges. The evidence of his historical existence is so slight that his name hardly appears to be genuine. Whether we make it an invention, as some do, to ἀπαξίον, or trace it, with other etymologists, to a root γυγας, meaning night or darkness, in either case the name is merely figurative, and is intended to refer, not to an individual, but to a period of remote and obscure antiquity.—Next in order comes Cercrops, whom we ought to regard as being, in genuine Attic
Cecrops

table, the first king of Attica, the true autochthon from whom, according to the popular faith, the Athenian people had their origin. The story of his being half man, half serpent, is only an expression of his autochthonous nature. For in Herodotus (1, 78), the explanation given by the Telmessians of the serpent's devouring the hero at Sardis is, δεν εναι γης παιδα, "that the snake is a child of earth." The story of his leading a colony from Sais, in Egypt, to Athens, is a comparatively late invention, and entitled to no credit. (Philol. Museum, 5, p. 357.) The very name Cecrops (Κεκρόπ) itself appears to be nothing else than a synonyme of αὐτόγονος. The τέτοιος, or cicada, was always regarded by the Athenians as a symbol of their autochtonia. As the eggs of this insect fall to the ground from the stalks on which they are deposited (Aristot., Hist. An., 5, 24), and are hatched in great numbers in showery weather, it was natural that the vulgar should consider the earth as producing them. Now one of the names of the cicada is κεκρόπ (Ελιαν, Hist. An., 10, 46), the original form of which would seem to have been κρέκνον, referring, as well as τέτοιος, to the peculiar sound which the insect emits. Cecrops, therefore (Κεκρόπ, Κρέκνος), is in reality nothing more than the cicada itself, the emblem of autochthonia, converted into the first king of Athens. This is rendered still more probable by the names of his daughters. As the ancients supposed the gods to have produced the world from the ground, they thought that it was wholly nourished by the dew. Hence the names Πάντορος ("All-dewy") and Ερεπος ("Dew"), given to two of the daughters of the fabled Cecrops. The third name, Αγρανος ("Field-piper"), is equally appropriate to the cicada, of whose music the ancients thought so highly, that it was doubted whether the Ionians did not wear the golden cicada in their hair in honour of Apollo. (Schol. ad Aristoph., No. 1502.) It becomes of little account respecting the part that Cecrops bore in the controversy between Neptune and Minerva! It is not difficult to perceive, that in this tradition a record is preserved of the rivalry that arose between two classes of the Attic population, the one devoted to maritime pursuits, and aiming at commercial eminence, the other contented with their own domestic resources, and preferring the tranquil occupations of agricultural and pastoral life, which formed the object of their worship, the peace. The victory of Minerva, which it commemorates, is a true and significant expression of the condition of this country, and of the habits of its people, from the days of Cecrops to those of Themistocles. (Wordsworth's Greece, p. 93.)—Craanaus comes next in the list of Attic kings. He was also an autochthon, contemporary with the flood of Deucalion. He married Podias, and the issue of their wedlock was Aththis. What is this but the legend of a union between the inhabitants of the hills (Κανών γῆς, the rocky country) with those of the plains of Attica (Πεδιάς, the plain country)? and thus Attica (Ἀττικα) was formed by uniting the rugged district with that belonging to the plain. And yet a hundred histories have repeated the name of Craanaus as a king of Attica!—This state of prosperity, however, does not appear to have been of long duration; for Athhis is said to have died in early youth; and the flood of Deucalion to have inundated the country during the reign of Craanaus, who was himself driven from the throne by the king next in succession, named Amphictyon. This appellation, indicating, as it does, a collector of neighbouring people into one community, appears to indicate an attempt made in this, the next age, to organize afresh the social elements, which had been disturbed by the convulsions of the previous epoch, by binding them together into one federal body. This design seems to have been attended with success, and has produced results favourable to the cultivation of the arts of civilized life. For the immediate successor of Amphictyon, and the representative of the State during the time of the mild rule of Xerxes, was Erichthonius. Erichthonius was, in the language of mythology, the son of Vulcan and Minerva; or, as that tradition may be interpreted, it was in this age that the manual labours which enjoyed the especial patronage of those two deities began to attract the attention and assume the importance which afterward rendered them the source of affluence and of glory to the possessors of the Athenian soil. (Wordsworth's Greece, p. 92, seqq.—Philological Museum, 5, p. 345, seqq.)

Celenae or Celenae, a city of Phrygia, in the southwest, at the sources of the Maraya. This was a small river which flows into the Maeander, and which, according to Xenophon, was named after Maraya, whom Apollo caused to be slain alive, and whose skin he hung in the cave where the river rises. Cyrus the Younger had a palace there, with a park filled with wild beasts, where he exercised himself in hunting. Within the enclosure of this palace rose the Maeander, and flowed through the park; the Maeander rose in the market-place. At the sources of the latter, Xerxes, after his return from Greece, built a palace and citadel. The inhabitants of Celenae were in after days carried off by Antiochus Soter to the city of Apamea, founded by him a few miles to the southeast, at the confluence of the Maeander and Totana. (Litt., 69, 13.—Xenoph., Anat., 1.)

Celang, one of the harpies, daughter of Neptune and Terra. (Virg., Aen., 3, 245.)

Celenderis, a city on the coast of Cilicia Trachea, to the northeast of the Ammemarian promontory. It was founded by the Phoenicians, and afterward received a Samian colony. Celenderis appears to have been a place of great strength, built on a high and precipitous, and surrounded by the sea. (Zsch., Ann., 2, 2, 1. It is now Chelindros. (Cramer's Asia Minor, vol. 2, p. 328.)

Celebes. Vide Equites.

Celeus, a king of Eleusis, father to Triptolemus by Metanira. He gave a kind reception to Ceres, who taught his son the art of cultivating the earth. (Herodotus, 7, 5, 1.—Pausan., 1, 14.—Virg., Georg., 1, 155.)

Cephaloicus, a celebrated physician. His native city is unknown; some writers contend for Rome, others for Verona. (Compare Fabricius, Bibl. Lat., 2, 4, p. 36, seqq.) Even his very name is partly involved in doubt, some making it Aurelius Cornelius Celsus, others Atius. The time in which he lived has also been a subject of controversy. One class of writers infer, from a passage in Columella (R. R., 1, 1, 14, compare 3, 17, 4, and 4, 3, 1), that he was born in the time of Tiberius, and lived until the reign of Trajan. (Schilling, Quest. de Corn. Celii Vita, Lips., 1824, p. 19 and 75.) Another class place his birth under the reign of Augustus. (Compare Le Clerc, Hist. de la Med., vol. 1, p. 517, seqq.—Schulze, Compend. Hist. Med., p. 298, seqq.) The most probable opinion is, that he lived under Augustus and Tiberius, but wrote his works under the latter. Celsus composed a large work, on the plan, in some measure, of an encyclopaedia, in which he treated of philosophy, jurisprudence, agriculture, and medicine. It was entitled De Artibus. Unhappily, however, only the eight books (from the 6th to the 14th) which treat of medicine have come down to us. The best editions are that of Rohrhen, Lugd. Bat., 1785, and that of Milligan, Lond., 1826. Roman literature, otherwise so barren of genuine literature, could boast of possessing in Celsus one, who, for elegance, terseness, learning good sense, and practical information, stands univaluated. Every branch of the profession has been treated

324
of by him, and it may be well said of him, Nikhil good tettitn mon ornaiet. So complete a specimen of professional knowledge, selected by a sound judgment, and adorned with philosophy, is nowhere else to be met with. As a Roman historian said of Homer, that he who can believe him to have been born blind must himself be devoid of every sense, so may we venture to affirm respecting Celsus, that he who can suppose him to have been a mere compiler, and never to have practised the art of medicine, must be totally destitute of all professional experience. His preface contains an admirable exposition of the principles of the different sects which had risen up in medicine before his time; and in the remaining part of the 1st book there are many pertinent remarks on the best method of preserving the health. In the 2d, which treats of the general symptoms and phenomena of diseases in general, he has laid aside some of hermetical nonsense, having, not doubt, discovered that "to copy nature was to copy him." The last part of this book is devoted to the subject of diet and regimen; and here his views will, with a few exceptions, even now be admitted by the unprejudiced to be wonderfully correct. Dr. Cullen, with all his prejudices against ancient authors, allows that, "in most instances, his judgment, if understood well, might be found perhaps to be very good."—In the same work he devotes a whole chapter (the 14th) to the description, remarks upon critical days, and treatment, will be found to be particularly deserving of attention. Venusian and cold applications to the head are the general remedies which he most approves of, and happily would it have been for mankind if the masters of the profession had been content to follow this simple plan of treatment, instead of being carried away by such specious theories as those of the Gallenians and Brunoni, which all must now admit have introduced very mistaken and fatal views of practice. The other parts of his work it is unnecessary to go over minutely; but we would point out, as particularly valuable, his divisions and treatment of ulcers. It is remarkable that no one has treated of diseases of the "absence paries" with the same precision that he has done. The different shades of cutaneous diseases, which are found so difficult to distinguish by the modern practitioners, he has, as a surprising degree of precision. But, of the whole work, the most interesting part, perhaps, is the 7th book, which treats of the operations of surgery. His account of those performed upon the eye may be instanced as particularly excellent. The operating for coughing the cataract is described in much the same manner as it is now performed. The ancients were not acquainted with the mode of extracting the operculum, but they were by the celebrated Dupuytren, who has revived it at Paris, and considers it to possess the advantage over the common plan of affording a freer passage to the stone. Mr. Charles Bell, of London, has also operated much in the same way upon boys, to whom Celsus directs his practice. Celsus has the merit of being the first author who makes mention of the application of the ligature to arteries for stopping hemorrhage. The ligature is also mentioned by Heliodorus in a short tract on amputation preserved by Nicetas, by Galen in nearly twenty places, by Aetius, Paulus Aeginitas, Avicenna, Rhazes, Avenzoar, and Albucasis; so that it cannot with any propriety be called a modern invention.—In the last book he treats minutely of fractures and dislocations; and, here, of course, he avails himself of the correct views previously laid down by Hippocrates. One may venture to affirm that, even at the present day, he who is thoroughly acquainted with the writings of Celsus, and has learned to reduce his knowledge to practice, will prove a useful and distinguished member of his profession.—II. A Platonic, or, according to others, Epicurean philosopher, who lived towards the close of the reign of Hadrian. His name is famous as that of one of the bitterest enemies of Christianity. From a motive of curiosity, or, perhaps, in order to be better able to combat the new religion, Celsus caused himself to be initiated into the mysteries of Christianity, and to be received into that secret society which St. Clement of Rome is supposed to have founded. (Compare Kestner, Agape, oder der geheime Weltbund der Christen, &c., Jenae, 1819, Svo.) It appears, however, that the sincerity of the neophyte was distrusted, and that he was refused admission into the higher ceremonies. The discontent to which this gave rise in the breast of Celsus, inflamed his resentment against the Christians, and he wrote a work against them, entitled Αἱ Ληπίδες Άνθρωπος, "A True Discourse," as he calls it, which, surpassing the ambition of his intellect and eloquence to paint Christianity as a ridiculous and contemptible system, and its followers as a sect dangerous to the well-being of the state. There is no falsehood to which he has not recourse in order to represent in an untruth the Christian scheme of morals, to parody and falsify the text of the Old and New Testaments, and to calumniate the character of Jesus Christ and his disciples. He says that in his time this Christian sect was powerful, and corrupt the human race (λέγεται λαματινόμενος τον όντων ανθρώ- πων βίον), and exhorts the government to extirpate the sect, if it wishes to save the empire. The discourse itself is lost; but Origen, who refuted it, in a work divided into eight books, has given us so complete an extract from it, that, by the aid of this, we can follow all the principal reasonings of the author. Celsus wrote also a work against magicians and sorcerers (Κατὰ Μάγκων), which is cited by Origen and Lucian. The latter, who was his friend, addressed to him a memoir on Alexander, the false prophet, in which he extols the wisdom of Celsus, his love for truth, and his amiable manners. (Schüll, Hist. Lat. Gr., vol. 5, p. 103, sqq. III. Albionanus, a friend of Horace, warned against plagiarism (Epist., 1, 3, 15) and pleasantly ridiculed (Epist., 1, 8) for his foibles. Celsus also wrote a work against the Gauls and the Gallic race, but, in a special sense, an appellation given to the most indigenous and extensive of the three great tribes that occupied Gaul in the days of Caesar. (Vid. Gallia.) Celtiberi, a people of Spain, brave and powerful, who occupied the greater part of the interior of the country. According to Diodorus Siculus (5, 33), they were composed of two nations, the Celtæ and Iberi, whence their name, which, perhaps, was used for distinction, was applied to the powerful tribes in Gaul. Their cavalry were excellent, and fought equally well on foot and on horseback. Niebuhr considers the fact far from proved that the Celts of Iberia were strangers from Gaul who had migrated into that country. No definite tradition of this event is, according to him, to be found; not even in Diodorus. This assertion, however, is altogether untenable, and is based upon the strange hypothesis that different races of human beings were originally created, and that mankind did not spring from one common parent. (Compare Niebuhr, Rom. Hist., vol. 2, p. 256.) The Celtiberi were reduced beneath the Roman sway in the Sertorian war, after a long and brave resistance. They were divided into six tribes, the Bellones, Arevac, Pelenones, Dithii, Belli, and Lusones. The country of the Celtiberi was sometimes called Celtiberia, on the east, the Corubitana and the range of Mount Orta; on the north upon the Iberus; on the west upon the Tagus and the Cartepein; on the south upon the Octanti. It comprised, therefore, what is now the southwestern part of Aragon, the southern part of Navarre, the eastern portion of Old Castile, and the northeastern division of New Castile. (Plin., 3,
3.—Id., 4, 22.—Liv., Epit., 48.—Eutrop., 4, 16.—

Celtici, a people of Lusitania, whose territory lay below the mouth of the Tagus, and between that river and the Turdetani. They were of Celtic origin, as their name reports, and their country answered to what is now the southern part of Alentejo. Their chief town was Pax Julia, now Beja. (Plin., 3, 1.—Id., 4, 21)

Cenaeum, a promontory of Euboea, which formed the extreme point of the island towards the northwest. The modern name is Lithada. (Strab., 444.,—Plin., 4, 12.—Piol., p. 87.)

Cenchrius, Censorinus, Tacit., Gallienus, were:—In the harbour of Corinth, on the Saronic Gulf, from which this city traded with Asia, the Cyclades, and the Euxine. (Strabo, 380.) It was about seventy stadia from the city itself; and the road thither appears, from the account of Pausanias, to have been lined with temples and sepulchres. Dr. Clarke observes, that the remains at Cenchreae faithfully correspond with the description given by Pausanias of the spot. Sir W. Cell says the place is still called Ken-
chrea. (Itin. of the Morea, p. 207.) II. A village of Arcadia, near the promontory of Arcadia, southwest of Argos. A tumultus was here erected to some Argives who had fallen in a battle with the Spartans. (Strabo, 376.)

Cenchreis, a small island off the Spiracum Promontorium of Argolis. (Plin., 4, 11.)

Cenchrius, a river of Ionia near Ephesus and Mount Solimissus, where the Curetes, according to some, concealed and protected Lysias after her delivery, when she was pursued by the power of Juno. (Strab., 639.)

Cenmagni, a people of Britain, north of the Trinobantes, on the eastern coast, forming part of the great nation of the Iceni. (Vid. Iceni.) Lipsius, however, rejects the term Cenmagni, where it occurs in the text of Caesar (B. G., 5, 21), on the ground that this race are nowhere else mentioned among the British tribes, and he proposes to read in place of it, Iceni, Cencri. The author of the Greek paraphrase of Caesar has Kreyvavol, whence Vossius conjectured the true reading to be Cenomani, and supposed this nation to have crossed over from Gaul. (Lemaire, Ind. Geogr. ad Cau., p. 231, seqq.)

Cenina, Vid. Cenina.

Cenomani, a people of Gaul, belonging to the nation of the Aurelii. (Vid. Aurelii.)

Censores, two magistrates of great authority at Rome. (Vid. Aurelii.) The office of the censors was chiefly to estimate the fortunes, and to inspect the morals of the citizens. For a full account of their duties, &c., consult Adams, Rom. Ant.

Censorinus, I. one of the ephemeral Roman emperors who appeared in so great numbers under the reign of Gallienus, and are known in later Roman history as the "thirty tyrants." (Treb. Pollio, in Hist. Aug. Script., vol. 2, p. 254, ed. Hack.) Censorinus had been formerly in the camp, and to the senate; he had been twice consul, twice praetorian prefect, three times prefect of Rome, and four times proconsul. After having passed through this honourable career, he retired to the country, being now advanced in years, and lame from a wound he had received in the war against the Persians during the reign of Valerian. It was under these circumstances that he was proclaimed emperor, A.D. 269, in spite of it would appear, of his own wishes; and the species of pleasure he was surmained, or rather nicknamed, Claudius, in allusion to his lameness (claudus, "lame"). The strict discipline, however, which he wished to introduce, gave offense, and he was slain by the very soldiers who had raised him to the throne. (Treb. Politi., Vit. Cens.)

II. A grammarian and philosopher, who flourished under Maximus and Gordianus, about A.D. 286. He wrote a small work entitled "De die Natali," which was so called because composed on occasion of the birthday of his friend Cerellius. It treats of the time of birth, of the influence of one's Genius, as well as that of the stars on the birth-place of an individual; and embraces many other topics of a chronological, mathematical, and cosmographical character.

Canio, therefore, who edited the work in 1583, separated the latter part of this production from the rest, and regards it as a fragment of an unknown author, "De naturali institutione." The style of Censorinus is good, though not free, of course, from the blemishes natural to his time. We have also a fragment, de Me-
teria, by Censorinus. It seems to have been written on accents, and another on geometry, but these last parts have not reached us. The best edition of Censorinus is that of Havericum, Lugd. Bat., 1743, 4v, reprinted in 1767. (Bähr, Gesch. Röm. Lit., vol. 1, p. 661.) The latest edition is that of Gruber, Nuremb., 1805, 8v.

Centauri, a Thessalian race famed to have been half-men half-horses.—The Centaurs and Lapithae are two mythic tribes, which are always mentioned together. One of these tribes, the centaurs, were bountifully provided under the appellation of wild-creatures (φῆσις), and once under their proper name. (ll., 1, 268.—ib., 2, 742.
—ib., 11, 832.) We also find the name Centaurs in the Odyssey (21, 303). They seem to have been a rude mountain-tribe, dwelling on and about Mount Pelion. It is very doubtful whether Homer and Hesiod conceived them to be of a mangled form, as they were subsequently represented. In the fight of the Cen-
taurs and Lapithae on the Plain of Hermes, the latter appear in panoply fighting with spears, while the former wield pine-clubs. (Hes., Scut. Herc., 178, seqq.) Pindar is the earliest poet extant who expressly describes them as semi-ferine. According to him (Pyth., 2, 78, seqq.), the offspring of Ixion and the cloud (vid. Ixion) was a son named Centaurus, who, when grown up, wandered about the foot of Mount Pelion, where he united with the Magnesian mares, who brought forth the Centaurs, a race partaking of the form of both parents, their lower parts resembling their dams, their upper their sire. The common account makes the Centaurs to have been the immediate off-
spring of Ixion and the cloud. By his wife Dia, Ixion had a son named Pirithoos, who married Hippodamia, daughter of Acratas, king of Argos. The chiefs of his own tribe, the Lapithae, were all invited to the wed-
ing, as were also the Centaurs, who dwelt in the neighborhood of Mount Pelion. The Lapithae, all the other strangers were likewise present. At the feast, Eury-
ton, one of the Centaurs, becoming intoxicated with the wine, attempted to offer violence to the bride; the other Centaurs followed his example, and a dreadful conflict arose, in which several of them were slain. The Centaurs were finally driven from Pelion, and obliged to retire to other regions. (Ovid, Met., 12, 210, seqq.—Diod. Sic., 4, 70.)—According to the narrative version of T. Eustathius, Centaurus was being invited to the mansion of Pirithous, got intox-
ciated, and behaved so ill, that the heroes rose, and, dragging him to the door, cut off his ears and nose, which was the occasion of "strife between the Cen-
taurs and men." (Od., 21, 293, seqq.) When Her-
cules was on his way to hunt the Erymanthian boar, he was entertained by the Centaur Pholus; and this gave rise to some misunderstanding between the Cen-
taurs, which terminated in the total discomfiture of the latter.—The most celebrated of the Centaurs was Chiron, the son of Saturn by the nymph Philyra. (Vid. Chiron.)—It is the opinion of Buttmann (My-
thologus, vol. 2, p. 22), that the Centaurs and Lapithae are two purely poetic names, used to distinguish two opposite races of men; the former, the rude horse-
riding tribes, which tradition records to have been
spread over the north of Greece; the latter, the more civilized race, which founded towns, and gradually drove their wild neighbours back into the mountains. He therefore thinks the exposition of Centurias as *Airpie{}rs* (from *κατειχ* in *ἀφω*) not an improbable one, for that very idea is suggested by the mere Cossack, leaning forward with his protruded lance as he gallops along. He regards, however, the idea of *καταρπασ* having been in its origin simply *καταρπ* as much more probable. Lapithae may, he thinks, have signified *Stone-persuaders* (from *λάθως χειλε*), a poetic appellation for the builders of towns. He supposes Hippodamia, as her name seems to intimate, to have been a Centaurea, married to the prince of the Lapithae: Pliny (34, 17) says she was the mother of the Cossack, leaning forward with his protruded lance as he gallops along. For he considers, however, the idea of *καταρπασ* having been in its origin simply *καταρπ* as much more probable.

The name of Nicephorius, "that brings victory," probably on account of some battle gained in its vicinity during the time of the Syrian kings. It separated Armenia from the country of the Cappadoci, and it was by the Bithia-Sint. *Anab.* 4, 3.—Mannert, *Geogr.,* vol. 5, p. 236."

*Centronia*, a people of Gaul, among the Graioceli and Catargers, were defeated by Cesar in several engagements. Their chief city was Forum Claudii Centronia, now Centron. (Lemaire, *Index Geogr. ad Cas.,* p. 231.)

*Centum Cellae*, a seaport town of Euryia, north-east of Cithra. It is better known under the name of Trajani Potus, that emperor having caused a magnificent harbour to be constructed there, which Pliny the younger has described in one of his epistles (6, 31). Two immense piers formed the port, which was semi-circular, while an island, constructed artificially of immense masses of rock, brough there by vessels and sunk in the sea, served as a breakwater in front and supported a pharos. The coast being very destitute of harbours, the building of the port of Trajan was of great national benefit. Previous to Trajan's improvements the place was very thinly inhabited, and received its name from the mean and scanty abodes scattered here and there along the shore. Centum Cellae having been destroyed by the Saracens, the inhabitants built another town at some distance inland, but afterward they reoccupied the site of the old city, which, from that circumstance, obtained its present name of Centum Cellae. (Craik, *Anc. Italy,* vol. 1, p. 201, seq.—Mannert, *Geogr.,* vol. 9, p. 373.)

*Centumviri*, the members of a court of justice at Rome. There were originally chosen three each of the thirty tribes of the people, and, though 105, they were always called Centumviri. They were afterward increased to the number of 180, but still kept their original name. They seem to have been first instituted for the creation of the praetor peregrinus. The caucus that to this day exists before the Roman republic are enumerated by Cicero. They judged chiefly concerning testaments and inheritances. (Cic., *Or.,* 1, 39.—*Val. Max.,* 7, 7.—Quintil., 4, 1, 7.) After the time of Augustus, however, they formed the council of the praetor, and judged in the most important causes. When the number of the Centumviri reached 180, they were divided into four councils, sometimes only into two, and sometimes, in important causes, they judged all together. A cause before them could not be adjourned. (Plin., *Ep.,* 1, 18.— *Id.,* 1, 24.) Ten men were appointed, five senators and five equites, to assemble these councils, and preside in them in the absence of the praetor. (Sueton., *Caes.,* 47; *Liv.,* 35, 38.) The council of 180 was held at their first meeting in the Basilica Julia, sometimes in the Forum. (Consult Heineccius, *Antiq. Rom.,* ed. Haudb, 4, 6, 9, p. 664.)

*Centuripa* (την Κεντορίπα,—Πολ., *Κεντορίπα.*—Sil. Ital., *Centuripe*), an ancient city of the Siculi, on the eastern shore of Sicily, near Catana. After the Roman conquest of the island it became an important place in the corn-trade to Italy. The modern city of Centuripe appears to mark the ancient site. (Mannert, *Geogr.,* vol. 9, pt. 2, p. 416.)

*Ceos* (also called *Cea*), Plin., 4, 12.—Ovid, *Met.,* 7, 368, &c., an island of the *Ægean,* one of the Cyclades, opposite the promontory of Sunium in Attica. It was famed for its fertility and rich pastures. Pliny (4, 12) writes, that it had been torn from Eubea, and was once 500 stadia in length, but nearly four parts were carried away by the sea on the side of Boeotia. The Peloponnese was supplied from Ceos by means of corn-trade. There was a large fleet, sent from Ceos, which was more numerous than the Athenians. (Strabo, *Geogr.,* 9, 671.)

*Peloponnesus* (ξηρος Πελοποννήσος), an island of the *Ægean,* one of the Cyclades, opposite the promontory of Sunium in Attica. It was famed for its fertility and rich pastures. Pliny (4, 12) writes, that it had been torn from Eubea, and was once 500 stadia in length, but nearly four parts were carried away by the sea on the side of Boeotia. The Peloponnese was supplied from Ceos by means of corn-trade. There was a large fleet, sent from Ceos, which was more numerous than the Athenians. (Strabo, *Geogr.,* 9, 671.)

*Cephalonia*, an island in the Ionian sea, south-west of Ithaca, from which it is separated by a strait of six miles. It is now Cefalonia, and forms one of the seven Ionian islands. Strabo (456) asserts, that it was about three hundred stadia in circuit, or thirty-eight miles; Pliny (4, 12), forty-four miles; but both are very far short of the real measurement, which is little less than one hundred and twenty miles. The more ancient name of this large island was Samos, as Varro reports, and then passed to the Peloponnesians. (Strabo, *Geogr.,* 9, 671.) But the poet elsewhere speaks of the Cephalenians as the subjects of Ulysses. (Il., 2, 631.) All the writers of antiquity agree in deriving the name of Cephalonia from Cephalus, who settled here after his expedition against the Teleboi, in which he accompanied Amphitryon. (Strabo, *I. c.*) The Cephalenians did not share in the glory of the victory of Salamis, but one of their cities sent a few soldiers to Plataea. (Herodot., 8, 68.) The island, inhabited by the Peloponnesians, was taken by Lysimachus in 281 B.C., and was conquered by an Athenian fleet commanded by Tolimedes. But its subjugation does not appear to have been permanent, since Thucydides mentions, that, towards the commencement of the war, it was brought under the dominion of Athens, without a struggle, by a fleet of one hundred triremes (2, 30). There were four cities in the island, Palle of Pale, Crani, Same, and Proni. Besides these, there were several others, which, however, do not appear to exist near the modern village of Taphos, on the western coast of the island. (Dodwell's *Tour,* vol. 1, p. 75.) Strabo reports, that, towards the close of the Roman republic C. Antonius, the colleague of Cicero in his consulship, resided in Cephalenia during his exile, and acquired such an influence over the inhabi-
tants that he appeared to have the direction of the whole island. He had projected the foundation of a new city, but the work was never executed. (Cra-mer's Ancient Greece, vol. 2, p. 49, seq.)

Cephalon, a Greek writer, whose native country is unknown. Suidas, it is true, makes him to have been born at Gergitha in Tros, but the lexicographer evidently confounds him with another writer named Cephalon. (Voss., Hts. Gr., 2, 12.) Cephalon is said to have lived during the reign of Hadrian, and to have been exiled to Sicily for some offence given to the emperor. He wrote an Abridgment of Universal History (Σύντομος Ἰστορίκος) from Ninus to the death of Alexander. It was in the Ionic dialect, like the work of Herodotus, and, like this also, was divided into nine books, each named after one of the Muses. He composed also rhetorical declamations. His works are lost. (Photius, Cod., 68—vol. 1, p. 34, ed. Bek-ker.—Rutter ad Swid., s. v.)

Cephalon, a native of Gergitha in Tros, not to be confounded with the preceding. Cephalon wrote an interesting work, entitled Trojan Events (Τροικά). He appears to have been anterior to Alexander the Great, and is considered by Dionysius of Halicarnassus worthy of an attention as a historical writer. His work is lost. (Dion. Hal., Anti. Rom., 1, 49, cf. 72.)

Cepheus, the son of Deion, and a grandson of Procris, father of Cepheus, the husband of Echephena. They dwelt at Thoricos in Attica, and lived happily together, till curiosity to try the fidelity of his wife entered the mind of Cephalus. Feigning a journey of eight years, he disguised himself and came to Procris with a splendid jewel, which he offered to her on dishonourable terms. After much hesita-
tion she yielded, when her husband discovered himself and reproached her with her conduct. She fled from him in shame, but they were soon reconciled. Cephalus went constantly to the chase; and Procris growing suspicious, as she had failed herself, fancied that he was attracted by the charms of some other fair one. She questioned the slave who used to accompany him; and he told her, that his master used fre-
quently to ascend the summit of a hill, and cry out, "Come, Nephele, come!" Procris went to the des-
ignated hill, and concealed herself in a thicket; and on his return, "Come, Nephele, come!" (which was nothing more than an invocation for some cloud to interpose itself between him and the scorching beams of the sun), she rushed forward towards her husband, who, in his astonishment, threw his dart and unwittingly killed her. (Pherecydes, ap. Schol. ad Od., 11, 321.) This legend is told with great varia-
tions, which it is not worth while here to enumerate. (Consul Hygin., fab., 189. — Ovid, Met., 7, 661, seqg.—Pausan., 9, 19, 1.—Apollod., 3, 15, 1.—An-
ton. Lib., 41.) Cephalus, for his involuntary crime, was banished. He went to Thebes, which was at that time ravaged by a fox, which nothing could over-
take, and he joined Amphitryon in the chase of it. His dog Laelaps ran it down; but, just as he was catching it, Jupiter turned them both to stone. (Apollod., 2, 4, 7.) Cephalus then aided Amphitryon against the Teleboans, and on their conquest he settled in the island named from him Cephalonia. This last-
mentioned circumstance, however, is a mere coinci-
dence of name. (Keightley's Mythology, p. 381, seqg.)—II. An Athenian orator, who flourished to-
wards the end of the Peloponnesian war, and was one of those that contributed most to overthrow the rule of the thirty tyrants. Although he lived during a very stormy period, and although no one ever propos-
ed or caused to be proposed any trace of his works, yet he has acquired some celebrity through the accu-
sion brought against him, a remarkable fact in the history of Athens. We must not confound him with Cephas, the father of Lysias, who came from Syracuse and settled at Athens. Sui-
das makes Cephalus to have been the first orator that made use of an exordium and peroration. (Stud., s. v. Κόφαλος.)—III. The father of Lysias the orator. He was a native of Syracuse, but settled at Athens as a resident sojourner, or one of the μυκηναί. (Lys. contra Eratosth., 2.—Reiske, ad loc.)

Cepheus, a name given to Andromeda as daughter of Cepheus. (Ovid, A. A., 1, 193.)

Cephis, an ancient name of the Persians. (Vid. Persia.—Herodot., 7, 81.)—II. A name of the Ethiopians, from Cepheus, one of their kings. (Ovid, Met., 4, 764.—Gierig, ad loc.)

Cepheus, a king of Ethiopia, father of Andromeda, by Cassiope. He was one of the Argonauts, and was changed into a constellation after his death. (Ovid, Met., 4, 669.—Id., 5, 12.—Pausan., 4, 35.)

Cephsis, a borough of Attica, at the foot of Mount Dileus, and near the source of the Cephissus. It was the favourite residence of Herodes Atticus, who had a beautiful villa here. The modern name is said to be Kissaia. Cramer, however, gives Cephis sia. (Aul. Gall., 18, 10.—Cramer's Ancient Greece, vol. 2, p. 400.)

Cephisodotus, I. a statuary of Athens, flourished about B.C. 372. Two works of his are spoken of by the ancients, a Mercury nourishing Bacchus when an infant, and one of a public speaker in the act of deliv-
ering a speech. (Cod., 2, 49, 321.—Suid. p. 311, 8. Art., s. v.)—II. Another statuary, who flourished about Olym. 120. (Plin., 34, 8, 19.—Sillig, Dict. Art., s. v.)

Cephus and Cephissus, I. a celebrated river of Greece, that rises at the foot of Parnassus, close to Lina, and, after traversing the plains of Phocis and part of the Boeotian territory, empties into the Copae-
lic Lake in the latter country. Hesiod compared it to a serpent, and the name signifies its course. (Ap. Strabo, 424.) The modern name is Mauro Po-
tamo. According to the poet, the son of the river-
god Cephissus introduced the worship of the Graces into Boeotia (mid. Orchomenus), and hence the pecu-
liar attachment which they were said to have for the waters of this stream. (Vid. Gratian.)—II. A river of Attica, generally distinguished by the name of At-
ticus, to prevent its being confounded with the Ce-
phissus of Phocis. The latter may be considered a tribu-
arms, that it took its source near the demus of Try-
meis, and, after flowing through the Attic plains and passing under the long walls, discharged itself into the sea near Phalerum: he adds, that in summer it was nearly dry. In the Cephus Colones it is described, how-
ever, as a perennial stream (v. 669, seqg.—Cra-
mer's Ancient Greece, vol. 2, p. 357.)—III. A river running near Eleusis. According to Sir W. Gell (Imer-
gary, p. 34), it is divided at present into many small branches, and often inundates the plain in its vicinity. The modern name is said to be the Podhoniesta. — IV. A river of Argolis, flowing into the Inachus.—V. A river in the island of Salamis. (Strabo, 424.)

Ceramicus, I. now Keramo, a bay of Caria, north of the peninsula of Doris, receiving its name from the city of Ceramicus in its vicinity. (Plin., 5, 29.)—II. One of the most considerable and important parts of the city of Athens. Its name was derived from the hero Ceramus (Pausan., 1, 3), or perhaps from some potteries which were formerly situated there. (Her-
odotus, 5, 88.—Suidas, s. v. Κέραμις.) It included probably the Agora, the Stoa Basileos, and the Poe-
cile, as well as various other temples and public buildings. Antiquaries are not decided as to the gen-
eral extent and direction of this part of the ancient city; since, scarcely any trace remains of its monu-
ments and edifices; but we may certainly conclude, from their researches and observations, that it lay en-
tirely on the south side of the acropolis. (Leake's Topography of Athens, p. 101.) In this direction it
must have been limited by the city walls, which, as we know, came close to the fountain Callirhoe or Enneacrounos. (Thucyd., 2, 15.) The breadth of the Ceramicus, according to Mr. Hawkins, being thus confined on one side by the walls of the city, and on the other by the buildings immediately under the acropolis, could not have exceeded one half of its length. It was carried into the upper and inner Ceramicus. The former was without the walls, and contained the tombs of those who had fallen in battle, and were buried at the public expense. (Schol., Aristoph. Equit., 772.—Plut., Vit. Syll.—Hesych., s. v. Κεραυκος.) From Plutarch it appears, that the communication from the one Ceramicus to the other was by the gate Dipylum. (Hawkins’s Topogr. of Athens, in Watl. Coll., p. 485.—Cramer’s Anc. Greece, vol. 2, p. 315, seq.)

CERAMUS, a small town and fortress of Caria, on the northern side of the Sinus Ceramicus, and a short distance to the east of Halicarnassus. The village of Keramo, at the present day, indicates the ancient site. (Strab., 611.—Ptol., p. 119.)

CERAMUS (unto), a city of Pontus, on the seacoast, southwest of Trapezus. It was founded by a colony from Sinope in Paphlagonia, to which it paid a yearly tribute. It must not be confounded with Pharnacia. (Vit. Pharmac.) Xenophon and the Greeks rested here for ten days on their retreat from Asia. (Anab., 5, 3, 5.) From this place, according to Pliny, Lucullus first brought cherries into Italy, A.U.C. 680, which were introduced 120 years after into Britain. Hence the Latin cerasus, “a cherry-tree,” and cerasum, “a cherry.” According to Tournefort, the country is hilly and the hills covered with forests, in which cherry-trees grow naturally. It is now called Cermavon. (Ann. Marcell., 22, 13.—Plin., 15, 25.—Mela, 1, 19.)

CERANUS (or ACERANUS) MONTES, a chain of mountains stretching along the coast of northern Epirus, and forming part of the boundary between it and Illyricum. That portion of the chain which extended beyond Onicium, formed a bold promontory, and was termed Aceranum (Ἀκερανόν), from its summits (ἀκρα) being often struck by lightning (ἐκραυγα). The ancient name for this mountain was Ceramaris, or Chimarra, and that of the Acerranian promontory is Cape Linguetta. The Greek and Latin poets are full of allusions to this dangerous shore. (Apollon., Arg., 4, 1216.—Lycoth., 1016.—Virg., Æn., 3, 505.—Hor., A., 1, 3, 19.) It was much dreaded by the mariners of antiquity, from the belief that the mountains attracted storms. Augustus narrowly escape, shipwreck here when returning from Actium. (Cramer’s Anc. Greece, vol. 1, p. 94.)

CERANUS, a surname of one of the Ptolemae. (Vid. Ptolemaus XV.)

CERSÈS, the famous dog of Hades, the fruit of Echidna’s union with Typhon. He was stationed at the entrance of hell, as a watchful keeper, to prevent the living from entering the infernal regions, and the dead from escaping from their confinement. Orpheus lured him to keep with his lyre; and Hercules dragged him from hell in the performance of his twelfth and last labour. (Vid. Hercules.) The poets differ in their descriptions of this fabulous animal. He said (Theog., 312) assigns him fifty heads, calling him κύων πνευκοντακόρων. Sophocles (Trach., 1114) styles him Λεύδω τρίκαρον σκύλακα (“the three-headed dog of Pluto”); and in this last account the Latin poets generally coincide. Horace, however, calls him Λούκων centeicas (Od., 2, 13, 14), either by poetical amplification, or else in accordance with some Greek authority. (Compare the remarks of Tzetzes in his scholium on Lyocophon, v. 678: ὃ κόλον τοῦ Λεύδου, ὁ Θησεύς ἔχει κατά σκύλας.) Champollion traces a curious analogy between the Egyptian and Grecian mythology as regards the dog of Hades. "Le voisinage du séjour du suprême juge de l’Aménithi est annoncé par un piédestal, sur lequel se repose un animal monstrueux, mais dont les formes sont à déterminées qu’on ne peut y méconnaître un hippopotame, amphibie redoutable, dont les cavernes du Nil renfermaient un grand nombre. Ici c’est l’hippopotame féminelle, qui, dans les tableaux astronomiques de l’hélioscopy, occupe dans le ciel même la place que les Grecs ont donnée à la grande ourse. Cette constellation était nommée le Chien de Typhon par les Egyptiens, et sa présence dans l’Aménithi (l’enfer) ne laisse pas douter que cet animal ne soit le type du chien Cerberus, qui, selon les mythes Grecs gardait l’entrée du palais d’Aadès." (Champollion le jeune, "Explication de la principale scène peinte dans des Papyrus funéraires Egyptiens."—Bulletin des Sciences Historiques.)

CERCAESORUM, a city of Egypt, in the Memphitic nome, on the western bank of the Nile. It lay to the north of Memphis, and a short distance south of the spot where the Nile branched off into the Pelusiac and Canopic mouths. (Herod., 2, 15.—Id., 17, 97.) The ancient Cercasorum is thought to answer to the modern Besa, or Al Achasim. (Compare D’Anville, Mem. sur l’Egypte, p. 73.—Edrisi Africa, p. 498.)

CERDÂNE, a small island off the coast of Byzacium, in Africa, at the mouth of the Syrtis Minor, towards the northwest. It is now Kerkine. (Liv., 33, 48.—Tacit., Ann., 1, 53.—Plin., 5, 7.)

CERÉNIUM, a town of Macedonia, west of Amphipolis. It was situated at the mouth of the river Pon, on a lake called Cercesius palus. (Liv., 31, 41.)

CERCÔPEA, a probabilie race infesting Lydia during the reign of Omphale. They were overcome by Hercules. (Diod. Sic., c., 4, 31.) The legend connected with their name will be given, with some remarks upon it, under the article Melampygus.

CERCYON and CERCYONES, a king of Eleusis, son of Neptune, or, according to others, of Vulcan. He obliged all strangers to wrestle with him; and, as he was a dexterous wrestler, they were easily conquered and put to death. After many cruel victories of this kind, they were killed by the same Hercules. (Vit. Her., 2, 21.) They were not observed in the year after the battle of Cannæ. They were analogous to the Grecian Thesmophoria. (Vid. Thesmophoria.)

CERES (in Greek Demeter, Δημήτηρ), daughter of Saturn and Rheus, was the goddess of grain and harvests. She is in fact, however, the same as the goddess of the earth, Mother-Earth (γη μητέρ), whence some ancient system married her to Jupiter, the god of the heaven. The case of Ceres was thus the same as that of Hesiod (Theog., 454, 912) she is said to have become by this deity the mother of Proserpina (Persephone). In Homer she is but slightly mentioned (Il., 5, 500.—Od., 5, 125), and she does not appear among the gods on Olympus. She seems to have been early distinguished from the goddess called Earth, and to have been thenceforth regarded as the protectoress of the growing corn and of agriculture in general. The most celebrated event in the history of Ceres is the yearly offering of her daughter Proserpina by Hades or Pluto, and the search of the goddess after her throughout the whole world. It is noticed by Hesiod (Theog., 914); but the Homeric hymn in her honour contains perhaps the earliest narrative of this event, which, though apparently unknown to Homer himself, became a favourite theme with
succeeding poets, after whom Ovid has related it (Met, 5, 341.—Id., Fast, 4, 417, seq.). Claudian also has sung it in a poem, of which, unfortunately, a portion is lost, and in which he gives the unheard of story that Ceres,典型案例

in the Nyssian plain with the ocean

nymphs gathering flowers. According to some account, Venus, Minerva, and Diana were the companions of their sister on this occasion. (Hygin., fab., 146.—Claudian, Rapt. Pros., 2, 11, seq.—Stat., Achill., 2, 150.) Others gave her the sires as her attendants. (Apoll. Rh., 4, 886.) She plucked the rose, the violet, the coccus, the hycanth, when she beheld a caracass of surprising size and beauty, having a hundred flowers growing from a single root. Unconscious of danger, the maiden stretched forth her hand to seize the wondrous flower, when suddenly the wide earth gaping, Pluto arose in his golden chariot, and, seizing the terrified goddess, carried her off shrieking for aid, but unheard and unseen by gods or mortals save by Hecate, the daughter of Peræa, who heard her as she sat in her cave, and by King Helus (the sun), whose eye nothing on earth escapes. So long as the goddess beheld the earth and starry heavens, the fishy sea, and the beams of the sun, so long she hoped to see her mother and the tribes of the gods; and the tops of the mountains and the depths of the sea resounded with her divine voice. At length her mother heard, and, frantic with grief, inquired for tidings of her lost daughter; but neither gods, nor men, nor birds, could give her intelligence. Nine days she wandered over the earth, with flaming torches in her hands; on the tenth Hecate met her, but could not tell who it was that had carried off Proserpine. Together they proceeded to Helus, and the Sun-god tells Ceres that the ravisher is Pluto, who, by the permission of her sire, had carried her away to be his queen. Incensed at the conduct of Jupiter, Ceres thereupon abandoned the society of the gods and came down among men. But now she was heedless of her person, and no one recognised her. Under the guise of an aged female, she came to Eleusis, and was employed, as a nurse for her infant son Demo-

phoon, by Metanira the wife of Celeus, monarch of the place. Beneath the care of the goddess the child "throve like a god." He ate no food, but Ceres breathed on him as he lay in her bosom, and anointed him with ambrosia, and every night hid him beneath the fire, unknown to his parents, who marvelled at his growth. He had a habit of placing the war regalia of Ceres to make him immortal, but the curiosity of the flies Metanira for her sake deprived him of the intended gift. She watched one night, and, seeing what the nurse was doing to her child, shrieked with fright and horror. The goddess threw the infant on the ground, declaring what he had lost by the inconsiderateness of his mother, but announcing that he would still become a great and honoured man. She then disclosed her real character, and, raising an altar and temple to her without the city, on the hill of Eleuchthonia. The temple was speedily raised, and the mourning goddess took up her abode in it, but a dismal year came upon mankind; the earth yielded no produce; in vain the oxen drew the plough in the field; in vain the seed was cast into the ground, for Ceres would allow of no increase. Jove at length sent Iris to Eleusis to invite Ceres back to Olympus, but she would not leave the infant Demophoon; but her wishes were sent on the same errand, but with little success. Finding that there was no other remedy, and that the goddess would not allow the earth to bring forth until she had seen her daughter, Jupiter sent Mercury to Erebus to endeavour to prevail on Pluto to suffer Proserpine to return to the light. The monarch of the lower world yielded compliance, and, kindly addressing Proserpine, granted her permission to return to her mother. The goddess instantly sprung up with joy, and heedlessly swallowed a grain of pomegranate which he presented to her. Mercury conducted his fair charge safe to Eleusis, and delivered her into the hands of her mother. Ceres, after a little subsided, Ceres anxiously inquired of her daughter if she had tasted anything while below; for if she had not she would be free to spend her whole time with her father and mother; whereas, if but one morsel had passed her lips, nothing could save her from passing one third of the year with her husband; she should, however, pass the other two with her and the gods. Proserpina ingenuously confessed the swallowing of the grain of pomegranate, and then related unto her mother the whole story of her abduction. They pass the day in delightful converse. Hecate arrives to congratulate Proserpine, and henceforward becomes her attendant. Jove sends Rhes to invite them back to heaven. Ceres now composes, and fertility once more prevailed over the earth. Ceres thereupon taught "Triptolemus, horse-lashing Diocles, the mighty Eumolpus, and Celeus, leader of the people," the mode of performing her sacred rites; and the goddess, after this, returned to Olympus.—Such is, in all probability, the oldest account of this celebrated event. In progress of time it underwent various alternations; the scene was, as usual, changed, and circumstances also were added or modified. In the beautiful versions of it given by the Latin poets, the scene is transferred to the grove and lake in the neighbourhood of Enna in Sicily, the nymph Arethusa gives intelligence of the ravisher, the torches of Ceres are lighted from Etna, and Ascalaphus tells of Proserpine's having plucked a pomegranate in the garden of Pluto, and having put seven of the seeds in her mouth. In this as in other legends, the fancy of poets, and vanity of the inhabitants of different places, have taken abundances of liberties with the ancient tale.—The meaning of the whole fable is evident enough. Proserpine signifies the seed-corn, which, when cast into the earth, the soil thaws, the sun shines, it is, she is carried off by the god of the lower world; it re-appears; that is, Proserpine is restored to her mother, and she abides with her two thirds of the year. As, however, the seed-corn is not a third part of the year in the ground, it is probable that by the space of time which Proserpine was to spend with the god in the invisible state, was intended to be expressed the period between the sowing of the seed and the appearance of the first change of weather, and which space of time in some species of grain, barley for instance, is about four months. The vanity of the people of the hungry soil of Attica made them pretend, that corn was first known, and agriculture first practised in their country. They failed, that the goddess gave to Triptolemus (Thrice-plougher), who occupies the place of Demophon in the foregoing legend, her chariot drawn by dragons, in which he flew through the air, to distribute the fruits of the earth. (Callim., H in Cer., 22.—Pausan., 1, 14, 2.—Ovid, Met, 5, 645.—Hygin., fab., 147.)—Ceres, though of a gentle disposition in general, partook of the usual revengeful character of the gods, as may be seen by the legends of Stellio and Erysichthon. (Vid. Stelio and Erysichthon.)—The chief seats of the worship of Ceres and Proserpine were Attica, Arcadia (vid. Oeneaum), and the fertile isle of Sicily. Proserpine, as lady of Persephone, was on her day of unveiling, that is, on her marriage; as was also Thebes, according to the poet Euphorion. (Schol. ad Eurip., Phæm., 693.—Müller, Orçom., p. 217.) The form of Ceres is copied from that of Juno. She has the same majestic stature and manly air, but of a milder character. Her usual symbol are poppies, which sometimes compose a garland for her head, sometimes are held in her hand. She is frequently represented holding a torch, significant of her
search after Proserpina. At times she appears in her chariot drawn by dragons. (Keightley's Mythology, p. 170, seqq.)—The Latin name Ceres is in reality of the same force with the Greek appellation Demeter (Δημήτρια, i.e., γυνὴ μῖνή), the Roman C being originally the same letter, both in figure and power, as the Greek E; which was at first employed in the native language for the etymological aspirate, especially in the old Eolice dialect, from which the Latin is principally derived. (Compare Knight on the Greek Alphabet, p. 4, seqq.) The hissing termination, too, in the S, belonged to the same: wherefore the word, which the Attics and Ionians wrote EPA, EPE, or HPH, would naturally be written ΓΕΠΕΖ by the old Eolics; the Greeks always accommodating their orthography to their pronunciation; and not, like the Latin and French, excising from their words a number of useless letters. Ceres, however, was not a personification of the brute matter which composed the earth, but of the passive productive principle supposed to pervade it (Ovid, Fast., 1, 673.—Virg., Georg., 2, 324); which, joined to the active, was held to be the cause of the organization and animation of its substance; from whence arose her other Greek name ΔΗΤΗ, "the inventress." She is most frequently the wife of the omnipotent Father, Αἴθερ or Jupiter, and therefore the same as Juno; who is usually honoured with that title, and whose Greek name HPH signifies, as before observed, precisely the same. (Plutarch, ap. Euseb., Prep. Evang., 3, 1.) The Latin name Jovina is derived from the Greek ΔΗΝΗ, the female ζηιωρ or ηιας; the Etruscan, through which the Latin received much of its orthography, having no D or O in its alphabet. The ancient Germans worshipped the same goddess under the name of Hertha, the form and meaning of which still remain in our word Earth. The Greek title seems originally to have had a more general signification; for without the aspirate (which was anciently added and omitted almost arbitrarily) it becomes EPE; and by an abbreviation very common in the Greek tongue, PE, or ΕΠ, which, pronounced with the broad termination of some dialects, become ΏΕΑ; and with the hinging one of others, ΗΕΩ or ΡΗΩ; a word retained in the Latin, signifying properly matter, and figuratively every quality and modification that can belong to it. The Greek has no word of such comprehensive meaning; the old general term being in the refinement of their language rendered more specific, and appropriated to that principal mass of matter which forms the terraqueous globe; a term adopted by the ancients also by the same word united to the Greek article τὸ ἄρσι—TERRA. (Knight, Inquiry, &c., § 35, seqq.—Class. Journ., vol. 23, p. 228, and vol. 25, p. 39.—Sainte-Croix, Mystères du Paganisme, vol. 1, p. 159.)

Cerinthos, a town of Eubea, in the vicinity of Histiaia, and near a small river called Budorus. The name of Geronda, attached to a hamlet on the western coast, seems to recall that of Cerinthos. (Seymun., Ch. Arc., 1, 34.—Plut., Quaest. Gr.—Op., ed. Reiske, vol. 7, p. 187.)

Cerne, an island without the pillars of Hercules, on the African coast, mentioned by Hanno in his Periplus, as it is usually thought incorrectly termed. Here he established a colony, and it was always the depot of the Carthaginians on the Atlantic coast of Africa. Hanno says that it was the same distance from the Pillars of Hercules that Carthage was. According to Ronder, it was the island Cerintha of the ancient Argus. Gossellin, however, makes this island to be the modern Fedala. (Vid. the account of Hanno's voyage under the article Africa.)

Ceretani, a people of Hispania Tarraconensis, at the foot of the Pyrenees, and to the east of the Vascones. Pliny divides them into the Ceretani Augustiani (so named from Augustus having enlarged their territory), and the Ceretani Juliani, who possessed the Jus Latii. Their country answers to the district of Cerdaign in Catalonia. (Plin., 3, 3.—Pet. de Marseille, 1, 12.)

Cerdagne, a district of Epirus, separated from Thessaly by the river Thyamia. It was said to be the country which the Greeks composed of the island of Heliceus, having previously borne the appellation of Campania. It is now called Phylates. (Pasouan, 1, 11.—Steph. Byz., s. v. Cauvavla.—Thucyd., 1, 46.)

Cethurnus, n. a Roman consul, A.U.C. 421. He was obliged to lay down his office on account of some informality in his election.—II. M. Cornelius, a distinguished Roman orator. Being sent as praetor to Sicily, he quelled a sedition of the soldiers in that island. He was called to the censorship before he had been consul, a thing not in accordance with Roman usage, and obtained this latter office six years subsequently, B.C. 304. He carried on the war against the Carthaginians in Etruria, and defeated Mago, who was coming with succours for Hannibal. (Liv., 27, 11.—Id., 30, 18.)—III. C. Cornelius, proconsul in Spain, A.U.C. 557, defeated a numerous army of the Sede-tani. Being elected consul, A.U.C. 557, he gained a great victory over the Insurtes, and thence sent to Rome the honours of a triumph. The people having afterward chosen him censor, he assigned distinct places to the senators at the public games. (Liv., 31, 49.—Id., 32, 30.—Id., 35, 9.)—IV. C. Cornelius, a Roman rendered powerful by his influence with Marius. He himself was wholly governed by a female named Praxia, who obtained for Lucullus the government of Cilicia. (Plut., Vit. Lucull.)—V. C. Cornelius, a Roman of the most corrupt and abandoned character, and one of the accomplices of Catiline. He was strangled in prison by order of the senate. (Sall., Bell. Cat.)

Ceto, a daughter of Pontus and Terra, who mar- ried Phorcys, by whom she had the three Gorgons, the Glaucus, Echidna, and the serpent that watched the golden apples. (Hesiod., Theog., 270.)

Cetus, an incorrect form for Coeus or Coios. (Vid. Coeus.)

Ceyx, a king of Trachinia, and husband of Alcy- one. He was drowned as he went to consult the oracle of Clarion, and his wife, having been apprized of his fate in a dream, found his corpse on the shore. They were both changed into Halcyons. (Vid. Alcyone.)

Chaboras, a river of Mesopotamia, springing, ac- cording to Ptolemy, from Mount Masius, a little to the west of Niniba, but, according to other authorities, a little east of Charran. These last are followed by D'Anville. It falls into the Euphrates near the town of Circesium. Its modern name is the Khabour. In the Anabasis of Xenophon (1, 4, 19.—Compare Ind. Nom. to the edition of Zeune), it is called the Araxes, which appears to be an appellative term, as we find it applied to many other rivers in antiquity. The Chaboras is called by Strabo (17, 1, 2), the Assur, the Assi, or the Assirius. (Compare Amm. Marcell., 14, 1, and 23, 5.—Mannert, Geogr., vol. 5, p. 268, seqq.)

Chabrias, a celebrated Athenian general, at first a disciple of Plato's, who distinguished himself in the military movements of Athens during the fourth cen- tury before our era, after the termination of the Pelo- ponnesian war. One of his first acts on the approach of Evagoras, king of the Carians, this island in the island of Cyprus, against the Persian arms. He was after this sent to the aid of the Bactrians, who had been attacked by Agesilas, and he disconcerted the Spartan general by a manœuvre hitherto unknown to the Greeks. His army, on this occasion, being hard pressed by the foe, who had already become sure of victory, Chabrias or- dered his soldiers to plant one knee on the ground,
and rest their spears firmly on the other, covering their persons at the same time with their shields. Agesilaus, not daring to attack them in this position, drew back his forces into camp. A truce was arranged between them in honour of this exploit of Chabrias, and he was represented in the posture just described.

Some of the learned of modern times think that they recognise this statue in that of the "Gladiator." Chabrias afterward defeated near Naxos the fleet of the Lacedemonians, and thus restored to Athens the control of the sea, which she had lost since the battle of Ages Potamos. Subsequently to this he was accused of treason for having allowed Oropus to be surprised by the Theban exiles, but was acquitted not withstanding the powerful efforts of his foes, and particularly of Callistratus. Finding a stay at Athens rather unsafe, he accepted the offer of Tachus, king of Egypt, who already had Agesilaus in his service, and accepted the command of his naval forces. Tachus, however, having been abandoned by Agesilaus, who sided with his son Nectanebis, Chabrias returned to Athens, and he was then sent into Thrace to take charge of the war against Chersonesept. His operations, however, were not very successful in this quarter, owing to the disorganized state of the Graecian forces, in consequence of the failure of their pay. Not long after this the social war, as it has been termed, broke out between the Athenians on the one side, and the Byzantines, together with the inhabitants of Chios, Rhodes, and Cos, on the other. The Athenians gave the command of their forces to Chares, and Chabrias went with him as second in authority, having charge of the fleet according to Diodorus Sicyonus, but, as Nepos informs us, in the character of a simple volunteer. They proceeded to attack Chios; and Chares, wishing to make an onset by both sea and land, gave the command of his ships to Chabrias. The latter succeeded in forcing an entrance into the harbour, but, not being followed by the remainder of the squadron, he was surrounded by the vessels of the enemy, and fell bravely defending his king, although he might have escaped had he felt inclined. Great honours were paid to his memory at Athens. Demosthenes says, that he took in the course of his life seventeen cities and seventy vessels; that he made three thousand prisoners, and brought one hundred and ten talents into the public treasury; that he erected also many trophies, but his foes do not single one out for any victory over him. His friends, that the Athenians then, during the whole time Chabrias had command, never lost a single city, a single fortress, a single vessel, or even a single soldier. In this, no doubt, there is great exaggeration; still, however, he appears to have been a very able general, and one that would have equalled all who went before him, had he lived in more favourable times. Plutarch says, that Chabrias, though at other times scarcely anything could move him, was in the moment of action immeasurably brave. Xenophon, on the other hand, speaks of his boldness unguarded by discretion. We have his life by Cornelius Nepos, but it is a very meagre one. Xenophon, in his Greek history, might have given us more details respecting him; but the partiality of this writer for Sparta prevented him from saying much in favour of the Athenian commander. (Corn. Nep. in Vit.—Perizon. ad Ath., v. 6, 5.—Diod. Sic., 15, 32, seqq.—Strab., vol. 1, 1, 10, seqq.—De mir. ad Lin. Supp. L. 17, xcv.)

Charemoun, I. A tragic poet of Athens, who flourished about 338 B.C. The earliest testimony, perhaps, in relation to this poet, is the mention made of him by the comic writer Eubulus. ( Athen. sec. 2, c. 3.—Compare Aristot., Poet., 2, 25.—Id. Rhet., 2, 23, et sq.—Theophrast., Hist. Plant., 5, 9, 5.—Clinton's Fasti Hellenici, 2d ed., p. xxxii.) I. A philosopher and historian of Alexandria. He accompanied Aelius Gallus in his journey through Egypt, and was subsequently appointed librarian to the Serapeum. Being afterward called to Rome to preside over the education of Nero, he shared this office with Alexander the Great. His historical labours embraced the antiques of Egypt, both sacred and profane. He wrote also a work on Hieroglyphics, which has unfortunately perished. He is the author, also, of one of the two systems relating to the Egyptian religion, which divided the opinions of the ancient world. According to him, this religion was nothing more than a species of sacred physics, in which the visible worlds (topoikeusseca) played a principal part. Lambichus, on the other hand, maintained, that the Egyptians acknowledged one supreme and absolute intelligence. Perhaps both these philosophers were right: they may have spoken of different epochs.— (Schöll, Hist. Lat. Gr., vol. 5, p. 177, seqq.—Creuzer, Symbolik, vol. 1, p. 383.)

Chersones, a city of Bœotia, on the northeast of Lebadea. It was about sixteen English miles from Elatea, twenty-seven from Thebes, and sixty-two from Athens: Clinton's Fasti Hellenici, 2d ed., p. 294. In notis), and was remarkable for the important military events which occurred in its territory, and also as being the birthplace of Plutarch. Pausanias is inclined to look upon this city as the Bœotian Arme mentioned by Homer (II., 2, 607.—Pausan., 9, 40). According to some traditions, however, Arne and Miadea had both been swallowed up by the waters of the Copaic Lake; but others considered the town of Asoparphus as the Arne of the poet. (Strab., 413.) Pausanias reports, on the authority of Hesiod, that the name of Chersones was derived from Cherson, the son of Apollo. It was memorable for the defeat of the Athenians by the Bœotians, B.C. 447, and much more for their irretrievable defeat by Philip, B.C. 338. (Plut., Vide Demosth., c. 24.—Strab., 414.) Pausanias observes, that no trophy was erected by Philip after this signal victory, as it was not the privilege of the Macedonian kings. Several years after this place witnessed another bloody engagement, between the Romans, under the conduct of Sylla, and the troops of Mithradates, commanded by Taxiles and Archelaus, B.C. 86. Chersones is now called Kapren, and is still a populous village, with many vestiges of the ancient town. (Cramer's Ancient Greece, vol. 2, p. 241, seqq.—Doddweil's Tour, vol. 1, p. 290.—Phil. Arch., 4, ed., pp. 221.)

Chalcis. At present Bithynia, situate at the southern extremity of the Thracian Bosporus, nearly opposite to Byzantium or Constantinople. It was founded by a colony from Megara, about seventeen years prior to the settling of Byzantium. Chalcis was called by the Persian satrap MegabYZus, in derision, the city of the blind, because the inhabitants had overlooked the superior position on the opposite side of the straits, where Byzantium was subsequently founded. Chalcis is mentioned by Herodotus and Plutarch. It is also mark to an oracle of Apollo, which was received by the founders of Byzantium, and by which they were directed to select a spot for a city "opposite the blind" (ατεναινιον τυν κυλιν.—Strab., 320). But, whichever be the true account, one thing is certain, that the imputation attempted to be cast upon the Chalcisianians was any other than just. When Chalcis was purchased by the Persians, the city was not extended to the Euxine, and it would have been idle, therefore, to found a city, at that period, on the European side of the Bosporus, along which a steady current sets down from the Euxine Sea. It was only when traffic had spread to the shores of the Euxine, that the site occupied at present by Constantinople became an important one; since the vessels from that sea then would be carried down directly by the current into the harbour of the last-mentioned city.

**CHALCIDICE**

(Mantert, Geogr., vol. 7, p. 155.) Chalcedon was a always a considerable place. It preserved its independence until the reign of Darius, to whose arms the Chalcedonians were forced to submit. They remained so until, however, the defeat of Xerxes, and became the allies, or, rather, tributaries of the Athenians, to whom the ports of the Bosporus were an object of the highest commercial and financial importance. After the battle of Aegus Potamos, however, Chalcedon opened its gates to Lyssander, whose first object seems to have been to secure the entrance of the Bosporus by the possession of this city and Byzantium. (Xen. Hist. Gr., 2, 9, 1.) Thucydides, who is known to be the most prejudiced of the Chalcedonians at first possessed good institutions, but, having been tainted by the democratic principles of their neighbours, the Byzantines, they became luxuriously and debauched. (Ath.ens, 12, p. 526, f.) This city is also celebrated in ecclesiastical history for the council held there against the Eutychian heresy (A.D. 451). Hierocles assigns to it the first rank among the cities of the province then called Pontica Prima (p. 690)—it is to be observed, in writing that the name of this ancient city authors have not been uniform, some giving Χαλκυδόν, others Χαλκενόν. The former mode is, however, much more frequent, and it is confirmed by the existing coins, the epigraph of which is invariably ΚΑΛΧΑΝΩΝΙ, according to the Doric form. (Eckhel, Doct. Num. Vet., p. 1, vol. 1, p. 410.)—The site of this ancient city is now occupied by the modern village of Kadikes, the village of Kadiköse. (Liv.)

**CHALCIDICIUM** (Chalckidici), I. a district of Macedonia, between the Sinus Thermiaicus and Strymonicus. The lower part of it formed three peninsulas, Philegra or Pallene, Sithonia, and Athos. The small town of Chalcius gave name to this district,—II. Phlippos (p. 8, Appendix, 41.)—It is now situated about 10 miles from the town of Chalcius. (Vid. Chalclius V.)

**CHALCIDICIUS** (Chalckidicius), an epithet applied to Cume in Italy, as built by a colony from Chalcius in Eubea. (Verg. Aen. 6, 17.)

**CHALCIOCUS** an epithet given to Minerva at Sparta, from her having a brazen temple (χαλκοῦς οἴκος). Sir W. Gell, in his account of the Treasury at Argos, gives a reasonable explanation of this seeming inconsistency with the name of this island, and from which returns returned whenever he returned from his labours. (Gell's Argolis, p. 33.)

**CHALCIS** I. the most celebrated and important city of Eubea, situate on the narrowest part of the Euprosus. According to the common account, it was founded after the siege of Troy by an Ionian colony from Athens, under the conduct of Cosmus. (Strabo, 447.) Other authorities, however, have assigned to it a much greater antiquity, and it is certain that Homo, the father of Baby, was born in the same city. This event above mentioned. (H.1, 5, 537.) The flourishing condition of this great Ionian city, at a very early period, is attested by its numerous colonies on the shores of Italy and Sicily, as well as on the Thracian coast around Pallene and Mount Athos. Aristotle, as Strabo reports, dated these establishments from the period when the government of Chalcius, through the influence of the wealthiest inhabitants, named Hippopotamus, became a pure aristocracy. From Herodotus (5, 77) we learn, that the Chalciadians, having joined the Boeotians in their depredations on the coast of Attica, soon after the expulsion of the Pisistratide, afforded the Athenians just grounds for reprisals. They were conquered, however, by a large force, and, after defeating the Chalciadians, occupied the lands of the wealthiest inhabitants, and distributed among them 4000 of their own citizens. These, however, were obliged to evacuate the island on the arrival of the Persian fleet under Datis and Artaphernes. (Herod., 6, 100.) The Chalciadians, after the termination of the Persian war, became again dependent on Athens with the rest of Eubea, and did not regain their liberty till the close of the Peloponnesian war, when they asserted their freedom, and, aided by the Boeotians, fortified the Euprosus and established a communication with the continent by throwing a wooden bridge across the channel. Towers were placed at each extremity, and room was left in the middle for one ship only to pass. This work was undertaken, according to Diodorus, 410 B.C. (Diod. Sic., 18, 47.) From the advantages of its situation and the strength of its works, Chalcius was considered, in the latter part of the history of Greece, as one of the most important fortresses of that country; hence we find it a frequent object of contention between the Romans and Philip, son of Demetrius, who termed it one of the chains of Greece. (Polyb., 17, 11.—Id., 18, 28.) In the war with Perseus, the Chalciadians were cruelly oppressed and plundered by the Romans, whom Livy relates (Livy, 43, 7.) They were subsequently treated with still greater severity by Mummus, the destroyer of Corinth, for having favoured the Achaeans in their contest with Rome; and the epistomist of Livy asserts that their town was actually destroyed. (Livy, 52.—Compare Freminch., Suppl., 19.) Pausanias informs us that Chalcius no longer existed in his day (5, 23.—Compare Steph. Byz., s. v. Xalachi.—Hierocles, p. 548.) It is situated on the island of Coros, about a mile from the town of Chalcius, which is now called a small village by Justinian (4, 3.) In the middle ages it assumed the name of Euprosus (Apophasm., Geogr., vol. 4, p. 42, Geogr. Min. ed Hudson), which was in process of time corrupted to Negroponti, the modern appellation of the whole island, as well as that of its capital. (Cramer's Ancient Greece, vol. 2, p. 134.—II. A town of Eolia, at the foot of Mount Chalcius, and on the right bank of the Evenus. It was sometimes called below, or near the port of Galata, situated on the base of the mountain, and is now represented by the modern village of Galata. This seems places it near the mouth of the Evenus. Livy says it stood on the road from Naupactus to Lysimachia and Stratus (36, 11). Polybius calls it Chalcius, and speaks of it as a maritime town (6, 94.).—III. A small maritime town of the Corinthians, situated towards Sicily. (Thukyd., 1, 108.)—IV. A city of Macedonia, in the district of Chalcidice, to which it gave name. It was founded at an early period by a colony from Chalcius in Eubea. (V. A city of Syria, capital of the district of Chalcidice, and of Grecian origin, having been settled by the Macedonians. It was superseded afterward by Chalbe or Berae. It is represented by the modern Kinetarion or Chinertaf. (Appian, Bell. Syr., 20.—Joseph., Bell. Jud., 29, 3.) CHALDAEA, a country of Asia, at the head of the Persian Gulf. (Thukyd., 1, 108.) Some writers, however, make Babylon a part of it. With respect to the origin of the Chaldeans, who are called in scripture Chaldaim, various opinions have been entertained. Micaelides considers them as a foreign race in Assyria. His chief reason for this opinion is founded on the names of Chaldaman and Babylonian kings preserved in scripture, and by Ptolemy and Strabo, which differ from the Assyrian names, and bear an apparent resemblance to those of some northern nations of Slavonic origin. Thus Nebuchadnessar would be in Sia
vome, Nebu-godnou-sar, i. e., a prince worthy of heaven. Caesar would be equivalent to Balak-nor, i. e., a great prince; and so of others. It has been objected to this, that the word Caesar in Slavonic is nothing more than a corruption of Caesar, an opinion hardly worth refuting. The orthography of the Russian term tsar sufficiently disproves such an idea. Compare the Hebrew sar; the Arabic sary; the Sanscrit šrēra; the English size. So also we have in the arrow-headed inscriptions of Persepolis, as interpreted by Lassen, the Persian letters corresponding to the Persian word dard. (Lassen, Alterserschen Keil-Inschriften, &c., p. 141.)

—Compare Michaelis, Spiieg. Geogr., Heb. ext., vol. 2, p. 77, seqq.)—The Chaldeans appear to have been originally a mountaineer-race from the northern parts of Mesopotamia, though not, as Michaelis supposes, of foreign extraction, but in reality a branch of the Semitic race. (Compare Adelung, Mythradatae, vol. 1, p. 517.—Fürst, Chald. Gram., p. 5, seqq.)—Compare still further, in relation to the Chaldean tongue, the remarks of Saint-Martin, as cited by Balbi, Introduction a l'Atlas Ethnographique, p. 106, and, as regards the pretended antiquity of the Chaldee empire, consult Cuvier, on the Revolutions of the Surface of the Globe, p. 127, seqq., Eng. transl., 1859, and Drummond's Origins, vol. 1, p. 13, seqq.)—The Chaldeans are highly commended in many of the ancient writers for their skill in the sciences, especially in astronomy. If we are to believe Diodorus, however, the science of astronomy was, at one time, in a very slight. They seem to have pursued the study of astronomy no farther than as it might tend to aid their astrological researches. They taught that the shape of the earth was that of a skiff or small boat, and of eclipses of the sun they knew but little, and never ventured to predict them, or fix the time of their occurring. So says Diodorus. (Diod. Sic., 2, 31.—Compare, however, in relation to the science of the Chaldeans, the remarks of Str W. Drummond, Clares. Town., vol. 16, p. 145 and 262; vol. 17, p. 19; vol. 18, p. 1 and 298; vol. 19, p. 296.)

CHADEI, I. the inhabitants of Chadeia.—II. The same with the Chaldees. (Vid. Chaldees.)

CHALYEBS, a people of Pontus, in Asia Minor, who inhabited the whole coast from the Jasonium Promontorium to the vicinity of the riverThemodon, together with a portion of the inner country. They lived in the country, were very strong in their dairy, bred great iron-mules, and forged iron-works for others. (Apoll. Rh., 2, 1002, seqq. —Id., 2, 374. —Virg., Georg., 1, 58. —Diomys. Perieg., 768.) We are ignorant of the grounds on which the ancients attributed this active employment in the manufacture of the iron to the Chalyes, for it does not appear at present that this part of Asia is at all productive of that most useful metal; perhaps, however, if the mountainous districts were accurately examined, there could be found traces of the ancient works. It is plain, however, that they had not ceased to furnish a good supply of metallic ore in Strabo's time, for he observes, that the two great articles of produce in the land of the Chalyes, who were then commonly called Chaldei or Chalii, were the fisheries of the pelamys and the iron-works; the latter kept in constant employment a great number of men. Strabo observes, also, that these mines formerly produced quantity crude metal, and that this circuit, together with some affinity in the name, led some commentators of Homer to identify the Aby- be of that poet with the Chalyes of Pontus. (II., 2, 856.) Strabo himself strongly contends for this interpretation, and it is in all probability the true one. (Strabo, 549, seqq.) It is remarkable, that Herodotus names the Chalyes among the nations of Asia that were conquered by Croesus (1, 29), and yet they certainly are found afterward considerably beyond the Haly, which separated his dominion from those of Cyrus; either, therefore, they must have shifted their position, or Croesus subseptive to the loss which he had gained on the right bank of the Haly. Xenophon, who traversed the country of the Chalys, speaks of them as being few in number, and subject to the Mosyneci; he adds, that their chief employment was forging iron. But it is worthy of remark, that he places these Chalys more to the east than other writers. (Anab., 5, 5, 2.) Zenonius, therefore, is of opinion, that these people must have had a wandering sort of life, which often changed their territory. (Dissert. Geogr. ad Anab., p. xxvi, ed. Oeser, 1859.) Xenophon, however, speaks elsewhere of some other Chalys, who were situated apparently on the borders of Armenia, and were much more numerous and warlike. (Anab., 4, 7, 10.) Strabo reports, that the Chalys, in his time, had changed their name to that of Chaldei (Strab., 549); and it is remarked, that Xenophon speaks of an Armenian tribe of Chaldees, who wandered the Greeks near the river Centrus (Anab., 4, 3, 4.—Compare Eustath., ad Dion. Perieig., 768); but Menippus, in his Peripitus, calls the Pontic tribe Chaldei, and their canton Chaldia. (Ap. Steph. Byz., s. v. Xaldia.—Cramer's Asia Minor, vol. 1, p. 273, seqq.)

CHALYBON, a city of Syria, capital of the district called Chalhybonitis, and the same with the Scripture Helbon. (Ezek., 27, 18.) The surrounding country was famed for its wine. (Compare Casaub., ad Athen., 2, p. 66;° Hist. T. T., p. 458, note 9.)—Schlesier, Lex. V. T., s. v. Xaldia.) The venet, Russel, and others make this city correspond to the modern Aleppo (Haleb). Pococke, however, is in favour of Kennésrin, to the south of Aleppo. (Vid. Berea.)

CHALYS, a river of Hispania Tarraconensis, in the country of the Celtiberi, and one of the tributaries of the Iberus. Its waters were famed for hardening steel; so that the name Chalys was given to it, in that circumstance, by either the Romans or the Greeks, more probably the former. The modern name is the Queiles. (Justin, 44, 3.)

CHAONES, a people of Epirus. (Vid. Chaonia.)

CHAONIA, a region of Epirus. The ancients comprehended under the name of Chaonia that northwestern part of Epirus which bordered on the territory of Oricum, Amantia, and still more to the east on the country of the Attienses. It extended along the coast of the Ionian Sea from the Acrocorinian promontory to the harbour of Bathroutum, opposite the island of Corcyra. The exact limits of Chaonia cannot now be ascertained, since, even in Strabo's time, it was impossible to discern with accuracy what belonged to each of the several tribes into which the body of the nation had been divided, owing to the great political changes which that country had experienced since it became subject to the Romans. (Strabo, 2, 458.) He must observe, however, that in the time of Thucydides, the river Thyamis bounded that southern portion of Chaonia which bore the name of Cestrine, on the side of the Thespriote. The Chaones, as we learn from Strabo, were once the most powerful and warlike people of Epirus, until the Molossi, in their turn, acquired a preponderating ascendency over the other clans of that country. In the time of the Peloponnesian war the Chaones were the neutral, being subject to an aristocratical and not a monarchial government; their annual magistrates being always chosen from a particular family. (Thuc., 2, 80.) Tradition ascribed the origin of their name to Chaon, the brother of Helenus who married Andromache after the death of Pyrrhus. (Virg., Am., 3, 333.—Compare the commentary of Servius, ad loc.) It may be inferred from the name of Pasis, given to Chaonia by some ancient writers, that it was formerly occupied by the Pelagi. (Steph. Byz., 334)
CHA

s. v. Xaovia) Virgil uses the epithet Chaonius for Dodonaeus (Georg. 1, 8) in referring to the acorns of Dodona. (Cramer's Anc. Greece, vol. 1, p. 93.)

CHAOS, a heterogeneous mass, containing all the seeds of nature. According to ancient myth, Chaos came into being "broad-breasted Earth, the gloomy Tartarus, and Love." Chaos produced Erebus and Night, and this last bore to Erebus Day and Æther. The idea of Chaos and Night, divested of poetical imagery, is simply that of unformed matter, eternally existing as the passive principle, whence all forms are produced. Whether, besides this Chaotic mass, the ancient theogonies suppose an infinite, active, intelligent Principle, who from the first began to form the universe, is a question which has occasioned much debate. It is evident, upon the most cursory review of all the ancient theogonies, that God, the great Creator of all things, is not expressly introduced, but it is doubted whether the framers of these theogonies meant to exclude him from their respective systems, or indirectly to suppose his existence and the exertion of his power in giving motion to matter. When divested of allegory and poetry, the sum of the doctrine contained in the ancient theogonies will, it is conceived, be found to be as follows: The first matter, containing the seeds of all future being, existed from eternity with God. At length the Divine energy acting upon matter produced a motion among its parts, by which those of the same kind were brought together, and those of a different kind were separated, and by which, according to certain wise laws, the various forms of the material world were produced. The same energy of emanation gave existence to animals and men, and to gods who inhabit the heavenly bodies, and various other parts of nature. Among men, those who possess a larger portion of the Divine nature than others are hereby impelled to great and beneficent actions, and afford illustrious proofs of their divine original, on account of which they are, after death, raised to a place among the gods, and become objects of religious worship. (Enfield's Hist. of Philosophy, vol. 1, p. 130, seq.)

CHARADES: a town of Phocis, about 20 stadia from Lilea. Near it flowed the river Charadrus, which fell into the Cephissus. Herodotus (8, 33) names this place among the Phocian cities destroyed by the army of Xerxes.Dodwell states, that the ruins of Charadra are to be seen near the village of Marialates, at the foot of Parnassus. (Dodwell's Tour, vol. 2, p. 132.) It is probable that Charadra, in the later periods of the Byzantine empire, was situated on the bay of Nicomedea, or Sinus Astacenus. (Steph. Byz., s. v. Χάραδας.—II. Another and earlier name for the city of Tralles, in Lydia. (Steph. Byz., s. v. Τραλλάς, Χάραδας.—III. A town of Phrygia, between Lampe and Gerasala. (Nicet. Ann., p. 127, &c.)—IV. A town of Armenia Minor, in the northeastern angle of the country. (Ptol.—Compare Cramer, Armenia Minor, vol. 2, p. 154.)

CHARAXUS, a Mytilenean, brother to Sappho. (Vid. Sappho, near the commencement of the article.)

CHARXES, i. An Athenian general, who succeeded to the command after the condemnation and death of Leosthenes. He was sent by the Athenians against Alexander, tyrant of Pherae, but, instead of coming to action with the foe, he harassed the Athenian allies to such a degree by his extortions and oppression, that the Persians, according to Herodotus (1, 84), had revolted against the king of Persia. Some time after he was sent to aid Byzantium against Philip of Macedon, but he only incurred the contempt of his foe, and excited the discontent of the allies, so that the Athenians finally recalled him, and put Phocion in his place. This, however, did not prevent them from choosing him for their general at the battle of Chaeronea, where he was killed and his men put to the sword. He was celebrated for his wisdom and courage, and is said to have incurred the loss of the day. He was one of those whom Alexander ordered to be delivered up to him after the destruction of Thebes, but he succeeded in mollifying the conqueror, and was permitted to live at Athens. (Diod. Sic., 13, 95.—Atheneus, 12, p. 532.— Xen., Hist. Gr., 7, 2, 18.—Lambin., ad Corn. Nep., Vit. Chab., c. 3.)—II. A Greek statuary, born at Lindus. He was the disciple of Lyappus, and was celebrated as the maker of the colossal Rhodos, on which he was employed twelve years. (Strab., 652.—Plin., 34, 7.—Silvig, Dict. Art., s. v.)

CHARICLES, i. One of the 30 tyrants set over Athens by the Lacedaemonians, and possessing great influence among his colleagues. (Xen., Mem. Socr., 1, 2, 31.— Aristot., Polit., 5, 6.—Schlosser, ad Aristot., l. c.)—II. A celebrated physician in the train of Tiberius. Towards the end of that emperor's life, Charicles, on taking leave of him, as if about to journey abroad, managed, in grasping the hand of Tiberius, to feel his pulse, and became instantly convinced that the latter had not more than two days to live, a secret which he soon divulged to Macro. (Tacit., Ann., 6, 50.— Gronov., ad loc.)

CHARILLA, a festival observed once in nine years by the Delphians. It owed its origin to this circumstance: in a great famine the people of Delphi assembled and applied to their king to relieve their wants. He accordingly distributed the little corn he had among the better portion of them; but an orphan girl coming and importuning him, he beat her with his sandal. The girl, unable to endure the affront, hung herself with her girdle. The famine increased; and the oracle told the king that, to relieve his people, he must stone for the murder of Charilla. Upon this a festival was instituted with expiatory rites. The king presided over this festival, and distributed pulses and corn to such as attended. Charilla's image was brought before the king, who struck it with his shoe; after which it was carried to a desolate place, where they put it on a halter round its neck, and buried it where Charilla was buried. (Plut., Quaest. Gr.—Op., ed. Reiske, vol. 4, p. 176.)

CHARIS, a name applied by Homer (II., 18, 382) to the wife of Vulcan. In the Odyssey, on the other hand (8, 267), Venus is called Charis. It is curious to lend some thing in the figurative explanation of the myth, since Grace and Beauty were both regarded as the characteristics of Vulcan's labours. (Heyne, ad ill., l. c.)

CHARISIA, a festival in honour of the Graces, with dances which continued all night. A cake was given to those who remained awake during the whole time. (Eustath. ad Od., 18, 194.)

CHARISIUS, a freedman at Rome, on the 8th day before the Carian festival (February 22). It was celebrated among relations by a kind of family banquet, and presents were made. No stranger was allowed to be present. (Val. Max., 2, 1, 8.)

CHARITÉS, the Graces, daughters, according to He- siod (Theog., 907), of Jupiter and the ocean- nymph Éreine. They were three in number, and their names, as the same bard informs us, were Aglaia (Splendour), Euphrosyne (Joy), and Thalia (the Bloom- ing one) (Hes. Iliad, xix, 39). The Graces were the daughters of Helius (the Sun) and Eégle (Splendor); and Hermesianca made Peitho (Persuasion) one of their number. In Nonnus (Dionys., 24, 263) their names are Pasithéa, Peitho, and Aglaia. The Graces, like the Muses and other sister-goddesses, are spoken of by Homer in the plural, and with him their number is indefinite. They
are graceful and beautiful themselves, and the bestow-
ners of all grace and beauty both on persons and things.
The daughter of Charmides, son of Glaucon, was ad-

tained the goddess of love, although the queen of
heaven had authority over them (Il., 14, 267); and
she promises Pasithoe, one of the youngest of them,
as a wife to Somnus, in return for his aid in deceiving
Jupiter: by later writers she is even said to be his mother.
(Nomnus, 31, 184.—Eudoxia, ap. Villois.,
Anecd. Gr., vol. 1, p. 430.) Orchomenus, in Boeotia,
was the chief seat of the worship of these goddesses.
Its introduction was ascribed to Eleucos, the son of
the river Cephissus. The Lacedaemonians worship-
pit two only Graces, whom they name Cleta (Re-
nomed) and Phaenna (Bright), as we are informed by
Pausanias (t. c., c 3, 18, 6). The Athenians or-
dored the same number, under the names of
Hegemone (Leader) and Auxo (Increaser). The
Graces were at all times, in the creed of Greece, the
goddesses presiding over social enjoyments, the ban-
quett, the dance, and all that tended to inspire gayety
and cheerfulness. They are represented as three
beautiful sisters, either dancing together, or standing
with their arms around each other. Sometimes they
are nude, sometimes habited. (Keightley’s Mythol-
ogy, p. 192, seq.)—The Graces, like the Horse and
Muses, appear to have had originally a reference to
the stars and seasons. The Greeks deprived them
of their astronomical functions, and substituted sur-
merly bowers and groves as their place of abode.
We still see, however, on an ancient gem, the Graces
cancing upon the head of Taurus, while two of them are
turning towards seven stars, at which they point with the
hand. (Borioni, Collect. Antiq. Rom., fol. 1736,
3. 82.—Passaret, Thesaur. gemm. astrer., I. tab.
144.) At a later period, when moral ideas began to
be more intimately blended with parts of the Grecian
system, the Graces assumed analogous attributes.
One of them was supposed to represent a favour con-
ferred, another a favour received, while the third de-
signated the return made for benefits. (Aristot., Eth.,
5, 8.—Sene., de Benef., 1, 3.—Constant, de la Reli-
gion, vol. 2, p. 402.—Winckelmann, Essai sur l’Al-
legorie, c. 2.—Traités sur l’Allegorie, vol. 1, p. 132.)
Chariton, of Aphrodisias (a Carian town), the
name by which we know the author of a Greek ro-
mance, entitled, Των πατρ Χαιραι και Καληνθθη
(Thess. c. 284). His works have been preserved in
five books, a collection of nine stories, and, as it
appears, in eight books.” The appellation is probably an assumed one, as well as the title he
gives himself of “Secretary to the rhetorician Athen-
agoras.” This rhetorician is supposed by some to be
the same with the one of whom Thucydides makes
mention (6, 35, seqq.) as enjoying great credit among
the people of Syracuse. He was opposed to Her-
mocrates, the general who vanquished the Athenians.
The daughter of this Hermocrates is the heroine of
the romance, and it is probable that the writer wished
to appear to his readers in the light of a contemporary.
We have no data by which to fix the period when
Chariton flourished. Some place him at the end of the
4th century of our era. As regards the romance it-
self, it may be observed, that, though by no means
remarkable for its invention, it is smooth and easy in
the story. “Villeneau has said no worse about it,”
observes Madeleine (Histoire des Romans, No. 9,
132), “than that it is a work which the learned Lar-
cher has translated without being able to render it
amusing;” and Larcher himself, in his preface, re-
solves, with great good sense, to “say nothing about
‘it.’ In fact, it is by no means easy to say anything
about a book which is too dull for praise and too
harmless for censure.”—The best edition of Chariton
is that of D’Orville, with some excellent conjectural
emendations of Reiske, Amst., 1760, 3 vols. 4to.
Charmides, son of Glaucon, was famed in early
life for his beauty and his dissipated mode of life.
After having squandered his patrimony, he became a
pupil of Socrates, and, according to some, was in
time to turn his attention to public affairs. This advice
proved unfortunate, for Charmides, having joined the
city of Critias, was made one of the ten tyrants whom
Lysander established in the Piræus, to govern con-
jointly with the thirty in the city. He was slain along
with Critias in the first battle between the exiles un-
der Thrasybulus and the forces of the tyrants. Plato
has called one of his dialogues after him. Xenophon
makes mention of him in several occasions, especially
in his Banquet. (Xen., Mem. Socr., 3, 7, 1.—Schnei-
der, ad loc.—Xen., Symposium, 4, 31, &c.)—II.
or Charmides, an academic philosopher, the companion
of Philo. He was celebrated for the compass and
fidelity of his memory, and for his moral wisdom.
(Cic., Tact. Quaest., 1, 24.—Davies, ad loc.)
Charmion, one of Cleopatra’s female attendants,
who killed herself after the example of her mistress.
(Thuc., Hist. Ant., c. 96.)
Charmis, a physician of Marseille, in Nero’s age,
who revived the use of cold baths at Rome in cases
of sickness, after the practice had been discontinued
since the time of Antonius Musa. (Vid. Musa.)
He was very successful in his professional labours, and
amassed great riches. (Plut., 29, 1.—Sprengel, Hist.
de la Médi., vol. 2, p. 24.)
Charon, i. a deity of the lower world, son of
Erebus and Nyx. He received the souls of the dead in
a boat over the river Acheron to the infernal regions.
The sum exacted for this service, from each of the
shades ferried over by him, was never less than an
obolus, nor could it exceed three. A piece of money,
therefore, was generally placed by the ancients under
the tongue of the deceased, in order to meet this necesa-
ary demand. Such as had not been honoured with a
funerary were not permitted to enter Charon’s boat,
without previously wandering on the shore for one
hundred years. If any living person presented him-
self to cross the river of the dead, he could not be
admitted into the bark before he showed Charon a
golden bough, obtained from the Cumæan sibyl; and
the ferryman was on one occasion imprisoned for an
entire year, because he had, though against his own
will, conveyed Hercules across the stream without
first receiving from him this necessary passport. The
poet Vergil ascribes to Charon the character of a
severe though animated countenance, with eyes
 glowing like flame, a white and bushy head, vestments
of a dingy colour, stained with the mire of the stream,
and with a pole for the direction of his bark, which
last is of a dark ferruginous hue. (Verg., Aen., 6,
298, seqq.)—The earliest mention of Charon in Gre-
cian poetry seems to be in the ancient poem of
the Minyas, quoted by Pausanias (10, 28). The
fable itself is considered by some to be of Egyptian origin,
and in support of this opinion they refer to the ac-
count of Diodorus Siculus, relative to the statements
made by the Egyptian priests. (Diod. Sic., 1, 92, et
96.) The latter asserted, it seems, that Orpheus and
Homer had both learned wisdom on the banks of the
Nile; and that the Erebus of Greece, and all its
parts, personages, and usages, were but transcripts of
the mode of burial in Egypt; and here the corpse
of Charon was, according to the Egyptian historian
(named Charon in the language of Egypt) over
the Acherusian lake after it had received its sentence
from the judges appointed for that purpose. (Diod.,
l. c.) Lobeck, in his Aglaophamus (vol. 2, p. 811),
descathces all these fictions of the Egyptian priest-
hood in a very plain and summary manner, dignify-
ing them with the appellation of “portentosa mendacia,” a
title which they fairly deserve. (Qui tua
Orcli et locorum inferorum descriptio ad Orpheim re-
 tertor auctorem, ab Egyptiis illis, qui, propter religi
CHARON, a celebrated legislator, born at Catana in Sicily, where he flourished about 650 B.C. We have no account of his life, but he informs us, that he was of the middle class of citizens, and that he framed laws for the people of Catana as well as for other communities, which, like them, were descended from Chalcis in Euboea. Elian adds (V. H., 3, 17), that he was subsequently driven into exile from Catana, and took refuge in Rhegium, where he succeeded in introducing his laws. Some authors inform us, that he compiled his laws for the Thuriens; but he lived, in fact, for a long time before the foundation of Thurium, since his laws were abrogated in part by Anaxilas, tyrant of Rhegium, who died 476 B.C. It is not necessary, therefore, to suppose, with Sainte-Croix (Mem. de l’Acad. des Inscriptions, vol. 42, p. 317), that there were two legislators of the same name, one native of Catana, and the other of Thurium. The laws of Charondas were, like those of many of the ancient legislators, taken in verse, and formed part of the instruction of the young. Their fame reached even to Athens, where they were sung or chanted at repasts. The preamble of these laws, as preserved to us by Stobaeus, is thought, as far, at least, as regards the form of expression, not to be genuine; and Heyne supposes it to have been taken from some Pythogean treatise on the laws of Charondas. — The manner of this legislator’s death is deserving of mention. He had been permitted to come armed into the assembly of the people. The penalty for infringement was death. He became the victim of his own law: for, having returned from pursuing some robbers, he entered the city, and presented himself before the assembly of the people without reflecting that he carried a sword by his side. Some one thereupon remarked to him, “You are violating your own law.” His reply was, “On the contrary, I am establishing it,” and he slew himself on the spot. This action, however, is ascribed by others to Diocles, legislator of the Syracusans: perhaps it is true of neither. For farther details respecting Charondas, consult the memoir of Sainte-Croix, cited above, and Heyne, Opuscula Academica, vol. 2, p. 74, seqq.

CHARYBDIS, a dangerous whirlpool, mentioned in the Odyssey, and placed by Homer somewhere between his Wandering Rocks and his island of Thriankia. Directly opposite to it lies the fearful Scylla. The ancients, who were anxious to lose nothing of the wonders of Homer, made the straits of Messina the abode of Scylla and Charybdis. A full account of the whole fable, with its solution by Spallanzani, will be found under the article SCYLLA.

CHAUCI, a people of Germany, of Suevic race, and divided into the Chauci Maiiores and Minores. The former were situated between the Visurgis (Wesser) and Albis (Elbe); the latter between the Amisia (Emse) and Visurgis. Tacitus draws a very flattering picture of the Chauci. He represents them as the noblest of the German tribes, as distinguished for a love of justice and peace, but able, when attacked, to bring a powerful arm of horse and foot into the field. (Tacit., Germ., 35.) What is very surprising, Pliny describes the Chauci as a miserable race, weak in numbers and resources, compelled to build their cabins on hills, their country being twice every day inundated by the sea, without castle or pasture, or even a single tree in their territory. (Plin., 16, 1.)

How are these two writers to be reconciled? Probably in the following way. The Chauci, about the fourth century of our era, formed part of the confederation of the Saxones. This confederation, however, appears to have been better known by the name of Chauci than that of Saxones. Now Pliny may have meant the people termed Chauci, and Tacitus the confederation. (Consult Malte-Brun., Geogr., vol. 1, p. 105, Brusel ed.)

CHELIDONIA, a festival at Rhodes, in which it was customary for boys to go asking for presents from door to door in the same manner as modern children do at Christmas; it was so named because it began with an allusion to the arrival of the swallows, and the consequent approach of spring: Παράκλησις έλεος, κ. τ. λ. (Athenaeus, 8, p. 360, b, c.—Caesar, ad loc.)

CHELIDONIUM, now Keildoni, small islands south of the Sacrum Promontorium, on the coast of Lycia, very dangerous to sailors. The Chelidonian isles were two in number, according to Scylax (p. 38), or three as Strabo reports: the latter made them six stadia from the land, and five from each other. Captain Beaufort, however, distinctly counted five of these islands; whence he is led, not without reason, to think that this increase of number has been produced by the shock of an earthquake: two are from four to five hundred feet high, the other three are small and barren. (Karamanii, p. 37, seq.) After the victory at the river Eurymedon, it became the boast of the Greek nation, that no armed ship of Persia was to be seen westward of the Chelidonian isles, or of the Cyanean rocks at the entrance of the Euxine; and that no Persian troops dared to show themselves within a horseman’s day’s journey of the Grecian seas. In after times a report arose, that a treaty of peace had been regularly made between the Persian monarch and the Greeks, in which it was forbidden for any Persian forces to come within the limits just mentioned. As regards this pretended treaty, consult the remarks towards the close of the article CIMON. (Cramer’s Asia Minor, vol. 2, p. 256.)

CHELIDONIUM PROMONTORIUM, the same with the Sacrum Promontorium of Lycia, now Cape Keildonia. (Vid. Sacrum Promontorium, II.)

CHELÔNE, a nymph who was the only one of the deities that did not attend the nuptials of Jupiter and Juno; nay, she even made the celebration a subject of ridicule. Mercury thereupon precipitated her into a river on the banks of which her mansion was situated, and transformed her into a tortoise, under which shape she was doomed to perpetual silence, and to the necessity of always carrying her dwelling about with her. The Greek for a tortoise is χελώνη, and hence the fable arose. (Serv. ad Virg., Íli., I, 509.)

CHELOTTRES OF CHEЛONTÁTAS, Promontory of Ellys, forming the termination of the Peloponnesus towards the northeast. (Strabo, 338.)

—Plin., 4, 5.) It is now called Cape Tornese.

CHENNIS, I. a city of Egypt, the same as Panopolis. (Vid. Panopolis.)—II. A city of Egypt, mentioned by Herodotus (2, 91), and placed into the

337
Thebaic name, near Neapolis. There was in it, according to the historian, a temple dedicated to Perses, the son of Dānā. This city is considered by many to be the same with Panopolis, but incorrectly, as will appear on the least examination of the case. Herodotus says not a word of Pan's being worshiped at Panopolis. He places, moreover, his Chemnis, not in the Thebaic, but in the Thebaic nome, the distance of which from Panopolis forms another strong objection to this latter place being the same with Chemnis. Still farther, he mentions the city of Neapolis as standing near his Chemnis, where no traces of this city, nor, indeed, of any city at all, are to be found near Panopolis. For these reasons Mannert appears to be perfectly correct in making the Chemnis of Herodotus identical with Coptos. (Mannert, Geogr., vol. 10, pt. 1, p. 374.) Creuzer and Bähr, on the other hand, are in favour of the opposite opinion stated above, and adduce very feeble arguments in its support. (Bähr, ad Herod., 2, 91.)—III. An island in Egypt, situated in a broad and deep lake, near the temple of Latona, in the city of Butas. The Egyptians, according to Herodotus (2, 156), affirmed, that it was a floating island; but the historian, with great candour; adds, that for the want of means, he did not move it. The island contained a spacious temple dedicated to Apollo, and three altars; with great numbers of palms, and other trees, as well of such as produce fruit as of those that do not. The Egyptians had the following legend respecting this island; they stated, that Latona, one of the eight primary deities, residing in Butas, received Apollo from the hands of Isis, and preserved his life by concealing him in this island, when Typhon, arising in these parts, would have done his utmost diligence to find out the son of Osiris. It is thought that the Greeks invented from this story their fable respecting Delos. (Compare Larcher, ad Herod., l. c.) As regards the name Chemmis, consult the remarks of Champollion, Système Hierogl., p. 112. Mannert makes the Egyptian legend arise from the wish, on the part of the Egyptian priests, to explain the Grecian mythology by a reference to their own as its progeny. (Compare the remarks at the close of the article Charon. — Mannert, Geogr., vol. 10, pt. 1, p. 559.)

Cymors, a king of Egypt, the successor, according to Herodotus (2, 124), of Rhamspinitus. According to Larcher (Chronol. d’Herod., vol. 7, p. 90), Cheops began to reign 1178 B.C. Herodotus makes him to have ruled over Egypt for the space of fifty years, and to have been a most oppressive monarch. He shut up all the temples, forbade public sacrifices, and compelled the people to undergo the severest labour. Ten years were occupied in constructing a causeway, along which to draw the stones intended for a large pyramid, and twenty years were then spent in erecting the pyramid itself. On this structure was an inscription, in Egyptian characters, stating how much had been expended in radishes, onions, and garlic, for the workmen. The interpreter informed Herodotus, that this sum amounted to no less than 1600 talents of silver. Taking the Attic talent at a valuation of $1055.60, the sum expended will be nearly $1,700,000 of our currency. The mode to which Cheops had recourse in order to replenish his exhausted treasury, although gravely related by Herodotus (2, 126), is utterly incredible, and must have been a falsehood of the Egyptian priests. Indeed, the whole account given of Cheops bears this same impress of mendacity. He was, according to all, subject to the restraints of the sacerdotal order, and not only curbed the power of the latter, but likewise employed on public works a larger part of the population of Egypt, who were living in idleness, and whose morals were becoming more and more corrupted by a frequent attendance on the dissolve festivals so common among the Egyptians.—Diodorus Siculus gives Chemmis (Xémmis) as the name of the monarch who succeeded Rhamspinitus. The true reading, no doubt, is Chemnis (Xémmis), as we find it written in some MSS. (Diod. Sic., 1, 63.)

Cyrus, a king of Persia, brother and successor to Cheops. According to Herodotus (2, 127), he both imitated his brother in other things, and particularly in building a pyramid. He reigned fifty-six years. The historian adds, that the Egyptians, in consequence of the oppressive reigns of these two monarchs, Cheops and Chephren, would never thereafter mention their names, but always attributed their pyramids to "one Philist, a shepherd, who kept his cattle at that time in these same parts." Who this Philist was it is not possible to say. Zoega (de Obelisc., p. 389, no. 20) thinks, that Osiris of Philis is meant (Osiris Philensis), a deity to whom these abodes of the dead (the pyramids namely) were consecrated, and who, as he supposes, was called "a shepherd," in the same sense in which kings are called by Homer "the shepherds of their people" (πατέρες λαῶν). This opinion, however, is utterly erroneous, since the word "shepherd," as employed on this occasion by the priests of Egypt (Philist, Philis, Philis, Philis), is derived from the same root, as the Latin "shepherd," as derived from the Sanscrit चर्या, meaning a "herder," a "keeper," and "overseer," of sheep. (Compare Steyn, p. 739, ed. Berk.) — We come now to another opinion, which makes the pyramids of Cheops and Chephren to have been erected by kings of the Shepherd-race. It will be sufficient, however, in rejecting this supposition, to remark, that the building of such structures is entirely at variance with the known habits of a nomadic people. — Jablonski (Voc. Egypt., p. 346) thinks, that in the word "Philistis" there lurks the form "Philistani," i.e., a native of Palestine, which he considered to be equivalent here to "one of the Jews," under which he has referred to Moses. — Heeren, however, appears to be nearest the truth, when he makes the pyramids of Cheops and Chephren to have been the work of Ethiopian conquerors, and the term "shepherd" to have been, as above remarked, merely expressive of the contempt and hatred borne by the conquered towards those who had subdued them. (Heeren, Ideen., vol. 2, pt. 2, p. 118, no. — Bähr, ad Herod., 2, 128.)

Chersonesus, a Greek geographical term, equivalent in meaning to the Latin "peninsula." The earlier form is Chersonesos, the word being derived from Χέρσος (later form Χέρσος), "a continent" or "mainland," and νῆσος, "an island," since a peninsula partakes, as it were, of the properties of both continent and island. — The most noted Chersonesoi in ancient times were the following: I. Chersonesos Aurea, or Golden Chersonese, a peninsula of farther India, corresponding, according to D’Anville, Rennell, Mannert, and others, to the modern Malacca, but, as Gesselin maintains, to the southern part of Pegus. The positive knowledge of the ancient geographers can hardly be said to have extended much beyond this, their account of the regions farther to the east being principally derived from the natives of India. Even the position of the Golden Chersonese itself is given differently by different writers. (Compare Gesselin, 3, p. 49; — and 2, p. 252, &c.) The name given to this region by the ancients has reference to the popular belief of its abounding in gold; and here, too, some inquirers into early geography have placed the Ophir of Solomon, an opinion maintained also by Josephus. (Ant. Jud., 8, 6, 4.)
CHERRONESSUS CYMBRICA, a peninsula in the northern part of Greece, answering to the modern Julund, Schlesseig, and Holstein. (Ptol., 2, 11.)—III. CHER-
RONESSUS TAURICA, a peninsula between the Pontus Euxinus and Palus Maicus, answering to the modern Crimean.

The name was derived from the Tauri, a barbarous race who inhabited it. It was sometimes called Cherissenus Seythica and Cherissenus Magna. (Ovid, Trist., 4, 4, 83.—Id., Pont., 3, 2, 5.)—IV. CHERREUSCI, a people of Greece, often called merely the Cherr-
ssonus, and the most important of all. It was a peninsula of Thrace, between the Sinus Melas and the Hellespont.

The fertility of its soil, and its prox-
imity to the coast of Asia Minor, early attracted an influx of Grecian settlers, and its shores soon became crowded with flourishing and populous cities. From this quarter the Athenians drew their chief supply of grain, and having gained the plain at Pidna, the Apennines, is well known, and there are others in Epirus and the Greek islands. We are indebted to Capt. Beaufort for an accurate account of the Chimna-
ria flame, which, after the lapse of so many centuries, is still unsubdued. This able navigator and anti-
quary, being at the time to the east of Olympus, says:—"We had seen from the ship, the preceding night, a small but steady light among the hills; on mentioning the circumstance to the inhabitants, we learned that it was a yamar or volcanic flame; and they offered to supply us with horses and guides to exam-
nine it. "Of the part of the island which is sacred to the god, a plain, partly cultivated, and then, winding up a rocky and thickly-wooded glen, we arrived at the place. In the inner corner of a ruined building the wall is under-
mined, so as to leave an aperture of about three feet diameter, and shaped like the mouth of an oven; from thence the flame issues, giving out an intense heat, yet producing no smoke on the wall; and though from the neck of the opening we detached some small branches of caked soil, the walls were hardly discolour-
ed. Trees, brushwood, and weeds grow close around this little crater, a small stream trickles down the hill hard by, and the ground does not appear to feel the effect of its heat beyond the distance of a few yards. No volcanic productions whatever were perceived in the neighbourhood. The guide declared that, in the memory of man, there had been but one hole, and that it never had changed its size or appearance. It was now supposing that it was in a state of repose; and who could besides have sought an alliance with Sparta. (Herod., 1, 69.) It was at the court of the Lydian monarch, in all probab-
ility, that he saw ΑΣΟΠ, since Diogenes Laertius speaks of a question put by the philosopher to the fabulist. (Diog. Laer., 1, 68, seq.)

CHIMERA, a fabulous monster, the offspring of Ty-
phon and Echidna (Hesiod, Theog., 319), which rav-
aged the country's Arc. Greece until slain by Bellerophon.

It had the head and neck of a lion, the body of a goat (χιμαιρα), and the tail of a serpent, and vomited forth fire. (Hom., Il., 6, 181.) Hesiod's account is some-
what different from that of Homer's, since he gives the Chimera three heads, one of that a lion, another a goat's, and a third a serpent's. (Theog., 321.)

There is strong reason to believe, however, that this passage in Hesiod is an interpolation. (Hume, in Comment. Soc. Goth., vol. 3, p. 144.) The Latin poets, in their description of this monster, have imita-
ted, as usual, their Grecian masters. (Consult Luc.
cret., 5, 903.—Ovid, Met., 9, 646.—Virgil, Äen., 6, 288.) The various explanations given to this fabu-
los legend by the Greeks may be seen in Eustathius (ad Il., 6, 181, p. 634, 40). Servius, the great com-
mentator on Virgil, gives a curious one: "This, in
truth," says he, speaking of the Chimera, "is a monster which the poets speak of on fire the
present day: near it are lions: but the middle region is occupied by pastures which abound in goats.

The lower parts of the mountain swarm with serpents." (Serv. ad Virg., Äen., l. c.)—The geographers agree in adapting this fable to the mountains on the coast
of Lycia; but Strabo seems rather to place the site in Mount Cragus (Strab., 665), while Pliny, on the au-
thority of Ctesias, whose words have been preserved by Photius (Cod., 72), fixes it near Phaselis, beyond
Olympus. (Pit., 2, 106.) Seneca, in his account of this natural phenomenon, says, (Ep., 79):—"In
Lycia regio notissima est, Hephaestion incola vocavit; perforatum pluribus lucis solum, quod sine ullo nem-
centum damnum igne invincuit circuit. Lauta via bigam et vetusto, et tantum in remissa ac languida refugientibus." From this de-
scription it is plain that the fire in question had little of the usual volcanic character, being perfectly harm-
less. Instances of this sort of flame are, however
by no means uncommon; that of Pietra mala, in the Apennines, is well known, and there are others in Epirus and the Greek islands. We are indebted to Capt. Beaufort for an accurate account of the Chimna-
ria flame, which, after the lapse of so many centuries, is still unsubdued. This able navigator and anti-
quary, being at the time to the east of Olympus, says:—"We had seen from the ship, the preceding night, a small but steady light among the hills; on mentioning the circumstance to the inhabitants, we learned that it was a yamar or volcanic flame; and they offered to supply us with horses and guides to exam-
nine it. "Of the part of the island which is sacred to the god, a plain, partly cultivated, and then, winding up a rocky and thickly-wooded glen, we arrived at the place. In the inner corner of a ruined building the wall is under-
mined, so as to leave an aperture of about three feet diameter, and shaped like the mouth of an oven; from thence the flame issues, giving out an intense heat, yet producing no smoke on the wall; and though from the neck of the opening we detached some small branches of caked soil, the walls were hardly discolour-
ed. Trees, brushwood, and weeds grow close around this little crater, a small stream trickles down the hill hard by, and the ground does not appear to feel the effect of its heat beyond the distance of a few yards. No volcanic productions whatever were perceived in the neighbourhood. The guide declared that, in the memory of man, there had been but one hole, and that it never had changed its size or appearance. It was now supposing that it was in a state of repose; and who could besides have sought an alliance with Sparta. (Herod., 1, 69.) It was at the court of the Lydian monarch, in all probab-
ility, that he saw ΑΣΟΠ, since Diogenes Laertius speaks of a question put by the philosopher to the fabulist. (Diog. Laer., 1, 68, seq.)

CHIMERUM, a promontory on the coast of Epirus, opposite the island of Paxos. It is mentioned by Thucydides (1, 30) as the place where the Corinthians formed a camp to protect their allies against the Cor-
cyreans. (Compare Strabo, 324.—Pausan., 8, 7.)

It seems to answer to Cape Saracineico, above Parga. (Cramner's Ancient Greece, vol. 1, p. 111.)

CHION, a native of Heraclea Pontica, and disciple of Plato. Animated by the political fanaticism to which the young and inexperienced so easily abandon themselves, he left Athens, where he had resided for
the space of five years, attending the instructions of Plato, and returned home with the determination of freeing his native city from the yoke of tyranny. Clearchus, who ruled at Heraclea, was not, it is true, a good prince; but, in slaying him, Chion was the cause of this city's falling under a worse tyrant, Saty-
rus, the brother of Clearchus. Chion himself perished
as the victim of the latest project which the seventeen, it is said, had been written by the same philosopher. They are principally ad-
dressed to his father Matrius; but their authenticity has been called into question; and the real author is
supposed to have been a Platonist of the fourth cen-
tury. The style is clear, simple, and animated.
The best edition of these letters is that of Hoffmann, which is joined to the edition of the fragments of Memnon, by Orelli, Lips., 1816.—Consult, in relation to Chion, and the authenticity of these letters, the prolegomena of Hoffmann, p. 131, seqq. (Schoell, Ed. Lit. Gr., vol. 2, p. 291.)

Chion, called Chios, was the earliest writer of the old Athenian comedy. (Compare Aristot., Poet., 3, 5.—Suidas, s. v. Χιών.) His representations date from Olympic 73, 2, or 487 B.C. The names of three of his comedies are recorded, Ηπείρως, Πειρασία ἡ Αἰσ-
συπόλιος, and Πειραξ. To judge from these titles, we should conclude that his comedies had a political reference, and were full of personal satire; and from an allusion to the Chios, Vitruvius (Praf. in lib. 6) we may infer, that they were more like those of Epicarmus. (Theatre of the Greeks, p. 99, 4th ed.)

Chios, now Scio, an island in the Ægean Sea, between Lesbos and Samos, on the coast of Asia Minor. It is about 900 leagues in circuit, and was probably once connected with the main land, from which it is separated only by a strait three leagues wide. (Strabo, 645.) It was known by the names of Æchila, Macris, and Pityusa, but its most prevalent name was Chio, denoting some, or some part of Scio, because its mountains were often covered with it. Isidorus, however, deduces the name from a Syriac term signifying mastich, with which the island abounds. (Compare Dioscorides, 1, 90.—Plin., 12, 16.) It was well inhabited, and could once equip a hundred ships; and its chief town, called Chios, had a beautiful harbour which could contain eighty ships. (Herodot., 6, 8, and 31.—Thucyd., 8, 16.) The wine of this island, so much celebrated by the ancients, is still in esteem. The Chians are said to have first known the art of cultivating the vine, taught them by Κένηπον, the son of Bacchus, and by them communicated to the rest of mankind. The first red wine was made here. The marble of Chios was also in repute. It was one of the places which contended for the honour of having given birth to Homer, and his school was shown in the island. Modern Scio, until the dreadful ravages of the Turks, contained 115,000 inhabitants, nearly all Greeks, and was the best cultivated and most flourishing island in the Archipelago. (Compare Malte-
Brun, Geogr., vol. 2, p. 86, Am. ed.)

Chiron, the most celebrated of the Centaurs (vid. Centauri), and son of Saturn and the nymph Philyra. Dreading the jealousy of his wife Rhea, the god is said to have transformed Philyra into a mare, and himself into a steed: the offspring of this union was Chiron, half man and half horse. This legend first appeared in the poem of the Gigantomachia. (Schoell ad Apoll. Rh., 3, 554.) It is also noticed by Pindar. (Pyth., 3, 1, seqq.) Probably the praise of Chiron, by Homer (Il., 11, 832), for his love of justice, led to the making him the offspring of the god who ruled over the gold-

en race of men; and if, as it would appear, he was skilled in music, a more suitable mother could not have been assigned to him than the nymph "Lyre-loving." (Φιλὸς τοῦ Λυροῦ, Nachtrag zur Tr., p. 135.) Unto Chiron was intrusted the rearing and educating of Jason and his son Medeus, Hercules, Æsclapius, and Achilles. Besides his knowledge of the musical art, which he imparted to his heroic pupils, he was also skilled in surgery, which he taught to the last two of the number. In the contest between Hercules and the Centaurs, Chiron was acci-
dentally wounded in the knee by one of the arrows of the hero. Grieved at this unhappy event, Hercules ran to the wound, and there found and took a remedy given by Chiron himself; but in vain; the venom of the hydra was not to be overcome. Chiron retired into his cave longing to die, but unable on ac-
count of his immortality, till, on his expressing his willingness to die for Prometheus, he was released by death from his misery. According to another account, he was, on his prayer to Jove for relief, raised to the sky and made the constellation of Sagittarius. (Ovid, Fast., 5, 579, seqq.—Hygin., Poet. Astron., 2, 38.—Keightley's Mythology, p. 69, 317, 356.)

Chloë, a surname of Ceres at Athens. Her yearly festival, called Chloë, was celebrated with much mirth and rejoicing on the 6th of the month Thargeli-
on (a month corresponding to the middle of our May and June), and a ram, together with young garden plants, was offered to her. She had a temple near the citadel. (Pausan., 1, 22.—Schol. ad Soph., Ód. Col., 1609.) The name Chloë (χλόη) embraces the double idea of "green" or "verdant," as referring to the young blade of corn coming forth and gradually in-
creasing, and also "golden-haired," applicable to the ripened harvest. In this latter sense it bears a direct relation to the Homeric ἑρμής Δήμη-
τρης, and the Roman "Flava Ceres." (Consult Creu-
zer, Symbolik, vol. 4, p. 314, not.)—II. A female name of frequent occurrence, and denoting "the blooming one," "the fresh in youthful beauty," &c. It comes from χλόη, "the young blade of grass, corn," &c.

Chloë, the goddess of flowers, who married Zephyrus. The name is derived from the Greek χλωρός, "verdant," and, according to Ovid, she is the same as Flora. (Ovid, Fast., 5, 195.)—II. A daughter of Amphion son of Jason and Persephone, who married Neleus, king of Pylos, by whom she had one daughter and twelve sons, who all, except Nestor, were killed by Hercules. (Pausan., 2, 21, 9, 39.)

Chloris, Vid. Constantius Chlorus.

Chloes, vid. Phrynichus. (Vid. Suatius.)—II. A river of Thessaly, called "The river of Zupis." (Vid. Eu-
lus.)

Chlos, a river of Colchos, falling into the Euxine, north of the mouth of the Phasis. (Arrian, Peripl., Pont. Eux., p. 122, ed. Blancard.) Mamert supposes it to be the same with the modern Schiujani. (Geogr., vol. 4, p. 394.)

Chloe, islands in the Ionian Sea, off the coast of Iapigus. (Thucyd., 7, 39.) D'Anville concludes Cleverius in placing them near the harbour of Tarentum. (Com. et Not. ad Thucyd., 1. c.)

Chloe, islands off the coast of Eubea, near Sty-
ra. They coincide with the Casalieri of modern maps. (Herodot., 6, 101.)

Chloë, an Athenian tragic poet, the con-
temporar y of Phrynicus, and, like him, the competitor of Æschylus. With Pratinas and the last-mentioned dramatist he contended Olympic 70, 2, or B.C. 499, the time when Æschylus first exhibited. It is believed that he contended with Sophocles also, but the difference in their ages renders this extremely improbable; and the mistake may easily have arisen from the way in which Suidas mentions the book on the chorus which Sophocles wrote against him and Theopis. (Charitius, ed. Næke, p. 7.) It would seem that trag-
edy had not altogether departed from its original form in his time, and that the chorus was still satyric. Chloë is said to have written 150 pieces, but no fragment has come down to us. The disparaging re-
marks of Hermas and Proclus do not refer to him, but to his Samian namesake (Charitius, ed. Næke, p. 92), and he is mentioned by Alexis in such goodly company (Athenaenus, 4, p. 164, c.) that we cannot believe his poetry to have been altogether contemptible. One of his plays was called the Alope, and appears to have been of a strictly mythical character. (Pausan., 1, 14.) Some improvements and adaptations of Chloë's costume are described by Alope, and Eudocia. (Theatre of the Greeks, p. 59, 4th ed.)—II. A native of Samos, born in a state of slavery, from which condition he subsequently found means to extricate himself. Sui-
das, from whom we obtain this fact, makes him to have been the pupil and favourite of Herodotus; but
CHERILUS.

Cherilus was a young man when Xerxes invaded Greece, there is a contradiction to the previous assertion, since Herodotus was at this time but just born. Plutarch states, that Lysander of Sparta was very fond of the poet's society: this would fix the period when he flourished between the peace of Cimon and the commotion of the Delian League (499-495 B.C.).—Cherilus, ed. Náke, p. 21, seqq.) In his old age Cherilus was invited to the court of Macedonia by King Archelaus, who allowed him, it is said, three mine daily. At the court of this prince he died. Cherilus perceived that a poet could no longer please by following the footsteps of Homer, since a people arrived at the degree of civilization in which the Greeks then were, seemed no longer capable of relating his epic verse. A certain art which possesses so many charms in the earlier national poetry, Cherilus selected, in consequence, an historical subject, the victory of his countrymen over the arms of Xerxes. In this, however, he was unfortunate, since so recent an event was incompatible with the employment of fiction, and fiction is an important part of the machinery of every epic poem. According to Stobæus, he entitled his poem {περὶ τοῦ Περσηφονείου}, "the Perseid." We mean, because he claims to have composed this poem of his, that we are unable to ascertain whether he ended it with the battle of Salamis, or carried it on to the close of the war with Xerxes. This poem was a monument raised to the glory of the Athenians. An ancient law of Solon's relative to Homer, was revived in honour of Cherilus, and the people decreed that the poem should be publicly read, every year, at the festival of the Panathenaeas. Suidas, it is true, merely states, that he died, that this poem should be read with those of Homer." But such a resolve could only proceed from the Athenians, and could only have reference to the great celebration just mentioned, which periodically reunited the tribes of Attica. Suidas adds, that the author received a piece of gold for every verse; a recompense but little in unison with the spirit of a republic, and still less probable in the case of a long epic poem. It would seem, in fact, that Suidas is the first biographer of the Samian Cherilus which happened to another poet of the same name, who composed an effusion in honour of Alexander the Great. (Cherilus, ed. Náke, p. 78, seqq.) Whatever the reputation of Cherilus may have been, one thing at least is certain, that the Alexandrian critics excluded him from their canon, in which they assigned the fifth and last place to his rival Antimachus. A certain art which possesses so many charms in the earlier national poetry, with which the style of Cherilus was reproached, as well as the predilection of Plato for Antimachus, may have been the primary causes of this disgraceful exclusion of the Athenian poet—Among the fragments of the Perseid which have come down to us, there are some verses that have given rise to a curious discussion. The lines in question are preserved for us by Josephus (contra Apion, 1, p. 464.—vol. 2, ed. Huxley, p. 311), as the most ancient portions of a document in which mention is made of the Jews. In the invasion of the forces composing the army of Xerxes, Cherilus speaks of the inhabitants of the mountains of Solymin, in the vicinity of a large lake. (Μακεδονόν ἐν Σαλαμίνι φιλημένην, πολεμόφιλην ἂν Μήπου) Josephus is convinced that the poet means Jerusalem, but some critics of modern days insist that the Solymin in Lycia are meant, because Cherilus speaks of these troops as ἀρματοφόροι, i. e., having the hair cut in a particular form; a usage which the Levitical law (Levit., 19, 27) forbade, with the express view of distinguishing the Jews from the neighbouring nations. All doubt, however, is removed with regard to the poet's meaning, by his adding, that the troops in question spoke the Phoenician tongue, of which the Hebrew is only a dialect (Ἰλλαςάνιν Ἰβονίαν ἄποικον ἀφινετεῖς). It is probable, therefore, that Cherilus knew the inhabitants of these countries, had in general the custom of cutting the hair of the head in this way, and that his means of information had not put him in possession of the fact, that one community of Syria deviated from this custom. (Schött, Hist. Lit. Gr., vol. 2, p. 659, line 25, ed. Ritter, III., p. 431, seqq.) At the time of Minor, of whom Horace (Epist., 2, 1, 233.—Epist. ad Piso, 357), Quintus Curtius (8, 5, 8), and Ausonius (Ep. 16), as well as Acron and Porphyry, the scholars on Horace, make mention. It was to this poet that Alexander the Great is said to have promised a piece of gold for every verse which he should compose in his praise. The commentator, known under the name of the scholar of Croquius, informs us, that Cherilus could only possess the seven lines that were deemed worthy of the price offered by the monarch. Porphyry, however, remarks in more general terms, "Hicus omnino septem versus laudabantur." Now Strabo (672), and also Athenæus (8, 336), have preserved for us a translation, by Cherilus, into seven hexameters, of the Assyrian inscription on the tomb of Sardanapalus; and hence it has been supposed that these are the seven verses with which the poet composed this poem of his, that we are unable to ascertain whether he ended it with the battle of Salamis, or carried it on to the close of the war with Xerxes. This poem was a monument raised to the glory of the Athenians. An ancient law of Solon's relative to Homer, was revived in honour of Cherilus, and the people decreed that the poem should be publicly read, every year, at the festival of the Panathenaeas. Suidas, it is true, merely states, that he died, that this poem should be read with those of Homer." But such a resolve could only proceed from the Athenians, and could only have reference to the great celebration just mentioned, which periodically reunited the tribes of Attica. Suidas adds, that the author received a piece of gold for every verse; a recompense but little in unison with the spirit of a republic, and still less probable in the case of a long epic poem. It would seem, in fact, that Suidas is the first biographer of the Samian Cherilus which happened to another poet of the same name, who composed an effusion in honour of Alexander the Great. (Cherilus, ed. Náke, p. 101, seqq.—Schött, Hist. Lit. Gr., vol. 3, p. 75.) Ctesias, a work of Asia, between Sogdiana and the northeastern shore of the Caspian, whose capital was Gorgo, now Urgench. Their country is now Khurasan. Ritter has some curious speculations on the name Khorsan, as indicating a country in which the worship of the sun ancienly prevailed (Khorsan.—Ritter, Vorhalle, p. 90.) Chosroes. Vid. Corethus. Chosroes I. (more correctly Khosrow), king of Persia, successively to Xerxes, was the twenty-first monarch of the line of the Sassanides, and succeeded his father Kavad, A.D. 531. The Orientals, even after the lapse of twelve centuries, are accustomed to cite him as a model for kings, and the glorious surname of the "Just" is one which he frequently bears in history. Chosroes manifested even in early life the germ of those virtues which were afterward so brilliantly developed by him on coming to the throne. At the period of his accession Persia was involved in a war with Justinian, but Chosroes succeeded in negotiating a favourable peace, by the terms of which the Roman emperor had to pay 11,000 pounds of gold, and forego various advantages. Not long after (A.D. 540), having become powerful by reason of various Asiatic conquests, and regarding the Romans as usurpers of many of the ancient provinces of Persia, he invaded Syria, laid Antioch in ashes, and only drew off his forces from the territory of the empire after receiving the document of a considerable sum. After several other victorious expeditions, he renewed the war with Justinian, the successor of Justinian, whom he compelled to solicit a truce, but was soon after driven back across the Euphrates by Tiberius, the new emperor, and the Romans took up their winter-quarters in the Persian provinces. Chosroes died A.D. 579, after a glorious reign of forty-eight years, and was succeeded by his son Hormizd II., who died in 627.
tune, he having been dethroned and driven from his kingdom by a formidable rival, and compelled to take refuge with the Emperor Maurice. He owed his restoration to the generous aid of the same potentate. Not long after, upon the death of Maurice, he carried his victorious arms against his former allies, to the very walls of Constantinople and Alexandria; and subsequently he beheld the very Romans, whom he had so often defeated, penetrating, under Heraclius, into the heart of the Persian empire, and pillaging and burning all the palace itself. He was at last dethroned by his own son and cast into prison, where he died A.D. 628. (Saint-Martin, in Biogr. Univ., vol. 22, p. 391.)

Chryson Mares, a name applied by the ancients to the Frozen Ocean. The Cimbrini, according to Pliny (4, 13), called it Morimarua, i. e. "the dead sea." In the Welsh tongue, mor is the "sea," and maws "dead." In the Irish, nuair-croin means a thick, coagulated, frozen sea. (Compare Classical Journal, vol. 6, p. 297.)

Chrysa, I. a town of Tros, on the coast, near the city of Hamaxitus, where lived Chryses, the father of the beautiful Chryseis. (Homer, Iliad, 1, 37. — Id. ibid., 430, &c.) Strabo (604), however, places it in the innermost part of the Adramyttian Gulf, and hence some are in favour of making two places of this name, an old and a new Chrysa. (Compare Heyne's note to the German transl. of Le Chevalier, p. 125, note 2.) This Chrysa is more likely the town of Chryson Mares (App. Suid. Smintheus), whence it was also called Sminthium. (Mannert, Geog., vol. 6, pt. 3, p. 463.) II. A small island in the immediate vicinity of Lemnos, in which Philoctetes took up his abode when suffering from the wound inflicted by one of the arrows of Hercules. (Pausan., 8, 33.) It was afterward submerged by the sea, in accordance with an ancient prediction. (Herodot., 7, 6.) Choesen-Gouffier (Voyage pittoresque de la Gr. de Chypre, p. 159) thinks he saw traces of it still remaining. That the change here referred to has been occasioned by volcanic action no one can doubt. (Vid. Mosycthus.) The whole island of Lemnos is said to bear the strongest marks of the effects of volcanic fire; the rocks in many parts are like the burned and vitrified scoria of furnaces. (Hunt's Journal, in Walpole's Collection, vol. 2, p. 69.)

Chryseanthus, an eclectic philosopher of Sardis, made high priest of Lydia by the Emperor Julian, and supposed to possess a power of conversing with the gods and of predicting future events. (Eunap., p. 144, seqq. — Enfield's History of Philosophy, vol. 2, p. 71.)

Chryssoar, a son of Medusa by Neptune, born immediately after the decapitation of his mother by Perseus. (Apollod., 2, 4, 2. — Heyne, ad loc.) He was of gigantic stature, and received his name, according to Hesiod (Theog., 283), from his wielding in his hands a "golden sword" (χρυσέλαιος ἱππός). Chryssoar became by Callirhoe, one of the ocean-nymphs, the father of Geryon and Echidna. (Hesiod, Theog., 287, seqq. — Compare Ctesias Ephes. ap. Plut. de Fam., p. 1034, ed. Wetj. — Tzetz. ad Lyocyrph., v. 17.) — The legend of Chryssoar, like that of Perseus itself, has a blended religious and astronomical character. It is explained as the tale of a divine punishment by blood, and also of the reappearance of fertility, after the darker period of the year, the months of winter, have passed away. (Compare remarks under the article Perseus.)

Chrysoarion, a surname of Jupiter, from his temple at Stratonice in Caria. There was a political union of certain Carian states, which held their meetings here, under the name of Chrysoarion. These states had votes in proportion to the number of towns they possessed. (Strat., 600. — Cramer's Asia Minor, vol. 2, p. 204.)

Chryseis, the patronymic of Astynome, daughter of Chryses. (Vid. Chryses.)

Chryseis, a priest of Apollo Smintheus at Chrysa. He was the father of Astynome, who was called from him Chryseis. In the division of the spoils of Hypocampian Thebe, when that city was taken by the Greeks, Chryseis, as one of the captives, fell to the share of Agamemnon. Chryses, upon hearing of his daughter's fate, repaired to the Grecian camp, attired in his sacerdotal insignia, to solicit her restitution; and when his prayers were fruitless, he then implored the aid of Apollo, who visited the Grecians with a pestilence, and obliged them to restore Chryseis. (Hom., Il., 1, 11, seqq. — Id. ibid., 366, seqq.) It has been asked how Chryseis, a native of Chrysa, could have been taken prisoner at Thebe! Eustathius solves the difficulty, giving us their choice of one of two explanations. According to one account, as he informs us, she had been sent to Thebe as to a place of more safety than Chrysa, while another made her to have gone thither to attend a festival of Diana. (Eustath. ad Il., 1, 366.)

Chryssippus, I. a son of Pelops, carried off by Laius. (Apollod., 3, 5, 6.) This circumstance became a theme with many ancient writers, and hence the story assumed different shapes, according to the fancy of those who handled it. The death of Chryssippus was also related in different ways. According to the common account, he was slain by Atreus, at the instigation of his sister Hippodamia. (Compare Heyne, ad loc.) II. A stoic philosopher of Soli in Cilicia Campestris. He fixed his residence at Athens, and became a disciple of Cleanthes, the successor of Zeno. He was equally distinguished for natural abilities and industry, seldom suffering a day to elapse without writing 500 lines. He wrote several hundred volumes, of which three hundred were on logical subjects, but in all he borrowed largely from others. He often imitated the sages of India; and sometimes it seems he was God, or a universal effusion of his spirit, and that the superior part of this spirit, which consisted in mind and reason, was the common nature of things, containing the whole and every part. Sometimes he speaks of God as the power of fate and the necessary chain of events; sometimes he calls him fire; and sometimes he deifies the fluid parts of nature, air and water; and again, the earth, sun, moon, and stars, and the whole moral world, which they held to be a creation, and even those men who have obtained immortality. He was very fond of the figure Sorites in arguing, which is hence called by Persius the heap of Chryssippus. His discourses abounded more in curious subtleties and nice distinctions than in solid arguments. In disputation, in which he spent the greatest part of his life, he discovered a degree of promptitude and confidence which approached towards audacity. He often said to his preceptor, "Give me doctrines, and I will find arguments to support them." It was a singular proof of his haughty spirit, that when a certain person asked him what preceptor he would advise him to choose for his son, he said, "Me; for if I thought any philosopher excelled me, I would myself become his pupil." With so much contempt did he look down upon the distinctions of rank, that he would never, as other philosophers did, pay his court to the princes and great men by any external display of his writings. The vehemence and arrogance with which he supported his tenets, created him many adversaries, particularly in the Academic and Epicurean sects. Even his friends of the Stoic school complained, that, in the warmth of dispute, while he was attempting to load his adversary with the reproach of obscenity and absurdity, his own ingenuity often failed him, and he adopted such unusual and illogical modes of reasoning, as gave his opponents great advantages over him. (Cic., Ac. Quaest., 4, 27.)
a common practice with Chrysippus, at different times, to take the opposite sides of the same question, and thus furnish his antagonists with weapons, which might easily be turned, as occasion offered, against himself. Carneades, who was one of his most able and skilful adversaries, frequently availed himself of this circumstance, and refuted Chrysippus by convicting him of inconsistency. Of his writings nothing remains, except a few extracts which are preserved in the works of Cicero, Plutarch, Seneca, and Aulus Gelius. He died in the 143d Olympiad, B.C. 283, at the age of eighty-three. A statue was erected to his memory by Polybius (Dog. Laert. 7. 139.—Eulhuid’s History of Philosophy, vol. 1, p. 358.)

Chrysogoras, or the horn of gold, a name given to the harbour of Byzantium. (Vid. Byzantium.)

Chrysopolis, a town and harbour opposite Byzantium, on the Asiatic shore. It is often mentioned in history. The Athenians established there a toll, towards the close of the Peloponnesian war, to be paid by all ships coming from the Euxine. (Xen., Hist. Gr. 1, 1, 14.—Polyb., 4, 44, 3.) The ten thousand Greeks were encamped there for some days prior to crossing over into Thrace. (Xen., Anab., 6, 6, 22.) It is mentioned by Strabo (563) as a small town, and Pliny says, “Fusi Chrysopolis” (5, 32). Several historians, however, of a later date, continue to speak of it. (Zosim., 2, 30.—Socrat., Hist. Eccles., 1, 4.—Ann. Marcell., 22, 12.) Stephanus of Byzantium gives various etymological derivations of the name. The modern Scutari is thought to correspond to the ancient place. (Cramer’s Asia Minor, vol. 1, p. 191, seq.)

Chyserborhos, or Golden Stream, a river of Syria, near Damascus. It rises in Mount Libanus, and, after leaving its native valley, divides itself into five small streams near the village of Dunmar. The main one of these flows through Damascus, while two others water the gardens in the plain of El-Ghutha. All the streams unite subsequently and flow deeply into the sea. The Chyserborhos is the same with the Bardine or Amana (in Scripture Abana, 2 Kings, 5, 12), now the Baradi. (Abufeda, Tab. Syr.—Burckhardt, p. 37.—Von Richter, Wallfahrts, p. 154, seq.)

Chrysostom (St. John), an eminent father of the church, was born of a noble family at Antioch, A.D. 347. His father’s name was Secundus, and the surname of Chrysostom, or “golden-mouth” (Lowthian, p. 50,) obtained by the son, was given to him on account of his eloquence. He was bred to the bar, but quitted it for an ascetic life; first, with a monk on a mountain near Antioch, and then in a cave by himself. He remained in this retirement six years, when he returned to Antioch, and, being ordained, became so celebrated for his talents as a preacher, that, on the death of Nectarius, patriarch of Constantinople, he was chosen to succeed him in that preeminent place, which he very unwillingly accepted, he acted with great vigour and austerity in the reform of abuses, and exhibited all the mistaken notions of the day in regard to celibacy and the monastic life. He also persecuted the pagans and heretics with great zeal, and sought to extend his episcopal power with such unremitting ardour, that he involved himself in a quarrel with Theophilus, bishop of Alexandria, who opposed the extension of the Eastern Empire to Egypt; so that this quarrel ended in his formal deposition by a synod held at Chalcedon A.D. 403. He was, however, so popular in Constantinople, that a formidable insurrection ensued, and the empress herself interfered for his return. Towards the end of the same year, owing to his zeal relative to a statue of Eudoxia, placed near the great church, and causing a disturbance of public worship, all his troubles were renewed. If true, that in one of his sermons the empress was compared by him to Herodias, who sought the head of John in a charger, the anger of Eudoxia was not altogether unjustifiable. The consequence of her resentment was the assembling of another synod, in A.D. 404, the patriarch, in great danger and soon to die. The place of his banishment was Cocusus, a lonely town among the ridges of Mount Taurus, on the confines of Cappadocia and Cilicia. He sustained himself with much fortitude; but having, by means of his great influence and many adherents, procured the intercession of the western emperor, Honorius, with his brother Arcadius, he was ordered to be removed still farther from the capital, and died on the journey at Comana in Pontus, A.D. 407, at the age of sixty. Opinion was much divided in regard to his merits for some time after his death, but at length his partisans prevailed, and, thirty years from his decease, he was removed from his place of internment as a saint, and his remains were met in procession by the Emperor Theodosius the younger, on their removal from the place of his original interment to Constantinople. Chrysostom was a voluminous writer, but more eloquent than either learned or acute. Although falling short of Attic purity, his style is free, copious, and unaffected, and his diction often glowing and elevated. The numerous treatises or sermons by which he chiefly gained his reputation, are very curious for the information they contain on the customs and manners of the times, as elicited by his declaration against prevailing vices and follies. The first entire Greek edition of them was published at Paris, 1613, vols. 10 and 11, folio. 1613, but that of Montfaucon, Paris, with annotations and his life, 11 vols. folio, 1718, is by far the most complete. (Gorton’s Biog. Dict., vol. 1, p. 485.)

Chrysothemis, I., a daughter of Agamemnon and Clytemnestra.—II. A Cretan, who first obtained the poetical prize at the Pythian games. (Pausanias, 10, 7.)

Chyrl, a town of Lower Pannonia, situate on the Saavus, about fifty miles from Sirmium, and about one hundred from the confluence of the Saavus and Danube. It was famous for the defeat of Licinius by Constantine, A.D. 315, and was also the birthplace of Gratian. Its name is preserved in the obscure ruins of Sawveli. (Eutropius, 10, 4.—Ann. Marcellinus, 30, 24.)

Chytria, I. a flourishing commercial city in the so-called province of Phrygia, between Lyicia and Ca- ria. It was renowned for the Great distinction’s sake from another city of the same name situate in Pam- phylia. Chytra seems to have been originally a small town of the Cabalees, from whom the tract of Cabalia or Cabalis took its name. On the accession, however, of a Pisidian colony, the site was changed, the town considerably enlarged, and the name gradually altered from Cabalis, or some analogous form, to that of Chy- tria. (Blaug, Ant. 12, 12.) Chytria’s great promi- nency was chiefly owing to the excellence of its laws, though the government was that of an absolute mon- archy. Under this government were included the three old Cabalian towns of Bubon, Balbura, and Ceno- anda, and these, together with the capital Chytra, constituted a tetrapolis. Each of these towns had one vote in the general assembly of the states, except Chytra, which had two, in consideration of its ancient and ancient glory. In the time of Strabo, could raise no less than 30,000 foot and 2000 horse, and its influence and power extended over a part of Pisidia, Milies, and Lycia, as far as Perea of the Rhodians. (Strab., 631.) After its conquest by the Romans, we find Chytra mentioned as the chief city of a considerable forum or conventus, comprising not less than twenty-five towns. (Civ. Ep. ed. Atte, 5, 18.) According to Tacitus (Ann., 4, 13), Chytra, having been nearly destroyed by an earth-
CICERO.

quake, was afterward restored by Tiberius. In later writers we find it included within the limits of Caria. (Hierocl., 690.) Strabo reports, that there were four distinct Cibyrae: that of ancient Solyma, the Greek, the Sisidian, and the Lydian; the latter, however, he adds, was quite extinct even in Lydia. The Cibyrate excelled in engraving on iron or steel. (Strab., 631.) No trace of the ruins of Cibyra has as yet been discovered. They are to be found, however, in all probability, not far from Denizli, or Laodicea, on a river which is either the Lycus or a branch of it. (Cramer's Cibyra Minor, vol. 2, p. 269, seqq.)—II. A town on the coast of Pamphylia, southeast of Aspendus, called Cibyra Parva, for distinction sake from the preceding. Ptolemy annexes it to Cilicia Trecha. Its site corresponds to that of the modern Ibaru. (Strab., 667.)

Cicero, Marcus Tullius, a celebrated Roman orator, was born at Arpinum, the native place of Marius, B.C. 107, the same year which gave birth to Pompey the Great. His family was ancient, and of equestrian rank, but had never taken part in public affairs at Rome, though both his father and grandfather were persons of consideration in the part of Italy in which they resided. (Or. contra Rull., 2, 1.) His father, being a man of cultivated mind, determined to educate his two sons, Marcus and Quintus, on an enlarged and liberal plan, and to fit them for the prospect of those public employments which his own weak state of health incapacitated him from seeking. Marcus, the elder of the two, soon displayed indications of a superior mind, and we are told that his schoolfellows carried home such accounts of his extraordinary parts, that their parents often visited the school for the sake of seeing a youth who gave so much promise of future eminence. (Plut. in Vit.) One of his earliest masters was the poet Archias, whom he defended afterward in his consul year; and under his instruction he made such proficiency as compose a poem, though yet a boy, on the subject of Glaucus, which he performed the subject of one of the tragedies of Aeschylus. Soon after he assumed the manly gown, he was placed under the care of Scenula, the celebrated lawyer, whom he introduces so beautifully into several of his philosophical dialogues; and in no long time he gained a thorough knowledge of the laws and political institutions of his country. (De Clar., Or., 29.) This was about the time of the Social War; and, according to the same authorities, he continued his course of education to learn the military art by actual service. Cicero took the opportunity of serving a campaign under the consul Pompeius Strabo, father of Pompey the Great. Returning to pursue more congenial to his natural taste, he commenced the study of philosophy under Philo the Academic. But his chief attention was reserved for oratory, to which he applied himself with the assistance of Molo, the first rhetorician of the age. For five years, he was occupied in the argumentative subtleties for which the disciples of Zeno were so celebrated. At the same time he declaimed daily in Greek and Latin with some young noblemen, who were competitors in the same race of honors with himself. —Cicero was the first Roman who found his way to the highest dignities of the state with no other recommendation than his powers of eloquence and his understanding, as of a man of state. (Or. in Cat., vol. 1, Ch. 1. 2. 3. Pro Sull., 9. Pro Dom., 37.)—De Harusp, Resp., 23.—Ep. ad Fam., 15, 4.) The first cause of importance which he undertook was the defense of Roscius Amerinus, in which he distinguished himself by his courageous defense of his client, who had been accused of parricide by Chrysogonus, a favorite of Sylla's. This obliging him, however, according to Plutarch, to leave Rome from prudential motives, the power of Sylla being at that time paramount, he employed his time in travelling for two years under pretence of his health, which he tells us was yet unequal to the exertion of pleading. (De Clar., Or., 91.) At Athens he met with T. Pomponius Assius and Lucullus and there renewed with him a friendship which lasted through life, in spite of the change of interest and estrangement of affection so commonly attendant on turbulent times. Here too he attended the lectures of Antiochus, who, under the name of an Academic, taught the dogmatic doctrines of Plato and the Stoics.

Though Cicero at first evinced considerable dislike of his philosophical views, he seems afterward to have adopted the sentiments of the Old Academy, which they much resembled, and not until late in life to have relapsed into the sceptical tenets of his earlier instructor Philo. (Warburton, Div. Leg., lib. 3, sec. 3.—Vossius, de Nat. Leg., c. 8, sec. 22.) After visiting the principal philosophers and rhetoricians of Asia, he returned at the age of thirty to Rome, so strengthened and improved both in bodily and mental powers, that he soon eclipsed all his competitors for public favour. So popular a talent speedily gained him the suffrage of the commons; and being sent to Sicily as questor, at a time when the metropolis itself was visited with a scarcity of corn, he acquitted himself in that delicate situation with so much success as to supply the clamorous wants of the people without opposing the province from which the provisions were raised. (Or. pro Planc., 26.—In Verr., 5, 14.) Returning thence with greater honours than had ever before been decreed, he displayed a character fitted for himself still farther the esteem of the Sicilians, by undertaking his celebrated prosecution of Verres; who, though defended by the influence of the Metelli and the eloquence of Hortensius, was driven, in despair into voluntary exile. Five years after his quiescethip Cicero was elected tribune. Though possessed of only a moderate fortune, he nevertheless, with the good fortune and talent which marked his character, procured himself and family a comfortable subsistence, by keeping a house of refined company, where the best education was given to the young, and by entering into the extensive office of censor, which he filled with the utmost success, by preserving in his domestic arrangements the dignity of a literary and public man, without any of the ostentation of magnificence which often distinguished the candidate for popular applause. (Or. pro Dom., 58.) After the customary interval of two years, he was returned at the head of the list as praetor (Or. in Pis., 1), and now made his first appearance on the rostra in support of the Manilian law. About the same time he was chosen an orator for the public games; and having the opportunity of using the pulpit of censure, he delivered a discourse on the injustice of his pretensions, which was delivered, on the discovery and overthrow of this nefarious plot, as the Father and Deliverer of his country. His consulate was succeeded by the return of Pompey from the East, and the establishment of the First Triumvirate; which, disappointing his hopes of political greatness, induced him to resume his forensic and literary occupations. From these he was called off, after seven months, by receiving notice of Clodius, who at length succeeded in driving him into exile. This event, which, considering the circumstances connected with it, was one of the most glorious of his life, filled him with the utmost distress and despondency. Its history is as follows. Clodius, Cicero's bitter enemy, had caused a law to be renewed, declaring every one guilty of treason who ordered the execution of a Roman citizen before the people had condemned him. The blow was aimed against Cicero, on account of the punish-
ment he had caused to be inflicted, by the authority of the senate, upon the accomplices of Catiline. The illustrious ex-consul put on mourning, and appeared in public, accompanied by the equites and many young patricians, demanding the protection of the people. Cicero was in the praetorium, and, being accused of insulting them repeatedly, and ventured even to besiege the senate house. Cicero, upon this, went into voluntary exile. His conduct, however, in this reverse of fortune, showed anything but the firmness of a man of true spirit. He wandered about Greece, bewailing his miserable condition, refusing the consolations which his friends attempted to administer, and hurling the public honours with which the Greek cities were wont to load him. He retired at last to Athens, and there showed himself in love with literature and philosophy. He passed his days in that city in profound melancholy and despair. He published nothing but his "Consolatio," a work of a perfectly sad and pensive cast, and which, as he himself said, was written to revive the soul. Cicero now devoted himself entirely to literature and philosophy. The state of his private affairs, however, involved him in great embarrassment. A large sum, which he had advanced to Pompey, had impoverished him, and he was forced to stand indebted to Atticus for present assistance. These difficulties led him to a step which it has been customary to regard with great severity; the course of which, however, is not clear. He is said to have been in his 62nd year, and his marriage with his rich wife Publilia, who was of an age disproportionate to his own. Yet, in reviewing this proceeding, we must not adopt the modern standard of propriety, forgetting that the character of an age which reconciled actions even of moral turpitude with a reputation for honour and virtue. Terentia was a woman of most imperious and violent temper, and (what is more to the point) often her high degree of inflammatory temper produced an effect which seemed calculated to bring on present embarrassment by her extravagance in the management of his private affairs. By her he had two children, a son born the year before his consulship, and a daughter, whose loss he was now fated to experience. To Tullia he was tenderly attached, not only from the excellence of her disposition, but from her love of polite literature; and her death tore from him, as he so pathetically laments to Sulpicius, the only comfort which the course of public events had left him. (Ep. ad Fam., 4, 14.) His distress was increased by the unfeeling conduct of Publilia, whom he soon divorced for testifying joy at the death of her step-daughter. It was on this occasion that he wrote his treatise "On Consolations," with a view to mitigate the anguish of his sufferings. His friends were assiduous in their attentions; and Cesar, who had treated him with the utmost kindness on his return from Egypt, signified the respect he bore his character by sending a letter of condolence from Spain, where the remains of the Pompeian party still engaged him. But no attentions, however considerate, could soften Cicero's vexation at seeing the country he had formerly saved by his exertions, now subjected to the tyranny of one master. His speeches, indeed, for Marcellus and Ligarius exhibit traces of inconsistency; but for the most part he retired from public life, and gave himself to the study of those works which, while they mitigated his political sorrows, have secured his literary celebrity. The assassination of Cesar, which took place in the following year, once more brought him on the stage of public affairs. He hoped to regain great political influence: but Antony took Cesar's place, and all that was left Cicero to do was to compose those admirable orations against him which are known by the name of "Philippics," and which show him in the exultation of military success and patriotism. His enmity towards Antony induced him to favour the young Octavius, although the pretended moderation of the latter by no means deceived him. With him originated all the energetic resolutions of the senate in favour of the war which the consuls and the young Cesar were conducting against Antony in the name of the republic; and for a time the prospect seemed promising. But last, however, Octavius, having purchased himself of the consuls, and having formed an alliance with Antony and Lepidus, Cicero became convinced that liberty was at an end. At Tusculum, whither he had retired with his brother and nephew, he learned that Octavius had basely deserted him, and that his name, at Antony's demand, had been added to the list of the proscribed. He repaired, in a state of indiscipline, to
the seacoast, and embarked. Contrary winds, how- ever, drove him back to the shore. At the request of his slaves he embarked a second time, but soon re- turned again to await his fate at his country-seat near Formiae. "I will die," said he, "in that country which I have so often saved." Here, then, he was dis- posed to remain, and to meet his death; but his slaves, who were warmly attached to him, could not bear to see him thus sacrificed; and in the midst of soldiers selected to murder him, advancing towards the villa, they almost forced him to put himself into his litter, and to allow them to carry him once more on board of the vessel, which was still lying at Caieta. But, as they were bearing the litter towards the sea, they were overtaken in the walks of his own grounds by the soldiers who were in search of him, and who were headed by one Herennius, a centurion, and by C. Popilius Lanus. Popilius was a native of Pi- cenum, and, in a former occasion, had been success- fully defended by Cicero, when brought to trial for some offence before the courts at Rome. As the as- sistance of advocates was given gratuitously, the con- nection between them and their clients was esteemed very differently from what it is among us; and it was therefore an instance of peculiar atrocity, that Popilius pro- voked his services to Antony to murder his pa- tron, from no other motive than the hope of gaining the favour of Cicero to the destruction of his greatest enemy. The slaves of Cicero, undismayed at the appearance of the soldiers, prepared to defend their master; but he refused to allow any blood to be shed on his account, and commanded them to set down the litter and await the issue in silence. He was obeyed; and when the soldiers came up, he stretched out his head with perfect calmness, and submitted his neck to the sword of Popilius. He died in his sixty- fourth year, B.C. 43. When his master was accoun- ted to be dead, the soldiers cut off his two hands also, as the instruments with which he had written his Philippic Orations; and the head and hands were carried to Rome, and exposed together at the Rostra. Men crowded to see the mournful sight, and testified by their tears the compassion and affection which his un- worthy death, and his pure and amiable character, had so justly deserved. On the whole, antiquity may be charged with no inconsiderable portion of his dearth of perfect amiable as Cicero. None interest more in their lives, none excite more painful emotions in their deaths. Others, it is true, may be found of loftier and more heroic character, who save and subdue the minds by the grandeur of their views or the intensity of their exertions. But Cicero engages our affections by the integrity of his public conduct, the purity of his private life, the generosity, placability, and kind- ness of his heart, the playfulness of his temper, the warmth of his domestic attachments. In this respect his letters are invaluable. Here we see the man without disguise or affectation, especially in his letters to Atticus, to whom he unreservedly gave every thought, and talked with the same frankness as to himself. It must, however, be confessed, that the publication of this same correspondence has laid open the defects of his political character. Everything seemed to point out Cicero as the fittest person of the day to be a mediator between contending factions. And yet, after the eventful period of his consulship, we see him re- signing the high station in the republic which he himself might have filled, to the younger Cato, who, with only half his abilities, little foresight, and no address, possessed that first requisite for a statesman, firmness. Cicero, on the contrary, was irreolute, timid, and in- consistent. (Montesquieu, "Oraison Funèbre," 12.) He combined the defects of preserving a middle course (Ep. ad Att., 1, 19), but he was continually vacil- lating from one to the other extreme; always too confi- dent or too dejected; incorrigibly vain of success, yet mealy panegyrizing the government of a usurper. His foresight, sagacity, practical good sense, and singu- lar tact in directing men's measures, were lost for want of that strength of mind which points them steadily to one object. He was never decided, never (as has sometimes been observed) took an important step without afterward repenting of it. Nor can we account for the firmness and resolution of his consu- lature, unless we ascribe it in great measure to the ease of re- sting the cause of republicanism, that of balancing the contending interests. Boldness in opposition differs widely from steadiness in mediation; the latter implying a cool- ness of judgment, which a direct attack is so far from requiring, that it ever inspires minds naturally timid with unusual excitement.—Let us now pass to Cicero as a public speaker and writer. The orations he is known to have composed amount in all to about eighty, of which fifty-nine, either entire or in part, are pre- served. All those pronounced by him during the five years intervening between his election to the quastorship and aidsiphip have perished, except that for M. Tullius, the oratio and narratio of which were brought to light by the discoveries of Maio, in the Amb- robian library at Milan. From the same quarter have been obtained many other reliques of the elo- quence of Cicero, among the most important of which are, a large fragment of the oration for Scævus, and a detached passage of the oration of which proceeded his profanation of the mysteries of the Bona Dea. Of all the lost orations, the two most regretted are, that in defence of Cornelius, and the speech delivered by him in the temple of Bellona, in quelling the disturbance excited by the law of Otho. This last is said to have been one of the most signal victories of eloquence over the turbulence of human passions, while to the former Cicero himself frequently alludes as among the most finished of his compositions. The oration for Marcellus is maintained by many to be a spurious performance. It would seem, however, after weigh- ing all the arguments adduced by modern critics, that a part is actually genuine, but that much has been subsequently interpolated by some rhetorician or de- claimer. Of the rhetorical works of Cicero, the most admired and finished is the dialogue De Oratore, of which Cicero himself highly approved, and which his friends, according to the best authorities, was the chief of his productions. In the Oratoria Partitiones, the subject is the art of arranging and distributing the parts of an oration so as to adapt them in the best man-ner to their proper end, that of moving and per- suading an audience. In the dialogue on famous ora- tors, entitled Brutus, he gives a short character of all who had ever flourished in Greece or Rome, with any considerable reputation for eloquence, down to his own time. It was intended as a fourth and supple- mental book to the treatise De Oratore. The Ora- tor, addressed to Brutus, and written at his solicita- tion, was intended to complete the two works just mentioned. It enlarges on the favourite topic of Ci- cero, which had already been partially discussed in the treatise De Oratore, the character of the perfec- tor orator, and seeks to confirm his favourite propo- sition, that perfection in oratory requires an extensive acquaintance with every art. It is on the merits of this work in particular that Cicero, in a letter to a friend, asserts his perfect willingness that his reputation should be staked. The Topica are a compend of the Topica of Aristotle. The treatise De optimo genere Oratorum was originally intended as a preface to a translation of the celebrated orations of Demosthenes and Àeschines De Corona. The work De Inventione was a youthful performance, and that addressed to Herennius accorded to the best authorities, proceeded from his pen. In all Cicero's rhetorical works, except, perhaps, the Orator, he professes to have digested the principles of the Aristotelic and Iso-
CICERO.

Cicero's schools into one finished system, selecting what was best in each, and, as occasion might offer, adding remarks and exceptions. His subjects are considered in three distinct lights, with reference to the case, the speaker, and the speech. The case, as respects its nature, is definite or indefinite; with reference to the hearer, it is judicial, deliberative, or descriptive; as regards the opponent, the division is fourfold; according to the fact, its nature, its quality, or its propriety is called in question. The art of the speaker is directed to five points; the discovery of persuasives (whether ethical, pathetic, or dramatic of the inferences), arrangement, diction, memory, and delivery. And the speech itself consists of six parts; introduction (or exordium), statement of the case, division of the subject, proof, refutation, and conclusion or peroration. Cicero's laudatory orations are among his happiest efforts. Nothing can exceed the taste and beauty of those for the Manilian Law, for Marcellus, for Ligarius, for Archias, and the ninth Philippus, which is principally in praise of Servius Sulpicius. But it is in judicial eloquence, particularly on subjects of a lively cast, as in his speeches for Cælius and Muræna, and against Cæcilius, that his talents are displayed to the best advantage. To both kinds an amiable and pleasant turn of mind imparts inexpressible grace and delicacy; historical allusions, philosophical sentiments, descriptions full of life and nature, and polite raillery, succeed each other in the most agreeable manner, with a skilful landscape-gardener, who gives depth and richness to narrow and confined premises, by taste and variety in the disposition of his trees and walks.—We come next to Cicero's philosophical writings, after a brief enumeration of which we will offer a few remarks on the character of his philosophy itself. The treatise De Legibus has reached us in an imperfect state, only three books remaining, and these disfigured by numerous cancellations. It is a work of the highestinterest and philosophical principles of jurisprudence. The best sources, sets forth a body of laws conformable to Cicero's idea of a well-regulated state, and is supposed to have treated in the books that are lost of the executive power of the magistrates and the rights of Roman citizens. The treatise De Finibus Bonorum et Malorum is written after the manner of Aristotle, and discusses the chief good and ill of man; in it Cicero has combined the ideas of the Stoics and the Epicureans, and opposed the sages of antiquity. The Academicæ Quæstiones relate to the Academic Philosophy, whose tenets Cicero himself had embraced. It is an account and defence of the doctrines of the Academy. In the Tusculana Disputationes, five books are devoted to as many different questions of philosophy, bearing the most strongly on the practice of life, and involving topics the most essential to human happiness. The first book of the Paradoxa Salvestriæ explains the doctrines of the Cynics. The work De Natura Deorum embraces a full examination of the various theories of heathen antiquity on the nature of the gods, to which the treatise De Divinatione may be regarded as a supplement. The essay De Officiis, on moral duties, has not unaptly been styled the heathen Whole Duty of Man; nor have the dialogues De Senectute and De Amicitia been incorrectly regarded as among the most highly finished and pleasing performances of which any language can boast. We have to lament the loss of the treatises De Consolatione (that which we have under this title being a patched-up imposture of Signorius), De Gloria, and the one entitled Hortensius, in which last Cicero undertook the defence of learning and philosophy, and left to his illustrious competitor the task of disarming them. It was this book which first led St. Augustine to the study of Christian philosophy and the doctrines of Christianity. The treatise De Républica has been in part rescued from the destroying hand of time by the labours of Maio. Except the works on Invention and De Oratore, this was the earliest of Cicero's literary productions. It was given to the world A.U.C. 700, just before its author set out for his proconsular government in Cilicia. He was then in his fifty-third year. The object and spirit of the work were highly laudable. Cicero wished to bring back to its first principles by an impression expository of its theory; to inflame his contemporaries with the love of virtue, by portraying the character
of their ancestors in its primeval purity and beauty; and while he was raising a monument to all future ages of what Rome had been, to inculcate upon his own time truths that would still be his. We know him to have been his original purpose to make it a very voluminous work; for he expressly tells his brother (Ep. ad Q. Frat., 3, 5) that it was to be extended to nine books. Ernesti thinks that they were all given to the world (Ep. ad Att., 6, 1, in notis), although Cicero, in a letter to Atticus, on which that learned and accurate scholar makes this very remark, speaks of them as his aiz pledges or sureties for his good behaviour.

Cicero, as a philosopher, belongs, upon the whole, to the New Academy. It has been disputed whether he was really attached to this system, or had merely resorted to it as being the best adapted for furnishing him with oratorical arguments suited to all occasions. At first its adoption was subsidiary to his other plans. But, towards the conclusion of his life, when he no longer maintained the place he was wont to hold in the Senate or the Forum, and when philosophy formed the occupation "with which," to quote his own words, "life was just tolerable, and without which it would have been intolerable," he doubtless became convinced that the principles of the New Academy, illustrated as they had been by Carneades and Philo, formed the soundest system which had descended to mankind from the schools of Athens. The attachment, however, of Cicero to the Academic philosophy was free from the exclusive spirit of sectarianism, and hence it did not prevent his extracting from other systems what he found in them conformable to virtue and reason. His ethical principles, in particular, appear eclectic, having been in a great measure formed from the opinions of the Stoics. Of most of the Greek sects he speaks with respect and esteem. For the Epicureans alone he seems (notwithstanding his friendship for Atticus) to have entertained a decided aversion and contempt. The general purpose of Cicero's philosophical works was rather to give a history of the ancient philosophy, than dogmatically to inculcate principles of his own. It was his great aim to explain to his fellow-citizens, in their own language, whatever the sages of Greece had taught on the most important subjects, in order to enlarge their minds and reform their morals. In theoretic investigation, in the development of abstract ideas, in the analysis of qualities and perceptions, Cicero cannot be regarded as an inventor or profound original thinker, and cannot be ranked amongst the philosophers of the world. As a philosophical writer, lay in his luminous and popular exposition of the leading principles and disputes of the ancient schools; and no works transmitted from antiquity present so concise and comprehensive a view of the opinions of the Greek philosophers. The most obvious peculiarity of Cicero's philosophical writings is their form of dialogue. The idea was borrowed from Plato and Xenophon; but the natural form of the question is as in the case of the two Athenians, as was his object in writing. With them, the Socratic mode of argument could hardly be displayed in any other shape; whereas Cicero's aim was to excite interest, and he availed himself of this mode of composition for the life and variety, the ease, perspicuity, and vigour which it gave to his discussions. Nor does Cicero discover less skill in the execution of this style than in the dialogue itself. In the dignity of its speculators, that is, its tone of mutual courtesy, the harmony of his groups, and the delicate relief of his contrasts, is inimitable. The majesty and splendour of his introductions, the eloquence with which both sides of a question are successively displayed, the clearness and terseness of his statements on abstract points, his exquisite allusions to the scene or time of the supposed conversation, his digressions in praise of philosophy, could hardly be matched in "the opulency and fulness of his style, unite to throw a charm around these productions which has been felt in every age.—Cicero's Epistles, above 1000 in all, are comprised in forty-six volumes, most of which are addressed to Atticus, three to his brother Quintus, one to Brutus, and sixteen to his different friends; and they form a history of his life from his fortieth year. Among those addressed to his friends, some occur from Brutus, Metellus, Plancus, Calvis, and others. For the preservation of this most valuable department of Cicero's writings, we are indebted to Tyro, the author's freedman, though we possess at the present day only a part of those originally published. The most interesting by far are the letters to Atticus, for they not only throw great light on the history of the times, but also give us a full insight into the private character of Cicero himself, who was accustomed at all times to unburden his thoughts most freely to this friend of his. The authenticity of the correspondence with Brutus has been much disputed by modern scholars, and the general opinion is adverse to these letters being genuine.—Hfe his poetical and historical works have suffered a heavy fate. The latter class, consisting of his commentary on his consulsip, and his history of his own times, are altogether lost. Of the former, which comprised the heroic poems Aleyones, Limon, Marius, his own consolate, the elegy of Tamelastis, translations of Homer and Aratus, Epigrams, &c., but little remains except some fragments of the Phenomena and Diodore of Aratus. It may, however, be questioned, whether literature has suffered much by these losses. We are far, indeed, from speaking contemptuously of the poetical powers of one who possessed so much fancy, so much taste, and so fine an ear. But his poems were principally composed in his youth; and afterward, when his powers were more mature, his occupations did not allow even his active mind the time necessary for polishing a language still more rugged in metre than it was in prose. His contemporary history, on the other hand, can hardly have conveyed more explicit, and certainly would have contained less faithful, information than his private correspondence; while, with all the penetration he assuredly possessed, it may be doubted, if his diffuse and graceful style of thought and composition was adapted for the depth of reflection and condensation of meaning, which are the chief excellences of historical composition. The editions of the separate works of Cicero are too numerous to be mentioned here. The best of the Latin works of Erne, Hal., 1774, 8 vols. 8vo; that of Olivet, Paris., 1740, 9 vols. 4to; that of Schütz, Lips., 1814—20, 19 vols. (in 27) 12mo; and that of Nobbe, Lips., 1827, 1 vol. 4to, or 10 vols. 12mo. (Plut., in Vit.—Enc. Metropol., div. 3, vol. 2, p. 279, seqq.—Biog. Univ., vol. 8, p. 530, seqq.—Encyclop. Am., vol. 3, p. 190, seqq.—Dunlop, Rom. Lit., vol. 2, p. 275, seqq.—Bähr, Gesch. Röm. Lit., vol. 1, p. 457, seqq.—II. Marcus, only son of the orator, and his younger brother, Marcus Antonius. He took part in the civil contest at an early age, and served under both Pompey and Brutus. After the battle of Philippus he retired to Sicily and joined the younger Pompey. Subsequently, however, he took advantage of the act of amnesty that was passed, and returned to Italy, where he lived some time in a private situation. Augustus, on attaining to sovereign power, made him his colleague in the command of the army of Egypt. Marcus. He had the satisfaction of executing the decree which ordered all the statues and monuments that had been erected to Antony to be thrown down. After his consulsip he was appointed governor of Syria, from which period history is silent respecting him. He died at an advanced age, and was notorious for dissipated and intemperate habits.
appears to have inherited little, if anything, of his father's virtue, patriotism, and talent. (Cic. Ep. ad Att., 1, 2.—Id., Ep. ad Fam., 13, 11.—Plut., Vit. Cic. extr.—Id., Vit. Brut., &c.)—III. Quintus, brother of the orator, and brother-in-law of Atticus. After having been prior A.D. C. 695, he obtained the government of Asia. He was subsequently a lieutenant of Caesar's in Britain, and only left that commander to accompany his brother Marcus Tulius, as lieutenant, into Cilicia. After the battle of Pharsalia, in which he took part on the side of Pompey, he was proscribed by the triumvirate, and put to death by the emissaries of Antony. He had a marked talent for poetry, and had planned a poem on the invasion of Britain by Caesar. Herodotus has translated or else translated into the Greek, but which have not reached us. Eighteen lines of his are preserved in the Corpus Poëtarum of Maittaire. He was the author of the piece entitled "de Petitione Consulatu," usually printed along with Cicero's letters to him. It is addressed by Quintus to his brother when the latter was a candidate for the consulship, and gives advice with regard to the measures he should pursue to attain his object, particularly inculcating the best means to gain private friends and acquire general popularity. (Corrad. Quast., p. 278, ed. Lips. —Bisgro. Univ., vol. 8, p. 550.—Dunlop, Roman Literature, vol. 2, p. 495.)

Cicero, a people on the coast of Thrace, near the spot where Maronea stood in a later age. Homer has placed here the scene of Ulysses' first disaster. Ismarus was the name of their city, which the poets impose that chieftain to have taken and plundered; but the natives coming down from the interior in great force, he was driven off with severe loss of both men and ships. (Od., 1, 40, seqq.) Ismarus is known to later writers only as a mountain celebrated for its wine, which indeed Homer himself alludes to in another passage. (Od., 1, 197.)

Cilicia, a country of Asia Minor, on the seacoast, south of Cappadocia and Lycaonia, and to the east of Pisidia and Pamphilia. Herodotus says (7, 91), that the people of this country were anciently called Hypachaei, and that the appellation of Cilicians was subsequently derived from Cilix, son of Agenor, a Phocian. This passage seems to point to a Phocianic or Syrian origin for the race, a supposition strengthened by the fact of the early commercial habits of the people of Cilicia. This country, though tributary to the Persian empire, was not treated like other parts of the Persian dominion, nor were the native princes, with whom Sycennes appears to have been a common name. (Consalt Herod., 1, 74.—Id., 5, 118.—Xen., Anab., 1, 2.) Cilicia, more especially that part which consisted of plains, was a wealthy country; since we are informed by Herodotus (3, 90) that it yielded to Darius a revenue of 500 talents, equal to that of Mycia and Lydia together, besides 360 white horses. Xenophon also (Anab., 1, 2) describes the Cilicians as a beautiful people, living upon the best butter and abounding in wine and all kinds of trees, and yielding barley, millet, and other grain. In a military point of view, the importance of Cilicia was also very great, since it was surrounded by lofty mountains, presenting only one or two passes, and these easily secured by a small force against the largest armies. Had the Persians known how to defend these, the young Romans, who had the advantage of time, nor would Alexander have been able to penetrate to the plains of Issus, which witnessed the overthrow of Darius. (Arrian, Exp. Al., 2, 4.) At a later period we learn from Cicero, during his command there, what importance the Romans attached to the province of Cilicia, when it became necessary to cover Asia against the growing power of the Parthians. (Ep. ad Att., 5, 26.) As a maritime country, too, Cilicia makes a considerable figure in history, since it furnished numerous fleets to the Persian monarchs, as well as to the Syrian and Egyptian successors of Alexander. But it was more especially from the formidable character of her piratical navy that Cilicia has obtained a name in the seafaring annals of antiquity. Some idea of the alarm inspired by these daring rovers may be formed from the language of Cicero, however exaggerated we may suppose it to be for a political purpose. (Or. pro Leg. Manil., 11.) The selection, too, which the Roman people made of Pompey, and the unusual powers confided to him, prove the importance of the contest. In less than 50 days, however, Pompey reduced the whole province either by force or the terror of his arms. More than 20,000 pirates are said to have fallen into his hands, either enslaved or put to death, or removed to some distant countries, and thus entirely purged the shores of Asia of these nests of robbers. In the course of this war the Romans are said to have captured 378 ships, and burned 1300, conquered 120 towns and castles, and to have slain 10,000 of the enemy. Cilicia was divided into Campestrias and Trachéa. The former was the larger and more easterly portion, and derived its name from its champaign character. Trachéa, on the other hand, was so named from its rugged aspect (τραχεία, "rough"). It was nearly all occupied by the broad ridge of Taurus, which leaves scarcely any room for level land towards the sea. (Cramer's Asia Minor, vol. 2, p. 315, seqq.)

Cilix, a son of Agenor, who gave his name to Cilicia, according to Herodotus. (Consult remarks under the article Cilicia.—Herodot., 7, 91.)

Cimbr, a town of Texas, in the immediate vicinity of Adramyttium. (Hom., II., 1, 37.—Strab., 612.)

Cimber, L. Titius, one of the conspirators against Cæsar. He was a man notorious for his drunkenness and low violence (Seneca, Ep. 83—Id., de Ira, 3, 30), and he had been throughout the civil war a violent partisan of Cæsar's, who appointed him a short time before his assassination to the province of Bithynia. (Appian, Bell. Civ., 3, 2.—Cic., Ep. ad Fam., 12, 2.) Cimber was the one who gave the signal agreed upon with his associates for commencing the attack, by taking hold of Caesar's robe, and pulling it down from his shoulders. (Plut., Vit. Cæs.)

Cimbræ, a people of Germany, who invaded the Roman empire with a large army, and were conquered by Marius and Catulus. (For an account of the war, consult the article Teutones.) The Cimbræ are generally thought to have had for their original seat the Cimbri country, or the part of Bohemia inhabited by the Cimbri. Cimbri seems to have been a word derived from their common origin (Cimber), but the further connexion between their name and that of the ancient Cimmeri, a point which may have some bearing on the question respecting the origin of the Germanic race. (Consult remarks under the article Cimmeri, and compare Mannert, Geschichte der alten Deutschen, p. 11, and Pfister, Gesch. der Teutschen, vol. 1, p. 40.) Adelung, however, opposes this idea. (Mthradates, vol. 2, p. 143.)

Cimmerius, a range of hills in Etruria, lying to the south of Salpinium.—II. A lake at the foot of Mount Cimmerium, now Lake di Vico, or Ronciglione. (Strabo, 225.) The Cimmerian forest, whose almost impenetrable shades served for a time as a barrier to Etruria against the attacks of Rome, is described as covering the adjacent country to a considerable extent. (Liv., 46—Liv., Per., Strab., 1, 2.—Ptolemy.)

Cimmerus, a high mountain, in the northern race of Upper Asia, who appear to have originally inhabited a part of what is now called Tartary. According to Herodotus (1, 15), they were driven from their primitive seats by the Scythsians, and moved down, in consequence, upon Asia Minor which they invaded and ravaged during the reign of Ardes, king of Lydia, the successor of Gyges. Strabo, however, places the incursion of the Cimmerians in the time of Homer, or a little before the birth of the
CIMMERII.

CIM

>Cimmerium, a town in the interior of the Tauric Chersonese, northwestern of Theodossia. It is now Ekstr-Krim (Old Krim), on the river Tschuruck. (Mela, 1, 19.)

CIMÖLUS, one of the Cyclades, northeast of Melos. Its more ancient name was Ecinius, or Viper's Island, and from the number of vipers which infested it before it received its present name. It produced what was called the Cimolia terra, a species of earth resembling, in some of its properties, fuller's earth, though not the same with it. (Theophrast., de Lapid., 2, 107.—Strabo, 484.) The ancients used it for cleaning their clothes. It was white, dense, of a loose texture, mixed with sand or small pebbles, insipid to the taste, and unctuous to the touch. The substance, according to Sir John Hill (ad Theophr., l. c.), comes nearest to the Cimolian earth of antiquity, is the Steatite, or Soap-rock of Cornwall, which is the common matter of a great part of the cliff near the Lizard Point. Cimolus is now Kimili, though more generally known by the name of Argentiera. (Cramer's Anc. Greece, vol. 3, p. 405.)

Cimon, I. son of Miltiades, and of Hegesipyle the daughter of Olorus, a Thracian prince. His education, according to Plutarch, was very much neglected, and he himself indulged, at first, in every species of excess. At his father's death he seems to have succeeded to a very scanty fortune, and he would perhaps have found it difficult to raise the penalty of fifty talents, which had been imposed upon his parent, and which the son was bound to pay to the public treasury, had not Callias, one of the wealthiest men of Athens, struck by the charms of his half-sister Elpinice, undertook to discharge the sum as the price of her hand. (Vid. Callias, Elpinice.) Cimon, however, had attracted notice, and gained reputation, by the spirit which he displayed on the occasion of leaving the city on the approach of the Persians, when he was the foremost to hang up a bridle in the Acropolis, as a sign that he placed all his hopes in the fleet; and also by the valour with which he fought at Salamis. Aristides, in particular, saw in him a fit coadjutor to himself and antagonist to Themistocles, and exerted himself in his favour; and the readiness with which he contended for the glory and the honour of Pausanias, united themselves with Athens, was owing in a great measure to Cimon's mild temper, and to his frank and gentle manners. The popularity of Themistocles was already declining, while Cimon, by a series of successful enterprises, was rapidly rising in public favour. He defeated the Persians in Thrace, on the banks of the Styron, took Eion, and made himself master of the whole country. But he was inclined to vanity, was told of the adventures of the Persians, which were addicted to piracy; and brought thence to Athens what were deemed the bones of the national hero Theseus. He next subdued all the cities on the coast of Asia Minor, and went against the Persian fleet which lay at the mouth of the Eurymedon. The Persians, although superior in number, did not dare to abide an engagement, but sailed up the river to place themselves under the protection of their land forces. Cimon, with a part of the fleet, came up on the land, and, having defeated and sunk or taken two hundred ships, landed his men, flushed with victory, and completely routed the Persian army. Returning to Athens after these two victories thus achieved in a single day, he employed the perquisites of his command, and the resources which he had acquired from his successes over the barbarians, in the embellishment of
CIMON

has native city, and in relieving the wants of the indigent. He laid a part of the foundations of the long walls with magnificent solidity at his own charge, and the southern wall of the citadel was built with the treasures which he brought from Asia into the coffers of the state. He also set the example of adornning the public places with columns of Isocratean marble; and having, somewhat after the manner of a stream of water, converted the Academy, a spot about two miles north of the city, from an arid waste into a delightful grove. (Vid. Academicus.) He threw down the fences of his fields and orchards, that all who wished might enter and partake of their produce; he not only gave the usual entertainments expected from the rich to the members of his own borough, but kept a table constantly open for them. He never appeared in public without a number of persons attending him in good apparel, who, when they met with any elderly citizen scantily clothed, would insist on exchanging their warm mantles for his threadbare covering. It was the office of the same agents, respectfully to approach any of the poorer citizens of good character, whom they might see standing in the market-place, and silently to put some small pieces of money into their hands. This latter kind of expenditure was certain of producing a most beneficial tendency; and was no way the less of a demagogue, because Cimon sought popularity, not merely for his own sake, but for that of his order and his party—About 466 B.C., Cimon was sent to the Thracian Chersonese, of which the Persians still kept possession, and having driven them out, next reduced the island of Thasus, and took possession of the Thasian gold-mines on the neighbouring continent. Scarcely, however, had he returned to Athens, when an accusation was preferred against him of having been corrupted by the King of Macedonia, because he had refrained, not according to the common account, from attacking the Macedonians then at peace with Athens, but from striking a blow at the Thracian tribes on the frontier of that kingdom, who had recently cut off the Athenian settlers on the banks of the Strymon. (Vid. Amphipolis.) From this accusation Cimon had a very narrow escape. Having been sent, however, after this, with a body of troops to aid the Spartans before Ithome, and the latter having, after some interval, sent back their Athenian allies, whom they suspected of not lending them any effectual assistance, the irritation produced by this national insult fell principally upon Cimon, who was known to be an admirer of the Spartan character and constitution, and he was accordingly driven into exile. Subsequently having made the trees, and, by feigning the want of this able commander, and he was recalled and sent on an expedition against Egypt and Cyprus; but he was carried off by illness, or the consequences of a wound, in the harbour of Cithium, to which place he was laying siege. His spirit, however, still animated his countrymen; for the fleet, when sailing home with his remains, gained a naval victory over a large squadron of Phoenician and Cilician galleys near the Cyprian Salsamis. In this victory they gained on shore, either over the troops which had landed from the enemy’s ships, or over a land force by which they were supported.—Cimon was, beyond dispute, the ablest and most successful general of his day; and his victories shed a lustre on the arms of Athens, which almost dimmed the glories of Marathon and Salamis. In after times, Cimon’s military renown was confirmed by the report of a peace which his victories had concluded; and with his own name was connected one of terms most humiliating to the monarchy. These were, that the Persians had agreed to abandon at least the military occupation of Asia Minor, to the distance of three days’ journey on foot, or one on horseback, from the coast, and to abstain from passing the mouth of the Bosphorus and the Chelidonian islands into the western seas. This peace, of which Isocrates, De-
ancient or modern times, and has deservedly procured for those who were the actors in it the unmitigated abhorrence of all posterity. Cinna and Marius, by their own authority, now declared themselves consuls for the ensuing year; but Marius dying, after having only held that office for seventeen days, Cinna remained in effect the absolute master of Rome. During the space of three years after this victory of his, he continued to hold possession of the government at home, a period during which, as Cicero remarks (De Clar. Orat., 62), the republic was without laws and without dignity. At length, however, Sylla, after terminating the war with Mithridates, prepared to march home with his army and punish his opponents. Cinna, with his colleague Carbo, resolved thereupon to cross the Adriatic, and anticipate Sylla by attacking him in Greece; but a mutiny of their troops ensued, in which Cinna was slain, B.C. 77. Haughty, violent, always eager for vengeance, addicted to debauchery, precipitate in his plans, but always displaying courage in their execution, Cinna attained to a power little less absolute than that afterward held by Sylla or Caesar: and it is somewhat remarkable, that his usurpation should have been so little noticed by posterity, and that he himself should be so little known, that scarcely a single personal anecdote of him is to be found on record. (Apian, Bell. Civ., 1, 64.—Vell. Patr., 2, 43, seqq.—Appian, Bell. Civ., 2, 23; De Bello Hisp. Usit., 83, &c.—II. Of the conspirators against Caesar (Pist., Vit. Cæs.).—III. C. Helvius, a Roman poet, intimate with Caesar, and tribune of the commons at the time when the latter was assassinated. According to Plutarch, he went to attend the obsequies of Caesar, but, being mistaken by the populace for Cinna the conspirator, was torn in pieces by them. (Plut., Vit. Cæs.) Helvius composed a poem entitled Smyrna (or Zemyna), on which he was employed nine or ten years. Four fragments of it have reached us. It appears to have been characterized by considerable obscurity of meaning until the grammariian Crassutius wrote an able commentary upon it. (Sueton, Iull. Gram., 18.) Some other fragments have also reached us of other productions of this poet. (Weichert, de C. Helv. Cnsm. poet. Comment. —Bähr, Gesch. Röm. Lit., vol. i, p. 164.)

CINNAs is a town of Lusitania, in the northern or northwestern section of the country. Its precise situation has given rise to much dispute. According to some, it corresponds to Sitania, a deserted spot, six leagues east of Braga. Others, however, make it the same with certain ruins, called at the present day Chaledonum, and lying near Caldas de Gerez, on the northern confines of Portugal. (Val. Max., 6, 4, ext. 1.—Livy, Reisen durch Portugal, vol. 2, p. 3, seqq.—Ubert, Geogr., vol. 2, p. 399.)

CINYPs and CINYPHUS (Κινυψ, Χερόδ. —Κινυφος, Ptol., Strab.—Κινυφός, Suid.), a small river of Africa, below Tripolis, falling into the sea southwest of the promontory of Cephaloë. Herodotus (4, 198) speaks of the land around this river as being remarkably fertile, and equal to any other land in the production of corn. The water of this stream was conveyed by an aqueduct to the city of Leptis Magna. Bochart derives the name of the Cinyps or Cinyphus from the Phoenician Kinpho, "porcupine's river," the porcupine being found, according to Herodotus (4, 192), in parts of the country watered by this stream. (Bochart, Geogr. Sacr., 1, 24, col. 486.) The modern name of the Cinyps is Wadi Quaham, and travellers describe the soil in its neighbourhood as being still remarkable for its fertility. (Ritter, Erdkunde, vol. 1, p. 927.—Beesly's Travels, p. 71.)

CINZA (Κινάζα., Χερόδ. = Κύπρος), father by Myrrha, of Adonis. (Vid. Adonis and Myrrha.) He bears his name in the myth of the sun-god, and his name appears to come from the Phoenician Kinner, whence the Greek κινύφα, and also κινυφία (to mourn) or "launt." (Keightley's Mythology, p. 143.)

Circell, I. a promontory of Latium, below Antium, now Monte Circello. It was the fabled residence of Circe; the adjacent country being very low, and giving this promontory at a distance the appearance of an island. It would seem, that Hesiod's making the kings of the Tyrrheni to have been descended from Circe and Ulysses, led to the opinion that the island was that goddess was told so found on the historian. An accidental resemblance in name also may have induced many to select this promontory as the place of her abode. Homer's account, however, of the isle of Circe does not at all suit this spot. The island was a low one, whereas this is a lofty promontory. The adjacent sea also is represented by the poet as boundless to the view, which is not the case as regards Circell. (Mannert, Geogr., vol. 9, pt. 1, p. 621.) But, in truth, it requires too great a stretch of the imagination to believe that Homer, and the other poets who have sung of the charms of Circe, were describing places which had an actual existence. It is more than probable, that the fiction relative to the abode of Circe, received its application to the Italian coast subsequently to the period in which Homer wrote; when, from the celebrity of his poems, it became a matter of belief. (Cluver., Ital. Ant., vol. 2, p. 1000.—Crawick, Geogr. Lat. v., 186.)

CIRCEI (Κιρσιής, Rome), a name given to a district which makes the fable indigenous in the neighbourhood of the mountain. (Rom. Hist., vol. i, p. 66, 2d ed., Cambridge transl.)—The promontory of Circell was famed for its oysters in the time of both Horace and Juvenal. (Horat., Sat., 2, 4, 33.—Juv., 4, 140.)—II. A town of Latium, standing rather inland from the promontory just mentioned, probably on the site of the village of San Paolo, where some ruins are said to be visible. (Corr. R., 17, 43.)—III. C. Circeii, was the name given by the ancient historians to a district where the Greek sojourners, according to Nean. I., 8, 19.)—It was assigned to Lepidus as the place of his exile by Augustus. (Suet., Aug., 16.)

Circe, sister of Eetis king of Colchis, and daughter of the Sun and Perse, one of the ocean-nymphs. (Homer gives the mother's name as Perse, but He- siod, Apollodorus, and others, Perseis.) Circe is celebrated for her skill in magic arts, and for her knowledge of subtle poisons. According to Homer (Od., 10, 135, seqq.), she dwelt in an island, attended by four nymphs, and all persons who approached her dwelling were first feasted, and then, on tasting the contents of her magic cup, converted into swine. When Ulysses had been thrown on her shores, he deputed some of his companions to explore the country; these, incantatively partaking of the banquet set before them, were, by the effect of the enchanted potion, transformed as above. When Ulysses himself, on hearing of their misfortune from Eurylochus, set out to release them or share their fate, he was met by Hermes, who gave him a plant named Moly (Môlôs), potent against her magic, and directed him how to act. Accordingly, when she reached him the medicated cup, he drank of it freely, and Circe, thinking it had produced its usual effect, striking him with her wand, bade him go join his comrades in their sty. But Ulysses, displaying his sword, threatened to slay her son, but Eurylochus, a faithful and self-sacrificing beggar, falsely and solemnly swore that he, Circe, would not harm Circe. He afterward, at his desire, restored his companions to their pristine form, and they all abode in her dwelling for an emi
CIR

CIR

year. Circe is said to have had by Ulysses a son named Telemon, who after outwardlyGenuinelyslew his own father.

Hesiod, in his Theogony (1011), says Agrus and Latius (not the king of Latium), "who, after the race of the Tyrsenians." Later writers took great liberties with the narratives of Homer and Hesiod. Thus, for example, Dionsysius, the cyclopedographer, makes Circe the daughter of Eetes by Hecate, the daughter of her brother Perses. He goes on to say, that she was married to the king of the Sarmatians, whom she poisoned, and seized his kingdom; but, governing tyrannically, she was expelled, and then fled to a desert island of the ocean, or, as some said, to the headland named from her in Italy. (Vid. Circeii.) The Latin poets thence took occasion to connect Circe with their own scanty mythology. It was fabled, for example, that she had been married to King Picus, whom, by her magic art, she changed into a bird.

(Diod. Sic., 4, 45—{Budowia}, 261.—Schol. ad Apoll. Rh., 3, 280.—Ovid, Met., 14, 320, seqq.) Another legend made her the mother of Fauns, by the god of the sea. (Nannus, 13, 328.) The herb Moly is said, by these late writers, to have sprung from the blood of a giant slain by the Sun, in aid of his daughter in her island. Its name, we are told, comes from the Greek μόλος, its flower is white, as the warrior was the Sun. (Ptol., Hesper. ap. Phot. Cod., 190, vol. 1, p. 149, ed. Beckler.—Keightley's Mythology, p. 287.) Among other supernatural acts ascribed to Circe, was her converting Scylla into a hideous sea-monster. (P. Scylla.) Various theories have been started for explaining the fable of Circe and her transformation of men into swine. Heyne (Ezcuura, 1, ad Virg., 7, p. 103) thinks, that Homer merely gave an historical aspect, as it were, to an allegory invented by some earlier poet, and in which the latter wished to show the brutalizing influence of sensual indulgences.

(Compare Wachsmuth, ad Athen., 2, 2, p. 218.) Cretan (Symbolik, vol. 4, p. 22) sees in the name Circe ({Kypria} an allusion to some magic ring, since κυρίος is the Doric form for κυρίος, "a ring." (Greg. Corinthis, § 165.—Koen, ad loc.) J. C. Wolf (Mull. Græc., &c., fragm. 312) is in favour of another explanation, in support of which he cites Bochart (Geogr. Sacr., 1, 33) and Fabricius (Bibl. Græc., vol. 13, p. 120). The historians from whom Diodorus Siculus (2, 106) derived his information, represent the knowledge of Circe and Medea as purely natural, and relating perhaps to the mythology of their respective countries. Hence, also, drugs which produced mental stupefaction, without impairing the physical powers, are thought by some to have given rise, in this and other cases, to the accounts of men being transformed into brutes. (Salvete, des Sciences Occultes, &c.—Foreign Quarterly Review, No. 12, p. 427 and 444.) Porphyr thought the meaning of the fable relative to Circe was this, that impure souls passed after death into the bodies of brutes. (Compare taught by the god of Pythagoras. (Compare Herren, ad Stob. Ecl. Phys. et Eth., 1, 52, vol. 1, p. 1047.)

Circius, a violent wind blowing in the southern parts of Gaul, along the coast of the Mediterranean. Its fury was so great, that it carried on the roofs of dwellings, overthrew armed men, riders, and even loaded wagons. (Cato, Orig., lib. 3, ap. Aul. Gell., 2, 22.) It blow from the northwest. Its Gallic name was Kircius. (Compare taught by the god of Pythagoras.) In Armoric, kirc means impetuousness, and also a hurricane. (Compare Addelung, Milukratides, vol. 2, p. 53.—Camden's Britania, p. 19.) In Gaelic, Cuirrach means that which strikes or destroys. (Armstrong's Gaelic Dict., s. v.—Thierry, Histoire des Gaulois, vol. 2, p. 6.—Compare Favorin. Gallus, ap. Gell., 2, 22.—Senec., Collect. Nat., 5, 17.—Pius, 2, 47.)

Circe, a name given at Rome to a species of oblong-circular building, erected for exhibiting shows and games. The most ancient and celebrated of these structures, of which there were many in the Roman capital, was the Circus Maximus. It was built by Tarquin the Proud (207 B.C.), and was originally magnificently adorned. This structure lay between the Palatine and Aventine hills. Its length was three stadia (2187 feet), and the breadth a little over one stadium, with rows of seats all around, rising one above another. The lowest of these seats were of stone, and the highest of wood, and separate places were allotted to the senators and equites. It is said to have contained at least 150,000 persons, or, according to others, above double that number; according to Pliny, 250,000; some moderns say 390,000. Its circumference was one mile. It was surrounded with a ditch or canal, called Euripus, 10 feet broad and 10 feet deep, and with porticoes 3 stories high; both the work of Caesar. The canal served to supply it with water in naval exhibitions. For some interesting remarks on the ancient Circe in general, consult the work of Burgess (Description of the Circus on the Via Appia, near Rome, &c., Lond., 1829, 12mo.)

Cireba, a town of Phocis, at the head of the Crenssian Gulf. It served as the harbour of Delphi, and was situated close to the mouth of the river Pleistus, which descends from Parnassus. Pausanias (10, 37) reckoned sixty stadia from the city of Delphi to Cireba. This writer, however, seems to have confounded the town of which we are here speaking with Crissa, a city that had ceased to exist in his time, but which formerly stood more inland, between Circe and Delphi.

(Compare Strabo (418), who clearly distinguishes them, informs us that Cirja was situate on the sea, and opposite to Sicyon; and that the distance thence to Delphi was eighty stadia. The Cireban plain and port, says Eschines (in Cites., p. 69.—Compare Pausan., 10, 38), which are now accursed, were formerly inhabited by the Crissaæ and Acragallidae, a nefarious race, who violated the sanctity of the temple of Delphi, and sacked its treasures. The oracle, on being consulted by the Ambyptensors, declared that a war of extermination was to be carried on against these offenders, and that their land was never thereafter to be placed in a state of cultivation. This decree was executed in the time of Solon, who took an active part in the expedition. The port of Cirja was then demolished, and its territory declared accursed, according to the form prescribed by the oracle; but this edict was afterward violated by the Ambyptensors, who took the land and cast it into the sea. It then appears, that Cirja still existed in the time of Pausanias, as he mentions the temples of Apollo, Diana, and Latona, as well as several statues worthy of notice. The ruins of Cirja are pointed out by Sir William Gell, near the village of Xeno Pegasian, on a very gentle eminence on the coast, close to the many beds of the Pleistus. (Cramer's Ancient Greece, vol. 2, p. 153, seqq.)

Cirja and Cirta, a city of Numidia, about 43 miles from the sea, on a branch of the river Ampagtas. It was intended as the royal residence, and being, in fact, the only city originally in the country and erected by Carthaginian workmen, it hence took the Punic name of Cartha, or "the city." It was the residence of Syphax, Masinissa, and the other rulers of the land. When Cesar had landed in Africa, and was in great danger of being overpowered by Scipio and Junius, a certain Sittius, who had fled from Cartha, went with the latter country with a predatory band, having made a sudden attack upon Cirta, took it, and compelled Juba to return and defend his kingdom. Cesar being thus relieved, when the war was over, gave Cirta as a reward to Sittius, with a part of the adjacent country. The city now changed its name to Sitiamorum Colonia. In the time of the Emperor Constantine, having suffered much from account of...
its fidelity to its prince, he repaired and re-established it, giving it the name of Constantina. This name remains, with a slight variation, to the present day, and the small city built upon the ruin still says "Citium". Constantina is still called Cosntantina. (Appian, Bell. Pun., 7. 1, p. 111. 2.)

**Citium.**

1. a king of Thrace, father to Heucba. (Virg., Aen., 7, 320.)—II. a son of Melampus, killed by Jupiter. (Id., 10, 317.)

**Cissus.**

**Cissia.**

**Cissus.**

a town of Macedonia, in the vicinity of Thessalonica, which contributed, as Strabo says, to the aggrandizement of that city. The modern town is named to be Cismat. (French Strabo, vol. 3, p. 126.)

**Cissia.**

**Cispa.**

a country of Asia, having Media to the north, Babylonia to the west, the Persian Gulf to the south, and Persia to the southeast. Its capital was Susa. In Cissia was Ardericca, where Darius settled those of the Elretians whom his naval commanders had brought to him as prisoners in obedience to his command. (Vid. Ardericca and Eretia.)

**Cissia.**

was merely a part of the latter, and was properly the territory adjacent to the city of Susa. (Larcher, Hist. d'Herod.—Table Géographique, vol. 8, p. 133.)

**Clithion.**

**Cleon.**

II. a king of Platea in Bocotia, remarkable for his wisdom. By his advice, Jupiter pretended to be contracting a second marriage, when Juno had quarrelled with and left him. The scheme succeeded, and the goddess became reconciled to her spouse. (Pausan., 9, 3.) This monarch is said to have given name to the well-known mountain-range in Bocotia. Pausan., 9, 1.—II. An elevated ridge of mountains, dividing Bocotia first from Megaris, and afterward from Attica, and finally uniting with Mount Parnes and other mountains which belong to the northeastern side of that province. (Strabo, 405. 2.) It was dedicated, as Pausanias affirms (9, 2), to Jupiter Citharionus, and was celebrated in antiquity as having been the scene of many events recorded by poets and other writers. Suidas (suidas) gives as Actaeon, the death of Pentheusus, and the exposure of Ethipius. Here also Bacchus was said to hold his revels and celebrate his mystic orgies, accompanied by his usual train of satyrs and frantic Bacchantes. (Eurip., Bacch., 1381.—Soph., Ed. Tyr., 1451.—Id. ibid., 1931.—Eurip., Phain., 809.) We know from Thucydides (2, 75), that this mountain was once supplied with forest timber, as the Peloponnesians are said to have derived from thence staves they required for carrying on the siege of Plataea. But Dodwell affirms (4, 25) that it now shrubbed by deep gloom and dreary desolation," and elsewhere he remarks, "it is barren, or covered only with dark stunted shrubs; towards the summit, however, it is crowned with forests of fir, from which it derives its modern name of Bleta, the modern Greek term for the fir-tree, being, like the ancient, θήραν."

**Citrin.**

one of the most ancient cities of Cyprus, on the southern shores of the island, northeast of Amathus. Josephus says it was built by Chittim, the son of Javan. (Ant. Jud., 1, 7.—Compare Ephipan., Her., 1, 30.—Herod. in Jez., 5, 23.) It was the birthplace of the celebrated Zeno; and Diogenes Laertius, in his life of that philosopher, reports, that this town had been colonized by the Phoenicians, a circumstance which is confirmed by Cicero (de Fin., 4, 20) and Suidas (suidas α. ζύγων). Citium was besieged, at the close of the Persian war, by the Athenian forces and as late as the reign of Cimon (Thucyd., 1, 119.) According to Diodorus Siculus (12, 5), the place surrendered; but it was the last exploit of that distinguished general, for he was soon after taken ill, and died on board his ship in the harbour. (Plut. et Corn Nep., vit. Cim.) Citium was a bishophric under the Byzantine empire. The place still retains the name of Chiti. (Cramer's Asia Minor, vol. 2, p. 379, seq.)

**Cius.**

a river of Thrace, rising in the northwestern part of the chain of Mount Rhodope, and falling into the Ister. It is now the Eaker. D'Anville calls the river Ceseus.—II. A river and town of Bithynia. The town was destroyed by Philip, father of Perseus, and rebuilt by Prusias, who called it, after his own name, Prusias. (Vid. Prusias.)

**Civilia.**

a powerful Batavian, who raised a sedition against the Roman power during the controversy for empire between Vitellius and Vespasian. Tacitus has furnished us with interesting and copious details of this long-agitated conflict. (Tacit., Hist., 4, 13.—Id. ib., 5, 14, &c.)

**Cilanian.**

a river of Etruria, now la Chiana, rising near Aretrium, and falling into the Tiber northeast of Vulsumii. It may be seen from Tacitus that a project was once agitated for causing its waters, which formed large marshes near Clusium, to discharge themselves into the Arno. (Tacit., Ann., 1, 79.)—II. (or Clusianus), a river of Campania, falling into the sea near Liternum. It rises in the Apennines near Nola, and flows at an great distance from Aceretum. The modern name is Lago. By some writers the ancient name is given as Liternus. (Strabo, 243.—Liv., 39, 29.) This stream is apt to stagnate near its entrance into the sea, and to form marshes, anciently known as the Palus Litterna, now Lago di Patria. The appellation Clusianus is evidently derived from the Etrurian Cilanian. (Müller, Etruscker, vol. 1, p. 146, in not.) Pliny names them both Claisianus. (Plin., 3, 9.)

**Cleone.**

a city of Ionia, northeast of Cephalon and southeast of Lebedus. It was famous for its temple, grove, and oracle of Apollo. This celebrated seat of divination is supposed to have been discovered soon after the siege of Troy, and the poets relate many tales with regard to a contention in prophetic skill which took place here between Calchas and Mopses, and which ended in the defeat and death of the former. (Vid. Ctesias, 1, 5.) Pliny gives an account of the visit paid by Germanicus to this oracle. (Ann., 2, 54.) The priesthood was confined to certain families, principally of Milleticus. The number and names of those who came to consult the oracle were announced to the seer, who, having descended into the cave and drunk of the spring, revealed in verse to each his most secret thoughts. On this occasion it is said that a speedy death was announced to Germanicus. The oracle continued to flourish, and as late as the reign of Constantine. Considerable vestiges are still to be seen at Zille, which occupies the site of the ancient Clarians. (Cramer's Asia Minor, vol. 1, p. 359, seq.)

**Clastidium.**

a town of Liguria, northeast of Terrona, now Chiasteggio. It was celebrated as the spot where Claudius Marcellus gained the opilia opinia, by vanquishing and slaying Viridomarus, king of the Gauls. (Appian, civ., 9, 29.—Plut. Vit. Marcell.—Vit. Max., 1, 1,) Clastidium was betrayed to Hannibal after the battle of Ticinum, with considerable magazines which the Romans had laid up there, and it formed the chief depot of the Carthaginian army while encamped on the Trebia. (Polyb., 3, 69.—Liv., 21, 48.—Cic., Tusc. Disp., 4, 22.) It was afterward burned by the Romans in a war with the Ligurians. (Liv., 32, 29, and 31.)
CLAUDIA GENA, a celebrated patrician house at Rome, from which came many distinguished men in the days of the republic. According to Suetonius (Vit. Tib., 1), this family could boast of 23 consuls, 5 dictators, 7 censors, 7 triumphs, and 2 ovations. The emperors Tiberius and Claudius were of this same line. The Claudian family claimed descent from Appius Claudius. There was also a plebeian branch of the Claudii, named the Clavii Marcelli. (Consult Gland., clavii Marcelli, c. 222, seqq.)

CLAUDIA, I. a vestal virgins, suspected of having violated her vow. She proved her innocence by drawing off from a shool in the Tiber, with the aid of her girdle merely, a vessel which had been stranded there, and on board of which was the statue of Cybele, that had been brought to Italy from Asia Minor. (Ovid, Fast., 4, 306, seqq.—Sueton., Vit. Tib., c. 2.—Liv., 29, 14.)—II. A sister of Claudius Pulcher, fined by the people on an offensive remark made by her. It seems, that, as her vehicle (carpentum) was retarded in its progress through the streets of Rome by the pressure of the crowd, she exclaimed, in a moment of haughty irritation, strikingly characteristic of the Claudian race, "I wish my brother Pulcher were alive again, and would lose another fleet, that there might be less crowding and confusion at Rome!" (Sueton., Vit. Tib., c. 2.) A vestal virgin was a creature of Appius Claudius Audax. When the tribunes of the commons endeavoured to pull her father from his chariot, in the midst of a triumph (A. U. C. 610), she ascended the triumphal car, took her place by her father's side, and rode with him to the Capitol, thus securing him by her sacred character from any farther molestation. (Val. Max., 5, 4, 6.—Cic., pro. Cael., 14.) In Suetonius (Vit. Tib., c. 2.), Appius is called her brother (filius) that this is evidently an error of the copyists for patrem. (Pirk. Ann., vol. 2, p. 473.)—IV. Augusta, a daughter of Nero and Poppea. Her birth excited great joy in her progenitor father, but she died at the end of four months. Divine honours were decreed unto the royal infant, and a temple and priestess. (Tacit., Ann., 15, 23.—Sueton., Vit. Ner., c. 35.)—V. (Via) a Roman road, which branched off from the Via Flaminia, at the Pons Multivis, near Rome, and, proceeding through the Latium,*>*insinuated itself betwixt the Via Aurelia at Lucca. It appears to have fallen into disuse, when the central parts of Etruria, which it crossed, became unfrequented. (Cramer's Anc. Italy, vol. 1, p. 245.)—VI. Antonia, a daughter of the Emperor Claudius, married on. Pompey, whom Messalina caused to be put to death. Her second husband, Sylla Faustus, by whom she had a son, was killed by Nero, and she shared his fate when she refused to marry his murderer. (Sueton., Vit. Claud., c. 27.—Id., Vit. Ner., 35.)

CLAUDIA LEX, I. proposed by Claudia the consul, at the request of the allies, A. U. C. 573, that the allies and those of the Latin name should leave Rome, and return to their own cities. According to this law, the consul made an edict; and a decree of the senate was added, that, for the future, no person should be manumitted, unless both master and slave swore that the latter was not manumitted for the sake of changing his city. For the allies used to give their children as slaves to any Roman citizen, on condition of their being manumitted. (Liv., 41, 8, seq.—Cic., pro Balb., 23.)—II. Another by the consul Marcellus, A. U. C. 703, that no one should be allowed to stand candidate for an office while absent; thus taking from Cesar the privilege granted by the Pompeian law; also, that the name of the city should be taken from the colony of Novum Carthago into that city beplanted by Cesar (Sueton., Vit. Julia, 28.—Cic., Ep. ad Fam., 13, 35.)—III. Another, de usura, by the Emperor Claudius, which forbade people to lend money to minors on condition of payment after the decease of their parents. It is supposed to be the same with what was called the Senate-consultum Macedoninum, enforced by Vespasian. (Tacit., Ann., 11, 13.)—IV. Another, passed A.D. 535, and forbidding any senator or father of a senator to have a vessel above a certain burden (300 amphora). The object it had in view was to prevent their engaging in commercial operations. A clause is supposed to have been added to this law, prohibiting the acquisition of clerks from trading. (Liv., 21, 65.—Compare Curius, ad Sueton., Vit. Dei, 2.)

CLAUDIA AQUE, the first water brought to Rome by means of an aqueduct. This was one of 11-miles, erected by the censor Appius Claudius, A.D. 441. The supply was obtained from the river Anio. (Eutrop., 2, 4.—Liv., 9, 29.)

CLAUDIANUS, CLAUDIUS, a Latin poet, born at Alexandria in Egypt, probably about 365 A.D., in the first year of the reign of Valentinian I. His name indicates that his family was originally from Rome; but at Alexandria Greek was the language of every-day intercourse, and it was in this tongue that Claudian composed his first works. He received a distinguished literary education. It has been supposed, from some passages in his works, that in his youth he bore arms, and that he assisted, A.D. 394, in the battle between Theodosius and Eugenius. Gesner, however, has shown that these accounts are mistaken interpretation. It is more certain, that, after having passed some time at Rome, he followed, A.D. 398, Stilicho, the minister and guardian of Honorius, to Mediolanum, which was, at this period, the residence of the Emperor of the West. The minister, a Vandal by nation, and his spouse, the Princess Serena, became the patrons of the young poet; and the latter expressed his gratitude in verses, which were recomposed by honorifying the changed character. Nolci was Claudian raised to stations of which his talents no doubt rendered him worthy, but, on the request of the senate, the two emperors of the East and West united in having a bronze statue raised to him in the forum, the pedestal of which, bearing an inscription in honour of the poet, was discovered at Rome in the 15th century. The authenticity of this monument is doubted by some, but without sufficient reason, since Claudian must have lived a century later than Servius. From this account of Claudian's life, it is evident that his poems (25, 7.—Compare Schill, Hist. Lit. Rom., vol. 3, p. 52, in notis.) About A.D. 398, Claudian returned to Egypt, armed with a letter from his protector, demanding for the bard the hand of a rich heiress in this province. The marriage was celebrated at Alexandria, and Claudian conducted his young bride to the imperial court. After having enjoyed, for the space of more than ten years, the favour of his powerful protectors, our poet was involved in one of those catastrophes so common at court. Accused, probably, without any reason, of a design to raise his own son to the imperial throne, Stilicho was delivered over to punishment in 408. Though we know not how far Claudian was involved in the disgrace of his protectors, still we cannot doubt that he lost his official stations, and also a part of his fortune. The period of his death is unknown.—The question is sometimes put, whether Claudian was a Christian or not. There is nothing in his works to indicate that he was; for some Christian epigrams that are found among his poems are evidently epigrammatic. It is not a little surprising, indeed, that one who lived in a court which possessed a great zeal for Christianity, should have remained faithful to the religion of his fathers: the regrets, however, of St. Augustine and of Orosius, who state that Claudian was a pagan, are too positive in their bearing. In any case, the Christian, de Civ. Det, 5, 26.—Oros., adv. Pagan. Hist., 7, 35.)—Claudian has left poems of various kinds: epic, panegyric, satirical, and also idyls and epigrams. The panegyrics in verse, composed by him, are the earliest with which we are
CLAUDIUS.

acquainted, and may be regarded in the light of an innovation. Prose panegyrics had been in use from the second century of our era. These eulogiums in verse, composed by the poet, are as follows: 1st. A Panegyric on the consulship of Probinus and Oberrianus, which was written in the third, and fourth, and sixth consulships of Honorius, which took place in the years 396, 398, and 404: 3d. A Panegyric in honour of Mallius Theodorus, A.D. 399: 4th. A Eulogium on Stilicho, in three parts: 5th. A Eulogium on Serena. In reading these productions we are at a loss which to wonder at most, the base flattery of the poet, or the effrontery of those who received his gross adulation without a blush.—In epic poetry, Claudian left us a piece in three cantos or books, entitled "De Raptu Proserpina;" and the commencement of a second production, entitled "Gigantomachia," the war of the Giants. As regards the first of these works, critics have considered the third book inferior in polish to the other two, and showing less of a finishing hand. The plan of the poem, moreover, is a defective one. Instead of hurrying us at once into the very midst of the action, as an epic should, Claudian begins his war at its commencement, as an historian would relate an event. All the actors, too, being deities, and, consequently, elevated above the level of human nature, can only inspire a feeble interest. This defect Claudian seeks to remedy by a style always elevated, by striking imagery and brilliant descriptions: but this tone pervading the whole work, and the uniformity of the characters, have spread over it a monotonous which becomes fatiguing in the extreme. Notwithstanding all this, however, Claudian is, perhaps, next to Statius, the Latin epic poet that has come nearest to Virgil, especially in some of his descriptions and comparisons, and his merit will no doubt appear in a much more favourable light if we take into consideration the period when he lived.—Two other works of Claudian may be ranked in the class of epic poems. One is entitled "De Bello Gildaeus;" the other, "De Bello Getico, sive Pollentia." Gil- don, son of a king of Mauritania, had made himself independent in Africa during the reign of Theodosius the Great. The loss of this province, one of the granaries of the empire, was severely felt. Under Honorius, however, Africa was reconquered, and it is this exploit that Claudian celebrates in a poem, of which we have only the first canto, containing the cause and the preparations of the war. The poem "De Bello Getico" turns on the war with the Visigoths, called also the war of the fifth, which occurred in A.D. 409. When Honorius was consul for the fifth time with his brother Arcadius, emperor of the East, Alaric, king of this Germanic race, having entered Italy by the way of Pannonia, was defeated by Stilicho near Pollentia, among the Cottian Alps. This war is the subject of a poem by Claudian, in six hundred and forty-seven verses. Cassiodorus, it is true, and likewise Jornandes, say directly the contrary in relation to this affair: but in admitting the facts, which occurred by the order of Claudian, we do not intend to prejudice a question of the authentic- ity.—Claudian is the author also of some poems, which one would be tempted to rank in the class of satires, if the manner in which he treats his subject was not rather of an epic, or, if we may so speak, of a rhetorical character, and if these pieces were not composed with the same view as his panegyrics, namely, that of pleasing Stilicho. The productions to which we have alluded, amount, it is probable, to two or three, being dedicated to two enemies of the minister. These are, perhaps, Claudian's chef-d'œuvres. Some critics, however, consider the poem against Eutropius superior to that against Rufinus. We have also two Epithalamia of Claudian; one on occasion of the marriage of Honorius and Maria, the daughter of Stilicho and Serena; the other on the marriage of Paladius and Celerina.

In both of these pieces Claudian shows imagination and talent. The first of these epithalamia is followed by a poem, to which the copyists have given the title of Heauton-$x. There exist also five poetical epistles of Claudian which may be ranked among the feeblest of his productions. Under the third, fourth, and fifth, we have, moreover, seven didactic or descriptive poems. There are likewise some epigrams remaining, but many of them appear to have been written, not by Claudian, but by a Christian bard. To the works of Claudian it has been customary to join a poem in honour of Hecules. It is more correctly assigned, however, to Olympius Nemesianus. (Wernsdorff, Poet. Lat. Min., vol. 1, p. 276.) The best editions of Claudian are, that of G. T. K., L. 1751, 8vo; that of Burmann (secundum), Amst., 1760, 4to; and that of Artaud (in Lemaire’s collection), Paris, 1824, 2 vols. 8vo.

CLAUDIOPOLIS, a. city of Bithynia, previously called Bithynium. It was situate above Tium, in a district named Solane, celebrated for its excellent pastures, and a cheese much esteemed at Rome. (Strab., 665.—Pliny, 11, 42.) From Paussanias (8, 9), it would appear to have been either on the banks of the Propontis, or on the coast of Claudipolis in the reign of Tiberius. At a later period, as the birthplace of Antinoius the favourite of Hadrian, it received several privileges from that emperor. (Dio Cass., 69, 11.) Under Theodosius it was made the capital of the province Honoria. Many years after, we learn from Anna Comnena (p. 967) and Leo Diaconus (4, 9), who describe it as the most wealthy and flourishing city of Galatia, that it was almost totally destroyed by an earthquake, attended with vast loss of lives. (Graev's Asia Minor, vol. 1, p. 200.)—II. A city of Cilicia Trachis, but assigned by Ammianus and Hierocles to Issarius. (Ammian. Marcell., 14, 25.—Hieroc., p. 709.) It was founded by Claudius the Roman emperor, and was situate in a plain between two summits of Mount Taurus, and probably also on the Calyxinus, or one of its branches. (Wesseling, ad Hieroc., i. c.—Cracer's Asia Minor, vol. 2, p. 332.)

CLAUDIUS, I. Appius. (Vit. Appius.)—II. Pulcher, a Roman consul, in the first Punic war. When, previous to a naval engagement with the Carthaginians, the person who had charge of the sacred fowls told him that they would not eat, which was esteemed a bad omen, he ordered them to be thrown into the sea, exclaiming, "Then let them drink." After this, joining battle with the foe, he was defeated with the loss of his life. Having been recapitulated by the seers, he gave another specimen of the haughty temper of the Claudian race, for, on being directed to nominate a dictator, he purposely named his own "dux," an individual of the lowest rank. (Liv., Epit., 19.—Cic., N. D., 2, 3.—Id., de Div., 1, 16.)—III. Nero, a Roman consul in the second Punic war, who, in conjunction with his colleague Livius Salinator, defeated Hasdrubal in Umbria, on the banks of the Metaurus. (Vit. Metaurus and Hasdrubal.)—IV. The father of the above Claudius. He was distinguished chiefly for his naval skill in the Alexandrine war, under Julia Caesar. At a subsequent period he excited a sedition in Campania, by promising to restore the property of those who had suffered in the civil wars. This tumult, however, was soon quelled by the arrival of Octavius; and Tiberius, together with his wife Livia, took refuge in Sicily and Achaea until the establishment of the empire was completed. Claudius however, having been recalled by the sea, returned to Rome. Livia having after this engaged the affections of Octavius, Tiberius transferred to him the name and privileges of a husband. (Tacit., Ann., 5, 1.)—V. Tiberius Nero Caesar, the successor of Augustus, and son of the preceding. (Vit. Tiberius.)—VI. Tiberius Claudius Drusus Caesar, more commonly known by his historical name of Claudius, suc-
CLAUDIUS

C L E

ceeeded to the Roman empire on the death of Caligula. He was the second son of Drusus and Antonia, and, consequently, grand-nephew to Augustus. When the assassination of Caligula was made known, the first impulse of the court party and of the foreign guards was to massacre all who had participated in the murder. Several persons of distinguished birth exposed themselves, became, in consequence, the victims of their fury. This violence subsided, however, upon their discovering Claudius, who had concealed himself in an obscure corner of the palace, and, being dragged from his hiding-place, threw himself at their feet in the utmost terror, and besought them to spare his life. The soldiers in the palace immediately saluted him emperor, and Claudius, in return, set the first example departing to the army for the imperial dignity by a largess from the public treasury. It is difficult to assign any other motive for the choice which the army made of Claudius than that which they themselves professed, "His relationship to the whole family of the Caesars." Claudius, who was now fifty years old, had never done anything to gain popularity, or to display those qualities which secure the attachment of thesoldier. He had been a retired citizen, and the development of his faculties was retarded by his bodily infirmities; and although he outgrew his complaints, and became distinguished as a polite scholar and an eloquent writer (Tacit., Ann., 13, 3.—Sueton., Vit. Claud., c. 41), his spirits never recovered from the effects of disease and of severe treatment, and he retained much of the timidity and indolence of his childhood. (Sueton., Vit. Claud., c. 2.) During the reign of Tiberius he gave himself up to gross sensuality, and concealed himself under this degradation by the security which it brought with it. Under Caligula also he found his safety consist in maintaining his reputation for incapacity, and he suffered himself to become the butt of court parasites, and the subject of their practical jokes. (Sueton., Vit. Claud., c. 7.)

The excitement of novelty, on his first accession to the throne, produced efforts of sagacity and prudence, of which none who had previously known him believed him capable; and during the whole of his reign, too, we find judicious and useful enactments occasionally made, which would seem to show that he was not in reality "so silly an emperor" as historians have generally represented him to be. It is most probable, therefore, that the fatuity which characterizes some parts of his conduct was the result, not of natural imbecility, but of the early and unlimited indulgence of the Caesars. Claudius, with many magnificent works; he made Mauritania a Roman province; his armies fought successfully against the Germans; and he himself triumphed magnificently for victories over the Britons, and obtained, together with his infant son, the surname of Britannicus. But in other respects he was wholly governed by worthless favourites, and especially by his emperor, the profligate and abandoned Messalina, whose cruelty and rapacity were only equalled by her licentiousness. At her influence it was but too common for the profligate to put to death, on false charges of conspiracy, some of the wealthiest of the nobles, and to confiscate their estates, with the money arising from which she openly pampered her numerous paramours. When the career of this guilty woman was terminated, Claudius was governed for a time by his freedman Narcissus, and Pallas, another of his favorites. In 53, he took his wife, Agrippina, daughter of Germanicus, a woman of strong natural abilities, but of insatiable avarice, extreme ambition, and remorseless cruelty. Her influence over the feeble emperor was boundless, and was displayed in the most glaring manner. She prevailed on him at last to set aside his own son Britannicus, and to adopt her son Domitius Ahenobarbus, by her former husband, giving him the name by which he is best known, Nero, and constituting him heir to the imperial throne. Claudius having afterward shown a disposition to change the succession and restore it to Britannicus, fell a victim to the ambition of Agrippina, who caused him to be poisoned. A dish of mushrooms was prepared for the purpose, a kind of mushroom which the emperor particularly liked, especially fond, and the effects of the poison were hastened by the pretended remedies exhibited by Xenophon, the physician of the palace. It was given out that Claudius had suffered from indigestion, which his habitual gluttony rendered so frequent that it excited no surprise: and his death was concealed till Domitius Nero secured the guards, and had quietly slumbered, with the consent of the empress. He died in the sixty-fourth year of his age, and the fourteenth of his reign, A.D. 54. (Sueton., Vit. Claud. — Dio Cass., lib. 60.—Encyclop. Metropol., div. 3, vol. 2, p. 443, sqq.)

CLAUSOMENAE, a city of Ionia, on the coast of the Aegean Sea, west of Smyrna. There were two places of this name; the more ancient stood on the continent, and was strongly fortified by the Ionians in order to repel the Persians, but was taken by Alexander the Great, who destroyed it. The other, which is known by the name of Clazomenae, is situated on an island, where they built the second Clazomenes, so often mentioned in Roman history. (Strabo, 645.—Compare Pausaniae, 7, 3.) Alexander joined it to the continent by a causeway 250 paces long; from which time it was reckoned among the cities on the continent. (Plin., 5, 29.) Augustus greatly embellished it, and it was styled, on some medals, its founder, through flattery. Anaxagoras was born here. On or near its site stands the small town of Dourlak or Ourla. There are still some remains of the ancient causeway, by which one can reach, with some risk, however, from the force of the sea, the island of St. John. (Pococke, vol. 3, book 2, c. 2.—Chandler, c. 24.—Mannert, Geogr., vol. 6, pt. 3, p. 329.)

CLEANTHES, I. A Stoic philosopher of Assus in Lydia, disciple of Zeno. After the death of Zeno he presided over his school. His first appearance was in the character of a wrestler. In this capacity he visited Athens, where the love of philosophy was diffused through all ranks of people. He soon caught the general spirit, and though he was possessed of no more than four drachmae, he determined to put himself under the tuition of some eminent philosopher. His first master was Crates, the Academic. He afterward became a disciple of Zeno, and a celebrated advocate of the principles of the school. He was esteemed a good laborer in the public gardens, that he might have leisure in the daytime to attend the schools of philosophy. The Athenian citizens observing that, though he appeared strong and healthy, he had no visible means of subsistence, summoned him before the Areopagus, according to the custom of the city, to give an account of his manner of living. Upon this he produced the gardener for whom he drew water, and a woman for whom he gardened. At her instance he was compelled to prove that he subsisted by the labour of his hands, and that the judges of the court were struck with such admiration of his conduct, that they ordered ten minae to be paid him out of the public treasury; which, however, Zeno would not suffer him to accept. (Diog. Laerct.—Val. Max., 8, 7.—Sen., Ep., 44.) Antigonus afterward presented him with three thousand minae. From the manner in which these two incidents are related by different writers, such as Suidas; sphericus, or "the well-drawer," for many years he was so very poor that he was compelled to write the heads of his master's lectures on shells and bones, for the want of money to buy better materials. He remained, however, notwithstanding every obstacle, a pupil of Zeno for nineteen years. His natural faculties were slow; but resolution and perseverance enabled him to overcome every difficulty;
and at last he became so complete a master of the Stoic philosophy as to be perfectly well qualified to succeed Zeno. His fellow-disciples often ridiculed him for his dulness by calling him an ass; but his answer was, that if he were an ass he was the better able to bear the weight of Zeno's doctrine. He wrote many books in which he delivered some beautiful hymn to Jupiter, preserved in the Anthology. After his death, the Roman senate erected a statue in honour of him at Assus. It is said that he starved himself in his 90th year, B.C. 240. (Engel's History of Philosophy, vol. 1, p. 354, seqq.)—II. A Corinthian painter, whom some make to have been the inventor of drawing in outline. (Plin., 35, 3.) Atanagoras mentions him among the first that practised this branch of the art. (Silvio, Dict. Art. s. v.)

CLEARCHUS, I. a tyrant of Heraclae Pontics, who was killed by Chion and Leonidas, Plato's pupils, during the celebration of the festival of Bacchus, after the enjoyment of the sovereign power for twelve years, 353 B.C. (Consult Memnon, fragm. c. 1, and Hoffmann's Prolegomena in Choinis Epist.—Compare also remarks under the article Chion.)—II. A Lacedemonian, one of the Greek commanders in the Peloponnesian war, who was astonished by the son of that prince in the highest estimation of all the Greek leaders that were with him. A sketch of his character and history is given by Xenophon (Anab., 2, 6), in which many things appear to be softened down. He had been governor previously of Byzantium, under the orders of the Spartan Ephori, and had conducted himself so tyrannically that the government at home sent an armed force against him. Clearchus, anticipating the arrival of these troops, left Byzantium and sailed to Selymbria, and when the Spartan forces came he engaged in battle with them, but was defeated. After this he fled to Cyrus. He was entrapped along with the other Greek leaders, after the battle of Cunax, by the satrap Tissaphernes, and put to death in common with them. (Xen., Anab., 2, 5, 91, seqq.—Id. ib., 2, 6, 1, seqq.—Diod. Sic., 14, 12.)

CLEMENS, I. (commonly called Romanus, for distinction' sake from Clemens of Alexandria), one of the early bishops and friends of Dionysius the Areopagite, and of the Paul, and afterward bishop of Rome, to which station he was chosen A.D. 67, or, according to some, A.D. 91. He was the author of an epistle to the church of Corinth, printed in the "Patres Apostolici" of Le Clerc, Amst., 1698. Of this work, the only manuscript of which now extant is in the British Museum, Archbishop Wake printed a translation in 1705. The best edition of the original is Jacobson's, 2 vols., 8vo., Oxon., 1838. Clemens is supposed to have died at Rome about the close of the first century.—II. An eminent father of the church, who flourished between A.D. 192 and 217, and is commonly called Alexandria, to distinguish him from Clemens of Rome. He is supposed by some to have been a native of Athens, and by others of Alexandria, but of his real origin very little is known. He early devoted himself to study in the school of the latter city, and had many preceptors. (Strom., 1, p. 274.—Euseb. Hist. Eccl., 5, 2.) His Hebrew preceptor, whom he calls "the Sicilian bee," was unquestionably Pantanmus, a Jew by birth, but of Sicilian extraction, who united Greco with sacred learning, and was attached to the Stoic philosophy. (Vales. ad Euseb., 5, 10.) Clemens so far adopted the ideas of this preceptor as to espouse the moral doctrine of the Stoics. In other respects he adopted the greater method of philosophizing. While the pagan philosophers pillaged the Christian stores to enrich the Eclectic system, this Christian father, on the contrary, transferred the Platonic, Stoic, and Oriental dogmas to the Christian creed, as relics of ancient tradition originating in Dionys. derivation. (Strom., 1, p. 313.) In hopes of recommending Christianity to his catechumens (for, after Pantanmus, he had the charge of the Christian catechetical school in Alexandria), Clemens made a large collection of ancient wisdom, under the name of Stromatic, an epitaph borrowed from carpet-work, and intended to denote the miscellaneous nature of the collection. He divided his work into many sections, and each of these into many chapters. He assigned this reason for the undertaking, that much truth is mixed with the dogmas of philosophers, or, rather, covered and concealed in their writings, like the kernel within its shell. This work is of great value, as it contains many quotations, and relates many facts, not elsewhere preserved. But, though the object of his labours was laudable, it must be confessed that his inclination to blend heathen tenets with Christian doctrines rendered his writing in many respects injurious to the Christian cause. His vast reading embittered his judgment; and his injudicious zeal sometimes led him into credulity, not into dishonesty. We frequently find him adopting Platonic and Stoic tenets as Christian doctrines, and thus sowing the seeds of error in the Christian church. Besides the Stromatic, we have the following works of Clemens remaining: 1. Protoptipon, or an epitaph on Bacchus; 2. hymn to Zeno; 3. fragments of a treatise on the use of riches, entitled, "What rich man shall be saved?"—In these works he approaches the strict standard of orthodoxy; but in one which is lost, and the title of which was Hypotyposes, or "Institutions," he is stated by Photius (Cod., 109,—vol. 1, p. 89, ed. Bekker) to have maintained sentiments which were unscriptural.

The works of Clemens were first printed in Greek only, at Florence in 1550. Of the various editions with Latin version, the best is that of Archbishop Potter, 1 vols., fol., 1715, Oxon. (Enghed's History of Philosophy, vol. 2, p. 274, seqq.)

CLEOBIS and BITON, two youths, sons of Cydipp, the priestess of Juno at Argos, and remarkable for physical prowess, having both carried off prizes in the public games. Solon, in his conversation with Clearchus on the subject of human felicity, related, according to Herodotus (1, 91), the following incident respecting them. The mother Cydipp was required by an sacred custom to be drawn to the temple of Juno, on a certain festival, by a pair of oxen. The animals happening not to be brought up from the field in due season, and Cydipp being pressed for time, her two sons put themselves under the yoke, drew the chariot in which their mother sat for the distance of forty-five stadia (nearly six miles), and brought her in that manner to the temple. The men of Argos who stood around commended the strength of the youths, and the women facilitated their mother on having such sons; while Cydipp herself, in a transport of joy, prayed to the goddess that Cleobis and Biton might obtain the greatest blessing man could receive. When she had finished her prayer, and her sons had sacrificed and feasted with her, they fell asleep in the temple, and awoke no more. The Argives, in commemoration of their filial piety, caused stone figures to be erected to them at Delphi. Servius (ad Virg. Georg. 3, 592) says that the want of oxen on this occasion was owing to a pestilential malady, which had destroyed all the cattle belonging to Argos.—This touching little story is frequently alluded to by the ancient writers. (Compare Cic., Tusc. Quest., 1, 47.—Plut., Consol. ad Apoll., p. 108, F.—Id., Vit. Sol., c. 27.—Stobius, p. 603, &c.)

CLEONPLUS, a native of Lindus, in the island of Rhodes, son of Euphronius, is said to have claimed descent from Hercules. He was not less remarkable for strength than for beauty of person. After travelling in Egypt for the purpose of acquiring knowledge, he ascended the throne on the death of his father. Pitharch says he usurped it. The rest of his life is unknown; we are merely informed that he at-
tamed to the age of seventy years, and died about the 55th Olympiad. By some he is ranked among the wise men of Greece. His favourite maxim was "Αρετος μετοποιοει, "moderation is best," i.e., preserve a due mean in all things. (Diog. Laert. i. Vt.)

Cleon, son of 6. Cleon, son of Spinthias, and succeeded his brother Agesipolis I. He was defeated by Epaminondas in the battle of Leuctra, and lost his life on that occasion. (Xen., Hist. Gr., 6, 4, 13.—II. A son-in-law of Leonidas II, king of Sparta, who usurped the kingdom after the expulsions of that monarch, but was soon after expelled in turn and sent into banishment. (Pliot., Vit. Cleom.)

CLEOBURDA, a Greek writer, supposed to have been the author of the work which has reached us, entitled "Cyclic Theory of Meteor." i.e., Circular Theory of the Stars. He is thought to have lived some years before the Christian era. (Delambre, in Biogr. Univ., vol. 9, p. 54.)

CLEOMENES I., king of Sparta, ascended the throne B.C. 519. At the beginning of his reign he undertook an expedition against the Argives, defeated them, and destroyed a large number who had taken refuge in the sea. He afterwards led an army against the Pisistratidae from Athens. This is the same Cleomenes whom Aristogoras endeavoured, but in vain, to involve in a war with the Persians. He afterward managed, by undue influence, to procure an oracular response from Delphi, pronouncing his colleague Demaratus illegitimate, and thus obtained his deposition. Becoming alarmed, subsequently, lest the fraud should be discovered, Cleomenes fled secretly to Thessaly, and from thence passing into Arcadia, he began to stir up the people of this latter country against Sparta. The Lacedaemonians, fearing his intrigues, recalled him, but he died soon after his return, in a fit of insanity, by his own hand. (Herod., 5, 64.—Id., 5, 49, seqq.—Id., 5, 65, ccc.—II. Cleomenes II., succeeded his brother Agesipolis II. on the throne of Sparta, B.C. 371. The power of his country was then on the decline, and he possessed not the requisite talents to restore it to its former state. He reigned sixty years and ten months without having done anything worthy the notice of posterity. (Paus., 3, 6.—III. Cleomenes III., son of Leonidas II., ascended the Spartan throne B.C. 230. Dissatisfied at the prevailing manners of Sparta, he resolved to bring about a reform, and to restore the institutions of Lycurgus, after the example of Agis, who had lost his life in a similar attempt. Thinking that war would furnish the best opportunity for the execution of his design, he led his forces against the Achaeans, who were commanded by Aratus, and greatly distinguished himself. Returning after this to Sparta, with a portion of his army, he put to death the Ephors, made a new division of the lands, and introduced again the old Spartan system of education. He also took his brother Eucli- das as his colleague on the throne, and thus for the first time since the time of Spartan kings and the two kings of the same family. After a long, and in many respects successful, series of operations against the Achaeans and Macedonians, the latter of whom had been called in by Aratus as allies, Cleomenes was defeated by Antigonus in the battle of Sellasia, and immediately afterwards fled to Ptolemy Euergetes in Egypt. This monarch treated him with some degree of generosity, but his successor Ptolemy Philopator, a weak and suspicion-prone prince, took upon him evil eye, and at last kept him in confinement. The Spartan monarch, in a fit of despair, and taking advantage of the temporary absence of Ptolemy from his capital, broke forth from the place where he had been kept in custody, along with thirteen of his friends, and endeavoured to arouse the inhabitants in the cause of freedom. But, finding their efforts fruitless, they fell by their own hands. Cleomenes had been sixteen years king of Laconia. With him ended the race of the Heraclidae, which had so long sat on the throne of that country. Ptolemy ordered his body to be flayed and nailed to a cross, and his children to be put to death. (Pliot., Vit. Cleom.)

CLEOPE, a town of Argolis, northeast of Nemea. According to Strabo, it was 120 stadia from Argos and eighty from Corinth; he adds, that it was situated on a rock, and surrounded by walls, which justified the epithet applied to it by Homer (II., 2, 570). Hercules was said to have defeated and slain the Elean chief called Moliones, near Cleone. (Pindar, Olymp., 10, 26.—Consult Apollodorus, 3, 5, 1.) We learn from Pindar that games were there solemnized. (Nem., 4, 26.—Ibid., 10, 78.) Dodwell states, that the ruins of Cleone are to be seen on the site now called Courtes. They occupy a circular hill, which seems to have been completely covered with buildings. On the side of the hill are six ancient terrace-walls, rising one above another, on which the houses and streets were situated. (Tour, vol. 2, p. 206.—Chandler, vol. 2, p. 288.—Gell's Itin. of the Morea, p. 157.)—II. A town of Macedonia, in the peninsula of Athos, said to have been founded by a colony from Chalcis. (Herod., 7, 22.—Thucyd., 4, 109.—Cramer's Anc. Greece, vol. 1, p. 260.)

CLEOPATRA, I. a daughter of Idas and Marpessa, and the wife of Meleager. (Hom., II., 9, 557.)—II. The wife of Philip of Macedon, whom that monarch married after he had repudiated Olympias. (Justin, 9, 5.)—A month after the death of Philip, Olympia was compelled by her to destroy herself. (Justin, 9, 7.)—III. A daughter of Philip and Olympias, and sister to Alexander the Great. She married Alexander of Epirus, who fell in Italy. (Justin, 9, 6, 1.) After the death of Alexander of Macedon, her hand was sought by Perdiccas and others of his generals, but she was put to death by Antigonus. (Diod. Sic., 20, 37.—Compare Diod. Sic., 18, 23, and Wesseling, ad loc.)—IV. A daughter of Antiochus III. of Syria. She married Ptolemy V., king of Egypt, and was left guardian of her infant son Ptolemy VI., but she died soon after her husband, to the great regret of her subjects.—VI. A daughter of Ptolemy Philometor, was the wife of three kings of Syria, and the mother of four; namely, of Antiochus Dionysius, by her first husband Alexander Balas; of Seleucus V. and Antiochus VIII. the Syrian; and, lastly, of Antiochus IX. surnamed Cyzicennus, by Antiochus Euergetes or Sidetes. She was compelled by her son, Antiochus VIII., to drink the poison which she had prepared for him, B.C. 120.—VII. The most famous of the name was the daughter of Ptolemy Auletes, and remarkable for her beauty and personal accomplishments. According to the usage of the Alexandrian court, she
Cleopatra. married her eldest brother Ptolemy XII., and began to reign with him in her seventeenth year. Both she and her husband, being minors, were placed by the will of their father under the guardianship of Rome, an office which the senate transferred to Pompey. An intrigue in Alexandria, in the Egyptian capital, after the amicable first reconciliation, Cleopatra was compelled to yield to the tide of popular fury, and to flee into Syria, where she sought protection in temporary exile. The flight of this princess, though mainly arising from the tumult just mentioned, was unquestionably accelerated by the designs of the young king and his ambitious ministers. Their object became manifest when Cleopatra, after a few months' residence in Syria, came to Alexandria in safety, and had herself conveyed into the chamber of the royal apartments in the form of a large package of goods. The stratagem proved completely successful. Cleopatra was now in her twentieth year, distinguished by extraordinary personal charms, and surrounded with all the graces which give to those charms their greatest power. Her voice sounded like the sweetest music; and she spoke a variety of languages with propriety and ease. She could, it is said, assume all characters at will, which all alike became her, and the impression that was made by her beauty was confirmed by the fascinating brilliancy of her conversation. The day after this singular meeting, Caesar summoned before him the king, as well as the citizens of Alexandria, and made arrangements for the restoration of peace, procuring Cleopatra, at the same time, her share of the throne. Pothinus, however, one of Ptolemy's ministers, in whose intriguing spirit all the dissensions of the court had originated, soon stirred up a second revolt, upon which the Alexandrian war commenced, in which Cleopatra was defeated, and lost her life by drowning. Caesar now proclaimed Cleopatra queen of Egypt; but she was compelled to take her brother, the younger Ptolemy, who was only eleven years old, as her husband and colleague on the throne. The Roman general continued for some time at her court, and she bore him a son, called, from the name of his father, Caesarion. During the six years which immediately followed these events, the reign of Cleopatra seems not to have been disturbed by insurrection, nor to have been assailed by foreign war. When her brother, at the age of fourteen, demanded his share in the government, Cleopatra poisoned him, and remained sole possessor of the regal authority. The dissensions among the rival leaders who divided the power of Caesar, had no doubt nearly involved her in a contest with both parties; but the decisive issue of the battle of Philippi relieved her from the hesitation under which some of her measures appear to have been adopted, and determined her inclinations, as well as her interests, in favour of the conquerors. To afford her an opportunity of explaining her conduct, Antony summoned her to attend him in Cilicia, and the meeting which she gave him on the river Cydnus has employed the pen, not only of the historian, but of the princes of English imagination (Shakespeare, Antony and Cleopatra, act 1, scene 1.). The artifices of this fascinating princess, now in her twenty-fifth year, so far gained upon Antony, as not only to divert his thoughts from his original purpose of subjecting her kingdom to the payment of tribute, but entirely to hush his ambition to sleep, and make him sacrifice his great stake as a candidate for the empire of the world. After a fruitless attack upon the territory of Palmyra, he hastened to forget his disgrace in the society of the Egyptian queen, passing several months at Alexandria in the most foolish and puerile dissipation. The death of his wife, and his subsequent marriage with Octavia, was regarded by the Nilotic princess, which his ungoverned passions were preparing for him. But, though he had thus extricated himself from the snares of Alexandria, his inclinations too soon returned to that unhappy city; for we find that when he left Rome to proceed against the Parthians, he departed in advance his friend Fonteius Capito, to conduct Cleopatra into Syria. On his return from this disgraceful campaign, he encountered still deeper disasters. Antony, who was inducingsubmitting to the shellage which had rendered him the object of the eyes of most of his followers.—Passing over events which have been alluded to elsewhere (Vid. Augustus), we come to the period that followed the battle of Actium. When Octavius advanced against Egypt, and Antony had been a second time defeated under the walls of Alexandria, Cleopatra shut herself up with a few attendants, and the most valuable part of her treasures, in a strong building which appears to have been transformed into a temple. The intruder by friend or enemy, she caused a report to be circulated that she had retired into the monument to put herself to death. Antony resolved to follow her example, and threw himself upon his sword; but being informed, before he expired, that Cleopatra was still living, he caused himself to be carried into her presence, and breathed his last in her arms. Octavius, after this, succeeded in getting Cleopatra into his power, and the queen at first hoped to subdue him by her attractions; but finding at last that her efforts were unavailing, and suspecting that her life was spared only that she might grace the conqueror's triumph, she ended her days, if the common account is to be credited, by the bite of an asp. A small puncture in the arm was the only mark of violence which could be detected on the body of Cleopatra; and it was therefore believed that she had procured death either by the bite of a venomous reptile, or by the scratch of a poisoned bodkin. She was in her thirty-ninth year, having reigned twenty-two years from the death of her father. Octavius, it is said, though deprived by this act of suicide of the greatest ornament of his approaching triumph, gave orders that she should have a magnificent funeral, and that her body, as she desired, should be laid by that of Antony.—In the grave of Cleopatra was deposited the last of the royal race of the Ptolemies, a family which had swayed the sceptre of Egypt for two hundred and ninety-four years. Of the real character of this celebrated queen herself, it is not possible to speak, at this distance of time, with any degree of confidence. That she had beauty and talents of the highest order, is admitted by every historian who has undertaken to give the annals of her reign; and that she was accomplished in no ordinary degree, is established by the fact of her being a great proficient in music, and mistress of nearly all the languages which were cultivated in her age. She was well skilled, for example, in Greek and Latin, and she could converse with Ethiopians, Jews, Arabsians, Syrians, Medes, and Persians, without an interpreter. If her conduct was not at all times strictly pure, we must seek for an apology in the religion and manners of her country, and must ascribe the most glaring of her frailties, to an institution which regulated the matrimonial connexions of the Graeco-Egyptian nobles, and which paid no respect to the age, affectations, or temper of the parties. (Plut., Vit. Ces.—Id., Vit. Ant.—Encyclop. Metropol., div. 3, vol. 2, p. 345.)

Cleopatra, a city of Egypt, at the head of the Sinus Arabicus, and in the immediate vicinity of Arainon. (Vid. Arainon, VI.)
CLI

CICERO, a narrow passage on the coast of Lycia, near Phaselis. (Vid. Phasellis.)

CLINIAS, i. A Pythagorean philosopher and musician, 520 years before the Christian era. (Elian., V. H., 14, 23.)—II. An Athenian, said by Herodotus (8, 17) to have been the bravest of his countrymen in the battle fought against the Persian fleet at Artemision: and the Athenians are said by the same writer to have conducted themselves on that occasion with the greatest valour of any of the Greeks. This Clisthenes, it must be observed, was one of the celebrated Alcibiades. He married Dinomache, the daughter of Megacles, grandson to Agariste, the daughter of Clisthenes, tyrant of Sicyon. He fell at the battle of Coronea. Consult the learned note of Valckenaer (ad Herodot., l. c.) for other particulars respecting this Clisthenes. III. The father of Aratus, killed by Abantidas, B.C. 263. (Vid. Aratus II.)

Clito, one of the Muses. She presided over history, and was numerously represented as holding a half-opened roll. The invention of the cithara was ascribed to her. Having drawn on herself the anger of Venus, by taunting her with her passion for Adonis, Clito was inspired by the goddess with love for Pierus, the son of Magnes, and bore him a son named Hycanthus. (Apollo., 1, 3, 2, seqq.) Her name (Κλίτω) is derived from κλέως (Ionic for κλέος), glory, renown, &c., because she celebrates the glorious actions of the gods, and is herself very brave.

Clitomachus, a native of Carthage. (Diag. Lat., 4, 67, seqq.) In his early years he acquired a fondness for learning, which induced him to visit Greece for the purpose of attending the schools of the philosophers. From the time of his first arrival in Athens he attached himself to Carneades, and continued his disciple until his death, when he became his successor. He seems to have been a man of great industry, and made himself master of the systems of the other schools; but professed the doctrine of suspension of assent, as it had been taught by his master. Cicero relates, that he wrote four hundred books upon philosophical subjects. At an advanced age he was seized with a lethergy. Recovering in some measure the use of his faculties, he said, "The love of life shall deceive me no longer," and laid violent hands upon himself. (Cicero, Phil., 1, 47, 1.)

Clitumnus, a river of Umbria, rising in the vicinity of Spoletum, and falling into the Timis, and both together into the Tiber. The modern name of the Clitumnus is Clitumno. It was famous, according to Virgil, for its milk-white herds, selected as victims in the celebration of the triumph. (Verg., Georg., 2, 146.—Propert., 2, el. 19, 25.—Sil. Ital., 8, 452.—Jun., 12, 13.—Claud., 6, Cons. Hon., 506.) The beautiful description which the younger Pliny (Ep., 8, 8) has left us of this sacred river and its little temple, the ruins of which are still to be seen near the place of Petrainingo, called the Cistero, between Foligno and Spoleto, will be read with most pleasure in the original. (Compare Venuti, Osservazioni sopra il fiume Clitunno, del suo Culto e Tempio, Rom., 1773, 4to.—Cramer's Ancient Italy, vol. 1, p. 270.) According to Eustace, white herds are still seen wandering over the rich plain watered by this river. (Classical Tour, vol. 1, p. 322.)

Citrus, a familiar friend and foster-brother of Alexander, who had saved the king's life in battle. Alexander killed him with a javelin in a fit of inebriety, because, at a feast, he preferred the actions of Philip to those of his son. (Vid. Alexander.)

Clocasia, a goddess at Rome, who presided over the cloaca. These cloaca were sewers for carrying off the filth of the city. The main one was called Cloaca Maxima. From what remains of the Cloaca Maxima at the present day, we may infer that the praise which the ancients bestowed on the Roman cloaca generally was not unmerited. The first cloaca were constructed by the two Tarquins. Tarquinius Priscus drained the low grounds of the city about the Forum, and the valleys lying between the hills (the Palatine and Capitoline), by cloaca, which were carried into the Tiber. (Liv., 1, 38.) But the draining was imperfect, and the Cloaca Maxima was in consequence built by Tarquinius Superbus. (Liv., 1, 56.) It crossed the Roman Forum beneath the level of the pavement, and in ancient times it is said that the tunnel was so large that a wagon loaded with hay could easily pass under it. (Strabo, 253.) Pliny expresses his wonder at the solidity and durability of this great underground drain, which, after 800 or 900 years, still remained uninjured and entire (36, 15). At the present day, however, all that we see of it is the upper part of a gray massy arch of peperin stone, as solid as the day it was built, through which the water almost imperceptibly flows. Though choked up nearly to its top by the artificial elevation of the surface of modern Rome, it is curious to see it still serving as the common sewer of the city, after the lapse of nearly 2580 years. When the Tiber, into which the sewers being made from time to time on Mount Aventine and other places, by the censors M. Cato and Valerius Flaccus (Liv., 39, 44), but more especially, by Agrippa, who, according to Pliny (l. c.), is said to have introduced whole rivers into these hollow channels, on which the city was, as it were, suspended, and thus was rendered subterraneously navigable. (Compare Strabo, l. c.—Cassiod., Var. Ep., 5, 30.) It would seem, according to the common account, that the early cloaca were at first carried through the streets; but that, through want of regularity in rebuilding the city after it was burned by the Gauls, they in many places passed under private houses. Some architects, in order to support their improbable theory that the construction of the arch was not known even in Greece (where the art had reached a perfection it will never more attain) till about a hundred years before the Christian era, have attempted to controvert the antiquity of the Cloaca Maxima, and attribute it to a much later period. (Compare Hirt, Gesch. der Baukunst, vol. 2, p. 123, and Müller, Etrusker, vol. 1, p. 259.) But if it had really been rebuilt, as a late learned antiquary chose to imagine, by Augustus, would it have escaped the notice of Suetonius? or would Livy, that minute and accurate historian, who extols its grandeur and antiquity, and carefully chronicles the erection of every temple and basilica, have failed to record such a work as this, which must have been executed before his own eyes, and by the very prince in whose court he was living? On the
contrary, he expressly says, "that Tarquin made the great subterranean causes to carry off the filth of the city, a work so vast that even the magnificence of the present age has not been able to equal it." (Liv., 1, 56.) Pliny also, who records its repair in the reign of Augustus, adds the same, and after 800 years, this opus omnium maximum continued as strong as when first built by Tarquin. It may, indeed, seem incredible, that the Romans, in that rude age, should have been capable of executing so noble a piece of architecture; but Livy tells us, "that Tarquin sent for artists from every part of Etruria," for this and his other public works. Nothing can be clearer than this evidence to the Cloaca Maxima being the work of the Tarquins; and it seems to be confirmed by the words, "the antiquaries will pervert or overlook facts when they interfere with their favourite theories. This cloaca, therefore, is doubly interesting, not only from its extraordinary grandeur and antiquity, but from being, perhaps, the sole, and certainly the finest, remains of Etruscan architecture that have come down to our times. (Rome in the 19th Century, vol. 1, p. 249, note. Compare Burgess, Antiquities of Rome, vol. 2, p. 232.)

Cloanthus, one of the companions of Æneas, from whom the family of the Cluentii at Rome claimed descent. (Virg., Æn., 5, 122.)

Clodia, f. a sister of Clodius the tribune, and a female of the most abandoned character. She married Q. Metellus Celer, and was suspected of having poisoned him.—II. The younger sister of the preceding, and equally infamous in character. She married Lucullus, but was repudiated by him for her scandalous conduct. (Plut., Vit. Luculli.)

CLodia Lex. I. de Cypro, was brought forward by the tribune Clodius, A.U.C. 695, that Cyprus should be taken from Ptolemy and made a Roman province. This was done in order to punish that monarch for having refused Clodius money to pay his ransom when taken by the pirates, and to remove Cato out of the way by appointing him to see the law executed.—II. Another, de Magistratibus, A.U.C. 695, by the same. It forbade the censors to put a stigma or mark of infamy upon any person who had not been actually accused and condemned by both of them.—III. Another, A.U.C. 695, which required the same distribution of corn among the people gratis, as had been given them before at six asses and a triens the modulus.—IV. Another, A.U.C. 695, by the same, de Judicia. It called to an account such as had executed a Roman citizen without a judgment of the people, and all the formalities of a trial. Cicero was aimed at by this law, and soon after, by means of a hired mob, was actually banished.

Clodius, Publius, a Roman descended from an illustrious family, but notorious as a bold and reckless demagogue, and a man of the most corrupt morals. Besides being guilty of the most revolting turpitude in the case of his nearest female relatives, he introduced himself, in woman's clothing, into the house of Julius Caesar, with improper designs against Pompey, the wife of Caesar, of whom he was enamoured, and who was then celebrating the mysteries of the Bona Dea, at which no male was allowed to be present. He was tried for the sacrilege, and escaped punishment by bribing the judges. In order to be eligible to the tribuneship, he relinquished his patrician rank, and had himself adopted into a plebeian family. While filling the office of tribune he had numerous laws passed, favourable to the people, and adverse to the patricians. He procured for Cato, whom he detested, the government of Cyprus, in order that he might lose his reputation in this difficult office, and along with it the influence which he enjoyed at Rome. He cherished equal hatred towards Cicero, whom he finally succeeded in driving from the city. So troublesome at last did he become even to his own party, that, in order to keep him in check, Pompey procured the recall of Cicero from exile, which he could not effect, however, without the strenuous aid of the tribune Milo; and not long after Clodius was slain in a conflict that took place between his followers and those of Milo. (Cic., Or. pro Mil.—Plut., Vit. Cic.)

Clelia, a Roman virgin, given as a hostage to Porsenna. According to the old Roman legend, when Porsenna and the Romans made a peace after the affair of Mucius Scacovia, the latter people gave hostages to the king, ten youths and ten maidens, children of noble parents, as a pledge that they would truly keep the peace which had been made. It happened, as the story relates, that at the camp of the Etrurians, two youths, one of the maidens, escaped with her companions, and fled to the brink of the river; and, as the Etrurians pursued them, they all rushed into the water and swam in safety across the stream. But the Romans, jealous of their reputation for good faith, sent them all back to the camp of Porsenna. Not to be outdone in generosity, the monarch gave her and her female companions their freedom, and permitted her to take with her half of the ransom. Whereupon, with the delicacy of a Roman maiden, she selected those only who were of tender years. The Romans raised an equestrian statue in honour of her, on the highest part of the Sacred Way. (Liv., 2, 13.) She was also rewarded with a horse and arms. (Fragn. Dion. Cass., 4.—Bekker, Anecd., 1, p. 133, 8.) There is another story, that Tarquinus fell upon the hostages as they were conducted into the Etrurian camp; and, with the exception of Valeria, who fled back to the city, massacred them all. (Plin., 34, 13.)

Clotho, the youngest of the three Parcae, daughters of Jupiter and Themis. (Vit. Parcae.) She held the distaff, and spun the thread of life, whence her name (λαόθεν, to spin).

Cluentius, a Roman, who, at his mother's instigation, was accused of having poisoned his stepfather Oppianicus. He was defended with great ability by Cicero, in an oration which is still extant. (Vid. Cicero.)

Clusium, now Chiusi, a town of Etruria, on the banks of the Clanis. Its more ancient name was Camars. (Liv., 10, 25.—Compare Müller, Etrusker, vol. 1, p. 102, where the name Camars or Camara is regarded as a proof of the place's having been originally possessed by the Umbrian race of the Camerates. Consult also Clopper, R. Ant., vol. 2, p. 567.) The Gauls under Brennus besieged it, but marched to Rome without taking it. It was at Clusium that Porsenna, while his court; and near this city he erected for himself the splendid mausoleum of which Pliny has transmitted to us a description on the authority of Varro. (Plin., 36, 13.) The whole account seems to bear no small appearance of fiction; for, had such a stupendous work really existed, some traces of it would surely have remained, not merely in Pliny's day, but even in the present age.—Pliny (3, 5) makes a distinction between Clusium Vetus and Novum; and a village, named Chiusus, supposed to represent the latter, is pointed out at the foot of the Apennines, north of Arezzo, in confirmation of this distinction. (Cramer's Anc. Italy, vol. 1, p. 219.)

Clusius, I. or Clusius, a river of Gallia Transpadana, rising among the Euganei, and flowing between the Lake Bencasus and the river Mela. It is now the Chiesa, or Chio, one of the tributaries of the Oglio.—II. The surname of Jannus, when his temple was shut. (Ovid, Fast., 1, 130.)

Clvmina, I. a daughter of Oceanus and Tethys, who married Iapetus, by whom she had Atlas, Prometheus, Menoetius, and Epimetheus. (Hesiod, Theog., 508, seqq.)—II. The mother of Phœthon. (Ovid, Met., 1, 766.)—III. A female servant of Helen, who ac-
compounded her mistress to Troy when she eloped with Paris. (Ovid, Heroid., 17, 267.—Hom., Ill., 3, 144.)

Clymenides, a patronymic given to Phaethon's sisters, who were daughters of Clymena.

Clypea (called by the Greek writers Aspis), now Akhina, a town of Africa Propria, 22 miles east of Carthage. It was named after a shield, which was shaped like a shield. Agathocles seized upon this place when he landed in Africa, fortified it, and gave it, from the shape of the promontory, the name of Aspis ("a shield" in Greek, same as Clypeus in Latin). The native called the promontory Taphitis. This town served as a stronghold to Regulus in the first Punic war. (Lucan, 4, 586.—Liv., 27, 29.—Cæs., B. C., 2, 29.)

Clytemnestra, a daughter of Tyndarus, king of Sparta, by Leda. She was born, together with her brother Castor, from one of the eggs which her mother brought forth after her amours with Jupiter, under the form of a swan. She married Agamemnon, king of Mycenæ. When this monarch went to the Trojan war, he left his wife and family, and all his affairs, to the care of his relation Agæthus. But the latter proved unfaithful to his trust, corrupted Clytemnestra, and usurped the throne of Agamemnon, on his return home, was murdered by his guilty wife, who was herself afterward slain, along with Agæthus, by Orestes, son of the deceased monarch. (Consult, for a more detailed account, the articles Agamemnon and Orestes.)

Cnidus, a town and promontory of Doris in Caria, at the extremity of a promontory called Triopium. The founder of the place is said to have been Triopas. (Diod., 6, 61.—Pausan., 10, 2.) From him it received at first the name of Triopium, which at a later period was confined merely to the promontory on which it stood. (Scylax, p. 38.—Herodot., 1, 174.) Venus was the chief deity of the place, and had three temples erected to her, under the several surnames of Doris, Aëra, and Etulce. In the last of these stood a celebrated statue of the goddess, the work of Praxiteles. (Pausan., 1, 1.—Plin., 36, 5.—Her., Od., 3, 28.—Catull., 36, 11.) Nicomedes of Bithynia wished to purchase this admirable production of the chisel, and actually offered to liquidate the debt of Cnidus, which was very considerable, if the citizens would cede it to him; but they refused to part with what they esteemed the glory of their city. (Plin., l. c.) A drawing of the Venus of Cnidus, from an antique statue found near Rome, is given by Pliny, at the end of his lectures on sculpture (p. 22). The shores of Cnidus furnished in ancient times a great abundance of fish. The wines were famous, and Theophrastus speaks of the Cnidian onions as of a particular species, being very mild, and not occasioning tears. Cnidus was the birthplace of the famous mathematician and astronomer Eudoxus; of Agatharchides, Theopompos, and Ctesias. It is now a mere heap of ruins; and the modern name of the promontory is Cape Créo. (Mannert, Geogr., vol. 6, pt. 3, p. 236.) An account of the promontory of Cnidus is given in Parkinson's Travels, vol. 3, p. 261, from Walpole's MS. Journal.

Cnosus (Κνωσός, more correct than Cnosos, Κνωσός, if we follow the language of coins and inscriptions), the royal city of Crete, on the northern coast, at a small distance from the sea. Its earlier name was Serratus, which appellation was given also to the inaccessible stream that flowed beneath its walls. (Strab., 476.) It was indebted to Minos for all its importance. The other river, the Cretica, is said to have divided the island into three portions, in each of which he founded a large city; and fixing his residence at Cnosus, it became the capital of the kingdom. (Diod. Sic., 5, 78.) It was here that Dedalus cultivated his art, and planned the celebrated labyrinth. Cnosus long preserved its rank among the chief cities of Crete, and, by its alliance with Gortyna, obtained the dominion of nearly the whole island. The vestiges of this city are discernible at the present day, to the east of the town of Candia, which has communicated to the island its present name. The precise site of the ruins is called Long Candia. (Cramer's Anc. Greece, vol. 3, p. 368, seqq.) The name of this city is sometimes given in inscriptions as Enos, and the T occurs actually on some coins, but the more common initial letter in Greek inscriptions and on coins is the K. (Compare Rasche, Lex. Rei Num., vol. 2, col. 649, seqq.)

Coclius, a king of Sicily, who hospitably received Dedalus, when he fled before Minos. When Minos arrived in Sicily, the daughters of Cocclus destroyed him. (Ovid, Met., 8, 261.)

Cochius New. — Vid. Nerva I.

Coccygus, a mountain of Argolis, between Halice and Hermione. Its previous name was Thornaz; but it received the appellation of Coccygus from the circumstance of Jupiter's having been metamorphosed there into the bird called Coccyx (Κόκκυξ) by the Greeks. On its summit was a temple sacred to that god, and another of Apollo at the base. (Pausan., 2, 36.)

Cocountus Promontorium, a promontory of Brutium in Lower Italy, below the Sinus Scylaeus. The modern name is Cape Stilo. It marked the separation between the Ionian and Sicilian seas. (Polyb., 2, 14.)

Cocles, Publius Horatius (or, as Niebuhr gives it, Marcus Horatius), a Roman who, alone, opposed the whole army of Porsenna at the head of a bridge, while his companions behind him were cutting off the communication with the other shore. When the bridge was destroyed, Cocles, after addressing a short prayer to the god of the Tiber, leaped into the stream, and swam across in safety with his arms. As a mark of gratitude, every inhabitant, while famine was raging within the city, brought him all the provisions he could stint himself of; and the state afterward raised a statue to him, and gave him as much land as he could plough round in a day. (Liv., 2, 10.—Dion. Hal., 1, 24.) Whatever we may think of the other parts of the story, that portion of it which relates to the land is evidently mere poetical exaggeration. Polybius (6, 58) makes Cocles to have perished in the river. (Consult, as regards the whole legend, the remarks of Niebuhr, Rom. Hist., vol. i., p. 476, seqq., Camb. transl.)—The name Cocles properly means "a person blind of one eye." It appears to be the old form oecles (from oculus), with a harsh initial aspiration. (Varro, L. L., 6, 3.)

Cocytus, a river of Epirus, which, according to Pausanias (1, 17), blended its nauseous waters with those of the Acheron. Its fancied etymology (from κοιτων, "to lament," "to wail"), the unwholesomeness of its waters, and, above all, its proximity to the Acheron, induced the poets to make it one of the rivers of the lower world. (Virg., Georg., 3, 35.—Id., Æn., 6, 297, &c.)— Leaving Potamia, observes an intelligent traveller, "we passed over a marsh or bog, formed by the overflowing of the river Varea, which is probably the Cocytus of antiquity. It flows from below the mountains of Margariti, opposite Paramithia, and, after skirting the opposite side of the plain, empties itself into the Acheron, at a small distance from its mouth, below the village of Téchonãdides. Pausanias, in his description of the Acheron, intimates that the Cocytus also flows in the same plain; and no other river is called the ναόδος τοῦ Σουλη, and the Varea," is to be discovered in the Phanari. The very appellation Varea (βαράδα), which is an expression of grief or aversion, seems to strengthen the conjecture; and not only this, but the water of the Varea exactly coincides with the expression of Pausanias, ἐσπαραπταρτον, for it flows slowly over a deep muddy soil, imbibing noxious qualities.
from innumerable weeds upon its banks, and occasions the greatest part of the malaria of the plain." (Hughes, Travels in Greece, &c., vol. 2, p. 311.—Compare Warde, vol. 3, p. 554.)

Codorus, one of the ancient names of the Baltic. Mela (3, 3, 6) represents it as full of large and small islands, the largest of which he calls Scandinvia; so also Pliny (4, 13). The name Codorus seems to have some reference to that of the Goths in sound. The modern term Baltic appears to be derived from the Celtic Balt or Belt, denoting a collection of water; whence also the name of the straits, Great and Little Belt. (Malte-Bruns, Dict. Geogre, p. viii.)

Codomannus, a surname of Darius the Third, king of Persia. (Vid. Darius III.)

Codrus, the last king of Athens. He received the sceptre from his father Melanthus, and was now far advanced in years, having reigned for a considerable time, when some of the Dorian states united their forces for the invasion of Attica. The Dorian army marched to Athens, and lay encamped under its walls; and the oracle at Delphi had assured them of success, provided they spared the life of the Athenian king. A friendly Delphian, named Cleomantis, disclosed the answer of the oracle to the Athenians, and Codrus resolved to devote himself for his country in a manner not unlike that which immortalized among the Romans, at a later date, the name of the Deci. He went out at the gate disguised in a woodman's garb, and, falling in with two Doriens, killed one with his bill, and was killed by the other. The Athenians thereupon sent a herald to claim the body of their king, and the Dorian chiefs, deeming the war hopeless, withdrew their forces from Attica.—This story, which continued for centuries to warm the patriotism of the Athenians, has been regarded by some as altogether improbable. It would seem, however, to be confirmed by the fact mentioned by the orator Lycurgus (contra Lescr., p. 158), that Cleomantis, and his posterity, were honoured with the privilege of sharing the entertainment provided in the Prytaneion at Athens for the guests of the state. But we scarcely know how the current tradition is to be reconciled with another preserved by Pausanias (7, 25), that a part of the Dorian army effected their entrance by night within the walls, and, being surrounded by their enemies, took refuge at the altars of the Eumenides on the Areopagus, and were spared by the piety of the Athenians. If, however, either must be rejected as a fabulous story, both are equally destitute of authority, being the fragmentary remains of two different legendary accounts of the same event. (Vid. Archontes.—Thirlestall's Hist. of Greece, vol. 1, p. 275, vol. 2, p. 15.)

Coele (Ko'la), or, the Hollow, I. the northern division of Elis.—II. A quarter in the suburbs of Athens, appropriated to sepulchres. Cimon and Thurcydides were both interred in this place. (Herodot., 6, 103.—Plut., Vit. Cimon.—Pausan., 1, 23.) Coele is chosen as the name of some among the oriental orbes. Col. Leake places, with great probability, this hollow way or gate "to the south of the acropolis, near the gate of LUMbarthari, which answers to the POMTE MELITENSES." (Cramer's Ancient Greece, vol. 2, p. 336.)

Colesyria (Ko'la Syripa), or, the "Hollow Syria," a tract of country between the ranges of Libanus and Antilibanus; in Syria, and stretching inland from the coast as far as the country round Damasci. In the time of Dioscletian it received the name of Phocicia Libanensia. The modern appellation is given by some as El-Bakah. (Melcl, 1, 11.—Plut., 5, 12.—Jornandes, 12, 9.—Sozomen, 12, seq.)

Cylia, a law passed A.U.C. 630, that in trials for treason the people should vote by ballot, which had been excepted by the Cassian law. (Consult Cic., de Leg., 3, 16.)

Clytius, a young Roman of considerable talents and acquirements, but of dissolute character, who had been intrusted to the care of Cicero on his first introduction to the Forum. Having imprudently engaged in an intrigue with Glosia, the well-known sister of Clodius, and having afterward deserted her, she accused him of an attempt to poison her, and of having borrowed money from her in order to procure the assassination of Dio, the Alexandrian ambassador. He was defended by Cicero in a speech still extant, and obtained an acquittal. We find him subsequently attaining to the praeitura, and engaging eventually in the civil contest, in which he lost his life. In this, as in most other prosecutions of the period, a number of charges, unconnected with the main one, seem to have been accumulated in order to give the chief accusation additional force and credibility. Cicero had thus to defend his client against the suspicions arising from the general libertinism of his conduct. Middleton has pronounced this to be the most entertaining of the orations which Cicero has left us, from the vivacity of wit and humour with which he treats the gallantries of Clodia, her correspondence with Cicelius, and, in general, the extravagance and licentiousness of youth. This oration was a particular favourite with the celebrated Mr. Fox. (Dunlop's Roman Literature, vol. 2, p. 309, seq.—Correspondence of Wakefield and Fox, p. 50.)

Coeles, one of the earliest deities, and the spouse of Terra. He is the same with the Grecian Uranus. (Vid. Uranus.)

Coeus (Ko'eus), one of the Titans, son of Coelus and Terra, or, to adopt the Grecian phraseology, of Uranus and Ge (Ges). His name indicates his cosmographical character, being derived from kata tau, "to burn." (Vid. Titan. He was the father of Latona by Phoebe. (Hesiod, Theog., 404, seq.)

Cohors. Vid. Legio.

Colchis, the inhabitants of Colchis.

Colchis, a country of Asia, having Iberia on the east, the Euxine on the west, the Caucasus on the north, and the Caucasus on the south. It is famous in poetical legends as having been the land to which the Argonautic expedition was directed in quest of the golden fleece. (Vid. Argonauti.) It corresponds at the present day to what is called Mingrelia. Colchis abounded, according to Strabo, with fruit of every kind, and every material requisite for navigation. Its only exceptionable product was the honey, which had a bitter taste. The linen manufactured, however, was of a beautiful purplish colour, according to Herodotus (2, 105), after the manner of Egypt; the two kinds, however, being distinguished from each other by name, since the Greeks called the Colchian by the name of Sardonian, but that which came from Egypt by the proper name of the country. This species of manufacture, together with the dark complexion and crisped locks of the natives, were so many arguments with the ancients to prove the inhabitants of Egypt the progeny, independently of other proofs drawn, according to Herodotus, from their language and mode of life. The historian further informs us, that, being struck by the resemblance between the Colchians and Egyptians, he inquired, from motives of curiosity, of both nations, and discovered that the Colchians had more recollection of the Egyptians than the Egyptians bad of the Colchians. The Egyptians, however, told him, that they believed the Colchians to have been descended from a part of the army of Se
soturis, left behind by him in this quarter to guard the 
place when he was going on his Scythian expedition, and 
who were finally established here as a military colo-
ny. Another argument, in favour of the identity of the 
Colchians and Egyptians, is drawn by Herodotus from 
the singular circumstance of the rite of circumcision 
being common to both. (Compareマイシェル, Mss. 
Rech., vol. 4, § 185.—Meiners, in Comment. Soc. 

This account here given by Herodotus of the Col-
lchians has elicited a great diversity of opinion among 
modern scholars. Heeren, for example, thinks that 
the Egyptian colony in Colchis owed its existence to 
the Eastern custom of transplanting vanquished na-
tions, either in whole or part, to other and more dis-
ctant regions; and he supposes the Colchian settle-
ment to have been the result of some such transplanta-
tion by Nebuchadnezzar, or some other of the Asiatic 
conquerors, who were transplanted into Egypt. (Ileen, 
vol. 1, pt. 1, p. 405, not.) Holstenius makes the Colchians 
to have been a colony of Jews, transported to the 
shores of the Euxine by some Assyrian king. (Ep. 
ad divers. ed. Boissonad., p. 510.) Michaelis views 
them as of Syrian origin, led out from home after the 
overthrow of the kingdom of Damascus. (Mos. Rech., 
vol. 4, § 185, p. 18, not.) Ritter maintains a theory 
altogether different, equally debatable. But, in any 
view, he makes the Colchians of Indian origin, and in 
this way explains their acquaintance with the manufacture 
of linen. According to him they were a mercantile 
colony, established on the shores of the Euxine for 
the purposes of traffic, and the very name of Sardonia, 
as applied to the Colchian linen, he traces, along with 
the term Sisudon (Σισόδων, “fine linen”), to the land of 
Sardin (Sind) or India. (Ritter, Vorhalle, p. 35, 
seqq.)

Collias Promonturium, a promontory of Attica, 
about twenty stadia from Phalerum, and still retaining 
its ancient name, though occasionally designated by 
that of Tripyrgo. Here was a temple consecrated to 
Venus, another to the goddesses named Genetyllides 
(Pausan., 1, 1, —Strab., 398), and also chapels of 
Pan and Ceres. (Meurs., de Piraeo, c. 11, p. 574.) 
Collias was also celebrated for its earthenware. (Plint., 
de Epist., vol. 6, p. 153.—Elym. Mag.—Suid.) Ritter indulges in some curious spec-
ulations on the name Colias, and finds in it a connect-
ing link between the religious systems of the eastern 
and western world. (Vorhalle, p. 54, seqq.)

Collettia, I. a town of Lattium, to the north of Ga-
bil, and colonized from Alba. It was rendered famous 
in Roman history by the self-immolation of the chaste 
Lucretia. (Liv., 1, 58.) In the time of Strabo (192) 
it was but a small village. The ruins of this place 
are still to be traced on a hill, from which hence 
has obtained the name of Castelalcio. (Nibby, Viag-
gio Antiquario, vol. 1, p. 240.)—II. A town of Apul-
ia, near Mount Garganus, now Collatini. (Plin., 3, 
11.—Front. de Col.)

Collatinus, I. Tarquinius, grandson of Aruns 
elder brother of Tarquinius Priscus. He derived his 
surname from Collata, where he resided, and with the 
principality which he was invested. Collatinus was 
the husband of the celebrated Lucretia; and, after 
the expulsion of the Tarquins, he and Brutus were elected 
the first consuls. His relationship, however, to the 
Tarquin family excited distrust, and when a law 
was passed abating the whole Tarquinian house, he 
was forced to lay down his office and depart from Rome. 
He ended his days at Lavinium. (Liv., 1, 60.—Id., 
2, 2.)

Collina, I. one of the gates of Rome, on Mount 
Quirinalis, so called, a collinus Quirinalis et Viminalis. 
—It was called also Quirinalis. To this gate Hanni-
bal rode up and threw a spear within the city. (Ouid. 
Fast., 4, 871.) II. The name of one of the four re-
gions or wards into which Rome was divided by Ser-
vius Tullius. The other three were Palatina, Subur-
rana, and Esquiline. (Liv., 5, 41.—Id., 36, 10.— 
Plin., 34, 6.)

Colonna, I. a city of Troas, north of Larissa. It 
is placed on the coast by Sicyllus and others. Pliny, 
however, assigns it a position inland. Strobos makes 
it the residence of a Thracian prince, who ruled over 
the adjacent country, and also the island of Tempe. 
(Mannert, Geogr., vol. 6, pt. 3, p. 405.)—II. A town 
of Mydia, in the territory of Lampacus. (Arrian, 1, 
13.—Strab., 589.)

Colonía Agrípína, a city of Germany, on the 
Rhine. (Vind. Agrípína III.)

Colonus, a demus of Attica, to the northwest 
of the Academy, near Athens. It was named Hippioes, 
from the altar erected there to the Equestrian Nept-
tune, and is rendered so celebrated by the play of 
Sophocles (Edipus at Colonus) as the scene of the 
last adventures of Ædipus. It was the native borough 
of the poet, and is beautifully described by him in one 
of the choruses of the same play. From Thucydes 
we learn that Colonus was distant ten stadia from the 
city, and that assemblies of the inhabitants were on 
some occasions convened at the temple of Neptune. 
(Thucyd., 8, 67.)

Colophon, a city of Ionia, northwest of Ephesus. 
It was founded by Andronem, son of Codrus, and was 
situate about two miles from the coast, its harbour, 
called Notium, being connected with the city by means 
of long walls. Colophon was destroyed by Lysima-
chus, together with Lebedus, in order to swell the popu-
lation of the new town he had founded at Ephesus. 
(Pausan., 1, 9.—Diod. Sic., 20, 107.) The Col-
ophonians are stigmatized by several ancient writers 
as very prudent and skilled in the art of war (Athen. 
12, p. 506), and yet Strabo says, that, at one period, 
this place possessed a flourishing navy, and that its cavalry 
was in such repute, that victory followed wherever 
they were employed. Hence arose the proverb Κολο-
φόνων ἑπιφθεῖαν, “to add a Colophonian,” i. e., to put 
the finishing hand to an affair. The scholar at Plato, 
however, gives another explanation of the saying, 
which appears somewhat more probable, though its 
authority is not so good. He states, that the Colo-
phonians had the right of a double vote in the general 
assembly of the Ionians, on account of the service 
they had rendered the confederacy by inducing the city 
of Smyrna to join it. Hence they were frequently 
enabled to decide points left undetermined from a 
parity of suffrages. (Schol. ad Plat. Theaet., p. 319.) 
It arose from this old saying, that, in the early periods 
of the art of printing, the account which the printer 
gave of the place and date of the edition, being the 
last thing printed at the end of the book, was called 
the Colophon. This city was one of the places which 
contended for the birth of Homer, and was unquestion-
ably the native place of Mimnermus and Hermesianax. 
It was also famed for its resin, whence the name of 
Colophony, otherwise called Spanish wax, and Grecian 
resin. (Cramer's Asia Minor, vol. 1, p. 367, seqq.)

Colosse, a large and flourishing city of Phrygia 
Pasatiana, in an angle formed by the rivers Maeander 
and Mander. Strabo speaks of the great profits accruing 
from its wool-trade. One of the first Christian churches 
was established here, and one of St. Paul's epistles 
as addressed to it. In the tenth year of the reign 
of Nero, or about two years after the epistle of St. Paul 
was sent, this city was nearly destroyed by an 
earthquake. Under the Byzantine emperors, Colosse, 
being in a ruinous state, made way for a new and 
magnificent Colosseum, which was set up at a short dis-
tance from it. Some remains of Colosse and its more 
modern successor are to be seen near each other on 
the site called Khonas, or Kanassi, by the Turks. (An-
mell's Seven Churches, p. 92.)—Hierocles writes the
name of this place Ἀρτέμιδος, a reading given also by numerous MSS. of St. Paul's Epistles. But Herodotus, Xenophon, and Strabo give the more customary forms, and they also on their side the evidence of the authority of B.C. 360, not to be disputed. (Cramer's Asia Minor, vol. 2, p. 44.)

Colosseus, a celebrated brazen image at Rhodes, which passed for one of the seven wonders of the world. It was the workmanship of Chares, a pupil of Lysippus, who was employed twelve years in making it. Its height was 105 Grecian feet; there were few persons who could encompass the thumb with their arms, and its fingers were larger than most statues. In 404 B.C., when its cervices were large stones, placed there to counterbalance its weight, and render it steady on its pedestal. The cost was 300 talents (nearly $317,000), and the money was obtained from the sale of the machines and military engines which Demetrius Poliorcetan had left behind him when he raised the siege of Rhodes. (Plin., 34, 18.)

The Colossus is generally supposed to have stood with distended legs upon the two moles which formed the entrance of the harbour. As the city, however, had two harbours, one inside and one, much smaller, within which their fleets were secured, it seems more natural to suppose that this Colossus was placed at the entrance of this latter one, inasmuch as the space between the legs at the base could not have greatly exceeded fifty feet; a space too narrow to be the entrance to the main harbour. There was a winding staircase to go up to the top of the statue, from whence one might discover Syria, and the ships that went to Egypt. It was erected B.C. 360, and, after having stood about fifty-six years, was broken off below the knees, and thrown down by an earthquake. (Plin., i. c.)

Eusebius says that this occurred in the second year of the 139th Olympiad; but Polybius seems to place it a little later, in the 140th Olympiad (5, 88). The same writer adds, that the greater part of the walls and docks were thrown down at the same time. It remained in ruins for the space of 894 years; and the Rhodians, who had received several large contributions to repair it, divided the money among themselves, and frustrated the expectations of the donors, by saying that the oracle of Delphi forbade them to raise it up again from its ruins. (Strab., 652.)

In the year 672 of the Christian era, it was sold, according to Credenus, by the Saracens, who were masters of the island, to a Jewish merchant of Edessa, who loaded 900 camels with the brass. Allowing 800 pounds weight for each load, the brass, after the diminution which it had sustained by rust, and probably by theft, amounted to about 720,000 pounds weight. The city of Rhodes had, according to Pliny, 100 other colossuses, of inferior size, in its different quarters. —Compare the remarks of Ritter in relation to the worship of the sun, which prevailed in the earliest periods of Rhodes, and the connexion between this and the Colossus. He finds also his accustomed root (Col-) in the name of the statue. (Vorhalle, p. 100.)

Columella (L. Junius Moderatus), an ancient writer, born at Gades, in the reign of Augustus or Tiberius, and a contemporary, according to his own account, of Seneca and Celsus. The elder Pliny frequently makes mention of him. His father, Marcus Columella, had possessed in the province of Baetica. The son betook himself at an early period to Rome, where he passed his life, with the exception of a few holidays to Iberia and Cyprus. It is not ascertained whether he visited these latter countries as a simple traveller, or on some mission of government, for we know nothing very particularly of the circumstances of his life. We have two works of his remaining: one, entitled "De Re Rustica," in twelve books; the other, "De Arboribus." This last made, very probably, part of a work on agriculture, in four books, which Columella had published as the first edition of that which we now have in twelve books. On this supposition Cassiodorus was correct in saying that Columella had written a work in six books on rural economy. This author appears to have been but little read. Among the ancients, Servius, Cassiodorus, and Isidorus are the only ones that cite him. He fell into almost complete neglect after Palladius had made an abridgment of his work. (Vid. Palladius II.) Hence Vincent de Beauvais and Petrus de Crescentius, the latter of whom Schneider calls "diligentissimum veterum rerum rusticarum scriptorium lectorem," were not acquainted with him. (Script. Rust., ed Schneider, vol. 2, p. 5.) The statue of Columella is pure and elegant; if any reproach can be made against him, it is that of being too studied in his language on the subject of which he treats. The best edition is that of Schneider, in the "Scriptores Rustici," Lips., 1794—97, 4 vols. 8vo. That of Gesner is also in deservedly high repute, Lips., 1773, 2 vol. 4to.

Coluthus (Herculis), "The Pillars of Hercules," a name often given to Calpe and Abyla, or the heights on either side of the Straits of Gibraltar. The tradition was, that the Mediterranean had no outlet in this quarter until Hercules broke through the mountain barrier, and thus formed the present straits. The rocky height on either side of the opening was famed to have been placed there by him as a memorial of his achievement, and as marking the limits of his wanderings towards the west. (Vid. Calpe, Abyla, and Mediterranean Mare.)—Odys., 4, 351.—Virg., Æn., 11, 292.)

Colylvius, a native of Lycopolis in Egypt, supposed to have lived about the beginning of the sixth century. He wrote a poem in six cantos, entitled "Calvolymiace" (Καλυλυμίας), as well as other pieces that are now lost. He is believed also, though without any great degree of certitude, to have been the author of a poem, in three hundred and eighty-five verses, which bears the title of "the Rape of Helen" (Βέλτας Ἰωάννας). This most unfortunate imitation of Homer commences with the nuptials of Puteus and Thetis. The poet goes on, without any animation, sentiment, or grace whatsoever, to recount the judgment of Paris, the voyage of this prince to Sparta, and the abduction of Helen, which takes place after the first interview. This poem of Coluthus was discovered by Cardinal Bessarion along with that of Quintus Smyrnaeus. The best editions are, that of Van Lennep, Leonard, 1747, 8vo, improved by Shaeffer, Lips., 1825, 8vo, and that of Bekker, Berol., 1816, 8vo.

Comagene, Vid. Commagene.

Comana (orum), I. a city of Pontus, surnamed Pontica, to distinguish it from the Cappadocian city of the same name. It was situate to the northeast of Zela, and not far from the source of the Iris. (Strabo, 547.) This place was celebrated for the worship of the goddess Ma, supposed to answer to the Bellona of the Romans, and consequently revered with equal honour in the Cappadocian Comana. The priesthood attached to the temple was an office of the highest emolument and dignity, and was sought after by kings and princes. The city itself was large and populous, and kept up a considerable traffic with Armenia. The festivals of the goddess, which were held twice a year, drew thither an immense concourse from the surrounding countries and towns, as well as from more distant parts. The priests were not only exempted from the service of the temple, and most of these were courtiers. Hence it was remarked, that the citizens were generally addicted to pleasure, and the town itself was styled by some the little Corinth. The chief produce of the country was wine. When the Romans, under Lucullus, invaded Pontus, a report
was probably, by Mithradas, that they were come for the express purpose of plundering the shrine of Comana. (Cic., Or. pro Leg. Manil., § 9.) Some remains, at the present day, not far from Tokat, under the name of Komanak, sufficiently indicate the ancient site. (Cramer's Asia Minor, vol. 1., p. 307, seq.) —II. A city of Cappadocia, on the river Sarus, and the scene of a grand triumph of Commodus. He had celebrated, like its Pontic namesake (No. I.), for the worship of Mâ, the Cappadocian Bellona. The population consisted, in a great degree, of soothsayers, priests, and slaves, belonging to the sacred institution; the latter of these amounted, in the time of Strabo, to more than 6,000 of both sexes. These belonged exclusively to the high-priest, who stood next in rank to the King of Cappadocia, and was generally chosen from the royal family. The territory annexed to the temple was very considerable, and furnished a large income for the pontiff. (Cic., Ep. ad Fam., 15, 4.) It was asserted that the worship of Bellona, like that of Diana Tauropolis, had been brought from Taurus by Orestes and Iphigenia, and it was even pretended that the former had deposited within the temple his mourning locks (kôups), whence the city was called Comana. (Strab., 586.) These, of course, are fables of the Compendia Propriorum. The Bathôa of Comana was probably no other than the Annisus of the Persians and Armenians, and perhaps the Agdistis and Cybele of the Phrygians. The Cappadocian Comana was distinguished from the Pontic by the epithet of Xpoûl. The Turkish town of El Bostan is thought to represent the ancient city. (Kinnear's Travels, Appendix, p. 506. —Cramer's Asia Minor, vol. 2, p. 198, seq.)

Commagene, a district of Syria, in the northeastern extremity of that country, bounded on the north by Mount Taurus, on the west by Amanus, on the east by the Euphrates, and on the south by Cyrrhestica. Its chief city was Samestia. This tract of country had at one time rulers of its own, but became a Roman province under Domitian. Its modern name is Camash or Kamsak. (Plin., 5, 12. —Eutrop., 7, 19.)

Amml. Marcelli, 14, 28.) The name often occurs as Comagene, but the more correct form is Comagene. (Consult Rasche, Lex. Rei Num., vol. 2, col. 752.)

Commodus, L. Aurelius Antoninus, son and successor of M. Aurelius Antoninus, ascended the imperial throne A.D. 180. The reign of this prince is a scene of guilt and misery, which the historian contemplates with disgust, and is glad to dismiss with brevity. He appears, indeed, to have inherited all the vices of his mother Faustina; and his father, in selecting him for his successor, allowed the feelings of the parent to triumph over the wisdom of the magistrate. He had accompanied his father on the expedition against the Marcomanni and Quadi, but no sooner was Aurelius dead than his degenerate son became anxious to proceed to Rome, and soon concluded a hasty and disgraceful peace with the very barbarians whom his father was on the point of completely subjugating when he was cut off by disease. Notwithstanding the care which Antoninus had bestowed upon his education, Commodus was ignorant to an extreme degree, having neither abilities nor industry for profiting by the imperial example and instruction. On his return to Rome he speedily showed the bias of his natural disposition, giving himself up to unrestrained indulgence in the grossest vices. That he might do so without impediment, he intrusted all power to Perennis, prefect of the praetorian guard, a man of stern and cruel temper, who was at last slain by his soldiers for his severity. A conspiracy against the life of Commodus having failed, was followed by a long succession of judicial murders, to gratify the vengeance of the cowardly and vindictive tyrant. He was next threatened by a new danger: dissatisfaction had spread over the legions, and an attempt of Maternus, a private soldier, who headed the conspiracy, was frustrated. Commodus, during the celebration of the festival of Cybele, was so ably conceived, that he must have been successful but for the treachery of an accomplice. But neither duty nor danger could draw Commodus from the sports of gladiators or the pleasures of debauchery. Cleander, a Phrygian slave, soon succeeded to the place and influence of Perennis, and for three years the empire groaned beneath his cruelty and rapacity. At length he was put to death; but for a while, which could allay, the praetorian cavalry being defeated in the streets by the populace, until the head of Cleander was, by the emperor's command, thrown to the insur- gents. In the mean time, Commodus was indulging his base tastes and appetites, not only by gross sensuality, but by endeavouring to rule the gladiators in their sanguinary occupation. Being a very skilful archer, and of great personal strength, he delighted in killing wild beasts, and, in this sport, he was said to have rivaled the prowess of Hercules. In the gladiatorial contests, he publicly engaged so often, that he was the conqueror in 735 combats. Though luxurious in his dress, frequently resorting to the baths eight times in the day, scattering gold dust in his hair, and, from the fear of admitting the approach of a razor in the hand of another, singing off his beard, he was especially proud of exhibitions of personal strength, and frequently butchered victims with his own hands in the garb of a slaver. Among the flatteries of the obsequious senate, none pleased him more than the vote which style him the Hercules of Rome, not even that which annexed to him the titles of Pius and Felix, or which offered to abolish the name of the eternal city, and substitute for it Colonia Commodiana!—After thirteen years of unmitigated oppression, his favourite Manius ultimately became the instrument by which the Roman world was delivered from its odious master. She discovered, from some private notes of Commodus, that herself, Letaus the praetorian prefect, and Electrus the chamberlain, were on the list devoted to death: a conspiracy was immediately formed, Maria administered poison to the emperor, and, lest the measure should not prove effectual, the deed was completed by suffocation, A.D. 192. (Lamprid., Vit. Commodi, Metropol., vol. 3, p. 487.)

Compa, a city of Samnium, on the southern confines of the Hirpini. It revolted to Hannibal after the battle of Cannae, and it was here that this general left all his baggage and part of his army when advancing towards Campania. (Liv., 23, 1.) Compa was retaken by the Romans under Fabius two years afterward. (Liv., 24, 20.) Velleius Paterculus says, that Milo, the opponent of Oelodius, met his death before the walls of Compa, which he was then besieging (Vell. Paterc., 2, 68); but, according to Cassar and Pliny, this event took place near Cossa in Lucania. The modern Cunza occupies the site of the ancient city. (Cramer's Anc. Italy, vol. 2, p. 233.)

Comum, a city of Gallia Cisalpina, at the southern extremity of the Lucus Larius, or Lago di Como. It was originally a Gallic settlement, and continued to be an inconsiderable place until a Greek colony was established here by Pompeius, Strabo and Cornelius Scipio, and subsequently by Julius Caesar. Comum thenceforth took the name of Novum Comum. (Strabo, 212. —Poracchi Nobilta della Citta di Como, vol. 1, p. 10.) The enemies of Caesar, among whom were the consuls Cl. Marcellus and L. Cornelius Lentulus, appear to have taken the lead, and used every
out to ruin the colony, and even went so far as to propose a law which would deprive it of its municipal rights. (Appian, Bell. Civ., 2, 26.—Plut. Vit. Ces. —Suet., Vit. Jul., 28.) If they succeeded in their designs, it was only for a short time; since we may collect from the letters of the younger Pliny, who was born at Comum, that his native city was in his time in a very flourishing state, and in the enjoyment of all the privileges which belonged to a Roman corporation, independently of the prosperity and affluence it would naturally derive at the peculiar advantages of its situation. (Plin., Ep., 3; &c.—Id. ibid., 4, 13.—Id. ibid., 4, 24.) Comum is now Como. (Cramer's Anc. Italy, vol. 1, p. 60.)

CONC, a people of Spain, among the Cantabri. According to Horace (Ode, 3, 4, 34), they delighted in mingling the blood of horses with their drink. This same trait is mentioned by Silius Italicus (3, 390, seqq.), who makes them of Scythian origin, tracing them up to the parent stock of the Massagetae. Strabo likewise speaks of a resemblance between them and the Scythians in certain customs. The Scythian Massagetae, according to Dionysius Periegetes (v. 743, seqq.), drank milk mixed with horse's blood; which is also ascribed to the Geloni by Virgil (Georg., 3, 463); while Pliny states, that the Sarmatian mixed milk with the milk of mares, or with the blood drawn out of their legs. Their chief town, Concana, is now called San-tulpia, or Cangas de Onis. (Virg., G., 3, 463.—Sil. Ital., 2, 300.—Appian, Egid., 3, 4.)

CONDE, a people of Gallia Belgica, to the south of the Eburones. Their country answers at the present day to the archiepiscopacy of Condroz, forming part of the bishopric of Liège. (Cas., B. G., 2, 4.—Lemaire, Ind. Geogr. ad Cas., vol. 4, p. 239.)

CONFLIPTES, a city of the Treviri, at the confluence of the Moselle and Rhine, now Coblenz. This town, in the time of the Romans, was the station of the first legion; and afterward became the residence of the successors of Charlemagne. (Anton., Itin.—Tab. Pout.—Cas., B. G., 4, 15.—Amm. Marcell., 16, 3.)

CONIMBrica, a town of Lusitania, near the seacoast, on the river Munda, now Coimbra in modern Portugal. As regards the termination of the ancient name (bricca), consult remarks under the article Mesembria.

CONON, I, a distinguished Athenian commander, was one of the generals who succeeded Alcibiades in the conduct of the fleet during the war. Having engaged with Callicratidas, the Spartan admiral, he lost thirty vessels, and was compelled to take shelter in the harbour of Mytilene, where he was blockaded by his opponent. The victory gained by the Athenians at the Arginusæ released him at length from this situation. Being subsequently appointed along with five others to the command of a powerful fleet, he proceeded to the Hellespont, where Lysander had charged of the Lacedæmonian squadron. The negligence of his fellow-commanders, the result of overweening confidence in their own strength, led to the fatal defeat at Ægos Potamos, and the whole Athenian fleet was taken, except nine vessels of Conon's division, with eight of which, thinking that the war was now desperate, he sailed to Salamis in the island of Cyprus. The ninth vessel was sent to Athens with the tidings of the defeat. In Cyprus, Conon repaired the squadron, watching for an opportunity to prove of service to his country. Such a state of affairs soon presented itself. The Lacedæmonians, having no more rivals in Greece, sent Agesilaus with an army into Asia, to make war upon the Persian king. Conon immediately repaired to Pharnabazus, the satrap of Lydia and Ionia, aided him with his counsels, and suggested to him the idea of exciting the Thebans and other Grecian communities against Sparta, so as to compel that state to recall Agesilaus from the East. The plan was approved by the King of Persia and Conon, at the head of a Persian fleet, B.C. 398, attacked the Spartan, near Cnidus, and defeated him, with the loss of the greater part of his ships. Lacedæmon immediately lost the empire of the sea, and her power in Asia Minor ceased. Conon thereupon, after ravaging the coasts of Laconia, returned to Attica, rebuilt the city walls as well as those of the Piræus, with means which had been furnished by Pharnabazus, and gave on this occasion a public entertainment to all the Athenians. The Lacedæmonians, displeased by the success of Conon, and alarmed at the re-establishment of the Athenian fortifications, sent Antalcidas to Tiribazus, one of the Persian generals, to negotiate a peace. The Athenians, on their part, deputed Conon and some others to oppose this attempt; but Tiribazus being favourably inclined towards Sparta, and in all probability jealous of Pharnabazus, imprisoned Conon, under the pretext that he was endeavouring to excite an insurrection in Æolia and Ionia. The Persian king, however, disapproved of the conduct of his satrap, and Conon was released. The latter thereupon returned to the island of Cyprus, where he fell sick and died, about B.C. 390. His remains were conveyed to Athens. (Corn. Nep., in Vit.—Xen., Hell. Gr., 1, 4.—Id. ib., 2, 1, 21, &c.—Diod. Sic., 13, 78.—Id., 14, 39.—Id., 14, 83, &c.—II.) A native of Samos, distinguished as an astronomer and geometer. None of his works have reached us; but he is mentioned, however, with encomiums, by Archimedes, Virgil, Seneca, and others. Conon lived between about 300 and 260 years before our era. Apollonius, in the fourth book of his Conic Sections, does not speak as favourably of him as Archimedes has done. He thinks that many of his demonstrations might be rendered more concise. This is nearly all that we know respecting Conon as a geometer. He is mentioned as an astronomer by one of the commentators on Ptolemy, who speaks of his having made observations in Italy. Seneca (Quaest. Nat., 7, 3) informs us, that he had made out a list of the eclipses of the sun that had been visible in Egypt. He is mentioned also by Virgil (Eclog., 3, 40), and by Catullus in his translation of the Greek poem of Callimachus, on the tresses of Berenice. The Greek piece itself, in which he bore a conspicuous part, is lost. (Vid. Berenice.) Delambre expresses considerable doubt as to the correctness of the story, which he deems apocryphal. He has assigned a new constellation after the locks of the Egyptian queen. (Delambre, in Biogr. Univ., vol. 9, p. 427.)

CONSENTES, the name which the Romans gave to the twelve superior deities, or Divi Majorum Gentium. The best derivation of the name is that which traces it to the participle of the obsolete verb conso, "to advise" or "counsel," the Divi Consentes being they who formed the council of the sky. (Voss., Eüw., e. v.) Emnius has expressed their names in the two following lines:

"Juno, Vesta, Ceres, Diana, Minerva, Venus, Mars, Mercurius, Jovis, Nepitunus, Vulcanus, Apollo."

(Emnius, Fragm., ed. Hessel, p. 164.—Compare Colum., ad loc.)

CONSENTIA, a town of the Bruttii, the capital of that people according to Strabo (555), and situated at the mouth of the river Stombute, which is said to have been blocked by Hannibal after the surrender of Petilia (Liv., 23, 30), but again fell into the hands of the Romans towards the end of the war. (Liv., 29, 38.) It is now represented by Cosenza. (Cramer's Anc. Italy, vol. 2, p. 434.)

CONSTANS, a son of Constantine. (Vid. Constantius.)

CONSTANTIA, a granddaughter of Constantine, who married the Emperor Gratian.
CONSTANTINE, a princess, wife of the Emperor Galus.

CONSTANTINOPLE. Vid. Byzantium.

CONSTANTinus (Caecil Flavius Valerius Aurelius Claudius), surnamed the Great, son of the Emperor Constantius Chlorus, was born A.D. 272, or, according to some authorities, A.D. 274, at Naisus, a city of Daecia Sequaniarum. When Constantine's father was associated in the government by Dioclesian, the son was retained at court as a kind of hostage, but was treated with great kindness at first, and was allowed several opportunities of distinguishing himself. After the abdication of Dioclesian, Constantius and Galerius were elevated to the rank of Augusti, while two new Caesars, Severus and Maximin, were appointed to second them. Constantine was not called to the succession. Dioclesian, his. father, in his in-law, had left the nomination of the two new Caesars to the latter; and the son of Constantius, whose popularity and talents had excited the jealousy of Galerius, and whose departure, although earnestly solicited by his father, was delayed from time to time under the most frivolous pretences, with difficulty at length obtained permission to join his parent in the West, where he only escaped the machinations of the emperor by trickery and stratagem, and when he reached the western coast of Gaul. He came just in time to join the Roman legions, which were about to sail under his father's command to Britain, in order to make war upon the Caledonians. Having subdued the northern barbarians, Constantine returned to York, where he died in the month of July, in the year 306. Galerius, sure of the support of his two creatures, the Caesars, had waited impatiently for the death of his colleague, to unite the whole Roman empire under his individual sway. But the moderation and justice of Constantius had rendered him the more dear to his soldiers from the contrast of these qualities with the ferocity of his rival. At the moment of his death, the legions stationed at York, as a tribute of gratitude and affection to his memory, and, according to some, at his dying request, saluted his son Constantine with the title of Caesar. Under this official a Dioclesian, past the prime of life, reigned over the prefecture of Gaul for six years (A.D. 306-312), perhaps the most glorious, and certainly the most virtuous, period of his life. The title and rank of Augustus, which his soldiers had conferred upon Constantine, but which Galerius had not allowed him to retain, the latter gave to Severus, one of his own Caesars. This dignity had been expected by Maxentius, son of the deposed Emperor Maximian, the former colleague of Dioclesian. Indignant at his disappointment, Maxentius caused himself to be proclaimed emperor by his army; and, to colour his usurpation, he induced his father to leave his retreat and resume the imperial title. A scene of contention followed, scarcely paralleled in the annals of Rome. Severus marched against the two usurpers; but was abandoned by his own troops, yielded, and was slain. Galerius levied a great army, and marched into Italy against Max- imian and Maxentius, who, with all their power, retired to Gaul, and endeavoured to procure the support of Constantine. This politic prince did not consider it expedient to provoke a war at that time, and for no better cause; and Galerius having withdrawn from Italy and returned to the East, Maximian and Maxentius returned to Rome. To add to his in- struggle, Galerius conferred the title of emperor on his friend Licinius; and thus there were at once six pretenders to the sovereignty of the empire, namely, Galerius and Licinius, Maximian and his son Max- entius, Maximin, who had been nominated Caesar by Galerius, and Constantine, the son and successor of Constantius. Among these rivals Constantine's position was the most precarious. He was without friends, both military and political. The harsh tem- per of Maximian soon led to a quarrel between him and his son Maxentius. Quitting Rome, he went to Gaul, to Constantine, who had become his son-in-law when he and his son were endeavouring to make head against Galerius. Here also Maximian found himself disappointed of that power which he so greatly longed to possess, and, having plotted against Constantine, was detected at Lyons, where he had formed a secret league before marching against Maxentius. The two emperors met at Milan, where their alliance was ratified by the marriage of Licinius to Constantine's sister. During this calm interview, Constantine prevailed upon Licinius to repeal the per-
secuting edicts of Dioclesian, and to issue a new one, by which Christianity was encouraged, its teachers were honoured, and its adherents advanced to places of trust and influence in the state. After the over-

throw of Maximin by Licinius, and his death at Ni-

comedia, Constantine and his brother-in-law were now

the only two that remained of the six competitors for

the empire; and the peace between them, which had

seemed to be established on so firm a basis, was soon

found to be too uncertain for sole empire. In the

first war (A.C. 315) Constantine wrested Illyricum from

his competitor. After an interval of eight years

the contest was renewed. Licinius was beaten before

Adrianople, the 3d July, 323, and Constantine the

Great was recognised as sole master of the Roman

world.—The seat of empire was now transferred to

Byzantium, which took from him the name of Con-
stantinople. Several edicts were issued for the sup-

pression of idolatry; and their churches and property

restored to the Christians, of which they had been de-

prived during the last persecution. A re-construction

of the empire was effectuated on a plan entirely new,

and this renovated empire was pervaded by the worship

and the institutions of Christianity. That much of

the policy of the statesman was mixed up with this

patronage of the new religion can easily be imagined.

But still it would be wrong to make him, as some have
done, mere hypocrite and dissembler. The state of his

religion was far from being the measure of his

judgment, was certainly very inadequate and imper-

fect; but he was well aware of the characters of the

two conflicting religions, Christianity and Paganism, 

and the purity of the former could not but have made

some impression upon his mind.—The private char-

acter of Constantine has suffered, in the eyes of posteri-

ty, from the cruel treatment of Crispus, his son by

his first-wive, whom he had made the partner of his empire

and the commander of his armies. Crispus was at the

head of the administration in Gaul, where he gained

the hearts of the people. In the wars against Licinius

he had displayed singular talents, and had secured

victory to the arms of his father. But, from that moment,

a shameful and unnatural jealousy stifled every paternal

feeling in the bosom of the monarch. He detained

Crispus in his palace, surrounded him with spies and

informers, and at length, in the month of July, 326,

ordered him to be put to death in the midst of a grand

festival, to be carried off to Pola in Istria, and there

put to death. A cousin of Crispus, the son of Licin-

ius and Constantine's sister, was at the same time sent,

without trial, without even accusation, to the block.

His mother imprecated in vain, and died of grief. Faus-

ta, the daughter of Maximian, the wife of Constantine,

and the mother of the three princes who succeeded

him, was shortly after stifed in the bath by order of

her husband.—Constantine died at the age of sixty-

three, at Nicomedia, May 22, 337, after a reign of

thirty-one years from the death of his father, and of

fourteen from the conquest of the empire. (Hether-

ington, Hist. of Rome, p. 236, seqq.—Sismondi, Fall

of the Roman Empire, p. 76, seqq.—Encyclop. Mro-

ropol., div. 3, vol. 3, p. 74, seqq.—Constantine left

three sons, Constantine, Constans, and Constantius,

among whom he divided his empire. The first, who

had been eldest, was certainly far surpassed in

honor by the armies of his brother Constans, and

killed in the twenty-fifth year of his age, A.D. 340.

Magnentius, the governor of the provinces of Rhaetia,

murdered Constans in his bed, after a reign of thirteen

years; and Constantius, the only surviving brother, now

became the sole emperor, A.D. 353, punished his

brother's murderer, and gave way to cruelty and op-

pression. He visited Rome, where he displayed a

triumph, and died in his march against Julian, who had

been proclaimed emperor by his soldiers.

Constantius, I. Chlorus, son of Eutropius; and

father of Constantine the Great, merited the title of

Cesar, which he obtained, by his victories in Britain

and Germany. He became the colleague of Galerius

on the abdication of Dioclesian; and, after bearing

the character of a humane and benevolent prince, he

died at York, and had his son for his successor, A.D.

306.—II. The third son of Constantine the Great.

(Vid. Constantine.)—III. The father of Julian and

Gallus, was son of Constantine by Theodora, and died

A.D. 312. Diocletian, a Roman general, who married Pla-

cidia, the sister of Honorius, and was proclaimed em-

peror he enjoyed only seven months. He died

universally regrettely, 421 A.D., and was succeed-

ed by his son Valentinian in the West.

Consularia, the festival of the god Consus. (Vid.

Consus.)

Consoles, two chief magistrates at Rome, chosen

annually by the people. The office commenced

after the expulsion of the kings, and the first two con-
suls were L. Junius Brutus and L. Tarquinius Colla-

tinus, A.U.C. 244. In the first ages of the republic

the two consuls were always chosen from patrician

families; but the people obtained the privilege, A.U.C.

388, of electing one of the consuls from their own

body; and sometimes both were plebeians. The first

consul from the plebeians was L. Sextius.—It was

required that every candidate for the consulship

should be forty-three years of age. He was at least

to have served through two campaigns as a private

man, without any re-

turn; and it was requisite, before he canvassed for

the office, to have discharged the inferior functions

of quaestor, adile, and pretor. Sometimes, however,

these qualifications were disregarded. M. Valerius

Corvus was made a consul in his twenty-third year;

Scipio Africanus the Elder in his twenty-fourth, and

the Younger in his thirty-eighth; T. Quinctius Flami-

ninus when not quite thirty; Pompey before he was

full six-and-twenty. Peas to the consulship of a whole

province was a matter of honor, and was given to

one of the archons. Their insignia were the same

with those of the kings (except the crown), namely,

the liga praetexta, sella curulis, the sceptre or ivory

staff, and twelve lictors with the fasces and securis.

Within the city, the lictors went before only one of

the consuls, and that commonly for a month alter-

nately. A public servant, called accensus, went

before the other consul, and the lictors followed. He

who was eldest, or had most children, or who was first

elected, or had most suffrages, had the fasces first.

When the consuls commanded different armies, each

of them had the fasces and securis; but when they

both commanded the same army, they commonly had

them for a day alternately. Valerius Poppolicia took

away the securis from the fasces, i.e., he took from

the consuls the power of life and death, and only left

them the right of scourging. Out of the city, how-

ever, the securis was equally necessary. It was alleged

that Constantius had obtained the securis, i.e., the right of punishing capi-

tally. Their provinces used ancientsely to be decreed

by the senate after the consuls were elected or had

entered on their office. But by the Sempronian law,

passed A.U.C. 631, the senate always decreed two

provinces to the future consuls before their election,

which they, after entering upon their office, divided

by lot or agreement. Sometimes a certain province

was assigned to some one of the consuls, both by the

senate and people, and sometimes again the people

reversed what the senate had decreed respecting the
provinces. No one could be consul two following years; an interval of ten years must have elapsed previous to the second application; yet this regulation was sometimes broken, and we find Marius re-elected consul, after the expiration of his office, during the Cimbrian war. The office of consul became a matter of form in the emperor's hands; however, as far as appearance went, who filled the station indulged in much greater pomp than had before been customary: they wore the toga picta or pulsatata, and had their fasces wreathed with laurel, which used formerly to be done only by those who triumphed. They also added the securns or axe to the fasces of their lieutenants. — Caesar introduced a custom, which became a common one after his time, of appointing consuls for merely a part of a year. The object was to gratify a larger number of political partisans. Those chosen on the first day of January, however, gave name to the year, and were called ordinarii; the rest were termed suffecti. Under Commodus there were no less than twenty-five consuls in the course of a single year. Constantine renewed the original institution, and permitted the consuls to be a whole year in office. — Cæsar. — Rom. decret. 9. 2. The name denotes. His altar was in the Circus Maximus, and was always covered, except on his festival-day, the 18th August, called Consualia. Horse and chariot races were celebrated on this occasion, and the working-horses, mules, and asses were crowned with flowers, and allowed to rest. (Dion. Hal. 1., 33. — Plut. quæst. Rom., 45.) Hence Consus has probably been confounded with Neptune Equester. It was at the Consualia that the Sabine maidens were carried off by the Romans. (Keightley's Mythology, p. 529.)

Cop stimulating, a small town of Boeotia, on the northern shore of the Lake Copais, and giving name to that piece of water. It was a town of considerable antiquity, being noticed by Homer in the Catalogue of the ships. (Il., 2, 502.) Pausanias remarks here the temples of Bacchus, Ceres, and Serapis (9, 24.— Cond. Theb., 4, 4. 7. Steph. vol. and 110.) Sir W. Gell points out, to the north of Karditsa (the ancient Arcapha), "a triangular island, on which are the walls of the ancient Copiae, and more distant, on another island, the village of Topolia, which gives the present name to the lake." (Gell's Itin., p. 143.) And Dodwell speaks of a low insular tongue of land projecting from the foot of Ptous, and covered with the ruins of a small ancient city, the walls of which are connected to the water's edge. (Dodwell's Tour, vol. 2, p. 56.)

Copias Lacus, a lake of Boeotia, which, as Strabo informs us, received different apppellations from the different towns situated along its shores. At Halias it was called Halartiactus Lacus (Strab., 410); at Orchomenus, Orchomenus. (Plin., 16, 36.) Pindar and Homer distinguish it by the name of Cephisus. That of Copias, however, finally prevailed, as Copiae were near the Euphrates, by far the most considerable lake of Greece, being not less than three hundred and eighty stadia, or forty-seven miles in circuit, according to Strabo (407). Pausanias states, that it was navigable from the mouth of the Cephisus to Cope (9, 24). As this considerable extent of water had no apparent discharge, it sometimes threatened to inundate the whole surrounding country. Tradition indeed asserted, that near Corinth, and especially at the seven cities, Eleusis and Athens, the latter of which was situated on the river Triton, which, if it is the torrent noticed by Pausanias, was near Alalcomene (Strab., 407. — Pausan., l. c.) Stephanus Byzantius reports, that when Crates drained the waters which had overspread the plains, the latter town became visible (l. c. "Abydos.") Some writers have asserted, that it occupied the site of the ancient Orchomenus. (Strab., l. c. — Steph. Byz., v. c.) Fortunately for the Boeotians, nature had supplied several subterraneous canals, by which the waters of the lake found their way into the sea of Euboea. Strabo supposes they were caused by earthquakes. Their number is uncertain, in which, who seems to have inquired minutely into the subject, was informed by the natives that there were as many as fifteen. He himself only observed four, one at the foot of Mount Ptous, near Acrisias, which conveys the waters of Copais to the Lake Hylica, a distance of about two miles. The other katabothra, as they are called by the modern Greeks, are on the northeastern side of the lake. Dodwell speaks of these subterraneous canals as being in a colossal and picturesque rock, of a hard though friable quality, and full of natural caverns and fissures. (Dodwell's Tour, vol. 1, p. 238.) In consequence of some obstructions in these outlets, an attempt was made to cleanse them in the time of Alexander, and for this purpose square pits were cut in the rock in the supposed direction of this underground stream. Mr. Raikes saw some of these remaining. (MS. Journal. — Walpole's Memoirs, vol. 1, p. 304.) According to Dodwell (vol. 1, p. 240), "at the springs of Lake Cephissus, which is at 1600 feet, the depth varies according to the unevenness of the ground under which the water is conducted to its outlet. It is impossible to penetrate into these deep recesses, which are most of them filled with stones or overgrown with bushes; but it would not be difficult to ascertain their depth, and their direction might be traced by following the shafts, which extend nearly to the sea." — Mr. Raikes gives the following account of the outlets where they emerge into the sea, "the mouth of the Larni I rode along its banks, until, in about three miles, I came to a spot covered with rocks and bushes, in the middle of which the whole river burst with impetuosity from holes at the foot of a low cliff, and immediately assumed the form of a considerable stream. Above this source there is a small plain under cultivation, bounded to the west by a range of low, rocky hills, and to the east, a magnificent view of the Copais Lake and the mountains of Phocis presents itself to the eye." The same writer remarks, that "when the undertaking for clearing the katabothra, in the time of Alexander, was proposed, the rich and flourishing towns of the plain were reduced to a state of desolation by the encroachments of the lake, and under the despondency occasioned by a universal monarchy, sunk into complete decay. At present the rising tide was thought to have drained a great portion of the richest soil in the world into a morass, and, should any permanent internal obstruction occur in the stream, the whole of this fertile plain might gradually become included in the limits of the Copais Lake." — The Copais Lake was especially famed for its eels, which grew to a large size, and were highly esteemed by the epicures of antiquity. (Archeor. ap. Athen., 7, 53.) We know from Aristophanes that they found their way to the Agathargis (v. 880, seqg. — Legist., v. 36); and we are informed by Dodwell (vol. 1, p. 237), "that they are as much celebrated at present as they were in the time of the ancients; and, after being salted and pickled, are sent as delicacies to various parts of Greece." Some which were extraordinarily large were offered up as sacrifices, and decorated like victims. (Athen., 7, 59.—Compare Pausan., 9, 22, seqg. — Crit. Anc., the Poet, vol. 2, p. 256.)

Copia, a harbour in Gedrosia, supposed by some to be the modern Gondel. (Compare the remarks of Vincent, Commerce of the Ancients, vol. 1, p. 252, seqg.)

Copis, a city of Egypt, in the northern part of the Thebaïs, and to the east of the Nile, from which river
COR
it stood some distance back in a plain. Under the
Pharaohs its true name appears to have been Chen-
mis, and it would seem to have been at that time
merely a place connected with the religious traditions
of the Egyptian nation. Under the Ptolemies, on the
other hand, the Isis, upon the propriety for the place,
assumed more of a Greek form, but the city itself arose
into commercial importance. The Arabian Gulf begin-
ing to be navigated by the Greeks, and traffic be-
ing pushed from this quarter as far as India, Taptus
became the centre of communication between this lat-
ter country and Alexandria, through the harbour of
Berenice on the Red Sea. It was well situated for
such a purpose, since the Arabian chain of mountains,
which elsewhere forms a complete barrier along the
coast, has here an opening which, after various wind-
ings, conducts to the shore of the Red Sea. Along this
route the caravans proceeded; and camels were also
employed between Taptus and the Nile. The road
from Taptus to Berenice was the work of Ptolemy
Philadelphia, and 258 miles in length. It was raised
above the level of the surrounding country.—Taptus
was destroyed by the Emperor Dioclesian, for having
subservied the Eastern Theophrastus, "Histor.
Chrongr., p. 4, ed. Paris.—Euseb., Chron., p. 178.)
Its favourable situation for commerce, however, soon
cause it again to rise, and Hierocles speaks of Taptus
in the sixth century.—The modern name is Keft
or Kuept, a name which exhibits, according to some,
the simple form of that word which the Greeks cor-
rupted or improved into Egyptus. Plutarch states
405), that Isis, upon receiving the news of the death
of Osiris, cut off one of her locks here, and that hence
the place was called Kuept, this term signifying, in
the Egyptian language, want or privation. Mannert
suggests, that Taptus may have denoted in the
Egyptian tongue a mixed population, a name well suited
to the inhabitants of a large commercial city; and he
conjectures, that the modern appellation of Kopis,
as given to the present mingled population, which is sup-
posed to be descended in part from the ancient Egypt-
ians, may have reference to this idea. (Mannert,
Geoïgr., vol. 10, pt. 1, p. 365.)
Corà, a town of Latium, southwest of Anagnia.
It was a place of great antiquity, and has preserved its
name unchanged to the present day. Virgil (Aen., 6,
773) makes it to have been a colony from Alba, while
Piny (3, 5) says, it was founded by Dardanus, a Tro-
jan. Corà suffered greatly during the contest with
Spartacus, being taken and sacked by one of his wan-
dering bands. (Flor. 3, 20.) It apparently, how-
ever, recovered from this devastation, as there are
some fine remains of ancient buildings to be seen here,
which must have been erected in the reigns of
Tiberius and Claudius. But Propertius and Lucan
speak of Corà as the seat of ruin and desolation.
(Propert., 4, 11.—Lucan, 7, 392.—Nibby, Virg. Ant-
102.)
Coreasæum, a maritime town of Pamphylia, south-
east of Side. It is described by Strabo as a strong
and important fortress, situate on a steep rock. Pomp-
tey took Coreasæum in the piratical war. It is also incidentally noticed by Livy (33, 20.—Com-
pare Sclavas. p. 40.—Pliqu., 5, 27). Hierocles as-
signs Coreasæum to Pamphylia, and D'Anville's map
grees with this. Others, however, to Cicilia; and
Cramer's map places it in this latter country, just be-
yond, the coast, where the modern town of Corea-
sæum corresponds with that of Alaya.Capt. Beauf-
fort describes it as a promontory rising abruptly from
a low sandy isthmus. Two of its sides are cliffs
of great height, and absolutely perpendicularly; and
the eastern side, on which the town is placed, is so
steep, that the houses seem to rest on each other. It
forms, according to him, a natural fortress which might
be rendered impregnable; and the numerous walls and
towers prove how anxiously its former possessors lab-
oured to make it so. (Beaufort's Karamania, p.
172.—Cramer's Anc. Asia Minor, vol. 2, p. 4.)
Coreali, a small people of Sarmatia, in Europe, who
inhabited the shores of the Euxine, near the mouths
of the Danube. (Orbd, ex Ponti, 4, 2, 37.)
Coras, a brother of Catullus and Tiburtus (edit. Tis-
bur), who fought against Æneas. (Virg., Æn., 7, 672.)
Corax, a Greek, whom the ancients regarded as
the creator of the rhetorical-art. Cicero, following
Aristotle, says, that when the tyrants were driven out
of Sicily, and private affairs began again to be taken
cognizance of by the tribunals of justice, Coreax and
Tisius wrote on the rhetorical art, and penned pre-
cepts of oratory. In this way, according to him,
the eloquence of the bar arose, the Sicilians being naturally
an acute race and given to disputatioon. (Cic., Brut.,
c. 12.—Compare De Orat., 1, 20, and 3, 21.) Coreax
and Tisias must have lived, consequently, about 473
B.C, since this is the period when the Sicilians re-
gained their freedom, of which they had been deprived
by Coreax and the other tyrants who were contempor-
aneous with him. (Plutarch, in Mor. Univ., vol. 9,
p. 556.)
Corybuli, Cn. Domitius, a celebrated Roman com-
mander, under Claudius and Nero. He was famed
for his military talent, his rigid observance of ancient
discipline, and for the success of his arms, especially
among the Parthians. On account of his great reputa-
tion, he became an object of jealousy and suspicion
by Nero, who recalled him, under pretence of reward-
ing his merit. When Corebul reached Corinth, he met
there an order to die. Reflecting on his own want
of prudence and foresight, he fell upon his sword, ex-
claiming, "I have well deserved this!" Thus perish-
ed, A.D. 67, the greatest warrior, and one of the most
virtuous men of his time. Corebul had written Me-
moirs of the wars carried on by him, after the manner
of Cæsar's Commentaries; but they have not reached
our day. (Tacit., Ann., 11, 18.—Id. 13, 35.—
Id. 14, 26.)
Corebulonis Monœtum, a place in the north-
western part of Germany, among the Frisii, near the
confines of the Chaucii. It is supposed to answer to
the modern Groningens. (Tacit., Ann., 11, 19.)
Corcyra, an island in the Ionian Sea, off the coast
of Epirus, in which Homer places the fabled gardens
of Alcinous. It is said to have been first known un-
der the name of Drepane, perhaps from its similarity
of shape to a syrinx. (Apollon., Argon., 4, 385.) To
this name succeeded that of Schera, always used by
Homer, and by which it was probably known in his
time. From the Odyssey we learn, that this island
was then inhabited by Phœacians, a people who, even
at that early period, had acquired considerable skill
in nautical affairs, and possessed extensive commercial
relations, since they traded with the Phœcenians, and
also with Eubœa and other countries. Corecyra was
in after days the principal city, and the seat where the
town of Coerufa stands. Scylas speaks of three harbours, one of
which is depicted as beautiful. Homer describes the
position of the city very accurately (Od., 6, 262). In
the middle ages, the citadel obtained the name of Kourpu,
from its two conical hills or crests, which appellation
was, in process of time, applied to the whole town,
and finally to the island itself. Hence the modern
name of Corefia, which is the corruption of the for-
meter. (Wordsworth's Greece, p. 263.) As, however,
the island is designated in Boccacio by the appella-
tion of Gurofo, and as the modern Greek term is Koerfo,
some have imagined that the name Coerufa originated
in a Roman corruption of the ancient word for Koerfo
(kóllαs), "gulf" or "bay," which might well be
applied to the harbour beneath the double summits. (Wordsworth, l. c.) Corfu forms at the present day once more, and is the most important town of the number. It is 70 miles in length by 30 in breadth, and contains a population of 30,000 souls. The olive arrives at greater perfection here than in any other part of Greece; but the oil obtained from it is acrid.—Corfu was for a long time considered as the stronghold of It- 
aly against the attacks of the Mussulmans. The fol-
lowing is a sketch of the history of this island. Its 
earlier periods are enveloped in the mist of uncertainty 
and conjecture. A colony of Corinthians is said to have 
settled here about 1349 years before our era. It was 
afterward governed by kings of whom little is known. 
Homer has, indeed, immortalized the name of Alci-
nüs. But it is not easy to draw a map of the Ho-
meric Phaeacia, which shall coincide in its details 
with the localities of Corfu; nor will the topographer find 
it a simple task to discover the natural objects con-
connected in the Odyssey with the city of the Phaeacian 
king. In process of time, Corcyra, enriched and a-
grandized by its maritime superiority, became one of 
the most powerful nations in Greece. (Thucyd., 1, 1.) 
The Corinthians, under Chersicrates, formed a settle-
ment here in 735 B.C., and 415 years afterward it was 
captured by Agathocles of Syracuse, who gave it to 
his daughter Lanessa upon her marriage with Pyrrhus 
of Epirus. It was occupied by the troops of the Il-
lyrian queen Teuta, about fifty-eight years after its 
seizure by Agathocles, but was soon after taken from 
her by the Romans, under the consul Cn. Flavius; 
and, although it had the privileges of a free city, it 
remained under the Romans for many centuries. 
In the time of Strabo it was reduced to extreme misery, 
owing to the vices of its administration and its want of 
moderation in prosperity. Corfu has for several cen-
turies been celebrated for its powerful fortresses, to 
which great additions were made by the French, and 
since the war of 1897, by the hands of which 
other people it, together with the other Ionian islands, 
at present remains. (Dodwell's Tour, vol. I, p. 36. 
seqq.—I. An island in the Adriatic, on the coast of 
Illyricum, termed Nigra ("Black"), in Greek Mέλαια, 
to distinguish it from the more celebrated island of 
the same name. It is now Curzola. Apollonius accounts 
for the epithet just mentioned from the dark masses of 
wood with which it was crowned. (Argon., 4, 571.) 
Some conjecture that the inhabitants of Curzola, 
receiving a colony from Cnidian in Asia Minor. 
(Scylla, v. 426.—Compare Skylax, p. 8.—Strabo, 
315.)

Corduba, a city of Hispania Bética, on the right 
bank of the river Batis, and about 1200 stadia from 
the sea. The river being navigable to this quarter, 
Corduba became, in consequence, a large and opulent 
commercial place. It was the birthplace of both the 
Senecas, and of the poet Lucan, and is now Cordova. 
(Strab., 141.—Plin., 3. 3.—Wernsdorff, Post. Lat. 
Min., vol. 5, pt. 3, p. 1366.)

Corre I. (Κόρη, "the maiden"), an Attic name for 
Proserpina. Some, not very correctly, derive the term 
from κήπος, "to cut," &c., and make it have reference 
unto the "harvest." (Journal Royal Institution, No. 
1, p. 59.)—II. A Corinthian female, said to have been 
the inventress of plaster-casts. (Atheneum., Leg. pro 
Corintho, 1847, p. 30.)

Corinthus, the capital of the Peloponnesus, in Italy, about 
three miles from the Aternum. During the Social war 
it took the name of Italica, and had the honour of be-
ing styled the capital of Italy. This arrangement, how-
ever, was of short continuance, as Corinthus appears 
to have seceded from the confederacy before the 
conclusion of the war. (Diad. Sic., Fragm., 37.) In 
later times we find it still regarded as one of the most 
important cities of this part of Italy, and one which 
Cæsar was most anxious to secure in his enterprise 
against the liberties of his country. It surrendered to 
him after a short defence. (Bell. Civ., 1, 16.—Com-
ments of Flor., 1, 4.)

Corinna, a poetess of Thebes, or, according to 
others, of Tanagra, distinguished for her skill in lyric 
verse, and remarkable for her personal attractions. 
She was the rival of Pinder, while the latter was still 
a young man; and, according to Aelian (V. H., 13, 25), 
she gained the victory over him no less than five times. 
Pausanias, in his travels, saw at Tanagra a picture, in 
which Corinna was represented as binding her head with 
a fillet of victory, which she had gained in a contest with 
Pinder. He supposes that she was less indebted for 
this victory, to the excellence of her poetry than to her 
Boeotian dialect, which was more familiar to the ears 
of the judges at the games, and also to her extraordinary 
beauty. Corinna afterward assisted the young poet 
with her advice; it is related of her, that she recom-
mended to him to ornament his poems with mythi-

cal narrations; but that, when he had composed a hymn, in 
the first six verses of which (still extant) almost the 
whole of the Theban mythology was introduced, she 
smiled and said, "We should sow with the hand, not 
with the whole sack." (Pausan., 9, 22, Plut., de 
rebus gestis. Reza., v, 392.) She was "surnamed in the Fly" (Μύατι), as Erina had been 
styled the "Bee." This appellation of Mýa also has 
descended to Alexandrea, who speaks of a poet 
named Mýia. (Strom., 4, 19.) The poems of 
Corinna were all in the Boeotian or Αἰκλικ dialect. 
Too little of her poetry, however, has been preserved 
to allow of our forming a safe judgment of her style 
of composition. The extant fragments refer mostly 
to mythological subjects, particularly to heroisms of 
the Boeotian legends. These remains were given by 
Ursinus, in his Carpina novem illustrium feminarum, 
1568; by Wolf in his Poetrarum octo fragmenta, 
1734; and by Schneider in his Μανωνοῦ ἀνθογ., Giess., 
1802, 8vo. (Schöll, Hist. Lit. Gr., vol. 1, p. 295.— 
Mörike, Gesch. Lit. der Gr. und R., p. 317.)

Corinthium Isthmus, or Isthmus of Corinth, between 
the Saronic Sinus and Corinthis Sinus, and uniting 
the Peloponnesus with the mainland. It is named 
from θῆκας Propria. The ancient appear to have 
been divided in their opinions concerning the exact 
breath of the isthmus. Diodorus (11, 16) and Stra-
bo (335) say it was forty stadia, and Mela (2, 3) 
five miles, with which last Pliny agrees (4, 5). The 
real distance, however, in the narrowest part, cannot 
be less than six miles (or not quite five British miles), 
as the modern name of Hexamition sufficiently denotes. 
Ships were drawn, by means of machinery, from one 
side to the other, near the town of Schompus, on the 
narrowest part of the isthmus, which was called Dii-
kos. This could only be accomplished, however, with 
the vessels usually employed in commerce, or with lumi-
 bers, which were light ships of war, chiefly used by the 
Illyrians and Macedonians. The tediousness and ex-
spense attending this process, and still more probably 
the difficulty of circumnavigating the Peloponnesus, 
led to frequent attempts, all of which failed, for 
effecting a junction between the two seas; but all proved 
equally unsuccessful. According to Strabo (54), De-
metrius Poliorcetes abandoned the enterprise, because 
it was found that the two gulfs were not on the same 
level. We read of the attempt having been made be-
fore his time by Periander and Alexander; and, sub-
sequently to Demetrius, by John Cleopatra, Cassand-
eral, Nero, and Herodes Atticus. "It appears somewhat 
surprising," remarks Mr. Dodwell, "that these success-
ive attempts should have failed or been relinquished
The art of perforating rocks was well understood and dexterously practised both in Italy and Greece at a very early period, and, therefore, no difficulty of this kind could have occasioned the abandonment of so useful a project, though Pausanias is of a different opinion. It was afterward begun with the greatest energy, and abandoned without any plausible motive, as no doubt the quantity of rock or earth to be removed, and all the circumstances, would have made it a very probable object of previous calculation. And if Demetrius was really convinced that the level of the Corinthian Gulf was higher than that of the Saronic, and that the adjacent shore, with the neighbouring islands, would be inundated by the union of the two seas, those who came after him would not have persevered in so destructive an undertaking. Sesoonaris, and afterward Darius, were in the same manner deterred from finishing a canal from the Red Sea to the Nile, by an apprehension that Egypt would be inundated. (Strab., 38.—Id., 804.) Dio Cassius tells nearly the same story about digging the isthmus as that which is related to travellers at this day. He says that blood issued from the ground; that groans and lamentations were heard, and terrible apparitions seen. In order to stimulate the perseverance of the people, Nero took a spade and dug himself. (Dio Cass., 62, 16.—Compare Suet., Vit. Ner., 19.—Lucan, 13.) Dio Cass. and Lucan state, that Nero was said to have been detained from proceeding, under a representation made to him, similar to that which Demetrius received respecting the unequal levels of the two seas. He adds, however, a more probable reason; the troubles, namely, that were excited by Vindex in Gaul, and which occasioned the emperor’s hasty return from Greece to Italy. (Lucian, de perfoes. Isthm. —Op., ed. Bip., vol. 9, p. 286.) It is probable, as far as associated, that the usual appearances went, that the priests at Delphi had already infested the “groundwork of the enterprise.” (Dodwell’s Tour, vol. 2, p. 184.) Travellers inform us, that some remains of the canal undertaken by the Roman emperor are yet visible, reaching from the sea, northeast of Lechaion, about half a mile across the isthmus. It terminates on the southeast side, where solid rock occurs, which, as Dr. Clarke thinks, must have opposed an insurmountable obstacle. (Tras., vol. 6, p. 562.) Sir W. Gell remarks, that the isthmus was crossed by a plain or bay of Scamhus, along a natural hollow at the foot of a line of fortifications. There are also several pits, probably sunk to ascertain the nature of the soil, through which the canal was to be carried. The ground, however, is so high, that the undertaking would be attended with enormous expense. (Itin. of the Morea, p. 208.)—We hear also of various attempts made to raise fortifications across the Isthmus for the Peloponnesians when threatened with invasion. The first undertaking was made before the battle of Salamis, when, as Herodotus relates, the Peloponnesian confederates, having blocked up the Scironian way, collected together a vast multitude, who worked night and day, without intermission, on the fortifications. Every kind of material, such as stones, bricks, and timber, were employed, and the iron stakes filled up with earth and sand. (Herodot., 5, 73.) Many years after, the Lacedaemonians and their allies endeavoured to fortify the isthmus from Chremon to Lechaion against Epaminondas; but this measure was rendered fruitless by the conduct and skill of that general, who forced a pass- sage across the Oenian Mountains. (Xen., Hist. Gr., 7, 1.) Cleomenes also threw t5 trenches and lines from Acrocorinthus to the Oenian Mountains, in order to prevent the Macedonians, under Antigonus Doson, from making their way to the Peloponnesus. (Polyb., 2, 32.—Plut., de Cleom.)—The Isthmian Games of Corinth derived great celebrity from the games which were celebrated there every five years in honour of Palemon or Melicerta, and subsequently of Neptune. (Pausan., 1, 44, 374.)

**Corinthiscus Sinus, or Gulf of Lepanto,** an arm of the sea running in between the coast of Achaia and Sicyonia to the south, and that of Phocis, Locris, and Eôlia to the north. Its gulf had the general appellation of Corinthian as far as the Isthmus, but it was divided into smaller bays, the names of which were sometimes poetically used for the entire gulf. Its different names were the Crissan, Cirrhæan, Delphic, Calydonian, Rhian, and Halyconian. Besides being now called the Gulf of Lepanto, the Sinus Corinthiscus is often known by the name of the Gulf of Népakos or Salona. The victory of Don John of Austria, in 1571, over the Turks, has immortalized the name of the Gulf of Lepanto in modern history. (Dodwell’s Tour, vol. 1, p. 111.)

**Corinthus,** a famous city of Greece, now Corito or Corinth, and situate on the isthmus of the same name. Commanding by its position the Ionian and Ægean seas, and holding, as it were, the keys of Peloponnesus, Corinth, from the pre-eminent advantages of its situation, was already the seat of opulence and the arts, while the rest of Greece was sunk in comparative obscurity and barbarism. Its origin is, of course, lost in the night of time; but, we are assured that it was a great town before the time of Ephyre long before the siege of Troy. According to the assertions of the Corinthians themselves, their city received its name from Corinthus, the son of Jove; but Pausanias does not credit this popular tradition, and cites the poet Enneüs to show that the appellation was really derived from Corinthus, the son of Marathon (2, 1). Homer certainly employs both names indiscriminately. (Il., 2, 570; 13, 602.) Pausanias remarks that the

**Corinthia**
 CORINTHUS.  

Corinth, the city of the Accadian and Naucratian, and later to the maritime dependencies of the Romans (Strabo, I. c.—Aristot., Polit., 5, 9.) Cypselus was succeeded by his son Periander. On the death of this latter, after a reign of forty-four years, according to Aristotle, his nephew Psammetichus came to the throne, but lived only three years. At his decease Corinth regained its independence, when a moderate aristocracy was established, under which the republic enjoyed a state of tranquillity and prosperity unequalled by any city known by Thucydides, that the Corinthians were the first to build war-galleys and triremes; and the earliest naval engagement, according to the same historian, was fought by their fleet and that of the Corcyreans, who had been alienated from their mother-state by the cruelty and impolicy of Periander. (Thucyd., 1, 13.
Compare Herodot., 3, 43.) The arts of painting and sculpture, more especially that of casting in bronze, attained to the highest perfection at Corinth, and rendered this city the ornament of Greece, until it was stripped by the rapacity of a Roman general. Such was the beauty of its vases, that the tombs in which they had been deposited were ransacked by the Roman colonists whom Julius Cæsar had established there after the destruction of the city; these, being transported to Rome, were purchased at enormous prices. (Strabo, 381.) An interesting dissertation on these beautiful specimens of art will be found in Dodwell's Tour (vol. 2, p. 198).

—Thereafter the Gauls, who for the want of corn and water pursued the inhabitants of the island, in a state of desolation, were exposed to the attacks of the Romans and the Corinthians. Pausanias reports (7, 16), that all the men were put to the sword, the women and children sold, and the most valuable statues and paintings removed to Rome. (Vid. Mummius.) Strabo observes (l. c.), that the finest works of art which adorned that capital in his time had come from Corinth. He likewise states, that Corinth remained for many years deserted and in ruins; as also does the poet Antipater of Sidon, who describes in verse the scene of desolation. (Anat., vol. 2, p. 20.)

Julius Cæsar, however, not long before his death, sent a numerous colony thither, by means of which Corinth was once more raised from its state of ruin. (Strabo, 381.) It was already a large and populous city, and the capital of Achaia, when St. Paul preached the gospel there for a year and six months. (Acts, xvi. 12, 13.) He may also have visited it, though it is not mentioned by Pausanias, it was thickly adorned by public buildings, and enriched with numerous works of art (Pausan., 2, 2); and as late as the time of Hiocles, we find it styled the metropolis of Greece. (Synedr., p. 646.)

In a later age, the Venetians received the place from a Greek emperor; Mohammad II. took it from them in 1458; the Venetians recovered it in 1687, and fortified the Acrocorinthus again; but the Turks took it anew in 1715, and retained it until driven from the Peloponnesus.—An important feature in the scenery around Corinth, was the Acrocorinthus, an account of which has been given in a previous article. (Vid. Acrocorinthus.) On the summit of this hill was erected a temple of Venus, to whom the whole of the Acrocorinthus, in fact, was sacred. In the times of Corinthian opulence and prosperity, it is said that the shrine of the goddess was attended by no less than one thousand female slaves, dedicated to her service as courtresses. These priestesses of Venus contributed not a little to the wealth and luxury of the city; whence, from a well-known expression, of ναύτης ἰπρός κάρμον έκτά διάλοχος, or, as Horace expresses it (Epíst., 1, 17, 36), "Non cuius homin contiguit adire Corinthum," in allusion to its expensive pleasures.—Corinth was famed for its three harbours, Lechaum, on the Corinthian Gulf, and Cenchre and Schænum on the Saronic. Near this last was the Didiclos, where vessels were transported over the isthmus by machinery. (Vid. Corinth Isthmus.) The first of these is now choked with sand, as is likewise the port of Cenchre. The shallow harbour of Schænum, where was a quay in ancient times, has now almost disappeared. All these harbours are mere morses, and corrupt the air of the city.—Before leaving this subject, it may not be amiss to say a few words in relation to the well-known Corinthian brass of antiquity. The common account is, that when Corinth was destroyed by the Romans, the metals that were in the city melted and mixed together during the war. If a specimen of this valuable composition, known by the name of Corinthian brass, be Corinthian. This, however, bears the stamp of improbability on its very face. Klaproth rejects the account. He seems to think, and adds the authority of Pliny in his favour, that it was merely a term of art, and applied to a metallic mixture in high estimation among the Romans, and, though of a superior quality, nearly resembling auricularum. This last was composed of either copper and zinc, or of tin, copper, and tellur; the former of a pale yellow, the latter of a darker colour, resembling gold. The mixture by means of calamine was rendered tough and malleable. (Crombie's Gymnastium, vol. 2, p. 127, not.)

Coricilans, Caius Marcus, a distinguished Roman of patrician rank, whose story forms a brilliant legend in the early history of Rome. His name at first was Caius Marcus, but having contributed, mainly by his own strength of mind and his great skill and the defeat of a Volscian army, assembled for its aid, on the same day, he received for this gallant exploit the surname of Coriolanus. Not long after this, however, during a scarcity at Rome, he opposed the distribution of a supply of provisions, in part sent by Gelon, of Sicily, and advised the patricians to make this a means of recovering the power which had been wrested from them by the commons. For this and other conduct of a similar nature, he was tried in the Comitia Tributa, and condemned to perpetual banishment. Resolving, upon this, to gratify his vindictive spirit, Coriolanus presented himself as a supplicant to Tullius Aufidus, the leading man among the Volsci, was well received by him and the whole nation, and, war being declared, was invested, along with Aufidus, with the command of the Volscian forces. By his military skill and renown Coriolanus at once defeated the Romans, and, moving in rapid succession on all their subject cities, he advanced at the head of the Volscian army against Rome itself, and encamped only five miles from it, at the Fosse Clutiae. All was thereupon terror and confusion in the Roman capital. Embassy after embassy was sent to Coriolanus, to entreat him to spare his country, but he remained inexorable, and would only grant peace on condition that the Romans restored all the cities and lands which they had taken from the Volsci, and granted to the latter the freedom of Rome, as had been done in the
case of the Latins. After all other means of concilia-
tion had failed, a number of Roman females, headed
by the mother and the wife of Coriolanus, proceeded
to his tent, where the lofty renunciations of his parent
were more powerful than all the arms of Rome had
proved, and the son, after a brief struggle with his irri-
tated and vindictive feelings, yielded to her request,
exclaiming at the same time, "Oh mother, thou hast
saved Rome, but destroyed thy son!" The Volscian
forces were then withdrawn, and Rome was thus saved,
by female influence alone, from certain capture. On
returning to the Volscii with his army, Coriolanus,
according to one account, was summoned to trial for his
conduct, and was slain in a tumult during the hearing
of the cause, a faction having been excited against him
by Tullius Aufdius, who was jealous of his renown.
(Dion. Hal., Ant. Rom., 8, 59.) According to another
statement, he lived to an advanced age among the
Volscian people, often towards the close of his life ex-
claiming, "How miserable is the state of an old man
in banishment!" (Plut., in Vit.—Life, 2, 39, seqq.)
Nebhur, who writes the name Cnaeus Marius, on
what he considers good authority, indulges in some
acute speculations on the legend of Coriolanus. He
thinks that poetical invention has here most thoroughly
stifled the historical tradition. He regards the name
Coriolanus as of the same kind merely with such appel-
lations as Camerinus, Collatius, Mugillanus, Vibilu-
nius, &c., which, when taken from an independent town,
were assumed by its πρόσωπος, when from a dependant
one by its πατρόνων. The capture of Corioli belongs
merely, in his opinion, to a heroic poem. As for Corioli
himself, he thinks that he merely attended the
Volscian standard as leader of a band of Roman exiles.
He admits, however, that a recollection like the one
which remained of him could not rest on mere fable,
and that, in all probability, his generosity resigned the
opportunity afforded him of taking the city, when Lat-
tium was almost entirely subdued, and when Rome
was brought to a very low ebb by pestilence. (Neb-
Corioli, an ancient city of the Volsci, between Velitae
and Lanuvium, from the capture of which C. Marius
obtained the surname of Coriolanus, according to
the common account. (Vid., however, remarks at the
end of the article Coriolanus.) We collect from Livy
that it was situated on the confines of the territory
of Ardea, Aricia, and Antium. (Liv., 2, 33, and 71.)
Dionysius speaks of Corioli as one of the most con-
spicuous ancient names of Italy. (Hist., 6, 25.)
Pliny (3, 5) enumerates Corioli among the towns of
Latium of which no vestiges remained. A hill, now
known by the name of Monte Giovo, is thought, with
some degree of probability, to represent the site of
Corioli. (Cramer's Ancient Italy, vol. 2, p. 84.)
Cornelia LEX, I. De Religione, enacted by L. Cor-
nelius Sylla, A.D. 677. It restored to the sacrato-
torial college the privilege of choosing the priests, which,
by a previous and customary usage, had been given to
the people. — II. De Municipis, by the same;
that the free towns which had sided with Marius should
be deprived of their lands and the right of citizens;
the last of which Cicero says could not be done. (Pro
Dom., 30.)—III. Another, de Magistratibus, by the
same; which gave the privilege of bearing honours and
being promoted before the legal age, to those who had
followed the interest of Sylla, while the sons and par-
tners of the enemies of Sylla were deprived of the
privilege of standing for any office in the
state.—IV. Another, de Magistratibus, by
the same, A.D. 673. It ordained, that no person should
exercise the same office until after an interval of ten
years, or be invested with two different magistracies
in one year; and that no one should be praetor before
being quater, nor consul before being praetor.—V.
Another, de Magistratibus, by the same, A.D. 673.
It ordained, that whoever had been tribune should
not afterward enjoy any other magistracy; that there
should be no appeal to the tribunes; that they should
not be allowed to assemble the people and make
laws to them, nor to propose laws; but should only
retain the right of intercession. (Cic., de Leg., 3, 9.)
—VI. Another, by the same. It allowed an individ-
ual, accused of having taken away the life of another
by weapons, poison, false accusation, &c., the privilege
of choosing whether he wished the judges to decide his
case by voice or by ballot. — VII. Another, by the
same, imposing the punishment of aqua et ignis interdictio
on all such as were found guilty of forging testimonies
or any other writings, of debasing or counterfeiting
the public coin, &c.—VIII. Another, imposing the
same punishment as the preceding on all who had been
guilty of extortion, &c., in their provinces. (Consul,
as regards other "Cornelian Laws," Heineccius, Antiq.
Rom., ed Haubold, p. 650, &c.—Ernesti, Clav. Cic.,
Cornelia, I. daughter of Cinna. She was Julia,
Cesar's second wife, and mother of Julia the wife of
Pompey. She died young. Plutarch says, it had
been the custom at Rome for the aged women to have
funeral panegyrics, but not the young. Cesar first
broke through this custom, by pronouncing one upon
Cornelia. This, adds the biographer, contributed to
fix him in the affections of his countrymen: they
sympathized with him, and considered him a man of
good feeling, who had the social duties deeply at
heart. (Plut., Vit. Cæs., 5.)—II. Daughter of
Metellus Scipio, married to Pompey after the death of
her first husband Publius Crassus. She was remark-
able for the variety of her accomplishments and the
excellence of her private character. Plutarch makes
her to have been versed, not only in the musical art,
but in polite literature, in geometry, and in the
precepts of philosophy. (Plut., Vit. Pomp., c. 55.)
After the battle of Pharsalia, when Pompey joined her at
Mytilene, Cornelia with tears ascribed all his misfor-
tunes to her union with him, alluding at the same time
to the unhappy end of her first husband Crassus in his
expedition against the Parthians. (Compare Lucan,
8, 88.) She was also a witness, from her galley, of
the murder of her husband on the shores of Egypt.
(Plut., Vit. Pomp., c. 79.)—III. Daughter of Scipio
Africanus Major, and mother of Tiberius and Caius
Gracchus. Cornelia occupies a high rank for the purity
and excellence of her private character, as well as for
her motherly exertions in favor of Tiberius and
Sempronius Gracchus, and was left on his death with a
family of twelve children, the care of whom devoted
entirely upon herself. After the loss of her husband,
his hand was sought by Ptolemy, king of Egypt, but
the offer was declined. Plutarch speaks in high terms
of her conduct during widowhood. Having lost all
her children but three, one daughter, who was married
to Scipio Africanus the younger, and two sons, Tibe-
rius and Caius, both of whom were the objects of
education of these, and, to borrow the words of Plu-
tarch, she brought up her two sons in particular with
so much care, that, though they were of the noblest
origin, and had the happiest dispositions of all the
Roman youth, yet education was allowed to have con-
tributed still more than nature to the excellence of
their characters. Valerius Maximus relates an anec-
dote of Cornelia, which has often been cited. A Cam-
panian lady, having displayed to Cornelia some very beau-
tiful ornaments which she possessed, desired the latter, in
return, to exhibit her own. The Roman mother pur-
poselessly detained her in conversation until her child
returned from school, when, pointing to them, she
claimed, "These are my ornaments!" (Hac orna-
menta mea sunt—Val. Max., 4, 4. init.) Plutarch in-
forms us, that some persons blamed Cornelia for the
rash conduct of her sons in after life, she having been accustomed to reproach them that she was still called the mother-in-law of Scipio, not the mother of the Gracchi. (Plut., Vit. T. Gracch., c. 8.) She bore the untimely death of her sons with great magnanimity, and a statue was afterward erected in honour of her by the Roman people, bearing for an inscription the words "Cornelia, mother of the Gracchi." (Plut., Vit. C. Gracch., c. 4.)

**Cornelius**, a name indicating a member of the *Gens Corneliae*. The greater part of the individuals who bore it are better known by their surnames of Cossus, Dolabella, Lentulus, Scipio, Sylla, &c., which see.

**Cornelículum**, a Sabine town, which gave its name to the Corniculani Colles. It is one of those places of which no trace is left, and is only interesting in the history of Rome as being the most accredited birthplace of Servius Tullius. (Liv., 1, 39.—Dion. Hal., 3, 50.—Plin., 3, 5.) The Corniculani hills are those of Monticelli and Santi Angelo; and Cornelículum itself may have stood on the site of the latter village, if we place Cenia at Monticelli. (Cramer's *Ancient Italy*, vol. 1, p. 308.)

**Cornificio**, I. Quintus, a contemporary of Cicero's, distinguished for talents and literary acquirements; twice elected triumvir, and once censor, and several officers in the state. Catullus and Ovid both speak of his poetic abilities, and he appears to have been the friend of both. (Catull., 38.—Ovid, Trist., 2, 436.—Burmann, ad Od., 1.) Cornelius distinguished himself as Proprator in the Illyrian war, and also as governor of Syria, and afterward of Africa. In this latter province he espoused the cause of the senate after Caesar's death, and received and gave protection to those who had been proscribed by the second triumvirate. He lost his life, however, while contending in this quarter against Sextius, who had been sent against him by Octavius. (Appian, Bell. Civ., 3, 85.—Id. ib. 4, 36; 4, 53; 4, 56.—Compare the account given by Eusebius, Chron. An. mcccclxxvi.) Some modern scholars make this Cornelius to have been the author of the Treatise to Herennius, commonly ascribed to Cicero. (Vid. Herennius.) He is said also to have been an enemy of Virgil's, but this supposition violates chronology, since the poet only became eminent subsequent to the period when Cornelius died. (Heyne, ad Donat. Vit. Virg., § 67, p. clxxii.)—II. Lucius, a partizan of Octavius, by whom he was appointed to accuse Brutus, before the public tribunal at Rome, of the assassination of Caesar. (Plut., Vit. Brut., c. 27.) He afterward distinguished himself, as commander of Rome's lieutenants, by a masterly retreat in Sicily during the war with Sextius Pompeius. (Appian, Bell. Civ., 5, 111, seqq.)

**Coriniger**, a surname of Baccus.

**Cornutus**, L. Annaeus, a Greek philosopher, born at Leptis in Africa, who lived and taught at Rome during the reign of Nero. The appellation L. Annaeus appears to indicate a client or freedman of the Seneca family. His tenets were those of the Stoic sect, and his name was not without distinction in that school of philosophy. He excelled in criticism and poetry; but his principal studies were of a philosophic character. His merits as a teacher of the Stoic doctrine sufficiently appear from his having been the preceptor of that honest advocate for virtue, the satirist Persius. Persius, dying before his master, left him his library, with a considerable sum of money; but Cornutus accepted only the books, and gave the money to the sisters of his pupil. Petron Liv. was also one of his pupils. Under Nero, Cornutus found himself in exile for his freedom of speech. The emperor having written several books in verse on the affairs of Rome, and his flatterers advising him to continue the poem, the honest Stoic had the courage to remark, that he doubted whether so large a work would be read; and when it was urged that Chrysippus had written as much, he replied, "His writings were useful to mankind." After so unpardonable an offence against imperial vanity, the only wonder was that Cornutus escaped with his life. He composed some tragedies, and a large number of other works, the only one of which that has come down to us is the "Theory concerning the Nature of the Gods" (Θεωρία περὶ τῶν θεῶν φύσεως), or, as it is entitled in one of the MSS., "Concerning Allegories" (περὶ Ἀλληγορίας). Cornutus, in fact, in this production, seeks to explain the Greek mythology on allegorical and physical principles. The best edition is that given by Gale in his *Opuscula* (Canab., 1670, 12mo).—The name of this philosopher is sometimes, though less correctly, written Plurmutus. (Consult the remarks of Gale, Pref. ad Opusc. p. 2, seqq., and Martini, Disputatio de Cornuto, Lugd. Bat., 1825, 8vo.—Au. Gel., 6, 2.—Euseb., Eccl. Hist., 6, 19.—Ensfeld's *Hist. Phil.*, vol. 2, p. 110.)

**Coribus**, I. a foot-racer of Elis, who carried off the prize at the Olympic games, B.C. 776. This date is remarkable, as being the one from which the Greeks began to count their Olympiads. Not that the Olympic games were now for the first time established, but names were now first inscribed on the public registers. Some writers calculate the Greek Olympiads from the period of their re-establishment by Lycurgus, Iphitus, and Cleosthenes, and hence they make the first Olympiad of Coribus correspond to the twenty-eighth of Iphitus. (Pausan., 5, 8.—Siebelis, ad loc.—Larcher, Tabl. Chronol., vol. 7, p. 590.—Id., Essais de Chronologie, p. 307.) According to Athenaeus, Coribus was by profession a cook! ( Athen., p. 360, 2.) It appears to have been a circumstance of importance, that the Arundel Marbles make the first Olympiad of Coribus coincide with the year 806 of the Athenian era, when Erechylus, the twelfth perpetual archon, was in his third year of office. (L'Art de Verifier les Dates, vol. 3, p. 173, Paris, 1819.) Delalande makes the true summer-solstice of the year 776 B.C., under the meridian of Pisa in Elis, to have taken place at 11h 18' 33" of the morning. (L'Art de Verifier, &c., vol. 3, p. 170.)—II. Quintus, a town in Etruria, which had an important place in the wars of Pericles. (Plut., Vit. Peric., c. 13.)—III. A son of Mygdon, king of Thrace, who, from his love for Cassandra, offered his services to Priam, under the hope of obtaining the hand of his daughter. The prophetess, however, knowing the fate that awaited him, implored him to retire from the war; but he was inflexible, and fell by the hand of Peneleus the night that Troy was taken. (Virg., Íli., 2, 425.)

**Coronea**, a city of Boetia, on the western shore of the Sinus Messeniacus. It is now Coron, and the gulf is called after it, the Gulf of Coron. Its original name was &Epsilon; 4opas; but this was changed to Coron after the restoration of the Messenians. It was in attempting to take this town, during the war occasioned by the succession of Messene from the Achaean league, that Philopomen was made prisoner. (Liv., 39, 49.)

Strabo reports that this place was regarded by some as the Pedasus of Homer. The haven of Coron was called the Port of the gulf. (Cramer's *Ancient Greece*, vol. 3, p. 139.)

**Coronea**, a city of Boetia, on the southeast of Cherson, on a branch of the Cephissus. It was a place of considerable antiquity and importance, and was said to have been founded, together with Orchomenus, by the descendants of Athamas who came from Theessaly. (Pausan., 9, 34.—Strabo, 4, 1.) General importance, at different times in its vicinity. Tolmides, who commanded a body of Athenian troops, was here defeated and slain by the Boeotians, which led to the emancipation of the whole province, after it had been subject to the Athenians since the victory B.B.
they obtained at Cenophytm. (Thucyd., 1, 113.) The battle of Coronea was gained by Agesilus and the Spartans against the Thebans and their allies in the second year of the 96th Olympiad, 394 B.C. (Xen. Hist. Gr., 4, 3, 8, seqq.—Plut. Vit. Agesil., 17.) This city was also twice taken by the Phocians under Onomarchus, and afterward given up to the Thebans by Philip in 326 B.C. (Polyb., 2, 62.) {Gell., Imag. Gr., 2, 2, p. 69.) The Coroneans, in the Macedonian war, having adhered to the cause of Perseus, suffered severely from the resentment of the Romans. (Polyb., 27, 1, 8, and 5, 2.—Liv., 42, 44, and 67.—Id., 43, Suppl., 1, 2.) The ruins of Corone are observable near the village of Korum, on a remarkable insulated hill, where there are "many marbles and inscriptions. On the summit or acropolis are remains of a very ancient polynyal wall, and also a Roman ruin of brick." (Gell., Itin., p. 150.—Dowdall, vol. 1, p. 247.)

Coroxis, daughter of Phlegyas, and mother of Escalusius by Apollo. She was put to death by the god for having proved unfaithful to him, but the offspring of her womb was first taken from her and spared. (Vid. Escalusius.)

Coris, I. the inhabitants of Corsica.—II. The inhabitants of part of northern Sardinia, who came originally from Corsica. (Mannert, Geogr., vol. 9, pt. 2, p. 179.)

Corsica, an island of the Mediterranean, called by the Greeks Κόρις. Its inhabitants were styled by the same people Κόρινθοι; by the Latins, Corsi. In later times the island took also the name of Coris. (q.v. Kopis.—Compare Steph. Byz., s. v. Kopis.—Dioms. Perieg., v. 459; et Eustath., ad loc.) The ancient writers represent it as mountainous and woody, and only well cultivated along the eastern coast, where the Romans had settlements. (Dioms. Perieg. v. 460.) Its natural products were resin, honey, and wax. (Diod. Sic., 5, 13.) The honey, however, had a bitter taste, in consequence of the bees deriving it from the yew-trees with which the island abounded. (Verg., Eclog., 9, 30.—Ovid., Am., 1, 12.—Diod. Sic., 5, 14.) It was to their feeding abundantly on this honey, however, that the longevity of the Corsicans was ascribed. (Compare Eustath. ad Dioms. Perieg., v. 535, et al.; and Eustath. ad loc. of name of Tarsus, in the mountains, indebted for their subsistence more to the produce of their flocks than to the cultivation of the soil. Seneca, who was banished to this quarter in the reign of Claudius, draws a very unfavourable picture of the island and its inhabitants; describing the former as rocky, unproductive, and unhealthy, and the latter as the worst of barbarians. He writes, however, under the influence of prejudiced feelings, and many allowances must be made (Senec., de Consol. ad Hel., c. 6, 8.) The Corsi appear to have derived their origin from Ligurian and Iberian (called by Seneca Spanish) tribes. Eustathius says that a Ligurian female, named Corsa, having pursued in a small boat a bull which had taken to the water, accidentally discovered the island, which her countrymen named after her. (Eustath., ad Dioms. Perieg., v. 458.—Compare Isidor Origines, 14, 6.) The Phocceans, on retiring from Asia, settled here for a time near the city Aleria, but were driven out finally by the Tyrrhenians and Carthaginians. (Diod. Sic., 5, 13.) The Romans took the island from this latter people B.C. 231, and subsequently two colonies were sent to it: one by Marius, which founded Mariana, and another by Sylla, which settled on the site of Aleria. Mantinorum Oppidum, in the same island, is now Basia; and Urecinum, Ajaceto, was the birthplace of Na- polian Bonaparte. (Norris, Corse, c. 2.)

Cos, a city of Mesopotamia, on the river Musa. D'Anville places it at the confluence of the Musa and Euphrates. The Musa, according to Xenophon (Anab., 1, 5, 4), flowed around the city in a circular course. Mannert supposed it to have been more than a canal cut from the Euphrates. (Vid. Masc, where notice is taken of an error in D'Anville's chart.) The site of Corso appears to correspond, at the present day, to a spot where are the ruins of a large city, named Erzi or Israah. (Rennell, Illustrations of the Anatasia, &c., p. 108.)

Corfu, or Kerkyra, on the coast of Greece, on the western island of Corfu, and the eastern island of Crete, comprises the area of the mainland between the northernmost point of the mainland and the southernmost point of the east side of Crete. It is situated on the west side of the Gulf of Corinth, about 145 miles west of Athens; and the distance north-west of the Lacus Thrasymenus, and fourteen miles south of Arretium. Its claims to antiquity were equalled by few other places of Italy. It is thought to have been built on the ruins of an ancient town called Corcyra, and is known by that appellation in Virgil. (Aen., 3, 170.—Id. ibid., 7, 209; 9, 10; 719.—Compare Silius Italicus, 5, 123.) From the similarity of names, it was supposed by some to owe its origin to Corinth, the father of Dardanus. Others deduced the name from the circumstance of Dardanus having lost his helmet (κώρος) there in fighting. Both, however, are pronounced by Heyne to be mere fables. (Heyne, Excurs., 6, ad Aen., 3.) Perhaps the opinion most entitled to credit is that of Mannert, who makes the place to have been of Pelasgic origin. This, in fact, is strongly corroborated by the massy remains of the ancient walls, evidently of Pelasgic structure. Dionysius of Halicarnassus, moreover, who quotes from Eustathius, says of the Corinthians, and those anterior to Hesiod, states that the Pelasgi, who had landed at Spina on the Po, subsequently advanced into the interior of Italy, and occupied Corfia, which they fortified, and from thence formed other settlements in Tyrrhenia. On this account Corfia is styled the metropolis of that province. (Steph. Byz., s. v.—Compare Sil. Ital., 7, 174.) Corfia was one of the twelve cities of Etruria. (Müller, Etrusker, vol. 1, p. 253.) The Greek name of the place was Coryth (Τρώης), and the Etrurian one Kortina, from which the Romans made Corfia. (Müller, Etrusker, vol. 2, p. 268.) The city still retains its ancient appellation of Cortina. It was colonized by the Romans (Dioms., 1, 26), at what period is uncertain; probably in the time of Sylla, who colonized several towns of Etruria. Cramer thinks, that some confusion of names must have given rise to the story of Dardanus coming from Italy to Corfu. (Aen., 7, 205.) It is known that there were several towns in antiquity of the name of Gyron, Gyronte, and Gortyna, in Thessaly, Boetia, Arcadia, and Crete; countries all more or less frequented at one time by the Pelasgi. This, he thinks, was the original form by which Corfia was first named; for Polybius calls it Gyron (3, 82), and it is known that the Etruscans and Umbri, who took their letters from the Pelasgi, never used the letter G, according to some accounts, Dardanus came from Arcadia, and according to others, from Crete. Cramer suspects, however, that the Thessalian Gyron ought to have the preference; for this city, in a passage of Strabo, though it is supposed to be mutilated, is entitled the Tyrrhenian (Strab., 330), and this might prove the key to the Tuscan origin of Dardanus, besides confirming the identity of the Tyrrheni with the Thessalian Pelasgi. (Cramer's Anc. Italy, vol. 1, p. 915, not.)

Corinna, or Corvus, a name given to M. Valerius, from his having been assisted by a crow (corvus) while engaged in combat with a Gaul. (Vid. Valerii.—II. Messala, a distinguished Roman in the Augustan age. (Vid. Messalla.)

Corybantes, the priests of Cybele, called also Galli. (Vid. Cybele.) In celebrating the festivals of the goddess, they ran about with loud cries and Howling, and with drums, horns, pipes, kitharas, and castanets, cutting their flesh with knives. Some derive the name from their moving along in a kind of dance, and tossing the head to and fro (ἀπὸ τοῦ κορυβό· τοῦς θαίνειν). According to Strabo (479), and
COS

Freret (Mem. de l'Acad. des. Inscr., &c., vol. 18, p. 34), the word Corybas is a Phrygian one, and refers to the Corybantes, the goddesses of Phrygia. In the time of Pausanias, the Corybantes had not been indugled. As regards the assertion commonly made, that the Corybantes were originally from Mount Ida, it may be remarked, that more correct authorities make Phrygia to have been their native seat. (Compare Rolle, Recherches sur le Culte de Bacchus, vol. 1, p. 246, seq.)

The dance of the Corybantes is thought to have been symbolical of the empire exercised by man over metals, as also of the movements of the heavenly bodies. (Constant, de la Religion, vol. 4, p. 375, seq.) The Corybantes are said to have been the first that turned their attention to metallurgy. (Sainte Croix, Mystères du Paganisme, vol. 1, p. 79.)

Corybas, son of Iasion and Cybele, who introduced the rites of the mother of the gods into Phrygia, from the island of Samothrace. (Diod. Sic., 5, 49.)

Corycides, a name applied to the nymphs who were supposed to inhabit the Corybian cave on Mount Parnassus. They were the daughters of the river-saint Pleiatus. (Ovid, Met., 1, 320.—Apoll. Rk., 2, 711.)

Corycinanthrum, I. a cave or grotto on Mount Parnassus, about two hours from Delphi, and higher up the mountain. It is accurately described by Pausanias, who states, that it surpassed in extent every other known cavern, and that it was possible to advance into the interior without a torch. The roof, from which an abundance of water trickles, is elevated far above the floor, and vestiges of the dripping water (i.e., stalactites) are to be seen attached to it, says Pausanias, along the whole extent of the cave. The inhabitants of Parnassus, he adds, considers it as sacred to the Corycian nymphs and the god Pan. (Pausan., 10, 32.—Compare Strabo, 417.)

Herodotus relates (8, 36), that on the approach of the Persians, the greater part of the population of Delphi ascended the mountain, and sought refuge in this capacious recess. We are indebted for an account of the present state of this remarkable cave to Mr. Raikes, who was the first modern traveller that discovered its site. He describes the narrow and low entrance as spreading out at once into a chamber 330 feet long by nearly 200 wide. The stalactites from the top hung in the most graceful forms the whole length of the roof, and fell like drapery down the sides. (Raikes's Journal, in Walpole's Collection, vol. 1, p. 312)—II. A cave in Cilicia, near Corycus, of which more is said below. (Pliny, 5, 31.)

Corycus, I. a promontory of Ionia, southeast of the southern extremity of Chios. The high and rugged coast in this quarter harboured at one time a wild and daring population, greatly addicted to piracy; and who, by disguising themselves, and frequenting the harbours in their vicinity, obtained private information of the course and freight of any merchant vessel, and concerted measures for the purpose of intercepting it. This security by which their intelligence was procured gave rise to the proverb, Τούτο θ' από τον Κορυκανίον ἡμοδέχοντος, "This, then, the Corycian overheard," a saying that was used in cases where any carefully-guarded secret had been discovered. (Compare Erasmus, Chin. 1, cent. 2, col. 76.)

The modern name of the ridge of Mount Corycus is the Table Mountain, but the ancient appellation is still preserved in that of Kourko, which belongs to a bold headland forming the extreme of the Corycian peninsula towards Samos. Pliny (5, 31) calls it Corycian Caput. (Cramier's Asia Minor, vol. 1, p. 351.)—II. A small town of Cilicia Trachae, near the confines of Cilicia Campestris, on the seacoast, and to the east of Seleucus Trachae. It has been a fortress of great strength, and a mole of vast unheaved rocks is carried across the bay for about a hundred yards. It served at one time as the harbour of Seleucia, and was then a place of considerable importance. The modern name is Korgos. About twenty stadia inland was the Corycian cave, celebrated in mythology as the abode of the god of music, Pithos. Pthyg., 1, 31. —Id. ib., 8, 20.—Eschyl., P. v., 350, seqq.) In fact, many writers, as Strabo reports, placed Arims or Arimi, the scene of Typhon's torments, adjoined to Homer, in Cilicia, while others sought it in Lydia, and others in Campania. The description which Strabo has left us of this remarkable spot leads to the idea of its having been once the crater of a volcano. He says it was a deep and broad valley, of a circular shape, surrounded by lofty rocks. The lower part of this crater was rugged and stony, but covered nevertheless with shrubs and evergreens, and especially sarron, of which it produced a great quantity, regarded as the best of all antiquity. There was also a cave from which gushed a copious stream, which, after a short course, was again lost, and reappeared near the sea, which it joined. It was called the "bitter water." (Strab., 671.) The account of Pomponius Mela is still more minute and elaborate. (Mela, 1, 13.—Cramer's Asia Minor, vol. 2, p. 336.)—III. A naval station, on the coast of Lycia, about thirty stadia to the north of Olympus. Strabo makes it a tract of shore (Καρύκος αγημαλος.—Strab., 666.)

Coryphasium, a promontory on the western coast of Messenia, north of Methone, now Cape Zonchio. There was a town of the same name on it, to which the inhabitants of Fyllos retired after their town was destroyed. (Pausan., 4, 36.)

Cos, an island of the Ægean, one of the Sporades, west of the promontory of Doris. Its more ancient names were Cea, Staphylus, Nymphæa, and Meropis, of which the last was the most common. (Thucyd., 8, 41.) The colonization of this island must have taken place at a very early date, since Homer makes mention of it as a populous settlement. (II., 2, 184, 14, 255.)

The inhabitants were of Dorian origin, and closely connected with the Doric colonists on land. It is now called Stato Chora. Its chief city was Cos, anciently called Astypalassa. Strabo remarks, that the city of Cos was not large, but very populous, and seen to great advantage by those who came thither by sea. Without the walls was a celebrated temple of Æsculapius, enriched with many admirable works of art, and, among others, two famous paintings of Apelles, the Antigonus and Venus Anadyomene. The latter painting was so much admired that Augustus ordered it to be consigned to the god in Cy- sar; and in consideration of the loss thus inflicted on the Coans, he is said to have remitted a tribute of one hundred talents which had been laid on them. Besides the great painter just mentioned, Cos could boast of ranking among her sons the first physician of antiquity, Hippocrates. The soil of the land was very productive, especially in wine, which vied with those of Chios and Lesbos. It was also celebrated for its purple dye, and for its manufacture of a species of transparent silk stuff, against the use of which by the Romans Juvenal in particular so strongly inveighs. The modern island presents to the view fine plantations of lemon-trees, intermixed with stately maples. (For a more particular account of it, consult Turner's Tour in the Levant, vol. 3, p. 41, seqq.—Cramer's Asia Minor, vol. 2, p. 220.)

Cossa, I. (or Cosse), a town of Etruria, near the coast, on the promontory of Mount Argentario, north of the promontory of Capo Creta. (Cramier's Asia Minor, vol. 1, p. 395.) It is situate at a little distance from the modern Ansedonia, which is now itself in ruins. For a plan of this ancient city, consult Michele, L'Italia, &c., tav. 10, who gives also a representation of parts of its walls built of polygonal stones. (Compare Michele, Storia degli Antichi Popoli Italiani, tav. 4.) According to him, this is the only specimen of such construction to be found in Etruria. From Pliny (3, 2), we learn that Cossa was founded by the
people of Volci, an Etruscan city, and Virgil has named it in the catalogue of the forces sent by Etruria to the aid of Annia. (Ovid, 10, 167.) Cotta becomes Roman colony A.U.C. 480. (Vell. Patert. 1, 14.—Liv. Epit, 14.—Cramer's Ana. Italy, vol. 1, p. 195.)—II. A city of Lucania, in Italy, near the sources of the river Cylustamus. (Steph. Byz., s. v. Kōssa.) Caesar, who calls it Cosa, states that Titius Annius Milo was slain before its walls when besieging the place in Pompey's cause. (Bell. Civ., 3, 22.) Oliverus was nearly correct in his supposition, that Cassano might occupy the site of this ancient town. (Jal. Antiq. 2, 1205,) for more modern topographers have in fact discovered its ruins at Civita, a village close to the former place. (Anton. Lucan, p. 3, disc. 1.—Romanelli, vol. 1, p. 240.— Cramer's Ancient Italy, vol. 2, p. 354.)

Coccus, I. a surname of the familia Maligheninsis, a branch of the Gens Cornelius. (II. Aulus Cornelius, a Roman, and military tribune, who slew in battle with his own hands Lai Tolumnus, king of the Vican tes, for which he offered up the Spolia Opima to Jupiter Feretrius, being the only one who had done this since the time of Romulus. (Liv., 4, 20; where consult the discussion into which Livy enters on this subject, and also the note of Crevier.)

Cotes, a promontory of Mauritania, now Cape Es par tel. The form in Greek is generally given as plural, al Kortikes. Poliony, however, has the singular, Kortikia. The name is Punic, and signifies a vine; and hence the Greeks sometimes translated the term by Ampelus. (Mel, 1, 5.—Mannert, Geogr., vol. 10, pt. 2, p. 465.)

Cothon, a name given to a small but elevated island in the inner harbour of Carthage, commanding a view of the sea, and on which the Carthaginian admiral resided. Around the whole island numerous ships of war were laid up under cover of spacious halls or arsenals, with all the necessary stores for fitting them out at the shortest notice. (Appian, Pun., 96.—Strabo, 572,.) The term appears to indicate a harbour made by art and human labour; and hence Festus states that artificial harbours were called Cothones. (Fest., s. v. Catones, with the emendation of Scaliger.) The word appears to be derived from the Punic (Hebrew) Kilton, with its primary reference to cutting, lopping off, &c. (Gesenius, Phoen. Mon., p. 422.)

Cotize, a king of the Daci, whom Heym invaded Paranaisia, and was defeated by Corn. Lentius, the lieutenant of Augustus. (Sueton., Aug., 21.—Plo rus, 4, 12.—Horat., Od., 3, 8, 18.)

Cotta, I. Caius Aurelius, a celebrated Roman orator, of the school of Crassus, and who flourished about A.U.C. 661. He failed, observes Cicero, in his pursuit of the tribuneship by the envious opposition which he encountered. Having accused before the people, he spoke with great force against the violent and dictatorial action of the tribunes; but the senate silenced the orator, and then went into voluntary exile, without waiting for his condonation. This happened in the stormy times of Marius and Sylla. He was recalled by the latter. When consul in 677, Cotta had a law passed, which gave the tribunes of the commons the right of holding other offices, of which they had been deprived by Sylla. —II. L. Aurelius, flourished at the Roman bar when Cicero was yet a young man, and the diction of his orations stand forth in the oratory of Tertius and Cotta. The eloquence of this individual was calm and flowing, and his diction elegant and correct. He was elevated to the consulship in 687 A.U.C., and in the year following to the censorship. In the debate respecting the recall of Cicero, Cotta, who was first called upon for his opinion, distinguished himself for the manly frankness with which he censured the proceedings against Ciceron. (Cic., de Div., 2, 21.—Ep. ad Att., 12, 23 &c.)—III. M. Aurelius, a Roman commander in the war against Mithridates, in which he distinguished himself by guarding the Pontis and to protect Bithynia. His eagerness to engage in battle with Mithradates before Lucullus came up, led to his defeat by both sea and land, after which he was shut up in Chalcodon until relieved by Lucullus. (Plut., Vit. Lucull., 14.)—IV. L. Aurunculeius, a lieutenant of Cesar's in Gaul, cut off along with Titu rius by the Eburones. (Ces., B.G., 5, 26, seqq.)

Cottia Alpes, now Mont St. Genevre, generally, though erroneously, supposed to be the place where Hannibal crossed the Rubicon. (Vid. Alpes.) They took their name from Cottius. (Vid. Cottius.)

Corriss, a chieftain, who held a kind of sovereignty over several valleys among the Alps. It appears to have been hereditary, as we also hear of King Don nus, his father. (Ovid, Ep. Pont., 4, 7.) Cottius is represented as lurking in the fastnesses of his Alps, and even defying the power of Rome, till Augustus thought it worth while to conciliate him with the title of prefect. (Dio Cassius, 9, 24.—Amm. Mar cell., 15, 10.) Claudius, however, restored to him the title of king. Under Nero, the Cottian Alps became a Roman province. (Suet., Ner., 18.) The extent of the territory which Cottius possessed cannot now be easily defined; for though all the people which composed his dominions are enumerated in the inscription of the arch at Suza, many of them remain unknown, notwithstanding great pains have been taken to identify their situation. (Consult Millen, Verr. en Italie, vol. 1, p. 105.) Enough, however, is known of them to make it appear, that the territory of Cottius extended much farther on the side of Gaul than of Italy. In Gaul, he seems to have held under him all the eastern part of Dauphiné, and the northeastern portion of Provence. (Compare D'Anville, Not. de l'Ance. Gaule, art. Catturgies, Savinates, Esbouian, &c.)

Cottus, a giant, son of Culus and Terra, who had cain hundred hands and fifty heads. (Hesiod, Theog., 149.) His brothers were Gyes (Vesp., the form Vergi is less correct: Götting, ad loc.) and Briareos. The most recent expounders of mythology consider these three as mere personifications, relating to the winter season. Thus Cottus (Kußos, from kóπeto, "to smite") is the Smiter, and is an epithet for the hail: Gyes (Vespe, the part of the plough to which the share is fixed), is the Furrower, or the rain: and Briareos is the Conquerer, (Briareos, Briareus, Briareus, Briareus, Briareus, Briar, and denoting weight and strength) is the Presser, the snow which lies deep and heavy on the ground. They were naturally named Hundred-handed (katarxhyme, centimani,) from their acting so extensively at the same moment of time. (Hermann, über das Wesen, &c., p. 84.)—Welcker understands by the Hundred-handed the water. (Welck., Tril., 147.—Keightley's Mythology, p. 46.)

Cotyeum, a town of Phrygia, south of Dorylaum, on the Thymis, a branch of the Sangarius. Suidas says, that, according to some accounts, it was the birthplace of Æsop the fabulist. Alexander, a grammarian of great learning, and a voluminous writer, was also a native of Cotyeum. Late Byzantine writers term it the metropolis of Phrygia. (M. Duc., p. 7, a.) Kuiyaga or Kuatek, a Turkish town of about eight thousand souls, has succeeded to the ancient Cotyeum. The name of this is sometimes given to Giovanni, which, judging from ancient coins, is the more correct mode of writing it, the legend being always KOTIAEΩN. (Sesini, p. 121.—Rasche, Lex Rei. Num., vol. 3, col. 1052.—Cramer's Asia Minor, vol. 2, p. 17.)

Cotys, a name borne by several kings of Thrace, and also by some other princes. —I. A king of Thrace, contemporary with Philip, father of Alexander. He
CRA

was a very active and inveterate foe to the Athenians, and did them considerable mischief in the Chersonese. Crotys was assassinated by Python and Heralcides, who received each from the Athenians, as a recompense for the deed, the rights of citizenship and a golden crown. (Demosth., contra Aristocr.—Aristot., Politi., 5, 10.—Palmer, ad Demosth., crit. Arist., 30.)—II. A king of Thrace, who sent his son Sadales, at the head of five hundred horse, to the aid of Pompey, in his contest with Caesar. (Cass. Bell. Civ., 3, 4.—Compare Lucan, 5, 54, and Curtius, ad loc.)—III. A king of Thrace in the time of Augustus, slain by his own Rhesceuropolis, B.C. 15. He was a prince of a literary turn, and Ovid addressed to him one of his epistles from the Euxine (Ep. ex Ponto, 2, 9.—Tacit., Ann., 2, 66, &c.)—IV. Son of Manes, succeeded his father on the throne of Lysyra. (Herod., 4, 45.—Consult Ritter, Vorhaltte, p. 365.)—V. A king of the Odrysæ, in the second half of the 6th century B.C., presides against the Romans. (Liv., 42, 29.)

Cytto, or Cytys, a goddess worshipped by the Thracians, and apparently identical with the Phrygian Cybele. Her worship was introduced at Athens and Corinth, where it was celebrated, in private, with great indecency and licentiousness. The priests of the goddesses were called Baptes. A full account of all that the ancients have left us in relation to this deity, may be found in Buttmann (Mylæologia, vol. 2, c. 19, p. 159, seqq., "Über die Kyttytis und die Baptes") and in Lobeck (Aglaophamus, p. 1007, seqq.—Epimetrum xi, ad. c. 8.

Cæmus, I. a chain of mountains running along the coast of Lycia. It rises precipitously from the sea, and, from the number of detached summits which it offers to the spectator in that direction, it has not unaptly been called by the Turks Yedi Bourroum, or the seven Capes. Cæmus is bounded on the east by eight great summits (Strab., 665.) This same writer also places in the range of Cæmus the famed Chimæra. (Vid. Chimæra.) Sclavos calls Cæmus, however, a promontory, and makes it the separation of Lycia and Caria (p. 39.—Compare Pith., 5, 28.)—II. A town of Lycia, in the vicinity of the mountain-ranges of the same name. (Strab., 665.) The authority of Strabo is confirmed by Scoto (Scoto, p. 92.—Cramer's Asia Minor, vol. 2, 245, seqg.)

Cranã, a surname of the Athenians, from their King Cranãus. (Vid. Cranãus.)

Cranãus, the successor of Cercops on the throne of Attica. He married Pedias, and the offspring of their union was Athis. (Consult remarks under the article Cercops.)

Cranã, a town of Cephallenia, situated, according to Strabo, on the coast, and of no inconsiderable extent. (Strab., 456.—Thucyd., 2, 34.—Liv., 38, 28.) The Athenians established the Messenians here, upon the abandonment of Pylos by the latter, when that fortress was restored to the Lacedaemonians. (Thucyd., 5, 35.) Dr. Holland says, "this city stood on an eminence at the upper end of the bay of Argostoli; and its walls may yet be traced nearly in their whole circumference," which he conceives to be nearly two miles. The situation is that usually called Cyclopien. (Vol. 1, p. 55.—Dodwell, vol. 1, p. 75.)

Crarón and Cranãm, a city of Thessaly, on the river Onchus, southeast of Pharsalus. Near it was a fountain, the water of which warmed wine when mixed with it, and the heat remained for two or three days. (Athenæus, 2, 16.)

Crandor, a philosopher of Soli, among the pupils of Plato, B.C. 310. He was the first who wrote commentaries on the works of Plato. Crandor was highly celebrated for the purity of his moral doctrine, as may be inferred from the praises bestowed by the ancients, especially by Cicero, upon his discourse "on grief!" Horace also (Ep., 1, 2, 3) alludes to his high reputation as a moral instructor. (Ensfeld's History of Philosophy, vol. 1, p. 248, seqq.)

Crassus, I. Lucius Licinius, a Roman orator and man of consular rank. In A.U.C. 633, being only twenty-one years of age, he made his debut in the Forum, in a prosecution against C. Carbo. Cicero says, that he was remarkable, even at this early period, for his candour and his great love of justice. Crassus was but twenty-seven years old when his eloquence obtained the acquittal of his relation, the vestal Licinia. Being elevated to the consulsipth in 657, he was the author of a law, by which numbers of the allies, who passed for Roman citizens, were sent back to their respective cities. This law alienated from him the affections of the principal Italians, so that he was regarded by some as the primary cause of the social war, which broke out three years after. Having Hither Gaul for his province, Crassus freed the country from the robbers that infested it, and for this service had the weakness to claim a triumph. The senate were favourable to his application; but Scævola, the other consul, opposed it, on the ground that he had not conquered foes worthy of the Roman people. Crassus conducted himself, in other respects, with great wisdom in his government, and not only did not remove from around him the son of Carbo, who had come as a spy on his conduct, but even placed him by his side. He died in the 38th year of his age, on the 17th of February, B.C. 53, which was not a witness. Being appointed censor in 659, he caused the school of the Latin rhetoricians to be closed, regarding them as dangerous innovators for the young. Crassus left hardly any orations behind him; and he died while Cicero was yet in his boyhood: but still that author, having collected the opinions of those who had heard him, speaks with a minute, and apparently perfect, intelligence of his style of oratory. Hither Gaul was a speaker that had hitherto appeared in the Forum. Though not without force, gravity, and dignity, these were happily blended with the most insinuating politeness, urbanity, ease, and gayety. He was master of the most pure and accurate language, and of perfect elegance of expression, without any affectation, or unpleasant appearance of previous study. Great clearness of language distinguished all his harangues; and, while he was careful to keep the topics of law in view, he possessed an inexhaustible fund of argument and illustration. Some persons considered Crassus as only equal to Antonius, his great contemporary; others preferred him as the more perfect and accomplished orator. The language of Crassus was indisputably preferable to that of Antonius; but the action and gesture of the latter were as incontestably superior to those of Crassus. As a public speaker Crassus was remarkable for his diffidence in the opening of a speech, a diffidence which never forsook him; and, after the practice of a long life at the bar, he was frequently so much agitated in the exordium of a discourse, as to grow pale and tremble in every joint of his frame. The most splendid of all the efforts of Crassus was the immediate cause of his death, which happened A.U.C. 662, a short while before the commencement of the civil wars of Marius and Sylla, and a few days after the consulship, in which he is supposed to have borne his part in the dialogue, "De Oratore." The consul Philippus had declared, in one of the assemblies of the people, that some other advice must be resorted to, since, with such a senate as then existed, he could no longer direct the affairs of the government. A full senate being immediately summoned, Crassus arraigned, in terms of the most glowing eloquence, the conduct of the consul, who, instead of acting as the political parent and guardian of the senate, sought to deprive its members of their ancient inheritance of respect and dignity. Being farther irritated by an attempt, on the part of Philippus, to force him into compliance with his de
signs, he exerted, on this occasion, the utmost effort of his genius and strength; but he returned home with a pleuritic fever, of which he died seven days after.

This oration of Crassus, followed, as it was, by his almost immediate death, made a deep impression on his countrymen; who, long afterward, were wont to re-

pair to the senate-house for the purpose of viewing the spot where he had last stood, and where he fell, as it may be said, in his noblest form. (Dio Cass. Rom. Lit., vol. 2, p. 215, seqq.)—II. Marcus, was praeator A.U.C. 684. (Cic, de Fin., 5, 30.) He was

surnamed by his friends Agelastus (Ἀγέλαστος), because, according to Pliny (7, 19), he never laughed during the whole course of his life; or because, according to Lucullus, he laughed but once. (Cic, de Fin., 5, 30.)—III. Marcus Licinius, surname-

ned the Rich, grandson of the preceding, and the most opu-

lent Roman of his day, was of a patrician family, and the son of a man of consular rank. His father and brother perished by the proscriptions of Marius and Cinna while he was still quite young, and, to avoid a similar fate, he took refuge in Spain until the death of Cinna, when he returned to Italy and served under Sylla. The speech which was then beginning to attend upon Pompey, though still young and only a simple member of the equestrian order, excited the jealousy of Crassus, and, despairing of rising to an equality with him in warlike operations, he betook himself to public affairs at home, and, by paying court to the people, defending the impeached, lending money, and aiding those who were candidates for office, he amassed wealth and gained influence to the extent of which Pompey had acquired by his military achieve-

ments. It was at the bar, in particular, that Crassus rendered himself extremely popular. He was not, it would seem, a very eloquent speaker, yet by care and application he eventually exceeded those whom nature had more highly favoured. When Pom-

PE, and Caesar, and Cicero declined speaking in behalf of any individual, he often arose, and advocated the claims of those who came forward as candidates. He aid the unfortunate, his courteous and conciliating de-

partment, acquired for him many friends, and made him very popular with the lower orders. There was not a

Roman, however humble, whom he did not salute, or whose salutation he did not return by name. The great defect, however, in the character of Crassus, was his inordinate fondness for wealth; and, although he could not strictly be called an avaricious man, since he is said to have lent money to his friends without demanding interest, yet he allowed the love of riches to exercise a paramount sway over his actions, and it proved at last the cause of his unhappy end. Plutarch informs us, that his estate at first did not exceed three hundred talents, but that afterward it amounted to the enormous sum of seven thousand one hundred talents (nearly $7,500,000). The means by which he at-

tained to this are enumerated by the same writer, and some of them are singular enough. Observing, says Plutarch, how the city was to fires, he made it his business to buy houses that were on fire and others that joined upon them; and he commonly got them at a low price, on account of the fear and distress of the owners about the result. A band of his slaves there-

upon, regularly organized for the purpose, exerted themselves to extinguish the flames, and, after this was done, rebuilt what had been destroyed, and in this way Crassus gradually became the owner of a large portion of Rome. He gained large sums also by educating and real estate. Plutarch, in fact, regards this as his principal source of revenue. Of all this eager grasping after wealth, however, Crassus appears to have been no mean soldier, even though he displayed so few of the qualities of a commander in his Parthian campaign. Created praetor A.U.C. 680, he was sent to terminate the war with Spartacus. He accordingly met, defeated him in several encounters, and at last bringing him to a decisive action, ended the war by a single blow, Spartacus and forty thousand of his fol-

lowers being killed in the field. Not venturing to com-

mand a triumph for a victory over gladiators and slaves, he contented himself with an ovation. In 682 Cras-

sus obtained the consulship, having Pompey for his colleague. At a subsequent period we find him im-

plified by an informer in the conspiracy of Catiline, but acquitted by acclamation the moment the charge was heard by the senate. We now come to the closing scene in the career of Crassus. When Caesar, on returning from his government to solicit the consul-

ship, found Pompey and Crassus at variance (which had been the case also during almost all the time that they were colleagues in the consular office), and per-

ceived, that, for the furtherance of his own ambitious views, the aid of these two individuals would be needed by him for opposing the influence of the senate, as well as that of Cicero, Cató, and Catulus, he managed to reconcile them, and, soon, in conjunction with both of them, he secured the well-known league under the style of the First Triumvirate, which was to be the ruin of the lib-

erties of the Roman people. By the terms of this com-

 pact Crassus obtained the government of Syria. In the law that was passed relative to this government of Crassus, no mention was made of any war in its neighbourhood; still every one knew that he had connected with it an immediate invasion of Par-

thia. Plutarch even states, that he had fixed upon neither Syria nor Parthia as the limits of his expected victory; he had fixed upon the direct road to the confines of the Bactrian, and the shores of the Eastern Ocean. The only motive to this memorable and unfortunate undertak-

aking was the rapacious love of wealth. It was not, however, without considerable opposition from the people and the tribunes that Crassus was allowed to proceed on this expedition. All the influence of Pom-

pey was necessary to prevent an expression of popular wrath, for no good was expected to result from hos-

tile action against the Parthians; and, besides, there was a very great fear of fire, and of the losses which might be sustained by the army and the country in general. Instead of improving the discipline of the soldiers and keeping them in proper order; he spent his time in making inquiry relative to the revenues of the cities, and in weighing the treasures which he found in the

382
temple of Hierapolis. In the spring the Roman commander took the field, on the frontier of Syria, with seven hundred horse, and an equal number of light or irregular troops. With this force he again passed the Euphrates; when he was joined by an Arabian chief, whom Plutarch calls Ariamnes, but who is elsewhere named Abarus or Abgarus; and in this barbarian, owing to his knowledge of the country, and his warm and frequent expressions of attachment to the Romans, Crassus unfortunately placed the utmost confidence. The result may easily be foreseen. Crassus intended to have followed the course of the Euphrates till he should reach the point where it approaches nearest to Seleucia and Ctesiphon, the capital of the Parthian empire; but, being dissuaded from this by his crafty guide, and directing his march across the plains, he was led at last into a sandy desert, where his army was attacked by the Parthian forces under Surena. An unequal conflict ensued. The son of Crassus, sent with a detachment of Gallic horse to repel the Parthian cavalry, lost his life after the most heroic exertions; and his loss was first made known to his father by the barbarians carrying his head on a spear. Crassus himself, not long after, being compelled by his own troops to meet Surena in a conference, was treacherously slain by the barbarians, and his head and right hand sent to the Parthian king, Orodes. The whole loss of the Romans in this disaster (Plut., Vit. Crass.) was not less than 10,000 taken prisoners. (Plut., Vit. Crass.— Dio Cass., 40, 13, seqq.—Appian, Bell. Parth.)

Crates, or Sinus Craterus, the ancient name of the Gulf of Naples, given to it from its resembling the mouth of a large bowl or mixer (σαπρόσ). It is about twelve miles in diameter.

Craterus, one of Alexander’s generals, distinguished for both literary and warlike acquirements. He, however, died at Delphi by Alexander’s order he obtained by the frankness of his character; and the monarch used to say, “Hephaestion loves Alexander, but Craterus the king.” After the death of Alexander, he was associated with Antipater, in the care of the hereditary states. He afterward crossed over into Asia along with Antipater, in order to contend against Eumenes, but was defeated by the latter, and lost his life in the battle. (Nep., Vit. Eum., 2—Jas Virginianus.)

Crates, I. A philosopher of Bosotia, son of Ascondus, and disciple of Diogenes the Cynic, B.C. 324. He is considered as the most distinguished philosopher of the Cynic sect, after Diogenes. In his natural temper, however, he differed from his master, and, instead of being morose and gloomy, was cheerful and facetious. Hence he obtained access to many families of the most wealthy Athenians, and became so highly esteemed, that he frequently acted as an arbiter of disputes and quarrels among relations. He was honourably descended, and inherited large estates; but when he turned his attention to philosophy, he sold them, and distributed the money among the poorer citizens. He adopted all the singularities of the Cynic sect. His wife Hipparchia, who was rich and of a good family, and had many suitors, preferred Crates to every other, and, when her parents opposed her inclinations, left his house and went to live with him. She was threatened to put an end to her life. Crates, at the request of her parents, represented to Hipparchia, in every circumstance in his condition and manner of living which might induce her to change her mind. Still she persisted in her resolution, and not only became the wife of Crates, but adopted all the peculiarities of the Cynic sect. (Enfield’s History of Philosophy, vol. 1, p. 313.)—II. A philosopher of Athens, who succeeded in the school of his master Polemon. Crates and Polemon had long been attached to each other from a similarity of dispositions and pursuits. While they lived, their friendship continued inviolate, and they were both buried in the same grave. (Diog. Laert., 4, 21.)—III. An Athenian, originally an actor, and who in that capacity performed the principal part in the plays of Cratinus. He could not, however, have followed this profession very long, for we learn from Eusebius that he was well known as a comic writer in 450 B.C., which was not long after Cratinus began to exhibit. Crates, according to Aristotle (Poet., 4, 6), was the first Athenian poet who abandoned the iambic or satyrine form of comedy, and made use of general stories or fables. Perhaps the law, passed B.C. 440, restraining the virulence and license of comedy, might have some share in giving his plays this less offensive turn. His style is said to have been gay and facetious; yet the few fragments of his writings which remain are of a serious cast; such are, for example, his reflections on poverty, and his beautiful lines on old age. From the expressions of Aristophanes (Equit., 538), the comedies of Crates seem to have been marked by elegance of language and ingenious ideas. Yet, with all his endeavours to please his fastidious auditors, the poet had, in common with his rivals, to endure many contumelies and vexations. He nevertheless, with unwearied resolution, continued to compose and exhibit during a varied career of success and reverses. (Theatre of the Greeks, 2d ed., p. 170.)

Crates, an ancient river of Arcadia, rising in a mountain of the same name, and flowing through Achaia into the Sinus Corinthiacus, to the west of Ægira. It was from this stream that the Italian Crathis, which flowed between Crotona and Sybaris, derived its appellation. (Herodot., 1, 146.—Strabo, 386.)—II. A river of Lucania, flowing into the Sinus Tarentinus, between Crotona and Sybaris. It is now the Crati. The ancients ascribed to this stream the property of turning white the hair of those who bathed in its waters, which were, however, accounted salutary for various disorder. (Strabo, 263.)

Cratinus, an Athenian comic poet, born B.C. 519. It was not till late in life that he directed his attention to comic compositions. The first piece of his on record is the Αἱρομοι, which was represented about 448 B.C., at which time he was in his seventy-first year. In this play, according to Plutarch (Vit. Com.), the mask of Cynisca, the celebrated heroine, as she concluded the year before, 449 B.C., was adjudged by the judges to Aristophanes (Equit., 407), and the same year is in the language employed by the poet, it may be inferred that he was on terms of close intimacy with the Athenian general. Soon after this, comedy became so licentious and virulent in its personalities, that the magistracy were obliged to interfere. (Schol. in Aristoph., Acharn., 67.—Compare Clinton’s Pasti Hellenici, B.C. 440 and 407.) A decree was passed, B.C. 440, prohibiting the exhibitions of comedy; which law continued in force only during that year and the two following, being repealed in the archonship of Euthymenes. Three victories of Cratinus stand recorded after the recommencement of comic performances. With the Χειμαζόμενου he was second, B.C. 425 (Argum. Acharn.), when the Αχαρνείς of Aristophanes won the prize, and the third place was adjudged to the Νομομαχία of Eupolis. In the same year he was again first with the Πρίαμεις. But Aristophanes and Cratinus again first with the Πρίαμεις. (Argum. Equit.) In a parabasis of this play that young rival makes mention of Cratinus; where, having noticed his former successes, he insinuates, under the cloak of an equivocal piety, that the veteran was becoming doing and superannuated. The old man, now in his ninety-seventh year, indignant at this inside, sets out in his remaining vigour, and composed, against the contests of the approaching season, a comedy entitled Ερυθραί, or Οἱ Φλάγη, which turned upon the accusations brought against him by Aristophanes. The aged
C R E

C R E

dramatist had a complete triumph. (*Argum. Nub.*) He was first; while his humble antagonist was vanquished also by Ameipsias with the Kórov, though the play of Aristophanes was his favourite. Neptune, who, with his notorious intemperance, Cratinius lived to an extreme old age, dying B.C. 422, in his ninety-seventh year. (*Lucian, Macrob., 25.*) Aristophanes alludes to the excesses of Cratinius in a passage of the Equites (v. 526, seqq.). In the Pax (v. 700, seqq.), he humorously ascribes the jovial old poet's death to a shock on seeing a cask of wine stove and lost. Cratinius himself made no scruple of acknowledging his failing; "O Pyr. ἀναφέρων οἰκοτροφή καὶ οὕτως ἐν τῷ Πιθηκ λέγεις αὐχερος."—Schol. in Pax, 703.) Horace, also, opens one of his epistles (1, 19) with a midstrim of the comedian's, in due accordance with his practice. The titles of thirty-eight of the comedies of Cratinius have been collected by Meursius, Konig, &c. His style was bold and animated (*Persius, 1, 123), and, like his younger brethren, Eupolis and Aristophanes, he fearlessly and unsurprisingly directed his satire against the iniquitous public office and the profligate of private life. (Herodot. Sat., 1, 4, 1, seqq.) Nor yet are we to suppose, that the comedies of Cratinius and his contemporaries contained nothing beyond broad jest or coarse invective and lampoon. They were, on the contrary, marked by elegance of expression and purity of language; elevated sometimes into philosophical dignity by the sentiments which they declared, and graced with many a passage of beautiful idea and high poetry: so that Quintilian deems the Old Comedy, after Homer, the most fitting and beneficent object of a young pleader's study. (*Quint., 10, 1.—Theatre of the Greeks, 2d ed., p. 166, seqq.)

Cratippus, a peripatetic philosopher of Mytilene, who, among others, taught Cicero's son at Athens. He first became acquainted with Cicero at Ephesus, whither he had gone for the purpose of paying his respects to him. Afterward, being sided by the orator, he obtained from Caesar the rights of Roman citizenship. On coming to Athens, he was requested by the Areopagus to settle there, and became an instructor of youth in the tenets of philosophy, a request with which he complied. He wrote on divination and on the interpretation of dreams. (*Cic., Off., 1, 1—Id., de Div., 1, 3.—Id., Ep. ad Fam., 12, 16.*)

Cratylus, a Greek philosopher, and disciple of Heraclitus. According to Aristotle (*Metaph., 1, 6,*) Plato attended his lectures in his youth. *Diogenes Laertius,* according to some, says that Cratylus was the interlocutor in the dialogue of Plato called after his name. (*Compare Schleiermacher's Introduction to the Cratylus, Dobson's transl., p. 245.*)

Crassilius, a nation who occupied at one period a part of the Cunhbean plain. They are described by Eschines (in Ctes., 465) as very impious, and as having plundered some of the offerings of Delphi. They were driven from the Amphictyonic Assembly by a law, and from the neighborhood of Veii and Rome, by means of a law, which is erroneously given by some as Arcagallidae, and they are thought by Wolf, who adopts this lection, to have been a remnant of the army of Brennus. (*Consult Taylor, ad Esch., I., c.*)

Cremeria, a small river of Tuscany, running between Veii and Rome, and celebrated for the daring but unfortunate enterprise of the galant Fabio. (*Ovid, Fast., 2, 193, seqq.*) The Cremeria is now called la Valia, a river passing through the neighborhood of Totona and falls into the Tiber a little below Prima Porta. (*Cramer's Anc. Italy, vol. 1, p. 239.*)

Cremmya, a strong place in the interior of Pisidia, lying, according to Ptolemy, on the declivity of Taurus, nearly six miles north of Selga. According to Strabo (569), it had been long looked upon as impregnable; but it was at length taken by the tetrarch Amyntas, with some other places, in his wars against the Pisdians. 'This fortress was considered afterward by the Romans to be of so much consequence, that they established a colony here.' (*Plut., p. 124—Herod., 1, p. 681—Zonaras, 1, 15.*) We are thus only supposing, that this town is represented by the modern fort of Kérinza, occupying a commanding situation between Isbarte and the lake Egreder. (*Cramer's Asia Minor, vol. 2, p. 300.*)—II. A commercial place on the Palus Mæotis. Mannert supposes the name to be one of Greek origin, and to have reference to its rocky situation. He locates the place at the mouth of the Tanais, near the modern Taganrog. (*Mannert, Geogr., vol. 4, p. 15.*)

Cremóna, a city of Cisalpine Gaul, northeast of Placentia, and a little north of the Po. Cremona and Placentia were both settled by Roman colonies, A.U.C. 535. (*Polyb., 3, 40.*) After the defeat on the Trebia, we find the consul P. Scipio retiring to Cremona (*Liv., 21, 56,* and it appears that the Romans retained the place throughout the whole of the second Punic war, though it suffered so much during its continuance, and afterward from the attacks of the Gauls, that it was found necessary to recruit its population by a fresh supply of colonists. (*Liv., 37, 46.*) The colony, being thus renewed, continued to prosper for nearly a hundred and fifty years; when the civil wars, which ensued after the death of Caesar, materially affected its interests. Cremona unfortunately exposed the cause of Brutus, and thus incurred the vengeance of the victorious party. The loss of its territory, which was divided among the several generals of Augustus, is well known from the line of Virgil (Eclog., 9, 29), "Mantua va misera nimium vicina Cremona," which is nearly repeated by Martial (8, 55), "Jugera perdiderat misera vicina Cremona." The effect of this calamity would seem, however, to have been but temporary: and, in fact, we learn from Strabo (216), that Cremona was accounted in his time one of the most considerable towns in the north of Italy. The civil wars, which arose during the time of Otho and Vitellius, were the source of much severer suffering to this city than any former evil, as the fate of the empire was more than once decided between large contending armies in its immediate vicinity. After the defeat of Vitellius's party by the troops of Vespasian, it was entered by the latter, and exposed to all the horrors that fire, the sword, and the ungoverned passions of a licentious soldiery can inflict upon a city taken by storm. The conflagration of the place lasted four days. The indignation which this misfortune excited was so great that it has been such, that Vespasian, afraid of the odium it might attach to his party, used every effort to raise Cremona from its ruins, by recalling the scattered inhabitants, reconstructing the public edifices, and granting the city fresh privileges. (*Tacit., Hist., 3, 33 and 34.—Plin., 3, 19.—Polyb., p. 63.—Cramer's Ancient Italy, vol. 1, p. 66, seq.*)

CREUTYCIUS COBUDUS, an historian who wrote an account of the History of Augustus. He places observes to Tiberius, and his prime minister Sejanus, by stating in his history that "Cassius was the last of the Romans." (*Tacit., Ann., 4, 34.*) Suetonius, however, makes him to have called both Cassius and Brutus by this title. (*Sueton, Vit. Ttb., 61.—Dio Cass., 57, 24.*)

Creon, I. king of Corinth, and father of Creusa or Glauce, the wife of Jason. (*Vid. Creusa and Me- lacon.*).—II. A king of the city of Tebe, father of Toc-toc and son of Ecdipus. (*Vid. Ecdipus.*) He ascended the throne of Thebes after Eteocles and Polynices had fallen in mutual combat, and gave orders that the body of the latter should be deprived of funeral rites, on which circumstance is founded the plot of the Antigone of Sophocles. (*Vid. Eteocles, Polynices, Antigone, &c.*)

CREPHTYLUS, a native of Samos, who composed, under the title of *Oiaiéas áiwsos,* "The conquest of
CRETA.

Æchala," an epic poem commemorative of the exploits of Hercules. According to an ancient tradition, Homer himself was the author of this piece, and gave it to Creophylos as a return for the hospitable reception which he had received under his roof. (Strabo, 638.) In an epigram of Callimachus, however, Creophylos is named as the real author. (Strab. i. c.) It was among the descendants of Creophylos that Lycy- curtainus found to Plutarch (Vit. Lycurg., 4), the Iliad and the Odyssey. (Schöl. Hist. Lit. Cr., vol. 1, p. 166.)

Crepontes, a son of Aristomachus, who, with his brothers Temenus and Aristodemus, conquered the Peloponnesus. This was the famous conquest achieved by the Heracides. (Vid. Aristodemus and Heraclides.)

Crestone, I. or Creton, a city of Thrace, the capital probably of the district of Crestonia. Dionysius of Halicarnassus, and most of the commentators and translators of Herodotus, confound this city with Cortona in Umbria. (Compare Müller, Etroduker, vol. 1, p. 95.—Larcher, Hist. d'Herodote.—Table Geogr., vol. 8, p. 149.) Herodotus speaks of Crestone as situate beyond the Tyrrhenians, and inhabited by Pelasgi (1, 67), speaking a different language from their neighbours. Renelt thinks that the reading Tyrrhe- niacs of Theopompus and Thucydides, in which it is substituted for it, as Thermae, afterward Thessalonica, agrees with the situation mentioned by the historian. (Geography of Herodot., p. 45.) If, however, the text be correct as it stands, it shows that there was once a nation called Tyrrhenians in Thrace. This is also confirmed by Thucydidies (4, 109.—Compare the elaborate note of Larcher, ad Herodot., i. c.,—II. A district of Thrace, to the south of Anthemus and Bolbo, chiefly occupied by a remnant of Pelasgi. (Herodot., 1, 57.) We are informed by Herodotus, that the river Ethedorus took its rise in this territory; and also that the camels of the Persian army were here attacked by lions, which only to be found in Euro- pe, as he remarks, between the Neustus, a river of Thrace, and the Aechelous (7, 124, and 127). Thucydidies also mentions the Crestonians as a peculiar race, part of whom had their habitations near Monument Athos (4, 109). The district of Crestone is now known by the name of Caradagh. (Cramer's Anc. Greece, vol. 1, p. 240.)

Cretan, one of the largest islands of the Mediterrane- an Sea, at the south of all the Cyclades. Its name is derived by some from the Curetes, who are said to have been its first inhabitants; by others, from the nymph Crete, daughter of Hesperus; and by others, from Crees, a son of Jupiter, and the nymph Idaea. (Steph. Byz., s. v. Κρητή.) It is also designated among the poets and mythological writers by the several appellations of Ζηρια, Doliche, Idaea, and Telchinia. (Pliny, 4, 12.—Steph. Byz., s. v. Ατριά.) According to Herodotus, this great island remained in the possession of various barbarous nations till the time of Minos, son of Europa, who, having expelled his brother Sarpedon, became the soveraign of the country (1, 173.—Compare Hoesch, Kréta, vol. 1, p. 141). These early inhabitants are generally supposed to be the Eteocretes of Homer, who clearly distinguishes them from the Grecian colonists subsequently settled there. (Od., 19, 172.) Strabo observes that the Eteocretes were considered as indigenous; and adds, that Staphylus, an ancient writer on the subject of Crete, placed them in the southern side of the island. (Steph. Byz.) Other authors, who concur in this statement of the geography, say, that it was impossible, or, to establish a connexion between this primitive Cretan race and the Curetes, Dactyls, Telchines, and other ancient tribes, so often alluded to with reference to the mystic rites of Crete, Samothrace, and Phrygia. (Strab., 606.) Minos, according to the concurrent testimony of antiquity, first gave laws to the Cretans, and, hav- ing conquered the pirates who infested the Ægean Sea, established a powerful navy. (Herodot., 1, 171. —Id., 3, 122.—Thucyd., 1, 4, 46.—Ephor., ap. Strab., 476.— Aristot., Politt., 2, 12.) In the Trojan war, Idomeneus, sovereign of Crete, led its forces to the war in eighty vessels, a number little inferior to that commanded by Agamemnon himself. According to the tradition of Silenus, Virgil has followed, Idomeneus was afterward driven from his throne by faction, and compelled to sail to Iapigia, where he founded the town of Salernum. (A. B., 3, 121 and 399.) At this period the island appears to have been inhabited by a mixed population of Greeks and barbarians. Homer enumerates the former under the names of Achai, Dor- rians, named Triachiates, and Pelasgi. The latter, who were the most ancient, are said to have come to Crete from Thessaly, under the conduct of Temenus, successor to the great Pelasgic emigration into Italy. (An- dron., ap. Steph. Byz., s. v. Δαμιων.) The Dorians are reported to have established themselves in Crete, under the command of Althamenes of Argos, after the death of Codrus and the foundation of Megara. (Strabo, 481.—Eustath. ad II., 2, 645.) After the Trojan war and the expulsion of Idomeneus, the prin- cipal cities of Crete formed themselves into several leagues of baronies, each independent of the others, but connected by federal ties. These, though not exempted from the dissensions which so universally distracted the Greek republics, maintained for a long time a considerable degree of prosperity, owing to the good system of laws and education which had been so early instituted throughout the island by the decrees of Minos. The Cretan code was supposed by many of the best-informed writers of antiquity to have been furnish- ed Lycurgus with the model of his most salutary regu- lations. It was founded, according to Ephorus, as cited by Strabo (480), on the just basis of liberty and an equality of rights; and its great aim was to promote social harmony and peace by enforcing temperance and frugality. On this principle, the Cretan youths were divided into classes called Agelae, and all met at the Andrea, or public meals. Like the Spartans, they were early trained to the use of arms and to the severe exercise of heat and cold, and underwent the severest practice; they were also compelled to learn their letters and certain pieces of music. The chief magistrates, called Cosmo (Κόσμος), were ten in number, and elected annually. The Gonentes constituted the council of the nation, and were selected from those who were thought worthy of holding the office of Cos- mus (Κόσμος). There was also an equestrian order, who were bound to keep horse at their own expense. (Compare Aristot., Politt., 2, 7.—Polyb., 6, 46.) But though the Cretan laws resembled the Spartan institu- tions in so many important points, there were some striking features which distinguished the legislative en- actments of the two countries. One of these was, that the Lacedemonians were subject to a strict agrarian law, whereas the Cretans were under no restraint as to the accumulation of moneyed or landed property; another, that the Cretan republics were for the most part democratic, whereas the Spartan was decidedly aristocratical. Herodotus informs us, that the Cretans were deterred by the unfavourable response of the Pythian oracle from contributing forces to the Grecian armament assembled to resist the Persians (7, 169). In the Peloponnesian war, incidental mention is made of some Cretan cities as allied with Athens or Sparta; but the island does not appear to have played any active part in the more important transactions of the war. (Thucyd., 2, 85.) The Cretan soldiers were held in great estimation as light troops and archers, and readily offered their services for hire to such states, whether Greek or barbarian, as needed them. (Thucyd., 7, 57. — Xen., Amby, 3, 3, 6.—Polyb., 4, 8.—Id., 5, 14.)
In the time of Polybius the Cretans had much degenerated from their ancient character, for he charges them repeatedly with the grossest immorality and the most hateful vices. (Polyb., 4, 47.—Id. ibid., 53.—Id., 6, 46.) We know also with what severity they are regarded by St. Paul, and by the whole of the early poets, Epimenides (Ep. Tit., 1, 12), Kretes diei theo-tau, kakeia deira, ousieter aruahi.—The Romans did not interfere with the affairs of Crete before the war with Antioco, when Q. Fabius Labeo crossed over into the island from Asia Minor, under pretence of claiming certain Roman captives who were detained there. (Lis., 37, 60.) Several years after, the island was invaded by a Roman army commanded by M. Antonius, informing the inhabitants that the Roman Senate had secretly favoured the cause of Mithradates; but Florus more candidly avows, that the desire of conquest was the real motive which led to this attack (3, 7.—Compare Liv., Epit., 97). The enterprise, however, having failed, the subjugation of the island was not effected till some years later, by Metellus, who, from his success, obtained the agnomen of Creticus. (Lis., Epit., 99.—Appian, Excerpt. de Reb. Cret.—Flor., 3, 7.) The territory of Crete is nearly the same in extent as it was formed, together with Cyrenia, one of its numerous provinces, being governed by the same proconsul. (Dio Cassius, 53, 12.—Strabo, 1198.—Crete forms an irregular parallelogram, of which the western side faces Sicily, while the eastern looks towards Egypt; on the north it is washed by the Mare Creticum, and on the south by the Libyan Sea, which intervenes between the island and the opposite coast of Cyrene. The width of the strait where the entrance of Crete was estimated at 4100 stadia by Artemidorus; but Sosicrates, who wrote a very accurate description of it, did not compute the periphery at less than 5000 stadia. Hieronymus also, in reckoning the length alone at 2000 stadia, must have exceeded the number given by Artemidorus. (Strabo, 474.) According to Pliny, the extent of Crete from east to west is about 270 miles, and it is nearly 589 in circuit. In breadth it nowhere exceeds 50 miles. Strabo observes, that the interior is very mountainous and woody, and intersected with fertile valleys. Mount Ida, which surpasses all the other summits in elevation, rises in the centre of the island; its base occupies a circumference of nearly 600 stadia. To the west it is connected with another chain, called the white mountains (Aegea drup), and to the east its prolongation forms the ridge anciently known by the name of Dicte. (Strabo, 475, 478.) The island contains no lakes, and the rivers are mostly mountain-torrents, which are dry during the summer season.—It has been remarked by several ancient writers, that Homer in one passage ascribes to Crete 100 cities (Il., 2, 649), and in another only 90 (Od., 19, 174), a variation which has been accounted for on the supposition, that ten of the Cretan cities were found ed posterior to the siege of Troy; but, notwithstanding this explanation, which Strabo adopts from Ephorus, it seems rather improbable, that the poets should have paid less attention to historical accuracy in the Iliad than in the Odyssey, where it was not so much required. The difficulty may be solved by assuming, what has every appearance of being true, that the Odyssey was not the composition of Homer, but the work of a later age. Others affirmed, that during the siege of Troy the ten deficient cities had been destroyed by the enemies of Idomeneus. (Strabo, 479.—Compare Hoek, Creia, vol. 2, p. 437.) The modern name of Crete is Candia. Chalcik was produced there in abundance here, and was hence called Creta Terra, or simply Creta. The valleys or sloping plains in modern Candia are very fertile. The greater portion of the land is not cultivated, but it might produce sugarcane, excellent wine, and the best kind of fruit; the exports are salt, grain, oil, honey, silk, and wool. Crete abounds in wild fowl and different kinds of game. (Malte-Brun, Geog., vol. 6, p. 156, Am. ed.—Cramer's Ancient Greece, vol. 3, p. 356, seqq.) The best work on the history of ancient Crete is that of Hoeck (Creta, 3 vols. Svo, Göttingen, 1822—29). Crete, I. the wife of Minos. (Apollod., 3, 1.) II. A daughter of Deucalion. (Id., 3, 3.) Crete, the inhabitants of Crete. (Virg., En., 4, 146.) Creusa, I. a daughter of Creon, king of Corinth, and wife of Jason. She received from Medea, as bridal presents, a diadem and robe, both of which had been prepared with magic art, and saturated with deadly poisons. A second time she was surprised in these, flames burst forth, and fed upon and destroyed her. Creon, the father of the princess, perished in a similar way, having thrown himself upon the body of his dying daughter, and being afterward unable to extricate himself from the embrace of the corpse. (Eurip., Med., 781, seqq.—Id. ibid., 1156, seqq.) According to the scholiast, she was also called Glauce. (Schol. ad Eurip., Med., 19.) II. Daughter of Paim and Hebeus, and wife of Eneas. She was a most fair woman, who, when she fled in the night with her husband, but they were separated during the confusion, nor was there absence observed until the other fugitives arrived at the spot appointed for assembling. Aeneas a second time braved the perils of the burning city in quest of his wife. While he was distractedly seeking her for every quarter of Troy, Creusa appeared him as a deified personage, and appeased his alarm by informing him, that she had been adopted by Cybele among her own attendant nymphs; and she then exhorted him to pursue his course to Italy, with an intimation of the good fortune that awaited him in that land. (Virg., En., 2, 562, seqq.) Creusus or Creusa (Kreusos or Kriuia), a town of Bocotia, which Pausanias (9, 32) and Livy (36, 21) term the harbour of Thespiae. It was on the confines of the Megarcean territory, and a difficult and dangerous road led along the shore from Thence to Aegosthene, a seaport belonging to the latter. Xenophon, on two occasions, describes the Lacedæmonians as retreating from Bocotia by this route, with great hazard and labour, before the battle of Leuctra, when under the command of Cleombrotus, and again subsequent to that bloody conflict. (Hist. Gr., 5, 4, 17.—Ibid., 6, 4, 25.) Pausanias describes the navigation from the coast of the Peloponnesus to Creusa as dangerous, on account of the many headlands which it was necessary to double, and also from the violence of the winds blowing from the mountains (9, 32.—Compare Strabo, 405 and 409.—Plut., p. 86). The position of Creusa seems to correspond with that of Livadostro, a well-frequented port, situated in a bay running inland towards the north, to which it gives its name. From Livadostro to Patala there is a path which winds around the western shore of the bay, at the base of Mount Citheron, and agrees very well with Xenophon's description. (Cramer's Ancient Greece, vol. 2, p. 202, seqq.) Cribius or Cramissus, I. a river of Sicily, in the western part of the island, flowing into the Hypsea. D'Anville makes the modern name Cattabellaotta; but Mannert, the San Bartolomeo. The orthography of the ancient word is given differently in different editions of Virgil. The true reading is Cribius or Crimissus. (Consult Heyne, in Var. Lect., ad Virg., En., 2, 245; Cellarius, Geogr. Ant., vol. 1, p. 794.) I. or Cribius, a promontory on the coast of Bruttium, north of Crotona. The modern name of the promontory is Capo dell' Alìce; of the river, the Fluminia; the modern Ciro answers to the city. This place was said to have been founded by Philoctetes after the siege of Troy. (Strab., 254.—Steph.)
CRITOLAIUS, I. a native of Phaselis in Lycia, who came to Athens to study philosophy, and became there, after the death of Ariston of Cos, the head of the Peripatetic school. He was son of Nicocles, along with Carneades and Diogenes, on an embassy to Rome, B.C. 158, and acquired great reputation in that city, during his stay there, for his ability in speaking; a circumstance, however, which did not prevent his declaring against the rhetorical art, which he considered prejudicial rather than useful. He lived more than eighty years. Critolaus strove to confirm, by new arguments, the doctrine of Aristotle respecting the eternity of the world. (Plut., de Exil., p. 605, Cici., de Fin., 5, 5 — Stoic., Eclog. Phys., 1, 1 — Philo, Mund. Incorrupt., p. 943.) — II. A general of the Achaeans, and one of the principal authors of the war between the Romans and their countrymen, which ended in the subjugation of the latter. (Polyb., 38, 2, — Id., 38, 5, &c.)

CRI-METRðPON (Κριμέτροπος, i. e., "Ram's Front"), I. a promontory of the Tauric Chersonese, and the most southern point of that peninsula. It is now called Kardakjibouaro, according to D'Anville which signifies, in the Turkish language, Black-nose Mannert, however, makes the modern name to be Ayjag, or the Holy Mountain. — II. A promontory of Crete, forming its southwestern extremity, now Cape Creto. (Plin., 4, 11.)

CROBZYI, a people between Mount Hæmus and the Danube, in Lower Mesia. Their territory lay in a northeastern direction, from Philippopolis on the Herus. (Plin., 4, 12.)

CROCODILOPOIIS, a city of Egypt. (Vid. Arsinoe V.)

CROCUS, a youth who, being unable to obtain the object of his affections, the nymph Smilax, pined away, and was changed into the crocus, or "saffron." Smilax herself was metamorphosed into the smilax, or "Oriental bindweed." (Ovid, Met., 4, 283.)

Crocus, an ally of Alyattes, king of Lydia, and born about 591 B.C. He was the fifth and last of the Mermadas, a family which began to reign with Gyges, who dethroned Candaules. (Herod., 1, 14.) According to the author just quoted, Croesus was the son of Alyattes by a Carian mother, and had a half-brother, named Panteleus, the offspring of an Ionian female. An attempt was made by a private foe of Croesus to hinder his accession to the throne, and to place in the kingdom the hands of Pantaleus; but the plot failed (Herod., 1, 92), although his son Alyattes (Serm. 45) informs us, that Croesus, on coming to the throne, divided the kingdom with his brother. Phutarch states, that the second wife of Alyattes, wishing to remove Croesus, gave a female baker in the royal household a dose of poison to put into the bread she made for Croesus. The woman informed Croesus, and gave the poisoned bread to the queen's children, and the prince, out of gratitude, con- 

CRITO, a wealthy Athenian, the intimate friend and disciple of Socrates. When that philosopher was accused of impiety by him; and, after his condemnation, succeeded in bribing his friends to release him out of the prison, so that Socrates, had he felt inclined, might easily have escaped. He is introduced, therefore, by Plato as an interlocutor in the dialogue called Crîto, after his name. The remainder of his life is not known; but, as he was nearly of the same age with Socrates, he could not have lived so long. Crito wrote seventeen dialogues, which are lost. (Plat., Crito.) He was the son of his master, who wrote an account of Pallene, of Persia, and the foundation of Syracuse, of the Getæ, &c. (Suid., s. v.) — III. An Athenian sculptor, who, with Nicolaus, one of his fellow-citizens, made a statue intended as a support to a building. This work, belonging to the class of Caryatides, is still extant, and forms part of the collection at the Villa Albani. Winckelmann (vol. 6, p. 263) thinks he flourished about the time of Cicer- 

CRITIUS, SALLUSTIUS. Vid. Sallustius.

CRITIUS, SALLUSTIUS, Vide Sallustius.

CRISSEUS SINUS, an arm of the Sinus Corinthiacus, on the northern shore. It extends into the country of Phocis, and had at its head the town of Crissa, whence it took its name. Its modern name is the Gulf of Thebes. It is one of the principal harbours of Sicyon. Amphissa, which was the chief town of the Locri Ozoles, and lay to the northeast of Delphi. (Cramer's Anc. Greece, vol. 2, p 151.)

CRITIUS, the reputed mother of Homer. (Vid. Homerus.)

Carriis, one of the thirty tyrants set over Athens by the Spartans. He was of good family, and a man of considerable talents, but of dangerous principles. He applied himself with great success to the culture of eloquence, which he had studied under Gorgias, and Cicero cites him among the public speakers of that day. (Brutt., 7 — De Orat., 2, 22.) He appears also to have had a talent for poetry, for we may judge from some fragments of his which have reached us. Critics turned his attention likewise to philosophical studies, and was one of the disciples of Socrates, whom, however, he deserted with and left. (Xen., Mem., 1, 2.) Being after this banished from Athens for some cause that is not known, he retired to Thessaly, where he excited an insurrection among the Perænes or serfs. (Consult Schneider, ad Xen., Hist. Gr., 2, 3, 36, et ad Xen., Mem., 1, 2, 24.) Subsequently to this he visited Sparta, and wrote a treatise on the laws and institutions of that republic. Returning to Athens along with Lysander, B.C. 404, he was appointed one of the thirty, his pride of birth and hatred of dema- gogues having pointed out, at the proper season, the office. After a cruel and oppressive use of the power thus conferred upon him, he fell in battle against Thra- sybulus and his followers. Plato, who was a relation of his, has made him one of the interlocutors in his Timæus and Critias. (Xen., Hist. Gr., 2, 3 — Id., 2, 4.)

Carro, I. a wealthy Athenian, the intimate friend and disciple of Socrates. When that philosopher was accused of impiety by him; and, after his condemnation, succeeded in bribing his friends to release him out of the prison, so that Socrates, had he felt inclined, might easily have escaped. He is introduced, therefore, by Plato as an interlocutor in the dialogue called Crîto, after his name. The remainder of his life is not known; but, as he was nearly of the same age with Socrates, he could not have lived so long. Crito wrote seventeen dialogues, which are lost. (Plat., Crito.) He was the son of his master, who wrote an account of Pallene, of Persia, and the foundation of Syracuse, of the Getæ, &c. (Suid., s. v.) — III. An Athenian sculptor, who, with Nicolaus, one of his fellow-citizens, made a statue intended as a support to a building. This work, belonging to the class of Caryatides, is still extant, and forms part of the collection at the Villa Albani. Winckelmann (vol. 6, p. 263) thinks he flourished about the time of Cice-
and of literature. He is often famed for his riches and munificence. Poets and philosophers were invited to his court, and, among others, Solon, the Athenian, is said to have visited his capital, Sardis. Herodotus relates the conversation which took place between the 'after and Croesus on the subject of human felicity, in which the Athenian offended the Lydian monarch by his little value which he attached to riches as a means of happiness. (Herod., 1, 59.) This anecdote, however, appeared encumbered with chronological difficulties, even to the ancients (Plut., Vit. Sol., c. 27), and has given rise to considerable discussions in modern times. (Consult Larcher, Chronol. d'Herodot., vol. 7, p. 205, seqq.—Clavier, Histoire des premiers temps de la Grèce, vol. 2, p. 324.—Schultz, Apparat. ad Annall. Crit. Rev. Græc., p. 16, seqq.—Bähr, ad Herodot., 1, 30.) Not long after this, Croesus had the Lydians, whose capital was, by a great army, the Aya (vid. Aya); but the deep affiction into which this loss plunged him was dispelled in some degree, after two years of mourning, by a feeling of disquiet relative to the movements of Cyrus and the increasing power of the Persians. Wishing to form an alliance with the Greeks of Europe against the danger which threatened him, a step which had been recommended by the oracle at Delphi (Herod., 1, 56), he addressed himself, for this purpose, to the Lacedæmonians, at that time the most powerful of the Greek communities; and having succeeded in his object, and made magnificent presents to the Delphic shrine, he resolved on open hostilities with the Persians. The art of the crafty priesthood who managed the machinery of the oracle at Delphi is nowhere more clearly shown than in the history of their royal dupe, the monarch of Lydia. He had lavished upon their temple the most splendid gifts; so splendid, in fact, that we should be tempted to suspect Herodotus of exaggeration in his account by other writers. And the recipients of this bounty, in their turn, put him off with an answer of the most studied ambiguity when he consulted their far-famed oracle on the subject of a war with the Persians. The response of Apollo was, that if Croesus made war upon this people, he would destroy a great empire; and the answer of Amphiaraus (for his oracle, too, was consulted by the Lydian king), tended to the same effect. (Herod., 1, 53.) The verse itself, containing the response of the oracle, is given by Dürer (Croesus, p. 272), and, according to him, was as follows: Κρότως, "Άλυς διαύλος, μεγάλην ἀρχήν καταλύειν, "Craesus, on having crossed the Halys, will destroy a great empire," the river Halys being, as already remarked, the boundary of his dominions to the east. (Compare Cíc., de Div. 2, 56.—Aristot., Rhet., 3, 4.) Croesus thought, of course, the kingdom thus referred to was that of Cyrus; the issue, however, proved it to be his own. Having assembled a numerous army, the Lydian monarch crossed the Halys, invaded the territory of Cyrus, and a battle took place in the district of Pteria, but without any decisive result. Croesus, upon this, thinking his forces not sufficiently numerous, marched back to Sardis, disbanded his army, consisting entirely of mercenaries, and sent for succour to Amasis of Egypt, and also to the Lacedæmonians, determining to attack the Persians again in the beginning of the next spring. But Cyrus did not allow his adversary this respite. Having before the intention of the Lydian king to break up his present army, he marched with all speed into Lydia, before a new mercenary force could be assembled, defeated Croesus (who had no force at his command but his Lydian cavalry), in the battle of Thymbra, shut him up in Sardis, and took the city itself after a siege of fourteen days, and in the fourteenth year of the reign of the son of Alyattes. With Croesus fell the empire of the Lydians, and they were driven from Bithynia, and left so many splendid offerings; that deity heard his prayer, and a sudden and heavy fall of rain extinguished the flames! (Herod., 1, 85, seqq.) This story must be decidedly untrue, as it is not possible to conceive that the Persians would employ fire, which to them was a sacred element, in punishing a criminal. Croesus, after this, stood high in the favour of Cyrus, who profited by his advice on several important occasions; and Ctesias says that the Persian monarch assigned him for his residence a city near Ecbatana. This prince, in his last moments, recommended Croesus to the care of his son and successor Cambyses, and entreated the Lydian, on the other hand, to be an adviser to his son. Croesus discharged this duty with so much fidelity as to give offence to the new monarch, who ordered him to be put to death. Happily for him, they who were charged with this order hesitated to carry it into execution; and Cambyses, soon after, having regretted his former decision, confounded himself into his presence, and restored to his former favour. The rest of his history is unknown. As he was advanced in years, he could not have long survived Cambyses. (Herod., 3, 36, seqq.—Compare Bähr, ad Ctes., p. 105, seqq.—Cruzer, Pragm. Hist., p. 207, seqq.—Nic. Damasc., in Excerpt. Vales., p. 457, seqq.) The wealth of Croesus was proverbial in the ancient world, and one source of supply was in the gold ore washed down by the Pactolus from Mount Geryon. (Herod., 1, 30, Vales., p. 214.—Compare Hauck, Croesus, ch. 1, cent. 6, col. 516.—Strab., 610, 625, Verg., Æn., 10, 141. —Senec., Phil., 604.—Juvenc., Sat., 14, 298.) CRONI or CRONINI, a town of Arcadia, in the district Cromitis, mentioned by Xenophon as a place of some strength. It is thought by Sir W. Gell to correspond with Crane, two hours and forty-seven minutes from Sinano, or Megalopoli. (Itin. of the Morea, p. 99.) CROMVOY, a small place in Corinthia, on the shore of the Saronic Gulf, south of the Megarac frontier. It was celebrated in mythology as the haunt of a wild boar destroyed by Theseus. (Plut., Vit. These., Plat., Lach., p. 196.—Strabo, 380.) Pausanias says it was named after Crommus, son of Neptune. From Thucydidies (4, 44) it appears that Crommyon was 120 stadia from Corinth. The little hamlet of Canette or Kinetta is generally thought to occupy the site of this ancient town. (Chandler's Travels, vol. 2, ch. 43.) CROPHI, a mountain of Egypt, between Elephantia and Syene. Between this mountain and another called Mophi were the sources of the Nile, according to a foolish statement made to Herodotus by an Egyptian priest at Sais. (Herodot., 2, 28.) CRÔTÔNA or CRÔTO (Κρότων), now Cotrone, a powerful city of Italy, in the Bruttium ager, on the coast of the Sinus Tarentinus. Its foundation is ascribed to the Corinthians. We know the reason of this coloniza-
According to some traditions, the origin of Crotona was much more ancient, and it is said to derive its name from the hero Croton (Ovid, Metam., 15, 53.—Compare Herod., Pont. Fragm., p. 20.—Diod. Sic., 4, 24.) The residence of Pythagoras and his most distinguished followers in this city, together with the overthrow of Sybaris which it accomplished, and the exploits of Milo and of several other Crotonian victors in the Olympic Games, contributed in a high degree to raise its fame. Its climate, also, was proverbially excellent, and all these circumstances were particularly calculated for producing in its inhabitants that robust frame of body requisite to ensure success in gymnastic contests. Hence it was commonly said, that the last athlete of Crotona was the first of the other Greeks. (Strabo, 262.) This city was also celebrated for its school of medicine, and was the birthplace of Demo- cedes, who long enjoyed the reputation of being the first physician of Greece. (Herodot., 3, 131.) However brilliant an epithet in the history of Crotona its triumph over Sybaris may appear, that event must be regarded also as the term of her greatness and prosperity; for from this period it is said that luxury and the love of pleasure, the usual consequences of great opulence, soon obliterated all the good effects which had been produced by the wisdom and morality of Pythagoras, and conspired to enervate that hardihood and vigour for which the Crotonites had hitherto been so peculiarly celebrated. (Strab., Fragm., 7, 1, and 10, 1.—Tim. ed. Athen., 12, 4.) As a remarkable change which took place in the Warlike spirit of this people, it is said that, on their being subsequently engaged in hostilities with the Locrians, an army of 130,000 Crotonianae were routed by 10,000 of the enemy on the banks of the Sagras. Such was, indeed, the loss they experienced in this battle, that, according to Strabo, their city henceforth rapidly declined, and could no longer exercise any influence among the Italian republics. (Strabo, 261.) According to Justin (20, 2), it is true, a much earlier date ought to be assigned to this event; but the accounts which Strabo has followed evidently regarded it as subsequent to the fall of Sybaris, and probability rather favours such an arrangement in the order of events. (Con- sult Heyne, de Civit. Græc., prolog. 10, in Op. Acad., vol. 5, p. 184.) Dionysius the elder, who was then alive, never mentions the loss of the city. Græc, having surprised the citadel, gained possession of the town, which, however, he did not long retain. (Liv., 24, 3.) Crotona was finally able to assert its independence against his designs, as well as the attacks of the Bruttii; and when Pyrrhus invaded Italy, it was still a considerable city, extending on both banks of the Esaro, and its walls embracing a circumference of twelve miles. But the consequences of the war which ensued with that king proved very fatal to its prosperity, that above one half of its extent became deserted; the Esaro, which flowed through the town, now ran at some distance from the inhabited part, which was again separated from the fortress by a vacant space. Such is the picture which Livy draws of the state of this city after the battle of Cannas, at which period almost all the Greek colonies abandoned the country. But Croton was not long occupied by the Bruttii, with the exception of the city, which the chief inhabitants had taken refuge; these being unable to defend the place against a Carthaginian force, soon after surrendered, and were allowed to withdraw to Locri. (Liv., 24, 2 and 3.) Crotona eventually fell again into the hands of the Romans, A.U.C. 560, and a colony was established here. Pliny merely speaks of the Oppidum, without adding a single remark respecting its importance. It became a place of some consequence in the time of Belisarius, who made it, on account of its position, a chief point in his operations along the coast. (Procop., B. Goth., 3, 28, et al.) Its harbour, however, does not seem to have been any of the best, or well calculated to afford protection against storms and tempest. It was what Polybius calls (10, 1) a summer-harbour. (Cramer's Anc. Italy, vol. 2, p. 391. seqq.—Mannert, Geogr., 9, pt. 2, p. 210.)

The inhabitants of Crotona. (Cic., de Int., 2, 1.)

Crotonitae, of Crotona. (Cic., de Int., 2, 1.)

Crotonitae (κροτωνιατας χόρος), a part of Italy, of which Crotona was the capital. (Thucyd., 7, 35.)

Crotonium or Crotonum, a town of the Sabines, in the vicinity of Fidenae, and, like Fidenae, founded by a colony from Alba. (Dion. Hal., 2, 53.) Its great antiquity is also attested by Virgil (Aen., 7, 629), and by Silius Italicus (8, 367). From Pliny (3, 5) we learn that the Crotonitae were vanquished by Romulus, and that a settlement was formed in their territory. The fertility of their lands is extolled by more than one writer. Their city, however, was not finally conquered till the reign of the elder Tarquin. (Liv., 1, 38.) The name of Crotonitae Colles appears to have been given to the ridge of which the Mons Sacer formed a part, since Varro, speaking of the secession of the Roman people to that hill, terms it Secessio Crostumerina. (L. L., 3, 1.) The tribe called Crustumerina evidently derived its name from this ancient city. (Liv., 42, 34.) The ruins of Crustumerum are said to exist in a place now called Marzigliano Vecch. (Var., Vat. Lat. lib. 18, c. 17.—Cramer's Ancient Italy, vol. 1, p. 303, seqq.)

Ctesias, a Greek historian and physician of Cnidus, who flourished in the time of Artaxerxes Mmnon. (Suidas, s. v.—Xen. Anab., 1, 8, 27. Diod. Sic., 1, 32.) He was of the family of the Aсеleiades, who possessed the art of healing as a patrimony, inherited from their great progenitor Εσελεπίας. (Galen, vol. 6, p. 552, 1, 51, τα βασιλεία) Ctesias assisted at the battle of Platea (479 B.C.), but it is not precisely known whether he was in the army of Cyrus or in that of Artaxerxes. He merely states that he healed the wound received by the latter during the conflict. In speaking, however, of the death of Clearchus, the Grecian commander, which took place a short time after the battle, he informs us, that he was then the physician of Parysatis, the mother of Artaxerxes, which would render it very probable that he was from the first in the service of the king, and not in that of his brother. (Compare Bähr, ad Ctes., p. 16, Prolog.) He passed, after this, seventeen years at the court of Persia. Ctesias composed a History of Assyria and Persia, entitled Περίτεχνικα, in 23 books, written in the Ionic dialect. In writing this, he obtained great assistance, as well from the oral communications of the Persians as from the archives of the empire, to which he states that he had access, and in which appear to have been deposited those royal documents which Didorus Siculus calls βασιλείαν ὁμολογία. These annals contained rather the history of the court and the monarchs of Persia than that of the state itself. What we possess at present of the history of Ctesias, induces the belief, that it was precisely in this circle of events that the work of Ctesias just mentioned was principally taken up. It is by means of quotations given by Athenaeus, and more especially by Plutarch, that we are enabled to form some conjectures of several of the first six books, which turned entirely on the history of Assyria. We have an extract, in a somewhat more complete order, from the seventeen books that immediately follow: Photius has placed it in his Bibliotheca. Ctesias wrote also a history of India (Ἰδεακικά), in one book, from which Photius has also copied an extract. On many points Ctesias is contradicted by Herodotus, whom he accuses of dealing in fable; and also with Xenophon. He has been charged, in his turn, with being, on many occasions, negligent of the truth. What has principally injured the reputation of
CTE

CUM

Ctesias is his system of chronology, which is more difficult to be reconciled with that of the Scriptures than the one adopted by Herodotus. It must be observed, however, that, among the ancient writers, Plutarch is the only one whose very definite report is based on the statements of Dionysius of Halicarnassus, Diodorus Siculus, Strabo, Pliny, and even Xenophon himself, his contemporary, cites him with praise, or at least without contradicting him. It may reasonably be asked, moreover, whether the two ought to have been better acquainted with the subject of which they treat, Herodotus or Ctesias? Herodotus, who speaks only of the affairs of Persia on the testimony of others, and who wrote at a period when the Greeks had as yet but little knowledge of Persia, lived in the thirty-seventh year of the Persian wars, and had, indeed, passed many years at Susa, where he enjoyed so high a reputation as to be charged with the management of some important negotiations? (Gedon, Mem. de l'Acad. des Inscr., &c., vol. 14, p. 247, seqq.)—What has just been said, however, refers merely to the work of Ctesias on Persia. His history of India is crowded with fables. Heeren (Icen, vol. 1, p. 323) seeks to justify Ctesias, on the ground that he details merely the records of the Egyptians, which were in the mouths of the vulgar in Persia. Cuvier also observes, that Ctesias has by no means imagined the fantastic animals of which he speaks, but that he has fallen into the mistake of ascribing an actual existence to the hieroglyphic figures, which are remarked at the present day among the ruins of Persepolis. We there find, for example, the matichora, that fabulous animal which was the symbol or hieroglyphic of royal power. Many other fables are to be explained by the ignorance of the laws of nature, which was so great among the ancients.—The fragments of Ctesias are to be found appended to various editions of Herodotus. A separate edition was given by Lion, in 1825, 8vo, Göttingen, and another by Bähr, in 1824, 8vo, Francoff. This last is decidedly the best. The editor has not contented himself with giving an accurate text, corrected by the aid of manuscripts, but in his commentary he explains the text, with reference to history, geography, &c., and seeks also to justify Ctesias against most of the charges alleged to his discredit. (Schöll, Hist. Lit. Gr., vol. 2, p. 176, seqq.—Id., vol. 7, p. 436.)—II. An Ephesian, who also wrote on Persian affairs (Consult Vossius, de Hist. Graec. 3, p. 349.)—III. An artist, mentioned by Pliny (34, 29) as having flourished, along with other carvers in silver, after the time of Mon—IV. A spendthrift and debauched person. Some verses of the comic poets Anaxilas and Philaeus against him are preserved in Athenaeus (10, p. 416, d.)

Ctesiphon, I. an Athenian, who brought forward the proposition respecting the crown of gold, which the Athenians, on his motion, accorded to Demosthenes for public services. He was accused of having brought to trial for this by Eschines, but was successfully defended by Demosthenes. This controversy gave rise to the two famous and rival orations concerning "the Crown." (Vid. Eschines, Demosthenes.)—II. A city of Parthia, situated on the eastern bank of the Tigris, opposite to, and distant three miles from Seleucia. It was founded by Vardanes, fortified by Pacorus, and became the metropolis of the whole Parthian empire. Ctesiphon was at first an insignificant village, but the camp of the Parthian monarchs being frequently pitched in its vicinity, caused it gradually to swell into a great city; it was taken by the Romans, and again 33 years after by the Emperor Severus. (Dio Cass., 75. 9.—Spartian., Vit. Sec., 16.—Herodian. 3, 30.) Notwithstanding, however, its losses, it succeeded to Babylon and Seleucia as one of the great capitals of the East. In the time of Julian, Ctesiphon was a great and flourishing city; and Coche, as the only remaining part of Seleucia was called, was merely its suburb. To these two fragments of history has been added the "Debauched Man," or the "Daim," or the "Cities." They are now both in ruins. Ctesiphon never recovered its sark by the Saracens, A.D. 637. This place was the winter residence of the Parthian and Persian monarchs. In summer they dwelt at Ecbatana in Media. (Strabo, 743.—Plin., 6, 26.—Mannert, Geogr., vol. 5, p. 406.)

Culáro, a city of the Allobroges, in Gallia Narbonensis, on the banks of the Isara. On being rebuilt in the reign of Augustus, it was called Nepotopolis, and is now Grenoble. (Cic., Ep. ad Fam., 10, 23.—Poul Warnefr., de Gést. Longob., 3, 8.)

Cuma, I. a city of Æolis, in Asia Minor. (Vid. Cyme.)—II. A city of Campania in Italy, northwest of Neapolis. It was placed on a rocky hill washed by the sea; and the same name is still attached to the ruins which lie scattered around its base. Whatever doubt may have been thrown on the pretensions of many other Italian towns to be "original Cuma," those of Cuma seem to stand on grounds too firm and indisputable to be called in question. It is agreed upon by all ancient writers who have advertised this city, that it was founded at a very early period by some Greeks of Euboea, under the conduct of Hippocles of Cume and Megasthenes of Chalcis. (Strabo, 243.—Thucyd., 4, 6.—Liv., 8, 22.) The Latin poets, moreover, with Virgil at their head, all distinguish Cuma by the title of the Euboeic city. (Ab., 6, 154.—Ovid, Met., 14, 154.—Lucan, 5, 156.—Martialis, 9, 30.—Staitius, Syr., 4, 3.)—The period at which Cuma was founded is stated in the chronology of Eusebius to have been about 1050 B.C., that is, a few years before the great migration of the Ionians into Asia Minor. (Compare Scaliger, ad Euseb., Chron., and Prideaux, Not. ad Marm. Oxon., p. 146.) We have also the authority of Strabo (1, c.) for considering it as the most ancient of all the Greek colonies in both Italy and Sicily. The colonization of Cuma at this early period is a remarkable event, as showing the progress already made by the Greeks in the art of navigation, and proving also that they were then well acquainted with Italy. (Compare Müller, Etrusk., vol. 1, p. 167.) Hence Blum is of opinion, that to an early intercourse between Rome and Cuma, by means of commercial operations, is to be ascribed the Æolic character which so clearly develops itself in the forms of the most ancient Latin. (Einleitung in Roma altergeellschaft, p. 89.) Strabo also confers upon him that from its commencement the state of the colony was most flourishing. The fertility of the surrounding country, and the excellent harbours which the coast afforded, soon rendered it one of the most powerful cities of southern Italy, and enabled it to form settlements along the coast, and to send out colonies as far as Sicily. When Campania placed itself under the protection of Rome, Cuma followed the example of that state and obtained the privileges of a municipal city. (Liv., 8, 14, and 23, 31.) In the second Punic war it was attacked by Hannibal, but, by the exertions of Tiberius Sempronius Gracchus, it was vigorously and successfully defended. (Liv., 23, 37.) This city became a Roman colony in the reign of Augustus but, owing to the superior attractions
of Baiae and Neapolis, it did not attain to any degree of prosperity, and in Juvenal’s time it appears to have been nearly deserted. (Sat., 3, 1.) But Cumae was, perhaps, still more indebted for its celebrity to the oracular sibyl, who, from the earliest ages, was supposed to have made her abode in the Cumman cave, from which she delivered her prophecies. Every one is acquainted with the splendid fictions of Virgil relative to this sibyl, but it is not so generally known that the noble fabric of the poet was raised on a real foundation. The temple of Apollo, or, as it was more generally called, the cavern of the sibyl, actually existed; it consisted of one vast chamber, hewn out of the solid rock; but was almost entirely destroyed in a siege which the fortress of Cumae, then in the possession of the Goths, sustained. Such a cavern, caused the citadel to sink into the hollow, and thus involved the whole in one common ruin. (Agath., Hist. Goth., 1.) There is also a description of this cave in Justin Martyr. (Orat. Parant.—Cramer’s Ancient Italy, vol. 2, p. 148, seqq.)

Cumae, a place in Babylonia, where the battle was fought between Cyrus the younger and his brother Artaxerxes Mnoemnon, and in which the former lost his life. Arians,—c. says, it was 500 stadia distant from Babylon. D’Anville places it within the limits of Mesopotamia, near Is, the modern Hit. But Manner, with more propriety, assigns it to Babylonia, and fixes its location a few miles south of the entrance of the wall of Media. (Geogr., vol. 3, pt. 2, p. 331.)

Curnes, I. Ager, a region in the southernmost part of Lusitania, between the river Anzas and the Sacrum Promontorium and Atlantic. It is now Algarve. The appellation Cuneus is generally thought to have been given to it by the Romans from its resemblance to a "wedge" (cuneus); Ubert, however, thinks that the name is to be traced to the Coni (Kovio), of whom Polybius (10, 7) speaks as dwelling to the west of the straits, and who were probably inhabitants of the southwestern part of Iberia. Appian (Reb. Hist., c. 57) calls them Cunei (Kovioi), and makes their capital to have been Gergoria. It is very probable that this name, in the time of the Roman sway, reminding that people of their own term cuneus, gave rise to the idea of ascribing a wedgelike form to the country in the southern parts of Lusitania. (Ubert, Geogr., vol. 2, p. 309.)—II. or Curnum Promontorium, a promontory of the Cuneus Ager, in Lusitania, to the west of the mouth of the Anas, now Cape Santa Maria. It is there, by undermining of Portugal (Plin., 4, 22.) Curnio, the god of love. (Vit. Eros.)

Curetis, a town of the Sabines, to the north of Eretum, celebrated as having given birth to Numa Pompius. (Virg., En., 6, 811.) Antiquaries are divided in opinion as to the site occupied by this ancient place. Cluverius fixed it at Vescovo di Sabini (Ital. Ant., 1, 675), about twenty-five miles from Rome; the Abbé Chaupy at Monte Maggiore, on the Via Salaria, and twenty miles from that city. (Dec. de la Maison d’Hor., vol. 3, p. 576.) The opinion of Holstenius ought, however, to be preferred; he places it at Curetis, a little town on a river of the same name, which bears an evident similarity to that of the ancient city, and where, according to the same accurate observer, many remains were still visible when he examined the spot. (Adnot. ad Steph. Byz., p. 106.—Compare P. Anstille, Geogr. Anc., vol. 1, p. 193.—Cramer’s Ancient Italy, vol. 3, p. 310.)

Curetes, an ancient people, who would seem to have been a branch of the Leleges, and to have settled at an early period in the island of Crete. (Compare Euseb., Chron., 1, p. 14.—Mannert, Geogr., vol. 8, p. 21.) Being piratical in their habits, we find them, in process of time, occupying many of the islands of the Archi-

pelago, and establishing themselves also along the coasts of Acanania and Ætolia. It is from them that the latter country first received the name of Curetis. Strabo (465) derives their appellation from Koypa, tonsura, from the circumstance of their cutting off the hair in front, to prevent the enemy from taking hold. (Compare recent reports of the site.) Others derive their name from the town of Curium in Ætolia, in the vicinity of Pleuron. Ritter, however, finds in the name Curetes the key-word of his system (Kor), which traces everything to an early worship of the Sun and other heavenly bodies; just as he deduces the name Creta from Kor-eta. (Vorhalle, p. 410.)—The name Curetes is also applied, in a religious sense, to a class of priests in the island of Creta; who, however, to be identical with the early inhabitants already spoken of. To them was confided by Rhea the care of Jupiter’s infancy, and, to prevent his being discovered by his father Saturn, they invented a species of Pyrrhic dance, and drowned the cries of the infant deity by the clashing of their arms and cymbals. Some writers among the ancients pretended, that the Dacetyli were the progenitors of the Curetes, and that Phrygia had been the cradle of their race. Others have been inclined to identify them with the Goths of Crete. (Compare Ephoros, ap. Dio. Sic., 5, 64.) The president De Brosses, in order to clear up this obscure point, advances the opinion, that the Curetes were the ancient priesthood of that part of Europe which lies in the vicinity of Asia, and resembled the Druids among the Celts, and the Salii among the Sabines, as well as the sorcerers and jugglers of Lapland, Nigrita, &c. Hence he infers, that it would be idle to seek for their native country, since we find this class of priests everywhere existing where popular belief was based on gross superstition. The most celebrated college of these jugglers would be in Crete. (Hist. de la Répub. Rom. de Salluste retablie, vol. 2, p. 564, in notis.) But, whoever they may have been, one thing is certain, that the Curetes exerted themselves successfully to civilize the rude inhabitants of Crete. (Compare Seneclus, ad Virg., Aen., 3, 151.—"Curetes primi cultores Cretae case decurunt." They taught them to keep flocks and herds, to raise bees, to work metals. They made them acquainted also with some of the leading principles of astronomy. (Theon., ad Arat., 1, 35.) To the Curetes, too, must no doubt be attributed what is said of Melisseus, the first king of Crete, that he was the first to sacrifice to the gods, to introduce new rites and sacred processions unknown before his time; and that his daughter Melissa was the first priestess of the Mother of the Gods. (Lactant., div. Inst., 1, 22, 19.) Melisseus, whose daughters Amalthaea and Melissa nourished the infant Jupiter with milk and honey, was of necessity contemporary with the Curetes, and may be regarded without doubt as one of them. In a word, so well ground a reputation did the Curetes leave behind them, that, in process of time, it became customary in Crete, when an inhabitant of the island had rendered himself conspicuous by talent or acquisitions, to call him, as is proved by the example of Epimenides, a new Curete, or simply a Curete. (Plut., Vit. Solon, 84.—Diog. Lcrir., 1, 114.) The title of Thyreatis, or "children of the Earth," also given to the Curetes (Dio., 5, 65.) and likewise of that of "Companions of Rheus" (Strabo, 465), sufficient to prove that they worshipped this divinity. The founders of Cnosus, they say, raised in that city a temple, consecrated to the Grove, unto the Mother of the Gods (Dio., 5, 66.—Synceul., Chron., 125.)—For other remarks on the Curetes, consult Sainte-Croix, Mystères du Paganisme, vol. 1, p. 71, seqq.}

Curetis, i. a name given to Crete, as being the residence of the Curetes. (Ovid, Met., 8, 136.)—II. The earlier name of Ætolia. (Vit. Curetes.) 391
CURIA, I. a subdivision of the early Roman tribes, each tribe containing ten curiae. This arrangement commenced, as is said, with Romulus, at which time the number of tribes amounted to three, so that the curiae at their very outset were thirty. This number of curiae always remained the same, whereas that of the once legioned, forming part of the thrice-five. Each curia anciently had a chapel or temple for the performance of sacred rites. He who presided over one curia was called Curio; he who presided over them all, Curio Maximus.—II. A name given to a building where the senate assembled. These curiae were always consecrated, and, being thus of a religious character, were supposed to render the debates of the senate more solemn and suspicious. The senate appears at first to have met in the chapels or temples of the curiae, and afterward to have had buildings specially erected for this purpose. Varro, therefore, distinguishes the curias into two kinds; the one where the priests took care of divine matters, and the other where the senate counsel for human affairs. (Varro, L. L., 4, 32.—Burgess, Antiquities of Rome, vol. I, p. 360.)

CURIAI, a family of Alba. The three Curiaii, who presided in turn, had lost the victory, belonged to it. (L., 1, 24.)

Curio, I. Caius, was priest A.U.C. 632, but did not attain to the consulship. Cicero speaks with praise of his oratory, an opinion founded, not on personal knowledge, but on the speeches he had left. (Cic., Brut., 32.)—II. C. Scribonius, was consul with Cneus Octavius, A.U.C. 677. On returning from the province of Macedonius, he triumphed over the Dardani, as proconsul, A.U.C. 681. (Sismon., Fast. Cons., ad Fast., 1, 15, ed. Oxon.) Cicero often mentions him, and in his Brutus (c. 49) enumerates him among the Roman orators, along with Cotta and others.—III. C. Scribonius, son of the preceding, a turbulent and unprincipled man, and an active partisan of Julius Cæsar's. Being deeply involved in debt when tribune of the commons, Cæsar gained him over by paying for him what he owed (Plut., Vit. Pomp., c. 53), and Curio immediately was raised with great vigour in his behalf. Cæsar, it seems, was under obligations to him before this, since Curio is said to have saved his life when he was leaving the senate-house after the debate about Catiline's accomplices, his personal safety being endangered by the young men who stood in arms around the building. (Plut., Vit. Cæs., c. 8.) Plutarch ascribes Antony's early initiation into licentious habits to his acquaintance with Curio. (Vit. Ant., c. 2.—Compare, Cic., Phil., 2, 2.) Cicero speaks very favourably of his natural qualifications as an orator, but denies him the praise of application. (Cic., Brut., 81.) On the breaking out of the civil war, Cæsar, after having possessed himself of Rome, sent Curio to take charge of Sicily. The latter subsequently crossed over from this island into Africa, with an armed force, against Juba and the followers of Pompey, but was defeated and slain. (Appian, Bell. Civ., 2, 41, seqq.)

CURIOLOTA. I. The Curioloti were a tribe of Gallic origin. Their territory lay to the northeast of the Veneti, and answers to what is now the territory of St. Malo, between Dinant and Lamballe, in the department of the Côtes-du-Nord. (Lemaire, Ind. Geogr., ad Caz., p. 244.)

CURIUM, a city of Cyprus, on the southern coast, or rather, according to the ancients, at the commencement of the western shore, at a small distance from which, to the north, was a pebble beach called the name of Curium. Curium is said to have been founded by an Argive colony, and it was one of the nine royal cities of Cyprus. (Herod., 5, 113.—Strab., 683.) The site seems to correspond with what is now Episcopia, implying the existence of a bishop's see, a circumstance which applies to Curium in the middle ages. (Hierol., p. 706.) Ancient writers report, that the hills around Curium contained rich veins of copper ore. (Theophr., de Ven.—Serv., ad Verg., Enn., 3, 111.—Cramer's Asia Minor, vol. 2, p. 376.)

Curio DENTATUS, Manius, a Roman, celebrated for his labours in the写出完成。
have been aided in this by a natural tunnel gradually formed through the basin of the lake itself. (Compare Arnold's *History of Rome*, vol. 1, p. 511.) II. Quintus Rufus, a Latin historian. (Vid. Quintus I.)

**CURLUS MAGISTRATUS**, the name given to a class of magistrates which conferred the privilege of using the *sellâ curru* or chair of state. This was. An old done made of ivory, or, at least, adorned with it. The magistrates who enjoyed this privilege were the dictator, consuls, praetors, censors, and curule aediles. They sat on this chair in their tribunals on all solemn occasions. Those commanders who triumphed had it with them in their chariot. Persons whose ancestors, or themselves, had borne any curule office, were called nobili, and had the *jus imaginarii*. They who were the first of the family that had raised themselves to any curule office, were called *homines novi*, new men.—As regards the origin of the term *curulis*, Festus deduces it from *curru*, "a chariot," and says, that "*curule magistratus*" were so called because they were accustomed to be borne along in chariots ("*guia curru vehabantur*"). Aulus Gellius (3, 18) also remarks, quoting, at the same time, Gabius Basus, that those senators who had borne any curule magistracy were accustomed, as a mark of honour, to be conveyed to the senate in chariots, and that the seat in the chariot (*sellâ curru*) was hence denominated *"curule*" (*sellâ curulis*). He may be right. There is no raiser of the term, but he is certainly wrong in the explanation which he gives, since Pliny expressly states (7, 43), that L. Metellus, who had enjoyed the highest honours in the state, having become deprived of sight, had the privilege allowed him of being conveyed to the senate in a chariot, a *favour granted to no one before his time*.—The common derivation of the word is from *Cures*, a town of the Sabines, whence this official chair is said to have been derived. Lusius favours this latter etymology. (De Magistr. Vet. P. R., c. 12.)

**Cussaei or Cossaei**, a nation occupying the southern declivity of those mountains which separated Susiana from Media. The Elymese possessed the northern declivity. The Cussaei or Cossaei were a brave people, and the kings of Persia were frequently compelled to purchase a passage over these mountains from them. Alexander effectuated this by many采取 surprize. Among them is lost a large portion of his army in crossing them. According to Mannert, this people, together with the Carduchi and some other neighbouring tribes, were the ancestors of the modern Curds. (Mannert, Geogr., vol. 5, p. 493.)

**Curus**, a river of Hungary, falling into the Danube; now the Vag, according to D'Anville. Mannert, however, makes it the same with the Granus or Grun. (Mannert, Geogr., vol. 4, p. 380, in nota.)

**Cuttis**, a settlement of the Sabines, east of Reate, and on the right bank of the Velinus, famed as an aboriginal city of great antiquity (Dion. Hal., 1, 14 and 2, 49), and celebrated for its lake, now Pozzo Ratignano, and the floating island on its surface. (Senec., Nat. Quast., 3, 25.—Plin., 2, 96.) This lake was further distinguished by the appellation of the Umbilicus, or "Navel" (i. e., centre) of Italy. (Varro, ap. Plin., 3, 153.) The statement is found by D’Anville (Ancl. Geogr., 165) to be correct, when referred to the breadth of Italy; the distance from Ostia to Cuttis, the ruins of which are to be seen close to Paterno, a village near Civita Ducale, being seventy-six miles, and the same from thence to Castrum Truentinum on the Adriatic. If Cluverius is right in reading *Kövon* for *Kövön* in Stephanus of Byzantium, who quotes the name from the Périgea of Ctesias, as belonging to a city of the Umbri, we may adduce the authority of that early historian in proof of the antiquity of this town. Cuttis is also noticed by Strabo (225) for its mineral waters, which were accounted salutarv for many disea-
rocks; and near them the vast wave of the dark Amphitrite resounds: the blessed gods call them the Wanderers. Here neither birds pass, nor do falsehoods, which carry the omens to father Jove; but the smooth rock always takes some one of them, while the father supplies another to make up their number. From this not yet has any ship of men escaped, whichever has come to it, but the waves of the sea, and the storms of pernicious fire take away planks of ships and bodies of men together. That ship, indeed, only, which passes over the sea, has sailed beyond, the Argos, a care to all, which sailed from Æxia... But as the two rocks, the one reaching heaven with its sharp top, and a dark cloud surrounds it: this, indeed, never goes away, nor does clearness ever hold possession of its top, either in summer or in autumn; nor could a mortal man ascend it, or descend, not if he had twenty hands and feet; for the rock is smooth like one polished around. — It is not difficult, from the accounts here given, adorned though they be with the garb of poetry, to deduce the inference that the Cyanean isles were originally volcanic. The "atmos of pernicious fire" (ἀτμός ὑδάτων ἱδρύλαια) and the dark cloud (νυμφή κέφαλα) point at once to this. Hence, in the discussions which have arisen relative to the formation of the Thracian Bosporus, and the enlargement of the Mediterranean Sea (vid. Mediterraneum Mare), the agency of volcanoes is generally asserted by the one party. (Compare Ouvier, Voyage, &c., vol. 1, p. 62.—Geographie Physique de la Mer Noire, par Bureau de la Maitte, p. 255, seqq.)

The only probable change in the region of the Bosporus must have been produced by a gradual sinking of a barrier of rocks, and that even this must have occurred at a period antecedent to all historical and geographical records. They add, that the pretended volcanic substances brought from the Bosporus have been proved to be merely fragments of ordinary rocks. (Malte-Brun, Geogr., vol. 3, p. 297, Bruxelles ed.) It is difficult, however, to reconcile this assertion with the strong and decided language of Dr. Clarke, relative to the structure of the rock of which the Cyanean isles consist, as well as to the general appearance of the shore along the line of the Bosporus. "The Cyaneum," he remarks, "are each joined to the main land by a kind of isthmus, and appear as islands when this is inundated; which always happens in stormy weather. But it is not certain that the isthmus, connecting either of them with the continent, was formed by the action of fire, which, probably, owing to that gradual sinking of the level of the Black Sea before noticed. The same cause continuing to operate, may hereafter lead posterity to marvel what is become of the Cyaneum; and this may also account for their multiplied appearance in ages anterior to the time of Strabo. For some time before we reached the entrance to the Canal, steering close along its European boundary, as it is called, in the cliffs and hills, even to their summits, a remarkable series of stratified and homogeneous stony substances, rounded by attrition in water, imbedded in a hard natural cement, yet differing from the usual appearance of breccia rocks; for, upon a nearer examination, the whole mass appears to have undergone, first, a violent action of fire; and, secondly, that degree of friction in water to which their forms must be ascribed. Breccia rocks do not commonly consist of a single isolated fragment, but are formed ed by this singular aggregate, and the parts composing it, exhibited, by the circumstances of their position, a striking proof of the power of an inundation; having dragged along with it the constituent parts of the mixture, over all the heights above the present level of the Black Sea, and deposited them in such a manner as to leave no doubt but that a torrent had there passed towards the Sea of Marmora. All the strata of the mountains, and each individual mass composing them, lean from the north to the south. At the point of the European lighthouse, we found the sea tempestuous, the craft obtained by a slight compact lava: these rocks have separated prismatically, and they exhibit surfaces tinged by the oxide of iron. From this point we passed to the Cyanean isle, upon the European side of the strait, and there landed. The structure of the rock, whereof the island consists, corresponds with the nature of the strata already described: but the substances composing it were perhaps never before associated in any mineral aggregate. But they all appear to have been more or less modified by fire, and to have been cemented during the boiling of a volcano. In the same mass may be observed fragments of various-coloured lava, of trap, of basalz, and of marble. In the fissures appear agate, chalcedony, and quartz; but in friable and thin veins, not half an inch in thickness, deposited posterior to the setting of the stratum. The agate appeared in a vein of considerable extent, occupying a deep fissure not more than an inch wide, and coated by a green earth, resembling some of the lavas of Etna, which have been decomposed by acidiferous vapours. The summit of this insular rock is the most favourable situation for surveying the mouth of the canal; thus viewed, it has the appearance of a cratæ, whose broken sides were opened towards the Black Sea, and, by a smaller aperture, towards the Bosporus. The Asiatic side of the strait is distinguished by appearances similar to those already described; with this difference, that, opposite to the island, a little to the east of the Anatolian lighthouse, a range of basaltic pillars may be discerned, standing upon a base inclined towards the sea; and, when examined with a telescope, exhibiting very regular prismatic forms. From all the preceding observations, and after due consideration of events recorded in history, as compared with the phenomena of nature, it is, perhaps, more than probable, that the bursting of the Thracian Bosporus, the deluge mentioned by Diodorus Siculus, and the draining of the waters once uniting the Black Sea to the Caspian, were all the consequence of an earthquake caused by subterraneous fires, which were not extinct at the time of the passage of the Argonauts, and the effects of which are still visible." (Clarke's Travels—Russia, Tartary, and Turkey—vol. 2, p. 340, seqq.)

Cyaxares, 1. a king of the Medes, grandson of Dejoces, son of Phraorotes, and father of Astyages. He weds a princess of the Medes, and is captured by Cambyses. (Comp. Darseis, Larcher, ad loc.), and this trait displayed itself in his treatment of the Scythians, a body of whom had taken refuge in his territories in consequence of a sedition. He received them kindly, allowed them settlements, and even went so far as to intrust some children to their care, in order to have them taught the Scythian language and the art of bending the bow. After some time had elapsed, the Scythians, accustomed to go forth to the chase, and to bring back to the king the spoils of their success, were by the king turned one day with empty hands. Cyaxares gave vent to his temper by punishing them severely. The Scythians, indignant at this treatment, which they knew to be unmerited, resolved to slay one of the children confided to their care, and, after preparing the flesh like the game they had been accustomed to bring, to serve it up before Astyages, and betake themselves immediately afterwards to the interior of their country. A third plan succeeded but too well. Cyaxares demanded the fugitives from the Lydian monarch, and on his refusal a war ensued. This war lasted for five years: in the sixth, an eclipse of the sun, which had been predicted by Thales, separated the contending armies. Peace was soon restored through the mediation of Lycabens, king of Babylon, and Syennes, king of Cilicia. (Herodot., 1, 73, seqq.) Herodotus also informs us
(1, 103), that Cyaxares was superior in valour to his ancestors; that he was the first who regularly trained the Asiatics to military service; dividing the troops, which had been imbodied promiscuously before his time, into distinct companies of lancers, archers, and cavalry. The historian then adds parenthetically, "(this was he who waged war with the Lydians; when, during a battle, the day became night)." This parenthetical remark evidently refers to the foregoing account of the eclipse. We are next informed, that, having subdued all Asia above the river Halys, he marched with all that were under his command against Nineveh, resolving to avenge the death of his father by the destruction of that city. After he had defeated the Assyrians, he laid siege to the city; but was forced to raise it by a sudden invasion of his territories. For a numerous army of Scythians, headed by Madyas, made an irruption into Media, defeated him in a pitched battle, and reduced him and all Upper Asia, under subjection to them, for eight-and-twenty years. (Herodot., 1, 103, seqq.) Then, in revenge for their galling impositions and exactions, he slew their chief- tains, when intoxicated, at a banquet to which he had invited them, and, expelling the rest, recovered his former power and possessions. (Herodot., 1, 196.) After this, the Medes took Nineveh and subdued the Assyrian dominion, all except the certain of the federates in the world. Cyaxares died after having reigned forty years, including twenty-eight years of the Scythian dominion. —Hale fixes the time of the eclipse that was predicted by Thales, as above stated, on the 18th of May, B.C. 603, at 9 hours and 30 minutes in the morning. He makes this eclipse to have been a total one, and the moon's shadow to have traversed the earth's disk, near the mouth of the river Hac- rane, the boundary of the two contending kingdoms. This a later day. (Hale's Analysis of Chronology, vol. 4, p. 84, 2d ed.) The same learned writer makes Cyax- are I. to have been the same with Kai Kobad, whom Mirkhond, and other Persian historians give as the founder of the second or Kaianian dynasty. He iden- tifies him also with the Ahasuerus of Scripture. (Hale's Analysis, vol. 4, p. 76, 81.) According, how- ever, to another modern writer, Cyaxares is the same with the Pseudo-Cyaxares of the Persic historians, and the Fedirum, &c., p. 53, seqq., Hanon, 1829.—II. Of Astyages, succeeded his father at the age of 49 years. Being naturally of an easy, indolent disposi- tion, and fond of his amusements, he left the burden of military affairs and the care of the government to Cy- rus, his nephew and son-in-law, who married his only daughter, and was, therefore, doubly entitled to suc- ceed him. Xenophon notices this marriage as taking place after the conquest of Babylon. (Cyrop., 8, 28.) But to this Sir Isaac Newton justly objects: "This daughter, saith Xenophon, was reported to be very handsome, and used to play with Cyrus when they were both children, and to say that she would marry him; and, therefore, they were much of the same age. Xenophon saith, that Cyrus married her after the tak- ing of Babylon; but she was then an old woman. It is more probable that he married her while she was young and handsome, and he a young man." (Chrom., p. 310.) Newton supposes that Darius the Mede was the son of Cyaxares, and cousin of Cyrus; and that Cyrus rebelled against, and dethroned him two years after the capture of Babylon. But this is unfounded: for Darius the Mede was sixteen years older than Cy- rus. We may therefore rest assured that he was Cy- axares himself, and none else. (Hale's Analysis of Chronology, vol. 4, p. 88, 2d ed.)

Cybele was a goddess, daughter of Ceus and Terra, and distin- guished by the appellation of "Mother of the Gods," or "Goddess of the Earth." The Phrygians regarded her as the goddess of nature or of the earth. Her temples stood on the summits of hills or mount- ains, such as Dindymus, Berecyntus, Sipylus, and others. She was particularly worshipped at Pessinus, in Galatia, above which place rose Mount Dindymus, whence her surname of Dindymene. Her statue in this city was nothing more than a large aërole, which was held to be her heaven-sent image, and which was removed to Rome near the close of the second Punic war. The legend of Cybele and Atys has already been alluded to, in its various forms (vid. Atys), and the explanation given on that occasion may here be repeated, that Atys was, in fact, an incarnation of the sun. The account of Diodorus, as usual, is based upon the system of Euhemerus, by which a mortal origin was sought to be established for all the heathen divinities. According to this writer, Cybele was daughter to King Moon and his queen Dindymene. She was exposed by her mother Cybele, where she was suckled by panthers and lionsesses, and was afterward reared by shepherdesse who named her Cybele. When she grew up, she displayed great skill in the healing art, and cured all the diseases of the children and cat- tle. They thence called her the mountain-mother. While dwelling in the woods she formed a strict friend- ship with Marsyas, and had a love-affair with a youth named Atys or Atthis. She was afterward acknowledged by Cybele, but her father, on discovering her intimacy with Atys, seized that unhappy youth and put him to death. Grief deprived Cybele of her rea- son: with dishevelled locks she roamed to the sound of the drums and pipes which she had invented, over various regions of the earth, even as far as the coun- try of the Hyperboreans, teaching mankind agriculture: her companion was still the faithful Marsyas. Mean- time a dreadful famine ravaged the land, and she, despairing of deliverance, resolved to die (vid. Cybele). But the body of Atys should be buried, and divine honours be paid to Cybele. A sta- tely temple was accordingly erected to her at Pes- sinus by King Midas. (Diod. Sic., 3, 58, seq.) It is apparent from this account, pragmatized as it is, that Cybele, Marsyas, and Atys were all ancient Phry- gian deities.—Like Asiatic worship in general, that of Cybele was enthusiastic. Her priests, named Gali and Corybantes, ran about with dreadful cries and bowings, beating on tympanes, clashing cymbals, sounding pipes, and cutting their flesh with knives. The box-tree and cypress were considered as sacred to her; as from the former she made the pipes, and Atys was said to have been changed into the latter. We find from Pindar and the dramatists, that the worship and the mysteries of the Great Mother were common in Greece, particularly at Athens, in their time. (Pind. Pyth., 3, 137.—Schol. upon, 31st.—Eucl. Bacch., 78.—Id. Hel., 1321.) The worship of Cybe- le, as has already been remarked, was introduced into Rome near the close of the second Punic war, A.U.C. 547, when a solemn embassy was sent to Attalus, king of Pergamus, to request the image at Pessinus, which had fallen from heaven. The monarch readily yielded compliance, and the goddess was conveyed to the Italian capital, where a solemn festival was held for the reception of her, and a solemn festival, named the Magna- eia, was celebrated every year in her honour. (Liv., 29, 14.—Ovid. Fast. 4, 179, seqq.) As the Greeks had confounded her with Rhea, so the Latins made her one with their Ops, the goddess of the earth. (La- cret., 2, 598, seqq.—Virg. En., 3, 104, 6, 785, seq.)
In works of art Cybele exhibits the matronly air and composed dignity, which distinguish Juno and Ceres. Sometimes she is veiled, and seated on a throne with lions at her side; at other times riding in a chariot drawn by lions. Her head is always crowned with towers. She frequently beats on a drum, and bears a sceptre in her hand. (Keightley’s Mythology, p. 208, seqq.) The Cilician Cybele, in her festival, is decked with the cymbals (κύμβος, κύμβαλα) used in the worship of the goddess. It is better, however, to suppose her so called, because represented usually in her more mysterious character, under a globular or else square form: (λέγεται δὲ καὶ Κυθέλα ὑπὸ τοῦ κυκλίδος σχήματος, κατὰ γεωμετρίαν, ἀ γῆν. — Lex. Antiq., Frag. in Herm. Gramm.—Knight’s Inquiry, § 42, Class. Journ., vol. 23, p. 253.—For an explanation of the myth of Cybele, which cannot, of course, be given here, consult Gaigniat, vol. 2, pt. 1, p. 67, seqq.)

Cybistra, a town of Cappadocia, in the district of Cataonia, and at the foot of Mount Taurus. (Cic., Ep. ad Fam., 15, 2 et 4.—Ep. ad Att., 5, 20.) Cicero made it his headquarters during his command in Cilicia. Leake is inclined to place Cybistra at Karhsaraz, near Mazarca, but this position does not agree with Strabo’s account. D’Anville had imagined, from a passage of Strabo, that Cybistra was distinguished by Bustereh, a small place near the source of one of the branches of the Halya; but it is not said whether there are any remains of antiquity at Bustereh, and, besides, Leake affirms that, according to the Arabian geographer Hadji Khalifa, the true name of the place is Koshter. (Ania Minor, p. 63.) Cybistra is mentioned by Hierocles among the Episcopalian cities of Cappadocia. (Hierol., p. 700.—Mannert, Geogr., vol. 6, pt. 2, p. 230, seq.)

Cyclades, a name applied by the ancient Greeks to that cluster (κύκλος) of islands which encircled Delos. Strabo (485) says, that the Cyclades were at first only twelve in number, but were afterward increased to fifteen. These, as we learn from Artemidorus, were Ceos, Cythnos, Seriphos, Melos, Siphnos, Cimolos, Praisinthus, Olearos, Paros, Naxos, Syros, Myconos, Tenos, Andros, and Gyaros, which last, however, Strabo himself was desirous of excluding from the list, calling it a mistake. It seems, however, that the Istmian poets—It appears from the Greek historians, that the Cyclades were first inhabited by the Phoenicians, Carians, and Leleges, whose piratical habits rendered them formidable to the cities on the continent, till they were conquered and finally extirpated by Minos. (Thucyd., 1, 4.—Herodot., 1, 171.) These islands were subsequently occupied for a short time by Polycrates, tyrant of Samos, and the Persians. (Herodot., 5, 28.) But, after the battle of Leuctra, they became dependent on the Athenians. (Thucyd., 1, 94.)

Cyclīci poēta, a name given by the ancient grammarians to a class of minor bards, who selected, for the subjects of their productions, things transacted as well during the Trojan war, as before and after; and who, in treating of these subjects, confined themselves with-in a certain round or cycle of fable (κύκλος, circula). In order to understand the subject more fully, we must observe, that the period was both a Mythic and a Trojan cycle. The former of these emblazoned the whole series of fable, from the genealogies of the gods down to the time of the Trojan war. The latter comprised the fables that had reference to, or were in any way connected with, the Trojan war. Of the first class were Theogonies, Cosmogonies, Titanomachies, and the like; of the second, the poems of Arctium, Lesches, Stasimus, and others. At a later period, the term cyclic was applied to two species of poems; one, where the poet confined himself to a trite and hackneyed round (κύκλος) of particulars (compare Horat., Ep. ad Pis., 132); the other, where, from an ignorance of the true nature of epic poetry and of the art itself, the author, with tedious minuteness, recounted all the attendant circumstances of an event, from the earliest beginnings of the same; as, for example, the history of the Trojan war, from the story of Leda and the eggs. (Compare Heyne, Excursus, 1, ad En., 2, vol. 2, p. 299, ad. Lips.)

Cyclopes, a fabled race, & gigantic size, having but one eye, large and round, placed in the centre of their forehead, whence, according to the common account, their name was derived, from κύκλος, "a circula! opening," and ὤψ, "an eye." Homer makes Ulysses, after having left the country of the Lotus-eaters (Lotophagi), to have sailed on westward, and to have come to that of the Cyclopes, which could not have been very far distant, or the poet would in that case, as he always does, have specified the number of days occupied in the voyage. The Cyclopes are described by him as a rude and lawless race, who neither planted nor sowed, but whose land was so fertile as to produce for them, of itself, wheat, barley, and vines. They had no social institutions, neither assemblies nor laws, but dwelt separately, each in his cave, on the tops of lofty mountains, and each, without regard to others, governed his own wife and children. The adventure of Ulysses with Polyphemus, one of this race, will be found under the account of his Home, and the size of the Cyclopes in general, but every effort is made to give an exaggerated idea of that of Polyphemus. Hence some have imagined that, according to the Homerian idea, the Cyclopes were not in general of such huge dimensions or cannibal habits as the bard assigns to Polyphemus himself. For the latter does not appear to have been of the ordinary Cyclops-race, but the son of Neptune and a sea-nymph; and he is also said to have been the father of the Cyclopes. (Od., 1, 70.) Later poets, however, lost no time in supplying whatever the fable wanted in this respect, and hence Virgil describes the whole race as of gigantic stature, and compares them to so many tall forest-trees. (Aln., 3, 680.) It is not a little remarkable, that neither in the description of the Cyclopes in general, nor of Polyphemus in particular, is there any notice taken of their being one-eyed; yet, in the account of the blinding of the latter, we read: "His single eye, large and round, was plucked out. We may hence, perhaps, infer, that Homer followed the usual derivation of the name.—Thus much for the Homerian account of the Cyclopes. In Hesiod, on the other hand (Theog., 139, seqq.), we have what appears to be the earlier legend respecting these fabled beings, a circumstance which may tend to show that the Odyssey was composed by a poet later than Hesiod, and not by the author of the Iliad. In the Theogony of Hesiod, the Cyclopes are only three in number, Brontes, Steropes, and Arges. They are the sons of Uranus and Gaea (Caelus and Terra), and their employment is to fabricate the thunderbolt for Jove. They are said to be in every other respect like gods, excepting the one, single eye, in the middle of their foreheads, a circumstance from which Hesiod also, like Homer, deduces their general name: "Their name," says the poet, "was Cyclopes, because one, round eye lay in their forehead." (Theog., 144, seq.) In the individual names given by Hesiod, we have evidently the germe of the whole fable. The Cyclopes are the energies of the sky, the thunder, the lightning, and the rapid march of the latter (Brontes, from βρόντη, thunder. —Steropes, from στρόπη, the lightning. —Arges, from ἀργής, rapid.) In accordance with this idea, the term Κύκλων (Cyclope) itself may be regarded as no proper name, but a name compounded with μάξης, Κύκλως, Κύκλως, Πελον; and the word κύκλος being the root, we may make the Cyclopes to be the Whirlers, or, to designate them by a Latin name, the Volvuli. (Compare Hermann, de Mythol. Graec. Antiquiss.—Opusc., vol. 2, p. 176.)
When the Thunder, the Lightening, and the rapid Flame had been converted by poetry into one-eyed giants, and localized in the neighbourhood of volcanoes, it was an easy process to convert them into smiths, the assistants of Vulcan. (Callim. H. n. Dion. 46, seqq.—Virgil, Georg. 4, 175.—Ann. 8, 416, seqq.) As they were now artists in one or two of the manual arts, they gave no surprise to find them engaged in a task adapted to their huge strength, namely, that of rearing the massive walls of Tityrus, for which purpose they were brought by Proetus from Lycia. (Schol. ad Eurip. Orest., 955.—Keightley's Mythology, p. 259, seqq.) Hence, too, the name Cyclopic, is applied to this species of architecture, respecting which we will give some explanation in the course of our present article. It is this, or rather, the mentioned circumstance has led some to imagine, that the Cyclopes were nothing more than a caste or race of miners, or, rather, workers in quarries, who descended into, and came forth from, the bowels of the earth, with a lamp attached to their foreheads, to light them on their way, and which at a distance would appear like a large, flaming eye: an explanation more ingenious than satisfactory. (Hirt, Geschichte der Baukunst, vol. 1. p. 367.) The story of the beehive, which follows, is exactly such an explanation. (Cod., 199.)—This is the simple account, which is given of the name Cyclope to the circular buildings constructed by the Pelasgi, of which we have so remarkable a specimen in what is called the Treasury of Atreus, at Mycenae. From the form of these buildings, resembling within a hollow cone or beehive, and the round opening at the top, the individuals who constructed them are thought to have derived their appellation. (Krause, Helos, vol. 1. p. 440.—Compare Genesis, x. 6, 24.) The country occupied by the Homeric Cyclopes, it may be remarked, that this is usually supposed to have been the island of Sicily. But it would be very inconsistent in the poet to place the Cyclopes, a race contemnning the gods, in an island sacred to, and in which were pastured the herds of the Sun. The distance, too, between the land of the Lotophagi and that of the Cyclopes would not appear very considerable; since, as has already been remarked, it is not given in days and nights, a mode of measurement always adopted by Homer when the distance mentioned is a great one. Everything conspires, therefore, to induce the belief, that the Cyclopes of Homer were placed by him on the coast of Africa, a little to the north of the Sirtis Minor. (Compare Mannert, Geogr., vol. 4. p. 9, seqq.) They who make them to have dwelt in Sicily blend an old tradition with one of ease of this article. This last probably took its rise when Ætna and the Lipari islands were assigned to Vulcan, by the popular belief of the day, as his workshops; which could only have happened when Ætna had become better known, and Mount Moschusly, in the Isle of Lemnos, had ceased to be volcanic. Before we conclude this article, a few remarks will be made on the subject of Cyclopic architecture. This style of building is frequently alluded to in the works of Plutarch, Cicero, and other ancient writers, and the architectural work of extraordinary magnitude, to the execution of which human labour appeared inadequate, was ascribed to the Cyclopes. (Europ. Iph. in Aul. 534.—Id., Herc. Fur., 10.—Id., Trood, 108.—Strabo, 373.—Senec., Herc. Fur., 996.—Statius, Theb., 4, 151.—Pausan., 2, 25.) The general character of the Cyclopic style is immense blocks of stone, without either plaques placed upon each other, sometimes irregularly, and the interstices of the buildings, sometimes in regular and horizontal rows. The Cyclopic style is commonly divided into four eras. The first, or oldest, is that employed by Tityrus and Mycenes, consisting of blocks of various sizes, some of them very large, the interstices of which are, or were once, filled up with small stones. The second era is marked by polygonal stones, which nevertheless fit into each other with great nicety. Specimens exist at Delphi, lulis, and at Cos on Etruria. In this style there are no courses. The third era appears in the Phocian cities, and in some of Beotia and Argolis. It is distinguished by the work being made in courses, and the stones, though of unequal size, being of the same height. The fourth and youngest style presents horizontal courses, and the stones, though of various height, but formed of stones which are all rectangular. This style is chiefly confined to Attica. (Hamilton, Archaeol., 15, 320.) Drawings of Cyclopic walls are given in Gelii's Argolis, pl. 7.—Miscell. Antichi Monumenti, tav. 9, 10, 11, 12.—Hirt, Geschichte der Baukunst, taf. 7, fig. 5, 6, 8, 9, 10. The most rational opinion relative to the Cyclopic walls of antiquity, is that which ascribes, in the main, the days of the ancient Cyclops to the Sicilians and Pelasgi. (Doddell, Tour, vol. 2. p. 219.—Hirt, Gesch. der Bauk., vol. 1. p. 199, &c.)

Cycnus. I. a son of Mars, killed by Hercules. As the latter was passing by the temple of Apollo at Paphae, he was opposed by Cycnus, who was in the habit of plundering those who brought the sacrifices to the god. Both Cycnus and his parent Mars were standing in the same chariot ready for the conflict. Hercules and Mars fell. Another version relates, that Mars, who had witnessed the fate of his son, would avenge him, he received a wound in the thigh from the spear of the hero. The two combats are described in the Hesiodian fragment called the "Shield of Hercules." (Vid. Hesiod. II. A son of Neptune, whom his father had made invulnerable. He fought on the side of the Trojans at the landing of the Greeks, and had Achilles for an antagonist. When the latter saw that his weapons were of no effect, he took advantage of a fall on the part of Cycnus, occasioned by a stone with which he came in contact, as he was retreating before the Grecian hero, and choked him to death by means of the strap of his helmet. Neptune immediately changed the corpse of his son into a swan (κώστος, cycnus. —Ovid, Met., 12, 72, seqq.)—III. Son of Phoroneus, and king of the Liguarians. He was a relation and friend of Phœthon's, and, when standing on the banks of the Po when the sisters of the latter were transformed into poplars, while mourning at the sight he himself changed into a swan. (Ovid, Met., 2, 367.)

Cydia, a painter, born in the island of Cythus, one of the Cyclades, and who flourished Olym. 104. Hirtoriensius, the orator, purchased his painting of the Argonauts for 144,000 sesterces (nearly $5000). This same piece was afterward transferred by Agrippa to the terrrace of Neptune. (Plin., 35, 40.—Dio Cass., 53, 27.)

Cydidpe. Vid. Acontius.

Cydnus, a river of Cilicia Canumaris, rising in the chain of Mount Taurus, and falling into the sea a little below Tarsus, which stood on its banks. (Xen., Anab., 1, 2.) Its waters were extremely cold, and Alexander nearly lost his life by bathing in them when he was an exile. Nevertheless, he was advised never to resist from this, is connected with the well-known story of the physician Philip. (Arrian, Exp. Alex., 2, 4.—Quint. Curt., 3, 4, 7, seqq.) The river Cydnus expanded about a mile below Tarsus, near the sea, and formed a port for the city, called Rhegma, or the aperture. (Strabo, 672.) The Geogr. Nub. Clima, 4, 5, 5, gives the castle of Aril on the harbour of Tarsus. (Mannert, Geogr., vol. 6, p. 2, 15.) The Cydnus now remains, and, according to Captain Beaufort, is at present inaccessible to any but the smallest boats; though within the bar that obstructs the entrance, it is deep enough, and about 160 feet wide. That this river was navigable, however, anciently, we learn from Plutarch's description of Cleopatra's splendid pageant in sailing down its stream; a passage so well known to the English reader from Shakespeare's beautiful version. (Plut., Vit. Ant., c
CYN

25.) Capt. Beaufort observes, that the sea must have retired considerably from the mouth of the Cydnus; since, in the time of the crusades, it is reported to have been 23 miles from Tyre. And now that distance is more than doubled. (Karamania, p. 275.)

CYDONIA, the most ancient city in the island of Crete. (Strabo, 476.) It is said to have been founded by the Cyclones of Homer (Od., 3, 292), whom Strabo considered as indigenous. But Herodotus ascribes its origin to a party of Samians, who, having been exiled by Polycrates, settled in Crete when they had expelled the Cucydians. Six years afterward, the town was captured by the Amazons andisceja. (Herodot., 3, 59.)

It stood on the northern coast of the northwestern part of Crete, and was the most powerful and wealthy city of the whole island, since, in the civil wars, it withstood the united forces of Cnosus and Gortyna after they had reduced the greater part of Crete. From Cydonia the quince-tree was first brought into Italy, and hence the fruit was called malum Cydonium, or Cydonian apple. Its inhabitants were the best of the Cretan archers. The ruins of this ancient city are to be seen on the site of Jerami. (Cramer's Ancient Greece, vol. 3, p. 365, seq.)

CYDRARA, a city of Phrygia. Mannert supposes it to have been the same with Laodice, on the confines of three provinces, Caria, Phrygia, and Lydia, and situation on the Lycurus which flows into the Medusa. (Geogr., vol. 6, pt. 3, p. 131.) Herodotus speaks of a pillar erected in Cydrara by Cræsus, with an inscription defining the boundaries of Phrygia and Lydia; so that it must have been on the confines of these two countries at least. (Herodot., 7, 30.)

CYLLAUS, a celebrated hero of Castor, according to Senecca, Valerius Flaccus, Claudian, and Martial, but, according to Virgil, of Pollux. (Verg., G., 3, 90.)

The point is gravely discussed by La Cerda and Marty, in their respective commentaries, and the conclusion to which both come is, that which might have easily been surprised, that the steed in question was the common property of the two Dioscuri. Staius, in his poem on Domitian's horse, mentions Cyllarus as serving the two brothers alternately. (Silv., 1, 154.)

Stecichorius also, according to Suidas, says that Mercury gave Phlogeus, and Harpagus, and Cyllurus to both Castor and Pollux. (Suid., s. v. Κυλλάρος.)

In the Iliad, 8, 475, 476, it is said that Mercury gave them Harpagus, but Juno, EchthAEA, and Cylurus. (Etymol. Mag., p. 54, 54.)

CYLIENE, I. the port of Elis, the capital of the district of Elis in the Peloponnesus. It is supposed to be the modern Chireanzena.—II. The loftiest and most celebrated mountain of Arcadia, rising between Stymphalus and Pheneos, on the borders of Achaea. It was said to take its name from Cyllen, the son of Eta- tos, and was sacred to the poets, the birthplace of Mercury, to whom a temple was dedicated on its summit. Hence the epithet Cyllenius applied to him. (Ps.-ian., 8, 17.—Hom., Hymn. in Merc., 1.—Pind., Olym., 6, 129.—Il., 2, 605.—Virg., En., 8, 138.)

The perpendicular height of this mountain was estimated by some ancient geographers at twenty stadia, by others at fifteen. (Strabo, 388.) The modern name is Zygria. (Gell's Itin., p. 168.) Pouqueville calls it Chelemon. (Yoyage en Grèce, vol. 5, p. 339.)

Cyme, to the most considerable of the cities of Eöis, in Asia Minor, and lying to the northeast of Phocaea. This place, sometimes, but not less correctly, called Cuma, was named Phricianos, because its founders had settled for some time around Mount Phricium in Locris, previous to crossing over into Asia. On their arrival in Eöis, they found that country in the possession of the Pelasgi; but the latter, who had sustained great losses during the Trojan war, were unable to offer any resistance to the invaders, who successively founded Neanichos and Cyme, though, according to some traditions, there existed already a place of that name, so called from Cyme, one of the Amazons. (Strabo, 623.—Steph. Byz., s. v. Κυμή.)

Cyme was one among the many cities which laid claim to the honour of having given birth to Homer. Hesiod's father was born in this place, the poet himself, however, in Ascria in Boiotia. Ephorus, also, one of the most distinguished ancient historians, says that, though the works are unfortunately lost, was a native of Cyme. And yet this city, notwithstanding the celebrity it derived from the birth of such talented individuals, was by no means generally famed for the genius and wit of its citizens. On the contrary, they were proverbially taxed with stupidity and slowness of apprehension. (Strabo, 622.—Suid., Οὐρὸς εἰς Κυμάνων.,—Plut., Vit. Cæs., c. 61.)—In the reign of Tiberius, Cyme suffered, in common with the other cities of Asia, from the terrible earthquake which desolated that province. (Tacit., Ann., 2, 47.)

Its site is near the Turkish village of Sanderly. D'Anville is in favour of Nemourt, but this is more probably the ancient Myrina. (Mannert's Geogr., vol. 6, pt. 1, p. 390.—Cramer's Asia Minor, vol. 1, p. 147, seq.)

CYMôTHÔS, one of the Nereides, represented by Virgil as assisting the Trojans, with Triton, after the storm with which Εολοι, at the request of Joveus, had afflicted the fleet. (Aen., 1, 148.—Hesiod, Theog., 245.)

CYNÆGIUS, an Athenian, celebrated for his extraordinary courage. He was brother to the poet Εολος. After the battle of Marathon, he pursued the flying Persians to their ships, and seized one of their vessels with his right hand, which was immediately severed by the enemy. Upon this he seized the vessel with his left hand, and when he had lost that also, he still kept his hold with his teeth. Herodotus merely relates that he seized one of the Persian vessels by the stern, and had his hand cut off with an axe. The more detailed account is given by Justin. Phasis, an obscure painter, represented Cynègius with both his hands, which Cornelius Longinus made the subject of a very neat epigram, preserved in the Anthology. (Herodot., 6, 114.—Justin., 2, 9.—Anthol. Palat., vol. 2, p. 660, ed. Jacob.)

CYVENNA, a town of Arcadia, on the river Crathis, near the northern borders, and some distance to the northwest of Cylène. It had been united to the Achæan league, but was betrayed to the Εολοιans in the Social War. This was effected by some exiles, who, on their return to their native city, formed a plot for admitting the enemy within its walls. The Εολοιans, accordingly, having crossed into Achaia with a considerable force, advanced to Cyanêthês, and easily scaled the walls; they then sacked the town and destroyed all the inhabitants, even those whose treachery they were indebted for their success. Polybius observes, that the calamity which thus overwhelmed the Cyanêthiens was considered by many as a just punishment for their depraved and immoral conduct, their city forming a striking exception to the estimable character of the Arcadians in general, who were esteemed a pious, humane, and social people. Polybius accounts for the neglect of the city, which music had fallen among the Cyanêthians. All the towns of Arcadia, save this single one, paid the greatest attention to the science, deeming it a necessary branch of education, on the principle that its influence was beneficial in humanizing the character and refining the manners of the people. The historian adds, that such was the abhorrence.
produced in Arcadia by the conduct of the Cynic-thians, that, after a great massacre which took place among them, many of the towns refused to receive their deputies, and the Mantineans, who allowed them a passage through their city, thought it necessary to perform laudable rites and expiatory sacrifices in every part of their territory. Cynethia was burned by the Babylonians on the occasion of the conquest of Babylon, in 343, but was probably restored, as it still existed in the time of Pausanias. (Cramer's Ancient Geography, vol. 3, p. 319.) Cynæath is supposed to have stood near the modern town of Calabryja, though there are no remains of antiquity discernible near that place. (Dodwell's Tour, vol. 2, p. 447.—Gell's Itin. of Greece, p. 131.)

**Cynèth of Cynètes (Κυνήθος ή Κυνήτης),** according to Herodotus (2, 32), the most western inhabitants of Europe, living beyond the Celts. Mannert, following the authority of Avienus (Ora Marit., v. 200), makes them to have been situated in Spain, on both sides of the river Anas, and their western limit to have corresponded with the modern Faro in Algarve, while their eastern was the bay and islands formed by the small rivers Odité and Tinto. (Compare Larcher, Hist. d'Herodote.—Tab. Geogr., vol. 7, p. 159.—Ukers, Myths of the World, vol. 1, p. 235.) Niebuhr, however, is of a different opinion. "Still more absurd," observes he, "than this identification of the Celts of Herodotus with the Celtici, is the notion that the Cynètæs, who, by his account, dwelt still farther west, being the most remote people in that part of Europe, were the inhabitants of Algarve, merely because this district, on account of Cape St. Vincent, which projects in the shape of a wedge, was called Cynicæus by the Romans, and unfortunately may, from its true situation, be considered the westernmost country in this direction. As in historical geography we are not to look for the Celts to the west of the Iberi, so the Cynètæs are not to be sought to the west of the Celts; yet assuredly they are not a fabulous people, but one which dwelt at a very great distance beyond the Celts, and, therefore, probably in the north; for, the more distant the object was from the center, the more deformed its image would be in the truth." (Niebuhr's Geography of Herodotus, p. 13.)

**Cynici,** a sect of philosophers, so called either from Cynsarges, where Antithenes, the founder of the sect, lectured, or from the Greek term κωνος, "a dog," in allusion to the snarling humour of their master. This sect is to be regarded not so much as a school of philosophers as an institution of manners. It was formed rather for the purpose of providing a remedy for the moral disorders of luxury, ambition, and avarice, than with a view to establish any new theory of speculative opinions. The sole end of the Cynic philosophy was to subdue the passions, and produce simplicity of manners. Hence the coarseness of their outward attire, their haughty contempt of external good, and patient endurance of external ill. The rigorous discipline of the first Cynics, however, degenerated afterward into the most absurd severity. The Cynic renounced every kind of scientific pursuit, in order to attend solely to the cultivation of virtuous habits. The sect fell gradually into disesteem and contempt, and many gross and disgraceful tales were propagated respecting them. (Vid. Antithenes and Diogenes.—Engel's History of Philosophy, vol. 1, p. 301, seqq.—Tennemann, Grundriss der Gesch. der Phil., vol. 113.)

Cyno, the daughter of Archidamus, king of Sparta, who was the first female that ever turned her attention to the training of steeds, and the first that obtained a prize at the Olympic games. (Pausan., 3, 8.)

Cyno, the wife of a herdsman, and the one who nurtured and brought up Cyrus the Great, when exposed in infancy. (Herodot., 1, 110.) Her name, in the median language, was Spaco, according to Herodotus, who makes Cyno the Greek translation of it, from κωνον, "a dog," and adds that it signified, in the Median tongue, a female dog. It is not known whether the dialect of the Medes and Persians was the same. In such remains as we have of the Persian language, Borton and Reland have not been able to discover the term. But, it is affirmed that the Hyrcanians, a people in subjection to the Persians, called, even in his time, a dog by the word *spac.* On what authority he makes this assertion is not known. Foster, in his letter to Michaelis upon the origin of the Chaldees, thinks that he detects a resemblance between the Median Spaco and the Slavonic *Suba,* which has the same meaning. (Compare Michaelis, Spicilegium, vol. 2, p. 99.) Some of the Greek grammarians cite the word *σάρβε* as signifying "a dog," among the Persians. (Struse, Specim. Quest., p. 14, not.)

**Cynoscephalæ,** eminences in Thessaly, southeast of Pharsalus, where the Romans, under T. Quintius Flamininus, gained a victory over Philip, king of Macedonia, and put an end to the first Macedonian war. (Strabo, 441.—Liv., 33, 6.—Polyb., Fragm., 18, 3, 10.) They are described by Plutarch as hills of small size, but so hard that Apelles, with the help of three deputies, could not destroy those to top, from their resemblance to the heads of dogs (κονιακι κεφαλεια.—Plut., Vit. Flamin.) Sir W. Gell, in describing the route between Larissa and Velcastro, the ancient Phere, observes, that Cynoscephalæ was in the range of hills which separate the plain of Larissa from that of Pharsalia. (Itin., p. 268.—Compare Pourquieville, vol. 3, p. 390.)

**Cynoscephali, a nation of India, who were said to have the heads of dogs, where their name derived. (Ctesias, Ind., 23.—Asul. Gell., 9, 4.—Elian, Nat. An., 4, 46.—Diod. Sic., 3, 34.)** The last writer quoted speaks of them as resembling human beings of deformed visage, and as sending forth human mutterings. It has been generally supposed, that the Cynoscephali of antiquity were nothing more than a species of large ape or baboon. Heeren, however (Ideen, 1, 2, p. 689), thinks, that Ctesias refers, in fact, to the Paræs or lowest species of baboons, and that his applition of Cynoscephali is a figurative allusion to their degraded state. Malte-Brun also thinks that the narration of Ctesias refers to some actual race of human beings (Novelles Annales, p. 356, seqq.—Bähr, ad Ctes., p. 321), and supposes that a black race is meant, who at a very early period occupied not only the islands of the Southern Ocean, but the interior of the peninsula of India as far as the mountains, and also the country around the sources of the Indus. He calls them "Negres Oceaniques, Haraforas, ou Alphuriens de Borné." Bähr seems inclined to admit this hypothesis, but maintains that more or less of fable must have been blended with it. He refers to the Hindu legends of the war waged by Rama with the nation of asps in Ceylon, and to the bridge buildt by asps, connecting that island with the peninsula of India. (Compare the plate given in Cruzer's Symbolik, p. 29, and the remarks of Cruzer himself, vol. 1, p. 606, 612.) Some inferior race, subdued by a superior one, is evidently meant.

**Cynos, a town of Locris, in the territory of the Opuntii, and their principal maritime place. According to some ancient traditions, it had long been the residence of Deculton and Pyrrha; the latter was even said to have been interred here. (Strabo, 425.—Apollod., ap. Schol. in Pind. Ol., 9, 65.)** The ruins of the town were doubtless those which have been observed near the small village of Lebanonis, by Sir W. Gell and other travellers.

**Cynosarges, a place in the suburbs of Athens, where the school of the Cynics was held. It derived its name from a white dog (κωνον δρυός), which, when
Cyprus

Cyprianus (or Thascius Caecilius Cyprianus), one of the Latin Fathers of the church, born at the beginning of the third century of our era, in Africa, either at Carthage, or some place in its vicinity. According to Gregory Nazianzen, he belonged to a senatorial family of that place. His name previous to his conversion was Thascius Cyprianus, but he now assumed the epithets of the Saint in his baptism, the name of the priest by whom he was converted. Cyprian conducted himself so well after his change of faith, that, upon the death of Donatus, bishop of Carthage, he was unanimously chosen to succeed him. For nearly two years he managed the affairs of his bishopric in tranquility; but in 251, on the commencement of the Decian persecution, the pagans of Carthage, enraged at his desertion of them, demanded that Cyprian should be thrown to the lions. During the storm he thought it prudent to withdraw, on which he was proscribed by government and his goods were confiscated. In his retirement, which lasted fourteen months, he employed himself in writing letters to his people and clergy, and to the Christians at Rome, exhorting them to remain steadfast in their faith. On the death of the Emperor Decius, Cyprian returned to Carthage, and held different councils for regulating the affairs of the church. He afterwards returned to African, and managed a number of non-sacramental, and even disciplinary questions. One subject of much contention was the validity of the baptism of heretics. Cyprian maintained, that all baptism out of the Catholic Church was null and void, and that all who came over from heresies to the church ought to be baptized again. He was supported by the African bishops, but opposed by Stephen, bishop of Rome. In 257 the persecution was renewed by order of the Emperors Valerian and Gallienus, and Cyprian was slain with a number of heretics and pagans. Paterinus, bishop of Carthage, and, remaining firm in his faith, was banished to Curibus, a town twelve leagues from Carthage, where he employed himself in writing letters to the persecuted Christians, exhorting them to cheer their spirits and persevere in their religion. At the end of eleven months he was recalled to Carthage by Galerius Maximus, a new proconsul. On his return, finding that orders were issued to carry him before the proconsul, who was then at Utica, and apprehending that he was unable to escape to them, he went to the island of Delos itself (Plin. 4, 12.)

Cynthius, a surname of Apollo, from Mount Cynthius, in the island of Delos, where he was born. (Vid. Cynthius.)

Cynthia, a mountain of Delos, which raises its barren summit to a considerable height above the plain. At its base was the city of Delos. The modern name is Monte Cinto. On this mountain, according to the poets, Apollo and Diana were born, and hence the epithets of Cytherea, Cytherea and Cytherea they applied to them. (Strab. 485.—Plin. 4, 12.—Virg. Geogr. 3, 36.—Ovid. Met. 6, 304.—Id. Fast., 3, 346, &c.)

Cynura, a little tribe of the Peloponnesus, on the shore of the Sinus Argolicus, and bordering on Lacus, Arcadia, and Argolis properly so called. They were an ancient race, accounted indigenous by Herodotus (8, 73), who also styles them Ionians. The possession of the tract of country which they occupied led to frequent disputes and hostilities between the Spartans and Argives. (Pausan. 3, 2, 7.—Steph. Byz., s. v. Kívový.) As early as the time of Echestratus the son of Agis, the first king of Sparta, the Cynurians were expelled from their homes by the Lacedaemonians, under pretence that they committed depredations on the Spartan territory. (Pausan. loc. cit.)

Cyprissius of Cypriasis, I. a town of Messenia, near the mouth of the river Cyprissus, and on the Sinus Cyprissus. The river and gulf are now called Arcas and Gulf of Arcas, respectively, from the modern town which occupies the site of Cyprissus. (Strabo, 348.—Polyb. 5, 92.)—II. A town of Laco- nia, in the vicinity of the Asopus. The site is now occupied by the modern fortress of Kupino or Ram- pano, sometimes also called Castel Kyparissi. (Cra- mer's Anc. Greece, vol. 3, p. 194.)

Cyprissus, a youth, son of Telephus of Cea, beloved by Apollo. He slew by mistake, a favourite stag, and, amid the deep sorrow which he felt for the loss of the animal, was changed into a cypress-tree. (Ovid, Met. 10, 121, seqq.)

Cyprians (or Thascius Caecilius Cyprianus), one of the Latin Fathers of the church, born at the beginning of the third century of our era, in Africa, either at Carthage, or some place in its vicinity. According to Gregory Nazianzen, he belonged to a senatorial family of that place. His name previous to his conversion was Thascius Cyprianus, but he now assumed the epithets of the Saint in his baptism, the name of the priest by whom he was converted. Cyprian conducted himself so well after his change of faith, that, upon the death of Donatus, bishop of Carthage, he was unanimously chosen to succeed him. For nearly two years he managed the affairs of his bishopric in tranquility; but in 251, on the commencement of the Decian persecution, the pagans of Carthage, enraged at his desertion of them, demanded that Cyprian should be thrown to the lions. During the storm he thought it prudent to withdraw, on which he was proscribed by government and his goods were confiscated. In his retirement, which lasted fourteen months, he employed himself in writing letters to his people and clergy, and to the Christians at Rome, exhorting them to remain steadfast in their faith. On the death of the Emperor Decius, Cyprian returned to Carthage, and held different councils for regulating the affairs of the church. He afterwards returned to African, and managed a number of non-sacramental, and even disciplinary questions. One subject of much contention was the validity of the baptism of heretics. Cyprian maintained, that all baptism out of the Catholic Church was null and void, and that all who came over from heresies to the church ought to be baptized again. He was supported by the African bishops, but opposed by Stephen, bishop of Rome. In 257 the persecution was renewed by order of the Emperors Valerian and Gallienus, and Cyprian was slain with a number of heretics and pagans. Paterinus, bishop of Carthage, and, remaining firm in his faith, was banished to Curibus, a town twelve leagues from Carthage, where he employed himself in writing letters to the persecuted Christians, exhorting them to cheer their spirits and persevere in their religion. At the end of eleven months he was recalled to Carthage by Galerius Maximus, a new proconsul. On his return, finding that orders were issued to carry him before the proconsul, who was then at Utica, and apprehending that he was unable to escape to them, he went to the island of Delos itself (Plin. 4, 12.)

Cynthia, a mountain of Delos, which raises its barren summit to a considerable height above the plain. At its base was the city of Delos. The modern name is Monte Cinto. On this mountain, according to the poets, Apollo and Diana were born, and hence the epithets of Cytherea, Cytherea and Cytherea they applied to them. (Strab. 485.—Plin. 4, 12.—Virg. Geogr. 3, 36.—Ovid. Met. 6, 304.—Id. Fast., 3, 346, &c.)

Cynura, a little tribe of the Peloponnesus, on the shore of the Sinus Argolicus, and bordering on Lacus, Arcadia, and Argolis properly so called. They were an ancient race, accounted indigenous by Herodotus (8, 73), who also styles them Ionians. The possession of the tract of country which they occupied led to frequent disputes and hostilities between the Spartans and Argives. (Pausan. 3, 2, 7.—Steph. Byz., s. v. Kívový.) As early as the time of Echestratus the son of Agis, the first king of Sparta, the Cynurians were expelled from their homes by the Lacedaemonians, under pretence that they committed depredations on the Spartan territory. (Pausan. loc. cit.)

Cyprissius of Cypriasis, I. a town of Messenia, near the mouth of the river Cyprissus, and on the Sinus Cyprissus. The river and gulf are now called Arcas and Gulf of Arcas respectively, from the modern town which occupies the site of Cyprissus. (Strabo, 348.—Polyb. 5, 92.)—II. A town of Laco- nia, in the vicinity of the Asopus. The site is now occupied by the modern fortress of Kupino or Ram- pano, sometimes also called Castel Kyparissi. (Cra- mer's Anc. Greece, vol. 3, p. 194.)

Cyprissus, a youth, son of Telephus of Cea, beloved by Apollo. He slew by mistake, a favourite
Cypselus, a large island of the Mediterranean, south of Cilicia and west of Syria. Like every other island in the Grecian seas, it appears to have borne several appellations in remote ages, but many of these are only possible, and none have become or are now current.

Those which occur most commonly are Sphacia, Cerastis, and Cypirus, for which fanciful etymologies are adduced by Stephanus of Byzantium, Eustathius, and other authorities compiled by Meursius: that of Cypirus, which finally prevailed over every other, is also uncertain; but the notion which derives it from the shrub cypress is probably the most correct; and Bochart, whose Phcenician analogies rest here on safer ground, insists strongly on its validity. (Geogr. Sacr., p. 373.)

Cyrus is reckoned by Strabo (654), or, rather, Timaeus, whom he quotes, as the third in extent of the seven Mediterranean isles, which he classes in the following order: Sardinia, Sicily, Cyrus, Crete, Euboea, Corinna, and Lesbos. According to ancient measurements, its circuit amounted to 3420 stadia, including the sinuosity of the coast. Its greatest length from west to east, between Cape Acamas and the little island, which, added to it in the estimation which Strabo gives of its extent, is reckoned to be 1000 stadia. The interior of Cyprus is mountainous; a ridge being drawn across the entire length of the island, from Cape Acamas on the west, to that of Dinaretum in the opposite direction; it attains the highest elevation near the central region, and was anciently called Olympus. This physical conformation precludes the existence of any considerable rivers. There are no lakes, but some salt marshes on the coast. Cyprus yielded to no other island in fertility, since it is celebrated for its excellent wine and oil, and abundance of wheat and various fruits. There was also a great supply of timber for building ships. (Strabo, 684.) Its mineral productions were likewise very rich, especially copper, found at Tamausa, and supposed to be alluded to in the Odyssey. The first inhabitants of this island are generally supposed to have come from Phenicia, and yet, that the Cyprians spoke a language different from that of Phenicia, and peculiar to themselves, is evinced from the scattered glosses preserved by the lexicographers and grammarians. One thing is certain, however, that the whole of the ceremonies and religious rites observed by the Cyprians, with respect to Venus and Adonis, were without doubt borrowed from Phenicia. Venus, in fact, was the principal deity of the island, and, as might be expected, the Cyprians were, in consequence, a sensual and licentious people. Prostitution was sanctioned by the laws (Herod., 1, 190).—Atheneus, 12, p. 510), and hired flatterers and professed soothsayers attended on the luxurious princes of the land. (Clearch, ap. Athen., 6, p. 255.) Nevertheless, literature and the arts flourished here to a considerable extent, even at an early period, as the name of the Cypria Carmina, ascribed by some to Homer, sufficiently attests. (Herod., 2, 118.—Atheneus, 15, p. 682.) The island of Cyprus is still famed for its fertility. The most cultivated portion of the country is known as the cotton. The French also send thither for turpentine, building timber, oranges, and particularly Cyprus wine. Hyacinths, anemones, ranunculuses, and the single and double narcissus, grow here without cultivation. They deck the mountains, and give the country the appearance of an immense flower-garden. But agriculture is neglected, and an unwholesome atmosphere infects some of the islands which lie behind the protection of the draining water is unknown. (Maizle-Brum, Geogr. vol. 2, p. 88, Am. ed.—Cramer's Asia Minor, vol. 2, p. 366, seqq.)

Cypselus, I. son of Eetion, and a native of Corinth, who attained to the sovereign power in that city about 660 B.C. The Heraclide clan of the Baschiade had previously changed the original constitution of Corinth into an oligarchy, by keeping themselves distinct, in the manner of a caste, from all other families, and alone furnished the city with the annual Prytanes or chief magistrates. Cypselus, although connected on the mother's side with the Baschiade, overcame, with the assistance of the lower orders, the oligarchs, now become their dread enemies; and this was the period of his accession to the sovereignty of the State. (Elian, V. H., 1, 19), and, from the inability of the people to govern themselves, made himself tyrant of Corinth. However violently the Corinthian orator in Herodotus (5, 92) accuses this sovereign, the judgment of antiquity in general was widely different. Cypselus was of a peaceable disposition, reigned without a body-guard, and never forgot that he rose from being a demagogue to the throne. Herodotus informs us (i. c.) that an oracle had been given to the parents of Cypselus, before the birth of the latter, intimating that the offspring of their union would overthrow the existing authority at Corinth; and that the Baschiade, happening to hear of this, and comparing it with another response which had been given unto their own family, sent certain of their number to destroy Cypselus shortly after he was born. His mother, however, saved his life by hiding him in a coffer or chest (σκυρό- δερα), from which circumstance he obtained his family name (Κυβέρνος). His descendants, the Cypselids, consecrated at Olympia, in the temple of Juno, a richly adorned coffer, in commemoration of the escape of their progenitor, an elaborate account of which offering is given by Pausanias (5, 17, seqq.). This was not, however, the coffer in which Cypselus himself had been preserved. (Compare Falkekenau, ad Herod., i. c., and, consult, on the subject of the coffer of Cypselus, Müller, Archív. der K. K. Denk.- und Gesch.- Zum. Bd., 1790, Göttingen.)

Cypria, a country of Africa, east of the Syriac Minor, and west of Marmarica. It corresponds with the modern Barca. Cyrenaica was considered by the Greeks as a sort of terrestrial paradise. This was partly owing to the force of contrast, as the rest of the African coast along the Mediterranean, from Carthage to the Nile, was a barren, sandy waste, and partly to the actual fertility of Cyrenaica itself. It was extremely well watered, and the inhabitants, according to Herodotus (4, 199), employed eight months in collecting the productions of the land; the fertile plains first yielded their fruits, then the second region, which they called the hills, and lastly those of the highest part inland. One of the chief natural productions of Cyrenaica was an herb called silphium, a kind of lasser piscium or assafetida. It was fasting for cattle, rendering their flesh also tender, and was a useful aperient for man. From its juice, too, when kept down, a powerful and odoriferous oil was obtained. The silphium formed a great article of trade, and at Rome the composition above mentioned sold for its weight in silver. It is for this reason that the silphium appeared always on the medals of Cyrene. Its culture was neglected, however, when the Romans became masters of the
country, and pasture was more attended to. Captain Beechy, in the course of his travels through this region, noticed a plant about three feet in height, very much resembling the hemlock in form. He was told, that it was the daily fatal to the camels who ate of it, and that its juice was so acrid as to fester the flesh, if at all excoriated. He supposes it to be the silphium.

Della Cella describes, apparently, the same production as an umbelliferous plant, with compound, indented leaves, fleshy, delicate, and shining, without any involucre; the fruit being somewhat flattened, surmounted by three ribs, and furnished all round with a membrane as glossy as silk (p. 128). Captain Smith succeeded in planting over a specimen of the plant, which is said to be now thriving in Devonshire. (Beechy, p. 410, seqq.) M. Pacho says, that the Arabs call it diarías; and he proposes to class the plant as a species of laservort, to seem under the name of laservortium diarías. It seems to resemble the laservortium furelacement of Linnaeus.—Cyrenaica was called Pentapolis, from its having five cities of note in it, Cyrene, Barce, Ptolemis, Berenice, and Tauchira. All of these exist at the present day under the form of towns or villages, and what is remarkable, their names are accurately changed from what we may suppose the pronunciation to have been among the Greeks. They are now called Kurin, Barca, Tollomata, Bernic, and Taucera. Some farther remarks upon the district of Cyrenaica will be found under the head of Cyrene, being blended with the history of that city as its capital. For a full account of the silphium, see the 36th volume of the Mémoires de l'Academie des Belles Lettres, p. 18. and for some valuable observations respecting Cyrenaica, consult the work of M. Pacho, Relation d'un Voyage dans la Marmarique, la Cyrenaïque, &c., Paris, 1828, 4to.

Cyrenaici, a sect of philosophers who followed the doctrines of Aristippus, and whose name was derived from their founder's having been a native of Cyrene, and from their school's having been established in this place. Aristippus made the summa bonum and the télos of man to consist in enjoyment, accompanied by good taste and freedom of mind, to κρατεῖν καὶ μὴ ἕττασθαι ἕδονας ἀριστον, οὐ τὸ μὴ χρεῖσθαι. (Diog. Laert., 2, 75.) Happiness, said the Cyrenaics, consists, not in tranquillity or indolence, but in a pleasing agitation of the mind or in active enjoyment. Pleasure is the ultimate object of human pursuit; it is only in subserviency to that thus, friendship, and even virtue are to be desired. All crimes are venal, by the advice of them. They are thus induced to meditate impulse of passion. Nothing is just or unjust by nature, but by custom and law. The business of philosophy is to regulate the senses in that manner which will render them most productive of pleasure. Since, then, pleasure is to be derived, not from the past or the future, but the present, a wise man will take care to enjoy the present hour, and will be indifferent to life or death. Such were the tenets of the Cyrenic school. The Stoicks held the view, that the tēlos of man is to achieve the remote distance of Cyrene from Greece, the chief seat of learning and philosophy; in part to the unbounded latitude which these philosophers allowed themselves in practice as well as opinion; and in part to the rise of the Epicurean sect, which taught the doctrine of pleasure in a more philosophical form. (Enfield's History of Philosophy, vol. 1, p. 197.—Tennemann's Manual, p. 101, Johnson.)

The god, handed to the hereditary ruler of the river Peneus, beloved by Apollo. The god carried her in his golden chariot over the sea, to that part of Africa called after Cyrenaica, where he bore him a son named Aristeus. (Pind., Pyth., 9, 90, seqq.—Heune, ad Virg., Georg., 4, 321.)—II. A celebrated city of Africa, on the Mediterranean coast, the capital of Cyrenaica, and to the west of Egypt. The foundation of this place dates as far back as the 37th Olympiad (about B.C. 628), when, according to Herodotus, a colony of Greeks from Thera, under Battus, were conducted by the god Cyrene, in his delightful spot, then called Iarasa. In the neighbourhood was found a spring of excellent water, which the Dorian colonists are said to have called the fountain of Apollo, and to have named Cyra (Κύρα), having in this, most probably, given a Greek form to some application in use among the natives. From Κύρα arose the name of the place, Kuprion, which, substituting the Ionic for the Doric form, became Kuprion, or Cyrene. (Callim. H. in Apoll., 88.—Birchard, ad Dionys. Perieges, 213.) The name Cyrene is a Greek application of the word Cyra, which makes Aristæus to have been the founder of the city, and to have named it after his mother, the nymph Cyrene, is, of course, purely fabulous.—After the arrival of Battus in this quarter, other migrations from Greece also took place; and the colonists became strong enough, under their third sovereign, to make war upon their Libyan neighbours, and even to defeat an army of Egyptian auxiliaries, which Apries (Pharaoh Hophra) had sent to their assistance. (Herodot., 4, 160.) The state of Barca was founded by a division of the colonists, headed by the brother of the king (Arcesilas III.), who, having abjured his authority, left Cyrene with his followers. A civil war ensued, followed by the usual consequences, an application to the neighbouring states for foreign aid, the eventual ruin of one party, and the loss of independence by the other. At first the Barceans appear to have had the advantage; but, in the reign of a fourth Arcesilas, who had married the daughter of the sovereign of Barca, a popular insurrection took place, in which both monarchs were assassinated. The mother of the Cyrenian king, Queen Pheretime, fled to Egypt, and invoked the aid of Ayryander, the Persian viceroy under Darius Hystaspes, who readily espoused her cause. Barca, after a long siege, fell through treachery, and was plundered by the Persians; but the vengeance of the queen was glutted in the massacre of all who had been concerned in the insurrection. After this we hear no more of Barca as a separate state. In the time of Aristotle Cyrene was a republic; and this appears to have been the form of government at the era of the memorable dispute recorded by Sallust, between the Cyreneans and the Carthaginians, relative to their respective limits. (Vid. Philani.) Cyrene subsequently fell under the power of the Carthaginians, and was comprised, with Egypt and Libya, in the division of Ptolemy Lathyros; under whose reign Cyrene was ruled Cyrene for fifty years. It continued to form part of the empire of the Ptolemies till it was made over by Ptolemy Physcon to his illegitimate son Apion. During a reign of twenty-one years, during which Egypt was a prey to intestine disturbances, Apion maintained peace and tranquillity in his dominions, and on his death bequeathed Cyrenaica to the Romans. The senate accepted the bequest, but allowed the Cyreneans to retain the possession of this city. Ptolemy Apion opened the way for fresh discord; and the anarchy was terminated, twenty years after the death of Apion (B.C. 76), by the reduction of the whole of Cyrenaica to the condition of a Roman province. In the time of Strabo it was united with Crete in one government. The most flourishing period of Cyrene was probably that of the Ptolemaic dynasty, and of the preceding two or three centuries. It was then a celebrated city. (Theéodore, 1.) To which period we may assign the Doric temples and other monuments, which are decidedly of an early style. The philosophy and literature of Greece were diligently cultivated at Cyrene, and this city gave birth to Aristippus, the founder of the licentious sect distinguished by the name of Cyrenaic. It was the birthplace also of the poet Callimachus, of Eratosthenes the historian, and Carneades
the sophist. Numbers of Jews appear to have settled in Cyrenaica, even prior to the Christian era. It was a Jew of Cyrene whom the Roman soldiers compelled to be the seer of Seleucia (Acts 27, 32.—Mark, 15, 21.) Cyrenian Jews were present at Jerusalem on the day of the Pentecost; some of them took part with their Alexandrian brethren in disputing against the proto-martyr Stephen; and Christian Jews of Cyprus and Cyrene, fleeing from the persecution of their intolerant brethren, were the first preachers of Christianity to the Greeks of Antioch. (Acts, 2, 10; 6, 9; 11, 50.) That Cyrene continued to rank as under the Roman judicature may be inferred as well from some Latin inscriptions as from the style of many of the architectural remains. To what circumstance its desertion is attributable, does not appear; but in the fifth century it had become a mass of ruin. It is so described by Synesius, who lived in the time of Theodosius the younger. The wealth and honours of Cyrene were transferred to the episcopal city of Ptolemais. The final extirpation of the Greek colonies of Cyrenaica, dates, however, from the destructive invasion of the Persian Chosroes, who, about 616, overran Syria and Egypt, and he advanced as far westward as the neighbourhood of Tripoli. The Saracens completed the work of destruction, and for seven centuries this once fertile and populous region has been lost to civilization, to commerce, and almost to geographical knowledge. For three parts of the year Cyrene is untenanted, except by jackals and hyenas, and during the seasons wandering Bedouins, too indolent to ascend the higher ranges of hills, pitch their tents chiefly on the low grounds to the southward of the summit on which the city is built. The situation of Cyrene is described by modern travellers as singularly beautiful. It is built on the edge of a range of hills, rising about 800 feet above a fine sweep of high table-land, forming the summit of a lower chain, to which it descends by a series of terraces. The elevation of the lower chain may be considered at 700 feet; they ascend to about 1800 feet above the level of the sea, of which it commands an extensive view over the table-land, which, extending east and west as far as the eye can reach, stretches about five miles to the northward, and then descends abruptly to the coast. The view from the brow of the height, extending over the rocks, and woods, and distant ocean, is described by Capt. Beechey, as rivalled in magnificence. Advantage has been taken of the natural declivity, to shape the ledges into practicable roads, leading along the face of the mountain, and communicating, in some instances, by narrow flights of steps cut in the rock. These roads, which may be supposed to have been the favourite drives of the citizens of Cyrene, are very plainly indented with the marks of chariot-wheels, deeply furrowing the smooth, stony surface. The rock, in most instances rising perpendicularly from these galleries, has been hewn into innumerable tombs, formed with great labour and taste, and generally adorned with architectural façades. In several of the excavated tombs were discovered remains of paintings, representing historical, allegorical, and pastoral subjects, executed in the manner of those of Herculaneum and Pompeii: some of them by no means inferior to the best that have been found in those ancient works on these paintings, consult Beechey, p. 451, seqq.)

Cyrillus. I. bishop of Jerusalem, born in that city A.D. 315. He succeeded Maximus in the episcopate, about the close of the year 350; and the author of the Chronicle of Alexandria, as well as Socrates and other writers, informs us, that on the 7th of May, 351, about nine in the morning, a luminous cross was seen in the heavens, extending from Calvary to the Mount of Olives, a distance of nearly three fourths of a league. The Greek church has a festival on the 7th of May, in commemoration of this phenomenon, which marked the promotion of Cyril to the mitre. Cyril, in reply, wrote a description of the celestial appearance in a letter to the Emperor Constantius, and the subject has afforded much controversy to writers of a later age.—Cyril became involved in a controversy with Acacius, archbishop of Cæsarea, an Arian or Semiarian in his tenets; and refused to obey the citation of his opponent to appear at Cæsarea: the charge alleged against him was, having wasted the property of the church, when the truth was, that during a great famine, Cyril had sold some of the sacred ornaments in order to procure subsistence for the suffering poor. The council assembled at Cæsarea, and composed of Arian bishops, condemned him, and, on Cyril’s appealing from them to a higher tribunal, Acacius, construing this appeal into a high offence, drove him from Jerusalem. He was restored to his see in 359 by the council of Seleucia, which also pronounced the deposition of Acacius and many other Arians, but in the following year Acacius and his partisans succeeded in again deposing Cyril. In the year 361 he was again restored to his pontificate. It was about this time that Julian made his memorable attempt to rebuild the Jewish temple: Cyril was then at Jerusalem, and before the flames issued from the side of the former structure, he confidently predicted the failure of the emperor’s scheme. He became odious to Julian, who resolved, according to Orosius, to sacrifice this prophecy by his return from the Persian war. Julian, however, perished in the expedition. Cyril was again exiled, in 367, by the Emperor Valens, who had embraced Arianism: his exile lasted for ten years, and he only returned to Jerusalem in 378, when Gratian re-established in their sees those bishops who were in communion with Pope Damasus. Cyril governed his church without any farther troubles for the space of five years, and it is a matter of surprise that none of his tenets, which, on the whole, are very much like those of the Arians and semiarians, are regarded as the most ancient and complete abridgment that we possess of the doctrines of the primitive church. The Calvinists have attempted to prove them supposititious, but the Protanists of England have fully succeeded in establishing their authenticity. We have also a homily of Cyril’s on the paralytic man mentioned in Scripture, and his letter to Constantius on the luminous cross which appeared at Jerusalem, and which he saw himself. For some time after his death his name was preserved in innumerable monuments, and later in the works of Mills, Oxon. 1769, fol., and that of Tottée, Paris. 1790, fol. This last is decidedly the better one, and was published by Maran on the death of Tottée. (Bpgr. Univ., vol. 10, p. 404, seqq.)—II. Bishop of Alexandria, in the fifth century, succeeded his uncle Theophilus in that dignity in the year 412. The bishops of Alexandria had long acquired great authority and power, and Cyril was able to confirm and augment it. Soon after his elevation, he expelled the Novatians from Alexandria, and stripped their bishop, Theopompus, of all his property. In 415 the Jews committed some insult on the Christians of Alexandria, which so enraged Cyril, that, instead of advising them to apply for redress to the civil magistrate, he put himself at the head of his people, and led them to the assault and plunder of the synagogues and houses of that people, and drove them out of the city. This conduct, however, displeased Orestes, the govern-
of Alexandria, who feared that the bishop’s author-
ity, if not checked, might infringe upon that of the
magistrates.] Ptolemy was forced to support the rival
claims, and battles were fought in the streets of Alex-
andria; and Orestes himself was one day suddenly
surrounded by 500 monks, by whom he would have
been murdered had not the people interfered. One
of these assailants, being seized, was put to the tortu-
sore so severely that he died under the operation, on
which Cyrril had him immediately canonized, and on every
occasion of public or private instance and zeal. There
also lived in Alexandria a learned pagan lady, named
Hypatia, with whom Orestes was intimate, and who
was supposed to have encouraged his resistance to the
claims of the bishop. This accomplished female was
one day seized by a band of zealots, who dragged her
through the streets, and concluded by tearing her limb
from limb, a piece of atrocity attributed to the instiga-
tion of Cyrril, and from which his memory has never
been absolved. He next engaged in a furious contro-
versy with Nestorius, bishop of Constantinople, who
maintained that the Virgin Mary ought not to be called
the Mother of God, but the mother of our Lord or
of Christ, since the Deity can neither be born nor die.
These humilies, falling into the hands of the Egyptian
monks, caused a great commotion among them, and
Cyrril wrote a pastoral letter to them, in which he
maintained that the Virgin Mary ought to be called
the Mother of God, and denounced bitter censures
against all who supported an opposite opinion. A con-
troversial correspondence between the two bishops en-
sued, which ended in an open war of excommunications
and anathemas. To put an end to this contro-
versy, in 431 a council was held at Ephesus by the
Emperor Theodosius; and Cyrril, by his precipitancy
and violence, and not waiting for a number of Eastern
bishops, obtained the condemnation of Nestorius with-
out his being heard in his own defence, and that prelate
was deprived of his bishopric and banished to the
Egyptian deserts. When John, bishop of Antioch,
and the other Eastern bishops, however, appeared, they
avenged Nestorius, and, deposing Cyrril, put him in
prison. In a subsequent meeting of the council, he
was liberated and absolved from the sentence of de-
position, but had the mortification of seeing the doc-
trine which he had condemned spreading rapidly through
the Roman empire, Assyria, and Persia. He died at
Sidon, in 444. Cyrril was a man of learning, but overbearing, ambitious, cruel,
and intolerant in the highest degree. He is much ex-
tolled by Catholic writers for his great zeal and piety,
of which the particulars thus specified are proofs.
He was the author of a number of works, treatises, &c.,
the best edition of which was published at Paris in
1638, in 7 vols. fol., under the care of Jean Aubert,

Cyropolis, a country of Syria, northeast of the
city of Antioch, and north of the district of Chalý-
bonites. It was so called from its capital Cyrrhus. 
(Plin., 5, 23.—Cic., Ep. ad Att., 5, 18.)

Cyrrhus, I. a city of Macedonia, in the vicinity of
Pella. (Compare Thucydides, 2, 100.) There is a
Palace Castor about sixteen miles west of Pella,
which is very likely to be Cyrrhus. Wesseling thinks
that Diodorus alludes to the Macedonian Cyrrhus (18,
4), when he speaks of a temple of Minerva built there
Hence the title of Kōphēs; thus, it was by both Strabo
and Pliny understood that the city was founded by
Cyrrhus. (Cramer’s Ana. Greece, vol. 1, p. 292.)
—II. A city of Syria, the capital of a district named
after it Cyrrhestica. It derived its name from the
Macedonian Cyrrhus. Stephanus Byzantinus, how-
ever, writes Κύπρος. Later writers, and especially
Christian ones, give the name of this place as Κύ-
ρος, Cyrrus, being mangled, probably, by the fable which
is found in Procopius (Bdlyt., 2, 12), that the Jews
were the founders of the city, and called it after Cyrrus
their liberator. The ruins are still called Corus. 
(Cellarius, Geogr. Ant., vol. 2, p. 350.)

Cyrrus, I. a celebrated conqueror, and the founder
of the Persian empire. His early history has been
given, on the authority of Herodotus, under the article Asty-
agoras.—He had not been long seated on the throne,
when his dominions were invaded by Oresus, king of
Lydia, the issue of which contest was so fatal to the
latter. (Vid. Cressus.) The conquest of Lydia estab-
lished the Persian monarchy on a firm foundation,
and Cyrrus was now called away to the East by vast
designs, and by the threats of a distant and formidable
enemy. Babylon still remained an independent city
in the heart of his empire, and to reduce it was his
first and most pressing care. On another side he was
tempted by the wealth and the weakness of Egypt;
while his northern frontier was disturbed and endan-
gered by the fierce barbarians, who ranged over the
plains that stretch from the skirts of the Indian Caspian
casus to the Caspian. Until these last should be sub-
dued or humbled, his Eastern provinces could never
enjoy peace or safety. These objects demanded his
own presence; the subjugation of the Asiatic Greeks,
as a less urgent and less difficult enterprise, he com-
mitted to his lieutenants. While the latter, therefore,
were executing his commands in the West, he was him-
self enlarging and strengthening his power in the East.
When at last he felt that he was firmly established
on the Euphrates, he laid siege to Babylon. The account
of its capture is given elsewhere (vid. Babylon), though
it seems doubtful whether he took the city in the way
there related, or in any other manner, and did not rath-
er owe his success to some internal revolution, which
put an end to the dynasty of the Babylonian kings.
In Xenophon’s romance, Cyrrus is made to fix his resi-
dence at Babylon during seven months in the year;
possibly we may safely conclude that this was ever
the practice of any of his successors; but it is highly
probable that, the reduction of this luxurious city con-
tributed, more than any other of the Persian conquests,
to change the manners of the court and of the nation.
Cyrrus himself scarcely enjoyed so long an interval
of repose. The protection which he afforded to the Jews
was probably connected with his designs upon Egypt;
but he never found leisure to carry them into effect.
While engaged in these enterprises, he was also
hurrying against one of the nations on the eastern side of the Cas-
pian. According to Herodotus, it was the Massagetae,
a nomadic horde, which had driven the Scythenians
before them towards the West; and, after gaining a vic-
tory over them by stratagem, he was defeated in a great
battle and slain. The event is the same in the nar-
row of Ctesias; but the people against whom Cyrrus
marched are called the Derbises, and their army is
strengthened by troops and elephants furnished by Indi-
yan sailors; while the death of Cyrrus is speedily averged
by one of his vassals, Amorges, king of the Sacii, who gains a decisive victory over the Derbices, and annexes their land to the Persian empire. This account is so far confirmed by Herodotus, that we might not hear from him of any consequences that followed the success of the Massagetae, or that the attention of Cambyses, the son and heir of Cyrus, was called away towards the North. The first recorded measure of his reign, on the contrary, was the invasion of Egypt. (Thirlwall's Greece, vol. 2, p. 172, seq.)—Thus much for the history of Cyrus, according to the generally received account. It is more than probable, however, that many antecedent statements respecting his birth, parentage, early life, attainments, and powers of mind and subsequent career, were circulated throughout the East, since we find discrepancies between the narratives of Herodotus, Ctesias, and Xenophon in these several particulars, that can in no other way be accounted for. It has been customary with most scholars to decry the testimony of Ctesias, and to regard him as a writer of but slender pretensions to the character of veracity. As far, however, as the history of Cyrus was concerned, to say nothing of other parts of his narrative, this opinion is evidently unjust, and its injustice will be placed in the clearest light if we compare together the two rival statements of Ctesias and Herodotus. The account of the latter teems with fabulous, from which that of the former appears to be entirely free. It is far more consistent with reason, to believe with Ctesias that there was no affinity whatever between the Persia of Cambyses and Herodotus, that the latter was his maternal grandfather. Neither does Ctesias make any mention of that most palpable fable, the exposure of the infant; nor of the equally fabulous story respecting the cruel punishment of Harpagus. (Compare Bähr, ad Ctes., Pers., c. 2, and the words of Reineccius, Fam. Reg. Med. et Bactr., Lips., 1872, p. 35, "ab Aystage usa purata in Cyrus et Harpargam sanguine oramur, quod Herodotus, ab Herodoto fabulam plane rejecit.") Nor need this lack of similitude between the statements of Ctesias and Herodotus occasion any surprise. The latter historian confesses, very ingenuously, that there were three different traditions in his time relative to the origin of Cyrus, and that he selected the one which appeared to him most probable (1, 96). How unfortunate this selection was we need hardly say. Ctesias, then, chose another tradition for the foundation of his history, perhaps, may have partially mingled a third with his narrative. (Compare Eschyl. (Pers., v. 767) appears to have followed a fourth. (Compare Stanley, ad Eschyl., 1. c., and Larcher, ad Ctes., Pers., c. 2, 2.) With these several accounts, again, what the Armenian writers tell us respecting Cyrus is directly at variance. (Compare Recherches Curiouse sur l'Histoire Ancienne de l'Asie, par Corby et Martin, p. 84, seqq.) Among the modern scholars who have expounded the cause of Ctesias, his recent editor, Bähr, stands most conspicuous. This writer regards the narrative of Herodotus as savouring of the Greek love for the marvellous, and thinks it has been in some degree adulterated from the story of the Théban Óedipus and his exposure on Citharon; while, on the other hand, Xenophon presents Cyrus to our view as a young man, imbued with the precepts of the Sparta of Solon, and exhibiting in his life and conduct a model for the sons of kings. Thus, perhaps, may have partially mingled a third with his narrative. This circumstance gives the following as what appears to him a near approximation to the true history of Cyrus. He supposes Cyrus not to have been of royal lineage, but to have been by birth in the rank of a subject, and gifted with rare endowments of mind. He makes him to have first seen the light at the time when the Medes possessed the empire of Asia. The provinces or divisions of this empire he supposes to have been held by satraps or viceroys, whose power, though derived from the monarch, was hereditary among themselves. He makes Cambyses, the father, to have been one of these satraps; and Cyrus, the son, to have succeeded him. Their sway was over the Persians, whom they ruled with almost regal power. Cyrus at length revolted from the king of the Medes, and, by the side of his immediate followers, obtained possession of the empire. In order, however, the better to keep in subjection the other nations composing the empire of Astyages, he wished to pass himself off as the son and lawful successor of the dethroned monarch. Hence arose the nuptials of Cyrus and Amytis the wife of Astyages. (Compare, as regards the Persian custom of intermarriage, Guerney, Hist. Iran., vol. 2, p. 11; Curt., 3, 11, 24, and 8, 2, 19.—Theodore, Serv., 9, p. 614.—Bähr, ad Ctes., p. 91.) Hence, too, we may account for the circumstance of Astyages' not having been put to death, but being treated with great honour, and made the companion of Cyrus in his marches against those nations who would not acknowledge his sway. (Consult Bähr, ad Ctes., p. 86, seqq.,—Ctesias makes Cyrus to have reigned thirty years, and Herodotus twenty-nine. According to some authorities he died at a very advanced age. (Compare Xenophon, Cyrop., 8, 7, 1.) Scaliger, guided by Dion and Ctesias, makes Cyrus to have reached the 218th year of the era of Nabonassar, i.e., B.C. 528. (De Emend. Temp., p. 402.)—The name Cyrus (Kírós) is generally thought to have been deduced from a Persian word, meaning the Sun. (Plut., Vit. Artax., 1.) Coray (ad Plut., l. c.) informs us, that the Sun is well known in Persian to be called Kúrós. He adds, that of the succeeding emperors, one, such as Cambyses, or as Darius, the son of Kúrós, with a sky only of aáír Kúrós of Ïérra Kúrós légainon and Pléthon, Schol. in Orac. Mag. Zorostes., p. 68, lin. 3, a fine.) Ritter also adduces various authorities to show, that, among the ancient Persians, as well as other early Oriental nations, Kor and Koros denoted the Sun. (Vorhalle, p. 86, seqq.) Wahl had proved the same before him. (Vorderw. 1, p. 399.) Compare, however, Khrsh (Cyrus) is traced by Gesenius also to the Persian. (Heb. Lex., s. v.) The previous name of Cyrus appears to have been Agridates (Strabo, 729), which Rosenmüller explains by the Persian Agah-dar-dad, i.e., "juris cognitionem habens," "ius tenens ae servans." (Rosenm., Handbuch, vol. 1, p. 367.—Bähr, ad Ctes., p. 458.)—II. Commonly called "the Younger," to distinguish him from the preceding. (Compare Plut., Vit. Artax., 1, p. 31.) The Persians (compare Herodotus, v. 767.) in the beginning of his reign, stand on the throne, and was also his mother's favourite. She had encouraged him to hope, that, as Xerxes, through the influence of Atos, had been preferred to his elder brother, who was born while their father was yet in a private station, so she should be able to persuade Darius to set aside Ar- tæxeres, and declare Cyrus his successor. In the mean while he was invested with the government of the western provinces. This appointment he seems from the first to have considered as a step to the throne. He had, however, sagacity and courage enough to perceive, that, should he be disappointed in his first expectations, the co-operation of the Greeks might still enable him to force his way to the acquisition of Asia, and with this view he introduced the side of Sparta in her struggle with Athens, both as the power which he found in the most prosperous condition, and as that which was most capable of furthering his designs. According to Plutarch (Vit. Artax., 2), Cyrus went to attend his father's sickness with sanguine hopes that his mother had accomplished her purpose, and that he was sent for to receive his father's crown at court; however, he saw himself disappointed in his expectations, and found that he had only come to witness his father's death, and his brother's acces-
tion to the throne. He accompanied Arta-xeres, whom the Greeks distinguished by the epithet of Mene-
on, to Pahragada, where the Persian kings went then every spring to consult the oracle. Ar- 

taphernes took this opportunity of charging him 

with a design against his brother's life. It would seem, 

from Plutarch's account, that one of the officiating 
priests was suborned to support the charge; though it 
is by no means certain that it was unfounded. Ar- 
ta-xeres was convinced of its truth, and determined on 
putting his brother to death; and Cyrus was only saved 

by the passionate entreaties of Parysatis, in whose arms 
his brother had sought refuge from the executioner. The 
character of Arta-xeres, though weak and timid, seems not 

to have been naturally unamiable. The ascendency 

which his mother, notwithstanding her undissembled 

prediction for her younger son, exercised over him, 

was the source of the greater part of his crimes and 

misfortunes. On this occasion he suffered it to over- 

power both the suspicions suggested by Tissaphernes, 

and the jealousy which the temper and situation of Cy- 

rus might reasonably have excited. He not only bar- 
doned his brother, but permitted him to return to his 
government. Cyrus felt himself not obliged, but hum- 

bled, by his rival's clemency; and the danger he had 

escaped only strengthened his resolution to make him- 

self, as soon as possible, independent of the power to 

which he owed his life. Immediately after his return 

to Sardis, he began to make preparations for the ex- 

ecution of his design. The chief difficulty was to keep 

them concealed from Arta-xeres until they were fully 
matured; for, though his mother, who was probably 

from the beginning acquainted with his purpose, was 
at court, always ready to put the most favourable con- 

struction on his conduct, yet Tissaphernes was at hand 
to watch it with malignant attention, and to send the 

earliest information of any suspicious movement to the 

king. Cyrus, however, devised a variety of pretexts 
to blind Tissaphernes and the court, while he collected 
an army for the expedition which he was meditating. 

His main object was to raise as strong a body of Greek 
troops as he could, for it was only with such aid that 

he could hope to overpower an adversary, who had the 

whole force of the empire at his command; and he 

knew enough of the Greeks to believe, that their su- 

periority over his countrymen, in skill and courage, was 

sufficient to compensate for almost any inequality of 

numbers. In the spring of 401 B.C., Cyrus began his 

operations. He raised his army from the Grecian force, 
a part of which joined him on the road, amounting to 

11,000 heavy infantry, and about 3000 targeteers. His 

barbarian troops were 100,000 strong. After directing 

his line of march through the whole extent of Asia 

Minor, he entered the Babylonian territory; and it 

was not until he reached the plain of Cunaxa, between 

sixty and seventy miles from Babylon, that he became 
certain of his brother's intention to hazard an engage- 

ment. Arta-xeres met him in this spot at the head of 
an army of 900,000 men. It was feared that the Persian 
monarch had continued to waver almost to the last, 
between the alternatives of fighting and retreat, and was only diverted from adopting the lat- 
ter course by the energetic remonstrances of Tiriba- 
hus. In the battle which ensued, the Greeks soon 
routted the barbarians opposed to them, but committed 
an error in pursuing them too far, and Cyrus was com- 
pletely surprised. He was surrounded by the rest of 
the king's army, to make an attack upon the centre, 
where his brother was in person. He routed the 
royal body-guard, and, being hurried away by the vi- 
one of his feelings the moment he espied the king, he 
engaged with him, but was himself wounded and slain 
by a common soldier. Had Clearchus acted in con- 
formity with the directions of Cyrus, and led his divis- 
ion against the king's centre, instead of being drawn 
off into pursuit of the flying enemy, the victory must 

have belonged to Cyrus. According to the Persian 
custom of treating slain rebels, the head and right 

hand of Cyrus were cut off and brought to the king, 

who caused himself to have seized the head by the 

hair, and to have held it up as a proof of his victory 
to the view of the surrounding crowd. Thus ended 
the expedition of Cyrus. Xenophon, who gives an ac- 
count of the whole enterprise, pauses to describe the 
qualities and conduct by which this prince commanded 
love and respect, in a manner which shows how impor- 
tant the results of his success might have been for the 
welfare of Persia. The Greeks, after the battle, began 
to negotiate with the king through Tissaphernes, who 
offered to lead them home. He treacherously violated 
his word, however; and having, by an act of perfidy, 
taken possession of the persons of the Greek command- 
ers, he sent them up to the king at Babylon, where 
they were all put to death. The Greeks were not, 
however, discouraged, though at a great distance from 
their country, and surrounded on every side by a pow- 
erful enemy. They immediately chose new command- 
ers, in the number of whom was Xenophon, who has 
given so beautiful and interesting an account of their 
celebrated retreat. (Vid. Xenophon.) According to 
Diodorus and Diogenes Laertius, the expedition was 
taken by Cyrus in the 4th year of the 94th Olympiad. 
Larcher, on the contrary, in a dissertation inserted in the 17th vol. of the Memoirs of the Acade- 
my of Inscriptions and Belles Lettres, makes it to have 
been in the third year of that Olympiad, in the end of 
March or beginning of April. He makes the battle of 
Cunaxa to have been fought at the end of October, in 
the 4th year of the same Olympiad, and the time which 
the whole expedition occupied, including the retreat, 
down to the period when the Greeks entered the army 
of Thymbron, to have been two years. (Plut., Vit. 
281, seqq.)—III. A large river of Asia, rising in Iberia 
and falling into the Caspian; now the Kur. This river 
waters the great valley of Georgia, and is increased 
by the Aragvi, the Iora, probably the Ierus of the ancient, 
and the Alasan, which is their Alazo. When it 
reaches the plains of Shirvan, its waters are mixed 
with those of the Aras or Araxes. These two rivers 
form several branches, sometimes united and some- 
times separated, so that it appears uncertain, as it was 
in the time of Strabo and Ptolemy, whether their mouths 
were to be considered as separate, or whether the 
Cyrus received the Araxes. (Plut. vita Artas, 
10, 6, 9; Id., 10, 13;—Meis, 3, 5,—Strabo, 345.) 
Cyta, a city of Colchis, in the interior of the coun- 
try, near the river Phasis, and northeast of Tundaros. 
It was the birthplace of Meida, and its site corresponds 
at the present day to Kutais, the capital of the Rus- 
sian province of Imerethi. The inhabitants, like the 
Colchians generally, were famed for their acquaintance 
with poisonous herbs and magic rites. Scylax calls 
the place Malé (Mäen), which Vossius changes to 
Cyta in his Cosmography. (Zonar., I. 16, 3; Plut. vita 
Artas, 10, 13;—Strabo, 345.) 
Cytes, a surname given to Meida by the poe- 
s, from her having been born at Cyta. (Propert., 
2, 1, 73.) 
Cythere, now Cerigo, an island on the coast of 
Laconia in Peloponnesus. It was particularly sacred 
to the goddess Venus, who was supposed to have 
been brought by Poseidon from the abyss of the sea, 
and thence to have mounted the west coast of Italy, 
as the Pharsalians tell us, from the sea, near its 
coasts. Stephanus of Byzantium says, that the 
island derived its name Cythera from a Phoenician 
named Cytherus, who settled in it. Before his arrival 
it was called Porphyris or Porphyrysis, according to 
Eustathius (ad Dion. Perieq., 500), from the quantity 
of purple fish found on its shores; but the name of 
Cythera is as ancient as the time of Homer. (Od., 
1, 80. The fable respecting Venus' having arisen from
the sea in its vicinity, means nothing more than that her worship was introduced into the island by some maritime people, probably the Phoenicians. Cythera was a place of great importance to the Spartans, since an enemy, if in possession of it, would thereby be enabled to ravage the southern coast of Laconia. Its harbours also sheltered the Spartan fleets, and afforded protection to all merchant vessels against the attacks of pirates. When the city was strongly fortified, a second entrance was added by the construction of a second bridge. (Thucyd., 4, 53.) Hence the Argives, who originally held it, were driven out eventually by the Spartans. A magistrate was sent yearly from Sparta, styled Cytherodices, to administer justice, and to examine into the state of the island; and so important a post was it, that Demaratus expressly advised Nicias to seize it with a part of his fleet, since by that means he would complete the ancient alliance and the confederacy, and defend their own territories. Demaratus quoted, on this occasion, the opinion of Chloco, the Lacedaemonian sage, who had declared it would be a great benefit to Sparta if that island were sunk into the sea. Cythera (Cerigo) is now one of the Ionian islands. (Virg., Ec., 1, 236; 10, 5.—Pausan., 3, 33.—Ovid, Met., 4, 288; 15, 366.—Past., 4, 15.—Herodot., 1, 29.)

Cyzicus was the surname of Venus, from her rising out of the sea near the island of Cythera.

Cythnos, an island between Ceos and Siphnus, in the Mari Myrtoum, colonized by the Dryopes. (Artem., ap. Strab., 485.—Dicaearch., Ins., 27.) It was the birthplace of Cydasias, an eminent painter. The cheese of Cythnos, according to Stephanus and Julius Pollux, was held in high estimation among the ancients. The island is now called Thersitica. It was also named Quilroe and Dryopes. (Cramer's Anc. Greece, vol. 3, p. 403.)

Cyzinium, the most considerable of the four cities of Doris in Greece. According to Thucydides (3, 95), it was situated to the west of Paros, and on the borders of the Locri Ozolae. £eschines observes, that it sent one deputy to the Amphictyonic council. (De Fals. Leg., p. 43.)

Cyzosum, a city of Phalphagis, on the coast between the Cyclades Carambria and Amastria. It was a Greek town of great antiquity, since Homer alludes to it (Il., 2, 853), and is thought to have been founded by a colony of Milesians. According to Strabo (540), it had been a part of the inhabitants of Sinope. In its vicinity was a mountain, named Cytorus, which produced a beautifully-veneised species of box-tree. (Catal. 4, 13.—Verg., Georg., 2, 437.) The ruins of the ancient city are now covered by a hamlet called Quitos or Kitros. (Tavernier, Voyage, lib. 3, c. 6.) In the vicinity is a high mountain called Ketros or Kotr. (Abulfeda, tab. 18, p. 309.—Mannert, Geogr., vol. 6, pt. 3, p. 23.)

Cyzicus, I. an island off the northern coast of Mycia, nearly triangular in shape, and about five hundred stadia in circuit. Its base was turned towards the Propontis, while the vertex advanced so closely to the continent that it was easy to connect it by a double bridge. This, as Pliny reports, was done by Alexander. Scylax, however, says that it was always a peninsula, and his authority is followed by Mannert, who is of opinion that the inhabitants may, after the time of Scylax, have separated it from the mainland by a canal or ditch, for purposes of security. (Plin., 5, 32.—Mannert, Geogr., vol. 6, pt. 3, p. 527.) It is extreme between a peninsula at the present day, and there are no indications of the bridges mentioned by Pliny and others. (Scaliger, Viaggio, p. 502.—Cratler's Asia Minor, vol. 1, p. 47.)—II. A celebrated city of Mycia, on the island of the same name, situate partly in the plain which extended to the bridges connecting the island with the continent, and partly on the slope of Mount Areton-oros. Its first foundation is ascribed by Conon to a colony of Pelasgi from Thessaly, under the conduct of Cyzicus, son of Apollo, and Aristides speaks of the god himself as the founder of the city. (Orat. Cyzic., 1, p. 114.) In process of time the Pelasgi were expelled by the Tyrrhenii, and these again made way for the Milesians, who are generally looked upon by the Greeks as the real settlers, to whom the foundation of Cyzicus is to be attributed. (Conon, Narrat., 41.—Strab., 635.) Cyzicus became, in process of time, a flourishing commercial city, and was at the height of its prosperity, when, through the means of the kings of Pergamus, it secured the favour and protection of Rome. Florus speaks in the highest terms of its beauty and opulence; and Strabo assures us that it equalied in these respects, as well as in the wisdom of its political institutions and the firmness of its government, the most renowned cities of Asia. The Cyzicene commonwealth resembled those of Rhodes, Marseilles, and Carthage. They elected three magistrates, who were curators of the public buildings and stores. They possessed extensive arsenals and granaries, and care was taken to preserve the wheat by mixing it with Chaliced earth. Owing to these wise and salutary preuctions, they were enabled to sustain an arduous and memorable war against Mithridates Eupator, by both sea and land, until relieved by Lucullus. (Appian, Bell. Mithr., c. 73.—Plut., Vit. Liv., c. 9.—Strab., 575.) The Romans, in acknowledgment of the bravery and fidelity displayed by the Cyzicenians on this occasion, granted to them their independence, and greatly enlarged their territory. Under the emperors, Cyzicus continued to prosper greatly, and in the time of the Byzantine sway it was the metropolis and the Hellenopolitan province. (Hieroc., p. 661.) It was nearly destroyed by an earthquake, A.D. 943. Cyzicus gave birth to several historians, philosophers, and other writers. The coins of this place, called Kyzikoivnoi stahtres, were so beautiful as to be deemed a mirror of art. Proserpina was worshipped as the chief deity of the place, and the inhabitants had a legend among them, that their city was given by Jupiter to this goddess, as a portion of the earth, and that there are some ruins of Cyzicus now pass by the name of Atraki. (Cramer's Asia Minor, vol. 1, p. 40, seqq.)—III. A king of the Dolonians, a people who are said to have been the first inhabitants of the district of Cyzicus in Mycia. He was killed in a night encounter by the Argonauts, whom he had mistaken for enemies. (Vid. Argonauta.)

D.

Dale or Danaw (called by Herodotus Dal), a people who dwelt on the southeastern borders of the Caspian Sea, in the province of Hyrcania. They seem to have been a roving nomadic tribe. Virgil (Aen., 728) styles them indomiti; and Servius, in commenting on the passage of the poet where the term occurs, states that they extended to the northern part of Persia. He must allude evidently to the incursions they were accustomed to make into the countries south of Hyrcania. (Compare Plin., 6, 17.—Mela, 1, 2, and 3, 5.) Their country is supposed by some to answer to the modern Dahistan. (Plin., 6, 17.—Curt., 7, 4.—Herod., 1, 125.)

Dacia, a large country of Europe, bounded on the south by the Danube, which separated it from the Romans on the north by Sarmatia, on the east by the Tarsus and Pontus Euxinus, and on the west by the Issyges Meleagri. It corresponded nearly to Valachia, Transylvania, Moldavia, and that part of Hungary which lies to the east of the Tisza or Teiss, one of the northern branches of the Danube. In A.D. 105, Trajan added this country to the Roman empire. He
erected a stately bridge over the Danube, 3325 English feet in length. This Aurelian destroyed: his motive in so doing is said to have been the fear lest the barbarians would find it an easy passage to the countries south of the Danube, for which they had already abandoned to the Goths the Dacia of Trajan. (Vopisc., 33, 39.) On this occasion he named the province south of the Danube, to which his forces were withdrawn, Dacia Aureliana. (Vid. Messia.) There were afterward distinguished in Dacia, the part bordering on the Danube and called Ripensis, and that which was sequestered in the interior country under the name of Mediterranea. This last was probably the same with the Roman, more anciently termed Dardania. The Daci of the Romans are the same with the Goths of the Greeks. (Mannert, Geogr., vol. 4, p. 185, seqq.) From Dacus comes Davus, the common name of slaves in Greek and Roman plays. Geta was used in the same sense. The Daci were, in process of time, successively subdued by the Sarmatae, the Goths, and the Huns; and lastly, the Saxons, driven by the conquests of Charlemagne, established themselves in Dacia. The Saxons principally concentrated themselves in what is now Transylvania, corresponding to the ancient Dacia Mediterranea, a fertile region, surrounded with forests and metalliciferous mountains. (Sambuco, Append. Rec. Hung. Bonfin., p. 760.) To their coming must be entirely attributed the origin of its cultivation. All its principal towns were built by them: traces of their language still remain; and it is from them that Transylvana received the name of Sibeni, or the Region of Seven Cities. (Chron. Hung., c. 2, ap. Rec. Hung. Scrip., p. 31.—Clarke's Travels—Greece, Egypt, Holy Land, etc., vol. 8, p. 295, seqq.)

Dacicus, I, a surname of the Emperor Trajan, from his conquest of Dacia. (Rasche, Lex. Rom. Num., vol. 3, col. 27.)—II. A surname, supposed, but erroneously, to have been assumed by Domitian, on account of a pretended victory over the Dacians. The coins on which it occurs are Trajan's. (Achaintre, ad Juv., Sat., 6, 204.)

Dactyli. Vid. Idasi Dactyli.

Dædalus, I. a town of Caria, near the confines of Lycia, and on the northern shore of the Glauceus Sinus. It was said to have derived its name from Dædalus, who, being stung by a snake on the crossing the small river Ninus, died and was buried here. (Steph. Byz., s. v. Sibabala.)—II. A mountain, in the vicinity of the city of the same name, and on the confines of Lycaonia and Cilicia. (Strabo, 664, 1—III. Two festivals in Byzantia. One of these was observed at Alacocomi by the Plataeans, in a large grove, where they exposed, in the open air, pieces of boiled flesh, and carefully observed whether the crows that had come to prey upon them directed their flight. All the trees upon which any of these birds alighted were immediately cut down, and with them statues were made, called Dædales, in honour of Dædalus.—The other festival was of the name of Daedala.—I. The origin of this festival was every thirty years by all the cities of Boetia, as a compensation for the intermission of the smaller festival for that number of years, during the exile of the Plataeans. Fourteen of the statues called Dædalæ were distributed by lot among the Plataeans, Lebadeans, Coroneans, Orchemonians, Thespians, Thebans, Tanagreans, and Choereonians, because they had effected a reconciliation among the Plataeans and Lebadeans, and caused them to be recalled from exile about the time that Thebes was restored by Cassander, the son of Antipater. During this festival, a woman in the habit of a bridemaid accompanied a statue, which was dressed in female garments, along the banks of the Eurotas. This procession was attended to the top of Mount Cithaeron by many of the Boeotians, who had assigned places assigned them by lot. Here an altar of square pieces of wood, cemented together like stones, was erected, and upon it were thrown large quantities of combustible materials. Afterward a bull was sacrificed to Jupiter, and an ox or heifer to Juno, by every one of the cities of Boeotia, and by the most opulent that attended. The poorer citizens offered small cattle; and all these oblations, together with the Dædalæ, were thrown in the common heap and set on fire, and totally reduced to ashes. The festival originated in this: when Juno, after a quarrel with Jupiter, had retired to Eubea, and refused to return, the god went to consult Cithaeron, king of Platea, to find some effectual measure to subdue her obstinacy. Cithaeron advised him to dress a statue in a bridal habit, and carry it in a chariot, and publicly to report it was Platea, the daughter of A sposus, whom he was going to marry. The advice was followed, and Juno, informed of her husband's future marriage, repaired in haste to meet the chariot, and was easily united to him, when she discovered the artful measures he made use of to effect a reconciliation. (Pausan., 9, 3.) Plutarch composed an entire treatise on this festival, some fragments of which have been preserved by Eusebius (Prop. Evang., 3, 1, p. 83.—Plut., Op. ed. Hutten, 14, 257.), and agree with the account given in Pausanias, except that, in the narrative of Eusebius, Cithaeron is called Alacocomene, and Platea, Dædala. (Siechels, ad Pausan., l. c.)

Dædalis, I. the name of a celebrated artist of antiquity, said to have been a native of Athens. In treating of him, it is requisite first to mention, that the statements of ancient writers respecting him cannot be understood as establishing the true history of an individual, but rather as obscurely intimating the origin and progress of the arts in Greece; and, in particular, the information which is afforded respecting the place of his birth, and the countries in which he lived, seems to reflect light on the districts in which the arts were first cultivated. In noticing the accounts which have reached us, of the personal history of the artist Dædalis, the name itself first claims our attention. We learn from Pausanias (9, 3, 2), that all statues and images were anciently styled daédala, and as this designation was common long before the birth of the Athenian artist Dædalis, it is inferred that the name Dædalus was given to him on account of his productions. We have many similar instances of names given to individuals, to show either the origin of particular acts, or the talents, ingenuity, and other excellences of artists. Diodorus Siculus (4, 76, seqq.) and Pausanias (7, 4, 5—Plut., 16, 693, seqq.) the Greek writers. say, that he was born in Attica; but Ausonius (Max., 301.) designates him as a Cretan, probably because a large portion of his time was spent in the island of Crete. The name of his father is variously stated by different authors. Plato (Ion, p. 363) and Diodorus Siculus (4, 76, seqq.) give the name as Metiones. On the other hand, Hyginus (Fab., 274), Suidas, Servius (ad Verg., Aen. 6, 14), Pausanias (9, 3, 4), and others, call him the son of a shoemaker, his name being that of his father. The name Dædalæia is common in the names of the native towns of Attica, and seems to have been derived from the name of this or another artist. Dædalis, jealous of his skill, and apprehensive of the rivalry of the young man, cast him down from the Acropolis and killed him. For this murder he was banished by the court of Areopagus, and he betook himself to Minos, king of Crete, for whom he built the Labyrinth. He also devised an ingenious species of dance for Ariadne, the daughter of that monarch (Il., 18, 580); but, having formed
the wooden cow for Pasiphae, he incurred the dis-
pleasure of the king, and was thrown into prison.
Having, by means of Pasiphae, escaped from con-
finement, he determined to flee from Crete; but, being
unable to get away by sea, he resolved to attempt
flight through the air. He made, accordingly, wings
of feathers united by wax, for himself and his son Icar-
us. They mounted into the air; but Icarus ascend-
ing too high, and approaching the sun, his wax
melted, and he fell into the sea, and was drowned.
Dedalus arrived in safety in Sicili-
y where he was kindly received by Cocalus, king of
that island, who took up arms in his defence against
Minos, when the latter pursued him thither. (Apollod.,
3, 15, 9.—Ovid, Met., 8, 103, seqq.—Philiat. Fragment,
1, p. 145, ed. Gellér.) Here, too, he was employed in
erecting several great architectural works, some of
which were extant even in the time of Diodorus.
Thus, after being cast into prison, he died in Sicily, but
others mention that he went to Egypt, where he left
monuments of his ability (Stylax Peripil.); and others,
again, assert, that he was a member of the colony which
Aristees is said by some to have established in Sar-
donia. Thus much for the pretended history of Deda-
lus. It must be evident, that under the name of this
artist are concealed facts respecting the origin of Gre-
cian art, the city of Athens, and other subjects.
Dedalus, therefore (δαίδαλος, "ingenious," "invent-
re"), is merely a personification of manual art. He
was the Eponymus of the class of Dalaidai, or statua-
tes, at Athens, and there were various wooden statu-
es, preserved till late times, and said to be the work
of his hands. Icarus (from istoro, "to be like," istoro,
ikeiros) was a suitable name for his son, and the re-
semblance between it and the name of the Icarian Sea
probably gave occasion to the legend of the flight
through the air. (Silic., Dict. Art., s. v.—Keight-
ley's Mythology, p. 398.) Dedalus is said to have
introduced several improvements into the forms of an-
cient statues, by separating the legs, which before
were closed together, and representing his statues in
the attitude of motion forward; and also by opening
the eyes, which were previously shut. Hence arose
the saying of a most ancient proverb, "To open the eye,
that Dedalus communicated motion to statues by an
infusion of quicksilver. (Plut., Men. p. 97, ed.
Statib.—Aristot., Polit. 1, 4.—Suid., s. v. Δαϊδάλου
ποιημάτα.—Böttiger, Andeutungen, p. 49.)
Dedalus is mentioned as the inventor of the axe, plumbline,
auge, and also of glue; and likewise as the person
who first introduced masts and sails into ships. (Plut.,
7, 56.—Varro, Fragment, p. 365, ed. Dip.)—II. A statua-
ty of Sicyon, which flourished in the 96th Olympiad, or
400—397 B.C. (Plut., 34, 8.—Silic., Dict. Art., s. v.)—
III. A statue of Bithynia, author of an admirable
figure of Zeus Στράτος, which was preserved at Nor-
comedia. (Arrian, ap. Eustath., ad Dionys. Perig.,
796.) Thiersch thinks that he lived after the found-
ing of Nicomedia. He certainly flourished when the
arts had been brought to a high state of perfection in
Greece. (Silic., Dict. Art., s. v.)

DAMAS. Vid. DAM.

DALMATIA, a part of Illyricum, between the rivers
Titius and Drinus, and the ranges of the Dalmatian
mountains and Scardus. It derived its name from the
Dalmates, a barbarous but valiant race, supposed to be
of Thracian origin, and who were very skilful in navigat-
ing the sea along their coast, and extremely bold
in their piracies. The modern name of the country
is the same as that of the ancient. The capital, Dalmi-
unum or Dalmium, was taken by the Romans, B.C. 157; the country, however, was not
completely subdued until the time of Augustus, who
is said by Appian (Bell. Ill. c. 25) to have concluded
the war in person before he became emperor. Ac-
cording to Strabo, the Dalmatians had a peculiar cus-
tom of dividing their lands every eight years, and had
no coined money. The geographer also informs us,
that they possessed fifty towns, all of considerable
size, several of which were burned by Augustus. Their
capital he calls Dalmium, and derives it from the name
of the nation. (Strab., 316.) The Romans, after their
conquest of this country, divided it into Dalmatia Mar-
crius and Mediterranea, and made it part of the prov-
ince of Illyricum, forming the lower portion of Illyria
Barbara. Dalmatia, however, is sometimes made to
comprehend a much wider tract of country, namely,
all Illyria Barbara, or the region between Istria and
Durnbach, the Adriatic Sea and the Danube. Dalm-
ata was the native land of several of the Roman
emperors, who exerted themselves, accordingly, to
improve its condition. Many cities, therefore, and splen-
did structures arose in various parts of it; and, after
the new division of the Roman provinces under Con-
stantine and Theodosius, Dalmatia became one of
the most important parts of the empire. (Flor., 4, 12.—
Sueton., Vit. Tib., c. 9.—Id., Vit. Aug., c. 21.—Jor-
109, 126, 136.)

Dalmatio, a nephew of Constantine the Great.
He was invested by this emperor with the title of
Caesar, and was made governor of the provinces of
Macedonia, and Greece. Dalmatius fell in a tumult
of his own soldiers, A.D. 338, brought about by the
instrigues of Constantius, after the death of Constantine.
(Zosim., 2, 39, seq.—Compare Crevier, Hist. des
Emp., vol. 6, p. 395.)

Dalmium, the capital of Dalmatia, and from which
the Dalmate are said to have derived their name.
It was situate to the east of the river Naro, and north-
east of Narona. This place, like many other of the
Dalmatian towns, was situate on an eminence. Hence,
when it was attacked by the Romans, the usual ma-
chines could not be brought up against it, and the con-
sul Figulus was compelled to dart burning brands
from his catapults. As the fortifications of the place
were of wood, these were soon reduced to ashes, and
with them a large part of the city itself. Strabo (315) and
Stephanus of Byzantium write the name Dalmion (Δαλμίων)
or Dalmium (Δαλμίου). The reduction of this city by Figulus
took place B.C. 119. (Appian, Bell. Ill., 11.—Mannert,
Geogr., vol. 7, p. 372.)

DAMASCENA, or DAMASCÉNE (δαμασκινή χώρα), a
game given to the region around Damascus, in Syr-
bia. (Plin., 5, 12.—Strab., 736.)

DAMASCUS, a philosopher, a native of Damascus.
He commenced his studies under Ammonius at Alex-
andria, and completed them at Athens under Marinus,
Isidorus, and Zenodorus. According to some, he was
the successor of Isidorus. It is certain, however,
that he was the last professor of New-Platonism at
Athens. He appears to have been a man of excellent
judgment, and to have had a strong attachment for
the sciences, particularly mathematics. He wrote a
work entitled "Aporiai καὶ λύσεις περὶ τῶν πρώτων ἀρχῶν, "Doubts and solutions concerning the origin of
things." Of this only two fragments remain, one
preserved by Photius, which forms a biographical
sketch of Isidorus of Gaza; the other treating τῆρ forg
γεννητοῦ, "of what has been procreated." A Munich
MS. is said to contain an uncited work of his, en-
titled "Aporiai καὶ λύσεις εἰς τὸν Πλάτωνα Παρα
dην, "Doubts and solutions relative to the Parmen-
ides of Plato." (Arctin, Beiträge zur Gesch. und
117, seq.)

DAMASCUS (in Hebrew Dammesek), one of the prin-
cipal cities of Syria, in what was called Cede-Syria,
a few miles to the east of Antilbanus, where the chain
defines to turn off to the southeast, under the name of
Cambel. It was beautifully situated in an extensive
and pleasant plain, still called Goutch Demesk, or the orchard of Damascus, and watered by a river called by the Greeks Bardine or Chrysorhoas, the golden stream, now Baradi. The Syriac name of this stream was Phaphar. Damascus is supposed to have been founded by Uz, the eldest son of Aram. (Gen., 10, 23.) Hence the country of Damocles is mentioned by Homer in the Iliad, and by the Phcenicians, and later the name Damocles is used of Abraham, and may be reckoned one of the most ancient cities of Syria. It was conquered by David (2 Sam., 8, 6), but freed itself from the Jewish yoke in the time of Solomon (1 Kings, 11, 23, seqq.), and became the seat of a new principality, which often harassed the kingdoms of both Judah and Israel. It afterward fell, in succession, under the power of the Assyrians and Persians, and came from the latter into the hands of the Seleucidæ. Damascus, however, did not flourish as much under the Greek dynasty as it had while held by the Persians. The Seleucidæ neglected the place, and bestowed all their favour on the new cities erected by them in the northern parts of Syria; and here, no doubt, lies the reason why the later Greek and Roman writers say so little of the city itself, though they are all loud in their praises of the adjacent country. Damascus was seized by the Romans in the war of Pompey with Tigranes, B.C. 65, but was not a great military post, and was comparatively unimportant place, until the time of Dioclesian. This emperor, feeling the necessity of a strongly fortified city in this quarter, as a depot for munitions of war, and a military post against the frequent inroads of the Saracens, selected Damascus for the purpose. Everything was done, accordingly, to strengthen the place; extensive magazines were also established, and likewise numerous workshops for the preparation of weapons, &c. (Chron., 11, p. 132.—Notitia Imperii.) It is not unlikely that the high reputation to which Damascus afterward attained, for its manufacture of sword-blades and other works in steel, may have had its first foundations laid by this arrangement on the part of Dioclesian. The city continued from this time a flourishing place. In the 7th century it fell into the hands of the Saracens, and was for some time after this the seat of the caliph. In this stormy age, too, remained animosities, and dissensions, as well as the northern races subsisted under the Greek rule. It is now the capital of a pachalic. The Arabs call it Es-Sham, and the Oriental name Demesk is known only to geographers. It is one of the most beautiful and pleasant cities of Asia, and is by the Arabs considered the first of the four terrestrial paradises. Its population is variously estimated from 90,000 to 200,000. Volney gives the former number, and Ali Bey the latter. The Christian population is estimated by Conan at about 20,000, including Greeks, Catholics, Latins, Maronites, Armenians, and Nestorians, but he says “this is a rough calculation. It is impossible to know the exact number.” (Mannert, Geogr., vol. 6, pt. 1, p. 409, seq.)

Damasippus, I. a priest during the consilium of Papiernus Carbo and the younger Marius, A.U.C. 671. As a follower of the Marian party, he indulged in many cruel excesses against the opposite faction, and also against such as were suspected of favouring it. He was put to death by Sylla. (Sallust, Cat., 51.—Vell. Patert., 2, 26.)—II. A character in Horace, who is there represented as having been at first a virtuoso, or dealer in antiques, but who, proving unfortunate in this branch of business, assumed the name and appearance of a Stoic philosopher. (Horat., Sat., 2, 3, 17, seqq.)

Damen, one of the ancient nations of Scotland, whose country answered to the modern Clyndendale, Renfrew, Lennox, and Stirling. (Ptol.—Mannert, Geogr., vol. 2, p. 207.)

Damon and Damochi, of a people, whose country answered to the modern Devonshire and Corn-

wall. As the several tribes of the Damnonii submitted without much resistance to the Romans, and never joined in any revolt against them, their conquerors were under no necessity of building many forts or keeping many garrisons in their country. Hence it happens, that few Roman antiquities have been found here, and only few inscriptions. A station in the Itineraries is mentioned by the Roman writers. Mannert considers the name Damnonii the more correct of the two. (Geogr., vol. 2, p. 195.)

Damoctes, one of the flatterers of Dionysius the Elder, of Sicily. Having in the course of conversation extolled the power and wealth of the tyrant, and the abundant means of felicity by which the latter appeared to be surrounded, Dionysius asked him whether he would like to make trial of this same state, which seemed to him so happy a one. Damocles eagerly assented, and the tyrant caused him to be placed on a purple couch, most beautifully adorned with various embroidery. Vessels of gold and silver, richly wrought, met his view on every side, and an exquisite banquet was served up by slaves of the most attractive mien, who were attentive to his every command. Damocles thought himself at the summit of human felicity; when, happening to cast his eyes upward, he observed a sword hanging over his head, by means of which, he supposed, he might as easily cut off his head as the other, which he therefore left unattended. Damocles was pardoned by the dread of immediate death, but was afterward rescued by a friend, who passed between him and the sword, suspended from it by a single horsehair, directly over his neck as he lay reclined at the banquet. All feeling of delight instantly left him; and he begged the tyrant to allow him to depart, since he no longer wished to enjoy this kind of felicity. And thus was Damocles taught the salutary lesson, that little, if any, enjoyment is found in the possession of usurped power, when every moment is imbibed with the dread of impending conspiracy and danger. (Gic. Tusc, 5, 22.—Cornelius, Philo, ap. Euseb., Prep. Evang., 8, 14, p. 391.—Macrobi, ad Somn. Scip., 1, 10.—Sidon. Apoll., 2, 13.—Horat., Od., 3, 1, 17.)

Damon, a Pythagorean philosopher of Syracuse, united by ties of the firmest friendship to Phintias (not Pythias, as the name is commonly given), another Pythagorean, of the same city. Dionysius the tyrant having condemned Phintias to death for conspiring against him, the latter begged that leave might be allowed him to spend a short period to a neighbouring place, in order to arrange some family affairs, and offered to leave one of his friends in the hands of Dionysius as a pledge for his return by an appointed time, and who would be willing, in case Phintias broke his word, to die in his stead. Dionysius, quite sceptical as to the existence of such friendship, and prompted by strong curiosity, assented to the arrangement, and Damon took the place of Phintias. The day appointed for the return of the latter arrived, and public expectation was highly excited as to the probable issue of this singular affair. The day drew to a close, no Phintias came, and Damon was in the act of being led to execution, when, on a sudden, the absent friend, who had been detained by unforeseen and unavoidable obstacles, presented himself to the eyes of the admiring crowd, and saved the life of Damon. Dionysius was so much struck by this instance of true attachment, that he pardoned Phintias, and extremed the two to allow him to share their friendship. (Diod. Sic., fragm., lib. 10, vol. 4, p. 52, seqq., ed. Bip.—Val. Max., 4, 7, 1, ed. Hase.—Plut. de amic. mut., p. 93.)

Damophila, a poetess of Lesbos, intimate with Sappho. She composed a hymn on the worship of the Pergæan Diana. (Philostat., Vit. Apollon., 1, 20.)

Damoëns, a boxer of Syracuse, excludèd from the Nemean games for killing his antagonist in the boxing, not according to the rule. The name of the latter was Creugas, and the two competitors, after having consumed the entire day in boxing, agreed each to receive from the other a blow without flinching. Creugas first struck Damoëns on the head, and then Damoëns,
with his fingers unfairly stretched out, struck Creugus on the side: and such, observes Pausanius, was the hardness of his nails and the violence of the blow, that his hand pierced his side, seized on his bowels, and, drawing them outward, gave instant death to Creugus.—A fine piece of sculpture has come down to us of Dictys Danae.

Danae, a large town of Cappadocia. D'Anville makes it to have been the same with Tyana, an opinion which is ably refuted by Mannert, who maintains that it lay more to the southeast, and coincided with the Tanadaris of Ptolemy. It is mentioned in Xenophon's Anabasis as being in the vicinity of the Cilician Gates (1, 2). The position of Tyana on Mannert's chart is north of the Cilician pass; in D'Anville's it is to the southeast. (Mannert, Geogr., vol. 6, pt. 2, p. 239, 263.)

Danaë, I. the daughter of Acrisius, king of Argos, by Eurydice, daughter of Lacedæmon. Acrisius inquired of the oracle about a son; and the god replied that he would himself have no male issue, but that his daughter would bear a son, whose hand would deprive him of life. Fearing the accomplishment of this prediction, he framed a brazen subterranean chamber (δίσεκαν), into which for nine years he confined his daughter and her nurse, in order that she might never become a mother. (The Latin poets call the place of confinement a brazen tower.) But Jupiter had seen and loved the maiden; and, under the form of a golden shower, he poured through the roof into her bosom. Danaë became, in consequence, the mother of a son, whom she and her nurse reared in secrecy until he had attained his fourth year. Acrisius then chanced to hear the voice of the child at play. He brought out his daughter and her nurse, and, putting the latter instantly to death, drew Danaë privately, with her child, to the altar of Hercean Jove, where he made her answer on oath whose was her son. She replied that he was the offspring of Jove. Her father gave no credit to her protestations. Enclosing her and the boy in a coffer, he cast them into the sea, to the mercy of the winds and waves, a circumstance which has afforded a subject for a beautiful piece by the poet Simonides. The coffer was carried to the little island of Seriphus, where a person named Dictys drew it out in his nets (ἄκουρος); and, freeing Danaë and Perseus from their confinement, treated them with the greatest attention. Polydectes, the brother of Dictys, reigned over the island. He fell in love with Danaë; but his son Perseus, who was now grown up, had as an obstacle in his way. He had, therefore, recourse to artifice to deliver himself of his presence; and, feigning that he was about to become a suitor to Hippodamia, the daughter of Cœnomaus, he managed to send Perseus, who had bound himself by a rash promise, in quest of the head of the Gorgon Medusa, which he pretended that he wished for a bridal gift. When Perseus had succeeded, by the aid of Hermes, in destroying the Gorgon, he proceeded to Seriphus, where he met with the mother of his son. He had been obliged to fly to the protection of the altar from the violence of Polydectes. He immediately went to the royal residence; and when, at his desire, Polydectes had summoned thither all the people, to see the formidable head of the Gorgon, it was displayed, and each became a stone of the form and position which he exhibited at the moment of the transformation. Having established Dictys as king of Seriphus, Perseus returned with his wife and son to Argos, where he was met by Acrisius there, proceeded to Larissa in Thessaly, whither the latter had retired through fear of the fulfillment of the oracle. Here he inadvertently killed Acrisius. (Vid. Acrisius, Perseus.)—There was a legend in Italy, that Areus, the capital of the Rutulians, had been founded by Danaë. (Virg., Æn., 7, 378, 410.) It was probably caused by the similarity of sound in Danaë and Daunia. Danaüs is the father of Turnus.—An explanation of the legend of Danaë will be found under the article Perseus. (Apollod., 2, 4, seqq.—Keightley's Mythology, p. 414, seqq.)

Danaïdes, the fifty daughters of Danaus, king of Argos. An account of the legend connected with their names will be found, together with an explanation of the names of their husbands, in the next article. (Danaus.)

Danaëphoria, another name for the Borysthenes, first mentioned in an anonymous Periplius of the Euxine Sea. It is now the Dnieper. The Dnieper rises in the Vaidai hills, near the sources of the Duna, and, after a winding course of about 800 miles, falls into the Black Sea, a little to the east of the Dniester. In the lower part of its course the navigation is impeded by islands, and at one place, about two hundred miles above its mouth, by falls, which continue for nearly forty miles. A little above its mouth, the river widens into a kind of lake or marsh, called Liman, into which the Bog, the ancient Hypanis or Bogus, one of the principal tributaries of the Dnieper, discharges itself. As regards the root of the name Danaeris (Dan, Don), consult remarks under the article Tanais. (Plin., 4, 12.—Mela, 2, 1.—Ammanian Marcell., 22, 18.—Jornandes, de Reb. Get., p. 5.)

Danastus, another name of the Tyrs or Dniester. It is called Danastus by Ammianus Marcellinus (31, 3), Danastris by Constantine Porphyrogenitus (de admin. Imperio, c. 8), and Danastor by Jornandes (de Reb. Get., p. 84). The Dniester rises from a lake amid the Carpathian Mountains in Austrian Galicia, and empties into the Black Sea after a course of about six hundred miles. The name Tyrs (Trjor) occurs in Ptolemy, Strabo, Stephanus of Byzantium, and Sirmynus of Chios. Herodotus gives the Ionic form Trjor. (Herod., 4, 51.) As regards the root of the name (Dan, Don), consult remarks under the article Tanais.

Danaüs, a son of Belus and Anchinoe, and brother of Egyptus. Belus assigned the country of Libya to Danaüs, while to Egyptus he gave Arabia. Egyptus conquered the country of the Melampodes, and named it from himself. By marriage, Danaüs became the father of fifty sons. Danaüs had by several wives an equal number of daughters. Dissension arising between him and the sons of Egyptus, they aimed at depriving him of his kingdom; and, fearing their violence, he built, with the aid of Minerva, a fifty-oared vessel, the first that ever was made, in which he embarked with his daughters, and fled over the sea. He first landed on the isle of Rhodes, where he set up a statue of the Lindian Minerva; but, when he retired to Boeotia, he proceeded to Argos, where Gelanor, who at that time ruled over the country, cheerfully resigned the government to the stranger who brought thither civilization and the arts. The people took the name of their new monarch, and were called Danaï (Δαναϊ). The country of Argos being at this time extremely deficient in pure and wholesome water (Vid. Inachus), Danaüs sent forth his daughters in quest of some. As Amaëmnon, one of them, was encountered in the search, she was rescued by Neptune from the intended violence of a satyr, and the god revealed to her a fountain called after her name, and the most famous among the streams that contributed to form the Lernæan lake or marsh. The sons of Egyptus came now to Argolis, and entertained their uncle to bury past enmity in oblivion, and to give them their
DANAUS conveys in marriage. Danaïs, retaining a perfect recollection of the injuries they had done him, and distrustful of their promises, consented to bestow upon their daughter, in marriage, the land and revenues of a trifling domain, a lot; but, on the wedding-day, he armed the heads of the brides with daggers, and enjoined upon them to slay in the night their unsuspecting bridegrooms. All but Hypermenestra obeyed the cruel orders of their father; and, cutting off the heads of their husbands, they flung them into Lerna, and buried their bodies with all due rites outside of the town. At the command of Jupiter, Mercury and Minerva purified them from the guilt of their deed. Hypermenestra, however, spared Lyncæus, for the delicta regard which he had shown to her modesty. Her father, at first, in his anger at her disobedience, put her into close confinement. Releasing, however, after some time, he gave his consent to her union with Lyncæus, and proclaimed gymnastic games, in which the victors were to receive his other daughters as the prizes. It was said, however, that the crime of the Danaïdæ did not pass without due punishment in the lower world, where they were condemned to draw water, for ever, with performed vessels. (Apollod., 2, 1, 4.—Hygin., fab., 168, 169, 170.—Schol. ad Ili., 1, 42, et ad 4, 171.—Schol. ad Eurip., Hec., 872.) Thus much for the story of Danaïs. The intimate connexión between this popular legend and the peculiar character of the Argive soil, which exhibited a striking contrast between the upper part of the plain and the low grounds of Lerna, has given rise to a bold and ingenious theory. Argos was greatly deficient in water (whence Homer calls it “thirsty,” ῥοῦλινον), and the word ἀνάσα signifies “dry.” We have here, then, a simple derivation for the name Danaïs, namely, the people of the thirsty land of Argos; and, in the usual manner, the personification of their name is a hero, Danaïs. Again, springs are daughters of the earth, as they are called by the Arabs; the nympha of the springs are therefore daughters of Danaïs, that is, of the thirsty land; and, as a confirmation, in some degree, of this view of the subject, we may state, that four of the daughters of Danaïs, namely, Anymone, Peirene, Phyesades, and Asteira, were names of springs. Still farther, a head (κύπρυς) is a usual name for a spring in many languages; and a legendary mode of accounting for the origin of fountains is to ascribe to them the dwelling forth of the blood of some person who was slain on the spot where the spring emitted its waters. Thus the blood of Pentheus and Actaeon gave origin to springs on Mount Parnassus. (Philipon, 1, 13; Conze, Welders, Traul., p. 400.) The number fifty, in the case of the Danaïdæ, is probably an arbitrary one, for we cannot discern in it any relation to the weeks of the year, as some endeavour to do. (Völcker, Myth. der Iap., p. 192, seqq.) It is to be observed, that the fountains of the Inachus were in Mount Lyceon or Lyceion (Schol. ad Apoll. Rh., 1, 125), and here, perhaps, lies the origin of 1, the cipher in one form of the legend, fights with devils, vanished Danaïs, and was changed into a tree, that is, from Mount Lyceon overcomes the dry nature of the soil. We see, therefore, that the physical legend may have existed long before there was any intercourse with Egypt; and, like that of Io, may have been subsequently modified so as to suit the new theory of an Egyptian colony at Argos. (Herod., 2, 91; 171, 185.—Müller, Orchom., p. 109, seqq.—Völcker, 1, 184, seqq.—Keightley’s Mythology, p. 409, seqq.) Danaïus, the largest river of Europe except the Rha or Volga, and called in German the Donau, by us the Danube. Strabo and Pliny make it rise in the chain of Mons Abnoba, or the mountains of the Black Forest. According to modern accounts, it has its origin on the heights of the Black Forest, from three sources, the Brig-Ach and the Brige, which are both more considerable than the third or the Donau, a feeble stream that is enclosed in a stone basin, and formed into a fountain in the court of the castle of Danou-Bruchberg, and leads, the first to the river Dahn. It is considered the source of the Danube. (Maille-Brun, vol. 7, p. 41, Am. ed.—Id., vol. 6, p. 288.) It is one of the few rivers which run from west to east, traversing Austria, Hungary, and part of Turkey in Europe, and, after a course of about 1620 miles, falls into the Black Sea. It is of irregular width, being sometimes confined between rocks and mountains, at other times so wide that it almost resembles a sea, and again broken and divided into small streams by numerous islands. It receives sixty navigable rivers, the largest of which is the Cenus or Inn, and 120 smaller streams. It is always yellow with mud, and its sands are everywhere auriferous. At its entrance into the Black Sea it is shallow; its waters are spread over an immense surface, and lie stagnating among an infinity of reeds and other aquatic plants. The current of the river communicates a whitish colour to the sea, and gives a freshness to it for nearly nine leagues, and within one league renders it fit for use. Pomponius Mela says it had as many mouths as the Nile, of which three were small and four navigable. Only two now remain, which can scarcely be entered by ships of considerable size or burden, the rest being choked up. The ancients gave the name of Ister to the eastern part of this river after its junction with the Savus or Savae. The Greeks and Romans were very imperfectly acquainted with the whole course of the stream, which was for a long period the northern boundary of the Roman empire in this quarter. This river was an object of worship to the Scythians. The river-god is represented on a medal of Trajan; but the finest figure of him is on the column of that emperor at Rome. (Mela, 2, 7.—Amm. Marcell., 22, 19.—Ptol., 3, 10.—Plin., 4, 12.—Dionys. Perieg., 301.) As regards the root of the name (Dan), consult remarks under the article Tannis. DAPHNE, a city of Egypt, about sixteen miles from Pelusium, on the route to Memphis. (Anton., Itin., p. 162.) There was always a strong garrison in this place, to keep in check the Arabians and Syrians. It is now Sañas. (Herodot., 2, 30.) DANPHE, I, a daughter of the Peneus, and the first love of Phoebus. This god, according to the poetic legend, proud of his victory over the serpent Python, beholding Cupid bending his bow, mocked at the effect of the puny darts on Cithaeron. Cithaeron, annoyed by Phoebus, taking his station there, shot his golden arrow of love into the heart of the son of Latona, and discharged his leading one of aspersion into the bosom of the nymph of the Peneus. Daphne loved the chase, and it alone, indifferent to all other love. Phoebus beheld her, and pursued. Exhausted and nearly overtaken, Daphne, on the banks of her father's stream, stretched forth her hands, calling on Peneus for protection and change of nature. In terror of his daughter, and Daphne became a bay-tree (βαῦν, laura). The god embraced its trunk, and declared that it should be afterward his favourite tree. (Ovid, Met., 1, 452, seqq.—Hygin., fab., 203.) The meaning of this legend is evident enough. It is only one of the many tales devised to give marvel to the origin of natural productions; and its object is to account for the bay-tree being red, or its leaves of a red tinge. The great majority of the authorities place the legend in Arcadia, making Daphne the daughter of the Ladon by Earth (the natural parent of a plant), and add that it was her mother who changed her on her prayer. (Pausan., 8, 20.—Nonnus, 42, 387.—Schol. ad Ili., 1, 14.—Stat. Theb., 4, 289, &c.—Keightley’s Mythology, p. 118.) A beautiful spot about forty stadia to the south of Anti- ochus, near the Orontes, adorned with fair edifices, and
containing a temple sacred to Apollo and Diana. The whole was surrounded with a thick grove of cypresses and bay-trees (βώβας), from the latter of which the place derived its name. Numerous fountains, too, imparted continual freshness to the grove and coolness to the surrounding atmosphere. The luxurious citizens of Antioch made this a favourite place of re- treat, and even the Roman governors often forgot amid the enjoyments of Daphne the cares of office. Poesy, too, seems to have been highly cherished by the place, and by the united beauties of nature and art with which it was adorned, that he considerably enlarged the limits of the grove, by the addition of many of the surrounding fields. The modern name of the place is Belit-el-Mar, “the house of water.” (Ammian. Marcell. 19, 2. — Id. 22, 31. — Sozomen, 5, 19. — Eutrup., 6, 11.)

Daphnephoria, a festival in honour of Apollo, celebrated near the Boeotian lake. It was then usual to adorn an olive bough with garlands of bay and flowers, and place on the top a brazen globe, from which were suspended smaller ones. In the middle were a number of crowns, and a globe of inferior size; and the bottom was adorned with a saffron-coloured garment. The globe on the top represented the Sun or Apollo; that in the middle was an emblem of the moon, and the others of the stars. The crowns, which were 365 in number, represented the months of the year. This bough was carried in solemn procession by a beautiful youth of an illustrious family, and whose par- ents were both living. (Pausan., 9, 10, 4.)

Daphnis, a celebrated herdsman of Sicily, the son of Mercury by a Sicilian nymph. He was found by the shepherds, when an infant, lying among the bay-trees (βώβας), and from this circumstance obtained his name. Pausan. taught him to sing, and play upon the pipe, the laurel was the favourite plant, and the Musaphis inspired him with the love of song. According to Diodorus, he was the inventor of pastoral poetry. He also accompanied Diana in the chase, and, when the labours of the day were ended, was wont to delight the goddess with the sweet notes of his syrinx. Daphnis became eventually attached to a Naiad, who forbade him holding communion with any other female, under pain of loss of life and she withdrew from him on account of that effect. A princess, however, contrived to in- toxicate him: he broke his vow, and the threatened penalty was inflicted. According to Diodorus, however, the Naiad merely predicted that loss of sight would be the consequence of his proving unfaithful to her. The orichus, in his first Idyl, represents him as pining away in death, and refusing to be comforted. (Serv. ad Virg., Eclog., 5, 20. — Diod. Sic., 4, 84. — Strab., 6, 1, 20. — Pausan., 1, 16, 28. — Pany. — Herodot., 29. — Aelian, V. H., 10, 18.) Ovid says, that the Naiad turned him into a rock. (Met., 4, 276, seqq. — Keightley's Mythology, p. 240.)

Daphnis (gen. -unis; in Greek, Δαφνίς, -όντως), a town of the Locri Epizephyrii, situate on the seacoast, at the mouth of a river of the same name, near the frontier of the Epirothian Locri. Strabo (424) places it twenty stadia from Onomede in. Into the river Daphnus the body of Hesiod was thrown after his murder. (Vid. Hesiodus.)

Dardanus (called also Daras, gen. -atis), a river of Africa, rising to the northwest of the Palus Nirgetis, on Mount Mandras, and falling into the Atlantic to the north of the promontory Arsinarium. It is supposed to be the same with the Senegal. (Bichof und Müller, Wörter der Geogr., p. 405.) Gosselin, however, makes it correspond to the modern Darabín. (Recherches, vol. 3, 112.)

Dardania, I, a district of Troas, in the north, called so from its inhabitants the Dardani. These derived their name from Dardanus, who built here the city of the same name. (Vid. Dardanus, I., II.) According to the Homeric topography, the Dardani, who were subject to Anacharsis, and commanded by his son Æneas during the siege, occupied the small district which lay between the territory of Abydus and the Promontory of Rheteum, beyond which point the Trojan land, properly so called, and the hereditary domains of Priam commenced. Towards the mainland, Dard- ania extended to the summit of Ida, and beyond that chain to the territory of Zelea, and the plains watered by the Æusus on the north, and as far as the territor- ies of Assus and Antandrus to the south. (Strab., 532, 606.) It was more particularly within this inland district that the descendants of Æneas are said to have maintained themselves as independent sovereigns after the siege of Troy. (Cramer's Asia Minor, vol. 1, p. 80, seq.)—II. A region of Illyria, lying south of the territory of the Scordisci. It comprehended the upper valleys of the Drilo, and extended to the borders of Paonia and Macedonia. The Dardani, its inha- bitants, were often at war with the latter power, more particularly under the reign of its last two monarchs. Their country answers to the modern districts of Ipeck, Priatina, and Jacova, which are situate to the south of Servia, and form part of the pachelic of Scutari. Strabo describes these Dardani as a savage race, living mostly in caves formed out of mud and dirt, and yet pos- sessing great taste for music, having from the earliest period been accustomed with both wind and stringed instruments. (Strab., 316. — Cramer's Anc. Greece, vol. 1, p. 47.)

Dardanis of Dardanum, a promontory of Troas, south of Abydus, near which was situate the city of Dardanus. It is now called Cape Berberi, or Kepos Burun. The Hellespont here begins to contract it- self. (Strab., 587, 593.)

Dardanus, I. a celebrated hero, son of Jupiter and Electra, who was supposed to come to Troas, according to some ac- counts, from Azædia; according to others, from Italy. All, however, agree in fixing upon Samothrace as the spot in which he had formed his first principality, be- fore he migrated to the foot of Mount Ida. (Apollod., 3, 12. — Strab., 331. — Virg., Æn., 7, 207.) We may reconcile this variety of opinions respecting the native country of Dardanus, by supposing that he was a chief of that early race, who, under the name of Pelasgi, were so widely spread, and were especially domiciled in the terri- tories, each of which claimed to be the birthplace of the hero. The epoch of the arrival of Dardanus on the coast of Asia is too remote to be ascertained at pres- ent with accuracy. Homer reckons five generations between Dardanus and Priam. (Il., 20, 230.) Plato, as we learn from Strabo (592), placed his arrival in the second epoch after the universal deluge, when man- kind began to leave the summits of the mountains, which fear had driven them, and where they had led a barbarous and savage life, in caves and grots, like the Cyclopes of Homer. The Athenian philosopher deduced his reasoning from the passage in Homer, where the town founded by Dardanus is stated to have been built at the foot of Ida. (Il., 20, 215, seqq.) The legend respecting Dardanus is as follows: Afflicted by the death of his brother Iasion, whom Jove had struck with lightning, Dardanus left his throne, and passed over to the mainland, where Teucer, the son of the river Scamandrus and the nymph Iidea then reigned over a people called Téuceri. He was well received by this prince, who gave him his daughter Batiæa (Il., 2, 813) in marriage, and a part of his ter- ritory, on which he built a town called Dardanus. He had two sons, Ilus and Icrithus, the former of whom died childless: the latter succeeded him in the king- dom, and was famous for his wealth. By Asty- boe, daughter of the Simoës, Icrithus had a son named Tros, who succeeded him on the throne. From Tros came Ilus, Assaracus, and Gynymedes. The house of Priam were descended from Ilus; that of
DARE

Æneas from Assaracu. (Cramer's Asia Minor, vol. 1, p. 76, seqq. —Keightley's Mythology, p. 453.)—II. An ancient city of Troas, founded by Dardanus. According to Homer, who calls it Dardania, it was situated at the foot of Mount Ida. (Il, 20, 215. —Strab., 592.)—III. Another city of Troas, not to be confounded with the preceding. By whom it was built is uncertain. We know, however, that it existed in Strabo's time (5, 117), when Strabo mentions its capture by the Persians, in the reign of Darius. In the narrative of Xerxes's march, he describes it as close to the sea, and conterminous with Abydus (7, 43). Strabo reports, that the inhabitants were often compelled to change their abode by the successors of Alexander: he reports also, that peace was concluded here between Sylla and Mithradates. (Strab., 595. —Plut., Vit. Syll., c. 21.) The ruins of Dardanus are to be found between Kepos Burun and Dersend Tcheneh Burun. The name Dardanelles, which was in the first instance applied to the Turkish castles erected to defend the passage of the straits, and next to the straits themselves, is confessedly derived from an ancient city. (Cramer's Asia Minor, vol. 1, p. 82.)

Dares, I. a Trojan priest, mentioned by Homer (II, 5, 9). It is absurdly pretended, by some of the ancient writers, that he wrote an Iliad, or history of the Trojan war, in Pindar's way (Pind. Pyth. 22) assuming that it still existed in his day, without telling us, however, whether he himself had read it or not. There can be no doubt that Elian was deceived, and that the work which he took for the production of Dares was the composition of some sophist of a much later age. However this may be, the Iliad of which Elian speaks no longer exists; but we have a Latin work remaining, written in prose, which was for some time regarded as a translation from the Greek original, and was ascribed to Dares of Nymphæum, but with solecisms. The truth is, that this work is the production of an English poet, who flourished at the close of the 12th century. His name was Joseph, to which was sometimes added Davenous, from his having been at Exeter in Devonshire, and at other times Icaneus, from the ancient name of Exeter, Isca. This Iliad, thus falsely ascribed to Dares, is not even translated from any Greek writer; it is merely the work of a writer of the 12th century, which Joseph Icaneus composed under the title De Bello Trojano. —The work just mentioned, as well as that of Dictys Cretensis, forms the original source of a famous romance of chivalry, which met with extraordinary success during the middle ages, and in the centuries immediately subsequent to the invention of printing. These works of Dares and Dictys having fallen into the hands of a Sicilian named Guido dalle Colome, a native of Messina, and a celebrated lawyer and poet of the 13th century, he conceived the idea of giving them that romantic air which would harmonize with the spirit of the age, when chivalry had now acquired its greatest lustre. He consequently intercalated the narratives of the pretended poets of Phrygia and Crete with various adventures, suited to the taste of the age, such as tournaments, challenges, single combats, &c. His work having met with considerable success, he composed, in Latin prose, a romance of the war of Troy, in which he also introduced the war of the Seven against Thebes, and the expedition of the Argonauts. He confounds together history and mythology, Greek and Arabian manners; his heroes are acquainted with alchemy and astronomy, and come in contact with dragons, griffins, and other fabulous monsters. His romance was translated into almost every European language, and was read by general enthusiasm. Hence the desire which at that time seized the great families of Europe of claiming descent from one of the heroes of Trojan story; and hence the eagerness, on the part of the monks, to compose genealogies consisting of Greek and Roman names which had some analogy with the names of the sovereign princes of the middle ages. (Schoell, Hist. Lit. Gr., vol. 7, p. 3, seqq.) This same work of Dares Phrygius was the source whence Conrad of Würzburg, in the latter half of the 13th century, derived the materials of the poem which he composed in like manner on the war of Troy. (Koberstein, Grundriss der Deutsch Nationalität, § 46, not. 3.) —(Dares, p. 129.)—This Dares was celebrated as a pupilist, though conquered in the funeral games of Anchises by the aged Enelltus. (Virg., Æn., 5, 369, seqq.) This Dares, or a Trojan of the same name, was slain by Turnus in Italy. (Æn., 12, 363.)

Daricus, a Persian coin of the purest gold. According to Harpocration and Suidas, it weighed two drachmas, and hence it was equivalent in value to 20 Attic drachmas of silver. Five Darics were consequently equal to an Attic mina of silver. (Wurm, de pond., &c., p. 58.) Reckoning the Attic drachma at 17 cents, 5.93 mills, Federal currency, the value of the Daric will be 3 dollars, 51 cents, 8.64 mills. The Daric was the gold coin best known at Athens; and when we consider the great number that are recorded to have been employed in presents and bribes alone, exclusive of the purposes of traffic, it would seem extraordinary that so few should have reached modern times. We did not even know, that upon the conquest of Persia, the Darics collected during the reigns of the type of Alexander. Very few Persian Darics are now to be seen in cabinets. There is one in Lord Pembroke's, which weighs 129 grains; and there are three in the cabinets at the British Museum, weighing about 128½ grains each. The purity of the gold in the Persian Daric was remarkable. Ballotey found it to be in one, =g, or 0.9583 (Mem. de l'Acad. des Insocr., vol. 21); and yet, if we credit Pisis (Hist. Num., c. 1, 20, 21), the annular abacus of Philip and his son Alexander, which he makes = 23 carats, 10 grains, or 0.979. (Wurm, l. c.) The Daric had on one side the figure of an archer crowned, and kneeling upon one knee; upon the other a sort of quadrate incusa, or deep cleft. Knight sees in the figure upon the Persian Daric, not an archer, but a type of Hercules-Mithras, or the sun. (Inquiry, § 151.—Class. Journ., vol. 25, p. 49.) Common parlance, however, is quite correct, when it ascribes to it the origin of Agelius, who said that he had been driven out of Asia by thirty thousand archers, meaning so many Darics distributed among the Greek cities by the Persian king. Who the Darius was from whom the coin received its name has never been clearly ascertained. According to the scoliast on Aristophanes (Eccles., 689), and also Harpocration and Suidas, the Daric did not obtain this appellation from the son of Hystaspes, but from a more ancient king of the name of Darius. Hence some writers are led to infer that Darius the Mede, who is mentioned by Daniel (5, 31), was the same with the Cyaareas of whom Xenophon speaks. (Compare Prideaux, Hist. Connec., 2, 538.—Hutchinson, ad Xen., Cyrop., 5, 2, 33.—Perizon, ad Ælian, V. H., 1, 22.) Wesseling, however, maintains the contrary, and ascribes the origin of the coin in question to the son of Hystaspes; 1st, because we find no mention made by the Greeks of any more ancient Darius than the one just alluded to; and, 2d, because, as the lineage of the monarch is given by Herodotus, Darius, the son of Hystaspes, appears to have been the first who bore the name. Zeune conjectures (what, in fact, seems more than probable), that Darius, the son of Hystaspes, only corrected, and gave his name to an ancient coinage already existing. Müller also speaks of the Darics as having been coined by Darius Hystaspis. (Public Econ. of Athens, 1, p. 32.) —The silver coins which go by the name of Darics are in truth miscalled. The earliest of them, if we may credit Herodotus (4, 166), were struck by
Darius, the Persian governor of Egypt, under Cambyses, in imitation of the Darics. He was put to death by Darius for his presumption. The coining of these Darics or Aryandics in silver, however, must have been continued after the time of the Persian governor. No fewer than eight specimens of this description are in the cabinets of the British Museum. One, formerly Mr. R. P. Knight's, bears the name of Pythagoras, a king of Persia, introduced by Mr. Knight conjectured. Others, which have the figure of the archer crowned on one side, have a mounted horseman on the other. They are generally considered as ancient Persian coins, and are commonly, though without any assignable reason, except as bearing the impress of an archer, called Darics. In the silver Daric, a drawing of which is given by Landon (Numismatique du Voyage d'Anazarbas, p. 49), a kneeling archer appears on both sides of the obverse. These coins are parts of Scripture which were written after the Babylonian captivity (he refers to Chron., 29, 7, and Ezra, 8, 27). The gold Darics are mentioned by the name of A dar kok; and in the Talmudists by the name of Darkonoth (Buxtorf, Lex. Rabbin, p. 577), both from the Greek Αδαρκος. (Prideaux's Conexions, vol. 1, p. 185, ed. 1745.)

Darius, I suppose, Hystaspis (or son of Hystaspes), a son of Persia, belonging to the royal line of the Achemenides, and whose father Hystaspes had been governor of the province of Persia. Seven noblemen of the highest rank, in the number of whom was Darius, conspired to deethone the Magian Smerdis, who had usurped the crown after the death of Cambyses, and, having accomplished their object, resolved that one of their number should reign in his stead. According to Herodotus (3, 84), they deposed him and came to meet at early dawn in the suburbs of the capital, and that he of their number whose horse should first neigh at the rising of the sun, should possess the kingdom. If we believe the historian, who gives two accounts of the matter, Darius obtained the crown through an artful contrivance on the part of his groom. It is more probable, however, that, in consequence of his relationship to the royal line, his election to the throne was the unanimous act of the conspirators. It is easy, indeed, that they reserved for themselves privileges which tended at least to make them independent of the monarch, and even to keep him dependent upon them. One of their number is even said to have formally stipulated for absolute exemption from the royal authority, as the condition on which he withdrew his claim to the crown: and the rest acquired the right of access to the king's person at all seasons, without asking his leave, and bound him to select his wives exclusively from their families. How far the power of Darius, though nominally despotic, was really limited by these privileges of his grandees, may be seen from the occurrence which took place in the early part of his reign, in the case of Intaphernes, who had been one of the partners in the conspiracy. He revived himself, it is true, for an outrage committed by this individual, by putting him on his horse and beating him to death. But, before he ventured to take this step, he thought it necessary to sound the rest of the six, and to ascertain whether they would make common cause with the offender. He was probably glad to remove men so formidable to distant governments; and it may easily be conceived, that, if their power was so great at court, it was still less restrained in the provinces that were subjected to their authority. Nevertheless, Darius was the greatest and most powerful king that ever filled the throne of Persia, and even the disasters he experienced but strengthened and the remembrance of his wisdom and his prosperity. Cyrus and Cambyses had conquered nations: Darius was the true founder of the Persian state. The dominions of his predecessors were a mass of countries only united by their submission to the will of a common ruler, which expressed itself by arbitrary and irregular exactions: Darius first organized them into an empire, where every member felt its place and knew its functions. His realm stretched from the Egean to the Indus, from the steppes of Scythia to the Cataracts of the Nile. He divided this vast tract into twenty satrapies or provinces, and appointed the tribute which each was to pay to the royal treasury, and the proportion in which they were to supply provisions for the army and for the king's household. A high road on which distances were regularly marked, and spacious buildings placed to receive all who travelled in the king's name, connected the western coast with the seat of government; and along this road, couriers trained to extraordinary speed transmitted the king's messages.—Compared with the rude government of his predecessors, the institutions of Darius were wise and vigorous; they were considered as foundations laid for a structure that was never raised, they were weak and barbarous. The defects of the Persian system, however, belong to another head. (Vid. Persia.)—Darius, in the very beginning of his reign, meditated an expedition against the Scythians, in retaliation, most probably, for the desolating inroads of that barbarous but warlike race, and to check their incursions for the time being. This expedition is connected to the display of power and resources of the Persian empire. His march, however, was delayed by a rebellion which broke out at Babylon. The ancient capital of Assyria had been secretly preparing for revolt during the troubles that followed the fall of the Magian, and for nearly two years it defied the power of Darius. At length the treachery of Zopyrus, a noble Persian, who sacrificed his person and his power to the interest of his master, is said to have opened its gates to him. When he was freed from this care he set out for the Scythian war. The whole military force of the empire was put in motion, and the numbers of the army are rated at seven or eight hundred thousand men. This expedition of Darius into Scythia has given rise to considerable discussion. The first point involved is to ascertain how far the Persian monarch penetrated into the country. According to Herodotus (4, 83), he crossed the Therme, and then passed the Thracian river, the Danube on a bridge of boats, and then pursued a Scythian division as far as the Tanais. Having crossed this river, he traversed the territories of the Sauromatae as far as the Budini, whose city he burned. Beyond the Budini he entered upon a vast desert, and reached the river Dara, where he remained some considerable time, erecting forts upon its banks. Finding that the Scythians had disappeared, he left these works only as a bowing, turned his course to the westward, and, advancing by rapid marches, entered Scythia, where he fell in with two of the divisions of the enemy. Pursuing these, he traversed the territories of the Melancheni, Androphagi, and Neuri, without being able to bring them to an engagement. Provisions failing, he was eventually compelled to re-cross the Danube (vid. Histiaeus), glad to have saved a small portion of his once numerous army. According to Remmel (Geography of Herodotus, vol. 1, p. 136), the Persian monarch, in marching against the Scythians, crossed the Danube between Ismail and the junction of that river with the Pruth, and penetrated as far as Saratan on the Wolga. (Compare Manner, Geogr., vol. 3, p. 13, seqq.) It is very doubtful, however, whether Darius proceeded as far as this, especially when we take into consideration the time consumed by a Persian army in making an expedition, the difficulties of the army in crossing large and rapid rivers, and the difficulty of supplying so numerous a force with food and forage, especially when wandering in the track of the Scythians at a distance from the coast. According to other accounts (Strabo, 365), Darius only came as far as the sandy tract between the Danube and
the Tyras, in the present Bessarabia, where, in after days, Antigonus was taken prisoner by the Scythians, with his whole army. (Uberti, Geogr., vol. 1, p. 59.)

To wipe away the disgrace of this unfortunate enterprise, we find the Persian monarch shortly after undertaking an expedition against India. In this he was more successful, and conquered a part of the Pendjab; but, however, the whole country, as some modern writers erroneously represent. Some time after this, Miletus having revolted, and Aristagoras, its ruler, having solicited aid from the Athenians for the purpose of enabling it to maintain its independence, they sent twenty ships, to which the Eretrians added five more, in order to the four thousand men and one thousand reeds of the Milesians. Aristagoras, upon this successor's arriving, resolved to make an expedition against Sardis, the residence of the Persian satrap. Accordingly, landing at Ephesus, the confederates marched inland, took Sardis, and drove the governor into the citadel. Most of the houses in Sardis were made of reeds, and even those which were built of brick were roofed with reeds. One of these was set on fire by a soldier, and immediately the flames spread from house to house, and in a short time consumed the whole city. The light of the flagration showing to the Greeks the great numbers of their opponents, who were beginning to rally, being constrained by necessity to defend themselves, as their retreat was cut off by the river Pactolus, the former retired through fear, and regained their ships. Upon the receipt of this intelligence, Darius, having called for a bow, put an arrow into it, and shot it into the air, with these words: "Grant, oh Jupiter, that I may be able to revenge myself upon the Athenians." After he had thus spoken, he commanded one of his attendants thrice every dinner time was set before him, to exclaim, "Master! remember the Athenians." Mardonius, the king's son-in-law, was intrusted with the care of the war. After crossing the Hallespont, he marched down through Thrace, but, in endeavouring to double Mount Athos, he lost 300 vessels, and, it is said, more than 20,000 men. After this he was attacked in the night by the Brygi, who killed many of his men, and wounded Mardonius himself. He succeeded, however, in defeating and reducing them under his power, but his army was so weakened by these circumstances that he was compelled to return ingloriously to Asia. Darius, only animated by this loss, sent a more considerable force, under the command of Datis and Artaphernes, with orders to sack the cities of Athens and Eretria, and to send to him all the survivors in fetters, with the pieces of the isle of Naxos and the city of Eretria in Euboea, but were defeated with great slaughter by the Athenians and Plateans under the celebrated Miltiades at Marathon. Their fleet was also completely unsuccessful in an attempt to surprise Athens after the battle. (Vid. Miltiades and Marathon.) The anger of Darius was doubly inflamed against Athens by the event of Marathon; and he resolved that the insolent people, who had inhabited in fetters, with the heads of their messengers, and driven his generals to a shameful flight, should feel the whole weight of his arm. The preparations he now set on foot were on a vast scale, and demanded a longer time. For three years all Asia was kept in a continual stir; in the fourth, however, Darius was distracted by other causes; by a quarrel between his two sons respecting the succession to the throne, and by an insurrection in Egypt. In the following year, he invaded Egypt and Attica, he died, and Xerxes mounted the throne, B.C. 485. Darius reigned thirty-six years. His memory was always held in veneration by the Persians and the other nations comprehended under his sway, whom he governed with much wisdom and moderation.—As regards the import of the name Darius in Persian, Herodotus (6, 98) informs us that it was equivalent to ἐπέχω, "one who restrains," but he is at variance with Heraycius, who makes it the same as φυσσαῖος, " prudent." Grootehof makes Darius to be a compound word, the first part of which is an abbreviation of Ἰρανος ("Ireland") and the latter portion comes from kahah ("king"), and thinks that the name may have been pronounced in Persian Daryavesh, or Daryeezh, whence, by an easy change, we have Daryavash, which reminds us of the Aapeioiase of Ctesias (Peræ., § 48). Herodotus appears to have merely translated the latter part of the name Darius, by ἐπέχω, imitating, after the Greek fashion, the sound of the Persian word. (Grootehof, in Heerw. Ideen, vol. 1, pt. 5, p. 347.) Darius was the last of the Persian conquerors to have a personal expedition to the Parthians. Mardonius, after the defeat of the Greeks, returned to Persepolis, and there received news of the death of Darius in Thrace, and of his son-in-law, Osthames, one of the sons of Darius Ochus. His true name was Codomannus, and he had, before coming to the throne, acquired some reputation for personal courage, chiefly through an exploit which he had performed in one of the expeditions against the Cadusians, when he accepted a challenge from one of their stoutest warriors, and slew him in single combat. The eunuch Bagoas raised him to the throne, not so much, however, on the latter account, as because he had previously been friends, and because, perhaps, there was no other prince of the blood on whose gratitude he could safely rely. (Vid. Bagoas.) Codomannus, upon his accession, which took place about the time when Philip of Macedon died, assumed the name of Darius. He soon discovered that Bagoas, who may have intended at length to mount the throne himself, designed that he should share the fate of his last two predecessors. A cup of poison had been prepared for him. But, having detected the plot, he called Bagoas into his presence, and compelled him to drink the deadly draught.—The reign of Darius Codomannus was early disturbed by the invasion of Alexander. The Persian monarch, however, did not take the command of his forces until after the battle of the Granicus had been fought, and Alexander had advanced as far as Cicia. He then proceeded to meet the invader, in all the pomp of royalty, but, with want on all sides, and with a large army against such an antagonist. Resolving to hazard an encounter, contrary to the advice of his Greek allies, Darius engaged in the battle of Issus, but was compelled to flee from the field with so much precipitation as to leave behind him his bow, shield, and royal mantle. His camp was plundered, and his mother, wife, and children fell into the hands of the conqueror. In vain, after this, did Darius supplicate for an accommodation with Alexander, but the latter proceeded to sack Cius, and then advanced by forced marches in pursuit of him, and learned eventually that the monarch was a prisoner in the hands of Bessus, one of his own satraps. (Vid. Bessus.) A still more active pursuit now commenced, and the unhappy king refusing to proceed any farther, was left mortally wounded in a chariot, while Bessus and his accomplices took to flight, accompanied by
DAT

DEC

600 horse. Darius expired before Alexander saw him. The conqueror then took over the corpse.—Alexander ordered his body to be buried in the sepulchre of his ancestors with royal magnificence, took charge of the education of his children, and married his daughter. (Plut., Vit. Alex.—Arrian, Exp. Al.—Thirwall's History of Greece, vol. 6, p. 337, seqq.)—IV. Eldest son of Artaxerxes Meneon, put to death for conspiring against his father. (Plut., Vit. Artax.).

Dascylus, a city of Bithynia, in the district Olympos, placed by D'Anville as a lake at the mouth of the small river Horissus; which runs, according to him, into the Propontis. Mannert, however, makes it to have been situated to the west of the mouth of the river Gebes or Gelbes, and gives the Horissus as flowing to the west towards the Rhynacuss. (Geogr., 6, pt. 3, p. 553.) This city is named by Strabo and Tolemy Dascylus, as it is here given, but by Mela and Pliny, Dascylus. (Strabo, 576.—Pltn., 5, 39.—Mela, 1, 19.) During the continuance of the Persian empire, it was the residence of the satrap of Myssia and Phrygia Minor; hence, immediately after the battle of the Granicus, Alexander despatched Parmenio to take possession of it. (Arrian, Exp. Al., 1, 18.) The modern name, according to D'Anville, is Daskilo.

Datames, a satrap of Cappadocia, in the reign of Artaxerxes Meneon. He was a man of extraordinary ability, who had been trained to the sword, and might have proved the firmest bulwark of his throne. But the calumnies of some envious courtiers had excited the suspicions of Artaxerxes against him, and Datames saw himself obliged to revolt, to escape disgrace and ruin. He long maintained his independence, but was at length entrapped and slain by Mithradates, a son of Ariobazanes, satrap of Phrygia. This event took place after the death of Artaxerxes, and perhaps Datames had then retired to the throne. Nepos has written the life of Datames. (Nep., Vit. Dat.—Compare Polyben., 7, 29, 1.)

Datés, a general of Darius Hystaspis, sent, in conjunction with Artaphernes, to punish Eretria and Athens. Datis was a Mede, and Artaphernes son of the satrap of Lydia, and nephew of Darius. He was hence superior in rank, but inferior probably to Datis both in age and military experience. The latter, therefore, was led to believe him to be the real leader of the expedition. The whole armament consisted of 600 ships, according to Herodotus; this, on the footing which he fixes elsewhere, of 200 men to each trireme, would give 120,000 men as the strength of the Persian land force transported in the fleet. After accomplishing one object of the expedition in the capture of Eretria, Datis and Artaphernes then invaded Attica, but were defeated in the memorable battle of Marathon. According to Ctesias (Pers., c. 18), Datis fell on the field of battle; but Herodotus (6, 119) makes him to have returned to Asia. Larcher sides with the latter (Hist. d'Herod., vol. 9, p. 272), and Bähr with the former (ad Ctes., p. 145). This commander, in the exultation which he felt on occasion of his first success in reducing Naxos (vid. Darius), exclaimed, ó ἀρετῆς καὶ χάρις τῶν θεῶν καὶ χάριμα σε, Φωκίους! The words χάριμα σε for χάρις τῶν θεῶν, for the Greeks always said χάρις. These kinds of expressions are afterwards called Datism. (Compare Aristoph., Pac., v. 290, and the remarks of the scholar on v. 288.)

Dátos, a town of Europe, which, after having belonged to Thrace, was transferred to Macedonia when the empire was extended on that side. It was situate not far from the coast, to the northeast of Amphipolis, and near the southern extremity of the range of Mount Pangeus. It stood on a craggy hill, having a forest to the north, and to the south a lake or marsh at a small distance from the sea. Proserpina is said to have been gathering flowers here when she was carried away by Pluto, whereas the common account places the scene of the fable at Euboea in Sicily. This place was proverbially rich, on account of the mines of gold in its territory. Its territory also was highly fertile, and it possessed excellent docks for the construction of ships; hence arose the proverb, Δάτος ἄγων, i. e., an abundance of good things. (Strabo, p. 331.—Compare Harpocrat., s. v. Δατος.—Zenob., Prov. Grac. Cent., 3, 71.)

Daulis, a city of Phocis, south of the Cepheisus, and about seven stadia from Panopeus. (Pausan., 10, 4.) It was a city of great antiquity, and celebrated in mythology as the scene of the tragic story of Philomela and Progne. Thucydides (2, 29) affirms, that Teres, who had married Progne, the daughter of Pandion, sovereign of Athens, was chief of Daulis, then occupied, as well as the rest of Phocis, by a body of Thracians; in support of his statement, he observes, that the poets frequently alluded to Philomela under the name of the "Daulian bird." Strabo (423) asserts, that the word "Daulos," which signifies a thick forest, had been applied to this district from its woody character. Daulis, having been destroyed by the Persians, was no doubt afterward restored, as we find it besieged and taken, during the Macedonian war, by T. Flaminius, the consul. Livy represents it as situate on a lofty hill difficult to be scaled (32, 18). Daulis was the more ancient name; Dalius, Dalius, Dalius, and Daulum. (Polyb., 4, 25.) Paussanias reports, that the Daulians surpassed in strength and stature all the other Phocians (10, 4). The site of this ancient city retains the name of Daulia. (Compare Dodwell, Tour, vol. 1, p. 204. —Gell's Itinerary, p. 172 and 203.—Cramer's Anc. Greece, vol. 2, p. 183.)

Daunia, a country of Italy, forming part of Apulia, and situated on the coast to the northwest of Puteoli. It seems to have been one of the earliest Italian tribes with which the Greeks became acquainted, from the circumstance of their having formed colonies, which they established at a remote period on the western shores of the Adriatic. This people, according to the most received tradition, obtained their appellation from Daunus, the father-in-law of Diomede, which latter is stated, on his return from Troy, to have been compelled, from domestic calamities, to abandon his native kingdom, and he founded another kingdom in the plains watered by the Aufidus. This tradition, as far as it relates to Diomede, may afford matter for discussion, but it proves, at least, the great antiquity of the Daunians as an indigenous people of Italy. Other accounts, perhaps still more ancient, asserted that Daunus was an Illyrian chief, who, driven from his country by an adverse faction, formed a settlement in this part of Italy. (Pestus, s. v. Daunia.—Cramer's Ancient Italy, vol. 3, p. 260.)

Daunus, according to one account, an Illyrian chief, who, on being driven from his native country by an adverse faction, formed a settlement in that part of Italy which was called Daunia after his name. (Pestus, s. v. Daunia.)

Poetic legends, however, make him to have been of Italian origin, and a son of Pilumnus, king of Apulia, by Danae, who had fled hither, as was fabled, from Greece. Virgil makes him of the house of Pilumnus the son of Pilumnus, king of Pilos. (En., 10, 76.)

Decapolis, a country of Palestine, lying to the east and southeast of the sea of Tiberias. It seems to have belonged originally to the possessions of the kingdom of Israel, but was afterward reckoned as a part of Syria. Pliny (15, 2) and Tolemy both speak of it as forming a part of the latter country. The term decapolis is derived from the circumstance of ten cities (τένες πόλεις) contained in it having formed a confederation, in order to oppose the Assimonian princes, by whom the Jewish nation was governed until the time of Herod. After his death they passed into the hands of the Romans. 

Geo

417
DECEMVIRI. (Josephus, Ant., 17, 12.—Id., Bell. Jud., 2, 4.) The inhabitants were for the most part of Grecian origin. These ten cities, according to Ptolemy, were Scythopolis, Hippo, Gadara, Dion, Felix, Gerassa, Philadelphia, Canatha, Capitolias, and Gadara. Pidny, instead of rising in the Danube valley, as it was supposed, rests his account agrees with that of Ptolemy, who seems more worthy of reliance in this instance than the Roman writer. (Plin., 6, 18.)

Decretales, a warlike and enterprising monarch of the Dacieans, who prosecuted a successful war against Domitian, and drove him to a disgraceful peace. He was unable, however, to cope with Trajan, and destroyed himself when all was lost. His head was sent by the Emperor to Rome, and the remains were afterwards given by the Romans, on the information of one of his confidants, in the bed of the river Sagentia (now the Istrig), and in various secret caverns. (Dio Cass., 67, 6.—Id., 68, 6, seqq.) Lazzius, cited by Fabrecci, says, that some Wallachian fishermen, in the middle of the sixteenth century, found a part of these treasures, which had escaped the search of Trajan. (Fabr., de Col. Trag., c. 8.)

Decelles, a borough and fortress of Attica, about 135 miles from Athens, and of the same distance from the Boeotian frontier. This town was always considered of great importance, from its situation on the road to Euba, whence the Athenians derived most of their supplies; when, therefore, by the advice of Alcibiades, it was seized and garrisoned by a Lacedemonian force, they became exposed to gross loss and inconvenience. (Thucydi., 6, 91.—Id., 7, 19.—Strabo, 396.) Thucydides reports, that Decelles was visible from Athens; and Xenophon observed, the sea and Piraeus could be seen from it. (Hist. Gr., 1, 1, 25.) Herodotus states, that the lands of the Decelleans were always spared by the Peloponnesian army in their invasions of Attica, because they had pointed out to the Tyndarids the place were Helen was secreted by Theseus, when they came to Attica in search of her. (Herodot., 9, 73.—Alex. ap. Athen., 2, 76.) Sir W. Gell describes Decelles as situate on a round detached hill, connected by a sort of isthmus with Mount Parnes. From the top is an extensive view of the plains of both Athens and Eleusis. The fortress is at the mouth of a pass through Parnes to Oropus. The nearest place is Varibobi. (Itin., p. 106.) Mr. Hawkins gives the modern name of the spot on which the ruins of Decelles stand as Χυπάλκεια. (Walpole’s Collection, vol. 1, p. 398, in notis.—Cramer’s Ancient Greece, vol. 2, p. 403.)

Decemviri. I. Ten commissioners appointed to frame a code of laws for the Roman state.—The history of this affair is as follows: The intestine feuds between the patricians and plebeians were continuing with unabated animosity. Occasionally one of the consuls favoured the plebeians, and proposed some mitigation of the hardships under which they were labouring, or some increase of their privileges, but generally with little success. The Agrarian law, brought forward by Spurius Cassius, continued to be the main demand of the commons and their supporters. The law was, on every occasion, either directly or indirectly prevented. At last the commons became convinced, that they need hope for no complete redress of grievances, until they should have previously secured the establishment of some constitutional principle, from which equal justice would, of necessity and from its very nature, emanate. Accordingly, Caio Terentulus Haria, and others, determined to procure a complete reform of the existing state of things. It was proposed, that ten commissioners should be chosen, five by the patricians and five by the commons, to draw up a constitution, which should define all points of constitutional, civil, and criminal law; and should thus determine, on just and fixed principles, all the political, social, and civil relations of all orders of the Roman people. Af-
by the gradual encroachments of the commons, and was only frustrated by the selfish and inordinate ambition of the leading agents. The people had been clamorous for a code of laws, a demand which the patricians, in whom the whole judiciary power was vested, and to whom the knowledge of the law was confined, had always very strenuously opposed. After violent alternations between the two orders, the patricians on a sudden yielded to the popular wish, and became apparently as desirous of a code of laws as the people themselves were: when, however, it came to the choice of commissioners, who should be sent abroad for the purpose of inspecting foreign codes, the nobility insisted that all three deputys should be patrician rank. They gained their point, and three of their own order were appointed. That these deputys actually went to Greece is a point far from being well established; indeed, the contrary would seem much nearer the truth. We have, it is true, the authority of Florus, Orosius, and Aurelius Victor, in favour of the Roman laws having been compiled from the code of Solon; but, on the other hand, Diodorus Siculus (12, 23), who makes mention of the Decemviri, speaks of the old laws of the Romans having sent to Athens for that purpose; and in none of the works of Cicero is any account given of this deputation. It must not be denied, however, that Dio Cassius (44, 26) makes Cicero remark, a little after the death of Caesar, that their forefathers had not disdained to borrow some laws from Athens; and Cicero himself, in his treatise De Legibus (2, 28), speaking of a funeral law of the twelve tables, states that it was nearly all borrowed from one of the laws of Solon. In opposition to this, however, it may be urged, that a comparison of the fragments we possess of the decemviral laws with the code of Solon, shows so striking a discrepancy in general, as to lead at once to the belief that the coincidences mentioned by Cicero are to be explained on other and different grounds. Why, it may be asked, if the Roman code were borrowed from the Greek, did it breathe so little of the spirit of Grecian legislation, and contain so many things peculiar to the Romans and foreign to the Greeks? How came it that Hermodorus of Ephesus, who is reported to have interpreted and explained the Attic laws to the Roman commissioners, used many Latin terms, such as auctoria, hiripex, asidurnu proctorianus, and many others, for which there were no equivalent expressions among the Greeks!—But the authority of Cicero himself is confounded on this point. He himself does not to rank the laws of the twelve tables far above those of Greece. “It is easy,” he observes, “to perceive how much the wisdom and prudence of our forefathers surpassed that of other nations, if you compare our laws with those of Lycurgus, Draco, and Solon. It is incredible how ill digested and almost ridiculous every system of civil law is excepting our own. That I reflect every day, when in my discourses I prefer the wisdom of our ancients to that of the heathens, and add that the particular of the Greeks.” (Cic., de Orat., 1, 44.) Is this the language of a man who believed that the Decemviri had been indebted to the legislators of Greece for the code which they promulgated?—The truth appears to be, that whatever admixture of Grecian laws there was in the Roman code, was derived from Grecian customs and usages prevalent at the time both in the Greek colonies and in the city itself. To these Grecian customs were added others, of a more particular to the Romans. These last were, in fact, the old Leges Regiae, which, as the ancient writers inform us, were observed, after the expulsion of the kings, not as written law, but as customs. The patricians might well be anxious to give them the sanction of written laws, as it is highly probable that, being of regal institution, they breathed more or less of an aristocratical spirit.

Now the concurrence of the nobility in the views of the people, as regarded a code of laws, appears to have been all a preconcerted plan. They wished to destroy the tribunian power, and bring in laws which would tend to strengthen their own hands. The short time in which the Decemviri were permitted to make any impression on the minds of the people, before the'</p>
the Danube, in the vicinity of Mons Abnoba, which paid the tenth part of their value to the Romans. (Tacit., G. 29.) Much interesting information relative to these lands will be found in the work of Leichtent, entitled "Schwenen unter den Römern," Fribourg, 1823.

Deianira, a daughter of Eaneus, king of Eetolia. Her beauty procured many admirers, and her father promised to give her in marriage to him only who proved superior in prowess to all his competitors. Her- cules obtained her hand, after a contest with the god of the Achelous. (Vid. Acheleis.) On his way to Tra- chis, after his union with the daughter of Eeanus, Hercules came in company with Deianira to the river Euenus, where Nessus, the Centaur, had taken his abode, and carried over travellers, saying that he had re- ceived this office from the gods as a reward for his uprightness. Hercules went across through the water himself, having agreed on the price for the conveyance of Deianira. Nessus attempted the honour of his fair freight. She resisted, and Hercules, hearing her cries, shot Nessus to the heart as he came on shore. The dying Centaur thought on revenge: he called Deianira to him, and told her, if she wished to possess a philtre, or any other thing that would make her love him, to keep carefully the blood which flowed from his wound: an advice with which she incantiously complied. When Hercules, subsequently, had erected an altar to Jupiter at the promontory of Ceneum in Euboea, and, wishing to offer a sacrifice, had sent for a splendid robe to wear, Deianira, having heard from the messenger of a female captive named Iola, whom Hercules had taken, and fearing the effect of her charms on the heart of her husband, resolved to try the efficacy of the philtre of Nessus, and tinged with it the tunic which was sent. Heracles, suspecting nothing, put on the fatal garment, and prepared to sacrifice. At first he felt no effect from it; but, when it became warm, the venom of the hydra, which had been communicated by his arrow to the blood of the Centaur, began to consume his flesh, and eventually compelled him, in order to put an end to his sufferings, to ascend the funeral pile at Etea. (Vid. Hercules.)—Another leg- end relates that he had to be the offspring of Bacchus and Althaia, queen of Eeanus. Apollodorus speaks also of her skill in driving the chariot, and her acquaintance generally with martial exercises, a state- ment which he appears to have borrowed from some old poet. (Apollod., 1, 8, 11—Heyne, ad loc.—Apollod., 2, 7, 5. —Id., 2, 7, 7.—Orph. Met., 9, 9. —Id. ib., 9, 137, 7.—Müller, in his explanation of the myth of Hercules, makes the marriage of that hero with Deia- nira a figurative allusion to the league between the Dorian and Ætolians for the invasion of the Pe- loponnesus. (Doriains, vol. 1, p. 70, Eng. trans.) Creuzer, on the other hand, gives a mystic interpre- tation to the legend. According to him, Hercules represents the power of the sun in drying up and fertilizing the wet places. Hence Æneas (Oivets, orivoc), the vine-man (or cultivator of the vine), gives his offspring in marriage to Hercules (or, in other words, gives the vine to the protecting care of that power which imparts the principle of production), and Her- cules rescues her from the Centaur, the type, according to Creuzer and others, of the water or morasses. (Sy- bobol., vol. 2, p. 251.)

Deidâmia, a daughter of Lycomedes, king of Scy- ron. She bore a son called Pyrrhus, or Neoptolemus, to Achilles, who was disgusted at her father's court in women's clothes, under the name of Pyrrha. (Apollod., 13, 7. —Propert., 2, 9, 16. —Orph. A. A., 1, 685, seqq.)

Drôdes, a Median, who, when his countrymen had shaken off the Assyrian yoke, succeeded in attaining to the sovereign power. His mode of accomplishing that object was as follows: Having, by his probity and

strict exercise of justice, obtained the office of judge in his own district, he made himself so celebrated by the discharge of his official duties that the inhabitants of other districts also came to him for redress. Pret- ending at last that his private affairs were suffering, in consequence of the time which he devoted to the administration of justice, he established himself in a place where he used to sit to determine differences. Lawlessness and iniquity thereupon increased, until an assembly of the Medes being summoned, the partisans of Deiodes recommended him for king, and he was ac- cordingly elected. He is said to have founded the city of Ecbatana, and to have reigned 43 years, being succeeded on his death by his son Phraorct. (Herod., 1, 96, seqq.)

Deiphobus was first distinguished as tetrarch of Galatia, and, on account of the eminent services which he performed in that station, and of the figure which he made in the Mithradatic war, was afterward ap- pointed to the throne of Armenia Minor by Pompey, which appointment was confirmed by the senate. In the civil wars he sided with Pompey, and on that ac- count was deprived of his Armenian possessions by Cæsar, but allowed to retain the title of king and the other favours conferred on him by that monarch. Northcote, who has been accused by his grandson, with whom he was at open variance, of having made an attempt on the life of Cæsar when the latter was in Asia. Cicero ably and successfully defended him be- fore Cæsar, in whose presence the cause was tried. After Cæsar's death, he recovered by bribery his for- feited territories. He intended also to join Brutus, but the general to whom he committed his troops went over to Antony, which saved him his kingdom. (Cic., De reg. civ., c. 46. 11, 12. —Id. ep. ad. Pl. 5, 17. —Id., de Har. Resp., 13. —Id., de Div., 2, 37, &c.)

Deiphobus, a sibyl of Cume, daughter of Glaucus. Virgin makes her the guide of Æneas to the lower world. (Liv. 6, 296, seqq.) Various names are given to her by the ancient writers, in relation to which, cons- ult Gallus (Disserationes de Sybilis, p. 145).

Deiphobus, a son of Prium and Hecuba, who married Helen after the death of Paris, and was betrayed by her to Menelaus, and was therefore murdered. (Virg., Aen., 6, 495.) According to Virgin's account, she in- troduced Menelaus secretly into the bedchamber of Deiphobus, who was asleep at the time, and, on awak- ing, was unable to defend himself, his faithless con- sort having removed his trusty sword from beneath his head, and all arms from his palace. He was cruelly mutilated before being put to death. (Virg., l. c.) Homer makes Deiphobus to have particularly distin- guished himself during the Trojan war, in two encoun- ters with Meriones and Ascalaphus. (II., 13, 156, et 517, seqq.)

Delia, I. a festival celebrated every fifth year in the island of Delos, in honour of Apollo. It was institu- ted by the Athenians, after the solemn lustration of Delos, in the sixth year of the Peloponnesian war. (Vid. Delos.)—II. Another festival, celebrated annu- ally by a sacred voyage from Athens to Delos. It was said to have been instituted by Theseus, who, when going to Crete, made a vow to Apollo, that, if he and the rest of the youths and maidens should be saved, he would send every year a sacred delegation to the natal island of the god. The vow was fulfilled, and the custom was ever after observed by the Athenians. The persons sent on this annual voyage were called Deliastæ and Theori, and the ship which con- veyed them was called to have been the same with the one which was said to have carried Theseus to Crete. The begin- ning of the voyage was computed from the time that the priest of Apollo first adorned the stern of the ship, with garlands, according to Plato, and from that time they began to purify the city. During this period, up to the time of the vessel's return, it was held unlawful 420
DELOS.

to put any condemned person to death, which was the reason that Socrates was reprieved for thirty days after his condemnation, as we learn from Plato and Xenophon. With regard to the sacred vessel itself, which was called Oeucip, it was supposed, by the Athenians to the time of Demetrius Phalereus, that restoring always what was decayed, and changing the old rotten planks for others that were new and entire; so that it furnished philosophers with matter of dispute, whether, after so many repairs and alterations, it still remained the same identical ship; and it served as an instance to illustrate the opinion of those, who held that the body still remained the same numerical substance, notwithstanding the continual decay of elements and the acquisition of others, through several stages of life. (Plat., Phædon, § 2, seqq.—Schol., ad loc.—Plut., Vit. Thes., c. 33.— Xen., Mem., 4, 8, 2.—Callim., H. in Del., 278, &c.)—Athenians of Delos, from her having been born in the island of Delos.

Delion, a city of Boeotia, on the seacoast, north of the mouth of the Asopus. It was celebrated for its temple of Apollo, and also for the battle which took place in its vicinity between the Boeotians and Bœotians, and Boeotians were finally routed. It was in this engagement that Socrates, according to some accounts, saved the life of Xenophon, or, according to others, of Alcibiades. (Strabo, 403.—Diog. Laert., 2, 22.—Thucyd., 4, 96.) Some vestiges of this ancient town have been observed by modern travellers near the village of Dramiæ, on the Euripus. (Græf’s Itin., p. 134.—Dodwell’s Tour, vol. 2, p. 155.)

Delos, a surname of Apollo, because born on Delos. Delamainium, the ancient capital of Dalmatia. (Vid. Dalminium.)

Delos, an island of the Ægean, situate nearly in the centre of the Cyclades. This island was called also Asteria, Pelasgia, Chlamydia, Legia, Pyrrha, Scythis, Mydis, and Ortygia. (Plin., 4, 12.—Steph. Byz., s. v. Δήλος) It was named Ortygia from δηλος, a quæl, and Legia from λαμης, a hare, the island formerly abounding with both these creatures. On this account, according to Strabo, it was not allowed to have dogs at Delos, because they destroyed the quails and hares. (Strabo, 485.) The name Delos is commonly derived from δήλος, manifest, in allusion to the island having floated under the surface of the sea until made to appear and stand firm by order of Neptune. This was done for the purpose of receiving Latoa, who was on the eve of delivery, and who was found, after her stay, to have been borne by an ought not to receive her; as Delos at the time was floating beneath the waters, it was freed from the obligation. Once fixed in its place, it continued, according to popular belief, to remain so firm as even to be unmoved by the shocks of an earthquake. This, however, is contradicted by Thucydides and Herodotus, who report that a shock was felt there before the Peloponnesian war. (Thucyd., 1, 2, 9.—Herod., 1, 88, and Demost. Orat., 253, ad Diom. Perieg., 525, and Pindar, ap. Phil. Jud., 2, p. 511.) Pliny quotes, among others, Aristotle, who pretends that its name was given to Delos, because the island rose unexpectedly out of the sea, and appeared to view. Many other opinions have been advanced respecting its origin. According, however, to Olivier, it is at the present day everywhere schistose or granitical, exhibiting no traces of a volca-no; and nothing that can explain, by the laws of geology, the wonders which the Greeks have transmitted to us respecting it.—It appears from Thucydides, that as early as the days of Homer, whose hymn to Delos he quotes, this island was the great rendezvous of the Ionians, who met there to celebrate a national festival and public games.—Delos was celebrated as the natal island of Apollo and Diana, and the solemnities with which the festivals of these deities were observed there never failed to attract large numbers from the neighbouring islands and the continent. Among the seven wonders of the world was an altar at Delos, which was made of the horns of animals. Tradition reported that it was constructed by Apollo, with the horns of his own sacred deer, and presented by him to his sister Diana. Plutarch says he saw it, and he speaks of the wonderful interlacing of the horns of which it was made, no cement nor bond of any kind being employed to hold it together. (Plat., de Solert. An., p. 983.)

The Athenians were commanded by an oracle, in the time of Pisistratus, to purify Delos, which they did by causing the dead bodies to be taken up which had been buried there, and removed from all places within view of the temple. In the sixth year of the Peloponnesian war, they, by the advice of an oracle, purified it anew, by carrying all the dead bodies to the neighbouring island of Rhenea, where they were interred. After having done this, in order to prevent its being polluted for the time to come, they published an edict, that for the future no person should be suffered to die, nor any woman to be brought to bed, in the island, but that, when death or parturition approached, they should be carried over into Rhenea. In memory of this declaration, it is said, the Athenians instituted a solemn quinquennial festival. (Vid. Delia.—Thucyd., 3, 104.) A ship called Theoris (Oeucip) likewise sailed annually from the Athenian shores on a sacred voyage to this same island. (Vid. Delia II.)—When the Persian armament, under Datis and Artaphernes, was making its way through the Grecian islands, the inhabitants of Delos left their rich temple, with its treasures, and the whole of its tutelary deities, and fled to Tenos. The fame of the sanctuary, however, saved it from spoliation. The Persians had heard that Delos was the birthplace of two deities, who corresponded to those which held the foremost rank in their own religious system, the sun and moon. This comparison was probably suggested to them by some Greek who wished to save the temple. Hence, though separately neither of the divine twins inspired the barbarians, and with reverence their common shrine was not only spared, but, if we may credit the tradition which was current in the days of Herodotus, received the highest honours from Datis: he would not suffer his ships to touch the sacred shore, but kept them at the island of Rhenea. He also sent a herald to recall the Delians who had fled to Tenos; and offered sacrifice to the god, in which 300 talents of frankincense are said to have been consumed. (Herodot., 6, 97.) After the Persian war, the Athenians established a colony in the island of the Greeks, and ordered that all meetings relative to the confederacy should be held there. (Thucyd., 1, 96.) In the tenth year of the Peloponnesian war, not being satisfied with the purifications which the island had hitherto undergone, they removed its entire population to Ađramyttium, where they obtained a settlement from the Persian satrap Pharmaces. (Thucyd., 5, 13.) He also sent to Corinth and to the Ionians, who were afterwards treacherously murdered by order of Arsaces, an officer of Tissaphernes. (Thucyd., 8, 108.) Finally, however, the Athenians restored those that survived to their country after the battle of Amphipolis, as they considered that their ill success in the war proceeded from the anger of the god on account of their conduct towards this unfortunate people. (Thucyd., 5, 32.) Strabo says that Delos became the place of great importance after the destruction of Corinth, as the merchants who had frequented that city then withdrew to this island, which afforded great facilities for carrying on trade on account of the convenience of its port, its advantageous situation with respect to the coasts of Greece and Asia Minor, as well as from the great concourse of people who resorted thither at stated times. (Plin., 4, 12.—Livy., 38, 43.) The Romans especially favoured the interests of the Delians, though they had conceded
to the Athenians the sovereignty of the island and the administration of the temple. (Polyb., 30, 18.) But, on the occupation of Athens by the generals of Mithradates, they landed troops in Delos, and committed the greater part of the city to a flames. Some of the inhabitants refusing to espouse their cause. After this calamity it remained in an impoverished and deserted state. (Strabo, 456. —Appian, Bell. Mithr., c. 28. —Pausan., 3, 23. —Antip. Thees. Anal., vol. 2, p. 118.) The town of Delos was situate in a plain watered by the little river Inopus (Strabo, i. c. —Callim., Hymn. in Del., 256), and by a lake, called Trochoeides by Herodotus (2, 170), and Theognis (v. 170), which Thucydides also allude to (Hymn. in Del., 261. —Iph. Taur., 1997.) The island is now called Deo or Sthile, and is so covered with ruins and rubbish as to admit of little or no culture. (Wheeler, vol. i, p. 88. —Spon, vol. i, p. 176. —Tournefort, vol. i, p. 307. —Choseul Gouffer, Voyage Pittoresque, vol. i, p. 396, seq.)

Delphi, a small but important city of Phocis in Greece, situate on the southern side of Mount Parnassus, and built in the form of an amphitheatre. Justin (24, 6) says it had no walls, but was defended by its precipices. Strabo (418) gives it a circuit of sixteen stadia; and Pausanias (10, 5) calls it πολις, which seems to imply that it was walled like other cities. In earlier times it was, perhaps, like Olympia, defended by the sanctity of its oracle and the presence of its god. These being found not to afford sufficient protection against the enterprises of the profane, it was probably fortified, and became a regular city after the predatory incursions of the Phocians. The walls may, however, be coeval with the foundation of the city itself; their high antiquity is not disproved by the use of mortar in the construction. Some of the Egyptian pyramids are built in a similar manner. (Consult Hamilton's Egyptiana. —Dodwell's Tour, vol. i, p. 164.)—The more ancient name of Delphi was Pytho, from the serpent Python, as is commonly supposed, which was said to have slain by Apollo. (Apollod., Biblith., i, 4, 3.) Whereas the name Delphi itself was derived we are not informed. Some make the city to have received this name from Delphus, a son of Apollo. Others deduce the appellation from the Greek δελφός, "brethren," because Apollo and his brother Bacchus were both worshipped there, each having one of the summits of Parnassus sacred to him. The author of the Hymn to Apollo seems to purport on the word Delphi, in making Apollo transform himself into a dolphin (see vol. 2, 62. —Herodot., 1, 146. —Strabo, 5, 494.) Some supposed, that the name was intended to designate Delphi as the centre or navel of the earth. Faber makes it Τελ Ψηλι, "the oracle of the Sun" (Curtis, vol. i, p. 66), and Bryant would tempt us to resolve the Nymph who originally presided over the sacred precincts of Delphi, into Αιν ομφα, i. e., "fons oraculi." (Mythology, vol. i, p. 110 and 345.) Jones derives the title of the city from the Arno Tëlî, "to inquire." (Greek Lex., s. v. Têlî.) If, and on the etymological views, we might venture to adduce of our own, it would be, Βελώψ, or the old term οι (i. e., "the sun"), with the digamma prefixed in place of the aspirate. (Compare the Greek forms φιος, i. e., φλως, φλας, i. e., φλως-αρ, and the Latin Sol.) Delphi was the city of the Gymnopedists, with the term Βελ the Oriental Baal. —In speaking of this city, the poets commonly use the appellation of Pytho, but Herodotus and historians in general prefer that of Delphi, and are silent as to the other. A short sketch of the history of this most celebrated oracle and temple will not, perhaps, be unacceptable to the reader. Though not so ancient as Dodona, it is evident that the fame of the Delphic shrine had been established at a very early period, from the mention made of it by Homer, and the accounts supplied by Pausanias and Strabo. The Homeric hymn to Apollo in forms us (v. 391, seq.), that, when the Pythian god was established in his sanctuary at Delphi, he beheld the sea a merchant-ship from Crete; this he directs to Crissa, and appoints the foreinners the servants of his newly-established sanctuary, near which they settled. When this story, which we would not affirm to be historically true, is stripped of the language of poetry, it can only mean, that a Cretan colony founded the temple and oracle of Delphi. (Heeren, Ideen, vol. 3, p. 94.) Strabo reports, that it was at first constructed only by the inhabitants of Delphi, but became more widely spread, foreign princes and nations eagerly sought responses from the sacred tripod, and loaded the altar of the god with rich presents and costly offerings (420). Pausanias states that the most ancient temple of Apollo at Delphi was formed, according to some, out of branches of bay, and that these branches were cut from the tree that was at Tempe. The form of this temple resembled that of a cottage. After mentioning a second and a third temple, the one raised, as the Delphians said, by bees from wax and wings, and sent by Apollo to the Hyperboreans, and the other built of brass, he adds, that to this succeeded a fourth and more stately edifice of stone, erected by two architects named Trophonius and Agamedes. (Pausan., 10, 5.) Here were deposited the sumptuous presents of Gyges and Midas, Alyattes and Croesus (Herodot., 1, 14; 60, 51), as well as those of the Sybarites, Sparta, and Sicellia, each prince and nation having their separate chapel or treasury for the reception of these offerings, with an inscription attesting the name of the donor and the cause of the gift. (Strabo, 420.) This temple having been accidentally destroyed by fire in the first year of the fifty-eighth Olympiad, of 548 B.C. (Pausan., l. c.), the Amphiictions undertook to build another for the sum of three hundred talents, of which the Delphians were to pay one fourth. The remainder of the amount is said to have been obtained by contributions from the different cities and nations. Amasis, king of Egypt, furnished a thousand talents of alumina. The Alcmeonides, a wealthy Athenian family, undertook the contract, and agreed to construct the edifice of Porine stone, but afterward liberally substituted Parian marble for the front; a circumstance which is said to have added considerably to their influence at Delphi. (Herodot., 2, 186. —Id., 6, 62.) According to Strabo and others, it was dedicated to Apollo, and to the Corinthian shrines. The vast riches accumulated in this temple, led Xerxes, after having forced the pass of Thermopylae, to detach a portion of his army into Phocis, with a view of securing Delphi and its treasures, which, as Herodotus affirms, were better known to him than the contents of his own palace. The enterprise, however, failed, owing, as it was reported by the Delphians, to the manifest interposition of the deity, who terrified the Medes with the hub of the temple, and scattered the barbarians. (Herodot., 8, 37.) Many years subsequent to this event, the temple fell into the hands of the Phocians, headed by Philomelus, who scrubbed not to appropriate its riches to the payment of his troops in the war he was then waging against Thebes. The Phocians are said to have plundered the temple, during this contest, of gold and silver, to the enormous amount of 10,000 talents, or nearly 10,000 pounds. (Consult Pausan., 10, 2, Strabo, 421.) At a still later period, Delphi became exposed to a formidable attack from a large body of Gauls, headed by their king Brennus. These barbarians, having forced the defiles of Mount Eta, possessed themselves of the temple and ransacked its treasures. The booty which they obtained on this occasion is stated to have been immense; and this they must have suc-
Delphi.

ceded in removing to their own country, since we are told, that, on the capture of Tolossa, a city of Gaul, by the Roman general, Delphi, a priestess of the Delphian priestess was found them. (Strabo, 188. — Dio Cassius, Excerpt., p. 630.) Pausanias, however, relates, that the Gauls met with great disasters in their attempt on Delphi, and were totally discomfited through the miraculous intervention of the god (10, 23.—Compare Polybius, 1, 6, 5.—Id., 2, 20, 6.—Justin, 24, 6.) Sylia is also said to have robbed this temple, as well as those of Olympia and Epidaurus. (Cass., 640.—Deid. Sic, Excerpt., 406.) Strabo assures us, that in his time the temple was greatly impoverished, all the offerings of any value having been successively removed. The Emperor Nero carried off, according to Pausanias (10, 7), five hundred statues of bronze at one time. Constantine the Great, however, proved a more fatal enemy to Delphi than either Sylia or Nero. He removed the sacred tripod to adorn the hippodrome of his new city, where, together with the Apollo, the statues of the Helianian muse, and a celebrated statue of Pan, they were extant when Sozomen wrote his history. (Gibbon, Decline and Fall, c. 17.) Among these tripods was the famous one, which the Greeks, after the battle of Plataea, found in the camp of Mardonius. The Brazen Column which supported this tripod is still to be seen at Constantinople. (Clarke’s Travels—Greece, Egypt, &c., vol. 3, p. 75, seqq.) The tripod was placed at Delphi, which the inspired priestess was said to be the central point of the earth, this having been proved by Jupiter himself, who despatched two eagles from opposite quarters of the heavens, which there encountered each other. (Strabo, 419.—Pausan., 10, 16.—Plut., de Orac. Def., p. 409.) Strabo reports, that the sacred tripod was placed over the mouth of the cave, whence proceeded the exhalation, and which was of great depth. On the other side of the temple, he says, the inspiration, pronounced her oracles in extemporary prose or verse; if the former, it was immediately verified by the poet always employed for that purpose. The oracle itself is said to have been discovered by accident. Some goats having strayed to the mouth of the cavern, were suddenly seized with convulsions; those likewise by whom they were found in this situation having been affected in a similar manner, the circumstance produced such an effect on the priestess, that she was immediately inspired, and the oracle pronounced the seat of prophecy. (Pausan., 10, 5.—Plut., de Orac. Def., p. 433.—Plin., 2, 93.) The priestess could only be consulted on certain days. The season of inquiry was the spring, during the month Busius. (Plut., Quaest. Grac., p. 292.) Sacrifices and other ceremonies were to be performed by those who sought an answer from the oracle, before they could be admitted into the sanctuary. (Herodot., 7, 140.—Plut., de Orac. Def., p. 435, 437.—Id., de Pyth. Orac., p. 397.) The most remarkable of the Pythian responses are those which Herodotus records as having been delivered to the Athenians, before the invasion of Xerxes (7, 140), to Croesus (1, 46), to Lycurgus (1, 65), to Glaucus the Spartan (6, 86), and one relative to Ageulus, cited by Pausanias (3, 8). There was, however, it appears, no difficulty in bribing and otherwise influencing the Pythia herself, as history presents us with several instances of this in postures. Thus we are told, that the Alemoniades suggested on one occasion such answers as accorded with their political designs. (Herodot., 5, 62, 90.) Cleomenes, king of Sparta, also prevailed on the priestess to aver that his colleague Demaratus was illegitimate. On the discovery, however, of this machination, the Plataeans removed from her office. (Herodotus, 6, 86.) The same charge was brought against Platonax, another sovereign of Sparta. (Thucyde., 5, 16.—Compare Plut., Vit. Demosth., p. 854.—Id., Vit. Nic., p. 532.) Delphi derived farther celebrity from its being the place where the Amphipolitian council held its sessions, a privilege granted to the Delphian priests by the law of the Delphic truce. (Saint Croix, des Gouvern. Feder. Art., p. 19,) and also from the institution of the games which that ancient and illustrious body had established after the successful termination of the Cisrian war. (Vid. Pythia, 11, and compare Cliont’s Fasti Hellenici, Appendix, 1, p. 195.) For an account of the ruins of Delph., on part of the site of which stands the present village of Castri, consult Clarke’s Travels—Greece, Egypt, &c., vol. 7, p. 225.—Dodges Tour, vol. 1, p. 174, seqq.—And for some remarks on the fable of Apollo and Python, consult the latter article. No traces of the sacred aperture remain at the present day. Dr. Clarke, however, inclines to the opinion that it ought to be searched for in the very middle of the ancient city. He bases his remark on a passage of Steph. Byz. (p. 229, ed. Grono., Amat., 1679), and on the statement of Strabo, that the navel of the earth was in the midst of the temple of Apollo. (Clarke’s Travels, l. c.)

Delphicus, a surname of Apollo, from his sanctuary and worship at Delphi.

Delphus, a son of Apollo and Celeno, who, according to one account, was the founder of Delphi. (Pausan., 10, 6.)

Delta, a part of Egypt, which received that name from its resemblance to the form of the fourth letter of the Egyptian alphabet. (Plut., Vit. Cæsar, 420.—Saint Croix, des Gouvern. Feder. Art., p. 19, and also lac, the mouth of the Nile, where the river begins to branch off, and is generally supposed to have been formed, in part at least, if not altogether, by the deposits of the Nile. (Consult remarks under the article Nilus, and also Lyell’s Geology, vol. 1, p. 355.)

Demades, an Athenian, of obscure origin, the son of a mariner, and at first a mariner himself. He afterward, although without any liberal education, came forward as a publicor, and obtained great influence among his countrymen. Demades is described as a witty, acute, and fluent speaker, but an unprincipled and immoral man. Having been taken prisoner at Chaeronia, he is said, by a free and well-timed rebuke, to have checked the insolent joy displayed by Philip, but afterward to have allowed himself to be corrupted, and employed as a venal agent by the conqueror. The first part of this story is hardly credible, but the latter part, having been substantiated, Demades from this time was the tool of Macedon. He advocated the interests of Philip, flattered his successor Alexander, sided with Antipater, and, in a word, is described by Plutarch as the man who, of all the demagogues of the day, contributed most to the ruin of his country. (Vit. Phæc, init.) He was at last put to death by Cassander, having been proved, by means of an intercepted letter, to be in secret league with the enemies of the former, B. C. 318. Cicero and Quintilian state, that no orations of Demades were extant in their time. (Cic., Brut., 9.—Quint., 2, 17, et 12.) The old rhetorician, however, from whom Tzetzes drew his information on the subject, had read speeches of his. (Tzetze, Chit., 6, 36, seq.) We have, moreover, remaining at the present day a fragment of an oration by Demades, entitled τοῦ πεπνημένου ὄρατος, "An apology for his conduct during the tumult in Messene," which is said to be found in the collections of Aldus, Stephens, and Reiske. (Ruhenkem, Hist. Crit. Orat. Graec., in Opusc., vol. 1, p. 349, seq.—Hauptmann, de Demade Dissert.—Schöll, Hist. Lit. Gr., vol. 2, p. 265, seq.)

Demaratus, 1. the son and successor of Ariston on the throne of Sparta. B. C. 526. He was deposed, through the intrigues of Chramotes, his colleague, on the ground of his being illegitimate. After his deposition, he was chosen and held the office of magistrate; but, being insultingly derided on one occasion by Le-
otychides, who had been appointed king in his stead, he retired, first to the island of Zancusius, whither he was pursued by the Lacedaemonians, and afterward crossed over into Asia, to Darius, who received him honourably, and presented him with lands and cities. (Herod., 6, 65, 70.) He enabled Xerxes subsequently to obtain the nomination to the empire, in preference to his elder brother Artabazares, by suggesting to him an argument, the justice of which was acknowledged by Darius. (Herod., 7, 3.) We find him after this, though an exile from his country, yet sending the first intelligence to Sparta of the designs of Xerxes against Greece. (Herod., 7, 399.) He accompanied the monarch on his expedition, frankly praised to him the discipline of the Greeks, and especially that of the Spartans; and, before the battle of Thermopylae, explained to him some of the warlike customs of the last-mentioned people. (Herod., 7, 209.) We learn also, that he advised Xerxes to seize, with his fleet, on the island of Cythera, off the coast of Laconia, from which he might continually infest the shores of that country. The monarch did not adopt this suggestion, but still always regarded the exile Spartan as a friend, and treated him accordingly. The nature of the advice relative to Cythera makes it more than probable that Demaratus, in sending home information of the threatened expedition of Xerxes, meant in reality to taunt and alarm his countrymen. (Herod., 7, 234, seqq.)

II. A rich citizen of Corinth, of the family of the Bacchiads. When Cypselus had usurped the sovereign power of Corinth, Demaratus, with all his family, migrated to Italy, and settled at Tarquinii, 658 years before Christ. Commerce had not been deemed repugnant among the Corinthian nobility; and as a merchant, therefore, Demaratus had formed ties of friendship at this place. He brought great wealth with him. The sculptors Euclides and Eurgammons, and Cleophas the painter, were said to have accompanied him; and along with the fine arts of Greece, he taught (so the popular account said) alphabetic writing to the Etrurians. His son Lycono migrated afterward to Rome, and became monarch under the name of Tarquinii Priscus. (Plin., 35, 5. — Liv., 1, 34, seqq.) — III. A Corinthian, in the time of Philip and his son Alexander. He had connexions of hospitality with the royal family of Macedon, and, having paid a visit to Philip, succeeded in reconciling that monarch to his son. After Alexander had overthrown the Persian empire, Demaratus, though advanced in years, rising to the exalted rank of conqueror, and, when he beheld him, exclaimed, "What a pleasure have those Greeks missed, who did not see Alexander seated on the throne of Darius?" He died soon after, and was honoured with a magnificent funeral. (Plut., Vit. Alex., c. 37. — Id. ibid., c. 66. — Id., Vit. Aeg., c. 15.) — IV. A Corinthian exile at the court of Philip, king of Macedon. (Plut., Alex.)

DEMÉTRIÁ, a festival in honour of Ceres, called by the Corinthians "the festival of the Ceres," instituted for the votaries of the goddess to lash themselves with whips made with the bark of trees. The Athenians instituted for a short time a solemnity of the same name, in honour of Demetrius Poliorcítès.

DEMÉTRIAS, a city of Thessaly, on the Sinus Phaelisicus or Pagassius, at the mouth of the river Onches- tus. It owed its name and origin to Demetrius Poliorcités, about 290 B.C., and derived, as Strabo reports, the name of the first settlement on the most northern parts of the adjoining towns of Nélia, Pagassius, Ornæumius, Rhizus, Sepias, Olizon, Bébe, and Iolcos, all of which were finally included within its territory. (Strabo, 436. — Plut., Vit. Dem. ) It soon became one of the most flourishing towns in Thessaly, and, in a military point of view, was allowed to rank among the principal fortresses of Greece. It was, in fact, most advantageously placed for defending the approaches to the defile of Tempe, as well on the side of the plains as on that of the mountains. Its maritime situation also, both from its proximity to the island of Euboea, to Asia, the Peloponnesian Isthmus, and the opposite shores of Asia, rendered it a most important acquisition to the sovereigns of Macedonia. Hence Philip, the son of Demetrius, is said to have termed it one of the chains of Greece. (Polyb., 17, 11. — Liv., 32, 37. — Id., 28, 5. ) After the battle of Cynoscephalæ, it became the principal town of the Magnesian republic, and the seat of government. It fell under the Roman power after the battle of Pydna. Demetrius is generally thought to coincide with the modern Vóló; but this last occupies the site of the ancient Pagasæ. (Cramer's Anc. Greece, vol. 1, p. 434.)

DEMÉTRIÓS, I. a son of Antigonus and Stratonic, surnamed Poliorcités (Πολιορκητής), "besieger of cities," from his talents as an engineer, and his peculiar skill in conducting sieges, especially by the aid of machines and engines either invented or improved by himself. At the age of twenty-two he was sent by his father against Ptolemy, who had invaded Syria. He was defeated near Gaza; but he soon repaired his loss by a victory over one of the generals of the enemy. He afterward sailed with a fleet of 250 ships to Athens, and restored the Athenians to liberty, by freeing them from the power of Cassander and Ptolemy, and expelling the garrison which was stationed there under Demetrias Phalerus. The gratitude of the Athenians to their deliverer passed all bounds, or was only equaled by their fulsome and impious adulation of the details of which are to be found in the pages of Plutarch. (Vit. Demet., c. 10.) But Demetrius was soon summoned by his father to leave the flattery of orators and demagogues, in order to resume the combined duties of an admiral and an engineer in the reduction of Cyprus. After a slight engagement with Menelaurus, the brother of Ptolemy, he laid siege to Salamis, the ancient capital of that island. The occurrences of this siege occupy a prominent place in history, not so much on account of the determined resistance opposed to the assailants, and the great importance attached to its issue by the heads of the belligerent parties, as for a new species of warlike engine invented by Demetrius, and first employed by him against the city of Salamis. The instrument in question was called an Helepolis, or "Town-taker," and was an immense tower, consisting of nine stories, gradually diminishing as they rose in altitude, and armed all around with a multitude of armed men, who discharged all sorts of missiles against the ramparts of the enemy. Ptolemy, dreading the fall of Salamis, which would pave the way, as he easily foresaw, for the entire conquest of Cyprus, had already made formidable preparations for compelling Demetrius to raise the siege. A memorable seafight ensued, in which the ruler of Egypt was completely defeated, with the loss of nearly all his fleet, and thirty thousand men. This victory brought to Antigonus, then took place, but ended disgracefully; and Demetrius was sent to reduce the Rhodians, who persisted in remaining allies to Ptolemy. The operations of the son of Antigonus before Rhodes, and the resolute defence of the place by the inhabitants, present perhaps the most remarkable example of skill and heroism that is to be found in the annals of ancient warfare. The Helepolis employed on this occasion greatly exceeded in magnitude the apparatus which Antigonus had used against Salamis. Its towers were 150 feet high; it was supported on eight enormous wheels, and propelled by the labour of 3400 men. After a siege of a whole year, however, the enterprise was abandoned, a treaty was concluded with the Rhodians, and Demetrius, at the request of the Athenians, who were now again subjected to the Macedonian yoke, proceeded to rescue Greece from the power of Cassander. In this he was so successful—
DEMETRIUS.

ful that he ultimately spread the terror of his arms over the whole of that country. The object of Antigonsus and his son was now to effect the final subjugation of the Philippians and the Epirots, and the federacy of Seleucus, Ptolemy, Lysimachus, and Cassander was therefore renewed, with the view of crushing these ambitious schemes, and in the battle of Ipaus they succeeded in effecting their object. Antigonus fell in the conflict, and Demetrius, after a precipitate flight of 200 miles, regained his fleet with only a small remnant of his once powerful host. Sailing soon after to Athens, he received information from the fickle and envious inhabitants that they had resolved to admit no king within their city; upon which, finding that all Greece had now submitted to the influence of Cassander, he made a descent on the coast at Corinth for the mere purposes of plunder and revenge, and afterward committed similar ravages along the whole coast of Thrace. Fortune, however, soon smiled again. Seleucus, jealous of the power of Lysimachus, whose territories now extended to the Syrian borders, resolved to strengthen his own dominions by forming an alliance with the family of Demetrius, which was still possessed of considerable claims and interests. He therefore made proposals for, and obtained in marriage, the accomplished Stratonice, the daughter of his former rival. The power of Demetrius again became formidable, an alliance with Ptolemy, who gave him his daughter Ptolemais in marriage, having also added to its increase. Having compelled the Athenians to open the gates of the city, he sent a despatch to Agathocles, to repair, and having generously forgiven their previous frankness, he turned his attention to Macedonia, and having embraced an opportunity of interfering in the affairs of that country, which was afforded by dissensions between the two sons of Cassander, he cut off Alexander, one of the two princes, and made himself master of the throne. His restless ambition now projected new conquests in Europe. The son of Ptolemy, who had rejoiced against Pyrrhus when he drove him from Thessaly, and then marched to Thebes, which he took by assault. About the same time also he built the city of Demetrias on the Pelasgic gulf; and, in order to increase his naval power, formed a matrimonial union with the daughter of Agathocles, tyrant of Sicily. His fleet at length amounted to 500 galleys, many of them having fifteen or sixteen banks of oars; while his land forces exceeded considerably 100,000 men, of which more than 30,000 were cavalry. This formidable power excited the alarm of Lysimachus and Ptolemy; the latter advanced against Greece with his fleet, while the former, with Pyrrhus his ally, made a land attack on Macedon in two different points at once. Demetrius took the field with his usual alacrity, but when he approached the position of Pyrrhus, the greater part of his troops deserted him, and he was compelled to flee. Leaving Macedon a prey to Lysimachus and Pyrrhus, the active Demetrius passed over into Asia Minor with a body of his best troops, resolved to assail his adversary in the most vulnerable quarter. The enterprise was at first attended with the most brilliant success. In a short time, however, a check was imposed on his career by Agathocles, the son of Lysimachus, and Demetrius was compelled to apply for protection to his aged son-in-law. The latter yielded to his solicitation only so far as he was permitted to set himself to spend two months within his territory; and was subsequently induced by his courtiers to rid himself of so dangerous a guest, by sending him a prisoner to a strong fortress on the Syrian coast, about sixty miles south of Antioch. A sufficient revenue was allowed him for his support, and he was permitted to indulge in the chase and other manly exercises, always, however, under the eye of his keepers. At last, however, giving up all active pursuits, he closed his checkered life, at the end of three years, a victim to chagrin, sloth, and intemperance. His remains were delivered up to his son Antigonus, who interred them with great splendour in the city of Demetrias. The age of Demetrius at the time of his death was forty-four. His posterity enjoyed the throne of Macedon in continued succession down to Perses, when the Roman conquest took place. —Demetrius was remarkable for the possession of two qualities, which seem to be altogether inconsistent with each other, an excessive love of pleasure and an ardent passion for glory. His courage in conflicts, his profound acquaintance with the military art, and his skill, particularly in the construction of war-engines, constitute still too large a recommendation of posterity. His dissolute morals have been justly censured, but there were many excellent traits of character which went far towards counterbalancing his vices. He always showed himself a dutiful and affectionate son, a mild and generous conqueror, and a liberal patron of the arts. (Plut. Vit. Demettr.) II. Son of Antigonus Gonatas, and grandson of Demetrius Poliorcetes, succeeded his father, B.C. 243. He made war on the Aetolians and Achaeans, and was successful against both, especially the latter, whom he defeated, although under the command of Aratus. He had distinguished himself, before coming to the throne, by driving Alexander of Epirus out of Macedonia, and also stripping him of his own dominions. He reigned ten years, and was succeeded by his son, Philip III. (Justin, 26, 2.—Id. ib., 28, 3.) III. Son of Philip III., of Macedonia. He was a brother of Lysimachus, and commanded by the Romans, and was sent by his father as a hostage to Rome, where he also made many friends. He was subsequently married, and not long after paid a second visit to the capital of Italy, as an ambassador from Philip, on which occasion he obtained, by his modest and candid deportment, favourable terms for his parent, when the latter was compelled of to the Roman senate by the cities of Greece. Returning home, he loaded with marks of Roman respect, and honoured by the Macedonians themselves, who regarded him as the liberator of their country, he excited the jealousy of his own father, and the envy and hatred of his brother Perseus. The latter eventually accused him of aspiring to the crown, and of carrying on, for this purpose, a secret correspondence with the Romans. Philip, tending too credulously an ear to the charge, put his son Demetrius to death, and only discharged some of the insolence by which he had incurred the displeasure of Rome. (Liv., 33, 30.—Id., 39, 35, seqq.—Id., 40, 5.—Id., 40, 24.—Id., 40, 54, seqq.) IV. Surnamed Soter (Σωτήρ), or "the Preserver," was the son of Seleucus Philopator; and was sent by his father, at the age of twenty-three, as a hostage to Rome. He was living there in this condition when his father died of poison, B.C. 176. His uncle Antiochus Epiphanes thereupon usurped the throne, and was succeeded by his own son, the young Epiphanes, to whom the title of Soter was conferred. He was, however, the real discoverer of the Roman dominion in the East, having, in vain endeavoured to interest the senate in his behalf, secretly escaped from Rome, through the advice of Polybius the historian, and, finding a party in Syria ready to support his claims, defeated and put to death Epipator, and ascended the throne. He was subsequently acknowledged as king by the Romans. After this he freed the Babylonians from the tyranny of Timarchus and Perdiccas, and conquered the Philistines under the title of Soter. At a subsequent period he sent his generals Nicanor and Bacchides into Judaea, at the solicitation of Alcimus, the high-priest, who had usurped that office with the aid of Epipator. These two commanders ravaged the country, and Bacchides defeated and slew the celebrated Judas Maccabæus. Demetrius, at last, came so hated by his own subjects, that he related object of so much dislike, if not of fear, to the neighbouring princes, that they advocated the claims of Alexander Bala, and he fell in battle against this competitor for the crown,
after having reigned twelve years (from B.C. 162 to B.C. 150). His death was avenged, however, by his son Demetrius II. (Polyb., 31, 12.—Id., 31, 10.—Id., 32, 4, sqq.—Id., 33, 14, sqq.—Justin, 34, 3.—Id., 35, 1.)—V. Son of the preceding, was summoned Nicator, or 'the Conqueror.' He drove out Alexander Bala, with the aid of Ptolemy Philometer, who had given him his daughter Cleopatra in marriage, though she was already the wife of Bala. He ascended the throne B.C. 146, but soon abandoned himself to a life of indulgence and debauchery, leaving the real conduct of his reign in the hands of Lathobes, his favourite, an unprincipled and violent man. The disgust to which his conduct gave rise induced Tryphon, who had been governor of Antioch under Bala, to revolt, and place upon the throne Antiochus Dionysius, son of Bala and Cleopatra, a child only four years of age. A battle ensued, in which Demetrius was defeated, and Antiochus, now receiving the surname of Theos, was conducted by the victors to Antioch, and proclaimed king of Syria. He reigned, however, only in name. The actual monarch was Tryphon, who put him to death at the end of about two years, and caused himself to be proclaimed in his stead. Demetrius, meanwhile, held his court at Seleucia. Thinking that the crimes of Tryphon would soon make him universally detested, he turned his arms in a different direction, and marched against the Parthians, in the hope that, if he returned victorious, he would be able to secure the aid of that nation against the Syrian antagonist. After some successes, however, he was entrapped and made prisoner by the Parthian monarch Mithradates, and his army was attacked and cut to pieces. His captivity among the Parthians was an honourable one, and Mithradates made him espouse his daughter Rhodoguna. The intelligence of this marriage so exasperated Cleopatra, that she gave her hand to Antiochus Sidetes, her brother-in-law, who thereupon ascended the throne. Sidetes having been slain in a battle with the Parthians after a reign of several years, Demetrius escaped from the hands of Mithradates and remounted the throne. His subjects, however, unable any longer to endure his pride and cruelty, requested from Ptolemy Physcon, a king of the race of the Seleucids, to govern them. Ptolemy sent Alexander Zebina. Demetrius, driven out by the Syrians, came to Ptolemais, where Cleopatra, his first wife, with whom the Syrians were shut against him. He then took refuge in Tyre, but was at length put to death by the governor of the city. Zebina recompensed the Tyrians for this act, by permitting them to live according to their own laws, and from this period commences what is called by chroniclers the era of the independence of Tyre, which was still subsisting at the time of the council of Chalcedon, 574 years after this event. (Joseph., Ant. Jud., 13, 9.—Id. id., 13, 12.—Id. ib., 13, 17.—Justin, 36, 1.—Id., 39, 1.—L'Art de verifier les Dates, vol. 2, p. 331.)—VI. Summed Eusæus (Εὐσαῖος), "the Seasonable" or "Fortunate," was the fourth son of Antiochus Grypus. He was proclaimed king at Damascus, and, in conjunction with his brother Philip, to whom a part of Syria remained faithful, drove out Antiochus Euseba from that country, compelling him to take refuge among the Parthians. The two brothers then divided the dominions of Antiochus Euseba. Eusæus reigned the longest of all, and left Damascus that of Demetrius. The latter afterward marched to the aid of the Jews, who had revolted from their king Alexander Jannaeus. He was recalled, however, to his own dominions by the news of an invasion on the part of his own brother Philip. He took Antioch, and besieged Philip in Beroea; but the latter being succoured by the Parthians and Arabians, Demetrius was besieged in his own camp, and at length taken prisoner. He was brought to the king of Parthia, who treated him with great distinction, and sent him into Upper Asia. He reigned a little over six years. The Abbé Belley has written a learned dissertation on the reign of this monarch, illustrated by medals. (Mem. de l'Acad. des. Inscr., vol. 29.)—VII. Pegasos, a medical writer, who flourished during the reign of Michael VIII. (Palaeologus). By the order of this monarch, he wrote a work on the Gout (παθήσεις). We have two treatises under his name; but it is extremely doubtful whether he was indeed their author. The first is on the art of training falcons for the sport of hawking. (Schilh., Hist. Lit. Gr., vol. 7, p. 265.) The best edition of the treatise on the gout is that of Bernhard, Amst., 1763, 8vo.—VIII. Phæreus (three syllables-Φαθρεύς), a native of Phærum in Attica, and the last of the more distinguished orators of Greece. He was the son of a person who had been slave to Timotheus and Conon. (Compare Eutich., Var. Hist., 12, 45; and the remarks of Perizonius, ad loc.) But, though born in this low condition, he soon made himself distinguished by his talents, and was already a conspicuous individual in the public assemblies when Antipater became master of Athens; for he was obliged to save himself by flight from the vengeance of the Macedonian party. He was compelled to quit the city a second time, when Polysperchon took possession of it through his son. Subsequently named by Cassander as governor of Athens (B.C. 312), he so gained the affections of his countrymen, that at last, during the absence of Antipater from office, they are said to have raised him to three hundred and sixty statues. Atenaeus, however, on the authority of Duris, a Samian writer, reproaches him with luxurious and expensive habits, while he prescribed, at the same time, frugality to his fellow-citizens, and fixed limits for their expenditures. It is thought, however, that Duris, or else Atenaeus in copying him, erred with respect to the name; since what the latter relates of Demetrius of Macedon, and Demetrius Poliorcetes. (Var. Hist., 9, 19.) After the death of his protector, Demetrius was driven from Athens by Antigonus and Demetrius Poliorcetes (B.C. 306). The people of that city, always fickle, always ungrateful, always the sport of the demagogues who ruled them, overthrew the numerous statues they had erected to him, although he had been their benefactor and idol, and even condemned him to death. Demetrius, upon this, retired to the borders of the age of the departure of twenty years. It is generally supposed that he was the individual who gave Ptolemy the advice to found the Museum and famous library. This prince consulted him also as to the choice of a successor. Demetrius was in favour of the monarch's eldest son, but the king eventually decided for the son whom he had by his second wife Berenice. When Ptolemy II., therefore, came to the throne, he revenged himself on the unlucky counsellor by exiling him to a distant province in Upper Egypt, where Demetrius put an end to his own life by the bite of an asp (B.C. 284).—Compare the dissertation of Bonamy, on the life of Demetrius Phalerus, Mem. de l'Acad. des. Inscr. et Belles Lettres, vol. 7, p. 157, sqq.). Cicero describes Demetrius as a polished, sweet, and graceful speaker, but deficient in energy and power. (De Orat., 2, 25.—Brut., 9.) Quintilian assigns to him the praise of being a master of the oratory, and says that of all his works, the acquisition of which would prove of great value to us. Plutarch cites his treatise "On Socrates," which
DEMOCRITUS.

appears to have contained also "a Life of Aristides." We have said that the works of Democritus are lost: there exists, however, an "Aristides," an "in Tria Viribus," a work full of ingenious observations; but critics agree in making it of later origin. It appears that the copyists have confused Democritus Phalereus with Democritus of Alexander, who flourished under Marcus Aurelius, and was, perhaps, the author of the work in question. Besides the treatise on Elocution, there exists a small work On the Apotheosis of the Seven Sages, which Sibouw has inserted in his edition of the Fragments of Democritus Phalereus. — The best editions of the treatise on Elocution are, that of Gale, Oxon., 1676, 8vo, re-edited by Fischer, Lips., 1773, 8vo, and that of J. G. Schneider, Alten., 1779, 8vo. This last is printed with but little care; yet it is critical, and supplied with an excellent commentary. (Schold, Hist. Lit. Gr., vol. 3, p. 241, seqq.) — IX. A Cynic philosopher, who flourished at Corinth in the first century. During the reign of Caligula, he taught philosophy at Rome, where he obtained the highest reputation for wisdom and virtue. He was banished from Rome in the time of Nero, for his free censure of public manners. After the death of this emperor he returned to Rome; but the boldness of his language soon offended Vespasian, and again subjected him to the punishment of exile. Apollonius, with whom he had contracted a friendship, prevailed on Titus to recall him; but under Domitian he shared the common fate of philosophers, and withdrew to Puteoli. Seneca, who was intimately acquainted with him, speaks in the highest terms of his masculine eloquence, sound judgment, intrepid fortitude, and inflexible integrity. (Seneca, de Vit. Beat., 25.)

Democritus, a celebrated philosopher, born at Abdera, about 490 or 494 B.C., but according to some, 480 or 470 B.C. His father was a man of noble family and of great wealth, and contributed largely towards the entertainment of his master, Leucippus, when he was expelled from Athens. He is supposed to have visited Egypt and Ethiopia, the Persian Magi, and, according to some, even the Gymnosophists of India. Whether, in the course of his travels, he visited Athens or attended upon Axanagoras, is uncertain. There can be little doubt, however, that, during some part of his life, he was instructed in the Pythagorean school, and particularly that he was a disciple of Leucippus. After a long course of years thus spent in travelling, Democritus returned to Abdera, richly stored with the treasures of philosophy, but destitute even of the necessary means of subsistence. His brother Damocis, however, received him kindly, and liberally supplied all his wants. In his old age, Democritus was thrown on his resources, and to make his word good, he committed his property to riots the realm of sepulchre. Democritus, desiring to avoid this disgrace, gave public lectures to the people, chiefly from his larger Diacomas, the most valuable of his writings; in return, he received from his hearers many valuable presents; and other testimonies of respect, which relieved him from all apprehension of suffering public censure as a spendthrift. Democritus, by his writings and works — especially by his acquaintance with natural phenomena, acquired great fame, and excited much admiration among the ignorant Abderites. By giving previous notices of unexpected changes in the weather, and by other artifices, he had the address to make them believe that he possessed a power of predicting future events, and they not only looked upon him as something more than mortal, but even proposed to invest him with the direction of their public affairs. From inclination and habit, however, he preferred a contemplative to an active life, and therefore declined these public honours, and passed the remainder of his days in solitude. It is said that from this time he spent his days and nights in caverns and sepulchres; and some even relate, that, in order to be more perfectly master of his intellectual faculties, he deprived himself, by means of a burning-glass, of the organs of sight. The story, however, is utterly incredible, since Democritus had not only the most perfect eyes, but even employed his leisure in writing books, and in dissecting the bodies of animals, neither of which could well have been effected without eyes. Nor is greater credit due to the tale that Democritus spent his leisure hours in chemical researches after the philosopher's stone, the dream of a later age; or to the story of his conversation with Hippocrates, grounded upon letters which are said to have passed between the father of medicine and the people of Abdera. These and the nature of Democritus, but which are so evidently spurious that it would require the credulity of the Abderites themselves to suppose them genuine. The only reasonable conclusion that can be drawn from these and other marvellous tales, is, that Democritus was, what he is commonly represented to have been, a man of lofty genius and penetrating judgment, who, by a long course of study and observation, became an authority on the natural sciences, and the most correct observer of the natural consequence of which was, that, like Roger Bacon in a later period, he astonished and imposed upon his ignorant and credulous countrymen. Petronius relates, that he was perfectly acquainted with the virtues of herbs, plants, and stones, and that he spent his life in making experiments upon natural bodies. — Democritus has been commonly known under the appellation of "The Laughing Philosopher"; and it is gravely related by Seneca (De Ira, 2, 10.) — De Tranq. — That he never appeared in public without expressing his contempt of the follies of mankind by laughter. But this account is wholly inconsistent with what has been related concerning his fondness for a life of gloomy solitude and profound contemplation; and with the strength and elevation of mind which his philosophical researches must have required, and which are ascribed to him by the general voice of antiquity. Thus much, however, is certain, that Democritus, in the third century, (V. H., 4, 50) and Lucian (Vit. Auct., vol. 3, p. 112, ed. Bip.), that a man so superior to the novelty of his contemporaries, and whose lot it was to live among a race of men who were stupid to a proverb, might frequently treat their follies with ridicule and contempt. Accordingly, we find that, among his fellow-citizens, he obtained the appellation of γελατοσ, or the "Derizer." Democritus appears to have been in his morals chaste and temperate; and his sobriety was repaid by a healthy old age. He lived and en-
joyed the use of his faculties to the term of a hundred years (some say several years longer), and at last died through mere decay.—Democritus expanded the atomic theory of his master Leucippus, to support the truth of which he maintained the impossibility of division ad infinitum; and from the difficulty of assigning a commencement of time, he argued the eternity of existing nature, of void space, and of motion. He supposed the atoms, originally similar, to be endowed with certain properties, such as impenetrability, and a density proportionate to their volume. He referred every active and passive affection to motion, caused by impact, limited by the principle he assumed, that like can only act on like. He drew a distinction between primary motion and secondary; impulse and reaction; from a combination of which he produced rotatory motion. Herein consists the law of necessity, by which all things in nature are ruled. From the endless multiplicity of atoms have resulted the worlds which we behold, with all the properties of immensity, resemblance, and dissimilitude which belong to them. The soul consists (such is his doctrine) of globular atoms of fire, which impart movement to the body. Maintaining his atomic theory throughout, Democritus introduced the hypothesis of images (éidola), a species of emanation from external objects, which make an im- pression on our senses, and from the influence of which he deduced sensation (éidológenè̂s) and thought (tómpuros). He described the human figure, as rude, imperfect, and therefore false perception, and a true one. In the same manner, consistently with his theory, he accounted for the popular notions of the Deity; partly through our incapacity to understand fully the phenomena of which we are witnesses, and partly from the impressions communicated by certain beings (éidola) of enormous stature, and resembling the human figure, which inhabit the air. To these he ascribed dreams, and the causes of those varieties of sensation, which he calls the dínamis, or vital principle. In rhetorical and critical philosophy also, laying down that happiness consisted in an equality of temperament (éidolphus), whence he deduced his moral principles and prudential maxims. It was from Democritus that Epicurus borrowed the principal features of his metaphysics. (Enfled’s History of Philosophy, vol. 1, p. 423 seqq.;—Ritter, Hist. Phil., vol. 1, p. 544, seqq.—Tenn- meyer’s Manual, p. 79.)

Démélon, a Lucianian at the court of Alcinoüs, who sang in the presence of Ulysses. (Hom., Od., 8, 44.—Plut., de Mus.—I.) A Trojan chief, who came with Æneas into Italy, where he was killed. (Virg., Æn., 10, 413.)

Démélon, I. a centaur, killed by Theseus at the nuptials of Pirithous. (Ovid, Met., 12, 356.—I.) A son of Antenor, killed by Achilles. (Hom., II., 20, 395.)

Démônaux, a Cynic philosopher, of excellent character, contemporary with Lucian, who relates his history. He was a native of Cyrus, of wealthy parents, and is described by Lucian as having been the best philosopher he ever knew. Démônaux resided at Athens, attained to the age of nearly 90 years, and was honoured at his death with a public funeral. (Lucian, Vit. De- monac., vol. 5, p. 231, seqq., ed. Byp.)

Démophilon or Dêmophon. Vid. Phyllis.

Demosthenes, I. a celebrated Athenian orator, a native of the borough of Peania, in the tribe Pandio- nis. His father, Demosthenes, was a citizen of rank and opulence, and the proprietor of a manufactory of arms; not a common blacksmith, as the language of Juvenal (10, 130) would lead us to believe. The son was born in the fourth year of the 98th Olympiad, B.C. 385, and lost his father at the early age of seven years, when he was left to the care of his mother, Cleobule. The guardians to whom his father had intrusted the administration of a large property pro- ving faithless to their charge, and wasting a large por- tion of his patrimony, the orator’s early studies were seriously impeded by the want of sufficient means, to say nothing of the over-anxious fears of maternal tenderness, and the delicate state of his own health. When Demosthenes was about sixteen years of age, his curiosity was attracted by a trial in which Calli- tratus pleaded, and won a cause of considerable im- portance. The eloquence which procured, and the acclamations which followed, his success, so inflamed the ambition of the young Athenian, that he deter- mined to devote himself thenceforward to the assidu- ous study of oratory. He chose Isocrates as his master, rather than Isocrates (either because this plan was less expensive, or because the style of the latter was not sufficiently nervous and energetic): from Plato, also, he imbibed much of the richness and the grandeur which characterized the writings of that mighty master. At the age of seventeen he appeared before the public tribunals, and pronounced against his faithless guar- dians, and against a debtor to his father’s estate, five orations, which were crowned with complete success. These discourses, in all probability, had received the finishing hand from Isæus, under whom Demosthenes continued to study for the space of four years after he had reached his majority. An opening so brilliantly successful imboldened the young orator, as may well be supposed, to speak before the people; but, when he made the attempt, his feeble and stammering voice, his interrupted respiration, his ungraceful gestures, and his ill-arranged words, made the attempt an abject failure. Returning home in the utmost distress, he was reani- mated by the kind aid of the actor Satyrus, who, hav- ing requested Demosthenes to repeat some passage from a dramatic poet, pronounced the same extract after him with so much correctness of enunciation, and in a manner so true to nature, that it appeared to the young orator to be quite a different passage. Con- vinced, thereupon, how much grace and persuasive pow- er a correct pronunciation could add to his oration, he resolved to correct the deficiencies of his youth, and accomplished this with a zeal and perseverance which have passed into a proverb. How deeply he commands our respect and admiration by his struggles to overcome his natural infirmities, and remove the impressions produced by his first appearance before his assembled countrymen! He was not indebted for the glory he acquired either to the bounty of nature, or to the incessant practice of him to an inherent strength of his own unconquerable will. To free himself from stammering, he spoke with pebbles in his mouth, a story resting on the authority of De- metrius Phalerus, his contemporary. It also appears that he was unable to articulate clearly the letter R; but he vanquished that difficulty most perfectly; for Cicero says, “exercitatores facisce ut plenissime dicere.” He removed the distortion of features, which accompanied his utterance, by watching the movements of his countenance in a mirror; and a naked sword was suspended over his left shoulder while he was declaiming in private, to prevent its rising above the level of the right. That his enunciation might be loud and full of emphasis, he frequently ran up the steepest and most uneven walks, an exercise by which his voice acquired both force and energy; and on the seashore, when the waves were violently agitated, he declaimed aloud, to accustom himself to the noise and tumult of a public assembly. He constructed a sub- terranean study, where he would often stay for two or three months together, shaving one side of his head, that, in case he should wish to go abroad, the shame of appearing in that condition might keep him within. In this solitary retreat, by the light of his lamp, he copied and recopied, ten times at least, the orations scattered throughout the history of Thucydides, for the purpose of moulding his own style after so pure a model.—Whatever may be the truth of these several stories, Demosthenes got credit for the most ind-
DEMOSTHENES.

fatigable labour in the acquisition of his art. His enemies, at a subsequent period of his career, at-
ttempted to ridicule this extraordinary industry, by re-
marking that all his arguments were sheets of the large
and they eagerly availed themselves of the opportunity of denying
him the possession of natural talents. A malicious
opinion like this would easily find credit; and, in fact,
a similar mistake is very frequently made; for, since
it is acknowledged on all hands, that all successful men
who are naturally dull must be industrious, the con-
verse of the proposition grows into repute, and it is in-
ferred that all men who are industrious must necessarily
be dull. The accusation against Demosthenes seems to
have rested chiefly on his known reluctance to speak
without preparation. The fact is, that, though he could
exert the talent of extemporaneous speaking, he avoided
rather than sought such occasions, partly from defer-
tence to his audience, and partly from apprehending
the possibility of a failure. Plutarch, who mentions
this reluctance of the orator, speaks at the same time
of the great merit of his extemporaneous effusions.—
Demosthenes reappeared in public, after the rigorous
discipline of private study, at the age of 25 years,
and pronounced two orations against Leptines, the
author of a law which imposed on every citizen of
Athens, except the descendants of Harmodius and
Aristogiton, the exercise of certain burdensome func-
tions. The second of these discourses, entitled "Of
Immunities," is regarded as one of his happiest efforts.
After this he became much engaged with the business
of the bar, and these professional labours, added to the
several war which so disheartened him, had so
much recovered from his guardians, appear to have formed his only
means of support. But, whatever may have been the
 distinction and the advantages which Demosthenes
acquired by his practice at the bar, his principal glory
is derived from his political discourses. At the pe-
riod when he engaged in public affairs, the state was a
mere wreck. Public spirit was at the lowest ebb; the
laws had lost their authority, the ambition of early mas-
ers had yielded to the inroads of luxury, activity to indol-
ence, probity to venality, and the people were far advan-
ced upon the route which conducts a nation to inremdi-
able servitude. Of the virtues of his forefathers there
remained to the Athenians naught save a attachment,
carried almost to enthusiasm, for their native soil, for
that country the possession of which had been con-
tested even by the gods. On the slightest occasion
the feeling of patriotism was sure to display itself; to
have to rest chiefly on the power of a direct address
he was still capable of making the most strenuous efforts for
the preservation of their freedom. No one knew bet-
ter than Demosthenes the art of exciting and keeping
alive this enthusiasm. His penetration enabled him
easily to divide the ambitious plans of Philip of Mae-
don, from the very outset of that monarch's operations,
and he resolved to counteract them. His whole pub-
lic career, indeed, had but one object in view, and that was
"to destroy the Tyrants." For some four or five years this
monarch found the Athenian orator continually in his path, and every attempt proved unavail-
ing to corrupt so formidable an adversary. These
fourteen years, which immediately preceded the fall
of Grecian freedom, constitute the brightest period in
the history of Demosthenes. And yet his courage was
political rather than military. At Chersonoea he fled
from the field of battle, though in the Athenian assem-
blies no privy or secret proceedings could influence his
choice or influence his conduct. But, though overpowered in
the contest with the enemy of Athenian independence,
he received after his defeat the most glorious recom-
pense, which, in accordance with Grecian customs,
a grateful country could bestow upon a virtuous son.
Athens decreed him a crown of gold. The reward was
opposed by .Eschines. The combat of eloquence which
arose between the two orators, attracted to Athens an
immense concourse of spectators. Demosthenes tri-
umphed, and his antagonist, not having received the
fifth part of the vote, was, in conformity with the ex-
ting arrangement of the law, returned into exile. A short
period after this splendid victory, Demosthenes was
condemned for having suffered himself to be bribed by
Harpalus, a Macedonian governor, who, dreading the
anger of Alexander, had come to Athens to hide
there the fruit of his extortion and rapine, and had bar-
gained with the popular leaders of the day for the pro-
tection of the republic. Demosthenes, having escaped
from imprisonment; fled to Aegina, whence he could
behold the shores of his beloved country, and earnestly
and constantly protested his innocence. After the
death of Alexander he was restored, and his entry into
Athens was marked by every demonstration of joy.
A new league was formed among the Grecian cities
against the Macedonians, and Demosthenes was the
soul of it. But the confederacy was broken up by
Antipater, and the death of the orator was decreed.
He retired thereupon from Athens to the island of Ca-
lauria, off the coast of Argolis, and, being still pursued
by the satellites of Antipater, terminated his days by
poison, in the temple of Neptune, at the age of
above sixty years. —Before the time of Demosthenes
there existed three distinct styles of eloquence: that
of Lysias, mild and persuasive, quietly engaged the at-
tention, and won the assent of an audience; that of
Thucydides, bold and animated, awakened the feelings
and powerfully forced conviction on the mind; while
that of Isocrates was, as it were, a combination of the
two former. Demosthenes can scarce be said to have
proposed any individual as a model, although he
bestowed so much untiring labour on the historian of
the Peloponnesian war. He rather culled all that was
valuable from the various styles of his great predeces-
sors, working them up, and blending them into one
harmonious whole: not, however, that there is such
a uniformity or mannerism in his works as prevents
him from applying himself with versatility to a variety of
subjects; on the contrary, he seemed to have had
the power of carrying each individual style to perfec-
tion, and of adapting himself with equal excellence
to each successive topic. In the general structure of
many of his sentences, he resembles Thucydides; but
he is more simple and perspicuous, and better calcula-
ted to be quickly comprehended by an audience.
On the other hand, his clearness in narration, his elegance
and purity of diction, and (to borrow a metaphor from
storing) hisسهل, and some passages of his orations on
Lyca. But the argumentative parts of the speeches of
Lysias are often deficient in vigour; whereas earnest-
ness, power, zeal, rapidity, and passion, all exemplified
in plain, unornamented language, and a strain of close,
business-like reasoning, are the distinctive characteris-
tics of Demosthenes. The general tone of his oratory,
indeed, was admirably adapted to an Athenian audience,
constituted as it was of those whose habits of life were
public and political, whose education had led to the cul-
tivati on of literature. The former were captivated by sheer sense, urged with masculine force
and inextinguishable spirit, and by the forcible applica-
tion of plain truths; and yet there was enough of grace
and variety to please more learned and fastidious audi-
tors. "His style," as Hume well observes, "is rapid
harmony, exactly adjusted to the sense: it is vehement
reasoning, without any appearance of violence: it is
lively, without being confused: it is involved in a continu-
ous stream of argument; and, of all human productions,
the orations of Demosthenes present to us the models
which approach the nearest to perfection." Another
very remarkable excellence of Demosthenes is the col-
location of his words. The arrangement of sentences in
such a manner that their cadences should be har-
monious, and, to a certain degree, rhetorical, was a
study much in use among the great masters of Greg
DEMOSTHENES.

DEMOSTHENES.

clan composition. Plato passed the latter years of his life in correcting his dialogues, and that very simplicity remarkable in the structure of the periods of Demosthenes is itself the result of art. — The question has often been raised as to the secret of the success of Demosthenes. How is it that he attained to his astonishing pre-eminence? How is it that, in a faculty which is common to the whole species, that of communicating our thoughts and feelings in language, the palm is conceded to him alone by the unanimous and willing consent of all nations and ages? And this universal approval will appear the more miraculous the more it is compared with that of him who for the first time peruses his unrivalled orations. They do not exhibit any of that ostentatious declaration, on which loosely hangs the fame of so many pretenders to eloquence. There appears no deep reflection to indicate a more than ordinary penetration, or any philosophical remarks to prove the extent of his acquaintance with the great moral writers of his country. He affects no learning, and he displays none. He aims at no elegance; he seeks no glaring ornaments; he rarely touches the heart with a soft or melting appeal, and when he does, it is only with an effect in which a third-rate artist would have surpassed him. He had no wit, no humour, no vivacity, in our acceptance of these terms, qualities which contribute so much to the formation of a modern orator. He wanted all these undeniable attributes of eloquence, and yet who rivals him! — The secret of his power is simple; it lies essentially in this, that all his oratorical principles were interwoven with his very spirit; they were not assumed to serve an interested purpose, to be laid aside when he descended from the Bema, and resumed when he sought to accomplish an object. No; they were deeply seated in his heart, and emanated from its profoundest depth. The more his country was environed by dangers, the more steady was his resolution. Nothing ever impaired the truth and integrity of his feelings, or weakened his generous conviction. It was his undeviating firmness, his disdain of all compromise, that made him the first of statesmen and orators; in this lay the substance of his power, the primary foundation of his superiority; the rest was merely secondary. The mystery of his mighty influence, then, lay in his honesty; and it is this that gave warmth and tone to his feelings, an energy to his language, and an impression to his manner, before which every imputation of insincerity must have immediately disappeared. He was the very type of that meaning of Demosthenes himself, when, to one who asked him what was the first requisite in an orator, he merely replied, "Delivery" (εἰκόνας); and when asked what were the second and third requisites, gave the same answer as at first. (Plut., Vit. X. Orat., p. 435.) His idea was this: a lifeless manner on the part of a public speaker, shows that his own feelings are not enlisted in the cause which he is advocating, and it is idle for him, therefore, to seek to move the spectators. He speaks from within himself, and his own manner becomes one of himself. On the other hand, when the tone of voice, the gesture, the look, the whole manner of the orator, display the powerful feelings that agitate him, his emotion is communicated to his hearers, and success is inevitable. It was not, therefore, mere "action" that Demosthenes required in an orator, an error into which some have fallen from a mistranslation of the Latin rhetorical term "actus," as employed by Cicero (Adv. Phil. 2. 15). In following this view men have been the more attentive to the whole manner of delivery, the look, the tone, the every movement, as many unerring indications of internal emotion, and of the honesty and sincerity of the speaker. (Compare Quintilian, Inst. Or., 11, 3, 12.) — A comparison has often been drawn between Demosthenes and Cicero; but by no writer has it been done more successfully than by the celebrated Longinus. "The sublimity of the orator, the remarks, "consists in his abruptness, that of the orator in his differences. Our countryman [Demosthenes], from fear of the fire, that mighty conflict with which he bears down all before him, may be compared to a tempest or thunderbolt; while Cicero, like a wide-spreading confabulation, devours and rolls onward in every direction, ever maintaining its destructive energy, and nourished and supported from time to time by the fuel of various kinds with which it is continually supplied in its progress." (Long. n., 6, 2.) Cicero's eloquence is like a continuous triumph; he is in the balance of the precious figure in the procession, which is swollen with the grandeur and riches of conquered provinces. Demosthenes is the terrible sweep of a vast body of cavalry. Cicero's oratory was local, fitted only to the audience; in Athens it would not have been tolerated. Demosthenes was for the whole earth, and at all times. In Rome he would have been as resistless as in Athens; and his eloquence would be as convincing now as it was in the popular assemblies of old. — Of the orations of Demosthenes we have sixty-one remaining, and sixty-five Introductions, or τροκόμα δημογωρία. In confining ourselves to the classification adopted by the ancient rhetoricians, we may arrange all these discourses under one of three heads. 1. Deliberative discourses (λάγος συμβουλεύσιμος), treating of political topics, and delivered either before the senate or the assembly of the people. 2. Judicial speeches (λάγος δίκαιας), having for their object the settling of a difference; 3. Studied or set speeches (λάγος προσδιορισμενος), intended to censure or praise. — Seventeen of the orations of Demosthenes belong to the first of these classes, forty-two to the second, and two to the third. (Compare Becker, Demosthenes als Staatsmann und Redner, Halle, 1815, 2 vols. 8vo.) — Of the seventeen discourses which compose the first class, five treat of various subjects connected with the republic, and twelve of the quarrels between the state and King Philip. Our limits, of course, allow an examination of only a few of these, that are most important in their character. Of the twelve harangues that turn upon the quarrels of the republic with King Philip, the first was pronounced in the first year of the 107th Olympiad, B.C. 352; the second, third, and fourth, in the fourth year of the same Olympiad, B.C. 349; the fifth in the second year of the 108th Olympiad, B.C. 347; the sixth in the third of the same Olympiad, B.C. 344; the seventh in the same Olympiad, B.C. 344; the eighth in the second year of the same Olympiad, B.C. 343; the ninth in the third year of the same Olympiad, B.C. 342; the tenth and eleventh in the fourth year of the same Olympiad, B.C. 341; and the twelfth in the first year of the 110th Olympiad, B.C. 340. — The order here given is taken from Dionysius of Halicarnassus; but no manuscript and no editions observe it. The manuscripts give the 1st, 2d, 10th, and 11th Olympiads before the 1st, and the 2d and 3d before the 4th, as the forming the conclusion of the first. They give the title of 2d, 3d, and 1st Olynthiac to his 2d, 3d, and 4th. The remaining four (6th, 8th, 9th, 12th) have the following titles: "Of Peace," "Of Halonesus," "Of the Chersonese," and "On the letter of Philip." We will now speak of them in chronological order. 1st and 2d, Πρὸς Φίλιππον λάγος προτότο, "First Philippic." Demosthenes here exhorts his countrymen to the promptest action against Philip. This monarch had, after the defeat of the Phocians, assumed a threatening attitude, as if wishing to establish himself in their country. The discourse we are now considering has been divided into two parts, which, according to Dionysius of Halicarnassus, were pronounced at different times; but this opinion is contradicted by most critics. — 3d, 4th, 5th, 6th, 7th, 8th, 11th, 12th Olympiads. A. B. T. The three Olynthises. Their
DEMOSTHENES.

object is to stimulate the Athenians to succour Olyn-
thus, and prevent its falling into the hands of Philip —
"in the name of the gods, and of the Athenians, and of
the people." Philip, having obtained a seat in the council of the
Amyc-
tons, Demosthenes advises his countrymen to pre-
serve the peace with this prince. Libanius thinks
that this discourse, though written by Demosthenes, was never delivered. Leland, Auger, Jacobs, and
Bekker are, however, of a different opinion.—7th.
Кауа Филистов логос Β, the Second Philippic, pro-
nounced after the return of Demosthenes from the
Peloponnesus, when he had sieged a peace accorded
between Sparta and Messenia.—8th. Ηηι της Άλω-
νησος, "Of Halonessus," or, rather, of a letter of
King Philip's, by which he makes a present to the
Athenians of the isle of Halonessus, which he had
taken from the pirates, and demands of the Athe-
nians to share with them the office of protecting
the seas. Demosthenes strenuously opposes so insult-
ing an offer; it is, however, far from certain whether he
ever pronounced such a discourse as this. Libanius
says, that the ancient critics ascribed it to Hegasippus,
the friend of Demosthenes. Suidas and the author of
the Etymologicon Magnum agree with him. Valcke-
naer (Diar. de fragm. Eurip., p. 253), Larcher
(Mem. de l'Acad. des Inscr., &c., vol. 2, p. 243), and
Bekker, also adopt this opinion; Jacobs (Demosthenes
Staatenred., p. 378), after having stated the arguments
on either side, pronounces no decision: Jacques de Tornac (Œuvres de Demosth., p. 124) and Weiske (Oratio de Halonessus, &c., Lubben, 1808, 4to) maintain that the speech is genu-
ine.—9. Περί τῶν ἐν Χειρονομία πραγμάτων, ὡς ἐπέρ
Δοκείωντος, "Of the events in the Chersonese, or of
Dopeithes." This general, sent at the head of a
colony into the Chersonese, had committed hos-
tilities against the city of Cardia: the only one which
Philip had reserved for himself in the conditions of
peace made between the Athenians and Macedonians.
Philip insisted on his being punished: Demosthenes undertakes in this oration to justify the
conduct of the Athenian commander.—10th. Καυα
Φιλιτστον λογος Γ, the Third Philippic. The pro-
gress which Philip had made in Thrace, where he
was preparing to lay siege to the cities of Perinthus
and Byzantium, form the subject of this harangue.
11. Κατά Φιλιστον λόγος Δ, Fourth Philippic. pro-
nounced after the return of Demosthenes from the
Peloponnesus, in order to fall upon Byzantium. Valcke-
naer (Or. de Phil., p. 250), Wolf (ad Lept. Proleg.,
π. ΙΧ.), and Bekker do not acknowledge this as a pro-
duction of Demosthenes.—12. Ο πρὸς τὴν ἐπιστολήν
Φιλιστον λόγος, "On the letter of Philip." The
letter of the king, to which this harangue refers, still
exists. It contains many complaints, but no declaration
of war. Taylor, Reiske, Valckenaeer, and Bekker,
consider this letter to be spurious. We have now come
to the second class of the orations of Demosthenes,
the special class, the "De Philippis," those of a judicial nature; and here a distinc-
tion must be made between those which refer to
affairs connected with the state, and those which re-
late to individual interests: in the former case, the
procedure was called καταγωγία; in the second, δικαί;
words which may be translated "accusation" and
"pleading." Of the first species, we have twelve ha-
rague, written after the most important of which is
that entitled Περί στφάνου, "Concerning the State of
Demosthenes had been twice crowned in the theatre
during the Dionysiac festival; the first time, after the
expulsion of the Macedonian garrisons from the island
of Eubea, and again after the alliance with the The-
bans. In the 24 year of the 110th Olympiad, Ctes-
phon, who was then president of the senate, had a
decree passed by this body, that, if the people ap-
proved, Demosthenes should be crowned at the ac-
neicomposing Dionysiac festival, in the public theatre, as
a recompense for the disinterested manner in which he
had filled various offices, and for the services which he
had never sought or obtained. This matter had to be
confirmed by a pesiphon, or decree of the people; but, before it was brought
before them, Αeschines presented himself as the accuser
of Ctesiphon. He charged him having violated the
laws in proposing to crown a public functionary
before the latter had given an account of the manner
in which he had discharged his office, and to crown
him, too, in the theatre, instead of the senate or
the Prytaneion. He alone was to bring a final case of
having alleged what was false, for the purpose of
favouring Demosthenes. He concluded by demanding
that a fine of fifty talents be imposed upon Ctesiphon.
The matter remained for some time pending, in con-
sequence the interruption which public business of
all kinds met with during the embarrasments and
troubles that succeeded the battle of Charonsea. When,
however, the influence of the Macedonian party had,
through the exertions of Antipater, gained the ascend-
ancy in Athens, Αeschines believed it to be the fa-
vorous moment for the revival of his accusation.
It was brought forward, therefore, again, in the 3d year
of the 112th Olympiad, which was eight years since the
proposition of Ctesiphon had been made. Αeschines,
thereupon pronounced his famous harangue, to which
Demosthenes replied. This speech of Demosthenes
is regarded, and justly so, not only as his chief-d'œuvre,
but as the apogee of his career, and much in that the
simplicity of the language, and the tone in which
the orator speaks, is not only unlike the language of
the Verh. of Aeschines, and other compositions he
had ever produced. Such is the opinion of Dionysius of
Halicarnassus (De Comp. Verb.—Ed. Reiske, Op.,
vol. 5, p. 204), of Cicero (Orat., § 133), and of Quin-
tilian (Inst. Or., 11, 1). Modern critics come to
the same conclusion. It is said that after this discourse,
Demosthenes no longer appeared as a public speaker.
Ulpian, in his commentary on the oration respecting
the crown, relates an anecdote, which has often been
quoted, and which is regarded, with good reason, that the
accents are anterior to the grammarians of Alexandria.
Demosthenes is endeavouring to fix the charge of
bribery on Αeschines, whom he represents as corrupted
by Philip and by Alexander, and consequently their
hireling, and not their friend or guest. Of this asser-
tion he declares his willingness to submit the truth to
the judgment of the assembly. "I call thee," says
the orator, "the hireling, first of Philip, and now of
Alexander; and all those who have become his ac-
counted, in opinion as well as in fact. If thou disbelieveth, ask them the
question: but no, I will ask them myself,—Athen-
ians, does Αeschines appear to you in the light of a
hireling or a friend of Alexander's?"—In putting this
question, Demosthenes purposely commits a fault of
accentuation; he places the accent improperly on the
anteponitima, instead of the last syllable, of μακρόθυ
—in the words of Ulpian, ἐκώς ἐναρξάμενοι—in order to draw the attention of the people to the
question. This had the desired effect; the accurate ears of the Athenians were struck with
the mistake; to correct it, they called out μακροθυτο, μακροθυτο ("a hireling! a hireling") from every part
of the assembly. Affecting to receive the word as the
expression of their sentiments on the guilt of Αeschines,
he cries out, "Dost thou hear what they say?"—The
simple pleadings (δικαία) relative to matters of a state
interest, constitute the second class of orations and
actions.
Of the second class, which remains, which are as fol-
lows: 1. Discourses having relation to the proceed-
ings instituted by Demosthenes against his guardians.
They are five in number: of these, two are against
Aphobus, and two against Onitor, his brother.—2.
Λογο ταιραγροφικον, or, as Cicero (de Invent, I, 8),
calls them, constitutions translatae. The Roman
orator remarks: "Cum canes ex eo pendit quod non
aut is ager videtur quem oporet, aut non aut apud quos,
quae temporis, qua leges, qua crimen, qua poena opor-
of Demosthenes. De...t, translativa dicitur constitutione, quia actio translationis et commutatioius indigere videtur. Atque harum aliarum in omnibus causa genus incideri necesse est. Nam in quomque rem non incidit, in ea nihil esse potest, nisiurus in esse praebantur. Hic est, quem...venit putari." We have seven discourses of this class from the pen of Demosthenes, viz., against Zenothemis, against Apaturius, against Labritus, against Phormion, against Panetnetus, against Nantsimachus, and Xenoph...Patara. — 3. Discourses relative to the rights of suc...to, and to questions of dower. These are four in number: against Macartatus, against Leonchares, against Spudias, against Beatus for his mother's dowry. — 4. Discourses in matters of contract and of debt. These are three in number: against Calippus, against Nicostratus, against Timotheus.— 5. Actions for inde...orum, a. a. i. The discourses under this head are five in number: against Ecratus, against Olympiodorus, against Conon, against Dionysiodorus, against Gallicus.— 6. Actions for perjury: two discourses against Stephanus, and one against Euerus and Mnesibus.— 7. Three discourses on the subject of the antidrom or exchange of estates. According to the laws of Athens, if any person appointed to undergo any public charge, or...e of all duties, the informer was excused. But if the person thus substituted denied that he was the richer of the two, they then exchanged estates. The discourses under this head are the following: against Phocippus, against Polyceles, and against the crown of the tribe. It is impossible to be useless to speak of each of these thirty pleadings: a few remarks on some of them must suffice. The five discourses which Demosthenes pronounced against his guardians contain valuable details respecting his youth, his fortune, the Athenian laws, &c. Aphobus, one of the guardians, was condemned to pay Demosthenes the sum of ten talents. It does not appear whether he brought the two other guardians to trial or not. It is probable that he settled the matter with them. These discourses have some resemblance to those of Issus, his master.— The paragraph for Phormio against Apollodorus has furnished occasion for a reply to the memory of Demosthenes. We are told by Plutarch (Vit. Dem.—vol. 4, p. 717, ed. Reiske), that Demosthenes "wrote an oration for Apollodorus, by which he carried his cause against the general Timotheus, in an action for debt to the public treasury. As a consequence, it has been conjectured that Stephanus, which formed a just exception against his character. For he composed likewise the oration which Phormio had pronounced against Apollodorus. This, therefore, was like furnishing the enemies with weapons out of the same shop." — The discourse against Macartatus respecting the succession of Hagnias is interesting from the circumstance of our having the defences of that city, and it is probable that he was able to compare the pupil with his former master. It remains to speak of the third class of Demosthenes' orations, the λογος κτητικιος, "studied or set speeches." We have only two remaining, and these, very probably, are spurious. The one, επιταθως λογος, is an oration on the Athenians who had perished at Chaeronea: the other, ερωτησις λογος, is written in praise of the beauty of the young Epicrates.— There are also six letters of Demosthenes to his daughter, written during his exile: five of them are addressed to the people of Athens.—The best editions of the entire works of Demosthenes are, that of Reiske, in the Corpus Oratorum Graecorum, and that of Bekker, in the Oratores Attici, 10 vols., 8vo, Oxon., 1825. (Scholl, Hist. Lit. Gr., vol. 2, p. 224.—Encyclopedia Metropolitana, div. 2, vol. 1, p. 699, seqq.—Recollections of an Irish Barrister, s. v. Demosth.) II. An Athenian general, son of Alcisthenes, who obtained considerable reputa...tion during a part of the Peloponnesian war. When the Spartan monarch Agis made an inroad into Attica, Demosthenes, on his part, infested the coasts of the Peloponnesus, and seized upon and fortified the Messene. This he did with the aid of the Sphacteria, in which he had a conspicuous, or, rather, the principal share. He was afterward sent with an armament to the relief of Nicias before Syracuse: but, by his precipitate measures there, brought defeat upon himself, and the consequent ruin of the whole expedition. Demosthenes and Ni...sias were both put to death while in prison, notwithstanding the endeavours of the Spartan commander Gylippus to save their lives. Another account, allude...d to by Plutarch, makes them to have been stoned to death.— (Thucyd., 4, 3, seqq.—Plut., Vit. Nic.)—III. The father of the orator Demosthenes, a rich manufacturer of arms. (Plut., Vit. Demosth.) — 1. A Greek physician, a disciple of Alexander Philalethes, who obtained the same surname as his master, namely, Philalethes, or "Lover of Truth." He flourished about the commencement of our era, and turned his at...ention particularly to diseases of the eye. We have some fragments remaining of his writings on this subject, which appear to have formed part of a work often cited by Galen, Orbisius, and Aëtius. (Sprengel, Hist. de la Med., vol. 1, p. 458.—Renauldin, in Biogr. Univ., vol. 11, p. 64.) Deo (Δ'ωο), a name given to Ceres. According to the common account, it means the "finder" or "inventor," and alludes to the search for, and discovery of, a name for the goddess, viz.: Ceres. — Compare Eustath., ad Hom., Od. 1, 115.—Apollon. Lex. Hom., p. 221, ed. Toll.) Knight, however, gives a different and much superior explanation. "Ceres, he observes, "was not a personification of the brute matter which composed the earth, but of the passive productive principle supposed to pervade it; which, joined to the active, was held to be the cause of the organization and animation of its substance; whence it came her Greek name, Δ'ωο, the inventress." (Enquiry, &c., p. 86.) Some etymologists are in fa...vour of an Oriental derivation for the name. Thus, Sicker (Hymn. ad Cer., p. 112) dedicates it from the Hebrew dawew, "to be feeble" or "afflicted," in allusion to the sorrow of Ceres for the loss of her daught...er; or, as he explains it, the condition of the vegeta...ble kingdom, when the quickening principle does not act. Schelling also makes Deo signify "the one that has nothing for his share," or the "guardian of the commonless search." (Gotth. der Samml., p. 13.—Id. ib., p. 57.—Creuzer, Symbolik, vol. 4, p. 275, not.) The term Δ'ωο occurs in the Homeric hymn to Ceres (v. 47, 211, 497), but is suspected by Herrmann of being an interpolation. (Hom., Hymn., ed. Herr.—Epist. ed., p. c. i., seq.) Droine (Δρινων), a name given by the Greek poets to Prosus, as the daughter of Deo for Ceres. Vid. Deo, 4, 12, 13, 14, ib., v. 9, ib., v. 14. Derbe, a city of Asia Minor, in Lycocnia, near Isauria. D'Anville places it in a district of Isauria called Antiochian, agreeing with Ptolemy (p. 124) and Stephanus of Byzantium; but St. Luke (Acts, 14, 6) and Hierocles (p. 675) assign it to Lycocnia. Derbe and the adjacent town of Lystra derive considerable interest from what befell St. Paul and Barna...bas. The Latin name of the town was Deliva, which, in this place was called by some Delbia, which, in the Lycocnian language, signified the "junker." The same lexicographer describes it as a fortress and port of Isauria; but we ought, in his account, to substitute λυκος for λυσφω, which would imply, that the town was situated near some one of the numerous lakes that are to be found in this part of Asia Minor. Delbe, as we learn from Strabo (560), was at one time the residence and capital of Antipater, the robber chief of Lyco...
DEUCELION.

DEUCALION.

DEUCELION.

DEUCELON.

DEUCALION, a prominent personage in the mythical traditions from which Greek history sprang. He is usually represented as the son of Prometheus and Clymene (Schol. ad Pind., Ol. 9, 72), or of Prometheus and Pandora, and is sometimes called the father (Thucyd., 1, 3), sometimes the brother of Helen (Schol. ad Apollon. Rh. 3, 1068), the reputed founder of the Greek nation. The seat of his authority was Thessaly, from which, according to general tradition, he was driven to Pararnassus by a great deluge (Apollod., 1, 7, 2), which, however, according to Aristotle (Mastor., 1, 14), occurred rain from heaven, and by the destruction of the Aelous. The Greek legend respecting this memorable event is as follows: Deucalion was married to Pyrrha, the daughter of Epiphemus and Pandora. When Jupiter designed to destroy the brazen race of men on account of their impiety, Deucalion, by the advice of his father, made himself an ark (Adapaç), and, putting provisions into it, entered it with his wife and children. Jupiter then poured rain from heaven, and the mountains of Thessaly were burst through by the flood, and all Greece without the isthmus, as well as all the Peloponnesus, were overflowed. Deucalion was carried along the sea in his ark for nine days and nights, until he reached Mount Parnassus. By this time the rain had ceased, and, leaving his ark and the country "Flight-giving" (Φυλάκων), who sent Hermes, desiring him to ask what he would. His request was to have the earth replenished with men. By the direction of Jupiter, thereupon, he and his wife flung stones behind them, and those which Deucalion cast became men, those thrown by Pyrrha women; and from this circumstance, the name of people (λέοντας from λίος, "a stone."—Apollod., 1, 7, 2). This story, it may easily be seen, is of a very narrow and even unpoetic character. It restricts the general deluge to Greece Proper, perhaps originally to Thessaly (Aristot., l. c); and it most incongruously represents others as having escaped as well as Deucalion; yet, at the same time, it intimates, that he and his wife alone had been preserved in the catastrophe. What is said of the brazen age is quite at variance with the narrative of Hesiod, and is a very clumsy attempt to connect one cosmogonic, and irreconcilable myths. The circumstance of the ark is thought by some to be borrowed from the Mosaic account, and to have been learned at Alexandria, for we elsewhere find the dove noticed. "The mythologists," says Plutarch, "inform us, that a dove let fly out of the ark, was to Deucalion a sign of bad weather if it came in again, of good weather if it flew away." (Plut., de solert. an.—Op., ed. Reiske, vol. 10, p. 41.) The writer of the Mythology of Hermes also strongly remind us of Noah.—The Latin writers take a much nobler view of the deluge. According to them, it overspread the whole earth, and all animal life perished except Deucalion and Pyrrha, whom Ovid, who gives a very poetical account of this great catastrophe, conveys in a small boat to the summit of Parnassus; while others make Etes or Atlas the mountain which yielded them a refuge. (Ovid, Met. 1, 183,—Serv. ad Virg., Elog., 6, 41.) According to Ovid, they consulted the ancient oracle of Themis respecting the restoration of mankind, and received the following response: "Depart from the fane, veil your heads, loosen your girded vestments, and cast behind you the great bones of your parent." (Met., 1, 981, seqq.) They were at first horror-struck at such an act of impiety being enjoined upon them; but at length Deu-
culation penetrated the sense of the oracle, the stones being, by a very natural figure, the bones of the earth.

—Deucalion and Pyrrha are evidently pure beings of fiction, personifications of water and fire. The name *Deucalion* comes very probably from *dew* (whence *dew*), to set; while *Pyrrha* is evidently derived from *pyr*, fire. The meaning of the legend will then be: in another passage through which the Peneus carries off the water, that betrays into the Thessalian sea, which, if on all sides shut in by lofty mountains, had been closed by some accident, they overflowed the whole of its surface, till the action of subterraneous fire opened a way for them. According to this view of the subject, then, the deluge of Deucalion was merely a local one; and it was not until the time of Ptolemy Philadelphus, when the Hebrew Scriptures began to be attached to them, that some features borrowed from the universal deluge of Noah have been incorporated into the story of the Thessalian flood. (Welcker, *Vril.,* p. 549, note.—Keightley’s *Mythology.*—Clint. *Pasti Fluminieni,* vol. 1, p. 43, note.) It is but fair to remark, however, that many modern writers regard the deluge of Deucalion as nothing else than a tradition of the great cataclysm of Noah, altered in some of its features, and placed by the Hellenes in the period which they assigned to Deucalion. He was regarded as the founder of their nation, and because his history is confounded with that of all the chiefs of the renewed nations. Such, in particular, is the opinion of the celebrated Cuvier. (Theory of the Earth, p. 145, seqq., Jameson’s *transl.*—Ovid, *Ed. Lemaire,* vol. 3, p. xiii., seqq.)

DIA, I. another name for the island of Naxos. (Plin., 4, 12.)—II. An island not far from the northern shore of Crete. (Diac. *dias*.)

DIAEÔRAS, I. a native of the island of Melos, and follower of Democritus. Having been sold as a captive in his youth, he was redeemed by Democritus, and trained up in the study of philosophy. He attached himself also to lyric poetry, and was much distinguished for his successes in this branch of the art. His name, however, has been transmitted with infamy to posterity, as that of an avowed advocate for the rejection of all religious beliefs. It is expressly asserted by some writers, that when, in a particular instance, he saw a persued person escape punishment, he publicly declared his disbelief of Divine Providence, and from that time spoke of the gods and all religious ceremonies with ridicule and contempt. He even attempted to lay open the sacred mysteries, and to dissuade the people from submitting to the rites of initiation. A price of six hundred talents was set upon his head, and he fled to Corinth, where he died. He lived about 416 years. (Cic., *N. D.,* 1, 23.—Id. *ib.,* 3, 37.—*Vit. Max.,* 1, 1, ext. 7.)—II. An athlete of Rhodes, who gained the prize in pugilism at the Olympic games, B.C. 462, Ol. 79. His victory was celebrated by Pindar, in an ode which is still extant (Olympiad 7), and which is said to have been inscribed in golden letters in the temple of the Lindian Minerva, at Rhodes. According to Pindar, he turned out three times, and won the games of Rhodes, four times at the Isthmian, and was successful also at the Nemean and other contests. Aulus Gellius (3, 15) informs us, that he saw his three sons crowned on the same day at the Olympic games, and expired through joy. Bayle (*Dict.,* s. v.) censures Pindar for prolix digression in the ode above referred to, and is censured in turn by Böckh: *Bayius, Pindaris quidem psalmus nutus, minoresque carmen, quod in digesta reprobaret, ita pulchre adournatur et, ut nihil miraveri quatt:* Böckh, *ad Pind.,* Ol., 7, vol. 3, p. 167.

DIASTÈGÖRAS, a festival at Sparta in honour of Diana Orthia. (Vid. Bomoneca.)

Diana (called by the Greeks *Auxereus, Artemis,* was the daughter of Jupiter and Latona, and sister of Apollo. She was the goddess of the chase; she also presided over the delivery of females. The sudden deaths of women were ascribed to her darts, as those of men were to the arrows of her brother, of whom she forms the exact counterpart. Diana was a spotless virgin; her chief joy was to speed like a Dorian maid over hills, followed by a train of nymphs, in pursuit of the flying game. (Cic., *Nat. deorum.* —Hymn. *ad Dian.*) Diana, while yet a child, as she sat on her father’s knee, besought him to grant her permission to lead a life of perpetual virginity, to get a bow and arrows formed by the Cyclopes, and to devote herself to the chase. She farther asked for sixty Ocean-nymphs as her companions, and twenty nymphs from Amnisus in Crete as her attendants. Of towns and cities she required not more than one, satisfied with the mountains, world, and terror would dare, but to aid women in the pains of childbirth. Her indulgent sire assented with a smile, and gave her not one, but thirty towns. She speeds to Crete, and thence to Ocean, and selects all her nymphs. On her return, she calls at Lipara on Vulcan and the Cyclopes, who immediately lay aside all their work to execute her orders. She then proceeds to Arcadia, where Pan, the chief god of that country, supplies her with a fleet of goats. (Dionysius.) She next met with the Nemean Lion, which, in the course of a year, was brought to her. He was then the first of the huntress-goddess. Five deer, larger than bulls, with horns of gold, fed on the banks of the dark-pebbled Anaurus, at the foot of that hill: of these the goddess, unaided by her dogs, caught four, which she reserved to draw her chariot: the fifth, destined by Juno for the last labour of Hercules, bounded across the Keladon and escaped.—The adventures of Diana were not numerous. She turned Actaeon into a stag for having unconsciously beheld her when bathing. Callisto was changed by her into a bear for a breach of maiden purity. Orion perished by her arrows. Along with her brother she destroyed the children of Niobe; and, in a fable later than Homer, she is said to have detained the Greecian fleet at Atulis, in consequence of Agamemnon’s having killed a hind which was sacred to her, and to have required the sacrifice of his daughter Iphigenia. The Alcides Actaeon and Iphigenia are subjects of marriage between Diana and Jupiter; and the latter goddess, changing her form into a hind, sprang out between the two brothers, who, aiming their darts at the supposed beast, by her art pierced each other, and died.—If Diana or Artemis were merely one of the names under which the moon was worshipped, it need not surprise us to find her identified with Selene, with Hecate, and even with Proserpina, the goddess of the under-world. As she were called the three-formed goddess, ruling as Selene in the sky, as Artemis or Diana on earth, as Hecate or Proserpina in Erebos. This will also give a very simple reason for her being the sister of women in labour. The moon was believed by the ancients to have great influence over growth in general (Plin., 18, 30.—*Id.,* 2, 99.—*Id.,* 10, 54.—*Plut., de Is. et Oz.,* 41.—*Eulogia, I.*); and as, moreover, a woman’s name was assigned to the moon it was natural to conceive that the moon-goddess presided over the birth of children. (Vid. Lucina.)—On the other hand, sudden deaths were ascribed to the influence of Apollo and Diana. In the former case, this will be an allusion to the *coup de soleil*; in the latter, to the well-known unhealthy influence of the moon, in producing fevers, &c. Diana was also confounded with the goddess worshipped on the Tarus in Crete; whose玖was stained with the blood of such unhappy strangers as were cast on that inhospitable shore. (Herod., 4, 103.—Eurip., *Iph. in Taur.*) She was identified, too, with the goddess of nature adored at Ephesus, whose symbolical figure, by its multitude of breasts and heads of animals hung around it, denoted the fecundity of nature. —Diana is generally repre-
sented as a healthy, strong, active maiden; handsomely, but with no gentleness of expression. She wears the Cretan hunting-shoes (tdovgêulcs), and has her garment tucked up for speed. On her back she bears a quiver, and in her hand a bow or a hunting-spear. She is usually attended by a hound. Walker considers the mode in which this goddess is represented as an illustration of what he terms the locomotive system. (Analytica, vol. iv, p. 420.) The name Artemis seems identical with 
dêovs, schole, vourpargyia, and therefore, sound and pure, with reference to the virginity of the goddess. Welcker, however, regards it as an epithet of the same nature with Opis and Nemesis, and says that it is òpî-òvqey. (Scheuen, p. 263.) The name Diana comes from Dia or Deiva (from the old Dian, which became Dianjana or Deiviana, and ultimately Diana. She was invoked as Deiva Iana in the Salian hymns. Varro makes Iana the same as Luma. (R. R. 1, 37.) Nigidius, however (Ap. Macrob., Sat., i, 9), makes Diana come from Iana with D prefixed; while Lanzi deduces the name from the early Greek form TH AN (i. e., ý avârca, "the queen"), just as Apollo is called òvâc. (Saggio di Lingua Etrusca, vol. 1, p. 43, not.)—Mythologists are divided respecting the original nature of Apollo and Diana. The question is, whether they are to be regarded as physical or moral beings. Both classes of disputants refer to the Homeric and Hesiodic poetry, where Apollo appears only as the god of prophecy, music, and archery, and Diana as his counterpart in this last office. Voss, therefore (with whom agree Wolf, Lobeck, Hermann, Vöckler, Nitzsch, and Müller), maintains such to have been the original conception of these deities; while Heyne, Buttmann, Weisler, Creuzer, Guigniaut, and others, think that Apollo and Diana were, in their original character, connected with the sun and moon. This latter hypothesis is undoubtedly the more correct one of the two. (Keightley's Mythology, p. 128, seqq.) The references, in the discussion just alluded to, are as follows: Voss, Mythol. Briefe, vol. 2, p. 385.—Id. ib., vol. 3, p. 53.—Wolf, ad II., i, 43.—Lobeck, Aglaoph., p. 79.—Hermann, über das Wesen, &c., p. 106, seqq.—Vöckler, Myth. der Isr., p. 309.—Heyne, ad II., i, 56.—Buttmann, Mythologie, vol. 1, p. 1, seqq.—Id. in Volcker, Philosoph. 19, 222.

DIAMON'T PROMONTORIUM, a promontory and town of Hispania Tarraconensis, on the Mediterranean coast, opposite the Pitiusae Insulae. The modern name of the town is Denia, and of the promontory, cape St. Martin. It was one of the three towns on this coast whose foundation was ascribed to the Massilians. It was called by them Artemisium, from the Greek name of Diana, who had a temple here which was much venerated. Sertorius made this the chief station for his fleet, in consequence of its favourable position for intercepting the vessels of the foe. Mela names the promontory Ferraria, without doubt from iron-works in its vicinity. (Strab., 159.—Mannert, Geogr., vol. 1, p. 423.—Mela, 2, 6.)

DIASIS, a festival in honour of Jupiter at Athens. In ancient Athens, the four tribes under the government of Erechthonius derived their names from four divinities, Jupiter, Minerva, Neptune, and Vulcan. They were termed, accordingly, Diad,"Ἄθρωος, Πενελώνες, and Πενελώς. The deities in question were the four great possessors of the Attic soil, and Jove was the first among them. At the outgoing of the month Anthesterion, all the citizens celebrated his festival under the name of Diasis; many, after the old fashion, offered him the fruits of their fields, while others sacrificed cattle. It was a state family-feast; the old idea of house and court not being forgotten in it. (Cruzer, Symbolik, vol. 2, p. 510.—Wachsmuth, Alterthumsk., vol. 4, p. 25, et 139.—Mitchell, ad Aristoph., Nub., 397.)

DIBIO, a city of Gaul, in the territory of the Lingones, and now Dijon. It was founded, according to some authorities, by the Emperor Aurelian, while others make him merely to have fortified it anew. (Greg. Turon., 3, 19.)

DICIRA, a town of Thrace in the territory of the Bistonics, and to the southeast of the Bistonian marsh. (Herod., 7, 109.—Stylax, p. 27.—Strabo, Epit., 7, p. 931.) Dr. Clarke, in his travels, mentions the Bistonian Heraon near it, which probably are to be identified with those of Dicea. Clarke’s Travels, vol. 8, p. 65.

DICÆARCHIA. Vide Puteoli.

DICÆARCHUS, I. a native of Messana in Sicily. He was a scholar of Aristotle’s, and is called a peripatetic philosopher by Cicero (Off., 2, 5); but, though he wrote some works on philosophical subjects, he seems to have devoted his attention principally to geography and statistics. His chief philosophical work was two dialogues “on the Soul,” each divided into three books, the one dialogue being supposed to have been held at Corinth, the other at Mytilene. In these he argued against the Platonic doctrines of the soul, and, indeed, altogether denied its existence. The greatest performance, however, of Dicæarchus was a treatise on the geography, politics, and manners of Greece, which he called Βίος Ἑλλάδος, “The Life of Greece” (a title which is generally limited by Virgil in his Vita Populi Romani, xi, 54). But the philosophical writings of Dicæarchus are lost. His geographical works have shared the same fate, except a few fragments. We have remaining one hundred and fifty verses of his Αναγραφὴ τῆς Ἑλλάδος, or “Description of Greece,” written in iambic trimeters; and also two fragments of the Βίος Ἑλλάδος, one containing a description of Beotia and Attica, and another an account of Mount Pelion. It has been conjectured that he has communicated to the citizens from Dicæarchus, in which he treatises on “Musical Contests,” “on the Dionysian Contests,” &c., are referred to, are drawn from his “Life of Greece,” and that the grammarians have named them by the title of the subdivision to which these subjects belonged, instead of the leading title of the book. (Nâke, Rhein. Mus. für 1833, p. 47.) Dicæarchus’s maps were extant in the time of Cicero (Ep. ad Att., 6, 2), but his geographical works in general were not to be depended upon. (Strab., 104.) Cicero was very fond of the writings of Dicæarchus, and speaks of him in terms of warm admiration. (Ep. ad Att., 2, 2.) In one of the ex tant fragments Dicæarchus quotes Posidippus, and must therefore have been alive in 289 B.C.—The remains of this writer are given in the Geography Græce Minores of Hudson, Gail, and Bernhardy. They were printed also (with the exception of the one respecting Pelon) in the collection of Stephens, Paris, 1530, and in the second volume of Gronovius’s Thesaurus Antiq. Græc. Marx has given a new edition of them in Creuzer’s Meletenmai, vol. 3, p. 174, seqq.—II. A grammarian, a pupil of Aristarchus. (Suid.)

DICTÆUS MONS. Vide Dicte.

DICTAMNUM PROMONTORIUM. Vide Dictynnam Promontorium.

DICTATOR, the highest extraordinary magistrate in the Roman republic. Through the name obviously contains the root "dict," it was doubted by the Roman writers, whether the title had reference to the mode of his nomination or his power. He was also called Prator Maximus, and Magister Populi, and in Greek διάκοιτος, or "double consul." After the expulsion of the kings, the consulship was established. The two consuls possessed the same power as the kings in the administration of the state and the command of the army, yet their authority was subject to some restrictions, and principally to the appeal that could be made from their decisions. The two consuls, possessing equal authority, often differed in their
views and opinions; a circumstance which necessarily caused jealousy and disunion, particularly in the command of the army when on active service. In extraordinary emergencies, therefore, the republic required a single magistrate, invested with ample authority to act without the consent of the consuls. The creation of the dictatorship. The first dictator was created about 253 B.C., or 501 B.C. (Livy, 2, 18.) The dictator united in himself the power of the two consuls; and the authority of all the other magistrates, except that of the tribunes, ceased as soon as he was appointed. He possessed the whole administrative power of the state, and the command of the army without any restrictions. (Die Cas., according to Zonaras, 7, 19, when he referred to a lost book of Dio is given.—Dion. Hal., 5, 70, segg.) He had the power of life and death, and there was no appeal from his decision. This power, however, continued only for the space of six months, even although the business for which he had been created was not finished, and was never prolonged beyond that time except in extreme necessity, as in the case of Camillus, for Sylla and Caesar usurped their perpetual dictatorship in this way. Sometimes (such as Cincinnatus) he had been called to his duty by an appeal of the people for the restoration of civil order. The dictator usually resigned his command whenever he had effected the business for which he had been created: thus, Q. Cincinnatus and M. Emilius abdicated the dictatorship on the 16th day; Q. Servilius on the 8th day. Another check on the dictator's power was, that he could lay out none of the public money without the authority of the senate or the order of the people. He could not, moreover, leave Italy; a law which was only once violated, and that on account of the most urgent necessity, as, for example, in the first Punic war, when a dictator commanded in Sicily. (Livy, Epit., 19.) Neither was he allowed to ride on horseback without the permission of the people. The principal check, however, against a dictator's abuse of power was, that he might be called to an account for his conduct when he resigned his office. The dictator was not created by the suffrages of the people, as the other magistrates, but one of the consuls, by order of the senate, named as dictator whatever person of consular dignity he thought proper; and this he did, after having taken the auspices, usually in the dead of night. Sometimes the senate itself appointed the dictator, and in some instances he was elected by the comitia. The dictator was preceded by twenty-four lictors, with the fasces and securia, or, in other words, by as many as the two consuls together. The writing on their rods and the signet rings on the fasces which had been represented as the emblem of a king, as we read in the epistle of Irenaeus to his people, was, according to Adam, a sort of prescription. The eight lictors, as Adam, asserts, that the dictator was attended by twenty-four lictors with the fasces and securia even in the city. In this they appear to have erred. Plutarch, indeed, tells us, in his life of Fabius, that the dictator was attended by twenty-four lictors; but, as Justus Lipsius observes, this statement is contradicted by higher authority; for we are told in the epistles of the 89th book of Livy, that Sylla, in assuming to himself twen- ty-four lictors, guard that he might run no danger from the Senate, and that he was himself the chief one: "Sylla, dictator factus, quo nemo quidem unquam fecerat, cum fasces viginti quattuor processit."—At first the dictator was taken only from the patri- cian order, but afterward (B.C. 356) from the plebeian order. After his appointment he nominated the master of the horse (Magister Equitum), who commanded under him. Sometimes, however, a master of the horse who was not a patrician. The dictatorship was then also called "DictatorFactus," or, as Dio says, "Sylla, factus, quo nemo quidem unquam fecerat."

DICTAT.  

DIC.
DID

DID

ry of that contest. This work, according to the account that has come down to us, was discovered in the reign of Nero, in a tomb near Crossus, which was laid open by an earthquake. It was written in Phenician, and translated into Greek by one Euipraxis or Praxias. The Greek translation has not reached our times, but we have remaining the Latin version of Q. Septimus, who lived in the time of the Emperor Dioclesian, and not in that of Constantine. Scioippius (Paradox. Lit. Ep., 5) makes him to have been a contemporary of Cornelius Nepos, an assumption which the style of Septimus most clearly disproves. The work of Septimus contains the first five books, with an abridgment of the remainder. The Phenician text of this story has been very ably refuted by Perizonius, in his "Dissertatio de Historia Belli Trojanj, quae Dictyos Cretenis nomen praefat, Graca." The real author was Euipraxis or Praxias, and the whole affair was got up to impose upon Nero, who was at that time on a visit to Achaia. What added to the deception was, that an earthquake did actually take place in Crete at this same period. (Perizon., Diss., 5.) Although this work does not merit the confidence which its fabrick would naturally give it, it is still not without interest for those who pursue the study of antiquity, since it contains many things derived from books which no longer exist. The best edition is that of Smids, Amst., 1702, in 4to and 8vo, with the preliminary dissertation of Perizonius. (Fabric., Bibl. Lat., 1, 6, p. 111.—Bähr. Gesch. Rom. Lit., vol. 1, p. 465, seq.)—II. A brother of Polydectes, king of Seriphus, made monarch of the island, in place of the latter, by Persius. (Virg. Danæ.) Didius Lex, de Sumpitibis, by Didius, A U.C. 610. It limited the expense of entertainments, and the number of guests, and ordained that the sumptuary laws should be extended to all the Italians, and that not only the master of the feast, but also the guests, should incur a penalty for their offence. (Macrobi., Sat., 2, 13.) Didius Julianus, of a family originally from Mediolanum (Milan), and grandson of Salvius Julianus, a celebrated jurist, was born about A.D. 133. He was educated by Domitia Lucilla, the mother of Marcus Aurelius. Didius soon rose to important offices, was successively questor, pretor, and governor of Belgic Gaul, and, having defeated the Chauci, obtained the consulship. He was afterward sent as governor to Dalmatia, and next to Germania Inferior. Under Commodus he was governor of Bithynia: on his return to Rome he showed a luxury and dissipation, any loading enormously rich. After the murder of Pertinax, A.D. 193, the pretorians having put up the empire at auction, Didius proceeded to their camp, and bid against Sulpicius, the father-in-law of Pertinax, who was to make his own bargain with the soldiers. Didius having bid highest, and having been proclaimed, was taken by the soldiers into Rome. The senate, with its usual servility, acknowledged him emperor, but the people repudiated him, and deserted him, and indeed detested him with abuse and imprecations in the circus, when he assisted at the solemn games which were customary on the occasion of a new reign. He is said to have borne these insults with patience, and to have behaved altogether with great moderation during his short reign. Three generals, at the head of their respective legions, refused to acknowledge the nomination of the pretorians; Pescennius Niger, who commanded in the East; Septimius Severus in Illyricum; and Claudio Albinus in Britain. Severus being proclaimed Augustus by his troops, marched upon Rome, and found no opposition upon the road, as the towns and garrisons all declared for him. The pretorians themselves forsook Didius, and the senate readily pronounced his abdication and proclaimed Severus emperor. A party of soldiers making their way into the palace, and dis- regarding the entreaties of Didius, who offered to renounce the empire, cut off his head. He had reigned only sixty-six days. (Spartianus, Vit. Did. Jul.—Dio Cass., Epit. Lib., 73.) Didius Elissa, daughter of Belus II, king of Tyre, and sister of Pygmalion. According to Justin (18, 5), the Tyrians, on the death of Belus, gave the kingdom to Pygmalion, though still quite young, and Didio married Acerbas, her maternal uncle, who was priest of Hercules, an office next to that of king. Acerbas was possessed of great treasures, which, dreading Pygmalion's covetous disposition when the latter had attained to manhood, he deemed it prudent to conceal. Pygmalion, in order to obtain this wealth, assassinated him while officiating at the altar, and Didio, unwilling to remain in a spot which served but to renew her grief, quitted her brother's kingdom. The tyrant, to prevent her final escape with the treasures of Acerbas, despatched messengers to solicit her to return to Tyre. Dido apparently assented, but took the precaution, when embarking, to place in the vessel, in the presence of those whom Pygmalion had sent to her, several bales filled with sand, which she told them contained the treasures. When they were out at sea, she compelled her attendants to throw these bales into the sea; and then representing to those who had come from the monarch, the instant death that awaited them if they presented themselves before him without the expected treasures, and that a regard for their own safety should induce them to become her companions in search of some settlement, in which they might find shelter from the persecution of Pyg- malion, she prevailed upon them to follow her fortune. Large numbers of the chief men (senatorum agmina), with whom the time had previously been agreed upon, thereupon joined her party. She sailed first to Cyprus, where the priest of Jupiter and his whole family, in obedience to the will of the gods, added themselves to the expedition. Taking these along with her, and also eighty Cyprian maidens, whom she carried off from the shore of the island, she sailed in quest of new settlements, and landed on the coast of Africa. Not being allowed by the inhabitants a more extensive grant of land than what could be covered with a bull's hide, Dido evaded this jealous concession, by cutting the hide into small slips, and enclosing with them a large portion of ground. The space thus enclosed was hence called Byrsa, from the Greek Bipoa, "a hide." (Vit., however, Byrrha.) Here the first settlement was made, and as the city gradually increased in size and Car- thage became the capital of the colony. The Cumaean story, which is not so extensively known, is that the Phoenician colonist had established itself, Ibarus, king of Mauritania, sought the hand of Dido in marriage, and threatened war in case of refusal. Her subjects thereupon importing her to save them from this formidable enemy, she demanded three months for consideration. During this interval she caused a large pile to be erected, as if for the purpose of offering a propitiatory sacrifice to the gods of those who had dared to offer war upon her; and when she was informed that it was revealed to her by the shade of Sichaeus, who at the same time discovered to her the spot where his treasures were concealed, and urged her to seek out her own safety in flight. Virgil sanctions the story, that the Carthaginians, when making a foundation for their city, dug up the head of a horse, which was regarded as a presage of future greatness; a story which Bohart
Dido

considers to have arisen from the word Cacabe (one of the names of Carthage), signifying also, in Punic, "woman of wedlock," or "woman of the house of Tyndar" (7843). But the point on which the Mantuan poet and the historians most essentially differ, is the manner of Dido's death. Virgil attributes this to grief on her being abandoned by Æneas, whom she had hospitably received when wrecked on her coast. Opinions vary also relative to the time of Dido's death; but it is generally agreed, that she lived some centuries later than the Trojan hero. Her subjects, after her death, paid her divine honours — a question relative to Dido is discussed by Heyne in the first Excur. us to the fourth Æneid. He divides the earlier history of Carthage into three epochs: the first commences fifty years before the taking of Troy; the second, 173 years after the former; and the third, 190 years still later. At the commencement of this third epoch he makes Dido to have flourished, and to have improved, not however, to have founded, the city, which, in fact, existed long before.—On the episode of Dido, as introduced by Virgil into his Æneid, Dunlop (History Rom. Lit., vol. 3, p. 167) has the following remarks: "Our poet has just so far availed himself of ancient traditions as to give probability to his narration, and to support it by the præsa fides facto. He wrote, however, at such a distance of time from the events which formed the groundwork of his poem, and the events themselves were so obscure, that he could depend upon few, if any, authorities in determining it appears from chronology, that Dido lived many hundred years after the Trojan war; but the point was one of obscure antiquity, known perhaps to few readers, and not very precisely ascertained. Hence, so far was the violence offered to chronology from revolting his countrymen, that Ovid, who was so knowing in ancient histories and fables, wrote an heroic epicle as addressed by Dido to Æneas."—In giving the narrative of Dido, he brings in an etymology of the name, as assigned by some of the ancient writers. The derivation, however, appears to be an erroneous one. Dido neither denotes "the heroine," as Servius maintains (ad Æn., 4, 36), and as we have already given it: nor "the man-slayer" (ἀνθροφόνος), as Eustathius pretends (compare Bochart, col. 746); nor "the wanderer" (τηλαόντις), as we find it stated in the Etymologicum Magnum. The name Dido means "she who gives." Hence the exclamation of the reference be to Baal or to her husband: "ante delicios ejus, sive Baalis, sive maritii." (Gesenius, Phan. Mon., p. 406.) The other appellation, Elisaa (more correctly, perhaps, Eliza), means "the exulting" or "joyous one" (Gesen., l. c.), and not, as Bochart makes it, "the divine maiden." (Bochart, Geogr. Sacr., col. 472.)

Didymus, an artist, mentioned in Virgil. (Æn., 5, 359.) The name, of course, is imaginary.

Didymus, a famous grammarian, the son of a seller of fish at Alexandria, was born in the consilium of Antonius and Cicero, B.C. 63, and flourished in the reign of Augustus. Macrobius calls him the greatest grammarian of his own or any other time. (Sat., 5, 22.) According to Athenæus (4, p. 139, c.), he published 3500 volumes, and had written so much that he was called "the forgetter of books" (διαλογιστής), for his works were so numerous, that he had forgotten his own name. He was also called "the man with brazen bowls" (γαλακτοφάγος), from his unwearied industry. To judge from the specimens of his writings given by Athenæus, we need not much regret the loss of them. His criticisms were, according to Suidas, of the Aristarchean school. He wrote, amongst other things, an exposition of the Agamemnon of Ion ( Athen., 11, p. 418, d.); and also of the plays of Phrynichus (Id., 9, p. 371, f.); several treatises against Juba, king of Mauretania (Suid., s. v. Ἰβαον; a book on the corruption of diction ( Athen., 9, p. 368, l.), &c. The Scholia Minor a Homer have been attributed to him, but incorrectly, for Didymus himself is pronounced in the collection of proverbs extant under the name of Zenobius, was partly taken from a previous collection made by Didymus; and about sixty fragments of his fifteen books on agriculture are preserved in the collection of Cassianus Bassus.

Dier, a name given to Jupiter as "the Father of Light." (Vid. Jupiter.)

Diggita, a small stream, watering the vale of Usitaca, near the Tiburian villa of Horace. It is celebrated by the poet for the refreshing coolness of its waters, and the beautiful scenery along its banks. The modern name is La Licenza. (Horat., Epit., 1, 18, 104.)

Dinant, one of the ten Greek orators, for the explanation of whose orations Harpocrates compiled his lexicon. He was a Corinthian by birth, but settled at Athens, and became intimate with Theophrastus and Demetrius Phalereus. Dionysus of Halicarnassus fixes his birth at B.C. 361. The time of his highest reputation was after the death of Alexander, when Demosthenes and other great orators were dead or banished. He seems to have got his living by writing speeches for those who were in want of them, and he carried on apparently a profitable business in this way. Having always been a friend to the aristocratical party, he was involved in a charge of conspiracy against the deposed Pausanias. Athens was then in Chalcis in Eubea. He was allowed to return to Athens by Demetrius Poliorcetes, after an absence of fifteen years. On his return, Dinarchus, who had brought all his money back with him, lodged with one Proxenus, an Athenian, a friend of his, who, however, if the story be true, proved to be a knave, and robbed the old man of his money, or, at least, colluded with the thieves. Dinarchus brought an action against him, and, for the first time in his life, in a court of justice. The charge against Proxenus, which is drawn up with a kind of legal formality, is preserved by Dionysius of Halicarnassus. Of the numerous orations of Dinarchus, only three remain, and these are not entitled to any very high praise. One of them is against Demosthenes, touching the affair of Harpalus. Dionysius passes rather a severe judgment on Dinarchus. He considers him merely an imitator of Lyssias, H. 2127, etc., and so of the Athenians, and though an orator to a certain extent, in copying the several styles of these three great orators, yet failing, as all copyists from models must fail, in that natural expression and charm which are the characteristics of originality. The extant orations of Dinarchus are found in the usual collections of the Attic orators. (Dion. Hal., de Dinarch. Jud.—Op., ed. Reiske, vol. 5, p. 529, seqq.)

Dindymus of Orus, I. a mountain of Galatia in Asia Minor, placed by Ptolemy southeast of Pessinus, while Strabo says that the city lay upon it. The latter writer names it Dindymus, which is generally followed by subsequent geographers. Mannert, however, considers the true name to have been Dindymus, from the Greek δίδυμος (twins), and supposes this appellation to have been given to it from its double summit. One of these summits had the name of Agistis; and on this, according to Mannert, the poet makes Dindymus to have been at the northern extremity of a chain of mountains known by the name of Olympus, not to be confounded, however, with the mountain named Olympus near Prusa in Bithynia, nor with another Olympus in Galatia, on which the Tolstoioboi collected their forces to resist the proconsul Manlius. The whole march of the Roman army, as described by Livy, shows that this last-mentioned mountain lay about ten geographical miles northeast of Ancyra. The goddess Cybele was worshipped at Pessinus and on Mount Dindymus, and hence was
called Lindymene. (Mannert, Anc. Geogr., vol. 6, 3, 63.)—II. A mountain in the island of Cyzicus, and overhanging the city. It had on its summit a temple, said to have been erected by the Argonauts in honour of Cybele. (Strabo, 575.)

DNIA, a town of Gallia Narbonensis, and the capital of the Bodionici. Its name is said to be of Celtic origin, being derived from *d in, water, and *ta, hot, so called from the thermal waters at the distance of a quarter of a league from it. It is called Digne. (Compare Mannert, Geogr., vol. 2, p. 106.)

DINOCRATES, a very celebrated Macedonian architect, who offered to cut Mount Athos into a statue of Alexander. (Vid. Athos, at the close of the article.)

The monarch took him to Egypt, and employed him in several works of art. Ptolemy Philadelphus directed him to construct a temple for his queen Arsinoë, after her death; and the intention was to have the ceiling of leadstone, and the statue of iron, in order that the latter might appear to be suspended in the air. The death of the artist himself frustrated the undertaking. (Pliny, 34, 14.)

DINOCRATES, a famous mathematician of the Platonic school, the brother of Menecrates, and disciple of Plato. Pursuing the steps of his brother, who amplified the theory of the conic sections, Dinocrates is said to have made many mathematical discoveries; but he is particularly distinguished as the inventor of the conies. Montesquieu has observed, that there is some reason for ascribing the original invention of this curve to Hippasia of Elea, an ingenious philosopher and geometer contemporary with Socrates. (Proclus, Comment. in Eucl., 2, 4.—Pappus, Coll. Math., 4, prop. 25.)

DIOCLEA, a town of Dalmatia, the birthplace, according to some, of the Emperor Dioclesian. Its ruins are near the modern city of Split.

DIOCITIA, a district of Epirus, a city of Macedonia, called so in honour of Dioclesian, and supposed by Mannert (Geogr., vol. 7, p. 479) to have been identical with Pella.

DIOCLETIANUS, CAIUS VALERIUS JOVIVS, a celebrated Roman emperor, born of an obscure family in Dalmatia, at the town of Dioclea or Doclea, from which town he derived his first name, which was lengthened by afterward leaving to the more harmonious Greek form of Diocles and, at length, after his accession to the empire, to the Roman form of Diocletianus. He likewise, on this occasion, assumed the patrician name of Valerius. Some, however, make him to have been born at Salona. His birth year also is differently given. The common account says 245 A.D., but other statements make him ten years older. He was first a common soldier, and by merit and success gradually rose to rank. At the commencement of his career, and while he occupied some inferior post, it is said that a Drusianus, in whose house he lodged, upbraided him with covetousness, to whom he jocously replied, "I shall be more generous when I am emperor." "You are joking," replied the Drusianus; "but I tell you, in good earnest, that you will attain to the empire after you have killed a boar." This circumstance is said to have given rise to the city of Tongres, and present bishopric of Liege.—Diocletian served in Gaul, in Mesia, under Probus, and was present at the campaign against the Persians, when Carus perished in so mysterious a manner. He commanded the household or imperial body-guard when young Numerianus, the son of Carus, was secretly put to death by Aper, his father-in-law, while travelling in a close litter on account of illness, on the return of the army from Persia. The death of Numerianus being discovered, after several days, by the soldiers, near Chalecedon, they arrested Aper, and proclaimed Dioclesian emperor, who, addressing the army from his tribunal in the camp, protested his innocence of the death of Numerianus, and then, upbraiding Aper for the crime, plunged his sword into his body. The new emperor observed to a friend that he had now "killed the boar," punning on the word Aper, which means a boar, and alluding to the prediction of the Druidess. Dioclesian, in fact, self-composed and strong-minded in other respects, was all his life an anxious believer in divination, which superstition led him probably to inflict summary punishment upon Aper with his iron thumbs. He then, with a large army, marched into Nicomedia in September, 284 A.D., and afterward chose this town for his favourite residence. Carinus, the other son of Carus, having collected a force to oppose Dioclesian, the two armies met at Marginum in Moesia, where the soldiers of Carinus had the advantage at first, but Carinus himself having been slain by one of his own officers, both armies joined in acknowledging Dioclesian emperor, A.D. 285. Dioclesian was generous after his victory, and, contrary to the common practice, there were no executions, proscriptions, or confiscations of property; he even retained most of the officers of Carinus in their places. Dioclesian, on assuming the imperial power, found the empire assailed in various quarters, but his talents and energy soon succeeded in counteracting these evils. In the year 286, he chose his old friend Maximian, a brave, but rude and uncultivated soldier, as his colleague in the empire, and it is to his influence that we owe the more faithful adherence to Dioclesian, and willing to follow his advice. Maximian was stationed in Gaul, and on the German frontier, to repel invasion; Dioclesian resided chiefly in the East, to watch the Persians, though he appears to have visited Rome in the early part of his reign. After the lapse of a few years, Dioclesian thought it necessary, in consequence of invasions and revolts in different parts of the empire, to increase the number of his armies; and in the 1st year of A.D. 292, according to some, 291, he appointed Galerius a Caesar, and Maximian, at the same time, adopted, on his part, Constantius Chlorus. The two Caesars repudiated their respective wives; Galerius married Valeria, Dioclesian's daughter, and Constantius married Theodora, daughter of Maximian. The two Caesars remained subordinate to the two Augusti, though each of the four was intrusted with the administration of a part of the empire. The first division of provinces was made; Egypt; Maximian had Italy and Africa; Galerius, Thrace and Illyricum; and Constantius, Gaul and Spain. But it was rather an administrative than a political division. At the head of the edicts of each prince were put the names of all four, beginning with that of Dioclesian. Dioclesian resorted to this arrangement probably as much for reasons of internal as of external policy. By fixing upon four colleagues, one in each of the great divisions of the empire, each having his army, and all mutually checking one another, Dioclesian put a stop to military insolence and anarchy. The empire was no longer put up for sale; this immediate and intolerable evil was effectually cured, though another danger remained, that of disputes and wars between the various sharers of the imperial power; still it was a small danger, and one which did not manifest itself so long as Dioclesian remained at the helm. Writers have been very free of their censure upon this emperor, for parcelling, as they call it, the empire; but this was the only chance there was of preventing its crumbling to pieces. Italy and Rome, in particular, lost by the change: they no longer monopolized the wealth and power of the world; but the other provinces gained by this. — The new Caesars justified Dioclesian's expectations.成功的 personnel were being chosen in different parts of the empire, and though Galerius at first met with a defeat from Narse, King of Persia, yet, in the following year, he gave the Persians a terrible overthrow. Nar-
DIOCLETIANUS. DIO

... but whether the firmness of Diocletian, or the skill of his followers, or the weakness of the others, contributed the most to his success, cannot be decided. In 305 he abdicated, and wrote to his old colleague to induce him to do the same. "Were you but to come to Salona," answered Diocletian, "and see the vegetables which I raise in my garden with my own hands, you would no longer talk to me of empire." Diocletian died in 313, surviving his abdication about nine years. — He ranks among the most distinguished emperors of Rome; his reign of twenty-seven years, being upon the whole, prosperous for the empire and creative to the empire, was a most desolating one. He was severe, but not wantonly cruel, and we ought to remember that mercy was not a Roman virtue. His conduct after his abdication shows that his was no common mind. The chief charge against him is his haughtiness in introducing the Oriental ceremonial of prostration into the Roman court. The Christian writers, and especially Lactantius, have spoken unfavourably of him; but Lactantius cannot be implicitly trusted. (Eutrop. 9, 19, seq.; Aurel. Vict. 39, 14. Vopisc. Carin. 15. Paneg. Maxim. Lactant., de mort. persec. 8, et 18., Euseb., Vit. Const. c. 18, &c.)

Diodorus, an historian, surnamed Siculus, because born at Agrigentum in Sicily, and the contemporary of Julius Caesar and Augustus. His principal data for the events of his life are derived from his own books, and from the works of his contemporaries. He was of Republican sentiment. He visited Italy, and repaired to Rome, where he published a general history, in forty books, under the title of Bibliotheca historica, or Historical Library. To this labour he consecrated thirty years of his life. The history comprehended a period of 1138 years, besides the time preceding the Trojan war, and was carried down to the end of Caesar's Gallic war. His work was written after the death of Caesar; and the Roman war was the last event treated of. He gives a sketch of the history anterior to the war of Troy, and of these, the three former to the antiquities of barbarian states, the three latter to the archaology of the Greeks. But the historian, though treating of the fabulous history of the barbarians in the first three books, enters into an account of their manners and usages, and carries down the history of these nations to a point of time posterior to the Trojan war; thus, in respect of the former, he has a history which is nearly contemporary with the events narrated. These books, as also the history of the war of Troy, are defective, and are for the most part confused and garbled. They are the earliest account of these nations which were to know the power of the Greek; but the names of the kings are not given; and the order of the events is often incorrect. These books were published at Rome, and are among the materials used by Eusebius, John Malalas, Synkellos, and other writers of the lower empire, who have cited them in the course of their works; but, above all, to the authors of the "Extracts respecting Empresses," and of the "Extracts respecting Virtues and Victories." We are indebted to the translator of Eusebius, who has inserted in his Myriobiblon extracts from several of the books, from the 31st to the 33d, and from the 36th to the 38th and 40th. Important additions have also recently been made from MSS. in the Vatican Library. (As regards the sources whence Diodorus drew the materials of his work, consult the dissertation of Heyne, "De fontibus hist. Diodort," prefixed to the Latin edition of the work.)

A great advantage possessed by Diodorus over most of the ancient historians, is his indicating the order of time: though it must be acknowledged, at the same time, that his chronology offers occasional difficulties, and often needs reducing. Diodorus, who wrote at
Rome, and at a period when the dominion of this city extended over the greatest part of the civilized world, arranges his narrative in accordance with the Roman calendar and consular fasti: he frequently adds the names of the Athenian archons that mention contemporaneous. Now, at the time when he wrote, the consuls entered on their office on the first of January, whereas, after the adoption of the cycle of Meton, B.C. 402, the Athenian archons commenced their terms about the middle of the year. DioDorus, however, limits himself to the mention of those archons that entered upon their duties in the course of the consular year, which forms the basis of his chronology; thus, the events which took place during the first six months of a year, ought to be referred to the archon mentioned by him in the preceding year. Nor is this all; the duration of the consulship was that of the Roman year, which, from a very early period, was made to consist of 365 days; while the duration of the archonship remained for a long time subject to the irregularity of the Athenian calendar and years, the latter being sometimes 365 days, at other times 364. Thus, we find, that the archons prevented the events of 364 years, of which the names of the consuls also indicated by him fully agree; whereas, by the name of the archon, he makes it to be the following year, the 1st of the 114th Olympiad. (Compare Diod. Sic., vol. 1, 113. —Annales des Lagides, par M. Champaignon Pigeac, vol. I, p. 264.) We must carefully attend to this point in remodelling the chronology of DioDorus, when we compare his accounts of the same events in accordance with the work itself, and the merits of the author, the most discrepant opinions have been entertained by modern writers. The Spanish scholar Vives called him a mere trifer; and Jean Bodin accused him, in no sparing terms, of ignorance and carelessness; while, on the other hand, he has been defended and extolled by many eminent critics as an accurate and able writer. Among the latter is Dionysius of Halicarnassus, who considered him to have been the too great extent of his work. It was not possible for any man living in the time of Augustus to write an unexceptionable universal history. It is not, then, a matter of surprise, that DioDorus, who does not appear to have been a man of superior abilities, should have fallen into a number of particular errors, and should have placed too much reliance on authorities sometimes far from trustworthy. Wherever he speaks from his own knowledge, however, he, perhaps, generally, could rely upon; but when he is indebted to others, from the writings of others, he has shown little judgment in the selection, and has, in many cases, proved himself incapable of discriminating between the fabulous and the true. We must not blame him for having given a Greek colouring to the manners of other nations which he describes, for it was the common practice of Greek writers to do so, and he has not erred so much in this respect only a simple truth. DioDorus has been indebted to him, moreover, for many particulars which, but for him, we should never have known; and we must regret that we have lost the last, and probably the most valuable, portion of his works, as even by the fragments of them which remain we are enabled, in many places, to correct the errors of Livy. The style of DioDorus, though not very pure or elegant, is sufficiently perspicuous, and presents but few difficulties. The MSS. of his work, however, is in a state of great confusion, and is principally the case. (Schell, Hist. Lit. Gr., vol. 4, p. 77, seq. —Niebuhr, Röm. Gesch., vol. 3, p. 190, note 297.) The best edition of DioDorus is that of Weseling, Amat., 2 vols. folio, 1746; reprinted at the Bipont press in 11 vols. 8vo, 1793, with dissertations by Heyne, and notes and disquisitions by Eyring. —II. A native of Caria, and disciple of the Megarian school. He was a great adept in that species of verbal combat which prevailed among the philosophers of his sect. It is said that a question was proposed to him in the presence of Ptolemy Soter, by Stilpo, one of his fraternity, which he required time to answer, and on this account he was ridiculed by Ptolemy, and denounced Cicero. Certified at this defeat, he wrote a book on the question, but nevertheless died of vexation. He is the reputed author of the famous sophism against motion. "If any body be moved, it is moved either in the place where it is, or in a place where it is not, for nothing can act or suffer where it is not, and therefore there is no such thing as motion." DioDorus was suitably rewarded for this brilliant discovery; having dislocated his shoulder, the surgeon who was sent for kept him for some time in torture, while he proved from the philosopher's own mode of reasoning that the bone could not have moved out of its place. (Schell, Hist. Lit. Gr., vol. 3, p. 253.)—III. A peripatetic philosopher, with whom the uninterrupted succession of the peripatetic school terminated. He was a native of Tyre, and a pupil of Critolaus. Mention is often made of him in the selections of Stobaeus, and also in the works of Cicero. The son of an honest man, according to DioDorus, was to live in a becoming manner, free from toil and care, τό αύριονμεγάλο καὶ κάλλος ζωήν, or, vacare omnium molestia cum honestate, as Cicero expresses it. (Acad., 2, 42.) —IV. An orator and epigrammatic poet, a native of Sardis. He was married Zonias (Ζωνίας). He fought in Asia, and was contemporaneous with Mithradates the Great, against whom he was charged with conspiring. He defended himself in the manner of Jacobs, Catal. Poet. Epigram. in Anthol., vol. 3, p. 883. —Strab., 627.) V. Another native of Sardis, who wrote historical works, odes, and epigrams. Strabo speaks of him as subsequent to the former, and a contemporary and friend of his own. (Strab., 627.) We have one of his epigrams remaining. (Jacobs, l. c.) —DioGenes, I. A celebrated Cynic philosopher of Sini mars. His name, who was a banker, was convicted of debasing the public coin, and was obliged to leave the country, or, according to another account, his father and himself were charged with this offence, and the former was thrown into prison, while the son escaped from the city and came to Athens. Here he attached himself, as a disciple, to Antisthenes, who was at the head of the Cynics. Antisthenes at first refused to admit him into his house, and even struck him with a rod; but Digenes pressed on, and said, Strike me, Antisthenes, but never shall you find a stick sufficiently hard to remove me from your presence, while you speak anything worth hearing. The philosopher was so much pleased with this reply, that he at once admitted him among his scholars. DioGenes perfectly adopted the principles and character of his master. Renouncing every other object of ambition, he determined to distinguish himself by his contempt of wealth and pleasures, and by his constant struggle against luxury. He wore a coarse cloak; carried a wallet and a staff; made the porticoes and other public places his habitation; and depended upon casual contributions for his daily bread. A friend, whom he had desired to procure him a cell, not executing his order so soon as was expected, he took up his abode in a tub or large vessel in the Metrour. It is probable, however, that this was only a temporary expression of his contempt, and that he did not make a tub the settled place of his residence. This famous tub is indeed celebrated by Juvenal; it is also ridiculed by Lucian, and mentioned by Seneca. But no notice is taken of so singular a circumstance by other ancient writers who have mentioned this philosopher; not even by Epictetus, who discourses at large concerning DioGenes, and relates many particulars respecting his manner of life. It may therefore be questioned whether this whole story is not to be ranked among the nu
merous tales which have been invented to expose the sect of the Cynics to ridicule. It cannot be doubted, however, that Diogenes practised the most hardy self-control and the most rigid abstinence; exposing himself to the utmost extremes of heat and cold, and living upon the simplest diet, casually supplied by the hand of charity. In his old age, sailing to Ægina, he was taken by pirates and carried to Crete, where he was exposed to sale in the public market. When the purchasers asked him what he could do, he said, I can govern men; therefore sell me to one who wants a master. Xeniates, a wealthy Corinthian, happening at that instant to pass by, was struck with the singularity of his reply, and purchased him. On their arrival at Corinth, Xeniates gave him his freedom, and committed to him the education of his children and the direction of his domestic concerns. The Cynics execrated this trust with so much judgment and fidelity, that Xeniates used to say that the gods had sent a good genius to his house. During his residence at Corinth, the interview between him and Alexander is said to have taken place. Plutarch relates, that Alexander, when at Corinth, receiving the congratulations of all ranks on being appointed to command the army of the Greeks against the Persians, missed Diogenes among the number, with whose character he was not acquainted. Curious to see one who had no regard for his person, and of the most rigid independence of spirit, Alexander went in search of him, and found him sitting in his tub in the sun. "I am Alexander the Great," said the monarch; "and I am Diogenes the Cynic," replied the philosopher. Alexander then requested that he would inform him what service he could render him: "Stand from between me and the sun," said the Cynic. Alexander, struck with the reply, said to his friends who were ridiculing the whimsical singularity of the philosopher, "If I were not Alexander, I would wish to be Diogenes." This story is too good to be omitted, but there are several circumstances which in some degree diminish its credibility. It supposes Diogenes to have lived in his tub at Corinth, whereas it appears that he lived there in the house of Xeniates, and that, if he ever dwelt in a tub, he left it behind him at Athens. Alexander, moreover, was at this time scarcely 20 years old, and certainly was no stepford of Diogenes. He did not receive this title till his Persian and Indian expedition, after which he never returned to Greece; yet the whole transaction supposes him elated with the pride of conquest. Diogenes, probably, was visited by Alexander, when the latter had gathered his general assembly of the Greeks at Corinth, and was received by him with rudeness and incivility, which may have given rise to the whole story. The philosopher at this time would be about 70 years of age. Various accounts are given concerning the manner and time of his death. It seems most probable that he died at Corinth, of mere decay, in the 90th year of his age, and in the 114th Olympiad. His friends contended for the honour of defraying the expenses of his funeral; but the magistrates settled the dispute by ordering him an interment at the public expense. A column of Parian marble, terminated by a figure of a dog, was raised over his tomb. His fellow townsman of Sinope also erected brazen statues in memory of the philosopher. Diogenes left behind him no system of philosophy. After the example of his master, he was more attentive to practical than theoretical wisdom. The following are a few of the particular opinions ascribed to him. He thought exercise was indispensable, and able to effect anything; that there were two kinds of exercise, one of the mind, the other of the body, and that the former was more powerful, and produced a greater effect. By the cultivation of the mind, he did not mean the prosecution of any science, or the acquirement of any mental accomplishment; all such things he considered useless; but he intended such a cultivation of the mind as might serve to bring it into a healthy and virtuous state, and produce upon it an effect analogous to that which exercise produces upon the body. He adopted Plato's doctrine, that there should be a community of wives and children; and he held, with the Dorian lawgivers, that order (κατάφυς) was the basis of civil government.—The freedom of remark in which Diogenes indulged, and which spared neither the rich and powerful, nor even the religious superstitions of the age, gave great offence; and the consequence was, that in his private life he suffered much obloquy, and was made the subject of ludicrous and disgraceful calumny. It is wholly incredible, that a man who is universally celebrated for his sobriety and contempt of pleasure, and who, for his vehement indignation against vice, and his bold attempts to reform the age in which he lived, has been represented by some of the most eminent philosophers as one endowed with divine wisdom, should have been capable of committing the grossest indecencies. The tale which is related of him and the courteous Lais is wholly inconsistent with chronology, for Lais must have been fourscore years old, and Diogenes seventy, when the circumstance is related to have taken place. The truth is, we are chiefly indebted for these stories to Athenæus, a writer who seems to have ransacked every corner of antiquity, and who, because of the puerility of his methods, has never been able to give the credit of philosophy. (Diog. Laertius, Vit. Diog.—Plutarch, Apoph.—Engfeld, Hist. Philos., vol. 1, p. 305, seqq.—II. A native of Apollonia in Crete, was a pupil of Anaximenes, and contemporary with Anaxagoras. Schleiermacher, however, who is followed by Schaubach, the editor of the fragments of Anaxagoras, affirms, from the internal evidence of the fragments of the two philosophers, that Diogenes preceded Anaxagoras. But Diogenes must have written his history of Anaxagoras, and yet have been his junior, as we know was the case with Empedocles. (Aristot., Met., 1, 3, p. 843. b.) Diogenes followed Anaximander in making air the primal element of all things; but he carried his views farther, and regarded the universe as issuing from an intelligent principle, by which it was at once vivified and ordered, a rational as well as sensitive soul, but still without recognising any distinction between mind and matter. The only book on Cosmology (τέρον φύσεως). The fragments which remain have been recently collected and edited by Panzerbeirter. (Diog. Laert., 9, 9.—Bayle, Hist. Dict., a. e.—Schleiermacher, Mem. Berlin. Acad. for 1815.—Philol. Museum, vol. 1, p. 92.)—III. Laertius, so called from his native city, Laertes in Cilicia. He wrote the lives of the philosophers, in ten books, which are still extant. The period when he lived is not exactly known; but it is supposed to have been during the reign of Septimius Severus and Caracalla. (Compare Ioniou, de Script. Hist. Phil., lib. 3, c. 12, § 5, seqq.) Diogenes is thought to have belonged to the Epicurean sect. He divides all the Greek philosophers into two classes; those of the Ionic and those of the Italic school. He derives the first from Anaximander, the second from Pythagoras. After Socrates, he divides the Ionic philosophers into three branches: 1st. Plato and the Academicians, down to Critias; 2d. the Cynics down to Chrysippus: 3d. Aristotle and Theophrastus. The series of Italic philosophers consists, after Pythagoras, of the following: Tolelages, Xenophon, Parmenides, Zeno of Elea, Lecippus, Democritus, and others down to Epicurus. The first seven books are devoted to the Ionic philosophers; the last three treat of the Italic school.—The work of Dionysius is an attempt to distribute the leading currents of philosophy. It contains a brief account of the lives, doctrines, and sayings of most persons who have been called philosophers; and though the author is evidently a most unprofitable task for which he imposed
upon himself, and has shown very little judgment and discrimination in the execution of it, yet the book is interesting, as it is a gloss on the Iliad, which no one could not have learned from any other quarter, and is entertaining as a sort of omniana on the subject. The article on Epicurus is valuable, as containing some original letters of that philosopher, which comprise a pretty satisfactory epitome of the Epicurean doctrines, and are very useful to the readers of Lucretius. The best editions of Diogenes are, that of Melanson, *Amat.*, 1892, 2 vols. 4to, and that of Hugner, *Lips.,* 1828, 2 vols. 8vo.

Diomedes, son of Tydeus and Deiphyle, was king of Aetolia, and one of the bravest of the Grecian chiefs in the Trojan war, ranking next to Achilles and Ajax. Homer represents him as one of the favourites of Minerva, and ascribes his many acts of valour to her protecting influence. Among his exploits, it is recorded of him that he engaged in single combat with Hector and Menelaus; that he wounded Mars, Menelaus, and Venus; and that, in concert with Ulysses, he carried off the horses of Rhesus, and the palladium; and procured the arrows of Philoctetes. (Sophocles, however, makes Ulysses to have been aided in this last-mentioned affair by Pyrusus, son of Achilleus.) Diomedes was deprived of the affection of his wife Egleia, through the wrath and vengeance of Venus, by whose influence, during his absence at the war, she had become attached to Cyllabares, the son of Sthenelus. (But consult Heyne, *ad Apollon.*, 1, 8, 6, *et ad Hom.*, II., 5, 412.) Diomedes was so afflicted at the enstrangement of Egleia, that he abandoned Greece, and settled at the head of a colony, in Magna Graecia, where he founded a city, to which he gave the name of Argyripa; and married a daughter of Daunus, prince of the country. In the progress of his voyage to Italy, Diomedes was shipwrecked on that part of the Libyan coast which was under the sway of Lycurus, who, as was his usage towards all strangers, seized and confined him. He was, however, liberated by Callirhoe, the tyrant’s daughter, who became so enamoured of him, that, upon his quitting the African shores, she put herself to death. Diomedes, according to one account, died in Italy at a very advanced age; while another legend makes him to have been slain by his father-in-law Daunus. (Tzet., *ad Lycoreph.*, 603, *seqq.*). His companions were so much afflicted by his death that they were desirous of landing; but, however, he makes this transformation earlier in date, and to have taken place during the lifetime of Diomedes. (Esn., 11, 272.) He seems to have followed the tradition recorded by Ovid (Met., 14, 457), that Agnon, one of Diomedes’ companions in his voyage from Troy, insulted Venus with contemptuous language, and that the goddess, in revenge, transformed not only Agnon, but many others of Diomedes’ followers into birds. These birds, according to Ovid, resembled swans; but it is more probable they were transformed into islands in the Adriatic, and were noted for their fondness for Greeks, and their aversion towards the natives of any other country. (Vid. Diomedea Insulae.—Consult Heyne, *Excurs.*, 1, *ad Esn.*, 11, and Lord Bacon’s *Fables of the Ancients*, fab. xvii.)—II. A king of the Bistones, in Thrace, son of Mars and Cyrene. His mares fed on human flesh. Hermes sailed to this quarter, having been ordered, as his eighth labour, to bring a horse from Tyre. Ulysses came with the grooms of Diomed, and led the mares to the sea. The Bistones pursued with arms. Hermes, leaving the mares in charge of Abderus, one of his companions, went to engage the foe. Meanwhile the mares tore their keeper to pieces; and the hero, having defeated the Bistones and slain Diomed, built a city by the tomb of Abderus, which he called Abdera after him. Hermes brought the mares to Eurytheus, who turned them loose; and they strayed on to Mount Olympus, where they were destroyed by the wild beasts of the shade. This account makes Hercules to have given Diomedes to be devoured by his own mares; and Eurytheus to have conscripted them to Juno. (Diod. Sic., 4, 15.)

Diomedis Insulae, certain small islands opposite the Sinus Urius, and at no great distance from the coast of Apulia. They are celebrated in mythology as connected with the legend of the transformation of Diomedes’ companions into birds. (Vid. Diomedes L., towards the close of the article.) (Antost., *de M. Mab.,—Lycoreph., Alex., v. 599.—Ovid, Met., 14, 457.) Ancient writers differ as to their number. Strabo (284) recognises two; whereof one was inhabited, the other deserted. This is also the account of Pliny (3, 26, and 10, 44), who states, that one was called Diomedea, and the other Teutia. Ptolemy, however, reckons five, which is said to be the correct number, if we include in the group three barren rocks, which scarce deserve the name of islands. The island to which Pliny gives the name of Diomedes appears to have also borne the appellation of Trenius, as we learn from Tacitus (Ann., 4, 71), who informs us that it was the spot to which Augustus removed his abandoned daughter Julia, and where she terminated a life of infamy. Of these islands, the largest is now called Isola San Domino, the other S. Nicolo. (Romanellis, vol. 2, p. 296.—Cramer’s *Ant. Italy*, vol. 2, p. 275.)

Dion, 1. an illustrious inhabitant of Syracuse, receiving an ample inheritance from his father Hipparchus, became a disciple of Plato, invited to the court of Syracuse by the elder Dionysius. In consequence of the instructions of his master, he escaped being infected with the licentiousness of the capital, and he shared with his preceptor, at a subsequent period, in the persecutions inflicted by the son and successor of the tyrant. He was nearly connected with Dionysius by having married his daughter, and by latter being one of his wives; and he was also much esteemed by him, so as to be employed on several embassies. At the accession of the younger Dionysius, Plato was again, at Dion’s request, invited to Syracuse. In order, however, to counteract his influence, the courtiers obtained the recall of Philistus, a man notorious for his adherence to arbitrary principles. This faction determined to supplant Dion, and availed themselves of a real or supposititious letter to fix him the charge of disloyalty. Dion was deposed and banished; he was restored to Italy, and from thence proceeded to Greece, where he was received with great honour. Dionysius became jealous of his popularity in Greece, especially at Athens, stopped his remittances, confiscated his estates, and compelled his wife, who had been left at Syracuse as an hostage, to marry another person. Dion, incensed at this treatment, determined to expel the tyrant. Plato resisted his intentions; but, encouraged by other friends, he assembled a powerful force sailed to Sicily, took advantage of the absence of Dionysius in Italy, and freed the people from his control. Dionysius returned, but, after some conflicts, was compelled to escape to Italy. The austere and philosophical manners of Dion, however, soon lost him the favour of his fellow countrymen, and he was supplanted by Heraclides, a Syracuse, exile, and obliged to make his retreat to Leontini. He afterward repaired the injury, and was a member of the council, and of Heraclides to be assassinated. This robbed him ever after of his peace of mind. An Athenian, an intimate friend, formed a conspiracy against his life, and Dion was assassinated in the 55th year of his age, B.C. 354. His death was universally lamented by the Syracusans, and a monument was raised to his memory. (Diod. Sic., 16, 6, *seqq.*—Plut., Vit. Dion.—Corn. Nep., Vit. Dion.—H. Cassius, Cocceianus, son of Cassius Apollonius,
a Roman senator, was born A.D. 155, in Bithynia. His true name was Cassius, but he assumed the other two names, as being descended on the mother's side from Dion Chrysostom. Thus, though he was on his mother's side of Greek extraction, and though, in his writings, he adopted the then prevailing language of his native province, namely, the Greek, he must nevertheless be considered as a Roman. Dio Cassius passed the greater part of his life in public employments. He was a senator under Commodus; governor of Smyrna after the death of Septimius Severus; for he had displeased this monarch, and held no office, consequently, during the life of the latter; and afterward consul, as also proconsul in Africa and Pannonia. Al- exander Severus entertained the highest esteem for him, and made him consul for the second time, with himself, though the pretorian guards, irritated against him on account of his severity, had demanded his life. When advanced in years, he returned to his native country. Dion published a Roman history, in eighty books, the fruit of his researches and labours for the space of twenty-two years. It embraced a period of 983 years, extending from the arrival of the Emanas at Italy, and the subsequent founding of Rome, to A.D. 229. Down to the time of Julius Caesar, he only gives a summary of events; after this, he enters somewhat more into details; and from the time of Commodus he is very circumstantial in relating what passed under his own eyes. We have fragments remaining of the first 36 books: but there is a considerable portion of the 35th book, on the war of Locullus against Mith- radates, and of the 36th, on the war with the pirates, and the expedition of Pompey against the King of Pontus. The books that follow, to the 54th inclusive, are nearly all entire: they comprehend a period from B.C. 65 to B.C. 10, or from the eastern campaign of Pompey, and the death of Mithradates, to the death of Agrippa. The 55th book has a considerable gap in it. The 56th to the 60th, both included, which comprehend the period from A.D. 7 to A.D. 79, are nearly all entire, except from the defeat of Varus in Germany to the reign of Claudius. Of the following 20 books we have only fragments, and the meager abridgment of Xiphilinus. The 80th or last book comprehends the period from A.D. 222 to A.D. 229, in the reign of Alexander Severus. The abridgment of Xiphilinus, as now extant, commences with the 36th, and continues to the end of the 80th book. It is a very indifferent performance, and was made, either by Dion Chrysostom himself, or by Michael Ducas: the abbreviator, Xiphilinus, was a monk of the eleventh century.—The fragments of the first 36 books, as now collected, are of three kinds. 1. Fragmenta Valesiana: such as were dispersed throughout various writers, scholiasts, grammarians, lexicographers, &c., and were collected by Henri de Valois. 2. Fragmenta Peiresciana: comprising large extracts, found in the section entitled "Of Virtues and Vices" of the Constitutions of Constantine, compiled by order of Constantine VI., Porphyrogeni- tus. The manuscript of this belonged to Peiresc. 3. The fragments of the first 34 books, preserved in the second section of the same work of Constantine's entitled "Of Embassies." These are known under the name of Fragmenta Ursiana, because the manu- script containing them was found in Sicily by Fulvio Ursino, bishop of the town, and sent to Rome, containing fragments of books 1-35, and 61-80, and which have been published in the second volume of the Scriptorum Nova Collectio, p. 135, seqq. These are the added fragments of an unknown continuator of Dion (p. 234-246), which go back to the time of Constantine. Other fragments from Dion belong chiefly to the first 35 books, also published in the same collection (p. 527, seqq.), were found by Mai in two Vatican MSS., which contain a logographic collection made by Maxim- many manuscripts. The annals of Zonaras also contain numerous extracts from Dion. There is a French model; but the imitator is comparable with his original neither as regards arrangement and the distribution of material, nor as regards style of views, and above all as regards style of writing. His style is generally clear, though there are occasionally obscure pas- sages, where there appears to be no corruption of the text. His diligence is unquestionable, and, from his opportunities, he was well acquainted with the circum- stances of the empire during the period for which he is a contemporary authority; and, indeed, we may as- sign a high value to his history of the whole period from the time of Augustus to his own age, as well as the work without value for the earlier periods of Ro- man history, in which, though he has fallen into errors, like all the Greek and Roman writers who have hand- led the same obscure subject, he still enables us to correct some erroneous statements of Livy and Dio- nysius.—The best edition is that of Fabricius, completed by Reimar, Hamb., 2 vols. folio, 1761. Not- withstanding, however, the labours of these editors, a new critical edition is much wanted, both from the uncertainty of the edition just mentioned, and the fact that the manuscripts have not been collated with suf- ficient care. The small Tauchnitz edition, 4 vols. 16, contains all the fragments. A very useful ed- ition appeared in 1824-1825, by Sturz, from the Leip- zig press, 8 vols. 8, which some even prefer to the edition of Fabricius and Reimar. (Schöll, Hist. Lit. Gr., vol. 4, p. 180, seqq.—Hoffmann, Lex. Bibliog- raph., vol. 2, p. 150. Droysen, Chrys. Rom. Histor., the Golden-mouthed, on account of the beauty of his style, was a native of Prusa, in Bithynia, and a sophist and sooth. He was in Egypt when Vespasian, who had been proclaimed emperor by his own army, came there, and he was consulted by that prince on the proper course to be adopted under the circumstan- ces. Dion had the candour, or, as some may think, the want of judgment, to advise him to restore the re- public to the public. He afterward resided for years at Rome, till one of his friends having engaged in a conspiracy against Domitian, Dion, fearing for himself, fled to the modern Moldavia, where he remained till the tyrant's death, labouring for his subsistence with his own hands, and possessing no books but the Phaedon of Plato, and Demosthenes' περὶ Παραπτωμέων. Do- mitian having been assassinated, the legions quartered on the Danube were about to revolt, when Dion got upon an altar, and harangued them so effectually that they submitted to the decision of the senate. Dion was in high favour with Nerva and Trajan, and, when the latter triumphed after his Dacian victories, the orator sat in the emperor's car in the procession. He returned to Bithynia, where he spent the remainder of his life. Accusations of peculation and treason were brought against him, but rejected as frivolous. He died at an advanced age, but it is not known in what year. We have eight volumes of his "Ethiopics." They are very prettily written, but not of much intrinsic value. The best edition is that of Reiske, 2 vols. 8, Lips., 1784 (Schöll, Hist. Lit. Gr., vol. 4, p. 210, seqq.).

DIONEA, a surname of Venus, as the daughter of Dion.

Dione, a nymph, daughter of Nereus and Doris. She was mother of Venus by Jupiter, according to Homer (Iliad, i.), and of Dionysus by Semele. She is often called the female Δίς, or ΖΕΤΣ, and therefore associated with him in the most ancient temple of Greece at Do- dona. (Inquiry into the Symb. Lang., &c., § 43.—Cass. Juv., vol. 23, p. 234.—Compare Buttmann, Mythologus, vol. 1, p. 7, and Constant, de la Reli- gion, vol. 2, p. 335, in notis.)

Dionysia, festivals held in honour of the god Dio- nysus or Bacchus. The most important of these were held at Athens and in Attica; and these derive their importance from their being the occasion on which the
DIONYSIUS, a town of Egypt, situated at the south-western extremity of the Lake Moeris. It is now called Abdel-Kurun, or, according to (Potin), Abekchou, on the eastern bank of Lower Moeris, in the vicinity of the Euxine Sea. Pliny says that it was also called Cronus, but Pomponius Mela (2, 2) makes Cronus the port of Dionysopolis. The modern name is Dinysopol. —II. A city of India, supposed by Man- nert to be the same with the modern Nagar, or Nuskr, on the western bank of the river Cow. Mannert does not consider it to have been the same with the ancient city of Nyassa, but makes the Carthaginians of the latter to have moved to it. (Geog., vol. 5, p. 142.)

DIONYSIUS I, or the Elder, a celebrated tyrant of Syracuse, raised to that high rank from the station of a simple citizen, was born in that same city 430 B.C. He was son-in-law to Hermocrates, who, having been banished by an adverse party, attempted to return by force of arms, and was killed in the action. Dionysius was dangerously wounded, but he recovered, and was afterward recalled from exile. At the same time he was nominated one of the generals, and, under pretence of raising a force sufficient to resist the Carthaginians, he obtained a decree for recalling all the exiles, to whom he gave arms. Being sent to the relief of Gela, then besieged by the Carthaginians, he effected nothing against the enemy, pretending that he was not seconded by the other commanders; and his friends suggested, that, in order to save the state, the supreme power ought to be confided to one man, reminding the people of the times of Gelo, who had defeated the Carthaginian host, and given peace to Sicily. The general assembly therefore proclaimed Dionysius supreme chief of the republic about 405 B.C., when he was twenty-five years of age. He increased the pay of the soldiers, enlisted new ones, and, under pretence of a conspiracy against his person, formed a guard of mercenaries. He then proceeded to the relief of Gela, but failed in the attack on the Carthaginian camp: he however penetrated into the town, the inhabitants of which he advised to leave it quietly in the night under the escort of his troops. On his retreat he persuaded those of Camarina to do the same. This raised suspi- cions among his troops, and a party of horsemen, riding on before the rest, raised, on their arrival at Syracuse, an insurrection against Dionysius, plundered his house, and treated his wife so cruelly that she died in conse- quence of the wounds which she sustained. In order to escape close after, set fire to the gate of Acradina, forced his way into the city, put to death the leaders of the re- volt, and remained undisputed possessor of the su- preme power. The Carthaginians, being afflicted by a pestilence, made proposals of peace, which were ac- cepted by Dionysius, and he then applied himself to fortifying Syracuse, and especially the island of Orty- gia, which he made his stronghold, and which he peo- pleled entirely with his subjects; on other occasions, he was assisted by the aid of whom he put down several revolts. Af- ter reducing beneath his sway the towns of Leontini, Catana, and Naxus, he engaged in a new war with Carthe, in which he met with the most brilliant suc- cess, making himself master of numerous towns in Si- cyli, and becoming eventually feared both in Italy and Sicily, to the dominion of both of which countries he seems at one time to have aspired. In order to raise money with which he might purchase arms and sup- posed to them the joint plunder of the temple of Del- phi: the enterprise, however, failed. He then plun- dered several temples, such as that of Proserpina at Locri; and as he sailed back with the plunder, with a fair wind, he, who was a humourist in his way, ob- served to his friends, "You see how the immortal gods favour sacrifice." Having carried off a golden manne from a statue of Jupiter, consecrated by Gelo out of the spoils of the Carthaginians, he replaced it by a wooden garment, saying that this was more suited to the vicissitudes of the seasons. He also took away a golden beard from Theasalpius, observing that it was not better to adorn the son of a beardless god (Apollo) to make a display of his own power. He had appropri- ated to himself the silver tables and golden vases and crowns in the temples, saying he would make use of the bounty of the gods. (Cic., N. D. 3, 34.—Ali- an, V. H., 1, 20.) He also made a descent with a fleet on the coast of Etruria, and plundered the temple at Core or Agylia of 1000 talents. With these re- sources he was preparing himself for a new expedition to Italy, when the Carthaginians were defeated in Sicily, 383 B.C., and defeated Dionysius, whose brother Leptines fell in the battle. A peace followed, of which Carthage dictated the conditions. The boundary of the two states was fixed at the river Halycus, and Dionysius had to pay 1000 talents for the expenses of the war. This peace lasted fourteen years, during which Dionysius remained the undisturbed ruler of Syracuse, and one half of Sicily, with part of southern Italy. He sent one of his generals, called Agylla, to the north, and his fleets navigated both seas. Twice he sent assistance to his old ally, Sparta; once against the Athenians, 374 B.C., and again in 369, after the battle of Leuc- tra, when the Spartans were hard pressed by Epi- mondas. Meantime the court of Dionysius was fre- quented by many distinguished men, philosophers, and poets. Plato is said to have been among the former, being invited by Dion, the brother-in-law of Dionys- ius; but the philosopher's declamations against tyr- anny led to his being sent away from Syracuse. The poets fared little better, as Dionysius himself aspired to poetical fame, for which, however, he was not so well qualified as for political success. Those who did not praise his verses were in danger of being led to prison. Dionysius twice sent some of his poems to be recited at the Olympic games, but they were hissed by the assembly. He was more successful at Athens. A tragedy of his obtained the prize, and the news of his success almost turned his brain. He had just con- cluded a fresh truce with the Carthaginians, after hav- ing made an unsuccessful attack on Lilybaemum, at the expiration of the fourteen years' peace; and he now gave himself up to rejoicings and festivities for his po- tistical triumph. In a debauch with his friends, he ate and drank so intemperately that he fell senseless, and soon after died (some say he was poisoned by his phy- sician at the instigation of his brother Doris). He died 63d year of his age, having been tyrant of Syracuse thirty-eight years. After the death of his first wife, he married two wives at once, namely, Doris of Locri, and Aristaneia, daughter of Hipparius, of Syracuse: by these women he had seven children, of whom Di- onysius, his elder son by Doris, succeeded him in the sovereignty. —Dionysius was a cleaver statesman, and generally successful in his undertakings. He did much to give the Athenians a sense of the power of Syracuse, and it was probably owing to him that all Sicily did not fall into the hands of the Carthaginians. He was unscrupulous, rapacious, and vindictive, but several of the stories stated of his cruelty and suspicious temper appear improbable, or at least exaggerated. The works of Philistus, who had written his life, and who is praised by Cicero, are lost. Diidorus, who is our principal remaining authority concerning Dionysius, was a critic and a criti- cal writer. The government of Dionysius, like that of many others who are styled tyrants in ancient histo- ry, was not a despotism; it resembled rather that of the first Medici, and other leaders of the Italian repub- lics in the middle ages, or that of the stadtholders in Holland. The popular forms still remained, and we find Dionysius repeatedly convoking the assembly of the
people on important occasions, when full freedom of speech seems to have been allowed. (Plut., Vit. Dion.—Diad. Soc., 13, 92, seqq.—Id., 14, 7, seqq., &c.) An account of the famous prison, or “Ear of Dionysius,” will be found under the article Lautumia.—II. The second of that name, surnamed the Younger, was son of Dion. He moved with greater prudence and experience. He followed at first the advice of Dion, who, although a republican in principle, had remained faithful to his father, and who now endeavored to direct the inexperienced son for the great of his country. For this purpose Dion invited his friend Plato to Syracuse about 364 B.C. Dionysius received the philosopher with great respect, and, in deference to his advice, reformed for a while his loose habits and the manners of his court. But a faction, headed by Philistus, who had always been a supporter of the tyranny of the elder Dionysius, succeeded in prejudicing the son against both Dion and Plato. Dion was exiled, under pretense that he had written privately to the senate of Carthage for the purpose of concluding a peace. Plato urgently demanded of Dion at the time he kept a school... He endeavored to contain it, he left Syracuse, after which Dionysius gave himself up to debauchery without restraint. Dion, meanwhile, was travelling through Greece, where his character gained him numerous friends. Dionysius, moved by jealousy, confiscated his property, and obliged his wife to marry another. Upon this, Dion collected a small force at Zacynthus, with which he sailed for Sicily, and entered Syracuse without resistance. Dionysius retired to the island of Ortigia, and, after Rome resistance, in which Philistus, his best supporter, was taken prisoner and put to death, he quitted Syracuse by sea and retired to Locri, the country of his mother, where he had connexions and friends. Dion having been treacherously murdered, several tyrants succeeded each other in Syracuse, until Dionysius himself came and retook it about B.C. 346. Instead, however, of improving by his ten years’ exile, he had grown worse. Having, during the interval of his absence from Syracuse, usurped the power of a tyrant in Locri, he had committed many atrocities, had put to death several citizens, and abused their wives and daughters. Upon his return to Syracuse, his cruelty and profligacy drove away a great number of people, who emigrated to various parts of Italy and Greece, while others joined Iketas, tyrant of Leonitini, and a former friend of Dion. The latter sent messengers to Corinth to request assistance against Dionysius. The Corinthians appointed Timoleon leader of the expedition. This commander landed in Sicily B.C. 344, notwithstanding the opposition of the Carthaginians, and of Iketas, who acted a perfidious part on the occasion; he entered Syracuse, and soon after obliged Dionysius to surrender. Dionysius was sent to Corinth, where he spent the remainder of his life in the company of actors and low women; some say, that at this time he kept a school. (Sall. 5) states, that he purposely affected low habits in order to disarm revenge, in that, being despised, he might no longer be feared or hated for his former tyranny. Several repartees are related of him in answer to those who taunted him upon his altered fortunes, which are not destitute of wit or wisdom. (Plut., Vit. Dion.—Diad. Soc., 16, 5, seqq.—III. Halicarnassus or Halicar- nassus, an historian and critic, was born at Halicarnasus in the first century B.C. He composed one of the first histories, and he had in it, beyond what he has told us himself. He states, that he came to Italy at the termination of the civil war between Augustus and Antony (B.C. 39), and that he spent the following two-and-twenty years at Rome in learning the Latin language, and in collecting materials for his history. (Antiq. Rom., 1, 7, seqq.—Compare Phot., Biblioth., cod. 83.) The principal work of Dionysius is his Roman Antiquities (Ῥωμαϊκὴ Ἀρχαιολογία), which commenced with the early history of the people of Italy, and terminated with the beginning of the first Punic war, B.C. 265. It originally consisted of 20 books, of which the first two remain only in fragments. The eleventh book, in the year 312 B.C., but some fragments of the latter half of the history are preserved in the collection of Constantine Porphyrogenitus, and to these a valuable addition was made in 1816, by Mai, from an old MS. Besides, the first three books of Appian were founded entirely upon Dionysius; and Plutarch’s biography of Camillus must also be considered as a compilation mostly taken from the Roman Antiquities, so that, in a certain sense, upon the whole, we have not lost much of his work. With regard to the trustworthiness and general value of Dionysius’ history, considerable doubts may justly be entertained: for, though he has evidently written with much greater care than Livy, and has studied Catil and the old annalists more diligently than his Roman contemporary, yet he wrote with an object which at once invalidates his claim to be considered a veracious and impartial historian. Dionysius wrote for the Greeks, and his object was to recommend to them what they felt at being conquered by a race of barbarians, as they considered the Romans to be. And this he endeavored to effect by twisting and forging testimonies, and botching up the old legends, so as to make out a prima facie proof of the Greek origin of the city of Rome; and he inserts arbitrarily a great number of set speeches, evidently composed for the same purpose. He indulges in a minuteness of detail, which, though it might be some proof of his good experience. His history, is a palpable indication of want of faith in the case of an ancient history so obscure and uncertain as that of Rome. With all his study and research, Dionysius was so imperfectly acquainted with the Roman constitution, that he often misrepresents the plainest statements about it. (Nicol., Rom. Hist., vol. 2, p. 13, Cambr. transl.) For instance, he thought the original constitution of Rome was a monarchical democracy, and that he could trace the same system in other countries. He believed, when he wrote his second book, that the decrees of the people were enacted by the curia and confirmed by the senate (Antiq., 2, 14), and not, as he afterward discovered, the converse. (Antiq., 7, 38.) In a word, though the critical historian may be able to extract much that is of great importance for the early history of Rome from the garbled narrative and dull trifling of Dionysius, he cannot be regarded as a meritorious writer, or recommended to the student of ancient history as a faithful guide.—Dionysius also wrote a treatise on rhetoric; criticisms on the style of Thucydides, Lyssias, Isocrates, Isaeus, Dinarchus, Plato, and Demosthenes; a treatise on the arrangement of words, and some other short essays. His critical works are much more valuable than his history, and are, indeed, written with considerable power. The criticism on Dinarchus displays good value and judgment, and shows the great pains which he has taken to separate the genuine writings of the Attic orators from the forgeries which passed under their name. The best editions of Dionysius are, that of Hudson, Oxox., 1704. 2 vols. fol., and that of Reiske, Lips., 1774—1777, 6 vols. 8vo. Mai’s fragments were first published at Milan in 1816, and reprinted the following year at Frankfort. They also appear in the second volume of Mai’s Nova Collect. Rom., Rome, 1827.—IV. The author of a Greek poem in 1186 hexameters, entitled Ταῦ Οἰκονύμη Περίοικος, "A Description of the Habitable World." It is not clearly ascertained where he was born. The probability is, however, that he was a native of Charax, in Susiana. It is uncertain, also, when he flourished; he belonged, however, according to the general opinion, to the lat-
ter part of the third or the beginning to the fourth century A.D. He derived from his poem the surname of Periogetes. This production of his has little merit as a work of imagination, and but feeble interest for the geographer. The commentary, however, of Eustathius upon it possesses some value from the miscellaneous information which is scattered throughout. There are two Latin translations of the poem, one by Rufus Fes-
tus Avienus, and the other by Fries". With the last and
the second a translation of Callimachus was published in that of Bernhardy, Lips., 1828, 8vo, in the first volume of his Geographi

Graci Minores. (Scholl, Hist. Lit., Gr., vol. 4, p. 59.) —
V. A Christian writer, called Areopagita, from his hav-
ing been a member of the court of Areopagus at Athens.
He was converted to Christianity by St. Paul's preach-
ing. (Acts, 17, 34.) He is reported to have been the first bishop of Athens, being appointed to that office by the apostle Paul, and to have suffered martyrdom under Domitian. The last and least number of writings were circulated under his name, which were collected together and printed at Cologne in 1536, and subsequently at Antwerp in 1534, and at Paris in 1646, 2 vols. fol. They have now for a long time, been deemed spurious, although the learned differ in respect to the times and authors of the fabrication.
The most probable reasoning, however, fixes them at the end of the fifth century. (Suid.—Cave, Hist. Lit., Gr., vol. 3, pt. 1. Eusebius Exiguus, or the Little, on account of the smallness of his stature, was a Scythian monk of the sixth century, who became an abbot at Rome. Cassiodorus, who was his intimate friend, speaks highly of his learning and character. At the request of Stephen, bishop of Salona, he drew up a body of canons, entitled "Collectio, sive Codex Canonum Ecclesiasticorum," &c., translated from the Greek, containing the first 50 apostolical canons, and a great number of the canons of Nice, Constantinople, Chalcodon, Sardis, and including 138 canons of certain African councils. He afterward drew up a collection of the decreats, and both are to be found in the Bibliotheca Juris Can-
nonici Veteris of Justell. To this Dionysius some writers ascribe the mode of computing the time of Easter, attributed to Victorinus, and of dating from the birth of Christ. (Cave's Hist. Lit.—Hutton's Math. Dict.—VII. A Greek poet and musician, the author of the antithetic couplet, the answering verses of which, was addressed to Callipho, Apollo, and Nemesis. They were published by Vincent Galilei, at Florence, in 1581; and again by Dr. Fell, at Oxford, in 1672, from a manu-
script found among the papers of Archbishop Usher. It appears by these notes, that the music of the hymns in question was in the Lydian mode and diatonic gen-
us. Galilei asserts that he had from a Florenti-
tine gentleman, who copied them from an ancient Greek manuscript in the library of Cardinal St. Angelo at Rome, which manuscript also contained the treatises on music by Aristides, Quintillus, and Bryennius, since published by Meibomius and Dr. Wallis. The Florentine and Oxford editions of these hymns exactly agree; and they have since also been printed in the fifth volume of the French Memoirs of the Academy of Inscriptions, &c. (Burney's History of Music.)
DIOPHANTUS, a mathematician of Alexandria, who, according to the most received opinion, was contem-
porary with Sappho and Alcman. The most received opinion, founded upon a passage of Abulpharag, an Arabic author of the thirteenth century: he names, among the contemporaries of the Emperor Julian, Diophantes (for Diophantus), as the author of a celebrated work on algebra and arithmetic; and he is thought to have derived his information from an Arabic commentator on Diophantus, Muhammad al Buziani, who flourished about the end of the eleventh century. The passage of Abulpharag, in the translation of Pococke, is as follows: "Extis etiam Diophantes, cujus liber, &c., quam Algebrae vocant, celebris est." According to Ilder, however (in a communication to Schulz), the Arabic text, when rendered into Latin, runs as follows: "Cujus liber Ab-kisset de Algebra et Almokabal est, celebris est." The two words Al-aghefar and Almokabala, designate with the Arabians what we call algebra. The term Kisset means "division," but Ab-kisset is unintelligible: it may, perhaps, be the Greek word "Alphak" (Ἀλφακ), which has been given to the initiated state. Some critics, who attach no great weight to this testimony of the Arabian writer just referred to declare that there is no reason whatever for fixing any precise period between B.C. 200 and A.D. 400. Di-
ophantus is certainly later than the first of these dates, since he cites Hypatia; he is anterior to the year 400 of our era, since, according to Suidas, the celebrated Hypatia, who perished A.D. 415, commented upon his writings. The reputation of Diophantus was so great among the ancients that they ranked him with Pythagoras and Euclid. From his epitaph in the An-
thologia, which furnishes a kind of arithmetical prob-
lem, the following particulars of his life have been collected: viz., that he was married when thirty-three years old, and had a son five years after; that his son died at the age of forty-two, and that his father did not survive him above four years; whence it appears that Diophantus was eighty-four years old when he died. The editor of this work, viz., to find a number such that its sixth, twelfth, and seventh parts, with five, its half, and four, amount to the whole number: which is evidently eighty-four. Diophantus wrote a work entitled Arithmetical Questions, in thirteen books, of which only six remain. It would seem that in the fifteenth, and even at the beginning of the seventeenth, century all the thirteen books still existed. John Müller, known by the name of Regio-montanus, assures us that he had a copy of the three last books, and, according to Bache de Meziariec, Cardinal Pe-
ron also once possessed a complete copy. The arithmetic of Diophantus is not merely important for the study of the history of mathematics, from its making known the state of the exact sciences in the fourth century before the Christian era, but is interesting also to the mathematician himself, from its furnishing him with luminous methods for the resolution of analy-
tical problems; he may find in this book a branch of the exact sciences called algebra. It is scarcely to be conceived, however, that, while the curious machinery of common language consti-
tuted the sole instrument of investigation, the very curious conclusions which we find in this work could have resulted from the researches of one single mind. To suppose that Diophantus was the author of the analysis which bears his name is so contrary to all analogy with experience and the history of mental phenomena, as to be utterly impossible to admit. Still, if we inquire into the history of this branch of analy-
sis, and ask who were the predecessors to Diophantus, or whether they were Greeks or Hindus, no satis-
factory answer can be given. We have also a sec-
ond work of Diophantus on Polygon Numbers (Περὶ πολυγώνων ἀριθμῶν). He himself cites a third, under the title of Πολικάρμα, or Cordarities. The best edition of Diophantus is that of Fermat, Tolos., 1684, fol. It is a republication of that of Cassiodore and Dionysius. The valuable translation of the Arithmetical Questions into German was published by Otto Schulz, Berlin, 1822, 8vo, to which is added Poesler's translation of the work on Polygon numbers.
(Scholl, Hist. Lit., Gr., vol. 7, p. 43, seqq.)
Diöge, a friend of Ανέας, killed by Turnus. He was engaged in the games exhibited by Άνεας on his father's tomb in Sicily. (Virg., Æn., 5, 297; 12, 276.)
Diocletian, I. a disciple of Ανέας, who wrote. I. Acta on the Government of Lacedaemon (Πολιτεία Δα-
καδαμοιον); 2. Commentaries, or Historic Memoirs.
DIOSCORIDES.

(D'Askef, Νεο-Ed. Schweigl, vol. 1, p. 31.)—II. A poet of Alexandria, some of whose epigrams are preserved in the Anthology (ed. Jacobs, vol. 1, p. 224, seqq.).—III. A native of Anazarbus in Cilicia, who lived, according to some, in the time of Antony and Cleopatra, while others place him in the reign of Nero. One circumstance in favour of the latter supposition is, that Pliny, who faithfully mentions the authors with whom he borrows, does not once mention Dioscorides, although we find in the work of the former a great number of passages which appear to have been borrowed from the latter. This silence on the one hand, and conformity on the other, prove that Pliny and Dioscorides wrote nearly at the same period, and derived some of their materials from the same sources, particularly from the last work of Sextius Niger. Dioscorides himself informs us, that, as a military officer, he himself had derived a great number of facts from the work of Phlias, from his having on his person a spot resembling a lentil (phasis). Dioscorides is the most celebrated herbalist of antiquity, and for sixteen or seventeen centuries there was nothing known that could be regarded as superior to his work, "Περὶ Τῆς Μελανίκης, "On the Materia Medica," in five books. This is the more surprising, considering the real nature of this famous work. The author introduces no order into the arrangement of the materia medica; but having made alphabetical use of the names of plants, he appears to a resemblance of sound in the names he gives his plants. Thus, medium was placed with epidemium, althaea cannabina with cannabis, hippocastanum (cinus stellatus) with hippobadis, and so on. The mere separation of aromatic and gum-bearing trees, esculent and crop-plants, hardly forms an exception to this statement. Of many of his plants no description is given, but they are merely designated by a name. In other cases the descriptions are comparative, contradic-
tory, or unintelligible. He employs the same word in different senses, and evidently attached no exactness to the terms he made use of. He described the same plant twice under the same name or different names; he was often notoriously careless, and he appears to have been very ready to state too much upon the authority of others. Nevertheless, his writings are extremely interesting to the amateur in materia medica, as a source of medical knowledge in the author's day, and his descriptions are in many cases far from bad: but we must be care-
ful not to look upon them as evidence of the state of botany at the same period; for Dioscorides has no pretensions to be ranked among the botanists of anti-
quity, considering that the writings of Theophrastus, four centuries earlier, show that botany had even at that time begun to be cultivated as a science distinct from the art of medicine. He was not satisfied with the rapidly increasing number of new plants, and the general advance in all branches of physical knowledge, compelled the moderns to admit that the vegetable kingdom might contain more things than were dreamed of by the Anazarbian philosopher, that the authority of Dioscorides ceased to be acknowledged.—Dioscorides, in his preface, criticises the authors who had treated of this subject before him: Iolas of Bithynia, and Her-
achis of the Arabian Empire, and of them Craterus and Heracleides, the botanist (βιοτήπος), and Andreas the physician, who had been regarded as the best writers on this subject, had nevertheless omitted many plants or roots; the disciples of Asclepiades, namely, Julius Bassus, Nicetas, Petronius, Sextius Niger, and Di-
odotus, had described very exactly what all the world knew, but had passed over in silence the antacive vir-
tues of medicaments. He also states, in his preface, that his work is divided into five books. Photius, how-
ever, cites as a sixth and seventh book, two small trea-
tises which have come down to us, the one on Alexi-
pharmac, and the other on Thiaceas. The authenti-
city of these is doubted by critics; and yet not only these, but all the rest of the work which is often arranged in a very different manner; be-
ing distributed sometimes into five, and at other times into seven, eight, or nine books. The text also has experienced various interpolations, which have in some degree been removed by the diligence and learning of later editors. Among these may be mentioned the synonyms for the names of the plants in the several chapters, which are taken from the ancient Egyptian, Dacian, and Celtic languages. These have been now placed at the end of the period, as they are generally supposed not to have come from the pen of Dioscorides. Many passages, too, have been discovered, which have been added to the text, being taken from authors of a later period, such as Athenagoras, Orbiassius, Constantinus Af-
cricans, or else being translations from Pliny. Many transpositions, too, have been made in the text by copy-
ists and possessors of manuscripts, with a view of improving it so as to introduce into the work an alphabetical arrangement. Besides the Alexipharmacs and Theriacs, there exists another work attributed to Dioscorides, and entitled Ἑπείροιστις ἀπλῶν τε καὶ συνάκων φαρμάκων, "Of Simple and Compound Medicines which are easy to be prepared." It is divided into two books: the authenticity of the treatise, however, is extremely doubtful. Finally, we have a work entitled Ἑπείροιστις ἀπλῶν τε καὶ συνάκων φαρμάκων, "Of the Knowledge of Medi-
cines." It contains a collection of the most celebrated works of Dioscorides and Stephen of Athens. Dr. Alston affirms, that Dioscorides brought the Greek Ma-
teria Medica to perfection; or, at least, that it was never much improved afterwards. "In him I have counted," he says, "above 90 medicinal plants, 700 books, and 168 animal substances, that is, 958 in all."—Even Galen," remarks Dr. Adams, "who is so par-
simonious of praise, seldom mentions Dioscorides but in terms of high eulogy, and neither Galen nor As-
tius, Orbiassius nor Paulus Egineta, have made any ma-
terial addition to the list of medical articles described by Dioscorides. The only fault with which his work is at all chargeable, is his attributing, in some instan-
tes, too many virtues to one and the same substance; and probably some which one cannot always admit to have been founded upon actual experience. On this ground Dr. Cullen founds a severe charge against the accuracy of his text, which is considerably less than of modern literature; at the expense of the ancient was then at its height in Edinburgh, the opinion of such a critic ought to be received with considerable allow-
ance, more especially as Cullen is constantly betraying his ignorance of the works which he deprecates."—The most celebrated MS. of Dioscorides is one at Vi-
enna, illuminated with rude figures. It was sent by the Emperor Constantine VII to the Empress Maria Theresa, under the inspection of Ja-
quim. Two impressions only of these plates have ever been taken off, as the work was never printed. One of them is in the library of the Linnean Society of London; the other with Sibthorp's collection at Oxford. They are of little importance, as the figures are of the rudest imaginable description. Another MS., of the ninth century, exists at Paris, and was used by Salmassius: this also is illustrated with figures, and has also Ar-
ic and Coptic names introduced, on which account it is supposed to have been written in Egypt. Besides these, there is at Vienna a MS., believed to be still more ancient than that first mentioned; and three.
others are preserved at Leyden. The latest and best edition of Dioscorides is that of Sprengel, in the collection of Greek physicians by Kuhn, Lp., 1829, 8vo. The folio edition by Saracenus (Sarassini Francof., 1598), is also a very good one. Sprengel's edition is improved by many MSS. — So far as European plants are in question, we may suppose that the means of illustrating Dioscorides are now nearly exhausted; but it is far otherwise with his Indian and Persian plants. Concerning the latter, it is probable that much may be learned from a study of the modern Materia Medica of India. When the Nestorians, in the fifth century, were driven into exile, they sought refuge among the Arabs, with whom they established the Arabic version of the Pharmacopoeia, which extended into Persia and India, and laid the foundation of the present medical practice of the nations of those countries. In this way the Greek names of Dioscorides, altered, indeed, and adapted to the genius of the new countries, became introduced into the language of Persia, Arabia, and Hindustan, and have been handed down traditionally to the present day. Thus Dr. Royle has shown, by an examination of the text of the promontorium, that the Dioscorides of Persia is not a Gentian, as has been imagined; that Nardos Indico is unquestionably the Nardostachys Jatamansi of De Candolle, and that the Lukion Indico was neither a Rhamnus nor a Lycium, but, as Prosper Alpinus long ago asserted, a Berberis. (Encycl. Us. Knowl., vol. 9, p. 5.—Schöll, Hist. Lit. Gr., vol. 5, p. 331, seqq.)

Dioscoris Insula (Διοσκόριδος ἱλίον, Ptol.), or Dioscorida (Διοσκορίδα, Perip., p. 17), an island situate at the south of the entrance of the Arabian Gulf, and now called Socotora. The aloes here produced are held in more estimation than those of Hadramaut. The ancient name, observes Vincent (Periplus of the Erythraean Sea, p. 341.—Commerce of the Ancients, vol. 2), may have a Greek origin; but it has so near a name to Socotra or Zocotora, that it is much more likely to be a nautical corruption of an Arabic term, than the application of a Greek one. The island is near a hundred miles long, and thirty at its greatest breadth: it was inhabited only on the northern side in the age of Arrian, and the population there was very scanty, consisting of a mixture of Arabians, Indians, and Greeks, who had resorted hither for the purposes of commerce; while the remainder of the country was marshy and deserted. Marco Polo informs us, that in his time the inhabitants were Christians; and Al Edrisi confirms this, with the addition, that the Greeks were introduced there by Alexander at the request of Aristotle, in hopes of obtaining aloes. Cosmas Indicopleustes, on the other hand, says they were Greeks from Egypt (ed. Montfau, p. 179).

Dioscurea (Διόξωρευα), or sons of Jupiter, a name given to Castor and Pollux.

Dioscurias, a maritime town of Colchis, at the mouth of the small river Charsus. It was afterward called Sebastopolis, and was, in the earliest ages, the port most frequented in Colchis by distant as well as by the neighbouring nations, speaking different languages; a circumstance that still distinguishes Iskhiria, which name is only a corruption of the ancient one. (Mannert, Geogr., vol. 4, p. 370.) Arrian makes it to have been established by a colony of Milesians. Pompousius Mela, however, says that it was founded by Castor and Pollux, who made a voyage to Colchis, along with Jason, in the Argonautic expedition. (Mela, lib. 3, cap. 4.)

Diospolis I. Magna, a famous city of Egypt. (Vid. Thebe.)—II. Paros, a city of Egypt, west of Ten- tis, and on the western side of the Nile. It was the capital of the nome Diospolises. Pococke thought that the site of this place was in the vicinity of the village Hou, a supposition adopted by D'Anville, and also by

Dioscorides, who has the sçavans of the French expedition. (Mannert, Geogr., vol. 10, pt. 1, p. 376.)—III. A city of Palestine, called also Lydda. It was situate in an extensive plain, and is placed by the Itiner. Hierosol. (p. 60) thirty-two miles northwest of Jerusalem. It was destroyed by the Saracens, a little period after, about two geographical miles to the east of its site, the modern city of Ramlat. (Abulfeda, Tab. Sur., p. 79.)

Diræ, another name for the Furies. (Vid. Furies.)

Diræ, I. wife of LyCUS, king of Thebes. She treated Antiope with great cruelty, and was put to death by Amphion and Zethus, Antiope's two sons. They tied her by the hair to a wild bull, and let the animal drag her through the city until she was dead. After death she was changed into a sacred monster, and honored in the country of Thebes. (Vid. Antiope.)—II. A fountain near Thebes, in Bocotia, the waters of which emptied into the Iseum. Near it was the dwelling of Pindar. Sir W. Gell noticed a brook to the west of the Cadmes, by some Turkish tombs, which he considered to be the ancient Diræ. (Cramer's Anc. Greece, vol. 5, p. 230.)

Dis, a name given to Pluto. (Vid. Pluto.)

Dioscuria, I. a promontory of Alexandria, in ancient Egypt, introduced by some Arabians, and the most southern part of the Sinus Arabicus, or Red Sea. From its appearance as it stretched along the coast, it received the appellation of Dire (Διρέ) or "the neck." The modern name is said to be Bab-el-Mandeb. According to Mannert, however, Dire is now Ras-bet, and the opposite promontory of Poisidium is Bab-el-Mandeb. The city of Dire, or, as it was originally called, Derenice epi-Dires, stood upon part of the promontory Dire. (Mannert, vol. 10, pt. 1, p. 59, seqq.)

Dioscorida, a malevolent deity, daughter of Nox, and sister to Nemesis, the Parce, and Death. She was driven from heaven by Jupiter, because she sowed dissensions among the gods, and was the cause of continual quarrels. When the nuptials of Peleus and Thetis were celebrated, the goddess of discord was not invited, and this seeming neglect so irritated her, that she threw into the midst of the nuptial assembly an apple all of gold, and having on it the inscription, "Let the fairest take me." This apple was the cause of the ruin of Troy, and of infinite misfortunes to the Greeks. (Vid. Paris.) Discord is represented with a pale, ghastly look, her garment torn, her eyes sparkle with fire, and in her bosom she has a concealed dagger. (Lucian, Dial. Marit., 5.—Virg., En., 8, 702.)

Dithymamus, I. a name of Baccus. (Eurip., Bacchae, 572) According to the old opinion, deservedly rejected, it stood for διθυμανός, "double-hearted," i.e. he who has passed through two doors," as an allusion to the double birth of Baccus. The quantity of the first syllable is an inexpressible objection to this interpretation, and Welcker's answer to it (Nachtrag, p. 192), that this deviation from the quantity of δίς arose from the necessities of the trochaic verse, falls to the ground at once, unless it can be shown not only that the metre of the dithymamb itself was trochaic, but also that it was necessary to introduce the name of the poem into the poem itself. (Donaldson, Theatre of the Greeks, p. 17, not., 4th ed.)—II. The earliest species of choral poetry connected with the worship of Baccus. The inventor of this species of hymn was as little known as the meaning of the name. It is attributed by Herodotus to Arion (1, 29); by others to Lasus (Schol. ad Aristoph., Vesp., 195).—Said, s. v. ἄδους; and Archil., a man of the kind long before, whom the scholiasts mention by it. (Archil., frag., 38, ed. Liebel.) It was danced by a chorus of fifty men or boys around a blazing altar (Schol. ad Pind., Olymp., 13, 26.—Simonid., Epigr., 76); and hence it was also called the Cyclic chorus. The subjects were generally the labors of Baccus, and his misfortunes. Indeed, unless we misunderstand
Plato's words (Leg., 3, p. 700, b. Διονύσου γένεσις . . . ὑδαταράμος λέγόμενος), the name of the song expressed as much. It was originally distinguished by a disorderly and enthusiastic wildness of tone, which, in the end, degenerated into turgidity and bombast. The music was Phrygian (therefore stirring and rapid), and the pipe its original accompaniment. For there were more solemn festivities and systematic wildness of the dithyramb sprang tragedy; just as comedy came from the Phallic song.—Blomfield supposes an etymological connexion between the words λαυδος, θριάμβος, and διθυράμβος, and thinks they are corruptions of Egyptian terms. (Mus. Crit., vol. 2, p. 70.) It is more probable, however, that θριάμβος and διθυράμβος came with the worship of Bacchus from India, and that Dithyrambus was not, as many think, the name of the god after it became the name of the song, but the reverse. Donaldson, however, opposes this last-mentioned supposition, and attempts also to give a new derivation to the term itself, but with little, if any success. (Theatre of the Greeks, p. 18, not., 4th ed.)

Diindis, a leading nobleman of the Εὐδοί, who possessed great influence with Caesar in consequence of his fidelity and attachment to the Romans. (Cas., 83, 234, not., 8.)

Dium, one of the principal cities of Macedonia, and not unfrequently the residence of its monarchs. It was situate, according to Livy (44, 6 and 7), at the foot of Mount Olympus, which leaves but the space of one mile from the sea; and half of this is occupied by marshes formed by the mouth of the river Baphyrus. Thucydides (4, 78) says it was the first Macedonian town which Brasidas entered on his march from Thessaly. This place suffered considerably during the Social war from an incursion of the Α执意ans under their prætor Scopas, who levelled to the ground the walls, houses, and gymnasion, destroying the porches around the temple of Jupiter, an edifice of great celebrity, with the offerings and everything used in the festivals. (Polyb., 4, 62.) It is evident, however, from Livy's account, that this damage had been repaired when the Romans occupied the town in the reign of Perseus. It was here, moreover, ascertained considerably during the Social war from an incursion of the Α执意ans under their prætor Scopas, who levelled to the ground the walls, houses, and gymnasion, destroying the porches around the temple of Jupiter, an edifice of great celebrity, with the offerings and everything used in the festivals. (Polyb., 4, 62.) Pliny terms it Colonia Diennis (4, 10). Some similarity in the name of this once flourishing city is apparent in that of a spot called Standa, which answers to Livy's description. Dr. Clarke, however, was not disposed to acquiesce in this opinion, and thought that it must have stood at Katarina. (Traces—Greece, Egypt, &c., vol. 7, p. 400, seqq.) It was most probably mistaken, as Katerina, or Hateri, which is the real name of the place, is doubtless the Hatera of the Tabula Theodosiana, one stage from Dium. (Cramer's Ancient Greece, vol. 1, p. 208.) Divodrum, the capital of the Mediomatrici, a pool of Belgic Gaul, who were located along the Mosella or Morlaix. Its name was afterward changed to that of the people itself, and now Morlaix. (Tactil. Hist., 1, 63.—Amm. Mars., 15, 27.)

Dodonà, I. a celebrated city and oracle of Epirus, situate most probably in the present valley of Joannina, but the exact position of which has never been ascertained. We are not assisted here by any accurate ancient traveller like Pausanias, nor have we any itineraries or faithful measurements of distances to guide us; all is vague and indefinite; and, even after a most careful perusal of all the various passages in which the name occurs, very different opinions may be entertained on the subject. Dionysius of Halicarnassus places it four days' journey from Butthrotum, and two from Ambracia. (Antiq. Rom., 1, 5.) Colonel Leake makes it to have been situate at the southeastern extremity of the Lake of Joannina, near Kastritsa (Trees

e in Northern Greece, vol. 4, p. 168, seqq.), and there are many reasons for believing that the Dodonean territory corresponded to the valley at the south of that sheet of water. It is true there is no mention of a lake in the neighbourhood of the ancient Dodona, but the place is described as surrounded by marshes, and it is not unlikely that the Lake Joannina may have been one of the later lakelets of the territory of the Thracians in the country. (Leake, vol. 4, p. 189.) It is universally allowed, that the temple of Dodona owed its origin to the Pelasgi at a period much anterior to the Trojan war; since many writers represent it as existing in the time of Deucalion, and even of Inachus. (Asch., Prom. Vinc., v. 679.—Dion. Hal., Ant. Rom., 1, 14.) Herodotus distinctly states, that it was the most ancient oracle of Greece, and represents the Pelasgi as consulting it on various occasions (v. 527). Hence the title of Pelasgiæ assigned to Jupiter, to whom the temple was dedicated. (Zev ùna, Δοδωναῖ, Πελασγικά. Thucid., 16, 239.—Compare Hesiod, ap. Strab., 7, 327.) Of the existence, however, of another oracle in Thessaly of the same name (vid. No. II.), no doubt can be entertained; and to this the prayer of Achilles, in Homer, probably had reference. —Setting aside the fables which Herodotus has transmitted concerning Dodona, it is evident that he evidently attached no belief, his report of the affinity which existed between the service of this temple and that of Thebes in Egypt is deserving of our attention. It appears from this author, that in his time the service of the temple was performed by females; and he has recorded the names of the three priestesses who officiated when he visited Dodona (2, 55). Strabo, however, asserts, that these duties were originally allotted to men, from the circumstance of what is mention of the Selli as being attendant upon the gods. The term Selli was considered by many ancient writers to refer to a people of Pelasgic origin, whom they identified with the Hellen (Soph., Truch., v. 1160, seqq.—Strabo, 327.—Eustath., ad II., 16, v. 233.—Schol. ad Hom., l. c.—Aristot., Metapol., 1, 14.—Hexych., s. v. Σέλλος), and also with the Tomuri. (Eustath., ad Od., 16, 493.) The origin of the word Dodona is a subject of dispute. Indeed, one of the contradictory opinions transmitted to us by Steph. Byz. (s. v. Δοδώνα.—Compare remarks under No. II.) Nor are we better informed as to the nature and construction of the temple during the early age of Greek history. The responses of the oracle were originally delivered from the sacred oak or beech. (Soph., Truch., v. 173.—Hesiod, ap. Schol. in Soph., Trachin.) Its reputation was at first confined to the inhabitants of Epirus, Acarnania, Etolia, and the western parts of Greece (Pausan., 7, 21), but its fame was afterward extended over the whole of that country, and even to Asia, as we know that on one occasion the oracle was consulted by Cresus. (Herod., 1, 46.) The Boiotians were the only people who received the prophetic answers from the mouth of men; to all other nations they were always communicated by the priests of the temple. The reason of this exception is stated at length by Bellerophon (401), on the authority of Ephorus. (Compare Procl., Chrestem., ap. Phot., Bibl., vol. 2, p. 321, ed. Bekker.) Dodona was the first station in Greece to which the offerings of the Hyperboreans were despatched, according to Herodotus; they arrived there from the Adriatic, and were thence passed on to the Maic Gulf (4, 33). Among the several offerings presented to the temple by various nations, one dedicated by the Corinthians is particularly noticed. It was a brazen figure placed over a caldron of the same metal; this statue held in its hand a whip, the lash of which consisted of three chains, each having an astragalus fastened to the end of it; these, when agitated by the wind, struck the caldron, and produced so continued a sound that 400 vibrations.
could be counted before it ceased. Hence arose the various proverbs of the Dodonian caldron and the Corean lash. (Strabo, Compend., 7, p. 329.) Menander, in one of his plays, compared an old nurse's chatter to the endless sound of this kettle. (Menand., Relig., ed. Meinecke, p. 27.) It is held that many opinions, Slavonic and otherwise, were composed of many caldrons, contiguous to each other, so that, striking upon one, the sound was conveyed to all the rest. But this account is not so much to be depended on as the other, which, according to Steph. Byz., rests on the authority of Polemo Perigeotes, who seems to have written a very accurate description of the curiosities of the place; as also another person named Aristides. We hear of the idea of the Dodonian oracle as a sort of the Persian invader (Herodot., 9, 93), and again in the reign of Agesilus, who consulted it previously to his expedition into Asia. (Plut., Apoll., Lyc., p. 125.) It is stated by Diodorus Siculus (14, 13), that Lysander was accused openly of having offered to bribe the priestess. The oracle which warned the Molossian Alexander of his fate is well known from Livy (8, 24). From Demosthenes we learn, that the answers delivered from time to time to the Athenians were written down in an archive; and he himself appeals to their testimony on more than one occasion. At length, during the Social war, Dodona was, according to Polybius (4, 67), almost entirely destroyed in an irruption of the Aetolians, under their praetor Dorimachus, then at war with Epirus. "They set fire," says the historian, "to the porches, destroyed many of the offerings, and pulled down the sacred edifice." It is probable that the temple of Dodona never recovered from this disaster, as in Strabo's time there was scarcely any trace left of the oracle; but the town must still have existed, as it is mentioned by Hierocles among the cities of Epirus in the seventh century; and we hear of a bishop of Dodona in the council of Ephesus. (Wessel, ad Hieroc., Synecd., p. 651.)—All accounts seem to agree that Dodona stood either on the declivity or at the foot of an elevated mountain called Tomarus or Tamorius. (Strabo, 328.) Hence the term Tomuri, supposed to be a contraction for Tomaruri (Τομαρουρίων), or guardians of Tomarus, which was given to the priests of the temple. (Strabo, l. c.) In Callimachus (Hymn. in Cer., 52) we find the name of the mountain written Tomars (Τομαρος). This lofty mountain was farther remarkable for the number of streams which burst from its sides. (Plin., 4, 1.)—If, then, we had the means of distinguishing the modern chain which answers to the ancient Tomarus, we might easily discover the site of Dodona, but the whole of Epirus being covered with lofty mountains, it is not easy to ascertain even this point.—(For discussions on this interesting question, consultramer's Anc. Greece, vol. 1, p. 116, seqq.—Wordsworth's Greece, p. 247.—Walpole's Collection, vol. 2, p. 473.—Hughes's Travels, vol. 1, p. 511.)—II. A city and oracle of Thessaly. It has given rise to much controversy whether Homer (II., 2, 749) refers to this or the city of Epirus, and the scholiasts and commentators are divided in their opinion. Stephanus Byzantius (s. v. ΔΩΔΩΝΥ) enters fully into the discussion, and quotes passages from several writers on the antiquities of Thessaly, who all acknowledged a city named Dodona or Bodona in that country: whence the opinion has been entertained that the oracle of Jupiter was afterward transferred to Epirus. Strabo (441) seems to adopt this notion, and affirms, in his words, that the Thessalonic Dodona was situated near the Thessalian Pindus, and the locality to suppose that it stood near Scutussa, at the foot of Mount Ossa (9, p. 441). Ritter has some curious and learned speculations on this subject. According to this writer, the primitive form of the name was Bodona (Βοδονα), and he traces the founding of Dodona to a sacrificial colony from India, and establishes, when taken in connexion with various other parts of early Greek history, the remarkable fact of the introduction of the Buddha-worship into Greece along with the germs of civilization. The analogy between the root of the name and the term Buddha of the Hindu Buddha (Buddha), is sufficiently obvious. Ritter's work, however (Vor- halle Europäischer Völkergeschichten vor Herodotus, um den Kaukasus und an den Gestaden des Pontus, Berlin, 1829, Svo), ought to be carefully perused in order to do justice to his learned and elaborate arguments. His object is to show, that the stream of civilization and religion flowed into the countries of Europe from the remote India, by pursuing a route through the mountains, passing through the Himalaya, and descending down into Europe by the shores of the Euxine. | Dodonius, a surname of Jupiter from Dodona. (Consult Homer, II., 16, 233.—Ζευς ἄνω, Δωδώνυτα, Πειαργυκό. And compare remarks under the article Dodona.)| Dodonides, the priestesses who gave oracles in the temple of Jupiter in Dodona. (Vid. Dodona.) | Dolabella, P. Cornelius, a Roman who married Tullia, the daughter of Cicero, and was accused of an irruption to join Caesar at the beginning of his rebellion, as the national patron of men of broken fortunes. He afterward fought under him at Pharsalia, distinguished himself by his revolutionary proceedings when tribune during Caesar's absence in Egypt, and afterward went with him into Africa, and served under him through the whole of that campaign. On his return to Italy after Caesar's final victory, he appears to have lived in a style of great magnificence, and the excellence of his entertainments is recorded by Cicero, who, through him and one or two other friends maintained a friendly intercourse with the dominatv party. He was nominated by Caesar for the consulship a short time before the assassination of the latter, and after Caesar's death, assumed the office of consul himself, but went over to the side of the republic, and acted vigorously in its behalf. Subsequently, however, Antony drew him entirely away from the republican party by paying off for him a heavy load of debts. Leaving Rome in order to get possession of Syria against Cassius, he surprised Smyrna and put Trebonius to death, on which the senate declared him a public enemy. Having been pursued and defeated by Cassius, he destroyed himself.—Dolabella was a man of no virtue or principle. Cicero was compelled to have his daughter Tullia divorced from him. Still, however, the orator always kept up a fair intercourse with him, and endeavored to use him as a check upon the disorders of Antony, his colleague in the consulship. (Cic., Phil., 2, 30.—Id., Ep. ad Fam., 9, 16.—Middleton, Life of Cicero, vol. 2, p. 206, 224, 290, 343, &c., Svo ed.) | Dolicha, I, a town of Thessaly, in the Pherrebian district, to the southeast of Azorus. Here the consul Q. Marcius Philippus received a deputation from the Achaean league, at the head of which was Polybius, who accompanied the Roman army in their singular and perilous march through the defiles of Olympus into Pieria. (Polyb., Ed. Scriptor., 28, 11.—Livy, 42, 53.— Id., 44, 2.)—II. A town of Syria, situate in the district of Euphratensis, and northwest of Zeugma. The ancient name is preserved in that of Dolae, a castle on a chain of mountains, which, detached from Amanus, are prolonged towards the Euphrates. (Abulfeda, Tab. Syr., p. 122.—Mannert, Geogr., vol. 6, pt. 1, p. 496.) | Dolon, a Trojan, the only son of the herald Eu- medes, famed for swiftness of foot. When Hector was anxious to explore by night the Grecian camp Dolon, induced by the promised reward of the chari and horses of Achilles, undertook the enterprise. Of his approach to the Grecian tents, he was met by D— 461
The ascendency which she had acquired, however, over the vicious emperor, was too strong to be thus easily made to yield. But, as the unruly spirit of the Trojan was at length wearisome to the conquerors, he was put to death by Diomed for his treachery. (Hom., II, 10, 314.—Virg., Æn., 12, 349.)

Dolón, a people of Thrace. (Herodot., 6, 34.—Vid. Mitilidæ.)

DoLÔPEs, a people of Thessaly, who appear to have been early established in that southeastern angle of Thessaly formed by the chain of Pindus, or rather Tymphrestus, on one side, and Mount Othrys, branching out of it, on the other; the latter mountain they were separated from the Ænianes, who were in possession of the upper valley of the Sperchius; while to the west they bordered upon Phthiotis, with the inhabitants of which country they were connected as early as the siege of Troy. This we learn from Homer, who represents Phoenix, the Dolopian leader, as accompanying Achilles thither in the double capacity of preceptor and ally. (Il., 9, 480.—Pind., ap. Strab., 431.)

Dolopians, according to Pausanias and Harpocration, sent deputies to the Amphictyonic council. From Herodotus we learn that they presented earth and water to Xerxes, and furnished some troops for the expedition undertaken by that monarch into Greece (7, 132 and 185). Xenophon, at a later period, enumerates them as subjects of Jason, tyrant of Pherae. (Hist. Gr., 6, 1.) Diódoros Siculus informs us that they took part in the Laconic war (18, 11). We afterwards hear of them as having been divided into two districts, between the Ætolians, who had extended their dominion to the borders of this district, and the kings of Macedonia. Hence the frequent incursions made by the former people into this part of Thessaly when at war with the latter power. (Liv., 31, 12.—Id., 33, 34.—Id., 36, 38.) Dolopia was finally conquered by Perseus, the last Macedonian monarch. The cantons of Thaumako, Gruttiano, and part of Agrapha, may be supposed to occupy the situation ascribed by ancient writers to the country of the Dolopians. (Cramer’s Anc. Greece, vol. 1, p. 416.)

Dómitia Lex, de Sacerdotois, brought forward by Cn. Domitius Ahenobarbus, tribune of the commons, A.U.C. 650. It enacted that the pontifices, augures, and decemviri sacris facienda should not be chosen by the sacerdotal colleges, but by the people. The pontifices maximus and curio maximi were always, in the first instance, the deputies chosen by the people. (Cic., Rull., 2, 7, Liv., 25, 5.—Id., 27, 5.)

Dómitia Genia, a celebrated plebian family, divided into two branches, that of the Calvini and that of the Ahenobarbi. The Calvini attained to the consular office A.U.C. 422, the Ahenobarbi in 562. The latter, at length, in the person of Nero, became invested with imperial power; but with this emperor perished the male line of the Domitii. Domitian only belonged to this family, through his mother Domitia. Domitia, I. Lepida, aunt of Nero, was accused of magic and put to death (A.D. 54) through the intrigues of Agrippina, who was jealous of her influence over Nero. (Tacit., Ann., 12, 64, seq.)—II., or Domitilla, wife of Vespasian, by whom he had Titus and Domitian, and a daughter named Domitilla. She had been the mistress of a Roman knight, and passed for a freed woman; but she was declared of free birth on having been identified by Domitian with Flavus Liberatus, who held the situation of scribe to one of the questors. She died before Vespasian came to the throne. (Suet., Vit. Vespas., 3.)—III., Longina, daughter of the famous Corbulon, the general of Nero. She married Ælius Lanius, but was seduced by Domitian, and, after the birth of a daughter, publicly raised to the throne. Hardly, however, had the emperor elevated her to the station of Augusta, when his jealousy was alarmed by certain familiarities to which she admitted the pantomime Paris, and he drove her from his bed and palace.
his wife were among the victims. In the following year, A.D. 96, a conspiracy was formed against Domitian among the officers of his guards and several of his intimate friends, and his wife, the infamous Domitia, herself is said to have participated in it. The immediate cause of it was his increasing suspicions, which threatened the life of every one around him, and which are said to have been stimulated by the predictions of astrologers and soothsayers, whom he was very ready to consult. He was killed in his apartments by several of the conspirators, after struggling with them for some time, in his 45th year, and in the fifteenth of his reign. On the news of his death, the senate assembled and elected M. Cocceius Nerva emperor.—The character of Domitian is represented by all ancient historians in the darkest colours, as being a compound of timidity and cruelty, of dissimulation and arrogance, of self-indulgence and stern severity towards others. He gave himself up to every excess, and plunged into the most degrading vices. Conceiving at last the mad idea of arrogating divine honours to himself, he assumed the titles of Lord and God, and claimed to be a son of Minerva. Soon after he had succeeded to the government, he indulged in that love of solitude, which pride and fear combined to render in a very short time the most confirmed of all his habits. In the beginning of his reign, says Dio Cassius, he customed himself to spend several hours every day in the strictest privacy, employed frequently in nothing else than in catching flies, and piercing them with a sharp instrument. Hence the well-known remark made by Vibius Crispus, who, when asked whether there was any one with the emperor, replied, “No, not even a fly.” Domitian took a delight in inspiring others with terror; and Dio Cassius tells of a singular banquet, at which he invited the principal members of the senate and equestrian order, where everything wore the appearance of an intended execution. He once even convened the senate to determine in what way a large turbot should be cooked, whether whole or divided. And yet at one time, before his becoming emperor, Domitian had applied himself to literature, and he is said to have composed several poems and other works.—The senate, after his death, issued a decree that he should be buried in the Forum, and his ashes, in the Forum Romanum, and obliterated from every public monument. (Tacit., Hist. 3, 59, seqq. — Id. ib. 4, 2, seqq. — Sueton., Vit. Domit. — Dio Cass., 67.—Plin., Epist., 4, 11.—Id., Paneg., 52, 6, &c.—Juv., Sat., 4, 37, seqq.)

DOMITILLA. Vid. Domitia II.

DOMITIUS, I. Ahenobarbus, the first of the Domitians, who bore the surname of Ahenobarbus, lived about the beginning of the sixth century from the founding of the city.—I. Cneius Ahenobarbus, son of the preceding, was plebeian ædile A.U.C. 558, B.C. 196; prætor A.U.C. 560; and consul A.U.C. 562. (Liv., 33, 42.—Id., 49, 35, &c.)—II. Cneius Ahenobarbus, was consul B.C. 122. He conquered Bituriges, general of the Arverni, slaying 20,000 and making 3000 prisoners. On his return to Rome he obtained a triumph. Lucius Ahenobarbus, was quaestor B.C. 65, and prætor some years after. In the year 54 B.C. he attained to the consulship. He and Lentulus were the first to oppose Caesar in his invasion of Italy. Betrayed by his own troops into the hands of the conqueror at the capture of Corfinium, he received his liberty, and again raising a little army at his own expense, sustained a siege at Massilia. Escaping thence, we find him with Pompey in Macedonia still the determined enemy of Caesar, and finally he fell in the flight after the battle of Pharsalia. (Cic., Ep. ad Fam., 8, 14.—Id. ib., 16, 12.—Id., Ep. ad Att., 1, &c.)—V. Cneius Ahenobarbus, son of the preceding, inherited all his father's hatred towards Caesar. After the death of the latter, he joined the party of Brutus and Cassius. After the battle of Philippi he went over to the triumvirs, was pardoned, and, during the ensuing year, obtained the consulship, A.U.C. 732. Subsequently, however, he attached himself to Octavius against Antony, but died before he could render the former any service.—VI. Cneius Ahenobarbus, father of Nero, married Agrippina, the daughter of Germanicus, B.C. 29. He degraded his high birth by the cynicism of his character and corruption of his morals. In early life he killed one of his freedmen, who would not drink as much as he wished him to do. He tore out also the eye of a Roman knight who displayed towards him a freedom of spirit that gave offence. Being accused before Claudius of treason, adultery, and other crimes, he only escaped by the death of that emperor. He used to say, that from himself and his wife there could only spring a monster deadly to the human race, a prediction fatally verified in Nero. (Tacit., Ann., 4, 75.—Id. ib., 6, 45, &c.)

DONATUS, AElius, I. A celebrated grammarian, born in the fourth century of our era, about A.D. 333. He was preceptor to St. Jerome, who speaks with great approbation of his talents, and of the manner in which he explained the comedies of Terence. Independent of his commentaries on Virgil and Terence, Donatus composed a treatise, put to the mouth, in which he treated, as it were, of the parts of speech individually. This work was highly esteemed, and Diomedes the grammarian entertained so high an opinion of its merits, as subsequently to add it to his own work on Latin grammar. Some, though without the least authority, maintain that the commentaries of Donatus on Virgil and Terence are lost, and that those which at the present day bear his name are spurious. That on Virgil is very unimportant, it is true, and appears worse than spurious. It is said that he neither of the author commented on, nor of the reputation of the grammarian to whom it is ascribed. But the commentary on Terence is extremely valuable. Some writers assign the commentary on Virgil not to AElius Donatus, but to Claudius Tiberius Donatus. (Compare the remarks of Heyne on the life of Virgil by Donatus, vol. 1, p. 153, in notis.)—II. A bishop of Numidia, in the fourth century. According to some writers, he was the founder of the church at Carthage, the first to introduce the schism produced by the election of a bishop of Carthage. He was deposed and excommunicated in councils held at Rome and Arles, in the years 313 and 314, but was for some time after supported by a party at home. What farther happened to him is not known. —III. A bishop of Carthage, chosen to that office in 316. He continued and supported the schism produced by his name-sake, which led to a persecution under the Emperor Constans, in which the imperial arms finally prevailed, and Donatus died in exile about 355. According to St. Augustine, this prelate maintained an inequality of persons in the Trinity. (Corton's Biogr. Dict., vol. 1, p. 653.)

DONIA, an island in the Icariian Sea, one of the Sporades. It lay southeast of Icaria, and east of Patmos. The marble obtained from this island was green. It is thought to correspond to the modern Raia. (Compare, as regards this island, the following authorities: Tacit., Ann., 4, 30.—Mela, 2, 7.—Plin., 4, 12.—Steph. Byz., s. v. Donovia.)

DORIAS, the inhabitants of Doris. (Vid. Doris.)

DORIAS, a river of India extra Gangem. Mannert makes it correspond to the small river Pegu. (Geogr., vol. 5, pt. 1, p. 249 and 264.) Others, however, are in favour of the modern Zoon, the mouth of which is in the kingdom of Tonkin. (Donatus of Messenia, where Thamyris the musician challenged the Muses to a trial of skill. Pausanias (4 33) notices this ancient town, of which he saw the ruins near a fountain named Achaim. Strabo, however, asserts that no such place was known to

483
exist in his day, but that some identified it with an obscure town named Oluris, in the Messenian district of Aulon (350). This may have been the spot alluded to by Pausanias. Homer (II., 2, 594) assigns Dorium to the dominions of Nereus, and Hesiod seems to have adopted a different tradition from other poets, since he removes the scene of the story of Thamyris to Dotium in Thessaly (ap. Steph. Byz., s. v. Δτιών.—Plin., iv, 5, 4.).

Doris, a country of Greece, situated to the south of Thessaly, and separated from it by the range of Mount Ætea. On the south it had the Locri Ætoliae. On the east it was parted from the Locri Æpicenomidi by the Pindus, a branch of the Cephissus; and on the west from Ætolia by a part of the chain of Ætea. Its territory was of small size, extending only about 40 miles in length. The country, though mountainous, had still several beautiful plains, and was very fruitful.—The Dorians were the most powerful of the Hellenic tribes, and derived their origin, as they pretended, from a mythical personage named Dorus, who is generally made the son of Hellen, though he is described as the son of Xuthus, Proetus, and Calchas. Pausanias mentions five successive migrations of this race. Their first settlement was in Phthiotis, in the time of Deucalion; the next under Dorus, in Hestiaiotis, at the foot of Ossa and Olympus; the third on Mount Pindus, after they had been expelled by the Cimæans from Hestiaiotis. In this settlement, says Herodotus, they were called the Macedonian people; and he elsewhere (8, 49) attributes to the Dorians a Macedonian origin, though there does not appear to be any real connexion between the Dorians and the Macedonians, who were of Illyrian origin (Müller, Dorians, vol. i, p. 2), beyond this vicinity of abode. The fourth settlement of the Dorians, according to Herodotus, was in Dryopis (afterward called the Doric Tetrapolis); and their last migration was to the Peloponnesus. Another, and most remarkable expedition, not mentioned by Hesiod, was the migration of the Achaean people from the Danubting to Crete, which is stated to have taken place while they were in their second settlement, at the foot of Olympus (Androm., ap. Strab., 475); and Dorians are mentioned as inhabitants of that island even by Homer (Od., 19, 174). The eastern coast was the first part which they occupied. (Staphylus, ap. Strab., 475). This early settlement in Crete must not be confounded with the two subsequent expeditions of other Dorians to Crete, in the 7th and 6th centuries B.C., when they were well settled in the Peloponnesus, the one from Laconia, under the guidance of Pollis and Delphus; the other from Argolis, under Althæmenes. The migration of the Dorians to the Peloponnesus, which is generally called "the return of the descendants of Hercules," is expressly stated to have occurred 80 years after the Trojan war, that is, in B.C. 1104. (Thucyd., 1, 12.) The origin and nature of the community of these Dorians is one of the most obscure matters in the whole of ancient history. We are told that the Dorians are involved in much obscurity. The Dorians were, from very early times, divided into three tribes, and the epithet "thrice divided" (τριβίδες) is applied to them by Homer in the passages referred to above. These three tribes were the Hyllæans, the Dymanes, and the Pamphylians. Now the two latter tribes are said to have been descended from Dymas and Pamphylos, the two sons of Ægimius, a mythical Æolian king; and the first claimed a descent from Hyllus, the son of Hercules. An attempt has been made to show that the Hyllæans were of Doric origin, as well as the other two tribes. (Müller, Dorians, 1, chap. 3, sect. 2.) It is more natural, however, to infer from the traditions, as well as from the duplicate divinities of the Dorians, that the genuine Dorians were included in the two other tribes, and that the Heraclids were a powerful Achæan family, united with them in a similar manner, but by a stronger tie than with the Ætolians under Oxylus, who are also said to have taken part in this expedition. The Heraclids, then, with their Ætolian and Dorian allies, crossed the Corinthish Gulf from Naupactus, invaded and subdued Æolia, which was assigned to the Æolian chiefman; and, bendering their steps southward, conquered successively, and with greater or less difficulty, Messenia, Laconia, Argolia, Corinth, and Megaris. In Laconia they were joined by the Cadmean clan of the Ægide, who assisted them in their tedious war with Amyclas, and afterward took part in the colonies to Thera and Cyrene. This invasion, which so materially affected the destinies of Greece, was very similar in its character to the return of the Israelites to Palestine. The invaders, who, like the descendants of Abraham, brought their wives and children with them, though they, perhaps, did not completely abandon their last settlement, which was still called and considered Dorian (Thucyd., 1, 107), numbered about 20,000 fighting men, on the highest estimate. (Müller, Dorians, 1, ch. 4, sect. 8.) They were therefore very inferior in number to the inhabitants of the countries which they conquered; but the superiority of their peculiar tactics, as well as that which the Norman invasion introduced into England, namely, the superior instinct of a warlike race, by which the invaders remained on a footing of equality among themselves, all the old inhabitants of the country were reduced to an inferior condition, like the Saxons in England. They were called πελικουσι, or " dwellers around," a name corresponding to the Pfahlbürger, or "citizens of the Palisade," at Augsburg, who dwelt in the city suburbs, without the wall of the city; to the "citizens of the Palisade," in the time of James I., the people of the contado in Italy; and to the Fauxbourgeois in France. (Niebuhr, Roman Hist., vol. i, p. 398, Cambr. trans.—Arnold’s Thucydides, vol. 1, p. 626.) The usual name for a constitution in a Dorian state was "an order," or regular principle (κόσμος), and this name appears to have arisen from the circumstance that the attention of the Dorian legislators was principally, if not solely, directed to the establishment of a system of discipline, and to the agreement of that strict subordination which is the result of it. The necessity of this was apparent, from the peculiar relation subsisting between the Dorians and their πελικουσι. It was by superior prowess and discipline that the farmer had acquired their rank, and it was only by a continuance of this superiority that they could hope to maintain themselves in the same position. The same occasion for strict discipline may also account for the peculiar tactics and for the system in most Dorian communities. The Dorian women enjoyed a degree of consideration unusual among the Greeks. The Syssitia or common tables, which were established in most Doric states, were designed to admonish those of the privileged class, that, living as they did in the midst of a conquered but numerous population, they must not consider themselves to have the right of mastering and oppressing that part of the population which was the same as their own, for the sake of their order. (Consult Müller’s Dorians, Eng. trans., Oxford, 1830, 2 vols. 8vo.—Hermann, Lehrbuch der Griechischen Staatsalterthümer, Heidelberg, 1838, translated Oxford, 1836. —Lachmann, Sartanische Staatsverfassung, Breslau, 1836.—Encycl. Us. Knorr, vol. 9, p. 89.) II. A colony of the Dorians in Asia Minor, on the coast of Caria. On the arrival of the Dorians in Asia, they formed themselves into six independent states or small republics, which were confined within the bounds of as many cities.
These were Lindus, Ialysus, Camirus, Cos, Cnidus, and Halicarnassus. Other cities in the tract, called from them Doris, belonged to their confederacy; but the Dorian chief among all the Greeks was Doris, which, the Dorians, were admitted into the temple at Tripe, where they exhibited solemn games in honour of Apollo Triopius. The prizes were tripods of brass, which the victors were obliged to consecrate to Apollo, and leave in the temple. When Agiscles of Halicarnassus won the prize, he transgressed this custom, and carried the tripod to his own house, on which account the city of Halicarnassus was ever afterward excluded from the Dorian confederacy. The Dorians were from that time known by the name of the five cities, or Pentapolis, and no longer by that of Hexapolis.—III. A goddess of the sea, daughter of Oceanus and Tethys. She married her brother Nereus, by whom she had 50 daughters called Nereides. Her name is often used to express the sea itself. (Propert., 1, 17, 25.—Virg., Aen. 10.—Hesiod, Theog.—IV. A female of Locri, in Italy, daughter of Xenetus, whom Dionysius the Elder, of Sicily, married the same day with Aristomache. (Vid. Dionysius.)

DORIS, a plain in Thrace, near the mouth of the Hebrus, where, according to Herodotus (7, 59), Xerxes numbered his land forces, as he was marching upon Greece. The mode in which his officers ascertained the amount of his troops was this: they drew up in a place a body of 10,000 men; and making these stand together as compactly as possible, they traced a circle around them. Dissmissing these, they enclosed the circle with a wall broad high; into this they introduced the army by bodies of 10,000 men each time. (Vid. Xerxes.)

DORSS/NUS, or more correctly Dossennus, a Roman comic poet, and writer of Atellane fables, who enjoyed no mean reputation as a popular dramatist. (Compare Vossius, de Poet. Lat. incerti. et. c. 7, p. 84.) Horace makes mention of him (Ep., 1, 2, 178.) He particularly excelled in draman of this sort. The original ed the minute; but, in consequence of the applause which these elicited from the lower orders, he would seem, from the censure of Horace, to have been tempted to go still farther, and push matters to extremes. The same poet also pleasantly alludes to his carelessness and negligence as a writer, by saying that he traversed the stage with his sack, or comic slipper, loose and untied. Seneca makes mention of the inscription on his tomb; from which it appears he died a exile. The Greek copies the powers in the lower orders, he would seem, from the censure of Horace, to have been tempted to go still farther, and push matters to extremes. The same poet also pleasantly alludes to his carelessness and negligence as a writer, by saying that he traversed the stage with his sack, or comic slipper, loose and untied. Seneca makes mention of the inscription on his tomb; from which it appears he died a exile. The Greek copies (Bekker, vol. 173.)—U. S. Knodl. vol. 9, p. 118.

DORSO, C. Fabius, a Roman, who, according to the old legend, when Rome was in the possession of the Gauls, issued from the Capitol, which was then besieged, to go and offer on Mons Quirinalis a stated sacrifice enjoined on the Fabian house. In the Ga- llic war, being the guardian of the sacred things in his hands, he descended from the Capitol and passed through the enemy without betraying the least signs of fear. When he had finished his sacrifice, he re- turned to the Capitol unmolested by the foe, who were astonished at his boldness, and did not obstruct his passage or molest his sacrifice. (Liv. 5, 46.)

DORUS, a son of Hellen. (Vid. DORUS.)

DORUS, a town of Phrygia, now Eski-kaleh, at the junction of the Bosphor and Thymbris, two branches of the Sangarius, and on the confines of Bithynia. The plain of Dorylæum is often mentioned by the Byzantine historians as the place of assemblage of the armies of the Eastern empire in their wars against the Turks; and it is described by Anna Comnena as being the first extensive plain of Phrygia after crossing the ridges of Mount Olympus, and after passing Leucus. For some remarks on the modern Eski-kaleh, consult Walpole's Collection, vol. 2, p. 205.

DOSAN, a son of Antigonus III., because he promised and never performed; δοσων, in Greek, i.e., about to give; i.e., always promising. (Vid. Antio- nius III.)

DRAO, I. a celebrated Athenian legislator, who flourished about the 39th Olympiad, B.C. 621. Suidas tells us that he brought forward his code of laws in this year, and that he was then an old man. Aristotle (Polit., 2, sub fin.) says, that Draco adapted his laws to the existing constitution, and that they contained nothing particular beyond the severity of their penal- ties. The slightest theft was punished capitally, as well as the most atrocious murder; and Demades re- marked of his laws, that they were written with blood, and not with ink. (Plut., Vit. Sol., c. 17.) Draco, however, deserves credit as the first who introduced written laws at Athens, and it is probable that he im- proved the criminal courts, by his transfer of cases of bloodshed from the athenian to the ephetae (Jul. Pol- lux, 8, 124, seq.) before since his time the archons had a right of settling all cases arbitrarily, and without appeal; a right which they enjoyed in other cases un- til Solon's time. (Bekker, Anecd. Grac, p. 449, l. 23.) It appears that there were some offences which he did not punish with death; for instance, loss of civ- il rights was the punishment of attempting to alter one of his laws. (Demosth., c. Aristocor., p. 714, Bekk.) Draco was an archon (Pausan., 9, 36, 8), and, conse- quently, an Eupatriad: it is not, therefore, to be sup- posed, that his object was to favour the lower orders, through his code seems to have given the power of the nobles. The Athenians, it is said, could not endure the rigour of his laws, and the legis- lator himself was obliged to withdraw to the island of Eginia. Here he was actually suffocated in the the- atre beneath the number of cloaks and garments which the people of the island, according to the usual mode of expressing approbation among the Greeks, shower- ed upon him. He was buried in the theatre. On the legislation of Draco in general, consult Wackenroth, Hellenische Alterthumsk., 3, 1, p. 239, seqq.—Encycl. Us. Knodl., vol. 9, p. 118.

DRAUSE, Vid. Zarangaei.

DRAVUS, a river of Germany, rising in the Norican Alps. (Plin., 3, 25.—Strabo, 314.) It traverses the southern parts of Noricum and Pannonia, running from west to east, and falls into the Danube near the city of Conocam, or Erident. It is now the Drave. Piol- lemey calls it the Dravus, and the Danube, which he says was distinguished as a moral writer. It ran as follows: "Hospes resiste, et sophiam Dossenni leges." (Senec., Epist., 89, 6.—Fabric., Bibl. Lat., vol. 3, p. 238, seqq.)

DRAUS/NUS, a Roman, who, according to the old legend, when Rome was in the possession of the Gauls, issued from the Capitol, which was then besieged, to go and offer on Mons Quirinalis a stated sacrifice enjoined on the Fabian house. In the Ga- llic war, being the guardian of the sacred things in his hands, he descended from the Capitol and passed through the enemy without betraying the least signs of fear. When he had finished his sacrifice, he re- turned to the Capitol unmolested by the foe, who were astonished at his boldness, and did not obstruct his passage or molest his sacrifice. (Liv. 5, 46.)

DRE, a town of Sicily. (Vid. Doris.)

DREBENEM, I. a town of Sicily, north of Lilybaem, and in the vicinity of Mount Eryx. Here Anaximenes, according to Virgil, lost his father Anchises. The more correct form of the name is Drepana (à ὄπερνων). This place was founded in the beginning of the first Punic war by the Carthaginian commander Hamilcar, who removed hither the inhabitants of Eryx, and other places adjacent. (Diod. Sic., 23, 9.) Drepanum and Lilybaem formed the two most important cities of the Carthaginians in Sicily. Off this place, near the Engatesinsula, was fought the famous naval battle between the Romans commanded by Lutatius Catulus, and the Carthaginians under Hanno. The Romans gained a decisive victory, which put an end to the first Punic War. Drepanum was so called from the curvature of the shore in its vicinity resembling a seyto (περαπρων). It is now Trapani. (Mannert, Geogr., vol. 9, pt. 2, p. 384, seqq.) II. A town of Bithynia, on the Sinus Acastenus, called by
Constantine the Great, Hellenopolis.—III. A promontory on the Sinus Arabicus, below Arsinöe: it is now Ras-Zafranët.

The name of Illiricum, which falls into the Adriatic at Lissus. This is the largest of the Illyrian streams. Strabo (316) informs us, that it was navigable as far as the country of the Dardanii, which is a considerable distance from the sea, as they inhabited the southern part of what is now Servia. This river is formed principally by the junction of two others, the one distinguished in modern geography by the name of the white Drino, which rises in the chain of Mount Bertiscus (Strabon, Chronic, ap. Geogr. Min., Vol. 2, p. 99); the other flows from the south, out of the great lake of Ochrida, the ancient Lycnitias Palus, and unites with the former after a course of nearly sixty miles: this is commonly termed the Black Drino. (Cramer's Ancient Greece, vol. 1, p. 41.)

Dromus Achillis, a promontory near the mouth of the Borythenes. (Strabo, 307.—Arrian, Peripl., p. 21.—Peripl. Anonym., p. 8.—Mela, 2, 1.—Plin., 4, 28.) According to the old geographers, Achilles, having entered the Enixe with a hostile fleet, after ravaging the coast, landed on this promontory, and exercised himself and his followers in running and other gymnastics sports. (Manrett, Geogr., vol. 4, p. 234.) It is a low, sandy, and uninhabited neck of land, resembling somewhat a sword in its shape. Strabo evidently exceeds the true measurement, when he states it to be one thousand stadia. Pliny only makes it eighty miles. Its modern name is said to be Kosso-Oeschirgatë. (Vid. Leuce.)

Driniani and Droutnia (δ' θρούνιτις, Πτολ.—δ' θρούνιτικα, Strabo), a river of Gaul, rising among the Alpes Cottiae, north of Brigantio or Briançon. It falls into the Rhodanus or Rhone, about three miles below Avenio or Agonnum, after a course of one hundred and eighty miles, and is now called the Durance. It is an extremely rapid river, and below the modern town of Sisteron it has been found necessary to throw a bridge over it. Its inundations are frequent and very destructive. (Strab., 185.—Manrett, Geogr., vol. 2, p. 78.)

Druidae, the ministers of religion among the ancient Gauls and Britons. Britain, according to Caesar, was the great school of the Druids, and their chief settlement was in the island called Mona by Tacitus, now Anglesey. The natives of Gaul and Germany, who were not so thoroughly versed in the mysteries of Druidism, resorted to this island to complete their studies.—Many opinions have been formed respecting the origin of the name. The common derivation is from ὁ δρύς, an oak, either from their inhabiting and teaching in forests, or, as Pliny states, because they never sacrificed but under an oak. But it is hard to imagine how the Druids should come to speak Greek. Some deduce the name from the old British word dru or dru, which may mean that they were wise. This last derivation receives considerable support from a passage in Diodorus Siculus (5, 31), who, speaking of the philosophers and priests of Gaul, the same with the Druids, says that they were called Σαρωνίδαι, a term which some of the commentators trace to the old Greek form Σάρωνις (Ioc.), a hollow oak. Wesseling, however, it must be acknowledged, condemns this reading, and is in favour of receiving it as a word for the former and real Sarōnidae. Among the many Oriental derivations which have been given, a favourite one is that from the Sanscrit term Druvīth, signifying poor, indigent. In historical conformity with this derivation, it has been urged that, among the Hindus, we may observe in the Sanniás the professional mendicant, while among the Druids poverty was rather a merit than a disgrace. —The arguments in favour of the Oriental origin of the Druids are deserving of great attention, although too numerous to be here all detailed. Diogenes Laertius and Aristotle class the Druids with the Chaldeans, Persian Magi, and Indians, in which they are followed by other writers. The Druidical sects are comprehended under the eleventh school in the names of the Druidical gods. The importance which the Druids attached to bulls and oxen forms another very striking mark of coinincidence. The Druidical mysteries also are said by Davies to have been nearly parallel to the rites of Bhaawane and Eleusins. In the magic rod of the Druids we likewise discern the sacred staff of the Brahmins. Both possessed consecrated beads; both made almost endless lustrations; both wore linen tāras; and Maurice remarks that the circle, Brahma's symbol, and the crescent, that of Siva, were both Druidical ornaments. So also there was a striking resemblance between the notion entertained by the Druids of a Supreme Being, and that found in the sacred writings of the Hindus. —The Druids formed a distinct caste, possessing the greatest authority, being the learned men and philosophers of the nation, and having also very great authority in the government of the state. Julius Caesar has left more information concerning them than any other writer. According to him, they performed all public and private sacrifices, explained the doctrines of religion, distributed all kinds of rewards, administered justice at stated times, and determined the punishment which should be inflicted on offenders. Whoever opposed their decisions was excommunicated by them, and was thereby deprived of all share in public worship. They could even pronounce men to be uninstructed and ignorant people; and, in fact, their power had hardly any limits. They appointed the highest offices in all the cities, and these dared not undertake anything without their advice and direction. They were freed from taxes and all public burdens. Instruction in religious and all other kinds of knowledge, the art of war alone excepted, was intrusted entirely to them. They gave oral instruction in the form of verses, which often had a hidden meaning, in which, though numrously composed, many thousands, were committed to memory by their pupils. According to Caesar, they believed in the immortality of the soul, and its transmigration through different bodies. They taught, moreover, the nature and motions of the heavenly bodies, the magnitude of the universe and the earth, the nature of things, and the power of the gods. They also practised astrology, magic, and soothsaying. According to Pliny, they were not free from moral improprieties. They even divided themselves into many orders. They had a wonderful reverence for the mistletoe, a parasitical plant, which grows, not from the earth, but on other plants, particularly the oak. This they looked upon as the holiest object in nature. They likewise esteemed the oak sacred. The Druids had a common superior, who was elected by a majority of votes from their own number, and who enjoyed his dignity for life. In their sacrifices, the Druids often employed human victims, like the Athenians. (Strabon, 6, 44.) Caesar states that the members of the Gallic nobility might alone enter the order of the Druids. Porphyry, on the other hand (de Abst., 4, 17), makes admission into this priesthood to have been open to all who could obtain the consent of their fellow-citizens. The severity, however, of a long and rigorous novitiate, occupying many years, would operate as a sufficient barrier to the entrance into this order. As regards the wisdom of which the Druids were the depositaries, it may be remarked, that, among all the early nations of antiquity, a sacerdotal caste of some kind or other appear, by observation of the stars and the phenomena of nature, to have formed for themselves a species of scientific religion, if it may be so termed, which was carefully treasured up by the sacred order, and rendered inaccessible to the people at large. Hence those oral traditions which were always confined to the limits of the sanctuary, and those sacred
books which were closed against the profane crowd. Such were, among the Etrurians, the Achéronic and ritual books of Tagés, containing the precepts of agriculture, legislation, medicine, the rules of divination, of meteorology, of astrology, and also a system of metaphysics: such were, among the Egyptians, the books of Horae, of Orus, and of the Canopic jar; among the Hindus, the Vedas, the Pourans, the Angas, with their innumerable commentaries; and such was the sacred wisdom of the Gallic Druids. — The ablest work on the ancient Druids is the splendid and elaborate production of Mr. Higgins. (The Celtic Druids, by Godfrey Higgins, Esq., F.S.A., 4to, London.) In this will be found a vast body of most interesting information respecting this ancient priesthood. "The Druids," observes Mr. Higgins, "held the sacred doctrine of Ve-rine, in effect, with Pythagoras, the worship of one Supreme Being, a state of future rewards and punishments, the immortality of the soul, and a metempsychosis. These doctrines, their hatred of images, their circular temples open at the top, their worship of fire as the emblem of the Sun, their observation of the most ancient Taureic festival (when the Sun entered Taurus), their seventeen-letter alphabet, and their system of oral instruction, mark and characterize the Druid in every age and in every country, whatever name the priests of the country may have been known." (Celtic Druids, p. 305.) The Druids exercised, as may well be imagined, great influence over the minds of their more ignorant countrymen. Tacitus (Ann., 14, 30) speaks of the summary punishment inflicted upon them by Suetonius Paulinus, in the reign of Nero. The island of Mona was taken by the Roman troops with great slaughter of the foe, the sacred groves were cut down, and the Druids were put out. On the introduction of Christianity, the Druidical order gradually ceased, and the Druids themselves were regarded as enchanters by the early Christians.

Drusilla, I. Livia, a daughter of Germanicus and Agrippina, born at Augusta Treverorum (Treves) A.D. 15. She was far from inheriting the excellent qualities of her mother. Her own brother Caligula seduced her, and then gave her in marriage, at the age of seventeen, to her cousin, the young Drusus, a man at the prime of his consular rank. Subsequently, however, he took her away from her husband, and lived with her as his own spouse. This unhallowed connexion lasted until the death of Drusilla, A.D. 38, and at her decease Caligula abandoned himself to the most extravagant sorrow. Divine honours were rendered to her memory, and medals were struck in honour of her, with the title of Augusta. She was 23 years of age at the time of her death. (Sueton. Vit. Calig., 24.) Dio Cassius calls the name of her husband Marcus Lepidus, differing in this from Suetonius. He may possibly refer to a second husband, who may have been given her, for form's sake, a short time before her death. (Dio Cass., 59, 3.)—II. A daughter of Agrippa, king of Judaea, remarkable for her beauty. She was at first affianced to Epiphanes, son of Antiochus, king of Comagene. But, on his declining to submit to the rite of circumcision and to Judaise, the marriage was broken off. On her return she was then given to Azizus, king of Esessa. Not long after, however, Drusilla renounced the religion of her fathers, abandoned her husband, and espoused Antonius Felix, a freedman of the Emperor Claudius, and brother to Pallas the freedman of Nero. This is the Felix who was governor of Judaea, and is mentioned in the Acts of the Apostles. Drusilla was with Felix at Caesarea when St. Paul appeared before the last, and, having had a son by her second husband, named Agrippa, with the title of Vespasianus, which took place during the reign of Titus. (Joseph. Jud. Ant., 19, 9.—Noldius, de Vita et gestis Herodion, p. 463, seqq.)—Tacitus (Hist., 5, 9) calls Drusilla the granddaughter of Cleopatra and Antony, making her, consequently, the daughter of Juba II., king of Mauritania. The Roman historian is in error, for Drusilla was of Jewish origin. And besides, history only assigns to Juba II. a son, named Ptolemy. (Töchon, in Biogr. Univ., vol. 12, p. 46.)

Drusus, I. Claudius Nero, son of Tiberius Claudius Drusus the Younger, and of Agrippina and Claudia, was born in A.D. 38, three months after his mother's marriage with Augustus. He served early in the army, and was sent, in 17 B.C., with his brother Tiberius, against the Rhati and Vindelici, who had made an irruption into Italy. He defeated the invaders, pursued them across the Alps, and reduced their country. Horace has celebrated this victory in one of his finest odes (4, 4). Drusus married Antonia Minor, daughter of Antony and Octavia, by whom he had a son, called Tiberius Claudius, afterwards emperor, and Livia or Livilla. In 14 B.C., being sent to quell an insurrection in Gaul, occasioned by the extortion of the Roman tax-gatherers, he succeeded by his conciliatory address. In the following year he attacked the Germans, and, carrying the war beyond the Rhine, he obtained a series of victories over the Siscambri, Cherusci, Catti, and Tenceri, and advanced as far as the Visurgis or Weser, for which the senate bestowed on him and his posterity the title of Germanicus. Drusus was made consul, with L. Quintus Crispinus. He was soon after sent by Augustus against the Germans, crossed the Visurgis, and advanced as far as the Albis or Elbe. He imposed a moderate tribute on the Frisians, consisting of a certain quantity of hides, which, being afterward aggravated by the extortion of his successors, caused a revolt in the reign of Tiberius. (Tacit., Ann., 4, 72.) He caused a canal to be cut, for the purpose of uniting the Rhine to the Weser, which was known long after by the name of Pons Drusus; and he also began to raise dikes to prevent the inundations of the Rhine, which were completed by Paulinus Pompeius, in the reign of Nero. Drusus did not cross the Albis, probably because he thought that he had advanced already far enough: he retired towards the Rhine, but, before he reached that river, he died, at the age of thirty, in consequence, as it was reported, of his horse falling upon him and killing him. (Tacit., Ann., 4, 72.) Tiberius, who was sent for in haste, and found his brother expiring, accompanied his body to Rome, where his funeral was performed with the greatest solemnity. Both Augustus and Tiberius delivered orations in his praise. Drusus was much regretted by both the army and the Romans in general, who had formed great expectations from his manly and generous sentiments. (Tacit., Ann., 1, 3, seqq.—Id. ib., 2, 41—Id. ib., 4, 72, &c.—Id. Hist., 5, 19, seqq.—Sueton., Vit. Aug., 94.—Id., Vit. Tib., 7.—Id., Vit. Claud., 1, &c.—) Caesar, the son of the Emperor Tiberius by Vipsania daughter of Agrippa. He served with distinction in Pannonia and Illyricum, and was consul with his father, A.D. 21. In a quarrel he had with the imperial favourite Sejanus, he gave the latter a blow in the face. Sejanus, in revenge, seduced his wife Livia or Livilla, daughter of Drusus the elder and of Antonia; and the guilty pair got rid of Drusus by poison, which was administered by the eunuch Lygios. This crime remained a secret for eight years, when it was discovered after the death of Sejanus, and Livia was put to death. (Tacit., Ann., 1, 24, &c.—Id. ib., 4, 3, seqq.)—III. Caesar, son of Germanicus and Agrippina, and brother to Nero Caesar and Caligula. He married .Emilia Lepida, who was induced by Sejanus to betray her husband. Deluded himself by the arts of that evil minister, he conspired against the emperor, and was dragged to death by order of Tiberius. (Tacit., Ann., 4, 60. Id. ib., 6, 23, seqq.)—IV. M. Livius. (Vid. Livius.)

Dryades, nymphs that presided over the woods. The Dryades differed from the Hamadryades, in that

M M M
these latter were attached to some particular tree, with which they were known, and with which they died; whereas the Dryopes were the goddesses of the trees and woods in general, and lived at large in the midst of them. For though ἄψις properly signifies an oak, it was also used for a tree in general. Oblations of milk, oil, and honey were offered to them, and sometimes the votaries sacrificed a goat. The derivation of the name Hamadyrades is from ἄψις, “at the same time,” and ἄψις, “a tree,” for the reason given above. It is plain that ἄψις and the Greek tree are the same word. ἄψις has acquired this significator in II., 22, 126.—Od., 19, 163.—Herod., 7, 218.—Soph., Trach., 768. In Nonnus, ἄψις is constantly tree, and ὀψις, wooded. (Keightley’s Mythology, p. 237, not.)

Drymæa, a town of Phocis, on the banks of the Cephissus, northeast of Elatea. (Pausan., 10, 34.) It was burned and sacked by the Persians under Xerxes, as we are informed by Herodotus (8, 33). Its position is uncertain. Some antiquaries place it at Dadi, others at Ogyrene. (Compare Dodwell’s Tour, vol. 2, p. 135.—Gell’s Itin., p. 210.)

Dryopes, a people of Greece, in the vicinity of Mounts Cæta and Parnassus. (Herodot., 1, 56.—Strabo, 404.) Dicæarchus, however (v. 30), extends their territory as far as the Ambracian gulf. They were so called, it is supposed, from Dryope, the daughter of Euryyulus, or, according to the poets, from a nymph violated by Apollo. Others derive the name, however, from ὀψις, the Greek tree. The number of oaks which grew about the mountains, and the rustling of their leaves. The inhabitants themselves, however, advocated their fabulous origin, and claimed to be the descendants of Apollo; and therefore Hercules, having overcome this people, car-
ried them prisoners to Delphi, where he presented them to their divine progenitor, who commanded the hero to take them with him to the Peloponnesus. Hercules obeyed, and gave them a settlement there, near the Aineian and Hermionean territories: hence the Aineians came to be blended with, and to call themselves, Dryopes. According to Herodotus, however, they passed into Euboea, and from thence into the Peloponnesus and Asia Minor (8, 73; 1, 146). It is worthy of remark, that Strabo ranks the Dryopes among those chiefly of Thracian origin, who had, from the earliest period, established themselves in the latter country, and directed the southern shores of the Euxine. (Strab., 586.)

Durus, a river of Gallia, rising at the foot of Mount Jura, and, after a course of 50 miles, falling into the Arar or Saone, near Cabillonum, the modern Chartone. It is now the Dous or Doux. (Mannert, Geogr., vol. 3, pt. 1, p. 77.) The text of Cæsar (B. G., 1, 39), where he makes mention of this river, is very corrupt, some MSS. reading Addubis, others Alodubis, and others again Aludubis, Aludabius, and Aludabdis. Cellarius, following Valois (Valesius) and Vos-
sius, gives Duvus as the true lection (Geogr. Ant., vol. 1, p. 36), and this has been followed in the best ed-
ions. (Compare the remarks of Oberlinus, ad Cæs., l. c., as to the origin of the corruption.)

Dubis Portus, a port of Britain, supposed to be Dover. It was in the territory of the Canti, and 14 miles from Durovernum. At Dubis, according to the Notitia, some of ancient naumachia took place against the Saxon pirates. (Mannert, Geogr., vol. 2, pt. 2, p. 161.—Cellarius, Geogr. Ant., vol. 1, p. 331.)

Dullias Lex, L. was brought forward by M. Dul-
lius, a tribune, A.U.C. 304. It made it a capital crime to leave the Roman people without tribunes, or to create any new magistrature from whom there was no appeal. The punishment was scourging and be-
heading. (Liv., 8, 56.)—II. Another, A.U.C. 595, to regulate what interest ought to be paid for money lent, and fixing it at one per cent.

Duillus Nepos, Č. a Roman consul, the first who obtained a victory over the navy of Carthage, B.C. 260. At the battle of Cape Commons and Carthage, had been taken at sea by the Carthaginians in the first Punic war, Duillus proceeded, with a newly-built Roman fleet, to Sicily, in quest of the enemy, whom he met near the Lipari Islands; and, by means of grappling-
irons, so connected the ships of the Carthaginians with his own, that the contest became a sort of land-fight. By this unexpected manœuvre, he took eighty and de-
trianched thirteen of the Carthaginian fleet, and obtained a naval triumph, the first ever enjoyed at Rome. There were some medals struck in commemoration of this victory, and a column was erected on the occasion. This column (called Columna Rostrata, because adorn-
ed with beaks of ships) was, as Livy informs us, struck down by lightning during the interval between the sec-
tond and third Punic wars. A new column was erect-
ed by the Emperor Claudius, and the inscription re-
stored, though probably modernized. It was buried afterward amid the ruins of Rome, until, at length, in 1565, its base, which contained the inscription, was dug up in the vicinity of the Capitol. So much, how-
ever, was defaced, that many of the letters were irre-
gible. This inscription has been restored, on conjec-
ture, by the learning of modern scholars. (Compare Lipsius, Auctarium ad Inscript. Scaenianas.—Cic-
ocomns, Col. Rostr. Inser. in Grae. Theor., vol. 4, p. 1911.)

Dulichium, the principal island in the group of the Echinades. Its name occurs more than once in the Odyssey as being well peopleed and extensive. (Od., 1, 246; 16, 247.) Its situation, however, has never been determined by those who have commented on the poet; nor is it probable that much light can be thrown upon the subject at this distant period. Strabo (456), who has entered largely on the question, takes much pains to refute those who confounded it with Cephal-
enia, or with Zephyros, or even with Madeira. He himself contends, that the Dolicha of his time, situated at the mouth of the Achelous, opposite to Óenidae, and 100 stadia from Cape Araxus, was the real Duli-
chium. (Compare Steph. Byz., s. v. Δουλίχιον.—Eustath. ad Hom., Od., 1, 246.) But it is very doubt-
ful whether this place was ever of sufficient conse-
quence to apply to Homer’s description of that island. Dodwell, who has made some judicious observations on this head, swears that Dulichium was swallowed up by an earthquake; and mentions having been assured by some Greek sailors that there was, about two miles from Cephalenna, an immersed is-
land, extending out for seven miles. (Classical Tour, vol. 1, p. 107, seqq.—Cramer’s Anc. Greece, vol. 2, p. 27.)

Dunnorix, a powerful and ambitious chieftain of the Aedu, and brother to Diviciacu. He was dis-
possessed of his territory by Cæsar, and when the former was on the point of sailing for Britain, and had ordered Dunnorix to accompany him, the Aeduani, on a sudden, marched away with the cavalry of his nation, and directed his course homeward. He was pursued and put to death. (Cæs., B. G., 1, 3.—Id. ib., 1, 20.
—Id. ib., 5, 6, seq.)

Duris, a river of Spain, rising in the chain of Mons Idubeas, near the source of the river which bore his name. (Strabo, 152.) Ptolemy (2, 5) calls it the Δυρις, and Dio Cassius (37, 52) the Δυρις. It flowed to the west, through the territories of the Arevacii and Vesci, and formed a dividing line between the Lusitani and Vettones on the south, and the Callaici on the north. It emptied into the At-
tantic after a course of nearly 300 miles, but is navigable only seventy miles from its mouth, on account of the rapid current. Its modern name is the Duoro. The lands of the Darius are spoken of by the ancients as being auriferous. (Sil. Ital., 1, 234.) At the mouth
of this river stood Calle, commonly styled Portus Calle, from a corruption of portus Calle, the modern name of the mouth of the Tamaris. (Manzett, Geogr., vol. 1, p. 340.)—Ubert, Geogr., vol. 1, p. 443.)

Duracass, called also Drocas and Fanum Druidium, a city of the Eburones, in Gallia Lugdunensis, southwest of Lutetia. In its vicinity was the principal residence of the Druids in Gaul. The modern name is Drezus. (Cas., B. G., 6, 13.—Thaum., Hist., 34, seq.)

Durocortorum, the capital of the Remi, on the Vesin, one of the branches of the Aisna or Aisne. It is now Rheims. (Cas., B. G., 6, 44.)

Dyrrhachium, a city of the Achaeans, the last of the Achaman towns to the west, situated about forty stadia beyond the mouth of the Peyrus or Pirus. Pausanias states (7, 18), that its more ancient name was Palea. Strabo is of opinion, that the appellation of Dyryse had reference to its western situation, with regard to the other cities of the province (παυσον δυρωνιτικώς, νυ φοι και τονόμοι). He adds, that it was originally called Stratos. (Strabo, 367.) The epithet of Cauconius, applied to this city by the poet Antimachus, would lead to the supposition that it was once occupied by the ancient Caucas. (Ap. Schol. Lycophortron, v. 589.) Dyryse is mentioned as one of the twelve towns of Achaea by Herodotus (1, 146). Its territory, from being contiguous to Ellis and Eolia, was frequently laid waste during the Social war by the armies of those countries then united. (Cramer's Anc. Greece, vol. 3, p. 71.)

Dyrrhachium, a city of the Thessali, twenty stadia beyond the Sperchius, said to have sprung from the ground in order to assist Hercules when burning on Oeta. (Herodot., 7, 199.—Strabo, 423.)

Dyrrhachium, the name given to Mount Atlas by the neighbouring inhabitants. (Ororo κατιν, δητολ οι μεν Ευλωνες Αταλαντα καλολον, οι βαρδαροι δε Δυρον.)—Strabo, 325.) Mr. Hodgson, in a pamphlet on the affinities of the Berber languages, after observing that the Atlas chain of mountains was called by the ancient geographers, besides their common appellation, Dyrrhachium, and Dyrrachum, and Adris or Adamar, indulges in the following etymological remarks (p. 5, seqg). "These names appear to me to be nothing else than the Berber words Athraer, Edharrin, which mean a mountain or a mountain, differently corrupted from what they had been before they were changed to Atlas. Adhar, Athraer, Edharrin, Ad harass, or Adarrer, are evidently the same words, with such variations as may naturally be expected when proper names pass from one language to another. There is surely not more, nor perhaps so much, difference between them as between Antwerp and Amberes (the Spanish name for Antwerp), Mechlin and Malines, Lughtamun and Lyons, Odosene and Ulysses, Kouras and Carthage. And if the Romans or the Greeks changed Adhar or Edharrin into Adress, or in the accusative Adorous, why from Adress might they not have made Adras, Adrass, Adross or Adress? And it seems to be in favour of this supposition."

(Dyrrachium, new Dyraezo, a city of Ilyricum, previously called Epidamnum. (Vid. Epidamnus.)

E.

Eius, a name of Janus among the ancient Latins. Cornificius, quoted by Macrobius (Sat., 1, 9), maintains that Cicero (N. D., 2, 27) meant this appellation, and not Janus, when he derived the name ab eundo.

Ebra, I. a city of Lusitania, to the south of the Tagus and north of the Anas, called also Liberalitas Julia. (Plin., 4, 22.—Mela, 3, 1.) It is now Evora, the chief city of the province of Alentejo. II. A fortress in Hispamica Bética, on the eastern bank of the River Tagus. (Mel, 3, 1.) III. A city of Hispania Tarraconensis, near the river Tamaris. It is supposed to coincide with the modern village of Murus, near the mouth of the Tamaris. Others assign it to the valley of Obre, at the mouth of the Tamar. (Baschoff and Müller, Wörterb. der Geogr., p. 446.)

Euboea, a city of Attica, in the territory of the Boiotians, now on the west coast of the Aegean, which in the time of Herodotus was the most important city in the whole island. It formed a convenient post, and place of arms, for the Romans during the continual wars waged by them against the northern nations of Britain. Septimius Severus died here. The modern city can still show many vestiges of Roman power and magnificence. (Manzett, Geogr., vol. 2, pt. 2, p. 123.)

Euboea, the western isles of Britain, now Hebridies. Poemly (2, 2) places them to the north of Hibernia, and makes them five in number. The name Euboea was borrowed by the Romans from the Greek appellation 'Eboebai. Two of the five properly bear the name of Euboea; the remaining three were called Maleius, Epidium, and Ricina. Pliny (4, 16) calls them all Hebrides Insulae. "Euboea," says Salmasius, "Mela nullas recenset, et nullas Emolanas Ptolemeus. Vix sane mihi dubium est, quin Emode, vel Emude, et Euboea cadem sint." (Salmas. ad Solin., 1, 22.)

Eubrines, a nation of Belgic Gaul, to the west of the Ubii and the Rhini, and to the north of the Menapii. Their territory corresponded to the present county of Liége (le pays de Liége). Under the conduct of Ambiorix they defeated Sabinius and five legions of the Roman army. It is supposed that the lieutenants of Caesar, having induced them to quit their winter-quarters, and then having attacked them on the route, Caesar inflicted a terrible retaliation, desolating the country, and almost annihilating their race. The Tungri afterward took possession of the vacated seats of the Eburones. The capital of the Eburones was Aduatuca. This was rebuilt by the Tungri, and is now Tongres. (Cas., B. G., 2, 4. seqg.—Id., 16, 5, 26, seqg.—Id. ib., 6, 33.)

Ebusus (Ebovus, Cronon. ad Strab., ed Orm., p. 216.—Bosovius, Dionys. Perieig.), one of the Pituenses, or Pine-islands, so named by the Greeks from the number of pine-trees which grew in them (πινυς, pinus). The island of Ebusus was the largest of the number, and very fertile in the production of vines, olives, and large figs, which were exported to Rome and elsewhere. (Compare Mela, 2, 7.—Plin., 3, 5.—Id., 15, 9.—Fast. Aug., ed 621.) It was famed also for the number of the inhabitants, and here is a mere fable of former days. Some of the ancient writers call it simply Pituus. (Diod. Sic., 5, 16.—Compare Lieb, 28, 37, who, however, in another place (22, 20), names it Ebusus.) Agathemerus (Geo- gr., 1, 5) speaks of the larger Pitiusa in contradistinction to the smaller. It is about forty miles from the Mediterranean coast of Spain, and is about forty miles, by a slight corruption, It is still produces abundance of corn, and is the seat of a bishopric. Its size is made in it by natural evaporation. Its size is 190 square miles; the population about 15,000. Diodorus (l. c.) compares this island, in point of size, with Coreya. The chief place on the island was Ebusus, which had an excellent harbour, and was inhabited in part by Phoenicians. (Diod. Sic., 5, 16.—Sul. Ital., 3, 383.)

Echadata (harm), 1. the capital ofメディア, situate, according to Diodorus (2, 2), about twelve stadia from Mount Echadus, the genuine etymology of the word appears to be Agbatana (Abydrava). Stephanus of Byzantium says that this form Abydrava was employed by Ctesias. Bihler, however, in the latest edition of Ctesias, retains Ebydrava, not because he thinks it the true reading, but from a reluctance to change the form of the word in opposition to the MSS. But the same editor, in his Herodotus (1, 98), adopts Abydrava with Wesseling, for here the MSS. favour it.
Isidorus Characenus has 'Apobata, a manifest er-
ror. Reland (Diss. Miscell., pt. 2, p. 107) deduces
the name from the Persian Ac, 'a lord' or 'master,' 
and Abadah, 's cultivated and inhabited place.'—
Ecbatana, being in a high and mountainous country, was
a favourite residence of the Persian kings during sev-
eral ages. It was one of Susa, which has always been
inhabitable. The Parthian kings also, at a later period, retired to it
in the summer to avoid the excessive heat of Ctesi-
phon. According to Herodotus (1, 98), Ecbatana was
built near the close of the eighteenth century B.C. by
Deioces, the founder of the Median monarchy. The
book of Judith (1, 2) assigns the building of this city, or,
rather, the erection of its citadel, to Arphazad, in the
twelfth year of the reign of Nebuchadnezzar, King of
Assyria and of Media. As he afterwards made Arphazad the same with
Deioces, while others identify him with Phraortes, the
son of the latter, who might have repaired the city, or
else made some additions to it. —Herodotus furnishes
us with no hint whence we may infer the relative po-
sition of Ecbatana on the map of Media. His de-
scription of the fortress or citadel, however, is par-
ticular. "The Medes," he remarks, "in obedience to
their king's command, built those spacious and
many-walled remains of one of the ancient cities within the
Ecbatana circle, according to the following plan. Each inner
circle overtops its outer neighbour by the height of
the battlements alone. This was effected partly by the
nature of the ground, a conical hill, and partly by
the building itself. The number of the circles was seven;
within the innermost were built the palace and the
treasury. The circumference of the outermost wall
and of the city of Athens may be regarded as nearly equal.
The battlements of the first circle are white, of
the second, black; of the third, scarlet; of the fourth,
azure; of the fifth, orange. All these are brilliantly
coloured with different paints. But the battlements of
the sixth circle are silvered over, while those of the
seventh are gilt. Deioces constructed these walls
around his palace for his own personal safety. But
he ordered the people to erect their houses in a circle
around the outward wall." (Hercld., 1, 98, seq.)—

The Orientals, however, according to Diodorus Sicu-
lus, claimed a far more ancient origin for Ecbatana.
They not only described it as the capital of the first
Median monarchy, founded by Arbasces, but as exist-
ing prior to the era of the famed and fabulous Semir-
mis, who is said to have visited Ecbatana in the course
of her royal journeys, and to have built there a magnif-
cent palace. She also, with immense labour and ex-
 pense, introduced abundance of excellent water into the
city, which before had been badly supplied with it,
and she effected this object by perforating the adjacent
Mount Oroontes, and forming a tunnel, fifteen feet broad,
and forty feet high, through which she conveyed a lake-
stream. (Diod. Sic., 2, 13.) Ecbatana continued a
splendid city under the Persian sway, the great king
spending at this place the two hottest months of the
year. (Arist., l. c.—Xen., l. c.) The Macedonian
conquest did not prove destructive to Ecbatana, as it
had to the royal palace at Tiryns. Alexander de-
pilated in Ecbatana the treasures taken from Persis-
is and Parthia, and one of the last acts of his life
was a royal visit to the Median capital. Although not
equally favoured by the Seleucids, it still retained the
traces of its former grandeur; and Polybius has left on
record a description of its state under Antiochus the
Great, which shows that Ecbatana was still a splendid
city, though it had been depopulated of many of its
more costly dwellers. (10, 1.) When the Seleucids
were driven from Upper Asia, Ecbatana became
the favourite summer residence of the Arsacids,
and we have the authority of Tacitus to show, that, at
the close of the first century, it still continued to be
the Parthian capital. (Tacit., Ann., 15, 31.) When the
Persians, under the house of Sassan, A.D. 226, re-
covered the dominion of Upper Asia, Ecbatana, both
as an ancient seat of empire and as a place situate
far from the immediate scene of warfare between the
Persians and the Romans, continued to be a favourite
and secure place of residence. The natural builwars
of Mount Ecbatana, which were so admirably fit for the Roman
legions, nor did the matrons of Ecbatana cease to exhale the
smoke of a Roman camp. Consequently, we find, from
Ammianus Marcellinus, that near the close of the fourth
century, Ecbatana continued to be a great and a fortifi-
city.—The site of Ecbatana has been a matter of
dispute among modern scholars. Gibbon and Sir W.
Jones are in favour of the present Tabriz. The claims,
however, of this town are now completely set aside.
Mr. Withers contends for Ispahan. (Geography
of Anc. Asia, p. 10, sqq.) He is ably refuted, however,
in the Journal of Education (No. 4, p. 305, seqq.).
D'Anville, Mannert, and others declare for Hamm-
dan, which is undoubtedly the true opinion. The
route of commerce between the low country, in the
neighbourhood of the ancient Seleucia, and the mod-
ern Bagdad and the high table-land of Iran, is deter-
mined by the physical character of the country, and
has continued the same from the earliest recorded his-
tory. The first place of importance on the route, as
marked in the itinerary of Isidorus Characenus, as
lying in Seleucia and Ecbatana, are the places indi-
cated by modern travellers as lying on the route be-
tween Bagdad and Hamedan.—Mr. Kinneir describes
the climate of Hamedan as delightful during eight
months of the year; but in winter the cold is exces-
sive, and fuel with difficulty procured. Hamedan
lies in a low plain at the foot of Mount Elwdund, which
belongs to the mountain-chain that forms the last step
in the ascent from the lowlands of Irak-Arabs to the
high table-land of Iran. The summit of Elwdund is
tipped with continual snow. (Kinneir's Persia, p.
126.)—II. A town of Syria, in Galilaea Inferior, at the
foot of Mount Carmel, supposed to coincide with the
modern Castra. Here Cambyses gave himself a moral
wound as he was mounting his horse, and thus ful-
filled the oracle which had warned him to beware of
Ecbatana. (Herod., 3, 64.)

Echidna, a monster sprung from the union of Chy-
saor with Callirhoë, the daughter of Oecumus. She
is represented as a beautiful woman in the upper parts
of the body, but as a serpent below the waist. (Hesiod,
Theog., 297.)

Echinides, islands formerly lying opposite the
mouth of the Acheleus, but which, in process of
time, have for the most part become connected with
the land by the alluvial deposits of the muddy waters
of the river. These rocks, as they should rather be
termed, were known to Homer, who mentions them
as being inhabited, and as having sent a force to Troy
under the command of Megas, a distinguished warrior
of the Iliad. (II., 2, 625.) They are said by some
geographers to be now called Curzolarii; but this
name belongs to certain small, pointed isles near them,
called from their appearance Ozias (O'seias) by the

Echinos, V. C. Vicius, or Phocian. Echinos, one of the
men who sprang from the drag-
on's teeth sown by Cadmus. He, along with four
others, survived the conflict that ensued, and assisted
Cadmus in building Thebes. The monarch gave him
his daughter Agave in marriage, by whom he had Fen-
theus. After the death of Cadmus he reigned in Thebes.
Hence the epithet Echionean,' applied by the poet to the
people of Thebes. (Ovid, Met., 3, 311.—Horat., Od., 4, 4, 64.)

Echionides, a patronymic given to Pentheus as de-
scented from Echion. (Ovid, Met., 3, 311.)

Echionius, an epithet applied to the city of Thebes,
as founded by the aid of Echion. (Ovid, Met., 3, 311.
—Horat., Od., 4, 4, 64.)
Echtra, a daughter of the Air and Tellus, who chiefly resided in the vicinity of the Cepheus. She was one of Juno's attendants; but, having been treated unkindly by the goddess, she was deprived, in a great measure, by her, of the power of speech. Juno declared, that in future she should have but little use of her tongue; and immediately she lost all power of doing any more than repeat the sounds which she heard. Echo happening to see the beautiful youth Narcissus, became deeply enamoured of him. But, her love being slighted, she pined away till nothing remained of her but her voice and bones. The former still exists, and the latter were converted into stone. (Oruid, Met., 3, 341, seqq.)

Ectenies, a people who, according to Pausanias, first inhabited the territory of Thebes, in Boetia. Ogyges is said to have been their first king. They were exterminated by a plague, and succeeded by the Hyantes. (Compare Strabo, 401.—Pausan., 9, 5, 5. Lycopcr., 341, seqq.)

Edessa, L, a city of Mesopotamia, in the district of Oroene, on the banks of a small river called Scirtus. It lay northeast of Zeugma, and southeast of Samosata, and, according to the Itin. Ant., nine geographical miles from the Euphrates and Zeugma (ed. Wesseling, p. 185). ProcopiUS (Per., 2, 12) places it a day's journey from Batane; and an Arabian writer cited by Wesseling (ad Itin. Ant., l. c.), about six parasangs or four miles. Edessa is said to have been one of those numerous cities which were built by Seleucus Nicator, and was probably called after the city of the same name in Macedonia. It was once a place of great celebrity, and famous for a temple of the Syrian goddess, which was one of the richest in the world. During the intestine broils which greatly weakened the kingdom of Syria, Auguris or Abgarus seized on this city and its adjacent territory, which he erected into a kingdom, and transmitted the royal title to his posterity. We learn from St. Austin that our Saviour promised Abgarus that the city should be impregnable; and Eugrius (Hist. Eccles., 4, 27) observes, that although this circumstance was not mentioned in our Lord's, still it was the common belief; which was much confirmed when Chosroes, king of Persia, after having set down before it, was obliged to raise the siege. This is all, however, a pious fable. — Edessa was called Callirhoe, from a fountain contained within it. (Plist., 5, 24.) The sources of this fountain still remain, and the inhabitants here have a tradition, that it is the place where Abraham offered up his prayer previous to his intended sacrifice of Isaac. (Compare Niebuhr, vol. 2, p. 407. — Tavernier, lib. 2, c. 4.) In later times it was termed Roha, or, with the article of the Arabs, Orrhoa, and by abbreviation Orrha. This appellation would seem to have arisen from the circumstance of Edessa having been the capital of the district Osoroe, or, as it was more properly called, Oroene. The modern name is Orrhoa or Orrva. (Chron. Ed., in Assenmanni Bibl. Orient., vol. 1, 388.) The Arabsians revere the spot as the seat of learned men and of the purest Arabic. (Abulpharag., Hist. Dynast., p. 16, ed. Wesseling, ed. loc.) II. A city of Macedonia, called also Edessa and Ege, situata on the Via Egnatia, thirty miles west of Pella. According to Justin (7, 1) it was the city occupied by Caranus on his arrival in the country, and it continued apparently to be the capital of Macedonia, until the seat of war and the inhabitants have a tradition, that the town was destroyed after this event it remained the place of sepulture for the royal family, since we are told that Philip and Eurydice, the king and queen of Macedon, who had been put to death by Olympias, were buried here by Cassander. (Athen., 4, 41.) Pausanias (1, 6) states, that Alexander was to have been interred here; and when Pyrrhus, king of Epirus, had taken and plundered the town, he left there a body of Gauls, who opened the royal tombs in hopes of finding treasure. It was here that Philip was assassinated by Pausanias when he was in the marriage of his daughter Cleopatra with Alexander, king of Epirus. (Dios. Sic., 16, 92.) It is uncertain which of the two appellations is the more ancient, Ege or Edessa; the latter form is always used by later writers. (Hercl. Synec., p. 638.) It is generally agreed that the town called Vadina, situate on the river Vistriza, which issues from the Lake of Ostrovo, represents this ancient city; but it may be observed, that the name of Bodena appears to be as old as the Byzantine historians. (Codrums, vol. 2, p. 705.—Glycas, p. 309.) Dr. Clarke, in his travels (Greece, Egypt, &c., vol. 7, p. 434, seqq.), quotes a letter from Mr. Fiolt of Cambridge, who had visited Vadina, and which leaves no doubt as to its identity with Edessa. He says, "it is a delightful spot. There are sepulchres cut in the rock, which the superstitious inhabitants have never plundered, because they are afraid to go near them. I went into two, and saw the bodies in perfect repose, with some kinds of ornaments, and clothes, and vases. There is a beautiful inscription in the town. The fall of waters is magnificent." (Cramer's Ancient Greece, vol. 1, p. 226, seqq.)

Edini or Edones, a people of Thrace, on the left bank of the Strymon. It appears from Thucydides (2, 99), that "this Thracian clan once held possession of the right bank of the Strymon as far as Mygdonia, but that they were ejected by the Macedonians. The name of this tribe is often used by the poets to express the whole of the nation of which they formed a part. (Sop., Ant., 955.—Evra., Hec., 1153.)" Eetion, the father of Andromache, and king of Hymettian Thbe in Troas. (Hom., Il., 6, 396.) II. The commander of the Athenian fleet, conquered by the Macedonians under Clistus, near the Echinades. (Dios. Sic., 18, 15.)

Egeria, a nymph of Aricia in Italy, the spouse and instructress of Numa. (Vid. Numa.) Some regard her as one of the Camena. According to the old legend, when Numa died, Egeria melted away in tears into a fountain. Niebuhr places the grove of Egeria near Catone, and states that to the entrance of the baths of Caracalla. (Roman History, vol. 1, p. 202, Camb. tranl.) Wagner, in a dissertation on this subject, is in favour of the valley of Caffarella, some few miles from the present gate of Saint Sebastian. (Wagner, commentario de Egeriae fonte, et specu ejusque situ.—Marburg, 1824.)

Egnatia, a town of Apulia, on the coast, below Barium. It communicated its name to the companion way that the Caranki coast had with the Bruttium. (Strabo, 282.) Its ruins are still apparent near the Torre d'Agnazzo and the town of Monopoli. (Pratelli, Vita Appia, lib. 4, c. 16.—Romanelli, vol. 2, p. 143.) Pliny states (2, 107), that a certain stone was shown at Egnatia, which was said to possess the property of setting fire to wood that was placed upon it. It was this prodigy, seemingly, which afforded so much amusement to Horace (Sat., 1, 6, 89) and which, as the expression seems to imply, the poet, the stone in question would appear to have been placed in the entrance of a temple, serving for an altar. What Horace, however, regarded as a mere trick, has been thought to have had more of reality about it than the poet supposed. Some commentators imagine that the stone was placed over a naphtha spring, with an aperture in it for the flame to pass through; a simple contrivance which the priests would not fail to turn to
good account. So La Lande found in Italy, on a hill near Pietra Mala, not far from Frenzuola, flames breaking forth from the ground, the vapour from which resembled petroleum in smell. (Voyage d’un Français en Italie, vol. 2, p. 74—1705.) Compare also the remarks of Salamis on the account given by So-

inus of a volcanic hill near Agrigentum in Sicily. 

Solin., c. 5.—Salinus, ad loc., p. 89, seqq.)

Eion, a port at the mouth of the Styrmion, twenty-

five stadia from Amphipolis, of which, according to

Thucydides (4, 102), it formed the harbour. This

historian affirms it to have been more ancient than

Amphipolis. It was from Eion that Xerxes sailed to

Asia, according to Herodotus, after the battle of

Salamis. (Herodot., 8, 118.) Boges was left in

command of the town on the retreat of the Persian

armies, and made a most gallant resistance when

besieged by the Grecian forces under Cimon. On the

total failure of all means of subsistence, he ordered a

vast pile to be raised in the centre of the town, and

having placed on it his wives, children, and domestics,

he caused them to be slain; then, scattering every-

thing of value in the Styrmion, he threw himself on the

burning pile for his magnanimity. 

(Thucyd., 7, 107.—Thucyd., 1, 98.) After the capture of Am-

phipolis, the Spartans endeavoured to gain possession

of Eion also, but in this design they were frustrated

by the arrival of Thucydides with a squadron from

Thamus, who repelled the attack. (Thucyd., 4, 107.)

Eion afterward occupied Eion, and thither the remains

of his army retreated after their defeat before Amphi-

polis. (Thucyd., 5, 10.) This place is mentioned by

Lycopterus (v. 417). In the middle ages a Byzantine

town was built on the site of Eion, which now bears

the name of Conessa. (Cramer’s Ancient Greece, vol. 1,
p. 395, seqq.)

ELEA, the port of the city of Pergamum. Accord-

ing to some traditions, it had been founded after the

sieg of Troy, by the Athenians, under the command

of Mnesheus. (Strab., 622.) Elea was distant 12 stadia

from the mouth of the Cicus, and 120 from Pergamum.

(Strab., 615.) The modern name is Ia-

lea or Lalea. Smith places the ruins of this city at

no great distance from Clisiaskevi, on the road from

Smyrna to Berganat. (Account of the Seven Churches of

Asia, p. 7.—Liv., 36, 43.—Pausan., 9, 5.)

EleaBalbus, I. the surname of the son at Esema.

—II. The name of a Roman emperor. (Vid. Emesa and

Heliogabales.)

Elaphorida, a festival in honour of Diana, the

Hera of the Greeks. In this celebration a cake was made in

the form of a deer, Ελαφός, and offered to the goddess. It

owed its institution to the following circumstance. When

the Phocians had been severely defeated by the

Thessalians, they resolved, by the persuasion of a cer-

tain Deiphantus, to raise a pile of combustible mate-

rials, and burn their wives, children, and effects,

rather than submit to the enemy. This resolution was

unanimously approved of by the women, who decreed

Deiphantus to have been the first to light the fire. As

nothing was prepared, before they fired the pile,

they engaged their enemies, and fought with such des-

perate fury, that they totally routed them, and obtained

a complete victory. If commemoration of this

unexpected success, this festival was instituted to

Diana, and observed with the greatest solemnity.

(Athen., 14, p. 646, c.—Castellanus, de Fact. Græc.,
p. 341.)

Elata, the most considerable and important of

the Phocian cities after Delphi, situate, according to

Pausanias (10, 34), one hundred and eighty stadia from

Amphipolis, on a gently rising slope, above the plain

watered by the Cephissus. It was captured and burn-
ed by the army of Xerxes (Herodot., 8, 34), but, being

afterward restored, it was occupied by Philip, father of

Alexander, on his advance into Phocis to overawe the

 Athenians. The alarm and consternation produced at Athens by his approach is finely described by Demosthenes in his Oration de Corona (p. 284.—Compare Es-

chin. in Ctes., p. 73.—Strab., 424.) Some years after,

Elata made a successful defense against the arms of

Cassander. It was, however, reduced by Philip, son of

Demetrius, who bribed the principal inhabitants. (Pausan., l. c.) During the Macedonian war, this

town was besieged by the Roman consul, T. Flami-
ninus, and taken by assault. (Liv., 32, 18, seqq.

Polyb., 5, 36.—Id., 18, 26.) An attack subsequently

made on Elata by Tattius, general of Mithradates,

was successfully repelled by the inhabitants; in con-
sequence of which, the town was declared free by

the Roman senate. (Pausan., l. c.) Strabo speaks of its

advantageous situation, which commanded the entrance into Phocis and Beotia. Other passages

relative to this place will be found in Flutarch (Vit.

Syll.), Appian (Bell. Mithrad.), Theophratus (Hist.

Plant., 8, 8, 2), and Sclayx (p. 23). Its ruins are to

be seen on a site called Elepha, on the left bank of

the Cephissus, and at the foot of some hills which

unite with the chains of Cnemis and O. Sir W.

Gell, in his Antiquities of Thessaly, says that these

remains of the city walls, as well as those of the citadel, and the ruins of several temples (p. 216.—Compare Dodwell, vol. 2,
p. 140). At the distance of about twenty stadia to

the east was the temple of Minerva Cranes, described

by Pausanias: its remains were discovered by Sir W.

Gell and Mr. Dodwell. (Cramer’s Ancient Greece,

vol. 2, p. 179.)

Elbe, a tower of Gaul, rising in the same quar-

ter to the Liger, and, after pursuing a course almost

parallel with it, falling into this same stream below

Nevra. It is now the Allier. (Ces., B. G., 8, 34

and 53.—Mannert, Geogr., vol. 2, pt. 1, p. 119.)

Elea, a city of Lucania. (Vid. Velia.)

Electra, I. one of the Oceanides, wife of Atlas,

and mother of Dardanus by Jupiter. (Ovid., Fast., 4,
p. 31.)—II. A daughter of Atlas and Pleione, and one

of the Pleiades. (Vid. Pleiades.)—III. One of the

daughters of Agamemnon. Upon the murder of her

father, on his return from Troy, Electra rescued her

brother Orestes, then quite young, from the fury of

Ægisthus, by dispatching him to the court of her un-

cle Strophius, king of Phocis. There Orestes formed

the well-known attachment for his cousin Pylades,

which, in the end, led to the marriage of Electra with

that prince. According to one account, Electra had

previously been compelled, by Ægisthus, to become

the wife of a Mycenaean rustic, who, having regarded

her merely as a sacred deposite confided to him by

the gods, restored her to Orestes on the return of that

prince to Mycenae, and on his accession to the throne

of his ancestors. Electra became, by Pylades, the

mother of two sons, Strophius and Medon. Her story

has formed the basis of two plays, the one by Sopho-

cles, the other by Euripides. (Soph., Electr.—Eurip.,

Electr.)

Electrides, islands fable to have been in the

Adriatic, off the mouths of the Padus or Po, and to

have abounded with amber (electrum), whence their

name. (Vid. Eridanus.)

Electryon, son of Perseus and Andromeda, and

king of Mycene. He was the father of Alcmena. Electryon undertook an expedition against the Tele-

boans in order to avenge the death of his sons, whom

the sons of Taphius, king of Thrace, had slain in an en-

gagement. Recovering victorious, he was met by

Amphryton, and killed by an accidental blow. (Apollod., 2, 4, 6.—Vid. Alcmena.)

Eleis, the people of Elis in Peloponnesus. (Vid.

Elis.)

Elephantine, an island in Egypt, in the Nile, with

a city of the same name, about a semi-stadium distant

from Syene. Pliny (5, 9) calls it Elephantis Insula.
ELEUSINIA.

Hercules and the celebrated mysteries, one of which had its capital on this island. The eucharistic practices of the Nile are not far distant, and hence Eleusine became the depot for all the goods that were destined for the countries to the south, and that required land-carriage in this quarter in order to avoid the falls of the river. The Nile has here a very considerable breadth, and it is natural to suppose, that, on its entrance into Egypt, the inhabitants were desirous of ascertaining the rise of the stream at the point of its junction with the Mediterranean. Hence we find a Nilometer here, on the banks of the river. (Strabo, 817.) In the time of the Pharaohs, the garrison stationed on the frontiers against the Athenians had their head-quarters at Elephanta. In the Roman times, however, the frontiers were pushed farther to the south. In the fourth century, when all Egypt was strongly guarded, the first Cohors Theodosiana was stationed in this island, and, according to the Notitia Imperii,—It is surprising to learn, that the ancient eucharistic practices of the Nile came down to us, since Herodotus was here during the Persian sway, when Grecian influence could by no means have been strong enough to supplant the original name by one which is evidently a mere translation of it. The modern name of Elephanta is Gezyret Assuan, "the Island of Syene." There are some ruins of great beauty remaining, and, in particular, a superb gate of granite, which formed the entrance of one of the pious constructions dedicated to the temple of Coepht. (Manntert, Geogr., vol. 10, pt. 1, p. 323, seq.)

Elephantis, an impure poetess. Consult Martial (Ep., 12, 43, 4), Suetonius (Vit. Tib., 43), and the remarks of the commentators on each of these places.

Elephantophagi, a people of Ethiopia. (Consult remarks under the article Elephantis, page 72, col. 1.)

Eleusinia, a great festival observed every fourth year by the Eleians, Philistines, as also by the Phoenecians, Lacedemonians, Parthasians, and Cretans; but more particularly by the people of Athens every fifth year, at Eleusis in Attica, where it was said to have been introduced by Eumolpus, B.C. 1356. It was the most celebrated of all the religious ceremonies of Greece, whence it is often called, by way of enunciation, mysteries, the mysteries. It was so superstition ob- served, that if any one ever revealed it, it was supposed that he had called divine vengeance upon his head, and it was unsafe to live in the same house with him. Such a wretch was publicly put to an ignominious death. This festival was sacred to Ceres and Proserpina; everything contained a mystery; and Ceres herself was known only by the name of ἄχθεια, from the sorrow (ἄχθος) which she suffered for the loss of her daughter. This mysterious secrecy was solemnly observed, and enjoined on all the votaries of the goddess; and if any one ever appeared at the celebration, either intentionally or through ignorance, without proper introduction, he was immediately punished with death. Persons of both sexes, men and all ages were initiated at this solemnity, and it was looked upon as so heinous a crime to neglect this sacred part of religion, that it was one of the heaviest accusations which contributed to the condemnation of Socrates. The initiated were under the more particular care of the deities, and therefore their lives were supposed to be attended with more happiness and real success than those of other men. The ingratitude of the latter was not only granted during life, but it extended beyond the grave; and the former were honoured with the first places in the Eleusian fields, while others were left to wallow in perpetual filth and ignominy. As the benefits of expiation were so extensive, particular care was taken in examining the character of those who were presented for initia- tion. Such as were guilty of murder, though against their will, and such as were convicted of impiety or any heinous crime, were not admitted; and the Athenians suffered none to be initiated but those that were members of their city. This regulation, which compelled, according to the popular belief, Hercules, Castor, and Pollux to become citizens of Athens, was strictly observed in the first ages of the institution, but afterward all persons, barbarians excepted, were freely initiated. The festivals were divided into the greater and less mysteries. The less were instituted from the following circumstances: Hercules passed near Eleusis while the Athenians were celebrating the mysteries, and desired to be initiated. As this could not be done because he was a stranger, and as Eumolpus was unwilling to displease him on account of his great power, and the services which he had done to the Athenians, another festival was instituted without violating the laws. It was called μικρά, and Hercules was solemnly admitted to the celebration, and initiated. These minor mysteries were observed at Agrae near the Iliussus. The greater were celebrated at Eleusis, from which place Ceres had been called Eleusis. In later times the smaller festivities were added to the greater, and no person could be initiated at Eleusis without a previous purification at Agrae. This purification they performed by keeping themselves pure, chaste, and unpoluted during nine days, after which they came and offered sacrifices and prayers, wearing garlands of flowers, called ἑτέρες or ἑτέρα, and having under their feet Διός κόδων, Jupiter's skin, which was the skin of a victim offered to that god. The person who assisted them was called μώστρα, from μουτέστρα, tester, which was used at the purification; and they themselves were called μώστραι, the initiates. A year after the initiation at the less mysteries they sacrificed a sow to Ceres, and were admitted into the greater, and the secrets of the festivals were solemnly revealed to them, from which they were called φώστραι and ἐπόστραι, inspectors. The institution was performed in the following manner; the candidates, crowned with myrtle, were admitted by night into a place called μουτεστρικοῖς, the mystical temple, a vast and stupendous building. As they entered the temple, they purified themselves by washing their hands in holy water, and received for adoration that they were to come with a mind pure and undefiled, without which the cleanliness of the body would be unacceptable. After this the holy mysteries were read to them from a large book called πετρωμα, because made of two stones, petras, fitly cemented together; and then the priest, called τεροδόρους, proposed to them certain questions to which they readily answered. After this, strange and fearful objects presented themselves to their sight; the place often seemed to quake, and to appear suddenly resplendent with fire, and immediately covered with gloomy darkness and horror. Sometimes flashes of lightning appeared on every side. At other times thunder, hideous noises, and howlings were heard, and the trembling spectators were alarmed by sudden and dreadful apparitions. This was called τεροπία, immediate punishment. When all the ceremonies were finished, the word κός was uttered by the officiating priest, which implied that all was ended, and that those present might retire. In the common text of Hesychius, the words κός ὄμας are said to have been uttered on this occasion (Κός ὄμας ἐπιστομον μετελεξεμόνῳς), and various explanations have been attempted to be given. Wilford, for example, makes the words in question to have been Κός ὄς Πάξ, and maintains that they were taken by the Brahmins, at the conclusion of sacred rites! (Asiatic Researches, vol. 5, p. 297.) Münter, Creuzer, Ouvarrof, and others, have adopted the opinion of Wilford. (Münter, Erklärung einer griech. Inschrift., p. 18.—Creuzer, Symbolik, vol. 4, p. 573.—Ouvarrof, Essai sur les 463
Myst. d'Eleusis. p. 26, seq.—Schelling, über die Gött. von Samothrakeh, 91.) The revelations of all these writers, as well as the opinion of Von Hammer, who derives the word 'OymaD from the Persian Cambakach, which denotes, according to him, "vot sui compus," have been very unceremoniously put to flight by Lobeck. This able and judicious critic has emended the text of Hesychius so as to read as follows: Κόγις, ὑμαλος πάλα, ἐπιφωνία τετελεσμένου, and thus both κόγις and πάλα are nothing more than mere adjectives. The former of these is borrowed from the language of the Athenian assemblies for voting. The pebble or ballot was dropped into the urn through a long conical tube; and as this tube was probably of some length, and the urn itself of considerable size, in order to enable several hundred persons to vote, the stone striking against the metal bottom made a sharp, loud noise. This sound the Athenians imitated by the monosyllable κόγις. Hence the term κόγις came to denote that all was ended, that the termination of an affair was reached; and hence Hesychius assimilates it to the form πάλα, which appears to have had the same force as the Latin interjection pax. (Lobeck, A稳定性)phamus, p. 776, seqq.—Philol. Museum, No. 2, p. 425, not.)—But to return to the mysteries: the garments in which the new-comers were initiated were held sacred, and of no less efficacy to avert evils than charms and incantations. From this circumstance, therefore, they were never left off before the end of the festival, and they were thus appropriated for children, or dedicated to the goddess. The chief person that attended at the initiation was called θερόφινξ, the revealer of sacred things. He was a citizen of Athens, and held his office during life, though, among the Celans and Phliasians, it was limited to the period of four years. He was obliged to devote himself totally to the service of the deities; and his life was to be chaste and single. The Hierophant had three attendants; the first was called δρόμων, torch-bearer, and was permitted to marry; the second was called κόρος, a crier; the third administered at the altar, and was called ὁ κτι κυρις. There were, besides these, other inferior officers, who took particular care that everything was performed according to custom. The first of these, called βασιλεύς, was one of the archons; he offered prayers and sacrifices, and took care that there was no indecency or irregularity during the celebration. Besides him there was a board of four priests, called ἐπισκόποι, curators, elected by the people. One of these was chosen from the sacred family of the Eumolpidae, the other was one of the Ceryces, and the rest were from among the citizens. There were also ten persons who assisted at this and every other festival, called θεροποιοί, because they offered sacrifices.—This festival was observed in the month Bocromion or September, and continued nine days, from the 16th till the 25th. During that time it was unlawful to arrest a man, or present any petition, on pain of forfeiting a thousand drachmas, and according to others, on pain of death. It was also unlawful for those who were initiated to sit upon the cover of a well, to eat beans, mules, or weasels. If any woman rode to Eleusis in a chariot, she was obliged, by an edict of Lycurgus, to pay 6000 drachmas. The design of this law was to destroy all distinction between the richer and poorer sort of citizens.—The first day of the festival was called ἐρυμηθήσα, assembly, or the day on which they might be said that the mysteries were assembled together. The second day was called ὑπεράντη, to the sea, you that are initiated, because they were commanded to purify themselves by bathing in the sea. On the third day sacrifices, and chiefly a mulet, were offered; as also barley from a field of Eleusis. These oblations were called Ὀστα, and held so sacred that the priests themselves were not, as in other sacrifices, permitted to partake of them. On the fourth day they made a solemn procession, in which the λαδάδινοι, holy basket of Ceres, was carried about in a consecrated cart, while on every side the spectacle was accompanied by ἄμφιγεφτερ, hail, Ceres! After these followed women, called κυναρόφοροι, who carried baskets, in which were sesamum, carded wool, grains of salt, a serpent, pomegranates, reeds, ivy-boughs, certain cakes, &c. The fifth was called η τῶν Ἀμπάδων ἡμέρα, the torch-day, because on the following night the people ran about with torches in their hands. It was usual to dedicate torches to Ceres, and contend which should offer the largest in commemoration of the travels of the goddess, and of her lighting a torch at the flames of Mount Σένα. The sixth day was called ίαρχος, from Iacchus, the son of Jupiter and Ceres, who accompanied his mother in her search after Proserpina, with a torch in his hand. From that circumstance his statue had a torch in its hand, and was carried in solemn procession from the Ceramicus to Eleusis. The statue, with those that accompanied it, called ίαρχαγγελοι, was crowned with myrtle. In the way nothing was heard but singing and the noise of brazen kettles, as the votaries danced along. The way through which they issued from the city was called ἐπα πόδος, the sacred way; the resting-place, ἐπα σική, from a fig-tree which grew in the neighbourhood. They also stopped on a bridge over the Cephissus, where they derrid those that passed by. After they had passed this bridge, they entered Eleusis by a place called μοινός, the passage of the Bystanders. The seventh and last day of the festival was called πιπακος, earthen vessels, because it was usual to fill two such vessels with wine, one of which being placed toward the east, and the other toward the west, which, after the repetition of some mystical words, were both thrown down, and the wine being spilled on the ground, was offered as a libation. The Eleusinian mysteries lasted about eighteen hundred years, and were finally abolished by Theodosius the Great.—Various opinions, as may well be supposed, have been entertained respecting the nature and end of the Eleusinian mysteries. The following are some of the results of the inquiries of the learned and judicious Lobeck. (A stability)phamus, p. 3, seqq.)—In the very early ages of Greece and Italy, and probably of most countries, the inhabitants of the various independent districts into which they were divided had very little communication with each other, and a stranger was regarded as little better than an enemy. Each state had its favourable protection it was held to be, and these deities were propitiated by sacrifices and ceremonies, which were different in different places. It is farther to be recollected, that the Greeks believed their gods to be very little superior in moral qualities to themselves, and they feared that if promises of more splendid and abundant sacrifices and offerings were made to them, they might not be able to resist the temptation. As they were thus being deserted by their patrons, they adopted the expedient of concealing their names, and of excluding strangers from their worship. Private families, in like manner, excluded their fellow-citizens from their family-sacrifices; and in those states where ancient aerolites and such like were preserved as national palliads, the sight of them was restricted to the magistrates and principal persons in the state. (A stability)phamus, p. 68, 273, 274.) We are to recollect, that
Eleusis and Athens were long independent of each other. (Aglæoph., p. 214, 1531.—Müller, Dorians, vol. 1, p. 201.) The worship of Athena, and the secret religion of the Eleusinians, from which the Athenians were of course excluded, as well as all other Greeks. But when Eleusis was conquered, and the two states coalesced, the Athenians became participants in the worship of these deities; which, however, remained so long confined to them, as to have given rise to a proverb (Ἀλευαία τὰ Ἐλευσίνια), applied to those who met together in secret for the performance of any matter. (Aglæoph., p. 237.) Gradually, with the advance of knowledge, and the decline of superstition and nationalnilberality, admission to witness the solemn rites celebrated each year at Eleusis was extended to all Greeks of either sex and of every rank, provided they came at the proper time, had committed no inexpiable offence, had performed the requisite previous ceremonies, and were introduced by an Athenian citizen. (Aglæoph., p. 14, 28, 31.) These mysteries, as they were termed, were performed with a considerable degree of splendour, at the charge of the state, and under the superintendence of the magistrates; whence it follows, as a necessary consequence, that the rites could have contained nothing that was grossly immoral or indecent. (Aglæoph., p. 116.) There does not appear to be any valid reason for supposing, as many do, that a public discourse on the origin of things and that of the gods, and on other high and important matters, was delivered by the Hierophant, whose name would rather seem to be derived from his exhibiting the sacred things, ancient statues probably of the goddesses, which were kept carefully covered up, and only shown on these solemn occasions. The delivery of a public discourse would, in fact, have been quite repugnant to the usages of the Greeks in their worship of the gods; and the evidence offered in support of this supposition is extremely feeble. But the singing of sacred hymns, in honour of the goddess, always formed a part of the service. (Aglæoph., p. 63, 193—Müller, Prolegomen., p. 250, seq.) The ancient writers are full of the praises of the Eleusinian mysteries, of the advantage of being initiated, i.e., admitted to participate in them, and of the favour of the gods in life, and the cheerful hopes in death, which were the consequence of it. Hence occasion has been taken to assert, that a system of religion little inferior to pure Christianity was taught in them. But these hopes, and this tranquillity of mind, do not appear necessary for having recourse to so absurd a supposition. Every act performed in obedience to the will of Heaven is believed to draw down its favour on the performer. The Mussulan makes his pilgrimage to the Kaaba at Mecca, the Catholic to Loretto, Compostella, or elsewhere; and each is persuaded that, by having done so, he has secured the divine favour. (Aglæoph., p. 70, seq.) So the Greek who was initiated at Eleusis (the mysteries of which place, owing to the fame in which the rites were held, and the splendour and magnificence with which they were performed, eclipsed all others) retained ever after a lively sense of the happiness which he had enjoyed, when atoned to view the interior of the illuminated temple, and the sacred relics which it contained, when, to his excited imagination, the very gods themselves seemed visibly to descend from their Olympian abodes, amid the solemn hymns of the officiating priests. Hence there naturalized in his heart the pious notion, that the gods were bent upon him through after-life; and, as man can never divest himself of the belief of his continued existence after death, a vivid hope of enjoying bliss in the life to come. It was evidently the principle already stated, of seeking to discover the causes of remarkable appearances, which gave origin to most of the ideas respecting the recondite sense of the actions and ceremonies which took place in the Eleusinian mysteries. The stranger, dazzled and awed by his own conception of the sacredness and importance of all he beheld, confessed the nothing there could be without some mysterious meaning. What this might be he inquired of the officiating ministers, who, as various passages in Herodotus and Pausanias show, were seldom without a legend or Sacred Account (ἰερὸς ἱστορία), as it was called, to explain the dress or ceremony, which owed, perhaps, its true origin to the caprice or sportive humour of a ruder period. Or if the initiated person was himself endowed with intuitive power, he explained the appearances accordingly, in general, to the system of philosophy which he himself had embraced. (Aglæoph., p. 180, seq.) It was thus that Porphyry conceived the Hierophant to represent the Platonic Demiurgus or creator of the world; the torch-bearer (σφυροκτόνος the sun; the altar-man (ὁ ἐπί βωμος) the moon; the herald (κύριος) Hermes; and the other ministers the inferior stars. These fancies of priests and philosophers have been formed by modern writers into a complete system, and Saint-Croix in particular describes the Eleusinian mysteries with as much munuteness as if he had been actually himself initiated. (Compare Warburton's Dis. Legatim.—Saint-Croix, Recherches sur les Mystères, &c.)—It is to be observed, in conclusion, with respect to the charges of impiety and immorality brought against the Eleusinian mysteries by some Fathers of the Church, that this arose from their confounding them with the Bacchic, Isaac, Mithraic, and other private mysteries, notably connected with the worship of Ceres and the other goddesses of the Eleusinian mysteries. These were undoubtedly liable to that imputation. It must always be remembered, that those of Eleusis were public, and celebrated by the state. (Aglæoph., p. 116, 197, 202, 1263.—Müller, Proleg., p. 248, seq.—Keightley's Mythology, p. 181, seq.)

Eleusis, I. an ancient city of Boeotia, which, stood, according to tradition, near Copae and the Lake Copais, and was, together with another ancient city, named Athenae, inundated by the waters of that lake. (Strab., 407.) Stephonus of Byzantium reports, that when Crates drained the waters which had overspread the plains, the city of Athenae became visible (στ. Ἀθηνά). Compare Müller, Gesch. Hellens. Stämme und Städte, vol. 1, p. 57, seq.—II. A city of Attica, equidistant from Megara and the Piraeus, and famed for the celebration of the mysteries of Ceres. According to some writers, it derived its name from the city of Eleusis. According to others, it is connected with the moon of Heraclea, or the name of Mercury, but others of Angypos. (Pausan., I., 38.—Compare Aristid., Rhet. Eleus., vol. 1, p. 257.) Its origin is certainly of the highest antiquity, as it appears to have already existed in the time of Cercrops (Strab., 387), but we are not informed by whom, or at what period, the worship of Ceres was introduced there. Eusebios places the building of the first temple in the reign of Pandion (Chron., 2, p. 66); but, according to other authors, it is more ancient. (Clem. Alex., in Iren., I., 25.—Keightley's Mythology, p. 25.) Cercopes is said to have been king of Eleusis when Ceres first arrived there. (Hom., Hymn. in Cer., 96—Id. ibid., 356.—Id. ibid., 474.) Some etymologists suppose that Eleusis was so called, because Ceres, after traversing the whole world in pursuit of her daughter, came here (ἐλευσία, venia), and ended her search. Diodorus Siculus (5, 69) makes the name Eleusis to have been given this city, on account of its being the first that the goddess was brought from abroad into Attica; or, to use the words of the historian, "because the person who brought thither the seed of corn came from foreign parts." At one period Eleusis was powerful enough to contend with Athens for the sovereignty of Attica. This was in the time of Eumolpus. The controversy was ended by a treaty, wherein it was stipulated that Eleusis...
should yield to the control of Athens, but that the sa-
cred rites of Ceres should be celebrated at the former
city. Ceres and Triptolemus were both worshipped
here, under the name of Eleusis, and here also was situated,
the Rarius Campus, where Ceres was said to have
first sown corn. (Pausanias, 1, 38.) Dodwell ob-
erves, that the soil, though arid, still produces abun-
dant harvests (vol. 1, p. 583). The temple of Eleusis
was burned by the Persian army, in the invasion of
Attica (Herod., 9, 65), but was rebuilt, under the
administration of Pericles, by Ictinus, the architect of
the Parthenon. (Strabo, 395.—Plut., Vit. Periclis.)
Strabo says, that the mystic cell of this celebrated ed-
fice was capable of containing as many as twenty
people. A portal was afterward added by Demo-
trius Phalerenus, who employed for that purpose
the architect Philo. This magnificent structure was en-
tirely destroyed by Alaric A.D. 396 (Eunap., Vit.
Soph., p. 75), and has ever since remained in ruins.
Eleusis, though so considerable and important a place,
was classed among the Attic demi. (Strabo, l. c.)
It belonged to the tribe Hippothoonitis. (Steph. Byz.,
zn Eumeneis.) Livy speaks of the circuit as being a
fortress of some strength, comprised within the sa-
cred precincts of the temple (31, 25.—Compare Syl-
lax, Periplus, p. 21); and Dodwell observes (vol.
1, p. 584), that the acropolis was elevated upon a
rocky ridge, which rises to the north of the temple
of Ceres.—Eleusis, now called Lessina, is an inconsti-
tuable village, inhabited by a few Albanian Christians.
(Chandler’s Travels, c. 42.) The colossal statue of
the Eleusinian Ceres, the work of Phidias, after hav-
ing suffered many mutilations, was brought over to
England by Dr. Clarke and Mr. Cripps in 1801, and
now stands in the vestibule of the University Library
at Cambridge. The temple itself was subsequently cleared by Sir Wm. Gell. (Cramer’s Ancient Greece,
vol. 2, p. 360, seqq.)

Eleutheræ, a city of Attica, on the road from
Eleusis to Platea, which appears to have once belong-
ed to Bootia, but finally became included within the
limits of Attica. (Strabo, 412.) Pausanias reports
(1, 38), that the Eleutherians were not conquered by
the Athenians, but voluntarily united themselves to
that people, from their constant enmity to the The-
bans. Bacchus is said to have been born in this town.
(Diod. Sic., 3, 65.) This ancient site probably cor-
responds with that now called Gypro Castro, where
modern travellers have noticed the ruins of a consid-
erable ancient city, a large stoa, and apparently
designed to protect the pass of Citharon. (Diodotl’s
2, p. 407.)

Eleutheria, a festival celebrated at Platea in hon-
our of Jupiter Eleutherius, or the assister of liberty,
by deputies from almost all the cities of Greece. Its
institution originated in this: after the victory ob-
tained by the Grecians under Pausanias over Mardon-
ios, at Marathon, the Persians, in the vicinity of Platea,
as an altar and statute were erected to Jupiter Eleutherius,
whom they said, had freed the Greeks from the tyranny of
the barbarians. It was farther agreed upon in a general as-
sembly, by the advice of Aristides the Athenian, that
deputies should be sent every fifth year from the dif-
cerent cities of Greece to celebrate the Eleutheria, or
festival of liberty. The Plateans celebrated also an
annual festival in memory of those who had lost
their lives in the battle, which was called the Eleutheria,
thus: at break of day a procession was made with a
trumpeter at the head, sounding a signal for battle.
After him followed chariots loaded with myrrh, gar-
lands, and a black bull, and certain free young men,
as no signs of servility were to appear during the so-
lemnity, because they in whose honour the festival was
instituted had died in the defence of their coun-
try. They carried libations of wine and milk in large-
}ed vessels, with jars of oil and precious ointments.
Last of all appeared the chief magistrate, who, though
not permitted at other times to touch iron, or wear
armour, or take part in battle but white, yet appeared clad in
purple, and, taking a water-pot out of the city cham-
ber, proceeded through the middle of the town with
a sword in his hand, towards the sepulchres. There
he drew water from a neighbouring spring, and washed
and anointed the monuments; after which he sacri-
ficed a bull upon a pile of wood, invoking Jupiter and
Mercury, and inviting to the entertainment the souls
of those happy heroes who had perished in the defence
of their country. After this, he filled a bowl with
wine, saying, “I drink to those who lost their lives in
the defence of the liberties of Greece.”—There was
also a festival of the same name observed by the Sa-
mians in honour of the god of Love.—Slaves also,
when they obtained their liberty, kept a holyday, which
they called Eleutheria.

Eleutherïo-Ciliciæ, a name given to those of the
Cilicians who had fled to the mountains when the
Greek settlers established themselves in that country.
The appellation, which means “Free Cilicians,” has
reference to their independent mode of life. The
Greeks, however, connected a fable with this. Ac-
\ncording to them, when Myrina, queen of the Amazons,
was spreading her conquests over Asia Minor, the Cilici-
s were the only people that voluntarily surrendered to
her, and hence they were allowed to retain their free-
dom. (Diod. Sic., 3, 65.) Xenophon also makes men-
tion of the Cilician mountaineers (Anab., 1, 2), and
of their having cut to pieces some Greek troops, a part
of those in the army of Cyrus, who had lost their way.
Cicero came in contact with them during his govern-
cement in Cilicia, and partially reduced them under the
Roman sway, but they soon after became as free and
independent as ever. (Ep. ad Fam., 15, 4; ad Att.
5, 20.)

Eleutheropolis, a city of Palestine, placed by the
Itin. Ant. 24 miles northeast from Ascalon, and 20
miles southwest from Jerusalem. It was founded
in the third century, but by whom is uncertain.
(Amm. Marcell., 23, 1.) Hence, owing to its late foundation,
no mention of it occurs before the time of Jesus.
In the days of Ezra and Jerome, however, it was an
important and flourishing city, and these writers esti-
mate the distances and positions of places from this and
Elia or Jerusalem. St. Epiphanius was born here.
(Sosom., 6, 32.—Compare Cellarius, Geogr. Ant.,
vol. 1, p. 490.)

Ellithyn, a surname of Lucina, from her coming,
when invoked, to the aid of women in labour. (Findt.,
Cl., 6, 72.)

Elis, a surname of Jupiter, worshipped on Mount
Aventine. The Romans gave him this name, accord-
ing to Ovid (Fast., 3, 328), because they believed that
they could, by a set form of words, draw him down
(dierec) from the sky, to inform them how to expe-
tiate prodigies, &c. M. Salvatore, in his curious and
learned work on the Occult Sciences of the Ancients
(Des Sciences Occultes, ou Essai sur la Magie, &c.,
Paris, 1847), mentions this form of Jupiter, and ex-
plains it. He gives an account of Jupiter Elicitus, and
seeks to connect it with a knowledge of the art of draw-
ing down the electric fluid from the clouds. Medals
and traditions are the grounds on which he rests. “M.
La Boessiere,” he states, “mentions several medals which appear to have a reference to this subject.
One described by M. Duchet represents the temple of Juno, the goddess of the air: the roof which covers it is armed with pointed rods. An-
other, described and engraved by Pellerin, bears the legend Jupiter Elicius; the god appears with the lightning in his hand; beneath is a man guiding a winged stag; but we must observe, that the authenticity of this medal is suspected. Finally, other medals cited by Duchoud, in a work which he calls "Les Médailles de la République," engraved on the exergue; XV. Viri Sacris Faciundis; and bear a fish covered with points placed on a globe or on a patera. M. La Boëssetière thinks, that a fish or a globe, thus armed with points, was the conductor employed by Numa to withdraw from the clouds the electric fire. And, comparing the figure of this globe with that of a head covered with erect hair, he gives an ingenious and plausible explanation of the simple reason why some Roman gods, such as Jupiter, were, according to Valerius Antias, and ridiculed by Arnobius (lib. 5.), probably without its being understood by either.—The history of the physical attainments of Numa deserves particular examination. At a period when lightning was occasioning continual injury, Numa, instructed by the nymph Egeria, sought a method of appeasing the lightning (fulmen piare); that is to say, in plain language, a way of rendering this meteor less destructive. He accordingly consecrated Panurus, with whom the names in this place probably denote only the priests of these Etruscan divinities; he learned from them the secret of making, without any danger, the thundering Jupiter descend upon earth, and immediately put it in execution. Since that period, Jupiter Elicius, or Jupiter who is made to descend, was adored in Rome. Here the veil of the mystery is transparent: to render the lightning less injurious, to make it, without danger, descend from the bosom of the clouds: and the effect and the end are common to the beautiful discovery of Franklin, and to that religious experiment which Numa frequently repeated with success. Tullus Hostilius was less fortunate. 'It is related,' says Livy, 'that this prince, in searching the memoirs left by Numa, found among them some instructions relative to the secret sacrifices offered to Jupiter Elicius. He attempted to repeat them; but in the preparations or in the celebration he deviated from the sacred rite.' Exposed to the anger of Jupiter, evoked by a defective ceremony (solicitati prava religione), he was struck by the lightning and burned, together with his palace' (1, 31.—Compare Phn., 2, 53.—Id., 38, 4). An ancient annalist quoted by Pliny, expresses himself in a more explicit manner, and justifies the liberty we take in departing from the sense commonly given to the sentences of Livy by his translators. Guided by the books of Numa, or by undertook to evoke Jupiter by the aid of the same ceremonies which his predecessors had employed. Having departed from the prescribed rite, he was struck by the lightning and perished. (Lucius Piso, ap. Plin., 28, 2.) For the words rites and ceremonies, substitute the words physical process, and we shall perceive that the fate of Tullus was that of Professor Reichman. In 1753 this learned man was killed by the lightning, when repeating too incuriously the experiments of Franklin. (Salverte, vol. 4, p. 154.) The art thus veiled under the name of Zeus, Jupiter Elicius, and Zeux karadag, M. Salverte considers as having been employed by the various imitators of thunder. Going back to the age of Prometheus, it affords an explanation of the fable of Salmoneus; it was employed by Zoroaster to kindle the sacred fire (Dion Chrysost., Orat. Beryth.,) and perform, in the initiation of its followers, some of the miracles, of which he is the object of still existing writings. It may be inferred, that in the time of Ctesias the same art was known in India, and that the Jews were not unacquainted with its effects would appear from some remarks of Michaelis cited by M. Salverte. He remarks, "1. That there is nothing to indicate that the lightning ever struck the temple of Jerusalem during the lapse of a thousand years. 2. That, according to the account of Josephus (Bell. Jud., 5, 14,) a forest of spikes with golden or gilt points, and very sharp, covered the roof of this temple; a remarkable feature of resemblance with the temple of Juno represented on the Roman medals. 3. That this roof communicated with the caverns in the hill of the Roman temple, and of metallic tubes, placed in connexion with the thick gilding that covered the whole exterior of the building. The points of the spikes there necessarily produced the effect of lightning-rods. . . . How are we to suppose that it was only by chance they discharged so important a function; that the advantage received from it had not been calculated; that the spikes were erected in such great numbers only to prevent the birds from lodging there or roosting on the top of the temple? Yet this is the sole utility which the historian Josephus attributes to them. His ignorance is an additional proof of the facility with which the higher branches of knowledge must be lost, so long as men, instead of forming them into an organized system of science, sought only an empirical art of operating wonders." (Salverte, vol. 2, p. 166.—Foreign Quarterly, No. 12, p. 449, seq.)

Eulyx, a name given to the school of philosophy established by Phaedo of Elia (Laert., 2, 106.) It was instituted after the Socratic model by Phaedo of Elia, and was continued by Plistanus an Elian, and afterward by Menedemus of Eretria. (Enfield's History of Philosophy, vol. 1, p. 204.)

Elimea or Elimiotes, a region of Macedonia, to the east of Stymphalia. It was at one time independent, but was afterward conquered by the kings of Macedonia, and finally included by the Romans in the fourth division of that province. (Thucyd., 2, 99—Livy, 45, 30.) Though a mountainous and barren tract, Elimea must have been a very important acquisition to the kings of Macedonia, from its situation with regard to Epirus and Thessaly, there being several passages leading directly into those provinces from Elimea. The mountains which separated Elimea from Thessaly were the Cambuuni Montes of Livy (42, 53), which cross nearly at right angles the chain of Pelusus to the west, and that of Olympus to the east. Piolemy has assigned to the Elimiotes a maritime situation on the coast of Illyria, which cannot be correct (p. 81), but elsewhere he places them in the interior of Macedonia (p. 83), and writes the name Elymiiote. According to Stephanus of Byzantium, there was a town named Elimea or Elimeuma, which tradition reported to have been founded by Elymas, a Tyrrhenian chief (e. g. Eyleus). Piolemy calls it Elyme. Livy probably alludes to this city in his account of the expedition undertaken between Ioseus against Stratus, when that prince assembled his forces and reviewed them at Elymeis (43, 21). This capital of Elimiotes stood, perhaps, on the Haliacmon, not far from Greuno. (Crane's Ancient Greece, vol. 1, p. 200, seq.)

Elis, I. a district of the Peloponnesus, lying west of Arcadia. At the period of the Peloponnesian war, the name of Elis was applied to the whole of that northwestern portion of the peninsula situated between the rivers Larissus and Neda, which served to separate it from Achia and Messenia. (Strabo, 336.) But in earlier times, this tract of country was divided into several districts or principalities, each occupied by a separate clan or people. Of these the Caucones were probably the most ancient, and also the most widely disseminated, since we find them occupying both extremities of the peninsula. (Achaia, Strabo, 342.) Elisme affirms that, according to some authors, the whole of Elis once bore the name of Cauconia. Next to these were the Epei, who were placed by Homer (Od., 15, 296) in the northern part of the province, and next to Achaea. Pausanias who seems to have regarded them as indigenous, describes their name from Epeus, son of Eundymion, or...
of the earliest sovereigns of the country; on his death his brother Aiolus succeeded to his crown; but, as he was shortly after forced to fly his country for an involuntary crime, the sovereignty devolved on Eleus, a small and distant promontory on the coast, who gave his arms to the Elean people (5, 1). The former appellation, however, still continued to prevail, as we may infer from the poems of Homer, who mentions Elis as a district of the Epeis, without ever naming the Eleis.

Strabo also states, that Elis did not become the capital of the country till after the Persian war, at which period it was formed into a city by the union of several smaller towns. Prior to the siege of Troy, the Epeis existed for having been greatly reduced by their wars with Hercules, with whom they had been at enmity, and the Pylians commanded by Nestor. They subsequently, however, acquired a great accession of strength by the influx of a large colony from Aetolia, under the conduct of Oxylus, and their numbers were further increased by a considerable detachment of the Dorians and Heraclides. (Strabo, 354.—Pausan., 5, 3.) Iphitus, descended from Oxylus, and a contemporary of Lycurgus, re-established the Olympic games, which had been discontinued by war, and had been interrupted for several years. (Pausan., 5, 4.) The Pisates having remained masters of Olympia from the first celebration of the festival, long disputed its possession with the Eleans, but they were finally conquered, when the temple and presidency of the games fell into the hands of their rivals. The preponderance obtained by the latter is chiefly attributable to the assistance they derived from Sparta; in return for the aid afforded them in the messianian war. From this period we may date the ascendency of Elis over all the other surrounding districts hitherto independent. It now comprised not only the country of the Epeis and Caecones, which might be termed Elis Proper, but the territories of Pisa and Olympia, forming the ancient kingdom of Pelops, and the whole of Triphylia, which, according to Strabo's view of the Homeric geography, constituted the greater part of Nestor's dominions. (Strabo, 385.) The Eleans were present in all the engagements fought against the Persians, and, in the Peloponnesian war, zealously adhered to the Spartan confederacy, until the conclusion of the treaty after the battle of Amphipolis, when an open rupture took place between these people and the Lacedaemonians, in consequence of protection and countenance afforded by the latter to the inhabitants of Leprumna, who had revolted from them. (Thucyd., 5, 31.) Such was the resentment of the Eleans on this occasion, that they imposed a heavy fine on the Lacedaemonians, and prohibited their taking part in the Olympic games. They also made war upon Sparta, in conjunction with the Mantinians, Argives, and Athenians; and it was not till after the unsuccessful battle of Mantinea that this confederacy was dissolved. (Thucyd., 6, 81.) The Lacedaemonians, on the other hand, avenged those injuries by frequent incursions into the territory of Elis, and fought for possession of a spot of country which presented itself as the most favorable site for a temple and sanctuary. They were beaten, however, at Olympia under the command of Agis (Xen. Hist. Gr., 3, 2, 16.—Pausan., 5, 4); and again repulsed before the city of Elis, whether they had advanced under Pausanias, in the 3d year of the 94th Olympiad. (Diod. Sic., 14, 17.) At length the Eleans, wearied with the continual incursions to which their country was exposed, since it furnished entire substrata to the enemy, renewed and reaped their ancient alliance with Sparta. (Xen. Hist. Gr., 3, 2.—Pausan., l. c.) Not long after, however, we find them again in arms, together with the Boeotians and Argives, against that power. (Xen. Hist. Gr., 7, 2.) At the battle of Mantinea, they once more fought under the Spartan banners, jealousy of the rising ascendency obtained by the Thebans having led them to abandon their interests. (Xen., Hist. Gr., 7, 5, 1.) Pausanias writes, that when Philip acquired the dominion of Greece, the Eleans, who had suffered much from civil dissensions, joined him and voted him the power of a king; as it was decreed by the Athenians and Thebans at Charenes, and on the death of Alexander they united their arms with those of the other confederates, who carried on the war of Lamia against Antipater and the other commanders of the Macedonian forces. Some years after, Aristotimus, son of Damareus, through the assistance of Antigonus Gonatas, usurped the sovereignty of Elis; but a conspiracy having been formed against him, he was slain at the altar of Jupiter Servator, whilst he had fled for refuge. (Pausan., 5, 4, 5.) During the social war, the Eleans were the firmest allies of the Aetolians in the Peloponnesus; and though they were on more than one occasion basely deserted by that people, and sustained heavy losses in the field, as well as from the devastation of their territory and the capture of their towns, they could not be induced to desert their cause and join the Achaean league. (Polyb., 4, 5, seqq.—Id., 4, 58, seqq.—Id., 4, 71, seqq.—Id., 5, 17, seqq.) The Eleans were defeated by their confederates in which the Eleans are mentioned as an independent people: for though they do not appear to have taken any part in the Achaean war, they were included with the rest of the Peloponnesians in the general decree, by which the whole of Greece was annexed to the Roman empire. —Elis was by far the most fertile and populous district of the Peloponnesus, and its inhabitants are described as fond of agriculture and rural pursuits. (Polyb., 4, 73.) It is represented by Pausanias (5, 5), that Elis was the only part of Greece in which the byssus was known to grow. Another extraordinary circumstance relative to this province was, that no mules were engendered in it, though they abounded in the adjoining countries. This phenomenon had been noticed before by Herodotus (4, 30), who reports that it was looked upon as resulting from the curse of Heaven.—Elis was divided into three districts, Elis Proper, Pisatis, and Tripilias. The first of these occupied the northern section of the country, and has already been alluded to; the second, or Pisatis, was that part of the Elian territory through which flowed the Alpheus after its junction with the Erymanthus. It derived its name from the city of Pisa: the third, or Tripilias, formed the southern division. Some authors have derived the name of this portion of Elis from Tripilus, an Arcadian prince. (Polyb., 4, 77.) But others ascribe it with more probability to the circumstance of its inhabitants having sprung from three different transactions (ναος πολικος), the Epeis, the Minya or Arcadians, and the Eleans. (Strabo, 337.—Cramer's Ancient Greece, vol. 3, p. 77, seqq.)—II. The capital of Elis, situated, as we learn from Strabo, on the Peneus, at the distance of 120 stadia from the sea. It was, like many other towns of Greece, at first composed of several detached villages, which, being united after the Persian war, formed one considerable city. It always, however, remained a Phocian colony, a place of inordinate splendor, and under the immediate protection of the god whose festival was there solemnized. Hence, in early times, according to Ephorus, those troops which were obliged to traverse this country delivered up their arms on entering it, and received them again upon quitting the frontier. (Ap. Strabo, 357.—Compare Xen., Hist. Gr., 3, 2, 50.) But this primitive state of things was at length arrested, and a wall inclosed a part of the Elian territory as little respected as any other Greek state by the powers at war with that republic; still the peace and tranquillity thus enjoyed for a time by the Eleans, together with the vast concourse of persons attracted by the Olympic games, greatly contributed to the prosperity and opulence of their city. The remains of Elis are now called Palaeopolis, but they are
inconceivable, neither are interesting them from their state of preservation. (Compare the remarks of Chandler, Travels, vol. 2, ch. 2, p. 416. —Gell, Itin. of the Morea, p. 32.—Cramer’s Ancient Greece, vol. 3, p. 88, seqq.)

EMISIA, another name for Dido. (Vid. Dido.)

ELLOPA, a district of the Eburnae, in the northern part of the island, in which Histiæa was situated. According to some, it derived its name from Ellipsis, a son of Ion, who settled here. (Strab., 445.)

ELPINICE, a daughter of Miltiades. (Vid. Callias and Cimon.)

ELYMAIS, a province of Persia, lying to the south of Media, and forming the northern part of the larger district of Susiana. It derived its name from the Elymais. These were originally seated in the north (Polyb., 5, 44), but in process of time spread themselves over all the rest of Susiana, to the shores of the Persian Gulf. (Strab., Epit., 11, p. 1264, ed. Oxon.) Elymais, the metropolis of the province, was famed for a rich temple, which Antiochus Epiphanes attempted to plunder; he was beaten off, however, by the inhabitants. The temple was afterward plundered by one of the Parthian kings, who found in it, according to Strabo, 10,000 talents. (Manneri, Geogr., vol. 3, p. 15.)

ELYMIOTIS, a district of Macedonia, in the southwest, bordering on Thessaly and Epirus.

ELYRIT CAMP, the abode of the blessed in another world, where they enjoyed all manner of the purest pleasures. In the Homeric mythology, the Elysian fields lay on the western margin of the earth, by the stream of Oceanus, and to them the mortal relatives of the king of the gods were transported, without tasting of death, to enjoy an immortality of bliss. (Od., 4, 563, seqq.) In the time of Hesiod, the Elysian Plains had become the Isles of the Blessed, in the Western Ocean. (Op. ed. D., 160.) Pindar, who has left a glowing description of Elysium, appears to reduce the number of these happy islands to one. (Ol., 2, 129.)

At a later day, a change of religious ideas ensued, brought about by the increase of geographical knowledge, and Elysium was moved down to the lower world, as a place of reward for the good. The poetical conceptions respecting Elysium made it a region blessed with perpetual spring, clothed with continual verdure, enamelled with flowers, shaded by pleasant groves, and refreshed by never-failing fountains. Here the righteous lived in perfect felicity, communing with each other, bathed in a flood of light proceeding from their own sun, and the sky at eve being lighted up by their own constellations: "sollemque suum, sua sidera norunt." (Virg., Æn., 6, 541.) Their employments below resembled those on earth, and whatever had warmly engaged their attention in the upper world, continued to be a source of virtuous enjoyment in the world below. (Virg., Æn., 6, 653.)

EMATHIA, the more ancient name of Macedonia. Polybius (fragm., 24, 8) and Livy (40, 3) expressly assert, however, that Emathia was originally called Pioni, though Homer certainly mentions them as two distinct countries. (Cramer’s Ancient Greece, vol. 1, p. 226.)

EMBÆRA AUGUSTA, a town of Lusitania, below Norba Casarea, on the northern bank of the Anas. It is now Merida. (Plin., 9, 41.)

EMERA, an ancient city of Syria, situate near the eastern bank of the Orontes, southeast of Ephiphanias. It was the birthplace of the Emperor Heliogabalus, and contained a famous temple of the Sun, in which Heliogabalus was said to be born, at whose intercession it was proposed to attack a very large ruinous town, containing about 2000 inhabitants, though formerly a strong and populous city. (Amm. Marcell., 26, 18.)

EMODI MONTEs, part of a chain of mountains in Asia. Pliny (6, 15) states, that the Emodi Montes, and those of Imaus, Paroparnisium, and Caucasus were connected together. That part of the chain which Alexander crossed in order to invade Bactriana was called Paroparnisium, the more easterly continuation of the range was termed Emodi Montes, and its still farther continuation, even to the Eastern Ocean, was styled Imaus.

EMPODOCLES, a native of Agrigentum in Sicily, who flourished about 450 B.C. He was distinguished not only as a philosopher, but also for his knowledge of natural history and medicine, and as a poet and statesman. After the death of his father Metro, who was a wealthy citizen of Agrigentum, he acquired a great weight among his fellow-citizens by espousing the popular party and favouring democratic measures. His conduct in the state became at length so great that he ventured to assume several of the distinctions of royalty, particularly a purple robe, a golden girdle, a Delphic crown, and a train of attendants, always retaining a grave and commanding aspect. The skill which he possessed in medicine and natural philosophy enabled him to perform many wonders, which he passed upon the superstitious and credulous multitude for miracles. He pretended to drive away noxious winds from his country, and thereby to preserve the people from epidemic diseases. He is said to have checked, by the power of music, the madness of a young man who was threatening his enemy with instant death; to have restored a woman to life who had lain breathless thirty days; and to have done many other things, equally astonishing, after the manner of Pythagoras. On account of all this, he was an object of universal adoration, so that when he came to the Olympic games the eyes of all the people were fixed upon him. Besides medical skill, Empedocles possessed poetical talents. The fragments of his verses are scattered throughout the ancient writers, and Fabricius is of opinion that he was the real author of that ancient fragment which bears the name of the "Golden Verses of Pythagoras," of Gorgias of Leontini, the well-known orator, was his pupil, whence it may seem reasonable to infer, that Empedocles was also no inconsiderable master of the art of eloquence. According to the common account, he threw himself into a burning crater of a volcano, in order that, the manner of his death not being known, he might afterward pass for a god; but the secret was discovered by means of one of his brazen sandals, which was thrown out from the mountain in a subsequent eruption of the volcano. This story is rejected, however, as fictitious by Strabo and other judicious writers. The truth probably was, as Timæus relates, that, towards the close of his life, Empedocles went into Greece and never returned, whence the exact time and manner of his death remain unknown. According to Aristotle, he died at 60 years of age.—His masters in philosophy are variously given. By some, the Eleate generally, he is called a Pythagorean, in consequence of a resemblance of doctrine in a few unessential points. But the principles of his theory evidently show that he belongs to the Eleatic school, though the statement which makes him a disciple of Parmenides rests apparently upon no better foundation than a comparison of their systems; as, in like manner, the common employment of the mechanical physiology has led to an opinion that he was a hearer of his contemporary Anaxagoras. Empedocles taught, that originally All was one: God eternal and at rest; a sphere and a mixture (σωφρός, μίγμα), without a vacuum, in which the elements of things were held together in indistinguishable confusion; in his present love for the two elements (φύλαξ), he is no longer like to like. In a portion of this whole, however, or, as he expresses it, in the members of the Deity, strife (νείκος), the force which binds like to unlike, prevailed, and gave the elements a tendency to separate themselves, whereby the first become perceptible as such, although the separation 469
was not so complete but that each contained portions of the others. Hence arose the multiplicity of things. By the vivifying counteraction of love, organic life was produced, not, however, so perfect and so full of design as it now appears; but, at first, single limbs, then irregular combinations, till ultimately they received their present form and function. But, as the forces of love and hate are constantly acting upon each other for generation or destruction, the present condition of things cannot persist for ever, and the world which, properly, is not the All, but only the ordered part of it, will again be reduced to a chaotic unity, out of which a new system will be formed, and so on for ever.

There is no real destruction of anything, but only a change of combinations.—Of the elements (which he seems to have been the first to exhibit as four distinct species of matter), fire, as the rarest and most powerful, he held to be the chief, and, consequently, the soul of all sentient and intellectual beings which issue from the central fire, or soul of the world. The soul migrates through animal and vegetable bodies in atonement for some guilt committed in its unembodied state, when it is a demon; of which he supposed that an infinite number existed. The seat of a demon, which he calls the demon's brain, is the element in concert with this view of the objects of knowledge was his theory of human knowledge. In the impure separation of the elements, it is only the predominant one that the senses can apprehend; and, consequently, though man can know all the elements of the whole singly, he is unable to see them in their perfect unity, wherein consists their truth. Embodices therefore rejects the testimony of the senses, and maintains that pure intellect alone can arrive at a knowledge of the truth. This is the attribute of the Deity; for man cannot overlook the work of love in all its extent; and the true unity is open only to itself. Hence he was led to distinguish between the world as presented to our senses (κόσμος αίθρηγος), and its type the intellectual world (κόσμος νοητός).—The fragments of Embodices were published, with a commentary, by Sturz, Lips., 1805, Svo, and by Peyron, Lips., 1816, Svo. (Engfild, Hist. Phil., vol. 1, p. 492.—Engly. Useful Knowledge, vol. 2, p. 225.)

EMPORIUM, a country of Africa Propria, called also Byzacium, situate to the north of the Syrtes Minor. (Polylb., 3, 23.) In it stood Leptis Minor, below Hadrumetum. This city is said to have paid to the Carthaginians a talent each day. It was, in fact, a very fruitful district; and Polybius says, that almost all the hopes of the Carthaginians depended on the revenue they drew from it. (Compare Scylax, p. 40.) To this were owing the anxiety and state jealousy of the Carthaginians, that the Romans should not sail beyond the Fair promontory which lay before Carthage, and become acquainted with a region which they might be tempted to conquer. (Mannert, Geogr., vol. 10, pt. 2, p. 160.)

ENCELADUS, one of the giants that warred against Jove. Minerva flung upon him, as he fled, the island of Sicily, where his meat was consumed by the gods of Etna. (Pind., Pyth., 8, 15.—Id., Nem., 1, 100.—Id. ib., 4, 40.—Eurip., Ion, 204, seqq.—Apollon., 1, 6, 2.)

ENDYMION, the son of Aethlius and Calyce. He led a colony of Æolians from Thessaly, and founded the city of Elis. Endymion, it is said, gained the love of the goddess Selene, or the Moon, and she bore him fifty daughters. (Pausan., 5, 1, 1.) Jove, as a favour, allowed him to live an age he pleased. (Schol. ad Apollon., 4, 16, 75.) As others said, granted him the boon of perpetual sleep. The place of his repose was a cavern of Mount Latmus in Caris, and thither Selene used to repair to visit him. Some said he was made immortal for his righteousness; others, that, like Ixion, when raised to heaven, he aspired to the love of Juno, and was hurried to Erebos. (Schol. ad Apoll. Rh., l. c.)—There can be very little doubt that this mysterious being was originally an object of worship, and that he was converted into a hero in the usual manner. The sire assigned to him is nothing more than a personification of the Olympic Games. His festival was celebrated on the day when his repose was thought of, and perhaps furnish a key to his true nature. In these daughters Bökkh sees the fifty lunar months which formed the Olympic cycle of four years. In such case, Endymion would probably be the sun, who, with the moon, is the author of the months; or, supposing the myth anterior to the institution of the Olympic games, the daughters may have been the weeks of the year (the round number being employed as usual), of which the sun and moon are the parents. The conjunction of these bodies at the time of new moon is a matter of common observation. Endymion is perhaps the setting sun, who goes into (συνέβη) the sea, or, possibly, in the early myth, into the cavern where he meets the moon. (Muller, Proleg., p. 223.—Keightley's Mythology, p. 439, seqq.) The rationalizers said, that Endymion was a hunter, who used to go to the chase at night, when the beasts came out to feed, and to sleep in a cavern during the day; and hence he was supposed to be always asleep. (Schol. ad Apoll. Rh., l. c.)

ENIPUS, I. a river of Macedonia, in the district of Pieria, rising in Mount Olympus, and, though nearly dry in summer, becoming a considerable torrent in winter from the heavy rains. Its rugged and steep banks, which in some places attained a height of 300 feet, served for a long time as a defence to the Macedonian army under Perseus, when encamped on its left bank, until Paulus Æmilius, by sending a considerable detachment round the Perrhaebian mountains, threatened the rear of the enemy, and forced him to abandon his advantageous situation. (Liv., 44, 8 and 35.—Plut., Vit. Paul. Æmili.) The modern name of this stream, according to Dr. Clarke, is Malathria. (Travels—Greece, Egypt, etc., vol. 7, p. 390.)—II. A river of Thessaly, flowing into the Apidanus, which afterwards enters the Penes. It rose in Mount Òythea, and afterwards fell through Pharsalus, and issued from the western part of Phthisiotis, as we learn from Thucydides (4, 78), who remarks that Brasidas was arrested in his march through Thessaly when about to cross the Enipus. It is now called the river of Goura. Near the Enipus, and not far from its junction with the Apidanus, was situate the city of Pharsalus. (Cramer's Ancient Greece, vol. 1, p. 399.)—III. A small river of Elis, flowing near the city of Salinone. (Apollod., 1, 9, 8.) In Strabo's time it was called the Barnichus. (Strab., 350.)

ENNA, a city of Sicily, one of the most ancient seats of the Siculi, and celebrated over the whole island, not so much for its size and opulence, as for its being the principal centre of the worship of Ceres. The adjacent country was remarkable for its fertility; and in the plains of Enna Prosperpina was sporting when Pluto carried her away to be mistress of the lower world. Here, too, she had Menerva and Diana for her youthful companions. (Diod. Sic., 5, 3.) In the neighbourhood of the city was a cave, facing the north, through which the King of Hades is said to have driven his chariot as he was bearing off his prize. We have in this, no doubt, some old Siculan legend, appropriated by the Greeks to goddesses of their own mythology. Enna was regarded as the navel of Sicily (Pol. It., 2, 15.)—Compare Cic. in Verre, 4, 48, seqq.), and here Ceres and Proserpina had one of their most sacred temples. In a political point of view Enna was never of any importance. From the hands of the Carthaginians it fell into those of the Romans, and subsequently, when about to abandon the latter and return to their
former masters, the inhabitants met with prompt and signal chastisement. (Liv., 34, 38, seqq.) From this period the city gradually declined, its site becoming deserted, and occupied by the modern Castro Giovanni, but nearly all traces of the blooming meads in its neighbourhood have disappeared. (For some account of the modern place and its vicinity, consult Hoare's Classical Tour, vol. 2, p. 247, seqq.)

ENNÉA Hodoi, a spot in Thrace, near which the city of Amphipolis was founded. It appears to have derived its name, which means "the Nine Ways," from the number of roads which met here from different parts of Thrace and Macedon. This supposition is confirmed by travellers who have explored the adjacent country, and who report, that all the principal communications between the coast and plains must have led through this pass. It was here, according to Herodotus (7, 114), that Xenexes and his army crossed the Strymon on bridges, after having offered a sacrifice of white horses to that river, and buried alive nine youths and maidens. (Walpole's Collection, p. 510.)

ENNÉIUS, Quintus, a poet, who has generally received the distinguished appellation of the Father of Roman Song. He was born at Rudim, a town of Calabria, and lived from B.C. 239 to B.C. 169. (Cic., Brutus, c. 13.—Id., de Senect., c. 6.) In his early youth he went to Sardinia; and, if Silius Italicus (12, 393) may be believed, he served in the Calabrian levies, which, in the year 216 B.C., followed Titus Manlius to the war which he waged, in that island, against the favourers of the Carthaginian cause. After the termination of the campaign, he continued to live for twelve years in Sardinia. Aurelius Victor says he taught Cato Greek in Sardinia ("In praetura Sardiniam subegit, ubi ab Ennio Graecis litteris instituit"); but this is inconsistent with what is delivered by Cicero, that Cato did not acquire Greek till his old age. (De Senect., c. 9.) Ennius was at last brought to Rome by Cato the Censor, who, in 904 B.C., visited Sardinia, on returning as quaestor from Africa. (Corn. Nep., Vit. Cat.) At Rome he fixed his residence on the Aventine Hill, where he lived in a very frugal manner, having only a single maid as an attendant. (Hieron., Chron. Euseb., p. 37.) He instructed, however, the patrician youth in Greek, and acquired the friendship of many of the most illustrious men in the state. Being distinguished in arms as well as letters, he followed M. Furius Camillus, the Roman general, into Spain, and was received by the king of the Iberians (Cic., pro Archia, c. 10.—Id., Tusculan. Dis., 1, 21); and, in 185 B.C., he obtained the freedom of the city, through the favour of Quintus Fulvius Nobilior, the son of his former patron, Marcus. (Cic., Brutus, c. 20.) He was also protected by the elder Scipio Africanus, whom he is said to have accompanied in most of his campaigns. (Claudian, de Laud. Stilic., lib. 3, pref.) It is not easy, however, to see in what expediency was intended this renowned general. Scipio's Spanish and African wars were not extensive enough to have occasioned the loss of Ennius, who was conveyed from Sardinia to Rome; and the campaign against Antiochus was commenced and terminated while he was serving under Fulvius Nobilior in Ætolia. In his old age he obtained the friendship of Scipio Nasica; and the degree of intimacy subsisting between them has been characterized by the well-known anecdote of their successively feigning to be friends with one another, which is related by Cicero, (Cic., de Orat., 2, 68,) He is said to have been introduced to the emperors Augustus (H. Epist., lib. 19, 7), which brought on the disease called Morbus Articularis, a disorder resembling the gout, of which he died at the age of seventy, just after he had exhibited his tragedy of Thyrsestes. (Ser. Sammonius, de Medicina, c. 37.) The evils, however, of old age and indigence were supported by him, as we learn from Cicero, with such patience, and even cheerfulness, that one would almost have imagined he derived satisfac-

from circumstances which are usually regarded as, of all others, the most dispiriting and oppressive. (De Senect., c. 5.) The honours due to his character and talents were, as is frequently the case after his death, when a bust of him was erected in the family tomb of the Scipios. (Cic., pro Arch., c. 9.—Val. Max., 8, 15, 1.) In the days of Livy the bust still remained near that sepulchre, beyond the Porta Capena, along with the statues of Africanus and Scipio Asiacicus (Liv. 38, 56). The tomb was discovered in 1780, on a farm situated between the Via Appia and Via Latina. The slabs, which have been removed to the Vatican, contained several inscriptions, commemorating different persons of the Scipian family. There were neither statues nor any memorials remaining of Africanus himself or Asiacicus (Bancks, Civil History of Rome, vol. 1, p. 357.—Hobhouse, Illustrations of Childe Harold, p. 167); but a laurelled bust of Pepperino stone, which was found here, and which now stands on the sarcophagus of Scipio Barbatus in the Vatican, is supposed to be that of Ennius. (Rome in the 19th Century, Letter 36, vol. 3, p. 401, Am. ed.) There is also still extant an epitaph, reported to have been written for himself (Cic., Tusc. Disp., 1, 15), strongly characteristic of that overweening conceit, and high estimation of his own talents, which are said to have formed a principal defect in his character:—

"Adapite, O cæsæ, senis Enni imaginis formam.\nHic ventrum panum maximia facta patrum.\nNemo me lacrymis decor, nec funera ficta.\nFäxit—cur? volto visus per ora virum."

To judge by the fragments of his works which remain, Ennius greatly surpassed his predecessors, not only in poetical genius, but in the art of versification. By his time, indeed, the best models of Greek composition had begun to be studied at Rome. Ennius particularly professed to have imitated Homer, and tried to persuade his countrymen that the soul and genius of that great poet had revived in him, through the medium of a peacock, according to the process of Pythagorean transmigration. From a passage in Lucilius (1, 118, seqq.), it would appear, that Ennius somewhere in his works had described a descent into hell, through which he feigned that the shade of Homer had conducted him in the same manner as Dante afterward chose Virgil for his mystagogue. Accordingly, we find in the works of Ennius innumerable imitations of the heroic odes of Homer; and, in fact, he was to the Greek tragic writers whom he has chiefly imitated; and indeed it appears, from the fragments that remain, that all his plays were rather translations from the dramas of Sophocles and Euripides, on the same subjects which he has chosen, than original tragedies. They are founded on the old topics of Priam and Paris, Hector and Hecuba. Nor, although Ennius was the first writer who introduced satiatic composition into Rome, are his pretensions, in this respect, originality, very limited; for he is supposed to have invented the Tuscan and Ocean stage to the closet, by refining their grossness, softening their asperity, and introducing raillery, borrowed from the Greek poets, with whom he was familiar. His satires thus appear to have been a species of cento, made up from passages of various poems, which, by slight alterations, were humorously or satirically applied, and chiefly to the delineation of character. The fragments which have been preserved as a rule broken to allow us even to divine their subject. Quintilian mentions, that one of the satires contained a dialogue between Life and Death, contending with each other, a mode of composition suggested perhaps by the allegory of Prodicus. We are farther informed by Aulus Gellius (2, 29,) that he introduced into another satire, with great skill and beauty; Æsop's fable of the Larks, now well known through the imitation of Fontaine (liv. 4, 471)
ENNIUS.

It is certainly much to be regretted that we possess such scanty fragments of these productions, which would have been curious as the first attempts at a species of composition, which was carried to such perfection by succeeding Latin poets, and which has been regarded as almost peculiar to the Romans. The great work, however, of Ennius, and of which we have still considerable remains, is his Annals, or Metrical Chronicles, devoted to the celebration of Roman exploits, from the earliest periods to the conclusion of the Isthrian war. These annals were written by our poet in his old age, at least Asius Gallius informs us, on the authority of Varro, that the twelfth book was finished by him in his sixty-seventh year (17, 21). The annals of Ennius were partly founded on those ancient traditions and old heroic ballads, which Cicero, on the authority of Cato's Origines, mentions as having been sung at feasts by the guests, many centuries before the age of Cato, in praise of the heroes of Rome. Niebuhr has attempted to show, that all the memorable events of Roman history had been versified in ballads or metrical chronicles, in the Saturnian measure, before the time of Ennius; who, according to him, merely expressed in the Greek hexameter what his predecessors had delivered in a ruder strain, and then maliciously depreciated these ancient compositions, in order that himself might be considered as the founder of Roman epic. The Annals of Ennius, to Niebuhr, from which Ennius borrowed, was a romantic epic or chronicle, made up from these heroic ballads, about the end of the fourth century of Rome, commencing with the accession of Tarquinius, and ending with the battle of Regillus.—Ennius begins his Annals with an invocation of the nine Muses, and the account of a vision in which Homer had appeared to him, and related the story of the metamorphosis already mentioned by Homer, as being one of his great inspirations, and then proceeds to the history of the Alban kings, the dream of the Vestal virgin Ilia, which announced her pregnancy by Mars and the foundation of Rome. The reigns of the kings, and the contests of the republic with the neighbouring states previous to the Punic war, occupy the metrical annals to the end of the sixth book. It should be observed, in passing, that the Annals were not separated by Ennius himself; but were divided, long after his death, by the grammarian Q. Varius, in a manuscript, De Illust. Gram., c. 2.) Cicero, in his Brutus (c. 19), says that Ennius did not treat of the first Punic war, as Savius had previously written on the same subject. P. Merula, however, who edited the fragments of Ennius, is of opinion that this passage of Cicero can only mean that he had not entered into much detail of its events, as he finds several lines in the seventh book which, he thinks, evidently apply to the first Carthaginian war, particularly the description of naval operations, and the building of the first fleet with which the Carthaginians were attacked by the Romans. In some of the editions of Ennius, the character of the friend and military adviser of Servilius, generally supposed to be intended as a portrait of the poet himself, is ranged under the seventh book. The eighth and ninth books of these Annals, which are much more inserted into the history of the events of the Carthaginian war in Italy and Africa. This was by much the most interesting part of the copious subject which Ennius had chosen, and a portion of it on which he would probably exert all the force of his genius, in order the more to honour his friend and patron Scipio Africanus. The tenth, eleventh, and twelfth books of the Annals of Ennius contain the war with Philip of Macedon. In the commencement of the thirteenth, Hannibal excites Antiochus to a war against the Romans. In the fourteenth book, the consul Scipio, in his prosecution of this contest, arrives at Ilium, which he thus apostrophizes:—

"O patria! O divum domus Ilium, et inculta belli Pergama!"

Different Latin writers extoll the elegant lines of Ennius immediately following, in which the Roman soldiers, alluding to its magnificent revival in Rome, exclaim with enthusiasm, that Ilium could not be destroyed:

"Quia nec dardannaeus campae potuere perire, nec quom capitasa cepei, nec quom combusta cremari,

a passage which has been closely imitated in the seventh book of Virgil (v. 294, seqq.). The fifteenth book relates the expedition of Fulvius Nobilior to Ætolia, which Ennius himself is said to have accompanied. In the two following books he prosecutes the Isthrian war. The concluding, or eighteenth book, seems to have been in a great measure personal to the poet himself. Connected with his annals there is a poem of Ennius devoted to the celebration of the exploits of Scipio, in which occurs a much-admired description of the calm of evening, when the flow of the verification is finely modulated to the still and solemn imagery. Horace, in one of his odes (4, 8), strongly expresses the glory and honour which the Calabrian muse of Ennius had conferred on Scipio by this poem devoted to his praise.—The historical poems of Ennius appear to have been written with the introduction of much machinery or decorative fiction; for it is evident, that the early age of the Roman nation was found on ancient ballads or framed conformably to historical truth, they are obviously deficient in those embellishments of imagination which form the distinction between a poem and a metrical chronicle. In the subject which he had chosen, Ennius wanted the poetical advantages of distance in time or place. But though not master of a shell round which the passions would thicken, or a ground of persons which would fall prostrate, as at the first breath of Juba's lyre, still the Annals of Ennius, as a national work, were highly gratifying to a proud, ambitious people, and, in consequence, continued long popular at Rome. They were highly relished in the days of Horace and Virgil; and as far down as the reign of Marcus Aurelius, they were recited in theatres and other public places for the amusement of the people. (Aulus Gallius, 18, 5.) The Romans, indeed, were so formed on his style, that whatever was not popular with Ennius, a passage of his poetry would immediately fall prostrate, contrary to their own judgment, to employ antiquated terms, in compliance with the reigning prejudice. (Aul. Gell., 12, 2.) From his example, too, added to the national character, the historical epic became in future times the great poetical resource of the Romans, who versified almost every important event in their history. Besides the Pharsalia of Lucan, and the Aeni of Persius, the works of Ennius would have been treated. It is probable, that both Cicero and Virgil were obliged, contrary to their own judgment, to employ antiquated terms, in compliance with the reigning prejudice. The poem of Ennius, entitled Phaethon, is curious; since one would hardly suppose that, in so very luxurious a luxury, that the culinary art should have been systematically or poetically treated. All that we know, however, of the manner in which it was prepared or served up, is from the Apologia of Apuleius. It was, as its name imports, a didactic poem on estables, particularly fish. It is well known, that previous to the time of Ennius, this subject had been discussed, both in prose and verse, by various Greek authors, and was particularly detailed in the poem of Archestratus the Epicurean. It appears from
a passage of Apuleius, that the work of Ennius was a digest of all the previous books on this subject. The eleven lines which remain, and which have been preserved by Apuleius, mention the places where different sorts of fish are found in greatest perfection and abundance. Another poem of Ennius, entitled Epicharmus, was prefixed to the sixth book of the Greek work of Epicharmus, the Pythagorean, on the Nature of Things, in the same manner as Plato gave the name of Timaeus to the book which he translated from Timaeus the Locrian. The fragments of this work of Ennius are so broken and corrupted, that it is impossible to follow the plan of his poem, or the system of philosophy which it incuticated. It appears, however, to have contained many speculations concerning the nature of the earth, the system of the world, and the modes of composition, and which, according to him, were water, earth, air, and fire (Varro, R. Ré, 1, 4); as also with regard to the preservative powers of nature. Jupiter seemed merely to have been considered by him as the air, the clouds, and the storm.—Ennius, however, whose compositions thus appear to have been formed entirely on Greek originals, has not availed himself so successfully of these writings as Virgil has done of the works of Theocritus, and that of Philostratus the Orator; his stanzas have often been descended to imitate long passages, and sometimes to copy whole lines, from the Father of Roman Song. This has been shown, in a close comparison, by Macrobius, in his Saturnalia (6, 1, seqq.). Lucretius and Ovid also have frequently availed themselves of the works of Ennius. His description of the cutting of a forest, in order to fit out a fleet against the Carthaginians, in the seventh book, has been imitated by Sallust in the tenth book of the Thellis. The passage in his sixth Satire, in which he has painted the happy situation of a parasite, compared with that of the master of a feast, is copied in Terence's Phormio (2, 2).—It appears, then, that Ennius occasionally produced verses of considerable harmony and beauty, and that his conceptions were frequently expressed with energy and spirit. It must be recollected, however, that the lines imitated by Virgil, and the other passages which are usually selected with reference to the imitation of the early bard by other poets, are very favourable specimens of his taste and genius. Many of his verses are harsh and defective in their mechanical construction; others are frigidly prosaic; and not a few are deformed with the most absurd conceits, not so much in the idea, as in a jingle of words and extravagant alliteration.—On the whole, the works of Ennius are rather pleasing and interesting, as the early blossoms of that poetry which afterward opened to such perfection, than estimable from their intrinsic beauty. But, whatever may have been the merit of the works of Ennius, of which we are now but incompetent judges, they were at least sufficiently various. Epic, dramatic, satiric, and didactic poetry were all successively attempted by him; and we also learn that he exercised himself in the lighter species of verse, as the epigram and acrostic. (Cic. de Div., 2, 54.) For this novelty and excellence it is not difficult to account. The fountains of Greek literature were the corrodista in Latium, were open for his imitation. He stood in very different circumstances from those Greek bards who drew solely from the resources of their own genius; or from his successors in Latin poetry, who wrote after the best productions of Greece had become familiar to the Romans. He was thus placed in a situation in which he could enjoy all the popularity and advantages that might arise from undergoing the labour of invention, and might rapidly win his success through every mode of the lyre, without possessing any incredible diversity of genius. —Thus far we have spoken of the poetical productions of Ennius: but the most curious point connected with his literary history is his prose translation of the celebrated work of Euhemerus, entitled Ἐννεῖος Ἀναγραφή. The translation, as well as the original work, is lost. Some fragments, however, have been saved by St. Augustine and Lactantius. It is clear, notwithstanding their observation of prodigies and religious ceremonies, that there prevailed a considerable spirit of free thinking among the Romans. The works of Ennius. This is exemplified, not merely by his translation of Euhemerus, and the definition of the nature of Jupiter in his Epicharmus, but by various passages in dramas adapted for public representation, and which deride the superstitions of augurs and soothsayers, as well as the false ideas entertained of the worshipped divinities. Polybius, too, who flourished shortly after Ennius, speaks of the fear of the gods and the inventions of augury merely as an amusement; and we have a passage in time that he-represents the rashness and absurdity of those who were endeavouring to extirpate such useful opinions. —The fragments of Ennius will be found in the Fragmenta Veterum Poetarum Latinorum, by Robert and Henry Stephens, Paris, 1654; in the Fragmenta Veter. Trag. Latin., by Scheryusius, L. Bat., 1620; in the opera Et Fragmenta Veter. Poet. Lat., by Mattair, Lond., 1718 (vol. 2, p. 1456, seqq.); in the Fragmenta Veterum Lat., in the Berchius, Halberstadt, 1823 (vol. 5, pt. 1, Fragment Tragisch; pt. 2, Fragment. Com.).—In the Fragmenta Ennii of Cumloll, Neap., 1590, improved by Hesselius, Amst., 1707, 4to, &c. (Dunlop, Rom. Lit., vol. 1, p. 84, seqq.—Scholl, Hist. Lit. Rom., vol. 1, p. 114.—Id. ib., p. 142.—Bähr, Gesch. Rom. Lit., p. 78, seqq.)

Ennius, a city of Sicily, in the western quarter of the island, near the river Hypsa and northeast of Selinus. It was one of the three cities said to have been founded by Egesteres, a fable which clearly indicates the great antiquity at least of the place, and marks it as of Sicilian origin. We find it at one time under the power of Carthage, though with a free constitution. At a subsequent period it received a body of Campanian troops, which had been disbanded by Dionysius the elder, and it met with the same fate that all those cities encountered which had received the Campani within their walls; the male inhabitants were slaughtered, and the city became the property of these mercenaries. This change of masters, however, made no alteration in the affairs of Entella as far as its standing with Carthage was concerned: the Campani sided with the last-mentioned power as the former inhabitants had done, and were, in consequence, besieged by Dionysius, who finally captured the city. (Diod. Sic., 14, 9.—Id., 15, 73.—Id., 16, 67.) We hear little of the place in later times. The ruins of the ancient city are still called Entella, and are situated to the east of Poggio Reale, near the modern river Béli- ci. (Mannert, Geogr., vol. 9, pt. 2, p. 444.)

Entellus, a Sicilian, who, though advanced in years, entered the lists against the Trojan Dares, and conquered him in a pugilistic encounter. He had been, in earlier years, the friend and companion in arms of Eryx. (Virg. Æn., 5, 387, seqq.)

Enallactus (Ἐναλλάκτος), a surname frequently given to Mars. It is the Locrian name of Envy (Ἐνοία) given to Bellona (Hom., II., 8, 264.—Id. ib., 13, 519.—Id. ib., 17, 259, &c.)

Enyo (Ἐνόη), the daughter of Phorcys and Ceto, according to Hesiod (Theog., 273). She was a war- goddess, and one of the companions of Mars, and answers to the Bellona of the Romans. Some mythologists make her the sister, others the wife, of Mars. (Vid. Hesiod.)

Eos (Ἠώς), the name of Aurora among the Greeks, whence the epithet Eous is applied to all the eastern parts of the world. (Ovid, Fast., 3, 406; A. A., 3, 537; 6, 478.—Virg., G., 1, 288; 2, 115.)

Epaminondas, a Theban statesman and soldier, in whose praise, for both talents and virtue, there is a
The disposition of his troops on this occasion was an improvement on that by which he had gained the battle of Leuctra, and would have had the same decisive success, but that, in the critical moment, when the Lacedaemonian line was just broken, he received a mortal wound. Thus the army was paralyzed by this misfortune; nothing was done to improve a victory which might have been made certain; and this battle, on which the expectation of all Greece waited, led to no important result. “Each party,” says Xenophon, “claimed the victory, and neither gained any advantage: indecision, trouble, and confusion, more than ever before that battle, pervaded Greece.”—Whether Epaminondas could much longer have upheld Thebes was a question which the revenue of the state had made needful: without him she fell at once to her former obscurity. His character is certainly one of the fairest recorded in Greek history. His private life was moral and refined; his public conduct uninfluenced by personal ambition or by personal hatred. He was a sincere lover of his country; and if, in his schemes for her advancement, he was indifferent to the injury done to other members of the Grecian family, this is a fault in which, perhaps, to Greek statesman except Aristides was free. (Xen., Hist. Gr.—Plut., Vit. Pelop. —Encycl. U. Knowl., vol. 9, p. 466.)

Epaphus, a son of Jupiter and Io. This mythological personage is the instrument by which Grecian vanity derived the rulers of more ancient countries from its own gods and princes. Epaphus, according to the legend, was born in Egypt, and married Memphis, the daughter of the Nile, by whom he had a daughter named Libya. The name faileth made him the founder of Memphis. (Esth., Prom. Vint., 850, seqq.—Herod., 2, 153.—Ovid, Met., 1, 699, seqq.) Libya bore to Neptune Agenor, the father of Cadmus and Europa, and also Behus, who had by another daughter of the Nile, named Aachinoe, two sons, Danaus and Aegyptus. (Apollod., 2, 1, 4.) For some remarks on the name Epaphus, and on the whole legend, vid. Io.

Engi, people of Elia. (Vid. Elis I.)

Erano, son of Panopeus, was the fabricator of the famous wooden horse which proved the ruin of Troy. (Virg., Æn., 2, 264.—Justin, 20, 2.—Pausan., 10, 26.)

Epheusus, a celebrated city of Ionia, near the mouth of the river Cayster, called by Pliny (6, 29), “Altemum lumen Asia.” Mythology assigns, as its founders, Epheusus the son of the river Cayster, and Creusus (Krastos) a native of the soil. (Pausan., 7, 2.) Another account makes it to have been settled by Epheusus, one of the Amazons. (Steph. Byz., s. v.—Etymol. Mag., s. v.—Berkel, ad Steph. Byz., l. c.) According to a third tradition, the place owed its origin to the Amazons, who were permitted to settle here by Hercules their conqueror. Hence the name of the city, ἔπειξυς, from ἐπείξεσθαι, permission. A fourth legend makes the Amazons, when pursued by Hercules and Theseus, to have fled for refuge to an altar of Diana, and supplicated the protection of the goddess, which she accordingly granted: (καταφέντικος ἐπὶ τὰς βασιλείας τὸν Ἐπείξυνα, ἐπειξεῖν συνεργῇς τενέτης ἐπὶ τῶν ἔπειξίτων τῆς συνεργίας ὄντων ἐπείξυνα κληθέναι τῷ ἱερῷ, καὶ τὰς ἀρτεμίνας ἔπειξείνας. Εὐγένεια τοῦ ἔπειξυνας. Etym. Mag.) It is curious to observe how the name of the Amazons mingles in with some of these traditions. (Consult remarks under that article.) If we follow the graver authority of Strabo (640), we will find a settlement to have been first made in this quarter by the Carians and Leleges. Androclus, the son of Codrus, came subsequently with a body of Ionian colonists. (Pausan., 7, 2.) He protected the natives who had settled from devotion about the temple of Diana, and incorporated them with his followers; but expelled those who inhabited the town above, which the Carians and Lela-
The Greek revolution, and the predatory excursions of the Samiotes, in great measure accounted for this desertion. In the records of our religion Ephesus is ennobled as the burying-place of Timothy, the companion of St. Paul, and the first bishop of Ephesus, whose body was afterward translated to Constantinople by the wealth collected by the city, or priests to Asia, and placed with Saint Luke and Saint Andrew in the church of the apostles. The story of St. John the Divine was deformed in an early age with gross fiction; but he also was interred at Ephesus, and, as appears from one narration, on Mount Prion.—Ephesus was famed for its splendid temple of Diana. The statue of the goddess was regarded with peculiar veneration, and was believed by the vulgar to have fallen from the skies. It was never changed, though the temple had been more than once restored. This rude object of primeval worship was a block of wood, said by some to be of beech or elm, by others cedar, ebony, or vine, and attesting its very great antiquity by the fashion in which it had been formed. It was carved into the similitude of Diana, not as the elegant huntress, but an Egyptian hieroglyphic, which we call the goddess of nature, with many breasts, and the lower parts formed like a horse. The name Diana was given to the temple, and discovering the feet beneath. It was gorgeously apparelled; the vest embroidered with emblems and symbolical devices; and, to prevent its tottering, a bar of metal, it is likely of gold, was placed under each hand. A veil or curtain, which was drawn up from the floor to the ceiling, hid it from view, except while service was performing in the temple. This image was preserved till the later ages in a shrine, on the embellishments of which weest, and enjoyed a great revenue, with privileges, the eventual abuse of which induced Augustus to restrain them. It may be imagined that many stories of her power and interposition were current and believed at Ephesus. A people convinced that the self-manifestations of their deity were real, could not easily be turned to a religion which did not pretend to a similar or equal intercourse with its divinity. And this is, perhaps, the true reason why in the early ages of Christianity, a belief of supematernal interposition by the Panagia, or Virgin Mary, and by saints appearing in daily or nightly visions, was encouraged and inculcated. It helped by its currency to procure and confirm the credulous votary, to prevent or refute the cavils of the heathen, to exalt the new religion, and to deplore the established of its ideal superiority. The address of the town clerk to the Ephesians: “Ye men of Ephesus, what man is there who knoweth not that the city of the Ephesians is a worshipper of the great goddess Diana, and of the image that fell down from Jupiter?” is curiously illustrated by an inscription found by Chandler near the aqueduct, commencing as follows: “Inasmuch as it is notorious that, not only among the Ephesians, but also everywhere among the Greek nations, temples and shrines of various and sacred portions,” &c. The reputation and the riches of their goddess had made the Ephesians desirous of providing for her a magnificent temple. The fortunate discovery of marble in Mount Prion gave them new vigour. The cities of Asia, so general was the esteem for the goddess, contributed largely; and Cressus was at the expense of many of the columns. The spot chosen for it was a marsh, as much as possible from the sea, the most exposed part. The foundations were made with charcoal rammed, and with heaves. The southing contained immense quantities of marble. The edifice was extolled as a base on with ten steps. The architects were Chiosephon of Crete and his son Metagenes.
B.C.; and their plan was continued by Demetrius, a priest of Diana; but the whole was completed by Daphnis of Mileitus, and a citizen of Ephesus, the building having occupied 220 years. It was the first specimen of the Ionic style, in which the fluted column and capital with acanthus leaves were introduced. The whole length of the temple was 435 feet, and the breadth 230; with 127 columns of the Ionic order and Parian marble, each of a single shaft, and sixty feet high. These were donations from kings, according to Pliny (36, 14), but there is reason to doubt the correctness of the text where this assertion is made. Of these columns thirty-six were carved; and one of them, perhaps as a model, by Scopas. The temple, with its 127 columns, fifteen just within each side; and Vitruvius has not denied that if it had a roof; probably over the cell only. The folding doors or gates had been continued four years in glue, and were made of cypress wood, which had been treasured up for four generations, highly polished. These were found by Mutianus as fresh and as beautiful 400 years after as when new. The ceiling was of cedar; and the steps for ascending the roof (of the cell!) of a single stem of a vine, which attested the durable nature of the city; for every city was proud of citi- ple exulting ideas of uncommon grandeur from mere massiveness; but the notices we collect of its internal ornament will increase our admiration. It was the repository in which the great artists of antiquity dedicated their most perfect works to posterity. Praxiteles and his son Cephalos adorned the shrine; Scopas contributed a statue of Hecate; Timarete, the daughter of Micon, the first female artist upon record, finished a picture of the goddess, the most ancient in Ephesus; and Parrhasius and Apelles employed their skill to embellish the walls. The excellence of these performances may be supposed to have been proportional to their price; and a picture of Alexander grasping a thunderbolt, by the latter, was added to the superb collection at the expense of twenty talents of gold. This description, however, applies chiefly to the temple as it was rebuilt, after the earlier temple had been partially burned, perhaps the roof of timber only, by Herostratus, who chose that method to ensure to himself an immortal name, on the very night that Alexander the Great was born. Twenty years after, that magnificent prince, during his expedition against Persia, offered to appropriate his spoils to the restoration of it, if the Ephesians would consent to allow him the sole honour, and would place his name on the temple. They declined the proposal, however, with the flattering remark, that it was not right for one deity to erect a temple to another: national vanity was, however, the real ground of their refusal. The architect who superintended the erection of the new edifice was Dinocrates, of whose aid Alexander afterward availed himself in building Alexandria. (Vitruv., 2, pref._Compare Strabo, 640.—Plut., Vit. Alex., 72._Plin., 7, 57.—Solin., 40.) The extreme sanctity of the temple inspired universal awe and reverence. It was for many ages a repository of foreign and domes- tic treasure. There property, whether public or private, was secure amid all revolutions. The conduct of Xerxes was an example to subsequent conquerors, and the impiety of sacrilege was not extended to the Ephesian goddess. But Nero deviated from this rule. He removed many costly offerings and images, and an immense quantity of silver and gold. It was again plundered by the Goths from beyond the Danube in the time of the Visigoths. Another party, led by Raspe across the Hellespont and ravaging the country until compelled to retreat, when they carried off a prodigious booty. (Trebl. Pollio, in Gallien., c. 6.) The de- struction of so illustrious an edifice deserved to have been carefully recorded by contemporary historians. We may conjecture that it followed the triumph of Christianity. The Ephesian reformers, when author- ized by the imperial edicts, rejoiced in the opportunity of insulting Diana, and deemed it pious to demolish the very ruin of her habitation. When, under the auspices of Constantine and Theodosius, churches were erected, the pagans were allowed to pull down the temple's monu- ments, or accommodated to other worship. The immense dome of Santa Sophia now rises from the columns of green jasmine which were originally placed in the temple of Diana, and were taken down and brought to Constantinople by order of Justinian. Two pil- lars in the great church at Pisa were also transported thence. The very site of this stupendous and celebra- ted edifice is even yet undetermined. The following are the principal conjectures which are entertained by the ancients. The temple, it was supposed, had been erected by order of Herod the Great, who would, after the way he had driven Herostratus, who continued the work to the Magnesian gate, by erecting a stoa or portico of marble, a stadium in length, inscribed with the name of his wife, and intended to prevent the absence of ministers when it rained. It was near the agora or market-place of the first city, besieged by Creusus, though distant seven stadia, or a mile wanting half a quarter, from it. The monument of Androclus was shown in the second century near the road going from the temple of Diana by the Olympian towards the Magnesian gate. The ancient city was built on Traechis, and by the Athe- neum and Hypeleus. The Athenians was without the new city of Lysimachus, and the fountain Hype- leus was near the sacred port. In the plain of Ephes- us were anciently two lakes, formed partly by stagnant water from the river Selinus, which ran opposite the temple of Diana, probably from Mount Galleus. Pliny says:—"Templum Dianae complecti e diversi regioni- buo selinitae." It has been supposed, adds Chandler, that the souterrain by the morass or city- part, with two pieces of ancient wall, of square stone, by one of which is the entrance to it, are relics of the temple; but this was nearly in the centre of the city of Lysimachus; and Dallaway says, "Close upon the brink of the present morass, once covered by the sea, upon a rising ground, are accumulated walls of brick, faced with large slabs of marble, and of sufficient ex- tent to encourage Tournesfort and the English travel- lers in a conjecture that this structure was the far- famed temple of Diana." Every circumstance of de- scription, adds Rundell, accords with this spot, except the distance from the city wall; and among the fall- en masonry are broken shafts of porphyry, twelve feet long and four in diameter, more complete and polished than others which surround them. Might not this have been a temple dedicated to Asia by the Emperor of Rome, near the Morass? The souterrain under the supposed site is said by Ry- caut to have a descent of about thirty stairs, and by Van Egmont to be a very narrow and difficult passage, having spacious caverns, composed of amazingly large black stones. But these may as well have been the foundations of other ancient buildings as of the temple, and evidently Chandler does not agree in the opinion that this was the true one. For he asks in the introduction to the stoas by the stadium might, it is believed, furnish an area corresponding better, and more suited to receive the mighty fabric: which, however, it has been shown above, was in the plain, and distinct, though not remote, from the present city," Count Caylus, (Memoires de Litterature, vol. 53) says:—"Les fonda- tions qui subsistent encore aujourd'hui, ne ressemblent
point à la description de Pline, &c., and he has no other mode of accounting for this difference, than by supposing it might have been rebuilt after the time of Pliny, perhaps in the reign of Galba, and certainly been added to by the Goths. Dallaway suggests that the massive walls of, and adjoining to, the gymnasion may be those of the temple. The grandeur of its plan and dimensions, which are still marked by a long nave, finished by an arch of great expanse at either termination, seems to favour the pretensions of this edifice above those of the other. In various points of description they correspond, excepting that this was beyond the limits of the city walls; for the circumstances and kind of they apply equally to both ruins. *But the Turks, from whose barbarous corruptions or analogous terms the real and more ancient name is in some instances to be collected, call this particular ruin "Kislar Seray," or the palace of virginas. The same name induced Dr. Pococke, when investigating Alexandria Troas, to decide on a building as another temple of Diana. Perhaps the most probable solution of the difficulty will be, that the entire remains of the temple are buried under the soil. In the valley above Nolium is a fine Ionic column, evidently in its original situation, but of which not more than three or four feet are visible; the remainder is buried by the rapid accumulation of soil; and Mr. Cockerell calculates, that of the temple at Sardis 25 feet remain still covered with earth: the accumulation from the Caïster must be vastly greater and more rapid. The relative position of the temple with the Selimus huts would be in favour of a conjecture that it stood considerably lower down, and more towards the northeast than the spot usually assigned to it. This would agree better with the distance from the city, and its situation without the Magnesian gate, which can never be imagined to be that, as Chandler supposes, next to Aiasaluc. (Arundell's Seven Churches of Asia, p. 38, seqq.—Hirt, Geschichte der Baukunst bei den Alten, vol. 2, p. 60, seqq.)

**Ephebe** (Epheus), a giant, son of Aeolus. (Vid. Abödm.)

**Ephebus** (Epheboi), a body of magistrates at Sparta, who were possessed of great privileges. The institution of this office is usually ascribed to Theopompos, the grandson of Charilaus the Proclid; but it has been inferred, from the existence of an Ephesius in other Dorian states before the time of Theopompos, and from its being apparently placed among the institutions of Lycyngus by Herodotus (1, 65) and Xenophon (de Rep. Lec., 8, 3), that it was an ancient Dorian magistrature. Arnum supposes that the ephor who were five in number, were coëval with the first settlement of the Dorians in Sparta, and were merely the municipal magistrates of the five hamlets which composed the city (Müller, Dorians, vol. 2, p. 550, Eng. transl.); but that afterward, when the Heracleae began to encroach upon the privileges of the other Dorians, and, it would seem, in the reign of Theopompos, who endeavoured to diminish the powers of the Selian aristocracy, Arnum supposes that the ephor who, in the struggle which ensued, prevailed for the ephor an extension of authority, which placed them virtually at the head of the state, although the nominal sovereignty was still kept in the hands of the Heraclidæ. (Arnold, ad Thucyd., 1, 87.—Append., vol. 1, p. 646.) Thus the ephorus were popular magistrates, as far as the Dorians themselves were concerned, and were, in fact, the guardians of their rights from the encroachments of the state; though they were, in relation to the Periori (Ithaka) and the other institutions of an overbearing aristocracy. (Plato, de Leg., 4, p.712, d.) The ephor were chosen in the autumn of every year; the first gave his name to the year. Every Spartan was eligible to the office, without any regard to age or wealth. They were empowered to fine whom they pleased, and exact immediate payment of the fine. They could suspend the functions of any other magistrate, and arrest and bring to trial even the kings. (Xen., de Rep. Lec., 8, 4.) They resided and performed the duties of their office in October, 1, 87, and performed all the functions of sovereignty in receiving and dismissing embassies (Xen., Hist. Gr., 2, 13, 19), treating with foreign states (Herod., 9, 8), and sending out military expeditions (Xen., Hist. Gr., 2, 4, 29). The king, when he commanded, was always attended by two of the ephori, who exercised a controlling power over his movements. (Herod., 9, 76.)

The ephori were murdered on their seats of justice by Cleomenes IIIr, and their office was overthrown (Plut., V. Cleom., c. 8), but they were revived by Antigonus Doson and the Achamas in 222 B.C. (Polyb., 2, 70.—Pausan., 2, 9, 2); and the office subsisted under the Roman dominion. (Böckh, Corp. Inscrip. 1, p. 604, seqq.) Some able remarks on this magistracy may be found in Müller's Dorians, vol. 2, p. 115, seqq., and Tüttmann's Dargestellung der Griech. Staatsverfass., p. 104, seqq. (Encycl. U. Knoul., vol. 9, p. 469.)

**Ephoros**, a Greek historian, born at Cyme in Éolis, 405 B.C. He survived the passage of Alexander into Asia (333 B.C.), which he mentioned in his history. (Clem. Alex., Strom., 1, p. 387, a.) He studied rhetoric under Isocrates, but with so little success, that, after he had returned from Athens, his father Demophilus sent him back to the rhetorician for fresh instruction. (Plut., Vit. Isocr., p. 366, ed. Wyttenb.) Isocrates, perceiving his unfitness for public speaking, recommended him to turn his attention to historical composition (Sene., de Trans. Am., c. 6); but his style was low and slovenly even in his histories, and Plutarch remarks upon the silliness of the set speeches which he introduced. (Pol. Praecom., p. 803, b.) Polybius observes that, though in his account of naval matters he is sometimes happy, he always fails in describing battles by land, and was entirely ignorant of tactics. (Excerpt. Vatian., p. 391.) Ephorus wrote, I, A History of Greece, in thirty books, beginning with the siege of Troy, and terminating with the siege of Perinthos (340 B.C.). Part of the thirdieth book was written by his son Demophilus. (Diod. Sic., 16, 14.) 2. On Inventions, in two books. 3. On Goods and Ills, in twenty-four books. 4. On Remarkable Objects in various Countries, in fifteen books. 5. The Topography of Cyme. 6. On Dic. —The fragments of these works have been collected by Marx, Carlsruhe, 1815. (Encycl. U. Knoul., vol. 9, p. 469.—Schol. Ptol. H. Geogr. 2.)

**Ephyræ**, I. the ancient name of Corinth, which it received from a nymph of the same name, and hence Ephyrus is equivalent to "Corinthius." (Vid. Corinthus.)—II. A city of Epirus, at the head of the bay or harbour called Glykys Limen. It is mentioned by Homer and other writers. Homer, in several passages of the Iliad and Odysseus, alludes to one or more cities of this name. The Ephyrus, which was situated on the north of the Selliæ, is described alternately by Strabo (338) to Elis in Peloponnese, though he allows that many commentators on the poet were of opinion that he there alluded to the Thesprotian city of the same name. Eustathius observes on the verse above cited, that, as there were nine towns so called, it was no easy matter to ascertain to which reference was made. It seems probable, however, that the Ephyrus, which is twice mentioned in the Odyssey (1, 259, and 2, 225), seems more strong and abundant in the Homeric figures, is the one in question, since it was evidently near Ithaca, and the river Selin is not named in either of the passages. This city is also spoken of by Pindar (Nem., 7, 53); from which passage we may infer, with Pausanias, that it was the capital of the ancient kings of Thesprotia, and where, on the attempt of Theseus and Pirithous to carry off...
the wife of Aidoneus, they were both taken prisoners and detained. (Pausan., 1, 17.—Compare Apollodorus, 2, 7.—Diod. Sic., 4, 36.) It appears from Strabo (924) and other authorities, that this town afterward took the name of Cichyra, but on what occasion we do not know. It has been supposed, with great attention, that this part of Epirus, reports, "that the ruins of Ephyra are to be seen at no great distance from the Acheronian lake, near a deserted convent dedicated to St. John. Though the walls lie for the most part in a confused mass of ruins, they may be distinctly traced in a circular figure: those parts which remain perfect exhibiting a specimen of masonry apparently more rude even than Tyrins itself, though the building itself might be regarded as Greek. (Travels, vol. 2, p. 312.—Cramer's Ancient Greece, vol. 1, p. 113, seqq.)

Epicharmus, the first Greek comic writer of whom we have any certain account. He was a Syracuseus, either by birth or emigration. (Theocritus, Epig., 17.) Some make him a native of Crastus, some of Cos (Suidas—Budicia, p. 106); but all agree that he passed his life at Syracuse. It was about B.C. 500. Of his life, writings, and character, we know nothing. He is said to have been, eleven years after the commencement of Phrynicus, and just before the appearance of AESchylus as a tragedian, that Epicharmus produced the first comedy properly so called. Before him this department of the drama was, as we have every reason to believe, nothing but a series of licentious songs and sarcastic epigrams, without plot, connexion, or consistency. He gave to each exhibition one single and unbroken scene, and converted the loose interpolations into regular dialogue. (Aristot., Poet., 5, 5.) The subjects of his comedies, as we may infer from the extant titles of thirty-five of them, were partly parodies of mythological subjects, and, as such, not very different from the dialogue of the satyric dramas, and partly political, and in this respect may have furnished a model for the dialogue of the Athenian tragedy. Tragedy had, some years before the era of Epicharmus, begun to assume its staid and dignified character. The woe of heroes, and the majesty of the gods had, under Phrynicus, become its favourite theme. The Sicilian poet seems to have been struck with the idea of exciting the mirth of his audience by the exhibition of some ludicrous matter dressed up in all the grave solemnity of the newly-invented art. Discarding, therefore, the low drolleries and scurrilous invectives of the ancient καλομάθης, he opened a novel and less inveterate source of amusement: he composed a piece of burlesque drama upon the usual tragic subjects. (Athenaeus, 15, p. 698, ed. Schneid., vol. 5, p. 555.) They succeeded, and the turn thus given to comedy long continued; so that when it once more returned to personality and satire, as it afterward did, tragedy and tragic poets were the constant objects of its parody and ridicule. The great changes thus effected by Epicharmus justly entitled him to be called the Inventor of Comedy (Theocritus, Epig., 1). The consequence of this is, that the plays of Phrynicus or Phrynnus preceded him by a few Olympiads. (Aristot., Poet., 3, 5.—Athenæaus, 14, p. 652, a.) But his merit rests not here: he was distinguished for elegance of composition as well as originality of conception. Demetrius Phalerus (compare Vossius, de Poet. Gr., 6, p. 31) says, that Epicharmus excelled in the choice and collocation of epithets: on which account the name of Ἐπικάρμος was given to his kind of style, and the platoe (Rhet., 3, 9) lays one fault to his charge as a writer, the employment of false antitheses. So many were his dramatic excellences, that Plato terms him the first of comic writers (Theaetetus, p. 33), and in a later age and foreign country, Plautus chose him as his model. (Horat., Epist., 2, 2, 58.) The plays of Epicharmus, to judge from the fragments still left us, abounded in apothegms, little consistent with the idea we might otherwise have entertained of their nature, from our knowledge of the buffooneries whence his comedy sprung, and the writings of Aristophanes, his partially extant successor. But there is a Pythagorean (Diog. Laert., 8, 78.) In the midst of merriment, he failed not to inculcate, in pithy gnomes, the otherwise distasteful lessons of morality to the gay and thoughtless, and, sheltered by comic license, to utter offensive political truths, which, promulgated under any other circumstances, might have subjected the sage to the vengeance of a despotic government. We find Epicharmus still composing comedies B.C. 409, (Suidas—Budicia, vol. 1, p. 13, Blomfield's transl.—Compare, however, Thiersch's G. G., Sandford's transl., vol. 1, p. 25, seqq.)

Epictetus, an eminent Stoic philosopher, born in a servile condition at Hierapolis in Phrygia. The year of his birth is not known, nor are we able to make any very close approximation to it. He must have been born, however, before the end of Nero's reign, 68 A.D., else he could not have been more than twenty-one when Domitian published that edict against philosophers, in 89 A.D., in consequence of which Epictetus retired from Rome. At the age of twenty-one he was not likely to have attained sufficient notoriety to bring him within the operation of such an edict. Epictetus, then, was born most probably during one of the last eight years of Nero's reign. The names and condition of his parents are unknown: neither do we know how he came to be brought to Rome. But in this city he was for some time a slave to Epaphroditus, a freedman of Nero's, who had been one of his body-guard. An anecdote related by Orion, which illustrates the fortitude of Epictetus, would also show, if it were true, that Epaphroditus was a most cruel master. Epictetus, when his master was twisting his leg one day, smiled and quietly said, "You will break it;" and when he did break it, only observed, "Did I not tell you that you would do so!" (Orig. c. Celis., 7, p. 368.) We are not told how or when Epictetus managed to effect his freedom; but he could not have been still a slave when he left Rome. We infer, from the time of his retirement, that he was an edict of Domitian. This event, the only one in his life the date of which we can assign, took place, as has been said, in the year 89 A.D., being the eighth year of Domitian's reign. Epictetus then retired to Nicopolis in Epirus, and it is a question whether he ever returned to Rome. The chief ground for believing that he did is a statement of Spartan (Vit. Hadr., 16), that Epictetus lived on terms of intimacy with the Emperor Hadrian; while it is a consequence of the other legend, that he died in the reign of Emperor Phokaicus. We have no evidence of any of his discourses having been delivered at Rome, but that they contain frequent mention of Nicopolis. This argument, however, is hardly sufficient to overthrow the express testimony of Spartan. We do not know when he died. Suidas says that he lived till the reign of Marcus Aurelius; but, though some support for this opinion is sought to be obtained from Themistius (Gr., 5, ad Jovian. Inst.), yet it is by no means strong. The other side, who, writing during the reign of the first Antonine, speaks of Epictetus, in two places, as being dead. (Noct. Att., 2, 18.—Ib., 17, 19.) Epictetus led a life of exemplary contentment, simplicity, and virtue, practising in all particulars the morality which he taught. He lived for a long while in a small hut, with no other furniture than a bed and lamp, and without an attend-
ant; until he benevolently adopted a child whom a friend had been compelled by poverty to expose, and hired a nurse for its sake. — Epictetus was a teacher of the Stoic philosophy, and the chief of those who lived during the period of the Roman empire. His lessons were plain, and he treated his pupils not as children, but with the same respect that he had for himself and his own principles. His favourite maxim, and that into which he resolved all practical morality, was "bear and forbear," ἀνέχον και ἀνέχον. He appears to have differed from the Stoics on the subject of suicide. (Arrian. Epict., 1. 8.) We are told by Arrian, in his Preface to the "Discourses," that he was a powerful and exciting lecturer; and, according to Origen (Cels., 7, ad init.), his style was superior to that of Plato and Socrates. The estimate of Epictetus was held, that, on his death, his lamp was purchased by some more eager than wiser aspirants after philosophy for three thousand drachmae, or over five hundred dollars of our currency. (Lucian, Adv. In- doct. bibl. cens., vol. 8, p. 15, ed. Bip.) Though it is said by Suidas that Epictetus wrote much, there is no good reason to believe that he himself wrote nothing. His Discourses were taken down by his pupil Arrian, and published by him in six books, of which four only remain. The same Arrian compiled a life of Epictetus, and wrote a life of Epicurus, which is lost. Some fragments have been preserved, however, by Stobaeus. Simplicius also has left a commentary on his doctrine, in the Eclectic manner. The best edition of the remains of Epictetus is that of Schweig- hausen, 6 vols. 8vo, Laps., 1799. The same editor has published the Enchiridion, together with the Ta- blet of Cebes, in a separate volume (Laps., 1797. 8vo). There is an English version of the Enchiridion or Manual by Mrs. Carter. (Fabric., Bibl. Græc., ed. Harles, vol. 5, p. 64.—Enfield, Hist. Philos., vol. 2. p. 121.—Encycl. Us. Knowl., vol. 9, p. 471.)

Epicurus, a celebrated philosopher, born in the year 341 B.C., seven years after the death of Plato. He was a native of the Island of Samos, whither his father had gone from Athens, in the year 352 B.C., among 2000 colonists then sent out by the Athenians. (Strabo, 628.) Yet he was an Athenian by right, belonging to the borough Gargettus, and to the tribe Αἰγείς. His father Neocles is said to have been a schoolmaster, and his mother Charesistrata to have practised arts of magic, in which it was afterward made a charge against Epicurus, that, when he was young, he assisted her. (Diog. Laert., 10. 4.) Having passed his early years in Samos and Teos, he went to Athens at the age of eighteen. We are told that he had begun to study philosophy when only fourteen, having been incited thereto by a desire, which the teachers to whom he had applied had failed to satisfy, of understanding Hesiod's description of chaos; and that he began with the writings of Democritus. In Samos he is said to have received lessons from Pamphilus, a follower of Plato. (Suid.—Cic., N. D., 1. 26.) — On the occa- sion of this his first visit to Athens, Epicurus stayed there for a very short time. He left it in consequence of the measures taken by Perdiccas after the death of Alexander. He returned again, and went to Athens to join his father. In his 32d year, 310 B.C., he went to Myti- lene, where he set up a school. Staying only one year at this latter place, he next proceeded to Lampascus, where he taught for four years. He returned to Athens in the year 306 B.C., and now founded the school, which ever after was named from him the Epicurean. He purchased a garden for 80 minae (about 1400 dol- lars), wherein he might live with his disciples and de- liver his lectures. He lived in Athens, with the exception only of two or three excursions to his friends in Asia Minor, until his death, B.C. 270. The disease which brought him to his death was the stone. He was in his seventy-second year when he died, and he had then settled in Athens as a teacher for 36 years. Epicurus is said by Diogenes Laertius (10, 9), to have had so many pupils that even whole cities could not contain them. Hearers came to him from distant places; very many from Lampascus; and while men often deserted other schools to join that of Epic-urus, there were never more than one another. Epic-urus being deserted for any other teacher. Epicurus and his pupils lived together in the garden of which we have spoken, in a state of friendship, which, as it is usually represented, could not be surpassed; ab- staining from putting their property together and en- joying it in common, for the quaint yet significant rea- son that such a plan implied mutual distrust. The friendship subsisting between Epicurus and his pupils was well described by a contemporary. "Epicurus and his pupils lived together as brothers; they lived in the same garden, too, they lived in the most frugal and virtuous manner, though it was the delight of the enemies of Epic-urus to represent it differently, and though Timo- crates, who had once been his pupil, and had abandoned him, spread such stories as that Epicurus used to vom- it twice a day after a surfeit, and that many immodest women were inmates of the garden. (Vid. Leontium.) An inscription over the gate of the garden told him who might be disposed to enter, that barley-cakes and water were all that were to be had for the fee of one denarius. (Ep. 31; and such was the chastity of Epicurus, that one of his principal opponents, Chrysippus, endeavoured to account for it, so as to deny him any merit, by saying that he was without passions. (Stob., Serm., 117.) Epicurus did not marry, in order that he might be able to prosecute philosophy without interruption. His most attached friends and pupils were Hermachus of Mytilene, whom he appointed by will to succeed him as master of the school; Metrodorus, who wrote several books in defence of his system, and Polygenus, Epicurus's three brothers, Neocles, Chereudemus, and Aristobulus, also followed his philosophy, as also one of his servants, Mys, whom at his death he made free. Besides the garden in Athens, from which the followers of Epicurus, in succeeding time, came to be named the philosophers of the garden (Jurr. Sat., 13. 122.— Id., 14, 319), Epicurus possessed a house in Melite, a village near Athens, to which he used often to retire with his friends. On his death he left this house, to- gether with the garden, to Hermachus, as head of the school, to be left by him again to whosoever might be his successor. — In physics Epicurus trod pretty closely in the footsteps of Democritus; so much so, indeed, that he was accused of taking his atomic cosmology from that philosopher without acknowledgment. He made very few, and these unimportant, alter- ations. (Cic., de Fin., 1. 6.) According to Epicurus, as also to Democritus and Lecippus before him, the universe consists of two parts, matter and space, or vac- uum in which matter exists and moves; and all matter, of every kind and form, is reducible to certain indivisible particles or atoms, which are eternal. These atoms, moving, according to a natural tendency, straight down- ward, and also obliquely, have thereby come to form the different bodies which are found in the world, and which differ in kind and shape, according as the atoms are differently placed in relation to one another. In this system, a creator is dispensed with; and indeed Epicurus, here again following Democritus, set about to prove, in an à priori way, that this crea- tor could not exist, inasmuch as nothing could arise out of nothing, any more than it could it be utterly perish and become nothing. The atoms have existed always, and always will exist; and all the various physical phenomena are brought about, from time to time, by their various motions, and purely by the laws of motion. It remains to speak of the Epicurean system of ethics. Setting out from the two facts that man is susceptible of pleasure and pain, and that he seeks the one and avoids the other, Epicurus propounded, that it is a man's duty to endeavour to in- crease to the utmost his pleasures, and diminish to
the utmost his pains; choosing that which tends to pleasure rather than that which tends to pain, and that which tends to a greater pleasure or to a lesser pain rather than that which tends respectively to a lesser pleasure or a greater pain. He used the terms pleasure and pain in a manner which makes him, with including pleasure and pain of both mind and body, and he esteemed the pleasures and pains of the mind as incomparably greater than those of the body. Making, then, good and evil, or virtue and vice, depend on a tendency to increase pleasure and diminish pain, or the opposite, he arrived, as he easily might do, at the several virtues to be inculcated and vices to be denounced. And when he got thus far, even his adversaries and detractors regarded him as the defender of the name Galen, for they knew that they should have continued to revive the principle, no matter by what name it might be called, when they saw that it was a principle which led to truth.—The period in which Epicurus opened his school was peculiarly favourable. In the room of the simplicity of the Socratic doctrine, nothing now remained but the subtlety and affectation of Stoicism, the unnatural severity of the Cynics, or the debasing doctrine of indulgence to vices, which, as they thought, led to the renown of Aristippus. The luxurious refinement which now prevailed in Athens, while it rendered every rigid scheme of philosophy, as well as all grossness of manners, unpopular, inclined the younger citizens to listen to a preceptor who smoothed the stern and wrinkled brow of philosophy, and, under the notion of conducting his followers to enjoyment in the bower of tranquillity, led them unawares into the path of moderation and virtue. Here, no popularity of his school. It cannot be denied, however, that, from the time when this philosopher appeared to the present day, an uninterrupted course of censure has fallen upon his memory; so that the name of his sect has almost become a proverbial expression for everything corrupt in principle and infamous in character. The charges brought against Epicurus are, that he superseded all religious principles by dismissing the gods from the care of the world; that if he acknowledged their existence, it was only in conformity to popular prejudice, since, according to his system, nothing exists in nature but material atoms; that he discovered great insolence and vanity in the disrespect with which he treated the memory of former philosophers, and the characters and persons of his contemporaries; and that both he and his disciples were addicted to the grossest sensuality. These accusations, too, have been not only the voice of common rumour, but more or less confirmed by men distinguished for their wisdom and virtue—Zeno, Cicero, Plutarch, Galen, and a long train of Christian fathers. With respect to the first charge, it certainly admits of no refutation. The doctrine of Epicurus concerning nature militated directly against the agency of a Supreme Being in the formation and government of the world; and his misconceptions with respect to mechanical motion, and the nature of divine happiness, led him to divest the Deity of some of his primary attributes. It does not, however, appear that he ever denied the existence of superhuman powers. Cicero could credit this reformer with inconsistency in writing books concerning piety and the reverence due to the gods, and in maintaining that the gods ought to be worshipped, while he asserted that they had no concern in human affairs. That there was an inconsistency in this is obvious. But Epicurus professed, that the universal prevalence of the ideas of gods was sufficient to prove that they existed; and, thinking it probable that all other nations, from sensations, he imagined that the gods were beings of human form, hovering about in the air, and made known to men by the customary emanations. He believed that these gods were eternal, and supremely happy, living in a state of quiet, and meddling not with the affairs of the world. He con-
tended that they were to be worshipped on account of the excellence of their nature, not because they could do men either good or harm. (Cic., N. D., I, 41.—Seneca, de Benef., 4, 19.)—Our chief sources of information respecting the doctrines of Epicurus are, the 10th book of Diogenes Laertius, and the poem of Lucretius: "De Rerum Naturae." Information is also furnished by the writings of Cicero, especially the "De Finibus" and the "De Natura Deorum;" by those of Seneca, and by the treatise of Plutarch entitled "Against Colotes." Epicurus, according to Diogenes Laertius, was a more voluminous writer than any other philosopher, having written as many as 300 volumes, in all of which he is said to have studiously avoided making errors. But the work which has come down to us is that which Epicurus himself had the means and motives for modifying. When introduced among the Romans, these doctrines, though very much opposed at first, were yet adopted by many distinguished men, as Lucretius, Atticus, Horace. Under the emperors, Pliny the Younger, and Lucian of Samosata, were Epicureans. (Enfield, Hist. Phil., vol. 1, p. 445, seqq.—Emelcy. Us. Known, vol. 9, p. 472.—Good's Lucretius, Prolegom.—Id., Book of Nature, vol. 1, p. 48, seqq., &c.)

Epidamus, a city of Illyricum, on the coast, north of Apollonia. Its foundation is universally ascribed to the Corecyreans, who, in compliment to Corinth, their metropolis, invited a citizen of that town to head their new colony. (Thucyd., 1, 24.) But we are not informed what circumstances led to the change in its name from Epidamus to that of Dyrachium, by which it is more commonly known to the Latin writers. Some have thought that Epidamus and Dyrachium were two different towns, the latter of which was the summer home of the former. Others affirmed, that the Romans, considering the word Epidamus to be of evil omen, called it Dyrachium from the ruggedness of its situation. (Appian, B. C., 2, 39.—Pomp. Mela., 2, 3.—Plin., H. N., 3, 23.) It is pretty evident, however, that the word Δυραχίον is of Greek, and not of Latin origin, for we find it used by the poet Euphorion of Chal- cis in a verse preserved by Stephanois of Byzantium, s. v. Δυραχίον. The fact seems to be, that the founders of Epidamus gave the name of Dyrachium or Dyr- rachium to the high and craggy peninsula on which they built their town. Strabo (316) certainly applies this appellation to the Chersonese, as does the poet Alexander cited by Stephanos, s. v. Δυραχίον, and this, in time, may have usurped the place of the former name. It is probable, also, that the town called Dyr- rachium did not exactly occupy the site of the ancient Epidamus; indeed, this is plainly asserted by Pau- sanias and others. It was founded by the Persians and the foundation of Epis- dammus to the second year of the 38th Olympiad, or about 625 B.C. Periander was then tyrant of Corinth, and nearly at the same period Cyrene was founded by Battus. Placed at the entrance of the Hadratic, in a situation most advantageous for commerce, which was also favoured by its relations with Corecyra and Corinth, Epidamus early attained to a considerable degree of importance, and preserved a considerable treasury at Olympia (Pausan., 6, 19), and its citizens vied with those of the most celebrated states of Greece in wealth and accomplishments. (Herodot., 6, 127.) And though the jealousy of the neighbouring barbarians had often prompted them to disturb the peace of the rising colo- ny, it successfully withstood all their attacks until
EPIDaurus.

EPIDaurus, I. a city of Argolis, on the shores of the Saronic Gulf, opposite the island of Ægina. Its territory extended along the coast for the space of fifteen stades, while towards the land it was encircled by lofty mountains, which contributed to its security. (Strabo, 374.) The more ancient appellation of this city was Epiaurikon; its founders having been Carians, as Aristotle reported, who were afterward joined by Lacedaemonians (see Strabo). On the arrival of the Heraclidae and Dorians, Epidaurus submitted to the latter arms, and received the name of Epidamos under Deipylus (Pausanias, 2, 34.) It afterward contributed, as Herodotus informs us (1, 146, and 7, 99), to the foundation of several Dorian cities in Asia Minor. The constitution of Epidaurus was originally monarchical; in the time of Periander of Corinth, his father-in-law, Procles, was tyrant of Epidaurus. (Herod., 3, 53.) Afterward the government was aristocratical; the chief magistrates being called Artyneus or Artyney, as in Arta, mentioned above, and being the presidents of a council of one hundred and eighty. The common people were termed Komipedes (Komipodes) or dusty-feet, in allusion to their agricultural pursuits. (Plut., Quaest. Gr., 1.) Epidaurus was the mother-city of Ægina and Cos, the former of which was once dependent upon it; afterward, however, the Æginetans emancipated themselves from this state of vassalage, and, by means of their navy, did much injury to the Epidaurian territory. (Herod., 5, 83.) The Epidaurians sent ten ships to Salamis, and 800 heavily-armed soldiers to Plataea. (Herodot., 8, 1, and 9, 105.) They were the allies of Sparta during the Peloponnesian war (Thucyd., 1, 105, and 2, 56), and successfully resisted the Argives, who besieged their city after the battle of Amphipolis. (Thucyd., 5, 53, seqq.) During the Boeotian war they were still in alliance with Lacedaemon (Xen., Hist. Gr., 4, 2, 16 — Id., 7, 2, 5), but in the time of Augustus they revolted with the Achaian league (Polyb., 2, 5.) Epidaurus was still a flourishing city when Paulus Æmilius made the tour of Greece (Livy, 45, 28. — Polyb., 30, 15, 1.) and Pausanias informs us, that many of its buildings were in good preservation when he visited Argolis, more than three centuries later. Epidaurus was famed for having been, in the mythological legends of Greece, the natal place of Æsculapius; and it derived its greatest celebrity from a neighbouring temple to this god, which was the resort of all who needed his assistance. The temple of Æsculapius was situate at the upper end of a valley, about five miles from the city. In 293 B.C., it was so celebrated that, during a pestilence at Rome, a deputation was sent from this city to implore the aid of the Epidaurian god. (Liv., 10, 47.) The temple was always crowded with invalids, and the priests, who were also physicians, contrived to keep up its reputation, for the walls were covered with tablets describing the cures effected there. This temple with its adjacent buildings was described by Strabo. This sacred edifice had been raised on the spot where Æsculapius was supposed to have been born and educated. It was once richly decorated with offerings, but these had for the most part disappeared, either by open theft or secret plunder. The greatest depredator was Sylla, who appropriated the wealth deposited in this shrine to the purpose of defraying the expenses of his army in the war against Mithridates. (Plut., Vit. Sylla. — Dion. Sic. Excerc. 406.) Several states, that the site of this ancient city is now called Epithauroi; but the traces are indistinct, and it has probably long been deserted. (Travels, vol. 2, p. 272.) Dodwell observed "several masses of ruin at the foot of a prominent mount, which are covered by the sea; also some Doric remains and Roman fragments, on that side which is towards the plain." (Class. Tour, vol. 2, p. 263.) The ruins of the temple of Æsculapius have long been on the spot now called Geitraioi, probably a corruption of Hieron. Near the temple was a remarkably beautiful theatre, built by Polyclitus. (Pausan., 2, 27, 5.) This is now in better preservation than any other theatre in Greece, except that at Trametzus, near Ioannina, and was capable of containing 12,000 spectators. (Laketa, Morus, vol. 2, p. 423. — Oramer's Ancient Greece, vol. 3, p. 279.) —II. A town of Laconia, named Limeria, on the eastern coast, about 200 stadia from Epidelium. It
had been founded by the Argives, to whom, indeed, according to Herodotus, the whole of this coast, as far as the Malean promontory, once belonged. Apollodorus (ap. Sir Ib., 389) pretended, that Limeras was only a contraction of Lymenas, by which alias it was more correctly known, since the eminence of the harbour. The town was situated on an eminence near the sea, and contained, among other buildings, a celebrated temple of Æsculapius. The ruins of Epidaurus Limeras are to be seen a little to the north of the modern Monemba-
sia. (Ibn. of Morea, p. 235.) Its site is now known by the name of Palaido Embasia. (Cramer's Ancient Greece, vol. 3, p. 201.)—III. A maritime city of Illy-
ria, on the river Naro. Mannert identifies it with the Arbona of Polybius (2, 11.—Mannert, Geogr., vol. 7, p. 350).

Epitom, I. one of the Euboe Insulae, supposed by
Mannert to be the same with the modern Ila. (Geogr.,
vol. 2, p. 231.)—II. A promontory of Caledonia, cor-
responding to the southern extremity of the peninsula of
Cantyre. (Mannert, Geogr., vol. 2, p. 204.)

Ermin (Erëryou, descendant), the sons of the Grecian heroes who were killed in the first Theban war with Thebes, were called the Epigoni. The name is
famous in ancient history. It was undertaken ten years
after the first. The sons of those who had perished in
the first war resolved to avenge the death of their fathers.
The god, when consulted, promised them victory,
if led by Alcmæon, the son of Amphiaras. Al-
cmæon accordingly took the command. Another ac-
count, however, given by Pausanias (9, 9, 2), makes
Thersander, son of Polyneices, to have been at the head
of the expedition. The other leaders were Amphitro-
chus, brother of Alcmæon; Agiæus, son of Adras-
tus; Diomedes, of Tydeus; Promachus, of Parthe-
nopeus; Sthenelus, of Capaneus; and Eurylycop, of
Meceisteus. The Argives were assisted by the Mæ-
senians, Arcadians, Corinthians, and Megarians.
The Thebans obtained aid from the neighbouring states.
The invaders ravaged the villages about Thebes. A
battle ensued, in which Laodamas, the son of Æteocles,
lew Agiæus, and fell himself by the spear of Al-
cmæon. The Thebans then fled; and, by the advice of
Tiresias, they secretly left their city, which was en-
tered and plundered by the Argives, and Thersander
was placed on the throne.—With the exception of the
events of the Trojan war and the return of the Greeks,
nothing was so closely connected with the Iliad and
Odyssey as the war of the Argives against Thebes,
since many of the principal heroes of Greece, particu-
larly Homer and Thersander, were in the contest,
the conquerors of Thebes, and their fathers before
them. The invaders of Crete, the elder Greeks in general appear to have done;
or if the authorship of Homer is doubted, they
were usually attributed to no author at all. Thus
the second part of the Thebais, which related to the
events of the Epigoni, was, according to Pausanias
(9, 9, 2), ascribed by some to Homer. The true reading in
Pindar, Hdt., &c., is that of the FIRST elevation, of
which we have a notice in Herodotus (4, 32. —
Müller, Hist. Lit. Gr., p. 70, seq.)

Epeimides, a Cretan, contemporary with Solon,
born in the year 639 B.C., at Phæstus, in the island of
Crete, according to some accounts, or at Cnosus
according to others. Many marvelous tales are re-
lated of him. It is said, that getting, by his father's
order, his hair shaved, he laid himself down in a
cave, where he fell asleep, and slept for fifty years.
He then made his appearance among his fellow-citi-
zens with long hair and a flowing beard, and with
a knowledge of medicine and natural history which then
appeared more than human. Another idle story told
of this Creten is, that he had a power of sending his
soul out of his body and recalling it at pleasure. It is
added, that he had familiar intercourse with the gods,
who, while he was engaged in the performance of pro-
phetic offices during the early part of his life for which he is best known, was his visit to
Athens at the request of the inhabitants, in order to
pave the way for the legislation of Solon by purifica-
tions and propitiatory sacrifices. These rites were
calculated, according to the spirit of the age, to ally
the feuds and party dissensions which prevailed there;
and, although what he enjoined was mostly of a reli-
gious nature (for instance, the sacrifice of a human vic-
tuals), yet, in the same year as his visit, he dedi-
cated, and of two altars to Hybris and Anasidéa, the two evil
powers which were exerting their influence on the
Athenians), there can be little doubt but that his object
was political; and that Solon's constitution would hardly
have been accepted, had it not been recommended and
sanctioned by some person, who, like Epimenes, claimed
from men little less than the veneration due to a
superior being. The Athenians wished to reward
Epimenes with wealth and public honours, but he
refused to accept any remuneration, and only demand-
ed a branch of the sacred olive-tree, and a decree of
perpetual friendship between Athens and his native
city.—We probably owe most of the wonderful tales,
relative to Epimenes, to the Cretans, who, were to
a proverb, famous for their powers of invention.
All that is credible concerning him is, that he was a man
of superior talents, who pretended to have intercourse
with the gods; and, to support his pretensions, lived
in retirement upon the spontaneous productions of the
earth, and practised various arts of imposture.
Perhaps, in his hours of pretended inspiration, he had
the art of appearing totally insensible and entranced, which
would easily be mistaken, by ignorant spectators,
for a power of dismissing and recalling his spirit. Epi-
menides is said to have lived, after his return to Crete,
for the age of 157 years. Divine honours were paid
him after his death; and, in consequence, his name
has no other claims to be mentioned among philoso-
phers, except that he composed a theology, and other
poems concerning religious mysteries. He wrote
also a poem on the Argonautic expedition, and other
works, which are entirely lost. His treatise on oracles
and responses, mentioned by St. Jerome, is said to
have been the work from which St. Paul quotes in the
epistle to Titus (1, 12.—Concil. Hierich. Epimenides
aus Kreta. Leipzig. 1801, p. 476.—Dieg. Laert., 1, 109.—
Val. Max., 8, 13.

Epimenides, a son of Iapetus and Clymena, one of
the Oceanides. He inconsiderately married
Pyrrha, by whom he had Pyrrha, the wife of Deucal.
The legend connected with his name will be found un-
der the article Pan. He composed an encomium of
Pyrrha, the daughter of Epimenes. (Ovid, Met., 1, 390.)

Epiphanes, I. a town of Cilicia Campestris, south-
west of Anazarbus, and situated on the small river Car-
sus, near the range of Mount Amanus. It is now
Surfendkar. (Ptol., 5, 27.)—II. A city of Syria, on
the Orontes, below Apamea. Its Oriental and true name
was Hamshah, and it was reckoned by the people of the

Digitized by Google
East one of the most magnificent cities in the world, having been founded, as they imagined, by Hamath, one of the sons of Canaan. Allusion is frequently made to Hamath in the Old Testament. (Compare Genesis, 10, 18.—2 Samuel, 8, 9.—2 Kings, 43, 34. —Jerem. 49, 23.—Amos, 6, 2.)

EPIPHANIUS (illustrious), I. A surname of Antiochus IV., King of Syria.—II. A surname of Ptolemy V., King of Egypt.

EPIPHANIUS, a bishop of Salamis in Cyprus, in the fourth century. He was born of Jewish parents, at a village called Besanducan, near Eleutheropolis, in Palestine, about A.D. 320, and appears to have been educated in Egypt, where he imbibed the principles of the Gnostics. At length he left those heretics, and, becoming an ascetic, returned to Palestine and adopted the discipline of St. Hilarion, the founder of monachism in that country. Epiphanius erected a monastery near the place of his birth, and thence he went till he was bishop of Salamis in 367. Here he remained about 36 years, and composed most of his writings.

In 391 he commenced a controversy with John, bishop of Jerusalem, relative to the Platonic doctrines of the learned and laborious Origen, against which he wrote and preached with implacable bitterness. John favoured Origen's views, but Epiphanius found in Theophilus, the violent bishop of Alexandria, a worthy confidant, who, in 395, convened a council, and condemned all the works of Origen. Epiphanius himself then called a council in Cyprus, A.D. 401, and reiterated this condemnation, after which he wrote to St. Chrysostom, then bishop of Constantinople, requesting him to do the same. On finding this prelate disinclined to sanction his violent proceedings, he forthwith repaired to Constantinople, for the purpose of exciting the bishops of that diocese to join in executing the decrees which his Cyprian council had issued; but, having entered a church in the city in order to repeat his anathemas, he was forewarned by Chrysostom of the illegality of his conduct, and was obliged to desist. Exasperated at this disappointment, he applied to the imperial court for assistance, where he soon embroiled himself with the Emperor Eudoxia; for, on the occasion of her asking him to pray for the young Theodotius, who was dangerously ill, he replied that her son should not die, provided he would not patronise the doings of the defenders of Origen. To this presumptuous message the empress indignantly answered, that her son's life was not in the power of Epiphanus, whose prayers were unable to save that of his own archdeacon, who had recently died. After thus vainly endeavouring to gratify his sectarian animosity, he resolved to return to Cyprus; but he died at sea on the passage, A.D. 403.

The principal works of Epiphanus are: 1. Ha-

1. Ha-

1. Paido-

Theopompus (ap. Strab., 221.) The oracle at Dodona was always called Pelasgic, and many names of places in Epirus were also borne by the Pelasgic cities of the opposite coast of Italy. (Niebuhr, Hist. Rom., vol. 1, p. 34.) But the peoples of Illyria had barbarized the whole nation; and though Herodotus speaks of Thesprotia as a part of Hellas, he refers rather to its old condition, when it was a celebrated seat of the Pelasgians, than to its state at the time when he wrote his history. In their mode of cutting the hair, in their costume, and in their language, the Epirites resembled the Macedonians, who were an Illyrian race. (Strab., 227.)

2. Theopompus (ap. Strab., 323) divided the inhabitants of Epirus into fourteen different tribes, of which the most renowned were the Macedonians and Molossians, who successively maintained a preponderance in this country. The Molossians claimed descent from Molossus, son of Neoptolemus and Andromache. Tradition reported, that the son of Achilles, Neoptolemus, or Pyrrhus, as he is also called, having crossed from Thessaly into Epirus on his return from the siege of Troy, was induced, by the advice of an oracle, to settle in the country, having subjugated a considerable extent of territory, he transmitted his newly-formed kingdom to Molossus, his son by Andromache, from whom his subjects derived the name of Molossi. (Pind., Nem., 7, 56.)

3. Cyrmus (Chios concives Pyrrhus) to have been the son of Neoptolemus (v. 446). The history of Molossia is involved in great obscurity until the period of the

"Pentaglottus" (Πεντάγλωττος), or the Five-tongued. But Scaliger calls him an ignorant man, who committed the greatest blunders, told the greatest falsehoods, and knew next to nothing about either Hebrew or Greek. Still his writings are of great value, as containing a series of curious facts and circumstances of curious works which are no longer extant. The best edition of his works is that of Petavius, Paris, 2 vols. fol., 1622, and Col., 1682. (Du Pin, Bibl. Eccles., vol. 2.—Caree's Lit. Hist.—Bayle, Dict., s. v.—Clarke's Succession of Sacred Literature.—Encyc. Useful Knowledge, vol. 9, p. 477.)

EPIRUS, a piece of elevated and broken ground, sloping down towards the city of Syracuse, but preserving an elevated appearance. In the circumference of its overlooking Syracuse. Hence Thucydides (6, 96) remarks, ἐκ τῶν Ἡρωών, διά τὸ ἐπίτελον τού ἄλλου ἀραμαίοις ἐπιτρε-ποῦνται. (Consult Giller, de Situ et Origine Syracusarum, p. 53, seqq.)

Epirus, a country to the west of Thessaly, lying along the Adriatic. The Greek term θηρίανος, which answers to the English word mainland, appears to have been applied to a very early period to the western portion of Greece, which is situated between the chain of Pindus and the Ionian Gulf, and between the Ceraunian Mountains and the river Acheleion; this name being probably used to distinguish it from the large, populous, and wealthy island of Corcyra, which lay opposite to the coast. It appears that, in very ancient times, Acarnania was also included in the term, and in that case the name must have been used in opposition to all the islands lying along the coast. (Strab., 459—Hem., Od., 14, 160.) The ancient geography of Epirus was attended with great difficulties even in the time of Strabo. The country had not then recovered from the effects of the destruction caused by Paulus Emilius in 167 B.C., who destroyed seventy towns, and reduced to slavery 150,000 of the inhabitants. (Polyb., ap. Strab., p. 322.—Liv., 45, 34.—Plut., Vit. Paul. Emil., c. 29.) After this the greater part of the country remained in a state of absolute desolation, and, where there were any inhabitants, they had nothing but villages and ruins to dwell in. (Strab., 327.)—The inhabitants of Epirus were scarcely considered Hellenic. The population in early times had been Pelasgic. (Strab., 221.) The oracle at Dodona was always called Pelasgic, and many names of places in Epirus were also borne by the Pelasgic cities of the opposite coast of Italy. (Niebuhr, Hist. Rom., vol. 1, p. 34.) But the peoples of Illyria had barbarized the whole nation; and though Herodotus speaks of Thesprotia as a part of Hellas, he refers rather to its old condition, when it was a celebrated seat of the Pelasgians, than to its state at the time when he wrote his history. In their mode of cutting the hair, in their costume, and in their language, the Epirites resembled the Macedonians, who were an Illyrian race. (Strab., 227.) Theopompus (ap. Strab., 323) divided the inhabitants of Epirus into fourteen different tribes, of which the most renowned were the Macedonians and Molossians, who successively maintained a preponderance in this country. The Molossians claimed descent from Molossus, son of Neoptolemus and Andromache. Tradition reported, that the son of Achilles, Neoptolemus, or Pyrrhus, as he is also called, having crossed from Thessaly into Epirus on his return from the siege of Troy, was induced, by the advice of an oracle, to settle in the country, having subjugated a considerable extent of territory, he transmitted his newly-formed kingdom to Molossus, his son by Andromache, from whom his subjects derived the name of Molossi. (Pind., Nem., 7, 56.) Cyrmus (Chios concives Pyrrhus) to have been the son of Neoptolemus (v. 446). The history of Molossia is involved in great obscurity until the period of the
Persian invasion, when the name of Admetus, king of the Molossi, occurs from the circumstance of his hav-
ing generously afforded shelter to Themistocles when
in exile and pursued by his enemies, although the in-
fluence of that celebrated statesman had previously been
exerted against him in some negotiations which he had tried in vain. Alexander, who was alive at this time,
terminating ancedote, as they are furnished by Thucy-
dides, serve to prove the weakness as well as poverty of
the Molossian chiefs compared with the leading
powers of Greece at that time. (Thucyd., i, 136.)
Admetus was succeeded by his son Tharypas or Tha-
rybas, who appears to have been a minor towards the
beginning of the Peloponnesian war, when we
find his subjects assisting the Ambracians in their in-
vasion of Acsarnia. The bishop on that occasion,
reports, that Sablyinthus, prince of Atinaition, was
ed at Tharybas (2,80). Tharybas is represent-
ed by Plutarch (Vit. Pyrrh.) as a wise and able mon-
arch, and as encouraging science and literature. His
successor is not known; but some years after we hear
of a prince called Alcetas, who was dethroned by his
subjects, but restored by Dionysius of Syracuse.
(Diod. Sic., 15, 13.—Pausan., 1, 11.) Neoptolemus,
his son, reigned but a short time, and left the
crowd to his brother Aryan, together with the care of
his children. Alexander, the eldest of these, succeed-
ed his uncle, and was the first sovereign of Epirus
who raised the character and fame of that country
among foreign nations by his talents and valor.
His sister Olympias had been married to Philip of Mace-
don, before his accession to the throne of Epirus; and
the friendship thus cemented between the two mon-
archs was still further strengthened by the union of
Alexander with Cleopatra, the daughter of Philin-
us. It was during the celebration of these nuptials at
Edessa that the King of Macedon was assassinated.
Alexander of Epirus seems to have been an ambitious
prince, desirous of conquest and renown; and, though
we have no certain information of the events which
occurred during his reign, there is good reason for be-
ieving that he united the Chaoniaes, Thesprotians,
and other Epirotic clans, together with the Molossians,
under his standard. The king of Epirus was,
first assumed by him. (Diod. Sic., 16, 72.—Strabo,
280.) Having been applied to by the Tarentines to
aid them against the attacks of the Lucani and Brutii,
he eagerly seized this opportunity of adding to his
fame and enlarging his dominions. He therefore
crossed over into Italy with a considerable force; and,
and, when he had been properly secured by the Tarentines
and the other colonies of Magna Graecia, the barba-
rians, after being defeated in several engagements,
must have been conquered. But Alexander, being left
to his own resources and exertions, was at length sur-
rounded by the enemy, and slain near the fated walls
of Pandosia, in the Bratan territory. (Liv., 8, 24.—
Strabo, 255.) On the death of Alexander the crown
devoided on his cousin Eacides, the son of Aryan the
former king, of whom little is known, except that,
he had been assisted his brother Olympias against Cas-
sander, his soldiers mutinied and deposèd him; not
long after, however, he appears to have been reinstated.
(Diod. Sic., 19, 36.) His brother Alcetas, who suc-
ceded him, was engaged in a war with Cassander,
which proved unfortunate; for, being defeated, his do-
minions were overrun by the forces of his victorious en-
emy, and he himself was put to death by his rebellious
subjects. (Diod. Sic., 19, 36.) The name of Pyrrhus,
who afterwards took the theme, was a legend on the
name of Epirus, and gives to its history an importance
it never would otherwise have possessed. (Vid. Pyr-
thus.) Alexander, the eldest son of Pyrrhus, succeed-
ed his father, whom he sought to emigrate by attempting
fresh the conquest of Macedon. On this occasion An-
tigonus Gonatas was again vanquished and driven from
his dominions. But Demetrius, his son, having raised
another army, attacked Alexander, and presently com-
pelled him to evacuate the Macedonian territory. (Jus-
 tin, 26, 3.—Frontin., Strat., 3.) At the expiration of
two other insignificant reigns, the royal line of the
Eacides becoming extinct, the Epirots determined to
abandon Epirus as bounded on the north by Illyria and part
of Macedonia, from the Arcoceranian mountains to the
central chain of Pindus. In this direction the river
Aous would be the natural line of separation between
these two countries. The Peravai and Tympanii,
who occupied the upper valleys of that river, being
generally looked upon as Epirotic tribes, while the
Orestas and Elymiotes, contiguous to them on the
north, were certainly included within the limits of
Macedonia. Thus, although in the beginning Pyrrhus
formed another natural barrier, as far as the end of the
Bosphorus, which served to part the Cassopii and oth-
er Molossian clans from the country of the Athamanes.
But as the republic of Ambracia, which occupied both
banks of this river near its entrance into the Ambrac-
ian gulf, became a portion of Epirus after it ceased
to enjoy a separate political existence, we must remove
the southern boundary of this province to the vicin-
yty of Argos and the territory of the Amphiochlorians.
Epirus, though in many respects wild and mountain-
ous, was esteemed a rich and fertile country. Its
pastures produced the finest oxen, and horses un-
rivaled for their speed. It was also famous for a
large breed of dogs, thence called Molossi; and mod-
ern travellers have noticed the size and fecocity of
these dogs at the present day. Epirus corresponds to
the Lower Albania of modern times. The follow-
ning is the account given of the present aspect of the
country by Malte-Brun, remarked Locris and Lower
Albania is colder than that of Greece; the spring does not
set in before the middle of March, and the heat of sum-
mer is oppressive in July and August: in these months
many streams and rivers are drained, the grass and
plants are withered. The vintage begins in Septem-
ber, and the heavy rains during December are suc-
cceeded in January by some days of frosty weather.
(Pouqueville, vol. 2, p. 269, seq.) The oak-trees,
and there is almost every kind of them, arrive at great
perfection: the plane, the cypress, and magnificent
ash appear near the seacoast, beside the laurel and
the linden; but the forests on Pindus consist chiefly of
cedars, pine, larch, and chestnut-trees. (Pouqueville,
vol. 2, p. 186 and 274.—Id., vol. 4, p. 412.) Many
of the mountains are arid and sterile; such as are suf-
ciently watered are verdant, or covered with the wild
vine and thick groups of elders; in spring their sides
are covered with flowers, of either the violet, the narcissus,
and the lycanthus in the same profusion as in the mild
districts of Italy. The inhabitants cultivate cotton and
silk; but the olive, for want of proper care, does not
yield an abundant harvest; the Amphiochlorian peach,
the Arta nut, and the quince, grow in a wild state in
woods and uncultivated land. Epirus was once fa-
mous for its oxen; the breed was improved by King
Pyrrhus (Plin., v. 17, 44.—Aratot., Hist. Anc. 39, 5.)
and it has now degenerated; they are small, stunted, and
ill-shaped. The horses of the same country are still
excellent." (Malte-Brun, Geogr., vol. 6, p. 179.
Am. ed.)

EPOREDRIX, I. a leading chieftain among the Edus
in Gaul. He commanded the forces of his country.
EQU

EQU

men in their war with the Sequani, before Caesar's ar-
rival in Gaul. (B. G., 7, 67.) He afterward went
over to the side of Vercingetorix, in the great insur-
rection against the Roman power, but was taken pris-
oner by Caesar. (B. G., 7, 55.—Ib., 63.—Ib., 67.)
—II. Another Euvian leader, mentioned by Caesar. (B. G., 7, 76.)

Euryalus, a patronymic given to Periphanes, the
son of Euryalus, and the companion of Ascanius. (Virg.,
Aen., 5, 547.)

EXCURSI, a festival established at Rome by Romu-
lus in honour of Mars, when horse-races and games
were exhibited in the Campus Martius. It took place
on the 27th of February. (Varro, de L. L., 5, 3.—
Ovid, Fast., 2, 859.)

Equites, the name of an order in the Roman state.
Their origin, according to the old tradition, was this:
Romulus, having divided his subjects into three tribes,
chose from each 100 young men, whom he destined
to serve on horseback, and act as his body-guard.
This body of cavalry was called the Celeres, and afterward
the Equites. (Dion. Hal., 2, 13.) Niebuhr supposes
(Rom. Hist., vol. 1, p. 326), that whereas Patres and
Patricii were titles of honour for individuals, Celeres
was the name of the whole class as distinguished from
the three tribes. The three Celeres were called by the same names as the three tribes
of the patricians, namely, Ramnes, Tities, and Luceres.
Their tribunes are spoken of as a college of priests
(Dion. Hal., 2, 64), and it appears that the tribes of
the patricians had also tribunes. (Dion. Hal., 2, 7.)
Moreover, when it is said that Tarquinius Priscus made
three new centuries, which he added to the former three,
and that the whole went under the name of the Sex
Suffragia, or the Six Equestrian Centuries, we cannot
doubt that the alteration which he introduced were con
stitutional, and not merely a military one; that, in fact,
the centuries which he formed were, like the original
three, tribes of houses; that his innovation was nothing
but an extension of the political division of Rome under

When Servius Tullius established the comitia of the
centuries, he received the Sex Suffragia, which in
cluded all the Equestrian Centuries, and to them he added twelve other equestrian centuries
true up of the richest of the plebeian order. (Niebuhr,
vol. 1, p. 427.) The ancient writers appear to have
laboured under some great confusion with regard to
this arrangement. Livy (1, 43) makes a proper distinc-
tion between the twelve equestrian centuries created
by Servius, and the six which existed before; but
when he states (1, 36) that the cavalry in the reign of
Tarquinius Priscus amounted to 1800, he appears to be
antiquating the origin of the eighteen equestrian cen-
turies which formed part of the constitution of Servius.
To the establishment of the Comitia Centenaria, the cre-
ation of a body of Equites, as a distinct order, seems
to be due. The plan of Servius was, to a certain extent,
identical with that of Solon. The object of both legis-
lators was to break down the limits to which the old
aristocracy was confined, and to set up an order of
wealth by the side of the order of birth; not, however,
that when a person could produce his 400,000 sester-
tes, he became ipso facto a knight, as was the case
in after times. (Hor., Epist., 1, 1, 67.) According to
the Servian constitution, good birth or the sanction
of the censor was necessary for gaining a place in the
equestrian order. (Polib., 6, 20.—Zonaras, 7, 19.)

When Cicero says (De Repub., 2, 20) that Tarquinius
established the equestrian order on the same footing as
that of the patricians, he does it in his time, and also attributes
to the same king the astounding marks of wealth
for the purchase and keep of their horses, he is evi-
dently inconsistent. In Tarquin's time, that is, before
there was any plebeian order, it was natural enough
that the poorer patricians, who were obliged to serve
on horseback (just as the Παλαιοκαστοτοίμον, Plut., Vit.
Sot., c. 18), should be furnished with the means for
doing so. But the case was different with the equites,
the establishment of an order of wealth. A man
might then be of equestrian rank, and yet have no
horse assigned him. Thus, on the one hand, we find
the two genera of Ely, a number of equites serving on horseback at their own expense (Liv., 5, 5;)
and, on the contrary, L. Tarquinius, who was a Patri-
cian, was obliged to serve on foot from his poverty.
(Liv., 3, 27.) From this it appears probable that a
certain sum was fixed, which it was not necessary for
every eques to have, but the possessor of which was
obliged to serve on horseback at his own expense if
no horse could be given him by the public; and that
those whose fortune fell short of this, were obliged to
serve in the infantry under the same circumstances.

The lieutenant of the dictator was called "the chief
of the equites" (magister equitum); and although in
later times he was appointed to this office by the dic-
tator himself, it is probable, as Niebuhr conjectures
(vol. 1, p. 559), that he was originally elected by the
12 centuries of plebian equites, just as the dictator or
magister populi was chosen by the sex suffragia, or,
in other words, by the populus or patriae. With re-
 gard to the duties of the equites besides their mi-
 nitary duties, they had to act as judices or jurymen un-
der the Servian law: the judices were chosen from the senate as well as from the
equites: by the Glaucian law, the equites alone
performed the office; and so on, by alternate changes,
till the law of Aurelius Cotta, B.C. 70, by which the
judices were chosen from the senators, equites, and tribuni
ararii.—The equites also ranked the public
revenue, and, when engaged in military services,
were called the publicani; and though Cicero, who
was himself of the equestrian order, speaks of these
farmers as "the flower of the Roman equites, the or-
nament of the state, the safeguard of the republic"
(pro Planct., 9), it appears that they were a set of de-
testable oppressors, who made themselves odious in
all the provinces by their avarice and rapacity.—The
equites, as may be inferred from what has been already
recorded, gradually increased in rank and power,
and became, as they were in the time of Cicero, for
stance, an ordo or class of persons, as distinguished
from the senate and the plebs. They had particular
seats assigned them in the circus and theatre. The
insignia of their rank, in addition to the horse,
were a golden ring, and the augustus clavus, or narrow
border of purple on their dress, as distinguished from the latus
clavus, or broad band of the senators. The last two ins-
ignia seem to have remained after the former ceased
to possess their original and distinctive character. (En-
cycl. Us. Knol., vol. 9, p. 492.)

Equus Tericus, a town of Samnium, on the Ap-
ian Way, distant, according to the Itineraries, twen-
ty-two ancient miles from Cluvia, which is itself ten
miles northeast of Beneventum. (Romanelli, vol. 2,
p. 331.) The town Terticus is Ocean, equivalent to
the Latin Magnus. (Lanzi, vol. 3, p. 608.) Much
discussion has arisen among geographers as to the pre-
cise situation of this place. Cluverius was of opinion
that it ought to be placed at Ariano (Ital. Ant., 2, 12); others near Ascoli (Fraulii, Via Appia, lib. 4, c. 10); D'Anville at Castel Franco (Annali Geogr.
de l'Itali., p. 218), which supposition is nearly correct;
but the exact site, according to the report of local an-
tiquaries, is occupied by the ancient church of St.
Eleuterio, a martyr who is said to have been killed
in the siege of Ecumen. This place is
about five miles distant from Ariano, in a northerly di-
rection. The branch of the Apian Way on which
Equus Terticus stood, runs nearly parallel with that
which Horace seems to have followed in his west-
845
known journey to Brundisium. He informs us, that he passed the first night after having left Beneventum at a villa close to Trivicum, a place situated among the mountains separating Samnium from Apulia. Horace, in speaking of Equus Tucicis, pleasantly alludes to the unmanageable nature of the name in verse: 

"Mansuri oppidulo, quod vs devere non est."  

(Sat., 1, 5, 19, 2.)

Erasistratus, a physician of Iulis, in the island of Ceos, and grandson of Aristotle by a daughter of this philosopher's. (Strabo, 486.—Steph. Byz. s. v. Ιουλις.) After having frequented the schools of Chrysippus, Metrodorus, and Theophrastus, he passed some time at the court of Seleucus Nicator, where he gained such great reputation by discovering his secret discovery which preyed upon the young Antiochus, the son of the king, who was in love with his mother-in-law, Queen Stratonic. (Appian, Bell. Syr., c. 156.—Lucian, de Deser Syr., c. 17.) It was at Alexandria, however, that he principally practised. At last he refused altogether to visit the sick, and devoted himself entirely to the study of anatomy. The branches of this study which are indebted to him for new discoveries, are, among others, the doctrine of the functions of the brain, and that of the nervous system. He has immortalized himself by the discovery of the vasa lactea; and by the doctrine of the equality near that of the circulation of the blood. Comparative anatomy furnished him with the means of describing the brain much better than had ever been done before him. He also distinguished and gave names to the auricles of the heart. (Galen, de Dogm. Hipp. et Plat., lib. 7, p. 311, seqq.—Id., de Usu Part., lib. 8, p. 458.—Id., de Administr. Anat., lib. 7, p. 184.—Id., an Sanguis, &c., p. 228.) A singular doctrine of Erasistratus is that of the heart. It is the blood which, according to him, fills the arteries, which we inhale in respiration, which from the lungs makes its way into the arteries, and then becomes the vital principle of the human system. As long as this spirit moves about in the arteries, and the blood in the veins, man enjoys health: but when, from some cause or other, the veins become contracted, the blood then spreads into the arteries and becomes the source of maladies: it is called fever when it enters into some noble parts or into the great artery; and inflammations when it is found in the less noble parts or in the extremities of the arteries. (Galen, Comm., 1, in lib. de Nat. Hum., p. 3.) Erasistratus rejected entirely blood-letting, as well as cathartics: he supplied their place with dieting, tepid bathing, vomiting, and exercise. In general, he was attached to simple remedies: he recognised what was subsequently termed Idiosyncasy, or the peculiar constitution of different individuals, which makes the same remedy act differently on different persons. A few fragments of the writings of Erasistratus have been preserved by Galen. (Scholl, Hist. Lit. Gr., vol. 3, p. 406, seqq.—Sprengel, Hist. Med., vol. 1, p. 439, seqq.)

Eratosthenes, one of the Museus, who presided over lyric, tender, and amorous poetry. She is said to have invented also hymns to the gods, and to have presided likewise over pantomimic dancing. Hence Anaximenes says, "Plectra gerens Erato saltus pede, carmine, vultu." (Idyl. ult., v. 6.) She is represented as crowned with roses and myrtle, holding a lyre in her hand. She appears with a thoughtful, and sometimes with a gay and animated, look. (Compare Müller, Archäol. der Kunst, p. 594, seqq.)

Eratosthenes, a distinguished contemporary of Archimedes, born at Cyrene in the 3rd century B.C. He was perhaps one of the most celebrated philosophers of his age, and is said to have been enrolled in the Pythagorean school. His mathematical, astronomical, and geographical labours are those which have rescued his name from oblivion. The Alexandrian school of sciences, which flourished under the first Ptolemies, had already pro
duced Timocares and Aristyllus, whose solstitial obser
vations, made probably by the shadows of a gnomon, and by the armillary circles imitative of those of the celestial vault, retained considerable credit for centuries afterward, though, from these methods of obser
vation, they must have been extremely rude and im-
perfect. Eratosthenes, however, had not only the advan
ces arising from the instruments and observations of his predecessors, but the great Alexandrian library, which probably contained all the Phcenician, Chaldaic, Egypti
an, and Greek learning of the time, was intrusted to his superintendence by the third Ptolemy (Euergetes) who invited him to Alexandria; and we have proof, in the scattered fragments which remain to us of this great man, that these advantages were duly cultivated to his own fame and the progress of in
teresting astronomy. The only work attributed to Era-
tosthenes which has come down to us entirely, is ent
itled "Catalogue (Catasterismi)," and is merely a catalogue of the names of forty-four constellations, and the situations in each constellation of the princi
pal stars, of which he enumerates nearly five hundred, but without one reference to astronomical measurement. We find Hipparchus quoted in it, and mention made of the motion of the pole, that of the polar star having been nearly constant for a long time. Several in
stances, taken in conjunction with the vagueness of the descriptions, render its genuineness extremely doubtful; at all events, it is a work of little value. If Eratosthenes be really the author of the "Catasteris
mi," it must have been composed merely as a vade meum, for we find him engaged in astronomical researches far more exact and more worthy of his gen
ius. By his observations he determined, that the distance of the sun from the earth was 87°, or 11,300 times the diameter of the sun's disc, and that the obliquity of the ecliptic, was \( \frac{1}{4} \) of an entire circumference, or 47° 42' 39", which makes the obliquity to be 23° 51 19.5', nearly the same as that supposed by Hippar
chus and Ptolemy. As the means of observation were at that time very imperfect, the instruments divided only to intervals of 10', and corrections for the greater refraction at the winter solstice, for the diameter of the solar disc, &c., were then unknown, we must re
ject all the measurements of Eratosthenes. His next achievement was to measure the circumference of the earth. He knew that at Syene (the modern Assouan) the sun was vertical at noon in the summer solstice; while at Alexandria, at the same moment, it was below the zenith by the fifteenth part of a circumference: the two places are nearly on the same meridian (error 2°). Neglecting the solar parallax, he concluded that the distance from Alexan
dria to Syene was the fiftieth part of the circumference of the earth; this distance he estimated at five thou
sand stadia, which gives two hundred and fifty thou
sand stadia for the circumference. Thus Eratosthe
nes has the merit of pointing out a method for finding the circumference of the earth. But his data were not sufficiently exact, nor had he the means of measuring the distance from Alexandria to Syene with sufficient precision.—Eratosthenes has been called a poet, and Scaliger, in his commentary on Manilius, gives some fragments of a poem attributed to him, entitled 'Equino (Hermes), one of which is a description of the terres
trial zones. It is not improbable that these are au
thentic.—That Eratosthenes was an excellent geome
ter we cannot doubt, from his still extant solution of the problem of two mean proportionals, preserved by Theon, and a lost treatise quoted by Pappus, De Locis Mathematicis, which he had collected, and out
der some conjectures. (Hist. des Math., an. 7, p. 290.)—
Eratosthenes appears to have been one of the first who attempted to form a system of geography. His work on this subject, entitled Geography (Geogra
graphie), was divided into three books. The first con

486
tained a history of geography, a critical notice of the authorities used by him, and the elements of physical geography. The second book treated of mathematical geography. The third contained the political, historical, and geographical notes of the third globe. The whole work was accompanied with a map. The geography of Eratosthenes is lost; the fragments which remain have been chiefly preserved by Strabo, who was doubtless much indebted to them.—Eratosthenes also busied himself with chronology. Some remarks on his Greek chronology will be found in Clinton's <i>Pasin Hellenici</i> (vol. i. p. 3—18., p. 408); and on his list of Thalian kings in Raek's work on the Ancient Egyptian Chronology (<i>Alkone</i>, 1830).—The properties of numbers attracted the attention of philosophers from the earliest period, and Eratosthenes also distinguished himself in this branch. He wrote a work on the "Duplication of the Cube," Κύβον διπλασιασ-μόν, which we only know by a sketch that Eudoxus has given of it, in his treatise on the Sphere and Cylinder of Archimedes. Eratosthenes composed, also, another work in this department, entitled Ἐκσενον, or "the Sphere," the object of which was to separate prime from composite numbers, a curious memoir on which was published by Horsley, in the "Philosophical Transactions," 1772. —Eratosthenes arrived at the age of eighty years, and then, becoming weary of life, died, by voluntary starvation. (Suid., s. e.) Montu-clus, with his usual naivety, says, it would have been more philosophical to have awaited death "de pied ferme."—The best editions of the <i>Catasterismi</i> are that of Schaubach, with notes by Hayne, <i>Gett</i>, 1793, and that of Matthias, in his <i>Araus</i>, <i>Francos</i>, 1817, 8vo. The fragments of Eratosthenes have been collected by Bernhardy, <i>Berol</i>, 1822. (Montuclus, <i>Hist. des Math.</i> p. 239.—Delambre, <i>Hist. de l'Astron. Anc.</i>, p. 86.—Encyc. U.S. <i>Knovel</i>, vol. 9, p. 497.)

Erebus, a strongly-fortified town of Sicily, northeast of Agrigentum, which the Romans made their principal place of arms in the siege of the last-mentioned city. It was soon after destroyed. (Polyb., i. 18.)—When mention is made, in other passages of the ancient writers, of Erebus, we must, no doubt, refer it to the city of Herbessa, which lay nearer Syracuse. (Mannert, <i>Geogr.</i>, vol. 9, pt. 3, p. 441.)

Erichthion, one of the boroughs of Attica, and belonging to the tribe Ἐγεις. Its position has not been clearly ascertained. This was the native demus of Xenophon and Isocrates. (Diog. Laecn., 2, 48.)

Eretria, a town of the lower coast, springing from Chaos. On him and his sister Nox (<i>Nyght</i>) came <i>Aether</i> and the Day. (Hesiod, <i>Theog.</i>, 123, sqq.)—II. A dark and gloomy region in the lower world, where all is dreary and cheerless. According to the Homeric notion, Erebus lay between the earth and Hades, beneath the latter of which was Tartarus. It was therefore not an abode of the departed, but merely a passage from the upper to the lower world. (Hom., ad Hell. נסאיס, Λεοντάκι, s. e.) This mode of explaining is opposed, however, by some, though on no sufficient grounds. (Keightley's <i>Mythology</i>, p. 90.)—Scribal scholars derive the name Erebus from the Hebrew <i>erch</i>, evening.

Eretheia, the well of salt water in the Acropolis at Athens. (Vid. Eretheus.)

Eretheus, one of the early Attic kings, said to have been the son of Pandion I. and the sixth in the series of Attic kings. (Paus., L. p. 11, 10.)

Eretria, the capital of Eretria or the Attic region of Eceria II.—We have already given some remarks on the fabulous history of the Attic kings, under the article Cecrops. It may be added here, that Eretheus in all probability was only a title of Neptune. This appears, plainly as far as such a point can be said to be plain, both from the etymology of the name and the testimony of ancient writers. Thus we have in Hesychius, "Ἐρέθειον. Ποικίλος ὁ Ἀθηναῖος καὶ in the scholia of Tzetzes to Lycochron (v. 158), "Ερεχ-θενος, ὁ Ποικίλος ὁ Γείτων (παρά τὸ ἔρημον, τὸ κοινόν). Many other writers declare the identity of Neptune and Eretheus. The temple, which was called Eretheus, was occupied by the temple of Minerva Polias, and its principal altar was dedicated to Neptune, "on which," Pausanias says (1, 26), "they also sacrificed to Eretheus;" a very natural variation of the story, when it was forgotten that Neptune and Eretheus were the same. "Ἐρέθειος means "the shaker," and is equivalent to ἐνοπτήριον or ἐνοπτήριος, the most frequent epithets of the god of the sea. That Eretheus was really Neptune is further evidenced from the circumstance, that the well of salt water in the Acropolis, which was said to be the memorial of the contest of Neptune with Minerva for the honour of being the tutelary deity of Athens, was called ὁ δάλασσα Ἐρέθειος. (Philol. Museum, No. 5, p. 360.)

Erethmondias, a name given to the Athenians, from their king Eretheus. (Ovid, Met., 7, 430.)

Erethus or Ereus (on coins the name is always written with one Σ), a city of Lebos, situated on a hill, at the distance of twenty-eight stadia from Cape Sigirum. It derives celebrity from having given birth to Theophrastus Phainias, another disciple of the great Stagirite, and was likewise a native of this place. (Strab., 616.—Steph. Byz., s. v. "Ἐρεθός") According to Archestratus, quoted by Athenaeus, Erethus was famous for the excellence of its wheaten flour. The site yet preserves the name of Ereus. (Pococke, vol. 1, b. 3, c. 4—Cramer's <i>Asia Minor</i>, vol. 1, p. 163.)

Eretria, a town of the island of Eubea, situated on the coast of the Eupirus, southeast of Chalcis. It was said by some to have been founded by a colony from Triphylia in Peloponnesus; by others its origin was ascribed to a party of Athenians belonging to the demus of Eretria. (Strabo, 447.) The latter opinion is far more probable, as this city was doubtless of Ionic origin. (Herodot., 8, 48.) We learn from Strabo, that Eretria was formerly called Melaneis and Aratia ; and that, in a remote period, it had attained to a considerable degree of prosperity and power. The Eretrians had conquered the islands of Cees, Teos, Tenos, and others. And in their festival of Diana, which was celebrated with great pomp and splendour, three thousand soldiers on foot, with six hundred cavalry, and sixty chariots, were often employed to attend the procession. (Strabo, 448.—Compare Livy, 35, 38.) Eretria, at this period, was frequently engaged in war with Chalcis; and Thucydides reports (1, 15), that Eretria was the most of the Greek cities that took part in the contest. The assistance which Eretria then received from the Milesians induced that city to co-operate with the Athenians in sending a fleet and troops to the support of the Ionians, who had revolted from Persia at the instigation of Aristogoras (Herodot., 5, 99); by which measure it became exposed, in conjunction with Athens, to the vengeance of Darius. This monarch accordingly gave orders to his commanders, Nicias and Aristeides, to repair to Eretria and Athens, and bring the inhabitants captive before him. Eretria was taken after six days' siege, and the captive inhabitants brought to Asia. They are said to have been in number only four hundred, among whom were ten women. The rest of the Eretrians escaped to the Persians among the rocks of the island. Darius treated the prisoners kindly, and settled them at Arderia, in the district of Chalcis, in the <i>Ed. 111</i>.——With respect to the story of Aristeides, they occupied the same spot at the beginning of the Christian era. Eretria recovered from the effects of this disaster, and was rebuilt soon after. We find it mentioned by Thucydides, towards the close of his history (8, 94), as revolting from Athens on the approach of a Spartan fleet under Hugesandridas, and mainly contributing to the success obtained by that commander. After the
death of Alexander, this city surrendered to Ptolemy, a general in the service of Antigonus (Diod. Sic., 19, 78); and in the Macedonian war, to the combined fleets of the Romans, the Rhodians, and Atalus. (Liv., 32, 16.) It was subsequently declared free, by order of the Roman senate. (Polyb., 18, 29, seq.) This place, as we learn from Athenaeus, was noted for the excellence of its flour and bread. (Sopat., Com. ap. Athen., 4, 50.) At one time it possessed a distinguished school of philosophy and dialectic, as we learn from Strabo (444.—Compare Diog. Laert., Vit. Arce.—Plut., 4, 12.—Steph. Byz., s. v. Ἐπέτρωπα). The ruins of Etruria are still to be observed close to a headland which lies opposite to the mouth of the Asopus in Thessaly, and gives the name of the gulf as Gavellinae. (Cramer's Anc. Greece, vol. 2, p. 196, seq.)—II. A demus of Attica. (Strab., 447.)—III. A town of Thessaly, near Pharsalus, and between that city and Pherrus. (Polyb., fragm., 18, 3, 5.—Liv., 33, 6.)

Eretum, a town of the Sabines, north of Numen- tum and northeast of Fidenae, and at a great distance from the Tiber. Its name frequently occurs in the Roman annals, as a place that is generally mentioned by Virgilius (7, 711), who enumerates it in his list of the Sabine towns which sent aid to Turnus. It was subsequently the scene of many a contest between the Romans and Sabines, league with the Etruscans. (Liv., 3, 29, Dion. Hal., 3, 59.) Hannibal, according to Caustus, the historian, when advancing by the Via Salaria towards Rome, to make a diversion in fa- vor of Capua, turned off at Eretum to pillage the temple of Peronia. In the time of Strabo's generation Eretum appears to have been little more than a village. (Strab., 229.) The modern Rimanile is supposed to occupy the site of the ancient Eretum, and not Monte Riondo, as was generally believed until the Abbé Chaupy pointed out the error. (Desc. de la maison d'Horace, vol. 3, p. 85.—Nibby, delle Vie degli Antichi, p. 89.—Cramer's Anc. Italy, vol. 1, p. 308.)

Erichthonius, one of the early Attic kings, and the immediate successor of Amphiction. He was fa- bled to have been the offspring of Vulcan and Minerva, a legend which we have explained under the arti- cle Cecrops. (Vid. remarks at the close of that arti- cle.) Not inconsistent with this account is the other tradition, which ascribes to Erichthonius the honour of having been the first to yoke four horses to a car; a remarkable circumstance in the barren land of Atti- ca, where the horse was reared with difficulty, and maintained at a considerable expense, and which was therefore the most expressive indication that could have been adopted, of the greater diffusion of wealth consequent on the successful cultivation of those arts and manufactures which began to flourish at this pe- riod. (Wordsworth's Greece, p. 95.)

Eriuca, one of the Lipari islands, now Varecua. (Vid. Ἑρίουκα.)

Eridanus, a river of Italy, in Cisalpine Gaul, called also Padus, now the Po. D'Anville states, that the name Eridanus, though a term for the entire river, was specially applied to the Ostium Spineticum, or Spinetic mouth, which last received its name from a very an- cient city in its vicinity, founded by the Greeks, and called Spina. Some writers consider the name Eridan- nus as coming, in fact, from a river in the north of Europe, the modern Rudaun, which flows into the Vistula near Danizie. Here the Phœnicians and Car- thaginians traded for amber, and their fear of rivalry in this lucrative trade induced them to keep the source of their traffic involved in so much obscurity, that it became, in time, the subject of poetical embellish- ment. The Rhodians, or Rhone, is thought by some to have received its ancient name from this circumstance, being confounded by the Greeks, in the in- fancy of their geographical knowledge, with the true stream. This probably arose from amber being found among the Gallic nations, to whom it may have come by an over-land trade. In like manner, amber being obtained afterward in large quantities among the Ve- neti on the Adriatic, induced the Greeks to remove the Eridanus to this quarter, and identify it with the Po, of which they placed their imaginary amber-islands, the Electrides. The Veneti obtained their amber in a similar way with the Gallic nations. Thus the true Eridanus, and the fable of Phaethon also, both refer to a northern origin; and a curious subject of discussion arises with regard to the earlier climate of the regions bordering on the Baltic, for remarks on which, vid. Phaethon. (Cic. in Afrat., 145.—Claudian, de Cons. Hon., 6, 156.—Curt., 3, 32.—Dion. Hal., 1, 3.—Lucan, 2, 409. Virg., G., 1, 482.)

Eriöene, daughter of Icarius. Her father having been taught by Bacchus the culture of the grape, and having made wine, gave of it to some shepherds, who, thinking themselves poisoned by the draught, killed him. When they came to their senses, they buried him; and his daughter Erione, being guided to the spot by her father's faithful horse Icarus, here built her dwelling. (Dion. Hal., 3, 14; 7, 7, Hyg., fab., 139.) Jupiter translated the father and daughter, along with the faithful Mars, to the skies: Icarius became Bôôtes; and Erione, Virgo; while the horse was changed, according to Hyginus (Post. Astron., 2, 4), into Pro- cyon; but, according to the scholarist on Germanicus (p. 128), into the Canis Major, which is therefore styled by Ovid (Fast., 4, 399), "Canis Icarus." (Prop., 2, 24, 24) calls the stars of the Greater Bear, "Boves Icarii." (Held, Sterrh., 48.)

Erinna, I. a poetess, and the friend of Sappho. She flourished about the year 356 B.C. All that is known of her is contained in the following words of Eustathius (ad Ill., 2, p. 337). "Erina was born in Lesbos, or in Rhodes, or in Teos, or in Telos, the little island near Cnidus. She was a poetess, and wrote a poem called 'the Distaff' (Χαλακρά) in the Ἑλληνική and Doric dialect: it consisted of 300 hexameter lines. She was the friend of Sappho, and died unmarried. It was thought that her verses rivalled those of Homer. She was only 19 years of age when she died." Chained by her mother to the spinning-wheel, Erinna had as yet known the charm of existence in imagination alone. She probably expressed in her poem the restless and aspiring thoughts which crowded on her youthful mind, as she pursued her monotonous work. We possess at the present day no fragments of Erinna. (Muller, Hist. Græc. Lit., p. 186.) II. A poetess mentioned by Eusebius under the year 354 B.C. This appears to be the same person who is spoken of by Pliney (34, 8), as having celebrated Myro in her poems. No frag- ments of her poetry remain. (Encycl. Us. Knocel, vol. 9, p. 508.)

Erinnyes, a name applied to the Furies, so that Erinnyes (Ἑρίνναιες) is equivalent to Dèra, or Furiae. Müller makes the Greek term Ἐρίνναιες indicate "a feel- ing of atonement, of bitter displeasure, at the impious vio- lation of our sacred rights, by those most bound to respect them." (Muller, Eumen., p. 186.) This perfectly accords with the origin of the Erinnyes in the Theogony, and with those passages of the Homeric poems in which they are mentioned; for they are there invoked to avenge the breach of filial duty, and are named as the punishers of perjury. (Hom., Il., 9, 454, 568.—Od. ix., 19, 258.) It is, verily, a mis- take to be not insulted with impunity (Od., 17, 475); and when a horse has spoken, in vio- lation of the order of nature, the Erinnyes deprive him of the power of repeating the act. (Il., 19, 418.) The Erinnyes, these personified feelings, may there- fore be regarded as the maintainers of order both in the moral and natural world. There is, however, an-
other view taken of these goddesses, in which they are only a form of Ceres and Proserpina, the great god-
desses of the earth. For everything in nature hav-
ing injuring as well as beneficial effects, the bounte-
onous earth itself becomes grim, as it were, and displeased
with mankind, and this is Ceres-Erinny. In the Ar-
cadian legends of the goddessas now in the choric
choregi of the Eumenides of Aeschylus, may be dis-
tinguished a dream of this nature. (Müller, Eumen., p. 191, seqq. —Keightley's Mythology, p. 196, seq.)

Eriphyle, a sister of Adrastus, king of Argos, who
married Amphiarous. She was daughter of Talaus and
Lysimaech. (For an account of the legend connected
with her name, consult the article Amphiarous.)

Eros, the Greek name for the goddess of Discord.
(Vol. ii. p. 341 seqq.)

Erisichthon, a Thessalian, son of Triops, who de-
herited Ceres, and cut down her sacred grove. This
impiety irritated the goddess, who afflicted him with
continual hunger. This infatiation gave occasion for
the exercise of the filial piety and power of self-trans-
formation of the daughter of Erisichthon, who, by her
assuming various forms, enabled her father to sell her
over and over again, and thus obtain the means of liv-
ing. This process was repeated, and a prince of
Anton. Lib., 17.). He was driven at last by hunger
to feed on his own limbs. (Ovid, Met., 8, 738, seqq. —
Tactz. ad Lyocopp., 1393. —Compare the account of
Callimachus, H. in Cerr., 32, seqq.)—This legend ad-
mits of a very simple explanation. Erisichthon is a
name akin to Erisie (i.e. pious) or "mildens;" and
Hellanicus (ap. Athan., 10, p. 416) said that he was
also called Ebenus (i.e. of the burning); from his in-
satiat hunger. The destructive madness is therefore the
enemy of Ceres, to whom, under the title of Ery-
siba, the Rhodians prayed to avert it. (Müller, Pro-
egorgam, 162. —Keightley's Mythology, p. 177.)

Eros, the god of Love, the same with the Cupid of
the Latin. This deity is unnoticed by Homer. In the
Theogony (v. 120) he is one of the first of beings,
and produced without parents. In the Orphic hymns
he is the son of Kronos. (Schol. ad Apoll. Rhod., 3,
26.) Sappho made him the offspring of Heaven and
Earth (Id. ib.), while Simonides ascribes the Love of
Venus and Mars for parents. (Id. ib.) In Olen's hymn
to Ilithyia (Pausan., 9, 27, 2), this goddess was termed
the mother of Love; and Alcaeus said, that "well-
sandedal Iris bore Love to Zephyrus of golden locks"
(ap. Plut., Amat., 20).—The cosmogonic Eros of
Hesiôd is apparently a personification of the principle
of attraction, on which the coherence of the material
world depends. Nothing was more natural than to
turn Venus the mother of Love; but the reason for so
calling Ilithyia, the goddess who presides over child-
birth, is not equally apparent: it was possibly meant
to express the increase of conjugal affections produced
by the birth of children. The making Love the off-
spring of the Westwind and the Rainbow would seem
to be only a poetic mode of expressing the well-known
fact, that the Spring, the season in which they most
prevail, is also that of Love. (Theog., 1275.) In the
bucolic and some of the Latin poets, the Loves are
spoken of in the plural number, but no distinct
offices are assigned them. (Theocrit., 7, 96. —Bion,
1, passim. —Horat., Od., 1, 19, 1.)—Thespis in Bood-
tia was the place in which Eros was most worshipped.
The Thespianus used to celebrate games in his honour
on Mount Helicon. These were called Erota. Eros
had also altars at Athens and elsewhere. The god of
love had been represented as a fair-haired boy, rosy and
naked, with light hair floating on his simuli-
ders. He is always winged, and armed with a bow and
arrows. Nonnus (7, 194) seems to represent his ar-
srows as tipped with flowers. The arrows of Cama, the
Hindu Eros, are thus pointed.—The adventures of
Eros are not numerous. The most celebrated is that
contained in the legend of Psyche. (Vid. Psyche.
—Keightley's Mythology, p. 146, seqq.)

Erycina, a surname of Venus, from Mount Eryx
in Sicily, where she had a temple. The Ercyinia
Venus appears to have been the same with the Phoe-
cnian goddess, who was connected with the Phoeni-
later people, and a temple erected to her on Mount
Eryx. In confirmation of this, we learn from Diodo-
rus Siculus, that the Carthaginians revered the Erycin-
ian Venus equally as much as the natives themselves.
(Diod. Sic., 4, 83.)

Erymanthus, 1. a mountain-chain in the northwest
angle of Arcadia, celebrated in fable as the haunt of
the savage boar destroyed by Hercules. (Apollod., 2,
1, 3. —Pausan., 8, 24. —Homer, Od., 6, 102.) Apollonius
places the Erymanthian monster in the wilds of
Mount Lampia; but this mountain, as we learn from
Pausanias (8, 24), was that part of the chain where
the river Erymanthus took its rise. The modern name
of Mount Erymanthus, one of the highest ridges in
Greece, is OlonoS. (Thuc. of the Morea, p. 122.)—II.
A river of Arcadia, descending from the mountain of
the same name, and flowing near the town of Phoepis.
After receiving the river Carinus, with whom called the
Arcadian river, it joins the Alpheus on the borders of
Elis. The modern name of the Erymanthus is the Dogana.
(Cramer's Ancient Greece, vol. 3, p. 320.)

Erythia, an island off the coast of Iberia, in the
Atlantic. It lay in the Sinus Gadiatanus, or Bay of
Cadiz, and was remarkable for its fertility. It was
called by the inhabitants Junonis Insula; and by later
writers, Aphrodisia. Here Geryon was said to have
reigned; and the fertility of the island seems to have
attracted the fable of his oxen. Vid. Hercules and
Geryon. (Plin., 4, 22. —Mela, 3, 6.) Many
commentators have agreed to identify with Erythea
the Island of Leôn. (Compare Classical Journal, vol. 3,
p. 140.)—II. A daughter of Geryon. (Pausanias, 10,
37.)

Erythra, one of the twelve cities of Ionia, situate
near the coast, opposite Chios. (Herodot., 1, 142.)
Its founder was said to have been Erythras, the son
of the king of Thessaly, who established himself here
with a body of Cretans, Carians, and Lycians. At a later
period came Cleopus, son of Codrus; with an Ionia-
n colony. (Stcyiez, p. 37.) The city did not lie exactly
on the coast, but some little distance inland: it had a
harbour on the coast named Kissus. (Lie., 36, 43.)
Erythra was famous as the residence of one of
the Sibyls at an early period, and in the time of Alex-
ander we find another making her appearance here, with
similar claims to prophetic inspiration. (Strabo, 643.)
According to Pausanias (10, 12), the name of the elder
Sibyl was Herophile. The same writer informs us,
that there was at Erythea a very ancient temple of
Hercules (7, 5). Either this city had disappeared at
the time Herocles wrote, or else he means it under the
name of Satrote (z&Pître\B), which he places near
Clazomenae, and which is mentioned by no other
writer. (Herod., p. 660.) According to Taverner (vol.
2, lett. 22), the modern name of (Itakata) occupies the
site of the ancient city: Chandler, however, found
the old walls some distance to the north of this, with
the name of Rythre still remaining. (Mannert, Geogr.,
vol. 6, pt. 3, p. 321, seqq.)

Erythreum Make, a name applied by the Greeks
to the whole ocean, extending from the coast of Ethi-
opia to the island of Taprobana, when their geo-
ographical knowledge of India was at first extended so
far. (Clav. vet. of Commerce and Navigation of
the Ancients, vol. 2.) They derived the name from
an ancient monarch who reigned along these coasts,
by the name of Erythras, and believed that his grave
was to be found in one of the adjacent islands. (Wahl
Arien, p. 316 and 636. —Agatharchidas, p. 4, Geogr.
ET E

Minos, ed. Hudson.—Ciceros, ed. Bähr, p. 359.—Cur
tius, 8, 9, 14.) Afterward, when the Greeks learned
the existence of an Indian Ocean, the term Erythraean
Sea was applied more generally below Arabia, and
to the Persian Gulf. In this latter sense Strabo uses the
name. Herodotus follows the old ac
testation of the word, according to the opinion prev-
alent in his age. The appellation was probably de-

tained from Edom (Esau), whose descendants were
Idumaeans, and inhabited the northern part of
Arabia. (Wahl, Asien, p. 316.) They navigated
upon the Red Sea and Persian Gulf, and also upon the
Indian Ocean; and the Oriental name Idumaean signi-

fying them is preserved in the Arabian name for the
Sea and the Erythraean Sea (النطور الديلاسس). Vide
Arabicus Sinus. (Curtil., 8, 9.—Plin., 6, 23.—He-
rodot., 1, 180, 189; 3, 93; 4, 37.—Melc., 3, 8.)

Eryx, I., a son of Butes and Venus, who, relying
upon his strength, challenged all strangers to fight with
him in the combat of the ceustus. Hercules accepted
his challenge after many had yielded to his superior
dexterity, and Eryx was killed in the combat, and
buried upon the slope of the mountain where he had built a temple
to Venus. (Virg., Aen., 5, 405.—II. A mountain of Sicily, at the western extremity of the island,
and near the city of Drepanum. It was fabled to have re-
ceived its name from Eryx, who was buried there. On
its summit stood a famous temple of Venus Erycina
(vid. Erycina), and on the western declivity was situ-
ted the town of Eryx, the approach to which from the
plain was rocky and difficult. At the distance of 30
stadion stood the harbour of the same name. (Polyb.,
1, 55 — Diod., 24, 8, 8; Cass. Verr., 2, 8.) The
Phoenicians most probably were the founders of the
place, and also of the temple; and the Erycian Ve-

cus appears to be identified with the Aretope of the
latter people. (Compare Diod., 4, 83.) The native
inhabitants in this quarter were called Elymi, and Eryx
is said by some to have been their king. (Diod., 4,
83.—Virg., Aen., 5, 759.—Hiem., Excerp., 2, ad En.,
5.—Apollod., 1, 9.—Id., 2, 6.—Hygin., fab., 260.)

Virgil makes Aeneas to have founded the temple: in
this, however, he is contradicted by other authorities.
Aeneas, in fact, never was in Sicily, and therefore
the whole is a mere fable. The town was destroyed
by the Carthaginians in the time of Pyrrhus, who a
short time previous had taken it by storm, and the
inhabitants were removed to Drepanum. (Diod., 22, 14.
—Id., 23, 9.) It soon, however, revived, owing to the
celebrity of the adjacent temple. In the first Punic
war it fell into the hands of the Romans (Polyb.,
1, 58.—Id., 2, 7), but was surprised by Barcas, the
Carthaginian commander, and the inhabitants who es-

caped the slaughter were again removed to Drepanum.
(Diod., 24, 2.) The place never recovered from this
blow: the sanctity of the temple drew, indeed, new
inhabitants around, but the city was never rebuilt.
No traces of the temple remain at the present day.
On the summit of the mountain, now called St. Giulia-

de, is an ancient castle, supposed to have been erect-
ded by the Elymi. (Manenti, Geogr., vol. 3, pt. 2,
p. 383, seqq.)

Esquilus and Esquillus, Mons, one of the seven
hills of Rome, added to the city by Servius Tullius,
who enclosed the greater part of it within the circuit
of his walls, and built his palace upon it, which he
continued to inhabit till the day of his death. We are
informed by Varro (L. L., 4, 8), that the Esquiline
depicted its name from the Latin word exculsus; in proof of
which he mentions several ancient sacred groves, such as the Locus Quer-
quetulanus, Fagutalis, and Esquillus. It was the
most extensive of the seven hills, and was divided into
two principal heights, which were called Cispius and
Cippus. The Campus Esquilinus was granted by the
senate as a burying-place for the poor, and stood with-
out the Esquiline gate. As the vast number of bodies
here deposited rendered the places adjoining very un-
healthy, Augustus gave part of it to his favourite Ma-
meenas, who点缀ed it with gardens and extensive
gardens, whence it became one of the most
healthy situations of Rome. (Horat., Sat., 8, 10,
seqq.—Id., Epod., 5, 100.) The Esquiline had the
honour of giving birth to Julius Caesar, who was born
in that part of the Suburra which was situated on this
hill. Here also were the residences of Virgil, of the
younger Pliny; and here were situate a part of Nero's
Golden house, and the palace and baths of the
Emperor Titus. The Esquiline, at the present day, is
the most extensive of the seven hills, and most

deserted of the three eastern hills of Rome. (Rome in
the 19th Century, vol. 1, p. 204, Am. ed.)

Eskhoden, a people of Sarmatia Asiatica, to the
east of the Palus Mæotis. Ptolemy, however, places
them in Serica, and in Scythia extra Imaun; while
Herodotus assigns them to the country of the Massa-
getas, and Pliny to Sarmatia Europaea. (Herod., 1,
201.—Id., 4, 25.—Plin., 6, 7.) Some writers seek
to identify them with the Cucuteni of the Dni. (Vid.
Issedones, and consult Bischoff und Möller, Würerb.
der Geograph., p. 485.)

Etruria, according to Strabo (430), that portion of
Thessaly which lies near Pindus, and between that
mountain and Upper Macedonia. The same writer
evertheless informs us (p. 437), that, according to some
authorities, this district was originally the country of
the Doriens, who certainly are stated by Herodotus
(1, 55) to have once occupied the regions of Pindus;
but that afterwards it took the name of Es-
tisots, from a district in Eubes, so called, the inhabi-
tants of which were transplanted into Thessaly by the
Perrhaebi. (Cramer's Anc. Greece, vol. 1, p. 352.)
Etruscus, a son of Ædipus and Jocasta. After
his father's death, it was agreed between him and his
brother Polynices that they should both share the
kingdom, and reign alternately, each a year. Eteocles,
by right of seniority, first ascended the throne; but, after
the first year of his reign was expired, he refused to give
up the crown to his brother according to their mutual
agreement. Polynices, resolving to punish so gross a
violation of a solemn engagement, fled to the court of
Aeadrasus, king of Argos, where he married Argia the
doughter of that monarch; and, having prevailed upon
Aeadrasus to espouse his cause, the latter undertook
what was denominated the Theban war, twenty-seven
years, as is said, before the Trojan one. Aeadrasus
marched against Ædipus with an army, of which he took
the command, having with him seven celebrated
chiefs, Tydeus, Amphaius, Capanes, Partenopeus,
Hippomedon, Eteocles son of Ædipus, and Polynices.
The Thebans who espoused the cause of Eteocles
were, Melanippus and Isamars, sons of Astacus, Poly-
chrones, Megareus, Lasthenes, and Hyperbius. All
the Argive leaders, with the exception of Aeadrasus,
fell before Ædipus, Eteocles also being slain in single
combat with Polynices. Ten years after the conclu-
sion of this war, Ædipus was put to death by the
clan chiefstains of Argos, who took up arms to
avenge the death of their sires. (Vid. Epigoni.) Lists
of the seven Arge commanders are given by
Æschylus in his "Seven against Ædipus;" by Eurip-
ides in his Phoenissae and Supplices; and by Sopho-

cles in his "Ædipus at Colonus." They all agree,
except that in the Phoenissae the name of Aeadrasus
is substituted for that of Eteocles. The tragic poets
also very generally allude to the four Ædipus

eripides, whom we have followed as to the age of
Eteo-
cles, makes him the elder of the two brothers; but
Sophocles, on the contrary, calls him the younger.
(Ed. Col., 1292.)

Eteocles, one of the seven chiefs of the army of
Aeadrasus, in his expedition against Ædipus. He was

490
EVA

killed by Megareus, the son of Creon, under the walls of Thebes. (Apollod., 3, 6.)

Etesian (Eρημαῖα), winds blowing every year (έτος) at a stated period, over the Aegaean Sea. They came from the north, and are hence sometimes called Eρυ- σιοι βορέιοι. The Etesian winds prevailed for forty days in the autumn. The Romans spoke of Etesian winds in the Indian Ocean, blowing from the south, by which he evidently means the monsoons. (Arrian, Exp. Alex., 6, 21.—Indic., 21.)

ETURIA. Vid. Etruria.

Eudocia, a daughter of Iphis or Iphicles of Argos, who slighted the addresses of Apollo, and married Cap- paneus, one of the seven chiefs who went against Thebes. When her husband had been struck with thunder by Jupiter for his blasphemies and impiety, and his ashes had been separated from those of the rest of the Argives, she threw herself on his burning pile, and perished in the flames. (Virg., Æn., 6, 447.—Propert., 1, 15, 21.—Stat., Theb., 12, 800.)

Evagoras, I, a king of Salamis in the island of Cy- prus, and a descendant of Teucer son of Telamon, the founder of that city. When Evagoras saw the light, the throne of Salamis was occupied by a Phoenician ruler, to whom he applied for aid by his eloquence. This Phoeni- cian was afterward slain by one of the leading chief- tains of the country, who thereupon usurped the supreme power, and endeavoured to seize Evagoras, whose right to the throne was an obstacle in the way of his ambition. Evagoras fled to Soli in Cilicia, assembled there a small band of followers, returned to Cy- prus, and, depositing the tyrant, mounted the throne of his ancestors. All this took place while the enfeebled empire of Persia was scarcely able to withstand the attacks of Cyrus; and this fact is mentioned by his aid was enabled to pre- pare a fleet, which restored the naval ascendency of his country. (Isocr., Evag., p. 200.—Xen., Hell. Gr., 2, 1, 19.—Corn. Nep., Vit. Con.—Diod. Sic., 14, 39.) Judging from the splendid panegyric passed upon his character by Isocrates, Evagoras was cer- tainly a prince of rare and distinguished virtue and merit; and his fortune for a time kept pace with his shining qualities. Unfortunately, however, he met with reverses towards the close of his reign. Artaxerxes Mmemon attacked his power, after the peace of Artaxerxes had left the Asiatic Greeks at the mercy of the Persian king. Evagoras was aided in his resistance to the Persian arms by Amasis of Egypt, and also se- cretly by the Aethiopians; but his efforts were unsuccess-ful, and he saw himself eventually compelled to renounce his authority over the other cities of Cyprus, and confine himself to Salamis, paying besides an annual tax to Persia. He was assassinated by a eunuch, five years after his accession to the throne of Cyprus. (Diod. B.C. 374. He was the son of Nicocles succeeded him. (Diod. Sic., 15, 2, seqq.)—II. Grandson of the preceding. Being deprived of his possessions by his uncle Protagoras, he fled to Artaxerxes Ochus, by whose order he was put to death. Evander, a son of the prophetess Carmenta, and king of Arcadia. An accidental murder obliged him to leave his country, and he came to Italy, where he drove the aborigines from their ancient possessions, and founded the city of Pallantium. After this he was afterward founded. (Vid. Italia.) He kindly re- ceived Hercules when he returned from the conquest of Geryon; and he was the first who raised him altars. He gave Æneas assistance against the Rutuli, and dis- tinguished himself by his hospitality. It is said that he first brought the Greek alphabet into Italy, and in- troduced there the worship of the Greek deities. (Vid. Pelasgi.) He was honoured as a god after death, and his subjects raised him an altar on Mount Aventine. (Vid. Pelasgi.)

Evans, a river of Asia Minor, flowing into the Euxine, to the southeast of Sinope. The name ap- pears to have been changed in process of time to Eve- chus. It formed the ancient boundary between Paph- lagonia and Cappadocia, or the White Syrians, who had spread themselves to the west of the Halys. (Man- nert, Geogr., vol. 6, pt. 3, p. 11.)

Evba, a large and celebrated island, lying along the coast of Leon, the alarm, and Attica. Its most an- cient name, as we learn from Strabo (444), was Ma- cris, which it obtained, as he affirms, from its great length in comparison with its breadth. Besides this, it was known at different times by the various appella- tions of Oche, Ellipia, Asopia, and Abantia. (Strab., l. c.—Plin., 4, 12.) The latter, which frequently oc- curs in the poets, was either derived from the Thra- cians, who had founded Aba in Phocis, and thence spread it into Abas in Achaia, and Æbes Aba in Abas. (Aristot., Ep. Strab., l. c.) Homer, as Strabo observes, though he designates the island by the name of Euboea, always employs the appellation of Abantes to denote the inhabitants. (II., 2, 536.—Ibid., 540.)

The name of Euboea originated traditionally from the passage of Io, who was even said to have given birth to Euphos in this island. (Heriod., Ep. Steph. Byz., a. v. 'Abeuterg.) Its inhabitants were among the ear- liest navigators of Greece, a circumstance which seems to confirm the notion preserved by Strabo of its hav- ing been occupied, in distant ages, by a Phoenician colony. We hear also of the Pelasgi and Dryopes being settled there. (Dion. Hal., 1, 55.—Diod. Sic., 4, 37.)

Herodotus affirms (1, 146), that the greatest part of the Ionian cities in Asia Minor had been col- onized by the Abantes of Euboea, who were not other wise, however, connected with the Ionians. This people also founded settlements, at an early period, in Libya, Sicily, and Cappadocia. (Strabo, 440.—Pau- sen., 5, 22.) Euboea, divided into a number of small independent republics, like the other states of Greece, presents no features for a common history. In fact, where each city requires a separate narrative, it is diffi- cult to embody what belongs to them collectively in one general account. Its fertility and abundant re- sources appear at an early period to have attracted the attention of the Athenian people, and to have inspired them with the desire of acquiring a territory situated so near their own, and adequate to the supply of all their wants. After the expulsion of the Pisistratidae, when the energy of the Athenian character had received a fresh impulse from the recovery of liberty, Athens readily availed itself of the pretence afforded by the Chalcidians, who occupied the principal city of the is- land, for invading Euboea, these having assisted the Boeotians in the war then carrying on against that pow- er. The Athenians, after defeating their nearest en- emy, suddenly crossed the Euphrus, and by routing the forces of the Chaione, seiz’d upon their territory, where they established four thousand of their own citizens as colonists. (Herodot., 5, 77.) They were obliged, how- ever, to evacuate this new acquisition, in order to defend their own country against a threatened attack of the Persian armament commanded by Datys and Artaphernes: nevertheless, they did not lose sight of the important advantages afforded by the possession of the island, and the assistance rendered by the Persian in- vasion had subsided, the maritime states of Greece united themselves into a confederacy, of which Ath- ens took the lead, and thus acquired an ascendency which proved so fatal to the liberties of those who

491
had unguardedly cemented that impolitic union. This
was peculiarly the case with the Eubcean cities, since we
learn from Thucydidcs (1, 114), that the whole is-
land acknowledged the supremacy and sway of Athens
prior to the Peloponnesian war; but neither that his-
torian nor Herodotus mentions the intervention of
and in whatsoever, their subjugation was effected.
On the Athenians being compelled, after their defeat at
Corones, to evacuate Boiotia, of which they had been
for some time masters, the Eubceans took advantage of
that circumstance to attempt emancipating them-
selves from a foreign yoke. But success did not at-
tend their eforts. As soon as the news of the revolt
had reached Athens, Pericles was despatched at the head
of a capable force to quell the insurrection, in which he
successed, not only from the superiority of his coun-
ting the frequent diversions made by the Peloponnesians in
favor of the islanders, that they were reduced to a
more abject state of submission than ever (Thucyd.,
1, 114); and it was not till the unfortunate Sicilian ex-
pedition had compelled Athens to fight for existence
rather than conquest, that the Eubceans ventured once
more to assert their right to independence (Thucyd.,
8, 6); but such was the want of zeal and energy dis-
playc by the multitude, that they obtained no aid from that quarter until nearly the ter-
mination of the twenty-first year of the war, when at
length Hegesandridas, a Spartan admiral, came to their
support, and gained a victory over the Athenian fleet;
the Eretrians then openly revolted, and their example
being quickly followed by the other towns, the whole
of Euboea recovered its independence. This island,
however, derived but little advantage from the change
which then took place. Each city, being left to its
own direction, soon became a prey to faction and civil
brol, which ended in a more complete slavery under
the dominion of tyrants. Towards the commence-
ment of the war between the Boeotians and Spartans,
we are told by Diodorus (15, 30), that the Eubceans
manifested a desire to place themselves once more
under the protection of Athens. Another party, how-
ever, having declared in favour of the Thebans, a civil
war ensued, which entirely exhausted both factions,
and forced them to make peace (16, 7). By the abil-
ity and judgment of Timotheus, the Athenian general,
a preponderance of opinion was decidedly created in
favour of that state (Demosth., de Cor., p. 108.—
7, p. 384), which continued until overthrown by the
arts and machinations of Philip. Phocion was emp-
owered by the Macedonian government to take all
the requisite measures for restoring tranquillity, and
he obtained some important successes over the Eubce-
ian forces; but it does not appear that much advan-
tage was ultimately derived from his victory. After
this period Euboea became attached to the Macedonian
interests, until it was once more restored to freedom
by the Romans, who wrested it from Philip, the son
of Demetrius. (Liv. 34, 51.)—This island, according to
Strabo (444), extends from the Malac Gulf along the
coast of Locris, Boiotia, and Attica, and from sixty
miles to about one thousand two hundred and sixty
miles; its greatest breadth nowhere exceeds one hundred and fifty stadia. (Compare Sclay, p. 23.) "Torn from the coast of
Bootia," says Pliny, "it is separated by the Euripus,
the breadth of which is so insignificant as to allow a
bridge to be thrown across. Of its two southern prom-
ontories, Gerestus looks towards Attica, Caphareus
towards the Hellespont; Cenaeum fronts the north. In
breadth it is at least 10,000, but in length it is nowhere less than two. Reaching from Attica to
Thessaly, it extends for one hundred and twenty
miles in length. Its circuit is three hundred and sixty-five.
On the side of Caphareus it is two hundred and twenty-
five miles from the Hellespont.—The abundance and
fertility of this extensive island in ancient times are
sufficiently attested by Herodotus, who compares it
with Cyprus (5, 31), and also by Thucydidcs (7, 28,
and 8, 96). Its opulence is also apparent from the
designation and value affixed to the talent, so frequent-
ly referred to by classic writers under the name of E-
bbox. We learn from Herodotus that it is subject to
frequent earthquakes, which he ascribes to the terri-
bercane cavities with which the whole island abounds
(447). The modern name of Euboea is Negropont,
formed, by a series of corruptions, from the word Eu-
ripus, which designated the narrow channel separating
the island from the Boeotian coast. (Cramer's An-
cient Greece, vol. 2, p. 121, seq.)

Eunoicus, belonging to Euboea. The epithet is also
applied to Cumea, because the temple was built by a col-
lony of Euboeans. (Orid. Pat., 4, 257.—Virg., En.,
6, 2; 9, 710.)

Eubulides, a native of Miletus, and successor of
Euclid in the Megarian school. He was a strong oppo-
ponent of Aristotle, and seized every opportunity of
censuring his writings and calumniating his character.
He introduced new subtleties into the art of dispu-
tation, several of which, though often mentioned as
proof of great ingenuity, deserve only to be remembered
as examples of egreous logic. Eubulides also taught modes
of reasoning, called by Aristotle Eristic syllo-
gisms, a few examples may suffice. 1. Of the soph-
ism, called from the example, The Lying : if, when
you speak the truth, you say, you lie; but: you say you lie
when you speak the truth; therefore, in speaking the
truth, you lie. 2. The Occult. Do you know your father? Yes. Do you know this man
who is veiled? No. Then you do not know your
father, for it is your father who is veiled. 3. Electa.
Electra, the daughter of Agamemnon, knew her broth-
er and did not know him: she knew Orestes to be her
brother, but she did not know that person to be her
brother who was conversing with her. 4. Sorites. Is
every grain a heap? No. Two grains? No. Three
grains? No. Go on, adding one by one; and if one
grain be not a heap, it will be impossible to say what
number of grains make a heap. 5. The Horned. You
have what you have not lost: you have not lost horns;
therefore you have horns. In such high repute were
these silly inventions for perplexing plain truth, that
Chrysippus wrote six books on the first of these soph-
isms; and Philetas, a Coan, died of a consumption,
which he contracted by the close study which he be-
stowed upon it. (Diog. Laer., 7, § 196—Enfield's
History of Philosophy, vol. 1, p. 199.)

Eucrates, a comic poet of Athens, born in the bor-
ough of Atrænas. He exhibited about B.C. 375. Eu-
clus, from his date, stood on the debatable ground
between the first and second species of comedy; and
to judge from the fragments in Athenaeus, who quotes
more than fifty of his comedies by name, he must
have written plays of both sorts. He composed, in all, 104
comedies. (Theatre of the Greeks, p. 119, 4th ed.)

Eucius, I. a painter, related, as is said, to Dædalus,
and who, according to Theophrastus (ap. Plin., 7, 56),
introduced painting to Greece. He was, however, a
figurative one for a skilful artist generally. (Euxipp.,
"skilful," "dexterus.")—II. A modeller, styled also Euchiris
(Pausan., 6, 4, 2), and one of the most ancient. He
and Eurgamnus are said to have accompanied Demaratus in his flight from
Corinth to Etruria. (Plin., 35, 12, 43.) Here again
both names are figurative.—III. An Athenian sculptor.
He made a statue of Mercury, which was placed at
Phenice; (Pausan., 14, 1, 5.) He placed, besides, places him among those artists who excelled in form-
ing brazen statues of combatants at the public games,
armed men, huntsmen, &c. On this account, Thiærc
correctly infers that he flourished in a later age. (Eppich, 11, Adnot, p. 33.)

Euculides, I. a native of Megara, founder of the Me-
garic or Eristic sect. Endowed by nature with a subtle and penetrating genius, he early applied himself to the study of philosophy. The writings of Parmenides first taught him the art of disputation. Hearing of a p. 198 Socrates, Euclid celebrated at once upon his instructions, and for this purpose removed from Megara to Athens. Here he long remained a constant hearer and zealous disciple of the moral philosopher. And when, in consequence of the enmity which subsisted between the Athenians and Megarians, a decree was passed by the former, that no inhabitant of Megara who should be seen in Athens should forfeit his life, he frequently came to Athens by night, from the tistle of it about twenty miles concealed in a long female cloak and veil, to visit his master at (Askell. 6, 10.) Not finding his natural propensity to disputation sufficiently gratified in the tranquil method of philosophizing adopted by Socrates, he frequently engaged in the business and disputes of the civil courts. Socrates, who despised forensic contests, expressed some dissatisfaction with his pupil for indulging a fondness for controversy. (Diog. Laert., 2, 30.)

This circumstance probably proved the occasion of a separation between himself and his former friend and teacher, which lasted for twenty-twelve years, and was only terminated when, after this time, at the head of a school in Megara (Diog. Laert., 3, 6), in which his chief employment was to teach the art of disputation. Debates were conducted with so much vehemence among his pupils, that Timon said of Euclid, that he had carried the madness of contention from Athens to Megara. (Diog. Laert., 6, 22.) That he was, however, capable of commanding his temper, appears from his reply to his brother, who, in a quarrel, had said to him, "Let me perish, I forbid you to revenge on me;" "and let me perish," returned Euclid, "if I do not subdue your resentment by forbearance, and make you love me as much as ever."—In disputation, Euclid was averse to the analogical method of reasoning, and judged that legitimate argumentation consists in deducing fair conclusions from acknowledged premises. He held that there is one supreme good, which he called by the different names of Intelligence, Providence, God; and that evil, considered as an opposite principle to the sovereign good, has no existence. The supreme good, according to Cicero, he defined to be, that which is always the same. In this doctrine, in which he followed the subtlety of Parmenides rather than the simplicity of Socrates, he seems to have considered good abstractedly as residing in the Deity; and to have maintained, that all things which exist are good by their participation of the first good, and, consequently, that there is, in the nature of things, no real evil.—It is said, that when Euclid was asked his opinion concerning the gods, he replied, "I know nothing more of them than that, they hate-iniquitous persons." If this epithet be justly ascribed to Euclid, it may serve to prove, either that he had learned, from the precepts of Socrates, to think soberly and respectfully concerning the Divine Nature, or that the fate of that good man had taught him caution in declaring his opinions. (Enfield's History of Philos-ophy, 2, 2.) If Euclid was a mathematician of Alexandria, considered by some to have been a native of that city, though the more received opinion makes the place of his birth to have been unknown. He flourished B.C. 280, in the reign of Ptolemys Lagus, and was professor of mathematics in the capital of Egypt. His scholars were numerous, and among them was Ptolemy himself. It is related, that the monarch having inquired of Euclid if there was not something of the art of mathematics less barbarous, and requiring less attention than the ordinary one, Euclid, though otherwise of an amiable character, dryly answered, that there was "no royal road to geometry." It is to this little incident that nearly all our knowledge of the particulars of his life is limited. Euclid was the first, in fact, who established a mathematical school at Alexandria, and it existed and maintained its reputation till theMohammedan conquest of Egypt. Many of the fundamental principles of the pure mathematics had been discovered by Thales, Pythagoras, and other predecessors of Euclid; but the merit of having given a systematical form to the science, especially that part of it which relates to geometry. He likewise studied the cognate sciences of Astronomy and Optics; and, according to Proclus, he was the author of "Elements," "Data," "An introduction to Harmony," "Phaenomena," "Optics," "Catoptrics," a treatise "On the division of Surfaces," "Porisms," &c. His most valuable work, "The Elements of Geometry," has been repeatedly published. All his works, except "Phaenomena," were in Latin, &c. He was the Savilian professor of astronomy, David Gregory. The edition of Peyrard, however, is entitled to the praise of being the best. It appeared at Paris in 1814 and some of the following years, in 3 vols. 4to. This edition is accompanied with a double translation, one in Latin and the other in French. M. Peyrard consulted a manuscript of the latter part of the ninth century, which had belonged to the Vatican library, and was at that time, lost in the French capital. By the aid of this he was enabled to fill various lacunae, and to re-establish various passages which had been altered in all the other manuscripts, and in all the editions anterior to his own. Hence Peyrard is the only one that has given a complete text of the "Elements" and "Data," for the "Phaenomena," and other works of Euclid, are rejected by him as spurious.—For some remarks on Euclid, consult Delambre, Hist. de l'Atstron. Ancien., vol. 1, p. 49, seqq., and the preface to Peyrard's edition.

Eudamidas, I. a son of Archidamus IV., brother to Agis IV. He succeeded to the Spartan throne, after his brother's death, B.C. 350. (Pausan., 3, 10.)—II. A son of Archidamus, king of Sparta, who succeeded B.C. 268.

Eudocia, I. a Roman empress, wife to Theodosius the Younger. Her original name was Athenais, and she was the daughter of Leontius, an Athenian philosopher; but on her marriage she embraced Christianity, and received the baptismal name of Eudocia. She was a female of beauty and talent. She put into verse several books of the Old Testament, and wrote several parables on some of the Jewish prophets, but became suspected by her husband of conjugal infidelity, and, being degraded, was allowed to seek a refuge in the Holy Land. Here she devoted herself to religious studies, but the jealousy of her suspicious husband still pursued her; and having learned that two priests, whom she had chosen, as the companions of her exile, were accosted to pay her frequent visits, and were loaded by her with presents, Theodosius sent Saturninus, one of the officers of his court, to Jerusalem, who put to death the two priests without even the formality of a trial. Irritated at this new insult, Eudocia caused Saturninus to be slain, a deed more likely to darken than avenge her innocence. The emperor contented himself with depriving her of all the badges of honor, and, after her marriage to a private individual. She lived twenty years after this event, in the bitterest peniten- tence, endeavouring to efface, by acts of piety, the crime which outraged honour had led her to commit. She died at the age of 67 years. (Le Beau, Hist. du Bas-Empire, vol. 7, p. 149.)

The principal work, ascribed by some to Eudocia, is Homoeocritra (Ойюекрітра), or a life of our Saviour, in 2413 hexameters, formed from the philosophy selected, or the poems of Homer. Others, however, ascribed one surnamed Patricius, who lived in the fifth century, its author. From a passage of Zonaras (Annal., vol. 3, p. 37), a leaf may be obtained for solving this difficulty. Pelagius would seem to have commenced the work in question, and Eudocia to have finished it. This princess has also, a
poem on the martyrdom of Cyprian. The best edition of the Home Eclectic that of Teucher, Lips., 1868, 5 vols.—II. The Younger, daughter of the preceding and of Theodotus II., married Valentinian III. After the assassination of her husband by Petronius Maximus, she was obliged to marry the usurper, Eudocius, out of indignation and revenge, called in Genesic, king of the Vandals, who came to Italy, plundered Rome, and carried Eudocius with him to Africa. Some years afterward she was sent back to Constantinople, where she died, A.D. 452.—III. The death of Constantine Ducas, married Romanus Diogenes, another of his distinctions, A.D. 1068, and associated him with her on the throne. Three years thereafter, Michael, her son, by means of a revolt, was proclaimed emperor, and caused his mother to be shut up in a convent, where she spent the rest of her life. She left a treatise on the genealogies of the gods and heroes, which displays an extensive acquaintance with the subject. It is printed in Vilainio's Anecdot Grecs, Venet., 1791, 2 vols. 410.

Eudoxus, I. a celebrated astronomer and geomctrician, born at Cnidian, who flourished about 370 B.C. He studied geometry under Archytas, and afterward, in the course of his travels, went to Egypt, and was introduced to the notice of Nectanebus II., and by him to the Egyptian priests. He is highly celebrated for his skill in astronomy by the ancients, though none of his writings on this or any other branch of science are extant. In this respect, there is an absurdity in the regular astronomy from Egypt to Greece, belongs to him. After his return from Egypt, he taught astronomy and philosophy with great applause at Cyzicus, and afterward removed to Athens, where he opened a school, and was in such high repute as to be consulted on subjects of policy as well as science by deputies from all parts of Greece. Eudoxus is said, in fact, to have supported his school with so much reputation as to have excited the envy of even Plato himself. Proclus informs us, that Euclid very liberally borrowed from the elements of geometry composed by Eudoxus. Cicero calls him the greatest astronomer that ever lived; and we learn from Petronius, that he retired to the top of a very high mountain, that he might observe the celestial phenomena with more convenience than he could on a plain or in a crowded city. Strabo says, that the observatory of Eudoxus was at Cnidian. Vitruvius speaks of a sundial constructed by him. (Dog. Log., 8, 86 seqq.—Cic. de Div. 2, 94—Petron. Arb., 88, 4—Strab., 119.—Vitruv., 9, 9.) He died B.C. 352. His works are lost, but they served as materials to Aratus for the composition of his poem entitled the Phaenomena. (Schöfl, Hist. Lit. Gr., vol. 3, p. 8.)—II. A native of Cynicus, sent by Ptolemy VII., Euergetes, on a voyage to India, and, some years after, on a second voyage by Cleopatra, widow of that prince. It appears that he subsequently attempted the circumnavigation of Africa. (For an account of his movements, consult remarks under the article Africa, page 79, col. 2.)

Euvemos. I. a name common to several epigrammatic poets, for some account of whom, consult Jacobs, Cat. Poet. Epig.—Anthol. Græc., vol. 13, p. 893.—II. A river of Etolia, rising, as Strabo (451) reports, in the country of the Hecatomneri, and which is accounted by the moderns a river of Eotia. Ptolemy says (p. 87) that it flowed from Mount Callidromus, meaning the chain of Cetis; which is sufficiently correct. Diemarchus, with less truth, affirms that it rises in Mount Pindus. (Stat. Græc., v. 61.) According to Strabo, it does not flow at first through the ancient Curetis, which is the district of Pleuron, but more to the east, by Chalcis and Calydon, after which it turns to the west, towards the plains in which the ancient Pleuron was situated; and finally, proceeding in a southerly direction, falls into the sea. Its more ancient name was Lykomarmos, or Strabo, I.,—Compare Apollodorus, 1, 7, 8. The Euvemos is rendered Euphrates by Proclus from the story of Nessus, who was slain here by Hercules for offering violence to Deioneira. The modern name of the river is the Fulbari. Near its mouth stood Missolonghi. (Cramer's Anc. Geœc, vol. 2, p. 75.)

Euergetes, a people of Upper Asia, whose true name was Arieans. The Greeks called them Euergetes, or benefactors, translating the Persian appellation, which, according to the name, and which Pherecius and Herodotus suspect from Herodotus (8, 85), to have been Orosanga. This title they are said to have received in return for succors afforded to the army of Cyrus, when it was suffering, in these regions, from cold and hunger. (Curt., 7, 3.) They dwelt near the river Eymander, the modern Hindmend (Arrian, Exp. Alex., 4, 6, 12), between Drangiana and Arachosia, and in the vicinity of the modern city of Deracsya, in whose name traces of the ancient one appear. (Compare Schmidt, ad Curt., l. c.)

Euergetes, a surname, signifying benefactor, given to Ptolemy III. and IV. of Egypt, as also to some kings of Syria, Pontus, &c.

Euganei, an ancient nation of Italy, said to have once occupied all the country to which the Veneti, its subsequent possessors, communicated the name of Venetia. (Livy, 1, 1.) Driven from their ancient abodes, they appear to have retired after the Adige (Adige) to their native country, to the eastern shore of the lakes Benacus and Issus, and in the adjacent valleys Pliny (5, 20) says, on the authority of Cato, that they held at one time thirty-four towns: these were admitted to the rights of Latin cities under Augustus. (Cramer's Anc. Italy, vol. 1, p. 74.)

Eugenius, I. a general who opposed Diocletian, A.D. 290; but was slain the very same day at the gates of Antioch, while attempting to make himself master of that city. —II. A usurper in the reign of Theodosius the Great, of Gallic extraction, A.D. 392. He was defeated, taken prisoner, and put to death, after having held power for two years. (Zosim., 4, 54, seqq.)

Euhemerus, a native of Messene, as is generally supposed, though, according to Brucker and others, he was from the island of Sicily. Being sent on a voyage of discovery by Cassander, king of Macedonia, he came, as he himself states, to an island called Panchaia, in which he resided, and which, Panormus, he found a temple of the Tripyllian Jupiter, where stood a column inscribed with a register of the births and deaths of many of the gods. Among these he specified Uranus, his sons Pan and Saturn, and his daughters Rhea and Ceres; as also Jupiter, Juno, and Neptune, who were the offspring of Saturn. Accordingly, the design of Euhemerus was to show, by investigating their actions, and recording the places of their births and burials, the mythological deities were mortal men, raised to the rank of gods on account of the benefits which they had conferred upon mankind. Ennius translated this celebrated work of Euhemerus, which was entitled 'Iepa 'Aravagraφ. The translation, as well as the original work, excepting some fragments, is lost; but many particulars concerning Euhemerus, and the object of his history, are mentioned in a fragment of the mythological deities were mortal men, raised to the rank of gods on account of the benefits which they had conferred upon mankind. Ennius translated this celebrated work of Euhemerus, which was entitled 'Iepa 'Aravagraφ. The translation, as well as the original work, excepting some fragments, is lost; but many particulars concerning Euhemerus, and the object of his history, are mentioned in a fragment of the mythological deities were mortal men, raised to the rank of gods on account of the benefits which they had conferred upon mankind. Ennius translated this celebrated work of Euhemerus, which was entitled 'Iepa 'Aravagraφ. The translation, as well as the original work, excepting some fragments, is lost; but many particulars concerning Euhemerus, and the object of his history, are mentioned in a fragment of the
EUMENES.

Human Human

be He distinguished himself in the funeral games of Patroclus. (H., 2, 714.—Id., 765, seqq.) —and contrivance of his own, it seemed highly probable that the translation of Ennius gave rise to the belief of many Roman philosophers, who maintained or insinuated their conviction of the mortality of the gods, and whose writings have been so frequently appealed to by Farmer, in his able disquisition on the prevalence of the Worship of Human Spirits. (Danlop's Roman Literature, vol. 1, p. 133.)

Éolos, a surname of Bacchus, given him, according to the poets, by Jupiter, whom he was siding in the contest with the giants. Jupiter was so delighted with his valour, that he called out to him, eü vie, "Well done, oh son!" Others suppose it to have originated from a cry of the Bacchantes, éëot. (Horat., Od., 1, 18, 9; 2, 11, 17.)

EULUS or CHOASPS, a river of Persia, flowing near the city of Susa. The kings of Persia, according to Herodotus (1, 198), drank of no other; and, whenever they went, they were attended by a number of four-wheeled carriages, drawn by mules, in which the water of this river, being first boiled, was deposited in vessels of silver. Ælian relates (V. H., 12, 40), that Xerxes, during his march into Greece, came to a desert place, and was exceedingly thirsty; his attendants with his baggage were at some distance, and proclamation was made, that whosoever had any of the water of the Choasps should produce it for the use of the king. One person was found who possessed a small quantity, but it was quite putrid. Xerxes, however, drank it, and considered the person who supplied it as his friend and benefactor, since he must otherwise have perished with thirst.—Wahl (Asien, p. 736) derives the name Choasps from the Persian khooz asp, i.e., “strength of the mountain,” “mountain-power,” and considered it as applicable to all mountain-streams. The appellation of Éolus, in Scripture Ulai (Daniel, 8, 2), is deduced by the Hebrews from the Pehlevi Õs Õs, which signifies “clean and pure water.” D'Anville supposes the Choasps to be the modern Karavan; but it is more probably the Abzal, which flows by the ruins which both Major Rennell and Mr. Kinneir have determined to be those of Susa.

EUMENES, son of Ctesius, king of Syria. He was carried off quite young by Phoenician pirates, and sold to Laertes, father of Ulysses, who brought him up carefully, and found in him a faithful follower and friend. Environed by the riches of his father and excited his master, on the return of the latter, though after an absence of many years. (Od., 14, 5, seqq.)

EUMÉLOS, I. a son of Admetus, king of Phœrus in Thessaly, by Alcestis, daughter of Pelias, and who married Iphithme the sister of Penelope. He went to the Trojan war, and had the fleetest horses in the Greek army. He distinguished himself in the funeral games of Patroclus. (H., 2, 714.—Id., 765, seqq.)—and contrivance of his own, it seemed highly probable that the translation of Ennius gave rise to the belief of many Roman philosophers, who maintained or insinuated their conviction of the mortality of the gods, and whose writings have been so frequently appealed to by Farmer, in his able disquisition on the prevalence of the Worship of Human Spirits. (Danlop's Roman Literature, vol. 1, p. 133.)

EUMENES, II. a native of Caddia, a town of the Thra- cian Chersonese, and, though of humble birth, yet an important actor in the troubled times which followed the death of Alexander the Great. Being early taken to the service of Philip of Macedon, he served him for some years. Alexander, for thirteen years, was the confidential office of secretary. He also displayed great talent for military affairs through the Persian campaigns, and was one of Alexander's favourite and most esteemed officers. After Alexander's death, in the general division of his conquests, Cappadocia, Paphla- gonia, and the coast of the Æuxine, as far east as Trep- zus, fell to Eumenes' share. This was an expectancy rather than a proviso, for the Macedonian army had passed south of these countries in the march to Per- sia, and as yet they were unsubdued. Perdicas, however, took arms to establish Eumenes in his new government, and did so at the expense of a single bat- tle. To Perdicas as regent, and, after his death, to the royal family of Macedon, Eumenes was a faithful ally through good and evil; indeed, he is the only one of Alexander's officers in whose conduct any appearance of gratitude or disinterestedness can be traced. When war broke out between Periander and Perdicas, B.C. 321, he was appointed by the latter to the chief command in Asia Minor, between Mount Taurus and the Hellespont (Corn. Nep., Vit. Eum.), to resist the expected invasion of Antipater and Craterus. The latter he defeated; but the death of Perdicas in Egypt threw the balance of power into Antipater's hands, who made a new allotment of the provinces, in which Eumenes was omitted, and Cappadocia given to another. The task of reducing him was assigned to Antigonus, about B.C. 320. The rest of his life was spent in open hostility to, or doubtful alliance with, Antigonus, by whom he was last put to death, having been delivered up to the latter by a portion of his own army. Eumenes was an admirable partisan soldier, brave, full of resources, and of unbowed spirit. We have his life written by Plutarch and Cornelius Nepos. (Consult Droysen, Geschichte der Nachfolger Alexanders, Hambl., 1886.) Those parts of Diodorus Siculus (18) which relate to him, and Plutarch's Life, will be read with pleasure by all who are fond of military adventure. (Encycl. U.S. Know., vol. 10, p. 68.—II. A king of Pergamus, the first of his name. He succeeded his uncle Philætæus on the throne, B.C. 263, and added much to the territory which he inherited from the latter, having even gained a victory, near Sardis, over Antiochus, son of Seleucus. After a reign of twenty-two years, he was succeeded by his son Attalus the Great, his legitimate heir. His son Apameus, the younger brother of Philætæus. The death of Eumenes was occasioned by his intemperate habits.—III. The second of the name, was son of Attalus I. He ascended the throne on his father's death, which took place at an advanced age, after a prosperous reign of 43 or 44 years. The new sovereign continuing to contend in his father's steps, and adhering to his policy, remained the firm friend of the Romans during all their revolutions. He married Pythias, daughter of Philip- pæus, and received from them, in recompense of his fidelity and valuable assistance, all the territory conquered from Antiochus on this side of Mount Taurus. Prior to this period the territory of Pergamus did not extend beyond the gulf of Elæa and Adramyttium. Waylaid by the hired assassins of Perses, king of Ma- cedomia, he had nearly perished at Delphi (Læo, 45, 14, seqq.), and yet he is represented by the Roman historian as subsequently favouring and countenancing the Corinthus' cause, of having thereby incurred the ill-will and anger of the Roman people. (Læo, 44, 13.—Id., 46, 1, seqq.) With that arrogant nation past services were reckoned as nothing, if they were not accompanied by the most abject and slavish dependance. The King of Pergamus employed him- self, during the leisure which a profound peace now afforded him, in embellishing his capital, and patron-
EUMENIDES, a city of Phrygia, north of Peltus, which probably derived its name from Eumenes, king of Pergamus. (Steph. Byz., s. v. Euphæsa.)

EUMENIDES (the kind goddesses), a name given to the Erinyes or Furies, goddesses whose business it was to avenge murder upon the defiler of human life. (Vitr., 3.) They are also called Semna (Sema) or "venerated goddesses." The name Eumenes is commonly thought to have been used through a superstitious motive. (Vid. Furius.)

EUMENIDIA, a festival in honour of the Eumenides or Furies. It was observed once a year with sacrifices and libations. At Athens none but freeborn citizens were allowed to participate in the solemnity, and of these, none but such as were of known virtue and integrity. (Vid. Eumolpus.)

EUMOLPUS (son of Benthesicyme) was the sacerdotal family or house, to which the priests of Ceres at Eleusis belonged. They claimed descent from the mythical Eumolpus. The Eumolpides had charge of the mysteries by hereditary right, and to this same sacerdotal line was expressly intrusted the celebration of the Thesmophoria. (Vid. Eumolpus, and consult Creuzer, Symbolik, vol. 4, p. 355, 412, 482, seqq.)

EUMOLPUS, son of Neptune and Chione, daughter of Alcamedes of Megara. Chione, to conceal her weakness, threw the babe into the sea, to the protection of his father. Neptune took him to Ethiopia, and gave him to his daughter Benthescyme to rear. When Eumolpus was grown up, the husband of Benthescyme gave him one of his two daughters in marriage; but Eumolpus, attempting to offer violence to the sister of his wife, was forced to fly. He came with his son Ismarus to Tegyrius, a king of Thrace, who gave his daughter in marriage to Ismarus. But Eumolpus, being driven by plots against hisegus, was once more forced to fly, and came to Eleusis. Ismarus dying, Tegyrius became reconciled to Eumolpus, who returned to Thrace, and succeeded him in his kingdom. War breaking out between the Athenians and Eleusinians, the latter invoked the aid of their former guest. A contest ensued, and, according to the account given by Apollodorus (3, 15, 4), Eumolpus fell in battle against Erechtheus. Pausanius, however, states (1, 28, 3), that there fell in this conflict, on the one side Erechtheus, and on the other Immerdos, son of Eumolpus; and that the war was ended on the following terms: the Eleusinians were to acknowledge the power of Athens, but were to retain the rites of Ceres and Proserpina, and over these Eumolpus and the daughters of Celues, king of Eleusis, were to preside. Other authorities, however, make the agreement to have been as follows: the descendants of Eumolpus were to have the Eleusinian temple of Eleusis, while the descendants of Erechtheus were to occupy the Attic throne. (Schol. msr. Arisid. ad Panathan., p. 118.—Creuzer, Symbolik, vol. 4, p. 344, note.)—Here we find a physical myth in union with an historical legend. It was a tradition in Attica, that the sacred family of the Eumolpides belonged to the mythic Thracians, whom we find sometimes on Helicon, sometimes in Thrace. The present legend, by making Eumolpus a son of the sea-god, and his father one of the north wind, and giving him a son named Iamarus, plainly intended to deduce the Eumolpides from Thrace, while the name Teggryus would seem to point to Beroia, where there was a town named Tegrya. (Keightley's Mythology, p. 383.)

EUNAPIUS, a native of Sardis in Lydia. He flourished in the fourth century, and was akinsman of the sophist Chrysanthus, at whose request he wrote the lives of the philosophers of his time. The work has been characterized by Brucker as a mass of extravagant tales, discoursing a feeble understanding, and an imagination prone to superstition. Besides being a sophist, he was an historian, and practised physic. He wrote a history of the Caesars from Claudius II. to Arcadius and Honorius, of which only a fragment remains. The lives of the philosophers was published with a Latin version by Junius, Ante., 1598, and by Cennelius in 1596.

EUPHORUS, a surname given to many of the Asiatic princes who were subjected to Mithradates VII. of Pontus, and Antiochus V. of Syria.

EUPATORIA, I. a town of Pontus, at the confluence of the Lycus and Iris. It was begun by Mithradates under the name Eupatoria, and received from Pompey, who finished it, the title of Magnopolis. (Strab., 556.) Its site appears to correspond with that of the modern Titeniek. (Mannert, Geogr., vol. 6, pt. 2, p. 471.)—II. A town in the northwestern part of the Tauric Chersonese, on the Sinus Caritines. It was founded by one of the generals of Mithradates, and is supposed to answer to the modern Koslos or Geolene. (Mannert, Geogr., vol. 4, p. 294.)

EUPHÄES, succeeded Androcles on the throne of Messenia, and in his reign the first Messenian war began. He died B.C. 730. (Pausan., 4, 5, 6.)

EUPHORBUS, a Trojan, son of Panthous, renowned for his valor; he wounded Patroclus, and was killed by Menelaus. (II., 17, 60.) Pausanius relates (2, 27, 7) that the town of Juno, near Mycenae, a votive shield was shown, said to be that of Euphorbus, suspended there by Menelaus. Pythagoras, who maintained the transmigration of souls, affirmed, that, in the time of the Trojan war, his soul had animated the body of Euphorbus; and as a proof of the truth of his assertion, he is said to have gone into the temple where the shield was hanging, and to have recognised and taken it down. Maximus Tyrius (Tyrius, 25, p. 285, ed. Dau.) speaks of an inscription on the shield, which he said it to have been offered by Menelaus to Minerva. Ovid (Met., 15, 160) lays the scene of the fable in the temple of Juno at Argos; while Tertullian (de Anima, p. 215) makes the shield to have been an offering at Delphi. Diogenes Laertius, finally, gives the temple of Apollo among the Branchides, near the city of Miletus, as the place where the wonder was worked (8, 4, seq.)

EUVORIAS, a tragic poet of Athens, son of Echylus. He conquered for thirty times with posthumous tragedies of his father's composition, and also wrote several dramas himself. One of his victories is commemorated in the argument to the Medea of Euripides, where we are told that Euphorion was first, Sophocles second, and Euripides third with the Medea. Olymp, 87, 2, B.C. 431. (Suid.—Theatre of the Greeks, p. 95, 4th ed.)—II. An epic and epigrammatic poet, born at Chalais in Euboea, B.C. 276, and lived till 200 B.C. He began his life as an Antithetor, and finished it as a sophist. He wrote various poems, entitled "Hestiod," "Alexander," "Arius," "Apollodorus," &c. His "Mopsopha" or "Miscellaneae" (Mopopha & ἰδακτα) was a collection, in five books, of fables and histories relative to Attica, a very learned work, but rivalling in obscurity the Cassandra of Lycophron. The fifth book bore the title of "Chialid" (Χιαίλης), either because it consisted of a thousand verses, or because it contained the ancient oracles that referred to a period of a thousand years. Perhaps, however, each of the five books consisted...
tained a thousand verses, for the passage of Suidas re-
respecting this writer is somewhat obscure and defective,
and Eudoxia, in the "Garden of Violets," speaks of a 
fifth Chilid, entitled Περὶ Χαρακτῆρος, "Of Oracles." 
Quintilian recommends the reading of this poet, and 
Vigil is said to have esteemed his productions very 
highly. A passage in the tenth Eclogue (v. 50, seqq.),
and a remarkable passage by Servius (ad Elog., 6, 72),
have led Heyne to suppose, that C. Cornelius Gallus,
the friend of Virgil, had translated Euphorion into 
Latin verse. This poet was one of the favourite 
authors of the Emperor Tiberius, one of those whom he 
imitated, and whose busts he placed in his library. 
The fragments of Euphorion were collected and pub-
lished by Meineke, in his work "De Euphorionis 
Chalc. vita et scriptis," Gedani, 1823, 8vo. (Schöll, 
Hist. Lit. Gr., vol. 3, p. 122.)

Euphrosyne, an eminent stationary and painter of Cor-
inthia, flourished about the 104th Olympiad, B.C. 
302. Pliny gives an enumeration of his works. (Plin., 
35, 8, 19.—Compare Pausan., 1, 3, 2, and the remarks 
of Fuseli, in his Lecture on Ancient Painting, p. 67.)

Euphrates, I. a native of Eubea, and a disciple of Plato. 
He quitth Athens for the court of Perdiccas, king of 
Macedonia, with whom he became a favorite. 
After the death of this monarch he re-
turned to his country, and headed a party against Phil-
ip, the successor of Perdiccas and father of Alexander. 
Being shut up, however, within the walls of E. O. 
he put an end to his own life. According to some,
he was killed by order of Parmenio.—II. A Stoic 
philosopher, and native of Alexandria, who flourished 
in the second century. He was a friend of the phi-
losopher Apollonius Tyaneus, who introduced him to 
Vespasian. Pliny the younger (Epist., 1, 10) gives 
a very high character of him. When he found his 
strength worn out by disease and old age, he volunta-
arily put an end to his life, by drinking hemlock. 
Rising first, for some unknown reason, obtained permis-
sion from the Emperor Hadrian. (Engfeld, Hist. Phi-
los., vol. 2, p. 119, seqq.)—III. One of the most con-
siderable and best known rivers of Asia. The 
Euphrates rises near Arze, the modern Erze-Ro\nun. Its source is among mountains, which Strabo makes to be 
a part of the most northern branch of Taurus. At 
first it is a very inconsiderable stream, and flows to the 
sea; but, until, encountering the mountains of Cappa-
docia, it turns northeastward, and after running at short 
distance, receives its southern arm, a large river com-
ing from the east, and rising in the southern declivity 
of the range of Mount Ararat. This southern arm of 
the Euphrates is the Arasias, according to Maennert, 
and is the river D'Anville mentions as the Euphrates 
which the ten thousand crossed in their retreat (Arab., 
4, 5), and of which mention is made by Pliny in re-
ference to the campaigns of Corbulon. The Euphrates, 
upon this accession of waters, becoming a very 
considerable stream, descends rapidly, in a bending 
course, nearly W.S.W. to the vicinity of Samos-
ta. The range of Amanus here preventing its farther 
progress in this direction, it turns off to the S.E., 
a course which it next pursues, with some little va-
riation, until it reaches Cireccus. To the south 
of this place it enters the immense plains of Semnan; 
but, being repelled on the Arabian side by some sandy 
barriers, it is forced to run again to the S.E. and approach the Tigre. In this part of its course, as the two rivers now approximate to one another, the 
intermediate land loses its elevation, and is occupied by 
meadows and morasses. Several artificial communi-
cations, perhaps two or three which are natural, form 
a preamble to the approaching junction of the rivers, 
which finally takes place near Coma. The river 
formed by their junction is called Shat-al-Abor, or the 
river of Arabia. It has three principal mouths, be-
side a small outlet; these occupy a course of thirty-
six miles. The southernmost is the deepest, and freas 
in its current. Bars of sand, caused by the river, and 
which change in their form and situation, render the 
approach dangerous to the mariner. The tide, which 
rises above Basora, and even beyond Coma, meeting 
with violence the downward course of the stream, 
raises its waters in the form of frothy billows.—Some 
of the ancients describe the Euphrates as losing itself 
in the lakes and marshes to the south of Babylon. 
(Arranx, 7, 7—Malas, 40.)—The Euphrates, with the 
river of Babylon, is continued without interruption to 
the sea. But uncertainty must always prevail with 
respect to this and other points connected with the 
Euphrates, both from the inundations of the river, 
which render this flat and moveable ground continually 
liable to change, as well as from the works of human labour. The whole 
length of the Euphrates, including the Shat-al-Abor, 
is 1147 English miles. Its name is the Greek form of 
the original appellation Phratrh, which signifies fruitful 
or fertile. Some moderns have considered the 
river of Babylon, to have been denominated from the 
Ortian article. The Oriental name is sometimes 
also written Perath, as in Gen., 2, 14, 15, 18, 
and Joshua, 1, 4. By the Arabs the river is called 
Forat. The epithet fertile is applied to it by Lucan, 
Sallust, Solinus, and Cicero. The modern name 
of the Arasias is Moral-Siay, or the waters of desire. 
(Malte-Brun, vol. 2, p. 109, seqq., Am. ed.)

Euphrosyne (Joy), one of the Graces, sister to 
Aglaia, and the mother of Sisyphus. (Pausan., 1, 
29.)

Eupolis, a writer of the old comedy, was born 
at Athens about the year 416 B.C. (Clinton, Fast. 
Hell., vol. 1, p. 63.) He was therefore a contemporary 
of Aristophanes, who, in all probability, was born 
a year or two after Eupolis is supposed to have 
existed for the first time in B.C. 429. In B.C. 425 he 
as third with his Νομουρίας, when Cratinus was sec-
tond, and Aristophanes first. In B.C. 421 he brought 
out his Μαρσαλίακας and his Κόλακας of the 
Dionysiacs; the latter is occasionally referred to 
by Aristophanes, under the name of the Πυθνός 
Eupolos, whose name is sometimes written Εύπολος, 
or Εύπολος, is a name which appears to be of Persian 
origin, and suggests a connection with the name of 
the Persian tyrant of that name, whom Aristophanes 
attacked in his Eupolos, a writing of his own invention. 
This appears to have been a satire, toward the 
annual festival of the Dionysiacs, and to be a 
vita of Eupolos, by the Greek painter, who, in a 
satirical allusion to his baldness. (Schol. in Aristoph., 
Nub., 552, 592.—Athen., 5, p. 216.—Schol. in Aristoph., 
Pac., 803.) The titles of more than twenty of his comedies 
are lost. A few fragments remain. Eupolis was a bold 
and severe satirist on the vices of his day and 
city. Persius (1, 124) terms him "ira-
sum." (Compare Hort., Sat., 1, 4, 1, seqq.) In the 
Márciaucus he attacked Hyperbolus. (Aristoph., 
Nub., 551.) In the Δίονυσιος he ridiculed the handsome 
pancraetist of that name; in the Αριστοπράτορος, 
which was probably a paquinade, he dashed the useless 
and cowardly citizens of Athens, and denounced 
Memathus as an epicure. In the Βαρταλ in 
which he inveighed against the effeminacy of his countrymen. (Schol. in 
Aristoph., Pac., 808.) In his Διανεμέονας he assailed 
Cimon, accusing him, among other charges, of the 
patriotic bias towards foreign Sparta. (Compare 
Hort., Sat., 1, 4, 1, seqq.) He was probably 
think that this play had a great influence on the public feeling.) 
Aristophanes seems to have been on bad terms with Eupolis, whom he 
charges with having pillaged the materials for his 
Μαρσαλίακας from the Πυθνός (Nub., 551, seqq.), and 
with making scurrilous jokes on his premature baldness. 
(Schol. ad Nub., 532.) Eupolis appears to have been a 
warm admirer of Pericles as a statesman and as a 
meter (Schol. ad Aristoph., Acharn., p. 794, Dionys.), 
as it was reasonable that such a comedian should be, if it 

---
to that he owed his unrestrained license of speech to the patronage of that celebrated minister. His death was generally ascribed to the vengeance of Alcibiades, whom he had lampooned, probably in the Barshiah. (Cicero, ad Att., 6, 1.) By his orders, according to the common account, Eupolis was thrown overboard during the passage of the Athenian armament to Sicily (B.C. 415). Cicero, however, calls this story a vulgar error; since Eratosthenes, the Alexandrian librarian, had shown that several comedies were composed by Eupolis some time after his death and assigned to this pseudo-assassination. His tomb, too, according to Pausanias, was erected on the banks of the Asopus by the Sicyonians, which makes it most probable that this was the place of his death. (Theatre of the Greeks, p. 102, seq., 4th ed.)

Euripides. I. a celebrated Athenian tragic poet, son of Mnesarchus and Clito, of the borough Phyla, and the tribe Cercopis. (Diog. Laert., 2, 48.—Suidas, s. v. Eupol.—Compare the Life by Thom. Magister, and the anonymous Life published by Elmsey.) He was born Olymp. 75, 1, B.C. 480, in Salamis, on the very day of the Grecian victory near that island. (Plut., Symph., 8, 1.) His mother Clito had been sent over to Salamis, with the other Athenian women, when Attica was given up to the invading army of Xerxes; and the name of the poet, which is formed like a patronymic from the Euripus, the scene of the first success of the Athenian fleet, shows that the minds of his parents were full of the stirring events of that momentous crisis. Aristophanes repeatedly imputes meanness of extraction, by the mother's side, to Euripides. (Thermoph., v. 386.—Ibid., v. 455.—Acharn., v. 478.—Egup., v. 17.—Rana, v. 840.) He asserts that she was an herb-seller; and, according to Aulus Gellius (15, 20), Theophrastus confirms the comedian's sarcastic insinuations. Philochorus, on the other hand, in his long story, shows his bias in proving that the mother of our poet was a lady of noble ancestry. (Suidas, s. v. Eupol.) Moschopulos also, in his life of Euripides, quotes this testimony of Philochorus. A presumptive argument in favour of the respectability of Euripides, in regard to birth, is given in Athenaeus (10, p. 424), where he tells us Οινοϕονεν τε παρα τοις αρχαιοισ εις ενεγενοται παιδει a fact which he instances in the son of Menelaus and in Euripides, who, according to Theophrastus, officiated as a boy in the army of Athens. This may be considered as one of the most distinguished Athenians in the festival of the Delian Apollo. Whatever one or both his parents might originally have been, the costly education which the young Euripides received intimates a certain degree of wealth and consequence as then at least possessed by his family. The pupil of Anaxagoras, Protagoras, and Prodicus (an instructor so notorious for the extravagant terms which he demanded for his lessons), could not have been the son of persons at that time very mean or poor. It is most probable, therefore, that his father was a man of property, and made a marriage of disparagement. In early life we are told that his father made Euripides direct his attention chiefly to gymnastic exercises, and that, in his seventeenth year, he was crowned in the Eleusinian and Thessalian contests. (Aul. Gell., 15, 20.) The scholiast of Euripides ascribes this determination, which was scarcely within his power, to the fact that when his wife was pregnant of the future dramatist, wherein he asserted that the child

και στρεφεται λευχων δικαιων και φιλαδελφων.

This he interpreted of gymnastic glory and garlands. It does not appear, however, that Euripides was ever actually a candidate in the Olympic games.—The genius of the young poet was not dormant while he was occupied in these merely worldly accomplishments; and even at this early age he is said to have attempted dramatic composition. (Aul. Gell., 15, 20.) He seems to have also cultivated a natural taste for painting. (Thom. Mag., in Vit. Vit. Anonym. Vit. Moschop.) Some of his pictures were long afterward preserved at Megara. At length, quitting the gymnasia, he applied himself to philosophy and literature. Under the celebrated rhetorician Prodicus, one of the instructors of Pericles, he acquired that oratorical skill for which his dramas are so remarkably distinguished. It is on this occasion that Aristophanes tauntingly terms him συγκεκατευκομενος (Pax., 534). He likewise repeatedly ridicules him for his 'αντιλόγια, λογομοι, and στροφαλ (Rana, 775); his περίστασια, σφιχισματα, &c. Quintilian, however, in comparing Sophocles with Euripides, strongly recommends the latter to the young pleader as an excellent instructor. Cicero, too, was a great admirer of Euripides, perhaps more so for the oratorical excellence commended by Quintilian. He was no less a favourite with his brother Quintus. (Ep. ad Fam., 16, 8.)—From Anaxagoras he imbibed those philosophical notions which are occasionally brought forward in his works. (Compare Valseniera, Diatribe, 4, 5, 6.—Boutou, de Philos. Euripides, published in Miscell. Grec. Dramat., p. 163, seqq., Grant, Cambridge.) Here, too, Pericles was his fellow-disciple. With Socrates, he had studied under the same master, Euripides was on terms of bref equality with the clever philosopher, who occasionally associated with him. The moral gnomes so frequently interwoven into his speeches and narrations. Indeed, Socrates was even suspected of largely assisting the tragedian in the composition of his plays.—Euripides began his public career as a dramatic writer, Olymp. 81, 2, B.C. 455, in the twenty-fifth year of his age. On this occasion he was the third with a play called the Plaides. In Olymp. 84, 4, B.C. 441, he won the prize. In Olymp. 87, 2, B.C. 434, he exhibited the Medea, the Bacchae, the Hippolytus, and the Tiridates, and the Theristis, a satyrical drama. His competitors were Euphorion and Sophocles. He was first with the Hippolytus, Olymp. 88, 1, B.C. 428, the year of his master's (Anaxagoras's) death: second, Olymp. 91, 2, B.C. 415, with the Alexander (or Paris), the Palamedes, the Troades, and the Stephus, a satyrical drama. It was in this contest that Xenocles was first. (Ehian, v. H., 2, 8.) Two years after this the Athenians sustained the total loss of their armament before Cumae, and Euripides, at the close of the day, gave an anecdote (Vit. Nic.), which, if true, bears a splendid testimony to the high reputation which Euripides then enjoyed. Those among the captives, he tells us, who could repeat any portion of that poet's works, were treated with kindness, and even set at liberty. The same author also informs us that Euripides honoured the soldiers who had fallen in that siege with a funeral poem, two lines of which he has preserved. The Andromeda was exhibited Olymp. 92, 1, B.C. 412; the Orestes, Olymp. 93, 1, B.C. 408. Soon after this time the poet retired into Magnesia, and from thence into Macedonia, to the court of Archelaus. As in the case of ,Scychus, the motives for this self-exile are obscure and uncertain. We know, indeed, that Athens was by no means the most favourable residence for distinguished literary merit. The virulence of rivalry raged unchecked in the licensed press, and the unbridled critical multitude would not afford the most satisfactory patronage to a high-minded and talented man. Report, too, insinuates that Euripides was unhappy in his own family. His first wife, Mclito, he divorced for adultery; and in his second, Cherila, he was not more fortunate on the same score. To the poet's unhappiness in his matrimonial connexions Aristophanes refers in his Rana (v. 1045, seqq.). Envy and envy among his fellow-citizens, infidelity and domestic vexations at home, would prove no small inducements to
EURIPIDES.

the poet to accept the invitations of Archelaus. Perhaps, too, a prosecution in which he became involved, on a charge of impiety, grounded upon a line in the Hippolytus (Aristot., Rhet., 3, 15), might have had some share in producing this determination to quit Athens; nor ought we to omit, that, in all likelihood, his contemporaries would have felt a partial and imminent danger. In Macedonia he is said to have written a play in honour of Archelaus, and to have inscribed it with his patron’s name, who was so much pleased with the manner and abilities of his guest as to appoint him one of his ministers. He composed in this same country also some other dramatic pieces, in one of which (the Bacche) he seems to have been inspired by the wild scenery of the land to which he had come. No letter of art caused so much of Euripides, except a few apocryphal anecdotes and apothegms. His death is said to have been, like that of Æschylus, in its nature extraordinary. Either from chance or malice, the aged dramatist was exposed, according to the common account, to the attack of some ferocious hounds, and by them so dreadfully mangled as to expire soon afterward, in his seventy-fifth year. This story, however, is clearly a fabrication, for Aristophanes in the Frogs would certainly have alluded to the tragic poet if it had been, as it has, so memorable in markable in it. He died B.C. 406, on the same day on which Dionysius assumed the tyranny. (Clinton, Fast. Hel., vol. 1, p. 81.) The Athenians sent Archelaus to send the body to the poet’s native city for interment. The request was refused, and, with every demonstration of grief and respect, Euripides was buried at Pella. A cenotaph, however, was erected to his memory at Athens.—If we consider Euripides by himself,” observes Schlegel (vol. 1, p. 198, scq.), “without any comparison with his predecessors; if we select many of his best pieces, and some single passages of others, we must bestow extraordinary praise upon him. On the other hand, if we view him in connexion with the history of his art; if in his pieces we always regard the whole, and particularly his object, as generally displayed in those which have come down to us, we cannot forbear blaming him strongly, and on many accounts, for which he is few, so much good and so much ill may be said with truth. His mind, to whose ingenuity there were no bounds, was exercised in every intellectual art; but this profusion of brilliancy and amiable qualities was not governed in him by that elevated seriousness of disposition, or that rigorous and artist-like moderation, which we revere in Æschylus and Sophocles. He always strives to please alone, careless by what means. Hence he is so unequal to himself. He sometimes has passages overpoweringly beautiful, and at other times sinks into real lowness of style. With all his faults, he possesses astonishing ease, and a sort of fascinating charm. —We have some cutting sayings of Sophocles concerning Euripides, although the former was so void of all the jealousy of an artist that he mourned over the death of the latter; and, in a piece which he shortly after brought upon the stage, did not allow his actors the ornament of a garland. I hold myself justified in applying to Euripides particularly, those accusations of Plato against the tragic poets, that they gave up men too much to the power of the passions, and made them effeminate by putting immoderate lamentations into the mouths of their heroes, because their groundlessness would be too clear if referred to his predecessors. The jeering attacks of Aristophanes are well known, but have not always been properly estimated and understood. Aristotle brings forward a reason why Euripides was so well pleased with what he called Euripides the most tragic of poets (Poet., 13, 10), he by no means ascribes to him the greatest perfection in the tragic art generally; but he means, by this phrase, the effect which is produced by unhap- py catastrophes; since he immediately subjoins ‘al though he does not arrange the rest well.’ Lastly, the scholar on Euripides contains many short and solid critiques on single plays, among which may possibly be preserved the judgments of the Alexandrian critics, of whom Aristarchus, by his soundness and acuteness, may be considered as one, he should be rarely restored. In signify a genuine critic. In Euripides we no longer find the essence of ancient tragedy pure and unmixed; its characteristic features are already partly effaced. These consist principally in the idea of destiny which reigns in them, in ideal representation, and the importance of the chorus. The idea of destiny had, indeed, come down from his predecessors as his inheritance, and a belief in it is inculcated by him, according to the custom of the tragedians; but still, in Euripides, destiny is seldom considered as the invisible spirit of all poetry, the fundamental thought of the tragic world. It will be found that this idea may be taken in a severe or mild point of view; and that the gloomy fearfulness of destiny, in the course of a whole trilogy, clears up, till it indicates a wise and good providence. Euripides, on the other hand, drew it from the regions of infinity, and, in his writings, inevitable necessity often degenerates into the caprice of chance. He is therefore more often sublime, namely, that of elevating, by its contrast, the moral free-will of man. Very few of his pieces depend on a constant combat against the dictates of destiny, or an equally heroic subjection to them. His men, in general, suffer, because they must, and not because they are willing. The contrasted subordination of ideal loftiness of character and passion, which in Sophocles, as well as in the graphic art of the Greeks, we find observed to the order, are in him exactly reversed. In his plays passion is the most powerful; his secondary care is for character; and if these endeavours leave him sufficient room, he seeks now and then to bring in greatness and dignity, but more frequently amiability. The dramatic persons of a tragedy cannot be all alike free from faults, as otherwise hardly any strife could take place among them, and consequently there could be no complication of plot. But Euripides has, according to this opinion, Euripides (Aristotle, Poet., 15, 7.—Arist., Dict., 26, 31), frequently represented his heroine as bad without any necessity; for example, Menelaus in the Orestes. Tradition, hallowed by popular belief, reported great crimes of many ancient heroes; but Euripides, from his own free choice, falsely imputes to them traits at once mean and malicious. More especially, it is by no means his object to represent the race of heroes as pre-eminent above the present one by their mighty stature, but he rather takes pains to fill up as to arch over the chasm between his contemporaries and that wondrous olden time, and secretly to espy the gods and heroes of the other side in their undress; against which sort of observation, as the saying goes, no man, however great, can be proof. His manner of representation, as it were, presumes to be intimate with them: it does not draw the supernatural and the fabulous into the circle of humanity, but into the limits of an imperfect individual. This is what Sophocles meant when he said that he himself represented men as they should be, Euripides as they were. Not as in his own characters could always be held up as patterns of irreproachable behaviour: his saying referred to their ideal loftiness of character and manners. It seems to be a design of Euripides always to remind his spectators, ‘See, those beings were men; they had just such weaknesses, and acted from exactly the same motives that you do, that the meanest of them would have made you write and write as you do; he, in his place, and where he calls Euripides the most tragic of poets (Poet., 13, 10), he by no means ascribes to him the greatest perfection in the tragic art generally; but he means, by his phrase, the effect which is produced by unhap-
an unessential ornament; its songs are often altogether episodical, without reference to the action; more glittering than energetic or really inspired. 'The chorus,' says Aristotle (Poet., 18, 21), 'must be considered as one of the actors, and as a part of the whole; I must endeavour to give in a degree which cannot be concealed even to a dramatic poet. Thus, for example, he seldom lets any opportunity escape of having his personages seized with sudden and groundless terror; his old men always complain of the infirmities of old age, and are particularly given to mount, with tottering knees, the ascent from the orchestra to the stage, which frequently, too, represented the declivity of a mountain, while they lament their wretchedness. His one and only design is to make, for the sake of which he not only offends against decorum, but sacrifices the connexion of his pieces. He is forcible in his delineations of misfortune; but he often lays claim to our pity, not for some internal pain of the soul, a pain too retiring in its nature, and borne in a manly manner, but for mere corporeal suffering. He likes to reduce his heroes to a state of beggary; makes them suffer hunger and want, and brings them on the stage with all the exterior signs of indigence, covered with rags, as Aristophanes so humorously throws in his teeth in the Acharnians (v. 410–448).—Euripides had visited the schools of the philosophers, and takes a pride in alluding to all sorts of philosophical theories; in my opinion, in a very imperfect manner, so that one cannot understand these instructions unless one knows them beforehand. He thinks it too vulgar to believe in the gods in the simple way of the common people, and therefrom draws a conclusion, on every opportunity, to unsound something of an allegorical meaning, and to give the world to understand what an equivocal sort of creed he has to boast of. We can distinguish in him a twofold personage: the poet, whose productions were dedicated to a religious solemnity, who stood under the protection of religion, and must therefore honour it on that account likewise, and the sophist, with philosophical pretensions, who, in the midst of the fabulous miracles connected with the stage, drew from the subjects of his pieces, endeavoured to bring out his sceptical opinions and doubts. While on the one hand he shakes the foundations of religion, on the other hand he plays the part of a moralist; in order to become popular, he applies to the heroic ages what would hold good only of the social relations of his contemporaries. He strews up and down a multitude of moral maxims, in which he contradicts himself, that are generally trite and often entirely false. With all this ostentation of morality, the intention of his pieces, and the impression which, on the whole, they produce, is that he has an extremely immoral. It is related of him, that he made Bellerophon come on the stage with a contemptible panegyric on riches, in which he preferred them before every domestic joy; and said, at last, 'If Venus (who had the epithet of golden) shone like gold, she would indeed deserve the love of men.' (Seneca, Epist., 115.) The audience, enraged at this, raised a great tumult, and were proceeding to stone the actor as well as the poet. Euripides, on this, rushed forward and exclaimed, 'Wait patiently till the end; he will fare accordingly.' Thus also he is said to have excused himself against the accusation, that his Ixion spoke too abominably and blasphemously, by replying, that, in return, he had not concluded the piece without making him revolve on the wheel. But this shift of poetic justice, to stone for the representation of wickedness, does not take place in all his dramas. The bad frequently escape; lies and other knavish tricks are open to him. A part of them, he may falsely attributes to them noble motives. He has also great command of that treacherous sophistry of the passions which gives things only one appearance. The following verse (Hippol., 608) is notorious for its apologue for perjury; indeed, it seems to express what casuists call moral reservation:

'My tongue took an oath, but my mind is unworn.'

In the connexion in which this verse is spoken, it may indeed be justified, as far as regards the reason for which Aristophanes ridicules it in so many ways; but still the formula is pernicious on account of the turn which may be given it. Another sentiment of Euripides (Phæmis, 534), 'It is worth while committing injustice for the sake of empire, in other things it is proper to be just,' was continually in the mouth of Cæsar, in order to make a wrong application of it. (Sueton., Vit. Cæs., 39.—Compare Cic., de Off., 3, 1.)—*Euripides* had also invented an article of accusation against Euripides among the ancients. Thus, for example, it must excite our indignation when Hecuba, in order to stir up Agamemnon to punish Polynestor, reminds him of the joys Cassandra had afforded him; who, having been taken in war, was his slave, according to the law of the heroic ages: she is willing to purchase revenge for a murdered son, by consenting to and ratifying the degradation of a daughter who is still alive. This poet was the last to take for the principal subject of a drama the wild passion of a Medea, or the unnatural love of a Phædra; as, otherwise, it may be easily understood, from the manners of the ancients, why love, which among them was far fewer emboldened by delicate feelings, played merely a subordinate part in their earlier tragedies. Notwithstanding the importance imparted to female characters, he is notorious for his habit of speaking of women only in contempt, and he brings out a great multitude of sayings concerning the weaknesses of the female sex, and the superiority of men, as well as a great deal drawn from his experience in domestic relations, by which he doubtless intended to pay court to the men, who, although they did not compose the whole of the public to which he addressed himself, yet formed the most powerful portion of it. A cutting saying, as well as an epigram, of Sophocles, 'That Athenian sentiment to the effect that he had drawn down to us, in which he explains the pretended hatred of Euripides for women by supposing that he had the opportunity of learning their frailty through his own unhallowed desires. In the whole of Euripides' method of delineating women, we may perceive, indeed...
EURIPIDES.

great susceptibility even for the more lofty charms of womanly virtue, but no real respect. —That independent freedom in the method of treating the story, which was one of the privileges of the tragic art, frequently, in Euripides, degenerates into unbounded caprice. It is well known that the fables of Hyginus, which are the subject-matter of most of his extant prologues, are partly extracted from his pieces. As he often over- turned what had hitherto been well known and generally received, he was obliged to use prologues, in which he announces the situation of affairs according to his acceptation, and makes known the course of events. (Compare the amusing scene in Aristophanes, Rana, 1177, seqq., and Porson's explanation of the employment of such prologues by Euripides, Pherecydes in Euripides, Endymion, p. 272 seqq.) Then, among the beginnings of the plays of Euripides very uniform; it has the appearance of, great deficiency of art when somebody comes out and says, 'I am so and so; such and such things have already happened, and this is what is going to happen.' This method may be compared to the labels coming out of the mouths of the figures in old pictures, which can only be excused by the great simplicity of their antique style. But then, all the rest is Euripidean. This is the way he deals with Euripides, whose personages discourse according to the newest fashion of the manners of his time. In his prologues, as well as in the dénouement of his plots, he is very lavish of unmeaning appearances of gods, who are elevated above men only by being suspended in a machine, and might very easily be spared. He pushes to excess the method which the ancient tragic writers have of treating the action, by throwing everything into large masses, with repose and motion following at stated intervals. At one time he unreasonably prolongs, with too great fondness for vivacity of dialogue, that change of speakers at every verse which was usual even with his predecessors, in which questions and answers, or reproaches and replies, are shot to and fro like darts; and this he sometimes does so arbitrarily, that half of the lines might be dispensed with. At another time he pours forth long, endless speeches; he endeavours to show his skill as an orator in its utmost brilliancy, by ingenious syllogisms, or by exciting pity. Many of his scenes resemble a suit at law, in which two persons, who are the parties opposed to one another, or sometimes in the presence of a third person as judge, do not confine themselves to what their present situation requires; but, beginning their story at the most remote period, accuse their adversary and justify themselves, doing all this with those turns which are familiar to pleaders, and frequently with those which are usual among scyphtans. Thus the poet attempted to make his poetry entertaining to the Athenians by its resemblance to their daily and favourite pursuit, carrying on and deciding, or at least listening to, lawsuits. On this account Quintilian particularly recommends him to the young orator, who may learn more by studying him than the older tragedians; an opinion marked with his usual accuracy. But it is easy to see that such a recommendation conveys no higher recompense. And the more frequent they find are in the drama when it is suitable to the capacity and object of the person who is speaking; but when rhetoric steps into the place of the immediate expression of the soul, it is no longer poetical. —The style of Euripides is, on the whole, not compressed enough, although it presents us with some very happily-drawn pictures and ingenious turns of language; it has neither the dignity and energy of Eschylus, nor the chaste grace of Sophocles; it is more frequent that his expression aims at the extraordinary and strange, and, on the other hand, loses himself in commonplace; and too often the tone of his speeches becomes quite every-day, and descends from the height of the buskin to level ground. For these reasons, as well as on account of his almost ludicrous delineation of many characteristic peculiarities (such as the clumsy deportment of Pen- theus in a female garb, when befooled by Bacchus (Bacchae, v. 762, seqq.), or the greediness of Hercules (Alexis 3, v. 764, seqq.), and his boisterous demands on the hospitality of Admetus), Euripides was a fore- runner of the new and arbitrary spirit of fashion, of the incipient, inclination, since, under the names belonging to the age of heroes, he frequently paints real personages of his own time. Menander also expressed an extraordinary admiration for him, and declared himself to be his scholar; and there is a fragment of Philemon, full of such extravagant admiration of him that it almost seems to be intended as a jest. 'If the dead,' he says, or makes one of his personages say, 'really possessed sensation, as, indeed, I suppose myself in order to see Euripides.' The sentiments of the more ancient Aristophanes, his contemporary, form a striking contrast to the veneration which the later comic writers had for him. Aristophanes reproaches or banters him for lowering the dignity of tragedy, by exhibiting so many heroes as whining and tattered beggars (Rana, v. 841, 1063. —Acharn., 393, seqq. —Pax, v. 147); by introducing the vulgar affairs of the poor and mean (Rana, v. 1078. —Pax, v. 532); and by the loquacity of all his personages, however low their rank or unsuitable their character might be. He charges his dramas with an immoral tendency (Rana, v. 850, 1043, 1063. —Nubes, v. 1371), and himself with contempt for the gods and fondness for new-fangled doctrines. (Rana, v. 887, seqq.) He laughs at his affectation of philosophy and rhetoric. (Rana, v. 815, 826, 966, 970, 1073, 1076.) Aristophanes, indeed, persecutes him indefatigably and inexorably; he was ordained to be, as it were, his perpetual scourge, that none of his vagaries in morals or in art might remain uncensured. Although Aristophanes, as a comic dramatist; is, by means of his parodies, the foe of the tragic poets in general, yet he nowhere attacks Sophocles; and even in the places in which he fastens on the weak side of Eschylus, his reverence for him is manifest, and he everywhere opposes his gigantic proportions to the petty ingenuity of Euripides. He has laid open, with immense understanding and inexhaustible wit, his sophistical subtlety, his rhetorical and philosophical pretensions, his immorality and seductive effeminacy, and the merely sensual emotions he excites. As modern judges of art have for the most part esteemed Aristophanes to be nothing better than an extravagant and sardonic buffoon, I add, moreover, that his scrupulousness and the art of translating the humourous dress he gives subjects into the truths which lie at the bottom, they have attached but little importance to his opinion. —After all that has gone before, we must not lose sight of the fact, that Euripides was yet a Greek, and a contemporary, too, of many of the greatest men that Greece possessed in politics, philosophy, history, and the graphic art. If, when compared with his predecessors, he stands far below them, with many, and perhaps far above them. He is particularly strong in the representation of a tempered and erring mind, given up to its passions to a degree of phrensy. (Longinus, 15, 3.) He is excellent when the subject leads principally to emotion, and has no higher claims; and still more on occasions when even moral beauty demands pathos. Few of his pieces are without single passages that are charmingly beautiful. Take him altogether, it is evident that he claims extraordinary talents; I only maintain that they were not united to a disposition honouring the rigour of moral principles and the holiness of religious feelings above everything else. (Theatre of the Greeks, 2d ed., p. 133, seqq.) Of the 120 dramas which Euripides is said to have composed, 501
we have remaining at the present day only eighteen tragedies and one satyr play. The following are the titles and subjects: 1. Ἐκάθεν, Hecuba. The sacrifice of Polyxena, whom the Greeks immolate to the memory of Achilles; and Orestes, who has doubly been reduced to captivity and deprived of her children, takes upon Polynemus, the murderer of her son Polydorus, form the subject of this tragedy. The scene is laid in the Grecian camp in the Thracian Chersonese. The shade of Polydorus, whose body remains without the rites of sepulture, has the prologue assigned to it. Ennius and L. Accius, and in modern times Erasmus of Rotterdam, have translated this play. According to others, they purchased this compliance for the sum of five talents. The subject of the Medea was a favourite one with the dramatic writers of former times, and has proved no less so with the moderns. Among the former may be mentioned Neophoron of Sicily, Eonius, Paeonius, Accius, Ovid, and Seneca; among the latter, Ludovico Dolce, Glover, Corneille, and others. Medea, the daughter of the temple of Phoenissae, and Hippolytus were also given an Italian version of it; several passages have been rendered into French by La Harpe; Racine owes it to some fine verses in his Andromache and Iphigenia, and Voltaire has imitated some parts in his Mérope.—2. Οἰνότης, Orestes. The scene of this play is laid at Argos, the seventh day after the murder of Clytemnestra. It is on this day that the people, in full assemblage, are to sit in judgment upon Orestes and Eletra. The only hope of the accused is in Menelaus, who has just arrived; but this prince, who secretly aims at the succession, stirs up the people in private to pronounce sentence of condemnation against the patrides. The sentence is accordingly pronounced, but the execution of it is left to the culprits themselves. They meditate taking vengeance by slaying Helen; but this princess is saved by the intervention of Apollo, who brings about a double marriage, uniting Orestes with Hermione, the daughter of Menelaus, and Eletra with Pylades. This dénouement is unworthy of the tragedy. The piece, moreover, is full of comic and satiric traits. Some commentators think they recognize the person of Socrates in that of the simple and virtuous citizen who, in the assembly of the people, undertakes the defence of Orestes. This play is ascribed by some to Euripides the younger, nephew of the former.—3. Φωνισσά, Phoenissae. The subject of this piece is the death of Eteocles and Polynices. The chorus is composed of young Phoenician females, sent, according to the custom established by Agenor, to the city of Thebes, in order to be consecrated to the service of the temple at Delphi. The prologue is assigned to Jocasta. Grotesu regards the Phoenissa as the chef-d'oeuvre of Euripides: a more elevated and heroic tone prevails throughout than is to be found in any other of his pieces. The subject of the Phoenisse is that also of the Thebae of Seneca. Statius has likewise imitated it in his Phoebus and Phoenissa. Hermione in the first two acts of his Antigone.—4. Μέδεα, Medea. The vengeance taken by Medea on the ungrateful Jason, to whom she has sacrificed all, and who, on his arrival at Corinth, abandons her for a royal bride, forms the subject of this tragedy. What constitutes the principal charm of the piece is the simplicity and clearness of the action, and the force and natural cast of the characters. The exposition of the play is made in a manner imitated in his in the charm and Notoro in the first two acts of his Antigone.—5. Αλκασία, Alcestis. The subject of this tragedy is moral and affecting. It is a wife who dies for the sake of prolonging her husband's existence. Its object is to shew, that conjugal affection and an observance of the rites of hospitality are not suffered to go without their reward. Hercules, whom Admetus had kindly received while unfortunate, having learned that Alcestis, the wife of the monarch, had consummated her mournful sacrifice, seeks her in the shades, and restores her to his abode. The subject is beautiful. The others of Euripides, the introduction of comic traits into a tragic subject is open to just criticism. Although the character of Hercules is interesting and well-drawn, and though the play, in general, offers many beauties, it is, notwithstanding, regarded as one of the most feeble productions of our authors.—7. Αν- ρομάκα, Andromache. The death of the son of Achilles, whom Orestes slays, after having carried off from the field of battle him Hermione, the charming and amiable princess, is laid in Thetidum, a city of Thessaly, near Pharsalus. Some have pretended, that the aim of Euripides in writing this tragedy was to render odious the Pharsalia of the Athenians which permitted bigamy. (Consult Reflexions sur l'Andromaque d'Euripide et sur l'Andromaque de Racine, par Louis Racine, in the Mem. de l'Acad. des Inscrip. et Belles-Lettres, vol. 8, p. 300; and by the Abbé Batteux in the same collection, vol. 42, p. 452. Consult also the work of Aug. Wilhelm Schlegel, Paris, 1805, 8vo, "Comparaison entre la Phoebre de Racine et celle d'Euripide." 8. Αλκάστη, Alcistis. The subject of this tragedy is moral and affecting. It is a wife who dies for the sake of prolonging her husband's existence. Its object is to shew, that conjugal affection and an observance of the rites of hospitality are not suffered to go without their reward. Hercules, whom Admetus had kindly received while unfortunate, having learned that Alcestis, the wife of the monarch, had consummated her mournful sacrifice, seeks her in the shades, and restores her to his abode. The others of Euripides, the introduction of comic traits into a tragic subject is open to just criticism. Although the character of Hercules is interesting and well-drawn, and though the play, in general, offers many beauties, it is, notwithstanding, regarded as one of the most feeble productions of our authors.—7. Αν- ρομάκα, Andromache. The death of the son of Achilles, whom Orestes slays, after having carried off from the field of battle him Hermione, the charming and amiable princess, is laid in Thetidum, a city of Thessaly, near Pharsalus. Some have pretended, that the aim of Euripides in writing this tragedy was to render odious the Pharsalia of the Athenians which permitted bigamy. (Consult Reflexions sur l'Andromaque d'Euripide et sur l'Andromaque de Racine, par Louis Racine, in the Mem. de l'Acad. des Inscrip. et Belles-Lettres, vol. 10, p. 311.) Racine, in the preface to his Andromache, holds the following view. "Euripides, in this piece, has been, and, indeed, the subject which he has adopted in his own piece. "Andromache, dans Euripide, crieant pour la vie du Molossos, qui est un fils qu'elle a eu de Pyrrhus, et qu'Hermione veut faire mourir avec sa mere. Mais ici il ne s'agit point de Molossos. Andromache ne connait pas d'autre mari qu'Hector, ni d'autre fils qu'Asymanes. J'ai cru en cela me conformer à l'idée
EURIPIDES.

que nous avons maintenant de cette princesse. La plupart de ceux qui ont entendu parler d'Andromaque ne la connaissent que pour la veuve d'Hector, et pour la mère d'Antanyax. On ne croit pas qu'elle doive aimer un autre mari ni un autre fils; et je doute que les larmes d'Andromaque eussent fait sur l'esprit de mes spectateurs l'impression qu'elles ont faites, si elles eussent été de nos jours, ou que celle qu'elle avoit d'Hector. It is easy to perceive from this how much the French poet has ennobled by the change the character of his heroine.—8. *Iktéreus, Suppliecs, "The Female Suppliants."*

The scene of this tragedy is laid in front of the temple of Ceres at Eleusis, whither the Argive females, whose husbands have perished before Thebes, have followed their king Adrastus, in the hope of engaging Theseus to take up arms in their behalf, and bid the gods to come from their shrines to the help of the Argives. The Argives and their allies, deprived of terrors and of hope, were withheld by the Thebans. Theseus yields to their request and promises his assistance. In exhibiting this play the third year of the 90th Olympiad, the fourteenth of the Peloponnesian war, Euripides wished, it is said, to detach the Argives from the Spartan cause. His attempt, however, failed, and the treaty was signed by which Mantinea was sacrificed to the ambition of Lacedaemon. The exposition of this piece is called by the French author—"it is as simple and splendid, and made without the intervention of an actual prologue; for the monologue by which *Aethra,* the mother of Theseus, makes known the subject of the piece, is a prayer addressed to Ceres, in which the recital naturally finds a place.—9. *Ilybeyevna ÿ ev Kóchó, Iphigenia in Aulis," Iphigenia at Aulis." The subject of this tragedy is the intended sacrifice of Iphigenia, and her rescue by Diana, who substitutes another victim. It is the only one of the tragedies in which there has not proceeded in the *prologue,* which is that it is not known, that the *Rheus,* which is also deficient in this respect, had one formerly. Hence Musgrave has conjectured that the present play had also once a prologue, in which the exposition of the piece was made by Diana; and *Elian (Hist. An., 7, 39)* cites a passage of the Iphigenia which we do not now find in it, and which could only have been pronounced by Diana; it announces what she intends to do for the purpose of sacrificing Iphigenia. Echschátâ, however, would maintain, that the Iphigenia which we at present have could not have been furnished with a prologue, since, if it had been, this prologue ought to have contained the recital which is put in the mouth of Agamemnon at verse 49, *seqv.* Hence Böck concludes, that there were two tragedies with this name, one written by Euripides and having a prologue, the other composed by Euripides the younger, and which is also the one that we now possess. (*Eichstätt, de Dram. Grecorum Comico-Satyrico,* p. 99.—Böck, *Greca Tragediae Principis,* &c., p. 216.—Consult also Bremi, Philol. Beiträge aus der Schweiz, p. 143, and Jacobso, *Zusätze zu Sulzer,* vol. 5, pt. 2, p. 401.) Racine has made the story of Iphigenia the subject of one of his chefs-d'œuvre. (*Consult the Comparison de l'Iphigene de Euripide avec l'Iphigene de Racine, par Louis Racine, in the Mem. de l'Acad. des Inscrip.,* &c., vol. 9, p. 298.) It has also been treated by Ludovico Dolce and by Retrou.—10. *Ilybeyevna ÿ ev Párcaus, Iphigenia in Tauride," Iphigenia in Tauire." The daughter of Agamemnon, rescued by Diana from the knife of the sacrificer, and transported to Tauire, there serves the goddess as a priestess in her temple. Orestes has been cast on the inhospitable shores of this country, along with his friend Pyladès, and by the laws of Tauris they must be sacrificed to Diana. Recognised by his sister at the fatal moment, Orestes conducts her back to their common country. A monologue by Iphigenia occupies the place of a prologue and exposition. The scene where Iphigenia and her brother became known to each other is of a deep and touching interest: nevertheless, Guimond de la Touche is said, in this respect, to have surpassed his model. —11. *Tróades, "The Trojan females."* The action of this piece is prior to that of the *Thebe.* The scene is laid in the Grecian camp, under the walls of Troy, which has fallen into the hands of the foe. A body of Trojan veterans, have been distributed not among the victors. A grandson of Theseus, named Casandra for herself; Polyxena has been immolated to the manes of *Achilles;* Andromache has fallen to Neoptolemus, Hebeia to Ulysses. The object of the poet is to show us in Hebeia a mother bowed down by misfortune. The Greeks destroy Astyanax, and his mangy body is brought in to the mother of Hector, his own parent being by this time carried away in the train of Neoptolemus. Ithum is then given as a prey to the hero. This scene, which is accompanied by a mournful review before the eyes of the spectator; yet there is no unity of action to constitute a subject for the piece, and consequently the play has no dénouement. Neptune appears in the prologue. Seneca and M. de Chateaubrun have imitated this tragedy.—12. *Búchasat, Buxch,' "The female Bacchanians."* The arrival of Bacchus at Thebes and the death of Pentheus, who is torn in pieces by his mother and sib- lings,—is the subject of this piece. Bacchus opens the scene and makes himself known to the spectators. Brunoy regards this as a satyric drama; in this, however, he is mistaken, as the chorus of satyrs can never be dispensed with in such compositions. The action of the Bacche is very defective: it is a success of rich paintings, of tragic situations, of brilliant verses, connected together by a very feeble interest. The spectacle which this tragedy presented must have been at once imposing and well calculated to keep the eye of the spectator on the stage. (Ezamén de la tragédie des Bacchantes, in the Théatre des Grce, by Roaul-Rochette, vol. 9, p. 376.) There is some probability for supposing that we have this play in a second edition.—13. *Hraklián, Heraklidia.* The descendants of Hercules, persecuted by Eurytheus, flee for refuge to Athens, and implore the protection of that city. The Athenians lend aid, and Eurytheus becomes the victim of the vengeance he has brought upon himself. The return of Hercules, the subject of this tragedy, explains the situation to the spectators. The poet manages to impart an air of great interest to the piece.—14. *Elixen, Helena.* The scene is laid in Egypt, where Menelaus, after the destruction of Troy, finds Helen, who had been detained there by Proteus, king of that country, when Paris wished to convey her to Ithum. Euripides follows in this the account of Herodotus, to which he adds some particulars of his own that border on romance. The action passes at the isle of Pharos, where Theoclymenus, the son and successor of Proteus, keeps Helen in custody with the view of expounding her. She employs a stratagem in order to escape from his power. The dénouement of this piece resembles that of the *Iphigenia in Tauris.—15. *Iex, Ion.* Ion, son of Apollo and Creusa, daughter of Erechtheus, king of Athens, has been brought up among the priests at Delphi. The design of Apollo is to make him pass for the son of Xuthus, who has married Creusa. The interest of the piece consists in the double danger which Creusa and Ion run; the former of being slain by Ion, and the latter of perishing by the poison prepared for him by a mother who is igno- rant of his being her son. The play, however, is somewhat complicated, and has need of a long exposition, which is assigned to Mercury. The scene is laid at the entrance of Apollo's temple in Delphi, a place expressly chosen in order to give an air of pomp and solemnity. A religious tone, full of gravity and softness, pervades the whole piece. There is much resemblance between this tragedy and the *Athais* of Racine.—16. *Hraklián maúativos,* 503.
EURIPIDES.

Hercules furens. After having killed, in his phrenesy, his wife and children, Hercules proceeds to submit himself to certain expiatory ceremonies, and to seek repose at Athens. Amphiagnosis appears in the prologue: the scene is laid at Thèbes.—17. Ἡλέκτρα. Electra. The subject of this piece has been treated almost as a ἀθέλον τῆς ἀθέλους, but alone, in a manner peculiarly his. Euripides transfers the scene from the palace of Ἐγίσθαυνος the country near Argos: the exposition of the play is made by a cultivator, to whom Electra has been compelled to give her hand, but who has taken no advantage of this, and has respected in her the daughter of a royal line. On comparing Euripides with Sophocles, we will find him inferior to the latter in the manner of treating the subject: he has proceeded, however, in embellishing it with interesting episodes.—18. Περίταξις. Rhesus. A subject derived from the tenth book of the Iliad. Some able critics have proved that this piece was never written by Euripides. (Conscnt Dissertatio sur la tragédie de Rhesus, par Hardison, in the Mem. de l'Acad. des Insér. et Belles-Lettres, vol. 10, p. 323.—Valckenaer, Diatribe Euripides, c. 9, seqq.—Beck's Euripides, vol. 9, p. 444, seqq., &c.)—19. Φαῖθρος, Phæthon. Of this play we have the title remaining. Clymene, the mother of Phœthon, is the wife of Merops, king of the Ethiopians, and Phœthon passes for the son of this prince. The young man, having conceived some doubts respecting his origin, addresses himself to the Sun. The catastrophe, which cost him his life, is well known. In the tragedy of Euripides, the body of her son is brought to Clymene, at the very moment when Merops is occupied with the care of procuring for him a bride.—50. Δαίμον, Dæmon. Of this play we have the title remaining. The Cyclops, Polyphemus, is deprived of his one eye. A ship has wrecked on the coast of Sicily, where the Cyclops have fallen into the hands of Polyphemus. The Cyclops has made slaves of them, and has compelled them to tend his sheep. Ulysses, having been cast on the same coast, and long having been in like manner deprived of his one eye, made captive by Polyphemus, finds in these satyrs a willing band of accomplices. They league with him against their master, but their excessive cowardice renders them very useless auxiliaries. They profit, however, by his victory, and embark along with him.—Among the numerous editions of Euripides which have issued from the press, the following are particularly worthy of notice: that of Beck, commenced by Morus, Lips., 1778–88, 3 vols. in 8vo.; the second edition, by Oxon., 1792, 4to: that of Mathiæ, Lips., 1813–17, 10 vols. 8vo.; and the variorum Glasgow edition, 1820, 9 vols. 8vo. —Of the separate plays, the best editions are those of Porson, Brunck, Valckenaer, Monk, &c. The Diatribe of Valckenaer (Diatribe in Euripidis perditiorum dramatum reliquias, Lugd. Bat. 1767, 4to) is a choice piece of criticism, and contains some happy corrections of the text of the fragments. It is an excellent work for those who wish to be acquainted with the philosophical opinions of Euripides, and with the peculiar character of his style, as distinguished from that of Sophocles.—II. A nephew of the preceding (Suid., s. v.—Böckh, de Trag. Græc., xiv. and xviii.), commonly styled Euripides Junior. He was a dramatic poet, like his uncle, and exhibited, besides his own compositions, several plays of the latter, then dead; one of these gained the prize. Böckh and others suspect that he reproduced the Ἰφιγένεια as Atis, and perhaps the Palamedes. (Vid. preceding article.) To this Euripides is ascribed, by Suidas, an edition of Homer. (Theatre of the Greeks, 2d ed., p. 158.) EURIPIDES. EURIPIDES. EURIPIDES.
Euripus.

chagrin, from not being able to account for so unusual a motion of the water. The story, however, is devoid of foundation. (Vid. Aristoteles.—From this rapid movement of the current, the Euripus derived its ancient name (εavadoc, and pirates, daco). Livy's account of this strait appears the most rational. "A more dangerous station for a fleet," observes this writer, "can hardly be found; besides that the winds rush down suddenly, and with great force, from the high mountains on each side, the strait itself of the Euripus does not ebb and flow seven times a day, at stated hours, as report says; but the current changing irregularly, like the wind, from one point to another, is hurried along like a torrent tumbling from a steep mountain; so that, night or day, ships can never lie quiet." (Liv. 28, 6.) The straits are now called, by a corruption of the ancient name, the straits of Negropont.

Hobhouse visited the Euripus, and the account given by this intelligent traveller of its appearance in our own days is deserving of being cited. "What I witnessed of the Euripus was, that the stream flows with violence, like a mill-race, under the bridges, and that a strong eddy is observable on that side from which it is to about run, about a hundred yards above the bridges; the current, however, not being at all apparent at a greater distance, either to the south or north. Yet the ebbing and flowing are said to be visible at times on account of the distance.

This strait, by marks shown of the rising and falling of the water in several small bays on both coasts. The depth of the stream is very considerable, not much more than four feet. The account which Wheler copied from the Jesuit Babin, respecting the changes of the Euripus, and which he collected on the spot, though not from his personal experience, he not being long enough in the place, was, that it was subject to the same changes of the ocean for eighteen days in every month, and was irregular during twelve, thirteen, or fourteen flowings and ebbings for the other eleven days; that is, that it was regular for the three last days of the old moon and the eight first of the new, then irregular for five days, regular again for the next seven, and irregular for the other six. The water seldom rose to two feet, and usually not above one; and, contrary to the ocean, it flowed towards the sea, and ebbed towards the main land of Thessaly, northwards in the winter or summer season for thirty-four days, and fell for three quarters; but, when regular, was six hours in each direction, losing an hour a day. It did not appear to be influenced by the wind. A Greek of Athens, who had resided three years at Egrio, told me that he considered the changes to depend chiefly on the wind, which, owing to the high lands in the vicinity of the strait, is particularly variable in this place. The two great gulfs, for so they may be called, at the north and south of the strait, which present a large surface to every storm that blows, and receive the whole force of the Archipelago, communicate with each other at this narrow shallow channel; so that the Euripus may be a sort of barometer, indicative of every change, and of whatever rising and falling of the tide, not visible in the open expanse of waters there may be in these seas. I did not, however, see any marks of the water being ever higher at one time than at another. The Greeks affirm that if a gale blows from the north or south, that is, either up or down the strait, the alteration took place only four times in the twenty-four hours; but that, when it was from the east, and blew strongly over the mountains behind Egrio, the reflexes took place more frequently, ten or twelve times; and that, in particular, immediately before the full of the moon, the turbulence and eddies, as well as the rapidity of the stream, were very much increased. There was never, at any season, any certain rule with respect either to the period or the number of changes. Those of the ancients who inquired into this phenomenon were aware, that the story of the Euripus changing its course always seven times during the day was unfounded; and the account given of it by Livy (23, 6) corresponds, in some measure, with that of my Athenian informant. The bridge which anciently connected the main land and the island was considerably longer than that which at present serves the same purpose. We are informed, that the strait was made more narrow by a dike, which inhabitants of Chalcis, in order to obstruct the passage, had thrown across it; and that it is by no means improbable, that the whole of the flat on which the fortified part of Egrio now stands, and which is surrounded on the land side by a wide marsh, was formerly covered by the waters of the Euripus." (Hobhouse's Journey, vol. 1, Lett. 29, p. 372, seqq., Am. ed.)

Európa. I. one of the three main divisions of the ancient world. With the northern parts of this the ancients were very slightly acquainted, viz., what are now Prussia, Sweden, Denmark, Norway, and Russia. They applied to this quarter the general name of Scandinaavia, and thought it consisted of a number of islands. From the Portuguese cape, designated by mariners the Rock of Lisbon, to the Uralian Mountains, the length of modern Europe may be reckoned at about 3300 British miles, and from Cape Nord, in Danish Lapland, to Cape Matapan, the southern extremity of the Morea, it may be about 2360. As regards the limits of Europe, it may be said that the Ural Mountains, the river of the same name, the Caspian Sea, and the lowest level of the isthmus between it and the Sea of Azof (a level indicated by the course of the Manytch and the Kuma), are boundaries between Europe and Asia in the part in which they are contiguous. That frontier ends at the Tanais or Don, which for a short space terminates the two continents.

The remaining limits are more easily determined; they are the Black Sea, the Bosphorus, the Propontis, and the Hellespont. The strait is the Archipelago; Tenedos, Mytilene, Chios, Samos, Nicaria, Cos, and Rhodes, belong to Asia; Naxos, Stampalia, and Scarpanto, to Europe. The Mediterranean divides Africa and Europe; but it is not ascertained whether Malta, Gozo, Comino, Lampedosa, and Linosa are African or European islands. The Canaries, Madeira, and the Azores are, in a physical point of view, appendages of Africa, being parts of a subangular continent which continues, with respect to the name of Europe, it must be confessed that its etymology is altogether uncertain. Bochart derives the word from the Phœnician Urappa, which he makes equivalent to the Greek λικνοπρόωτος, "of a white or fair aspect;" and considers it as applying not only to the sister of Cadmus, but also to the Continent of Europe, from the fairer visages and complexions of its inhabitants: "quia Europae Africanos candore faciei multum superstata." (Geogr. Sacr. 3, 43, col. 258.)

M. Court de Gebelin, on the other hand, deduces the name from the Phœnician Wirah, i. e., "West," as indicating the country lying in that direction with reference to Asia. His explanation, however, of the mode in which the same appellation came to be applied to the lunar divinity, is far less plausible: "Ce nom ne convient pas moins à la Lune; car on ne la voit que le soir ; et lorsqu'on commence à l'apercevoir à la Nécessité de la nommer autrefois, elle ne passait que les monts qu'elle ne la Reine de la Nuit ? elle fut donc appelée avec raison Europe." (Monde Primitif, vol. 1, p. 250.)—As regards the progress of geographical discovery, it may be remarked, that the earliest notices of Europe are in the writings of the Greeks, who inhabited the southeastern corner of the continent. From this country the geographical knowledge of Europe extended by degrees to the west and north. Homer, who was acquainted with the countries round the Ægean Sea or Archipelago. He had also a pretty accurate general notion respecting those which lie on the south
EUROPA.

coast of the Black Sea; but what he says about the countries west of Greece, on the shores of the Mediterranean, is a mixture of fable and truth, in which the fabulous part prevails. It would seem that, in his age, these seas were not yet visited by his countrymen, and that he obtained his knowledge from the Ptolemaic maps of Herodotus, and from sailors who had visited these regions, but who, according to the common policy of trading nations, spread abroad false accounts of these unknown countries, in order to deter other nations from following their track, and participating in the advantages of this distant commerce. It is probable, also, that the Phoenicians long excluded the Greeks from the navigation of the Mediterranean; for when the latter began to form settlements beyond their native country, they first occupied the shores of the Egyp-" and afterward those of the Black Sea. As the European shores of this last-mentioned sea are not well adapted for agriculture, except a comparatively small tract of the peninsula of Crimea, their early settlements were mostly on the Asiatic coasts, and, consequently, little addition was made by these colonies to the geographical knowledge of Europe. But the navigation of the Phoenicians was checked in the middle of the sixth century before Christ, apparently by their being excluded from the Black Sea, and at about the same time, also, the Greeks began to form settlements in the southern parts of Italy and on the island of Sicily, and to navigate the Mediterranean Sea to its full extent.

Accordingly, we find that, in the time of Herodotus (450 B.C.), not only the countries on each side of the Mediterranean, and the northern shores of the Black Sea, were pretty well known to the Greeks, but that, following the track of the Phoenicians, they ventured to pass the columns of Hercules, and to sail as far as the Cassiterides, or Tin Islands, by which name the Scilly Isles and a part of Cornwall must be understood. It is even reported, that some of their navigators sailed through the English Channel and entered the North Sea, and perhaps even the Baltic. It must be observed, however, that Herodotus professes himself totally unacquainted with the islands called Cassiterides (3, 115), and Strabo (p. 104, &c.) expresses a very uncertain opinion concerning their voyage of Pytheas. Thus a considerable part of the coasts of Europe was discovered, while the interior remained almost unknown. When the Romans began their conquests, this deficiency was partly filled up. The conquest of Italy was followed by that of Spain and the southern parts of Gaul, and, not long afterward, Sicily, Greece, and Macedonia were added. Caesar conquered Gaul and the countries west of the Rhine, together with the districts lying between the different arms by which that river enters the sea. His two expeditions into Britain made known also, in some measure, the nature of that island and the character of its inhabitants. Thus, in the course of little more than two hundred years, the interior of all those countries was discovered, the shores of which had been previously known. In the mean time, nothing was added to the knowledge of the coasts, the Greeks having lost their spirit of discovery by this time, and with their rise to power, the Romans not being inclined to naval enterprise. After the establishment of imperial power at Rome, the conquests of the Romans went on at a much slower rate, and the boundaries of the empire soon became stationary. This circumstance must be chiefly attributed to the nature of the countries which were contiguous to those boundaries. The regions north of the Danube are mostly plains, and at that time were only inhabited by wandering nations, who had nothing to do but to subsist by raising crops, and to be subject to a regular government. Such, at least, are the countries extending between the Carpathian mountains and the Black Sea, and therefore the conquest of Dacia by Trajan was of short continuance and speedily abandoned. The countries between the Alps and the Danube were soon added to the empire; but, as the nations who inhabited the tracts north of that river had not given up a wandering life, they were enabled to elude the Roman yoke. The most important addition to the empire and to geographical knowledge was the conquest of England during the first century of the Christian era. England, during the fourth century, the south of Scotland was added. Nothing seems to have been added afterward. The Geography of Ptolemy contains a considerable number of names of nations, places, and rivers in those countries which were not subjected to the Romans. Probably they were obtained from natives and from Roman traders, who had ventured to penetrate beyond the boundaries of the empire. But these brief notices are very vague, and in most cases it is very difficult to determine what places and persons are indicated. (Encycl. d. Sciences, tom. 10, p. 79.)—II. A daughter of Agenor (called by some Phoenicians) king of Phoenicia. Jupiter, becoming enamoured of her, according to the old legend, changed himself into a beautiful white bull, and approached her, "breathing saffron from his mouth," as she was gathering flowers with her companions in a mead near the seashore. Europa, delighted with the tameness and beauty of the animal, pressed her nose against his neck, and dared not venture to mount on his back. The disguised god immediately made off with her lovely burden, plunged into the sea, and swam with Europa to the Island of Crete, landing not far from Gortyra. Here he resumed his own form, and, beneath a plane-tree cresscd the trembling maid. The offspring of their union were Minos, Rhadamantus, and Sarpedon. Aste- rius, king of Crete, espoused Europa subsequently, and feared her son Anachron. (Apollon., v. 1.—Hes., et Bacchyl., p. 5-7.)—The island of Sheer, bounded on the west by the Black Sea, and on the east by the Ægean, and between these countries, with Greece, is the celebrated Ægean or Ægina. It was inhabited by the Æginaeans, celebrated by Homer under the name of Æginaeans. (Encycl. d. Sciences, tom. 10, p. 79.)—III. A daughter of Agenor, from the city of Tyre. Others again make her to have been borne away by some Cretan merchants, whose ship had the emblem of a white bull, and who intended her as a prize for their king Asterius, who had assumed the name of Jupiter! (Consult Banier's Mythology, vol. 3, p. 400, seqq.)—The truth is, however, that Europa was nothing more than the lunar divinity or the moon. In order to make this more apparent, let us review the whole ground of this singular story. We find the legend of Jupiter and Europa known already to Homer (Il., 14, 321) and Hesiod. (Schol. ad Il., 12, 397.) The old genealogical poet Asius (Pausan., 7, 4), and the Logographers Pherecydes (ed. Sturz, p. 111) and Hellanicus (p. 65), found already, in their time, a rich fond of materials in this fabulous legend. What Apollodorus, in particular, gives (3, 1), appears to have been taken from these writers. Antimachus and An- thisthenes were inclined to consider it as a religious subject (Schol. ad Apoll. Rhod., 2, 178), but more especially Eumelus (Schol. ad II., 6, 130) and Stesichor- us. (Schol. ad Eurip. Phæ., v. 674.)—Compare Fragm. Steisch., ed. Suchfort, p. 13.) Amid such a number of writers, it is no wonder if the topic proved...
EUROPA.

sufficiently attractive to occupy the attention of many of the later Greek and Roman authors. Hence we find it reappearing, after some lapse of time, in Moschus (Ibid., 2), Lucian (Dial. Mar.—Opp., vol. 2, p. 125, ed. Bip.), and Achilles Tatius (De Am. Cit. ev. ii., 315).—Tzctzes, Hesiod., Hom., Od., 3, 573. The name Europa, then, will have been given by the Asiatics to the country which lay west of them, towards the evening (Erebus) sun, or the quarter of darkness. At what period this appellation was extended to the whole continent cannot now be ascertained (Ueber’s Geogr., vol. 2, p. 210); as, however, Pherecydes already divided the earth into two hemispheres (Schol. ad Apoll. Rhod., 4, 1396), placing Europa in the vicinity of the south, we may suppose this arrangement to have been generally received about the time of the Logographers. Now it is manifest, from what has just been stated, that the original myths of Europa had no symbolic reference whatever to the continent of that name. Before, however, proceeding farther in the examination of this fable, it becomes important to consider the lineage assigned to the female in question. Homer (II., 14, 391) names her as the daughter of Phoenix, a name which, according to Pherecydes (Schol. Didymi, ed. Ald., 1521, p. 215), Asius (Pausan., 7, 4, 2), and Moschus (Ibid., 2, 40). With the Logographers a discrepancy presents itself. Some regard her as a daughter of Agenor, others still as the offspring of Phoenix (Schol. ad Apoll. Rhod., 3, 1186): that the former of these two accounts, however, is the more commonly-received one, appears in the extracts from the Logographers as made by Apollodorus (3, 1). In the original myths, therefore, Europa was the daughter of Phoenix, in the later and altered legend she is the child of Phoenix. Phoenix now, according to the custom observed in similar fables, of naming a land after its first monarch, becomes the king of Phoenicia, and hence the leading idea involved in the legend, that Europa came from Phoenicia. Let us now turn our attention more immediately to the being and person of Europa. The first passage that arrests our notice is one occurring in the treatise on the “Syrian Goddess,” ascribed to Lucian (Opp., ed. Bip., vol. 9, p. 87.) “There is in Phoenicia,” says the writer, “another large temple also, which is in the possession of the Sidonians, and which, as they say, is the temple of Astarte. Astarte I suppose to be the same with the moon. As, however, one of the priests told me, it was the temple of Europa, the sister of Cadmus. This daughter of King Agenor was honoured with a temple after her disappearance; and there has been to this sacred tradition (Διός τινα) respecting her, that, being very beautiful, she was beloved by Jupiter, who changed himself into a bull and carried her away into Crete. I heard this also from other Phoenicians; and, moreover, the Sidonian money has represented on it Europa sitting upon the back of a bull, that is, of Jupiter. They do not all agree, however, in making the temple to be of that Europa. In the case of so early a worship as that connected with the moon, the representations of later days exhibit some discrepancies. According to the more common statement, the temple was that of Astarte, whom the writer just quoted makes identical with the moon. Creuzer has shown with great ability (Symbolik, vol. 2, p. 65), that the greater part of the Syro-Phoenician goddesses conveyed the idea of the humid, receiving, fruit-yielding Earth, and the impregnated and in turn impregnating Moon. This explanation is clearly in the same order of attributes of the Phoenician Astarte. Not only is she regarded by Lucian and others (Selden, de Diet Syr., p. 214) as identical with Selene, but she is even styled, on that account, the Queen of Heaven (Jerosm., 7, 17); and the etymology given by Herodian, though of no value in itself, yet is of importance to the present discussion as showing the union of idea with re-
The goddess had the principal seat of her worship in Sidon. (2 Kings, 23, 13.) As lunar goddess, Astarte had, among her other symbols, some of the most familiar; and, in fact, she was the Phoenician Venus; and in all the phisico-religious systems of Lower Asia there existed a great uniformity in the leading principles (Creuzer, Symbolik, vol. 2, p. 11, seqq.), and throughout a large portion of this country the worship of the moon was firmly established. Without stopping to discover any traces of this in the Phægian rites, or in those of the goddess of Comana, which are so frequently to be found with Artemis Taurpolos, who would seem, in many respects, to have been the same with the Phoenician Astarte. (Compare Creuzer, Symbolik, vol. 4, p. 199. — Millin, Galerie Myth., vol. 1, p. 34, Nr. 121.) It is curious to observe, moreover, that Artemis Taurpolos was worshipped on the shores of the Persian Gulf, the primitive seat of the Phoenician race. (Europa ad Dionys. Persieg., 609.) — Compare Dupuis, Memoires de l'Inst. nat. an. XII., Lond., 1822, p. 11.) It seems, therefore, to be a matter of fact that, from the researches of Creuzer, the worship of Diana Luna would appear to have extended not only along the Persian Gulf, but also in various parts of middle Asia; and that the symbolical mode of representing this goddess was a female figure riding on a bull, with a crescent-shaped veil over her head. Such is the way in which she appears on a medal of the Island and Icaria (Harduin, de Num. Antiq., p. 217), where this worship also prevailed. (Strab., 638.) It is extremely probable, that some early statue of Diana Luna, represented in precisely the same posture as the figure on the Icarian medal, gave rise to the mythus of the carrying away of Europa by a bull; and thus Europa belongs, as an imaginary personage, to the cycle of the lunar worship. To place this in a still clearer light, let us turn our attention to the testimony afforded by ancient works of art. Achilles Tatius (p. 10) — Compare Plin., 36, 10) saw, in the Sidonian temple of Astarte, amongst the sacred offerings, a painting which had for its subject the carrying off of Europa. The description of this differs only in some collateral points from that of a painting preserved to us in the tomb of the Nasoni, of which Belloir makes mention. (Picture Antiqua sepulcri Nasoniorum in via Flaminia. — Gras, Thes. Ant. Rom., vol. 12, p. 1059.) The scene is laid on the shore near Sidon: the bull hastens with his lovely burden over the waves, and the playmates of Europa stand lost in astonishment and grief. The bearing away of Europa is the subject also of many sculptured stones that have come down to us. (Consul. Monfacon, Ant. Expl., vol. 1, p. 19, Nr. 4. — Gori, Museum. Florent., vol. 1, tab. 56, Nr. 9. — Augustini Gemma, ed. Gron., tab. 185. — Gemme Ant., p. 2, tab. 27. — Winckelmann, Catal. de Storck, p. 57. — Theasaurus Brandenb., p. 195.) It even seems, that the name Europa itself has reference to this female's identity. (Senec., Quaest. Nat., 5, 16.) Those, however, who recognised only four winds, made Eurus the East wind, and attempted to confirm this opinion by a fictitious derivation of the name, making Euphor getαivities γίνοσα, "blowing from the east," i. e., the point of the heavens where Aurora first appears.

Euryæs, a Trojan, son of Ophelitus, and one of the followers of Eneas. Virgil has immortalized the unbreakable friendship between him and Nisus. (Vid. Nisus.)

Euryæus, I. a herald of Agamemnon, in the Trojan war, who, with Talithbyus, took Briseis away from Achilles, under the orders of that monarch. (Hom., II., 1, 320.) — II. A herald of Ulysses. (Hom., II., 2, 184.)
Eurybates, a Spartan, commander of the combined Greek fleet at the battles of Artemision and Salamis. He was appointed to this office, although Sparta sent only ten ships, by the desire of the allies, who desired Ptolemy to be opposed in Egypt, (Herod., I. 33. Bahr, ad loc.) An allusion to the famous scene between Eurybates and Themistocles will be found under the latter article. (Vid. Themistocles.)

Eurydice, I., the wife of Amyntas, king of Macedonia. She had, by her husband Alexander, Perdiccas and Philip, and one daughter called Euryone, who was married to Ptolemy Alorites. A criminal partiality for her daughter's husband, to whom she offered her hand and the kingdom of Macedonia, speaks; Ptolemy, who must have felt a victim to her infidelity, had not Euryone discovered it. Amyntas forgave her. Alexander ascended the throne after his father's death, and perished by the ambition of his mother. Perdiccas, who succeeded him, shared his fate; but Philip, who was the next in succession, secured himself against all attempts from his mother, and ascended the throne with peace and universal satisfaction. Eurydice fled to Iphicrates, the Athenian general, for protection. The manner of her death is unknown. (C. Nep., Vit. Iphicli., 3.)—II. A daughter of Antipater, and the wife of Ptolemy I. of Egypt, by whom she had several children. After the death of Alexander the Great, she proceeded to Alexandria for the purpose of rejoining her husband, and she brought with her Berenice, her niece, who proved the source of all her misfortunes. For Berenice inspired Ptolemy with so strong a passion, that he took her as his second wife, and allowed himself to be controlled entirely by her influence. Eurydice and her children retired to the court of Seleucus, king of Syria. One of her daughters subsequently married Agathocles, son of Lysimachus; and another, Demetrius Poliorcetes. Ptolemy Ceraunus, the eldest of her sons, seized upon the kingdom of Macedonia. Eurydice followed him to that country, and contributed to conciliate towards him the minds of the Macedonians, through the respect in which they entertained for the memory of her father Antipater. Ptolemy Ceraunus having been slain, B.C. 280, in a battle against the Gauls, Macedonia was delivered up to the ravages of these barbarians, and Eurydice fled for protection to the city of Cassander. In order to attach the inhabitants more strongly to her interests, she gave them their freedom; and they, through gratitude, established a festival called after her name. The spot of her burial is not known. 

III. A daughter of Amyntas and Cyrene. As her previous name was Adea, afterward changed to Eurydice. (Arrian, ap. Phot., cod., 92—vol. I, p. 70, ed. Bekker.) She married Ariadus, the half-brother of Alexander, and for some time, through the aid of Cassander, defended Macedonia against Polyperchon and Olympias. Having been forsaken, at length, by her own troops, she fell into the hands of Olympias, together with her husband. But she was put to death by that queen. (Justin., 14, 5.)—IV. Wife of Bocchus. When she fled before Aristeus she was bitten by a serpent in the grass, and died of the wound. Her disconsolate husband determined to descend to the lower world, to endeavour to procure her restoration to life. Phito and Proserpina listened to his prayer; and Eurydice was allowed to return, on the express condition that Orpheus should not look back upon her till they were arrived at the gates of the region of the soul. Fearing that she might not be following him, the anxious lover looked back, and thereby lost her. (Vid. Orpheus.)

Euryfides, a river of Pamphylia, in Asia Minor, rising in the chain of Mount Taurus, and, after passing the city of Aspendus, falling into the Mediterranean below that place. (Sclav. p. 40. —Mela, 1, 14. —Mannert, Geogr., vol. VI, p. 169.) Near it the Persians were defeated by the Athenians under Cimon, B.C. 470, in both a naval and land fight. The Persian ships were drawn up at the mouth of the river, to the number of 350, or, as some affirm, 600; but, on the first attack, they fled to the shore and were stranded. Cimon then landed, hunting, and, after a severe engagement, routed the enemy, and took their camp and baggage. (Plut., Vit. Cim.—Thucyd., 1, 100.) This signal victory annihilated the Persian navy. The Eurymenus is now the Cupri-sou, and appears to have undergone considerable changes since ancient times, for the bar at the mouth is now so shallow as to be impassable to boats that draw more than one foot of water. (Cramer’s Asia Minor, vol. II, p. 281.)

Euryonymus, a contemporary of Hippocrates, but probably older in years, since he is deemed the author of the Cnidian aphorisms which are quoted by Hippocrates. (Galen, Comment. in Hipp. de victu acuti., p. 43.)

Eurypon, a king of Sparta, son of Sois. According to Pausanias (3, 7), his reign was so glorious a one, that his descendants were called from him Euryponids, although the family belonged to the Proclide. Plutarch, however (Vit. Lycurg., c. 3), says that the word Proclide is a change of name owing to Eurypon’s having relaxed the strictness of kingly government, and inclined to the interests of the people. (Consult Valckenaer, ad Theocrit. Adoniz., p. 371.)

Eurythénis, a son of Aristodemus, who reigned conjointly with his twin-brother Procles at Sparta. It was not known which of the two was born first; the mother, who wished to see both her sons raised on the throne, refused to declare it; and they were both appointed kings of Sparta by order of the oracle of Delphi, B.C. 1102. After the death of the two brothers, the Lacedaemonians, who knew not to what family the right of seniority and succession belonged, permitted two kings to sit on the throne, one of each family. The descendants of Eurythénis were called Eurythénidae, and those of Procles, Proclidae. It was inconsistent with the laws of Sparta for two kings of the same family to succeed the throne together. Eurythénis was sometimes violated by oppression and tyranny. Eurythénis had a son called Agis, who succeeded him. His descendants were called Agidae. There sat on the throne of Sparta 31 kings of the family of Eurythénis, and only 24 of the Proclidae. The former were the more illustrious. (Herodot., 4, 147; 6, 52. Pausan., 3, 1.—C. Nep., Vit. Ages.)

Eurythénis, a king of Argos, son of Mycenae, son of Theneclus, father of Naucus. He was the son of Pelops. Juno hastened his birth by two months, that he might come into the world before Hercules, the son of Alcmena, as the younger of the two was deemed by order of Jupiter to be subservient to the will of the other. (Vid. Alcmena.) The right thus obtained was cruelly exercised by Eurythénis, and led to the performance of the twelve celebrated labours of Hercules. The success of the hero in achieving these so alarmed Eurythénis, that king, himself with a brazen vessel, where he might secure himself a safe retreat in case of danger. Apollodorus says that it was a vessel of brass (πίθου χαλκοῦ, Apollod., 2, 5, 1), which he constructed secretly under ground. It appears, in fact, to have been a subterraneous chamber, covered within with plates of brass. The remains of the treasury of Atreus at Mycenae indicate a building of a similar description, The nails which probably served to fasten the metal plate appear, as if made thus, in a similar mode. These nails consist of 88 parts of copper and 12 of tin. A similar explanation may be given of the brazen temple of Minerva at Sparta. (Vid. Chalcis.)

Eurytribus. (Gell’s Itinerary, p. 33.) After Hercules had been translated to the skies, Eurythénis persecuted his children, and threatened with war Cecyza, king of Trachis, at whose court they had taken shelter. They thereupon fled to Aith
EUSEBIUS.

 uno, and received protection from the inhabitants, who refused to deliver them up to Eurytheus. A war ensued, in which Eurytheus and his brothers were slain by the hand of Hyllus, son of Hercules. The head of the monarch was sent to Alcmena, who dug out the eyes with a weaving-shuttle. (Apollod., 2, 8, 1, where for ἐπεκάθισα we are to read ἐπεκάθισον.) Other accounts of this event, however, are given by other writers. (Eurip., Heracleid., 928, seqq. — Compare Isoc., Paneg., 15.)

Eusebius Pamphilus, I. one of the most distinguished among the earlier Christian writers, and the friend of Constantine, was born in Palestine, probably at Cæsarea, about 264 A.D. He pursued his studies at Antioch, and is believed to have received holy orders from Agapius, bishop of Cæsarea. After having been ordained presbyter, he set up a school in his native city, and formed an intimate acquaintance with Pamphilus, bishop of Cæsarea, who suffered martyrdom under Galerius, in memory of which he added to his name the term Pamphilus, i.e., "the (friend) of Pamphilus." After the martyrdom of his friend he removed to Tyre, and thence to Egypt, where he himself was imprisoned. On his return from Egypt, he succeeded Agapius in the see of Cæsarea, A.D. 315. In common with many other bishops of Palestine, he at first espoused the cause of Arius; but at the council of Nice, in 325, where the Emperor Constantine was present, Eusebius the office of the opposition of Athanasius. The party to which he attached himself were called Eusebians, from their leader Eusebius of Nicomedia, and they seem to have acted in a great degree through hostility towards Athanasius and his supporters, as they did not, as yet, openly advocate the objectionable tenets of Arius, who had himself apparently submitted to the decrees of the council of Nice. Eusebius afterward, in 330, assisted at the council of Antioch, where the Arians triumphed, and he was present at the council of Tyre in 335, and joined those bishops who censured the proceedings of Athanasius, the great champion of orthodoxy. Eusebius was deputed by this council to defend before Constantine the judgment which they had passed against Athanasius; and he appears to have used his influence with the emperor to have Athanasius banished. The part which he took in the controversy caused him to be stigmatized as an Arian, though it appears that he fully admitted the divinity of Christ; and all that his accusers can prove is, that he believed there was a certain subordination among the persons of the Trinity. He was much in favour with Constantine, with whom he maintained an epistolary correspondence, many specimens of which he has inserted in his life of that prince. He died soon after his imperial patron, in 339 or 340. Eusebius was one of the most learned men of his time. "It appears from his works," says Tillemont, "that he had read all sorts of Greek authors, whether philosophers, historians, or divines, of Egypt, Phœnicia, Asia, Europe, and Africa." Though his writings are not without faults, they are defective in judgment and accuracy. All the studies of Eusebius were directed towards the religion which he professed, and if he cultivated chronology, it was with the view of establishing on a solid basis the confidence to which the historical books of the Old Testament present so fair a claim. He displayed the fruits of his researches in a Chronicle, or Universal History (Ἀνωτάτηθα Ιστορία), divided into five books.

In the first of these, in which he gave the name of Chronography (Χρονογραφία), he relates the origin and history of all nations and empires, from the creation of the world down to 325 A.D. He pursues an ethnographic order, devoting a particular section to each people. The duration of the reigns of princes was fixed in it, and the author entered into details on certain events. In this first portion of the work, Eusebius introduced extracts from various historical writers whose productions are lost, such as Alexander Polyhistor, Berosus, Ammianus, Manetho, &c. The second part, entitled "Chronical Canon" (Χρονικὸς Κανών), consisted of synchonistic tables, giving, by periods of ten years each, the names of sovereigns, and the principal events which had taken place, from the call of Abra- ham (B.C. 1794). In compiling this part of his labours Eusebius availed himself of the Chronography of Sextus Julius Africanus, which he inserted almost entire, and gave it different titles, of which one was "The Canon," Josephus, and other historians. This he continued also to his own times. We possess a Latin translation of this chronicle, made by St. Jerome: it is not, after all, however, a simple version, since this father continued the dates down to the year 378, and made several changes also in the first part of the work. The Greek text itself is lost; and though George Syncellus has inserted many fragments of it in his Chronicle, and Eusebius himself has adduced in his Manual of Christian Instruction (I II. 17. 70), the evidence of his researches, the remembrance of this original text was so far lost, that doubts began to be entertained whether that of the first book had ever existed, some critics being persuaded that Eusebius had written no other chronological work besides his Canon. Joseph Scaliger, however, undertook to reconstruct the first book of the work, by uniting all the fragments scattered throughout the writings of the various authors to whom they are attributed. The result has at length been cleared up in our own days, and all uncertainty on this point has been put completely to rest. In 1792, an Armenian of Constantinople, named Georgius Johannis, discovered an Armenian translation of the entire work. He made a copy of this, and transmitted it in 1794 to Dr. Zohrab at Venice. The precise date of the manuscript in question is unknown; but as the version is mentioned by Moses of Chorene, it ought to be as old at least as the fifth century. The first book of the Chronicle of Eusebius, with which we are made acquainted through the medium of this translation, is preceded by a preface, in which the author gives an account of the plan and difficulty of his undertaking. It is divided into forty-eight chapters, of which the first twenty-two embrace the chronology of the Chaldaeans, Assyrians, Medes, Lydians, Persians, Hebrews, and Egyptians, from the deluge to the time of Julius Caesar, and he has promised to communicate to the world whatever he may find there-
in sufficiently novel in its nature to merit such notice.

An account of the Armenian version is also given by Saint Martin (Journal des Savants, 1820, p. 106). The conclusion to which the last-mentioned writer arrives, is, as follows:—"The thing expected to have been derived from the version to which we are referring, must be graduated much lower than they originally were; and yet, at the same time, that this discovery is of sufficient importance to merit honourable mention, since it gives a great degree of certainty to many particulars, of which we were before put in possession relative to ancient history, and renders incontestable the authority of the Greek-fragments published by Scaliger.—Eusebius was also the author of an Ecclesiastical History ('Eκκλησιαστικὴ ἱστορία'), in ten books, from the origin of Christianity down to A.D. 324, a year which immediately preceded the triumph of the Catholic church over Arianism. This work contains no express history of church dogmas. The author proposed to himself a different object, which he specifies in the first book. It was to make known the succession of the apostles, and the individuals who, placed at the head of the different churches, distinguished themselves by their firmness and apostolical virtues, or who defended the word of God by their writings; to make mention of those persons who had endeavoured to propagate false doctrines; to describe the misfortunes and sufferings that had befallen the Jewish nation, as a punishment for their rejection of the Saviour; as well as the persecutions to which the faithful had been exposed, and the triumph procured for Christianity by the Emperor Constantine. A secondary object which Eusebius had in view, although he does not expressly mention it, was to transmit to posterity literary notices of those writers who had treated before him of detached portions of the sacred history. What he proposed to himself, however, was less to instruct and edify the faithful, than to place in the hands of the Gentiles a work which might induce them to believe in the truth of their religious systems, and the prejudices of education. One is tempted, at least, to ascribe this intention to him, when we call to mind that his work contains a number of things known to every Christian reader; such as, for example, all that relates to the person of our Saviour, and the authenticity of the sacred writings; and also when we consider the skill he has displayed in placing in a prominent point of view the claims of Christianity, without, at the same time, making any direct allusion to the absurdities of paganism. As Eusebius makes no mention of the troubles occasioned in the church by the doctrines of Arianism, it has been concluded that his history was not continued by him during the last sixteen years of his life (for he lived until 340); but that, being brought down by him to an epoch anterior to the council of Nice, it was concluded in 324. In support of this opinion it may be remarked, that Paulinus, the biographer of Eusebius, has placed the commencement of the tenth book, was dead in 325. (Consult Haake, de Byzantinorum rerum scriptoribus liber, Lips., 1677, 4to, pt. 1, c. 1, § 222.) In general, Eusebius may be called a moderate, impartial, and judicious writer. His history was translated into Latin by Rufinus, a priest of Aquileia, in the fourth century: he has made, however, retracements as well as additions; and in a later age a supplement in two books, which extends to the death of Constantine. This supplement was, in turn, translated into Greek by Gelasius of Cyzicus, about 476. Fabricius (Bibl. Græc. vol. 8, p. 445) says, that the work of Rufinus was translated by St. Cyril of Jerusalem, and he refers to Photius as his authority for this explanation. The patriarch of Constantinople speaks of this translation in a passage, for he never saw it; indeed, it never could have existed; since St. Cyril died in 386, and the supplement of Rufinus appeared subsequent to 395. The Latin translation of Rufinus still exists, but the Greek version of his supplement is lost. Nicophorus Callistus, a compiler of the fourteenth century, has incorporated into his ecclesiastical history the account of Eusebius. He mentions other works of Eusebius which have relation to the department of ecclesiastical history are the following: Περὶ τῶν ἐν Παλαιστίνῃ μαθηταῖς, "Of those who suffered martyrdom in Palestine." The period referred to is the persecution of Dioclesian and Maximin, from 303 to 309.—Δόγμα τριεκαταστάσεως, "Thirty-year discourse," i.e., an Elage on Constantine, pronounced in the thirtieth year of his reign. A.D. 335.—Περὶ τῶν ἐν Καταρουσίᾳ καταστρατιστών, "Of the Va-

EUSEBIUS.
the following books, down to the thirteenth inclusive, the author undertakes to show that the Greek writers who have depended on the Sacred volume whatever they have taught of valuable or good in matters of philosophy: such, according to him, is the case especially with Plato. The fourteenth and fifteenth books labour to prove, that in the philosophical opinions of the Greeks there reign evident contradictions; that the majority of these opinions have no better foundation than mere hypothesis, and swarm with errors.—We must not omit another work of our author's, entitled "Epilogi των τοπίων Ovidianorum," "Of the places mentioned in the sacred writings." It was in two books. The second book, which treats of Palestine, has alone reached us; we have it in Greek, and also in a Latin version by St. Jerome. The version would be preferable to the original, by reason of the corrections which Jerome made in the work, from his intimate acquaintance with the country, if it had not reached us in a very corrupt state.—The best editions of the work on chronology are, that of Scaliger, Lugd. Bat., 1659, fol., and that of Mai and Zobrist, Mediolan., 1818, 4to: the best editions of the Ecclesiastical History are, that of H. Stephens, Paris, 1544, fol., reprinted with the Latin version of Christophorson, at Genova, 1612; and that of Heinichen, Leps., 1827, 1 vol. 8vo. The life of Constantine accompanies the first of these.—The best edition of the Praparato Evangelica is that of Vigier, Paris, 1528, fol.; of Athenæus, Neapol., 1688, 2 vols. 4to; of Eusebius, Paris, 1693, of Emesa, named Piltaccus, slain in 554 by order of the Emperor Gallus, and to whom Ammianus Marcellinus (14, 7) gives the title of "conciliator ortorum."—III. A native of Myndus, in Caria, a contemporary of the preceding. Eunapius makes mention of him in the life of Maximus; and, according to Wytenbach (Eunap., ed. Bossoanez, p. 171), he is the same with a third Eusebius, of whom Stobæus has left us two fragments.

Eustathius, I. an archbishop of Thessalonica, flourished in the 12th century under the emperors Manuel, Alexius, and Andronicus Comnenus. He is celebrated for his erudition as a grammarian, and is especially known as a commentator on Homer and Dionysius the geographer. It must be confessed, however, that in the former of these commentaries he is largely indebted to the Deipnosophists of Athenæus, and Schweighaeuser holds the following language toward the relations of these obligations (Profess. ad Athen., p. xii.): "In Eustathii in Homeri Commentario Athenæus notor a capite ad calcem (errosisse dixerit) utramque paginam facit: adeoque est incredibilis et rara infinitis locorum numero, quius doctus ille praebuit ex uno Athenæi fonte hortus suis irrigavit, ut sapere etiam notissimorum nobilissimorumque auctorum, quorum ubiude obside ipsa scripta sunt, annum ejusdem Athenæi versibus prodiderit testimonium; utque, nisi de viri doctrina alia studio sita, subinde propromodum videri ille possit et sole Naufragi Deipnosophisti sapuisse." (Compare the note of the same editor, and Fabricius, Bibl. Græc., vol. I, p. 316, seqq.) The commentary of Eustathius was united to the edition of Homer which appeared at Rome in 1542, 1543, 1550, in 3 vols. folio; and was reprinted at Bâle in 1600, also in 3 vols. folio. The latest edition of this work is that of 1665, 6 vols. 4to. A work for that of Politi, undertaken in 1730, with a Latin version, was never finished. The three volumes of it which appeared at Florence, 1730-35, in folio, extend only to the end of the fifth book of the Iliad. Müller and Baumgarten-Crusius have performed a valuable service for the student, in publishing extracts from Eustathius along with the text of the Iliad and Odyssey. (Compare the Memoir of Andrès on the Commentary of Eustathius, and the various translations which have been made of it; Mem. della Reg.

Academia Ercolanensae, vol. I, p. 97, Naples, 1822. Bulletin des Sciences Historiques, vol. 4, p. 387, seqq.) The commentary on Dionysius, while valuable, from the scanty nature, most probably, of the materials employed. A commentary on Pindar is lost. Some unpublished letters of the archbishop's are to be found in the public libraries of Europe.—II. A native of Egypt, called by some Eumathius, and styled in one manuscript Πρωτονομολόγιος και μέγας χαρακτῆρας, "Protonomismus and great architect." He was the author of a romance, entitled, Παντείων "Ταύχη και Τεμαχίων "Pantieon and Hysminias." It is a cold, flat, and lifeless performance. The work has been twice published; first at Paris, 1618, in 8vo, with the version, and under the care, of Gaultin; and again by Teucher, Leps., 1792. This last contains merely the text and the last version of Gaultin, without either preface or notes.—III. An ancient jurist, who has left a work on Prescriptions, entitled, περὶ τῶν χρυσῶν διαστημάτων, "Of intervals of time." It was published by Cujas in the 1st volume of his works, Bâle, 1561, 8vo; in Greek and in Latin, and by Schard, in the collection of Löwenklau, vol. 2, and at Leipzig, in 1791, 8vo, by Teucher.

Euterpe, one of the Muses. She presided over music, and is generally represented as holding two flutes. To her was ascribed the poet's invention of the tragic chorus. Ausonius says of her, "Dulci- logus calamus Euterpe flautum urget." (Idyll. vit., 4.) She is "the well-delighting one" from εὖ, well, and πήροι, to delight. (Vid. Musm.)

Euthycrius, a sculptor of Sicyon, son and pupil of Lysippus, flourished in Olymp. 120. He was peculiarly happy in the proportions of his statues. Those of Hercules and Alexander were in general esteem, and particularly that of Medea, which was borne on a chariot by four horses. (Plin., 34, 8.) As regards the last of these subjects, however, consult the remarks of Sillig, where a new reading of the text of Pliny is suggested. (Sillig, Dict. Art., s. v.)

Eutropius ("the railer," εὐτροπελός), an epithet given to P. Volumnius, a Roman, on account of his wit and pleasantry. (Horat., Epist. 1, 18, 31.) Having forgotten to put his surname or title of Eutropius to a letter he wrote to Cicero, the orator tells him he fancied it came from Volumnius the senator, but was undeceived by the eutropia (εὐτροπελία), "the spirit of one" which he "well-delighting one" from εὖ, well, and πήροι, to delight. (Vid. Musm.)

Eutropius, I. a Latin historian of the 4th century. He bore arms under Julian in his expedition against the Parthians, as he himself informs us (9, 16), and is thought to have risen to senatorial rank. Suidas makes him of Italian origin, while some modern writers, on the other hand, advance the hypothesis that he was a native of Gaul, or, at least, had possessions in the neighbourhood of Aix, and was identical with the Eutropius to whom some of the letters of Symmachus are addressed. (Schoell, Hist. Lit. Rom., vol. 3, p. 161, seqq.—Compare the remarks of Tzschucke on the life of Eutropius, prefixed to his edition.) The manuscripts give him the title of Vir Cl, which may stand either for the "noblest" or "the best," but which in either sense indicates an advancement to some of the highest offices in the state. He wrote several works, of which the only one remaining is an abridgment of the Roman History in ten books. It is a brief and dry outline, without either elegance or ornament, yet containing certain facts which are nowhere else mentioned. The work commences with the foundation of the city, and is carried on to the death of Jovian, A.D. 364. At the close of this work, Eutropius announces his intention of continuing the narrative in a more-

512
vated style, inasmuch as he will have to treat of great personages still living; "quia ad inclytos principes sectiorem est." It does not appear that he ever carried this plan into execution. The best edition is that of Tscharsche, Lips., 1797, 8vo.—II. A eunuch and minister of the Emperor Arcadius, who rose by base and infamous practices from the vilest condition to the highest pitch of opulence and power. He was probably a native of Asia, was made chamberlain to the emperor in the year 395, and, after the fall of Rufinus, succeeded that minister in his master's place, and rose to unlimited authority. He even created consul, a disgrace to Rome never before equaled. An insult offered to the empress was the cause of his overthrow; and he was sent into perpetual exile to Cyprus. He was soon afterward, however, brought back on another charge; and, after being condemned, was beheaded A.D. 399. (Zosim., 5, 10.—Id., 5, 18, &c.)

Exampaeus, a fountain which, according to Herod- tus, flows into the Hypanis, where the river is four days' journey from the sea, and renders its waters bitter, that before were sweet. Herodotus places this fountain in the country of the ploughing Scythians, and of the Alazones. It takes, he adds, the name of the place where it springs, which, in the Scythian tongue, is Exampaeus, corresponding in Greek to ispal idol, or "the sacred ways." (Herodot., 4, 62.)

F.

Farina, now Farfa, a river of Italy, in the territory of the Sabines, called also Farfiris. (Virg., Aen., 7, 715.)

Farfa Genes, a numerous and powerful patrician house of ancient Rome, which became subdivided into several families or branches, distinguished by their respective cognomina. The name Fabius was divided between Fabius, Fabius Ambustus, Fabius Vibulani, &c. Pliny says that the name of this house arose from the circumstance of its founders having excelled in the culture of the bean (faba), the early Romans having been remarkable for their attachment to agricultural pursuits. (Plin., 18, 3.) According to Festus, however, the Fabii traced their origin to Hercules (Fest., s. v. Fabii), and their name, therefore, is thought to have come rather from the Etrurian term for "bean," Fabii, which Passeri makes equivalent to "angust" or "venerable." (Tab. En- gavin, vii, lin. 22.) But this etymology is less probable, since the Fabii are said, by the ordinary authorities, to have been of Sabine origin, and to have settled on the Quirinal from the time of the earliest Roman kings. After the expulsion of the Tarquinii, the Fabian, as one of the older houses, exercised considerable influence in the senate. Caso Fabius, being quaestor with L. Valerius, impeached Spurius Cassius, B.C. 486, A.U.C. 298, and had him executed. It has been noted as a remarkable fact, that, for seven consecutive years from that time, one of the two annual consulships was filled by three brothers Fabii in rotation. Niebuhr has particularly investigated this period of Roman history, and speculated on the causes of the long retention of office by the Fabii, as connected with the struggle then pending between the patricians and plebeians, and the attempts of them to monopolize the elections. (Rom. Hist., vol. 2, p. 174, seqq.) One of the three brothers, Q. Fabius Vibulani, fell in battle against the Veientes in the year of Rome 274. In the following year, under the consulship of Caso Fabius and Titus Virginianus, the whole house of the Fabii proposed to leave Rome, and settle on the borders of the territory of Veii, in order to take the war against the Veientes entirely into their own hands. After performing solemn sacrifices, they left Rome in a body, mustering 306 patricians, besides their fami-

lies, clients, and freedmen, and encamped on the banks of the Cremena in sight of Veii. There they fortified themselves, and maintained for nearly two years a harassing warfare against the Veientes and other people of Etruria. At last, in one of their predatory incursions, they fell into an ambuscade, and, fighting desperately, were all exterminated. (Livy, 2, 48, seqq.) Dionysius of Halicarnassus gives also another account of this disaster, which he considers less credible. According to this latter form of the legend, the Fabii, fleeing for Rome, in order to offer up a sacrifice in the chapel of their house. As they went to perform a pious ceremony, they proceeded without arms or warlike array. The Etrurians, however, knowing their road, placed troops in ambush, and, falling on the Fabii, cut them to pieces. (Consult the remarks of Dionysius, 9, 19, and of Niebuhr, Rom. Hist., vol. 2, p. 200.) It is said that one only of the Fabii escaped this massacre, having been left quite young at Rome. (Livi., 2, 50.—Dion. Hal., 9, 22.) His name was Q. Fabius Vibulanus, and he became the parent stock of all the subsequent Fabii. He was repeatedly consul, and was afterward one of the decemviri with Appius Claudius for two consecutive years, in which office he disgraced himself by his conciv- nance at the oppressions of his colleague, which caused the fall of the decemviri. (Vid. Decemviri.)

Fabia Lex. I. de ambitu, was to circumscribe the number of Senators or attendants which each of the allied cities was to cash in the capacity of some high office. It was proposed, but did not pass. (Cic. pro Muren., 34.) The Sactatores, who always attended candidates, were distinguished from the Salutatores, who only waited on them at their houses in the morning, and then went away; and from the Deductores, who went down with them to the Forum and Campus Martius. —II. There was another law of the same name, en- acted against kidnapping, or stealing away and retaining freemen or freewomen. The punishment of this one was the same, but afterward to be sent to the mines; and for buying or selling a freeborn citizen, death. (Cic. pro Rab., 3.—Ep. ad Quint. Fr., 1, 2.)

Fabia, a vestal virgin, sister to Terentius, Cicero's wife. She was accused of criminal intercourse with Catiline, and brought to trial in consequence, but was defended by Cicero and acquitted. (Middleton's Life of Cicero, vol. 1, p. 159.)

Fabii, Vid. Fabia Genes.

Fabii, I. M. Ambustus, was consul A.U.C. 393, and again several times after. He fought against the Hernici and the Tarquinians, and left several sons.—II. Q. Maximus Rullianus, son of the preceding, at- tacked and defeated the Sammites, A.U.C. 439, in the absence and against the orders of his commanding officer, the Dictator Papirus, who would have brought him to punishment for disobedience, but was prevented by the intercession of the soldiers and the people. This Fabius was five times consul, and dictator twice. He triumphed over the Sammites, Marsi, Gauls, and Etrurians. His son, Q. Fabius Gurges, was thrice consul, and was grandfather of Q. Fabius Maximus Verrucosus, one of the most celebrated generals of Rome.—III. Q. Maximus Verrucosus, the celebrated opponent of Hannibal. He is said to have been called Verrucosus from a wart on his lip, verruca being the Latin name for "wart." After a long and famous military career he triumphed over the Ligurians. After the victory of Hannibal at the Lake Trasimenus, he was named Prodictator by the unanimous voice of the people, and was intrusted with the preservation of the republic. The system which he adopted to check the advance of Hannibal is well known. By a succession of skilful movements, marches, and counter-marches, always choosing good defensive positions, he harassed his en- tagomist, who could never draw him into ground fa- vorable for his attack, while Fabius watched every op-
portunity of availing himself of any error or neglect on the part of the Carthaginians. This mode of warfare, which was new to the Romans, acquired for Fabius the name of "Cunctator" or "delay," and was cen-
sured by the young, the rash, and the ignorant; but it probably was the means of saving Rome from ruin. Minucius, who shared with Fabius the command of the army, having improvidently engaged Hannibal, was saved from total destruction by the timely assistance of the Gauls. In the following year, however, A.U.C. 536, Fabius being recalled to Rome, the com-
mand of the army was intrusted to the consul Teren-
tius Varro, who rushed imprudently to battle, and the defeat at Cannae made manifest the wisdom of the dic-
tator’s previous cautions. Fabius was chosen consul the next year, and was again employed in keeping Hannibal in check. In A.U.C. 543, being consul for the fifth time, he retook Tarentum by stratagem, after which he narrowly escaped being caught himself in a snare by Hannibal near Metapontum. (Livy, 27, 15, seq.) When some years after, the question was dis-
cussed in the senate, of sending Scipio with an army into Africa, Fabius opposed it, saying that Italy ought first to be rid of Hannibal. Fabius died some time after at a very advanced age. His son, called likewise Quintus Fabius Maximus, who had also been consul, died before him. His grandson Quintus Fabius Max-
imus Servilianus, being proconsul, fought against Vir-
icum in the time of the consul Ciminus, and took an hon-
able peace. (Livy, Epit., 54.) He was afterward consul repeatedly, and also censor. He wrote An-
als, which are quoted by Macrobius. (Sat., 1, 16.) His brother by adoption, Quintus Fabius Maximus 
Æmilianus, the son of Paulus Æmilius (Livy, 45, 41), was consul A.U.C. 609, and was father of Fabius, called Allobrogicus, who subduéd not only the Al-
obroges, but also the people of southern Gaul, which he ruled, and divided into five provinces, of which that of Provicia. Quintus Fabius Maximus, a grandson of Fabius Maximus Servilianus, served in Spain under Julius Caesar, and was made consul A.U.C. 709. Two of his sons or nephews were consuls in succes-
sion under Augustus. There was also a Fabius con-
sul under Tiberius. Panvinius and others have reck-
oned that, during a period of about five centuries, from the time of the first Fabius who is mentioned as con-
sul, to the reign of Tiberius, there were over seven dictatorships, eight censorship, seven augu-
rs, besides the offices of master of the horse and military tribune with consular power, were filled by
individuals of the Fabian house. It could also boast of thirty triumphs and two ovations. (Augustinus
 de Familii Romanorum.—Encyl. Us. Knool., vol. 10, p. 151.)—IV. A loquacious personage alluded to by Horace (Sat., 1, 1, 14).—V. Pictor, the first Ro-
man who wrote an historical account of his country. This historian, called by Livy scriptorum antiquissi-
num, appears to have been wretchedly qualified for the labour he had undertaken, either in point of judgment, fidelity, or research; and to his carelessness and inac-
curacy, more than even to the loss of monuments, may be attributed the painful uncertainty which to this day hangs over the early ages of Roman history. Fabius lived in the time of the second Punic war. The fam-
ily received its cognomen from Caius Fabius, who, hav-
ing resided in Etruria, and there acquired some know-
elige of the fine arts, painted with figures the temple of 
Sulis, in the year of the city 450. The historian was grandson of the painter. He served in the second Punic war, and was present at the battle of Trasy-
menus. After the defeat at Cannae, he was sent by the senate to inquire from the oracle at Delphi what would be the issue of the war, and thence by what sup-
plications the wrath of the gods might be appeased. His annals commenced with the foundation of the city and the antiquities of Italy, and brought down the se-
nies of Roman affairs to the author’s own time, that is, to the end of the second Punic war. We are inform-
ed by Dionysius of Halicarnassus, that, for the great proportion of the events which preceded his own age, Fabius Pictor had no better authority than vulgar trad-
tion. He probably found, that, if he had confined himself to what was certain in these early times, his history would have become dry, insipid, and incom-
plete. This may have induced him to adopt the fa-
bles, which the Greek historians had invented concern-
ing the origin of Rome, and to insert whatever he found in family traditions, however contradictory or uncer-
tain. Dionysius has also given us many exam-
pies of his improbable narratives, his inconsistencies, his negligence in investigating the truth of what he re-
lates as facts, and his inaccuracy in chronology. In
particular, as we are told by Plutarch in his life of
Romulus, Fabius followed an obscure Greek author, Diocles the Peparthian, in his account of the founda-
tion of Rome, and from this taintless source have flowed all the stories concerning Mars, the Vestal, the Wolf, Romulus, and Remus. He is even guilty of inaccu-
rate and prejudiced statements in relation to the affairs of his own time; and Polybius, who flourished shortly after these times, and was at pains to inform himself accurately concerning all the events of the second Pu-
ic war, apologized for quoting Fabius on one occasion as an authority, and, at the same time, strongly express-
ing his opinion of his history as full of errors and inconsistences. The account here given of this writer is rather confirmed by the few fragments that remain of his work, which are tripping and childish in the ex-
treme. (Dunlop’s Hist. Rom. Lit., vol. 1, p. 117, seq.)

Fabrateria, a town of Latium, on the river Liris, and near its junction with the Terus. The modern name is Fabriaterra. This town appears to have first
belonged to the Volsci, but as early as 454 B.C. it was placed itself under the protection of Rome.
(Livy, 8, 19.)

Fabricius, Caius, surnamed Luscus, was consul for the first time in the year 471 of Rome, 283 B.C., when he triumphed over the Boii and Etrurians. Af-
fter the defeat of the Romans, under the consul Lavinius, by Pyrrhus (B.C. 281), Fabricius was sent by the senate as legate to the king, to treat for the ransom of the prisoners, or, according to others, to propose terms of peace on the part of Rome, or to bribe him by large offers, which Fabricius, poor as he was, rejected with scorn, to the great admiration of the king. Fabricius being again consul, B.C. 279, was sent against Pyrrhus, who was then encamped near Tarentum. The physician of the king is said to have come secretly to the Roman camp, and to have pro-
posed to Fabricius to poison his master for a bribe. The consul, indignant at this, had him put in fetters, and sent back to Pyrrhus, on whom this instance of Roman integrity made a strong impression. Pyrrhus soon after sailed for Sicily, whether he was called by the Syracusans, then hard pressed by the Carthagin-
is. Fabricius, having defeated the Sammites, Lucan-
ians, and Bruttii, who had joined Pyrrhus against Rome, triumphed over these nations. Pyrrhus after-
ward returning to Italy, was finally defeated and driven away by M. Curius Dentatus, B.C. 276. Two years after, the Roman league triumphed over a Carthaginian force under Claudius Cinna for his colleague, ambassadors came from King Ptolemy of Egypt to contract an alliance with Rome.—Several instances are related of the ex-
treme frugality and simplicity which marked the man-
ners of Fabricius. When censor, he dismissed from the senate P. Cornelius Rufinus, who had been twice consul, and had also held the dictatorship, because he had in his possession ten pounds’ weight of silver plate. Fabricius died poor, and the senate was obliged to make provision for his daughters. (Plut., Vit. Pyrrh.—
Livy, Epit., 13 et 14.—Enc. Us. Knool., v. 10, p. 159.)
FALERNUS, a town of Italy, in Etruria, southeast of Pistoria, whence it is said the augur passed to Rome. Catiline made it a place of arms. The Goths, when they entered Italy under the consu-
late of Stilicho and Aurelian, A.D. 407, were defeated in a battle near it (Liv. xii. 24.-Sil. Ital., 4, 478. 
Sallust, Cat., 27.)

FALCIDIUS, nepos, proposed by the tribune Falcidius, A.D.C. 713, enacted that the testator should leave at least the fourth part of his fortune to the person whom he named his heir. ( Dio Cass., 48, 33.)

FALERIA, a town of Picenum, southwest of F��mum, now Falleroni. (Plin., 3, 13.)

FALERI (or Falerna), the City of Etruria, southwest of Falerii Novi, and the capital of the ancient Falisci, so well known from their connexion with the early his-
tory of Rome. Much uncertainty seems to have ex-
isted respecting the ancient site of this place; but it is now well ascertained that it occupied the posi-
tion of the present Civita Castellana. Cluver, and after him Holstenius (ad Steph. Byz., p. 67), have satisfactorily established this point. The doubt seems to have originated in the notion that there was a city named Falusium, as well as Falerii. (Strabo, 226.)

The situation of the ancient Falerii is made to agree with that of Civita Castellana, from the language of Plutarch ( Vit. Camil.) and Zonaras (Ann., 2), who both describe it as placed on a lofty summit; and the latter states that the old town was destroyed, and a new one built at the foot of the hill. This fact is con-
firmed by the identity of the new Falerii with the church of St. Maria Faleri, on the track of the Pla-
mian way, where the Itineraries place that city. We learn, too, from Pliny (3, 5), that Falerii became a colony under the name of Faliscas, a circumstance which sufficiently reconciles the apparent contradic-
tion in the accounts of this city. (Front., de Col., p. 130.)

Falerii, according to Dionysius of Halicarnas-
sus (1, 21), belonged at first to the Siculi; but these were succeeded by the Faleri, to whom the Greek form of its name is doubtless to be ascribed, as well as the temple and rites of the Argive Juno, and other indications of a Grecian origin which were observed by that historian, and with which Ovid, who had mar-
ried a lady of this city, seems also to have been struck, though he has followed the less authentic tradition, which ascribed the foundation of Falerii to Halesus, son of Agamennon. (Am., 3, 13.-Fast., 4, 73.)

The water Falerii Rh. Rome are chiefly detailed in the fifth book of Livy, with the celebrated story of Camillus and the schoolmaster of Falerii occurs. When the Roman commander was besie-
ging this place, the schoolmaster of the city (for the higher classes of Falerii had a public one for the com-
mon education of their children) committed a most disgraceful and treacherous act. Having led his schol-
ars forth, day after day, under pretence of taking ex-
ercise, and each time farther from the city walls, he at last managed to bring them within the reach of the Bar-
bian outposts, and surrendered them all to Camillus. Indignant at the baseness of the deed, the Roman gen-
eral ordered his lictors to strip the delinquent, tie his hands behind him, and supply the boys with rods and scourges to punish the traitor, and whip him into the city. This generous act on the part of Camillus pro-
duced so strong an impression on the minds of the inhab-
tants of Falerii, that immediately after submitting to treat of a surrender (Liv. 5, 27.-Comment. Val. Max., 
6, 5.-Front., Strat., 5, 4). It was not, however, till the third year after the first Punic war that this people was finally reduced. (Polybius, 1, 65.-Livy, Epit., 19.-Orat., 4, 11.)

The waters of the Faliscan ter-
itory were supposed, like those of the Clitunnum, to
have the peculiar property of communicating a white
colour to cattle. (Plin., 2, 103.-Oram's Anc. Italy, vol. 1, p. 526.)

FALERNUS AGER, a part of Italy famed for its wine. Few portions of the Italian peninsula were unfriendly to the vine, but it flourished most in that tract of the southwestermost coast to which, from its extraordinary fertility, its name of Falernus is derived. Here Felix was given. Some doubt concerning the extent of the appellation seems to exist; but Pliny and Strabo confine it to the level country reaching from Sinuessa to the promontory of Sorrento, and including the Campi Laborini, from whence the present name of Terra di Lavoro has arisen. In ancient times, in-
deed, the hills by which the surface is diversified seem to have been one continued vineyard. Falernus is spoken of by Pliny as a mountain, and Martial de-
scribes it under the same title; but Pliny, Polybius, and others, denominate it a field or territory (ager); and, as the best growths were styled indiscriminately Massicum and Falernum (vinum), it is thought that Massicus was the proper appellation of the hills which arose from the Falernian plain. The truth seems to be, that the choicest wines were produced on the southern declivities of the range of hills which com-
 menced in the neighbourhood of ancient Sinusessa, and extend to a considerable distance inland, and which may have taken their general name from the town or district of Falerii; but the most conspicuous or the best exposed among them may have been the Massic; and as, in process of time, several inferior growths were confounded under the common denomination of Falernian, correct writers would choose that epithet which most accurately denoted the finest vintage. If we are to judge, however, by the accounts of modern names, the question of locality will be quickly decided, as the mountain which is generally allowed to point to the site of ancient Sinusessa is still known by the name of Monte Massico. Pliny's account of the wines of Campania is the most circumstantial. (Plin., 14, 6.)

"Augustus, and most of the leading men of his time," observes this writer, "gave the preference to the Se-
tine wine that was grown in the Forum Appii, as being of all kinds the least calculated to injure the stomach. Formerly the Cacubian wine, which came from the poplar marshes of Amycæ, was most esteemed, but it has lost its repute through the negligence of the growers, and partly from the limited extent of the vineyards, which have been nearly de-
stroyed by the navigable canal begun by Nero from Avernus to Ostia. The second rank used to be as-
signed to the grapes of the Bacchus, and was commonly spoken of as Falernian. The territory of Falernus begins from the Campanian bridge, on the left hand, as you go to Urbana. The Faustian vine-
yards are situate about 4 miles from the village, in the vicinity of Cedœ, which village is six miles from Sin-
uessa. The wines produced on this soil owe their celebrity to the great care and attention bestowed on their manufacture; but latterly they have somewhat degenerated, owing to the rapid emigration of the farmers who are usually the best judges of the quantity than the quality of their vintage. They continue, however, in the greatest esteem, and are, perhaps, the strongest of all wines, as they burn when approached by a flame. There are three kinds, the dry, the light, and the sweet Falernian. The grapes of which the wine is made are unpleasant to the taste." From this and other accounts, it appears that the Falernian wine was strong and durable; so rough in its first vintage as not to be drinkable for several years, requiring to be kept many years before it grew mellow. Horace calls it a fiery wine; Persius, indomitum, i. e., possessing very 
heady qualities. According to Galen, the best was 
that from 10 to 20 years; after this period it became 
bitter. Among the wines of the present day, Xeres 
and Madeira most closely approximate to the Faler-
nian of old, though the difference is still very consid-
erable, since the ancient wines of Italy and Greece
were usually mixed with certain quantities of pitch, aromatic herbs, sea-water, &c., which must have communicated to the drink a sort of that color and character unpalatable. Among the ancient, and especially the Greek wines, it was no uncommon thing for an age of more than 20 years to leave nothing in the vessel but a thick and bitter mixture, arising, no doubt, from the substances with which the wine had been medicated. We have an exception, however, to this, in the wine made in Italy during the consulship of Opimius, A.U.C. 633, which was to be met with in the time of Pliny nearly 900 years after. This may have been owing to the peculiar qualities of that vintage, since we are informed that, in consequence of the great warmth of the summer in that year, all the productions of the earth attained an extraordinary degree of perfection. *Vid. Cacubus Agor. (Henderson's History of ancient and modern Wines, p. 81, seqq.)*

FALISC, a people of Etruria. (*Vid. Falerii.*)

FALISCIUS GRATIUS, *Vid. Gratius.*

FANNIUS LEX, de Sumptibus, enacted A.U.C. 588. It limited the expenses of one day, at festivals, to 100 asses, whence the law is called by Lucilius Centussius; on ten other days every month to 30, and on all other days to 10 asses: also, that no other fowl should be served up except one hen, and that not fattened for the purpose. (*Aul. Gell., 2, 24.—Macrobr., Sat. 2, 13.)*

FANNIUS, an inferior poet, ridiculed by Horace (*Sat., 1, 4, 49.*) He screen the labors of the hunters of the day carried his singing and bust to the library of the Palatine Apollo, a compliment only paid to productions of merit. The satirist remarks, that this was unasked for on the part of Fannius (ultra delatis capis et imagine); an expression of double import, since ultra may also contain a sly allusion to the absence of all mental exertion on the part of the poet. (*Schol. et Heindorf, ad Horat., i. c.)*

FANNIOS, a temple of Vacuna, in the vicinity of Horace's Sabine villa. (*Hor., Ep., 1, 10, 49.)* It is supposed to have stood on the summit of Rocca giovane.

FARFARIS. *Vid. Fabaris.*

FAUNA, a goddess of the Latin. According to the old Roman legends, by which all the Italian deities were originally mortals, she was the daughter of Picus, and the sister and wife of Faunus. One account makes her to have never left her bower, or let herself be seen of men, and to have been delisted for this reason, becoming identical with the Bona Dea, and no man being allowed to enter her temple. (*Macrobr., 1, 12.)*

According to another tradition, she was not only remarkable for her modesty, but also for her extensive and varied knowledge. Having, however, on one occasion, made free with the contents of a jar of wine, she was beaten to death by her husband with myrtle-twigs! Repeating, however, soon after the deed, he bestowet her in the same manner, on the sacred rites, myrtle boughs were carefully excluded; nor was any wine allowed to be brought, under that name, into her temple; but it was called "honey," and the vessel containing it also was termed mellarium (ecl. vas), i. e., "a honey-jar." (*Consul. Macrobr., Sat. 1, 12, and Spangenberg, de Vet. Lat. Relig. Domest., p. 64,* where other versions of the same story are given.) She has given the oracles from her temple after death, which circumstance, according to some, affords an etymology for the name Fauna or Fatueula, which was often borne by her (from fari, "to declare"). A different explanation, however, is given by Macrobius (*Labeo, ap. Macrobr., Sat. 1, 12.*).—There can be little doubt but that Fauna is identical not only with the Bona Dea, but with Terra, Tellus, and Opis; in other words, with the Earth personified. (*Macrobr., i. c.*)

The name appears to come from *φαυνα, φαών, connected with which are φαώνος and φαών, "to bring forth into the light," "to cause to appear." (*Creuzaer, Symbolik, vol. 1, p. 51, 54.)*

FAUNILIA, festivals at Rome in honour of Faunus. They were celebrated on the 13th of February, or the idea of the month. On this same day occurred the slaughter of the Fabi. (*Ovid, Fast., 2, 193, seqq.*) There was another festival of the same name, which was celebrated on the nones (5th) of December. (*Horat., Od., 3, 18.*)

FAUNA, certain deities of the country, represented as having the legs, feet, horns of goats, and the rest of the body human. The peasants offered them a lamb or a kid with great solemnity. When the spring brought back new life to the fields, the vivid imagination of the ancient poets saw them animated by the presence of these frolic divinities, and hence, no doubt, the origin of their name, from the Greek φαών or φαών ("to show forth," "to display to the view"), the Fauns being, if the expression be allowed, the rays of the genial spring-light personified. (*Creuzaer, Symbolik, vol. 2, p. 921.*)—The Fauns of the Latin mythology are somewhat analogous to the Satyrs of the Greeks. There are points, however, in which the ancient artists made them differ as to appearance. The Fauns are generally represented as young and frolic of mien; their faces are round, expressive of merriment, and not without an occasional mixture of mischief. The Satyrs, on the contrary, bear strong resemblance to different quadrupeds; their faces and figures partake of the ape, the raven or the goat; they have sometimes goats' legs, but always either goats' or horses' tails. (*Flaxman, Lectures on Sculpture, p. 152.*—According to Lanzi, there is, in general, in the lower limbs of the Faun, more of the goat, in those of the Satyr more of the horse. (*Vasi, p. 98, seqq.—Compare Vicoconti, Mus. Pio-Clement., vol. 3, p. 54, seqq.—Virg., G., 1, 10.—Ovid. Met., 6, 392.*)

FAUNUS, a rural deity of the ancient Latins, resem- bing the Fauns, but to whom 900 days only were dissimilar in name, and with whom he was often identified. (*Ovid., Fast., 2, 424.—Id. ib., 4, 650.—Horat., Od., 1, 17, 1.*)—Indeed, some writers think that his worship was originally Pelasgic, and was brought by this race from Arcadia, the well-known centre of the worship of Pan. (*Compare Creuzaer, Symbolik, vol. 3, p. 203.*—Faunus was held to have the power of telling the future. (*Ovid., 1. c.—Virg., En., 7, 81, seq.)*

In the later times he was identified with the other Italian gods, and was said to have been a just and brave king, greatly devoted to agriculture, the son of Picus and father of Latinus. (*Virg., En., 7, 47.—Probus, Geor., 1, 10.*—Like Pan, too, he was multiplied; and as there were many, we also meet abundant mention of Fauns. (*Vid. Fauni.*—The poets gave to Faunus the same personal attributes as they did to the Fauns, making his shape half human, half animal, or both. As Macrobius says, he is the Earth. (*Vid. Fauna, so Faunus appears to be the same with Tellumo. (*Spangenberg, de Vet. Lat. Rel. Dom., p. 63.—Heyst, Excurs., 5, ad En., 7.—Ruperti, ad Jun., 8, 131.—Antius, ap. Arnob. adv. gent., 5, 1, p. 483.—Creuzaer's Symbolik, vol. 3, p. 203.*)

FAVORINUS. *Vid. Phavorinus.*

FAVORA, I. daughter of Sylvia, married Milo the friend of Catullus by a criminal affair with the historian Sallust. (*Horat., Sat., 1, 2, 41.—Schol. Crug. et Acr., ad loc.)*—II. Daughter of Maximian, and wife of Constantine the Great. When her father wished her to join him in a plot for assassinating her husband, she discovered the whole affair to the latter. After exercising the most complete ascendency over the mind of her husband, she was eventually put to death by him, on his discovering the falsity of a charge which she had made against Grispus, the son of Constantine by a previous marriage. (*Ann. Mar.
cell, 14, 1.—Croly, Hist. des Emp. Rom., vol. 6, p. 356.)

Faustina, I. Anna Galeria, daughter of Annius Verus, prefect of Rome. She married Antoninus before his adoption by Hadrian, and died in the third year of her husband's reign, 36 years of age. She was notorious for her licentiousness, and, yet her husband appeared blind to her faults, and after her death even accorded unto her divine honors. Her effigy appears on a large number of medals. (Dio Cass., 17, 30.—Capitol., Vit. Anton. P., c. 3.)—II. Anna, or the Younger, daughter of the preceding, married her cousin Marcus Aurelius, and died A.D. 176, in a village of Cappadocia, at the foot of Mount Taurus, on her husband's return from Syria. She is represented by Dio Cassius and Capitolinus as even more profligate in her conduct than her mother; and yet Marcus, in his Meditations (1, 17), extols her obedience, simplicity, and affection. Her daughter Lucilla married Lucius Verus, whom Marcus Aurelius associated with him in the empire, and her son Commodus succeeded his father as emperor. (Capitol., Vit. Ant. Phil., c. 19.) Marchand (Mercure de France, 1745) and Wieland have attempted to clear this prince of all reproaches against his character. (Encyclopedia, Use. Knowledge, vol. 10, p. 209.)

Faustitas, a goddess among the Romans, supposed to preside over cattle, and the productions of the seasons generally. Faustitas is frequently equivalent to the Felicitas Temporum of the Roman medals. (Hort., Od., 4, 5, 17.)

Fauclus, the name of the shepherd who, in the old Roman legend, found Romulus and Remus getting suckled by the she-wolf. He took both the children to his home and brought them up. (Vid. Romulus, and Roma.)

February, a feast at Rome of purification and atonement, in the month of February: it continued for 12 days. The month of February, which, together with January, was added by Numa to the ten months constituting the year of Romulus, derived its name from this general expiatory festival, the people being then purified (februant) from the sins of the whole year. (Ovid, Fast., 2, 19.) Some, however, deduce the name February from the old Latin word fiber, mentioned by Varro (L. L., 4, 13), and meaning the "end" or "extremity" of anything, whence comes the term fimbria, "the hem or edge of a garment." In this sense, therefore, February will have been so called from its having been the last month in the earlier Roman year. (Herod., Hist., vol. 1, p. 303, biv.)

Felix, M. Antonius, I. a Roman governor of Juguria, who succeeded in office Cumanus, after the latter had been exiled for malversation. (Josephus, Ant. Jud., 20, 6.) He was the brother of the freedman Pallas, the favourite of Claudius. On reaching his government, A.D. 53, Felix became enamoured of the beautiful Drusilla, daughter of Agrrippa, at that time married to Azius, king of Emesa; and by dint of many debts and the money they owed him, a reputed sorcerer named Simon, he succeeded in detaching her from her husband, and in making her his own wife. Josephus charges this governor (Ant. Jud., 20, 8) with having caused the assassination of the high-priest Jonas, to whom, in a great measure, he owed his place. Felix, it seems, wished to rid himself of one who was continually remonstrating with him about the quibbling in his office, and therefore, in the guise of a prophet, and using the name of a reputed sorcerer named Simon, he succeeded in detaching her from her husband, and in making her his own wife. Josephus charges this governor (Ant. Jud., 20, 8) with having caused the assassination of the high-priest Jonas, to whom, in a great measure, he owed his place. Felix, it seems, wished to rid himself of one who was continually remonstrating with him about the quibbling in his office, and therefore, in the guise of a prophet, and using the name of a reputed sorcerer named Simon, he succeeded in detaching her from her husband, and in making her his own wife. (Joseph., t. i. :) It was before this Felix that St. Paul appeared at Cæsarea, on that memorable occasion when the startling subjects discussed by the apostle made the corrupt Roman tremble on his judgment-seat. (Acts, 25, 23.) Two years after, this Felix was succeeded by Porcius Festus, and left Paul still in prison, in order to please the Jews. The latter, however, sent a deputation to Rome to accuse him of various malpractices, but he was screened from punishment by the influence of his brother Felix, who succeeded Claudius on the imperial throne. (Joseph., Ant. Jud., 20, 8.)—II. A native of Rome, who succeeded Dionysius the Calabrian as bishop of that city, A.D. 271, and suffered martyrdom in 275. He was succeeded by Eutychianus, bishop of Luna. There is extant an epistle of Felix to Maximus, bishop of Alexandria, against Paul of Samosata.—III. A bishop of Rome, the second of the name in the list of Popes, though some call him Felix III., on account of his assumption of the title of Felix II. in the schism against Liberius (A. D. 355-66). He succeeded Simplicius A.D. 483. Felix had a dispute, upon questions of ecclesiastical supremacy, with Acacius, bishop of Constantinople, who was supported by the emperor and most of the eastern clergy, in consequence of which a schism ensued between the Greek and Latin churches. Felix died A.D. 492, and was succeeded by Gelasius I. He was canonized by the Roman church. (Concilia Maiorum, vol. 1, p. 293.)

Felina, an Etrurian city in Gallia Cisalpina, afterward called Bononia, and now Bologna. Pliny (3, 15) makes it to have been the principal seat of the Tuscans; but this must be understood to apply only with reference to the cities founded by that nation north of the Apennines. Bononia received a Roman colony 653 A. U. C. (Eutic., 37, 57.—Vell. Pater., 15.) Frequent mention of this city is made in the civil wars. (Cic., Ep., ad Fam., 11, 13.—Id. ib., 12, 5.—Appian., 4, 2.) As it had suffered considerably during this period, it was restored and aggrandized by Augustus after the battle of Actium, and continued to rank high among the great cities of Italy. (Tacit., Hist., 2, 53.—Strabo, 216.—Pomp. Mcl., 2, 4.—Cramer's Ancient Italy, vol. 1, p. 85.)

Feltria, a town of Italy, now Feltrie, in the district of Venetia. It was the capital of the small community called Feltrini.

Fenestella, a Roman historian, who lived in the time of Augustus. Pliny and Eusebius place his death in the sixth year of the reign of TibERius, A.D. 21. Fenestella wrote an historical work entitled Annales, from which Asconius Pedianus has derived many materials in his Commentaries on Cicero's Orations. Of this work only fragments remain. Another production, "De Successitis et Magistratuibus Romanorum," is sometimes attributed to him, 121, incorrectly, from the pen of Fociochi (Flaccus), a native of Florence, and was written at the commencement of the 14th century. Fenestella was seventy years old at the time of his death. (Voss., de Hist. Lat., 1, 19.—Funct. de Viril. et. L. L., p. 2, c. 5, 8.—Madvig, de Aeson. Pedew., p. 64.) The fragments of Fenestella's Annales are given, among others, by Havercamp, in his edition of Sallust, vol. 2, p. 395. (Bähr, Gesch. der Romischen Literatur, p. 12.)

Feralia, a festival at Rome of the Dii Manes, on the 21st of February, but, according to Ovid, on the 17th. Felix derives the word from fero, on account of a repast carried to the sepulchres of relations and friends on that occasion, or from feria, on account of the victims sacrificed. Vossius observes, that the Romans termed death fera, cruel, and that the word feralis might arise therefrom. (Ermann, Encycl., Handwörter, vol. 1, p. 341, s. v. fera.) It continued for 11 days, during which time presents were carried to the graves of the deceased, marriages were forbidden, and the temples of the gods were shut. Friends and relations also kept, after the celebration, a feast of peace and love, for settling differences and quarrels among one another, if any such existed. It was universally believed that
FER

FES

the manes of departed friends came and hovered over their graves, and feasted upon the offerings which the hand of piety and affection had prepared for them. In the case of the poor these offerings were plain and simple, consisting generally of a few grains of salt, the husks of the tree, scattered violets, &c. The wealthy, however, offered up sumptuous banquets. (Ovid, Fast. 2, 535, seqq. — Kirchmann, de Funeribus, p. 65.)

Ferenimento. I. a town of Etruria, southeast of Vulcini, now Ferentino. From Vitruvius, who speaks of some valuable stone-quarries in its neighbourhood (2, 7), we collect that it was a municipium. The Emperor Otho’s family was of this city. (Suet., Vit. Oth., 21, 22.—Zipoli, Vite Rom., vol. 2, p. 23.) —Compare Pliny, 15, 33.—II. A town of Latium, about eight miles beyond Anagnia, on the Via Latina, now Feronia. It appears to have belonged originally to the Volsci, but was taken from them by the Romans and given to the Hernici. (Liv., 4, 51.) It subsequently fell into the hands of the Samnites. (Liv., 10, 34.—Compare Steph. Byz., s. v. — Cramer’s Anc. Italy, vol. 2, p. 86, seqq.)

Feronia, also Feronium, as Pliny (3, 11) writes it, a town of Apulia, about eight miles to the southeast of Venusia, and on the other side of Mount Vultur. It is now Forenza. (Horat., Od., 3, 4, 15.—Diod. Sic., 19, 65.)

Feronia, an appellation of Jupiter among the Romans, who was so called from the feretrum, a frame supporting the spolia opima, dedicated to him by Romulus, after the defeat of the Ceninenses, and the death of their king. This derivation, however, is opposed by some, who think it better to derive the term from the Latin ferire, to strike. This is the opinion of Plutarch, and he adds, that Romulus had prayed to Jupiter that he might have power to strike his adversaries and kill him. (Liv., 1, 10.—Plut., Vit. Rom.)

Ferens Latinae, the Latin Holydays. (Vid. Latium.)

Feronia, a goddess worshipped with great solemnity by both the Sabines and Latins, but more especially the former. She is commonly ranked among the rural divinities. Feronia had a temple at the foot of Mount Soracte, and in her grove around this temple great markets used to be held during the time of her festival. Her priests at this place used to walk unhurt on burning coals. (Dion. Hal., 3, 32.—Strab., 226.—Heyne, ad Virg., Enn., 7, 500—Fabretti, Inscript., p. 462.) She had also a temple, grove, and fount near Arxur, and in this temple manumitted slaves went through certain formalities to complete their freedom, such as cutting off and consecrating the hair of their head, and putting on a pilaes or cap. (Liv., 32, 1.—Serv. ad Virg., Enn., 7, 564.) Flowers and first-fruit were the offerings to her, and the interpretation of her name given in Greek was Flower-bearing or Garland-loving, while some rendered it Persephone (Prosperena). Thus Dionysius of Halicarnassus renders τερένια, τερένιαν ἄναμμαζομένης, ἣν ὁ μεταφέρων ἐπὶ τὴν Ἑλλάδα γίγνομαι τῶν μνήμων, οἱ δὲ Φιλόστηκον, οἱ δὲ Φιλότεφλον καλοῦσιν. (Dion. Hal., 3, 32, where for Φερενίας we must evidently read Φερενίας, to suit the text in another part of Dionysius, 2, 49, as also the quantity given by the Latin poets.) Feronia was also said to have been called Juno Virgo (Serv. ad Enn., 7, 799); but this, according to Spangenberg, is a mistake, for from the Sabine form of the Sabine name (Herenia) being confounded with the Greek appellation for Juno (Hera). (Spangenberg, ad Vet. Lat. Rel. Dom., p. 48.) In the vicinity of the temple of Feronia, at Soracte, was another to the god Saturn, and the worship of these two divinities was connected, in a measure, by common ceremonies. Hence Müller compares these two divinities with the

Mania and Manius of the Etrurians. (Müller, Eutr., vol. 2, p. 65.)

Fescennia (torum) of Fescennium, a city of Etruria, east of the Ciminian Lake, and near the Tiber. It seems to have occupied the site of the modern Ga-

line, which was built by the Etruscans on the site of the Romans' foundations (1, 21), that this place was first possessed by the Siculi, who were afterward expelled by the Pelasgi; and he adds, that some slight indications of the occupation of this city by the latter people might still be observed in his day. It is on this account, probably, that Solinus (c. 8) says, it was founded by the Argives. Fescennium is quoted in the annals of Latin poetry for the nuptial songs, called Carmina Fescennina, to which, according to Servius, at the origin of the Fescennine verses, a reference is to be traced to the rude hilarity attendant upon the celebration of harvest. They were, therefore, in their primitive character, a sort of rustic dialogue spoken extemporaneously, in which the actors exposed before their audience the failings and vices of their adversaries, and, by a satirical humour and merriment, endeavoured to raise the laughter of the company. They would seem to have speedily run into excess, since one of the laws of the Twelve Tables prohibits this licence under pain of death; a punishment afterward commuted for beating with sticks. (Consulti Henrici, Versus ludicri in Romanorum Casarum priores olim compositi, Hale, 1810, p. 6.)

Festus, I. Sextus Pomponius (or, according to others, Pompeius), a grammarian, supposed to have lived during the latter half of the third century. He made an abridgment, in alphabetical order, of the large work of Verrius Flaccus, on the signification of Words ("De Verborum Significatione"). This abridgment has been divided by editors into 20 books, each of which contains a letter. Festus has passed over in silence those words which Verrius had declared obsolete, and he intended, it would seem, to have treated of them in a separate work. Sometimes he does not coincide in the opinions of Verrius, and on these occasions he gives his own views of the subject matter. The abridgment is found of it, and the most useful books we possess for acquiring an accurate knowledge of the Latin tongue; it has experienced, however, in some respects, an unhappy lot. It existed entire down to the 8th century, when Paul Winifred conceived the idea of making a small and meager extract from it. This compilation henceforward supplanted the original work in the libraries of the day, and the latter was so far lost to modern times that but a single manuscript is found of it, and that an imperfect one, commencing with the letter M. (Dacier, Paris, ad Fest.) Aldus Manucius, into whose hands the manuscript fell, amalgamated its contents with the labours of Paul Winifrid, and made one work of them, which he printed in 1513, at the end of the Cornucopia de Perotto. Another individual, whose name is unknown, made a similar union, but more complete than that of Aldus. Of this latter work the first six editions were published in 1560 by Antonio Agnese of Venice. Later, in 1685, by the archbishop of Saragossa. Other fragments of Festus were found in the library of Cardinal Farnèse; they were published by Fulvius Urusin, at Rome, in 1581. The best editions are, that of Dacier (In Usum Delphini), Paris, 4to, 1661, that of C. O. Muller, 4to, Leipzig, 1839, and that of Lindemann, in the Corpus Grammaticorum

519
Letinorum Victorum, vol. 2, 410, lips., 1832.—II. Porcius, governor of Judea after Felix, whom the Jews solicited to condemn St. Paul or to order him up to Jerusalem. The apostle's appeal to Caesar (the Emperor Nero) illustrates the dilemma of both Fisci

u and the Jews. (Acts, 25, 1, seqq.)

Fibrenus, a small stream of Latium, running into the Liris, and forming before its junction a small is-

and. This island belonged to Cicero, and is the spot where the scene is laid of his dialogues with Atticus and his brother Quintus on legislation. He describes it in the opening of the book as the property and resi-

dence of his ancestors, who had lived there for many generations; he himself was born there A.U.C. 646. The Fibrenus, in another passage of the second book, is mentioned as remarkable for the coldness of its wa-

ters. The river is now called Fiume della Posta: the island has taken the name of S. Domenico Abate. (Romanelli, vol. 3, p. 366, seqq.—Cramer's Ancient Italy, vol. 2, p. 113.)

Ficulea or Ficulnea, a town of Latium, beyond Mount Sacri,to the north of Rome. Cicero had a villa there, and the road that led to the town was called Fic-

ulensis, afterward Nomentana Via. (Cic., Att., 12, 34. —Liv., 1, 38; 3, 9.) It is supposed by Nibby to have stood at Monte Gentile, about nine miles from Rome. (Delle Vie degli Antichi, p. 94.)

Fidenae, a town of the Sabines, between four and five miles from Rome. It was at first a colony of Alba (Dion. Hal., 2, 54), but fell subsequently into the hands of the Etruscans, or more probably the people of Veii. Fidenae according to Dionysius (2, 22), was conquered by Romulus soon after the death of Tatius; he repre-

sents it as being at that period a large and populous town. It made several attempts to emancipate itself from the Roman yoke, sometimes with the aid of the Etruscans, at others in conjunction with the Sabines. Its last revolt occurred A.U.C. 329, when the dictator Ep. Emmius Mancerus, after having vanquished the Fide-

nenses near the town, stormed the city, which was abandoned to the licentiousness of his soldiery. (Liv., 4, 9.) From this time we hear only of Fidenae as a de-

serted place, with a few country-seats in its vicinity. (Strabo, 226.—Cic., de Leg. Agr., 2, 25.—Horat., Epist., 1, 2, 7.) In the reign of Tiberius a terrible disaster occurred here by the fall of a wooden amphitheatre, during a show of gladiators, by which accident 50,000 persons, as tacitus reports (Ann., 4, 62), or 20,000, according to another commentator (Tit., 40), were killed or wounded. From the passage of Tacitus it appears that Fidenae had risen again to the rank of a municipal town. (Compare Jucnecal, 10, 99.) The

distance of five miles, which ancient writers reckon between Rome and Fidenae, and the remains of an-

tiquity which are yet to be seen there, fix the site of this place near Castel Gibulco. (Nibby, Viaggio Ant., vol. 1, p. 85.—Cramer’s Anc. Italy, vol. 1, p. 302.)

Fides, the Roman goddess of a divine deity, whose name often oc-

curs in adjectives. The expression, mis dicus fides, which is so frequently found in the Roman classics, has been variously explained. Festus makes mis dictus fides to be put for Di oc fides, the son of Jupiter, i. e., Her-

cles; he cites, at the same time, other opinions, as that it is the same with swear ing per mis dices fides or per diurni tempora (i.e., dius) fides. All these etymolo-

gies, however, are decidedly erroneous. A passage in Pliny (Hist., 34) furnishes us a safer guide, which is as follows: “Per dium fides statuens a dictator saepe dicitur video necesse case eloquis, quidquid rogesc.” From this passage we may fairly infer, that, in the phrase under consideration, dius is the same as deus or divus, and fides an adjective formed from fides. Hence dius fides, “the god of honour,” or “of good faith,” will be the same as the Zevi piaest of the Greeks; and, if we follow the authority of Varro, identical with the Sabine Sancus and Roman Hercules. (Varro, L. L., 4, 10.)

Firmum, a city of Picenum, about five miles from the sea, below the river Tintna. It was called Firmum Picenum, and so was termed probably to distinguish it from several other cities of the same name, none of which is now known. (Mich. Catalani, Orig. e Antiq. Firmen, pt. 2, p. 32.) It was colonized, as Velleius Patercu-

lus informs us (1, 14), towards the beginning of the first Punic war. Ancient inscriptions give it the name of Colonia Augusta Firma. The modern town of Fer-

mo is yet a place of some note in the Marca d'Anco-

na; and the Porto di Fermo answers to the Castel-

Hum Firmaroon of Pliny (3, 13.—Cramer’s Anc.

ient Italy, vol. 1, p. 293.)

Firmus of Firmus, one of those ephemeral Roman em-

perors known in history by the name of tyrants, be-

cause they were usurpers of empire under legitimate sovereigns. He was born in Seleucia in Syria, and owned extensive possessions in Egypt. Urged on by the impetuosity and love of change peculiar to the Egyptian Greeks, he seized upon Alexandria, and as-

sumed the title of Augustus, one of his objects being to aid the cause of Zenobia, who had already been con-

quered by Aurelian, but whose power was still not com-

pletely overthrown. Aurelian marched against Fir-

mus with his usual rapidity, defeated him, took him prisoner, and inflicted on him the punishment of the crosses. Firmus is described as having been of extra-

ordinary stature and strength of body. His aspect was so forbidding that he obtained in derision the sur-

name of Cyclops. (Vopisc., Vit. Firm.)

Fiscellus, that part of the chain of the Apennines which separates the Sabines from Picenum. (Plin., 3, 12) Mount Fiscellus was reported by Varro to be the only spot in Italy in which wild goats were to be found. (Vat., R. R., 2, 1.)

Flaccus, I. a poet. (Vid. Valerius.)—II. Verrius, a grammarian, tutor to the two grandsons of Augustus, and author of a work entitled “De Verborum Signi-
catione.” (Vid. Festus, l.)—III. One of the names of Rome. (Vid. Horat.)

Flaminia Via, one of the Roman roads. It was constructed by C. Flaminus when censor (A.U.C. 533, B.C. 231), and was carried, in the first instance, from Rome to Narnia; whence it branched off in two directions, to Mevania and Spoleotum, uniting, however, again at Fulgina. From this place it continued its course to Nuceria, and there was died second a time, one branch striking off through Picenum to Ancona; whence it followed the coast to Fanoam Fortune; and there it met with the other branch which had passed the Apennines more to the north, and descended upon the sea by the pass of Petra Pertusa and Forum Sempronii. These two roads, thus reunited, terminated at Ariminum. (Cramer’s Anc. Italy, vol. 1, p. 292.)

Flaminus, C. Nepos, was consul A.U.C. 531 and 537 (B.C. 223 and 217). Having been sent this latter year against Hannibal, his impetuous character urged him to hazard the battle of the Lake Trasymenus, in which event his death and that of his army. (Liv., 22, 3.—Flor., 2, 6.—Val. Max., 1, 6.)

Flamininus, Titus Quintus, was made consul B.C. 198, before he was thirty years of age, and had the province of Macedonia assigned to him, with the charge of continuing the war against Philip, which had now lasted for two years, without any definite success on the part of the Romans. In his first campaign he drove Philip from the banks of the Aoös, and occupied Thessaly as far as the sea, and in detach ing the Achaeans from the Macedonian alliance. In the fol-

low ing year Flamininus, being confirmed by the senate in his command as proconsul, before commencing hos-

tileities aforesaid, held a conference with Philip on the coast of the Malae Gulf, and allowed him to send ambassa-

dors to Rome to negotiate a peace. These negoti-

ations, however, proving fruitless, Flamininus marched into Thessaly, where Philip had taken up a position,
and totally defeated him in the battle of Cynocephalae, in a spot broken by small hills, between Phere and Larissa. The Macedonians lost 8000 killed and 5000 prisoners. The decree granting peace to the Macedonians was a monarch on seven and humiliating terms, Flamininus was continued in his command for another year, B.C. 196, to see these conditions executed. In that year, at the meeting of the Isthmian Games, where multitudes had assembled from every part of Greece, Flamininus caused a priyer to proclaim, "that the senate and people of Rome, and their commander Titus Quintius, having subdued Philip and the Macedonians, restored the Corinthians, Phocian, Locrians, Euboeans, Thessalians, Acheans, &c., to their freedom and independence, and to the enjoyment of their own laws."

"Bursts of acclamation followed this announcement, and the crowd pressed forward to express their gratitude to Flamininus, whose conduct throughout these memorable transactions was marked by a wisdom, moderation, and liberality seldom found united in a victorious Roman general. He was thus the means of protracting the independence of the Greek states for half a century longer. In the following year, B.C. 195, Flamininus was intrusted with the war against Nabia, tyrant of Lacedaemon, who had treacherously seized on the city of Argos. The Roman commander marched into Laconia, and laid siege to Sparta, but he met with a brave resistance, and at last agreed to grant peace to Nabia, on condition that he should give up Argos and all the other places which he had usurped, and restore their lands to the descendants of the Messenians. His motives for granting peace to Nabia were, that he might prevent the destruction of one of the most illustrious of the Greek cities, and partly the great preparations which Antiochus, king of Syria, was then making on the coast of Asia. Livy suggests, as another probable reason, that Flamininus wished to terminate the war himself, and not to give time to a new consuls to supersede him and reap the honours of the victory. The senate confirmed the peace with Nabia, and in the following year, B.C. 194, Flamininus, having settled the affairs of Greece, prepared to return to Italy. Having repaired to Corinth, where depictions from all the Greek cities had assembled, he took a friendly leave of them, withdrew his garrisons from all their cities, and left them to the enjoyment of their own freedom. On returning to Italy, both he and his soldiers were received with great demonstrations of joy, and the senate decreed him a triumph for three days. But Flamininus, in his speech to the people at his triumph, appeared, among the hostages, Demetrius son of Philip, and Armenes son of Nabia, and in the rear followed the Roman prisoners, who had been sold as slaves to the Greeks by Hannibal during the second Punic war, and whose liberation Flamininus had obtained from the gratitude of the Greek states. The Achaeans alone are said to have liberated 1200, for whom they paid 10 talents as compensation-money to the Romans. Another argument, as he perhaps, a Roman triumph so satisfactory as this to all parties, and so little offensive to the feelings of humanity.

In the year 163 B.C., Flamininus was sent to Prusias, king of Bithynia, upon the ungracious mission of demanding the person of Hannibal, then in his old age, and a refugee at the court of Prusias. The monarch was prevailed upon to violate the claims of hospitality, which Flamininus maintained in him, by destroying himself with poison. In the year 166 B.C., Flamininus was made augur, in the room of C. Claudius deceased. (Liv. 45, 44.) After this he is no longer mentioned in history. (Plut. Vit. Flamin.)

—II. Lucius, brother of the preceding, commanded the Roman fleet during the first campaign of Quintius, and scoured the coasts of Euboea, Corinth, and other districts at that time allied or subject to the King of Macedonia. He was afterward expelled from the state by Catou, when censor, for having put to death a Gallic prisoner to gratify a manion of his. (Plut., Vit. Flam.)

FLAMININUS SINES, a gulf lying between Iatria and Liburna, in the Adriatic. It was also called Polatius Sinus, from the town of Pola in its vicinity. The name Flanaticus was derived from the adjacent town of Flano. The modern appellation is the Gulf of Quarararo. (Plin., 3, 19.)

FLANO, a town on the Ilyrian side of the Sinus Flanuticus, and giving name to the gulf. (Steph. Byz., s. v.) The modern name is Fiannona.

FLAVIUS, a canal intersecting the country of the Fri- sii, made by Drusus. This in time expanded to such a degree as to form a considerable lake or lagoon whose issue to the sea was fortified by a castle bearing the same name. This lagoon, having been, in progress of time, much increased by the sea, assumed the name of Zuyder Zee, or the Southern Sea; and of several channels which afford entrance to the ocean, that named Vlic indicates the genuine egress of the Flavis. (Tacit., Ann., 2, 6; 4, 72. —Plin., 4, 16. —Mel. 3, 2.)

FLORA, the goddess of flowers. She was a very ancient Italian deity, being one of those said to have been worshipped by Tatus. Her festival was termed Floralia, and was celebrated at the end of April and beginning of May. It greatly degenerated, however, in the course of time, and became so offensive to purity as not to bear the presence of virtuous characters. The story of Cato the Censor in relation to this festival is rather whimsical than interesting. The Romans, who in general displayed very little elegance of imagination in the origins which they invented for their deities, said that Flora had been a courte- san, who, having acquired immense wealth (at Rome in the early days of the republic!), left it to the Ro- man people, on condition of their always celebrating her birthday with feasts. (Plut., Quaest. Rom., 35. —Lactants., 1, 24.) Flora being an ancient, original Latin deity, was addressed by the honorific title of Mater, "Mother." (Cic. in Ver., 5, 14. —Lucret., 5, 738. —Keightley, ad Ov., Fast., 5, 183, seqq. —Id., Mythology, p. 540.)—II. A name assumed by a courte- san at Rome. (Plut., Vit. Pomp.)

FLORALIA, games in honour of Flora at Rome. (Vid. Flora.)

FLORENTIA, a town of Etruria, on the river Arno, now Florence, or, as the Italians call the city, Firenze. The town has been mentioned from the earliest periods. Of great antiqui- ty, as we find no mention made of it before the time of Cesar, by whom Frontius says it was colonized; unless we think, with Cluverius, that the town called Fluenta by Florus (1, 2), and mentioned with many other distinguished cities, as having severely suffered in the civil wars of Sylva and Marius, might be identified with it. However that may be, we find a distinct mention made of Florientia in the reign of Tita- nus, and, according to other historians, the inhabitants of that city petitioned that the waters of the Clanas, a river which was very injurious from its perpetual in- undations, might be carried off into the Arno. (Tacit., Ann., 1, 79. —Compare Plin., 3, 5.) At a later peri- od this city was destroyed by Totila, and rebuilt by Charlemagne. (Cramer's Anc. Italy, vol. 1, p. 183.)

FLORIUS, L. ANN. INERATIUS, a Latin historian, born, according to certain common traditions, in Italy, but, as others maintain, in Gaul, and who wrote in the reign of Tra- jan. He was still living in the time of Hadrian, and is perhaps the same individual to whom, according to Spartanus, this emperor addressed some sportive verse. By some critics also he is regarded as the au- thor of the Persigvtilum Veneris. A modern philolo- gist, Titze, has attempted to prove that the historian Florius lived in the time of Augustus, and that he is identical with the Lucius Julius Florus to whom Hor-
ace has addressed two of his epistles. It is true that some manuscripts give the historian the name of Julius; in order, however, to admit the hypothesis of Titus, we must regard as interpolated a passage of the Proemium of Florus, where mention is made of Trajan.

(Consult the work of Titus, De Legibus, lib. 1, c. 31, marg. on p. 21, ed. Bzoz., 1804, 3vo.) Florus has left us an abridgment of Roman History, entitled "Epitome de gestis Romanorum," divided into four books. It commences with the origin of Rome, and extends to A.U.C. 725, when Augustus closed the temple of Janus, a ceremony which had not taken place for 256 years previously. This work is a perfect abridgment, but from many ancient historians, no part of whose works any longer remain. It is less a history than an eulogium on the Roman people, written with elegance, but, at the same time, in an oratorical style, and not without affectation. Of tentacles facts are merely hinted at, events are passed over with a flourish of rhetoric; while the declamatory tone everywhere prevails, and the concise and sententious style of which he is fond of indulging, imparts a flavor of coldness to his writings, and renders them monotonous, and sometimes obscure. Florus likewise commits many errors of a geographical nature, and on many occasions is defective in point of chronology. His text has reached us in a very corrupt state, and abounds with interpolations.—Some manuscripts give to the author the work the name of Seneca: in fact, a branch of the Ansean family bore the name of Seneca; and there is even reason to believe that this family took indiscriminately the surname of Seneca or Florus. (Consult Wernsdorff, Poet. Lat. Min., vol. 3, p. 452.) From this title, as given by certain manuscripts, and from a passage of Lactantius, some critics have concluded that the Epitome is the work of Seneca the philosopher. Lactantius (Inst. divin., 7, 15) says, that Seneca divided the history of the Roman people into four periods; that of infancy, youth, manhood, and old age. This division occurs also in Florus, but in no other writer of antiquity, which would tend to strengthen the opinion that Lactantius has cited Florus under the name of Seneca. To this, however, it may be objected, that, though Florus adopts four periods or divisions in his work, his arrangement is not exactly the same with that mentioned by Lactantius; besides, Florus might have borrowed from Seneca. The best edition of Florus is that of Duker, Lips., 1842, 8vo. The edition of Fischer is also valuable, Lips., 1790, 8vo. (Schöll, Hist. Lit. Rom., vol. 2, p. 359, seqq.—Bähr, Gesch. Röm. Lit., vol. 1, p. 452, seqq.—Il. A young Roman, the friend of Horace, who accompanied Tibbies in his expedition into Dalmatia (A.U.C. 731), and subsequently into Armenia (A.U.C. 734). Horace addresses two epistles to him (1, 3, and 2, 2). Some make him the same with Florus the historian. (Gruaert.)

Fons Solis. Vid. Amnon.

Fontes, Capito, I. an intimate friend of Horace, and who, in the conference at Brandisium, acted for Antony, while Mænas had charge of the interests of Octavius. (Horat., Sat., 1, 5, 32.—II. A Roman who raised commotions in Germany during the reign of Galba. He was put to death by the lieutenant stationed there, before even orders reached them from Rome. (Dio, 67, 7.)

Formia, a town of Latium, to the northeast of Caeia-
ta. It was a place of great antiquity, and is looked upon by the most ancient writers as the abode and capital of the Lastrygones, of which Homer speaks in the Odyssey, and where his hero met with so insus-
hitable a reception. The description of the place, however, is so indefinite, though it may agree in the prin-
cipal features, that, unless the consenting voice of an-
tiquity had fixed upon this spot as the scene of Ulysses' disaster, we could have had no clew for discover-
ing in Formiae the seat of these savage cannibales. Every one, however, is at liberty to indulge his fancy with the supposition that the harbour which Homer describes was actually that of Caeta (the ancient Form-
iai), and he may there recognise in it the towering rocks, the prominent shores, and the narrow entrance.

(Odys., 10, 80.—Eustace's Classical Tear., vol. 2, p. 367.) According to Strabo (233), Formia was a La-
conian colony, and its first appellation was Hormiai, in allusion to the excellent anchorage which its port af-
forded to vessels. (Compare Plin., 3, 5.) This place, however, was actually that of Caeta (the ancient Formia-
i), and he may there recognise in it the towering rocks, the prominent shores, and the narrow entrance.

(Odys., 10, 80.—Eustace's Classical Tear., vol. 2, p. 367.) According to Strabo (233), Formia was a La-
conian colony, and its first appellation was Hormiai, in allusion to the excellent anchorage which its port af-
forded to vessels. (Compare Plin., 3, 5.) This place, however, was actually that of Caeta (the ancient Formia-
i), and he may there recognise in it the towering rocks, the prominent shores, and the narrow entrance.

(Odys., 10, 80.—Eustace's Classical Tear., vol. 2, p. 367.) According to Strabo (233), Formia was a La-
conian colony, and its first appellation was Hormiai, in allusion to the excellent anchorage which its port af-
forded to vessels. (Compare Plin., 3, 5.) This place, however, was actually that of Caeta (the ancient Formia-
i), and he may there recognise in it the towering rocks, the prominent shores, and the narrow entrance.
with eternal verdure, and bloomed with the richest flowers; while the productions of earth were poured forth spontaneously in the utmost profusion. The le-
gend of the Island of the Blessed in the Western Ocean may possibly have given rise to the tale of the Fortu-
nate Islands. (Vid. Elysium.)—Many at the present
day regard the Fortunate Islands of antiquity as geo-
ographical realities. Some make them identical with the
Canaries, and this opinion is grounded upon the
situation and temperature of those islands, and the de-
ficious fruits which they produce. (Pim., 6, 32).

Diod. Sic., 5, 19.)

**FORUM ROMANUM.** Vetus vel Magnum, a large open
space between the Capitoline and Palatine Hills, called
until lately Campo Vaccino, or the Cow-field, or mar-
ket. The Italians, however, have grown ashamed of
so vulgar a name, and have restored to the place its
ancient appellation of Forum Romanum. It is now
a mere open space, strewed for the most part with
ruins. It is collected from Livy (1, 12) and Dio-
nysius of Halicarnassus (2, 66), that the Forum was
situate between the Capitoline and Palatine Hills; and
from Vitruvius we learn that its shape was that of a
rectangle, the length of which exceeded the breadth
by one third. From these data, which agree with other
incidental circumstances, it is generally thought that
the four angles of the Roman forum were formed by
the four sides of the Capitol hill; the Fabian arch, at
the termination of the Via Sacra; the church of St.
Theodore, at the foot of the Pala-
tine; and that of the Consolazione, below the Capi-
tol. Here the assemblies of the people used general-
ly to be held, and here also justice was administered,
and public business transacted. It was formed by
Romulus, and surrounded with porticoes, shops, and
buildings by Tarquinius Priscus. (Livi., 1, 35.—Bion.
Hali, 3, 67.) Around them Vaccinae (Hist., 3, 6)
halls, called Basilicae, where courts of justice might sit,
and other public business be transacted. The present
surface of the Forum is from fifteen to twenty
feet above its ancient level.—There was only one For-
num under the republic; Cæsar added another; Au-
gustus a third; a fourth was begun by Domitian, and
finished by Nerva, after whom it was named. But
the most splendid was that of Trajan, adorned with the
spacious baths which have been noted. There were various
fora or places where commodities were sold.

**FORUM,** a name given in Roman geography to many
places where there was either a public market, or
where the prator held his court (Forum sine Conven-
tus); of these the most important were:—I. Forum,
a town of Latium, on the Appian Way, about twenty-
three miles from Aricia, and sixteen from Tres Ta-
berkæ. It is mentioned by St. Paul in the account of
his journey to Rome (Acts, 28, 15), and is also well
known as Horace's second resting-place in his jour-
yey to Brundisium. Holstenius and Corradini agree
in fixing the position of Forum Appii at Casarillo de
Santa Maria. But D'Anville, from an exact compu-
tation of distances and relative positions, inclines to
place it at Borgo Lungo, near Tréporti, on the present
road (Anat. Geogr. d'Italie, p. 186); and he would
seem to be correct, especially as it appears clear from
Horace, that here it was usual to embark on a canal,
which ran parallel to the Via Appia, and which was
called Decennovium, its length being nineteen miles.
(Procop., Rer. Got., 1, 2.) Vestiges of this canal
may still be traced a little beyond Borgo Lungo.
It must be observed, too, that the name of this modern
place agrees very well with the idea which Horace
gives us of Forum Appii.—II. Alliæni, a town of Gaul
of Cispadane Italy, modern town of Follonica. (Hist., 3, 6.)
Cluverius concurs, with considerable probability,
that this ancient town occupied the present site of
Ferrara, that modern name being evidently a corrupt-
tion of Forum Alliæni, confirmed to Forum Arrii.—

III. Aurelii, a town of Etruria, now Montalto (Cic.,
Cat., 1, 9)—IV. Claudii, another in Etruria, now Orto-
lo.—V. Corelli, another, now Imola, in the Pope's
dominions. (Pliny, 3, 16.—Cic., Ep. ad Fam., 12, 5.)—VI. Domiti, a town of Gaul, now Frontignan,
in Languedoc.—VII. Flaminii, a town of Umbris, now
San Giovanni. (Pim., 3, 14.)—VIII. Gallorum, a town of Gallia Togata, now Castel Franco, in
the Bolognese. (Cic., Ep. ad Fam., 10, 30.)—IX. Julii,
a town of Venetia, called Foro-albus urbis, now Fri-
uli. —X. Julii, a town of Gallia Narbonensis, now
Frejus, in Provence. (Cic., Ep. ad Fam., 10, 17.)

Fosi, a people of Germany, lying north of the Che-
rusci, along the Visurgis or Weser. They shared the
gate of the Cherusci when the Langobardi conquered
the latter people. They are supposed to have been a branch of the Cherusci. (Mannert, Geogr., vol. 3,
p. 175, 208.)

Fossæ, I. the straits of Bonifacio, between Corsica and Sardinia, called also Taphros. (Pim., 3, 6.)—II.
Drusi, a canal eight miles in length, opened by Drusus
from the Rhine to the Yssel. (Vid. Drusus, 1.—III.
Philistina, one of the mouths of the Po, now the Po
grande. It is spoken of as a very considerable canal,
having seven arms or cuts, called Septem Maria, or
Possiones Philistinae. These were drawn off from it
to the sea. The works in question were undertaken
by the Rhine, in the time of Varus, in order to
secure the good grounds about Hadria. Mozacchi sees in the term
Philistina traces of a reference to Phoenixia. (Moz-
cocchi, Dissert. Corton, vol. 3, diss. 1, diatri. 1, de
sette Mari.)

Possiones Philistinae. Vid. Fossa, III.

**FRANCI,** a confederation of Germanic tribes, which
first appeared on the stage of history in the last quar-
ter of the second century of our era. As the Franks
were the first of these confederations to pass the
Rhine under the name of a Christian nation and its
leader, and, together with the Galli or Gallo-Romans
and pacific Antoinius, Mannert concludes that their
confederation was not the result of hostile aggression
from Rome, but of internal wars; and these wars he
agrees were driven by a sense of self-defence against
the Saxon confederation, which, occupying the north
of Germany, sought to extend itself westward to the
Rhine. The Germans lying between the Saxons and
that river found it necessary to unite in order to re-
 sist the common foe. It is easy to show that they were
under their new name of Franks. (Geschichte der al-
ten Deutschen, besonders der Franken, p. 79, seqg.)
Various etymologies have been assigned to this,ap-
pellation: some deduce it from the German term
frank, meaning "free," and indicating a race of Free-
men; others from the francisca, a favourite weapon
of this people; but Ludein, in his Geschichte des Täst-
schen Volkes (Gotha, 1825—30), derives the name from
the word strangen, still used in Lower Saxony for
"to fight" or "brave" (compare the English "wre-
gle"); whence the epithet might mean quartersome,
or, perhaps, bold warriors. The Franks soon became
powerful enough to act on the offensive, and, crossing
the Rhine to meet other foes, they spread their
devastations from the banks of that river to the foot of
the Pyrenees: nor were they stopped by these moun-
tains. Spain, in turn, was overrun; and, when the
exhausted country no longer supplied a variety of plun-
der, the Franks seized on some vessels and transported
themselves into Mauritania. They were afterward
driven out of Gaul by the Roman arms, and from the
province of Probus (A.D. 277) to that of Honorius, seem
have contented themselves with occasional irrup-
tions. They obtained a permanent footing in Gaul
during the last years of the reign of Honorius. About
the year 506, Clovis, or Chlodwig (his proper Teutonic
name), by reducing the several Frank principalities un-
der his own sceptre, and conquering the last remnant
of the western Roman empire in Gaul, is held to have
founded the French monarchy. His Frank kingdom
was, nevertheless, by no means commensurate with modern France, consisting of merely the northern Ger-
mans and the Belgas, probably both banks of the Rhine, of the present kingdom of the Netherlands, and of so much of France as lies north of the Loire, with the exception of Brittany, where large bodies of Britons, expelled from their insular home by the Saxons, had established themselves, and long maintained their in-
dependence. Of the southern half of France, the lar-
gest part, situated to the west of the Rhone, was in-
cluded in the Visigothic kingdom of Spain; while the
provinces to the east of that river were held, together
with Savoy and Switzerland, by the Burgundians.
Chlodwig attacked both. Against the Burgundians he
exercised little or nothing, but he was more successful
against their western neighbours. Assisted by the
hatred which the Catholic natives entertained towards
their Arian master, he, before his death, reduced the
Visigothic dominions in Gaul to the single province
of Languedoc, incorporating all the rest in his Frank
realm. His sons and grandsons, in time, not only sub-
duced Burgundy, but brought many German states, as
the Thuringians, Alamans, and Bavarians, into com-
plete feudal subjection. (Foreign Quarterly Review,
No. 13, p. 169, seqq.)

Fregellae, a city of Latium, situate near the Liris,
and close to the Via Latina, as appears from the men-
tion of a station called Fregellinum in the Itineraries
which describe that route. Fregellae was stated by Stra-
bo (238) to be a city of considerable consequence
and the capital of a considerable district. It was
taken by the Romans A.D. 427. After suffering
from Pyrrhus, and subsequently from Hannibal,
this place attained to so considerable a degree of
importance and prosperity as to suppose that it could
compete even with Rome; its inhabitants revolted,
and probably under circumstances peculiarly offensive
to the Romans, submitted and were destroyed or sub-
dued by the Fregellani. Their town was immediately besieged,
and, after a vigorous resistance, was taken through
the treachery of Numitorius Pullus, one of their own
citizens, whose name has been handed down to us
by Cicero. (De Fin., 5, 22.—Phil., 3, 6.) Fregel-
lae was on this occasion destroyed, the discontented
state of the allies of Rome at that period probably
rendering such severe measures necessary. (Liv., Epit.,
30, 42; Cic., Verr., 4, 6; Suet., Vit. Aug., 18; Val.
Max., 2, 8.) In Strabo’s time the condition of this
city was little better than that of a village, to
which the neighbouring population resorted at certain
periods for religious purposes. Its ruins, according
to Cluverius, are to be seen at Caperona, a small town
on the right of the Garigliano. (Ital., Ant., vol. 1,
p. 1036.—Compare Histo. ad Steph. Byz., p. 220, and
De Chaupy, vol. 3, p. 478.) A more modern writer,
however, fixes this ancient site at S. Giovanni Incarico,
about three miles farther down the river. (Pau-
quelle Cayro, Citta del Lazio, vol. 1.—Romanelli,

Frentani, a people of Italy, on the Adriatic coast,
east of Samnium and northwest of Apulia, who re-
ceived their name from the river Frento, now Fortore,
which runs through the eastern part of their country,
and falls into the Adriatic opposite the islands of Di-
meste. The Frentani appear to have possessed a separa-
tely political existence, independent of the Sam-
nitic confederacy, though we are assured that they
devered their descent from that warlike and populous
race. (Strabo, 241.) Their history, in other respects,
bears a close resemblance to that of the neighbouring
tribes, the Vesti, Peliini, and Marrucini. Together
with these, the Frentani, as Livy reports, voluntarily
submitted to the Romans, and sent envoys to obtain
a treaty from that power, which was readily granted.
(Liv., 9, 45.) We find the Frentani also numbered
with the Marsi, Marrucini, and Vesti, by Polybius,
as the allies of Rome before the invasion of Hannibai
(2, 54). From Flutarch we learn, that they distin-
guishly defended themselves in the war against Pyrrhus (Vit.
Pyrrh.—Compare Florus, 1, 18), and it appears that
they faithfully adhered to the Roman cause throughout
the whole of the second Punic war. Appian is the
only author who has particularly mentioned the Fre-
tani, as having joined the coalition of the petty states
of central Italy against Rome (Cir. Bell., 1, 39), but
even without the authority of this writer we could not
doubt that this people would unite in support of the
common cause with the surrounding states, to whom
they were bound by consanguinity and other political
ties. Whatever may have been their former extent
of territory, we find it restricted by the geographers of
the Augustan age to the tract of country lying
between the mouths of the Aeternus and Tifernus, which
separated it from the Marrucini to the north, and from
Apulia to the south. (Melus, 2, 4.—Plin., 3, 11, seqq.—
Plut., p. 66.) Though it extended also into the interior
of Samnium, and the sources of the rivers just
mentioned, the few cities of the Frentani with which
we are acquainted appear to have been situated on
the coast. (Cramer’s Ancient Italy, vol. 2, p. 254,
seqq.)

Frissi, a people of Germany, having for their bound-
aries the eastern mouth of the Rhine on the west, the
ocean on the north, the Amisia or Ems on the east,
and the Vecht or Rhine on the north, were inhabited
by several tribes, consequently, what answers at the present
day to West Friesland, Groningen, and the northern angle
of Ober-Yssel, together with the islands which lie
partly to the north in the ocean, and partly to the
eastern mouth of the Rhine. Pliny and Tacitus (Ann.,
1, 60.—B., 4, 72, &c.) name this people Frisil;
Titoleny and Dio Cassius, Φρίσιος and Φρίσιος (Plut., 2,
11.—Dio Cass., 54, 92); but by later writers they are
also termed Germani. Their enmity to the Cherusci would
seem to have been one of the causes of the hostilities to
which they were subjected by the Romans. At a sub-
sequent period, however, they discovered the true nature
of the alliance which the latter had formed with them, and fell
an easy prey to their conquering arms. (Mannerei,
Geogr., vol. 3, p. 272.)

Frontinus, Sex. Jul., a Latin writer, born of a plebeian family (Policeni, Vit. Front., 1, seqq.), but who
attained, by his integrity, valour, and intelligence,
to some of the highest offices of the state. In A.D. 70
he was praetor, but abdicated this office to please
Domitian, who wished to add it to the dignity of consul,
with which he himself was already invested. (Com-
pare Tacitus, Hist., 4, 39.—Suetonius, Domit., 1.)
Five years after Frontinus obtained the command of
Britain, and was intrusted with the subjugation of the
Silures; which would seem to indicate that he had
been consul in A.D. 74, though the Fasti Consulares,
which are not, however, very complete as regards the
consules suffecti, make no mention of him. He ac-
complished the object of his mission, notwithstanding
the difficulties of the enterprise. Agricola, the father-
in-law of Tacitus, was appointed his successor. Under
Nerva he received the consulsiphip a second time, A.D.
97, and was appointed the same year Curator Aqua-
rum, or general superintendent of the waters and
aqueducts of the capital, and in this capacity brought
the waters of the Anio to Rome by means of a splen-
did aqueduct. He died about A.D. 106, and, at the
time of his death, the office of augur, in which
he was succeeded by Pliny. Frontinus wrote a work on the Roman aqueducts, and another on military stratagems. The former of these, to which the copyist has given the title of "aqueductus urbis Roma Commentarius," is written in an easy style, but without the least elegance. It is important, however, for archaeology, since we find in it a detailed history of those remarkable monuments, the aqueducts of Rome. As regards the title of the work, it may be remarked, that the term aqueductus does not appear in the treatise itself: and an old edition gives as the superscription, "De Aquis, quae in Urbem inuenta, libellus mirabilis." The other work, entitled "Stratagematicon libri IV." is partly of a military and partly of an historical character; it is a mere compilation, sometimes written with great negligence, especially in the historical part. Still, even in an historical point of view, the work is not without interest, since it contains some particulars which are not to be found in the other historians that have come down to us. To Frontinus are ascribed other productions, which are, however, of a later age. One is entitled "De Re Agraria," or "De Agrorum Qualitate," the others, "De Limitibus" and "De Colonias." The last two are merely fragments, and their authors lived after the time of the Antonines, who are mentioned in them. The best edition of Frontinus is that of Oudendorp, Lugd. Bat., 1779, 8vo. (Bähr, Gesch. Röm. Lit., vol. 1, p. 671, seqq.)

Fronto, I. A Latin writer, born at Cirta, in Africa, of an Italian family. After studying in his own country, he came to Rome in the reign of Hadrian, and acquired great reputation as a rhetorician and gram- marian. Antoninus Pius appointed him preceptor to his two adopted sons Marcus Aurelius and Lucius Verus, whose confidence and affection he gained, as is proved by their letters. After being consul, Fronto was appointed to a government in Asia, which his bad health prevented him from filling. His learning and his in-structive conversation are mentioned by various authors. He died in the reign of Marcus Aurelius, at an advanced age. (Küging, Suppl. ad Harles. Notit. Brev. p. 320.—Mai, Commem. prav., § iv., seqq.—Bähr, Gesch. Röm. Lit., vol. 1, p. 595.)

—Until of late years we had nothing of Fronto's works, except fragments of his treatise "De Differentia Verborum," being a vocabulary of the so-called synonyms. But in 1816, Angelo Mai had discovered the Acts of the First Council of Chalcedon, a MS., on which had been originally written some letters of Fronto to his two pupils, deciphered the text wherever the writing was not entirely obliterated, and published it with notes. It happened, by singular good fortune, that Mai, being some years after appointed librarian of the Vatican, discovered in another palimpsest volume another part of Fronto's letters, with the answers of Marcus Aurelius to some questions of his pupils. These volumes came originally from the monastery of St. Columbanus, in Bobbio, the monks having written them over with the Acts of the First Council of Chalcedon. It happened, that one of the volumes was transferred to Milan, and the other to Rome. Mai published the whole in a new edition, entitled, "M. Cornelii Frontonis et M. Aurelii imperatoris epistolae; L. Veri et Antonini Pii et Appiani epistularum reliquiae. Fragmenta Philono- mii. &c. &c. (Milan, 1824, 4to, Fasc. 2, and Fasc. 3.)" These letters are very valuable, as throwing additional light on the age of the Antonines, confirming what we know of the excellent character of Marcus Aurelius, and also showing his colleague Verus in a more favourable light than he had been viewed in before. The affectionate manner in which both emperors continue to address their former preceptor is very touch- ing. Two or three short epistles of Antoninus Pius are also interesting. There are, besides, many letters of Fronto to various friends, a few of which are in Greek. (Encycl. Us. Knoud., vol. 10, p. 498.)—II. A native of Emesa, a rhetorician, who lived at Rome under Marcus Aurelius Commodus, and taught rhetoric at Athens, and was the rival of the first Philostratus. The critic Longinus was his nephew. He wrote various works, of which only a few fragments remain. (Suid.—Scholl, Hist. Lit. Gr., vol. 7, p. 204.)

Fresno, a city of Latium, now fromone, situate on the river Casa. (Strabo, 238.) This place was deprived by Rome of its territory for having incited the Hermici to war, A.D. 150. Frontinus names it among the colonies, and Festus among the prefectorate. Fucinus, a lake of Italy, in the country of the Marsi, now sometimes called Lago Fucino, but more commonly Lago di Celano. It is of considerable extent, being not less than forty miles in circumference. As it was subject to inundation (Strabo, 241), Julius Caesar, it appears, had intended to find a vent for its waters (Sueton., Vit. Caesar., 44), but this design was not carried into execution till the reign of Claudius. After a continued labour of three years, during which 30,000 men were constantly employed, a canal of three miles in length was carried through a mountain from the lake to the river Liris. On its completion, the splendid but sanguinary show of a real naumachia was exhibited on the lake in the presence of Claudius and Agrippina, and a numerous retinue, while the surrounding hills were thronged with the population of the neighbouring country. The remuneration of the events fully detailed in Suetonius (Vit. Claud., 20), Tacitus (Annal., 12, 56), and Dio Cassius (60, 11). Hadrian afterward is said to have repaired this work of Claudius. (Eit., Spart., Vit. Hadr.) Considerable remains of this undertaking of Claudius are yet to be seen between Avezzano and Lugo. (Consorti, Dizerr. de Emisario Lacioc Fucini.—Romellii, vol. 3, p. 194.—Cramer's Ancient Italy, vol. 1, p. 178.)

Fulvia, a illustrious family at Rome, the branches of which were those of Curvus, Nobilior, Piacus, Patinus, Maximus, Centumalus, &c. Fulvia, I. A female of good family, but licentious principles. She disclosed to Cicero the details of the conspiracy of Catiline, which she had learned from Quintus Curius. (Sull., Cat., c. 23.)—II. A bold, ambitious woman, at first the wife of Clodius the turbulent tribune, and, after his death, of Marcus Anto- nius. She first came into notice on the assassination of Clodius, when, having caused the corpse to be brought into the vestibule of her dwelling, and having assembled the populace, she caused, by her tears and language, a violent sedition. Some years after this, having become the spouse of An- tony, she took an active part in the proscriptions of her husband, and is said to have even sacrificed to her own vengeance, various individuals on whom she had been differ- ently treated. After the head of Cicero was brought to Antony, she took it on her knees, broke forth into cowardly insult of the character of the deceased, and then, with fiendish malice, pierced the tongue with her golden bodkin. Having been left at Rome by An- tony during the war against Brutus and Cassius, she became all powerful in that city, named the preators at her own pleasure, sold the government to the highest bidders, and gave the power of life and death to Lucius, the brother of Antony, who had no claim whatever to one. When, after the battle of Philippi, Antony had passed into the East to regulate affairs in that quarter, Fulvia, irritated by his intercourse with Cleopatra, tri- ed to induce Octavius to take up arms against him. Not succeeding in this, she took them up against Oc- tavious himself, in conjunction with her brother-in-law Lucius, who now professed opposition to the ille- gal power of the Triumvirate. After very bold and
The spirited efforts, however, on her part, she was besieged with her brother-in-law at Perusia, and compelled to surrender to the power of Octavius, with whom she agreed to this, returned to Rome, and regained her husband, but was coldly received by him. She died at Sicyon, A.U.C. 712, through chagrın and wounded pride, as was believed, at her husband’s attachment to Cleopatra. (Vell. Paterc., 2, 74.—Plut., Vit. Ant.—Id., Vit. Cis.)

Fulvius, I. L. Curvus, was consul A.U.C. 432, B.C. 329, and six years after master of the horse to the dictator L. Emilius. (Liv., 8, 33.—II. M. Curvus Patius, was consul A.U.C. 499, B.C. 255, along with Œnilius Paulus Lepidus. These two commanders sailed for Africa after the overthrow of Regulus by the Carthaginians, gained a naval victory, compelled the foe to raise the siege of Clypea, and carried off an immense booty from the Carthaginian territories. They were shipwrecked, however, on their return to Italy, and of 200 vessels only 80 were saved. —V. Q. Flaccus, was consul A.U.C. 517, 519, 542, and 556 (B.C. 237, 224, 212, and 200). He defeated Hannibal near Rome, and laid siege to Capua, which surrendered to him after the lapse of a year. The conquered were treated with great cruelty. (Vid. Capua.) Some time subsequent to this, he marched against the Hippini, Lucanians, and other nations of Italy, who, alarmed at the severities inflicted on Capua, surrendered to him the garrisons which had been placed in their cities by Hannibal. (Liv., 28, 21.—Id., 28, 29.—Id., 25, 2.)—VI. M. Nobilior, was praetor in Spain A.U.C. 588, B.C. 196, and carried the Roman arms to the Tagus, making himself master also of Toleuto (Toledo), up to that period deemed impregnable. Having obtained the consulsiphip, A.U.C. 565, he was intrusted with the war in Greece, during which he took Ambracia, traversed Ephesus as conqueror, and reduced to submission the island of Cephalenia. Two years after this he was accused before the senate of having maltreated the allies of the Roman province, and was deprived of his consulsiphip. He received the honour of a triumph. In the year 573 he was elected censor along with Œnilius Lepidus, his bitter foe. Preparing injury to the state from their known enmity, the leading men of the senate ad- jured both individuals to lay aside their differences for the good of their country. A reconciliation accord- ingly took place, and nothing occurred to disturb these friendly feelings during the rest of their joint magistra- ture. He was then intrusted with the province of Mesopotamia, a basin- ic a forum, &c. He also constructed a port at the mouth of the Tiber. (Liv., 33, 42.—Id., 35, 7.—Id., 20, 22, &c.)—VII. Q. Flaccus, was praetor A.U.C. 573, B.C. 181. He took, in this capacity, the city of Urbisca in Farther Spain, and defeated the Celtiberi in the battle of Euba, killing in this and in another encounter 35,000 men. On his return to Rome he received the triumph, and in the same year (575) the consulship. (Liv., 28, 21.)—C. F. Patius, intrusted to the province of Africa, along with Posthumus Albinus. These two censors were the first that paved the streets of Rome, B.C. 174. The next year he built a temple to Fortune, and, to adorn it, carried off a large portion of the mar- ble tiles from the temple of the Locian Juno in Lower Italy. (Vid. Lacinium.) The senate com- pelled him to restore these. The popular account made him to have been deprived of reason for this act of sacrilege. (Liv., 39, 56 et 40.—Id., 40, 16.—Vell. Paterc., 1, 10.)—VIII. M. Flaccus, was consul A.U.C. 629, B.C. 125. He seconded the projects of Titus Gracchus to procure for the senators of Rome, a number of rights of citizenship. Being afterward sent against the Gauls, he defeated them, and obtained a triumph. Four years subsequently he became involved in the seditious movements of the Gracchi relative to the agrarian law, and perished in an affray which arose. (Vid. Gracchus.)

Fundani was a lake near Fundi in Italy, which dis- charges itself into the Mediterranean. (Tucic., Hist., 6, 69.) According to Pliny, the Lacus Fundanus was originally called Amyclaus, from the city of Amycle in its vicinity. (Plin., 14, 6.)

Fundi, a town of Latium, on the Appian Way, near the Lacus Fundanus, and not far from Caetia. It is now Fondi. The first mention of this place in history occurs at the end of the Latin war, A.U.C. 417, when, with the exception of the right of voting, it obtained the privileges of a Roman city, for having allowed a free passage to the Roman troops in their march into Campania. (Liv., 8, 14.) Not long after, however, the Fundani incurred the displeasure of the senate for having secretly aided the city of Privernum in a hostile incursion into the Roman territory, but, by a timely submission, they escaped the threatened vengeance. Fundi received the right of voting A.U.C. 564, and its citizens were enrolled in the Ænilian tribe. (Liv., 98, 36.) It was subsequently colonized by the veter- ans of the campaign Augustus. Horace’s description of the ridiculous importance assumed by the praetor of Fundi will be in the recollection of most readers. (Sat, 1, 5, 34, seqq.—Cramer’s Anc. Italy, vol. 2, p. 122.)

Furius, the Furies, called also Dirae and Eumenides. These goddesses are frequently named by Homer, but he says nothing of their origin. In the Theogony, they spring from the blood of Uranus, when mutilated by his son Saturn, whose own children they are ac- cording to Empedocles; while Æschylus and Sopho- cles call them the children of Night. (Æsch., Ena- men., 317, 413.—Soph., Eid., Col., 40, 106.) The Orphic religion made them the children of Night and Chaos. (Hymn., 70.) In the time of the Alexandrine writers, the Furies, like the Fates, were three in number, and were named Alecto (Unceasing), Megara (Envier or Denier), and Tisiphone (Blood-avenger). The Furies were worshipped at Athens as the revered (sacral) goddesses; and at Sicyon as the kind (Ευμενιδες) deities. It is generally thought that both of these appellations were prophylactic one, and meant to appease. Müller, however, is of opinion, that the term Eumenides, as applied to the Furies, is connec- ted with old religious ideas, according to which, death and ruin, as well as life and welfare, were supposed to emanate from one and the same source. (Müller, Eumem. p. 204.)—The external representation of these goddesses, in the play of Æschylus called after them, is founded entirely on the fearful aspect of their ideal na- ture. In their exterior configuration the poet seems to have drawn a good deal on his own invention; in the earlier bards they are always depicted in a frightful manner, before their eyes; and though there were in their temple at Athens old carved images of the Ænumes, still their figure could not be adapted to dramatic purposes. From the Gorgons Æschylus borrowed the snaky hair of the Furies. He took, no doubt, from these also the pendent tongue, red with the lapped gore, and the grinning mouth, which regularly characterizes the Gorgon head in ancient works of art. The long pen- ident tongue, moreover, is most likely the main type...
by which their resemblance to hounds was expressed. (Müller, Eumenid,, p. 216, seq.) According to the most common mode of delimiting the Furies, they are represented as standing, brandishing each a torch in one hand, and a scourge of snakes in the other.—For some remarks on the term Erinnyes, consult that article. (Keightley's Mythology, p. 196.)

Purki, a family which migrated from Medullia in Latium, and came to settle at Rome under Romulus, and was admitted among the patricians. Camillus was of this family, and it was he who first raised it to dignity. (Plut., Viz. Camillus.)

Furina, an early Latin goddess, whose name, in the time of Varro, was hardly known to a few. (Varro, L. L., 5, 3.) There was a sacred grove of this goddess beyond the Tiber (in which Caius Gracchus was slain), and this, with the similitude of the name, led Cicero and others to identify Furina with the Furies. (Cic., N. B., 3, 18.—Plut., Vit. C. Gracco., c. 17.—Martian., de Nupt., 2, 40.) The Furinalia were celebrated on the 25th July. (Keightley's Mythology, p. 540, seq.)

Furtes, M. Bibaciul, a Latin poet of Cremona, who wrote annals in Iambic verse. (Quintil., 10, 1, 96.) Horace ridicules him as a turgid and bombastic writer. (Sat., 2, 5, 39, seqq.)

Puscus, Aristus, a friend of Horace, as conspicuous for integrity as for learning and abilities. The poet addressed to him the 22d Ode of the First Book, and also the 10th Epistle, 1st Book.

Purina Lut., I. passed A.U.C. 690, ordained that, in the Comitia Tributa, the different kinds of people in each tribe should vote separately, that thus the sentiments of each rank might be known.—II. Caninia, another, enacted A.U.C. 751, to check the manumission of slaves; limiting this manumission to a certain number, proportioned to the whole amount of slaves which one possessed; from two to ten, the half; from ten to thirty, the third; from thirty to a hundred, the fourth part; but not above a hundred, whatever was the number. (Heinecc., Antig. Rom., 1, 7, 1.—Blair, on Slavery among the Romans, p. 174.)

G.

Gabæ, a city of Persia, in the province of Persis, placed by Ptolemy southeast of Pasargada, on the confines of Carmania. Manner makes it coincide with the modern Daralgherd. (Geogr., vol. 5, pt. 2, p. 530, seqq.)—II. A city of Sogdiana, southwest of Cyreschat. D'Anville supposes it to be the modern Kauos; Manner, on the contrary, is in favour of the modern Rabas, on the river Kressel, north of Samar-cand. (Geogr., vol. 4, p. 460, 483.) Gabæ was one of the first places to which the exploits of Alexander gave celebrity in this country. It is the same with the Gabæ of Curtius (Quint. Curt., 8, 4, 1.)

Gafri, I. a town of the Sabines, near the Via Salaria, and not far from Cures. Its site is now called Grotte di Torri, or simply Torri. (Galetti, Gabio, antica città di Sabina, scoperta ov’è ora Torri, ovvero le Grotte di Torri, Roma, 4to, 1767.)—II. An ancient city of Latium, somewhat to the northwest of Tusculum, and beyond the little river Veres. (Strabo, 239.) Its site corresponds, as is thought, to the modern P'Osra. Strabo mentions that it was on the Via Prænestina, and about 100 stadia from Rome. Dionysius of Halicarnassus gives the same distance (4, 53); and Appian places it midway between Rome and Prænesta. (Bell. Cite., 5, 23.) The Itineraries reckon twelve miles from Rome to this town. These data enabled Holstenius and Faibretti to fix the position of Gabæ with sufficient accuracy at a place called l'Osteria del Pantano; and this opinion was satisfactorily confirmed by the discoveries made here in 1792, under the direction of Gavin Hamilton, an estate on pointe of Prince Borghese, known by the name of Pantonei dei Grifti. (Visconti, Monumenti Gabini, 1792.) Gabæ is said to have been the scene of two furious colonies founded by Alba (Dion. Hal., 4, 53), and an obscure tradition represented it as the place in which Romulus and Remus were brought up. (Dion. Hal., 1, 84.—Plut., Vit. Rom.) The artful manner in which Tarquinius Superbus obtained possession of Gabæ, after he had failed in the attempt by force of arms, is well known, as recorded by Livy (1, 88, 5.—Curt., 4, 26, seqq. Of Gabæ.)

Gabii, it is admitted by many, that Tarquinius Superbus did not remain unanswered; for, after the expulsion of his family from Rome, he fell at Gabæ, a victim to his tyranny and oppression. (Liv., 1, 60.) According to the same historian, the Gauls received their final defeat from Camillus near this city (5, 49). This place suffered so much during the civil wars, that it became entirely ruined and deserted. We learn, however, from several monuments discovered in the excavations already referred to, that Gabæ was raised from this state of ruin and desolation under Antonius and Commodus, and that it became a thriving town. (Visconti, Monumenti Gabini.) In its more flourishing days, Juno seems to have been held in peculiar honour at Gabii, and the remains of her temple are said to be still visible on the site of this city. (Nibby, Viaggio Antiquario, vol. 1, p. 236.) The inhabitants of Gabæ had a peculiar mode of folding or girding the togs, in order to give more freedom to the person when in motion. In this mode of wearing the togs, which was called the Cinctus Gabinius, or "Gabine Cincture," the lappet was thrown back over the left shoulder, and brought round under the right arm to the breast; so that it girded the individual, and made the toga shorter and closer. According to Servius (ad Verg., En., 7, 612), the inhabitants of Gabæ, while engaged in sacrificing, were suddenly attacked by the enemy, whereupon, not having time to array themselves in arms, they tucked up their togs in this manner, and advanced to meet the foe. (Verg., En., 7, 612) represents the Roman consul thus arrayed when he opens the gates of the temple of Janus; and in this garb the Decii devoted themselves to death. (Cramer's Anc. Italy, vol. 2, p. 50.)

Gabina, the name of Juno, worshipped at Gabii. (Verg., En., 7, 682.—Vid. Gabii, II.)

Gabiniæ, I. de Comitia, proposed by A. Gabinius, the tribune at the battle of Lake Regillus. It required, that in the public assemblies for electing magistrates, the votes should be given by ballots, and not visa vose. (Cic., de Leg., 3, 16.)—II. Another, brought forward by A. Gabinius the tribune, A.U.C. 685. It granted Pompey the power of carrying on the war against the pirates during three years, and of obliging all kings, governors, and states to supply him with all the necessaries he wanted, over all the Mediterranean Sea, and in the maritime provinces of the Roman Empire, as far as 400 stades from the coast. (Dio Cass., 36, 7.)—III. Another, de Usura, by Au. Gabinius the tribune, A.U.C. 685. It ordained that no action should be granted for the recovery of any money borrowed upon small interest to be lent upon larger. This was a usual practice at Rome, which obtained the name of versusam facere. Compare the remarks of Heineccius, Rom. Ant., 3, 15, 14, p. 548, ed. Hahbold. Gabinius, C. F. 1, 2, 20, says, that when he was solicited from him, the Gabinian Laws, attached himself at first to Sylla, and afterward to Pompey. When tribune of the commons, B.C. 69, he proposed a law giving Pompey almost absolute control over the coasts of the Mediterranean, together with the command of the sea itself, for the purpose of suppressing the Cilician pirates. The leading men in the state endeavoured, but in vain, to prevent the passage of this law. They succeeded, however, in thwarting Gabinius' wish to
go as one of Pompey's lieutenants, although the latter expressly asked for him as such. Gabinius very probably was recompensed by Pompey in some other way, since his son, Publius Gabinius, was appointed to the same time and so corrupt in principle, that had this law not been passed, he would have turned pirate himself. Having obtained the consulship, B.C. 58, he took part with Clodius against Cicero, and powerfully contributed to the exile of the latter. The next year he obtained the government of Syria. Judea, which was comprised in this province, was at that period a scene of trouble, owing to the rival claims of Hyrcanus and Aristobulus to the throne. Gabinius defeated Aristobulus in a great battle near Jerusalem, and then wrote home to the senate, and claimed a thanksgiving for his victory. This was refused him, and he was then ordered to return. Disobeying the authority of the senate, he continued in command, and acted in the most arbitrary and oppressive manner. He even had the hardihood to march into Egypt, thus violating a positive law by making war beyond the boundaries of his own province. His object in passing into this country was to reintestate Ptolemy, which he successfully effected, after two victories over his rebellious subjects. The senate, highly incensed at his conduct, ordered him at last to return home and defend himself. Having obeyed this mandate, he was immediately accused of high treason. The interest of Caesar and Pompey, however, obtained his acquittal. He was immediately after accused of extortion, and was less fortunate. The same powerful influence was exerted in his behalf; and even Cicero himself, yielding to the solicitations of Pompey, actually appeared as his advocate. Gabinius was condemned to perpetual banishment. After an exile of some years he was recalled by Caesar, and remained henceforth attached to the party of the latter. Subsequently to the battle of Pharsalia, he was sent into Illyricum with a sufficient force to meet the new levied-legions, but his army was almost destroyed in the early encounters, by the barbarians, and he was compelled to shut himself up in Salona, where he died of a malady brought on by chagrin at his discomfiture. His death happened about A.U.C. 707. (Cic., pro Dom., 9.—Id., pro Leg. Man., 17.—Id., Phil., 14, 8.—Plut., Vit. Pompey.—Id., Vit. Cic., &c.—II. A Roman general under Claudius, about A.D. 91, who gained some successes over the Galatians. GADINUS GINUTUS. Vid. Gabii.

GADIRS (sum), GADIS (iis), and GADIRE, a flourishing commercial city of Spain, at the mouth of one of the arms of the Batis, now Cadiz. It was founded by a Phoenician colony about 1500 B.C., according to some; others, however, make its foundation coeval with that of Ulica, and this last to have been 287 years before Christ. Its name in Phoenician was Gadir, and signifies edge or limit, as it was thought that here were the western limits of the Phoenician dominions. Pliny (4, 36) remarks, "Pemi Gaddir, ita Punica lingua septim significante," and Solinus (c. 29), "Quam Tyrii, a Rubro profecti mari, Erythream, Pemi lingua sua Gaddir, id est septem, nominant."—The Greek name is Tades, and hence we have in Hesychius, Tades, τὰ περιόδαρια, Φωνίκες. (Compare the Hebrew form Gedére, which Gesenius defines a place on the seacoast with wall, into which the shepherds drove their flocks by night, and wild animals. Consult also Gesenius, Geschichte der Hebräischen Sprache und Schrift, p. 227.) It was situated on a small island of the same name, which was separated from the main land by a strait only one stadium wide. This island is said to have abounded at an early period with wild olive-trees, and to have been hence named Cotinida (Κοτινία), not by the early inhabitants of the land, however, as some of the ancient writers thought, but by the Greeks; for the appellation is a Grecian one. Near it lay the small island Erythea, called by the inhabitants Juno's island. (Vit. Erythaea.) Gades came into the power of the Carthaginians after the war, and in the second surrendered itself voluntarily to the Romans. From Julius Caesar it received the name and privileges of a Roman colony; and in later age it was styled Augusta Julia Gaditana. Hercules, surnamed Gaditanus, had here a celebrated temple. (Plin., i. c.—Flor., 2, 17.—Liv., 28, 37.—Justin., 44, 5.)

GADITANUS SINUS, now the Bay of Cadiz. GADITANUS FRETUM, now the Straits of Gibraltar. (Vit. Abyla and Cape.)

GATULI, a country of Africa, south of Numidia, and now answering in some degree to Biledulgerid, or the region of locusts. Its situation and limits are not properly ascertained, and, indeed, do not seem to have been always the same. Isidorus (c. 9) gives a curious account of the origin of the Gatuli:—"Gatuli Geza dicuntur suisse, qui ingenii agmine a locis suis numinis consecutendis loca Syriam in Libya occuparent: et, quia ex Geza venenatur, derivatio nomine Gatlui cognominati sunt." This statement is very properly refuted by the president Des Brosses; but he himself assigns an etymology just as uncertain, namely, from the Phenician term Gezeh, "a flock," on the assumption that they were a shepherd-race. (Flor., 4, 12.—Mela, 1, 4.—Plin., 5, 1.—Id., 21, 13, &c.)

GAIUS (vid. remarks under Gaius), one of the Roman classical jurists, whose works entitle him to a place among the great writing of the Romans, as for example Papinian, Paulus, and Ulpian. Nothing is known of the personal history of Gaius beyond the probable fact that he wrote under Antoninus Pius and Aurelius. His works were largely used in the compilation of the "Digest" or "Pandects," which contain extracts from his writings under various heads. The "Institutions" of Gaius were probably the earliest attempt to present a sketch of the Roman law in an elementary textbook. This work continued in general use till the compilation of the Institutes of Justinian, which were not only mainly based on the Institutions of Gaius, but, like this earlier work, were divided into four books, with the same general distribution of the subject-matter as that adopted by him. The Institutions of Gaius appear to have been neglected after the promulgation of Justinian's compilation, and were finally lost. All that remained was the digest of Gaius, collected in the Digest, and what could be gathered from the "Breviarium Alarcianum," as the code of the Visigoths is sometimes called. But in 1816, Niebuhr discovered a manuscript in the library of the chapter of Verona, which he ascertained to be a treatise on the Roman law, and which Savigny, founding his opinion on the specimens published by Niebuhr, conjectured to be the Institutions of Gaius. This conjecture was fully confirmed by the fact that the MS. has a author's name on it. Gösch, Bekker, and Hollow undertook to examine and copy this MS., an edition of which appeared at Berlin in 1820, by the first of these scholars. To form some idea of the labour necessary to decipher this MS., and of the patient perseverance of those who undertook this formidable task, the reader is referred to the report of Gösch to the Academy of Berlin, Nov. 6th, 1817. A second edition of this first publication, and a new edition of the Institutions was published by Gösch, at Berlin, in 1824, which presents us with an exact copy of the MS., with all its deficiencies, and contains a most copious list of all the abbreviations used by the copyst of Gaius.—The Institutions of Gaius form one of the most valuable additions that have been made in modern times to our knowledge of the Roman law. The fourth book is particularly useful for the information which it contains on actions and the forms of proce-
The style of Galaus, like that of all the classical Roman jurists, is perspicuous and yet concise. One of the most useful editions is that by Klenze and Böcking (Berlin, 1829), which contains the Institutions of Galaus and Justinian, so arranged as to present a parallelism, and to furnish a proof, if any yet were wanting, that the MS. of Verona is the genuine work of Galaus. (Encycl. Us. Knowl., vol. 11, p. 34.)—It was the Galas (Galatia) of Galasia, in the Zeitschrift für Geschichtliche Rechtswissenschaft, Berlin, 1815, and Hugo, Lehrbuch der Gesch. des Röm. Rechts.

Galantha, a servant-maid of Alcmena, whose sadness eased the sufferings of her mistress. When Juno resolved to retard the birth of Hercules, and hasten the labours of the wife of Sthenelus, she solicited the aid of Lucina, who immediately repaired to the dwelling of Alcmena, and, in the form of an aged female, sat at the morrow door with her feet crossed and fingers joined. In this posture she uttered some magical words, which served to prolong the sufferings of Alcmena. Alcmena had already passed some days in the most excruciating torments, when Galantha began to suspect the jealousy of Jusno; and concluded that the female, who continued at the door always in the same posture, was the instrument of the anger of the goddess. Influenced by these suspicions, Galantha could not forbear with expression of joy, she informed the aged stranger that her mistress had just brought forth. Lucina, at these words, rose from her posture, and that instant Alcmena was safely delivered. The laugh which Galantha raised upon this, made Lucina suspect that she had been deceived. She seized Galantha by the hair, threw her on the ground, and transformed her into a wasp. (Ovid, Met., 9, 306, seq.)—This whole fable is connected with a legend prevalent among the Thessalians, that when Alcmena was expelled from her house of parturition, a wasp (γαλάτη) ran by and terrified her by its sudden appearance, and that the terror thus excited eased her throes and produced a happy delivery. (Albian, V. H., 12, 5.) Hence the wasp was highly revered by the Thebans, and was called by them the nurse of Hercules. (Clem. Alex., Protr., p. 25, 6.)

Galatea, the inhabitants of Galatia. (Vid. Galatia.)

Galatia and Galathia, a sea-nymph, daughter of Nereus and Doris. She was passionately loved by the Cyclops Polyphemus, whom she treated with disdain; while Acis, a shepherd of Sicily, enjoyed her unbounded affection. The union, however, of the two lovers was destroyed by the jealousy of Polyphemus, who crushed his rival with a fragment of rock, which he rolled on him from an overhanging height. Galatia was inconsolable for the loss of Acis, and as she could not restore him to life, she changed him into a stream. (Ovid, Met., 13, 789—Virg., En., 9, 103.)

Galatia or Gallogracia, a country of Asia Minor, lying south of Paphlogonia, west of Pontus, and northeast of Phrygia. (Vid. Gallo-Gracia.)

Galba, I. Sergius, an orator anterior to Cicero. While holding the government of Spain, he treacherously murdered 30,000 Lusitaniacs. Having been accused for this by Cato the Censor, he was about to be condemned, when he wrought upon the feelings of the people by embracing before them his two sons, still quite young. This saved him. (Cic., Orat., 1, 53.)—II. Servius Sulpicius, a celebrated Roman lawyer, father of the emperor. —III. Servius Sulpitius, born in the reign of Augustus, of a patrician family, served with distinction in Germany, was afterward proconsul, first in Africa, and subsequently in His- pars, Tarraconens, in which office he gained a reputation for justice and moderation. He was still in
which is now well established. 2. Eighteen of rather doubtful origin. 3. Nineteen fragments, more or less extensive in size. 4. Eighteen commentaries on the works of Hippocrates.—To these published works must be added thirty or forty treatises or parts of treatises, which still exist in manuscript in the public libraries of Europe. The works of Galen have, in the text, been numbered from one to fifty, that treated on medical subjects, is supposed to have been one hundred and sixty-eight.—The instruction which Galen had received in the principles of the different sects of medical philosophy, given him an acquaintance with the various errors of each, and he speaks of them at all times in the language of no measured contempt. The school which was founded by himself may justly merit the title of Eclectic, for its doctrines were founded on the philosophy of Plato, on the substance and logic of Aristotle, and of the practical knowledge of Hippocrates. On many occasions he expresses himself strongly on the superiority of theory to mere empiricism; but upon those matters which do not admit of being objects of experience, such as the nature of the soul, he confesses his ignorance, and his inability to give any plausible explanation. Among the productions of Galen that are of a philosophical character are enumerated two treatises, "On the Best Doctrine against Phærornius; a dissertation on the opinions of Hippocrates and Plato;" "A commentary on the Theophrastus of Plato," and several pieces "On Dialectics." Galen has been frequently cited for impertinence; but his Demonstration of Divine Wisdom from the structure of the human body, in his treatise "On the use of the parts of the human body," is a sufficient refutation of this calumny. The following sketch of the professional character of this celebrated physician is given by Dr. Adams: "Galen, to whom medicine, and every science allied to it, are under so great obligations, was a man skilled in all philosophy, a profound reasoner, an ardent admirer of truth, a worthy member of society, and a distinguished ornament of his profession. Though, according to his own account, unambitious of fame, he acquired a name which for fourteen centuries was above every other name in his profession, and even now stands pre-eminently illustrious. We shall give a hasty sketch of his merits in the different branches of medical science to which he directed his attention. Wisely judging that an acquaintance with the minute structure of the human body was an indispensable preparation to a knowledge of its derangements, he devoted himself ardently to the study of anatomy, in which his works evince that he was eminently skilled. In his "Art of Stages, Anatomy" particularly, almost every bone and process of bone, every twig of nerve, every ramifications of blood-vessel, every viscous, muscle, and gland, with which modern anatomists are acquainted, are described by him with a degree of minute-ness which will surprise those who entertain a mean opinion of the Galenic anatomy. Vesalius, indeed, a zoologist for human dissection in the days of the Emperor Charles the Fifth, strenuously attacks the accuracy of his anatomical descriptions; and as he was constantly on the lookout for mistakes, he is no doubt sometimes successful in attaining the object of his search; but, in other instances, while endeavouring to set Galen right, he only goes wrong himself. For example, he finds fault with Galen for saying that the fourth ventricle of the brain is lined by a membrane; but it is now well ascertained that here Galen was right, while his accusers were wrong. In fact, the justness of Vesalius's strictures on Galen is to be doubted, although most of them had been previously rebutted by the learned Eustachius.—Galen's treatise 'De usu Partium' is replete with accurate anatomical descriptions, ingenious physiological theory, and sound theology, and in all these respects need not fear a comparison with our Paley's work on natural theology. Throughout, as the learned Mr. Harris has well remarked, he, in imitation of Aristotle, incalculates, with irresistible strength of argument, the great doctrine of Final Causes, maintaining, in opposition to the Epicureans, that Means do not lead to Ends, but Ends to Means. As to his Physiology, it is in general founded upon acute observation, accurate experiment, and philosophical induction; so that, in most instances where it has been departed from, subsequent experience has shown the correctness of its doctrines. Thus the distribution of the nerves into nerves of sensation and nerves of muscular motion, and the distinction between the characters of the cephalic and spinal nerves, although clearly pointed out by him, and acquired by Orphilus, Orphilus, Serapion, and by Rhazes, Serapion, Avicenna, Avenzoar, and Averroes among the Arabsians; nay, though admitted by his modern rival Vesalius, were overlooked or denied by subsequent physiologists, until the doctrine was lately revived by an intelligent lecturer on anatomy in London. In the hands of several English and French experimenters, this theory has undergone different modifications; but I will venture to predict, that, when time has examined and corrected many of the errors and alterations which have been made by modern hands upon the ancient doctrine, will be found to be rather blemishes than improvements. With regard to the functions of the arteries and veins, Galen's views must be admitted to be not very distinctly defined; but has the celebrated theory of Harvey removed all the difficulties, and cleared away all the obscurity, which hung over this important department of physiology? Let the following declaration, by one of the most distinguished among the present physiologists of France, be taken as a test of the degree of precision which now prevails upon this subject: 'Il n'existe pas deux ouvrages de Physiologie, deux traités de Medicine, où la circulation soit décrite et considérée dans le même manièr.' (Magendie, Jour. de Phys.) At all events, it is clear that Galen had the merit of establishing two important facts, regarding the function of the arteries; first, that they contain blood, and not vapour or gas, as maintained by Erasistratus; and, secondly, that it is the expansion or distolore of the artery which is the cause of the influx of the blood, and not the influx of the blood which is the cause of the expansion of the artery. The former of these facts Harvey himself does him the justice of allowing that he maintained; and a late French physiologist, Dumas, compliments him for having held the latter opinion, although it is in variance with Harvey's views respecting the circulation. In his work on the Natural Faculties he has expressed fully his sentiments upon a subject which is still far from being cleared up; but it is remarkable, that very lately a theory has been advanced, which corresponds, in a great degree, with the doctrine advocated by Galen. I allude to Dutrochet's famous theory of the Endosmosis and Exosmosis, which power, if I mistake not, are but different names for the Attractive and Expulsive Faculties of Galen.—Operative Surgery is the department of his profession which is least indebted to him; and yet even here he has left some monuments of his boldness and ingenuity. He has described minutely an operation performed by him upon the chest of a young man, by which he perforated the breast-bone, and laid bare the heart, in order to give vent to a collection of matter seated in the thorax. The subject of Ulcers is handled by him very scientifically in his book, 'De ratione Methodo, &c.' In his descriptive and divisions of ulcers are the same as those adopted by one of our best English writers on this subject, Mr. Benjamin Bell. His Commentaries on Hippocrates show his acquaintance with Fractures and Dislocations.—Of Hygiene, or the Art of Preserving Health, he treated at great length in a work consisting of six books.—His treatise De Fac-
ulte Alimentorum contains very important observations
on the nature of animals, and furnishes an ex-
position of his opinion on the subject of Dietetics.
It need not fear a comparison with the work lately
published on Diet by Dr. Paris. I do not state this in
disparagement of the latter, whom I esteem to be a
very judicious and able author, to insist on the point
that we have not advanced much in the knowledge of
this branch since the time of Galen.—Of most diseases
he has treated either fully or cursorily in some part or
other of his works, but upon the whole he has given no
comprehensive treatise upon the practice of physic.
His most complete treatises are those entitled De Cu-
rature, ad Glauconem, and the Ratio Curandi.—The Ma-
teria Medica and Pharmacy appear to have been the ob-
jects of particular study, and both are handled by
him in several of his works. Though his list of med-
icinal articles, taken from the vegetable kingdom, be
less numerous than that of Dioscorides, he has de-
scribed more animal and mineral substances. His
 treatise De Medicinis secundum locos contains a copi-
ous list of pharmaceutical preparations; and that part
of it Compositions for the Eyes might, I am con-
vinced, be consulted with advantage by the oculists of
the present day.—Of all his works, none was long so
much admired, and now so little known, it is scarcely
safe to express an opinion, lest we should be reduced to
the alternative of either reproaching antiquity for
want of sense, or modern times for want of discern-
ment. At all events, however, we may venture to af-
firm, that, if the Doctrine of the Temperaments have
any foundation in nature, no one had ever studied them
more attentively, or described them with greater pre-
cision, than Galen has done in this treatise.—In sev-
eral works he gives an elaborate system of the Aterri-
al Pulsation, as the base of his doctrines, which has
been taken up by all subsequent writers; and abridged ex-
positions of it may be found in Philaretus, Paulus
Ægineta, Actiusaurus, Rhaeses, and Avicenna. The
reader may find some candid remarks upon it in Bor-
den's Physiology, who, although an advocate for a new
system, given not an unfair statement of the system of
Galen.—The best edition of Galen is that of Kühn,
19 vols. 8vo, Lips., 1821-1830.
GaLÈRiUS, a Roman emperor. (Vid. Maximianus.)
GaLÈRiUS, I. now Galeria, a river of Calabria, flow-
ing into the bay of Tarentum. The poets have cele-
brated it for the shady groves in its neighbourhood, and
the fine sheep which fed on its fertile banks, whose
fleece was said to be rendered soft by bathing in the
—Horat., Od., 2, 6, 10.) II. A rich inhabitant of La-
tania, killed himself to avoid a punishment dictated
between the Trojans and Rutulians, when Ascanius
had killed the favourite stag of Tyriheus, which was
the prefect of the enmities between the hostile na-
tions. (Virg., Æn., 7, 555.)
GaLiLÆA, a celebrated country of Palestine, form-
ing the northern division. Josephus (Bell. Jud., 3, 3)
divides it into Upper and Lower, and he states that
the limits of Gailee were, on the south, Samaris and
Seynus, on the north, on the east, the sea of Jordan.
It contained four tribes, Issachar, Zebulum, Naphtali, and
Asher; a part also of Dan, and part of Peræa, or the country
beyond Jordan. Upper Galilee was mountainous, and
was called Galilee of the Gentiles, from the hea-
thens nations established there, who, were enabled, by
the mountainous nature of the country, to maintain
themselves against all invaders. Strabo enumerates
among its inhabitants, Egyptians, Arabsians, and Phoe-
nicians. (Strab., 760.) Lower Galilee, which con-
tained the tribes of Zebulon and Asher, was adjacent
to the Sea of Tiberias or Lake of Gennesareth. Ga-
ilee, according to Josephus, was very populous, con-
taining also the cities of Nazareth and Cana. It was
valued at a tremendous sum as a native produce.
Its principal city was Cesarea Philippi. The
inhabitants of Galilea were very industrious, and, be-
ing bold and intrepid soldiers, they bravely resisted the
nations around them. The Jews of Judea regarded
them with much contempt. Their language was a corrup-
ted and unpolished dialect of Syriac, with a mix-
ture of other languages. It was probably this corrupt
dialect that led to the detection of Peter as one of
Christ's disciples. (Mark, 14, 70.) Our Saviour
was called a Galilean (Matt., 26, 69), because he was
brought up at Nazareth, a city of Galilea; and as his
apostles were mostly, if not all, natives of this prov-
ce, they also are called Galileans and "men of Ga-
ilee." (Acts, 1, 11.) This country was most hon-
oured by our Saviour's presence. To this part Jo-
seph and Mary returned with him from Egypt; here
he lived till he was thirty years of age, and was bap-
tised; he thus frequently returned to the place where
he had grown up and been tempted; and in this province
was his place of residence when he commenced his
ministry. The population being very great, he had more
opportunities of doing good here than in any other portion;
on which account, probably, he made it his principal
abode. After his resurrection he directed his apostles
to come to Galilee to converse with him. (Matt.,
28, 7.—Consult, in relation to this country, the fol-
lowing part of Scripture, Josh., 20, 7, and 21, 39.—

Galli, I. a warlike race of antiquity. (Vid. Ga-
lia.)—II. A name borne by the priests of Cybele.
(Vid. Cybele.)
GaLLiA, an extensive and populous country of Eu-
rope, bounded on the west by the Atlantic, on the
north by the Inseula Batavorum, and the country of the
Gallatians, by the Rhenuus and the Alpes, and on the south by the Pyrenees. The greatest
breadth was 600 English miles, but much diminished
between each extremity, and its length was from 480
to 620 miles. It was therefore more extensive than
modern France before the Revolution, though inferior
to the kingdom under Napoleon, which was 560 miles
long from east to west, and 560 broad from north
to south. Gaul was originally divided among the three
great nations of the Belgae, the Celti, and the Aqui-
坦i. The Romans called the inhabitants of this
country by one general name, Galli, while the Greeks
styled them Celti. The Greeks called the country
itself Galatia, Celtica (Keltikì), and Celto-Galatia;
the last for distinction' sake from Galatia in Asia Mi-
nor. Of the three great nations of Gaul, the Celti
were the most extensive and indigenous, and the Bel-
ge the bravest. The Celti extended from the Sequa-
na or Sone in the north, to the Garumna or Garonne
in the south. Above the Celti lay the Belge, between
the Seine and Lower Rhine. They were intermixed
with Germanic tribes. The Aquitanii lay between the
Garonne and Pyrenees, and were intermingled with
Spanish tribes. These three great divisions, however,
were subsequently altered by Augustus, B.C. 27, who
extended Aquitanians into Celtica as far as the Liger
above the Liger was called Galia Lugdunensis, from the
colony of Lug-
dunum, Lyons; and the rest of Celtica towards the
Rhine was added to the Belge under the title of Bel-
lica; lastly, the south of Gaul, which, from having
been the first provinces possessed by the Romans, had

530
GALLIA.

been styled Galla Provencia, was distinguished by the name of Narbonensis, from the city of Narbo or Narbonne. This province was anciently called also Galia Braccata, from the braccio or under-garment, worn by the inhabitants, while the eastern coast was styled Comata, from the long hair worn by the natives. These four great provinces, in later ages, were called the four Gauls, and subdivided into 17 others.

As far back as we can penetrate into the history of the West, the West, or the Gauls occupying that part of the continent comprehended between the Rhine, the Alps, the Mediterranean, the Pyrenees, and the Ocean, as well as the two great islands situating to the northwest, opposite the mouths of the Rhine and Seine. Of these two islands, the one nearer the continent was called Alb-in, "White Island." (Alb signifies "high" and "white," i.e., contractum, from inins, means "island."—Compare the remark of Pliny, 14, 16, "Albium incolae, sic dicta ab aelius rupibus quae mare alludit.") The other island bore the name of Er-in, "Isle of the West" (from Eir or Iar, "the west"). The continental territory received the special appellation of Gallitachd, "Land of the Gauls." The term Gaeltachd, or, more correctly, Gaedhealtachd, is still applied to the highlands of Scotland. From this word the Greeks formed Taalairia (Gailetia), and from this latter the generic name of Taalairi. The Romans proceeded by an inverse method, and from the generic term Galli deduced the geographical denomination Gallia. The population of Gaul was divided into families or tribes, forming among themselves many distinct communities or nations. These nations generally assumed names deduced from some feature of the country in which they dwelt, or from some peculiarity in their social state. Often times they united together, in their turn, and formed confederations, which were the confederations of the Celtae, Edui, Armoric, Arverni, &c.—The Gaul was robust and of tall stature. His complexion was fair, his eyes blue, his hair a blond or chestnut colour, to which he endeavoured to give a red or flaming hue by certain applications. (Plin., 28, 12.—Martial, 8, 33.) The hair itself was worn long, at one time floating on the shoulders, at another gathered up and confined on the top of the head. (Diod. Sic., 5, 28.) The Gauls habitually wore a short robe and a tunic or a cloak, and among the nobles, on the other hand, removed it from the face, excepting the upper lip, where they wore thick mustaches. (Diod. Sic, l. c.) The attire common to all the tribes consisted of pantaloons or bracca (braca, bracca; brakian in Cymraic; bragu in Armoric). These were of striped materials. (In Celtic breac means "a stripe.") They wore also a short cloak, having sleeves, likewise formed of striped materials, called the tunic or the thong. (Strabo, 186.) Over this was thrown a short cloak or saggum (saec, Armoric, —Compare Issidor, Origin., 19, 24), striped like the shirt, or else adorned with flowers and other ornamental work, and, among the rich, superbly embroidered with silver and gold. (Virg., Aen., 8, 660.—Sil. Ital., 4, 152.—Diod. Sic., 5, 28.) It covered the back and shoulders, and was secured under the chin by a clasp of metal. The lower classes, however, wore for it one or two simple strips, either a thong or a strip of woollen, covered, in the Gallo-Kimric dialects, leum or len. (In Armoric len means "a covering;" and in Gaelic Lean signifies "a soldier's cloak."—Compare the Latin laena and the Greek laína and ñólaína.)—The Gauls possessed a strong taste for personal decoration: it was customary with the rich and powerful to adorn themselves with a profusion of collars, bracelets, and rings of gold. (Strabo, 196.) The offensive arms of the nation were at first, hatchets and knives of stone; arrows pointed with flint or shells; clubs; spears hardened in the fire, and named gais (in Latin gaxisum, in Greek γαίη), and others called catetus, which they threw at the enemy. (In Gaelic teth, pronounced go-tell, signifies "a fiery dart.") Foreign traffic, however, made them acquainted, in process of time, with arms of iron, as well as with the art of manufacturing them for themselves from the copper and iron of their own mines. Among the arms of metal which thenceforward came into use, may be mentioned the long sabre of iron or copper, and a pike resembling our halberds, the wound inflicted by which was considered more effective. For the Gauls, as well as the Cisalpine, warriors of the Gallic race had rejected the use of defensive armour as inconsistent with true courage; and, for a long period, an absurd point of honour had induced them even to strip off their vestments, and engage naked with the foe. This prejudice, however, the fruit of an ostentatious feeling natural to the race, was almost entirely effaced in the second century. The numerous relations of the Gauls with the Massiliots, Italians, and Carthaginians, had at first spread a taste for armour, as a personal decoration, among the Gallic tribes; in a short time the conviction of its utility was superadded; and the military costume of Rome and Greece, adopted on the banks of the Loire, the Rhone, and the Saône, formed a singular combination with the ancient array of the Gaul. "To a helmet of metal, of greater or less value according to the fortune of war, they were attached in the bow; the horns of elk, buffalo, or stag; while for the rich there was a headpiece representing some bird or savage beast; the whole being surmounted by a bunch of plumes, which gave to the warrior a gigantic appearance. (Diod. Sic., 5, 28.) Similar figures were attached to their bucklers, which were long, quadrangular, and painted with the brightest colours. These representations served as devices for the warriors; those which were attached with emblem by means of white or yellow stripes to the backs of the shields were considered to characterize himself or strike terror into the foe. (Compare Vegetus, 2, 18.—Sil. Ital., 4, 148.)—A buckler and casque after this model; a cuirass of wrought metal, after the Greek and Roman fashion, or a coat of mail formed of iron rings, after the manner of Gaul (Varro, L. L., 4, 20); an enormous sabre hanging on the right thigh, and suspended by chains of iron or brass from a short belt, was hanging at the side, either with a broad belt or a long, narrow cord, a collar, bracelets, rings of gold around the arm and on the middle finger. (Plin., 33, 1); pantalons; a sagum hanging from the shoulders; in fine, long red mustaches; such were the martial equipments and such the appearance of an Arvernian, Édouan, or Biturigan noble.—Hardy, daring, impetuous, born, as it were, for martial enterprises, the Gallic race possessed, at the same time, an ingenious and active turn of mind. They were not slow in following their Phœnician and Greek instructors in the art of mining. The same superiority to which the Spaniards had attained in tempering steel, the Gauls acquired in the preparation of brass. Antiquity assigns to them the honour of various useful inventions, which had hitherto escaped the earlier civilization of the East and of Italy. The process of tinning was discovered by the Gauls; that of veneering by the Édouins. (Plin., 34, 17.) The Gauls, too, were celebrated, without reputation. (Plin., 8, 48.) In agriculture, the wheel-plough and boulter were Gallic discoveries. (Plin., 18, 18.—Id. ibid., 18, 11.) With the Gauls, too, originated the employment of marl for enriching the soil. (Plin., 18, 6, seqq.) The cheeses of Mount Lessore, among the Galli; those of Nemauis; and two kinds made among the Alpes, became, in time, much sought after by the inhabitants of Italy. (Plin., 11, 49); although the Italians generally ascribed to the Gallic cheeses a savour of too acid a nature and somewhat medicinal. (Plin., 531)
The Gauls also prepared various kinds of fermented drinks; such as barley-beer, called cervices (Plin., 22, 15).—In old French, Cervesie; in Greek, Ouro.) and likewise another kind of beer, made from corn, and in which honey, cumin, and other ingredients were mingled. (Pausan., op Athen., 4, 13.)

The first of these were employed for leavening bread; it was used also as a cosmetic, and the Gallic females frequently applied it to the visage, under the belief that it imparted a freshness to the complexion. (Plin., 22, 25.) As regarded wine, it was to foreign traders that the Gauls and Ligurians were indebted for its use; and it was from the Greeks of Massilia that they learned the process of making it, as well as the culture of the vine.—The dwellings of the Gauls, spacious and of a round form, were constructed of posts and hurdles, and covered with clay both within and without; a large roof, composed of oak-shingles and stubble, or of straw cut and kneaded with clay, covered the whole. (Strabo, 106.—Vitr., 1, 1.)

Gaul contained both open villages and cities: the latter, surrounded by walls, were defended by a system of fortification, of which we find no example elsewhere. Caesar gives the following description of these ramparts: (Straight lines having equal lengths, and two feet distant from each other, are laid along the ground. These are mortised together on the inside, and covered deep with earth; but the intervals are stopped in front with large stones. These being fixed and cemented together, another range is put over, the same distance being preserved, and the beams not touching each other, but intermitting at equal spaces, and each bound close together by a single row of stones. In this manner the whole work is intermixed till the wall is raised to its full height. By this means the work, from its appearance and variety, is not displeasing to the eye: the beams and stones being placed alternate, and keeping their own places in exact right lines: and besides, it is of great advantage in the defence of cities: for it is secured by the stone from fire, and from the battering-ram by the wood, which, consisting of entire beams, forty feet long, for the most part mortised on the inside, could neither be forced in nor torn down. Such would seem to have been the fortifications of the cities in the civilized and populous part of Gaul. To the north and east, among the more savage tribes, there were no cities properly so called; the inhabitants resided for the most part in large enclosures, formed of trunks of trees, and calculated to repel by these rude interrenchments the assaults of a disciplined as well as undisciplined foe.—Besides his habitation in the city, the rich Gaul generally possessed another in the country, amid thick forests and on the banks of some river. (Cæs., B. G., 6, 30.) Here, during the heat of summer, he reposed from the fatigues of war; but he brought along with him, at the same time, all his equipments and retinue, his arms, his horses, his esquires. In the midst of the storms of faction and the civil dissensions, which marked the history of Gaul in the first and second centuries, these precautions were anything else but superfluous.

2. General habits of the Gallic race.

It was, as we have already remarked, in war, and in the arts applicable to war, that the genius of the Gauls displayed itself most to advantage. This people made war a regular profession, while the management of arms became their favourite employment. To have a fine martial mien, to retain for a long period and all over their body, with a pleasing figure, a point of honour for individuals, but a duty to the state. At regular intervals, the young men went to measure their size by a girdle deposited with the chief of the village, and those whose corpulence exceeded the official standard were severely reprimanded as idle and intemperate persons, and were, besides, punished with a heavy fine. (Strabo, 196.)—In preparing for foreign expeditions, a chieflain of acknowledged valour generally formed a small army around him, consisting, for the most part, of adventurers and volunteers who had flocked to his standard; these barbarous practices would have might be obtained. In internal wars, however, or of defensive ones of any importance, levies of men were forcibly made; and severe punishments were inflicted on the refractory, such as the loss of noses, ears, an eye, or some one of the limbs. (Cæs., B. G., 7, 4.) If any dangerous conjuncture occurred; if the honour or safety of the state were about to be compromised, then the supreme chief convened an armed council (Cæs., B. G., 5, 66). This was the proclamation of alarm. All persons who bear arms, from the youth to him advanced in years, were compelled to assemble at the place and day indicated, for the purpose of deliberating on the situation of the country, of electing a chief, and of discussing the plan of the campaign. It was expressly provided by law, that the individual who came last to the place of rendezvous should be cruelly tortured in the presence of the assembled multitude. (Cæs., B. G., 5, 66.) This form of convocation was made for the benefit of the people in the last extremity, and more frequently in the democratic cities than in those where the aristocracy had the preponderance. Neither infirmities nor age freed the Gallic noble from the necessity of accepting or suing for military commands. Oftentimes were seen, at the head of the forces, chieflains hoary and almost enfeebled by age, who could even scarcely retain their seats on the steed which supported them. (Hist., B. G., 8, 15.) This people engaged their aged warriors by making them die elsewhere than on the field of battle. To the fierce vivacity of the attack and to the violence of the first shock, were reduced nearly all the military tactics of the Gauls, on level ground and in pitched battle. In the mountainous regions, on the other hand, and especially in the vast and thick forests of the north, war had a close resemblance to the chase: it was prosecuted in small parties by an handbook and all sorts of stratagemas. Hounds, dogs, trained up to pursue men, tracked out, and aided in conquering the foe. These dogs, equally serviceable for the chase and for war, were obtained from Belgian Gaul and from Britain. (Strabo, 196.

—Sil. Ital., 10, 77.—Ovid, Met., 1, 533.—Martial, 3, 47.) A Gallic army generally carried along with it a multitude of chariots for the baggage, which embarrassed its march. (Hist., B. G., 8, 14.—Cæs., B. G., 1, 51.) Each warrior bore a bundle of straw, on which he was accustomed to sit in the encampment, or even in the line of battle while waiting the signal to engage. (Hist., B. G., 8, 15.)—The Gauls, like other nations, for a long period were in the habit of killing their prisoners of war, either by crucifixion, or by tying them to trees as a mark for their weapons, or by consigning them to the flames amid horrid rites. Long prior, however, to the second century of our era, these barbarous practices were laid aside, and the captives of transalpine nations had nothing to fear but servitude. Another custom, not less savage, that of cutting off the heads of their slain enemies on the field of battle, was not slower in disappearing. It was long a settled rule in all wars, that the victorious army should possess itself of such trophies as these; the common soldiers fixed them on the points of their spears, the horsemen wore them suspended by an handle, and all sorts of stratagemas in this way the conquerors returned to their homes, making the air resound with their triumphal acclamations. (Strabo, 197.) Each one then hastened to nail up these hideous testimonials of his valour to the gate of his dwelling; and, as the same thing was
done with the trophies of the chase, a Gallic village bore no faint resemblance to a large charnel-house. Carefully embalmed, and saturated with oil of cedar, the heads of hostile chieftains and of famous warriors were deposited in large coffers, and arranged by the side of the statues of their conquerors on the triumphal arches. (Strabo, 198.) This was the book, in which the young Gallic warrior loved to study the exploits of his forefathers; and each generation, as it passed onward, strove to add to the contents. To part, for money, with the head of a foe, acquired either by one's own exertions or those of his ancestors, was regarded as the height of baseness, and would have fixed a lasting stain on him who should have been guilty of the deed. Many even, when having refused, when offered by the relations or countrymen of the deceased, an equal weight of gold for a head thus obtained. (Diod. Sic., 5, 29.)

Sometimes the skulls, cleansed and set in gold or silver, served as a cup in the temples, or circulated in the festivities of the banquet, and the guests drank out of it to the glory of the victor and the triumphs of their country. These fierce and brutal manners prevailed for a long period over the Gauls, and animated the Celtic civilization of the march, abolished them by degrees, until, at the commencement of the second century, they were confined to the savage tribes of the North and West. It was there that Posidonius found them still existing in all their vigour. The sight of so many human heads, disfigured by outrages, and blackened by the air and the rain, at first excited in his bosom the mingled emotions of horror and disgust: "however," adds the stately traveller, with great naïveté, "my eyes became gradually accustomed to the view." (Strabo, 198.)—The Gauls, affected, as more manly in its character, a strong and rough tone of voice (Diod. Sic., 5, 31), to which, moreover, their harsh and guttural idioms greatly contributed. They conversed but little, and by means of short and concise phrases, which the constant use of metaphors and hyperboles rendered obscure and almost unintelligible to strangers. (Diod. Sic., l. c.) But, when once animated by dispute, or incited by something that was calculated to interest or arouse, at the head of armies or in political assemblies, they expressed themselves with surprising copiousness and fluency, and the habit in which they indulged, of employing figurative language, furnished them, on such occasions, with a thousand lively and picturesque images, either for exalting their own merit or putting down their opponent. The Gauls, in general, were accused of drinking to excess, as a habit which took its rise both in the grossness of their manners and in the wants of a cold and humid climate. The Massalian and Italian traders were not slow in furnishing the necessary aliment for the indulgence of this baneful vice. Cargoes of wine found their way, by means of the navigable rivers, into the very heart of the country. The tempting beverage was also conveyed in large wagons (Diod. Sic., 5, 28), and in various quarters regular establishments were opened for vending the article. To these places the Gauls flocked from every part, and gave, in exchange for the wines of the south, their metals, peltries, grain, cattle, and slaves. So lucrative was this traffic to the vendor, that oftentimes a young slave could be procured for a jar of the inebriating liquor. (Diod. Sic., 5, 28.)

About the first century, however, of our era, this vice began to extend itself among the higher classes, and to be confined to the lower orders, at least with the nations of the south and east.—Milk and the flesh of animals, especially that of swine, formed the principal aliment of the Gauls. A curious account of their repasts, traced by one who had often sat with them at table, is given by Posidonius (Ap. Athen., 4, 13). After an excessive indulgence in the pleasures of the banquet, they loved to seize their arms and defy each other to the combat. At first it was a mere sportive encounter; but, if either party chanced to be wounded, passion got so far the better of them, that, unless separated by their friends, they would still continue until one or the other fell a victim to his own or the other's sword. So far, indeed, did they carry their contempt of death and their ostentatious display of courage, that they might be seen agreeing, for a certain sum of money or for so many measures of wine, to let themselves be slain by others; mounted on some elevated place, they distributed the liquor or gold among their most intimate friends, and then reciting on their bucklers, presented their throats to the steel. (Posidonius, ap. Athen., 4, 13.) Others made it a point of honour not to retire from their dwellings when falling in upon them, nor from the flames, nor from the tides of ocean and the inundations of rivers; and it is to these foolish bravados that the Gauls owed their fabulous renown of being an impious race, who lived in open war with nature, who drew the sword against the waves, and discharged the arrow at the tempest.—The working of mines, and certain monopolies enjoyed by the heads of tribes, had placed in the hands of some individuals enormous capitals; hence the reputation for opulence which Gaul enjoyed at the period of the Roman invasion, and even still later. It was the Peru of the ancient world. The riches of Gaul even passed into a proverb. (Cic, Phil., 12—Josephus, 2, 28.—Plut., Vit. Caes.—Suet., Caes., &c.) The sight of various articles in use among the people at large, both plated and tinned, whether for domestic or for foreign use, such as utensils for cooking, arms, harness for horses, yokes for mules, and even sometimes entire chariots (Florus, 3, 2), could not fail to inspire the first travellers into this country with an exaggerated idea of its wealth, and contributed, no doubt, to spread a romantic colouring over the accounts that were given of it. To this was added the lavish prodigality of the Gallic chieftains, who freely spent the resources of their families, and also those of their dependants, for the purpose of attaining to office or securing the favour of the multitude. Posidonius makes mention of a certain Luern or Luer (Aoutéroaco, Posidon., ap. Athen., 4, 13.—Aoutéroco, Strabo, 191), king of the Arverni, who caused a shower of gold and silver to descend upon the crowd as often as he appeared in public. He also gave entertainments in a rude style of barbarian magnificence; a large space of ground was enclosed for the purpose, and cisterns were dug in it, which filled a crowd of a hundred and fifty people, who drank water, mead, and beer. (Posidon., l. c.) Properly speaking, there was no domestic union or family intercourse among the Gallic nations; the females were held in that dependence and servitude which denotes a very imperfect condition of the social state. The husband had the power of life and death over his wife as well as over his offspring. When a person of high rank suddenly died, and the cause of his decease was not clearly ascertained, his wife or wives (for many practised among the rich) were seized and put to the torture; if the least suspicion was excited of their having been privy to his death, the unfortunate victims perished in the midst of the flames, after the most frightful punishments. (Cass., B. G., 6, 19.) A custom, however, which prevailed in this country about the commencement of our era, shows that even then the condition of females had undergone some degree of modification. It was a common custom among husband and wife. Whatever sum the husband received with his wife as a dowry, the same amount he added to it from his own resources; a common stock was thus formed, the interest or profits resulting from which were preserved, and the whole fell to the lot of the survivor. The children remained under the care of their mother until the age of puberty; a father would have blushes to allow his son to appear publically.
in his presence, before the latter could wield a sabre and make a figure on the list of warriors. (Cas., B. G., 6, 18.)—Among some nations of Belgic Gaul, where the Rhine was an object of superstitious adoration, a whimsical custom prevailed; the river was made the means of testing the fidelity of the conjugal state. When a husband had doubts respecting his paternity, he took the new-born infant, placed it on a board, and exposed it to the current of the stream. If the plank and its helpless burden floated safely upon the waters, the result was deemed favourable, and all the father's suspicions were dissipated. If, on the contrary, the plank began to sink, the infant perished, and the parent's suspicions were confirmed. (Julian., Epist., 15, ad Maxim., philos.—Id., Orat., 2, in Contemp. imp.—Anthol. Gr., 1, 43, 1.)

Two privileged orders ruled in Gaul over the rest of the population: the priests and nobles. The people at large were divided into two classes, the inhabitants of the country and the residents of cities. The former of these constituted the tribes or clients appertaining to noble families. The client cultivated his patron's domains, followed his standard in war, and was bound to defend him with his life. To abandon his patron in the latter case was considered as the crime of crimes. The residents of cities, on the other hand, found themselves selves the control of this system of clientship, and, consequently, enjoyed greater freedom. Below the mass of the people were the slaves, who do not appear, however, to have been at any time very numerous. The two privileged orders of which we have just made mention, imposed each in its turn a heavy yoke of despotism upon Gaul; and the government of this country may be divided into three distinct forms, preceding, united, or distinct in time of the Indo-European character. It appears that of the priests, or a theocracy; that of the chieftains of tribes, or a military aristocracy; and that, finally, of the popular constitutions, founded on the principle of free choice by a majority of voters.—When we examine attentively the character of the facts relative to the religious belief of Gaul, we are led to acknowledge the existence of two classes of ideas, two systems of symbols and superstitions entirely distinct from each other, as well as to two dimensions of religious conception sible in its character, based on the adoration of natural phenomena, and recalling by its forms much of the polytheism of Greece; the other, founded on a material, metaphysical, mysterious, and sacerdotal pantheism, presenting the most astonishing conformity with the religions of the East. This latter has received the name of Druidism, from the Druids, who were its first founders and priests; the other system has been called the Gallic Polytheism. Even if no other testimony existed to prove the priority of the latter, in point of time, to Druidism, the natural and inevitable progress of religious ideas among all the nations of the globe would tend to establish the fact. It is not so, however. The old and valuable traditions of the Cymric race attribute to this people, in the most formal and exclusive manner, the introduction of the Druidical doctrines into Gaul and Britain, as well as the organization of sovereign priesthood. According to these traditions, it was the chief of the first invasion, Hu, Heus, or Hesus, surnamed "the powerful," who implanted in this territory, which had been conquered by his horde, the religious and political system of Druidism. A warrior, a priest, and a legislator during his life, Heus enjoyed, besides this, a privilege common to all founders of theocracies: he became a god after death. If the question be now put, how Druidism arose among the Cymric race, and from what source originated those striking points of resemblance between its fundamental doctrines and those of the secret religions of the East, between many of its ceremonies and those practised in Samothrace, in Asia, and in India, we find no light thrown upon this subject by history. Neither the facts collected by foreign writers, nor any national traditions, furnish us with a positive solution of the difficulty. It may be reasonably conjectured, however, that the Cymri, during their long sojourn either in Asia or on the borders of Asia and Europe, were initiated into religious ideas and institutions, which, circulating in the same manner as the arts, gradually and successively spread themselves over all the eastern quarter of the world. Druidism, introduced into Gaul by conquest, organized itself in the domains of the conquerors with greater energy than it had ever done elsewhere; and after it had converted to its dogmas the whole Gallic population, and probably a portion of the Ligures, it continued to have, in the midst of the Cymri, in Armorica, and in Britain, its most powerful colleges for priests and its most secret mythemes. The empire of Druidism, however, did not completely stifle that religion of nature which prevailed before its introduction in Britain and Gaul. Every wise and mysterious system of religion tolerates a fetichism more or less gross in its character, and calculated to take hold of and keep alive the superstition of the multitude; and this fetichism it seeks to hold always stationary, Stationary it therefore remained in the island of Britain. In Gaul, therefore, in the east and in the section of the country, where the Druidism had not been imitated by arms, although it had become the ruling religion, the early national form of worship preserved more independence, even under the ministry of the Druids who had constituted themselves its priests. It continued, then, to be here cultivated, and, following the progressive march of civilization and intelligence, it gradually elevated itself from the rudeness of mere fetichism to religious conceptions which became more and more refined. It was then that the development of the adoration of brute matter, of natural agents and phenomena, such as stones, trees (Max. Tyr., 38), winds, and, in particular, the terrible blast denominated Kirk or Circius (Sene., Quast. Nat., 5, 17), lakes, rivers (Posidon., ap. Strab., 188.—Oros., 4, 16.—Greg. Turon., de Glor. confess., c. 5), thunder, the sun, &c., gave place, in process of time, to the abstract notion of spirits or divinities regulating these phenomena, and established a deific power in every natural agent, or the latter endowed with deific attributes; thus, a later day, the god Tarann, the spirit of the thunder (Lucan., Pharsal., 1, 466.—Torann in Gaelic, and Tarann in Cymraig and Armoric, mean "thunder"); the god Pennin, the deity of the Alps (Liv., 21, 38); the goddess Arduina, presiding divinity over the forest of Ardennes, and numerous others. By a still farther effort of abstraction, the general powers of nature, that of the human soul, and even of civil society, were also deified. Tarann became the god of the skies, the mover of the universe, the supreme judge who hurled his angry thunder at mortals. The sun, under the name of Bel and Belen (Auson., Carm., 2, de Profess. Burdigal.—Tertull., Apoll., c. 24.—Herodian, 8, 3), became a beneficent deity, causing salutary plants to spring up and presiding over medicine. Heus or Hesus, notwithstanding his Druidic origin, took a station in the polytheism of Gaul, as the god of war and conquests; this was probably an incarceration of the Druids. In the Cymric traditions Heus has the character of chief deity, the supreme being. (Davies, Welsh Archæol., p. 110.) The genius of commerce also received the adoration of the Gauls under the name of Tuataed (Lactant., Div. Inst., 1, 21.—Min. Felix, c. 30); he was regarded as the inventor of all arts and the protector of routes. The manual arts had also their particular divinities. In Gaul, the ars metallica, that is to say, the art of working in brass, was deified under the form of an old man, armed like the Grecian Hercules with a club and bow, but whom his captives gayly followed, attached by the
ear to chains of gold and amber, which proceeded from his mouth. He was named Ogmios. (Lucian, Hrsc.—Opp., ed. Rip., vol. 7, p. 312.—Compare Ritter, Vorhalle, p. 368, seqq.).—Coincidences of so striking a nature with their own mythology could not fail to surprise Roman observers, nor was it difficult for them to discover, as they thought, all their own gods in the polytheism of Gaul. Caesar consequently informs us, that they acknowledged among their divinities Mercury, Apollo, Mars, Jupiter, and Minerva. "Mercury," observes this writer, "is the deity whose name they chiefly adore: they have many images of him: they reckon him the inventor of arts; their guide in travelling and journeys; and imagine that he has a very great influence over trade and merchandise. After him they adore Apollo, Mars, Jupiter, and Minerva, of whom they have the same opinion with other nations: that Apollo averts diseases; that Minerva first introduced needlework and manufactures; that Jupiter holds the supreme power of the heavens: that Mars presides over war. To him, whenever they have determined on going to battle, they usually devote the spoil they have taken." (Ces., B. G., 6, 17.)—This resemblance between the two systems of religion changed into identity when Gaul, subjected to the dominion of Rome, had felt for some years the influence of Roman ideas. It was then that the Gallic polytheism, honoured and favoured by the emperors, ended its career, and was gradually merged in the polytheism of Italy; while, on the other hand, Druidism, its mysteries, its doctrine, and its priesthood, were cruelly proscribed, and extinguished amid streams of blood.

The question to be considered here is this, whether there existed a Gallic family distinct from the other families of nations in the West, and whether it was divided into two races. The proofs which we shall adduce in favour of the affirmative are of three kinds: 1st, philological, deduced from an examination of the primitive languages of the west of Europe: 2d, historical, drawn from the Greek and Roman writers: 3d, likewise historical, deduced from national traditions among the Gauls.

1. Proofs drawn from an examination of languages.

In the countries of Europe, called by the ancients Transalpine Gaul and Britain, embracing, at the present day, France, Switzerland, the Low Countries, and the British Isles, various languages are spoken, which all, however, range themselves under two great classes: one, that of the languages of the South, draws its origin from the Latin, and embraces all the dialects of the Romans and French; the other, that of the Northern languages, is descended from the ancient Teutonic or German, and prevails in a part of Switzerland and the Low Countries in England, and in the lowlands of Scotland. Now we know historically that the Latin language was introduced into Gaul by the Roman arms; we know, also, that the Teutonic languages, spoken in Gaul and in Britain, may be in like manner traced to the conquests of the Teutonic or German tribes: these two main languages, therefore, introduced from without, are strangers to the primitive population, that is to say, to the population which occupied the countries in question anterior to these conquests. But in the midst of so many new-Latin and new-Teutonic dialects, we find in some parts of France and Britain the remains of primitive languages, completely distinct from the two great classes of which we have just made mention. Of these, France contains two, the Basque, spoken in the western Pyrenees, and the Bas-Breton, more extensively spread not long ago, but at present confined to the extremity of ancient Armorica. Britain likewise possesses two, the Welsh, spoken in the principality of Wales, and called by those who speak it the Cymraig; and the Gaélique, used in the highlands of Scotland and in Ireland. History gives us no information relative to these original languages, whether they were introduced into the countries where they are spoken posterior to the Roman and German conquests; neither does it furnish us with any grounds for surmising by whom they might have been so introduced: we are led, therefore, to regard these languages as these conquests, and, consequently, as belonging to the primitive population. The question of antiquity being thus disposed of, two other inquiries present themselves. 1. Did these languages belong to the same people or to different ones? 2. Have we any historical proofs that they were spoken anterior to the establishment of the Romans, and, consequently, of the Germans, and in what portions of territory? We will attempt to solve these two questions by examining each of these languages in succession; and first, we will remark, that the Bas-Breton attaching itself very closely to the Cymraig, the original idioms, of which we are speaking, are reduced in fact to three. 1. The Basque. 2. The Gaélique or Gallic. 3. The Cymraig or Cymric.

1. Of the Basque Language.

This language, called Euscara by the people who speak it, is used in some cantons in the southeast of France and northeast of Spain, on both sides of the Pyrenees: the singularity of its radicals and its grammatical construction distinguish it no less from the Cymric and Gallic tongues, than from the derivatives of the Latin and Teutonic. Its antiquity cannot be doubted, when we see that it has furnished the oldest apppellations for the rivers, mountains, cities, and tribes of ancient Spain. Its great extension is no less certain. The learned researches of Humboldt have discovered its inscription in the geographical nomenclature of almost the whole of Spain, especially the eastern and southern provinces. (Humboldt, Prüfung der Untersuchungen über die Urbevölkerung Spaniens, vermittelt der Vaskischen Sprache, Berlin, 1821.) In Gaul, the province called Aquitania by the Romans, and comprehended between the Pyrenees and the course of the Garonne, presents also, in its earliest geography, numerous traces of Basque. Similar traces are found in more ancient, and of rarer occurrence, it is true, along the Mediterranean, between the Orient Pyrenees and the Arno, in the region called by the ancients Luguria, Celtis-Luguria, and Iberon-Luguria. A large number of names of men, dignities, and institutions, mentioned in history as belonging to the Iberians, or else to the Aquitanis, are easily explained by the aid of the Basque language. From all this we may deduce the legitimate presumption that the Basque is a remnant of the ancient Spanish or Iberian language, and the population who speak it at the present day are a fragment of the Iberian race. That this race, in language at least, had nothing in common with the nations speaking the Gaélique and Cymric.

2. Of the Gaélique or Gallic tongue.

The Gaélique or Gallic, according to the mode of pronouncing the name, is spoken in the highlands of Scotland, in Ireland, the Hebrides, and the Isle of Man. There is no trace of any other idiom having been in use previously in these quarters, since most of the denominations of places, communities, and individuals belong exclusively to this language. We follow its vestiges by means of the historical and philological records; we still find that the Gaélique has prevailed in the whole of the lowlands of Scotland and in England, whence it appears to have been driven out by the Cymric tongue: we may recognise it also
GALLIA.

in a portion of the south, and in all the east of Gaul, in upper Italy, in Ilyria, and in central and western Spain; and, besides this, the Gauls of Armorica, which, how- ever, of Gaul that bear the most evident marks of the passage of this tongue. It is only by the aid of a Gaelic glossary that we can discover the significance of geographical names, dignities, institutions, individu- als, &c., belonging to the primitive population of this country. Still farther, the _patois_ of the east and south of France at the present day swarms with words that are strangers to the Latin, and which are discovered to be taken from the Gaelic. From these facts we may deduce the following inferences: 1. That the race which spoke Gaelic, in distant ages, occupied the British isles and Gaul, and that from this centre the language spread itself over many cantons of Italy, Spain, and Ilyria. 2. That it preceded in Britain the race which spoke the Cymric.

3. Of the Cymric tongue.

That part of Britain which is called the country or principality of Wales, is inhabited, as is well known, by a people who bear in their mother-tongue the name of Cymri or Kymri; and from the most distant period they have known no other. Authentic literary monu- ments attest that this language, the Cymraig or Cymric, was cultivated with great éclat about the sixth century of our era, not only within the actual limits of the principality of Wales, but, along the western coast of England, while the Anglo-Saxons, a Germanic population, occupied by conquest the centre and the east. An examination of the geographical and his- torical nomenclatures of Britain, anterior to the arrival of its German invaders, proves also, that, before this epoch, the Cymric prevailed throughout the whole southern part of the island, where it had succeeded to the Gaelic, which had been banished to the north. We have seen that the Cymric, the Cymric tongue, spoken in a part of Britain, was a Cymric dialect. The intermixture of a great number of Latin and French words has altered, it is true, the aspect of this dialect; yet historical monuments bear full tes- timony to the fact, that, about the fifth century, it was almost identically the same with that of the island of Britain, since the natives of this island, who fled to Armorica to escape from the Anglo-Saxons, found in this language a tongue that they understood, and spoke the same language with themselves. (_Adelung, Mytho- dates_, vol. 2, p. 157.) The names, moreover, drawn from geography and history, clearly show, that this idiom was spoken anterior to the fifth century in the whole of the west and north of Gaul. This tract of country then, as well as the southern portion of the isle of Britain, must have been anciently peopled by the race that spoke the Cymric tongue. But what is the generic name of this race? Is it the _Armorici-ans_? Is it the _Breton_?—_Armorican_, which signifies "maritime," is not a local, nor a generic, appellation; while, on the other hand, _Breton_ appears to have been nothing more than the name of a particular tribe. We will adopt then, provisionally, as the true name of this race, that of Cymri, which from the sixth century has served to designate it in the isle of Britain.—As regards the Cymric tongue, absorbed in the Cymric, it may not be amiss to state the following general particulars. The basis of both is undoubtedly the same, and both spring from some common tongue. By the side, how- ever, of this striking similitude in the roots and in the general system of the composition of words, we can- not fail to observe great discrepancies in the gram- matical structure, discrepancies essential in their char- acter, and which constitute two distinct languages, two branches of the same race, and yet not two dialects of the same tongue. It should also be remarked, that the Gallic and the Cymric belong to that great family of languages, the source of which is connected by philologists with the Sanscrit, the an- cient and sacred idiom of India.

II. Proofs drawn from the Greek and Roman histo- rians.

Cæsar acknowledges throughout the whole extent of Gaul, with the single exception of the province of Narbonne, three nations, "differing in language, institutions, and laws: the Aquitani, dwelling between the Pyrenees and the Garonne; the Belges, occupying the northern parts of the country, from the Rhine to- the Marne and Seine; and the Galli, called also Celti, established in the central quarter of the land." He gives to these three communities, taken collect- ively, the general name of Gallic, which in this case we may consider as no more than a mere geographical designation. Strabo adopts the division of Cæsar, but with an im- portant change. In place of limiting the Belges, as Cæsar does, to the course of the Sein, he adds to- them, under the name of paracceanites, or maritime (παρακκαικεντων), all the tribes established between the mouth of this river and that of the Loire, and known in Gallic geography by the appellation of Armoricaeans, which equally signifies "maritime," and of which the author states, that he had received them from an ancient writer. As to the term _Celtic_ unless under the apparent name of this country, or the one traced by Augustus after the reduction of Gaul to a Roman province. In all this the Narbonnais is not compré- hended: now, we find in the ancient writers that it contained, besides the Celtae or Galli, Ligurians, stran- gers to the Gauls (τροποποιηται.—_Strab.,_ 137), and also Phocean Greeks, who composed the population of Massilia and its dependencies.—There existed then, in the indigenous population of Gaul, four different branches: 1. The _Aquitani_; 2. The _Ligures_; 3. The _Galli or Celtae_; 4. The _Belges._—We will con- sider each of these in succession.

1. The _Aquitani._

"The Aquitanis," observes Strabo (189.—_Ed.,_ 176), "differing more from the Gallic race, not only in language, but also in physical conformation: they re- semble the Iberians more than they do the Gauls." He adds, that the contrast afforded by two Gallic na- tions confined within the limits of Aquitania, made the distinctive features of the race we are considering the more apparent. According to Cæsar, the Aquitani had, besides a peculiar dialect, institutions of a pecu- liar and separate character. Now, historical facts show that these institutions were not mere geographical designations, for the most part, the stamp of the Iberian character: that the national dress was Iberian; that there existed stronger ties of amity and alliance between the Aquitanian and Iberian tribes,
GALLIA.

than between the former and the Gauls, who were separated from them merely by the Garonne; in fine, that their virtues and their vices were assimilated in the closest manner to that standard of goodness which appeared to have constituted the moral type of the Iberian race. We find, then, a concordance between the proofs drawn from history and those deduced from an examination of languages; the Aquitanians were, beyond doubt, an Iberian population.

2. Ligures.

The Ligures, whom the Greeks call Ligyes, are designated by Strabo as strangers to Gaul. Sextus Avienus, whose labours were based upon documents which had been left by the Carthaginians, and who, consequently, must have been put in possession of much valuable matter connected with the ancient history of Iberia, places the primitive seats of the Iberi in the southwest of Spain, whence, after a long succession of conflicts, the invasion of the conquering Celts had compelled them to remove. (Avien., v. 132, &sc.;)

Stephanus of Byzantium also places in the southwest part of Spain, near Tartessus, a city of the Ligures, which he calls Ligustinè (Ligustinum). Thucydides subsequently shows us the Ligures, expelled from the southwestern part of the peninsula, arriving on the eastern borders of the Sicoris or Ségre, and driving away in their turn the nation of the Sicani. (Thucyd., 6, 2.)

He does not give this as a simple tradition, but as an incontestable fact. Ephorus and Philistus of Syracusae had the same opinion in the third century before our era. The bo believes that the Sicani were originally Iberians. The Sicani, driven from their country, forced their way through the eastern passes of the Pyrenees, traversed the Mediterranean shore of Gaul, and entered Italy. The Ligures must have followed them, since we find the latter nearly at the same time spread over the whole Gallic and Italian coasts, from the Pyrenees as far as the Arno. We know, by the unanimous testimony of the ancient writers, that the west and the centre of Spain had been conquered by the Celti or Galli; but we are uninformed as to the period when this took place. The movements of the Sicani and Ligures show us that the invasion was made by the western passes of the Pyrenees, and that the Iberian tribes, driven back on the eastern coast, began to move onward into Gaul and even Italy. They furnish us also with a continuation to the day when this took place; the Sicani, expelled from Italy, as they had been from Spain, seized upon the island of Sicily about the year 1400 B.C. (Perrot, Év. crit. comp., vol. 4, p. 200), which places the irruption of the Celti into Iberia about the sixteenth century before the Christian era. —Although, after what has been said, the Iberian origin of the Ligures appears to be placed beyond the reach of doubt, it must nevertheless be acknowledged, that their manners did not bear so strong an Iberian stamp as those of the Aquitanians; the reason would seem to be, that they did not preserve themselves from foreign intermixture. History tells us of powerful Celtic tribes intermingled with them in Celtic-Ligurian, between the Alps and the Rhone; at a still later period, Iber-Ligurian, between the Rhone and Spain, was subjugated almost entirely by a people who were total strangers to the Ligures, and who bore the name of the Boii. (Liv., 21, 26.) Beyond the Carpathians, the Volsci into Iber-Liguria (now Languedoc) cannot be fixed with any precision. The most ancient recitals, whether mythological or historical, and the peripherals down to that of Scylax, which appears to have been written about 350 B.C., make mention only of the Taurges, Elycyes, Debryces, and Sodes, in the whole canton; the Elycyes are even represented as a powerful nation, whose capital Narbo (now Nîmes) flourished in commerce and in arms. About the year 281, the Volsci Tectosages, inhabiting what is now upper Languedoc, are rendered conspicuous all of a sudden, and for the first time, by an expedition which they sent into Greece. (Justin., 24, 4. —Strabo, 1, 372.)

VOLSCIA.

The Ligures, whose origin is thus involved in obscurity, are here only mentioned as the authors of a passage, the Volscian anecdotes, inhabiting lower Languedoc, are also cited (Liv., 21, 26) as a numerous people, giving the law throughout all the surrounding country. It is then, between 340 and 281 that we must place the arrival of the Volsci and the conquest of Ibero-Liguria. —The manuscripts of Cesar, in speaking of the Volsci, have indifferently Volsci or Vol-gae. Ausonius (Cl. Urb. Notit., 9) informs us, that the primitive name of the Tectosages was Belgae; and Cicero (Pro M. Fonteio. —Dom. Bong., Rec. des Hist., &c., p. 656) calls them Belga: Saint Jerome relates, that the idiom of their colonies established in Galatia in Asia Minor, was still in his time the same that of Trèves, the capital of the Belge, and Saint Jerome had travelled both in Gaul and the East. (Hieron., 1, 2, Comment, Epist. ad Galat., c. 3.) After this, it is hardly permitted us to doubt but that the Volsci were Belgae, or, rather, that these two names were one and the same; and the details of their history, for they played an important part in the affairs of Gaul, furnish numerous proofs in support of their Belgic origin. We must therefore separate this people from the Ligurian population, with which they have nothing in common. —In conclusion, we infer, that the Ligures were Iberians; a second accordance of history with philological inductions. —We have therefore remaining only the Galli or Celti, and the Belgae, as containing the elements of the Gallic population properly so called.

3. Celtae.

There is no necessity whatever for our demonstrating the identity of the Celtæ and Galli; it is given, as fully established, by all the ancient writers. The signification, however, of the term Celt, is subject to great variations.

Cesar informs us (B. G., 1, 1), that it is drawn from the language of the Gauls: and, in fact, it does indeed belong to the present Gallic idiom, in which ceilt and cciletach mean "an inhabitant of the forests." This signification leads to the presumption that the name was a local one, and was applied either to a tribe, or to a confederation of tribes, occupying certain cantons; and that it consequently had a special and restricted meaning. Indeed, the great Gallic confederations were for the most part local. The testimony of Strabo may be cited in support of this hypothesis. The geographer informs us, that the Gauls of the province of Narbonne were formerly called Celtae; and that the Greeks, particularly the Massiliots, entering into commercial relations with them before becoming acquainted with the other nations of Gaul, erroneously took their name as the common appellation for the whole Gallic race. (Strab., 180.)

Celtic tribes intermingled with them in Celtic-Ligurian, between the Alps and the Rhone; at a still later period, Ibero-Ligurian, between the Rhone and Spain, was subjugated almost entirely by a people who were total strangers to the Ligures, and who bore the name of the Boii. (Liv., 21, 26.) Beyond the Carpathians, the Volsci into Iber-Liguria (now Languedoc) cannot be fixed with any precision. The most ancient recitals, whether mythological or historical, and the peripherals down to that of Scylax, which appears to have been written about 350 B.C., make mention only of the Taurges, Elycyes, Debryces, and Sodes, in the whole canton; the Elycyes are even represented as a powerful nation, whose capital Narbo (now Nîmes) flourished in commerce and in arms. About the year 281, the Volsci Tectosages, inhabiting what is now upper Languedoc, are rendered conspicuous all of a sudden, and for the first time, by an expedition which they sent into Greece. (Justin., 24, 4. —Strabo, 1, 372.)

VOLSCIA.

The Ligures, whose origin is thus involved in obscurity, are here only mentioned as the authors of a passage, the Volscian anecdotes, inhabiting lower Languedoc, are also cited (Liv., 21, 26) as a numerous people, giving the law throughout all the surrounding country. It is then, between 340 and 281 that we must place the arrival of the Volsci and the conquest of Ibero-Liguria. —The manuscripts of Cesar, in speaking of the Volsci, have indifferently Volsci or Vol-gae. Ausonius (Cl. Urb. Notit., 9) informs us, that the primitive name of the Tectosages was Belgae; and Cicero (Pro M. Fonteio. —Dom. Bong., Rec. des Hist., &c., p. 656) calls them Belga: Saint Jerome relates, that the idiom of their colonies established in Galatia in Asia Minor, was still in his time the same that of Trèves, the capital of the Belge, and Saint Jerome had travelled both in Gaul and the East. (Hieron., 1, 2, Comment, Epist. ad Galat., c. 3.) After this, it is hardly permitted us to doubt but that the Volsci were Belgae, or, rather, that these two names were one and the same; and the details of their history, for they played an important part in the affairs of Gaul, furnish numerous proofs in support of their Bel-
of the Arvernian Mountains to the west, and the ocean to the north: all this tract, and the coast likewise of the Mediterranean, so unproductive and arid at the present day, were for a long time covered with dense forests. (Live. 5, 34.) Plutarch places also between the Alps and the Pyrenees, in the earliest ages, a people called Celtorii. (Vit. Camill.) This race is thought by some, however, to have had its origin in part of the confederation of the Celts, for it signifies "elevated," and also "a mountain," and hence Celtor is supposed to designate an inhabitant of the woody mountains. Thus it would seem that the Celtic confederation, in the time of its greatest power, was subdivided into Celts of the plain and Celts of the mountain. Historians unanimously inform us, that it was the Celts who conquered the west and the centre of Spain; and, in fact, we find them, from the south, to have reached the Iberian population, such as the Celt-Iberi, a mixture of Celts and Iberians, who occupied the centre of the peninsula; and the Celti, who had seized upon the northwest. It is easy to perceive that the invasion must have commenced with the Gallic tribes nearest the Pyrenees. The Celtic confederation, however, did not alone accomplish this conquest; other Gallic tribes either accompanied or followed them: witness, for example, the people established in what is now Galicia, and was anciently denominated Galliceoia, and who, as is well known, belonged to the general Gallic race. Thus much for Spain. — As for upper Italy, though twice inundated by transalpine nations, it presents no trace of the name of Celt: no tribe, no territory, no river, recalls their peculiar appellation. Everywhere and on every occasion we meet merely with the general name of Gauls. The word Celt became known to the Romans only at a late period. — As to the assertion of Caesar, that the Gauls were called in their own language Celta, it is possible that the Roman commander, more occupied with combating the Gauls than studying their language and institutions, and finding, in effect, that the word Celta was Gallic, and recognised by the Gauls for one of their national denominations, may, without further investigation, have concluded that the two terms were synonymous. It is possible, too, that the Gauls of the eastern and central sections may have adopted, in their commercial and political relations with the Greeks, a name by which the latter were accustomed to designate them; just as we see, in our own days, some of the tribes of America and Africa, accepting, under similar circumstances, appellations which are either quite inexact or else totally erroneous. — From what has thus far been remarked, it would seem to follow, 1. That the name Celia had, among the Gauls, a limited and local application. 2. That the confederation of the tribes denominated Celta dwelt in part among the Ligeres, in part between the Cevennes and the Garonne, and along the Arver- nian plateau and the ocean. 3. That the Celtic confederation exhausted its strength in the invasion and conquest of Spain, and took no share consequently in two successive invasions of Italy. 4. Belgia. The Belgae are unanimously acknowledged by the ancient writers as forming part of the Gallic race. The word Belgae belongs to the Cymric idiom, in which, under the form Belgiaid, the radical of which is Belg, it signifies "warlike." It would seem, then, that this was not a generic appellation, but a title of some military expedition, some armed federation. It is a stranger to the present Gaelic dialect (for bolg, 'a stock, a branch') than to the Greek, but not to the national traditions of the Gaelic race, as still existing, in which the Belg or Fir-Bolg play an important part, as conquerors come from the mouths of the Rhine into ancient Ireland. The name of Belgae was unknown to the Greek writers; it appears, indeed, to have been comparatively recent in Gaul, when contrasted with that of the Celti, Ligures, &c. The Belgae had established themselves in Britain on the southern coast of the island, in the midst of the Breton race, who were not of Gallic origin; for the Gallic race were by this time driven to the north, beyond the Frith of Forth. Neither Caesar nor Tacitus has reported the market, or name, of these Bretons and the Belgae. The names of individuals, moreover, as well as those of a local nature in the cantons occupied by the two races, belong to one and the same language, the Cymric. In Gaul Caesar has given the Seine and Marne as the southern limits of the Belgae. Strabo adds to this Belgica another which he calls Paroceanites or Maritime, and which comprehends the tribes situate to the west, between the mouth of the Seine and that of the Loire, that is to say, the tribes which Caesar and the other Roman writers call Armoricans, from a Gaelic term which signifies "maritime." The testimony of Caesar is undoubtedly hard to be contested in what relates to Gaul. On the other hand, however, Strabo was acquainted with the writings of the Massiliots, he had studied the works of Posidonius, that celebrated Greek, who had traversed Gaul, in the time of Marius, as a man of learning and travel. The Massiliots have remarked that there have been a great many points of resemblance between the Armorican tribes and the Belgae to induce Posidonius and Strabo to declare them members of one and the same race; and, on the other hand, there must have been some very marked differences which could lead Caesar to make two distinct nations of them. An examination of historical facts shows us the Armorican tribes united in a sort of political and independent confederation, but, in the event of wars and general alliances, uniting themselves more willingly to the Belgae than to the race of the Gauls. Again, a philological investigation proves that the same language was spoken in Belgica in the time of Caesar as in that of Strabo. We may hence boldly conclude, that the Armoricans and the Belgae were two communities or confederations of the same race, which had arrived in Gaul at two different periods: we may also infer still farther: 1. That the north and west of Gaul, and the south of Britain, were peopled by one and the same race, forming the second branch of the Gallic population properly so called; 2. That the language of this race was one, the fragments of which are preserved in two cantons of ancient Armorica and in the island of Britain: 3. That the generic name of the race is entirely unknown to us, as far as history is concerned; but that philology gives it to us under the form of Cymri.

2. Gallic Nations of Italy. The most credible of the learned Romans who handled the subject of early Italian history, recognised two distinct conquests of upper Italy by nations which had migrated from ancient Gaul. The first of these inroads they carried back to the earliest periods in the history of the West; and they designated these first transalpine conquerors by the appellation of "Old Gauls," Veteres Galli, to distinguish them from the transalpine invaders who achieved the second conquest. This latter conquest, being the more recent of the two, is the better known. It commenced in the year 587 B.C., under the conduct of the Biturican Bellovesus, and it was continued by the successive invasions of four other bands, during the space of sixty-six years. — First conquest. These Old Gauls, according to the ancient writers, were the ancestors both of the Umbrians and the Etruscans. The freedman of Sylla, cited by Solinus (c. 8) as having established this point. This was also the opinion maintained by Gnipho, the preceptor of Julius Caesar, and who, born in Cisalpine Gaul, had probably directed his careful attention to the history of his own nation. Isidorus likewise adopted...
GALLIA.

The Greek writers also followed in the same train, with few exceptions, notwithstanding an etymology very popular in Greece, which made the word Umbrian (Ombrian) to be derived from Ὄμβρος, "a shower," "rain," because the nation in question had, according to some, escaped from a deluge. The Umbrians were regarded as one of the most ancient nations of Italy. (Plin., 2, 14; Flor., 1, 17.) After long and bloody conflicts, they drove the Siculi from the country around the Po. Now, as the Siculi passed into Sicily about 1364 B.C., the Umbrian invasion may have taken place in the course of the 15th century. They became a very powerful race, and their sway extended from the upper to the lower sea, as far south as the mouths of the Tiber and Treneto. The Etrurian people eventually put an end to their wide dominion. The Tiberi, Arreti, and Ombrii, by which the Romans and the Greeks designated this people, would seem to have been nothing else but the Gaelic Ambra or Ambra, which signifies "valiant," "noble," and to have been appropriated to itself as a military title by some invading horde.—The geographical division established by the Umbrians is not only in conformity with the customs of the Gallic race, but belongs to their very language. Umbra, a word of obscure origin, was extended into three provinces: Oll-Ombria, or "High Umbria," which comprised the mountainous country between the Apenines and the Ionian Sea; Is-Ombria, or "Low Umbria," which embraced the country around the Po; and Vil-Ombria, or "Umbria along the shore," which last, at a later period, became Etruria. Although the Etrurian influence produced a rapid change in the language, religion, and social order of the Umbrians, there still were preserved among the mountaineers of Oll-Ombria, a remnant of the character and customs of the Gauls: for example, the gauis or gua, a weapon both in its invention and name pointing to a Gallic origin, was always the national javelin of the Umbrian peasant. (Liv., 9, 36.) The Umbrians, who had been dispersed by the Etrurian conquerors, were received as brothers on the banks of the Sabine and among the Helvetic tribes, where they perpetuated their name of Insubres (Isambres). "Insubres," observes Livy, in "Educorum" (5, 23). Others found a hospitable reception among the Ligurians of the Maritime Alps (Plin., 3, 17, seqq.), and carried thither their name of Ambrones. This alone can explain a point which has occasioned much perplexity to historians, and has given rise to numerous contradictory theories; how, namely, a tribe of Alpine Ligurians, and another of Helvetii, warring against each other under the respective banners of the Romans and the Cimbri, found, to their great astonishment, that they had each the same name and the same war-cry. (Plut., Vit. Mar.)—From what has been said, it would seem to result, that upper Italy was conquered in the 15th century before our era by a confederation of Gallic tribes bearing the name of Ambra or Ambrones.—Second conquest. The first invasion had been made en masse, with something of order, and by a single confederation; the second was successive and tumultuous. During the space of sixty-six years, Gaul poured her population upon Italy by the Maritime, the Graian, and the Pennine Alps. If we bear in mind that, about the same epoch (B.C. 587), an emigration not less considerable took place from Gaul to Iliyria, under the conduct of Sigoveus, we cannot but believe that these great movements were the result of causes far more serious than those mentioned by Livy (5, 56). Gaul, in fact, presented at this period of her career a country deeply agitated by some violent commotion.—But of what elements were these bands composed, which descended from the Alps to seize upon upper Italy? Livy makes them to have come from Celtica, that is, from the domains of the Gauls, the forces conducted by Bel-

liveseus and Elitovius; and the enumeration of the tribes which formed this expedition, such as they are given by Polybius, proves, in fact, that the first wave belonged to the Gallic population.—Every one has heard of the famous combat between T. Manlius Torquatus and a Gaul of gigantic stature. True or false, the incident was very popular at Rome; it became a subject for the painter's skill; and the head of the Gaul, making horrible grimaces, figured as a sign for a banker's shop in the Roman forum. This sign, rounded into the form of a buckler, bore the name of Scutum Cimbriicum. It existed at Rome in the year of the city 596, and 168 before our era. (Compare Renæus, p. 342.) The term Cimbriicum is here employed as synonymous with Gallicum. —At a later period, when the invasion of the Cimbri from the north renewed in Italy the terror of this name, the victorious commander of Rome caused a buckler to be adorned with this ancient device. The shield of Marius, according to Cicero (de Or., 2, 66), had depicted on it a Gaul, with cheeks hanging down, and projecting tongue. —The term Cim- bri, then, designated one of the branches of the Gallic population, and this branch had colonies in Gallia Cispadana: we have ascertained, however, the previous occurrence and history of confederations of Gauls in the Gallic population, then, of Italy was divided into two distinct branches, the Galli and the Cimbri or Kimbri.

3. Gauls beyond the Rhine.

First branch.

We have spoken of a double series of emigrations, commenced B.C. 587, under the conduct of Bellovesus and Sigoveus. Livy informs us, that the expedition of Sigoveus set out from Celtic tribes and that its leader was a nephew of the Etrurian Ambigatus, who reigned over the whole country; which means that Sigove- sus and his followers were Gauls. The same historian adds, that they directed their course towards the Her- cyanian forest (5, 34). This designation is a very vague one; but we know from Trogus Pompeius, who, being born in Gaul, drew his information from more exact and precise traditions, that these Gauls established themselves in Pannonia and Illyria. (Justin, 24, 4.) Hence, ancient and modern geographers show us, in fact, a multitude of Gallic or Gallo-Illryian communities spread between the Danube, the Adriatic, and the frontiers of Epirus, Macedonia, and Thrace. Among the number of these are the Carni, inhabiting the Alpes Carnica, to the east of the great Alpine chain (compare the Celtic Carn, "a rock"); the Taurisci, a purely Gallic race (compare the Celtic Taur or Tor, "elevated," "a mountain."—Strabo, 293); the Iapodes (Strabo, 213), a Gallo-Illryian race occupying the valleys of Carinthia and Stiria; the Scordisci, dwelling around Mount Scordus, whose power was feared even by the Romans. The frequent recurrence of termina- tions in dana, mag, dur., &c., the names of mount- ains, such as Alpus and Albius; the country called Albania; in fine, a great number of Gallic words, found even at the present day in the Albanian tongue, are so many proofs of the Gauls having at one time or other taken up their residence in the Roman country.

Second branch.

Historical testimonies, remounting to the time of Alexander the Great, attest the existence of a people called Cimmeri or Cimbrini, on the borders of the Northern Ocean, in the present peninsula of Jutland. In the first place, critics acknowledge the identity of the names Cimmeri and Cimbrini as formed as they are, the one to the genius of the Greek, the other to that of the Latin tongue. (Strabo, 203.) The most an- cient writer that makes mention of the Cimbr is Phil- emon; according to him they called their ocean Mo- maruza, i. e., "Dead Sea," as far as the promontory
GALLIA.

...By this they styled it Cremnium. (Plin., 4, 13.) These two names are easily explained by the Cymri; the first signifies "sea"; marix, "to die," marixias, "death;" and cremn, "congealed," "frozen." In Gaelic, croin has the same force: Murchróinn is "the frozen sea." (Adelung, älteste Gesch. der Teutachen, p. 48.—Toland's several pieces, pt. 1, p. 150.)—Ephorus, who lived about the same period, knew the Cimbrni, and gives them the name of Celts; but in his geographical system, this very vague denotation describes the Celts of the same time. Gaul and an inhabitant of Western Europe. (Strabo, 203.)—Between the years 113 and 101 before our era, a deluge of Cimbrni poured its desolating fury on Gaul, Spain, and Italy, the belief was general, that they came from the extremities of the West, from the frozen regions bordering on the Northern Ocean, from the Cimbri Chersonese, from the shores of the Cimbric The- tis. (Florus, 3, 3.—Polyen., 8, 10.—Ammian. Mar- cell., 91, 5.—Claudian, Bell. Get., v. 638.—Plut., Vit. Mar.) In the time of Augustus, the Cimbrni occupied a portion of Jutland, and they acknowledged themselves to be the descendants of those who, in a preceding age, had committed so many ravages. Alarmed at the conquests of the Romans beyond the Rhine, and supposing that their object was to inflict vengeance upon them for the inroads of their ancestors, they sent an embassy to the emperor to supplicate for pardon. (Strabo, 292.)—Strabo and Mela (3, 9) place these Cimbrni in the island of the Britons, inhabited by their name at that time. (Germ., c. 37.) Pliny gives a much more extensive signification to this name of Cimbr; he would seem to make it a generic term. He not only, for example, recognizes the Cimbrni of the present Jutland, but he speaks also of the Mediterrane an Cimbrii (4, 3) in the vicinity of the Rhine, comprehending, under this common appellation, various tribes which in other writers bear widely different names. These Cimbrii, inhabitants of the British and German countries round about, were generally regarded as Gaes, that is to say, as belonging to one of the two races which then held possession of Gaul. Cicero, in speaking of the great invasion of the Cimbrii, says in many places that Marius had conquered the Gaes. In like manner, Sallust (Bell. Jug., c. 114) makes Caepio, who was defeated by the Cimbrii, to have been so by Gaes. Most of the subsequent writers hold the same language, and make it a regular habit of the Gaes to be the figure of a Gaul. To this we may add, that Casa-rinx, Boso-riz, &c., names of chieftains in the Cimbrian ar my, are to all appearance Gaelic appellations.—When we read the terrible details of this terrible invasion, we are struck with the promptitude and facility with which the Cimbrii and Belgae came to an understanding and arranged matters among themselves, while all the calamities of the inroad appear to have fallen on central and southern Gaul. Caesar informs us, that the Belgae vigorously sustained the first shock of the invaders, and arrested the torrent on their frontiers. This may all have been so; but we see them almost immediately after entering into an agreement with each other. The Belgae cede to the invaders one of their fortresses, Aquitum, in which to deposit their baggage; and the Cimbrii, on their part, leave as a guard for their baggage, which contained all their riches, a body of only six thousand men. In the course of this day, they must have been well assured, then, of the fidelity of the Belgae. After the overthrow of the Cimbrii in Italy, the garrison of Aquitum still remain in possession of the fortress and its territory, and become a Belgic tribe. When the Cimbrii wish to attack the province of Nar bonne, they make an alliance with the Volto Tecto- sages, a Belgic colony, while their proposals are re- jected by the other Gallic tribes. These facts, and many others that might be adduced, prove, that if there were a community of origin and language between the Cimbrii and one of the races that dwell in Gaul, it was more like the race to which the Belgae formed a part than that of any of the other Gallic one... Centaurus sheds a new light on the subject. He states, that the Æstii, a community dwelling in the vicinity of the Cimbri, on the shores of the Baltic, and in all probability belonging to the Cimbri race, spoke a language approximating closely to the insular Breton ("lingua Britannica propria," Tac., Germ., c. 45). Now we have seen that the language of the Bretons was also that of the Belgae and of the Armoric tribes. All the ancient historians attribute to a Gallic army the inva- sion of Greece, in the years 279 and 280 B.C. Ap- pian (Bell. Illit., 4) calls these Gauls Cimbrii. Again, the Gallic nations, whether pure, or intermingled with Sarmatian and German tribes, were numerous on the northern bank of the lower Danube and in the vicinity: the most famous of all, that of the Bastarnae (Tac., Germ., c. 46.—Plin., 4, 12.—Liv., 34, 26—It., 30, 50, seq.—Polyb., excerpt., leg. 62), intermingled probably with Sarmatians, dwelt between the Black Sea and the Carpathian Mountains. Mithradates, wishing to form a powerful league against Rome, addressed himself to this powerful nation. "He sent," says Justin (38, 3), "ambassadors to the Cimbri, Sarmats, and Bastarnae." It is evident, that the Cimbri of Jut land cannot here be meant, separated as they were from the King of Pontus by the whole extent of the Continent of Europe, but those Cimbri who dwelt in the vicinity of Constan tinople, for whom the name had been reflected the glory gained by their brethren in Gaul and in Noricum. The existence of Cimbrian na tions, existing at various intervals from the lower Danube as far as the Elbe, would seem to establish the fact, that all the country between the Pontus Euxinus and the Ocean, following the courses of the rivers, was possessed by the race of the Cimbrii anterior to the in crease and development of the Germanic race.

Proofs drawn from National Traditions.

There are few persons at the present day who have not heard of those curious monuments, as well in prose as in verse, which compose the literature of the Welsh or Cymri, and which go back, almost without interruption, from the 16th to the 6th cen- tury of our era: a literature not less remarkable for the originality of its forms, than for the light which it throws on the character of the Cymri. Previous attempts have been made to establish the fact at first with the greatest obscurity by a spirit of criticism alike superficial and contemptuous, the authenticity of these ancient records is now estab- lished beyond the possibility of doubt. (Consult Mlywrian, Archaeology of Wales. Turner, Authenticity of the ancient British poems, &c.) From the national traditions detailed in these early effusions, the following results may be established. 1. The duality of the two races is recognised by the Triads: the Gwyddelden (Gauls), who inhabit Albion are regarded as a stranger and hostile people. (Triodia, Triod., n. 41.—Archæol. of Wales, vol. 2, p. 2.) The identity of the Armoricans with the Cymric Britons is also recognised; the Armoricans are tribes that are designated as deriving their origin from the primitive race of the Cymri, and holding communication with them by the aid of one and the same language. (Tri oea., 5, 3.)—It is probable that these languages have to have come from that part of the land of Haf (the country of summer or of the south) called Deffroba- ni, and where at present is Constantinople. (These words, "and where at present is Constantinople," ap- pear to be the addition of some copyist; still they are not without value, as being founded on the traditions of the country.) They arrived at the foggy sea" (the German Ocean), and proceeded thence to Brit- ain and the country of Lydun. (Armorica), "where they settled." (Triodd., n. 4) The bard Taliesin
simply says, that the Cymri came from Asia. (Welsh Arch., vol. 1, p. 76.) The Triads and Druidic bards agree in many particulars respecting the settlement of the Cymri on their arrival in Western Europe. It was Hu, the powerful, who conducted them: a priest, a warrior, a legislator, and, after death, a god. He united in himself all the attributes requisite for the chief of a theocracy. Now we know that a part of the Gallic race was long subject to the theocratic government of the Druids. This name of Hu was not unknown to the Greeks and Romans, who give the appellation of Heva and Hesus to one of the deities of Druidism. —The Irish have also their national traditions, but so confused and evidently fabulous, that it would be improper to employ them on the present occasion. They contain, however, one thing which ought not to be omitted here, the mention of a people termed Bolg (Fir-Bolg), who came from the borders of the Rhine and conquered the south of Ireland. It is not difficult to recognise in these strangers a colony of the Belgic Cymri, though nothing probable is stated respecting their history or their settlement. —Annianus Marcellinus (15, 9), or rather Timagenes, whom he quotes, says, that the quotation is a part of an edition of the Gallic Druids concerning the origin of the nations of Gaul. This tradition stated, that a part of the Gallic population was indigenous, but that another part had come from far distant islands and countries beyond the Rhine, whence they had been driven by frequent wars and by inundations of the sea. —We find, then, in the traditional history of the Gauls, as well as in the testimony of foreign writers, and in the character of the languages spoken throughout the whole country, the fact well established of the division of the Gallic family into two distinct branches or races. General Conclusions. 1. The Aquitani and Ligures, though inhabitants of Gaul, were not of Gallic blood, but belonged to the Iberian stock. 2. The nations of Gallic blood were divided into two branches, the Galli and the Cymri. The relationship of these two branches to each other is confirmed by their idioms, their manners and customs, and their national characters in general. It becomes still more apparent, however, when we compare with them the other communities that dwelt in their vicinity, namely, the Iberians, the Italians, and the Germans. And yet there exists a sufficient diversity in their respective manners, idioms, and customs to forbid us to trace a line of demarcation between these two branches, which is warranted also as well by their national traditions as by the testimony of history. 3. The origin of the Gallic race belongs to the East. Their language, their traditions, their history, in fine, point to Asia as the cradle of their nation. (Thierry, Histoire des Gaulois, vol. 1, Introd., p. xii. lxviii.) At what period, however, they left their parents, their religions, their institutions, is one of the questions in the history of the Gauls which is beyond the reach of positive history. On this point we are left in a great measure to our own conjectures, although Linguistic, or the science of comparative philology, furnishes us with aids to the prosecution of this inquiry, by no means unimportant in their character. One thing, at least, is certain, from an attentive examination of the Celtic language, that the race who spoke this tongue came first into the Western continent and declined from it, or were separated from the parent stock. This circumstance, perhaps, may serve to explain why the Celtic idioms, along with the greatest richness in Indo-European radicals, display a less complete system of grammatical forms than most other branches of the same great family of languages; whether it be that, at the time of the Celtic separation from home, these grammatical forms had not yet reached their full number and development, or, what is more probable, that a longer period of separation, than in the case of other races, has exercised a more injurious effect. Whichever of the two be the correct opinion, it is nevertheless apparent, that the analogies between the Celtic and Sanscrit carry us back to a period the earliest that we can reach by the aid of comparative philology, and furnish us hence with most important data for ascertaining, to what degree of development the mother-tongue itself had attained before the separation in question took place. Thus, for example, an examination of the Celtic idiom appears conclusively to show, that, at the time when this separation took place, the mother-tongue possessed already an entire system of euphonic laws, to which the Sanscrit is indebted for the beauty of its European tongue, and which it has, in fact, preserved so well, that certain anomalies of the Celtic still find their explanation in the euphonic rules of the sacred language of India. (Pictet, de l'Affinité des Langues Celtes avec le Sanscrit, p. 172.) General History of Gaul. The history of Gaul divides itself naturally into four periods. The first of these comprises the movements of the Gallic tribes while yet in their Nomadic state. None of the races of the West ever passed through a more agitated or brilliant career. Their course embraced Europe, Asia, and Africa; their name is recorded with terror in the annals of almost every nation. They burned Rome; they wrested Macedonia from the veteran legions of Alexander; they forced Thermopyles and Argive Delphi, and then proceeded to pitch their tents on the plains of the Troad, in the public places of Miletus, on the borders of the Sangarius, and those of the Nile; they besieged Carthage, menaced Memphis, and numbered among their tributaries the most powerful monarchs of the East; they founded in upper Italy a powerful empire, and in the bosom of Phrygia they reared another empire, that of Galatia, which for a long time exercised its sway over the whole of Iberian Asia. —During the second period, that of their sedentary state, we see the gradual development of social, religious, and political institutions, conformable to their peculiar character as a people; institutions original in their nature; a civilization full of movement and of life, of which Transalpine Gaul offers the purest and most complete model. One might say, in following the animated scenes of this picture, that the theocracy of India, the feudal system of the Gauls, the political fermentation which led to the origin of a genuine democracy, had met on the same soil for the purpose of contending with each other and reigning by turns. Soon this civilization undergoes a change; foreign elements are introduced, brought in by commerce, by the relations of neighbourhood, by reaction from subjugated nations. Hence arose multiplied and often whimsical combinations. In Italy it is the Roman influence that exerts itself on the manners and customs of the Gauls; in the south of France that of the Massilios; while in Phrygia we have a most singular compound of Gallic, Grecian, and Phrygian civilization. —To this succeeds the third period in the history of the Gallic race, that of national struggles and subjugation. By a singular coincidence, it is always by the Roman sword that the power of the Gallic tribes is destined to fall; in proportion as the Roman dominion extends, that of the Gauls recedes; and as the victors and the vanquished, in the battle on the banks of the Alia, followed each other over the whole earth to decide the ancient quarrel of the Capitol. In Italy, the Cisalpine Gauls were reduced, but only after two centuries of obstinate resistance. When the rest of Asia had submitted to the yoke, the Galate still defended against Rome the independence of the East Gaul, and eventually fell, but through complete exhaustion, after

GALLIA.
G A L

a century of partial conflicts and nine years of general war under Caesar. In fine, the names of Caracatus and Galgacus shed a splendour on the last and incessant efforts of British freedom. It is everywhere an unequal conflict between ardent and undisguised valor on the one hand, and cool and steady perseverance on the other. —The fourth period comprehends the organization of Gaul into a Roman province, and the gradual assimilation of transalpine manners to the customs and institutions of Italy; a work commenced by Augustus and completed by Claudius. (Titiery, Histoire des Gaules, vol. 1, Introd., p. vi., seqq.)

GALLIA CILAPIA, Gaul this side of the Alps, with reference to Rome, a name given to the northern part of Italy, as occupied by the Gallic tribes which had poured over the Alps into this extensive tract of country. Livy assigns to these migrations of the Gauls as early a date as the reign of Tarquinius Priscus, that is, about 500 B.C. Further, Gallic tribes were established in their new possessions, they proceeded to make farther inroads into various parts of Italy, and thus came into contact with the forces of Rome. More than two hundred years had elapsed from the time of their first invasion, when they totally defeated the Roman army on the banks of the Allia, and became masters of Rome itself. The defence of the Capitol and the exploits of Camillus (Lae. 5, 47, seqq.), or, rather, the actions of his successors, (Lae. 5, 18.), quashed them, and the dangers which threatened the Gauls at home, preserved settled. From that time, the Gauls, though they continued, by frequent incursions, to threaten, and even ravage, the territory of Rome, could make no impression on that power. Though leagued with the Samnites and Etruscans, they were almost always unsuccessful. Defeated at Sentium in Umbria, near the Lake Vadimonis in Etruria, and in a still more decisive conflict near Antipathus (vol. 8, p. 512), the Gauls of this province (Polyb. 2, 19, seqq.), they soon found themselves forced to contend, not for conquest, but for existence. The same ill success, however, attended their efforts in their own territory. The progress of the Roman arms was irresistible; the Gauls were beaten back from the Adriatic to the Po, from the Po to the Alps, and soon beheld Roman colonies established and flourishing in the very heart of the towns which had so lately been their own. Notwithstanding the loss of their leaders, their spirit, though curbed, was still unabated; and when the enterprise of Hannibal afforded them an opportunity of recovering their losses and wreaking their vengeance on the foe, they eagerly embraced it. It is to their zealous co-operation that Polybius ascribes, in a great degree, the primary success of that expedition. By the efficient aid which they afforded Hannibal, he enabled him immediately after his defeat at Cannae to march into Italy, and to follow up his early success with promptitude and vigour. (Polyb. 3, 66.) As long as that great commander maintained his ground and gave employment to all the forces of the enemy, the Gauls remained un molested, and enjoyed their former freedom, without being much burdened by a war which was waged at a considerable distance from their borders. But when the tide of success had again changed in favour of Rome, and the defeat of Hasdrubal, together with other disasters, had paralyzed the efforts of Carthage, they once more saw their frontiers menaced; Gaul still offered some resistance, even after that humbled power had been obliged to sue for peace; but it was weak and unavailing; and about twelve years after the termination of the second Punic war, it was brought under entire subjection, and became a Roman province. (Car. B. Anti- pathus, vol. 9, p. 2.) Under this denomination it continued to receive various ascensions of territory, as the Romans extended their dominions towards the Alps, till it comprised the whole of that portion of Italy which lies between those mountains and the rivers Magra and Rubicon. It was sometimes known by the name of Gallia Togata (Mela, 2, 4.—Plin., 3, 14), to distinguish it from Transalpine Gaul, to which the name of Gallia Comata was applied. (Cic., Phil., 8, 9.) This latter name refers to the Gallic custom of wearing the hair long. The epithet Togata alludes to the circumstance of the rights of citizenship having been conferred on the natives of the country. The towns of Cisalpine Gaul obtained the privileges of Latin cities, and, consequently, the right of wearing the Roman toga, by a law of Pomp. Strabo (Ascon, com. in Or. in Pison., p. 490), about 665 A.U.C.—According to Polybius, Cisalpine Gaul was included in the figure of a triangle, which had the Alps and Apennines for two of its sides, and the Adriatic, as far as the city of Sena Gallica, for the base. This is, however, but a rough sketch, which requires a more accurate delineation. The following limits will be found sufficiently correct, for the every purpose. The river Orgus, Orcæ, will define the frontier of Cisalpine Gaul to the northwest, as far as its junction with the Po, which river will then serve as a boundary on the side of Liguria, till it receives the Tidone on its right bank. Along this small stream we may trace the western limit, up to its source in the Apennines, and the southern along that chain to the river Rubicon. To the north, a line drawn nearly parallel with the coast, from the mouth of the Adige to the mouth of the Po, will serve to separate Gaul from Rhasia and other Alpine districts. The Athesis, Adige, from the point where it meets that line, and subsequently the Po, will distinguish it on the east and south from Venetia, and the Adriatic will close the last side of this irregular figure. The character which is given us of this portion of Italy by the writers of antiquity is that of the most fertile and productive country imaginably possible; enormous on every side, fertile everywhere, and of every kind of grain. Immumerable herds of swine, both for public and private supply, were bred in its forests; and such was the abundance of provisions of every kind, that travellers when at an inn did not find it necessary to agree on the price of any article which they required, but paid so much: for the whole amount of what was furnished them; and this charge, at the highest, did not exceed half a denarius. (Ar. Polyb. 2, 18.) Under this description the Roman legionaries, by the rich produce of this country, Strabo remarks, that it surpassed all the rest of Italy in the number of large and opulent towns which it contained. The wool grown here was of the finest and softest quality; and so abundant was the supply of wine, that the wooden vessels in which it was commonly stowed were of the size of houses. (Strabo, 218.) Lastly, Cicero styles it the flower of Italy, the support of the empire of the Roman people, a monument of its dignity. (Phil., 3, 5.—Cramer’s Ancient Italy, vol. 1, p. 40, seqq.)

GALLIENUS, PUBLIUS LICINIUS, son of the Emperor Valerian, was made Caesar, and colleague to his father, A.D. 253. He defeated, in a great battle near Mediolanum (Milan), the Alemanni and other northern tribes, which had made an irruption into Upper Italy, and gave evidence on that occasion of his personal bravery and abilities. He was also a very well-informed in literature, and was both an orator and a poet. When Valerian was taken prisoner by the Persians, A.D. 260, Gallienus took the reins of government, and was acknowledged as Augustus. He appears to have given himself up to debauchery and the company of profligate persons, neglecting the interests of the empire, and taking no pains to effect the release of his father from his hard captivity, in which he died. The barbarians attacked the empire on every side, and this broke out in various provinces, where several commanders assumed the title of emperor, while Gallienus was loitering at Rome with his favourites. Yet now and then he seemed to awaken from his torpor, at the news of the advance of the
in the Gauls; and, putting himself at the head of the legions, he defeated Ingenuus, who had usurped the imperial title in Illyricum. But he disgraced his victory by horrible cruelties. Meantime Probsus, Aurelianus, and other able commanders, were strenuously supporting the honour of the Roman arms in the East, where Odenatus, prince of Palmyra, acted as a useful ally to the Romans against the Persians. Usurpers arose in Egypt, in the Gauls, in Thrace; in almost every province of the empire, from which circumstance this period has been styled the reign of the thirty tyrants. At last Aureolus, a man of obscure birth, some say a Dacian shepherd originally, but a brave soldier, was proclaimed emperor by the troops in Illyricum, entered Italy, took possession of Mediolanum, and even marched against Rome while Gallienus was absent. Gallienus returned quickly, repulsed Aureolus, and defeated him in a great battle, near the Addua, after which the usurper shut himself up in Mediolanum. Here he was besieged by Gallienus; but, during the siege, the emperor was murdered by some conspirators. (Aurel. Vict., c. 33.—Eutrop., 9, 8.—Zonaras, 12, 24, seqq.)

**Gallinaria Sylva**, a wood in Campania, near Liternum, that furnished timber for the fleet with which Sextus Pompeius infested the coasts of the Mediterranean. (Strabo, 248.) Juvenal mentions the spot as a noted haunt of robbers and assassins. (Sat., 3, 305.) From it he took his name to denote that this wood lay on the road from Sinussa to Naples. (Ad Fam., 9, 23.) It is now called Pineta di Castel Volturno. (Prattelli della Via Appia, p. 183.)

**Gallogrecia of Galatia**, an extensive country of Asia Minor, occupied by a horde of Gauls. This region being merely a dismembered portion of ancient Phrygia, it will only be necessary here, in inquiring into its former state, to account for its being occupied by the Gauls of Gallo-Graeci, for which it has many apppellations. We collect from Polybius and Livy (the latter of whom, however, only copies from the former), that this Asiatic colony was, in fact, but a detachment of those vast hordes which had wandered from Gaul under the conduct of Brennus, and with which that leader had invaded Greece. On their arrival in Dardania, a dispute arose between some of the chiefs concerning the division of conquered territory; and, the discontented troops, to the number of 20,000, determined to abandon the main body, and seek their fortunes elsewhere, under the direction of Leonorius and Lutarius. They traversed the plains of Thrace, and, encamping near Byzantium, were for a time the bane and terror of the citizens, by the devastations they committed, and the galling tribute they imposed. At length, however, tempted by the beautiful aspect of the shores of Asia, and the reputed wealth and fertility of that country, they were easily induced to listen to the offer of Nicomedes, king of Bithynia, for entering into his service. They accordingly crossed the Bosporus, and having joined the troops of Nicomedes, were of great assistance to him in his wars with Zibetes. They now obtained a firm footing in Asia Minor; and, though not more than 20,000 men, and of these not more than one half furnished with arms, they spread alarm and consternation throughout the peninsula, and compelled whole provinces and even empires to pay them tribute. They even proceeded to divide the whole of Asia Minor among their three tribes, allotting to each a portion on which it was to levy impositions. The Hellespont was assigned to the Trocmi, Aeolis and Ionia to the Tolistobogi, and the interior of the peninsula to the Tectosages. The settled abode, however, of the three tribes was in a valley between the Sangarius and Halys, which they had seized, without resistance or difficulty, from the unwarlike Phrygians. As their numbers increased, they became more formidable, and also more impetuous in their exactions; so that at length even the kings of Syria thought it prudent to comply with their demands. Attalus, king of Pergamus, was the only sovereign who had the resolution to refuse at length to submit to this ignominious extortion. He met the barbarians in the field, and, seconded by the bravery of his troops, obtained a victory over these Gallo-Graeci, as they were now called, from their mixture with the Greeks of Phrygia and Bithynia. (Lec., 38, 16.) Prusias, king of Bithynia, not long after, cut to pieces another body of Gauls, and freed the Hellespont from their depredations. (Polyb., 5, 111.) These, however, were only partial advantages, and the Gauls remained the terror and tyrants of Asia Minor, so says, at least, the Roman historian, till the war with Antiochus brought the Roman armies into Asia. The victory of Magnesia having driven that monarch across the range of Taurus, there remained the Gallo-Graeci only between the Romans and the entire possession of the peninsula. There was but a slight pretext to justify an invasion of these barbarous hordes in their own fastnesses. It was asserted that they had aided Antiochus in the campaign which had just terminated; and on this pretence war was declared against them, and the consul Manlius was ordered to march into their country, and reduce them by force of arms. That general, being joined by Attalus, brother of Eumenes, king of Pergamus, with a select body of troops, defeated the Tolistobogii at Tarsus, brought them to terms, and, by a victory over the Tectosages, no less decisive than the former, terminated the war; the small remnant of the Gauls being content to sue for peace on any conditions. The Roman senate, satisfied with having broken the power of the Gallo-Graeci, allowed them to retain possession of their country, on condition of giving no offence to Eumenes, king of Pergamus, who might be considered as their lieutenant in Asia, and forming their former colonies, and their men among the Roman citizens. Pro- vably, as Strabo informs us, the whole of Galatia had been divided into four parts, each governed by a separate chief named tetrarch. Each tetrarch had under him a judge and military commander, who appointed two lieutenants. These collectively had the power of assembling the general council, which met in a spot called Dryncometum, and consisted of 300 members. This assembly decided only criminal cases, besides the business of the tetrarchs and judges. Subsequently the number of tetrarchs was reduced to three, and finally to one. The latter change was made by the Romans in favour of Deiotarus, who had rendered their arms essential service in the Mithraic war (Appian, Bell. Mith., 114), and who is so often mentioned by Cicero in terms of the greatest esteem and friendship. (Vid. Deiotarus.) On his death, which took place at an advanced age, part of his principality was annexed to Paphlagonia and Pontus under Polemo; and part to the dominions of Amyntas, chief of Lycaonia. On the demise of the latter, the whole of Galatia came into the possession of the Romans, and formed one province of their vast empire. (Strab., 566.—Plin., 5, 32.)—Though intermixed with Greeks, the Galateans retained throughout their original tongue, since we are assured by St. Jerome that in his day he spoke the Galatian tongue as the Treverians did in Epius. ad Galatas. Neither did they entirely lose their original simplicity of manners; for Cicero, in his defence of Deiotarus (c. 9), praises him as an extensive cultivator and breeder of cattle. Less effeminate also and debased by superstition than the natives of Phrygia, they were more ready to embrace the tidings of salvation brought to them by the great Apostle of the Turcoman region (that name exists in ecclesiastical notices assign sixteen bishoprics to Galatia, under two divisions; one called Galatia Consularia, the other Salutaris. (Hieroc., p. 696.)—No ancient geographer has laid down with accuracy the
limits of Gallo-Grœcia. It is known generally, that to the west it bordered upon Phrygia Epictetus, and a portion of Bithynia, north of the Sangarius: on the north it ranged along the Bithynian and Paphlagonian chains, the Tmolus, and Spercheus, and the Pontus; from Cappadocia towards the east: on the south it was contiguous to Lycaonia and part of Pisidia, till it met again the Phrygian frontier, somewhere between the sources of the Sangarius and Alander on the north. (Cramer's Asia Minor, vol. 2, p. 79, segg.)

GALLUS, I. Calus or Cenus Sulpius, was consul B.C. 166. His name is honourably connected with the history of ancient science, since he may be regarded as the first individual, who, among the Romans, that turned his attention to astronomical studies. Livy states, that, when a tribune in the army of Paulus Æmilius in Macedon, he foretold an eclipse of the moon, first to the consul, and then, with his leave, to the Roman army. The eclipse took place on the evening before the great battle of Pydna, and the Romans, being prepared for it, were under no alarm, while their opponents were terrified, and deemed it an omen of the fall of their king Perseus. (L. i. 44. Comparc C. de Pers.) The date of this eclipse was 232 B.C. Now as the tables of Hipparchus only began with 162 B.C., Gallus must have availed himself of some (probably Oriental) model earlier than that of Hipparchus, but which has not come down to us. A passage in Pliny (2, 19) would seem to have reference to a work composed by Gallus, which may have been a treatise on eclipses, and such, indeed, is the opinion of Hardouin (Ad Plin. 1, c. 2). Cicero praises the astronomical knowledge of Gallus, in his letters (Epist. ad Familiam, 16), and Livy, Valerius Maximus, and Frontinian have not forgotten his name. He is said to have repudiated his wife because she appeared on one occasion in public without a veil. (Val. Max., 6, 3, 10.)—II. Cilnius, a distinguished Roman, ranked among the chief of the Latin elegiac writers, and compared by Quintilian with Tibullus, Propertius, and Ovid. He was born of poor and ignoble parents, A.U.C. 635. Forum Julii is said to have been the place of his birth (Chron. Eusob.). But there were two towns of that name within the boundaries of the Roman empire. The one, since called Frœi, lay within the district of that name; the other (now Frœus, in Provence) was situated on the south-eastern coast of the Roman province of Gallia Narbonensis. Some writers have fixed on the former as the birthplace of Gallus (Hist. Lit. Aquileinens, lib. 1, 8. Livii, Not. d'ell'Uld ede de Frœi Frœi, vol. 1, p. 275; Tiraboschi, vol. 1, pt. 1, lib. 3, 11), but a greater number have maintained that he was a native of Frœus. (Hist. Litt. de la France, par les Benedictins.)

Furedreich, Händbuch, &c., p. 286. —Harley, Intro. in Not. Lit. Rom., vol. 1, p. 333. Mühl. Einl., vol. 2, p. 223.) The Eusebian chronicle is the authority which places his birth at Forum Julii; but, owing to a corruption in some of the manuscripts of that chronicle, Forum Livii being substituted in its room, a few writers have supposed that he was born at this town, and consequently that he was a native of the Frœi. From the obscurity of his birth and of his original situation, little is known concerning the early years of Gallus. He is first mentioned in history as accompanying Octavius when he marched to Rome, after the battle of Modena, to demand the consulship. He had soon so far ingratiated himself with this leader, that we find him among the number of his viceres, after the battle of Philippi. He accompanied him, along with Masceus, to write in gentle terms to the senate, with assurances that he would offer no violence to the city, but would regulate all things with clemency and moderation. On the partition of the lands which followed the defeat of Brutus, Gallus was appointed to collect, from the cantons on the banks of the Po, a tribute which had been imposed on the inhabitants in place of depriving them of their lands. When the young triumvir became the undisputed master of the western half of the Roman empire, he raised Gallus to the high

GALLUS.
GALLUS.

throughout all Egypt, and engraving a record of his exploits on the pyramids. In unguarded hours, and when under the influence of the double intoxication of prosperity and wine, he applied to his master the most obtrusive and insulting expressions. (Dio Cass., 53, 23.) Indiscretion and vanity were quickly followed by profanity and cruelty. Gallus plundered the ancient city of Thebes, and stripped it of its principal ornaments (Ammianus Marcell., 16, 4), and he is even said, though on no very certain authority, to have filled up the measure of his offences by conspiring against the life of the emperor. In consequence of his misconduct, and of those unguarded expressions, which were probably conveyed to his master, with exaggeration, by some false friend or envious competitor, he was dismissed from the service of the emperor; and immediately after his return to Rome, one of his most intimate friends, called Largus, stood forth as his accuser. Augustus, in the mean while, forbade him his presence; and the charges, which now multiplied from every quarter, were brought before the senate. Though Gallus had many friends among the poets, he had few among the senators. No one could refuse verses to Gallus, but a fair hearing was probably denied him. He was denounced by several of his friends, and his whole property was confiscated. (Dio Cass., 53, 23.) Unable to endure the humiliation, which presented such a contrast to his former brilliant fortune, he terminated his existence by a voluntary death.

This sad conclusion to his once prosperous career took place A.D. 727, when he was in the forty-third year of his age. Augustus is said to have mourned the death which his severity had thus occasioned; and Suetonius, in the life of that emperor (c. 66), has described the feelings which he expressed on receiving intimation of his melancholy fate. But his sorrow probably was not sincere; and, if we may believe Donatus, he ungenerously carried his resentment so far beyond the tomb, as to command Virgil to expunge an eulogy on Gallus, which he had introduced near the conclusion of the Georgics, and to substitute in its place the story of Aeneas and the bees, which, however beautiful in itself, does not compensate for the loss of the poet's delineation of an eminent friend, by whom he was warmly patronised, and whom, in return, he warmly loved. —The guilt or the misfortunes of Gallus as a statesman have been long since forgotten, and he is now remembered only as a distinguished patron of learning, and as an elegant poet. Gallus was the friend of Pollio and Maccenas, and rivalled them, through life, as an eminent promoter of the interests of literature. He protected Parthenius Nicerinus, a Greek author, who had been brought to Rome during the Mithradatic war, and who inscribed to him his collection of smorous mythological stories, entitled Περὶ ἐρωτικῶν ταξιδιομάτων, declaring, in his dedication, that he addressed the work to Gallus, as likely to furnish incidents which might be employed by him in the poems he was then writing. But Gallus is best known to us as the patron of Virgil, whom he introduced to the notice of Maccenas, and as also instrumental in obtaining for him restitutions of his farm, after the partition of the lands among the soldiery. (Probus, Vit. Virg.) In gratitude for these and other favours conferred on him, the Mantuan bard has introduced an elegant compliment to Gallus in the sixth eclogue; and has devoted the tenth to the celebration of his passion for Lycria. The real name of this female is said to have been Gadira (Servius, ad Virg., Elog., 10.). She was an actress of Mineæa, who to exquisit beauty joined all the accomplishments of her profession. Besides having engaged the affections of Gallus, she had captivated Antony, and is said in her earlier years to have touched the heart of Brutus. The passion of Gallus may be supposed to have been at its height when Virgil wrote his tenth eclogue, A.D. 716, at which period Gallus was about thirty years of age. At this time Cytheris had forsaken him for a rival, who was then engaged in a military expedition on the other side of the Alps, and she had even accompanied her new lover to that inhospitable region.—The elegies of Gallus consisted of three books, and four fragments have been preserved. They were held, however, in high estimation so long as they survived. Ovid speaks of Tibullus as the successor of Gallus, and as his companion in the Elysian fields (Am., 3, 9); and he oftener than once alludes to the extensive celebrity which his verses had procured for him as well as to his mistress. (Am., 1, 15.) Quintilian ranks him as an elegiac poet with Tibullus and Propertius, though he thinks his style was somewhat coarser. He quotes the following passage from the fourth elegy, of which elegies Gallus translated or imitated from the Greek of Euphorion a poem on the Gnynean grove, written in the manner of Hesiod. He likewise translated from the same Euphorion a number of ancient mythological fables, such as the stories of Scylla and Philomela. Gallus also wrote a number of epigrams.—The four elegies, which were first published in the year 1500 by Pomponius Gauricus, as the work of Cornelius Gallus, are generally attributed to him by Maximinus Gallus, who lived in the reign of Anastasius. They are chiefly filled with complaints of the miseries and deprivations of extreme old age, a theme not likely to be chosen by Gallus, who died at the age of forty-two. Aldus Manutius, the son of Paullus, published another elegy, under the name of Asinius Gallus, the son of Pollio, whom he appears to have confounded with Cornelius Gallus. Though superior to the others in point of poetical style, it has no better claims to authenticity. (Dunlop, Hist. Rom. Lit., vol. 3, p. 429, seqq.) The best edition of the pieces and fragments attributed to Gallus is that of Wernsdorf in the Poetae Latini Minores.—III. Elius, the first and the only Roman that ever penetrated with an army into the interior of Arabia. He was of equestrian rank, and was appointed by Augustus imperial procurator in Egypt. The Egyptians of that day had accumulated great riches by the trade with India. This excited the cupidities of the Romans, and Elius Gallus was sent to subdue them. The expedition, however, signal failed, in consequence of the treachery of Syllaus, the commander of the Arabian auxiliaries who formed part of the Roman force. This leader, influenced by patriotic motives, guided the army of the invaders into sandy deserts, from which they were glad to retreat with considerable loss. The fleet, in like manner, which accompanied the expedition, was lost into shoals where a large number of vessels were lost. Syllaus paid for his patriotic treachery with his life. An account of the whole affair is given by Strabo, who was the intimate friend of Gallus. (Strab., 779, seqq.) Pliny and Dio Cassius also furnish us with information on this subject which is not contained in the narrative of Strabo. (Dio Cass., 53, 29.) Great difficulty arises, however, in attempting to adopt the accounts which we thus obtain with the state of geographical knowledge at the present day. (Consult Casselini, Recherches, vol. 2, p. 116. —De Sacy, Mem. de l'Acad. des Insr., &c., vol. 48, p. 514. —Mannert, Geogr., vol. 6, p. 116, seqq.) Valesius (Valois), Burmann, and Simson have noticed the error of Casaubon (ad Strab., l. c.), who confounds this Elius Gallus with Cornelius Gallus the poet. IV. Gallus Claudius Constantinus, brother of the Emperor Julian, and member of the Constantin the Great. In 351 A.D., Constantius, the son of Constantine, granted him the dignity of Caesar, and sent him to Antioch. But the power with which he was invested called forth nothing but vice, and Constantius having recalled him A.D. 354, caused him to be put to death in prison, 'the age of twenty-nine.'
GANGARIDE, a people near the mouths of the Ganges. Ptolemy assigns them a capital, called Gangaridae, on the western side of the Ganges, which D'Anville places in latitude 24° 50', and makes the site to coincide with that of Regi-molok. The Gangaridae were allies of the Prasii, who lay nearer the Indian coast; they owed allegiance to the Persian kings. But these two nations awaited the army of Alexander on the other side of the Hyphasis; but report made them so formidable for numbers and valour, that the wearied and alarmed Macedonians refused to cross the stream, in spite of all the efforts and remonstrances of their king. (Justin, 12, 8.—Curt., 9, 2.—Virg., Æn., 3, 27.)

GANGES, a famous river of India, which, in the language of Hindustan, is called Padda, and is also named Burra Gonga, or the Great River, and Gonga, or the river, by way of eminence; and hence the European name of the stream is derived. The Sanscrit name of the Ganges (Padda) signifies foot, because the Brahmins, in their fabulous legends, make the river to flow from the foot of Bfschan, who is the same with Vishnou, or the preserving deity. This great stream, together with the Burrampooter, whose twenty-one branches have annually increased by the addition of more streams, and whose source is in the vast mountains of Tibet, it seeks the plains of Hindustan by the west, and pursues the early part of its course through rugged valleys and defiles. After wandering about eight hundred miles through these mountainous regions, it issues forth a deity to the superstitious yet gladdened Hindu. This river was unknown to Herodotus, as he does not mention it, though it became famous in a century after. Its source was for a long period involved in obscurity. A survey, however, has been recently made by the British-Indian government, and it has been found to issue in a small stream, under the name of Bhagirathy, from under a mass of perpetual snow, accumulated on the southern side of the Himalaie mountains, between 31° and 32° north latitude, and 78° and 79° east longitude. It is computed to be 1500 miles in length, and at five hundred miles from its mouth is, during the rainy season, four miles broad and sixty feet deep. Its principal tributaries are the Jumna, the Gogra, and the Burrampooter. The whole number of streams which flow into it are eleven. About two hundred miles from the sea, the Delta of the Ganges commences by the dividing of the river. Two branches, the Cossimbazar and the Jellinghy, are given off to the west. These unite to form the Hoagley, or Bhagirathy, on which the port of Calcutta is situated. It is the only branch commonly navigated by ships, and in some years it is not navigable for two or three months. The only secondary branch which is at all navigable for boats, is the Chandah River. That part of the Delta which borders on the sea is composed of a labyrinth of creeks and rivers, called the Sunderbunds, with numerous islands, covered with the dense and rank vegetation called jungle, affording haunts to its numerous tigers. These branches occupy an extent of two hundred miles along shore. The Ganges rises fifteen feet by the end of June, owing to the heavy rains. The remainder of its rise, which is in all thirty-two feet, is occasioned by the rains which fall in Bengal. By the end of July, all the lower parts of the country adjoining the Ganges, as well as the Burrampooter, are overflowed for a width of one hundred miles, nothing appearing but islands and swamps, and the places where the sites have been deserted. The line of the Ganges which lies between Gangotiree, or the source of the leading stream, and Sagar island, below Calcutta, is held particularly sacred. The main body, which goes east to join the Brahmapostra, is not regarded with equal veneration. Wherever the river happens to run from south to north, contrary to its usual direction, it is considered peculiarly holy. The places most superstitiously revered are the junctions of rivers, called Bhanaga, the principal of which is that of the Jumna with the Ganges at Allahabad. In the British courts of justice, the water of the Ganges is used for swearing Hindus, as the Koran is for Mohammedans, and the Gospels for Christians. (Malte Brunn, Geogr., vol. 3, p. 18.)

GANGETCSINUS, now the Bay of Bengal, into which the Ganges falls.

GANYMEDES, son of Tros and of Callirhoe daughter of the Scamander. He was remarkable for his beauty, and on this account, according to the legend, was carried off to Olympus by an eagle, to be the cup-bearer of Jove, who gave Tros, as a compensation, some of the Olympians' breed. (Hom. i., 5, 265, seq.—Id. vii., 20, 313, seq.—Hom., Hymn., 4, 202.) One of the Cyclopic poets (ap. Schol. ad Eurip., Orest., 1390) said, that Jupiter gave Lamosdon a golden vine for Ganymede. The son of Tros succeeded Hebe as cup-bearer of the skies. (Vid. Hebe.) They who wish to give an historical aspect to this legend, make Ganymedes to have been carried off by Tantalus. The truth is, however, that the fable of Ganymedes, a mythological being, is derived from a symmetrical, or symbolical composition, representing the act of fruitifying nature, attended by Power and Wisdom: and this composition would appear to have been at first misunderstood, and afterward misrepresented in poetical fiction. For the lines in the Iliad alluding to it are, as Knight maintains, spurious; and, according to Pindar, the most orthodox, perhaps, of all the poets, Ganymede was not the son of Tros, but a mighty genius or deity, who regulated or caused the overflows of the Nile by the motion of his feet. (Schol. in Astrat. Phaenom., v. 282.) His being, therefore, the cup-bearer of Jupiter, means no more than that he was the distributer of the waters between heaven and earth, and, consequently, a distinct personification of that attribute of Jupiter, which is otherwise signified by the epithet Pluvius. Hence he is only another modification of the same personification as Attis, Adonis, and Bacchus; who are all occasionally represented holding the patera or cup; which is also given, with the cornucopia, to their subordinate emanations, the local genii; of which many small figures in brass are extant. (Inquiry into the Symb. Lang., &c., § 121.—Class. Journ., vol. 25, p. 42.)

GAKAMANTES (sing. Garamas), a people of Africa, south of Fazania, deriving their name from the city of Garama, now Garma. They were slightly known to the Romans under Augustus, in whose time some claim was made to a triumph over them, on which account they are mentioned by Virgil. (Virg., Æn., 4, 198; 6, 775.—Lucan, 4, 334.—Plin., 5, 8.—Sil. Ital., 1, 142; 11, 181.)

GARAMANTIS, a nymph, mother of Tarbas, by Jupiter. (Virg., Æn., 4, 198.)

GARGARUS, a mountain of Apulia, terminating in a bold promontory of the same name (Garganum Promontorium), now Punta di Vesti, or Strato (284) sea miles; but the Greeks appear to have considered the whole of that extensive neck of land, lying between the bay of Rodi and that of Manfredonia, as the Garganum Promontorium, for he describes it as running out to sea for the space of 300 stadia, or 37 miles. Seyfayx seems to refer to this mountain under the name of Arion. (Peregrus, p. 5.) Frequent allusion is made to this celebrated ridge by the later poets, especially on account of its fine groves of oaks. (Horat., Od., 2, 9.—Id., Ep., 2, 1, 200.—Sil. Ital., 8, 630.—Lucan, 5, 378.)

GARGAPHIA, a valley near Platea, with a fountain of the same name, which Acteon was torn to pieces by his dogs. (Ovid, Met., 3, 156.) The fountain of Gargaphia was situated about a mile and a half distant
from Plataea, on Mount Citheron, towards the Athenian frontier. (Gell, Itin., p. 112.)

Gargaros (plur. a, orum), one of the summits of Ida, the roots of which formed the promontory of Lecum. It is generally supposed to have been the highest peak of the range, but this honour must be assigned to the ancient Cotylus. (Hobhouse's Travels, Lett. 42.) On Gargaros was a town named Gargarus. (Strabo, 621.) Dr. Hunt gives an interesting account of his ascent of Gargarus. He found the summit covered with snow, and mentions thefollowing particular relative to its ancient name. "I have ventured to record a circumstance which proves on how fanciful a foundation etymological reasonings are founded. Our guide, when he pointed expressively to the snow on the top of the mountain, repeated the words Gar, gar, 'Snow, snow,' in which an enthusiastic topographer of the fluid would easily have traced the ancient name of Gargarus." (Walpole's Memoirs, vol. 1, p. 129. —Compare, in relation to Gargarus, Clarke's Travels, Greece, Egypt, &c., vol. 3, p. 166.)

Gargotto's, a demus or borough of the tribe Xegelis in Attica, where Eurythous is said to have buried. (Steph. Byz., s. v.—Strabo, 377.) It was the birthplace of Epicurus. (Diog. Laert., 10, 1.) The modern Kratho is supposed to occupy its site. (Stuarts' Ant. of Att., 3, p. 16. —Spon., vol. 2, p. 104.)

Garmnna, now the Garonne, a river of Gaul, which rises in the valley of Arran, to the south of Bertrand, among the Pyrenees, and falls into the Oceanus Cantabricus, or Bay of Biscay. The general course of this river, which extends to about 250 miles, is north-east. After its junction with the Duranzus or Dorlogue, below Burdelega or Bordeaux, it assumes the name of Gironde. According to Julius Caesar's division of Gaul into two distinct states, one Gallic and the other Celta, and separated that district from Gallia Celta. This river is navigable to Tolosa or Toulouse, and communicates with the Mediterranean by means of the canal of Louis XIV., about 180 miles long, made through Languedoc. (Mela, 3, 2.—Mannert, Geogr., vol. 2, p. 117.)

Gaugamela, a village of Assyria, in the district of Ararat, and near the river Tigris. (Arrian, 6, 1.) The battle between Alexander and Darius took place near this spot; but, as Arabela was a considerable town, the Greeks chose to distinguish the conflict by the name of the latter. Gaugamela is said to have signified, in Persian, "the house of the camel," and to have been so called because Darius, the son of Hystaspes, having escaped upon his camel across the deserts of Scythia, when retiring from the latter country, placed the animal here, and appointed the revenue of certain villages for its maintenance. (Plut., Vit. Alex., c. 31.)

Gaulus, I. a small island adjacent to Melite or Malta, now called Gozo. (Plin., 3, 8.)—II. Another below the south shore of Crete, now called Gozo of Candid, for distinction sake from Gozo of Malta.

Gauirus, a ridge of mountains bordering on Lake Avrumus, and now called Monte Barbaro. It was famous for its wines. (Lucan, 2, 865, seqq.—St. Ital., 8, 534. —Stat. Silv., 3, 5, 99.)

Gaza, one of the five Philistine satrapies or principalities, situated towards the southern extremity of Canaan, about 16 miles south of Ascalon (Itin. Ant., p. 150), and a small distance from the Mediterranean. Its port was called Gazororum Portus. As the name of the city of Gaza appears in the first book of Moses (10, 19), Mela must of course be mistaken, who says it was destroyed by an Egyptian, and states that Cambyses made this place his chief magazine in the expedition against Egypt. (Mela, 1, 11.) It was, however, an important and strongly-fortified place, as being situated so near the borders of that country. Alexander took and destroyed it, after it had made a powerful resistance for the space of two months. (Arrian, 2, 27.—Quintus Curtius, 4, 6.) Antiochus the Great sacked it, and it was several times taken from the Syrians by the Maccabees. (Polyb., exerpt. Vals. —Maccab., 1, 11, 61.—Josephus, Ant. Jud., 13, 21.) It was afterward subjected to new losses, so that St. Luke states (Acts, 8, 26) that it was, in his time, a desert place. Erasmus Schmid, Beza, and Le Moyne, however, following the Syriac version, refer the word gippes, in the original, not to Gaza, but to the way leading towards it. They are refuted by Reland. Strabo notices "Gaza, the desert," which agrees with the Acts. The place was called Constantinia afterward. It is now termed by the Arabs Rassa, with a strong guttural expression. The ancient name in Hebrew signifies strong. (Compare Mannert, Geogr., vol. 6, pt. 1, p. 263.)

Gerenna of Cevenn, now Cevenes, a chain of mountains in Gaul, which separated the Helvii from the Arverni, in that part of the Roman province corresponding to the modern Languedoc. The Pyrenees join the Cevennes, these last the Vosgges, which in their turn unite with Jura to the south, and form the Ardenes to the north. The name Cebenna appears to contain the Celtic radical Pen or Ben, "a summit," so that the name probably meant "the lofty range." (Macleay's Travels, vol. 1.)

Georrosia, a sandy and barren province of Persia, south and southeast of Carmania, and lying along the Mare Erythreum. It is now called Mekran. In passing through this country, the army of Alexander underwent very great hardships, from want of water and provisions, and from columns of moving sand. Its principal city was Pura, now Fohra. (Strabo, 720. —Arrian, 6, 23, seqq.) Wahle compares the name Georrosia with the Persian name, Georros or Geor, "stormy," "boisterous," from the boisterous and stormy waves that beat upon its coast. (Vorder und Mittel-Asien, p. 585.)

Gela, I. a river of Sicily, to the east of the Hime- ra, and falling into the sea on the southeastern coast, near the city of the same name. The appellation Gela is said to have been given to it from the icy coldness of its waters, the term gela (compare the Latin gelus) containing the idea of "cold." But Virgil took the word gelus (in the later ages of the Greeks) for "ice," the epithet immannis to Gela, meaning, according to some, the city, or, as others think, the river. The former opinion is the more correct one. The city was termed by the poet "immannis" ("of monster-symbol"), in allusion to the Minotaur on its coins. Those, however, who refer the epithet to the river, make it signify "crue," i. e., perilous, and consider it as alluding to the numerous whirlpools in this stream. Whence Ovid remarks, "Et tu voricius hic novum adeunde Gela." (Fast., 4, 470.—Virg., En., 3, 702.) The modern name of the Gela is, according to Cluverius, the Chi- ozzo, or "icy river."—II. A city of Sicily, on the southeastern coast, a short distance from the sea and from the mouth of the river of the same name. (Vid. Gela, I.) It was founded by a joint colony from Crete and from Lindus in the island of Rhodes, 45 years after the foundation of Sestos, or future Assos, by the elder, being unable to save the place from the Carthaginians, carried off to his people to his capital (Vid. Dionysius I.). The Gelons subsequently returned to their city, but only to encounter new mis-
fortunes. Agathocles, suspecting the inhabitants of favouring the Carthaginians, suddenly made himself master of Gela, put to death 4000 of the wealthiest citizens, confiscated their property, and placed a garrison in the city. The final blow was at last received from Gelon, who, on being at Agrippium, Phalaris, and this latter place, wishing to perpetuate his name, built the small but commodious city of Phintias, called after himself, and transferred to it all the inhabitants of Gela. From this period, therefore, 404 years after its foundation, the city of Gela ceased to exist. On a part of the ancient site stands the modern Terra Nova. The plains around Gela (Campi Geloii) were famed for their fertility (Plin. Nat. Hist., ii. 25.; Id., 13, 98. 56; Id., 109, 180 = Id., 201; — Strabo, 22, 5. — Scholi. 14, 2.) Gellius, Aulus (or, as some manuscripts give the name, Agellius), a Latin grammarian, born at Rome in the early part of the second century, and who died at the beginning of the reign of Marcus Aurelius. We have but few particulars of his life. We know that he studied rhetoric under Cornelius Fronto at Rome, and philosophy under Phavorinus at Athens, and that, on his return to Rome, he was made one of the centumviri or judges in civil causes. (Noct. Att., 14, 2.) Gellius has left behind him one work entitled Noctes Atticae, "Attic Nights." It was written, as he informs us in the preface, during the winter evenings in Attica, to amuse his children in their hours of relaxation. It appears, from his own account, that he had been accustomed to keep a common place book, in which he entered whatever he heard in conversation, or met with in his private reading, that appeared worthy of remembrance. In composing his "Noctes Atticae" he seems merely to have copied the contents of his commonplace book, with a little alteration in the language, but without any attempt at classification or arrangement. The work contains anecdotes and arguments, scraps of history and pieces of poetry, and dissertations on various points in philosophy, geometry, and grammar. Amid much that is trifling and puerile, we obtain information on many subjects relating to antiquity, of which we must otherwise have been ignorant. It is divided into twenty books, which are still extant, excepting the eighth and the beginning of the seventh. He mentions, in the conclusion of his preface, his intention of continuing the work, which he probably, however, never carried into effect. — The style of Aulus Gellius is in general negligent and incorrect. In his eagerness to imitate the old writers, he is often carried too far, and introduces too many forms of expression from the earlier comic poets, whom he seems most anxious to take for his models in this respect. That he invented, however, any new terms himself seems hardly credible. The best editions of Aulus Gellius are, that of Gronovius, Lugd. Bat., 1706, 4to, and that of Lion, Götting., 1824, 2 vols. 8vo. (Schöll, Hist. Lit. Rom., vol. 3, p. 310. — Bähr, Geach. Röm. Lit., vol. 1, p. 711.)

Gelon, a native of Gela in Sicily, who rose from the station of a private citizen to be supreme ruler of Gela and Syracuse. He was descended from an ancient family, which originally came from Telos, an island off the coast of Caria, and settled at Gela, when it was first colonized by the Rhodians. During the time that Hippocrates reigned at Gela (B.C. 498–491), Gelon was appointed commander of the cavalry, and greatly distinguished himself in battle. Hipocrates carried on against the Grecian cities in Sicily. On the death of Hippocrates, who fell in battle against the Siculi, Gelon seized the supreme power, B.C. 491. Soon afterward a more splendid prize fell in his way. The nobles and landholders (φυσαροι) of Syracuse, who had been driven from the city by an insurrection of their slaves, supported by the rest of the people, applied to Gelon for assistance. This crafty prince, gladly availing himself of the opportunity of extending his dominions, marched to Syracuse, into which he was admitted by the popular party (B.C. 489), who had not the means of resisting so formidable an army. He then entered into an open treaty, by which he promised to become master of Syracuse, if he would not attack the island before the citizens could have been removed from their habitation. In order to increase the population of Syracuse, he destroyed Camarina, and removed all its inhabitants, together with a great number of the citizens of Gela, to his favourite city. By his various conquests and his great abilities, he became a very powerful monarch; and the Athenians then expected the invasions of Xerxes, ambassadors were sent by them to Syracuse, to secure, if possible, his assistance in the war. Gelon promised to send to their aid two hundred triremes, twenty thousand heavy-armed troops, two thousand cavalry, and six thousand light-armed troops, provided the supreme command were given to him. This offer being indignantly rejected by the Lacedæmonian and Athenian ambassadors, Gelon sent, according to the proposal of the Greeks, a thousand ships to the siege of Massilia, with great treasures, and with orders to present them to Xerxes if he proved victorious in the coming war. (Herod., 7, 157–164.) This statement, however, was denied by the Syracusans, who said that Gelon would have assisted the Greeks, if he had not been prevented by an invasion of the Carthaginians, with a force amounting to three hundred thousand men, under the command of Hamilcar. This great army was entirely defeated near Himera by Gelon, and Theron monarch of Agrigentum, on the same day, according to Herodotus, on which the battle of Salamis was fought. (Herod., 7, 165, seqq.) An account of this expedition is also given by Diodorus Siculus (11, 21), who states, that the battle between Gelon and the Carthaginians was fought on the same day as that at Thermopylae. There seems, indeed, to have been a regular understanding between Xerxes and the Carthaginians, in accordance with which the latter were to attack the Greeks in Sicily, while the Persian monarch was to move down upon Attica and the Peloponnesus. — Gelon appears to have used with moderation the power which he had acquired by violence, and to have endeared himself to the Syracusans by the equity of his government, and by the encouragement he gave to commerce and the fine arts. We are informed by Plutarch, that posterity remembered with gratitude the virtues and abilities of Gelon, and that the Syracusans would not allow his statues to be destroyed together with those of the other tyrants, when Timoleon became master of the city. (Plut., Vit. Timol.) He died B.C. 478, and was succeeded by his brother Hiero. (Aristot., Politi., 5, 12. — Encycl. U.S. Knowl., vol. 11, p. 108.)

Geloi, the inhabitants of Gela. (Virg., Æn., 3, 709.)

Geloneás and Geloníni, a people of Scythia, included by Herodotus (4, 108) among the Budini. The historian speaks of their wooden city called Gelenus, and makes them to have been originally a Grecian race, who transplanted themselves from the trading ports of Greece and settled among the Budini, where they used a language partly Scythian and partly Grecian. This account, however, appears very unsatisfactory. It is better to refer the Gelones and Geloníni to a curious chain which joined Sicily to the more southern districts of Gela, either the connection with the regions of the remote East, by means of sacerdotal colonies scattered throughout the wilds of Scythia. Compare the remarks of Ritter, Vorhalle, p. 266.)

Gemonie Scale, steps at Rome, near the prison called Tullianum, down which the bodies of those who had been executed in prison were thrown into the Flumina.
rum, to be exposed to the gaze of the multitude. (Val. Max. 6, 9.—Liv. 35, 59.)

Genânum, a town of the Aureliani, on the Ligeris or Loire, which ran through it. It was afterward called Aureliani, from the name of the people, and is now Orleans. (Cass. B. C. 7, 3.—Lucan, 1, 440.)

Genauni, a people of Vindelicia. (Vid. Brenni.)

Genâta, a city of the Allobroges, at the western extremity of the Latus Leonus or Lake of Genèv, on the Hayes bank of the Rhodanus or Rhone. The modern name is the same as the ancient. (Cass. B. G., 1, 6.)

Genseric (more correctly Gisereric), king of the Vandals, was the illegitimate brother of Gonderic, whom he succeeded A.D. 429. In the same year he left Spain, which had been partly conquered by the Vandals, and crossed over into Africa, at the solicitation of Boniface, governor of that province, who had been induced, by the arts of his rival Aetius, to rebel against Valentinian III, emperor of the West. Boniface soon repented of the step he had taken, and advanced to meet the invader. But his repentance came too late. The Moors joined the standard of Genseric, and the powerful sect of the Donatists, who had been cruelly persecuted by the Catholics, assisted him against his oppressors. Boniface was defeated, and obliged to retire into Hippo Regius. Genseric remained till he obtained a fresh supply of troops. Having ventured upon a second battle, and being again defeated, he abandoned the province to the barbarians, and sailed away to Italy. A peace was concluded between Genseric and the Emperor of the West, by which all Africa to the west of Carthage was ceded to the Vandals. This, however, did not long continue, and the city of Carthage was taken by the Vandals, by surprise, A.D. 439. The Vandals, bers of the West and East made great preparations for the recovery of the province, but an alliance which Genseric made with Attila, king of the Huns, effectually secured him against their attempts. Genseric’s next object was the formation of a naval power: an immense number of ships were built, and his fleets ravaged the shores of Sicily and Italy. Invited by the Empress Eudoxia, he sailed up the Tiber, A.D. 455, and permitted his soldiers, for the space of four days, to plunder the city, which had been destroyed the fleet which the Emperor Majorian had collected for the invasion of Africa; and, as his power increased, his ravages became more extensive. The island of Sardinia was conquered, and Spain, Italy, Sicily, Greece, Egypt, and Asia Minor were plundered every year by the Vandal pirates. Leo, the emperor of the East, at last resolved to make a vigorous effort for the recovery of Africa. A great army was assembled, and the command was given to Basiliscus. He landed at Bona, and at first met with considerable success, but was at length obliged to retire from the province. After this victory Genseric met with no further opposition, but remained undisturbed master of the sea till his death, which happened A.D. 477. He was succeeded by his son Hunneric. Genseric was an Arian, and is said to have persecuted the Catholics who were in the service of his army. He was a generally-accepted tribune of the people, and like his son Genseric, was a brother of Genoa, besides having been a place of considerable trade, particularly in timber, which was brought from the mountains, where it grew to a great size. Some of it, being richly veined, was used for making tables, which were thought scarcely inferior to those of cedar-wood. Other commodities were cattle, skins, and honey, which the Ligurians exchanged for oil and Italian wine, none being grown on their coast. In later times we find the name written Janua, from an idea that it was founded by Janus, which Cluver justly rejects as absurd. (Ital. Ant., vol. 1, p. 70.—Cramer’s Ancient Italy, vol. 1, p. 25, seqq.)

Genusia Lex, proposed by the tribune Gennicus, A.U.C. 411, that no one should enjoy the same office twice within ten years, nor be invested with two offices in one year. (Liv. 7, 43.)

Genesius, a river of Illyricum. Cellarius places it to the south of the coast of Apollonia; but Kruse and others made it the same with the Pannonus of Ptolemy, to the south of Dyrhachium. The modern name, if Cellarius be correct, is the Semno or Siumini. Kruse, however, makes it the Iscumi. (Bischoff und Müller, Wörterb., p. 551.)

Geoponica (Γεωπονικά), or “a treatise on Agriculture” (from γής, γης, “the earth,” and ποινικά, “to beow labour upon”), the title of a compilation, in Greek, of precepts on rural economy with the help from ancient writers. The compiler, in his preface, shows that he was living at Constantinople, and dedicated his work to the Emperor Constantine, “a successor of Constantine, the first Christian emperor,” stating that he wrote it in compliance with his desire, and praising him for his zeal for science and philosophy, and also for his philanthropic disposition. The emperor here meant is supposed by some to have been Constantine Porphyrogenitus, though generally-accepted to be Cassianus Bassus, a native of Bithynia, who, however, is stated by others to have lived some centuries before the time of Porphyrogenitus. The question respecting the authorship of the Geoponica has excited much discussion, and Needham, in his edition of the work (Can tab., 1704), has treated the subject at great length. The work is divided into twenty books, which are subdivided into short chapters, explaining the various processes or cultivation adapted to various soils and crops, and the rural labours suited to the different seasons of the year; together with directions for sowing the various kinds of corn and pulse; for training the vine, and the art of wine-making, upon which the author is very diffuse. He also treats of olive-plantations and oil-making, of orchards and fruit-trees, of evergreens, of kitchen-gardens, of the insects and reptiles that are injurious to plants, of the economy of the pounded meal, of horned cattle, sheep, goats, pigs, &c., and the care they require; of the method of salting meat; and, lastly, of the various kinds of fishes. Every chapter is inscribed with the name of the author from whom it is taken, and the compiler gives, at the beginning of the first book, a list of the principal authorities. Other authors besides these are quoted in the course of the work. Two or three chapters are inscribed with the name of Cassianus, who is supposed himself in them as a native of Marathymus in Bithynia, where he had an estate. (Geopon., 5, 6, et 36.) The work is curious, as giving a course of ancient agriculture, collected from the most approved authorities then extant. The best edit.
GERMANY.

The origin of the Germanic nations is involved in uncertainty. The inhabitants of the beautiful regions of Italy, who had never known a rougher country, could hardly believe that any nation had deserted its native soil to dwell in the forests of Germany, where severe cold prevailed for the greater part of the year, and where, even in summer, impermeable forests prevented the genial rays of the sun from reaching the ground. They thought that the Germans must have lived there from the beginning, and therefore called them indigene, or "natives of the soil." (Tacit., de Mor. Germ., 2.) Modern inquiries, however, have established the descent of the Germanic race from the inhabitants of Asia; since it is now generally established that the Teutonic dialects belong to one great family with the Latin, the Greek, the Sanscrit, and the other languages of the Indo-Germanic chain. Von Hammer calls the Germans a Bactrian-Median nation. He makes the name Germani or Germani, in its primitive import, to have meant those who followed the worship of Buddha, and hence the Germans, according to him, are that ancient and primitive people who came down from the mountains of Upper Asia, the cradle of the human species, and, spreading themselves over the low country more to the south, gave origin to the Persian and other early nations. Hence the name Dachernania applied in early times to all that tract of country which lay to the north of the Oxus. The land of Erman, therefore, which was situated beyond this river, and which corresponds to the modern Chorassan, is made by Von Hammer the native of those who came down from the mountains of Upper Asia, and themselves are, as he informs us, called Dachernani, their primitive name, by the Oriental writers down to the fourteenth century. (Von Hammer, Wien. Jahrb., vol. 2, p. 319.—Compare vol. 9, p. 39.) Another remarkable circumstance is, that, besides the name referred to, that of the modern Persians may be found under its primitive form in the Persian tongue. We have there the term Pruschan or Peruschan, in the sense of "a foreigner." In Monjaschi (1, p. 533) we have Beruscan and Beruscan, in the sense of "communitas eiusdem religiosis," while, in Ferghensi Schurz, Peruschan or Peruschan more than once occurs. (Vol. 1, B. 182, V. 1. Z. and S. 183, e. Z.) Even the name Sachsen or Sassen (Saxons) is to be found in the Persian tongue, under the form Sassan, as indicating not only the last dynasty of the Persian empire (the Sassanides), but also those acquainted with the doctrines of the Chaldeans, who is far more nearly related to the Gothic than the modern Persian to the German. In the Oriental histories, moreover, mention is made of the dynasty of the sons of Bois, in whom we may easily recognise the progenitors of the Buri; while traces of the name of the Catti may be found in that of Kat, in Chorassan. (Fergh. Schurz, B. 231.) The Gotte, too, frequently appear under the appellation of the Deche in the histories of the Byzantines and finally to show rest of the Cetti has been traced to the Persian Parchin, "reason" or "understanding." (Von Hammer, in Kruse's Archiv. der Germanischen Völkerstamme, hft. 2, p. 124, seq.) Even as early as the time of Herodotus, the name of the Teutavios (Germani) appears among the ancient Persian tribes (Herod., 1, 125), while the analogies between the Persian and German are so striking as to have excited the attention of every intelligent scholar. Von Hammer divides the Germanic tribes into nearly as many as the mouths of the Borsythenes or Doniaper. The northern and northeastern parts of Gaul were also known under the name of Germany in the time of the Roman emperors, after the province of Belgica had been subdivided into Germania Prima and Germania Secunda.

The origin of the Germanic nations is involved in uncertainty. The inhabitants of the beautiful regions of Italy, who had never known a rougher country, could hardly believe that any nation had deserted its native soil to dwell in the forests of Germany, where severe cold prevailed for the greater part of the year, and where, even in summer, impermeable forests prevented the genial rays of the sun from reaching the...
GERMANIA.

ines be true, and they are acknowledged to be so by every scholar who has examined them, the commonly-received derivation of the name Germania falls to the ground. The advocates for this etymology maintain, that it is supplied by Catti, and Chaucers "war," and "man," a man, and that "Germani" therefore means "men of war" or "warriors," the Roman alphabet, in consequence of its not having any w, converting this letter into a soft g. They refer also to Tacitus, who states, that the Tungri first assumed this name on crossing the Rhine, and that it gradually spread over the whole nation. (De Mor. Germ., 2.) Others again assert, that the term is of Celtic origin, and was first applied by the Gauls to their German conquerors, and they deduce it from the Celtic gerr, "war," and mann, "a man." (Lemarie, Ind. Geogr., ad Cas., s. v., p. 269.) The true origin of the name, however, as has already been remarked, must be sought in the remote East.—There was also another national name which the Germans applied to themselves, and that was Teutones. In this we recognise at once the root of the modern term Deutsch or Teutscher; and the appellation would seem to have come from the old German word Dict, "a people," and to have been used as a name for the whole German race, considered as forming but one people, though divided into many independent tribes. (Klemm, Germ. Alterthums., p. 79.)

2. Geographical acquaintance with Ancient Germany.

The Greeks and Romans had very little knowledge of Germany before the time of Julius Caesar, who met with several Germanic tribes in Gaul, and crossed the Rhine on two occasions, rather with the view of preventing their incursions into Gaul, than of making any permanent conquests. His acquaintance was, however, limited to these tribes which dwelt on the banks of the Rhine. Under the early Roman emperors many of these tribes were subdued, and the country west of the Visurgis (or Weser) was frequently traversed by the Roman armies. But at no period had the Romans any accurate knowledge of the country east of this river; and it is therefore difficult to fix with certainty the position of the German tribes, particularly as the Germans were a nomad people. Some parts of Germany were inhabited by the Gauls, who were, according to Caesar (B. G., 6, 24), the more warlike nation in early times. Tacitus, at a later day, divides the Germans into three great tribes, without any reference to their names, to wit, the Chatti, the Inguvones, bordering on the ocean, 2. Hermiones, inhabiting the central parts. 3. Istavones, including all the others. Pliny (4, 14) makes five divisions: 1. Vinduli, including the Burgundiones, Varini, Carini, and Guillones. 2. Inguvones, including the Cimbri, Teutones, and Chauci. 3. Istavones, near the Rhine, including the midland Cimbri. 4. Hermiones, inhabiting the central parts, including the Suevi, Hermundurii, Catti, and Cherusi. 5. Pucetii and Bastarnae, bordering on the Dacians.

3. Manners and Customs of the Ancient Germans.

Our principal information on this subject is derived from Tacitus, who wrote a separate treatise on the manners and customs of the Germanic tribes, entitled "De Situ, Moribus, et Populis Germania." Occasional notices are also found in the works of other ancient authors, as well as in the works of the historians of the times of the emperors of the west, who had to deal with the inhabitants beyond the Rhine, and the emperors of the east, who had to deal with the inhabitants beyond the Danube. —A nation free from any foreign intermixture (say the Roman writers), as is proved by their peculiar national physiognomy, inhabits the countries beyond the Rhine, with fierce blue eyes, deep yellow hair, a robust frame, and a gigantic height; inured to cold and hunger, but not to thirst and heat, warlike, honest, faithful, friendly and unsuspicious towards friends, but towards enemies enoming and dis-
leader. Valour was the grace of man, chastity the virtue of woman. The primitive nations of German origin attached something of a sacred character to the female sex. Polygamy was only permitted to the princes as a means of extending their connexions; divorce was permitted neither by law nor by custom, but only by law. Adultery was considered an inexcusable crime, and was, therefore, very rare. Seduction was not to be excused on any consideration. The religious notions of this race could not but be rude and imperfect. The sun and moon, fire and earth, were their deities, whom they worshipped, with some imaginary beings to whom they ascribed the direction of the most important circumstances of life, and whose will the princes pretended to divine by secret arts. Their temples were caverns, rendered sacred by the veneration of many generations. The oracles so famous in the middle ages were considered by them infallible in all dubious cases. Religion afforded the most powerful means for inflaming their courage. The sacred standards, preserved in the dark recesses of consecrated caverns, were raised on the field of battle, and their enemies were devoted, with dreadful imprecations, to the god who presided over them. The custom only enjoined the favour of the gods; a warlike life, and death in battle, were considered as the surest means of attaining the joys of the other world, where the heroes were rejoiced by the relation of their deeds, while sitting around the festal table, and quaffing beer out of large horns or the sculls of their enemies. But the glory which the priests promised after death was conferred on the bards on earth. They celebrated in the battle and at the triennial festivals the glorious heroes of past days, the ancestors of the brave who listened to their simple but fiery strains, and were inspired by them with contempt of death, and kindled to glorious deeds.

4. History of Ancient Germany.

The Romans first became acquainted with the ancient Germans in B.C. 113, when they appeared under the name of Teutones and Cimbr, on the confines of the Roman dominion, and then moving south, carried the terror of their arms over Gaul and part of Northern Italy, until overthrown by Marius and Catulus (103 and 101 B.C.). When Julius Caesar had established himself in Gaul, he became acquainted with a nation then designated by the name of Germans. Aris- vistus, the leader of the nation, which had previously inhabited the banks of the Danube, attempted to establish himself in Gaul, but, being defeated by Caesar, he was obliged to fly beyond the Rhine. Of the fugitives who returned over the Rhine, the nation of the Marcomanni seems to have been formed. Caesar crossed the Rhine twice; not with the view of making conquests in that wilderness, but to secure Gaul against the destructive irritations of the barbarians. He even enlisted Germans in his army, first against the Gauls, and then against Pompey. He obtained an accurate knowledge of the nation by that expedition. The rest of Germany, he was told, was inhabited by the Suevi, who were divided into 100 districts, each of which annually sent 1000 men in quest of booty. They lived more by hunting and pasture than by agriculture, held their fields in common, and prevented the approach of foreign nations by devastating their borders. This state of things, if it existed in Germany in general, and if by the 100 districts are understood different tribes. The civil wars diverted the attention of the Romans from Germany. The confederacy of the Sygambri made insurrections in Gaul with impunity, and Agrippa transferred the Ubii, who were hard pressed by them, to the west side of the Rhine. But the Sygambri having defeated Lollius, the legate of Augustus (A.U.C. 739), the emperor himself, hastened to the Rhine, erected fortifications along the banks of this river to oppose the progress of the enemy, and gave his stepson Drusus the chief command against them. This general was victorious in several expeditions, and advanced as far as the Elbe. He died there in 12 B.C. Drusus' brother, and successor, received the command on the Rhine during two years, and exercised more cunning and force against the Germans. He induced them to enter the Roman service. The body-guard of Augustus was composed of Germans, and the Cheruscan Arminius was raised to the dignity of knight. From 740 to 755, different Roman generals commanded in those regions. Tiberius, having received the chief command a second time (A.U.C. 708), advanced to the Elbe, and probably have succeeded in making Germany a Roman province, but for the imprudence of his successor, Quintilius Varus, by which all the advantages which had been previously gained were lost. His violent measures for changing the manners and customs of the Germans produced a general conspiracy, headed by the Cheruscan Arminius, who had received his education in Rome. Destroyed with three legions into the forest of Teutoburg in October, 9 A.D. The Romans had probably been join in the army. A few fugitives only were saved by the legate Asprenas, who was stationed with three legions in the vicinity of Cologne. The consequence of this victory, gained by the Germans A.D. 9, was the loss of all the Roman possessions beyond the Rhine; the fortress of Aliso, built by Drusus, was destroyed. The Cherusci then became the principal nation of Germany. Four years after, the Romans, under the command of Germanicus, made a new expedition against the Germans; but, notwithstanding the valour and military skill of the young hero, he did not succeed in re-establishing the Roman dominion. The Romans then renounced the project of subjugating the Germans, whose invasions they easily repelled, and against any serious attacks from whom they were secured by the internal dissensions which had arisen in Germany. Marobodus, who had been educated at the court of Augustus, had united, partly by persuasion and partly by force, several Suebian tribes into a coalition, which is known under the name of the Marcomannic confederacy. At the head of this powerful league, he attacked the great kingdom of the Boii, in the southern part of Bohemia and Franchonia, conquered it, and founded a formidable state, whose authority extended over the Marcomanni, Hermunduri, Quadi, Longobardi, and Semnonnes, and which was able to send 70,000 fighting men into the field. A trust was placed upon the new legions, to attack Marobodus and destroy his power; but a general rebellion in Dalmatia obliged him to conclude a disadvantageous peace. The disasters which afterward befall the Romans in the west of Germany, prevented them from renewing their attempts against the Marcomanni, who ventured to make frequent incursions into the southern parts of Germany. Two powerful nations, therefore, now existed in Germany, the Marcomanni and the Hermunduri; the former however, soon became engaged in disputes. On the one hand, the Longobardi and Semnonnes, disgusted with the oppressions of Marobodus, deserted his confederacy and joined the Cherusci; and, on the other, Inguiniumus, the uncle of Arminius, having become jealous of his nephew, went over to Marobodus. After the war between the two rivals had been carried on for a considerable time, the Hermunduri were joined by the military art, which Arminius and Marobodus had learned in the school of the Romans, the victory at last remained with the Cherusci. Tiberius, instead of assisting Marobodus, who had solicited his help, instigated Catulna, king of the Goths, to fall upon him, forced him to leave his country, and to seek refuge with the Romans. Catulna, however, soon experienced the same fate from the Hermunduri, who now
appear as the principal tribe among the Marcomanni. The Cherusci, after the loss of their great leader, Arminius, A.D. 21, fell from their high rank among the German nations. Weakened by internal dissensions, they finally received a king from Rome, by the name of Ilticus, who was the last descendant of Arminius. During his reign they quarreled with their confederates, the Longobardi, and sunk to an insignificant tribe on the south side of the Danube. On the other hand, the Catti, who lived in the western part of Germany, rose into importance. The Frisians rebelled on account of a tribute imposed upon them by the Romans, and were with difficulty overpowered; while the Catti, on the Upper Rhine, made repeated assaults on the Roman fortresses on the opposite bank. Their pride, however, was humbled by Galba, who compelled them to abandon the country between the Lahn, the Maine, and the Rhine, which was distributed among Roman veterans. Eighteen years later a dispute arose between the Hermunduri and Catti, on account of the salt-springs of the Franconian Saale. Meanwhile the numerous companions of Maroboduus and Catulda, having settled on the north of the Danube, between the rivers Gran and Morava, had founded under Vannius, whom they had received as king from the Romans, a new kingdom, which began to grow op- pressive confederates among the German nations. Although Vannius had entered into an alliance with the Sarmatian Iazyge, he was overpowered by the united arms of the Hermunduri, Iazygi, and western Quadi (A.D. 50), and was compelled to fly for refuge to the Romans. His son-in-law, Sido, was now at the head of the government. He was a friend of the Romans, and rendered important services to Vespasian. In the West, the power of the Romans was shaken by the Batavi, so that the Emperor had with difficulty to pacify them. A war now broke out, that was terminated only with the downfall of Rome. The Suevo, being attacked by the Iazygi, asked for assistance from Domitian, who sent them 100 horsemen. Such paltry succours only offended the Suevo. Entering into an alliance with the Iazyger, in Dacia, they threatened Pannonia. Domitian was defeated. Nerva called them, and Trajan gained a complete victory over them. But, notwithstanding this victorious victory, the flames of war continued to blaze in those regions. The Roman empire was perpetually harassed, on two sides by the barbarians, on one side by a number of small tribes, who, pressed by the Goths, were forced to invade Dacia in quest of new habitations. The southern regions were assigned to them in order to pacify them. But a war of more moment was carried on against Rome on the other side, by the united forces of the Marcomanni, Hermunduri, and Quadi, which is commonly called the Marcomannic war. Marcus Aurelius fought against them to the end of his life, and Commodus bought a peace, A.D. 180. Meanwhile the Catti devastated Gaul and Rheasia, the Cherusci forced the Longobardi back to the Elbe. A.D. 220, new barbarians appeared in Dacia, the Visigoths, Gepidæ, and Heruli, and waged war against the Romans. At the same time, in the reign of Caracalla, a new confederacy appeared in the southern part of Germany, the Alemani, consisting of Istvovian tribes. Rome, in order to defend its provinces against them, erected the famous Vallum Romanorum, the ruins of which are still visible from Saxhausen to Oehringen. But the power of the Romans sank more and more, partly by the incessant struggle against the barbarians, partly by internal agitations. At the time when the Roman power had been weakened by civil wars, the political revolutions during the government of the emperors, the Franks forced their way as far as Spain, and in the reign of the Emperor Probus they also conquered the island of the Batavi. Thus the Franks and Alemani were now the most powerful German nations. Under Julian, the former lost the island of the Batavi, which was conquered by the Saxons, and the latter were humbled by the armies of Rome. But this was Rome's last victory. In the beginning of the 6th century barbarians assailed the Roman empire on all sides. The Vandals, Suevi, and Alans occupied Gaul and Spain. The Burgundians followed them to Gaul, the Visigoths to Italy and Spain, the Franks to Gaul and Moravia, the Longobardi to the Visigoths by the Ostrogoths, and these by the Longobardi. Thus began those migrations of the innumerable hosts, that spread themselves from the North and East over all Europe, subduing everything in their course. This event is called the great migration of the nations. (Encyclopaedia Americana, vol. 5, p. 452, seqq.)

GERMANICUS C. S., the eldest son of Drusus Nero Germanicus, and of Antonia the younger, born B.C. 14. He was the nephew of Tiberius and brother of Claudius, afterward emperor. Augustus, on adopting Tiberius, made the latter adopt his nephew Germanicus. At the age of twenty Germanicus served with distinction in Dalmatia, and afterward in Pannonia, and, on his return to Rome, obtained the honours of a triumph. He married Agrippina the elder, grand-daughter of Augustus, by whom he had nine children, of whom Caligula was the eldest. He was the son-in-law of Germanicus, and the mother of Nero. In A.D. 12, Germanicus was made consul, and soon after he was sent by Augustus to command the legions on the Rhine. On the news of the death of Augustus, some of the legions mutinied, while Germanicus was absent collecting the revenue in Gaul. He hastened back to the camp, and found it one scene of tumult and confusion. The young soldiers demanded an increase of pay, the veterans their discharge. They had already consumed 100,000 of the latter. Some offered their assistance to raise Germanicus to the supreme power, but he rejected their offers with horror, and left his judgment-seat, heedless of the clamour and threats of the mutineers. Having retired with a few friends to his tent, after some consultation on the danger to the empire if the hostile Germans should take advantage of the confusion caused by this sedition of the troops, he determined upon exhibiting to the soldiers fictitious letters of Tiberius, which granted most of their demands, and, the better to appease them, he dispersed to them immediately a considerable sum by way of bounty. He found still greater difficulty, however, in quelling a second mutiny, which broke out on the arrival of legates from the senate, who brought to Germanicus his promotion to the rank of proconsul. The soldiers suspected that they came with orders for their punishment, and the camp became again a scene of confusion. Germanicus ordered his wife Agrippina, with her son Caius Caligula, attended by other officers' wives and children, to leave the camp, as being no longer a place of safety for them. This sight affected and mortified the soldiers, who begged their commander to revoke the order, to punish the guilty, and to march against the enemy. They then began to inflict summary execution on the ringleaders of the mutiny, without waiting for the sanction of their general. A similar scene took place in the camp of two other legions, which were stationed in another part of the country, under the orders of Cincia. Availing himself of the state of excitement on the part of the soldiers, Germanicus crossed the Rhine, attacked the Marsi, the Bructeri, and other German tribes, and routed them with great slaughter. The following year he defeated the Catti, and, after having burned the city of Mammian (according to Tácitus, in the year 19), he victoriously returned over the Rhine. Here some deputies of Segestes appeared before him, soliciting, in the name of their master, his assistance against Arminius, the son-in-law of Segestes, by whom the latter was be-
Gersdernian hastened to his rescue, and made his way back to his own camp, where he found that his forces had been defeated and that the Germans had taken possession of the region.

The Roman army was in retreat, and Tacitus comments that Tiberius was not satisfied with the news of the defeat of the Romans, and that he immediately ordered an attack on the Germans.

The Roman forces were ordered to retreat, and Tacitus comments that this was a mistake, as Tiberius was not satisfied with the news of the defeat of the Romans, and that he immediately ordered an attack on the Germans.

The German forces were led by Arminius, who had been a Roman general before being captured by the Germans and converted to their cause.

Arminius was a skilled general, and he led his forces to victory over the Romans. The Romans were surprised by the attack and were defeated, with many of their soldiers being killed or captured.

After the battle, Arminius was able to negotiate a truce with the Romans, and Tacitus comments that this was a good decision, as it allowed the Romans to regroup and prepare for the next battle.

The Romans were able to recover from the defeat, and Tacitus comments that they were able to prepare for the next battle, which was fought near the town of Hieriski, where there were some German forces. (Tacit., Germ. 1.)

GERONTHAEA, a town of Laosca, to the north of Helos, founded by the Achæans long before the invasion of the Dorians and the Heraclids, and subsequently colonized by the latter. When Pausanias visited the town, he found Gerontaea in possession of the Eleuther-Lacones. It contained a temple and grove of Mars, and another temple of Apollo. This ancient temple was supposed to have been situated near the village of Hieriski, where there are some Germanic excavations. (Pausan., 3, 22.—Cramer’s Anc. Greece, vol. 3, p. 218.)

GERRA, I. a city of Arabia Deserta, on the Sinus Persicus. It was enriched by commerce, and the principal articles of trade were the perfumes brought from the Sába, sent up the Euphrates to Taspacus, and across the desert to Petra. (Plin., 6, 28.—Schol. ad Nicand., Alexiph., v. 107.) This city, for the construction of whose houses and ramparts stones of salt were used, appears to have been represented by that now named El-Katif.—II. A city of Xygætis Inferior, or lower Egypt, in the eastern quarter, about eight miles from Pelusium. Now probably Maselī.—III. A city of Syria, in the district of Cyrrhestica, between Bethmannaria and Amara, and near the Euphrates. Now Surak.—IV. According to Pтолемæus, a city on the Island Meninx, in the Syriæ Minor, west of the city of Meninx. (Bischaff and Möller, Wörterb. der Geogr., s. 5.)

GERBIS, a people of Scythia, in whose country the Borysanthians rose. The kings of Scythia were buried in their territories. (Herodot., 4, 71.)

GERMIS, a river of Scythia, which, according to Herodotus (4, 56), separated from the Borysanthians, near the place as far as which that river was first known. It flowed towards the sea, dividing the territories of the Herdsmen from those of the Royal Scythians, and supposed to have been the scene of the memorable battle fought by the Scythians under Arminius, and the Romans under Tiberius. Tacitus makes it the same with the modern Moloszniajvaci. Reunell, however, inclines in favour of the Tauczenac. (Geogr. of Herodot., p. 71.)

GERYON, GERYONEUS, and GERYONES, a celebrated monster, born from the union of Chyssar with Callirhoe. He had the bodies of three men united: they cohered above, but below the loins they were divided into three. He lived in the island of Erythea, in the Sinus Mediteranni, and was the possessor of a remarkable oxen. They were of a purple hue, and were guarded by a heraldman named Eurytion, and by the two-headed dog Orthus, the progeny of Echidna and Typhon. The tenth labour of Hercules was to bring the oxen of Geryon from the island where they were pastured. Having reached Erythea in the golden cup of the Sun-god, he passed the night on Mount Abas. The dog Orthus, discovering him, flew at him, and Hercules struck him with his club, and killed Eurytion who came up to his aid. Menestes, who kept in the same place the oxen of Hades, having informed Geryon of what had happened, the latter pursued the cattle and overtook Hercules as he was driving the cattle along the river Anthemus. Geryon there attacked him, but was slain by his arrows; and Hercules, placing the oxen in the cup, brought them over to the Continent. (Jil., 17, 13, 14.)—According to some ancient writers, the oxen of Geryon were brought, not from the island of Erythea, but from Acarnania. Consult on this subject remarks of Creuzer (Hist. Grac. Antiq., 347., p. 51, not.)

GESSORIACUM, a town of the Morini, in Gaul; it was afterward named Bononia, or Bolonia, and is now Boulogne. It appears to be the same with the Moro-

Rod., 4, 125.) This circumstance forms an important argument in the question respecting the affinity between the early Germanic and Persian races. (Con-}

sider remarks of the article Gersdernian, p. 1.)

This image contains a page of text. The text appears to be discussing historical events, specifically focusing on Tacitus' account of the Battle of the Weser in the context of Roman-Germanic relations. The text mentions the Roman general Tiberius and his response to the defeat, leading to the negotiation of a truce with the Germans. It also notes that the Romans were able to recover and prepare for the next battle. The text further describes the city of Gerontaea and its significance in terms of trade and warfare. The discussion continues with the mention of Geryon, a legendary figure in Greek mythology, and its association with the legendary battle of the Weser. The text concludes with remarks on the historical significance of Gessoriaicum, a town of the Morini in Gaul. The text is rich with historical and geographical references, providing insights into ancient Roman and Germanic interactions. The description also highlights the importance of Tacitus' work in preserving historical accounts of these events.
nert makes it identical with the Portus Icili or Iltus. (Mela, 3. 2. — Sueton., Vit. Claud., 17. — Evrotap., 9, 8. — Zosimus, 6. 2.)

Geta, Antonius, younger son of the Emperor Septem-

ber 11, was born A.D. 190, and made Caesar and 

colleague with his father and brother, A.D. 208. The

most remarkable circumstance recorded of him is the
dissimilarity of his disposition to that of his father

and brother, who were both cruel, while Geta

was distinguished by his mildness and affability. He

is said to have several times reproved his brother Car-

calla for his profanity to shed blood, in consequence

of which he incurred his mortal hatred. When Severus

died at Eberaum (Virid.), A.D. 211, he named his

two sons as his joint successors in the empire. The

soldiers, who were much attached to Geta, withheld

all the insinuations of Caracalla, who wished to reign

alone, and insisted upon swearing allegiance to both

emperors together. After a short and unsuccessful

campaign, the two brothers, with their mother Julia,

proceeded to Rome, where, after performing the fu-
nal rites of their father, they divided the imperial

palace between them, and at one time thought of di-

viding the empire likewise. Geta, who was fond of

tranquillity, proposed to take Asia and Egypt, and to

reside at Antioch or Alexandria; but the Empress Ju-

lia with tears deprecated the partition, saying that she

could not bear to part from either of her sons. After

repeated attempts of Caracalla to murder Geta, he

feigned a wish to be reconciled to his brother, and in-

vited him to a conference in their mother's apartment.

Geta, unsuspectingly went, and was stabbed by some

centurions whom Caracalla had concealed for the pur-

pose. His mother Julia tried to shield him, but they

murdered him in her arms, and she was stained by his

blood, and wounded in one of her hands. This hap-

pened A.D. 212. After the murder Caracalla began a

fearful proscription of all the friends of Geta, and also

of those who lamented his death on public grounds.

(Spartian., Vit. Geta. — Herodian, 4, 1, seqq. — Dio

Cas., 77, 5, seqq.)

Gete, the name of a northern tribe mentioned in

Roman history, inhabiting the country on both banks

of the Danube near its easterly, and along the western

shores of the Euxine. Those who lived south of the

Danube were brought into a kind of subjection to

Rome in the time of Augustus (Dio Cass., 51); and

their country, called Scythia Parva, and also Pontus,

is well known, under the latter name, through the poems

which the poets, especially the Augustan poets,

composed on this subject and on the place of his

residence. He gives in many passages a dismal

account of the appearance and manners of the Getes,

especially in elegies seventh and tenth of the fifth book

of his Tristia. The maritime parts of the country had

been in former times colonized by the Greeks, and this

may account for the partial civilization of the Gete

south of the Danube, while their brethren north of the

same river remained in a state of barbarism and inde-

pendence. The Gotes are described by Herodian

(4, 93) as living in his time south of the Ister (Dan-

ube). He calls them the bravest of the Thracians.
The Goths are supposed to have had a common ori-

gin with the Getes. (Plin., 4, 11. — Mela, 2, 2. —

Jornand., de Regn. Success., p. 50, seq.)

Gigantes, the sons of Ceus and Terra, who, ac-

cording to Hesiod, sprang from the blood of the wound

which Vergil describes as having been made by the

southern Caesars upon their son Sertorius; while Hy-

ginus calls them sons of Tartarus and Terra. They are

represented as of uncommon stature, with strength pro-

portioned to their gigantic size. Some of them, as

Cetus, Briareus, and Gyges, had fifty heads and one

hundred arms. The giants are fabled by the poets to

have made war upon the gods. The scene of the

conflict is said to have been the peninsula of Pallene;

and with the aid of Hercules the gods subdued their

formidable foes. The principal champions on the side

of the giants were Persephone, Alcyoneus, and Enel-

adus, on the last of whom Minerva flung the island

of Sicily, where his invisible causes the eruptions

of Etna. (Pind., Pyth., 8, 15. — Id., Nem., 1, 100.)

Apollod., 1, 5, 23.)—The gods, while engaged in the

destruction of the giants, brought forth the huge Ty-

phon to contend with the gods. The stature of this

monster reached the sky; fire flashed from his eyes;

he hurled glowing rocks with loud cries and hissing

against heaven, and flame and storm rushed from his

mouth. The gods, in dismay, fled to Egypt, and con-

cealed themselves under the arms of various animals.

Jupiter, however, after a severe conflict, overcame him,

and placed him beneath Etna. (Pind., Pyth., 1, 90,

seqq. — Id., frag. Etnic., 5. — Ezech., Prom., V., 351,
