Meséna, a daughter of Triopas, king of Argos, who married Polycaon, son of Leius, king of Lacoenia. She encouraged her husband to levy troops, and to seize a part of the Peloponnesus, which, after it had been conquered, received her name. (Pausan., 4, 1.)

Meséna (or, in the Doric dialect of the country, Messána, Meosína), the chief city of Messenia, in the Peloponnesus, was founded by Lacon, the son of Asopus, and founded by Epaminondas. It is said to have been completed and fortified in eighty-five days, so great was the zeal and activity displayed by the Thebans and their allies in this undertaking. (Diod. Sic., 15, 66.) Pausanias informs us, that the walls of this city were the strongest he had ever seen, being entirely of stone, and well supplied with towers and buttresses. The citadel was situated on Mount Ithome, celebrated in history for the long and obstinate defence which the Messenians there made against the Spartans in their last revolt. The history of this city is identified with that of Messenia, which latter article may hence be consulted.—The ruins of Messene are visible, as we learn from Sir W. Cell, at Maurornatis, a small village, with a beautiful source, under Ithome, in the centre of the ancient city. (Itin., p. 99.—Cramer's Anc. Greece, vol. 3, p. 150.—Cell's Itin. of Cramer's Graecia, vol. 2, p. 127.)

Messenia, a country of the Peloponnesus, between Laconia, Elis, Arcadia, and the Ionian Sea. The river Neda formed the boundary towards Elis and Arcadia. From the latter country it was farther divided by an irregular line of mountains, extending in a south-easterly direction to the chain of Taygetus on the Laconian border. This celebrated range marked the limits of the province to the east, as far as the source of the little river Pamisus, which completed the line of separation from the Spartan territory to the south. (Strabo, 361.—Cramer's Anc. Greece, vol. 3, p. 130.) Its area is calculated by Clinton at 1162 square miles. (Fast. Hell., vol. 2, p. 385.) Messenia is described by Pausanias as the most fertile province of Peloponnesus (4, 15, 3), and Euryipides, in a passage quoted by Strabo (396), speaks of it as a land well watered, very fertile, with beautiful pastures for cattle, and possessed of a climate which sometime partook of the hot in summer. The western part of the country is drained by the river Pamisus, which rises in the mountains between Arcadia and Messenia, and flows southward into the Messenian Gulf. The basin of the Pamisus is divided into two distinct parts, which are separated from each other on the east by some high land that stretches from the Taygetus to the Pamisus, and on the western side of the river by Mount Ithome. The upper part, usually called the plain of Stenyclerus, is of small extent and moderate fertility; but the lower part, south of Ithome, is an extensive plain, celebrated in ancient times for its great fertility, whence it was frequently called Macaria, or "the blessed." Leake describes it as covered at the present day with plantations of the vine, the fig, and the mulberry, and "as rich in cultivation as can well be imagined." (Travels in the Morea, vol. 1, p. 352.) The western part of Messenia is overspread by hills and valleys, but contains no high mountains. (Encycl. U. Br. Knowl., vol. 15, p. 126.)—We learn from Pausanias (4, 1, 2), that Messenia derived its appellation from Messene, wife of Polycaon, one of the earliest sovereigns of the country. He also observes, that whenever this name occurs in Homer, it denotes the province rather than the city of Messene, which he connected neither with the time of Epaminondas (Compare Strabo, 358.) At the period of the Trojan war, it appears from the poet that Messenia was partly under the dominion of Menelaus, and partly under that of Nestor. This is evident from the towns which he has assigned to these respective leaders, and is farther confirmed by the testimony of Strabo and Pausanius.
MESSENIA.

(Messenia, B.C. 743—747.) In the division of the Peloponnesus, made after the return of the Heraclidæ, Messenia fell to the share of Creophontes, son of Aristodemus, with whom commenced the Dorian line, which continued without interruption for many generations. In the middle of the eighth century before the Christian era, a series of disputes and skirmishes arose on the borders of Messenia and Laconia, which gave rise to a confirmed hatred between the two nations. Prompted by this feeling, the Spartans were said to have bound themselves by an oath never to return home till Messenia was subdued; and they commenced the contest by a midnight attack on Amphiæa, a frontier town, which they took, and put the inhabitants to the sword. This was the commencement of what was called the First Messenian War. The date of which is usually given, though it cannot be believed with certainty, as B.C. 742. 

End claims of hereditary, others had assumed the leadership, and courage sufficient for the crisis. Aware of the Lacedemonian superiority in the field, he protracted the war, avoiding battles and defending the towns. In the fourth year, however, a battle was fought with great slaughter and doubtful success. But the Messenians were suffering from garrison-confinement and the constant plundering of their lands. New measures were taken. The people were excitement was planted. With its natural strength, and open to supplies by sea, the Lacedæmonians having no fleet. Meanwhile they asked advice of the Delphic oracle, which bade them sacrifice to the infernal deities a virgin of the blood of Ægyptus, son of the Heraclid Creophontes. Impelled by patriotism or ambition, Aristodemus offered his own daughter; and, when it was intended to save her, he drew his sword in his hand, and offered it to his own. The fame of the obedience paid to the oracle so far disheartened the enemy, that the war languished for five years; in the sixth an invasion took place, and a battle, bloody and indecisive like the former. Euphaes was killed, and left no issue, and Aristodemus was elected to succeed him. The new prince was brave and able, and the Lacedæmonians, weakened by the battle, confined themselves for four years to the possession of his terrors. At last they again invaded Messenia, and were defeated; but, in the midst of his success, Aristodemus was so possessed with remorse for his daughter's death, that he slew himself on her tomb, and deprived his country of the only leader able to defend her. Ithome was besieged. The famished inhabitants found means to pass the Lacedæmonian lines, and fled for shelter and subsistence, some to neighboring states where they had lived in immemorial peace, others to the desert plains beyond the borders of their desolate country. Ithome was dismantled; and those who remained of the Messenians were allowed to occupy most of the lands, paying half the produce to Sparta.—The absence from home to which the Lacedæmonians had bound themselves, became, by the protraction of the war, an evil threatening the existence of the state, no children being born to supply the wants of war and natural decay. The remedy said to have been adopted was a strange one, highly characteristic of Lacedæmon, and such as no other people would have used. The young men who had come to maturity since the beginning of the war were free from the oath, and they were sent home to cohabit promiscuously with the marriageable virgins. But even at Sparta this expedient, in some degree, ran counter to the popular feelings. When the war was ended, and the children of this irregular intercourse were grown to manhood, though bred in all the discipline of Lycurgus, they found themselves generally slighted. Their spirit was high, their discontent dangerous; and it was thought prudent to offer them the means of settling out of Peloponnesus. They willingly emigrated, and, under Phalanthus, one of their number, they founded the city of Tarentum in Italy. (Vid. Parthenius.)—During forty years Messenia bore the yoke. But the oppression of the inhabitants was grievous, and imbittered with every circumstance of insult, and the Grecian spirit of independence was yet strong in them; they only wanted a leader, and a leader was found in Aristomenes, a youth of the royal line. Support being promised from Argos and Arcadia, allies of his country in a former war, Aristomenes attacked a body of Lacedæmonians, and, though not completely successful, did such feats of valour that the Messenians would have chosen him king; but he declined it, and was made general-in-chief. His next adventure was an attempt to practise on the superstitious fears of the enemy. Sparta having neither walls nor watch, he easily entered it alone by night, and hung against the Brazen House (a temple of the goddess of the lapis). The inscription declaring that Aristomenes, from the spoils of the Lacedæmonians, dedicated that shield to the goddess. Alarmed lest their protecting goddess should be won from them, the Lacedæmonians sent to consult the Delphian oracle, and were directed to take an Athenian adviser. The Athenians, though far from wishing the subjugation of Messenia, yet feared to offend the god if they refused compliance; but, in granting what was asked, they sent Tyrtaeus, a poet, and supposed to be of no ability. The choice proved better than they intended, since the poetry of Tyrtaeus being very popular, kept up the spirit of the people in all reverses.—The Messenian army had now been re-enforced from Argos, Elis, Arcadia, and Sicyon, and Messenian refugees came in daily: the Lacedæmonians had been joined by the Arcadians, Persians in Cynuria, who, by the desperate courage of the Messenians, and the conduct and extraordinary personal exertions of their leader, the Lacedæmonians were routed with such slaughter that they were on the point of suing for peace. Tyrtaeus diverted them from this submission, and persuaded them to recruit their numbers by associating some Helots, a measure very galling to Spartan pride. Meanwhile Aristomenes was ever harassing the intruders. Tyrtaeus was sent from Cyprus, where off from Caryæ a number of Spartan virgins assembled to celebrate the festival of Diana. He formed a body-guard of young and noble Messenians, who always fought by his side, and to whose charge he gave the captives. Heated with wine, the young men attempted to violate their chastity, and Aristomenes, after vainly remonstrating, killed the most refractory with his own hand, and, on receiving their ransom restored the girls unharmed to their parents. Another time, in an assault on Ægina, he is said to have been made prisoner by some Spartan women there assembled, who repelled the assault with a vigour equal to that of the men; but one of them who had previously loved him favoured his escape. —In the third year of the war, another battle took place at Megalethaphus, the Messenians being joined by the Arcadians. Through the treachery of Aristocrates, prince of Orchomenus, the Arcadian leader, the Messenians were surrounded and cut to pieces, and Aristomenes, escaping with a scanty remnant, was obliged to give up the defence of his country, and collect his forces at Ira, a stronghold near the sea. Here he supplied the garrison by plundering excursions, so ably conducted as to foil every precaution of the besiegers, insomuch that they were embarrassed all the culture of the conquered territory, and even of part of Laconia. At last, falling in with a large body of Lacedæmonians under both their kings, after an obstinate defence he was shot down and taken, with about fifty of his band. The prisoners were thrown as rebels into a deep cavern, and were killed by the fall except...
Aristomenes, who was wonderfully preserved and enabled to escape, and, returning to Ira, soon gave proof to the enemy of his presence by fresh exploits equally daring and judicious. The siege was protracted till the eleventh year, when the Lacedaemonian commander, one stormy night, learning that a post in the line had been quitted by its guard, silently occupied it with his men. Aristomenes heard of his movement and commenced a vigorous defence, the women assisting by throwing tiles from the house-tops, and many, when driven thence by the storm, even taking arms and mixing in the fight. But the superior numbers of the Lacedaemonians enabled them constantly to bring up fresh troops, while the Messenians were fighting without rest or pause, with the tempest driving in their faces. Cold, wet, sleepless, jaded, and hungry, they kept up the struggle for three nights and two days; at length, when all was vain, they formed their column, placing in the middle their women and children and most portable effects, and resolved to make their way out of the place. Aristomenes demanded a passage, which was granted by the enemy, unwilling to risk the effects of their despair. Their march was towards Arcadia, where they were most kindly received, and allotments were offered them of land. Early the following year, the moment was chosen for the deliverance of his country. He selected 500 Messenians, who were joined by 300 Arcadian volunteers, and resolved to attempt the surprise of Sparta while the army was in the farthest part of Messenia, where Pylos and Methone still held out. But the enterprise was frustrated by Aristocrates, who sent word of it to Sparta. The messenger was seized on his return, and the letters found on him discovering both the present and former treachery of his master, the indignant people stoned the traitor to death, and erected a pillar to commemorate his infamy.—The Messenians, who fell under the power of Lacedaemon, were made Helots. The Pylians and Methomans, and others on the coast, now giving up all hope of farther resistance, proposed to their countrymen in Arcadia to join them in seeking some fit place for a colony, and requested Aristomenes to be their leader. He sent his son. For himself, he resolved to cross to Italy, and assist with Lacedaemon, and he well knew that, while lived, some ill would ever be happening to it. After the former war, the town of Rhégium in Italy had been partly peopled by expelled Messenians. The exiles were now invited by the Rhégians to assist them against Zanclé, a hostile Grecian town on the opposite coast of Sicily, and in case of victory the town was offered them as a settlement. Zanclé was besieged, and the Messenians having mastered the walls, the inhabitants were at their mercy. In the common course of Grecian warfare, they would all have been either slaughtered or sold for slaves, and such was the wish of the Rhégian prince. But Aristomenes had taught his followers a nobler lesson. They refused to inflict on other Greeks what they had suffered from the Lacedaemonians, and made a convention with the Zancleans, by which each nation was to live on equal terms in the city. This was the origin of Messana. (Vid. Messana.)—Aristomenes vainly sought the means of farther hostilities against Sparta, but his remaining days were passed in tranquillity with Damaget, prince of Ialysus in Rhodes, who had married his daughter. His actions dwelt in the memories of his countrymen, and cheered them in their wanderings and sufferings: and from their legend, which has come together with that of the Lacedaemo- nians, and with the poems of Tyrtaeus, the story of the two Messenian wars has been chiefly gathered by the learned and careful antiquary Pausanias, from whose work it is here taken. The character of Aristomenes, as thus represented, combines all the elements of goodness and greatness, in a degree almost unparalleled among Grecian heroes. Inexhaustible in resources, unconquerable in spirit, and resolutely persevering through every extremity of hopeless danger, an ardent patriot and a formidable warrior, he yet was formed to find his happiness in peace; and after passing his youth under oppression, and his manhood in war against a cruel enemy, wherein he is said to have removed a town from the land of the Messenians, and retained a singular gentleness of nature, insomuch that he is related to have wept at the fate of the traitor Aristocrates. The original injustice and subsequent tyranny of the Lacedaemonians, with the crowning outrage in the condemnation as rebels of himself and his companions, might have driven a meaner spirit to acts of like barbarity; but, deep as was his hatred to Sparta, he conducted the struggle with uniform obedience to the laws of war, and sometimes in the case of the virgins taken at Carye, with more than usual generosity and strictness of morals.—The Messenians who remained in their country were treated with the greatest severity by the Spartans, and reduced to the condition of Helots or slaves. This cruel oppression induced them once more to take up arms, in the 79th Olympiad, and to fortify Mount Ithome, where they defended themselves for ten years, and never set foot on Sparta for fear of being so greatly reduced in numbers by a earthquake, which destroyed several of their towns, that they were compelled to have recourse to their allies for assistance. (Thucyd., 1, 101—Pausan., 4, 24.) At length the Messenians, worn out by this protracted siege, agreed to surrender the place on condition that they should be allowed to retire from the Peloponnesus. The Athenians were at this time on no friendly terms with the Spartans, and gladly received the refugees of Ithome, allowing them to settle at Naupactus, which they had taken from the Locri Ozoles. (Thucyd., 1, 103—Pausan., l. c.) Grateful for the protection thus afforded them, the Messenians displayed great zeal in the cause of Athens during the Peloponnesian war. Thucydides has recorded several instances in which they rendered important services to that power, not only at Naupactus, but in Ætolia and Amphipolis, at Pylos, at Methone in the Lacedaemonian war, and at Ëgospotamos for the Sicilian expedition. When, however, the dis- aster of Ægospotamos placed Athens at the mercy of her rival, the Spartans obtained possession of Naupactus, and compelled the Messenians to quit a town which had so long afforded them refuge. Many of these, on this occasion, crossed over into Sicily, to join their countrymen who were established there, and others sailed to Africa, where they procured settlements among the Eversperites, a Libyan people. (Pausan., 4, 26.) After the battle of Leuctra, however, which humbled the pride of Sparta, and paved the way for the ascendency of Thebes, Epaminondas, who directed the counsels of the latter republic, with masterly policy determined to restore the Messenian nation, by collecting the remnants of this brave and warlike people. He accordingly despatched agents to Sicily, Italy, and Africa, whither the Messenians had emigrated, to recall them to their ancient homes, and they were chosen to enjoy the blessings of peace and liberty, under the powerful protection of Thebes, Argos, and Arcadia. Gladly did they obey the summons of the Theban general, and hastened to return to that country, the recollection of which they had ever fondly cherished. Epaminondas, meanwhile, had made every preparation for the erection of a city under Ithome, which was to be the metropolis of Messenia, and such was the zeal and activity displayed by the Thebans and their allies in this great undertaking, that the city, which they named Messene, was completed in eighty-five days. (Diod. Sic., 15, 66.) The entrance of the Messenians, which took place in the fourth year of the 103d Olympiad, was attended with great pomp, and the celebrat...
tion of solemn sacrifices, and devout involvements to their gods and heroes. The lapse of 287 years from the capture of Ira, and the termination of the second war, seemed to bring about a decided change in their religion, their national customs, or their language, which, according to that historian, they spoke even more correctly than the rest of the Peloponnesians.

_Pausan., 4, 27._

Other towns being soon after reoccupied, the Messenians were presently in a condition to make head against Sparta, even after the death of Epaminondas and the decline of Thebes. That great general strenuously exerted himself, as the surest means of preserving their country, to enter into the closest alliance with the Arcadians, which salutary counsel they carefully adhered to. (_Polyb., 4, 32, 10._) They likewise conciliated the favour of Philip of Macedon, whose power rendered him formidable to all the states of Greece, and his influence now pro cured for them the restoration of some towns which the Lacedaemonians still retained in their possession. (_Polyb., 9, 28, 7._)

_Pausan., 4, 28._ Strabo, 361.) During the wars and revolutions which agitated Greece upon the death of Alexander, they still preserved their independence, and having, not long after that event, joined the Achaean confederacy, they were present at the battle of Sellasia and the capture of Sparta by Antigonus Doson. (_Pausan., 4, 29._) In the reign of Philip, son of Demetrius, an unsuccessful attack was made on their city by Demetrius of Pharsus, then in the Macedonian service. The habitants, though taken by surprise, defended their city with desperation. Philip, however, nearly all the whole of the enemy's detachment was cut to pieces, and their general, Demetrius, slain. (_Strabo, 361._)--_Polyb., 3, 19, 2._ Nabis, tyrant of Lacedaemon, made another attack on this city by night some years afterward, and had already penetrated within the walls, when succours arriving from Megalopolis under the command of Philopemen, he was forced to evacuate the place. Subsequently to this event, great dissensions arose among the Achaean states, which ultimately led to a rupture between the Achaeans and Messenians. Pausanias was not able to ascertain the immediate provocation which induced the Achaeans to declare war against the Messenians. But Polybius does not scruple to blame his countrymen, and more especially Philopemen, for their conduct to a people with whom they were united by federal ties. (_Polyb., 39, 19, 5._) Hostilities commenced unfavourably for the Messenians, and the course of events was not altered by a surprise, and disaster, not much short of Ajax, which ultimately conveyed them into a land of the hands of the victors. So exasperated were the Messenians at the conduct of this celebrated general, that he was thrown into a dungeon, and soon after put to death by poison. His destroyers, however, did not escape the vengeance of the Achaeans; for Lysorts, who succeeded to the command, having defeated the Messenians, captured their city, and caused all those who had been concerned in the death of Philopemen to be immediately executed. Peace was then restored, and Messenia once more joined the Achaean confederacy, and remained attached to that republic till the period of its dissolution. (_Livy, 39, 49._)--_Polyb., 24, 9._--_Pausan., 4, 29._--_Cramer's Anc. Greece, vol. 3, p. 122, seq._

_METEA._--_Eratosthenes, Geography, vol. 1, p. 106._--_Polyb., 1292._

Use of the term, and the site, have been discussed at large in the work of Cramer, and will here be reserved for a more convenient point in the course of the narrative.

METEA, a town in the territory of the Bruttii, in Italy, not far from Medurna, and below Vibo Valentia. Its site is generally supposed to accord with that of the modern Giaja. According to Stephanus, this ancient place was a colony of the Locri; and the same writer farther states, that, according to some accounts, it gave birth to the poet Stesichorus, though that honour is usually ascribed to him by Himerus in Sicily. Solinus, on the other hand (c. 8), asserts, that Metænum was founded by the Zancleans. (_Compare Mela, 2, 4._)--_Cramer's Anc. Italy, vol. 2, p. 423._

_Metaurus._--_Cramer's Anc. Italy, vol. 2, p. 432._

_METEA._--_Cramer's Anc. Italy, vol. 2, p. 432._

It is a river in the territory of the Bruttii, running into the Tyrrhenian or Lower sea. The town of Metænum is supposed to have stood at or near its mouth. It is now called the Metaurus, and sometimes the Petrusa. (_Cramer, It. Ant., vol. 2, p. 1292._) It appears to have been noted for the excellence of the
chunny fish caught at its mouth. (Athen. 7, 63.) Strabo speaks of a part of the same name, which may have been the town of Metaurus. (Strab. 256.—Cramer’s Anc. Italy, vol. 2, p. 423.) II. A river of Umbria, in Italy, flowing into the Adriatic. It was rendered memorable by the defeat of Hasdrubal, the brother of Hannibal. The Roman forces were commanded by the consuls Livius Salinator and Claudius Nero. A.U.C. 545. It is now the Metro. The battle must have taken place near the modern Possembrone, and on the left bank of the Metro. Through Livy has given no precise description of the spot, it may be collected that it was in that part of the course of the river where it begins to be enclosed between high and steep rocks (27, 47). Tradition has preserved a record of the event in the name of a hill between Possembrone and the pass of Furba, called Monte d’Asdrubale. (Cramer’s Anc. Italy, vol. 1, p. 261.) Metelli, a distinguished family of the Cecilian gens in Rome. Those most worthy of notice are: I. Q. Caecilius Metellus Macedonicus, was sent, when praetor (B.C. 148), into Macedonia, against Andronicus, who pretended to be a son of Perseus, the last king of Macedonia, and who had excited a revolt against the Romans. In this war Andronicus was defeated and taken prisoner by Metellus, who obtained, in consequence, a triumph, and the surname of Macedonicus. (Livy, Epit. 50.—Plut. 7, 13, 1.—Eutrop. 5, 8.) The date of the war was 151 B.C. Metellus was sent into Spain to oppose Viriathus, who had obtained possession of the whole of Lusitania, and had defeated successively the praetors Vetilius and Plautius. Metellus remained in Spain two years, and obtained several victories; but was superseded in the command, before the conclusion of the war, by Pompey. (Livy, Epit. 52, 53.—Val. Max., 3, 2, 21.—Id., 7, 4, 5.—Id., 9, 3, 7.—Appian, Ber., 76.) During the census in 150 B.C., and the war with Spain was protracted, a young man was murdered on the road, and it was with the greatest difficulty that his friends were enabled to preserve his life by obtaining another tribune to put his veto upon the order of Attius. (Livy, Epit. 59.—Plin., 7, 45.) Pliny refers to Metellus as an extraordinary example of human happiness: “Far, besides the possession of the highest dignities,” says the Roman writer, “and having obtained a surname from the conquest of Macedonia, he was carried to the funeral pile by four sons, of whom one had been praetor, three had been consuls, two had enjoyed a triumph, and one had been censor.” (Plin., 7, 45.) II. Q. Caecilius Metellus Numidianus, derived his surname from his victories in Numidia, whither he was sent in his consularship, B.C. 109, in order to oppose Jugurtha. He remained in Numidia, B.C. 108, as proconsul; but, in the beginning of the following year, he was superseded in the command by Marius, who had, previously been his legatus or lieutenant-general. On his return to Rome Metellus obtained the honours of a triumph. (Sallust, Bell. Jug.—Vel. Paterc., 2, 11.—Eutrop. 4, 27.—Livy, Epit. 65.) Metellus was censor B.C. 102. He took an active part in the civil commotions of his time, and was one of the most powerful supporters of the aristocratical party. In B.C. 109 he was obliged to go into exile, in consequence of opposing the measures of the tribune Saturninus; but, on the execution of the latter, Metellus was recalled from exile in the following year. (Vid. Marius.)—III. Q. Caecilius Metellus Pius, son of the preceding, belonged to the same political party as his father, and supported Sylla in his contest with Marius. Metellus received especial marks of favour from Sylla, and was consul with him B.C. 80. He was sent, in B.C. 78, against Sertorius in Spain, where he appears to have remained till the conclusion of the war, in B.C. 72. From the year 76 B.C. Pompey was his colleague in command, and they triumphed together at the end of the war. (Vell. Paterc., 2, 30.—Eutrop. 6, 5.—Plut., Vit. Pompey.) Pompey’s eldest son was Pontifex Maximus; and on his death, B.C. 63, in the consulship of Cicero, he was succeeded in that dignity by Julius Caesar. (Encycl. Us. Knact., vol. 15, p. 137.) Methodius, I. surnamed Euubulus, a father of the church, and a martyr, flourished at the beginning of the fourth century. He was at first bishop of Olympus or Patara in Lycaea, but was afterward translated to the see of Tyre. This latter station, however, he occupied only a short time. His zeal for the purity of the Christian faith exposed him to the resentment of the Arians; he was exiled to Chalcidice in Syria, and there received the crown of martyrdom, A.D. 312. He was the author of a long poem against Porphry; a treatise on the Resurrection, against Origen; another on the Pythonees; another on Free Will; a dialogue entitled “The Banquet of the Virgins,” &c. Several fragments of this author have been collected. The “Banquet of the Virgins” has reached us entire. It was first printed in the Latin version, and a Dissertation and a Dissertation by Leo Allatius. It is a dialogue on the excellence of chastity, modelled after the Banquet of Plato. The best edition is that of Fabricius, appended to the second volume of the works of St. Hyyppolitus, Amb., 1718.—II. A patriarch of Constantinople, born at Syracuse about the commencement of the ninth century. After various difficulties, into which he was plunged by his attachment to the Monothelites, he repelled the Nestorians, and, after being twice excommunicated, obtained the see of Constantinople, A.D. 842. His first act after his accession to the episcopal office was to assemble a council and re-establish the worship of images. He died A.D. 846. He was the author of several works, which are given by Combes in his Bibliotheca Patrum.—III. A monk and painter, born at Thessalonica, and who flourished about the middle of the 9th century. He is celebrated for having composed a dialogue on the question of the triumphs of the Monothelites, having converted them, &c., by means of a picture representing the scenes of the last judgment. (Biogr. Univ., vol. 28, p. 465.) Methone, f. a city of Macedonia, about forty stadia north of Pydna, according to the epitomist of Strabo (330). It was celebrated in history from the circumstance of Philip’s having lost an eye in besieging the place. (Strab. l. c.—Demosth., Olynth., 1, 9.) That it was a Greek colony we learn from Sclavix (Peripl., p. 26), and also Plutarch, who reports that a party of Eretrians settled there, naming the place Methone, from Methon, an ancestor of Orpheus. He adds, that these Greek colonists were termed Apospondendonti by the natives. (Quast. Grac.) It appears from Athenaeus that Aristotle wrote an account of the Methonean commonwealth (6, 27). This town was occupied by the Athenians towards the close of the Peloponnesian war, with a view of annoying Pericles by ravaging his territory and affording a refuge to his discontented subjects. When Philip, the son of Amyntas, succeeded to the crown, the Athenians, who still held Methone, landed three thousand men, in order to establish Argus on the throne of Macedonia; they were, however, defeated by the young prince, and driven back to Methone. Several years after, Philip laid siege to this place, which at the end of twelve months was captured. The inhabitants, having set fire to the town, the walls were razed to the ground. (Diod., 16, 34.) Dr. Clarke and Dr. Holland concur in supposing that the site of Methone answers to that
of Leotourochri. (Cramer's Anc. Greece, vol. 1, p. 216.)—N. A city of Thessaly, noticed by Homer (II., 2, 716), and situate, like the preceding, on the seacoast. It must not, however, be confounded with the Macedonian one, an error into which Stephanus seems to have fallen (s. v. Methon).—III. A city of Macedonia, on the western coast, being one of the five Mace-

nianus. According to Pausanias, the name was Mo-
thone. Tradition reported, that it was so called from Mothon, the daughter of Aeneas; but it more probably derived its name from the rock Mothon, which formed the breakwater of its harbour. (Pausan., 4, 35.) Strabo informs us, that, in the opinion of many writers, Methone should be identified with Pedasus, rank-
ed by Homer among the seacoast towns which Agamem-
on's fleet had to pass (II., 9, 1294.—Pausan., v., 359.) Pausanias makes the same observation. In the Peloponnesian war Methone was attacked by some Athenian vessels, who were conveyed thither in a fleet sent to ravage the coast of the Peloponnesus; but Brasidas, who was quartered in the neighbourhood, having forced his way through the enemy's line, threw himself into the town with 100 men, which timely succour obliged the Athenians to re-embark their troops. (Thucyd., 2, 13.) In the war which Antigonus' son Darius, the Nauplians: these, being expelled their native city by the Argives, were established here by the Lacedaemonians. (Pausan., 4, 35.) Many years after, it sustained great loss from the sudden attack of some Il-
yrian pirates, who carried off a number of inhabitants, both men and women. Methone was afterward be-
sieged and taken by Agrippa, who had the command of a Roman fleet: that general having found here Boc-
chus (Böye), king of Mauritania, caused him to be put to death as a partisan of Marc Antony. (Strab., 359.) We learn from Pausanias that Trajan especially fa-
voured this city, and bestowed several privileges on its inhabitants. Sir W. Gell states, that at about 2700 paces to the east of Molon is a place called Palatio Mothone, where are vestiges of a city. Mo-
don is a Greek town of some size, with a fortress built by the Venetians. (Cramer's Anc. Greece, vol. 3, p. 137.)—IV. or Methana, a peninsula of Argolis, within the district of Tarentum, formed by the harbour or bay of Pagon on one side, and the curvature of the Epidaurean Gulf on the other, and connected with the mainland by a narrow isthmus, which the Athenians occupied and fortified in the seventh year of the Peloponnesian war. (Thucyd., 4, 43.) Diodorus Sic-
ulas says it was taken by the same people under Tol-
men, and offered to Achilles between the Persians and the Pel-
oponnesian wars: and this is perhaps the meaning of Thucydides, when he says that, on peace being made, or, rather, a truce for thirty years, Trazene, among other towns, was restored to the Peloponnesians. (Thucyd., 1, 115.) Within the peninsula was a small town, also called Methone, which possessed a temple of Isis. About thirty stadia from the town were to be seen some hot springs, produced by the eruption of a mountain of the same name, called the Methonian. (Pausan., 2, 34.) Dodwell says, that "the moun-
tainous promontory of Methana consists chiefly of a volcanic rock of a dark colour. The outline is grand and picturesque, and the principal mountain which was thrown up by the volcano is of a conical form. Its apparent height is about equal to that of Vesu-
vius. The ancient city of Methone, according to the same intelligent traveller, "was situate in the plain, at the foot of this mountain; but there are a few remains of two edifices." (Dodwell, vol. 2, p. 291.—Cramer's Anc. Greece, vol. 3, p. 269, seqq.) Meth-

thyna, a city of Lesbos, lying opposite to Ass-
sus in Trias, and situate, according to Ptolemy, near the northernmost point of the island. It was, even to Mythene, the most important city of Lesbos. The territory of the place was contiguous to that of Myti-

lone, a circumstance which appears to have created considerable rivalry between them, and probably in-
duced the Methymneans to adhere to the Athenians, while their neighbours were bent on detaching them-
selves from that power. (Thucyd., 3, 18.) As a re-
ward for their fidelity, the Methymneans were ex-
mempted from paying the usual tribute, and were even given a share in the spoils which their countrymen were able to acquire. (Thucyd., 6, 85.) Towards the close of the Peloponnesian war, Methymna fell into the power of the Spartan com-
mander Callicratidas, who, though urged to treat the citizens with severity, and to sell them as slaves, re-
fused to comply with the advice, declaring that, as long as he was admiral, no Greek, as far as lay in his power, should be enslaved. (Xen., Hist. Gr. 1, 6, 8.) The best Lesbian wine was obtained from an adja-
cent town, called Methone; and a certain ancient
tale in connexion with this city (Compare De Sinuor, ad Bondel-
mont., Ins. Archipel., p. 219.—Cramer's Asia Minor, vol. 1, p. 160.)

Metis (Prudence), daughter of Oceanus, was the first wife of Jupiter, and exceeded gods and men in knowledge. Heaven and Earth, however, having told Jupiter that the first child of Metis, a maid, would equal him in strength and counsel; and that her sec-
ond, a son, would be king of gods and men, he decreed-
er her when she was pregnant, and swallowed her; and, after a time, the goddess Minerva sprang from his head. (Apollod., 1, 3, 6.) Metis is said to have given a potion to Saturn, which compelled him to vomit up the offspring whom he had swallowed. (Apollod., 1, 2, 1.)

Mettus, or Mettius Puffettius, I. dictator of Al-
ba. He fought against the Romans in the reign of Tullius Hostilius, and agreed at length with the foe to leave the issue of the war to a combat between the three Horatii and three Curiiatt. Beholding with pain his country subdued by the defeat of the latter, he imagined that he should be able to recover her freedom for her by joining with the Fidenates, who had attempted, during the late war, to shake off the Roman yoke. Secretly encouraged by him, they took the field, and advancing on the city of and joining with the Veientes, their allies. Puffe-
tius had promised to abandon the Romans, and go over to the Fidenates and Veientes in the middle of the engagement. He had not courage enough to keep his word, but proved a traitor alike to the Romans and to his new allies, by drawing off his troops from the line of battle, and yet not marching over to the foe, but waiting to see which side would conquer. The Romans gained the victory, and Puffettius was taken by the victorious army, and being attached to two four-horse char-
iotics, that were driven in different directions. (Liv., 1, 23, seqq.)—The common form of the name is Met-
us Puffettus, but the more correct one is Mettius, as is shown by Niebuhr (Rom. Hist., vol. 1, p. 299, Eng.
transl.)—II. Tarpa, a critic. (Vid. Tarpa.)

Meton, a celebrated astronomer, who lived at Ath-
ens in the fifth century B.C. He was, according to some (Aelian), and by others (Aristotle, and Plutarch), the best au-
torities call him a Leonician (Aeukouoverey). He is said to have pretended insanity in order not to go to the Athenian expedition against Syracuse, the disastrous termination of which he plainly foresaw. —

The solstices which Meton observed with Encelomos are preserved by Ptolemy. He is best known, how-
ever, as the founder of the celebrated lunar cycle, 841
called "the Metonic" after his name, and which is still preserved by the Western churches in their computation of Easter. This cycle takes its rise as follows: 230. Motions of the moon are very nearly 19 revolutions of the sun, and one complete revolution of the moon's node. If these approximations were exact, all the relative phenomena of the sun and moon, particularly those of eclipses, would recommence in the same order, at the end of every 19 years. There is, however, an error of some hours in every cycle. The first year of the first Metonic period commenced with the summer solstice of the year 432 B.C.; and if the reckoning had been continuous, what is now called the golden number of any year would have denoted the year of the Metonic cycle, if the summer solstice had continued to be the commencement of the year. On reckoning, however, it will be found that A.D. 1, which is made the first year of a period of 19 years, would have been part of the fourteenth and part of the fifteenth of a Metonic cycle. (Ibid., under CycUs des Meton.—Abhland. Acad., Berlin, 1814—1815, Hist. Philol. Cl., p. 230.—Encycz. Us Knowii., vol. 15, p. 146.) It has been conjectured," observes Dr. Hale, "and not without foundation, that the celebrated lunar cycle of 19 years, which Meton introduced into Greece for the adjustment of their lunar year with the solar, was borrowed from the ancient Jewish tables. This was the opinion of the learned Anatolius, bishop of Laodicea, about A.D. 270." (Hale's Chronicle, vol. 1, p. 66.)

Metropoles, a disciple of Crates. He had previously been a follower of Theophrastus and Xenocrates; but when he commenced cyclic, he committed his works to the flames, as the useless dreams of idle speculation. In his old age he became so dissatisfied with the world that he strangled himself. (Enfield, Hist. Philos., vol. 1, p. 314.)

Metrodorus, I. an intimate friend of Epicurus. He first attached himself to that philosopher at Lausius, and continued with him till his death. He maintained the cause of his friend and master in great trepidity, both by his discourses and his writings, against the Sophists and Dialectics, and consequently partook largely of the obloquy which fell upon his sect. (Cic., Tusc. Quaest, 2, 3.—Id., de Fin., 2, 3.) Plutarch charges him with having repudiated the folly of his brother Timocrates in aspiring to the honours of wisdom, while nothing was of any value but eating and drinking, and indulging the animal passions. (Col., vol. 10, p. 624, seqq.) But it is probable that this calumny originated with Timocrates himself, who, from a personal quarrel with Metrodorus, deserted the sect, and therefore can deserve little credit. (Enfield, Hist. Phil., vol. 1, p. 456.—Jouisius, Hist. Phil., 1, 2, 6.—Menage ad Diog. Laert., 10, 22.)—II. A painter and philosopher of Stratonicea, B.C. 171. He was sent to Paulus Æmilius, who, after his victory over Perseus, B.C. 168, requested of the Athenians a philosopher and a painter, the former to instruct his children, and the latter to make a painting of his triumphs. Metrodorus was sent, as uniting in himself both characters: and he gave satisfaction in both to the Roman general. (Plin, 35, 11.—Cic., de Fin, 5, 1, de Orat., 4.)

Mevania, a city of Umbria, on the river Tinia, in the south-western angle of the country, and the seat of one of its most ancient tribes. It was famous for its wide-extended plains and rich pastures. (Colum., 3, 8.) Strabo mentions Mevania as one of the most considerable cities of Umbria. (Strab., 227.—Compare Liv., 9, 41.) Here Vitellus took possession, as if determined to make a last stand for the empire against Vespasian, but soon after withdrew his forces. (Tacit., Hist., 3, 55.) If its walls, as Pliny says, were of brick, it could not be capable of much resistance (Hist. Nat., 1, 14). This city is farther memorable as the birthplace of Propertius, a fact of which he himself informs us (4, 1, 21). It is now an obsequious village, which still, however, retains some traces of the original name in that of Beragna. (Cramer's Anc. Italy, vol. 1, p. 260.)

Mezentius, king of Carœ, at the time that Æneas was fabled to have landed in Italy. He is represented by Virgil as a monster of ferocity, wantonly murdering many of his subjects, and causing others, fastened face to face unto dead bodies, to expire amid loathlessness and famine. His subjects, exasperated by his tyranny, expelled him from the throne. He and his son Lausus took refuge in the court of Turrus, whom they assisted in his war against Æneas. They both fell by the hand of the Trojan prince. The narrative of the combat in which they were slain is justly esteemed one of the most brilliant passages in the whole Æneid. Virgil has described Lausus as eminent for beauty of person, bravery, and filial piety; a pleasing contrast to his ferocious parent. The epithet contemplator divum was applied to Mezentius by Virgil, because he desired of his subjects the freedom of their lands and their flocks, instead of appropriating them in sacrifice to the gods. (Cato, ap. Macrobr., Sat, 3, 5.—Virg., Æn., 8, 478.—Id ib., 10, 762, seqq.)

Micipsa, king of Numidia, eldest son of Masinissa, shared with his brothers Gulussa and Mastanabal the kingdom of their father, which had been divided among them by Scipio Æmilianus. (Vid. Masinissa.) On the death of his brothers he became monarch of the whole country, about 146 B.C. Of a pacific disposition, Micipsa enjoyed a quiet reign, and proved the mildest of all the Numidian kings. Animated by the same enlightened policy as his father, he exerted himself strenuously for the civilization of his subjects, established a colony of Greeks in his capital, and assembled there a large number of learned and enlightened men. Although he had many children by numerous concubines, still Hampel and Adherbal were his favourite sons. Unhappily, however, he adopted his nephew, the famous Jugurtha, and declared him by his will, joint heir to the kingdom along with his two sons just mentioned. This arrangement brought with it the ruin of his family and kingdom. (Vid. Jugurtha.)

Micon, I. a painter and satyrus, contemporary with Polygnotus, who flourished about Olymp. 80. This artist has been noticed at great length by Böttiger (Archæol. Pict., 1, p. 254, seqq.). In ancient MSS. his name is sometimes written Micos, sometimes Mokos or Noskos, but the more correct form is probably Mikon (Micon). Varro mentions him among the more ancient painters, whose errors were avoided by Apelles, Protogenes, and others. (L. L., 8, p. 129, ed. Bisp.) Pliny states, that, in connexion with Polygnotus, he either invented some new colours, or employed those in use in his paintings on a better plan than that previously adopted. (Plin., 33, 13, 56.—L. L., 8, p. 129.) A painting of his, "the statue of Eneas," given by Silling (Dict. Art. s. v.)—II. Another painter, distinguished from the former by the epithet of "the Younger." His age and country are uncertain. (Plin., 35, 9, 35.) Böttiger confounds him with Micon I. (Silling, Dict. Art., s. v.)—III. A statuary of Syracuse. At the request of the children of Hiero II., king of Syracuse, he made two statues of this monarch, which were placed on Olympian hills, one representing him on horseback, the other on foot. The death of Hiero took place B.C. 215; and as the statues in question were made soon after this event, we may decide with certainty on the age of Micon. (Silling, Dict. Art., s. v.)

Midas, an ancient king of the Brygians in Thrace, son of Gordius, and whose name is connected with some of the earliest mythological legends of the Greeks. According to one account, he possessed, at the foot of
Mount Bermion, a garden, in which grew spontaneously roses with sixty petals, and of extraordinary fragrance. (Herod., 8, 138.—Compare Wessecing, ad loc.) To this garden Silenus was in the habit of repairing; and Midas (Pausan., 1, 4, 5) or his people, by pouring wine into the fount from which he was wont to drink, kept him supplied thus, and caused him to run away. (Herod. l. c.) Midas put various questions to him respecting the origin of things and the events of past times. (Serv. ad Verg., Eclog., 6, 13.) One was, What is best for men! Silenus was long silent; at length, when he was constrained to answer, he said: "Life is most free from pain when one is ignorant of future evils. It is best of all for man not to be born: the second is, for those who are born to die as soon as possible." (Aristot., de Nat. Anim., 3, 6.) Boïza said, and it has been supposed that the Boyzians were the originators of this fable. (Herk. Apoll., 7, p. 352, ed. Hulten.) He also, it is said, gave the king a long account of an immense country which lay without the ocean-stream, the people of which once invaded the land of the Hyperboreans. (Theopomp. ap. Elian, V. H., 3, 18.) The name of Midas is also connected with the migration of the Byrghians from Thrace into Asia Minor, where they are said to have changed their name to Phrygian; (Strab., 10, 4, 28.) and some, (see Aristot., de Nat. Anim., 3, 6.) and others (Herk. Apoll., 7, p. 352, ed. Hulten.) held, that Midas was the first to plant vines. (Pliny, 35, 349, &c.; and compare Weleker, Nachtrag, p. 301.) Schwenck, however, takes a very different view of the subject. He makes Midas to have been an old Thracian or Phrygian deity, referring to Hesychius (Μίδας θεός) as an authority for this, and identifies him with the moon-god, or Deus Lunus. He compares the name Midas with μεῖς, μενός, as the Cretan ἵππον was related to εἶς, ἐνός. Now αὐτί indi< subscript> cates unity, being merely δηοί with a prefix, as in μια for ἡμια; and ἐνός (annyus), "the year," has also relation to unity. Thus, according to Schwenck, Midas indicated the lunar year as a unit of time. The long ears of Midas he also makes a lunar symbol, as in the case of the Scandinavian goddess Mani, or the Moon. (Elmylogiologic Mythol. Andeut., p. 66, seq.) This explanation is very far-fetched. It is more than probable that the name Midas was common to the Lydians as well as Phrygians, since Midas, according to some accounts, was the husband of Omphale. (Clearch., ap. Athen., 12, p. 316.)—Mr. Leake gives an account of a very ancient monument at Doganbirt, in what was originally a part of Phrygia, which appeared to him to have been erected in honour of one of the kings of Phrygia, of the Midasian family. (Journal of a Tour in Asia Minor, p. 31.) It is very probable, indeed, that many monarchs of the Phrygian dynasty bore the name of Midas. (Lects. 573.) The remains of this place are near the monastery of Agios Adrianos, where there is a Palea Castro in a bold rock; the walls are of ancient masonry. (Gell, Itin. of the Morea, p. 185.—Cramer’s Anc. Greece, vol. 3, p. 250.)

Miletus, the inhabitants of Miletus. (Vid. Miletus.) Miletus, Milesjus Μηλεῖος (Μηλείωτος θεός), a place in Lower Egypt, to the west of the Sebennytus mount, in which was an island (Heliopolis) which the Nile, and which obtuseness, and the Nile, extended to the Milesians. (Eustath. ad Dionys.—Huda, Geogr. Min., vol. 4, p. 146.)

Miletopolis, a city of Mycia, northeast of Adra mytum, and situate on a branch of the river Rhyn dacus. It coincides, according to D’Anville, with the modern Bel Kessk. (Plin., 5, 32.—Steph. Byz., p. 467.)
MILETUS.

Miletus, I. a son of Apollo, who fled from Crete to avoid falling into the hands of Minos. (Apollod., 3, 1, 2.) He came to Caria, and was said to have been the founder of the city of Miletus. (Apollod., l. c. — Compare Heyne, ad loc.—II.) The most celebrated of the cities of Ionia, situate on the southern shore of the bay of MiIeTUS, and almost midway between the mouths of the rivers Cesus, according to Strabo, eighty stadia south of the embouchure of the Maeander. (Strab., 634.) The origin of this city falls in the period of the first Greek emigrations from home; but the circumstances connected with its founding are involved in great uncertainty. As far as any opinion can be formed from various accounts that are given of this event, it would appear that the place was first settled by natives of the country; that these came Sarpedon from Miletus in Crete, and after him Neleus from Attica, together with other settlers in process of time. (Strab., l. c. — Pausan., 7, 2. — Apollod., 3, 1. — Eustath. ad Dionys., v. 825.) Miletus was already large and flourishing when the cities of the parent country were but just beginning to emerge from obscurity. The admirable situation of the place, and the convenience of having four harbours, one of which was capable of containing a large fleet, gave it an early predominance among the Ionian cities. It carried on an active and extensive commerce with the shores of the Euxine on the one hand, and the distant coast of Spain on the other, to say nothing of the principal ports of the Mediterranean, which were likewise frequented by the Milesian vessels. Its most important trade, however, was with the shores of the Euxine. Almost all the Greek cities along the coast of this inland sea, which were found there at the period into whose possession were of Miletian origin. As, however, many of these cities were themselves conspicuous for size and population, one can hardly comprehend how Miletus, in the midst of so active a traffic, which of itself must have required the attention of considerable numbers, could command a superfluous population, sufficiently extensive for the establishment of so many colonies, which Pliny makes to have been eighty in number, and Seneca seventy-five. (Plin., 29. — Senec., Consol. ad Helv., c. 6. — Consult Rambach, de Miletio eysagouge Kolonion, Hal. Sax., 1792 — Lacherer, Hist. d’Herod., vol. 8, p. 344, 359.) It is more than probable, that, in sending out these colonies, the natives of the country, the Lydians, Carions, and Leleges, were invited to join, and did so. — Miletus was already a powerful city when the Lydian monarchy rose into consequence. The kings of Lydia, possessors of all the surrounding territory, could not brook the independence of the Ionian city; they accordingly carried on war against it for many years, and were at times powerful enough to advance even to the city walls, and to destroy or carry off the produce of the neighboring country; but they were unable to mar the prosperity of a city which had the control of the sea, and consequently bade defiance to their power. The Milesians appear subsequently to have made a treaty with Crassus, in which they probably acknowledged that sovereignty as their liege lord, and consented to pay him tribute. The same emperor was agreed upon between them and Cyrus, when the latter had conquered Lydia; and this saved Miletus from the disasters which befell at that time the other Ionian states. (Herod., 1, 141, 143.) But it was not always equally fortunate. In the reign of Darius, the whole of Ionia was excited to revolt by the intrigues and ambitious schemes of Histiaeus, who had been raised to the sovereignty of Miletus, his native city, by the Persians for a foothold, in return for services which he had rendered in the Persian expedition. Aristagoras, his deputy and kinsman, also greatly contributed to inflame the minds of his countrymen. At his instigation, the Athenians sent a force to Asia Minor, which surprised and burned Sardis; but this insult was speedily avenged by the Persian satraps, and, after repeated defeats, Miletus was besieged by land and sea, and finally taken by storm. This beautiful and opulent city, the pride and ornament of Asia, was thus plunged into the greatest calamity; the surviving inhabitants were carried to Susa, and settled, by order of Darius, at Ampe, near one, who is in Tarsus, according to the Persian commanders to the Carians. The Athenians are said to have been so much affected by this event, that when Phrynichus, the tragic writer, introduced on the stage his play of the Capture of Miletus, the whole house burst into tears, and the people fined the poet 1000 drachmas, and forbade the performance for the future. (Herod., 6, 6, seqg. — Calisth., ap. Strab., 635.) —When Alexander, after the battle of the Granicus, appeared before Miletus, the inhabitants, encouraged by the presence of a Persian army and fleet stationed at Mycale, refused to submit to that prince, and open their gates to his forces; upon which he immediately commenced a most vigorous attack on their walls, and finally took the city by assault. He however forgave the surviving inhabitants, and granted them their liberty. (Arrian, Exp. Al., 1, 18, seqg.) The Milesians sided with the Romans during the war with Caries, and the war between the two effects. This city was yet flourishing when Strabo wrote (Strab., l. c. — Compare Tacit., Ann., 4, 55 et 63), and still later, in the time of Pliny (5, 29) and Pausanias (7, 2). It appears from the Acts of the Apostles, that St. Paul sojourned here a few days on his return from Macedonia and Troas, and summoned hither the elders of the Ephesian Church, to whom he delivered an affectionate farewell address. (Acts, 20, 17, seqg.) The Milesian Church was under the direction of bishops, who sat in several councils, and ranked as metropolitan of Caria. (Hierol., Synecd., p. 678.) This continued as late as the decline of the Byzantine empire (Mich. Duc., p. 41); at which time, however, the town itself was nearly in ruins, from the ravages of the Turks and other barbarians, and the alluvial deposits caused by the Maeander. Miletus deserves further mention as the birthplace of Thales, the celebrated mathematician and philosopher; and his successors Anaximander and Anaximenes; also of Cadmus and Heracles, two of the earliest historians of Greece (Strab., 635. — Plin., 5, 39. — Suid., s. v. Kóipous.) The Milesians were in repute for their manufactures of couches and other furniture; and their woolen cloths and carpets were especially esteemed. (Atheneus, 1, p. 23. — Id., 11, p. 428. — Id., 12, p. 540, &c.) The modern village of Palataska occupies part of the site of the ancient city. The coast, however, has undergone great changes, for some remarks on which consult the article Maeander. (Cramer’s Asia Minor, vol. 1, p. 385, seqg.)

Milo, I. a celebrated athlete of Crotone in Italy. He accustomed himself from early life to bear burdens, the weight of which he successively augmented, and at last became so conspicuous for strength as to carry the most surprising loads with the utmost ease. Many curious stories are related concerning his wonderful strength. He could hold a pomegranate in his hand, with his fingers closed over it, and yet, without either crushing or even pressing on the fruit, could keep his fingers so firmly bent as to render it impossible for any one to take the fruit from him. He could place himself on a discus, some say a shield, covered over with oil or other unctuous substances, and rendered, of course, very slippery, and yet he could carry across a river. The Athenians would not dislodge him. He could encircle his bow with a cord, and break this asunder by holding his breath and causing the veins of the head to distend. He could hold his right arm behind his back, with the hand open and the thumb raised, and a man could not then separate his little finger from the rest. The account that is
given of his voracity is almost incredible. He ate, it is said, every day, twenty pounds of animal food, twenty pounds of bread, and drank fifteen pints of wine. Athenaeus relates, that on one occasion he carried a steer four years old the whole length of the stadium at Olympia (606 feet), and then, having cut it up and cooked it, ate it all up himself in one day. (Athen., 10, 415, c.) Some say, in a fit of madness, he killed it with a single blow of his fist. He had an opportunity, however, at last, of exerting his prodigious strength in a more useful manner. One day, while attending the lectures of Pythagoras, of whom he was a disciple and constant hearer, the column which supported the ceiling of the hall where they were assembled was observed to totter, whereupon Milo, upholding the entire superstructure by his own strength, allowed all present an opportunity of escaping, and then saved himself. Milo was crowned seven times as victor at the Pythian games, and six times at the Olympic, and he only ceased to present himself at these contests when he found no one willing to be his opponent. In B.C. 509 he had the command of the army sent by the people of Crotona against Sybaris, and gained a signal victory. His death was a melancholy one. He was already advanced in years and his health was failing. He was about to set foot lightly in a large trunk of a tree partly cleft by winds. Wishing to sever it entirely, he introduced his hands into the opening, and succeeded so far as to cause the trunks to fall out; but his strength here failing him, the separated parts on a sudden reunited, and his hands remained imprisoned in the cleft. In this situation he was devoured by wild beasts. (Aul. Gel., 15. 16.—Val. Max., 9, 12, 17.—II. Titus Annius, was a native of Lanuvium in Latium, and as born about 25 B.C. His family appears to have been a distinguished one, since we find him espousing the daughter of Sylla. Having been chosen tribune of the commons B.C. 57, he zealously exerted himself for the recall of Cicero, but the violent proceedings of Clodius paralyzed all his efforts. Determined to put an end to this, he summoned Clodius to trial as a disturber of the public peace; but the consul Metellus dismissed the prosecution, and thus enabled Clodius to resume with impunity his unprincipled and daring career. Milo thereupon found himself compelled, for the sake of his own personal safety, to keep around him a band of armed followers. His private resources having suffered greatly by the magnificent games which he had exhibited, Milo, in order to repair his shattered fortunes, married Fausta, the daughter of Sylla; but the unhappy woman was faithless; Flavius, an ex-slave of Milo's, who had been unfaithful to her, and her paramour, the historian Sallust, was only allowed to escape after receiving severe personal chastisement, and paying a large sum of money to the injured husband. Clodius meanwhile, having obtained the office of adile, had the assurance to accuse Milo in his turn of being a disturber of the public tranquillity, and of violating the laws by keeping a body of armed men in his service. Pompey interfered to release Clodius, but the affair was set aside. Sulla also, whose acquiescence in the whole affair was carried on amid the most violent clamours from their respective partisans. No decision, however, was made; the matter was protracted, and at last allowed to drop. Some years after this (B.C. 51) Milo offered himself as a candidate for the consulate against two other competitors, Clodius, of course, opposed him; but the powerful exertions of his friends had and induced him through, had not an unfortunate occurrence frustrated his hopes. Milo, the son of Clodius, it seems, had openly declared, that if Milo did not abandon all pretensions to the consulate, in three days he would be no more. This threat fell upon the head of its own author. On the 20th of January, Milo set out from Rome to go to Lanuvium, of which he was the chief magistrate or dictator, and where, by virtue of his office, he was on the following day to appoint a flamen for the performance of some of the religious ceremonies of the municipality. He travelled in a carriage, accompanied by his wife and one of his friends, and attended by a strong body of slaves, and also by some of the armed followers, whose services he had occasionally employed in his contests with Clodius. Milo himself, being a friend of his, added, that he would bring the latter, who was returning to Rome, followed by about thirty of his slaves. Clodius and Milo passed one another without disturbance; but the armed men, who were among the last of Milo's party, provoked a quarrel with the slaves of Clodius; and Clodius turning back, and interposing in an authoritative manner, Birria, one of Milo's followers, ran him through the shoulder with a sword. Upon this the fray became general. Milo's slaves hastened back in great numbers to take part in it, while Clodius was carried into an inn at Bovilla. Meanwhile, Milo himself was informed of what had passed, and, resolving to avail himself of the opportunity which was offered, he ordered his slaves to attack the inn and destroy his enemy. Clodius was dragged out into the road and there murdered; his slaves shared his fate, or saved their lives by fleeing to places of concealment; and his body, covered with vassals, was conveyed to the highway. (Ascon, Arg. in Cic., Orat. pro Mil.) When the corpse of Clodius was brought to Rome, a violent popular commotion ensued. The body was carried into the Forum and exhibited on the rostra; and at last the mob, having conveyed it from the rostra into the senate-house, set fire to a funeral pile made for it at the moment out of the benches, tables, and other furniture which they found at hand. The conflagration, so widely expected, that the senate-house itself was involved in the confusion and burned to the ground. These, and several other disorders committed by the multitude, somewhat turned the tide of public opinion in favour of Milo. He was now encouraged to return to Rome and renew his canvass for the consulate. He did so, but the whole city became eventually a scene of the greatest confusion; and, in order to restore public tranquillity, Pompey was declared sole consul, and armed with full powers to put a stop to farther disturbances. Milo was thereupon brought to trial for the murder of Clodius, and was defended by Cicero; but the clamours and outcry of the populace devoted to the party of Clodius, and the array of armed men that encompassed the tribunal, to prevent any outbreak of popular violence, prevented the orator from displaying his usual oratorical powers. Meanwhile, the event of the trial was known; he went into exile, and fixed his abode at Massilia in Gaul. Milo was also tried after his departure for three other distinct offences; for bribery, for illegal cabalg and combinations, and for acts of violence, and was successively found guilty on all. —It is said that, soon after Milo's condemnation, and when he was residing at Massilia, Cicero sent him a copy of his speech in the form of a letter, in which he had written his condemnation; not long after he had read over a letter to the orator, in which he stated that it was a fortunate thing for himself that Cicero had not pronounced the oration which he sent, since otherwise he (Milo) would not then have eaten such fine mullets at Massilia. It has been sometimes stated, that Milo was subsequently restored to his country. This, however, is altogether erroneous. Velleius Paterculus states that Milo returned without permission to Italy, and there busily employed himself
in raising opposition to Caesar during that commander's absence in Thessaly against Pompey. He adds that Milo was killed by the blow of a stone while laying siege to Compsa, a town of the Hirpini. (Cic., Or. pro Mil. — Vell. Patern., 2, 47, 68. — Encyclopaedia Metropolitana, div. 3, vol. 2, p. 218, seq. — Biogr. Univ., vol. 29, p. 57.)

Miltiades, 1. an Athenian, son of Cypselus, who, on a journey on a chariot-race at the Olympic games, and led a colony of his countrymen to the Chersonesos. The cause of this step on his part was a singular one. It seems that the Thracian Dolonci, harassed by a long war with the Absinthians, were directed by the oracle of Delphi to take for their king the first man they met in their return home, who invited them to come under his roof and partake of his entertainments. The Dolonci, after receiving the oracle, returned by the sacred way, passed through Phocias and Beotias, and, not being invited by either of these people, turned aside to Athens. Miltiades, as he sat in this city before the door of his house, observed the Dolonci passing by, and as by their dress and armour he perceived they were strangers, he called to them, and offered them the rites of hospitality. They accepted his kindness, and, being hospitably treated, revealed to him all the will of the oracle, with which his own predictions were in complete coincidence; he proposed to listen to them because weary of the tyranny of Pisistratus, first consulted the oracle of Delphi, and the answer being favourable, he went with the Dolonci. He was invested by the inhabitants of the Chersonese with sovereign power. The first measure he took was to stop the farther incursions of the Absinthians, by building a wall across the isthmus. When he had established himself at home, and fortified his dominion against foreign invasion, he turned his arms against Lamprocles. His expedition was unsuccessful; he was taken in an ambush, and made prisoner. His friend Creesus, king of Lydia, however, was informed of his captivity, and procured his release by threatening the people of Lampsacus with his severe displeasure. He lived a few years after he had recovered his liberty. As he had no issue, he left his kingdom and possessions to Stesagoras, the son of Cimon, who was his brother. The murdered office of Miltiades was greatly honoured by his countrymen, and they regularly celebrated festivals and exhibited shows in commemoration of a man to whom they owed their preservation and greatness. (Herod., 6, 38. — Id., 6, 103.) — II. A nephew of the former, and brother of Stesagoras. His brother, who had been adopted by Miltiades the elder, having died without issue, Miltiades the younger, though he had not, like Stesagoras, an interest established during the life of his predecessor, and through the Chersonese was not by law an hereditary principality, was still sent by the Pisistratidae thither with a garry. By a mixture of fraud and force he succeeded in securing the tyranny. On his arrival at the Chersonese, he appeared mournful, as if lamenting the recent death of his brother. The principal inhabitants of the country visited the new governor to console him, but their confidence in his sincerity proved fatal to them. Miltiades seized their persons, and made himself absolute in Chersonesus; and, to strengthen himself, he married Hegesipyla, the daughter of Olorus, king of the Thracians. When Darius marched against the Scythians, Miltiades submitted to him and followed in his train, and was left with the other Grecian chiefs of the army to guard the bridge of boats by which the Persians crossed the Danube. He then proposed to break up the cause of the Persians, and induced the Scyths to perish by the Scythians, to secure Greece and deliver Ionia from the Persian yoke. His suggestion was rejected, not for its treachery, but because Persia was to each of the tyrants his surest support against the spirit of freedom in the people. Miltiades, soon after, was driven out by the Scythians, but recovered his possessions on their departure. Knowing himself, however, to be omenous to the Persians, he fled to Athens, when their fleet, after the reconquest of Ionia, was approaching the coast of Thrace. The Athenian laws were severe against tyrants, and Miltiades, on arriving, was tried for his life. He was acquitted, however, under the plea that it was the way in which he had used his power in the Chersonesus, that led to the real merit of his conduct. Nay, he even so far won the favour of the people as to be appointed, not long after, one of the ten generals of Athens. It was at this same period that the Persian armament, under Datis and Artaphernes, bore down upon the shores of Attica; and, guided by Hippias, who knew the capabilities of every spot of ground in his country, the invading force landed at Marathon. According to custom, the Athenian army was under the command of its ten generals. The opinions of the ten were equally divided as to the propriety of engaging, when Miltiades, going privately to the polemarch Callimachus, who, by virtue of his office, commanded the right wing, and had an equal vote with the ten generals, prevailed upon him to come over to his way of thinking, and vote in favour of a battle. The vote of the polemarch, who was generally called by the name of the commander, came round to Miltiades, the battle took place. The details of this conflict are given elsewhere. (Vid. Marathon.) — Perhaps no battle ever reflected more lustre on the successful commander than that of Marathon on Miltiades; though it should be observed, that he whom all ages have regarded as the defender of liberty, began his career as an arbitrary ruler, and on only one occasion in his whole life was engaged on the side of power, but, to be he who could make it possible for a man to be the liberator of his own country and a despot in his own person, is no inconsistency, as the course of human events has often shown. — The reward bestowed upon Miltiades after this memorable conflict was strikingly characteristic. He and the polemarch Callimachus were alone distinguished from the other combatants in the painted porch, and stood apart with the tutelary gods and heroes. — Miltiades now rose to the utmost height of popularity and influence; immense possessions were bestowed on him, with twenty talents annually added, without declaring how he meant to employ them, but merely promising that he would bring great riches to Athens, the people readily agreed. He led them to the Isle of Paros, under the pretence of punishing its people for their compelled service in the Persian fleet, but really to avenge a personal injury of his own. He demanded one hundred talents as the price of his departure; but the Parions refused, and resisted him bravely; and in an attempt to enter the town, he received a wound, and was obliged to withdraw his army. On his return he was brought to trial for his life by Xanthippus, a man of high consideration, on account of the failure of his promises made to the people. His wound disabled him from defending himself, but he was brought into the assembly on a couch, while his brother Tisagoras defended him, principally by recalling his former services. The memory of these, with pity for his present condition, prevailed on the people to absolve him from the capital charge; but they fined him fifty talents, nearly $53,000. As he could not immediately raise this sum, he was cast into prison, where he soon after died of his wound, which had garrayed. — The character of Miltiades is one on which, with the few materials that history has left, we should not judge too exactly. The outline which remains is one that, filled up where seems most necessary. He was model of a successful statesman in an age when the prime minister of Athens was likewise the leader of her armies. Heeren has briefly noticed the transition which took place in the character of Athenian states-
men, from the warrior-like Miltiades and Histiaeotides, to the warlike rhetorician Pericles, and thence to the orator, who to his rhetorical skill united no military prowess. Miltiades, with great generalship, showed great power as a statesman, and some, but not much, as an orator. This is agreeable to his age. Whether he was a true patriot, governed by high principle, it is new impossible to determine. He achieved one great action, which for his country produced a most decisive result. The unfortunate close of his career may be regarded as best as showing the ingratitude of democracies; but perhaps a judicious historian will draw no conclusion of the kind, especially with no imperfect materials before him as we possess of the life of this illustrious Athenian. If the Athenians conceived that nothing he had done for them ought to raise him above the laws; if they even thought that his services had been sufficiently rewarded by the state, which enabled him to perform them, and by the glory he reaped from them, they were not ungrateful or unjust; and if Miltiades thought otherwise, he had not learned to live in a free state. (He-rod., lib. 5 e. 6.—Corn. Nep., Vit. Milt.—Encycl. Us. Knovel., vol. 15, p. 227.—Thirteenth's Greecee, vol. 2, p. 246.)

Miltos. Vide Aspasia II.

Mylitic Pons, a bridge about two miles from Rhodos, which over it is of a very dirty description. It was also called Mulvius. Its construction is ascribed to M. Emilius Scaurus, who was censor A.U.C. 644, and its ancient appellation is probably a corruption of his nomen. The modern name is Ponte Molle. If it be true that the bridge owed its erection to Emilius, Livy, when he speaks of it (27, 51), must be supposed to mention it by anticipation. We learn from Cicero that the Pons Mulvius existed at the time of Catiline's conspiracy, since the decrees of the Allobrogians were here seized by his orders. In later times, it witnessed the defeat of Maxentius by Constantine. (Zonim., 2, 16.—Cramer's Anc. Italy., vol. 1, p. 239.)

Mylas. Vide Lycia.

Mimallones, a name given to the priestesses of Bacchus among the Thracians, according to Hesychius and Suidas, or, more correctly, to the female Bacchae in general. Suidas deduces the term from the Greek verb μιμάλλων, "imitation," because the Bacchana, under the influence of the god, imitated in their wild fury the actions of men. Others, however, derive it from Mimas, a mountain of Thrace. Nonnus enumerates the Mimallones among the companions of Bacchus in his Indian expedition. (Compare Persius, Sat., 1, 99.—Ovid, A. A., 1, 541.—Sidon, Pref. Panec. Anthem.) Bochart gives as the etymology of the word the Hebrew Memallalan ("garula," "lo- quaculus"); or else Mamal, "a winepress." (Rolle, Recherches sur le culte de Bacchus, vol. 1, p. 136.)

Mimas, I, one of the giants that warred against the gods. (Compare Eupir., Ion, 215.—Senec. Herc. Fur., 981.—Apoll. Rhod., 3, 1227.) II. A mountain range of Ionia, terminating in the promontory Argenum, opposite the lower extremity of Chios. (Thucyd., 8, 34.—Plin., 5, 28.—Amm. Marc., 31, 42.)

Mimnermus, the obscure poet, a native of Colophon in Ionia, and contemporary with Solog. Muller, quoting a fragment of Mimnermus' elegy entitled "Nanno," says that he was one of the colonists of Smyrna from Colophon, and whose ancestors, at a still earlier period, came from Neleus Pylus. (Hist. Lit. Gr., p. 115.) Muller also ascribes the melancholy character of his poems to the reduction of Smyrna by Alyattes. From Horace and Propertius we gather, that his poems, and their advantage consisted, in part, from those appetites which, in poetical language, are expressed by the name of love. (Horat., Epist., 1, 6, 65.—Propert., 1, 9, 11.) His mind, however, was of a melancholy turn, which gave to his writings a pen-
ed, or to their want of mechanical contrivances, or to their knowledge that a compact and globular body is least liable to loss from friction, the Athenian coin was mound in a form more massive than our own, and much less convenient for tale or transfer, but better calculated to maintain its value unimpaired by the wearing of its edges. With the women round the mountain, it remains to be considered here is this: to what cause was it owing that the coins of Athens should have been executed throughout in a style of incoherence and coarseness; at a time, too, when the coins of other districts, far inferior in science and reputation to Athens, were finished in the most perfect workmanship! The fact is certainly remarkable; and the only explanation that has hitherto been given of it, may tend to illustrate still further the beneficial effects of commerce in its influence on the Athenian mint. The ancient coinage, says Eckhel, had recommended itself so strongly by its purity, and had become so universally known among Greeks and barbarians by its primitive emblems, that it would have been impossible to have made any considerable change in the form or workmanship of the coin, without creating a degree of suspicion against it, and eventually contrariwise. (Vindiciation of Walpole's Collection, vol. 1. p. 433.—Cardwell's Lectures, p. 26.)

Minerva, now Minicia, a river of Gallia Cisalpina, flowing from the Lake Benacus, and falling into the Po. (Virg., Eclog., 7, 13.—Id., Georg., 3, 15.—Id., Aen., 10, 206.)

Minides or Minyedes, the daughters of Minyas, king of Orchomenus, in Boetia. They were three in number, Leucippe, Aristippne, and Alcathoe. These females derided the rites of Bacchus, and continued plying their looms, while the women round the mountains. Bacchus came as a maiden and restored, but in vain; he then assumed the form of various wild beasts; serpents filled their baskets; vines and ivy twined round their looms, while wine and milk distilled from the roof; but their obstinacy was unsubdued. He finally drove them mad; they tore to pieces the son of Leucippe, and then went roaming through the mountains, till Mercury touched them with his wand, and filled them with a cecus or stag, and a crow. (Corinna et Nican., ap. Anton. Leh., 10.—Kilian, V., H., 3, 42.—Ovid, Met., 4, 1, seqq.—Keightley's Mythology, p. 213.)

Minerva, an ancient Italian divinity, the same in general with the Pallas-Athena (Παλλάς 'Αθηνή) of the Greeks, and to be considered, therefore, in common with her, in one and the same article. Minerva or Athena was regarded in the popular mythology as the goddess of wisdom and skill, and, in a word, of all the liberal arts and sciences. In both the Homer poems she is spoken of as the daughter of Jupiter, and in one place it seems to be intimated that she had no other parent. (II., 5, 875, seqq.) In later writers, however, the legend assumes a more extended form. It is said that Jupiter, after his union with Metis, was informed by Heaven and Earth that the first child born from this marriage, a maiden, would equal him in strength and counsel and that the only question was, who would be king of gods and men. Alarmed at this prediction, the monarch of Olympus swallowed his spouse, who was then pregnant; but being seized, after a time, with racking pains in the head, the god summoned Vulcan to his aid, who, in obedience to the commands of Jupiter, cut the head of the latter with a blow of his brazen hatchet, and Minerva immediately leaped forth, in panoply, from the brain of her sire. (Thuc., 8, 1, 3.—App. v., 9, 2, 35.—Herod., 2, 13, 57.—Pind., Ol., 7, 63.—Schol., ap. loc.—Schol. ad Apoll. Rhod., 4, 1310.) Still later authorities assign the task of opening the head of Jove to Prometheus (Euripides, Ion, 462.—Apollod., 1, 3), or to Hermes (Schol. ad Pind., Ol., 7, 66).—Minerva is in Homer, as in the general popular system, the goddess of wisdom and skill. She is in war opposed to Mars, the wild war-god, as the patroness and teacher of just and scientific warfare. She is therefore on the side of the Greeks, as he on that of the Trojans. But on the shield of Achilles, where the people of the besieged town are represented by figures which they are led by Mars and Minerva together (II., 18, 516), possibly to denote the union of skill and courage required for that service. (Il., 13, 277.) Every prudent chief was esteemed to be under the patronage of Minerva, and Ulysses was therefore her especial favorite, whom she relieved from all his perils, and whose son Telemachus she also took under her protection, assuming a human form to be his guide and director. In like manner, Cadmus, Hercules, Perseus, and other heroes were favoured and aided by this goddess. As the patroness of arts and industry in general, Minerva was regarded as the inspirer and teacher of able artists. Thus she taught Epeus to frame the wooden horse, by means of which Troy was taken; and she also superintended the building of the Argo. She was likewise expert in female accomplishments; she wove her own robe and that of Juno, which last she is said to have embroidered very richly. (II., 5, 723.—Ovid, Met., 7, 15.) When Hermes was set out in quest of the golden fleece, Minerva gave him a cloak wrought by herself. (Apoll. Rhod., 1, 721.) She taught this art also to mortal females who had won her affection. (Od., 20, 72.) When Pandora was formed by Vulcan for the ruin of man, she was attired by Minerva. (Theog., 573.) In the Homeric hymn to Vulcan (H. 20), this deity and Minerva are mentioned as the joint benefactors and civilizers of mankind, by means of the arts which they taught them, and we shall find them in intimate union also in the mythic system of Attica. The invention of the pipe (αὐλός) is also ascribed to this goddess. When Perseus says Pindar (Pyth., 12, 15, seqq.—Schol., ad loc.), had slain Medusa, her two remaining sisters bitterly lamented her death. The snakes which formed their ringlets mourned in concert with them, and Minerva, hearing the sound, was pleased with it, and resolved to compose it. She taught them to be in concert with her, and a pipe, whose music was named many-headed (πολυκέφαλος), on account of the number of serpents whose mournful hissings had given origin to the instrument. Others (Hygin., Fab., 165) say that the goddess formed the pipe from the bone of a stag, and, bringing it with her to the banquet of the gods, began to play upon it. Being laughed at by Juno and Venus, on account of her green eyes and swollen cheeks, she went to a fountain on Mount Ida, and played before the liquid mirror. Satisfied that the goddessess had had reason for her mirth, she threw the pipe away. Marsyas unfortunately found it, and, learning to play on it, ventured to become the rival of Apollo. His fate is related elsewhere (vid. Marsyas).—The favourite plant of Minerva was the olive, to which she had given origin in her well-known contest with Neptune (vid. Ceeropus), and the animals consecrated to her were the owl and the serpent. Minerva is considered the patroness of Athens, the city to which she gave name (Ἀθηνή, from Αἴθριος), where the splendid festival of the Panathenaea was celebrated in her honour. This goddess is represented with a serious and thoughtful countenance, her eyes are large and steady, her hair hangs in ringlets over her shoulders, a helmet covers her head; she wears a long tunic and mantle, she bears the aegis on her breast or on her arm, and the helmet and spear in her hand. In the explanation of Müller, the name Pallas-Athena appears to mean "the Athenian maid" (Παλλάς being the same as πᾶλλας, which originally meant "maid"); and she thus forms a parallel to the "Eleansian maid" (Κόρα or Proserpina. As this is her constant title in Homer, it is manifest that
MINERVA.

she had long been regarded as the tutelary deity of Athens. We may therefore safely reject the legends of her being the same with the Neith (Hesych., Ny/fox) of Sais in Egypt, or a war-goddess imported from the banks of the Lake Tritonis in Libya, and view in her one of the deities worshipped by the Attics at Athyris, and therefore probably one of the powers engaged in causing the productivity of the earth. Her being represented, in the poetical creed, as the goddess of arts and war alone, is merely a transition from physical to moral agents, that will presently be explained. (Müller, Proleg., p. 244. — Scheenck, Andeut., p. 239. — Welcker, Tril., p. 282.) The etymology of the Latin name Minerwa is doubtful. The first name, Min-, is taken as (min, in, as) "men" that we have in the Latin mi-nim-, men-s, &c., and also in the Greek μι&-ος, μι&-ους, &c., and the Sanscrit man-as. Cicero (N. D. 3, 24) gives a very curious etymology, "Minerva, quia minuit, aut quia minatur;" but some of the ancient grammarians appear to have been more rational in considering it a shortened form of Meminerva, since she was also the goddess of memory. Festus connects it with the verb memin-ere, supposed that the worship of the goddess herself, came to the Romans from Etruria, and he makes the Etrurian original to have been Menera or Memyna. (Etrusk., vol. 2, p. 48.) There were some peculiarities in the worship of Minerva by the Romans that deserve to be mentioned. Her statue was usually placed in schools; and the pupils were accustomed every year to present their masters with a gift called Minerval. (Varro, R. R. 3, 2. — Cic., de Div., 1, 10.) Minerva was also presided over olive-groves (Varro, R. R., 1, 1); and goats were not sacrificed to her, according to Varro, because that animal was thought to do peculiar injury to the olive. (R. R. 1, 2.) There was an annual festival of Minerva, celebrated at Rome in the month of March, which was called Quinquatrus, because it lasted five days. (Varro, L. L. 5, 3.— Ovid, Fast., 3, 209. —Att. Gall., 4, 21.) On the first day sacrifices were offered to the goddess, and on the other four there were gladiatorial combats, &c. There was also another festival of Minerva, celebrated in June, which was called Quinquatrus Minore. (Ovid, Fast., 6, 651.) There were several temples in Rome sacred to Minerva. Ovid mentions one on the Caelian Hill, in which she was worshipped under the name of Minerva Capita, but the origin of the appellation is unknown. Prof. Lippe, however, to it. It also appears from several inscriptions, in which the word Minerva Medica, that this goddess was thought to preside over the healing art. (Encycl. Us. Knoel., vol. 15, p. 232.) The most probable theory relative to Pallas-Athena, or Minerva, is that of Müller, which sees in her the temperate celestial heat, and its principal agent on vegetation, the moon. (Müller, Minerva Polias, p. 5.) This idea was not unknown to the ancients themselves; and Müller understands the same root Mark, i.e., the moon. It was also suggested by moderns and by oscillated Atticus, expressly called "the moon" (ap. Arnob., ad Gen. 3, 38. — Commod. Instr., ap. Harpocr., Ταυρωπας. — Creuer, Syntaxis, vol. 4, p. 237.) On the coins of Attica, anterior to the time of Pericles, there was a moon along with the owl and olive-branch. (Eckel, D. N., vol. 2, p. 163, 209.) There was a torch-race (λαυαδοπασια) at the Panathena, a contest with which none but light-bearing devotees were honoured, such as Vulcan, Prometheus, and the hero of the Trojan war, who was the incarnation of the earth (as subdominated Phanes), &c. At the festival of the Skirophoria, the priest of the sun and the priestess of Athene went together in procession. (Aristoph., Eccles., 18.) A title of Athene was "All-Diva" (Pandrosos). In the ancient legends of Athens, mention was made of a sacred marriage (λεπος γατος) between Athene and Vulcan ("cui postea Atticis ne virginibus dea inter mercet, conciliorum spuriicum obdurerat.") — Mül ler.) This goddess is also said to have given fire to the Athenians (Plut. Vit. Cim., 10), and perpetual flame was maintained in her temples at Athens and Alabaconera. (Pausan., 1, 26, 7. — Id., 9, 34, 1.) It could hardly have been from any other cause than that which was regarded as the moon, the natural owl, whose broad, full eyes shine so brightly in the dark, was consecrated to her; although some indirect maintain that this bird was sacred to her as the goddess of wisdom, since the peculiar formation of its head gives it a particular air of intelligence. (Lawrence's Lectures, p. 147, Am. ed.) The shield or corset, moreover, with the Gorgon's head on it, seems to represent the full-orbed moon; and finally, the epit he of this great and worshiped deity Minerva, known to the Greeks as Athen, is also given to Selene, or the Moon. (Empedocles, ap. Plut., de Fac., in Orb. Luc., 16, 21. — Eurip., Fr. incert., 209.) In accordance with this theory, the epithet Trigonea (Τριγονεια), so often applied to Minerva, has been ingeniously explained by considering it indicative of the three phases of the moon, just as the term Πραγάδινα is applied to Hecate. (Welcker, Trilogie, p. 283.) There are two other interpretations of this epithet, which have had general currency, both of which, however, are inferior to the one just mentioned. The first of these supposes it to signify Head-spring, as the word τριγωνος is said to have signified head in some of the obscure dialects of Greece (that of the Athenians, according to Nicanor of Colophon, Hesych., s. v.: Etyg. Mag., and Photius, s. v.: that of the Cretans, Eustath., ad H., 4, p. 524; 8, p. 606; Od., 3, p. 316.) The Boeotians, Τριγωνος, (Etyg. ad Lyce, 519.) But accounts like these are very suspicious, and the later Greeks would have made little scruple about coining a term, if they wanted it to suit any purpose. The other interpretation, which makes the banks of the river or lake Triton the birthplace of Minerva, has found a great number of supporters; but, as so many countries sought to appropriate this Triton to themselves, the choice among them might seem difficult. In the contest, however, there has lain between the river or lake Triton in Libya, and a small stream of the same name in Euboea. The ancients in general were in favour of the former; but, as there is no reason to suppose that the Greeks knew anything of the Libyan Triton in the days of Homer, or probably till after the colony had been settled at Cyrene, this theory seems to have little in its favour. Müller, therefore, at once rejects it, and fixes on the banks of the river Triton, which is as they supposed, the place where the moon-goddess was born. (Orchom., p. 355.) Here, however, Homer again presents a difficulty, for the practice of assigning birthplaces on earth to the gods does not seem to have prevailed in his age. — The moon-goddess of the Athenians probably came by her moral and political character in the following manner. It was the practice of the different classes and orders in a state to appropriate the general tutelary deity to themselves by some suitable appellation. Thus the Romans gave to Athena the epithet of Oz yoker (Bondeia), the citizens called her the Worker (Ευπορια), while the military men styled her the Front-fighter (Προοριος). As these last were the ruling order, their view of the character of the goddess became the prevalent one; yet even in the epic poetry we find the idea of the goddess's presiding over the arts still retained. (Müller, Minerva Polias, p. 1. — Keightley's Mythology, p. 163, 329.)
have been raised by Ulysses. (Strab., l. c.—Cramer's Anc. Italy, vol. 2, p. 185.)

Minervia, festivals at Rome in honour of Minerva. (Vid. Minerva, page 849, vol. 1, line 37, seq.)

Mino 1 was one of the Maenads of the Minoan Tyrrhenian or Lower sea, a short distance above Centum Cellæ. It is now the Mignonæ. (Virg., Æn., 10, 183.—Rutil., Ætna, 1, 277.)

Minoæi or Minoëi, a people in the southern extremity of Arabia Felix. Their country was called Minna, and their capital Carana. The name of the latter is preserved in Almakaranæ, which is a strong fortress. (Diod., 3, 42.—Augsberghæ, in Hudson's Geogr. Min., vol. 1, p. 57.—Rutil., Ætna, 1, 277.)

Minos, a patronymic of Ariadne, as daughter of Minos. (Ovid., Met., 8, 157.)

Minos, an ancient king, who in history appears as the lawgiver of Crete. Those critics who consider all the personages of mythological history as little more than names to which is attached the history of social development, would view Minos simply as the concentration of that spirit of order, which about his time began to exhibit in the island of Crete forms of a regular polity. But we are not to consider, because there is much undoubtedly mythological about the history of Minos, that therefore he never existed. The concurrent testimony of Thucydides and Aristotle shows it to have been the general belief in their times, that Minos was the first among the Greeks who possessed any amount of naval power. According to the latter author, he conquered and colonized several islands, and at last perished in an expedition against Sicily, to which island he was said to have pursued Dædælus after the affair of Pasiphaæ, and where the daughters of Cocalus suffocated him in a warm bath. (Vid. Cocalus.) In the second book of the "Politics," Aristotle draws a parallel between the Cretan and Spartan institutions, and he there ascribes the establishment of the Cretan laws to Minos. This comparison, aided probably by the connexion which existed between Crete and Sparta, owing to colonies, as early as the time of Homer, has no doubt suggested the theory invented and supported by Müller, that Minos was a Doric prince; a theory, as Mr. Thrilwall asserts, utterly unknown to the ancients. The subject is ably discussed by him in his "History of Greece" (vol. 1, p. 135). Some post-Homeric authorities make Minos a judge in Hades in company with Aeacus, Rhadamanthus being chief judge. In this character he appears in a short Platonic dialogue called "Men." The same, however, some critics consider spurious. Minos, according to the legend, was a son of Jupiter; this being the usual method taken by mythographers to express a person so ancient that they could put him on a level with no mere mortal; and from Jupiter as his father he is said to have learned those laws which he afterward enforced upon men. For this purpose, he is related to have retired to a cave in Crete, where he feigned that Jupiter his father had dictated them unto him, and every time he returned from the cave he announced some new law.

Minos is chiefly remarkable as belonging to a period when history and mythology interlace, and as uniting in his own person the chief characteristics of both. He is the son of Jupiter, and yet the first possessor of a navy; a judge in Hades, but not the less for that a king of Crete. It is very curious that Crete, so famous at this age both for its naval power and for being the birthplace of the Olympic games, should have attained anything like that celebrity which its position seemed to promise. Its office seems to have been that of leading the way in naval supremacy. Too insulated for power of a durable nature, it was lost in the confederate or opposing glories of Athens and Sparta; but while they were yet in their infancy, its insular form (together, perhaps, with some Asiatic refinement) gave it that concentrated energy which in an early age is irresistible. (Hom., II, 2, 65.—Id., ib., 13, 450.—Id., ib., 14, 321.—Id., Od., 19, 175.—Thucyd., 1, 3.—Platt., Leg., 1, 2 et 2.—Id., Min.—Aristot., Politi., lib. 2 et 7.—Encycl. Us. Knoetl., vol. 15, P. 428.)

Minotaur, a celebrated monster, half man and half bull, the offspring of Pasiphaæ, wife of Minos, by a bull. According to the legend, the Cretans had hesitated to give Minos the royal dignity after the death of Asterion, whereupon, to prove his claim to it, he asserted that he could obtain whatever he prayed for. Then, sacrificing to Neptune, he besought him to send him a bull from the bottom of the sea, promising to offer him to him as soon as he beheld it. Neptune sent up the bull, and Minos received the kingdom. The bull, however, being of a large size and of a brilliant white hue, appeared to Minos too beautiful an animal to be slain, and he put him in his herd, and substituted an ordinary bull. Neptune, offended at this act, made the bull run wild, and inspired Pasiphaæ with a strange passion for him, which she was enabled to gratify by the contrivance of Dædælus. Her offspring was the Minotaur. Minos, in compliance with an oracle, made Dædælus build for him the labyrinth. In this he placed the Minotaur, where he fed him on human flesh, and afterward on the youths and maidens sent from Athens. (Vid. Androgeus.) Theseus, by the aid of Ariadne, killed the monster (vid. Theseus and Labyrinthus), thereby delivering the Athenians from the cruel obligation of sending their children to be devoured. —Such is the mythological story. Its meaning is uncertain. It very likely belongs to that class of mythological tales which express a political fact, and the connexion in which Theseus stands with the Minotaur adds probability to this theory; for the exploits of Theseus are generally such effects as would be produced in historical times by the course of events in the formation of a polity. Such, at least, are his exploits in and about Attica, and there appears no sound reason to exclude this from the number. It may then, perhaps, be assumed, that, under the slaying of the Minotaur, is shadowed forth the abolition of certain obstacles existing in the way of free intercourse between Athens and Crete. But the descent of the Minotaur from Pasiphaæ (Πασίφαι), probably a name of the moon, and from the Bull, one of the zodiacal signs, may perhaps imply some astronomical fact connected with the recurrence of the tribute paid to Crete. The affection of Ariadne for Theseus, in mythological language, may be taken to mean a union of Cretan and Attic tribes. It should be observed, however, that in his shapeful argument, but ingenious treatise on mythology, considers the first two syllables of the word Minotaur to be identical with μεῖγος or μψαγος (the moon), as also with the root of the German mond and the English moon, so that we get the two parents of the Minotaur in the two parts of its name. This might lead us to believe that the name suggested the genealogy, and that the latter part referred, not to a bull's being the father of the Minotaur, but to the fact that horns and insular shape are there in prominent figures. The slaying of the Minotaur by Theseus might mean the introduction of the Attic worship in place of the previously prevalent Doric form. (Höck, Kreta, vol. 2, p. 63.—Schweenck, Andeut., p. 65.—Encycl. Useful Knoetl., vol. 15, p. 248.)

Minthe, a daughter of Cocyus, loved by Pluto. Proserpina discovered her husband's amour, and Minthe, driven hence, turned himself into an herb, called by the same name, and still, at the present day, denominated mint. (Ovid., Met., 10, 729.)

Minturnæ, a town of Latium, on the river Liris, and only three or four miles from its mouth; its extensive ruins sufficiently mark the place which it occupied: out of these the neighbouring town of Trajetta was built. (Strabo, 233.—Ptol., p. 66.—Plin., 8, 5.) We are informed by Livy (8, 29) that this town
Min. and Min. belongs to the Aesounes; but when that nation ceased to exist, Minutæna fell into the hands of the Romans, by whom it was colonized, A.U.C. 456. (Liv., 10, 21. — Vell. Paterc., 1, 14. — Dion. Hal., 1, 9.)

It was one of those maritime towns which were required to furnish sailors and naval stores which the Roman fleets. (Liv., 27, 38. — Id., 26, 3.) According to Frontinus, another colony was afterward sent thither under the direction of Julius Caesar. Minutæna, however, is chiefly known in history from the events by which it was connected with the fallen fortunes of Marius. This general, in endeavouring to effect his escape into Africa from the pursuit of the victorious Sylla, was forced to put in at the mouth of the Liris; when, after being put on shore and abandoned by the crew of the vessel, he sought shelter in the cottage of an old peasant. But this retreat not affording the concealment requisite to screen him from the pursuit which was now set on foot, Marius had no other resource left but to plunge into the marshes, with which the neighbourhood of Minutæna abounds. Here, though almost buried in the mud, he could not escape from his vigilant pursuers, but was dragged out and thrown into a dungeon. He was afterwards, by the order of a legatus, shortly after sent to despatch him; but this man, a Cimbrian by birth, could not, as the historians relate, face the destroyer of his nation, though unarmed, in chains, and in his seventieth year; such was still the glare of his eye and terror of his voice. Struck with this circumstance, the magistrates of Minutæna determined to set Marius at liberty, since such seemed to be the will of heaven. They further equipped a vessel which was destined to convey him to Africa. (Plut., Vit. Mar. — Jun., Sat., 10, 276. — Compare Liv., Epit., 77. — Appian, Bell. Civ., 1, 61. — Vell. Paterc., 2, 19. — Val. Max., 1, 5.)

The grove and temple of the nymph Marcia, supposed by some to have been the mother of Latins, and by others thought to be Circe (Verg., Ín., 7, 47. — Lactant., Mel., i, 21), were close to Minutæna, and held in the highest veneration. (Cramer's Anc. Italy, vol. 2, p. 131.)

Minutia Via, a Roman road, leading from the Porta Minutia or Trigeminia, through the country of the Sabines, as far as Brundisiun. (Schol. ad Horat., Epist., 1, 18, 20.)

Minutius, I. Augustinus, a Roman consul B.C. 458. He was defeated by the Æqui, and would have lost his whole army had not the dictator Cincinnatus come to his rescue and, by the latter to the rank of lieutenant or legatus, and at the same time deprived by him of his consular authority. (Liv., 3, 29.) II. Rufus, a master of horse to the dictator Fabius Maximus. His disobedience to the commands of the dictator, who was unwilling to hazard an action, was productive of an extension of his prerogative, and the master of the horse was declared equal in power to the dictator. Minutius, soon after this, fought with ill success against Hannibal, and was only saved by the interference of Fabius; which circumstance was such an effect upon him, that he laid down his power at the feet of his deliverer, and swore that he would never act but by his directions. He was killed at the battle of Cannae. (Liv., 23, 21. — Nep., Vit. Hannib., 5.) III. Felix, a native of Africa, who is generally supposed to have flourished a short time after Tertullian, though some have undertaken to prove that he was the author of Van. the Val. et cæteræ de vera et æterna. (M. Minutius Felicis, Campia, 1762, 4to.) Lactantius (Inst. Hist., 5, 1) and St. Jerome (Cata., S. S. Eccl., c. 58) state that he followed with repugnance the employment of an advocate at Rome. We have only one work of his remaining, a dialogue entitled Octavius, and containing a demonstration of the truth of Christianity. It is an interesting production for those who wish to become acquainted with the charges the pagans were accustomed to make against the new religion, and which Minutius Felix gives in a fairer manner than any other. It is apparent that he has himself availed himself of the apology of Tertullian; but he has a mode of viewing these arguments which is more pleasing and more elegant than that of his model. He may be regarded, in general, as one of the most elegant of the Latin ecclesiastical writers. The dialogue is between a heathen and a Christian, in which Minutius himself sits as a judge and moderator. By this contrivance he replies to the objections and arguments brought forward by the adversary, and refutes the calumnies cast upon Christianity by the teachings of the heathen philosophers, and at the same time exposes the absurdities of their creed and worship, powerfully demonstrating the reasonableness and excellence of the Christian religion. Minutius Felix is said to have been originally a pagan. — Erasmus thought his work was lost. This mistake arose from the copyists of the middle ages having joined the production of Felix to the treatise of Arnobius against the Gentiles, of which it was regarded as the eighth book. Adrian Junius thought that his work was the first to detect this false arrangement. Balduinus then printed the work of Felix separately.

The honour of this discovery, however, on the part of Junius, has been contested by some. The best editions of his work are, that of Gronovius, Lugd. Bat., 1709, 8vo, and that of Daniæ, Cant., 1712, 8vo.)

Minya, a race of great celebrity in the most ancient epic poetry of Greece, but whose name seems to have been almost forgotten before the beginning of the period when fable gives place to history. The adventurers who embarked in the Argonautic expedition were all called Minyans, though they were mostly Æolian chieftains, and the same name recurs in the principal settlements which referred their origin to the line of Æolus. Joclos itself, though founded by Crethus, is said to have been inhabited by Minyans; and a still closer affinity is indicated by a legend, which describes Minyas, the fabulous progenitor of the race, as a descendant of Æolus. (Apoll. Rhod., 3, 1694. — Schol., ad loc.) There are two ways in which this connexion may be explained, between which it is not easy to decide. The Minyans may have been a Peasagric tribe, originally distinct from the Hellenes: and this may seem to be confirmed by the tradition, that Crethus, when he founded Joclos, drove out the Peasagricans who were previously in possession of the land. (Dor., 4, 16. — Schol. ad II., 2.) But in this case we are led to conclude, from the celebrity to which the Minyans attained in the Greek legends, that they were not a rude and feeble horde, but which the Æolians reduced to subjection, but which were already so far advanced in civilization and power, that the invaders were not ashamed of adopting their name and traditions, and of treating them as a kindred people. It may, however, also be conceived, with some degree of plausibility, that they were driven by them, that the appellation of Minyas was not originally a national name, peculiar to a single tribe, but a title of honour, equivalent to that of "heroes" or "warriors," which was finally appropriated to the adventurous Æolians, who established themselves at Joclos and on the adjacent coast. If we take this view of it, all the indications we find of the wealth and prosperity of the Minyans will serve to mark the progress of the Æolian state, though the name occurs; and it will only remain doubtful, whether the Æolians or Hellenes were not more closely connected with other tribes in the north of Thessaly, among which the name of the Minyans likewise appears, than the common tradition would lead us to suppose. We hear of a town called Minya on the borders of Thessaly and Macedonia (compare Steph. Byz., s. v. Minva, and Astragalia), 851
and of a Thessalian Orchomenus Minyaeus. (Pliny, 4, 8.) In considering the elements of which the Helenic race was composed, it must not be overlooked that the Dolopes, who were seated on the western confines of Phthia, and are described in the Iliad (9, 484) as originally subject to its king, retained their name and an independent existence, as members of the great Orchomenian confederacy, to a very late period. (Pausan., 10, 8, 2, seg.) If, according to the other of these views just suggested, we consider Minyans and Θεοῖ for the same people, we find the most flourishing of the Θεια speeches in the city of Boetia. Here the city of Orchomenus rose to great power and opulence in the earliest period of which any recollection was preserved. Homer compares the treasures which flowed into it to those of the Egyptian Thebes. The traveller Pausanias, who was familiar with all the wonders of art in Greece and Asia, speaks with admiration of its most ancient monument, as not inferior to any which he had seen elsewhere. This was the treasury of Minyas, from whom the ancient Orchomenians were fabled to have been called Minyans; and the city continued always to be distinguished from others of the same name, as the Minyan Orchomenus. Minyas, according to the legend, was the first of men who raised a building for such a purpose. Homer compares his skill in art with names which express his traditional opinion of his unbounded wealth. Thus he is the son of Chryses, whose mother is Chryseogene, d.c. (Pausan., 9, 36, 4—Thirwall's Hist. Gr., vol. 1, p. 91.—Compare Müller, Orchomenus and the Minyer, p. 139, seqq.)

Minvus, a king of Orchomenus in Boetia, son of Chryses, and grandson of Neptune. He was famed for his opulence, and for the treasury or structure which he built, with his riches. (Consult remarks towards the end of the article.)

Misenus. I. Promontorium, a promontory of Campania, forming the upper extremity of the Bay of Naples, now Cape Miseno. It was so named, according to Virgil (En., 6, 234), from Misenus, the trumpeter of Θεοῖ, who was drowned and interred here. (Compare Propert., 3, 18.—Stat. Silv., 3, 1.) Other accounts speak of Minyas as a companion of Ulysses. (Strabo, 245.)—II. A town and harbour on the promontory of the same name. Misenus was probably the name used by the Cumans as a harbour (Dion. Hal., 7, 5). In the reign of Augustus it became one of the first naval stations of the Roman empire, being destined to guard the coast of the Tuscan Sea. (Suet., Aug., 48.)—Florus, 1, 10.) In process of time, a town grew up around the harbour, the inhabitants of which were called Miseneans. (Veget., 5, 1.) The neighbourhood of this place abounded with marine vines, among which may be mentioned that of C. Marius, too luxurious, as Plutarch observes, for such a soldier. (Compare Plin., 18, 6.) It was purchased afterward by Lucullus for 500,000 denarii. According to Seneca (Ep., 51), it stood on the brow of the hill overlooking the sea. Some years after it came into the possession of Tiberius, as we learn from Phadrus (2, 36), who has made it the scene of one of his fables. It was here that emperor ended his days. (Suet., Tib., 74.)—Pliny the elder was stationed at Misenus, as commander of the fleet, at the time of the great eruption of Vesuvius, in which he perished. (Cramer's Anc. Italy, vol. 2, p. 154, seqq.)

Mises, a Trojan, conspicuous for both his prowess in arms and his skill on the clarion or lutes. He often signalled himself by the side of Hector in the fight; and, after the fall of Troy, accompanied Θεοῖ on Italy, on the shores of which country, near the city of Cumae, he lost his life, having been drowned amid the breakers by a Triton who was envious of his musical skill. (Virgil, En., 6, 164.) Virgil calls him Eolides, not as indicating any diving descent from Eolus, the god of the winds, but merely as a patronymic denoting his origin from a mortal father named Eolus. The same poet is guilty of an anachronism in making Misenus acquainted with the lutes, since both the lutes and tusa were unknown in Homeric times. He has merely, however, followed in this the custom of the tragic writers. (Consult Heyne, Ezcur., 220.)—III. Misenus is further interred on the promontory, fabled to have been called Misenum after his name, and which is now still denominated Miseno. (Virg., En., 6, 232, seqq.)

Misitheus, father-in-law of Gordion III. (Vid. Gordionus III.)

Mithra or Mitra, a deity of Persia, generally supposed to have been the Sun. His worship, in process of time, introduced at Rome, and altars were there erected to him, with the inscription "Deo Soli Mitrae," or "Deo Invicto Mithrae." He is generally represented in sculpture as a young man, his head surrounded with a Phrygian bonnet, and in the attitude of supporting his knee upon a bull that lies on the ground. He holds with one hand a horn of the animal, while with the other he plunges a dagger into its neck. Mithras here represents the generative Sun, in the full bloom of youth and power, while the bull indicates the earth, containing in its bosom the seeds or germs of all things, which, when compelled to forth in an abundant flood from the wound inflicted by his dagger of gold. (Creuzer, Symbolik, par Guigniaut, vol. 1, p. 356.)—The mysteries of Mithras were celebrated with much pomp and splendour on the revival of the Persian religion under the Sassanides, but we do not read of the worship of the sun under this name in the earlier Greek writers. (Hyde, Hist. Rel., Vet. Pers., c. 4, p. 103.) The word is evidently the same as Mitra, one of the names of the Persian god of the sun. It is found in many ancient Persian names, as Μίθραδατς or Μιθραδάτης (Herod., 1, 110); Μιθραδάτης (Herod.: 3, 120); Ιούθος (Herod., 9, 102); Ζνιφούς (Herod., 7, 68); and in Μιθραίον, Μιθρίκιον, or Μιθρίκς (Xen., Hist. Gr., 2, 6.—Arrian, Exp. At., 1, 17.—Id. ib., 3, 16), which appear to be derivatives. (Pott, Eigenn. Forsch., vol. 1, p. xlvii., seqq.—Rosen, in Journal of Education, No. 9, p. 334, seq.—Engel. Us. Kiew., vol. 15, p. 298.)

Mithra was one of the most important deities among the Medes and Persians, which appears to have been formed from Μιθρα or Mitra, the Persian name for the sun, and the root da, signifying "to give," which occurs in most of the Indo-Germanic languages. The name, however, was written in several ways. In Herodotus (1, 110) we find Μιθράδατης; in Xenophon (Anab. 7, 8, 25), Μιθραδατης; in the Septuagint (Estu., 1, 8—Id., 4, 7), Μιθραδατης; and in Tacitus (Ann. 12, 10), Mithradates. On the Greek coin it is written Mithridates. A large class of names in different dialects of the Indo-Germanic languages have the same termination as Mithradas. Thus, in Sanscrit, we find the names Devadatta, Haradatta, Indradatta, Somadatta, that is, "given by the gods," "given by Har or Siva," "by Indra," "by Soma, or the moon;" and in Greek, such names as Thiodolus, Diolidus, Zenothisus, and He-rodotus. In Persian names the same termination occurs, viz. in the names of Mithridates and Pherecrates of Herodotus (7, 67; 9, 76); and the Madates of Curtius (6, 3).—The most celebrated race of princes of the name of Mithradates were the kings of Pontus, who were descended from Artabazes, one of the seven Persian nobles who overthrew the magi, B.C. 521. (Florus, 3, 5.—Diod. Sic., 19, 40.—Polyb., 3, 43.) The following is a list of these kings.—I. Mithridates I., of whom little is known. (Aristol., de Rep., 5, 10.)—II. Mithridates II., succeeded Ariobarzanes II., B.C. 365. He took an active part in the various wars which were carried out.
MITHRADATES.

by the successors of Alexander the Great; and, being an active and enterprising prince, he greatly extended his paternal dominions, whence he is frequently sur
named the founder (kratigos) of the kingdom of Pontus. He also ruled over Cappadocia and Phrygia. He was put to death by Antigonus, B.C. 302, at Cius in Mysia, at the age of 84, according to Lucian (Macrobi., c. 19), or 131, according to the history of Cassander.— III. MITHRADATES III., son of the preceding, ruled from B.C. 302 to 266.— IV. MITHRADATES IV., the son of Ariobarzanes III., was left a minor by his father. He attacked Sinope, which was taken by his successor Pharnaces, and carried on war against Eumenes II. He was in close alliance with the Rhodians; and joined with some princes of Asia Minor in making valuable presents to the Parthians to keep them from interference in the east (Polyb., 5, 89, seq.). He married the sister of Seleucus Callinicus, by which alliance he obtained Phrygia. His own daughter was married to Antiochus the Great.

— V. MITHRADATES V., surnamed Euergetes, reigned from about 156 to 120 B.C. He was an ally of the Romans, and assisted them in the third Punic war with a considerable fleet. He was assassinated at Sinope, and succeeded by his son, the famous Mithradates. — VI. MITHRADATES, surnamed Eupator, who dwelt on the eastern shores of the Black Sea, where he was reduced to subjection. The next acquisition which he made was Paphlagonia, which was said to have been left to the kings of Pontus by Pyrrhus II., king of Paphlagonia, who died about B.C. 121. Part of Paphlagonia he gave to Nicomedes II., king of Bithynia, who was, next to Mithradates, the most powerful monarch in Asia Minor. Nicomedes, however, was jealous of the increasing power of Mithradates; and on the death of Ariarathes VII., king of Paphlagonia, who had married a sister of Mithradates, Nicomedes married his widow, and seized the kingdom of Cappadocia, to the exclusion of the son of Ariarathes. Mithradates immedi
ately took up arms in favour of his nephew, defeated Nicomedes, and placed his nephew on the throne, under the title of Ariarathes VIII. In a few months afterward this prince was murdered by his uncle at a private conference, who placed a pretender of his own on the vacant throne, and defeated successively the brother of the late king, and a pretender to the throne, whom Nicomedes represented as a son of Ariarathes. Unable to cope with this formidable enemy, Nicomedes applied to Rome; and the Romans, who had long been anxious to weaken the power of Mithradates, declared both Cappadocia and Paphlagonia to be free states, and, having placed a Cappodacian, at their own request, to elect Ariobarzanes to the throne, Mithradates, however, did not tamely submit to the loss of his dominions. He entered into an alliance with Tigranes, king of Armenia, to whom he gave his daughter in marriage; and with his assistance he expelled Ario
barzanes from his kingdom, and also deprived Mi
comedes III., who had lately succeeded his father, of Bithynia. The two expelled kings applied to the Romans for assistance, and the latter sent an army under Aquilus to reinstate them in their kingdoms. A war with the Romans was now inevitable, and Mithradates conducted it with the utmost vigour. The Roman armies were defeated one after another; and the last, at Carrhae, in Cilicia, put to death his Gnaeus Domitius Ahenobarbus, and allowed his brother, a prisoner, to escape. The Romans then poured melted gold pounded down his hands; and among his followers B.C. 88 the whole of Asia Minor was in the hands of Mithrada
tes. In the same year he commanded all Romans to leave the country; but, before they could do so, they were massacred by the inhabitants of the different provinces of Asia Minor, to the number, it is said, of 80,000. Whether this massacre took place by the command of Mithradates, or was occasioned by the mutiny of his army, is left in some degree to doubt. The islands in the Egean followed the ex
ample of the countries of the mainland. Athens also submitted to the power of Mithradates, together with several other places in Greece. The Rhodians, the only people who offered him any vigorous resistance, were attacked, but without any success. In B.C. 87, Sylla arrived in Greece, and immediately commenced the siege of Athens, which was taken on the 1st of August, B.C. 87. Mithradates was taken a prisoner, and on his release was allowed to continue in possession of his dominions, with the consent of the Roman people. After his death his son, Mithradates, had the government of Asia with the title of Acileus. The island of Ar
corea, and shortly afterward by another victory at Orchomenus. During the successes of Sylla in Greece, the party of Marius had obtained the ascendency at Rome; and Flaccus, who had been consul with Cinna, was sent to succeed Sylla in the command. Flaccus, however, was put to death by Fimbria, an unprincipled man, but who possessed considerable military talents and prosecuted the war against Mithradates in Asia with great success. The victories of Fimbria and the state of parties at Rome made Sylla anxious for peace, which was at length agreed upon (B.C. 84), on condition that Mithradates should aban
don all his conquests in Asia, and restore Bithynia to Nicomedes, and Cappadocia to Ariobarzanes. But this war was scarcely ended before Mithradates was again involved in hostilities with the Romans. He had collected a large army to carry on war against the Colchians. Murana, who commanded in Asia, per
ceiving or pretending to perceive a disposition in Mithradates to renew the war, seized the opportunity of en
riching himself, and, without any authority from the senate or Sylla, invaded the dominions of Mithradates, and collected much plunder. Mithradates, having in vain complained to the senate, collected an army to defend his dominions, and completely defeated Murana on the banks of the Haly. But, as Sylla was dis
pleased with Murana for having attacked Mithradates, the peace was renewed, and thus an open rupture was avoided for the present. During the next eight years Mithradates employed himself in making preparations for a renewal of the war; and in B.C. 75 he broke the treaty which existed between him and the Romans by the invasion of Bithynia. Lucullus was appointed to the command B.C. 74, and commenced the war against Tigranes, king of Propontis, which had been supplied by Mithradates with every de
scription of military stores. In the following year Mithradates made an effort to relieve the place, but was defeated by Lucullus and ordered to retire to Pon
tus. He was soon after followed by the Roman gen
eral, and, having lost another battle at Cabiri, on the borders of Pontus and Bithynia, he fled into Armenia, to his son-in-law Tigranes, with a large force of Camacles, who was doing service for Mithradates. Mithrada
tes, however, did not tamely submit to the loss of his dominions. He entered into an alliance with Tigranes, king of Armenia, to whom he gave his daughter in marriage; and with his assistance he expelled Ario
barzanes from his kingdom, and also deprived Mi

893
ken by the conqueror. In the following year Tigranes was again defeated, together with Mithradas, near Aristaeus; but Lucullus was not able to derive all the advantages he might have done from his victories in consequence of the mutinous disposition of his troops. (Vid. Lucullus.) Mithradas was thus enabled to collect another army without opposition; and, having returned to Pontus, he defeated the Roman general Titarius, with the loss of 7000 men, before Lucullus could march to his assistance. This victory was followed by others; various parts of Asia Minor again submitted to his authority; and the Romans were compelled to the point of losing all the acquisitions they had made during the war. But the power of Mithradas had been shaken to its foundation; and, on the appointment of Pompey to the command, B.C. 66, the war was soon brought to an end. Mithradas was defeated on the banks of the Euphrates; and, in consequence of Tigranes having submitted to Pompey, fled to the barbarous tribes dwelling to the north of Caucasus, who received him with hospitality and promised him support. The spirit of Mithradas had not yet been broken by adversity; and he purposed, with the assistance of the Colchians and Scythians, to carry into execution a plan which he is said to have formed in his earlier years, namely, of marching through Thrace and Macedonia, and invading Italy from the north. But these plans were frustrated by the plots of his eldest son Pharnaces, who gained over the army to his side, and thrust this plan to the point of falling into the hands of the Romans, Mithradas put an end to his own life, B.C. 63, at the age of 68 or 69, after a reign of 57 years. (Appian, Bell. Mithrad. — Plut., Vit. Lucull. — Id., Vit. Syll. — Clinton, Fast. Hell., vol. 3, Appendix, 8 —Encycl. Us. Knowl., vol. 15, p. 299, seq.)

MITYLENE, or, more correctly (if we follow the language of coins), MYTILENE, the capital of Lesbos, in the southeastern quarter of the island, facing the coast of Myasia. It was first built on a small island, connected by means of some low rocks with Lesbos itself. In process of time, the population increased so much as to require an enlargement of the ancient limits. The space between Lesbos and the small island was filled up, and the city was extended to the main island of Lesbos. In this way the place became possessed of two harbours, which the small island and the causeway connecting it with Lesbos separated from each other. These latter, one of them — the principal — and was also protected by works from the violence of the wind. (Strabo, 617.—Diod. Sic., 13, 79.) The city is said to have been named from the elder daughter of Macareus. (Steph. Byz., s. v. Murlüps.)—Diod. Sic., 5, 80.) The fortunes of this place were always intimately connected with those of Lesbos itself. In the beginning of the Peloponnesian war, the people of Mytilene being accused of a secret negotiation with the Lacedaemonians, Athens sent a fleet against them. The other cities in the island, except Methymna, made common cause with Mytilene. After some resistance, however, the Athenians gained a complete victory, when the walls of Mytilene were razed, and many of its wealthier inhabitants put to death. The Athenians even sent an order to their commander to put to death all the males who had attained the age of puberty, but they became ashamed of their barbarous deed, and desisted from the order. The countermand arrived just one day previous to that appointed for the slaughter. (Thucyd., 3, 36-49.) The whole island, except the territory of Methymna, which was spared, being divided into 3000 parts, 300 of these parts were devoted to sacred purposes, and the rest distributed among the Athenians, by whom they were rented to the former proprietors. Mytilene, however, soon recovered from the effects of this blow, but always after this adhered to the side of the Athenians. It became a large and strong city, and the strength of its fortifications was greatly increased when it was besieged by the troops of Memnon, the general of Darius, during Alexander's expedition into Asia. (Arrian, 2, 1.) It suffered at a subsequent period from the Romans on account of its adherence to the side of Mithradas. (Epit., Lév., 89.—Compare Vell. Paterec., 2, 18.) It again, however, recovered from this misfortune, and was restored by Pompey to its former privileges, through favour to Theopanes. These privileges were confirmed by the Roman emperors, so that this town now held a distinguished rank among the first cities of the empire. Pliny styles it "libera Mytilene, annis MD. potentis" (5, 39.—Compare Strab., 617.—Vell. Paterec., 2, 18.) Athens praises its shellfish and wine (3, p. 86, c.; ib., p. 92, d.; 1, p. 30, b.). Mytilene could boast of having given birth to Sappho and Alceus, and to the historians Myrsilus and Helianicus. Pittacus, too, one of the seven wise men of Greece, long presided over her councils. The modern Mytilene occupies the site of the ancient city. The following description of it is given by a recent traveller. "The town of Mytilene is built on a small peninsula, and has two ports, one on the north, and one on the south of it, both too shallow for anything but boats: the port on the north is protected by a Genoese mole, now in ruins; the extremity of the peninsula is covered by a very large Genoese castle, and the remainder of it, and some of the continent, by the town. The town contains about 700 houses, and 400 Turkish; its streets are narrow and filthy." (Turner, Tour in the Levant, vol. 3, p. 299.)

MNEMON (Μνήμος), a surname given to Artaxerxes on account of his retentive memory. (Vid. Artaxerxes II.)

MENOSYNE, a daughter of Celus and Terra, mother of the nine Muses by Jupiter, and goddess of Memory. The meaning of the myth becomes apparent when we regard the Muses as symbolical of the inventive powers of the mind as displayed in the various arts. The power of remembering, gained by practice, at a time when books were rare, may well be assigned to the Muses as a parem. (Aesch., P. V., 461.)

MENARCHUS, I. an engraver on precious stones, born in Etruria, and father of Pythagoras the philosopher. Hence he probably flourished about Olymp. 89. (Silius, Histor. Art., 302.) The word, it is said, was derived from a name which the artist's son succeeded Aristaeus of Crotona, the immediate successor of Pythagoras himself. (Tennemann, Hist. Phil., 95.)

MENAES, a celebrated architect, born a slave in the house of Pericles. By the command of this distinguished statesman, he built the magnificent vestibule of the Athenian citadel, the erection of which occupied five successive years (B.C. 437-432.—Plut., Vit. Pericld., 19). While engaged in this undertaking, he fell through a platform, and was remaining, but was healed by Pericles by the application of the herb pellitory, which it was said Minerva had pointed out to the latter in a dream. (Plut., I. c.—Plin., 22, 17, 20.) A brazen statue of him was cast by Stipax, and this statue was designated "Sphalangeoptes." (Plin., I. c.—Id., 34, 8, 19.—Silius, Dict. Art., s. v.)

MENESTRUS, Vid. Menestheus.

MENOS, a name of a sacred bull consecrated to the sun, and worshipped by the Egyptians at Helio-

polis. According to Jablonski (Voc. Aegypt., p. 146, 184), his name signified "the bull of light" or "the sun." (Compare Strabo, 803.—Diod. Sic., 1, 21.—Plut., de Is. et Os. p. 492, ed. Wyt.) The colour of Mennis had to be black, and his skin must be rough and bristly. His worship, however, gradually disappeared whenApis became the general deity of the country, and we may date its downfall from the
MOL

time when Cambyses overthrew the magnificent temple of Heliopolis. Mucias was worshipped with the same superstitious ceremonies asApis, and at his death he received the same magnificent funeral. (Consult Crauver, Symbolik, par Guigniaut, vol. 1, p. 498.)

Mestres, a Latin military writer, whose history is unknown. He wrote a work De vocabulw, ria militum, published by Heyne, 1725 and 1726. The first edition was published in 1747, 4to, Veter., edited by J. Aloysius; and is a book of extreme rarity. There is also another edition, supposed to have been printed at Rome by Laver, about 1745, 4to. An edition was also published in 1679, 2 vols. 4to, Vesalisse.

Meknes, a river of Germany. (Vid. Mensus.)

Menas, I. a king of Egypt, who occupied the throne for 83 years, and was succeeded by Sesostris. (Larcher, Tabul. Chronol. p. 572.—Id., Chronol. d'Herod., p. 86, seq.—Bahr, ad Herod., 2, 100.—II. A lake of Egypt, supposed to have been the work of a king of the same name, concerning the situation and extent, and even the existence of which, authors have differed. It has been represented as the boldest and most wonderful of all the works of the kings of Egypt; and, accordingly, Herodotus mentions it superior to the pyramids and labyrinths. (Herod., 2, 149.) As to its situation, Herodotus and Strabo (810) mark it out by placing the labyrinths on its borders, and by fixing the towns which were around it, such as Acanthus to the south, Aphroditopolis towards the east, and Arsinoe to the north. Diodorus (1, 52) and Pliny (5, 9) confirm this statement, by placing it at 24 leagues from Memphis, between the province of that name and Arsinoe. The position thus indicated is supposed to answer to the modern Birkat-Carbon, a lake near by 50 leagues in circumference. Herodotus makes the Lake Mecris 3600 stadia in circumference, and its greatest depth 200 cubits. Bossuet has vindicated the statement of its large extent against the raillery of Voltaire. Rollin, however, deeming it to be incredible, adopts the opinion of Pomponius Mela (1, 9), and makes it 20,000 paces. D'Anville, with a view of reconciling the contending parties, has marked on his map of Egypt two lakes of this name, one of which is in fact a canal running parallel with the Nile; this he makes the Mecris of Herodotus and Diodorus, while the other is situated to the northwest, and corresponds, according to him, with the Mecris of Strabo and Ptolemy. This last is the Birkat-Carbon mentioned above; the former, which still subsists, is known by the name of Baher Joseph, or Joseph's river. It opens near Tarout Eicherriff, and ends near Malte-Brun.

The explanation given by Malte-Brun is, however, the simplest. He supposes that the canal dignified with the name of Joseph, like many other remarkable works, was executed by order of King Mecris. The waters then filled the basin of the lake Birkat-Carbon, which received the name of the prince who effected this great change. Thus a reason may be assigned for the ancient name of the lake, and for the name of artificial farm. However, the Birkat-Carbon gives no evidence of any such operation. (Malte-Brun, Geogr., vol. 2, p. 447, Brussels ed.) If we listen, however, merely to the relation of Herodotus, the Lake Mecris was entirely the work of human art; and, to show this, two pyramids were to be seen in its centre, each of which was 200 cubits above, and as many below the water, while on the summit of each was a colossal in a sitting posture. The scoop of the bank of the lake was 400 cubits wide, and its depth 60 cubits. The calculation of the volume of the water was to regulate the inundations of the Nile. When the waters of the river were high, a large portion was carried off by the canal the lake, in order that it might not remain too long on the soil of Egypt (lower at that time than in our days), and occasion sterility; when the inundation had declined, a second one was produced by the waters in Lake Mecris. The lapse of nearly 1200 years has made a great change in this as in the other Egyptian works of art. Mecris is now nearly 50 leagues in circumference. It might still, however, be made to answer its ancient purposes, if the canal of Joseph were cleared of the immense quantity of mud collected in it, and the dikes restored. The pyramids in this lake were no longer visible in the time of Herodotus. The lake, however, has afforded a most abundant supply of fish. The profits of this fishery were appropriated to find the queen with clothes and perfumes. (Compare Martin, Description, Hydrogr.—Descript. de l'Egypte, Etat. Mod., livraison 3, p. 195, seq.—Ibid., Antig. Mem. sur le Lac de Mecris, par Jornand., vol. 1, p. 79, seq.—Le Monistre sur Rollin, vol. 1, p. 22, seq.)

Menas, the world, the Roman empire, extending north of the range of Mount Haemus, the modern Balkan, as far as the Danube, and eastward to the Euxine, and corresponding to the present provinces of Serbia and Bulgaria. Its boundaries to the west were the rivers Drinus and Savus, which divided it from Pannonia and Illyricum. Strabo (295) says, that the old inhabitants of the country were called Mysi (Moecii), and were a tribe of Thracians, like their cousins the Mesiaces, and the ancestors of the Myrians in Asia Minor. The Romans first invaded their country under the reign of Augustus, and it was afterward made into a Roman province, and divided into Mecris Superior, to the west, the Drinus and the Cesius (or modern Isker), and Mecris Inferior, extending from the Cesius to the Euxine. Being a frontier province of the empire, it was strengthened by a line of stations and fortresses along the southern bank of the Danube, of which the most important were Axioipolis, Duroston, Nicopolis ad Istrum, Viminacium, and Singidunum. A Roman wall was built from the Danube to the Euxine, from Axioipolis to Tomi, as a security against the incursions of the Sarmatians and Scythians, who inhabited the delta of the Danube. The conquest of Dacia by Trajan removed the frontiers of the empire farther north, beyond Mecris; but after the loss of the province of Dacia, about A.D. 250, Mecris became a border country, and, as such, exposed to the irruption of the Goths, who, after several attempts, crossed the Danube, and occupied Mecris in the reign of the Emperor Valens. The Mesuo-Goths, for whom Ulphilas translated the Scriptures, were a branch of Goths settled in Mecris. Some centuries later, the Bulgarians and Scavonians occupied the country of Mecris, and formed the kingdom of Bulgaria in the region.

—The Greek writers called this country Mecris. (Dio Cass., 38, 10.—Amm. Marcell., 27, 9.—Phln., 3, 26.—Id., 4, 1.—Tac., Ann., 15, 6.—Herodion, 2, 10.—Encycl. Us. Knowl., vol. 15, p. 297.)

Moguntiacum or Moguntiacum, afterward Moguntia or Magonia, a city of the Vangiones, lying opposite to the mouth of the Meus or Mayn. It was founded, or, at least, considerably embellished by Drusus, brother of the Emperor Tiberius, in 17, and it formed the metropolis of Germania Prima, and the residence of the governor or prefect of Gaul. It often suffered from the Batavi in the earlier periods of the empire, and at a later day from the barbarians. The modern name is Mainz, or, as we commonly write it, Mayence. (Tacit., Hist., 4, 15, 37, 61, 70, et 71.—Plut., 3, 9.)

Molionis, the wife of Actor, son of Phorbas. She became mother of Ceautus and Eurytus, who from her are called Molionides. (Pausan., 8, 14.—Apollod., 2, 7.)

Molionides, the two sons of Actor and Molionis, called Actorides from their father, and Molionides from their mother. (Heyne, ad Il., 2, 708.) Their names were Eurytus and Ceautus. Homer describes
them, according to the common interpretation, as twins (δίδυμοι), and one as managing the chariot, while the other held the lash. Aristarchus, however, explained δίδυμοι by διφνεῖς, on the authority of Hesiod (κατὰ τοῦ Ἡσιόδου μένουν), and saw in the Molioides a double body with two heads and four arms, like the cultivators of the Patriarchal field. The man whose explanation has been rejected by many as too artificial, for the age of Homer; and in the same way has the tradition mentioned by the poet Ibycus been treated, which makes the Molioides both to have come from a silver egg (ap. Athen., 2, p. 57, f.). If we examine attentively the genealogy assigned to these heroes, new light will be found to break in upon this singular fable. Actor, the father, is "the man of the shore," against which the waves of the sea break; he is also "the man of grinding," of the grain crushed and broken by the mill. (Ἀκτώρ, ἀκτή—Δυσμιτήρος ἀκτῆ—Hes., Op. et D., 32.) On the other hand, Molius is "the female of combat." Molyos is the name of his father (compare μολύος), according to Pherecydes, and Apollodorus (1, 7) mentions two individuals of this name, one of the Sons of Mars, the other of Deucalion. Without war we can neither conquer nor defend the soil destined for culture. Hence one of these warriors, named Eurytus, was called the "good fencer," the guardian, like the two Anacres or Dioncuri, whom the Spartan tradition made to have issued from the same egg. Thus Eurytus is from εὖ and βοίωμι, with an active signification. (Compare Buttmann, Lexicogus, vol. 1, p. 146.) The other, Cteatus (Kteatos, -σταύρ, τεσ Macedonia, is "the possessor" or "proprietor." When the sea has entered within its proper limits, and the shore now contains it, then appear the cultivators of the Patriarchal field. The man who would remain master of his paternal soil must in some sort be double. He must have two arms for the sword and buckler, two for the lash and the reins with which he guides his courser. A single body ought to carry a double array of members, a single will to actuate two souls. These are the double men of Hesiod (διφνεῖς).—Such is the explanation of Creuzer as regards the fable of the Molioides. (Symbo- lite, vol. 1, p. 65; and Cambilius, p. 8; compare Butler, p. 1, p. 334, seqq.). In place of this very poetical version of the legend, Hermann gives one altogether different, and singularly prosaic. He sees in the whole story a general reference to traders coming by sea, disposing of their merchandise to advantage, and becoming possessed of riches. (Über das Wesen und die Behandlung der Mythologie, p. 55.)—The Molioides are also mentioned as having come to the aid of Augues against Hercules. (Hesye, ad II., 11, 709.) The Cyclic poets, from whom Pherecydes and Pindar (Ol. 10, 32) drew, in this instance, their materials, made them to have been slain by Hercules, whereas Homer speaks of them as surviving Hercules, as being still young (μακάρις ἄνθρώπινα, and contemporary with Nesfor.

Molo, a philosopher of Rhodes, called also Apollonius. (Vid. Apollonius V.)

Molorchus, an old labouring-man near Cleonos, who hospitably entertained Hercules when his latter was on his way against the Nemean lion. Molorchus wishing to offer a sacrifice, in order to propitiate the gods and obtain for Hercules a successful accomplishment of his enterprise, the hero begged him to reserve it till the thirtieth day, saying that if he should then return victorious, he might offer it to Jupiter the preserver; but if he fell in the contest, to make it a funeral offering. Having said this, Molorchus destroyed the lion, Hercules came to the abode of Molorchus on the last day of the appointed period, and found him just on the point of offering the victim for him as being dead. Hence we have in Tibullus the expression "Molorchis teexit," (4, 1, 13), and in Virg., "lucos Molorchis" (Georg., 3, 19.—Apollod., 2, 5, 1.—Heyne, ad loc.).

Molossi, a people of Epirus, occupying the northeastern portion of the country; that is, from the head of the Aous, and the mountainous district which connects Macedonia. Thessaly, and Epirus to the Ambraeans. Thence, and to the borders of a small portion of the shores of which was considered to belong to them. (Sevlaz, p. 12.) Molossi must therefore have comprehended the territory of Janinna, the present capital of Albania, together with its lakes and mountains, including the country of the Tymphaei, which bordered on that part of Thessaly near the source of the Peneus. Its limits to the west cannot precisely be determined, as we are equally ignorant of those of Thespia. The principal town of the Molossi was Ambraea. Under their King Alexander, about 320 B.C., they gained the precedence over the rest of Epirus, which they maintained under his successors, of whom Pyrrhus was the most celebrated. After the defeat of Perseus, Paulus Æmilius, the Roman general, ravaged the country of the Molossi, as well as the rest of Epirus, and destroyed their towns. The effects of the devastation which he caused were still visible in the time of Strabo. This country was famed for its dogs; they were of a robust make, but very useful in defending the flocks. (Cram., Hist. An., 9, 1. —Cramer's Anc. Greece, vol. 1, p. 131.)

Molossia or Molossis, the country of the Molossi in Epirus. (Vid. Molossi.)

Molossus, a son of Pyrrhus and Andromache. He reigned in Epirus after the death of Helenus. (Pausan., 1, 11.)

Molycrius or Molycria, a town of Æolia, on the borders of the Locri, and in the immediate vicinity of Antirrhium. According to Thucydides, it was situated close to the sea. This place had been colonized by the Corinthians, who were expelled by the Athenians, and it was afterward taken by the Æolians and Peloponnesians under Eurylochus. (Thucyd., 2, 8. —Id., 3, 102.) It is also alluded to by Pausanias (5, 34), who elsewhere writes it Molycia (9, 31), while other Greek writers give Molyreia, as for example Strabo (15, 3, 2). The name on which it is called Carvollina, where its remains are yet perceptible. (Cramer's Anc. Greece, vol. 2, p. 81.)

Momus, the god of raillery and ridicule, was the son of Night, without a sire. (Hesiod, Theog., 211.) He does not appear to have been known to Homer, but is alluded to by Plato and Aristotle, and, as might well be expected, by Lucian. (Hermot., 20. —Ver. Hist., 2, 3. —Nigr., 32.) Nothing was perfect or found favour in his sight; and the gods themselves were the objects of his perpetual and unlimited satire. He blamed Vulcan, because in the human form which he had made of clay, he had not placed a window in the breast, by which whatever was done or thought there might easily be brought to light. He cursed the house which Minerva had constructed, because the goddess had not made it moveable, by which means a bad neighbourhood might be avoided. In the case of the bull which Neptune had produced, he observed that his blows might have been sure if his eyes were placed nearer the horns. Venus herself was exposed to his satire; and when he could find no fault with her person, he cursed the noise made by her golden sandals. He was eventually driven from Olympus.—Momus reminds us of the Gigon (Πηγών) in the Cabiric mysteries. (Creuzer, Symbolik, vol. 2, p. 423.)

Mona, I an island between Britain and Hibernia, now the island of Man. On which the name of Mona (B. G., 5, 13) Potenius calls it Mováad (ed. Erasm., where some MSS. give Movapiva). He removes it, however, too far to the north. Orosius (1, 11) styles it Mervânia, which closely resembles the Monapia of Pliny (4, 10), especially if, with Cambden, we read Mo-
nabia for the latter. (Cellarius, Geogr. Ant., vol. 2, p. 355.)—II. An island off the coast of Britain, and facing
the territory of the Ordovices, of which, in strictness, it formed part. It was situate to the southeast
of the former, and is now the Isle of Anglesey. Tacitus
gives it the name of Mona (Ann., 14, 29.—Vit. Agric., 14), and Ptolemy styles it Mova, while Dio (Comm. 49. 2) notes that Mopontius, a Roman
name, as having been one of the principal seats of the Druids. Suetonius Paulinus had conquered Anglesey; but
the insurrection of the Britons under Boadicea did not leave him time to secure its possession. Agricola,
in a subsequent period, having subdued the Ordovices, undertook the reduction of the island and succeeded.
The invasion by Paulinus was seventeen years previous to the conquest of Agricola. (Tacit., Vit. Agric., 18.)
Peninsula is a pass in Wales, into the valley of Clwyd, in the parish of Llanaron, which, he says, is
still called Bolch Agríkle, probably from having been occupied by Agricola on his way to the isle of Mona.
Tacitus (Ann., 14, 29, seqq.) gives an interesting account of the first conquest by Paulinus. The sanctified
groves, stained with the blood of human sacrifices, were destroyed by the Roman general. (Consult, in
relation to the Druidical sacrifices, Higgins' Celtic Dictionary.)

Mons, I. A Parthian commander, the same with the Surena that defeated Crassus. The appellation Surena, by which he is more commonly known, was merely a Parthian term denoting his high rank.—II. A Parthian officer in the time of Corbulon. (Dio Cass., 62, 19.—Tacit., Ann., 15, 2.)

Munda, a river on the western coast of Lusitania, between the Durtius and Tagus. Coinbriga (the modern Coimbra) was situated on its banks. It is now the Mondego. (Mela, 3, 1.—Marcian, Peripl., in Huds. Gr. M, vol. 1, p. 43.) Pliny calls it the Munda (4, 22).

Moneutra, a surname of Juno among the Romans. She received it, according to one account, because she advised them (monuit) to sacrifice a pregnant sow to Cybele, to avert an earthquake. (Cic., de Div., 1, 15.) Livy says, that a temple was vowed to Juno under this name by the dictator L. Porius Camillus, when the Romans waged war against the Aurnici, and that the temple was raised to the goddess by the senate on the spot where the house of Manlius Capitolinus had formerly stood. (Livy, 7, 28.—Compare Ovid, Fast, 6, 183.) Suidas, however, states that Juno was summoned Moneutra from her assuring the Romans, when, in the war against Pyrrhus, their pecuniary resources had failed them, and they had addressed her in prayer, that, as long as they prosecuted the war with justice, the means for carrying it on would be supplied to them. After their arms were crowned with success, they rendered divine honours to Juno, styling her "Moneutra," or the "adviser," and resolved, for the time to come, to coin money in her temple (Suid., s. v. Moneutra)—Many etymologists derive the English word "money" from the Latin moneta; and this last, according to Vossius, comes from monet; "quod ideo moneta vocatur; quia nota inscripta moneta nos autoris et valoris." The true root, however, is most probably contained in the Anglo-Saxon myneg-ian, "to mark," or myneath-ian, "to stamp," (Richardson, Eng. Dict., s. v. "mint," "money."—Compare Tooke, Diversions of Parley, vol. 2, p. 210, ed. 1829)

Monds, a son of Prusias. He had one continued bone instead of a row of teeth, whence his name (pruo-
sum). (Plin., 7, 16.—Consult G. Covier, ad loc.)

Moneustra. Vid. Herculis II. (Herculis Monunci Portus)

Mons Sacer, a low range of sandstone hills, extending along the right bank of the Anio, and about three miles from Rome. It is celebrated in history by the secession of the Roman people. (Liv., 2, 32.—
Ovid, Fast., 3, 663.)—It was called Mons Sacor, because, says Festus, the people, after their secession, consecrated it to Jupiter. (Gell, Topography of Rome, vol. 2, p. 107.)

Mophes, a powerful giant, who could root up trees and hurl them like a javelin. (Jue., 1, 11.—
Ovid, Met., 12, 499, seqq.—Lucan, 6, 388.—Val. Flacc., 3, 3.)

Mopsorin, an eminence between Larissa and Tempe, on the southern bank of the Peneus. A severe skirmish took place in its vicinity between the troops of Perseus and the Romans. (Livy, 42, 61, et 67.) There appears to have been a fortress on it; and Sir W. Gell observed some vestiges on a hill near the village of Erineo, which appears to be the remains of this ancient post. (Ibn., p. 292.—Cramer's Anc. Geography.)

Mopsostia, an ancient appellation for Attica, supposed to be derived from the hero Mopsopoeus or Mops.
(sirah, 397.—Compare Lyceorph., v. 1339.)

Mopsuhestia, a town of Cilicia, near the sea, on the banks of the Pyramus. Strabo (675) informs us, that Mopsus and Amphilochos settled in this neighbourhood after the Trojan war, and founded the city of Maltus, and that subsequently they quarrelled about the place. This Mopsus, it is thought, induced the Greeks of the same age to search in this quarter for a city of Mopsus, and hence arose the name Mopsuhestia (Μοψουχεστία, "the retreat of Mopsus"), given to the place in question; whether correctly or otherwise, it is difficult to say, most probably, however, the latter. This appellation continued for a long period. Cicero (Ep. ad Fam., 3, 8) speaks of Mopsuhestia. Pliny, however (5, 27), calls it merely Mopsus. Under the Byzantine empire its name was corrupted to Mopsysta, or Manista, or Mansista. (Cod. Theodos., de conlat. donator., 1, 1—
Glycas, Ann., pt. 4, p. 306.—Itin., Hierosol., p. 580.) The modern Meneis appears to be a further corruption of these names. (Leake, Journal, p. 217.) It would seem that the early origin of Mopsuhestia is contradicted by the silence of Xenophon, and also of the historians of Alexander. Strabo is the first who makes mention of the place. (Mannert, Geogr., vol. 6, pt. 2, p. 101, seqq.)

Mopsus, I. A celebrated prophet, son of Manto and Apollo. He officiated at the altars of Apollo at Claros; and from his unerring wisdom and discernment gave rise to the proverb, "more certain than Mopsus." He distinguished himself at the siege of Thebes; but he was held in particular veneration at the court of Amphilochos, at Colophon in Ionia. Having been consulted, on one occasion, by Amphilochos, who wished to know what success would attend his arms in a war which he was going to undertake, he predicted the greatest calamities: but Calchas, who had been the soothsayer of the Greeks during the Trojan war, promised the greatest successes. Amphilochos followed the opinion of Calchas, but the prediction of Mopsus was fully verified. This had such an effect upon Calchas that he died soon after. His death is attributed by some to another mortification of the natural. The two soothsayers, however, each of whom attended to another's fame, came to a trial of their skill in divination. Calchas first asked his antagonist how many firs a neighbouring tree bore; ten thousand and one, replied Mopsus. The firs were gathered, and his answer was found to be true. Mopsus now, to try his adversary, asked him how many young ones a certain pregnant sow would bring forth, and at what time. Calchas confessed his inability and said, "Mopsus devoted the answer, which upon Mopsus delivered on the morrow, and would bring forth ten young ones, of which only one would be a male. The morrow proved the veracity of his prediction, and Calchas died through the grief which his defeat produced. (Tzetzes, ad Lyceorph., 427.) Amphilochos subsequently, having occasion to
visit Argos, intrusted the sovereign power to Mopsus, to keep it for him during the space of a year. On his return, however, Mopsus refused to restore to him the kingdom, whereupon, having quarrelled, they engaged and slew each other. (Tszez. ad Lycoeph., 440.) According to another legend, he was slain by Hercules. (Tszez. ad Lycoeph., 980.)II. A son of Aemyx and Chloris, born at Titarella in Theessaly. He was the prophet and soothsayer of the Argonauts, and died at his return from Colchis by the bite of a serpent in Libya. (Hygyn., Fab. 14, 128, 172. — Tszez. ad Lycoeph., 980.)

Morgantum (of it), a town of Sicily, southeast of Agrigum, and nearly due west from Catana. It lay in the southeast corner of the island. The village of Mandri Bianchi at present occupies a part of its site. (Mannert, vol. 9, p. 2, p. 430.)

Morimara, a name given by the Cimbrini to the Northern Ocean (Plin., 4, 27), and which means "the Dead Sea." In the Welsh tongue, Mor is the "sea," and Marr "dead." In the Irish, martr-crown denotes a thick, coagulated, frozen sea. (Class. Journ., vol. 6, p. 295, seq.)

A people of Belgic Gaul, on the shores of the British Ocean, and occupying what would correspond to the Boulongnais, part of the Department du Nord, and of Flanders along the sea. Their name is derived from the Celtic Mor, which signifies "the sea," and denoted a people dwelling along the seacoast. (Compare Thierry, Hist. des Gaulois, vol. 2, p. 40.) The Portus Itius or Lucius lay within their territories, and the passage hence to Britain was considered as the shortest. Virgil (Enn. 9, 727) calls them "extremi hominum," with reference to their remote situation on the coast of Belgic Gaul. (Heyne, ad loc. — Compare Plin., 19, 1.) Their cities were, Civitas Morinorum, now Termonne; and Castellum Morinorum, now Montcassel. (Cass. B. G. 4, 21.)

Morpheus (two syllables), the God of Sleep, and also of dreams, and hence his name from the various forms (poph, "form," "figure") to which he gives being in the imagination of the dreamer. Thus Ovid (Met., 11, 634) styles him "artificem, simulatoreque figure." (Compare Gericg, ad loc.) Morpheus is sometimes represented as a man advanced in years, with two large wings on his shoulders, and two smaller ones attached to his head. This is the more common way of representing him. (Winkelmann, Werke, vol. 2, p. 555.) In the Museum Pio Clementinum, he is sculptured in relief on a cippus, as a boy, treading lightly on tiptoe: on his head he has two wings; in his right hand a horn, from which he appears to be pouring something; in his left a poppy-stalk with three poppy-heads. On a relief in the Villa Borghese, the god of dreams is again represented as a boy with wings, and holding the poppy-stalk, but without any horn. (Winkelmann, vol. 2, p. 713.)

Mors, one of the deities of the lower world, born of Night without a sire. Nothing is particularly known relative to the manner in which she was worshipped. "The figures of this deity are of common occurrence; but they are very uncommon, as indeed those of the evil and hurtful beings generally are. They were banished from all medals; on seals and rings they were probably considered as bad omens, and were, perhaps, never used. — Among the very few figures of Mors I have ever met with, that in the Florentine gallery is, I think, the most remarkable: it is a little figure in brass, of a skeleton, sitting on the ground, and resting one of its hands on its breast. A figure of Mors was common enough in the paintings of old, because she is so frequently mentioned in a descriptive manner by the Roman poets. The face of Mors, when they gave her any face, seems to have been of a pale, wan, dead colour. The poets describe her as ravenous, treacherous, and furious. They speak of her roaring about open-mouthed, and seem to give her black robes and dark wings. As the ancients had more horrid and gloomy notions of death than we have at present, so the greater part of their descriptions are of a most frightful and dismal turn."—Compare with this the language of Nichol, (From Moris, vol. 1, p. 110, Cambridge (transl.), who speaks of the genius of death, represented on Etrurian bas-reliefs, as a perfect cherub. (Micali, pl. 44.)

Mortuum Mare. Vid. Mare Mortuum.

Mosa, a river of Gallia Belgica, on the confines of Germania Cisrhena. It rose in Mount Vogesus, among the Lingones, and emptied into the Yahal. It is now the Mos or Meuse. (Cas., B. G. 4, 10. — Cass. B. G. 2, 6. — Tac., Hist., 5, 13. — App., M. Cornel., 17, 2, 9.) In the Persian Thomson it is called the Mosaha.—Mosa Pons, otherwise called Trajectus Mosae (Itin. Ant., 461), is the modern Macstricht.

Moscha, a harbour of Arabia Felix, at the mouth of the Sinus Persicus. (Ptol., in Huds. G. M., 3, 13. — Arrian, Perip., in Huds. G. M., 1, 18.) It was much frequented, according to Arrian, on account of the Sachtalic incense obtained there. Much doubt has arisen whether to give the precise situation of this port. The opinion which it makes to correspond to the modern Mascate, though plausible on account of the similarity of names, cannot be supported. Moscha more probably answers to the modern Sadschar, which D'Anville calls Steger, and Vincent Schooer (Mannert Gengr., vol. 6, p. 1, p. 102, ed. 1831. — Vincent's Periplus, p. 344, seq. —)

Moschi, a people of Asia, dwelling, according to Mela (1, 2; 3, 5), in the vicinity of the Hyrcanian Sea; but according to Pliny (6, 4), around the sources of the Phasis, between the Euxine and Caspian Seas. Stephanus of Byzantium calls them Moxoia, and Procopius Moxoia. (Ret. Got., 4, 2.)

Moschion, I. a physician, whose era is not ascertained. A treatise on "Female Complaints" (Πείρων γυναικών παιδίων) is commonly ascribed to him. The best edition is that of Dewez, Vindob., 1793, 8vo. The best edition is here given after a very good MS. in the Imperial Library at Vienna. — It is to be regretted," says Mr. Adams, "that this author's work on 'Female Complaints' has descended to us in so imperfect a state; for it appears to have contained very original and ingenious views of practice. His directions relative to the umbilical cord after delivery are more judicious than those laid down by any other ancient author. He disapproves of all the superstitious and ignorant modes of procedure formerly resorted to in such cases, and recommends to tie the cord in two places, and to divide it in the middle with a scalpel or sharp knife. He reprobrates the ancient practice of using instruments of wood, glass, reed, or hard crusts of bread. In cases of retention of the placenta, he disapproves of stenuratories, fumigations, suspending weights from the cord, and the like, because such means are apt to occasion hemorrhage; and he directs the midwife in other particulars with great judgment."

Moschus, or Moschus, a philosopher of Sidon, and the most ancient name remaining on the list of Phoenician philosophers. If we are to credit Isamblichus (Vit. Pythag., 3, 14), he lived before the time of Pythagoras. After Pisonius, many writers ascribe to him a system of philosophy, which subsequently rose into great celebrity under the Grecian philosophers Leucippus and Epicurus, called the Atomic. It is urged, in defence of this opinion, that the Moseis of Pythagoras were the same with the Atoms of Moschus, with which Pythagoras became acquainted during his residence in Phocis; and that from Pythagoras this doctrine passed to Empedocles and Anaxagoras, and afterward to Leucippus and Epicurus. (Stob., Eel. Phys., 1, 13. — Anais, Metaph., 13, 6.) To this may be replied, that
MOSCHUS.

the single evidence of Posidonius the Stoic, who lived so many ages after the time of Moschus, to whom also Cicero allows little credit, and of whose authority even Strabo and Sextus Empiricus, who refer to him, intimate some suspicion, is too feeble to support the whole weight of this opinion. But the circumstance which most of these invasions of his position is, that the notion of the hero vanishing by hypothesis or system, which was followed by the Greek philosophers, was inconsistent with the genius and character of the Barbaric philosophy, which consisted in simple assertion, and relied entirely upon traditional authority. The argument drawn from the history and doctrines of Pythagoras is fully refuted, by showing that this part of the history of Pythagoras has been involved in obscurity by the later Platonists, and that neither the doctrine of Monomachus nor those systems which are said to have been derived from Moschus, are the same with the Atomic doctrine of Epicurus. We may therefore safely conclude, that, whatever credit the corporal system may derive from other sources, it has no claims to be considered as the ancient doctrine of the Phoenicians. (Enfield's History of Philosophy, vol. 1, p. 75.)—II. A Greek pastoral poet, whose era is not clearly ascertained. The Latin poet Suetonius speaks of a violent passion of Moschius, who was the friend or disciple of Aristarchus (for the word γυναικιος, which he employs, may have either signification). If this be correct, the poet ought to have flourished about the 156th Olympiad (B.C. 156). This position, however, is very probably erroneous, since Suidas is here in contradiction with a passage of Moschus himself (Episth. Bion, v. 102), in which the poet speaks of Theocritus as a contemporary. Now Theocritus flourished B.C. 570.—Moschus is said to have been a native of Syracuse, though he spent the greater part of his days at Alexandria. He was the friend, and, according to some, the disciple of Bion. We have four idyls from him, and some other smaller pieces. 1. Ἐρως δραπέτης ("Cupid, a run-away"), a poem of twenty-nine verses. Venus offers a reward to any one who will bring him back to her; and draws a picture of the young deity, so that no one may mistake him.—2. Ἐρως ἡγομένος ("Eros the ruler"), a piece of 133 verses. The poet represents all nature as mourning the death of Bion. It is a very elegant production; but overloaded with imagery, and open to the charges of what Vajcowski calls "elegantissimam luxuriam."—3. Μεγαρος, γυνὴ Ὑπνακλέους ("Meganara, spouse of Hercules"), a fragment, containing 125 verses. It is this fragment which some critics have sought to assign to Psander, and others to Panyasis. We have in it a dialogue between the mother and the wife of Hercules. The scene is laid at Tyris, and the hero is supposed to be absent in the time, accomplishing one of the labours imposed upon him. The two females deplore their own hard lot and that of Hercules, but contain less imagery and ornament than the other remains which we possess of Moschus. It is marked by a simplicity of manner which recalls to mind the ancient epicopee, and is distinguished by traits of genuine feeling.—"Moschus," observes Elton, "seems to have taken Bion for his model, and resembles him in his turn for apologies, his delicate amenity of style, his very small imagination, and his graceful and, as it were, feminine softness. His manner, on that may at first view appear forced and affected, from its exuberance of conceit; and Dr. Johnson, in his critique on 'Lycidas,' has given a currency to the opinion that, where there is real sorrow, there can be nothing of mere poetry. I am satisfied that the inference is unphilosophical. What is the reason that 'Lycidas,' and that the 'Monody on Lacey,' by Lord Lyttleton, continue to be popular in defiance of criticism? It is that the criticism is hypercritical, and that the popular feeling is right. Shakespeare, who had from nature the deepest intuition into the nature of things, and who saw that the human mind perpetually foils the calculations of previous reasoning. We are often struck with the language and deportment of his characters, as contrary to what might have been expected under such circumstances; and yet we shall, I believe, invariably find that Shakespeare, in disappointing the vulgar notions of probability or consistency, has taken his instructions from practical human life, and has employed the many, rather than the few, and overstrained mode of diction, and far-fetched train of sentiment, may be added as one of the most prominent, and as that which is most frequently condemned, with a positive confidence, as a glaring violation of a universally acknowledged rule. But it will be found that the human mind, when acted upon by any extraordinary excitement, does in fact fly to remote associations, and vent its superfluous energy in creating and exploring, and in a wild sportiveness of imagery. The 'Elegy' of Moschus, like the 'Lycidas' of Milton, is no impeachment of the poet's accurate taste or genuine simplicity of feeling; it is, in either instance, the luxury of sorrow which pleases itself with grotesque and romantic creations of an excited fancy: it is the revery of a poet; accompanied with that natural irregularity of mind, that unseating of the judgment by an overbalance of the imagination, which marks the delicious excess of melancholy in the man." (Specimens of the Classic Poets, vol. 1, p. 369, seqq.—) The remains of Moschus are given in the collections of Bruckl, Gaiskis, and Boissoneau. One of the best separate editions is that of Manso, Gotha, 1784 and 1807, 8vo. (Schött, Hist. Lit. Gr., vol. 3, p. 165.)

MOSCHYLUS. Vid. Moschylus.

MOSBELLA, a river of Belge Gaul, rising in the range of Mount Voguese, and flowing through the territories of the Lueoi, Mediomatrici, and Treveri, into the Rhine at Confluentes (Colcenis). It is now the Moselle. (Tac., Ann., 13, 53.—Amm. Marcell., 16, 3.—Flor., 3, 10.)

MOSCHYLUS or MOSCHYLUS, a mountain in Lemnos, and the earliest volcano known to the Greeks. (Ucker, über Lemnos und den Moschylus.—Allg. Geogr. Ephem., 1802, p. 12.) Hence Lemnos is mentioned by Homer (Od. 8, 922, as the favourite home of Vulcan; and this island received him when buried from the skies. (Il. 1, 592.) Moschylus is mentioned as a volcanic mountain by many of the later writers, and was situate on the eastern side of the island. (Antim., ap. Schol. ad Nicand., Thetis. 474.—Schol. ad Lycoph., 227.—Nicand., Thetis. 458.—Hesych., s. v. Μοσχυλος.—Steph. Byz., s. v. Μοσχυλος.—Varro, L. L., 7, 19, &c.) It is thought to have sunk in the sea a short time after the age of Alexander, and united together with the island Chrysa. The western parts of Europe became better known to the Greeks, and Ætna, with the Æolian isles, attracted their attention, they seem to have transferred the forges of Vulcan to this latter quarter. (Compare the authorities cited by Cluver, Sic. Ant., 1, 2, p. 497.)—According to other mythological fables, Typhon or Typhoeus lay buried beneath Ætna (Aeschyl. Prom., line 676, seqq.—Pind. Pyth., 1, 29, seqq.—Cher., Sic. Sic. Ant., 1, seqq.—Pind. Pyth., 1, 29, seqq.—Cher., Sic. Sic. Ant., 1, seqq.—Inpeps., line 24.) Oeneus (Ouappl., Cyneget., 1, 375, seqq.—Creezer, ad Xanth., fragm., p. 163, seqq.); and the battle-ground between the gods and giants was placed by some in Sicily, by others near Cumae in Italy. (Apollod., 1, 6, 3.—Strab., 243.—Id., 281.—Plin., 3, 9.—Id., 18, 25.—Polyb., 599.)
MUN, a people of Pontus in Asia Minor, on the borders of Bithynia. (Xen., Anab., 5, 4, 2.) The 10,000 Greeks passed through their country in their retreat. The name is one given them by the Greeks, from the circumstance of their dwelling in wooded oases or forests (μούσσων, a wooded tower, and οξέω, "to assail."—Sturz, Lex. Xen., vol. 3, p. 175.—Compare Apoll. Rhod., 2, 1018.—Schneider, ad Xen., l. c.).

Mučča, a surname of Vulcan, from the verb mulco, "to soil," and alluding to the sooty influence of fire upon metals. (Aṣd.CELL., 13, 22.—Macrobre, Sat., 1, 12.—Orid. Met., 2, 5.)

Mulucha, a river of Africa, the same, according to the common account, with the Molochata and Molucha, and which separated Mauritania from Numidia in the time of Bocchus, king of the former country. Hamaker, however (Miscellanea Phanecia, p. 240, seqq.), disputes the correctness of this, and makes distinct rivers of the Molochata, Molucha, and Mulucha. According to the Molucha and Mulucha, the boundary between the two countries above mentioned in the time of Bocchus (Liv., 29, 30); at a subsequent period, Mauritania was extended to the river Mulucha, in the days of Bocchus: under Bogod, the son of Bocchus, it was farther extended to the Ampasgas; but afterward, under Juba, was circumscribed by the Nasava: and finally, under the Emperor Claudius, the Ampasgas was again made the eastern limit, and Mauritania, thus enlarged, was divided by that river into two provinces, which the third river, the Malva, separated. (Hamaker, l. c.) According to the same Oriental scholar, the names Mulucha and Molochata both signify "salt;" while Malva has the meaning of "full," and indicates a large and copious stream. (Hamaker, p. 245.—Compare Gesenius, Phæn. Monument, p. 425.)

Muliús Pons. Vid. Milvius Pons.

Munius, I. Lucius, a Roman of plebeian origin. His having been elected (B.C. 159) into the Upper Spanish as praetor, he experienced at first a considerable check; but not long after retrieved his credit, and gained several advantages, which, though not very decisive, yet obtained for him the honours of a triumph. (Appian, Bell. Hisp., 56.—Schweiger, ad loc.) Having been elected consul B.C. 146, and charged with the continuance of the war against the Achaean league, he received the command of the forces from Metellus, encamped under the walls of Corinth, and defeated the enemy in a pitched battle. This victory put him in possession of the city, which was plundered and burned by his troops. The finest works of art became the prey of the conquerors, and were either destroyed in the conflagration or sent off to Rome. It is said that Mummius, in the true spirit of a rude and unlettered soldier, made it an express condition with those who had contracted to convey, on this occasion, some of the choicest works of art to Rome, that if they lost any they must replace them by new ones! ("si cas perdideris, nonas esse reddirur."—Vell. Patr., 1, 13.) On his return, Mummius was honoured with another triumph, and obtained the surname of Achæicus. He was elected consul a second time, B.C. 141, during which year the Capitol was gilded. (Plin., 33, 3.)

Munnius died so poor as not to leave sufficient for a dowry for his daughter, who accordingly married a rich man from Rome. He left some orations behind him, which Cicero characterizes as plain and old-fashioned in their style ("simplex quodam L. Mummius et antiquus."—Brutus, 25.) But the same writer does justice elsewhere to his great probity and indisposition, in bringing back from Corinth nothing wherewith to make himself a richer man. (De Officis, 2, 22.) Appian states that Mummius was condemned under the Varian law, and punished with exile, and that he ended his days at Delos. (Bell. Civ., 1, 37.) This, however, is very probably an error on the part of the historian, who makes him end his days in Gaul, and partly the result of a name mentioned by Cicero in his Brutus (c. 89.—Consult Schweiger, Ind. ad App., s. v. Mummius.—Freiherrn, 71, 41.)—If. Squipus, brother of the preceding. He is mentioned by Cicero, with more praise as a public speaker than his brother; and is also said to have been attached to the Stoic philosophy. (Cic., Brut., 25.)

Munatius, Plancus, a Roman whose name frequently occurs in the history of the civil wars. He was one of Caesar's warmest partisans, and was sent by him into Gaul to found colonies there. He was also intended by him for the consulship. After the battle of Mutina, he joined his forces to those of Antony and Lepidus, and became consul with the former, A.U.C. 712. He afterward accompanied Antony into Egypt, where he performed the part of a vile counsellor, and even of a boof胡同, around the person of Cleopatra. When fortune deserts his protege, he retires to Rome and calls in his aid the party of Octavianus. In 732 he was chosen censor. We have several letters of his among the correspondence of Cicero. They betray the equivocal character of the man. (Schöll, Hist. Lit. Rom., vol. 2, p. 149.)

Munda, a strongly fortified and large city of Hispania Baetica, on the coast, southwest of Malaca. (Strabo, 141, 160.) In its vicinity was fought the famous battle between Caesar and the sons of Pompey, B.C. 42. (Hirt., Bell. Hisp., 6, c. 31.) It was a most desperate action, and even the veterans of Caesar, who for upward of fourteen years had signalized their valor, were compelled to give way. It was only by the most vigorous exertions that the sons of Pompey were at last defeated. Caesar is said to have given up all for lost at one period of the fight, and to have been on the point of destroying himself. As he retired after the battle, he told his friends that he had never fought for victory, but that this was the first time he had fought for his life. Caesar is said to have lost 1000 of his best soldiers; the enemy had 30,000 slain. The battle was fought the 17th March, B.C. 45. After the battle, the siege of Munda ensued, and the assailants are said actually to have made use of the dead bodies of the enemy in elevating their mound to a sufficient height. The little village of Munda in Grenada is supposed to lie near the ancient city. (Plin., 3, 5.—Livy, 24, 42.—Sil. Ital., 3, 440.—Florus, 4, 2.—Dio Cass., 43, 39.—Val. Max., 7, 6.)

Munychia (and μῆνος), one of the ports of Athens, so called, it is said, from Munychus, an Orichemonian, who, having been expelled from Boeotia by the Thracians, settled at Athens. (Diod. Sic., fragm., 7.) Strabo describes it as a peninsula hill, connected with the continent by a narrow neck of land, and abounding with orchards, authors of which are the work of art. When it had been enclosed by fortified lines, connecting it with the other ports, Munychia became a most important position, from the security it afforded to these maritime dependencies of Athens, and, accordingly, we find it always mentioned as the point which was most particularly guarded when any attack was apprehended on the side of the sea. (Thucyd., 8, 92.—Xen., 9, 2.—Livy, 33, 44.—Cromek in Greece, vol. 2, p. 351.)

Hobhouse, in speaking of the Munychian harbour, observes, "the old harbour of Munychia is of a circular form: there are several remains of wall running into the water, and a piece of pier is to be seen at each side of the mouth of it; so that the entrance, as well as the
whole port, is smaller than that of the Piraeus. The direction of the port is from south to north. If the harbour is crowded four hundred ships, each vessel must have been a wherry. (Vol. 1, p. 301. Am. ed.) See more on this subject in the remarks on the articles Phialeus and Piraeus.

Murana, I. L. Licinius, a Roman commander. He had charge of Sylla's left wing in the battle with Arbelatus, near Cheronea, and contributed powerfully to the victory which Sylla gained on that occasion. After the latter had concluded a treaty of peace with Mithridates, he left Murana in command of the Roman forces in Asia, who, not long after, broke the treaty and invaded Cappadocia, plundering the treasures of the temple at Comana. Mithridates, however, met and defeated him on the banks of the Halys. (Vid. Mithridates VI. — II. The son of the preceding, a consul, and colleague of D. Silanus, was accused by Servius Sulpicius and Catio of having been guilty of bribery in suing for the consulship, and was ably defended by Cicero. The oration delivered on this occasion is still extant. Murana was acquitted.

Murua, a city of Pannonia Inferior, on the Dravus, a short distance to the west of its junction with the Danube. It was founded by Hadrian, and in its vicinity Magnentius was defeated by Constantius. It corresponds to the modern Essec, the capital of Selasia. (Steph. Byz., p. 472.— Ptol.)

Murtat was a station given to Venus by the Romans. The more popular orthography with the ancient writers was Myrtis, from myrtus, "the myrtle," and various reasons are assigned for this etymology. (Serv. ad Elocg., 7, 62.— Ovid, Fast., 4, 141.— Serv. ad Georg., 2, 64.) The other form of the name, Murcia, is explained as follows by St. Augustine (de Civ. Dei, 4, 16): "Dea Murcia, qua praetor modum non moveretur, ac faceret hominum ut ad mortem, id est, nimis desideriosum et inactuosum." (Compare Armbnois, p. 132.) She had a temple at the foot of the Aventine Hill, and hence this hill was actually called Murcius. (Festus.—Lit., 1, 33.)

Musia, Antonius, a celebrated physician at Rome, in the age of Augustus. He is commonly supposed to have been a freeman of that emperor's. Some, however, make him to have been of Greek origin, and the son of a certain Isius. Pliny speaks of a brother of Musia's, named Euphus, who was physician to Juba II., king of Mauritania; and he adds, that a certain plant, the virtues of which were discovered by him, received from this prince the complimentary name of Euphorbia. (Plin., 25, 7.) Musia had received an excellent education. It appears that he took up the study of medicine merely with the view of relieving his own father, who was weighed down with infirmities, and his filial piety was richly rewarded by the distinguished proficiency to which he attained in the healing art. His reputation became established by a successful cure which he performed in the case of the emperor. Augustus had been suffering for a long time under a complaint about which the ancient writers give us no exact information, but which the imperial physicians appear only to have aggravated by the use of warm remedies. Musia was at length called in, and the emperor placed himself in his hands. Scouring all fomentations and heating remedies, Musia prescribed one that was refreshing, by which Augustus soon recovered the health to which he had long been a stranger. (Suet., Vit. Aug., 81.— Dio Cass., 53, 30.— Plin., 29, 1.) Augustus and the senate not only presented Musia with a considerable sum of money, but also bestowed upon him the rank of an equestrius and knight, and caused a brazen statue to be erected to him in the temple of Esculapius. (Ackermann, Prodr. de Ant. Mus., § 6, p. 15.) It is also said, that, out of consideration for Musia, the whole medical profession were to be exempted from taxes for the time to come. Indeed, from this period, instruction in the healing art became more highly esteemed, which led was employed by the teaching of Philology, Rhetoric, and Philosophy. (Consult Gaupp, de prof. et med. curorum privilig., p. 29, Vratian, 1827.) Musia was not always, however, so successful in his practice; and the use of the cold bath, which had saved Augustus, hastened, or, at least, could not prevent, the death of the young Marcellus. This, at least, is the account given by Dio Cassius (53, 30). It must be observed, however, in justice to Musia, that Suetonius, Velleius Paterculus, Pliny, and Tacitus, are silent on this head. Dio Cassius, in another passage (53, 33), states, that Livia was suspected by some of having caused poison to be administered to young Marcellus, which baffled all the skill of his physicians; but he adds, that the prevalence of a severe epidemic during that and the following year, by which great numbers perished, rendered this suspicion somewhat improbable. Velleius Paterculus, Pliny, and Tacitus make no such reproach to the memory of Musia; and Servius, in a note to Virgil (Aen., 6, 862), attributes the death of Marcellus to a different cause. (Compare Bianconi, Lettres sur Celse, p. 59.—Rose, Diss. de Aug. contr. med. cura, Hal., 1741.) The cold bath, after this, was for a long time discontinued, until Charms of Massilia brought it again into use at Rome, with great emolument to the bathmen, and advantage to the health. (Gcsch.)—Essai Hist. sur le Med. en France, p. 29, Paris, 1762.)—The talents of Musia do not appear to have been confined to the medical art. Virgil praises his spirit and taste in an epigram contained in the Cataleca (13), in which he says that Phoebus and the Muses had bestowed upon him their choicest gifts. He appears, in fact, to have been on intimate terms with both Virgil and Horace, the latter of whom he advised to leave Rome and go to Naples. He was said to have been the first that made use of the flesh of vipers in curing ulcerous, and employed, as simples, letuce, succory, and endives. He was the inventor of many remedies, which all bore his name. (Galen, de Comp. Med., sec. loc., lib. 8, p. 287, &c.— Plin., 29, 6.)

Two works are erroneously ascribed to Musia, one a treatise "De Herba Botanica," published by Humelberg with notes, Tegur., 1537, 4to; and the other a poetical fragment "De tunc e Montibus," which appeared at Nuremborg, 1538, 4vo, under the editorial care of Troppan. The genuine fragments of Musia were collected by Caldani: "Antoni Musae fragmenta que existant," Bassana, 1800, 8vo.— There is a curious dissertation of Bishop Atterbury's (Lond., 1740, 8vo), in which he undertakes to prove that Virgil has commemorated Musia in the twelfth book of the Aeneid, under the character of Iapisi. (Biogr. Univ., vol. 50, p. 465; seq. — Spranger, Hist. Med., vol. 2, p. 23, seq.—Bähr, Gesch. Rom. Lit., vol. 1, p. 691.)

Musae, certain goddesses who presided over poetry, music, and all the liberal arts and sciences, and who were the daughters of Jupiter by the nymph Mnemosyne. No definite number of the Muses is given; for the verse in which they are said to be nine is now regarded as spurious. (Od., 24, 6.) Perhaps originally, as in the case of the Erinyes and so many other deities, there was no precise number. As (9, 29, 1) supposed a traditional, according to which there were only three Muses: Melete (Practice), Mneme (Memory), and Aoede (Song). Aristaeus said there were four, the daughters of Jupiter and the nymph Pallas (Wealthy), and that their names were Thekla-tho (Mind-soother), Aoede, Melete, and Arche (Beginning. — Cic., N. D., 3, 21.—Eulogen., 284). Alcam and some other poets make the Muses the daughters of Heaven and Earth. (Died. Sic, 47.— Paus., 9, 29, 4.) The more received opinion makes them nine in number, and, as we have already remark-
ed, the daughters of Jupiter and of Mnemosyne, the goddess of Memory. (Hes., Thog., 63, seqq.—Id., 16, 667.) Others would relate that Melpomene, Enterpe, Erato, Terpsichore, Urania, Thalia, and Polyhymnia, an account of each of whom will be found under their respective names, as well as of the particular departments which later ages assigned to each.

—Pieria in Macedonia is said by Hesiod (Thog., 53) to have been the birthplace of the Muses; and everything relating to them proves the antiquity of the tradition, that the knowledge and worship of these goddesses came from the North, or the Hellenes. (Buttmann, Mythol., vol. 1, p. 293.)—Voss, Mythol. Briefe, vol. 4, p. 3.—Müller, Orchiom., p. 381.—Id., Prolegom., p. 219.) Almost all the mountains, grovetoes, and springs from which they derived their apppellations, or which were sacred to them, were in Macedonia, Thessaly, Phocis, or Boeotia. Such are the mountains Parnassus, Pindus, Parnassus, Helicon; the fountains Hippocrene, Aganippe, Castalia; and also the Corycian Cave. —The Muses, as Homer informs us (Il., 2, 594), met the Thracian Thamyris in Dorian (in the Peloponnesus) as he was returning from Oechalia. He had boasted that he could excel them in singing; and, enraged at his presumption, they struck him blind and deprived him of his knowledge of music. Shortly after the birth of those goddesses, the nine daughters of Pierus, king of Elis, are said to have challenged them to a contest of singing. The place of trial was Mount Helicon. At the song of the daughters of Pierus, the sky became dark, and all nature was put out of harmony; but at that of the Muses, the heavens themselves, the stars, the sea, and the rivers, stood motionless, and Helicon swelled up with delight, so that his summit would have reached the sky had not Neptune directed Pegasus to strike it with his hoof. The Muses then turned the presumptuous maidens into nine different kinds of birds. (Nicator, ap. Anton. Lib. 9.) Ovid, who relates the legend (Met., 5, 300, seqq.), says they were turned into magpies, and he is followed by Stathius. (Silv., 2, 4, 19.)—The most probable derivation of the name Muse (Môéva) seems to be that which deduces it from the obsolete verb μείων, “to incline” or “to invent;” so that the Muses are nothing more than personifications of the inventive powers of the mind as displayed in the several arts. (Keightley’s Mythology, p. 185, seqq.)

-Musaeus, the subject of our next account, is little more is known of than Orpheus, the history of his life being enveloped in mystery and encumbered with fables. Plato calls him the son of Selenè, and, as if to leave no doubt about the meaning of this latter name, Hermsenianx, in a passage of his Leonton, preserved by Athenaeus, says that Mene, that is, the Moon, was the mother of this poet, whom he styles the favourite of the Graces (Athen., 13, p. 597, c.—Compare Schol. ad Aristoph. Ran., 1095.) Others would make a nymph have been his parent. Musaeus was born either at Athens or at Eleusis, for the ancient writers are not agreed upon this point: he was originally, however, from Thrace, and descended from the illustrious family of the Eumolpids, which owed its origin to the Thracian Eumolpus. This family was in possession of certain mysteries and peculiar rites of initiation, and claimed from father to son the gift of prophecy. (Consult Clavir, Hist. des premiers temps de la Grèce, tom. 1, p. 255.) Others would set down from Eumolpus: tradition named Antiphenes for his father. He is placed in the Arundelian marbles at 1426 B.C., when his hymns are said to have been received into the celebration of the Eleusinian mysteries. He passed the greater part of his life at Athens, and in the time of Pausanias, the quarter of the city where he had resided, and where he was also interred, still bore the name of Museum (Museion).—Pausan., 1, 26.) He was married to Délope, by whom he had Eumolpus the younger, who presided at the expiration of Hercules. Some traditions made Musaeus the disciple of Orpheus; others, on the contrary, call him the progenitor of Musaeus. But Servius, in his comment on Pausan., 1, 26, seqq., remarks, that although a disciple of Orpheus, he was more advanced in years than the latter, who bequeathed to him his lyre. According to another tradition, this instrument was intrusted to Musaeus by the Muses, who had found it on the seashore after the death of Orpheus. The poems of Musaeus, neglected very probably at a later period, when the poetry of Ionia, more consonant with the genius of the Greek nation, became widely diffused, were interpolated to such a degree, that, when in a subsequent age they became the subject of critical investigation, it was no longer possible to distinguish between what was original and what had been added. Pausanias (1, 22) regarded the hymn in honour of Ceres as the only genuine one: all the rest appeared to him the work of Onomacritus, who was contemporary with the Pisistratids; for the poem of Hero and Leander, which we have remaining, is by another Musaeus, surmised the grammarian. —We will now proceed to enumerate the titles of the works ascribed to the ancient bard.—Χρηομείοι (“Orales”). Musaeus, according to Herodotus (8, 96), had predicted the happy issue of the battle of Salamis; that is, some one had applied to this event, so glorious for the Greeks, one of the old prophecies preserved among the people; just as it was afterward done with regard to the three verses preserved for us by Pausanias (10, 9), and in which the Athenians saw, with the more willingness, a prediction relative to the battle of Aegos Potamos, because it confirmed the suspicions they had before entertained of the treachery of Adimantus. This last-mentioned oracle of Musaeus, and also another, likewise in three verses, preserved by Clemens Alexandrinus (Str. mat., 8, p. 738), are the two chief fragments that remain to us of the poetry of Musaeus. His oracles were collected by Onomacritus, in obedience to the commands of Pisistratus, and were interpolated by others, in order to make them more acceptable to the people. —Herodotus, 7, 6.) It appears, that after this it was impossible to distinguish what belonged to Musaeus from what had been interpolated by Onomacritus.—2. Τελεαρι (“Initiations”). A passage in the Republic of Plato (vol. 6, p. 221, ed. of Meineke) relates that the subject of this doctrine was the art of sacrifice; by these initiatory forms the acts of sacrifice committed either by individuals or entire communities were expiated. They were also cited under the title of Καλλαπαίοι (“Purifications”), or Παραλλασίας (“Absolutions”).—3. Ακτίσεως νόσων (“Charms against maladies”).—Cited by Aristophanes (Ran., 1033) and Eustathius (ad II., introd.).—4. Σφαίρα (“The Sphere”). An astrological poem. Diogenes Laertius, speaking of Musaeus, says, ὁ Μούσαυς ὁ Ἐλευσίνης ἄνθρωπος (Musaeus, the Eleusinian); ὁ Ἐλευσίνης τιμητικός (Musaeus, the prestigious). The meaning of this is, that he was the first who verified such subjects as a Theogony and the Sphere. Sir Isaac Newton incorrectly gives this a literal translation, that Musaeus was the first who constructed a sphere, and on this error is founded the calculation of that celebrated mathematician, according to which the Argonautic expedition took place. (Consult Clairv. Hist. des premiers temps de la Grèce, tom. 1, p. 255.) Other works by Musaeus are: Τεθνώνας (“Theogony”;—6. Τεταραγραφία, a description of the war of the Titans. —7. Τυφώδεις (“Precepts”). Addressed to his son Eumolpus. Also cited under the title of Εὐμώπλια ποίησις. It is supposed by some to have been a code of instructions for the celebration of the mysteries. According to Suidas, it contained 4000 verses.—8. Κρατηρ. Servius (ad Aen., 6, 607) is the only one that cites this poem. He says it was the first production of Musaeus, and was dedicated to Orpheus. The title would seem to in-
MUT

 dictate a work of a mixed character, as the term καρπός denotes a vessel in which wine and water were mixed. —9. A Hymn to Ceres. Cited by Pausanias as the only authentic production of Musaeus. It was composed by Achilles Tatius, and Procopius of Gaza, in the latter of whom it is addressed to a certain Musaeus: and though he is not styled, in the address, a grammatian, yet the letter evidently is intended for a person of this description. The period when Procopius flourished is fixed at about 520 A.D. If we suppose, then, that the poem of Hero and Leander was a production of Musaeus's youth, and that he had attained an advanced age when Procopius addressed to him the letter in question, perhaps between 480 and 500 A.D., nothing will prevent our regarding the correspondent of Procopius as the author of this poem, which thus might have been composed before 450 A.D. —The poem in question bears the following title, Τὰ καθ' Ἡρω καὶ Λεάνδρον. It consists of 340 hexameters. The story on which it is founded is an old one: Virgil and Ovid were both acquainted with it, and it bears on its very front the stamp of antiquity: the merit of the composition, however, does not lie the less in the poet. "The Hero and Leander," observes Elton, "exhibits that refinement of sentiment, and that sparkling antithetical ornament which are the indications of modern composition. It is a beautiful and impassioned production; combining in its love-details the warmth and luxuriance of Ovid, with the delicate and graceful nature of Apollonius Rhodius; and, in the peril and tumult of the catastrophe, rising to the gloomy grandeur of Homeric description." (Specimens of the Classic Poets, vol. 3, p. 320, Schäffl, Hist. Lit. Gr., vol. 1, p. 46, seqq. —Id., vol. 3, p. 123, seqq. —Id., vol. 6, p. 85, seqq.) The best editions of Musaeus are, that of Schrader, Leonard, 1742, 8vo, and Magd., 1775, 8vo, improved by Schäffer, Lips., 1825, 8vo; that of Passow, Lips., 1810, 8vo; and that of Meibus, Hal., 1814, 8vo.

Mutia or Mucia, a daughter of Q. Mucius Scaevola, and sister of Metellus Celer. She was Pompey's third wife. Her infidelity induced her husband to divorce her, on his return from the Mithradatic war, although she had borne him three children. Cesar was the seducer; and hence, when Pompey married Caesar's daughter, all blamed him for turning off a wife who had been the mother of three children, to espouse the daughter of a man whom he had often, with a sigh, called "this Egisto." Mucia's disloyalty must have been very public, since Cicero, in one of his letters to Atticus, thus styles it: "Divinae Muciae vehementer probatur." (Ep. ad Att., 1, 12.)

Mutina, a city of Cisalpine Gaul, now Modena, situate on the Æmilian Way, in a southeaster direction from Placentia and Parma. It is often mentioned in history, and more particularly during the stormy period which intervened between the death of Cesar and the reign of Augustus. Livy asserts (39, 55) that Mutina, in the year of the foundation of the city, 569 U.C., was inhabited by a Roman colony thirty-four years prior to that date (3, 40). Cicero styles it (Phil., 5, 9) "ferrisissam et splendidentissimam Populi Romani Coloniam." It sustained a severe siege against the troops of Antony, A.U.C. 709. D. Brutus, who defended the place, being apprized of the approach of the consuls Helvius and Pansa by means of carrier-pigeons, made an obstinate defense. The camp of Antony, being on the left bank of the river, was formed entirely of press'd earth: the bridges and Octavia, was forced to raise the siege. (Liv. Epit. 118 et 119.—Cic., Ep. ad Fam., 10, 14.—Vell. Pa- tere, 2, 61.—Florus, 4, 4.—Suet., Aug., 10.) Muti- na was also famous for its wool. From Tacitus (Hist., 2, 52) we learn that it was a municipium. (Cramer's Anc. Italy, vol. 1, p. 56.)

Mutius. Vide Mutius. Mutius or Mucius. Vide Scaevola. Mutius or Mutina, a deity among the Romans.
much the same as the Priapus of the Greeks. His temple was at first in the city, but was afterward, in the time of Augustus, removed to the twenty-sixth milestone. Festus calls him Mutinus Titus. (Consult Lactant., 1, 20.—Arnob. l. 4, p. 131.—August., de Civ. Det. 4, 11.—Id. ib., 6, 9.—Tertull., Apol., c. 25.—Dulaupe, Hist. des Cultes, vol. 2, p. 160, seqq.)

Mycæla, I. a promontory of Ionia, in Asia Minor, opposite the island of Samos. It is a continuation of Mount Messogis, which chain ran along the upper side of the Maeander for the greater part of its course. Mycale was known to Homer (Il., 2, 869), and, at a later day, the Panionium, or solemn assembly of the Ionian states, was held in a temple situated at its foot. (Plin., 6, 23.) It appears to correspond to the modern Mersino or Mirdacho. (Mannert, Geogr., vol. 5, pt. 1, p. 199, seqq.)

MT. MYCÆLA—Anc. Mycale, an ancient place, and known to Homer. (Il., 2, 498.—Hymn. in Apoll., 224.) We learn from Thucydides, that, in the Peloponnesian war, Mycale sustained a most afflictive disaster, owing to an attack made upon it by some Thracian troops in the pay of Athens. These barbarians, having surprised the town, put all the inhabitants to the sword, sparing neither women nor children, since they savagely butchered a number of boys who were assembled in the public school belonging to the place. The historian affirms, that this was one of the greatest calamities which ever befell a city. (Thucyd., 7, 30.—Pausan., 1, 23.—Strabo, 404.) The only remarkable building which it possessed was a temple of Ceres. Sir W. Gell has the following note on the ruins of this ancient town. "Blocks and foundations of a temple, and tombs; possibly the temple of Ceres Mycaleia. This temple stood on the left of the town, about half a mile from it. Many traces, probably, of Mycaleus."

MYCALÉ, I. an ancient city of Arcadia, in a northern part of the Peloponnesus, in the territory of Perseus, after the death of his grand
father Acrisius. (Pausanius, 2, 18.—Strabo, 377.)

The name was supposed by some to be derived from Mycene, daughter of Inachus; but others assigned a different origin to it, as derived from Pausanias (2, 16). Perseus was succeeded by Sthenelus, married to a daughter of Pelops named Astydama; after whom followed Eurystheus, Atreus, and Agamemnon. Under the last named monarch, the empire of Mycenae reached its highest degree of opulence and power, since his authority was acknowledged by the whole of Greece. (Thucyd., 1, 9.—Diod. Sic., 11, 65.)—Mycenae, which had been superior even to Argos in the Trojan war, declined after the return of the Heracleids; and in the 78th Olympiad, or 468 B.C., the Argives, having attacked and captured the city, levelled it to the ground and enslaved its inhabitants. (Diod. Sic., 11, 65.—Strabo, 372.) Pausanias attributes the destruction of Mycenae to the envy which the glory acquired by the troops of that city at Thermopylae and Plataea had excited in the minds of the Argives (2, 16.—Compare Herod., 7, 202). But Diódoros affirms, that the war arose from a dispute relative to the temple of Juno, which was common to the two republics. Strabo states, that so complete was the destruction of this celebrated capital, that not a vestige remained of its existence. This assertion, however, is not correct, since Pausanias informs us that several parts of the walls were yet standing, as also one of the gates, surmounted by lions, when he visited the ruins. Modern travellers have given us a few additional accounts concerning these walls. Of all the most remarkable among the remains of antiquity is what is termed the Treasury of Atreus. It is a hollow cone of 50 feet in diameter, and as many in height. It is composed of enormous masses of a very hard breccia, or sort of pudding-stone. This extraordinary edifice has obviously been raised by the projection of one stone above another, and they nearly meet at the top. The central stone at the top has been removed, along with two or three of those below, yet the edifice remains as durable as ever, and will probably last to the end of time. Sir W. Gell discovered brass nails placed at regular distances throughout the interior, which he thinks must have served to fasten plates of brass to the wall. (Gell’s Argolis, p. 29, seqq.) These nails consist of 88 parts of copper and 12 of tin. Dr.Clarke opposes the opinion of this being the Treasury of Atreus, principally on the ground that it was with the tradition, that to make it firmer it was made stronger. He adds, that it is far more probable, and in more conformity with what we find in ancient writers, that the Treasury was within the walls, in the very citadel. He considers it to be the Heróim of Perseus. (Travels, vol. 6, p. 493, Lond. ed. What ever may have been its use, it is worthy of notice, that cells of bronze or brass, i. e., covered within with plates of brass, were very common in ancient Argolis. Such, Travels, were the bronze gears of confinement of Danae, and the lurking-place of Eurystheus when in fear of Hercules. The remains of the ancient walls are also very curious, being evidently of that style of building called Cyclopean. Among other things, the Gate of the Lions, mentioned by Pausanias, still remains. The modern village of Kratá stands near the ruins of Mycenae.—The name of Mycenae was probably derived from its situation in a recess (μυκενή) forming a very fertile and healthy pass, through the mountains, from Patras in Lacedaemon, to Nauplia. In ages, from a mushroom, or the pommel of a sword. 

MYCURINUS, a king of Egypt, son of Cheops according to Herodotus (2, 129), but of Chephren according to Diodorus (1, 64). The last-mentioned writer calls him Mecherinus (Μεχέρινυς), a name which Zoega, by the aid of the Coptic, makes equivalent to "peaceful," and which agrees, therefore, very well with the epithet ήπιος ("mild" or "gentle"), applied to him by Herodotus (i. c.—Zoega, de Obelisco, p. 415.) Mycurinus was remarkable for the justice and modernization of his reign. Larcher makes him to have ruled over Egypt for the space of 20 years, he having ascended the throne, according to this critic, in B.C. 1072, and succession of Asychis B.C. 1052.—Mycerinus built one of the pyramids which travellers usually call the third one. It is smaller in size than the others, but, was equally as expensive as the rest, being cased, according to Diodorus Siculus, half-way up with Ethiopian marble. Herodotus informs us (2, 133) that this monarch, after having reigned for no great length of time, was informed by the oracle of Latona, at Butos, that he was destined to live only six years longer; and that, on complaining, that he, a pious prince, was not allowed a long reign, while his father and grandfather, who had been inquisitive to mankind and impious to the gods, had enjoyed each a long life, he was told that his short life was the direct consequence of his piety, for the fates had decreed that for the space of 150 years Egypt should be oppressed, of which determination the two preceding monarchs had been aware. (Herod., i. c.—Bähr, ad loc.)

MYCOCOS, one of the Cyclades, lying a little to the east of Delos. It is described by Athenaeus (1, 14) as a poor and barren island, the inhabitants of which were consequently rapacious and fond of money. Strabo reports that they lost their hair at an early age, whence the name of Myconian was proverbially used to designate a bald person. (Strabo, 487.—Compare the words of Donatus, ad Terr., Hec., 3, 4: "Myconae et tela seu juxtâ rostros, dontium est seditionis"") This island is mentioned by Thucydides (3, 29) and Herodotus (6, 119). Pliny assigns to it a mountain named Diana, and states that it had two towns (p. 22). The modern name of the island is Mycon. (Cramer’s Anc. Greece, vol. 3, p. 409, seqq.)

MYCONIA, i. a province of Macedonia, which appears to have extended from the river Axios to the lake Bolbe, and at one period even to the Strymon. (Herod., 7, 123.—Thucyd., 1, 58.) It originally belonged to the Edones, a people of Thrace; but these were expelled by the Temenides. (Thucyd., 2, 99.) Under Philip of Macedon, Myconia we must include several minor districts, enumerated by different historians and geographers. These are, Amphiatrix and Paraxia, Anthemus and Gresstonia or Crestonia. (Cramer’s Anc. Greece, vol. 1, p. 232.)—II. A district of Meso- potamia. The later geographical writers affix this name merely to the northeastern section of the land, especially to the country around Nisibis; Strabo, however, expressly includes the western part also. He farther makes it clear, that the name of Mykonion, or that of the inhabitants (Mygoniani), were first given by the Macedonians. (Strab., 747.) In this last particular he is wrong; for we find that the ten thousand, in their retreat, met with Mygonianoi (Xen., Anab., 3, 9), united with the Armenians, who disputed with them the passage of the river Centrites. Under the Macedonian sway, the name of Mygonia began to be discussed, and the Scevastites, and the inhabitants of the blooming."—Procop., Pers., 1, 17) was employed in its stead, more especially with reference to the tract of country enclosed between Mons Masius, the Euphrates, and the Chaboras. (Mannert, Geogr., vol. 5, pt. 2, p. 260, seqq.)

MYCONUS, i. a river of Mesopotamia, called also the Saocorus, rising in the district of Mygdonia, and falling into the Chaboras. It is now the Hermon, or, according to others, the Sindecar.—II. The epithet of "Mygdonian" is applied by Horace (Od, 2, 12, 52) to
Phrygia, either from a branch of the Mygdones having settled there at a very early period, while they were still regarded as a Thracian tribe, or else from one of the ancient monarchs of the land. In favour of the first of these opinions we have the authority of Strabo (575), who speaks of the Mygdones as occupying the northern parts of Phrygia; and on the other hand, Strabo remarks, in favour of the Phrygians to have received the appellation of Mygdonians from Mygdon, one of their early kings (10, 27). With Pausanias coincide Stephanus of Byzantium, and the scholarist Apollonius Rhodius (2, 787). In Homer, moreover, the Phrygians are styled λαος ΟΡΓΟΣ καΙ ΜΥΓΩΝΟΣ ΑΝΤΙΔΗΟΝ. The first of these two opinions, however, is evidently the more correct one. It is more consistent with reason that a country should give an appellation to its ruler than receive one from him.

Mygdones or Mygdon, I. an ancient monarch of the Mygdones. (Pausan., 10, 27.—Vid. Mygdonus II.)—II. A brother of Hecuba, Priam's wife, who reigned in part of Thrace. His son Corebus, who was called Mygdonides from him. (Verg., Æneid, 2, 341.)

Mylassa (oroum), a city of Caria, situate to the southwest of Stratonicea, and a short distance to the north of the ancient Mylasa. It was of Grecian origin, and was founded at a very early period, but by whom is uncertain. Here, at one time, resided Hecatomnus, the progenitor of Mausolus. (Strabo, 659.) Mylassa, as Strabo reports, was situated in a fertile plain, and at the foot of a mountain containing veins of a beautiful white marble. This was of great advantage to the city for the construction of public and other buildings; and the inhabitants were not slow in availiing themselves of it; for, as Strabo remarks, being so sumptuously embellished with handsome porticoes and stately temples. (Strabo, 659.) It was particularly famous, however, for a very ancient temple of the Carian Jove, and for another, of nearly equal antiquity, sacred to Jupiter Osogus. In after times a very beautiful temple was erected here, dedicated to Augustus and to Rome. Mylassa suffered severely in the inroad of Labienus, during the contest between Antony and Augustus, but was subsequently restored. (Jos. Cap. Antiq., 48, 26.) Pococke saw the temple to Augustus nearly entire, but it has since been destroyed, and the materials have been used for building a mosque. (Pococke, vol. 2, pt. 2, c. 6.—Compare Chandler, Asia Minor, c. 56.) Mylassa is now Melasos, and is at the present day remarkable for producing the best tobacco in Turkey. Mannert, however, thinks that Mylassa must be sought for in the vicinity of the modern Myla, while Reighard (Thes. Top. Norm., 1894) is in favour of Mylesea.—As regards the ancient name of this city, it may be remarked that the older Greek writers, with the exception, perhaps, of Polybius (de Virt., &c., i, 16, ad fin.), give ΜΥΛΑΣΑ (Mylasa); while Pliny, Pausanias, Stephanus of Byzantium, Hierocles, and others, have ΜΥΛΑΣΑ (Mylasa), and with this latter form the coins that have been discovered appear to agree. (Mannert, Geogr., vol. 6, pt. 3, p. 281.)

Mylae or Mylas, now Mulla, was situated on a tongue of land southwest of Pelorum, on the northern coast of Sicily. Between this place and a station called Naulochus, the fleet of Sextus Pompeius was defeated by that of the triumvir Octavius, under the command of Agrippa. (Thucyd., 3, 90.—Plin., 3, 8.—Vell. Patrec., 2, 79.) Reichard makes Myla answer to the modern Melilli. (Tkes.; tav. Sic.)

Myllita, a surname of Venus among the Assyrians. (Cels., 7, 24.)

Myne, a town of Caria,OLL northwest of Halicarnassus, on the northern shore of the peninsula below the Sinus Iassius. It was founded by a colonel from Trozene (Pausan., 2, 30, and appears to have been at no great distance from Halicarnassus, since Alexander marched over the intervening space in one night with a part of his troops. (Arrian, I, 24.) The city was a strong one, and Alexander would not stop to besiege it, though he attempted, but without success, to toggle it. Hierocles gives it, probably by corruption, the name of Amyndus. Pliny, besides Myndus, speaks of Palmyndus (5, 29); and perhaps his Neapolis is no other than the new town. (Compare Mela, 1, 16.)—"We can hardly doubt," remarks Leake, "that Myndus stood in the small sheltered port of Guminishii, where Captain Beaufort saw the remains of an ancient pier at the entrance of the port, and some ruins at the head of the bay," (Journal, p. 228.) Palmyndus may have been situate, as Mannert supposes, near the Cape Astypalea of Strabo, which derived its name probably from that circumstance, and which Cranmer takes to be the peninsula of Pasha Liman; but Myndus itself must be Menteshah. (Cranmer's Asia Minor, vol. 2, p. 176.)

Myonnesos, I. a town of Asia Minor, between Teos and Lebedos, and situated at a high peninsula. (Strabo, 1433—Lien., 37, 57.) The hill of Myonnesos is now called Hypsili-bonius, and is described by modern travellers as commanding a most extensive view of a picturesque country, of the seacoast and island. (Chandler's Travels, p. 124.)—II. A small island off the coast of Phthiotis, in Thessaly, and between the Artemisian shore of Eubea and the main land. It was near Apeira.—III. One of the small islands near Ephesus, which Pliny calls the Pisistrati (5, 81).

Myos Hormos or "Mouse's Harbour," a seaport of Egypt, on the coast of the Red Sea. Arrian says that it was one of the most celebrated ports on this sea. It was chosen by Ptolemy Philadelphus for the convenience of commerce, in preference to Assinoc (or Suez), on account of the difficulty of navigating the western extremity of the gulf. It was called also Aphroditus portus, or the port of Venus. It is full of little inlets and modern names of Suanfieh-d-Bakri, or "the sponge of the sea," having an evident analogy to the etymology of the second of the Greek names given above, from the vulgar error of sponge being the form of the sea, and Venus (Aphrodite) having been fabled to have sprung from the foam of the ocean. (From suanfieh our English term is s'fung, s'phunge, sponge.) The situation of Myos Hormos is determined by three islands, which Agatharchides mentions, known to modern navigators by the name of the Jaffetcens, and its latitude is fixed, with little fluctuation, in 27° 0' 0"; by D'Anville, Bruce, and De la Rochette. (Vinceni, Peripius, p. 78.) The entrance is said to be very crooked and winding, on account of the islands lying in front; and hence, perhaps, may have arisen the ancient appellation, the harbour being compared to a mouse's hole. (Bruce, vol. 7, p. 314, 8vo ed.)

Myra (oroum or a), a town of Lycia, near the southern coast, southwest of Limyra and west of the Sacrum Promontorium. It was situate on the brow of a lofty hill, at the distance of twenty stadia from the shore. (Strabo, 664.) According to Artemidorus (ap. Strab., l. c.), it was one of the six most important cities of the country. The Emperor Theodosius II. made it finally the capital of the province of Lycia (Malula, 14.—Hierocles, p. 698), as it was about this time the most distinguished city on the land route of Naxos, Isia, Seleuc, Vit. S. Theolac, l. 1, p. 272.) Myra, according to Leake, still preserves its ancient name. The distance of the ruins from the sea is said to correspond very accurately with the measurement of Strabo. (Journal, p. 183, 321.)
MYR

MYRIANDROS, a city of Asia Minor, on the Bay of Issus, below Alexandria (kara Ιέσων), which Xenoph.

on (Anab., 1, 4) places in Syria beyond the Pylæ Cilicis; but Scylax includes it within the limits of

cilicia (p. 40), as well as Strabo, who says that Se-

leucia of Pieria, near the mouth of the Orontes, was

the first Syrian town beyond the Gulf of Issus. It

was a place of considerable trade in the time of the

Persian dominion. Xenoph. speaks of the number of

merchant vessels here. It declined at a later pe-

riod, in consequence of its vicinity to the more flour-

ishing city of Alexandria. It appears to have been

originally a Phoenician settlement. (Xen., I. c.—Scy-

lax, l. c.)

The modern name is not given by any trav.

er.

MYRNA, I. a city and harbour of Eolus, in Asia Minor, forty stadia to the north of Cyma. (Strabo, 621.) According to Mela (1, 18), it was the oldest of the Eolian cities, and received its name from Myr-

rus its founder. Pliny (5, 30) states that it after-

ward assumed the name of Sebastopolis, of which, however, no trace appears on its coins. Philip, king of Macedonia (son of Demetrius), held possession of it for some time, with a view to future operations in Asia Minor, but, being vanquished by the Romans, he was compelled by that people to evacuate the place. (Polyb., 18, 37.—Lec., 33, 30.) Hierocles makes mention of this city at a later period (p. 661), after which we lose sight of it. It was the native

place of Agathias. Choisoul Gouffer gives the modern name as Sandariik.—II. A city on the

north-west coast of Lemnos, and one of the principal places in the island. It was situated on the side look-

ing towards Mount Athos, since Pliny reports (4, 12) that the shadow of the mountains was visible in the forum of this city at the time of the summer solstice.

—Myrns alone offered resistance to Miltiades when that general defeated the Lacedaemonians in the

same town. It was taken, however, by his forces. (Herod., 6, 140.—Steph. Byz., s. v. Ἑὖπα.) The ruins of this town are still to be seen. On its site stands the modern Castro.

(Walpole's Collection, vol. 1, p. 54.)—III. A town of

Crete, north of Lyctus. (Pliny, 4, 12.) It still re-

tains its ancient name. (Cramer's Anc. Greece, vol.

3, p. 393.)

MYRANDES, a surname of Apollo, from Myrina in

Eolus, where he was worshipped.

MYRMEDÖS, an artist of Miletus, mentioned as

making chariots so small that they were covered by the

wing of a fly. He also inscribed an elegiac distich on a

grain of sesamum. (Cic., Acad., 4.—Elian, V. H., 1, 17.—Pericon, ad loc.—Siliq, Dist. Art., s. e.)

MYRMYNÖES, a people on the southern borders of

Thessaly, who accompanied Achilles to the Trojan

war. They received their name, according to one

account, from Myrmidon, a son of Jupiter and Eury-

medusa, who married one of the daughters of Eolus, and whose son Actor married Εὐγινα, the daughter of

the Asopus. According to some, the Myrmidones

were so called from their having been originally ants, ιππουργός. (Vir. Αἰκας,) This change from ants
to men is founded merely upon the equivocation of

their name, which resembles that of the ant (ιππουργός).

(Ovid, Met., 7, 654.—Strab., 1, 554.—Strab., 1, 654.)

MYRON, a celebrated statuary and engraver on sil-

ver, who lived in Olympia, 87. Pausanias styles him an Athenian (6, 2, 1). The reason of this is sat-

Adnot., 64.) Myron rendered himself particularly fa-

mous by his statue of a cow, so true to nature that

bulls approached her if she was alive. This is fre-

quently alluded to among the epigrams in the An-

thology. (Sonnntag, Unterrath., vol. 1, p. 100.—Bütt-

ger, Andeutung., p. 144.—Goethe, über Kunst und Altertum., 2, p. 1.—Vid. Lemnos and Athos.)—A

list of Myron's productions may be seen in Siliq

(Dist. Art., s. e.).

MYRRAH, a daughter of Cinyras, king of Cyprus.

She had a son by her own father, called Adonis. When Cinyras was apprized of the crime he had un-

knowingly committed, he attempted to stab his daugh-

ter, but Myrrha fled into Arabia, where she was chan-

ged into a tree called myrrh. (Hygin., fab., 58, 278.

—Ovid, Met., 10, 298.)

MYRTILUS, a son of Mercury and Phaëthousa, cha-

rtor to Cénonousa. (Vid. Hippodamia, Cénonousa, and

Pelops.)

MYRTIÖS MARS, that part of the Aegean which lay

between Crete and the coast of Attica. (Strabo, 233.—Id., 375.) Pausanias states that it was so called

from a woman named Myrto (8, 14.—Cra-

MYRTUNTÖM, I. an inland lake of Acaonia, below

Anactorium; the water of which, however, is salt, as it communicates with the sea. It is now called Mur-

tari. (Strabo, 459.)—II. A town of Elis, originally

named Myrmus, and classed by Homer, under this name, among the Greek cities, and as such appears in the epic poems of the Iliad and Odyssey. It was about seventy stadia from the city of Elis, on the road from thence to Dyme, and near the sea. (Strabo, 341.) The ruins of this ancient place probably cor-

respond with the vestiges of high antiquity observed by Sir W. Gell near the village of Kalotéicho, on the road from Kapeletti to Palaiopolis. (Itin. of the Mo-

rea, p. 31.—Cramer's Anc. Greece, vol. 3, p. 92, seq.)

MYΣ, I. a celebrated engraver on silver, whose coun-

ctry is uncertain. According to the statement of Pau-

sanias (1, 28, 2), he must have been contemporary with Phidias. Myσ carved the battle between the

Centaurs and Lapithæ on the shield held by the

Mînerva of Phidias. (Pausan., l. c.) As regards the

anachronism committed by Pausanias in the passage

just referred to, and which makes Parrhiasus to have

assisted Phidias about Olympia, 84, consis of remarks

of Siliq (Dist. Art., s. e.).—II. A slave and follower of

Epicurus. The philosopher manumitted him by his

will. (Diog. Laert., 10, 3.—Menag., ad loc.)

MYΣIA, a country of Asia Minor, lying to the north

of Lydia and west of Bithynia. It is extremely dif-

ficult, as Strabo had already observed, to assign to the

Myssians their precise limits, since these appear to have

varied continually from the time of Homer, and are

very loosely marked by all the most ancient geographers.

From Scylax to Ptolemy, Strabo conceives, that the

Homeric boundaries of the lesser Myssia were the Εσ-

pus to the west and Bithynia to the east (Strab., 564); but Scylax removes them considerably to the east

of this position by placing the Myssians on the Gulf of

Cius. (Peripl., p. 35.) Ptolemy, on the other hand, has extended the Myssian territory to the west as far as Lamppacus, while to the east he associates it

with Bithynia by the river Rhynynca. It was the pre-

vailing opinion of antiquity, that the Myssians were not an indigenous people of Asia, but that they had been transplanted to their shores from the banks of the Dan-

digitized by Microsoft® 867
ube, where the original race maintained itself under the name of Mezi, by which they were known to the Romans for several centuries after the Christian era. (Strab., 303.—Artém., op. eund., 571.) Nor is that opinion at variance with the tradition which looked upon this people as of a kindred race with the Carians and Lydians, since these two nations were likewise supposed to have come from Thrace (Herod., 1, 172; Strab., 689); nor with another, which regarded them in particular as descended from the Lydians, in whose language the word myrsos signified “a beech,” which tree, it was farther observed, abounded in the woods of the Mysian Olympus. Strabo, who has copied these particulars from Xanthus the Lydian, and Menecrates of Elaea, states also, on their authority, that the Mysian dialect was a mixture of those of Phrygia and Lydia. (Strab., 572t.)—We may collect from Herodotus that the Mysians were already a numerous and powerful people before the Trojan war, since he speaks of a vast expedition having been undertaken by them, in conjunction with the Teucri, into Europe, in the course of which they subjugated the whole of Thrace and Macedonia, as far as the Peneus and the Ionian Sea. (Herod., 7, 20, 75.) Subsequently, however, to this period, the date of which is very remote and uncertain, it appears that the Mysi were confined in Asia Minor, and never had a free but an aggregate sphere of action with such extensive conquests. Strabo is inclined to suppose that their primary seat in that country was the district which surrounds Mount Olympus, whence he thinks they were afterward driven by the Phrygians, and forced to retire to the banks of the Caicus, where the Arcadian Telephus became their king. (Eurip., ap. Aristot., Rhet., 3, 2.—Strab., 572t.—Hygin., fab., 101.) But it appears from Herodotus that they still occupied the Olympian district in the time of Crousus, whose subjects they had become, and whose aid they requested to destroy the wild boar which ravaged their country (1, 36). Strabo himself also recognizes the division of this people into the Mysians of Mount Olympus and those of the Caicus (571). These two districts answer respectively to the Mysia Minor and Major of Piolemy. Homer enumerates the Mysi among the allies of Priam in several passages, but he nowhere defines their territory, (Iliad., 7, 72; 11, 327, 328.) He is, however, understood, he evidently assigns to them a situation among the Thracians of Europe. (Il., 13, 5.) The Mysians of Asia had become subject to the Lydian monarchs in the reign of Alyattes, father to Crousus, and perhaps earlier, as appears from a passage of Nicolas Damascenus, who reports that Crousus had been appointed to the government of the territory of Adramyttium and the Théban plain during the reign of his father (Crousus, Hist. Frag., p. 203.) Strabo even affirms that Troyas was already subjected in the reign of Gygges. (Strab., 590.) On the dissolution of the Lydian empire, they passed, together with the other nations of Asia, under the Persian dominion, and formed part of the third satrapy in the division made by Darius. (Herod., 3, 90.—Id., 7, 74.) After the death of Alexander they were annexed to the Syrian empire; but, on the defeat of Antiochus, the Romans rewarded the services of Eumenes, king of Pergamus, with the grant of a district so conveniently situated with regard to his own dominions, and which he had already occupied with his forces. (Polyb., 22, 27.—Liv., 38, 39.) At a later period, Mysia was annexed to the Roman province; (Cic., Ep. ad Quint. Fr., 1, 8.; but under the emperors it formed a separate district, and was governed by a procurator. (Athens., 9, p. 599, c.) It is to be noted that St. Luke, in the Acts, distinguishes Mysia from the neighbouring provinces of Bithynia and Troas (16, 7, seq.).—The Greeks have stigmatized the Mysians as a cowardly and imbecile race, who would suffer themselves to be injured and plundered by their neighbours in the most passive manner. Hence the proverbial expression Myumoi leia, used by Demosthenes (De Cor., p. 248, 23) and Aristotle (Rhet., 1, 12, 20), to which Cicero also alludes when he says, "Quid porro in Graco sermo tam tristis atque celebratum est, quam, si quis desperaret ductor, ut Myosum ultimum esse dicerit!" (Pro Pace, c. 27.) Elsewhere the same writer describes them as a tribe of barbarians, without taste for nature and the arts of civilized life. (Orest., c. 8.—Cramer's Asia Minor, vol. 1, p. 30, seqq.) Mysia, a river of Mysia, which falls into the Caicus near the source of the latter river. Mannert takes it for the true Caicus in the early part of its course. (Geogr., vol. 6, pt. 3, p. 397.) Mystes, a son of the poet Valgius, whose early death was so deeply lamented by the father that Horace wrote an ode to aly the grief of his friend. (Horat., Od., 2, 9.) Mytilène. Vid. Mitylene. Myus (gen. Myunitis), the smallest of all the Ionian cities, as appears from its only contributing three vessels to the united fleet of 350 sail. (Herod., 6, 8.) It was situated, according to Strabo, on the southern bank of the Maeander, thirty stadia from its mouth. (Strab., 696.) The Maeander was not navigable for large vessels, and the Mysians may principally be considered the inferior rank of Myus among her Ionian sisters in point of opulence and power. The inundations of the river, too, must have been very injurious. Myus was founded by the Ionians about the same time with Priene (Pausan., 7, 2), and was subsequently under the immediate sway of the Persians, since it was one of the cities given by Artaxerxes to Themistocles. (Diud. Sic., 11, 57.) The city afterward sank greatly in importance. It became subjected also to a very annoying kind of visitation. The sea would seem to have formed originally a small bay as far as Myus. This bay, in process of time, became converted by the depositions of the Maeander into a fresh-water lake, and so great a number of gnats was in consequence produced, that the inhabitants of the city determined to migrate. The Ionian confederacy, upon this, transferred the vote and the population of Myus to the city of Mile, which is now called by the Greeks, and are called at the present day Palataths (the Palace), from the remains of an ancient theatre, mistaken by the present inhabitants around for the ruins of a palace. (Mannert, Geogr., vol. 6, pt. 3, p. 262, seqq.) N. Nabathæa, a country of Arabia Petraea. It extended from the Elphrates to the Sinus Arabicus. The Nabathæans are scarcely known in Scripture until the time of the Maccabees. Their name is supposed to be derived from that of Nebaioth, son of Ishmael. (Genesis, 25, 13.—Ibid., 28, 9.—Isaiah, 70, 7.)—In the time of Augustus they were a powerful people; but their kingdom, of which Petra was the capital, ended about the reign of Trajan. At a still later period their territory belonged to Palestine Tertia. Nabathæa appears to correspond to the modern Hedchabat. (Mannert, Geogr., vol. 6, pt. 1, p. 165, seqq.) Nabas, a tyrant of Lacedæmon, who usurped the supreme power after the death of Machanidas, B.C. 205. He appears to have been a man surpassing all former tyrants in the monstrous and unheard-of wickedness that characterized his rule. From the very first he deliberately grounded his power on a regular system of rapine and bloodshed; he slew or banished all in Sparta who were distinguished either for birth or fortune, and distributed their wives and their estates among his own mercenaries, to whom he entirely trusted for support. His extortions were boundless, and death with torture was the penalty of refusal. No source of gain was
NABONASSAR, a king of Babylon, who lived about the middle of the 6th century before the Christian era, and who was one of the most formidable kings of the Carian era. The origin of this era is thus represented by Syncellus from the accounts of Polyhistor and Berossus, the earliest writers extant in Chaldean history and antiquities. “Nabonassar, having collected the acts of his predecessors, destroyed them, in order that the computation of the reigns of the Chaldean kings might be made from himself.” (Syncell., Chronograph., p. 207.) It began, therefore, with the reign of Nabonasser (C. 747). The form of year employed in it is the moveable year of 365 days, consisting of 12 equal months of 30 days, and five supernumerary days; which was the year in common use among the Chaldeans, Egyptians, Armenians, Persians, and the principal Oriental nations from the earliest times. This year ran through all the seasons in the course of 1461 years. The freedom of the Nabonassarean year from intercalation rendered it peculiarly convenient for astronomical calculation. Hence it was adopted by the early Greek astronomers Timocares and Hipparchus; and by those of the Alexandrian school, Ptolemy, &c. In consequence of this, the whole historical catalogue of reigns has been common, though improperly, called Ptolemy’s canon; because he probably continued the original table of Chaldean and Persian kings, and added thereto the Egyptian and Roman down to his own time. (Hale’s Analysis of Chronology, vol. 1, p. 513.)—Foster, in his epistle concerning the Chaldeans, as given by Michaelis (Spicilegium Geographia Hebraorum, vol. 2, p. 102), seeks to explain the name Nabonasser on the supposition of an affinity between the ancient Chaldaean language and the Scilavonic tongue. According to him, it is equivalent to Nebu-nash-tsar, which means, Our Lord in Heaven. This etymology has been impugned by some, on the ground that the Russian term for emperor or king is written Tzar, and is nothing more than a corruption for Cesar. Unfortunately, however, for this very plausible objection, the Russian term in question is written with an initial Tzär or Tsár, and cannot, therefore, by any possibility, come from Cesar. (Consult Schmidt’s Russian and German Dict., s. v.)

NABOPOLASSAR, a king of Babylon, who united with Assyges against Assyria, which country they conquered, and, having divided it between them, founded two kingdoms, the latter of which was noted Medes under Assyges, and that of the Chaldeans under Nabopolassar, B.C. 626. Necho, king of Egypt, jealous of the power of the latter, declared war against and defeated him. Nabopolassar died after a reign of 21 years. The name, according to Foster, is equivalent to Nebu-polezi-tsar, which means, Our Lord dwells in Heaven. (Consult remarks near the close of the article Nabonasser.)

NENIA or NENIA, a goddess among the Romans who presided over funerals. She had a chapel without the Porta Viminalis. (Festus, s. v. —Compare Arnob. 4, p. 131.—Augustin., de Civ. Dei, 6, 9.) The term is more commonly employed to denote a funeral dirge. (Festus, s. v.)

NÉV, I. Cænas, a native of Campania, was the first imitator of the regular dramatic works which had been produced by Livius Andronicus. He secured in the first Punic war, and his earliest plays were represented at Rome, B.C. 235. (Aul. Gell., ii. 17, 21.) The names of his tragedies (of which a few fragments remain as of those of Livius) are still preserved: Alcestis, from which there is yet extant a description of old age in rugged and barbarous verse, Danuė, Doloresets, Hessia, Hector, Iphigynia, Lycurgy, Phaëmides, Protesilaus, and Telephus. All these were translated or closely imitated from the works of Euripides, Aristophanes, and other Greek dramatists. Névis, however, was accounted a bat-
ter comic than tragic poet. Cicero has given us some specimens of his jests, with which he appears to have been dexterous; but they consist rather in unexpected turns of expression, or a play of words, than in genuine humour. Navius, in some of his comedies, indulged too much in personal invective and satire, especially against the elder Scipio. Encouraged by the silence of this illustrious individual, he next attacked the patrician family of the Metelli. The poet was thrown into prison for this last offence, where he wrote his comedies, the Haristus and Leontes. These being in some measure intended as a recantation of his former invectives, he was liberated by the tribunes of the commons. Relapsing soon after, however, into his former courses, and continuing to satirize the nobility, he was driven from Rome by their influence, and retired to Carthage, where he died, according to Cicero, A.U.C. 550, B C. 204; but Varro fixes his death somewhat later.—Besides his comedies, Navius was also author of the Cyprian Iliad, a translation from a Greek poem called the Cyprian Epic. Whoever may have written this Cyprian Epic, it contained 12 books, and was probably a work of amorous and romantic fiction. It commenced with the nuptials of Thetis and Peleus; it related the contention of the three goddesses on Mount Ida; the fables concerning Palamedes; the story of the daughters of Anius; and the love adventures of the Phrygian fair during the early period of the siege of Troy; and it terminated with the council of the gods, at which it was resolved that Achilles should be withdrawn from the war, by sowing dissensions between him and Atrides.—Some modern critics think that the Cyprian Iliad was rather the work of Lavius, a poet who lived some time after Navius, since the lines preserved from the Cyprian Iliad are hexameters; a measure not elsewhere used by Navius, nor introduced into Italy, according to their supposition, before the time of Ennius. (Ossinn, Analct. Crit., p. 36.—Hermann, Elem. Dicht. p. 10.)

Ametrical chronicle, which chiefly related the events of the first Punic war, was another, and probably the last work of Navius, since Cicero says (De Senect., c. 14) that in writing it he filled up the leisure of his latter days with wonderful complacency and satisfaction. It was originally undivided; but, after his death, was separated into seven books. (Suet., de Illust. Gramm.)—Although the first Punic war was the principal subject, as appears from its announcement, "Qui terrar Latial hemones tuscunt / Viraus fraudeaque Pinnicis fabor;"

yet it also afforded a rapid sketch of the preceding incidents of Roman history.—Cicero mentions (Brutus, c. 19) that Ennius, though he classes Navius among the fauns and rustic bards, had borrowed, or, if he refused to acknowledge his obligations, had pillaged many ornaments from Cicero's writings, taking the Roman and Latin language of Navius, in which Cicero, while he admits that Ennius was the more finished and elegant writer, bears testimony to the merit of the older bard, and declares that the Punic war of this antiquated poet afforded him a pleasure as exquisite as the finest statue that was ever formed by Myron. To judge, however, from the lines that remain, though in general too much broken to enable us even to divine their meaning, there was, as the Latin language of Navius in the work were more rugged and remote from modern Latin than his plays or satires, and infinitely more so than the dramas of Livius Andronicus. The whole, too, is written in the rough Saturnian verse. (Dunlop, Roman Literature, vol. 1, p. 74, seqq.—II. An augur in the reign of Tarquin, more correctly Navius. (Vid. Attus Navius)

NAHRVÄL, a people of Germany, ranked by Tacitus under the 1. p. 11 (Germ., 48). According to Kruse (Archiv für die Alte Geschichte) and Weisse (über die Völker des Alten Deutschlands), they dwelt in what is now Upper Lusatia and Silesia. Wilhelm, however (Germans, and Siles. Beobachter), places them in Poland on the Vistula, and Reichard, between the Wartha and Vistula.

NAIAD, certain inferior deities who presided over rivers, brooks, springs, and fountains. Their name is derived from vauz, "to flow," as indicative of the gentle motion of water. The Naiads are generally represented as young and beautiful virgins, leaning upon an urn, from which flows a stream of water. They were held in great veneration among the ancients, and sacrifices of goats and lambs were offered them, with libations of wine, honey, and oil. Sometimes they received only offerings of milk, fruit, and flowers. (Vid. Nymphae.)

NAISSUS, a city of Dacia Mediterranea, southwest of Ratria. It was the birthplace of Constantine the Great. Reichard identifies it with the modern Neza or Nisan, in the southern part of Servia. The name is sometimes written Naissus and Naesus. (Const. Porphyrii, de Them., 2, 9. — Zosim., 3, 11. — Anton., Itin., p. 134. — Amm. Marcell., 21, 10.)

NANNETES OR NANNETRAE (Strab. Nautihr.,) a people of Gallia Celta, on the north bank of the Ligur or Loire, near its mouth. Their capital was Coudivicenum, afterward Naamas, now Nantes (Nanz). Their city is sometimes (as in Greg. Tur., 6, 13) called Civitas Nannetica.

NANTIBITES, a people of Gallia Narbonensis, on the south of the Locus Lemanus or Lake of Geneva. (Cass. B. G., 4, 10.)

NAPESE, certain divinities among the ancients who presided over the forests and groves. Their name is derived from vauz, "a grove." (Virgil, Georg., 4, 3.)

NAR, a river of Italy, rising at the foot of Mount Fiscellus, in that part of the chain of the Apennines which separates the Sabine from Pienum (Pln., 3, 12), and, after many winding and murmuring river, flowing into the Tiber near Orculenum. (Virg., Aen., 7, 516. — Sil. Ital., 8, 453.) The modern name is the Nera. It was noted for its sulphurous stream and the whitish colour of its waters. (Virg., l. c. — Sil. Ital., l. c. — Plin., 3, 5, 12.) "The Nera," says Eustace, "forms the southern boundary of Umbria, and traverses, in its way to Narvi, about nine miles distant, a vale of most delightful appearance. The Apennine range, in its mildest and least serrated forms, bounds this plain; the milky Nar intersects it; and fertility, equal to that of the neighbouring vale of Clitumnus, adorns it on all sides with vegetation and beauty." (Classical Tour, vol. 1, p. 334.)

NARBO MARTIUS, a city of Gaul, in the southern section of the country, and southwest of the mouths of the Rhone. It was situated on the river Axar (or Audae), and became, by means of this stream, a seaport and a place of great trade. Narbo was one of the oldest cities of the land, and had a very extensive commerce long before the Romans established themselves in this quarter. Avienus (Or. Marit., v. 585) makes it the capital of the unknown tribe of the Elysees. The situation of this place appeared so favourable to the Romans, that they sent a colony to it before they had even firmly established themselves in the surrounding country. A. B. 74. (Strab. 4, 3.) The immediate cause of this settlement was the want of a good harbour on this coast, and of a place also that might afford the necessary supplies to their armies when marching along the Gallic shore into Spain. (Polyb., 3, 39.) At a later period, after the time of Cæsar, Narbo became the capital of the entire province, which took from it the appellation of Narbonensia. This distinction probably would not have been obtained by it had it not Massilia (Marseille) been declared a free and independent community by
the Romans. As a Roman colony, this place took the name of Narbo Martius. In the time of Cæsar it was called also Decumanae Colonia, from that commander's having sent thither so and so many of the closer troops of his, as the remnant of his favourite tenth legion. (Sueton., Tib. 4.) It continued a flourishing commercial city until a late period, as it is praised by writers who lived when the power of the Roman capital itself had become greatly diminished. (Aussomus, de Clar. Urb., 13.—Sidonius, carm., 23.) The remains of the canal constructed by the Romans for connecting the waters of the Atax with the sea by means of the lake Rubroucis, clearly prove the ancient power and opulence of Narbo. This city owed its downfall, along with so many others, to the invasions of the barbarous nations. It is now Narbonne. (Man- nert, Geogr., vol. 2, p. 63, seqq.)

Narbonensis Gallia, one of the great divisions of Gaul under the Romans, deriving its name from the city of Narbo, its capital. It was situated in the southern and southeastern quarter of the country, and was bounded on the east by Gallia Cisalpina, being separated from it by the Varus or Var (Piso, 3, 4); on the north by the Lacus Lemnus or Lake of Geneva, the Rhone, and Gallia Lugdunensis; on the west by Aquitania; and on the south by the Mediterranean and Pyrenees. It embraced what was afterwards the northern part of Savoy, Dauphine, Provence; the western part of Languedoc, together with the country along the Rhone, and the eastern part of Gascony. (Vid. Gall.)

Narcissus, I. A beautiful youth, son of the river-god Cephissus and the nymph Liriope, was born at Thessal, in Boeotia. He saw his image reflected in a fountain, and, becoming enamoured of it, pined away till he was changed into the flower that bears his name. This was regarded in poetic legends as a just punishment upon him for his hard-heartedness towards Echo and other nymphs and maidens. (Ovid, Met. 3, 341, seqq.—Hugon, fab., 271.) According to the version of this fable given by Eutocius (p. 304), Narcissus threw himself into the fountain and was drowned (Iphigeni eurou ekei, kai kypnign to eikostro bount). Pausanias, after ridiculing the common legend, mentions another, which, according to him, was less known than the one we have just given. This latter version of the story made Narcissus to have had a twin-sister of remarkable beauty, to whom he was tenderly attached. She resembled him very closely in features, wore similar clothes, and accompanied him everywhere. This sister died young; and Narcissus, deeply lamenting her death, used to go to a neighbouring fountain and gaze upon his own image in its waters, the strong resemblance he bore to his deceased sister making this image appear to him, as it were, the form of her whom he had lost. (Pausan., 9, 31, 6.)—The flower alluded to in the story of Narcissus is what botanists term the "Narcissus poeticus" (Linn. gen., 550). It loves the banks of soft streams, and is admira- bly personified in the touching legends of poetry; since, bending on its fragile stem, it seems to seek its own image in the waters that run murmuring by, and soon fades away and dies. (Fée, Flore de Virgile, p. cxviii.)—II. A freedman of the Emperor Claudius. He afterward became his private secretary, and in the exercise of this office acquired immense riches by the means of Messalina, jealous of his power, endeavoured to remove him, but without success, now her fall an easy victim to this unprincipled man. (Vid. Messalina.) Agrippina, however, was more successful. She was irritated at his having endeavoured to prevent her ascending the imperial throne; while Narcissus, on his side, espoused the interests of the young Britannicus, and urged Claudius to name him as his successor. Apprized of these plans, Agrippina drove Narcissus into a kind of temporary exile, by compelling him to go to the baths of Campania for his health; and, having taken advantage of his absence from Rome to poison the emperor, she next compelled Narcissus to put himself to death. (Tacit., Ann., 11, 56, 10, 9, seqq.) The story of the name Nequinum having been given to it in sport by the Romans, on account of the roguery of its inhabitants (naquam, "a rogue"), is a mere fiction. Narnia was colonized with the view of serving as a point of defence against the Umbri. Many years after, we find it incurring the censure of the senate for its want of zeal during the emergencies of the second Punic war. (Liv., 29, 15.) The situation of the place on a lofty hill, at the foot of which flows the Nar, has been, also, ascribed by several poets. (Clod., 6.—Cons., Hon., 515.—Sil. Ital., 8, 458.—Martial, 7, 92.) In the passage of Martial just referred to, the poet alludes to the noble bridge raised over the Nar by Augustus, the arch of which was said to be the highest known. (Procop., Reg. Got., 1.) The modern Naruni occupies the site of the ancient town. Travellers speak in high terms of the beautiful situation of the place. (Cradeau's Anc. Italy, vol. 1, p. 277.)

Narnia, now Narenta, a river of Dalmatia, rising in the mountains of Bosnia, and falling into the Adriatic opposite the island of Lesina. (Plin., 3, 22.) On its banks lay the city of Narnia, a Roman colony of some note. (Scylax, p. 9.—Mela, 2, 3.) Its ruins should be sought for in the vicinity of Castel Nornin. (Man- nert, Geogr., vol. 7, p. 347.)

Narses, a eunuch of the court of the Emperor Justinian I. at Constantinople. The place of his birth is unknown. He so ingratiated himself with the emperor, or that he appointed him his chamberlain and private treasurer. In A.D. 538 he was placed at the head of an army destined to support Belisarius in the expulsion of the Ostrogoths from Italy; but the dissensions which soon arose between him and Belisarius occasioned his recall. Nevertheless, in 539 he was again sent to Italy, to check the progress of Totila the Goth, and, after the death of Totila, he conquered the Teuton, whom the Goths had chosen king in the place of Totila, and, in the spring of 554, Bucellinus, the leader of the Alemanni. After Narses had cleared nearly all Italy of the Ostrogoths and other barbarians, he was appointed governor of the country, and ruled it fifteen years. During this time he endeavoured to enrich the treasury by all the means in his power, and excited the discontent of the provincial subjects, and in 556 he was deposed by Emperor Justinian II. Narses was deposed in disgrace, and sought revenge by inviting the Lombards to invade Italy, which they did in 568, under Alboin their king. Muratori and others have doubted whether Narses was concerned in the invasion of the Lombards. After his deposition he lived at Naples, and died at an advanced age, at Rome, in 567. (Encyclop. Am., vol. 9, p. 386.)

Narcōmus of Naryx, a city of south-eastern Italy, rendered famous by the legend of Ajax, son of Oileus. (Strabo, 425.) From Diodorus we learn that Isme- nas, a Boetian commander, having collected a force of Ænianes and Athamanes, whom he had seduced from the Lacedaemonian service, invaded Phocis, and defeated its inhabitants near Naryx (14, 82). The same historian afterward relates that Phayllus, the Phocian, having entered the Locrian territory, surprised the town of Naryx, which he razed to the ground.—Virgil
app as the epithet "Narcyian" to the Locris who settled in Italy, as having-been of the Opuntian stock. (I.\.n., 3, 396.)

Nasamones, a people of Africa, to the southeast of Cyrenaica, and extending along the coast as far as the middle of the Syrtis Major. (Compare Herod., 4, 172.) They were a roving race, uncivilized in their habits, and noted for their robberies in the case of all vessels thrown on the quicksands. They plundered the cargoes and sold the crews as slaves, and hence Lucan (9, 444) remarks of them, that, without a single vessel ever seeking their shores, they yet carried on a traffic with all the world. Augustus ordered an expedition to be sent against them, both in consequence of their numerous robberies, and because they had put to death a Roman prefect. They were soon conquered; and Dionysius Periegetes (v. 208) speaks of the "deserted dwellings of the destroyed Nasamones" (κρυμματευκα μελαθρα θανατησοντων Νασαμωνων). They were not, however, completely destroyed, for we find the race again appearing in their former places of abode, and resuming their former habits of plunder, until in the reign of Domitian they were completely chased away from the coast into the desert. (Euseb., Chron. Ol., 216, 2.—Josephus, Bell., 2, 16.) Some mention has been made, in another part of this work (vid. Africa, page 81, col. 1), of a journey performed through part of the desert of Cyrenaica by the Nasamones; and the opinions of some able writers have been given on this subject. The following remarks, however, of a late critic may be compared with what is stated under the article Nigeir. "Heredotus says that the Nasamones went through the deserts of Libya; and that he may not be misunderstood as to what he means by Libya, which is sometimes put for Africa, he states distinctly that it extends from Egypt to the presence of the Molosses, where it terminates; that it is inhabited by various nations besides the Grecians and Phoenicians; that, next to this, the country is abandonned to beasts of prey, and that all beyond is desert; that the young Nasamones, having passed the desert of Libya (not Sahara), came to a region with trees, on which were perched men of little stature; that they were conducted by them over morasses to a city on a great river, running from the west towards the rising sun, which was a fortress and enchanter, &c. &c. Now it is perfectly clear to us that the country alluded to by Herodotus was no other than Mauritania, and that the notion of their having crossed the great desert, and reached the Niger about Timbuctoo, is founded entirely on a misrepresentation of his quoters and editors, some of whom make the course of the young men to have been southwest, contrary to what Herodotus says, and for no other reason that we can devise but that such a course was required to bring them to a predetermined city and river, known to the moderns, but not to Herodotus. Herodotus, however, sanctions no such notion; he distinctly states, on the contrary, that they proceeded to the west, προς Ζεφυρον άνεμου, words that are never applied to any portion of the compass lying between west and south, the word Zephyrus, in Latin as well as in Greek, being used exclusively for west, and Αχλα generally for southwest. If we will only let Herodotus tell it to us one more time, we shall find in those parts of the Emperor of Morocco's dominions, situated between the Great Atlas and the Sahara, plenty of rivers, two of them, the Taglet and the Aïd-judi, both running to the east, and both great rivers in the eyes of men that had never witnessed a running stream; we shall also find cities and towns, intervening deserts, morasses, sands, and black men of small stature, the modern Berbers, the ancient Melogonituli, omnes coloris nigri, to answer the description of Herodotus; who says, moreover, that his river, which he calls the Nile, not only descends from Libya, but traverses all Libya, dividing that country in the midst. Pliny's information is still more explicit, and tends to corroborate our suggestion. He tells us that Suetonius Paulinus, the Roman general, after crossing the western Atlas, and a black, dirty plain beyond it (dry morass or peat-moss, of which we understand there is plenty), fell in with a river running to the eastward, which (Pliny) calls the Niger, probably from the black people or the black soil, and which is stated to lose itself in the sands; and which, according to Pliny, emerging again, flows on to the eastward, divides the Libyans from the Ethiopians, and finally falls into the Nile. Now the Taglet, which flows from the southern side of the snowy Atlas, crossed by the Roman general, runs in an eastern course, and loses itself in the sands; and the Aïd-judi, which rises from the same side, or the Central Atlas (in Mauritania Cæsariensis), and runs easterly into the lake Melgig, might very well be considered by Pliny as the continuation of the Taglet or his Niger; and it is sufficiently remarkable that this river, or some other of the numerous streams in the neighbourhood, should, according to Leo Africanus, be called the Ghir, which, it seems, is a native name. Here, then, we have at once the foundation for the Geir and Nigeir of Ptolomy, supplied to him by Pliny." (Quarterly Review, No. 82, p. 233, seq.)

Nasica, I, a surname of one of the Soisins. (Vid. Scipio Vercingetorix.) A character delineated by Horace in one of his satires. Nasica, a mean and aversative man, marries his daughter to Coranus, who was a creditor of his, in the hope that his new son-in-law will either forgive him the debt at once, or else will leave him a legacy to that amount in his will, which would, of course, be a virtual release. He is disappointed in both these expectations. Coranus makes his will and hands it to his father-in-law, with a request that it be executed immediately. But after repeated declining to do so, at last consents, and finds, to his surprise and mortification, no mention made in the instrument of any bequest to him or his. (Horat., Sat., 2, 5, 65.)

Nasidienus (by synonym Nasidienus, a quadrily, syllable), a character satirized by Horace. Under this feigned name the poet describes an enterprising of bad taste and mean habits affecting the manners of the high-classed Roman. (Horat., Sat., 2, 6, 8.)

Nasus or Nasus, a town or fortress near Ceniâda in Aecarnania. The name evidently implies an insular situation. Livy (26, 24; 38, 11) writes it Nasos; but that is probably a false reading. From the accounts of ancient writers, Nasos seems always to have been included with Ceniâda in the cessions of the latter place, made by the Romans first to the Eotians, and afterward to the Aecarnanians. (Polyb., 9, 2.) If Trigardion be not Ceniâda, it may represent Nasos, which was probably the port and arsenal of Ceniâda; and, though now joined to the continent, might very well have been an island in ancient times. (Cramer's Anc. Greece, vol. 2, p. 26.)

Natiso, a river of Venetia, in Cisalpine Gaul, rising in the Alps, and falling into the Adriatic near Aquileia. It is now the Natisone. Modern critics, however, are divided in opinion as to the identity of the Natisone with the Natiso, which Strabo and other ancient writers place close to Aquileia; as the Natiso is now some miles distant from the ruins of that city. The most probable supposition is, that some change has taken place in the bed of the river. (Cramer's Anc. Italy, vol. 2, p. 129.)

Naucratîs, a city of Egypt, in the Delta, and belonging to the Saitic nome. It was situated on the Canopic arm of the Nile, to the south of Metelis and northwest of Saïs. Strabo informs us (802) that, in the time of Psammitichus, a body of Milesians landed at the Bubonite mouth of the river, and built there a
stronghold, which he calls "the fortress of the Milesians" (τὸ Μάλισειον τέγων). The geographer evidently refers here to the survival of the city of Egypt of the Carian and Ionians, by whose aid, according to Herodotus (2, 152), Psmammitichus was enabled to subdue his colleagues in the kingdom. When, however, Strabo adds, that these Milesians, in process of time, sailed into the Saitic nomen, and, after having conquered Inarus in a naval conflict, founded the city of Naucratis, it would seem that he mixes up with his account of this place the circumstance of the succession that some Carians and Ionians, to the Athenians, to Inarus, king of Egypt, and by means of which he gained a victory over the Persians. Inarus, it is true, was afterward defeated, but no author mentions that the Milesians had any share in his overthrow. Naucratis appears, in fact, to have been founded long before any Greek settled foot in Egypt. It was given by Amasis to the Ionians as an entrepot for their commerce, and was not founded by them. This favour, however, on the part of the Egyptian monarch, was granted under such restrictions as prudence seemed to require. The Greek vessels were only allowed to enter the Canopic arm, and were obliged to stop at Naucratis. If a ship happened to enter another mouth of the river, it was detained; and the captain was not set at liberty unless he could swear that he was compelled to do so by necessity. He was then obliged to sail to Naucratis; or, if continual north winds made this impossible, he was forced to leave his vessels round the Delta to Naucratis. (Herod. 2, 179.) But, how rigidly severe these restrictions were originally enforced, they must soon have fallen into disuse, as the mouths of the Nile were open to any one after the conquest by the Persians. — Naucratis, from its situation, became the connecting link in the chain of communication between the coast and the interior of the country, and continued for a long period an important city. It is mentioned by Herodotus and many other ancient authors as low down as the sixth century. — The ruins which Niebuhr found near a place called Sakkadjar seem to indicate the site of the ancient city. — Naucratis was the native place of Athenaeus. Like every commercial city, it contained among its population a large number of disolute persons of both sexes. (Larcher, Geogr. d'Herodeot. p. 539, seqq. — Mannert, Gk. Lexic., vol. 2, p. 553.)

NAULISIUS, a naval station on the northeastern coast of Sicily. Between this place and Mylae, which lay to the west of it, the fleet of Sextus Pompeius was defeated by that of Octavius (A.U.C. 718, B.C. 36).—II. An island off the coast of Crete, near the promontory of Sammonium. (Plin., 4, 12.)—III. The port of the town of Bulis in Phocis, near the confines of Boeotia. (Plin., 4, 3.) It is supposed to have been the same with the Mychos of Strabo.

NAUPACTUS, a city of Locris, at the western extremity of the territory of the Oecomy, and close to Rhiun of Etolia. It was said to have derived its name from the circumstance of the Heraclidae having there constructed the fleet in which they crossed over into the Peloponnesus (vο ν, a ship, and πινικον, to construct. — Strabo, 426. — Apollod., 2, 7, 2). After the Persian war, this city was occupied by the Athenians, who there established the Messenian Helots after they had evacuated Ithome. (Thucyd., 1, 103.—Id. 2, 90.—Pausan., 4, 24, seqq.) The acquisition of Naupactus was of great importance to the Athenians during the Peloponnesian war, as it was an excellent station for their fleet in the Corinthian Gulf, and not only afforded them the means of keeping up a communication with Corcyra and Acarnania, but enabled them to land their supplies, to the north, upon the opposite coast, and to guard against any designs they might form against their allies. Some important naval operations which took place upon this city during the third year of the war, will be found detailed in Thucy-Ides (2, 83, seqq.). After the failure of the expedition and the discomfiture of the Athenian general, against the Etoliots, the latter, supported by a Peloponnesian force, endeavoured to seize Naupactus by a coup de main; but such were the able arrangements made by Demosthenes, who threw himself into the place with a re-enforcement of Acarnanian auxiliaries, that the enemy did not think proper to prosecute the attempt. (Thucyd., 3, 102.) On the termination of the Peloponnesian war, however, Naupactus surrendered to the Spartans, who expelled the Messenians from the place. (Pausan., 4, 26.) De- mosthenes informs us, that it had afterward been occupied by the Achaean, but was ceded by Philip of Macedon to the Etoliots (Phil., 3, p. 120.—Strabo, 426), in whose possession it remained till they were engaged in a war with the Romans. The latter, after having defeated Antiochus at Thermopylae, suddenly crossed over from the Mahic Gulf to that of the Corinth, and invested Naupactus, which would probably have been taken, notwithstanding the obstinate defence made by the Etoliots, had they not obtained a truce by the intervention of T. Flamininus. (Liv., 36, 30, seqq. — Polyb., 5, 102.) Naupactus was still a city of some importance in the time of Hierocles (p. 643), but it was nearly destroyed by an earthquake in the reign of Justinian. (Procop., Bell. Got., 3.)—The modern town is called Nenbachi by the Turks, Nenbato by the Greeks, and is distinguished by a strong accent on the last syllable. (Kempff's Journey, vol. 1, p. 8.) "Nepacto," says Sir W. Gell, "is a miserable pashalia, and a ruinous town; but it is worth visiting, because it gives a very exact idea of the ancient Greek city, with its citadel on Mount Rhegani, whence two walls, coming down to the coast and the plain, form a triangle. The port absolutely runs into the city, and is about with the land, which is built up, on the ancient foundations. (Ulin., p. 293.—Cramer's Anc. Greece, vol. 2, p. 105, seqq.)

NAUPHILDES, a patronymic of Palamedes, son of Nauplius. (Ovid., Met., 13, 39.)

NAUPILUS, I. a son of Neptune and Amynone, and the founder of Nauplia. (Pausanias, 2, 38.—Id. 4, 35.) He was the one that sold Auge, daughter of Alcus, to King Teuthras. (Vid. Aug.) This Nauplius must not be confounded with the second of the name, who was, in fact, one of his descendants. (Heyne, ad Apollod., 2, 1, 5. — Compare Burmann, Castal. Argonaut., ad Vol. Flacc., s. v. II. A descendant of the preceding, and one of the Argonauts. (Heyne, ad Apollod., 2, 1, 5. — Burmann, Castal. Argonaut., s. v. III.) A son of Calonoe and the father of Palamedes by Euphr crates, and the king of Eubea. He was so indignant at the treatment which his son had experienced from the Greeks, that, to avenge his death, he set up a burning torch on the promontory of Ca-
places, in order to deceive the Grecian vessels that were sailing by in the night on their return from Troy; and he thus caused their shipwreck on the coast. The torch, it seems, had been placed on the most dangerous part of the shore; but the Greeks mistook it for a friendly signal, inviting them to land here as the safest part of the island. Those of the shipwrecked crews that came safe to the land were slain by Nauplius, who is said, however, to have been drowned by his own hand into the sea when he saw his plan of vengeance frustrated by the escape of Ulysses, whose winds bore away in safety from the dangerous coast. (Hygin., fab. 116.)—The obscure and curious legend related by Apollodorus (2, 1, 5) is thought by many to have reference to this Nauplius. It assigns him a different end. According to this version of the story, Nauplius attained a great age, and having lived on the coast, lamenting the fate of those who were lost on it. At length, through the anger of the gods, he himself met with the same fate which he deplored in others. (Heyne, ad Apolloc., l. c.)

NAUPHUTS, a town of Pannonia, on a river of the same name, now Ober (Upper) Laybach. (Vell. Pat., 2, 110.—Plin., 3, 18.—Taetz., Ann., 1, 20.)

NAUSIKA, daughter of Alcinous, king of the Phaeacians. She met Ulysses shipwrecked on her father's coast, and gave him a kind reception. (Od., 6, 17, 18)

NAUSTATHMUS, I. a port and harbour in Sicily, at the mouth of the river Cacyprys, below Syracuse; now Asparagus. (Cluv., Sic. Ant., p. 97.—Reichard, Thes. Topogr.—II. A village and anchoring-place of Cyrenaica, between Erythron and Apollonia. (Mela, 1, 8.)—III. An anchoring-place on the coast of the Euxine, in Asia Minor, about 90 stadia from the mouth of the Halya: it is supposed by some to have been the place where Scylax landed on his voyage round the world (p. 701). D'Anville gives Balireth as the modern name; but Reichard, Kuryt Aghki. (Arrian, Perip., Hudson, G. M., 1, p. 16.)

NAXOS, I. a town of Crete, celebrated for producing excellent whetstones. (Pind., Isthm., 6, 107. —Schol. ad Pind., l. c.)—II. The largest of the Cyclades, lying to the east of Paros, in the Ægean Sea. It is said by Pline (4, 12) to have borne the several names of Strongyia, Dionysia, Sicilia Minor, and Cappadocia, and that it was visited by the Punic fleet, and was 75 miles in circuit, and twice the size of Paros. It was first peopled by the Carians (Steph. Byz., s. v. Νὰνος), but afterward received a colony of Ionians from Athens. (Herod., 8, 46.) The failure of the expedition undertaken by the Persians against this island, at the suggestion of Aristagoras, led to the revolt of the Ionian states. (Herod., 5, 28.) At this period Naxos was the most flourishing of the Cyclades; but, not long after, it was conquered by the Persian armament under Datis and Artabernes, who destroyed the city and temples, and enslaved the inhabitants. (Herod., 6, 96.) Notwithstanding this calamity, the Naxians, with four ships, joined the Greek fleet assembled at Salamis (Herod., 8, 45), and yet they were the first of the confederates whom the Athenians deprived of their independence. (Thucyd., 1, 98, 137.) It appears from Herodotus (1, 64) that they had al ready before the battle of Salamis despatched a mission to Sparta, and that they were to have gone to Athens. Naxos was farther celebrated for the worship of Bacchus, who is said to have been born there. (Virg., En., 3, 125.—Hom., Hymn in Apoll., 44.—Pind., Pyth., 4, 156.—Apollod., 1, 7, 4.) The principal town was also called Naxos. —The modern name of the island is Naxia. (Cramer's Anc. Greece, vol. 3, p. 408.) Mr. Hawkins gives the longest diameter of the island, according to the Russian chart, as about eighteen miles, and its breadth about twelve. (Clarke's Travels, vol. 6, p. 112, London ed.) Dr. Clarke observes of Naxos, that its inhabitants are still great votaries of Bacchus. Olivier speaks in inferior terms of the present Naxian wine, adding that the inhabitants know neither how to make nor preserve it. Dr. Clarke, on the contrary, observes that the wine of Naxos maintains its pristine celebrity, and that he thought it excellent. Naxos is said to have no ports for the reception of large-sized vessels, and has therefore been less subject to the visits of the Turks. But Cramer asserts that, when he visited the island, he was told that there was not a single Mohammedan in it, and that many of the inhabitants of the interior had never seen a Turk. The produce of the island consists at present of wines, wheat, barley, oil, oranges, lemons, peaches, figs, cheese, which is exported to Constantinople, cotton, honey, and wax. The vintage was one year so abundant, that the people were obliged to pour their wines into the estuaries of the Capucines. (Malte-Brun, Geog., vol. 6, p. 186, Am. ed.) II. A city on the eastern side of Sicily, situate on the southern side of Mount Taurus, and looking towards Catana and Syracuse. It was founded by a colony from the island of Naxos, one year before the settlement of Syracuse (Ol. 17, 3) and at the same time, consequently, with Crotina in Italy. (Thucyd., 6, 3. —Scymnus, v. 276.) The colony was a powerful one, and the rapid growth of the new state is clearly shown by the early founding of Naxian colonies. Naxos, however, not long after this, fell under the sway of Hippocrates, tyrant of Gela. (Herod., 7, 154.) But it soon recovered its freedom, waged a successful contest with Messana, and appeared subsequently as the ally of the Athenians against Syracuse, the rapid increase of this city having filled it with apprehensions for its own safety. At a still later period, Dionysius, tyrant of Syracuse, destroyed the city (Diod., 14, 15.—Ol. 94, 2), but the inhabitants, together with Naxos, afterward settled in the immediate vicinity, and founded Taurotemum. (Vid. Taurotemum.)

NAZIANZES, a city of Cappadocia, in the southwestern angle of the country, and to the southeast of Archealia. This place derives all its celebrity from Gregory, the distinguished theologian, who was born at Arrianus, a small village in the immediate neighbourhood, but who was promoted to the bishopric of Nazianzus. (Neæpa, Catt., 1, 48. —Epip., Syn. 14, 20.—Cramer, N. H.) Nazianzus is assigned by Hierocles to Cappadocia Secunda. The Itineraries remove it 24 miles from Archealia. (Cramer's Asia Minor, vol. 2, p. 114.)

NEZETUS, a river of Bruttium, rising to the northeast of Consenta, and falling into the Sinus Taren-tinus above Crotona. It is now the Neta. This stream was said to have derived its name from the circumstance of the captive Trojan women having there set fire to the Grecian fleet (vates, alio); a circumstance alluded to by many of the ancients, but with great diversity of opinion as regards the scene of the event. The use which Virgil has made of this tradition is well known. (Strabo, 265.—Cramer's Anc. Italy, vol. 2, p. 391.)

NEPOLLIS, a celebrated city of Campania, on the Sinus Crater, now Naples, or, in Italian, Napoli. Innumerable accounts exist relating to the foundation of this city; but the fiction most prevalent seems to be that which attributed it to the Siren Parthenope, who was cast upon its shores, and from whom it derived the name (Parthenope) which it is usually designated in the poets of antiquity. (Lycoiph., 717.—Dionysius Periegetae, 537.—Sil. Ital., 12, 33.) According to Strabo, the tomb of this pretended foundress was shown there in his time. (Strab., 424.)—Hercules is also mentioned as founder of Neapolis by Oppian and Diodorus Siculus (ap. Tzetz. ad Lycoiph., l. c.)—We find also considerable variations in what may be regarded as the historical
account of the origin of Neapolis. Scymnus of Chios mentions both the Phocaeans and Cumeans as its founders, while Stephanus of Byzantium names the Rhodians. But by far the most numerous and respect- able authorities attribute its formation to the Cumeans, a circumstance which their proximity renders highly probable. (Strabo, 216. — Livy, 8, 22. — Vell. Patr., 1, 4.) Hence the connexion of this city with Euboea, so frequently alluded to by the poets, and especially by Statius, who was born here. (Suid., 1, 2; 3, 5; 2, 2, c.c.) A Greek inscription mentions a hero of the name of Eumelus as having had divine honours paid to him, probably as founder of the city. (Cassius, Hist. Nep., p. 105.) This fact serves to illustrate another passage of Statius. (Suid., 4, 8, 45.) The date of the foundation of this colony is not recorded.

Velleius Paterculus observes only that it was much posterior to that of the parent city. Strabo seems to recognise another colony subsequent to that of the Cumeans, composed of Chalcidians, Pithecusians, and Athenians. (Strab., 246.) The latter were probably the same who are mentioned in a fragment of Timnus, quoted by Tzetzes (Ad Lyceum, v. 732-37), having migrated to Italy under the command of Diotimus, who also instituted a Λαμπαδοφορία, still observed at Neapolis in the time of Statius (Suid., 4, 8, 50.). The passage of Strabo above cited will account also for the important change in the condition of the city now under consideration, which is marked by the terms Paleopolis and Neapolis, both of which are applied to it by the ancient writers. It is to be noticed, that Paleopolis is the name under which Livy mentions it when describing the first transactions which connect its history with that of Rome, A.U.C. 429 (Livy, 8, 23); while Polybius, speaking of events which occurred in the beginning of the first Punic war, that is, about sixty years afterward, employs only that of Neapolis (1, 51).—Livy, however, clearly alludes to the two cities as existing at the same time; but we know little of Paleopolis after it had undergone a siege and surrendered to the Roman arms. According to the same historian, this town stood at no great distance from the site of Neapolis, certainly nearer to Venusius, and in the plain. (Romanelli, vol. 3, p. 530.) It was betrayed by two of its chief citizens to the Roman consul, A.U.C. 429. (Liv., 8, 25.) Respecting the position of Neapolis, it may be seen from Pliny, that it was placed between the river Sebeto now Neapolitan Sebato and its small tributary the Megara, or Megalia, as Statius calls it (Suid., 2, 2, 80), on which the Castel del Ovo now stands. (Plin., 3, 6. — Columella, R. R., 10.) It is probable that Neapolis sought the alliance of the Romans not long after the fall of the neighbouring city; for we find that they were supplied with ships by that town in the first Punic war, for the purpose of crossing over into Sicily. (Polyb., 1, 51.) At that time we may suppose that Neapolis, like those of Cuma, to have lost much of their Greek character, being from compelled to admit the Campanians into their commonwealth; a circumstance that has been noticed by Strabo (246). In that geographer's time, however, there still remained abundant traces of their first origin: Their gymnasia, clubs, and societies were formed after the Greek manner. Public games were celebrated every five years, which might rival in celebrity those celebrated at Myron's. They also sent a number of perfumes to Rome; while the indolence and luxury of Greek manners were also very prevalent, and allured to Neapolis many a Roman, whose age and temperament inclined him to a life of ease. (Ovid, Met., 15, 711. — Hor., Epod., 5, 24, 3. — Sil. Ital., 12, 31. — Stat., Sic., 3, 5, 83.) Claudius and Nero seem to have shown a like predilection for Neapolis as a residence. (Tacit., Ann., 15, 53. — Id., 16, 10.) The epitaph of Voces, applied to this city by Marcus (8, 79) proves that literature continued to flourish here in his time.

—Among other superstitious, we learn from Macrobius (Sat. 1, 18), that the people of Neapolis worshiped the sun, under the image of a bull with a human head, which was carried annually in procession, confirmed by numerous coins, and also by an inscription which has come down to us. (Cramer’s Anc. Italy, vol. 2, p. 168, seqq.)

NEARACHUS, a celebrated naval commander in the time of Alexander the Great. He was a native of Crete, and one of the friends of Alexander in early life, sharing with the young prince the disgraces incurred during the reign of Philip. When Alexander had subdued the empire of Darius, he sent Nearchus on a voyage of discovery, from the mouth of the Hydaspes down the Indus, and from the embouchure of the Indus to the Euphrates, along the coast of Dedonia, Carmania, and Persia. The narrative of this voyage has been preserved to us by Arrian, who professes to give an extract from the journal of Nearchus. It is contained in his Indica. The authenticity of the account has been questioned by Hardouin and Dodwell, but is fairly established by Sainte-Croix, in his Critique des Historiens d’Alexandre, Gesselin (Recherches sur la Geographie Ancienne), and Vincent (Voyage de Nearchus, Lond., 1807. — Commerce et Navigation des Anciens in the Indian Ocean, vol. 1). It must be confessed, however, that the three writers just mentioned differ in other respects as regards this celebrated voyage. Gesselin thinks, for example, that all the statements made by Nearchus are mere geographical contrivances and geographical fictions. Vincent, on the other hand, supposes that the defective system of the ancients must necessarily have introduced into the narrative of the Greek commander many errors and contradictions. Sainte-Croix, again, is deserted by his usual good sense and judgment when he assigns to the expedition of Nearchus no other motive but the foolish ambition of Alexander. If this is true, then, whether Herodotus has kept a journal so full of nautical and geographical observations!—Nearchus was recompensed by Alexander with a golden crown, which the monarch placed upon his head. A new route was marked out. Alexander was to undertake an expedition against Arabia, and Nearchus and his fleet were to accompany him, and to coast the Arabian shore; but the death of the monarch put an end to the design. After the decease of Alexander, Nearchus, who probably had obtained the preference of the later Paphlagonia and Lydia, exerted himself, but to no purpose, to secure the throne of Alexander to Hercules, son of Barsine. —He also wrote a history, or historical memoirs of the reign of Alexander; but of this work the title alone remains. The voyage of Nearchus, besides being contained in the common text of Arrian, may be found in Hudson’s Geographi Minoris Graeci, vol. 1. It appeared also in 1808, from the Vienna press, under the title of Neopompeia \\u03bbav\\u03b3vari. (Hofmann, Lpz. Bibliogr., vol. 3, p. 114)

NEBO, a mountain situate east of the river Jordan, and forming part of the chain of Abarim, north of the Dead Sea. The Israelites encamped at the foot of this mountain in the 46th year of their Exodus, and Moses, having executed the commission with which he was intrusted, and having pronounced his blessing on Israel, ascended this mountain and placed his那里 among its high places. The hero, after his charge, ascended this mountain, from the summit of which, called Pisgah, he had a view of the Promised Land, into which he was not permitted to enter: on this mountain he soon afterward died. Birkhead supposes the Djebel Attarvan, about 15 miles north of the Arnon, and a little to the right of the route from Madaba to Arabah or Aroer, and which is the highest point in the neighbourhood, to be Nebo. (Mantford’s Scripture Gazetteer, p. 325.)
Nemesis, or Colonia Venereae Nemesis, a town of the Turdetani, in Hispania Baetica, northeast of Ga-
des, and southwest of Hispalis. It is now Loberia or Loberiza. (Strabo, 143.—Plin., 3, 3.)

Nebrodés, a general name for the chain of mount-
ains running through the northern part of Sicily. The Greek form is Nebróth déon. (Strabo, 274.—Stil.
Ital., 14, 234.)

Necho, a king of Egypt who endeavoured to open a
communication, by means of a canal, between the Red Sea and the Mediterranean. The attempt was abandoned, after the loss of 120,000 men, by order of an oracle, which warned the monarch "that he was working for the barbarian" (τῷ βαρβάρῳ αὐτὸν προ-
εργύσαντα.—Herod., 2, 158). The true cause, how-
ever, of his abandonment was the want of opportunities. It would seem to have been the discovery, that the water of the Arabian Sea stood higher than the sandy plains through which the canal would have to run. (Compare Aris-
tot., Meteorol., 1, 14.—Strabo, 804.) A similar attempt was made, but with no better success, by Darius Hys-
taspis. (Herod., l. c.) Ptolemy Philadelphus at last accomplished this important work. An account of it is given by Strabo (804) from Artemidorus. (Com-
pare the note on the latter statement, Geogr., vol. 10, pt. 1, p. 507, seqq.) This event is Necho's most
famous in the annals of geographical discovery for a voyage which, according to Herodotus (4, 42), he caused to be performed around Africa, for the so-
lution of the grand mystery which involved the form and termination of that continent. He was obliged to employ, not native, but Phoenician navigators, of whose proceedings Herodotus received an account from the Egyptian priests. They were ordered to sail down the Red Sea, pass through the Columns of Her-
cules (Straits of Gibraltar), and so enter the Mediterra-
nean to Egypt; in other words, to circumnavigate Africa. The Phoenicians related, that, passing down the Red Sea, they entered the Southern Ocean; on the approach of autumn, they landed on the coast and planted corn; when this was ripe, they cut it down and again departed. Having thus consumed two years, they, in the third, doubled the Columns of Hercules and returned to Egypt. That they, in passing the most southern coast of Africa, were surprised to observe the sun on their right hand; a statement which Herodotus himself rejects as impossible. Such is all the account transmitted to us of this extraordinary voyage, which has given rise to a learned and voluminous controversy. Rennell, in his Geography of Herodotus; Vincent, in his Periplus of the Éthyl-
ranean Sea; and Gosselin, in his Geography of the An-
cients, have exhausted almost every possible argu-
ment; the first in its favour, the second to prove that it never did or could take place. To these last it appears impossible that ancient mariners, with their slender resources, creeping in little row-galleys along the coast, steering without the aid of a compass, and unable to venture to any distance from land, could have performed so immense a circuit. All antiquity, they observe, continued to suppose that the sun and daybreak respecting the form of Africa, which was only fully established several thousand years afterward by the expedition of Gama. On the other side, Rennell urges that, immense as this voyage was, it was entirely along a coast of which the navigators never re-
quired to lose sight even for a day; that their small banks were well equipped, and better fitted than ours for coasting navigation; and that these, drawing very little water, could be kept quite close to shore, and even be drawn on land whenever an emergency made this step indispensable. The statement that, at the extremity of Africa, they saw the sun on the right, that is, to the north of them (a fact which causes Herodotus peremptorily to reject their report), affords the strongest confirmation of it to us, who know that
to the south of the equator this must have really taken
place, and that the historian's unbelief arose entirely from his ignorance of the real figure of the earth. (Vid. Africa, p. 79, col. 1.)

Necropólis (from νεκρός, "dead," and τός, "city"), the city of the dead; a name beautifully ap-
plied to the burial-grounds in the neighbourhood of many of the ancient cities, such as Thebes in Egypt, Cyrene, Alexandreia, &c.

Nectanebés, a king of Egypt, cousin to Tachos, and proclaimed king during the absence of the latter, with the Egyptian forces, in Phenicia. He was sup-
ported by Aegasius, whom Tachos had offended by rejecting his advice. Aided by the Spartan king, Nectanebas defeated a competitor for the crown from Marseilles, and was at last firmly established in his king-
dom. Being subsequently attacked by Artabanus, who wished to reduce Egypt once more under the Persian sway, he met with adverse fortune, and fled into Ethiopia, whence he never returned. Nec-
tanebas was the last king of Egypt of the Egyptian race. (Plut., Vit. Aeg.,—Diod. Sic., 15, 92.—Id.,
16, 48, seqq.) As regards the variations in the or-
thography of the name, consult Wasseling, ad Diod.
Sic., 15, 92, seqq.

Néleus (two syllables), I. a son of Neptune and Tyro. He was brother to Pelias, with whom he was ex-
posed by his mother, who wished to conceal her frail-
ity from his father. They were preserved and brought to Tyro, who had then married Cretheus, king of Iol-
chos. After the death of Cretheus, Pelias and Néleus contended for the kingdom, which belonged of right to Óeson, the son of the deceased monarch and Tyro. Pelias proved successful, and Néleus departed with a body of followers into the Peloponnesus. (Diod.,
4, 68.) Here he founded Pylos in Messenia, and, 
marrying Chloris, daughter of Amphion, became the father of twelve sons, the oldest of whom was Peri-
clymenus, the youngest Nestor, and of one daughter,
named Pero. (Diod., l. c.) When Hercules attacked Pylos, he killed Néleus and all his sons but Nestor, who was then a child, and reared among the Gereni-
ans. (Hom., II, 11, 690.—Her., ep. Schol. ad Apoll.
Rhod., 1, 156, seqq.;—I. c.) Néleus had promised his daughter in marriage to him who should bring to Pylos the cows of Tyro, detained by Iphicles. Bias was the successful suitor; for an account of which legend, consult the article Melampus.—II. A
disciple of Theophrastus, to whom that philosopher bequeathed the writings of Aristotle. (Vid. Apel-
licon.)

Némaus, an important city of Gallia Narbonensis, next in rank to Narbo. It was situated on the main route from Spain to Italy, and was the capital of the Arécomici. It is now Nismes, and is famed for its remains of antiquity. (Mela, 2, 5.—Plin., 3, 4.)

Némea (Νήμεα), a city of Argolis, to the northwest of Mycenae, celebrated as the haunt of the lion slain by Hercules, and the spot where triennial games were held in honour of Archemorus, or Ophicles, son of Ly-
curus, king of Némea. (Apollod., 3, 6, 3.—Hygin.
Fab., 74.—Id., Fab. 273.) The games were solemn-
ized in the grove of Molochrus, who was said to have entertained Hercules when he came to Némea in pursu-
uit of the lion. (Apollod., 2, 7.)—We know from Polybius and Livy, that the Nemean games continued to flourish in the reign of Philip, son of Demetrius
(Polyb., 2, 7, 4.—Id., 5, 101, 6.—Livy, 27, 30.—
Strabo, 377; Néméa, king of Némea. (Apollod., 3, 6, 3.—Hygin.
Fab., 74.—Id., Fab. 273.) The games were solemn-
ized in the grove of Molochrus, who was said to have entertained Hercules when he came to Némea in pursu-
uit of the lion. (Apollod., 2, 7.)—We know from Polybius and Livy, that the Nemean games continued to flourish in the reign of Philip, son of Demetrius
(Polyb., 2, 7, 4.—Id., 5, 101, 6.—Livy, 27, 30.—
ter. They were celebrated under the presidency of the Corinthians, Argives, and inhabitants of Cleoneus (Arg. ad Pind., Nem., 3.—Compare Pausan., 2, 14, 2); but in later times they appear to have been entirely under the management of the Argives. (Livy, 34, 41.) They are said to have been celebrated every third year; and sometimes, as we learn from Pausanias, in the winter. (Pausan., 2, 15, 2.—Id., 6, 16, 4.) The crowns bestowed on the victors were of parsley, since these game were originally funeral ones, and since it was customary to lay chaplets of parsley on the tombs of the dead. (Wachsmuth, Gr. Antiq., vol. 1, p. 163, Eng. transl.)

NEMESIUS (Marcus Aurelius Olympius), a Latin poet, a native of Carthage, who flourished about 280 A.D. Few particulars of his life are known. His true family name was Olympius; that of Nemessianus, by which he is commonly cited, indicates probably that in point of correctness and elegance it is far behind Marmarica. Vopiscus, in his life of Numerian (who was clothed with the imperial purple A.D. 282), informs us that Nemessianus had a poetical contest with this prince, but was defeated. It is possible that Nemessianus may have been a kinsman of his; at least, the Emperor Carus, and his two sons, Carinus and Numerianus, bear, like our poet, the surname of Aurelius. Vopiscus also states that Nemessianus composed Hactiernae Cynegeticae, and gained all sorts of crowns ("omniae coronis illustratae emicuit," according to the felicite emendation of Casaubon). So that, whatever opinion may be formed of his merits by modern critics, it is certain that the emperor's triumph over him was by no means lightly esteemed by his contemporaries. We have only one of the three poems, of which the historian speaks, remaining, namely, that entitled Cynegética, the subject of which is the chase, and the fragments of which consist of two other poems. The Cynegética, or poem on hunting, consists of 325 verses; but the work is incomplete, either from having been left in that state by the poet himself, or from a portion of it having been lost. The plan of the piece is entirely different from that of Gratius Faliscus. This latter treat in a single strain of all the species of hunting, and in a very succinct way; Nemessianus, on the contrary, appears to have treated of the habits of each kind of hunting separately, and in a detailed manner. In the first book, which is all that we possess, the poet speaks of the preparations for the hunt, of the rearing of dogs and horses, and of the various implements and aids which must be provided by the hunter. In this portion of his work, Nemessianus often gives spirited imitations of Virgil and Oppian. Though the poem is not free from the faults of the age in which it was written, yet in point of correctness and elegance it is far beyond most contemporaneous productions.—Besides the Cynegética, and the fragments of the other two poems that have been mentioned (which some, however, assign to a different source), we have a small poem in honour of Hercules, and two fragments of another poem on fowling, "De Aquaria." The best edition of the remains of Nemessianus is that given by Wernsdorff in the first volume of his Poetae Latini Minores. (Schnell, Hist. Lit. Rom., vol. 3, p. 33, seqg.—Bähr, Gesch. Röm. Lit., vol. 1, p. 21.)

NEMISSIONA, a female Greek divinity, who appears to have been regarded as the personification of the righteous anger of the gods. She is represented as inexorably severe to the proud and insolent. (Pausan., 1, 33, 2.) According to Hesiod, she was the daughter of Night. (Theog., 223.—Compare Pausan., 1, 5, 1.) There was a celebrated temple sacred to her at Pharsalus, which may have been about six stadia distant from this temple. In this temple there was a statue of the goddess, made from a block of Parian marble, which the Persians had brought thither to erect as a trophy of their expected victory at Marathon, Pausanias says, that this statue was the work of Bithynia (1, 33, 2, seqg.; but Pliny ascribes it to Agoræritus: and adds, that it was preferred by M. Varro to all other statues which existed. (Plin., 36, 4, 3.) A fragment, supposed by some to be the head of this statue, was found in the temple of Rhamnus, and was presented to the British Museum in 1820. (Elgin and Phigaleian Marbles, vol. 1, p. 120; vol. 2, p. 123.)

The inhabitants of Rhamnus considered Nemesis to be the daughter of the Capitol (Pausan., 5, 18, 6). The practice of representing the statues of Nemesis with wings was first introduced after the time of Alexander the Great by the inhabitants of Smyrna, who worshipped several goddesses under this name. (Pausan., 7, 5, 1.—Id., 9, 35, 2.) According to a myth preserved by Pausanias, Nemesis was the mother of Helen by Jupiter; and Leda, the reputed mother of Helen, was only, in fact, her nurse (1, 33, 7); but this myth seems to have been in later times, to represent the divine vengeance which was inflicted on the Greeks and Trojans through the instrumentality of Helen. There was a statue of Nemesis in the Capitol at Rome; though we learn from Pliny that this goddess had no name in Latin. (Pliny, 28, 5.—Id., 11, 103.—Encycl. Us. Knowl., vol. 16, p. 141.)

NEMEUS, a native of Æmesa in Syria, and one of the most celebrated of the ancient medical philosophers. Of his life very few particulars are known; and even the time when he lived is uncertain, though this is generally supposed to have been during the reign of Theodosius the Great, towards the end of the fourth century. He became, in time, bishop of his native city. Nemeus has been accused of holding some of Origens erroneous opinions, but has been defended by Bishop Fell (Annot., p. 20, ed. Oxon., 1671), who however confers on him the name of a philosophical poet, that he "differed from the commonly-received opinion of the church." But it is as a philosopher and physiologist that Nemeus is best known, and his work Πέρι φύσεως ἀνθρώπων, "On the Nature of Man," is one of the most accurate treatises of antiquity. Some writers (among whom we may mention Bishop Fell, Fabricius, and Brucker) have even supposed that he was acquainted with the circulation of the blood; but in the opinion of Fell and other writers of his time (Biblioth. Anat.), and Sprengel (Hist. de la Méd.), he has no right whatever to be considered as the author of this discovery. The passage which has now given rise to the discussion is certainly remarkable: "The motion of the pulse," says he, "takes its rise from the heart, and chiefly from the left ventricle of it: the artery is with great vehemence dilated and contracted, by a sort of constant harmony and order. Whate'er it do in vertue, it draws with force the thinner part of the blood from the next veins, the exhalation or vapour of which blood is made the aliment for the vital spirit; but while it is contracted, it exhales whatever fumes it has through the whole body and by secret passages, as the heart throws out whatever is fuliginous through the mouth and nose by expiration" (cap. 24, p. 242, ed. Math.). There is another passage equally curious respecting the bile (cap. 28, ed. Math.); in which Nemeus is supposed to have known all that Sylvius afterward discovered with respect to the functions of the bile; but his claim in this case is no better than the former, and, indeed, Haller and Sprengel both say that his physiology is not at all more perfect than that of Galen. But even if we cannot allow Nemeus all the credit that has been claimed for him, still, from his general knowledge of anatomy and physiology (which is quite equal to that of the professional physicians), his acuteness in exposing the errors of the Stoics and the Manichees, the purity and elegance of his style compared with that of his contemporaries, and the genuine piety which shows itself throughout his work, he has always ranked very high.
In the list of ancient Christian philosophers. The best and most complete edition of Nesiomius is that of Matthæi, Hal. Magd., 1802, sv. Before the appearance of this, the edition of Pell, Oxon., 1671, sv, was most esteemed. (Encycl. Be. Knowl., vol. 16, p. 141, seq.)

**NEMJEUM,** a town of the Atrebates in Gaul, now Arras. (Vid. Atrebates.)

NEMĚTĚ, a nation of northern Gaul, in the division called Germania Prima, lying along the banks of the Rhine, and between the Vangiones and Tribocci. Their chief city was Noviomagus, now Spire. According to some, they occupied both banks of the Rhine, and are pointed out by Strabo in the place, as having been annexed in part to the Grand Duchy of Baden. (Tacit., Germ., 28.—Cass., B. G., 1, 31.—Lemaire, Ind. Geogr. ad Cass., e., v.)

NEMOUSS, the same with Augustonemetum and Claramontium, the capital of the Averni in Gaul, now Clermont. Strabo, from whom we obtain the name Nemos, is thought by some to have made a different place from Augustonemetum. (Mannert, Geogr., vol. 2, p. 141, 172.)

NEMÉLE, I. a daughter of Lycomedes, satirized by Archilochus, to whom she had been betrothed. (Vid. Lycomedes.)—II. A young female to whom Horace addressed one of his odes. The bard laments the unhappy lot of the girl, whose affection for the youthful Hebrus had exposed her to the angry chideings of an offended relative. (Horat., Od., 3, 12.)

NEOESAER, a city of Pontus, on the river Lykos, northwest of Comana. Its previous name appears to have been Aemera, and it would seem to have received the appellation of Neocesarea in the reign of Tiberius. In the time of Gregory Thaumaturgus, who was a native of this place, it is stated to have been the most considerable town of Pontus. (Greg. Neoec., Vit., p. 577.) It appears also, from the life of the same saint, to have been the principal seat of pagan idolatry and superstitions, which affords another presumption for the opinion that it had risen on the foundation of Aemera and the worship of Mon-Phænecides. Nisak, the modern representative of Neocesarea, is a town of some size, and the capital of a district of the same name, in the pachalic of Sirissa or Roum. (Cramer's Asa Minor, vol. 1, p. 315, seq.)—II. A city in the Ephrudes, in the Syrian district of Chalybonis; now, according to Reicheard, Kalat el Nesjahr. Neon, the same with Tithorea in Phocis. (Vid. Tithorea.)

NEOPATRICHOS, a town of Eolis, in Asia Minor, founded by the Eolians, as a temporary fortress, on their first arrival in the country, and thirty stadia distant from Larissa. Pliny leads us to suppose that it was not on the coast, but somewhat removed from it; and we collect from a passage in the Life of Homer (§ 11, seq.), that it was situated between Larissa and the Hermus. The ruins of this place should be sought for on the right bank of the Hermus, and above Giesselhitz, on the road from Smyrna to Bergamah. (Cramer's Asa Minor, vol. 1, p. 151.)

NEOPTOLEMUS, I. son of Achilles and Deidamia. (Vid. Pyrrhus, 1.)—II. A king of the Molossi, father of Olympias, the mother of Alexander. (Justin, 17, 3.)—III. An uncle of Pyrrhus, king of Epirus, raised to the throne during the absence of the latter in Italy. Pyrrhus, on his return home, associated Neoptolemus with him in the government; but afterward put him to death on a charge of treachery. (Plut., Vit. Pyrrh., 17, 4.)—IV. The minstrel of Alexander's life-guards. After the death of that monarch he took part in the collisions of the generals, and was defeated, along with Craterus, and slain by Eumenes. (Plut., Vit. Eum.)

—V. A poet, a native of Naupactus, who wrote a poem on the heroines and other females celebrated in mythology, which he entitled Neaçastraτον in honour of his native city. (Schol. ad Apoll. Rhod., 2, 299, &c.) Others, however, make Carcinus to have been the author of this poem. VI. A native of Paros, who composed a work on Inscriptions (Περι την Εντολογίαν), of which Athenaeus makes mention (10, p. 454). Nepa, or Nepos, the son of Aneas, was esteemed, and equivalent to the Latin "sidua." Cicero often employs it in his translation of Aratus, and it occurs in Manilius (2, 32) and elsewhere. Plautus uses it (Cassin, 2, 8, 7) for Cancer, and Cicero (de Fin., 5, 15) for Scorpio. This latter writer, moreover, who, in his translation of Aratus, commonly employs Nepa in the sense of Scorpio, in one passage (v. 460) uses it in the sense of Cancer. In Columella, also (1, 2, 30), Nepa occurs for Cancer, according to some, but perhaps with more correctness for Scorpio. (Compare Ideler, Sternnamen, p. 169.)

Nephele or Nepete, a town of Etruria, southwest of Faerii. Pliny (3, 5) calls it Nepet, and Signorus contends for this being the true reading: but in all the ancient inscriptions which have been found here, it is written Nepete. In Strabo it is named Nepita. (Strab., 226.) The modern name is Nepi. (Cramer's Asia Minor, p. 230.)

Nephele, the first wife of Athamas king of Thebes, and mother of Phryxus and Helle. (Vid. Athamas.)

Nepos, Cornelius, a biographical writer, who lived towards the end of the republic, and during the earlier part of the reign of Augustus. He is generally believed to have been born at Hostilia (now Ostiglia), a small town situate on the banks of the Po, near the confines of the Veronese and Mantuan territories. The year of his birth is uncertain, but he first came to Rome during the dictatorship of Julius Caesar. He does not appear to have filled any public office in the state; but his merit soon procured him the friendship of the most eminent men who at that time adorned the capital of the world. Catullus dedicated to him the volume of poems which he had privately read and approved of before their publication. Nepos addressed one of his own works to Pompeius Atticus, with whom also he was on terms of intimacy. (Vit. Attic., 13.) He likewise obtained the esteem and affection of Cicero (Ad. Gall., 15, 28), who speaks of his writings with high approbation in one of his letters, and in another alludes with much sympathy to the loss which Nepos had sustained by the death of a favourite son. (Ep. ad Att., 16, 5 et 14.) It further appears that Cicero had frequently corresponded with him, for Macrobius quotes the second book of that orator's epistles to Corn. Nepos, in the 723d.—It is probable that some of our author's works had been prepared, or were in the course of composition, previous to the death of Cicero; but they were not given to the public till early in the reign of Augustus, since Eusebius considers him as flourishing in the fourth year of that emperor (ap. Voss, de Hist. Lat., 1, 14). The precise period of his death is unknown, and it can only be ascertained that he survived Atticus, whose biography he writes, and who died in the 9th year of Nero. Some chronological accounts extend his life till the commencement of the Christian era, but it is scarcely possible that one who was a distinguished literary character in the time of Catullus could have existed till that epoch. Fabricius makes a curious mistake concerning the death of Cornelius Nepos, in saying that he was poisoned in 724 by his freedman Callisthenes, and in citing Plutarch's Life of Lucullus, as his authority for the fact. He says, "In the 724th year Plutarch only bears, that C. Nepos had somewhere said that the mind of Lucceius had become impaired in his old age, in consequence of a potion administered to him by his freedman Callisthenes. — Whether the Cornelius Nepos concerning whose life these circumstances have been gleaned was the author of the well-known book entitled Vite Exceellentium Imperatorum."
has been a subject, ever since the work was first printed, of much debate and controversy among critics and commentators. The dissension originated in the following circumstances: A person of the name of Emilius Probus, who lived in the fourth century, during the reign of Theodosius the Great, presented to his sovereign a copy of the *Vita Imperatorum*, and prefixed to it some barbarous verses, which he meant to identify himself as the author, or merely as the transcriber, of the work. These lines, being prefixed to the most ancient MSS. of the *Vita Excellentium Imperatorum*, induced a general belief during the middle ages that Emilius Probus was himself the author of the biographies. The *Editio Princeps*, which was printed by Janson in 1471, was entitled "Probi Emili Liber de Vitorum Excellentium Vita." All subsequent editions were inscribed with the name of Emilius Probus, till the appearance of that of Lambins, in 1568, in which the opinion that Probus was the author was first called in question, and the honour of the work restored to Cornelius Nepos. Since that time the *Vita Excellentium Imperatorum* have been usually published with his name; but various suppositions and conjectures still continued to be formed with regard to the share that Emilius Probus might have had in it. A very recent attempt, however, has been made again to vindicate for Emilius Probus the honour of the composition, in Rink's "Saggio per restituire a Emilio Probo il libro di Cornelio Nepote," as if the copyist had been in doubt as to the real author. So far from admitting those solecisms of expression for which Barthius thinks it necessary to account, Vossius chiefly founds his argument in favour of the classical authenticity of the work on that Augustan style, which neither Emilius Probus nor any other writer of the time of Theodosius could have attained. A very recent attempt, however, has been made again to vindicate for Emilius Probus the honour of the composition, in Rink's "Saggio per restituire a Emilio Probo il libro di Cornelio Nepote." After allowing for the superior dignity of the office of transcriber in the age of Theodosius, compared with its diminished importance at the present day, it would seem that there is something more implied in the verses of a very recent poet that he was merely a copyist; and he must either have added a part of the composition, or having discovered the MSS. was not unwilling that he should have some share of the credit due to the author. The *Vita Imperatorum*, properly so called, contained the lives of nineteen Greek, one Persian, and two Carthaginians. It has been conjectured that there was also a series of lives of Roman commanders, but that these had perished before Emilius Probus commenced his transcription. That Nepos at least intended to write these biographies, appears from a passage at the end of the life of Hannibal, in which he says, "It is now time to conclude this book, and proceed to the lives of the Roman generals, that, their examples being a subject of public utility, may be determined which are to be preferred." That he actually accomplished this task is rendered at least probable from the circumstance of Plutarch's quoting the authority of Nepos for facts concerning the lives of Marcellus and Lucullus; and it seems not unlikely that the sentence at the close of Hannibal may have suggested to that biographer the idea of his parallel lives. The principles which Nepos displays in the writing of his biographies were those of an admirer of virtue, a foe to vice, and a supporter of the cause of freedom. He wrote in the crisis of his country's fate, and during her last struggle for freedom, when despotism was impending, but when the hope of freedom was not yet extinguished in the breasts of the last of the Romans. The work, it has been conjectured (Harles, *Introduct. in Lit. Rom.*, vol. 1, p. 387), was undertaken in the same spirit as that in which Theodosius aimed at the composition of his *Historiae*, a life of some men as Drusus, and Timoleon, and by inserting sentiments which were appropriate to the times. In choosing the subjects of his biographies, the author chiefly selects those heroes who had maintained or recovered the liberties of their country, and he passes over all that bears no reference to this favourite theme. It must be confessed, however, that he does not display in a very enlivening view the fates of those popular chiefs who defended or liberated their native land. Thus, "thou, Lucullus, gloria censest," is lighted on almost every Grecian hero; and Miltiades and Themistocles ultimately received no better reward from the free Athenian citizens than Datas obtained from the Persian despot. With regard to the authenticity of his facts, Nepos has given us no information in his preface concerning the sources to which he resorted; but in the course of his biographies he cites Thucydidies, Xenophon, Theopompus, and Philistus, and also Dionysius, to whom his authority he chiefly trusted with regard to Persian affairs. (Vit. Conon, c. 5.) That he compared the different opinions of these historians on the same subject is evinced by a passage in his *Alcibiades* (c. 11); and it appears from another passage, in his life of Themistocles, that when they differed in their statement of facts, he had the good sense and judgment to prefer the authority of Thucydidies (c. 9). Anius Gallius rather commends his diligence in the investigation of facts (15, 28). But in (5, 1), on the other hand, censures both his credulity and haste. The investigations, moreover, of modern commentators have discovered many mistakes and inconsistencies in almost every one of his biographies. For example: 1. It was not the great Miltiades, son of Cimon, as Nepos erroneously relates, who founded a petty sovereignty in the Thracian Chersonese, but Miltiades the son of Cypselus, as the Greek biographer might have learned from Herodotus, *gloria censest*. 2. In (5, 1), on the other hand, censures both his credulity and haste. The investigations, moreover, of modern commentators have discovered many mistakes and inconsistencies in almost every one of his biographies. For example: 1. It was not the great Miltiades, son of Cimon, as Nepos erroneously relates, who founded a petty sovereignty in the Thracian Chersonese, but Miltiades the son of Cypselus, as the Greek biographer might have learned from Herodotus, *gloria censest*. 2. In (5, 1), on the other hand, censures both his credulity and haste. The investigations, moreover, of modern commentators have discovered many mistakes and inconsistencies in almost every one of his biographies. For example: 1. It was not the great Miltiades, son of Cimon, as Nepos erroneously relates, who founded a petty sovereignty in the Thracian Chersonese, but Miltiades the son of Cypselus, as the Greek biographer might have learned from Herodotus, *gloria censest*. 2. In (5, 1), on the other hand, censures both his credulity and haste.
Eutymemon. (Vit. Mycale.)—5. In comparing the end of the second chapter and the commencement of the third of the life of Pausanias, with the clear and circumstantial narrative of Thucydides (1, 120–126), we observe the circumstances of the latter are more graphic, more full, and more minute, and confounded the events.—6. There is no less disorder in the third chapter of the life of Lyonsander. Nepos confounds two expeditions of this general into Asia, between which thore elapsed an interval of several years. (Compare Xen., Hist. Gr., 3, 4, 10.—Diod. Sic., 14, 13.)—7. In the second chapter of the life of Dion, Nepos confounds the order of events. Plato made three voyages to Sicily; the first in the time of Dionysius the Elder, who had him sold as a slave; Dion was then only fourteen years old. At the time of his second voyage, Dionysius the Elder was no longer alive. It was during his third visit to the island that the philosopher reconciled Dion and Dionysius the Younger. Finally, it was not Dionysius the Elder, but the son, who invited Plato "magna ambitione."—8. In the second chapter of the life of Chabrias, utter confusion prevails. At the period when Nepos makes Agesilaus to have gone on his expedition into Egypt, this monarch was busily occupied in Bocotia; and Nepos himself, in his life of Agesilaus, makes no mention of this expedition. The king of Egypt, who was assisted by Chabrias was Tachus, and not Nectanebo.—9. Hannibal did not immediately march to Rome after the victory at Cannae, as Nepos in his life of Hannibal (c. 5 states, but after having permitted the spirit of his army to become corrupted in Campania.—10. In the life of Conon (c. 1), he says that this general had no share in the battle of Egospotamos; the contrary is proved by Xenophon. (Hist. Gr., 2, 1, 28.)—11. In the life of Agesilaus (c. 5) he attributes to this king the victory at Corinth, which was due to Aristodemus, as Xenophon informs us (Hist. Gr., 4, 2, 9).—Nepos is also charged with being too much of a panegyrist, and with having given to his Lives the air rather of a series of professed eulogies than of discriminating and impartial biographies. In fact, however, he selected the lives of those whom he considered as most worthy of admiration; and he has not failed to bestow due reprobation on the few who, like Pausanias and Lyonsander, degenerate from the virtues of their countrymen. Nepos appears to have been fully aware of the difference between history and biography; remembering that the latter was more simple than the former, that it did not require the same degree of fullness and research; and that regard to the exigencies of the day, and admitted more details of private life and manners. To this distinction he alludes in his preface; and we accordingly find that the life of Epaminondas, for example, is occupied with the private character and memorable sayings, more than with the patriotic exploits, of that renowned hero. He has thus recorded a very great many curious particulars which are not elsewhere to be found; and he excel in that art (the difficulty of which renders great abridgments rare) of perceiving the features which are the most characteristic, and painting them vividly with a few touches. "The character of Aleidias," says Gibbon, "is such that Livy need not have ashamed of it." (Misc. Works, 4, p. 417.)—The MS. of Zænillus Probos, the copies taken from it, and the Edito Princeps published by Janson in 1471, all terminated with the life of Hannibal. The fragment of the life of Cato the Censor, and the life of Pomponius Atticus, which are generally ascribed to the Vita Imperatorum, was discovered by Cornutus in an old MS. containing the letters of Cicero to Atticus, and were published by him along with the Vita Imperatorum, in an edition which is without date, but is generally accounted the second of that production of Nepos. It is evident that the life of Atticus was a separate work, or an extract of a work, which was altogether different from the Vita

Imperatorum; for, in the first place, Atticus was not a military commander; and, secondly, Nepos dedicates the Vita Imperatorum to Atticus, while, in the last chapters of the life of Atticus, he minutely records the circumstances of his private life. The facts are of opinion, that, along with the fragment on the life of Cato the Censor, it had originally formed part of a treatise by Cornelius Nepos which is now lost, and which was entitled "De Historia Latinitatis."—The life of Atticus is much more curious and valuable than the biographies of the Greek generals. It is fuller, and it is not drawn, as they are, from secondary sources. Nepos was the intimate friend of Atticus, and was thus enabled to obtain fresh and more critical information concerning the daily occurrences of his life, and with regard to the most minute particulars of his domestic arrangements, even down to his household expenses. As exhibiting the fullest details of the private life of a Roman (though a specimen, no doubt, highly favourable and ornamental), it is perhaps the most interesting piece of biography which has descended to us from antiquity.—Nepos appears to have been a very fertile writer. Besides the lives of commanders and that of Pomponius Atticus, he was the author of several works, chiefly of an historical description, which are now almost entirely lost. He wrote, in three books, an abridgment of the history of the world; and he had the merit of being the first author among the Romans who completed a task of this laborious and useful description. Autus Gellius mentions his life of Cicero (15, 28), and quotes the fifth book of his work entitled Exemplum libri (7, 18). He also composed a treatise on the difference of the terms litteratus and eruditus; and, finally, a passage in the life of Dion informs us of a work which Nepos wrote, De Historia Graecia.—While so many of his productions have been lost, and while it has been denied that he was the author of some which he actually composed, others, by a strange caprice, have been attributed to him which he certainly did not write. One of these is the work De Viris Illustribus, now generally ascribed to Aurelius Victor. Another is the book De Iucundo Troja, which professes to be a Latin translation, by Cornelius Nepos, from a Greek work by Dares Phrygius, though, in fact, it was written by an obscure author, after the age of Constantine. Along with the book which passed under the name of Dictys Cretensis, it became the origin of those follies of romance and chivalry, in which the heroes of Greece were marshalled with Arthur's Round-Table Knights, and with Richard of Charnage. The first edition of Nepos are, that of Longuelus, Colon., 1543; Lambinis, Lutet., 1569, 4to; et Francof., 1608, fol.; Bosius, Lips., 1657, 1675, 8vo; Van Staveren, Lulg. Bat., 1773, 8vo; Tschuckei, Götting., 1804, 8vo; Harles, Lips., 1806, 8vo; Fischer, Lips., 1807, 8vo; Dänne, Lips., 1827, 8vo; and Bremi, Lips., 1827, 8vo. (Dunlop's Roman Literature, vol. 3, p. 512, seqq.)

NEPOTIANUS, FLAVIUS POPILIA, a son of Eutropius, a friend of Constantine. He proclaimed himself emperor after the death of his cousin Constantius, marched to Rome with a body of gladiators and other worthless followers, defeated Anicetus the praetorian prefect, and pillaged the city. He enjoyed his usurped power only twenty-eight days, at the end of which period he was defeated and slain by Marcellinus, one of the lieutenants of Magnentius. (Le Beaus, Hist. des Empereurs, vol. 4., p. 14.)

NEPTUNIUM, a promontory of Bithynia, on the Propontis, at the mouth of the Ciusus Sinus. It is more usually known by its Greek name Posidium. Manuert gives the modern appellation as Bos Barun. (Geogr., vol. 6, pt. 3, p. 578.)

NEPTUNUS DEX, an expression applied by Horace (Epod., 9, 7) to Sextus Pompeius, who boastingly styled himself the son of Neptune, because his father

had once held the command of the sea. (Die Cass. 48, 19.) Coins still exist of this Roman leader, bearing the effigy of Neptune, with the inscription Magnus Pius Imperator terum; or this, Prefectus classis et ora maritima ex s. c. (Consult Rasche, Lex Rom. Num., vol. 6, col. 1676, seqq.)

Neptunus or Neptunus, the god of the sea, a Roman divinity, whose attributes are nearly the same as those of the Greek Poseidon (Ποσειδών). They will both, therefore, be considered in one and the same article. His son is Proteus, the son of Saturn and Rhea, and the brother of Jupiter and Juno, he appears to have been one of the most ancient divinities of Greece; although, according to Herodotus (2, 50), he was not originally a Greek deity, but his worship was imported from Libya. This statement, however, on the part of the historian, cannot be correct. Neptunus was the god of water in general, of the sea, the rivers, and the fountains, but he was more particularly regarded as the god of the sea, which he acquired in his share of the dominions of his father Saturn. His wife was Amphitrite, and their children were Triton and Rhode, or Rhodos, which last became the bride of Helius, or the Sun-god. A late legend said that Amphitrite fed the love of the god, but that he came riding on a dolphin, and thus won her affection; and for this service he placed the dolphin among the stars. (Eratosth., Catast., 31. — Hygin., Poet. Astron., 1, 17.)

Neptune, like his brother Jupiter, had a numerous progeny of sons and daughters. The most venerated steed Arion was the offspring of the sea-god and Ceres, both having assumed the equine form. According to one account, the nymph Rhodos was his daughter by Venus. (Heroph., ap. Schol. ad Pind. Ol., 7, 24.) Neptunus is said to have produced the horse in his well-known contest with Minerva for the right of naming the city of Athens. (Vid. Cecropia.) According to some, we are to understand by this myth that the horse was imported into Greece by sea. But this explanation is far from satisfactory. It is difficult to give a reason for the connexion of Neptune with the horse; but it is evident, from several passages in the Greek writers, that he was regarded as a kind of equestrian deity as well as the god of the sea. In the absence of a better explanation, we will give the one suggested by Knight. "The horse," says this writer, "was sacred to Neptune and the rivers, and was employed as a symbol of the waters. Hence also it may have been assumed as one of the types of fertility, and may furnish a clue to the fable of Neptune and Ceres. It may also throw some light on the narrative of Pausanias, where he states (8, 24) that the Phigalenses dedicated a statue to Ceres, having as a figure a woman in every part except the head, which was that of a horse; and that she held in one hand a dolphin, and in the other a dove." (Knight, Bacchur., &c., § 111, seqq. — Class. Journ., vol. 28, p. 34 seqq.) There is his residence on Olympus, Neptunus had a splendid palace beneath the sea at Xegen. (Il., 13, 21.—Od., 5, 391.) Homer gives a noble description of his passage from it on his way to Troy, his chariot-wheels but touching the watery plain, and the monsters of the deep gawking around their king. His most celebrated temples were at the Corinthian Isthmus, at Orchestus, Helice, Troezen, and the gathering-place of the Achaeans and Cretans. —Neptune is represented, like Jupiter, as the god of the elements of atmosphere; his form is exceedingly strong and muscular; and hence "the chest of Neptune" (στέφων Ποσειδώνος, Il., 5, 479) is the poetic expression for this characteristic of the deity, which is illustrated by the noble fragment from the pedestal of the Parthenon in the British Museum. He usually black bulls, rams, and boar-prints. —Neptune was not originally a god of the Doryans. He was principally worshipped by the Ionians, who were on most places a maritime people. In those Dorian cities, however, which acquired a love for foreign commerce, we find that the worship of Neptune extensively prevailed. (Müller's Doriens, vol. 1, p. 417 seqq., Eng. transl.) —The etymology of the names Poseidon and Neptunus is doubtful. Poseidon is written in Doric Greek Ποσειδήν, which of we have another example of the transformation to Neptunus, written Νεπτύννος (Ηροδ., in the inscription, now in the British Museum, on those Athenians who fell before this city. The name, according to some writers, contains the same root in the first syllable as we find in Ποσέδος and Νεπτύννος; and has the same reference, in all likehood, to water and fluidity. (Müller, Proleg., 289.) Neptunus, on the other hand, is derived by the Stoic Balbus, in Cicero, from nandum (N. D., 2, 26), an etymology which Cotta subsequently ridicules. (N. D., 3, 24.) Vero van deduces it from nepos, because this god "covers" (ονομαστι) the earth with the sea. (L. L., 4, 10.) This latter derivation, though approved of by Vossius (Etymol., s. v. nepos), is no better than the former. We may compare the form of the word Neptunus or Neptunus with Port-umnus, Vertumnus, and the word al-umnus; but the meaning or origin of the root Nept or Nep seems uncertain. It may, perhaps, be connected with the same root that is found in the Greek word or the Latin name; or perhaps it be the same word as Neptune. Thus, they were worshipped in Corinth, where Neptune was held in especial honour, as well as in other parts of Greece. (Pasuan., 2, 1, 7, seqq. —Id., 3, 265, 5, —Id., 5, 19, 2.) The Nereids were originally represented as beautiful nymphs; but they were afterward described as beings with green hair, and with the lower part of their body like that of a fish. (Plin., 9, 4.)

Nereus was the father of the Nereids, the eldest son of Pontus and Earth. (Hesiod, Theog., 238.) Though not mentioned by name in Homer, he is frequently alluded to under the title of the Sea-elder (άλως γέρων), and his daughters are called Nereids. According to Hesiod, he was distinguished for his knowledge and his love of truth and justice, whence he was termed an elder: the gift of prophecy was also assigned to him. When Hercules was in quest of the apples of the Hesperides, he was directed by the nymphs to Nereus. He found the god asleep, and seized him. Nereus, on awaking, changed himself into a variety of forms, but in vain; he was obliged to instruct him how to proceed before the hero would release him. (Apollodorus, 2, 5.) He also foretold to Paris, when carrying away Helen, the evils he would bring on his country and family. (Horat., Od., 1, 15.) Nereus was married to Doris, one of the ocean-nymphs, by whom he became the father of Oceanus and Tethys. (Keightley's Mythology, p. 244.) —Herrmann makes Νερεύς equivalent to Neptunus (νηπτύνων), and understands by the term the bottom of the sea. Hence, according to the same authority, Nereus is called "the aged one," because he is ever unchangeable; he is called true, because the bottom of the ocean never gapes in fissures, so as to allow the waters to escape; and he is termed mild and peaceful, because the depths of ocean are ever tranquil and at rest. (Herrmann Opuscule, vol. 2, p. 831.)
NERO.

a woman of low birth, still farther widened the breach between him and his parent. She frequently addressed him in the most contemptuous language; reminded him that he owed his elevation solely to her, and threatened that she would inform the soldiers of the manner in which Claudius had met his end, and that she would have Nero put to death.

The threats of his mother only served to hasten the death of Britannicus, whose murder forms the commencement of that long catalogue of crimes which afterward disgraced the reign of Nero. But while the management of public affairs appears, from the testimony of most historians, to have been wisely conducted by Burrus and Seneca, Nero indulged in private in the most abominable vices. He was accustomed, in company with other young men of his own age, to sally into the streets of Rome at night, in order to rob and maltreat passengers, and even to break into private houses and take away the property of their owners. But these extravagances were comparatively harmless; his love for Poppaea, whom he had seduced from Otho, led him into more serious crimes. Poppaea, who was ambitious of sharing the imperial power, was said to have instigated Seneca to attain her object while Agrippina was alive, and, accordingly, induced Nero to consent to the murder of his mother. The entreaties of Poppaea appear to have been supported by the advice of Burrus and Seneca; and the philosopher did not hesitate to palliate or justify the murder of a mother by her son. (Tacit., Ann., 14, 11. — Quintil., 8, 5.) — In the eighth year of his reign, Nero lost his best counsellor, Burrus; and Seneca had the wisdom to withdraw from the court, where his presence had become disliked, and where his enormous wealth was calculated to excite the envy even of the emperor. About the same time Nero divorced Octavia and married Poppaea, and soon after put to death the former on a false accusation of adultery and treason. In the tenth year of his reign, A.D. 64, Rome was almost destroyed by fire. Of the fourteen districts into which the city was divided, four only remained entire. The fire originated at that part of the Circus which was contiguous to the Pala- tine and Caelian Hills, and raged with the greatest fury for six days and seven nights; and, after it was thought to have been extinguished, it burst forth again, and continued for two days longer. Nero appears to have acted on this occasion with the greatest liberality and kindness; the city was supplied with provisions at a very moderate price; and the imperial gardens were thrown open to the sufferers, and buildings erected for their accommodation. But these acts of humanity and benevolence were insufficient to screen him from the popular suspicion. It was generally believed that he had set fire to the city himself, and some even reported that he had ascended the top of a high tower in order to witness the conflagration, where he amused himself with singing the Destruction of Troy. From many circumstances, however, it appears improbable that Nero was a guilty party in this crime. His guilt, indeed, was impressively asserted by Suetonius and Dio Cassius, but Tacitus admits that he was not able to determine the truth of the accusation. In or- der, however, to remove the suspicions of the people, Nero spread a report that the Christians were the au- thors of the fire, and numbers of them, accordingly, were seized and put to death. Their execution served as an amusement to the people. Some were covered with skins of wild beasts on which were fixed pieces of fire and wood, which were burned to death by dogs; others were crucified; and several were smothered with pitch and other combustible materials, and burned in the imperial gardens in the night: "Whence," says the historian, "pity arose for the guilty (though they deserved the severest punishments), since they were put to death, not for the pub-
The call is ever, had principally been doubted. Among others who suffered on this occasion were Lucan and Seneca; but the guilt of the latter is doubtful. In the same year Poppea died, in consequence of a kick which she received from her husband while she was in an advanced state of pregnancy. — During the latter part of his reign, Nero was principally engaged in theatrical performances, and in contending for the prizes at the public games. He had previously appeared as an actor on the Roman stage; and he now visited in succession the chief cities of Greece, and received no less than 1800 crowns for his victories in the public Grecian games. On his return to Italy he entered Naples and Rome as a conqueror, and was received with triumphal honours. But while he was engaged in these extravagances, Vindex, who commanded the legions in Gaul, declared against his authority; and his example was speedily followed by Galba, who commanded in Spain. The pretorian cohorts espoused the cause of Galba, and the senate pronounced sentence of death against Nero, who had fled from Rome as soon as he heard of the revolt of the pretorian guards. Nero, however, against the execution of his sentence had been passed against him, by requesting one of his attendants to put him to death, after making an ineffectual attempt to do so with his own hands. He died A.D. 68, in the 32d year of his age, and the 14th of his reign. — It is difficult to form a correct estimate of the character of this emperor. That he was a little imitative, and that he scrupled at committing no crimes in order to gratify his lust or strengthen his power, is certain. Nothing could be more monstrous than a belief that such a monster as Suetonius and Dio have described him, may reasonably admit of a doubt. The possession of absolute power at so early an age tended to call forth all the worst passions of human nature, while the example and counsels of his mother Agrippina must have still farther tended to deprave his mind. Though he put to death his adoptive brother, his wife, and his mother, his character appears to have been fixed in congenial soil; his general administration was wise and equitable, and he showed his heart still open to those worst actions, either the capricious cruelty of Caligula, or the sullen ferocity of Domitian. Nero was a lover of the arts, and appears to have possessed more taste than many of the emperors, who only resembled him in their profuse expenditure. The Apollo Belvidere is supposed by Tiersch (Epochen, &c., p. 312) and some other writers to have been made for this emperor. His government seems to have been far from unpopular. He was anxious to relieve the people from oppressive taxes, and to protect the provinces from the rapacity of the governors; and it may be mentioned as an instance of his popularity, that there were persons who for many years decked his tomb with spring and summer flowers, and that, in consequence of a prevalent rumour that he had escaped from death, several impostors at various times assumed the name of Nero, and gave no small trouble to the reigning emperor. (Tacit. Hist., i. 8.—Id., lib. 2, 8.—Sueton., Vit. Ner., 57.—Casaubon, ad Sueton., l. c.) During the reign of Nero the Roman empire enjoyed, in general, a profound state of peace. In the East the Parthians were defeated by Corbulo; and in the West, the Britons, who had risen in arms under Bodicca, were again reduced to subjection under the victorious Paulinus. (Encycl. Us. Knovt., vol. 16, p. 147.) It may not be amiss, before concluding this article, to make some mention of Nero's celebrated "Golden House" (Aurora Domus). The only description on record of this costly structure is that of Suetonius: "In nothing," says this writer, "was Nero so ruinous as in building. He erected a mansion extending from the Palatine as far as the Esquiline. At first he called it his house of Passage," but afterward, when it had been destroyed by fire and restored again, he gave it the name of his "Golden House." To form an idea of its extent and magnificence, it may suffice to state the following particulars. The vestibule admitted his colossal statue, which was elevated on a high base, and was placed on a large scale, that it had a triple portico a mile long; also, an immense pool like a sea, enclosed by buildings presenting the appearance of towns. There were, moreover, grounds laid out for tillage and for vineyards, and for pasturage and woods, stocked with a vast number of every description of cattle and wild animals. In other respects, everything was overlaid with gold, embellished with gems and with mother-of-pearl. The ceilings of the banqueting-rooms were fretted into ivory coffers made to turn, that flowers might be showered down upon the guests, and also furnished with pipes for discharging perfumes. The principal banqueting-room was round, and by a perpetual motion, day and night, was made to revolve after the manner of the universe. (Sueton., Vit. Ner., c. 31.) When the structure was completed, Nero is said to have declared "that he at length had found the means to gratify for a human being what he had been for a human being (hominem tandem habitarum capsae.—Sueton., l. c.)." Various explanations have been given of the way in which the contrivance was effected in the case of the principal banqueting-room. Donatus makes it a hollow globe, fixed inside a square room, and turning on its own axis; and he introduces the guests by a door near the axis, "where there is the least motion!" (Donat., de Urb. Vet., lib. 3. — op. Graec. Thr., vol. ii. p. 179.) Dacier (Ad Not. Alex. Rom. Ant., p. 491) thinks that the ceiling was made "to shift and exhibit new appearances as the different courses or dishes were removed." But this does not explain "the perpetual motion, day and night, after the manner of the universe." Nero's architects, Severus and Celer, certainly deserve the mention of their names. (Tacit., Ann., 15, 42.) Tacitus remarks, that "the gems and the gold which this house contained were not so much a matter of economy (being that which was given to fill the fields and woods); the woods, too, in one direction, forming a kind of solitude; while here, again, were open spaces with commanding views." (Tacit., l. c.) — The house of Nero and the palace of the Cæsars must not, however, be confounded. They were evidently two distinct things. (Tacit., Ann., 15, 39.—Burgess, Antiquities of Rome, vol. 2, p. 172, seq.) — I. A Roman consul. ( Vid. Claudius III.—III. Caesar, son of Germanicus and Agrippina. He married Julia, daughter of Drusus, the son of Tiberius. By the wicked arts of Sejanus he was banished to the isle of Pontia, and there put to death. (Tacit., Ann., 4, 59, seq.—Sueton., Vit. Tib., 54.)

**NEROCA**—A name given to Artaxata by Tiridates, who had been restored to his kingdom by Nero. (Vid. Artaxata.)

**NETORÓIGA**—I. a city of Hispania Baetica, some distance to the west of Corduba. It was also called Conseruida Julia, and is now Valera la Viaja. (Polib., 35, 2.—Uberkt, Geogr., vol. 2, p. 381.) In Polibius it is written 'Επόροδοκα by a mistake of the copyists, the N being omitted probably on account of the preceding τυφ. (Compare Schweig, ad Appian, 6, 48, p. 260.) On D'Anville's map this place is set down within the limits of Lusitania.—II. A city of Hispania Tarraconensis, in the territory of the Celtiberi, between Bilbilis and Teba; now Alumina. It is now Alumina. (Polib., 2, 17.—Appian, 5, 60.—Irin. Ant., p. 437, 439.—Uberkt, Geogr., vol. 2, p. 400.) Casabon (ad Polib., fragm., 35, 2) alters 'Ορόδοκα into 'Ερόδοκα.
607 years, but incorrectly, since the place meant is probably the Aereobriga of the Itinerary. As regards the termination of the name Nertobriga, consult remarks under the article Messenbria. (Ukert, 1. c.)

Nerva, Marcus Cocceius, the thirteenth Roman emperor, was born at Narita, in Umbria, A.D. 27 according to Eutropius, (9, 1), or A.D. 22 according to Dio Cassius, (68, 4). He succeeded Tiberius in Crete; but several of his ancestors rose to the highest honours in the Roman state. His grandfather Cocceius Nerva, who was consul A.D. 22, was a great favourite of the Emperor Tiberius, who was one of the most celebrated jurists of his age. We learn from Tacitus that this individual put an end to his own life. (Ann., 6, 25.)—Nerva, the subject of the present sketch, is first mentioned in history as a favourite of Nero, who bestowed upon him triumphal honours, A.D. 66, when he was pretor elect. The poetry of Nerva, which is mentioned with praise by Pliny and Martial, appears to have recommended him to the favour of Nero. Nerva was employed in offices of trust and honour during the reigns of Vespasian and Titus, but he incurred the suspicion of Domitian, and was banished by him to Tarentum. On the assassination of Domitian, A.D. 96, Nerva succeeded to the sovereignty of the empire by the expression of the late emperor Neronius Scenudus, commander of the Pretorian cohorts, and of Parthenius, the chamberlain of the palace. The mild and equitable administration of Nerva is acknowledged and praised by all ancient writers, and forms a striking contrast to the sanguinary rule of his predecessor. He discouraged all informers, recalled the exiles from banishment, relieved the people from some oppressive taxes, and granted toleration to the Christians. Many instances of his liberality and clemency are recorded by his contemporary, the younger Pliny, as allowed no senator to be put to death during his reign; and he practised the greatest economy, in order to relieve the wants of the poorer citizens. But his impartial administration of justice met with little favour from the Pretorian cohorts, who had been allowed by Domitian to indulge in excesses of every kind. Enraged at the loss of their benefactor and favourite, they compelled Nerva to flee to his native city Campania, and enter his hands Parthenius and their own commander Petronius, both of whom they put to death. The excesses of his own guards convinced Nerva that the government of the Roman empire required greater energy both of body and mind than he possessed, and he accordingly adopted Trajan as his successor, and associated him with himself in the sovereignty. Nerva died A.D. 98, after a reign of sixteen months and nine days. (Dio Cass., 68, 1, seqq.—Pliny, Paneg., c. 11.—Id. ib., c. 89.—Aurel. Vict., c. 15.—Encycl. Ul. Knowl., vol. 16, p. 149.)

Neru established a warlike people of Belgic Gaul, whose country lay on both sides of the Sealdes or Scheldt, near the sources of that river; afterward Hainault and Nord. Their original capital was Bagacum, now Bavay; but afterward Camaracum (Cambrai) and Turnacum (Tournay) became their chief cities towards the end of the fourth century. (Cass., B. G., 5, 39.—Plin., 4, 17.)

Nestor, a native of Tarentum, born in the present city of Bari. He is usually considered as the youngest of twelve brothers, all of whom, with the single exception of himself, were slain by Hercules, for having taken part against him with Augeas, king of Elia. The tender years of Nestor saved him from sharing their fate. (Vid. Neleus.) Nestor succeeded his father on the throne of Pylos, and subsequently, though at a very advanced age, led his forces to the Trojan war, in which he particularly distinguished himself among the Grecian chiefs by his eloquence and wisdom. Indeed, by the picture drawn of him in the Iliad, as well as by the description contained in the Odyssey, of his personal appearance, his character it would appear that Homer meant to display in his character the greatest perfection of which human nature is susceptible. The most conspicuous enterprises in which Nestor bore a part prior to the Trojan war, were the war of the Pylians against the Elians, and the affair of the Lapiths and Centaurs. Some have also placed him among the Argonauts. Nestor married Eurydice, the daughter of Clymenus (according to others, Anazibia, the sister of Aegeemon), and had seven sons and two daughters. He returned in safety from the Trojan war, and ended his days in his native land.—Nestor is sometimes called the "Pylian sage," from his native city Pylos. He is also styled by Homer "the Gerenian," an epithet commonly supposed to have been derived from the Messenian town of Gerenia, in which he is said to have been educated (Heye, ad ill., 2, 336), although others refer it to his advanced age. His son, Damos, was called "the Nestorian," and Homer makes Nestor, at the time of the Trojan war, to have survived two generations of men, and to be then living among a third. This would give his age at about seventy years and upward. (Heyne, ad ill., 1, 250.)

Nestorius, a Syrian by birth, who became patriarch of Constantinople A.D. 428, under the reign of Theodosius II. He showed himself very zealous against the Arians and other sects; but, after some time, a priest of Antioch named Anatolius, who had followed the Nestorian heresy, introduced Nestorius to the emperor, who was soon listening to the Nestorian schism. Nestorius refused to allow the Virgin Mary the title of Theotokos (Θεοτόκος), or Mother of God, but allowed her that of Christotokos (Χριστότοκος), or Mother of Christ. He met, of course, with numerous opponents, and the controversy occasioned great disturbances in Constantinople. Cyril, bishop of Alexandria in Egypt, with his characteristic violence, anathematized Nestorius, who, in his turn, anathematized Cyril, whom he accused of degrading the divine nature, and making it subject to the infirmities of the human nature. The Emperor Theodosius convoked a general council at Ephesus to decide upon the question, A.D. 431. This council, which was attended by 210 bishops, condemned the doctrine of Nestorius, who refused to appear before it, as many Eastern bishops, and John of Antioch among the rest, had not yet arrived. Upon this the council deposed Nestorius. Soon after, John of Antioch and his friends came, and condemned Cyril as being guilty of the Apollinarian heresy. The emperor, being appealed to by both parties, after some hesitation sent for Nestorius and Cyril; but it appears that he was displeased with what he considered pride and obstinacy in Nestorius, and he confined him in a monastery. But, as his name was still a rallying word for faction, Theodosius brought him to the emperor in Egypt, where he died. His partisans, however, spread over the East, and have continued to this day to form a separate church, which is rather numerous, especially in Mesopotamia, where their patriarch resides at Diarbekr. The Nestorians, at one time, spread into Persia.
Nia, and thence to the coast of Coromandel, where the Portuguese found a community of them at St. Thomé, which they converted to the Roman and consequently to the Catholic faith. (D'Arvieux, Histoire du Narcissus, 1698.

Nestus (less correctly Nessus), a river of Thrace, forming the boundary between that country and Macedonia in the time of Philip and Alexander. This arrange- ment subsequently became unchanged by the Romans on the conquest of the last empire. (Sta- bili, 331. —Liv., 45, 59.) Thucydides states that the river descended from Mount Iconius, whence the Hebrus also derived its source (2, 96), and Herodotus informs us that it fell into the Ægean sea near Abdera (7, 109. —Compare Theophrast., Hist. Pl., 3, 2). The same writer elsewhere remarks, that lions were in fact found in both places near the Nestus and the Acheollos of Arcarnania (7, 126. —Pliny, 4, 11. —Mela, 2, 9). In the middle ages, the name of this river was corrupted into Mestus; and it is still called Mesto, or Cara-von (Black River), by the Turks. (Cramer's Anc. Greece, vol. 1, p. 308.)

Nëzuri, a Scythian race, which appear to have been originally established towards the head waters of the river Tyras and Hapyan (Daciriat and Bog). They appear also to have touched on the Bastarnian Alps, which would separate them from the Aegyptians. (Curtius, 3, 12. —Deininger, 14, 12. —Renonel, Geogr. of Herodotus, vol. 1, p. 112.)

Nicæa, i. A city of India, founded by Alexander in commemoration of his victory over Porus. It was situate on the left bank of the Hydaspes, on the road from the modern Atootch to Lahore, and just below the southern point of the island of Jamad. (Arrian, 9, 5, 6. —Justinus, 12, 8. —Curtius, 9, 4. —Vincencio's Periplus, p. 110.) II. The capital of Bithynia, situate at the extremity of Lake Aeseus, on the right bank of the Byzantium informs us, that it was first colonized by the Bottimis, and was called Anchore (Ἀνχώρη). Strabo, however, mentions neither of these circumstances, but states that it was founded by Antigonus, son of Philip, who called it Antigonea. It subsequently received the name of Nicæa from Lysimachus, in honour of his wife, the daughter of Antipater. (Strab., 585.) Nicæa was built in the form of a square, whose sides were drawn at right angles to each other, so that from a monument which stood near the gymnasium, it was possible to see the four gates of the city. (Strab., l. c.) At a subsequent period, it became the royal residence of the kings of Bithynia, having superseded Nicomedea as the capital of the country. Piny the younger makes frequent mention, in his Letters, of the city of Nicæa and its public buildings, which he had undertaken to restore, being at that time governor of Bithynia. (Ep. 10, 40. —Dioc. 10, 48, seqq.) In the time of the Emperor Va- lens, however, the latter city was declared the metropoli- tan. (Dioc. Chrysost., Orat., 28.) Still Nicæa remained, as a place of trade, of the greatest import- ance; and from this city, too, all the great roads diverged into the eastern and southern parts of Asia Mi- nor. (Mannert, Geogr., vol. 6, pt. 3, p. 569, seqq.) Nicæa was the birthplace of Hipparchus the astronomer (Suidas, s. v. Ἰμαρχας), and also of Dio Cas- sius —The present town of Iznik, as it is called by the Turks, has taken the place of the Bithynian city; but, according to Leake, the ancient walls, towers, and gates are in tolerably good preservation. In most places they are formed of alternate courses of Roman tiles and large stone squares, joined by a cement of great thickness. The Turkish town, however, was never so large as the Grecian Nicæa, and it seems to have been almost entirely constructed of the remains of that city. (Leake's Journal, p. 10, seq. —Cra- mer's Asia Minor, vol. 1, p. 181.) Nicæa is famous in ecclesiastical history as the seat of the first and most important ecumenical council held in the Chris- tian church, at the request of the Emperor Constanti- nian, for the purpose of settling the Arius contro- versy, after he had in vain attempted to reconcile Arius and Alexander, the leaders of the two opposing parties in that dispute. The council met in the year 325 A.D., and sat probably about two months. It was attended by bishops from nearly every part of the East; few, however, came from Europe, and scarcely any from Africa, exclusive of Egypt. According to Eusebius, there were more than 325 bishops present, besides presbyters, deacons, and others. Some writers give a larger number. The account generally follow- ed is that of Socrates, Theodoret, and Ephraim, who state that 318 bishops attended the council. It is uncertain who presided, but it is generally supposed that the president was Hosius, bishop of Corduba (Cordoba) in Spain. Constantine himself was present at its meetings. The chief question debated in the council of Nicæa was the Arius heresy. Eusebius of Cæsarea proposed a creed which the Arius party would have been willing to sign; but it was rejected by the council, and another creed was adopted as im- bodying the orthodox faith. The most important feature in this creed is the application of the word consubstantial (ἵνα υἱόν τὸν Σινα) to the Son, to indicate the na- ture of his union with the Father; this word had been omitted in the creed proposed by Nicæa. The creed agreed upon by the council was signed by all the bishops present except two, Secundus, bishop of Potemlais, and Theonas, bishop of Marmarica. Three others hesitated for some time, but signed at last, namely, Eusebius of Nicomedea, Theognis of Nicæa, and Maris of Chaledon. The council excommuni- cated Arius, who was immediately afterward ban- ished by the emperor. The decision of this council became the law of the eastern church, for the Arius controversy was still warmly carried on; but it has supplied that mode of stating the doctrine of the Trinity (as far as relates to the Father and the Son) in which it has ever since been received by the orthodox. The time for the celebra- tion of Easter was also fixed by this council in fa- vor of the practice of the Western church. It also decided against the schism of Melethus. The only exception to this was made in the case of the Western church, for the Arius controversy was still warmly carried on; but it has supplied that mode of stating the doctrine of the Trinity (as far as relates to the Father and the Son) in which it has ever since been received by the orthodox. The time for the celebra- tion of Easter was also fixed by this council in fa- vor of the practice of the Western church. It also decided against the schism of Melethus. The only exception to this was made in the case of the West- ern church, for the Arius controversy was still warmly carried on; but it has supplied that mode of stating the doctrine of the Trinity (as far as relates to the Father and the Son) in which it has ever since been received by the orthodox. The time for the celebra- tion of Easter was also fixed by this council in fa- vor of the practice of the Western church.
NICANDER.  

have been preserved; but of all these we possess at present only two in a perfect state, with a few fragments of some of the others. Both are poems. One is entitled Θεραία (Theraiaca), the other Αλέξιφαρμακα (Alexipharmaca).—The Theraiaca consists of nearly 1000 lines in hexameter verse, and treats of the wounds caused by different venomous animals, and the proper treatment of each. It is characterized by a degree of practical knowledge which is surprising in a physician of his time. It was published by Haller (Biblioth. Botan.) as "longa, incondita, et nullius fidei farrago," but still we occasionally find some curious passages relating to natural history. We have in it, for example, an exact, but rather long description of the combat between the ichneumon and serpents, whose flesh this quadruped eats with impu- nity. He speaks of scorpions, which he divides into nine species, an arrangement adopted by some modern naturalists. This poem contains a number of curious observations on the effect of the venom of various kinds of serpents, each differing in the appearances and symptoms to which it gives rise. Nicander thought he had discovered that the poison of serpents is concealed in a membrane surrounding the teeth; which is, after all, not very far removed from the true state of the case. He describes a species of serpents, named φιθα, which always assumes the colour of the ground over which it has just passed; and the prince of serpents, the vipers: Aurocr., c. 178; and Ειλίαν, N. A., 16, 40.) Nicander is the first who distinguishes between the moth or night-butterfly, and that which flies by day, and he gives to the former the name of πάλαια. He is one of the earliest writers who also mentions the salamander. This poem contains, too, a great number of popular fables, which were credited, however, at the time that Nicander wrote; as, for example, that wasps are produced from horse-flesh in a potrind state, and become poisonous serpents when dried. He found the bite of the field-mouse is poisonous, and also that the animal dies if it should fall into a wheel rut, both which circumstances are repeated by Pliny (8, 88) and Ειλίαν (H. A., 2, 37).—The Alexipharmaca is rather a shorter poem, written in the same metre, and may be considered as a sort of commentary of the Theraiaca. Haller’s judgment on this work is as severe as that on the preceding. He says of it, “De- scripts medicinam, sive, magnum farrago et incondita plantorum potassimum alexipharmacarum subiczit.” Among the poisons of the animal kingdom he mentions the cantharis of the Greeks, which is not the Lytta Vesicatoria, but Meloe Chichorii. He speaks also of the burepsis (Carabus Bucidon); of the blood of a bull; of coagulated milk in the stomach of man-eating animals; of the leech (hirudo venenata); and of a species of gecko (σαλαλαμάδος). Among the vegetable poisons we find the acene, coriander (which has sometimes been fatal in Egypt), the hemlock, colchicum, henbane, and the different species of fungi, the growth of which Nicander attributes to fermentation. Of mineral poisons he mentions only white lead, a carbonate of lead and litharge, or protoxide of lead.—To counterbalance, in some degree, Haller’s unfavourable opinion of Nicander’s extant works, it ought in justice to be stated, that his knowledge of natural history appears to be at least equal to that of other writers of his own or even a later age, while on the subject of poisons he was long considered a great authority. Gaien several times quotes him; and Dioscorides, Aëtius, and Johannes Actuarius have borrowed from him largely. — Nicander’s general treatment of cases,” observes Dr. Adams, “in as far as my knowledge and experience enable me to form a judgment, is founded upon very solid and correct principles; and, in the correctness of his physiological views is such as cannot but command our admiration, considering the age in which he lived. Thus, he states that poison is most fatal to a person when fasting, which clearly implies his acquaintance with the fact that the vessels absorb most readily when in an empty state. This doctrine, which has been revived of late years by a celebrated French experimentalist as a new discovery, is allowed to not only by our author, but more fully by Celsus, Dioscorides, Paulus Ægineta, Avicenna, Atzemor, and Averroes. It was, no doubt, from his knowledge of the principles, that Nicander recommended general bleeding, lest, by emptying the ves- sels, the absorption and its distribution over the sys- tem should be promoted. Hence subsequent writers on Toxicology, such, for example, as Paulus Ægineta and Avicenna, only approve of bleeding when the poi- son is diffused over the body; and a very late author- ity, Dr. Paris, is at great pains to enforce the impro- priety of vesections in the early stages before absorp- tion has taken place.—Nicander recommends emplas- ses and the actual cautery as preservatives from absorption in cases of poisoned wounds, and both these modes of practice have been revived of late years with great en- comiums. The application of leeches to the vicinity of the wound, though not generally had recourse to now, seems a remedial measure deserving of trial.—In a word, the great merit of his practice is, that his rem- edies appear to have been administered upon genera- lly known and established principles; his several species, of many of his medicines, indeed, no one nowadays can speak from personal experience, and it seems but reasonable to judge of them in the indulgent manner that Socrates did respecting the obscurer part of the philosophical system of Heracitus: ‘What I do understand of it,’ said he, ‘with becoming modesty, I find to be admirable, and therefore I take it for granted that what I do not understand is equally so.’—With respect to Nicander’s merits as a poet, the most opulent eulogium that can be bestowed is, that he was a parallel to his master Averroes. So much for Nicander. He was a man of letters, a poet, a physician, and a man of letters. In the Greek Anthology, Colophon is congratulated for being the birthplace of Homer and Nicander (vol. 3, p. 270, ep. 567, ed. Brunck). Cecro, in alluding to his "Geórgies," a poem not now extant, praises the poetical manner in which he treats a subject of which he was entirely ignorant (de Orat., 1, 16); while Plutarch, on the other hand, says that the Theraiaca only escapes being prosa prose because it is inserted into the Parthenia, because there is nothing in it of false or fæalsohood. (De Aud. Poët., c. 2.) This very point, however, Julius Cæsar Senliger thinks worthy of es- pecial commendation, and says, "Magna ei laud quod ne quid ineptum aut inept sit dicat." (Poët., lib. 5, c. 15.) He goes on to praise the accuracy of his ex- pressions and versification, and declares that among all the Greek authors a more polished poet is hardly to be found. M. Merian, on the other hand, in an essay "Comment les Sciences influent dans la Poésie" (Mem. de l’Acad. Royal de Berlin, 1776, p. 423), mentions Nicander, to show the antithesis that exists between the language of poetry and the subjects of which he treated. He calls him "a grinder of anti- dotes, who sang of scorpions, toads, and spiders," and considers his poem as fit only for the apothecaries.— Nicander’s poetic genius, in all probability, was a good dealcriedto by the prosaic nature of the sub- jects which he chose for his theme; and he may fairly say, that his writings contain quite as much poetry as could be expected from such unpromising materials. As for his style and language, probably every one who has ever read half a dozen lines of either of his poems will agree with Bentley, who says that he studiously affected obsolete and antiquated words, and must have been an obscure writer even to his contemporaries. The Theraiaca, or Alexipharmaca, which is the subject of the Alexipharmaca is that of Schneider, Halle, 1792, 8vo. The Theraiaca, by the same editor, and equally valuable, appeared in 1816, Lips., 8vo. The Theraiaca was also published the same year in the

I. (Vid. Seleucus.)

NICEPHORIUS (Νάσηφωρ), a strongly-fortified city of Mesopotamia, south of Charra, and at the confluence of the Billichia and Euphrates. Alexander is said to have selected the site, which was an extremely advantageous one. (Plin., 6, 25.—Isid., Charac., p. 3.)

The name remained until the fourth century, when it disappeared from history, and, in the account of Julian's expedition, a city named Callinicum (Καλλίνικος) is mentioned, which occupies the same place where Nicophorium had previously stood. This conformity of position, and sudden change of name, lead directly to the supposition that Nicophorium and Callinicum were one and the same place, and that the earlier appellation ("Victory-bringing," νίκη and φέρει) had merely been exchanged for one of the same generic signification ("Parthenocopia," νεομαρίνα.) Hence we may reject the statement sometimes made, that the city received its later name from Seleucus Callinicus as its founder (Chron. Alexandr., Olym., 134, 1), as well as what Valesius (ad Amm. Marcell., 23, 6) cites from Lhánius (Ep. ad Aristatem.), that Nicophorium changed its name in honour of the sophist Callinicus, who died there. —Marcellinus describes Callinicum as a strong place, and carrying on a great trade ("munimentum, commoditu, et commercandi optimato gratissimum"). Justinian repaired and strengthened the fortifications. (Compare Theodoret, Hist. Relig., c. 26.) At a subsequent period, the name of the city again underwent a change. The Emperor Leo, who about 466 A.D. had contributed to adorn the place, ordered it to be called Leontopolis, and under this title Hierocles enumerates it among the cities of Osroene. (Syeneedem., ed. Weeseling, p. 715.) Stephanus of Byzantium asserts that Nicophorium, at a later period, changed its name to Constantinopolis, but this is impossible, as the city of Constantinople belongs to a quite different part of the country. —D'Anville fixes the site of Nicophorium near the modern Roccas, in which he is followed by subsequent writers. (Mannert, vol. 5, pt. 2, p. 386, seqq.)

NICEPHORUS, a river of Armenia Major, the same with the Euphrates of the ancients. (Vid. Euphrates.)

NICEPHORUS, I. an emperor of the East, was originally Logotheta, or intendant of the finances, during the reign of the Empress Irene and her son Constantine VI., in the latter part of the eighth century. Irene, having deprived her son of sight, usurped the throne, and reigned alone for six years, when a conspiracy broke out against her, headed by Nicephorus, who was proclaimed emperor, and crowned in the church of St. Sophia. He banished Irene to the island of Lesbos, where she lived and died in a state of great destitution. The troops in Asia revolted against Nicephorus, who showed himself avaricious and cruel, and they proclaimed the patrician Bardanes emperor; but Nicephorus defeated and seized Bardanes, confined him in a monastery, and deprived him of sight. The Empress Irene had consented to pay an annual tribute to the Saracens, in order to stop their incursions into the country, and Nicephorus resolved to continue this payment, and wrote a memorial of defiance to the Caliph Haroun al Raschid. The caliph collected a vast army, which devastated Asia Minor, and destroyed the city of Heracles on the coast of the Euxine, and Nicephorus was obliged to sue for peace, and pay tribute as Irene had done. In an attack which he subsequently made on the Bulgarians, he was utterly defeated by them, and lost his life A.D. 811. His son Stauraces succeeded him, but reigned only six months, and was succeeded by Michael Rhangabe, master of the palace.—II. The second emperor of the name, surnamed Phocas (but who must not be confounded with the usurper Phocas, who reigned in the beginning of the seventh century), was descended from a noble Byzantine family, and distinguished himself as a commander in the field. After the death of Romanus II., A.D. 950, his widow Theophano, who was accused of having poisoned him, reigned as guardian to her infant son; but, finding herself insecure on the throne, she invited Nicephorus to come to Constantinople, and promised him her hand. Nicephorus came, married Theophano, and assumed the title of emperor. A.D. 963. The Cilicians and the Saracens, and drove them out of Cilicia and part of Syria. In 968, Otho I., emperor of Germany, sent an embassy to Nicephorus, who received it in an uncivil manner. His avarice made him unpopular, and his wife, the unprincipled Theophano, having formed an intrigue with John Zimisces, an Armenian officer, conspired with him against her husband. Zimisces, with his confederates, was introduced at night into the bedroom of the emperor, and, on the 9th of July, A.D. 969—We have remaining, at the present day, a portion of a military work under the name of this emperor. It is entitled Περί παράδοσεως πολέμου, "Of war with light troops," making known the mode of carrying on war in mountainous countries, as practised in the tenth century. Hase has given the first 25 chapters of this work, at the end of his edition of Leo Diaconus, these being the only one contained in the MSS. of the Royal Library at Paris. A MS. at Heidelberg has 30 chapters more; but Hase believes that they do not belong to this work, or, rather, that they form part of a second work on the same subject. It is thought, however, that the production first mentioned appeared after the death of Phocas, and that the compiler, or perhaps author of it, lived in the time of Basilus II. and Constantine VIII. (Schöll, Gesch. Gr. Lit., vol. 3, p. 360.)—III. The third emperor of the name, surnamed Britannicus, was an old officer of some military reputation in the Byzantine army in Asia, and revolted against the Emperor Michael Dyucas, A.D. 1078. With a body of troops, chiefly composed of Turkish mercenaries, he marched to Chalcodon upon which Michael resigned the purple, and Nicephorus was proclaimed emperor at Constantinople. Michael was sent to a monastery with the title of Archbishop of Euphrasia. Another aspirant to the throne, Michael Bryennius, was defeated, taken prisoner, and deprived of sight. A fresh insurrection, led by Basilicius, was likewise put down by the troops of Nicephorus, under the command of Alexius Comnenus. Alexius himself, who had an hereditary claim to the throne, was soon after proclaimed emperor by the soldiers. Having entered Constantinople by surprise, he seized Nicephorus, and banished him to a monastery, where he lived a short time. A.D. 1081, when the Emperor Alexius Connenus (Comm. Alex., vol. 16, p. 207.)—IV. Basiliscus, a teacher of rhetoric at Constantinople during the latter half of the eleventh century. He has left some fables, tales, and epoepées; for example, Joseph accused by Potiphar's wife: David in the cave with Saul; David pursued by Absalom, &c. These productions are contained in the collection of Leo Allatius.—V. Bryennius, a native of Orestias, in Macedonia, so named-in-law to the Empress Irene; but who, when he married, the Empress Irene, was afterwards called Constantine VIII. Bryennius was, by his father-in-law intrusted to him the defence of Constantinople against Godfrey of Bouillon. In 1108 A.D., his father-in-law intrusted to him the defence of Constantinople against Godfrey of Bouillon. In 1108 he negotiated the peace with Boemond, prince of Antioch. At the death of Alexius in 1118, Irene, widow of the deceased, and Anna Commena, wife of Bryennius, wished him to ascend...
the throne; but his own indifference on this point, and the measures taken by John, the son of Alexius, defeated their plans. It was on this occasion that Anna Comnena passionately exclaimed, that nature had mista

NICEPHORUS.   N I C  

the soul of a woman. He died in 1137. At the order of the Empress Irene, Bryennius undertook, during the life of Alexius, a history of the house of Comnena, which he entitled "Γενεατογογία, "Materials for History," and which he distributed into four books. He commenced with Isaac Comnens, the first prince of this line, who reigned from 1057 to 1059 A.D., without being able to transmit the sceptre to his family, into whose hands it did not pass until 1081, when Alexius I. ascended the throne. Nicephorus stops at the period of his father-in-law's accession to the throne, after having given his history while a private individual. He had at his disposal excellent materials; but his impartiality as a historian is not very highly estimated. In point of diction, his work holds a very favourable rank among the productions of the Lower Empire. It was continued by Anna Comnena. (Schöll, Hist. Lit. Gr., vol. 6, p. 398.)—VI. Blemmida, a monk of the 13th century. He has left three works: "A Geographical Abridgment" (Γεωγραφία συντακτική), which is nothing but a prose paraphrase of the Periege

s of Dionysius the Geographer: a work entitled "A Second History (or Description) of the Earth" (Γενεατογογία περὶ τῆς γῆς), in which he gives an account of the form and size of the earth, and of the different lengths of the day; and a third, "On the Heavens and Earth, the Sun, Moon, Stars, Time, and Days" (Περὶ Οὐρανοῦ καὶ γῆς, Πλανήτων, Σελήνης, Λαμπρίτων, Χρόνου, και Ημερῶν). In this last the author develops a system, according to which the earth is a plane. The first two were published by Spohr, at Leipzig, 1818, in 4to, and by Manzi, from a MS. in the Barberini Library, Rom., 1819, 4to. Bernhardy has given the Metaphrase in his edition of Dionysius, Lips., 1828; the third is unedited. It is mentioned by Bredow in his Epistolae Pontificum, — VI. Surnamed Xanthopoulos, lived about the middle of the 14th century. He wrote an Ecclesiastical History in 18 books, which, along with many useful extracts from writers whose productions are now lost, contains a great number of fables. This history extends from the birth of our Saviour to A.D. 610. The arguments of five other books, which would carry it down to A.D. 911, are by a different writer. In preparing his work, Nicephorus availed himself of the works of men who had preceded him, and particularly of those of G理事会 in Paris, 1630, 2 vols. fol. The metrical Catalogues are to be found in the edition of the Epigrams of Theodorus Prodromus, published at Bâle, 1536, 8vo. The account of the mineral waters, &c., appeared for the first time at Vienna in 1802, 8vo, edited by Pampus.

scription are several times mentioned by Galen (Op., ed. Kuhn, vol. 15, p. 634; vol. 13, p. 96, 98, 110, and 112), in a manuscript from the library of Pliny (life, p. 31). We learn from Callinus Aurelianus (Mor. Chron., l. 2, c. 5) that he wrote also on catalepsy. He flourished about 40 B.C. (Encycl. Us. Knolw., vol. 16, p. 207.)

Nicetas, I. Eugenianus, author of one of the poorest of the Greek romances that have come down to us. He appears to have lived not long after Theodore Prodromus, whom, according to the title of his work as given in a Paris manuscript, he selected for his model. He wrote of the Loves of Drosila and Charclea. Boissoneau gave to the world an edition of this romance in 1819, Paris, 2 vols. 12mo, respecting the merits of which, consult Hoffmann, Lex. Bibliogr., vol. 3, p. 137.—II. Acominatus, surnamed Choniates, from his having been born at Chomae, or Colossier, in Phrygia. He filled many posts of distinction at Constantinople, under the Emperor Isaac II. (Angelus). About A.D. 1189, he was appointed by the same monarch governor of Philippopolis, an office of which Alexius V. deprived him. He died A.D. 1216, at Nicæa, in Bithynia, to which city he had fled after the taking of Constantinople by the Latins. He wrote a History of the Byzantine Emperors, in twenty-one books, commencing A.D. 1118 and ending A.D. 1206. It forms, in fact, ten different works of various sizes, all imbedded under one general head. Nicetas possessed talent, judgement, and a well-known taste for the art of rhetoric; but would be read with pleasure if he did not occasionally indulge too much in a satirical vein, and if his style were not so declamatory and poetical. The sufferings of Constantinople, which passed under his own eyes, appear to have imbittered his spirit, and he is accused of being one of the writers who contributed most to kindle a feeling of hatred between the Greeks and the nations of the West. We have a life of Nicetas by his brother Michael Acominates, metropolitan of Athens. It is entitled Monodia, and has never yet been published in the original Greek; a Latin translation of it is given in the Biblioth. Patrum Maxim. Lugd., vol. 22.—The latest edition of Nicetas was that of Paris, 1647, fol. A new edition, however, has lately appeared from the scholars of Germany, as forming part of the Byzantine collection, now in a course of publication at Bonn. —III. An ecclesiastical writer, who flourished during the second half of the eleventh century. He was at first bishop of Sermoni in Macedonia (whence he is sometimes surnamed Serrianiota), and afterward metropolitan of Heraclea in Thrace. He is known by his commentary on sixteen discourses of St. Gregory Nazianzen, and by other works connected with theology and sacred criticism. He was the author, likewise, of some grammatical productions, of which, however, only a small remnant has come down to us, in the shape of a tractate "on the Names of the Gods" (Εἰς τὰ ἱδιαῖα τῶν ὄντων), an edition of which was given by Creuzer, in 1187, from the Leipzig press.—IV. David, a philosopher, historian, and rhetorician, sometimes confounded with the preceding, but who flourished two centuries earlier. He was bishop of Dadybra in Paphlogonia, and wrote, among other things, an explanatory work on the poems of St. Gregory Nazianzen, and a paraphrase of the epigrams of St. Basil. An edition of these works appeared at Venice in 1563, 4to.

Nicola, a small river of Cisalpine Gaul, rising in the territory of the Ligures Apuanii, and falling into the Po at Brixellum. The Æmilian Way crossed it a little before Tanetum. It is now the Leuca. Mannert, however, gives the modern name as Crotolo; and Richard, Ongino.

Nicias, I. Son of Nicetas. He was a man of birth and fortune; but in whom a generous temper, popular manners, and considerable political and military talent, were marred by unreasonable diffidence and excessive dread of responsibility. Nicias, however, signalized himself on several occasions. He took the island of Sicily under his escort in 470 B.C., subdued many cities of Thrace which had revolted from the Athenian sway, shut up the Megarians within their city-walls, cutting off all communication from without, and taking their harbour Nisa. When the unfortunate expedition against Syracuse was undertaken by Athens, Nicias was one of the three commanders who were sent at its head, the other two being Alcibiades and Lamachus. He had previously, however, used every effort to prevent his countrymen from engaging in this affair, on the ground that they were only wasting their resources in distant warfare, and multiplying their enemies. After the recall of Alcibiades, the natural inclination of Nicias, increased by ill-health and dislike of his command, proved a principal cause of the failure of the enterprise. In endeavouring to retreat by land from before Syracuse, the Athenian commanders, Nicias and Demosthenes (the latter had come with re-enforcements), were pursued, defeated, and compelled to surrender. The generals were put to death; their soldiers were confined at first in the quarry of Epipolae, and afterward sold as slaves. We have a life of Nicias by Flutarch. (Thucyd., lib. 3, 4, 5, seqq.—Plut., Vit. Nic.)—II. An Athenian artist, who flourished with Praxiteles, in the C. A.D. 104, and assisted him in the decoration of some of his productions. (Plin., 35, 11. —Consult Sillig, Dict. Art., s. v.)—III. The younger, an Athenian painter, of whom mention is made by Phlegon. He commenced his career by painting his art Ol. 112. (Sillig, Dict. Art., s. v.) Nicias is said to have been the first artist who used burnt ochre in his paintings. (Plin., 35, 6, 20.)

Nicolo, an architect and mathematician, father of Galen, who lived in the beginning of the second century of our era. (Suid., s. v. Τάλνυς.)

Nicocles, I. King of Paphos, in the island of Cyprus. He owed his throne to the favor of Ptolemy Soter, who continued thereafter to bestow upon him many marks of favor. Having learned, however, at last, that Nicocles, forgetful of past benefits, had formed an alliance with Antigonus, Ptolemy sent two of his confidential emissaries to Cyprus, with orders to despatch Nicocles in case his traitorous conduct should be clearly ascertained by them. These two individuals, having taken with them a party of soldiers, surrounded the palace of Nicocles, and after having known to him the orders of Ptolemy, compelled him to destroy himself, although he protested his innocence. His wife Aziothea, when she heard of her husband's death, killed her maiden daughters with her own hand, and then slew herself. The other female relatives followed her example. The brothers of Nicocles, also, having shut themselves up in the palace, set fire to it, and then fell by their own hands. (Diod. Sic., 20, 21. —Westcoting, ad loc. —Polyb., 8, § 7. —II. King of Cyprus, succeeded his father Evagoras B.C. 374. He celebrated the funeral obsequies of his parent with great splendour, and engaged Isocrates to write his eulogium. Nicocles had been a pupil of the Athenian rhetorician, and recomposed his services with the greatest liberality. (Vit. Isocr.)

Nicocreon, a tyrant of Cyprus in the age of Alexander the Great. A fabulous story is related of his having been begotten by Ptolemy Philopator to be drowned alive in a mortar. (Vit. Anaxarchus.)

Nicolaus, I. a comic poet whose era is unknown. He belonged to the New Comedy according to some. Stobæus has a fragment of his in 44 verses, which he ascribes, however, to Nicolaus Damascens. —II. Surnamed Damascens (Νακοῦς ἄμμνασκεος), a native of Damascus of good family. He was the friend of Herod the Great, king of the Jews, and in the year 6 B.C. was sent by that monarch on an embassy to Augustus, who had taken offence at Herod because...
he had led an army into Arabia to enforce certain claims which he had upon Syllaus, the prime-minister of the King of Arabia, and the real governor of the country. (Joseph., Ant. Jud., 16, 9.) Nicolaus, hav- 
ing obtained an audience of the emperor, accused Sy-
laus, and defended Herod in a skilful speech, which is given in Josephus, Ant. Jud., 16, 4, seq. The sentence to be put to death as soon as he should have given satisfaction to Herod for the claims which the latter had upon him. This is the account of Jose-
phus, taken probably from the history of Nicolaus him-
self, who appears to have exaggerated the success of his embassy; for Syllaus neither gave any satisfac-
tion to Herod, nor was the sentence of death executed upon him. (Joseph., Ant. Jud., 17, 3, 2.) We find 
that Nicolaus was the son of a brother of Herod's 
son Antipater, when he was tried before Varus for plot-
ing against his father's life, B.C. 4 (Joseph., Ant. 
Jud., 16, 5, 4, seq.—Id., Bell. Jud., 1, 32, 4;) and 
again as the advocate of Archelaus before Augustus, 
in the dispute for the succession to Herod's kingdom. (Joseph., Ant. Jud., 17, 9, 6.—Id. th., 11, 3.—Id., 
Bell. Jud., 2, 2, 6.)—As a writer, Nicolaus is known in several departments of literature. He 
composed tragical poems, and a satirical work, called 
("Suauna"). Of these nothing remains. He also 
 wrote comedies, and Stobus has preserved for us 
what he considers to be a fragment of one of these, but 
what belongs, in fact, to a different writer. (Vid. Ni-
colaus I.) He was the author, also, of a work on the 
Remarkable Customs of various nations (Σωφρο 
γωνία παραδείγματα θρών;) of another on Distinguished Ac-
tions (Περὶ τῶν ἐν τοῖς πρακτικοῖς καλῶν;) and also 
of several historical works. Among the last-mention-
ed class of productions was a Universal History (Ἡ-
tορία καθολική,) in 144 books (hence called by Athe-
nuss πολύβιδες, 6, p. 249, a,) a compilation for 
which he borrowed passages from various historians, 
which he united together or oratorical flourishes. As 
he has drawn his materials in part from sources which 
no longer exist for us, the fragments of his history 
which remain make us acquainted with several facts of 
which we should otherwise have had no knowledge. 
This is the account of Nicolaus' reign; and Jose-
phus gives the following character of the 123d and 
124th books: "For, living in his kingdom and with 
him (Herod), he composed his history in such a way 
as to gratify and serve him, touching upon those things 
only which made for his glory, and glossing over many 
of his actions which were plainly unjust, and conceal-
ing them with all zeal. And wishing to make a 
specious excuse for the murder of Mariamne and her chil-
dren, so cruelly perpetrated by the king, he tells false-
hoods respecting her incontinence, and the plots of 
the young men. And throughout his whole histo-
ry he eulogizes extravagantly all the king's just ac-
tions, while he zealously apologizes for his crimes." (Ant. 
Jud., 16, 7, 1.) Nicolaus wrote also a life of 
Augustus, of which a fragment, marked too strongly 
with flattery, still remains. He was the author, too, of 
some topographical productions on the writings of Aris-
totle. As regards his own Biography, which has like-
wise come down to us, we may be allowed to doubt 
whether he ever wrote it.—The latest and most com-
plete edition of the remains of Nicolaus Damascenus 
is that of Orellius, Lips., 1804, with a supplement 
published in 1811, containing the result of the labours 
of Bremi, Ochsner, and others, in collecting the scat-
tered fragments of this writer. (Scholl, Hist. Lit. Gr., 
v. 4; supplementary dissertation, a discussion of 
Proclus and a New-Platonic, lived during the latter 
half of the fifth century. Suidas makes him to 
be the author of Progymnasmata and Declamations. 
One MS. assigns to Nicolaus the Sophist a portion of 
the Progymnasmata, which have been published under 
the name of Libanius. (Scholl, Hist. Lit. Gr., vol. 6, 
890)
transferred it to the inhabitants of the neighbouring city of Astacus. (Memnon, ap. Potei, c. 21, p. 722.) This city was much frequented and adorned by Europeans generally, as it lay directly on the route from Constantinople to the more eastern provinces, and contained, in its fine position, its handsome buildings, and its numerous warm baths and mineral waters, very strong attractions for travellers. Under the Romans, Nicomedea became one of the chief cities of the empire. Pausanias speaks of it as the principal city in Bithynia (6, 13; 6); but under Diocletian, who chiefly resided here, it grew greatly in extent and population, and became inferior only to Rome, Alexandria, and Antioch. (Labi., Orat., 8, p. 203.)

Lectant., de morte pers., c. 17.) Nicomedea, however, suffered severely from earthquakes. Five of these dreadful visitations fell to its lot, and it was almost destroyed by one in particular in the reign of Julian; but it was again rebuilt with great splendour and magnificence, and recovered nearly its former greatness. (Amn. Marcell., 17, 6.—Id., 22, 13.—Malal., l. 13.)—The modern Is-Mid occupies the site of the ancient city, and is still a place of considerable importance and much trade. The modern name is given by D'Anville and others as Is-Nikmaid. (Manerti, Geogr., vol. 6, pt. 3, p. 582.)

Nicoritis ("City of Victory," vixia et polia), a city of Palestine, to the northwest of Jerusalem, the same with Emmaus. It received the name of Nicopolis from the emperor Galerius, who restored and beautified the place. (Chron. Pasch. Ann., 223.) Josephus often calls the city Ammaus. (Bell. Jud., 1, 9.—Ibid., 2, 3.) It must not be confounded with the Emmaus of the New Testament (Luc., 24, 13), which was only eight miles from Jerusalem. (Manerti, Geogr., vol. 6, pt. 1, p. 283.)—I. A city of Cilicia, placed by Ptolemæus in the northeastern corner of Cilicia, where the range of Taurus enters it from Cappadocia. It was destroyed by the Goths in the reign of theodosius, and was not regained until 512; when it was restored by Justinian, and put in the hands of a bishop. (D'Anvil., Geogr., pt. 3, p. 164.)—II. A city of Cilicia, on the coast in upper Asia Minor, which is generally supposed to be the same with the Nicopolis of the New Testament, and to have been restored by Emperor Justinian. (D'Anvil., Geogr., pt. 3, p. 164.)

The modern name is given as Nicopolis. (Amm. Marcell., 24, 4.—Id., 31, 5.)—V. A city of Mesia Inferior, southeast of the preceding, at the foot of Mount Hazmus, and near the sources of the Isurus. It was called for, distinction sake, Nicopolis ad Isurus, and is now Nikob. It is a city of Cilicia Inferior, not far from the Euphrates, and in the territory of the Danube. It was founded by Trajan in commemoration of a victory over the Dacians, and was generally called, for distinction sake, Nicopolis ad Istrum or ad Danubium. The modern name is given as Nicopolis. (Amm. Marcell., 24, 4.—Id., 31, 5.)—VII. A city of Thrace, on the river Nessus, not far from its mouth, founded by Trajan. It is now Nicopolis. It is one of the ancient cities that have decayed, —Hieroc., p. 635.—Wesseling, ad Hieroc. l. e.)—VIII. A city of Epirus, on the upper coast of the Ambracian Gulf, and near its mouth. It was founded by Augustus, in honour of the victory at Actium, which place lay on the opposite or lower shore. Nicopolis may be said to have risen out of all the surrounding cities of Epirus and Acorania, and even as Athos, which were compelled to contribute to its prosperity. (Strab., 325.—Pausan., 5, 23.—Id., 7, 18.) So anxious was Augustus to raise his new col-
singing in a southern direction the inhabited region, and next to it the country of the wild beasts, they crossed the great sandy desert in a western direction for many days, until they arrived at a country inhabited by men of low stature, who conducted them through extensive marshes to a city built on a great river, which contains these waters. One of these streams is still called 

This information Herodotus derived from the Geographer of Cyrene, who had it from Eteocles, king of the Ammonites, who said that the river in question was a branch of the Egyptian Nile, an opinion in which the historian acquiesced. (Vid. Nasamonides, and Africa.)

—Strabo seems to have known little of the interior of Africa and its rivers: he cites the opposite testimonies of Posidonius and Artemidorus, the former of whom said that the rivers of Libya were few and small, while the latter stated that they were large and numerous. Pliny (5, 1) gives an account of the expedition into Mauritania of the Roman commander Setonius Paulinus, who (A.D. 41) led a Roman army across the Atlas, and, after passing a desert of black sand and burned rocks, arrived at a river called Ger, in some MSS. Niger, near which lived the Caraniri, next to whom were the Perorsi, an Ethiopian tribe; and farther inland were the Pharonis, as Pliny states above in the same chapter. The Caraniri, a desert consisting of valleys and small plains, enclosed by stony and rocky tracts of desert country. But, besides the Ger or Niger of Setonius Paulinus, Pliny in several places (5, 8, seq.; 8, 21) speaks of another apparently distinct river, the Niger of Ethiopia, which he compares with the Nile, "swelling at the same seasons, having similar animals living in its waters, and, like the Nile, producing the calamus and papyrus." In his extremely confused account, which he derived from the authority of Juba II., king of Mauritania, he mixes up the Niger and the Nile together with other rivers, as if all the waters of Central Africa formed but one water-course, which seems to have been a very prevalent notion of old. He says (5, 9) that the Nile had its origin in a mountain of Lower Mauritania, not far from the ocean; that it flowed through sandy deserts, in which it was concealed for several days; that it reappeared in a great lake in Mauritania Cessanis, was again hidden for twenty days in deserts, and then rose again in the sources of the Niger, which river, separating Africa (meaning Northern Africa) from Ethiopia, flowed through the middle of Ethiopia, and became the branch of the Nile called Astapus. The same story, though without any mention of the Niger, is alluded to by Vitruvius, Strabo, and others; and Mari (3, 25) states that the river whose source was called Dara, which is still the name of a river that flows along the eastern side of the southern chain of the Atlas of Marocco, and through the province of the same name which lies west of Tafilet, is nominally subject to Marocco. The Dara or Draha has a southern course towards the desert, but its termination is unknown. There is another river, the Akassa, called also Wadi Nun, on the west side of the Adrar ridge, or Southern Atlas, which flows through the country of Suez in a western direction, enters the sea to the south of Cape Nun, and seems to correspond to the Daras or Daratus of Ptolemy. Throughout all these confused notions of the hydrography of interior Africa, and the preceding geographers, there is no map or tradition apparent, namely, that of the existence of a large river south of the great desert, and flowing towards the east. It is true that Herodotus, Strabo, Pliny, and their respective authorities, thought that this river flowed into the Nile, but Mela seems to have doubted this, for he says that when the river reached the middle of the continent, it was not known what became of it. Ptolemy, who wrote later than the preceding geographers, and seems to have had better information concerning the interior of Africa, after stating that "Libya Interior is bounded on the north by the two Mauritania, and by Africa and Cyrenaica; on the east by Marmarica, and by the Ethiopia which lies south of Egypt; on the south by Interior Ethiopia, in which is the country of Agisymba; and on the west by the Western Ocean, from the Hesperian Gulf to the frontier of Mauritania Tingitana," says that the river known to him, and called the river of the ocean; after which he mentions the chief mountains of Libya, and the streams that flow from them to the sea. He then adds, "In the interior, the two greatest rivers are the Ger and the Niger: the Ger unites Mount Ussuraga (which he places in 20° 20' N. lat. and 50° E. long.) with the Garamanian pharax (the name of a mountain which he had previously stated to be in 10° 15' N. lat. and 33° E. long.). A river diverges from it at 49° E. long. and 16° N. lat., and makes the lake Chelonides, of which the middle is in 49° E. long. and 20° N. lat. This river is said to be lost under ground, and to reappear, forming another river, of which the western end is at 46° E. long. and 16° N. lat. The eastern part of the river forms the Lake Nuba, the site of which is at 50° E. long. and 15° N. lat." The positions here assigned to the Ger, and the direction of its main stream, from the Garamanian mountain Mount Ussuraga, being south-east and northwest, seem to point out for its representative either the Shary of Bornou, and its supposed affluent, the Bahr Kulla of Browne, or perhaps the Bahr Misselad of the same traveller, called Om Teyman by Burckhardt, who says that its indigenous appellation is Gir, a large stream coming from about 16° N. lat., and flowing north-west through Wadai, west of the borders of Darfur. The Bahr Kulla is supposed to flow into Lake Fitre; we do not know whether any communication exists between Lake Fitre and the Tschadda. In fact, it appears that several streams, besides the Bahr Kulla and the Bahr Misselad, all coming from the great southern range, or Mounts of the Moon, flow in a north-west direction through the countries lying between Bornou and Darfur, and the Geir of Ptolemy may have been the representative of any or all of them. We now come to the Marocco, which, having been mistaken for the Latin word Niger, has added to the confusion on the subject. Niger is a compound of the general appellative Geir or Gir, which is found applied to various rivers in different parts of Africa, and the prefix Ni or Nı', which is found in several names of the same region reported by Denham and Caillaü. Ptolemy makes the Niger quite a distinct river from the Geir, and places it in Mauritania Cessanis; he says that it joins the main stream of Mandra, 19° N. lat. and 14° E. long., with the mountain Thala, 10° N. lat. and 38° E. long. Its course is thereby defined as much longer and in a less oblique line to the equator than that of the Geir. In fact, it would correspond tolerably well (allowing for the imperfection of the means of observation in an-
cient times) with the actual direction of the course of the Joliba and that of the river of Sakktako, supposing that river to form a communication with Lake Tschadd, as Ptolemy says that the Nigeir has a divergent to the lake Lylv, which he places in 16° 30' N. lat. and 35° E. long., and the words of the text seem to express that the water ran into the lake; so that the course of the Nigeir, according to Ptolemy, as well as his predecessors, appears to be more or less like a river and not a lake for a great part of its course. "The lake Lylv," observes a distinguished geographer, "to which there was an easterly divergent, I strongly suspect to have been the lake Tschadd, notwithstanding that the position of Lylv falls 300 geographical miles northwestward of this lake; for the name of Lylv favours the presumption that it was the principal lake in the interior of Libya; it was very natural that Ptolemy, like many of the moderns, should have mistaken it as to the communication of the river with that lake, and that he should have mistaken two rivers flowing from the same ridge in opposite directions, one to the Quorra and the other to the Tschadd (I allude to the Sakktako and the Yeu rivers), for a single communication from the Quorra to the lake." (Leske's paper "On the Quorra and Nigeir," in the second volume of the Journal of the Royal Geographical Society, vol. 18, 1832.)

He may, it appears, however, not have been so much misinformed with respect to a communication existing between the lake and his Nigeir, if, as is now strongly suspected, the communication really exists, though in an inverse direction from that which Ptolemy appears to have understood. It is surmised that the river Tschadda, which, at its junction with the Quorra, just above the beginning of the delta, is larger than the Quorra itself, receives an outlet from the lake somewhere about the town of Jacobab. (Captain W. Allen, R. N., On a new construction of a Map of a Portion of Western Africa, &c.—Journal of the Royal Geogr. Soc. of London, vol. 8, 1839.) If this surmise prove true, it would explain the statement of the Arabic geographers of the middle ages, Edrisi, Abulfeda, and Leo Africanus, who state that the Nile-Abid, or river of the negroes, flows east from west. The Tschadda gives an outlet from the lake somewhere in the district of the Joliba or Upper Quorra that of the Greek and Roman geographers. Both were ignorant of the real termination of their respective streams. "It is nevertheless remarkable, that the distance laid by Ptolemy between his source of the river and the western coast is the same as that given by modern observations; that Thamondocana, one of the towns on the Niger, is exactly coincident with Tombuctoo, as recently laid down by M. Jamard from the itinerary of M. Galland; that the length of the course resulting from Ptolemy's positions is nearly equal to that of the Quorra, as far as the mountains of Kong, with the addition of the Tschadda or Skary of Funda; and that his position of Mount Thala, at the southeastern extremity of the Nigeir, is very near that in which we may suppose the Tschadda to have its origin; so that it would seem as if Ptolemy, like Sultan Bello and other modern Africans, had considered the Tschadda as a continuation of the main river, though he knew the Egyptian Nile too well to fall into the modern error of supposing the Nigeir to be a branch of the Nile. The mountains of Kong, and the passage of the river through them at right angles to their direction, formed a natural termination to the extent of the geographer's knowledge; in like manner, as among ourselves, the presumed, and at length the ascertained, existence of rivers has been the obstacle to a belief that the river terminated in the Atlantic." (Leske's Paper "On the Quorra and Nigeir," already quoted.)—The opinions established by the Arabian geographers of the middle ages, that the Niger flow-
books; another On Wind; a very large work On the Gods; but, above all, a System of Astrology, or a theory of the art of divination. Macrobius and Aulus Gallus, in citing Eratosthenes, have preserved for us some few fragments of them. An extract On Thunder, from one of his productions, exists in Greek, having been translated into that tongue by Lydus, and inserted in his treatise on Prodigies. (Schöll, Hist. Lit. Rom., vol. 2, p. 187.)

NILUS. Nilius, the name of the great river of Eastern Africa, the various branches of which have their rise in the high lands north of the equator, and, flowing through Abyssinia and other regions to the westward of it, meet in the country of Sennar. The united stream flows northward through Nubia and Egypt, and, after a course of more than 1800 miles from the farthest explored point of its principal branch, enters the Mediterranean by several mouths, which form the delta of Egypt. The word Nile seems to be an old indigenous appellation, meaning "river," like that of Gir in Sou- dan and other countries south of the Atlas. (Vid. Nie- ger.) The modern Egyptians call the river Bahir-Nil, or simply Behr; in Nubia it is known by various names; in Sennar the central branch, or Blue Riv- er, is called Adis; and in Abyssinia, Abauei. The three principal branches of the Nile are: 1. The Bahir el Abiad, or White River, to the west, which is now ascertained to be the largest and longest. 2. The Bahir el Azrek, or Blue River, in the centre. 3. The Tacazze, or Abbara, which is the eastern branch. These three branches were known to Ptolemy, who seems to have considered the western as the true Nile, and to have called the Bahir el Azrek by the name of Astapus, and the Tacazze by the appellation of Astaboras. He fixed the sources of the western river in numerous lakes at the foot of the Mountains of the Moon, which he placed in 10° S. lat. Strabo (821) speaks of the island of Methë as bounded on the south by the confluence of the Astaboras, Astapus, and Astasabas. In another place (796) he says, that the Nile receives the Astaboras and Astapus; which latter "some call the Astasobas, and say that the As- tapus is another river, which flows from some lakes in the south, and makes pretty nearly the direct course of the Nile, and is swollen by summer-rains." While these passages certainly prove that the ancient geog- raphers knew there were three main streams, they also prove that their notions about them were extremely confused. The Nile, as if it were doomed for ever to the same obscurity, seems to have been thought by the highest authorities of the land to which it ministers, still conceals its true sources from the eager curiosity of modern science. The question which was agitated in the age of the Ptolemies has not yet been solved; and, although 2000 years have elapsed since Eratosthenes published his conjectures as to the origin of the principal branch, we possess not more satisfactory knowledge on that particular point than was enjoyed by his days by the philosophers of Alexandria. The repeated failures, which had already attended the various attempts to discover its fountains, convinced the geographers of Greece and Rome that success was impossible, and that it was the will of the gods to conceal from all generations this great secret of nature. Homer, in language sufficiently ambiguous, describes it as a stream descending from heaven. Herodotus made in- quiry in relation to it, which was met by the answer of the Crocots, or Cretans, that they could not give reason to relinquish the attempt as altogether fruitless. Alexander the Great, and Ptolemy Philadelphus, en- gaged in the same undertaking, and despatched per- sons well qualified by their knowledge for the arduous task; but who, nevertheless, like the great father of history himself, travelled and inquired in vain. Pomp- onius Mela was doubtful whether it did not rise in the country of the Antipodes. Pliny traced it in im- agination to a mountain in the Laos Mauritania, while Euthemenes was of opinion that it proceeded from the borders of the Atlantic, and penetrated through the heart of Africa, dividing it into two con- tinents. Some of these ancient writers have ap- proached a conjecture, which also found supporters at a later period, that the Nile proceeded from the east, and might be identified with one of the great rivers of Asia. (Russell's Egypt, p. 32, seqq.)—The numer- ous reports of the natives, who call the Mountains of the Moon by the Arabic version of the same name Iblu ′lamari, though generally pronounced Ibal ′lamari, which would mean "blue mountains," seem to agree in placing the sources of the Abiad several degrees north of the equator, at nearly an equal dis- tance between the eastern and western coasts of Af- rica. But we have no positive information either as to the true position of the sources or of the mountains themselves. The Bahir el Azrek, or Blue River, which was long supposed to be the main branch of the Nile, and which Bruce also took for such, has three sources in the high land of Gojam, near the vil- lage of Gecch, southwest of Lake Dembeta, in 10° 50' 25" N. lat., and 36° 55' 30" E. long., according to Bruce's observations. The sources of the Azrek ap- pear to have been visited by Father Faz, and per- haps by other missionaries, long before Bruce. The vast importance attached to that discovery has become much diminished since the information which we have acquired of the Abiad, whose sources are still unex- plored, and still involved in that mystery which the ancients represent as hovering about the fountainheads of the Nile. The Tacazze rises in the high mountains of Lasta, in about 11° 40' N. lat., and 39° 40' E. long. Its sources were known to the Jesuit missions in Abyssinia, and have been visited of late years by Pearce.—The Nile, from the confluence of the Tacazze down to its entrance into the Mediterranean, a distance of 1200 geographical miles measured along the course of the river, receives no permanent streams; but in the season of rains it has wadys or torrents overflowing it from the mountains that lie between it and the Red Sea. North of Argo, in 19° 40' N. lat., the Nile enters the province of Dar Mahass, in Lower Nubia, where it forms a cataract or rapid, com- monly called the third cataract by those who ascend the river. After several windings, the river inclines to the northeast; and near 22° N. lat. forms the sec- ond cataract, called Wady Halfa, after which it passes the splendid terrace of Iparum, where, by flowing its course among its islands, and forming a figure A to the Nile, at about 24° N. lat., it descends for the last cataract, between granite rocks which cross the river near Assuan, the ancient Syene. After en- tering the boundaries of Egypt, the Nile flows through the whole length of that country, which it waters and fertilizes, especially the Delta. Egypt, in fact, owes to the Nile its very existence as a productive and habita- ble region, and accordingly, in olden times, the people worshipped the beneficent river as their tutelary god.

1. The Delta.

The Nile, issuing from the valley a few miles north of Cairo, enters the wide low plain which, from its tri- angular form and its resemblance to the letter Δ, re- ceived from the Greeks the name of the Delta. The river, at a place called Batu el Bahara, near the an- cient Cercernus, divides into two branches, the one, called the Red Delta, or Bahr Araba, the other, called the Black Delta, or Bahr Asyut, from its marshy character. The two arms or branches were anciently called the Ca- nopic and Phantisic. The figure of the Delta is now determined by these two branches, although the culti- vated plain known by that name extends considerably beyond to the east and west, as far as the sandy des- ert on either side. In ancient times, however, the triangle of the Delta was much more extensive at its apex, as the right side was formed by the Pelusiac
branch, which, detaching itself from the Nile higher up than the Damietta branch, flowed to Pelusium, at the eastern extremity of Lake Menzaleh. This branch is now in a great measure choked up, though it still serves partly for the purpose of irrigation. During our winter months, which are the spring of Egypt, the Delta, as well as the valley of the Nile, looks like a delightful garden, smiling with verdure, and enameled with the blossoms of trees and plants of late spring, the year the soil becomes parched and dusty; and in May the suffocating khamseen begins to blow frequently from the south, sweeping along the fine sand, and causing various diseases, until the rising of the beneficent river comes again to refresh the land.—For some remarks on the fertility of Egypt, and of the Delta in particular, consult the article Egypt, § 1, page 35, col. 1.

2. Mouths of the Nile and Inundation of the River.

The ancients were acquainted with, and mention, seven mouths of the Nile, with respect to the changes in which, the following are the most established results.

1. The Canopic mouth, now partly confounded with the canal of Alexandria, and partly lost in Lake Itko. 2. The Bolbitine mouth at Rosetta. 3. The Sebennytic mouth, probably the opening into the present Lake Itko. 4. The Bolbitine mouth at Damietta. 5. The Mendesian, which is lost in the Lake Menzaleh, the mouth of which is represented by that of Dibek. 6. The Tanitic or Satic, which corresponds to the Moea canal. 7. The Pelusiac mouth seems to be represented by what is now the most easterly mouth of Lake Menzaleh, where the ruins of Pelusium are still visible.—The rise of the Nile, in common with that of all the rivers of the torrid zone, is caused by the hot season. The rains of six days annually, the table-land of Abyssinia and the mountainous country that stretches from it towards the south and west, This phenomenon is well explained by Bruce. "The air," he observes, "is so much rarified by the sun during the time he remains at a temperature above the tropic of Capricorn, that the winds, loaded with vapours, rush upon the land from the Atlantic on the west, the Indian Ocean on the east, and the cold streams of the Antarctic. The concavity of the surface of the earth, and the great quantity of vapour gathered, as it were, into a focus, and, as the causes continue to operate during the progress of the sun northward, a vast train of clouds proceeds from south to north, which are sometimes extended much farther than at other periods.

In April all the rivers in the south of Abyssinia begin to swell; in the beginning of June they are all full, and continue so while the sun remains stationary in the tropic of Cancer."—The rise of the Nile begins in June, about the summer solstice, and it continues to increase till September, overflowing the lowlands along its course. The Delta then looks like an immense marsh, interspersed with numerous islands, with villages, towns, and plantations of trees, just above the water. Should the Nile rise a few feet above its ordinary elevation, the inundation sweeps away the mud-built cottages of the Arabs, drowns their cattle, and involves the whole population in ruin. Again, should it fall short of the customary height, bad crops and dearth are the consequences. The inundation, after having remained stationary for a few days, begins to subside, and about the end of November most of the fields are left dry, and covered with a fresh layer of rich brown slime: this is the time when the lands are put under culture. It would seem that the Nile has no regular passage through a considerable extent of rich soil before it attains the ranges which bounds the western extremity of Nubia. The tropical rains collect on the table-lands of the interior, where they form immense sheets of water, or temporary lakes. When these have reached a level high enough to overflow the boundaries of their basins, they suddenly send down into the rivers an enormous volume of fluid impregnated with the soft earth over which it has for some time stagnated. Hence the momentary pauses and sudden renewals in the rise of the Nile; hence, too, the abundance of fertilizing slime, which is never found so copious in the waters of rivers that owe their increase solely to the tropical rains. The result of these causes of the rise of the Nile, upon analysis, gives nearly one half of argilla-ceous earth, with about one fourth of carbonate of lime; the remainder consisting of water, oxide of iron, and carbonate of magnesia. On the very banks the slime is mixed with much sand, which it loses in proportion as it is carried farther from the river, so that, at a certain distance, it consists almost entirely of pure argil. This mud is employed in several arts among the Egyptians. It is used for excellent bricks, as well as into a variety of vessels for domestic uses. It enters, also, into the manufacture of tobacco-pipes. Glass-makers employ it in the construction of their furnaces, and the country people cover their houses with it. —We have already remarked, that Egypt is indebted for her rich harvests to the mould or soil which is deposited by the river during the annual flood. As soon as the waters recede, the floods which are thus formed become partly detached. If it has imbibed the requisite degree of moisture, the process of agriculture is neither difficult nor tedious. The seed is scattered over the soft surface, and vegetation, which almost immediately succeeds, goes on with great rapidity. Where the land has been only partially inundated, course is had to irrigation, by means of which many species of vegetables are raised, even during the dry season. Harvest follows at the distance of about six or eight weeks, according to the different kinds of grain, leaving time, in most cases, for a succession of crops wherever there is a full command of water. —The swellings of the Nile, in Upper Egypt, are from 30 to 35 feet; at Cairo they are 23 feet, according to Humboldt, but, according to Girard, 7.419 metres, nearly 244 feet; in the northern part of the Delta, owing to the breadth of the inundation and the artificial channels, only 4 feet. The object of clarifying the water of the Nile is by means of powdered almonds. It holds a number of substances in a state of imperfect solution, which are in this way precipitated. Its water is then one of the purest known, remarkable for its being easily digested by the stomach, for its salutary qualities, and for all the purposes to which it is applied, Europeans, as well as natives, are loud in their eulogies on the agricultural and salubrious facilities of the water of the Nile. Giovanni Finati, for example, who was no stranger to the limpid streams of other lands, sighed for the opportunity of returning to Cairo, that he might once more drink its delicious water, and breathe its mild atmosphere. Maillet, too, a writer of good credit, remarks, that it is among waters what Champagne is among wines. The Muscovites themselves acknowledge, that if their prophet Mohammed had tasted it, he would have supplanted heaven for a terrestrial immortality, that he might enjoy it for ever. (Russell's Egypt, p. 48, 52, seqq.)

3. Depositions of the Nile, and increase of the Delta.

We have here a very interesting topic of inquiry. It is an observation as old as the days of Herodotus, that Egypt is the gift of the Nile. This historian imagined that all the lower division of the country was formerly a deep bay or arm of the sea. Some of the writers of his time had been on the same errand of research. Homer illustrates his reasoning on this subject by supposing, that the present appearance of the Red Sea resembles exactly the aspect which Egypt must have exhibited in its original state; and that if the Nile by any
NILUS.

means were admitted to flow into the Arabian Gulf, it would, in the course of 20,000 years, convey into it such a quantity of earth as would raise its bed to the level of the surrounding coast. I am of opinion, he subjoins, that this might take place even within 10,000 years; and the rivers received where they are now are less than this be choked up with mud, in the time in which passed before our age, by a stream so great and powerful as the Nile? (2, 11.)—The men of science who accompanied the French expedition into Egypt undertook to measure the depth of alluvial matter which has been actually deposited by the river. By sinking pits at different intervals, both on the banks of the current and on the outer edge of the stratum, they ascertained satisfactorily that the soil declines from the margin of the stream towards the foot of the hills; secondly, that the thickness of the deposite is generally about ten feet near the river, and decreases gradually as it recedes from it; and, thirdly, that beneath the mud there is a bed of sand analogous to the substance which has at all times been brought down by the flood of the Nile. This convex form assumed by the surface of the valley is not peculiar to Egypt. Bruce observed it near the river, where the quantity of soil transported by the current is greater than that which is washed down by rain from the neighbouring mountains. The plains which skirt the Mississippi and the Ganges present in many parts an example of the same phenomenon.—An attempt has likewise been made to ascertain the rate of the annual deposition of alluvial substance, and thereby to measure the elevation which has been conferred upon the valley of the Nile by the action of its river. But on no point are travellers less agreed than in regard to the change of level and the increase of land on the seacoast. Dr. Shaw and M. Savary take their stand on the one side, and are resolutely opposed by Bruce and Volney on the other. Herodotus informs us, that in the reign of Meris, if the Nile rose to the height of eight cubits, all the lands of Egypt were sufficiently watered; but that in his own time—not quite 900 years afterwards—the country was not covered with less than fifteen or sixteen cubits of water. The addition of soil, therefore, was equal to seven cubits at the least, or 126 inches in the course of 900 years. “But at present,” says Dr. Shaw, “the river must rise to the height of twenty cubits—and it usually rises to 24 cubits—before the whole country is overflowed. Since the time, therefore, of Herodotus, Egypt has gained new soil to the depth of 320 inches. And if we look back from the reign of Meris to the time of the Deluge, and reckon that interval by the same proportion, we shall find that the whole perennial accession of the soil, from the Deluge to A.D. 1721, must be 500 inches; that is, the land of Egypt has gained 41 feet 8 inches of soil in 4072 years. Thus, in process of time, the country may be raised to such a height that the river will not be able to overflow its banks; and Egypt, consequently, from being the most fertile, will, for want of the annual inundation, become one of the most barren, as is proved by the whole phenomena of the Nile.” (Shaw’s Travels, vol. 2, p. 235.)—We shall see presently that this fear on the part of the learned traveller is entirely without foundation. Were it possible to determine the mean rate of accumulation, a species of chronometer would be thereby obtained for measuring the lapse of time which has passed since any monument, or other work of art in the neighbourhood of the river, was originally founded. In applying this, however, it must be remembered that the surface of the soil has been raised more than is generally supposed. Proceeding on this ground, the French philosophers hazarded a conjecture respecting a number of dates, of which the following are some of the most remarkable: 1. The depth of the soil round the colossal statue of Memnon, at Thebes, gives only 0.106 of a metre (less than four inches) as the rate of accumulation in a century, while the mean of several observations taken in Egypt gives 0.476 of a metre, or rather more than four inches. But the basis of the statue of Memnon was certainly raised above the level of the inundation by being placed on an artificial mound; and excavations made near it show that the original height of that was six metres (19.686 feet) above the level of the soil. A similar result is obtained from examining the foundations of the palace at Luxor. Taking, therefore, 0.126 of a metre, or rather more than four inches, as the annual rate of accumulation of the soil, the divisor, the quotient, 4760, gives the number of years which have elapsed since the foundation of Thebes was laid. This date, which, of course, can only be considered as a very imperfect approximation to the truth, carries the origin of that celebrated metropolis as far back as 2960 years before Christ, and, consequently, 612 years before the Deluge, according to the reckoning of the modern Jews. But the numbers given are relevant, in a particular sense. The text and the Septuagint version, which, carrying the Deluge back to the year 3716 before Christ, make an interval of seven centuries and a half between the flood and the building up of the earth. Though no distinct account of the age of that city is to be found in the Greek historians, it is clear from Diodorus that they believed it to have been begun in a very remote period of antiquity. (Diod. Sic., 1, 18.)—2. The rubbings collected at the foot of the obelisk of Luxor indicates that it was erected fourteen hundred years before the Christian era.—3. The causeway which crosses the plain of Siout furnishes a similar ground for supposing that it must have been founded twelve hundred years anterior to the same epoch. —4. The pillar at Helopolis, six miles from Cairo, appears, from evidence strictly analogous, to have been raised about the period just specified; but, as the waters drain off more slowly in the Delta than in Upper Egypt, the accumulation of alluvial soil is more rapid than higher up the stream; the foundations, therefore, of ancient buildings in the former district will be at a great a depth below the surface as those of much greater antiquity are in the middle and upper provinces. But it is obvious that to form these calculations with such accuracy as would render them less liable to dispute, more time and observation would be requisite than could be given by the French in the space of a few years during which they continued in undisturbed possession of Egypt. One general and important consequence, however, arising from their inquiries, can hardly be overlooked or denied; namely, that the dates thus obtained are as remote from the extravagant chronology of the ancient Egyptians, as they are consistent with the testimony of both sacred and profane history, with regard to the early civilization of that interesting country.—But, let it be observed, here, that it is at all events impossible to ascertain, in the first instance, whether the measures referred to by the ancient historians were in all cases of the same standard; and, secondly, whether the deposition of soil in the Egyptian valley did not proceed more rapidly in early times than it does in our days, or even that it has done ever since its effects first became an object of philosophical inquiry. For it is quite possible that the rate of accumulation has increased, and its extent towards the sea greatly increased since the age of Herodotus, we might safely infer, as well from the great infusion of earthy matter which is held in suspension by the Nile when in a state of flood, as from the analogous operation of all large rivers, both in the old continents and in the new. There is, in truth, no good reason for questioning the fact mentioned by Dr. Shaw,
that the mud of Ethiopia has been detected by soundings at the distance of not less than twenty leagues from the coast of the Delta. Nor yet is there any substantial ground for apprehending, with the author just named, that, in process of time, the whole country may be raised to such a height that the river will not be able to overflow its banks; and, consequently, that Egypt, from being the most fertile, will, for want of the annual inundation, become one of the most barren parts of the universe. "According to an approximate calculation," observes Wilkinson, "the land about the first or lowest cataract has been raised nine feet in less than seven years from Cairo about five feet ten inches; while at Rosetta and the mouths of the Nile, where the perpendicular thickness of the deposit is much less than in the valley of Central and Upper Egypt, owing to the great extent, east and west, over which the inundation spreads, the rise of the soil has been comparatively imperceptible." As the bed of the Nile always keeps pace with the elevation of the soil, and the proportion of water brought down by the river continues to be the same, it follows that the Nile now overflows a greater extent of land, both east and west, than in former times; and that the superficies of cultivable land in the plains of Thebes and of Central Egypt continues to increase. All fears, therefore, about the stoppage of the overflowing of the Nile are unfounded. (Russell's Egypt, p. 37, seqq.—Engel. Us. Knovel, vol. 16, p. 294.)

4. Change in the course of the Nile.

The Nile is said by Herodotus (2, 99) to have flowed, previously to the time of Menes, on the side of Libya. This prince, by constructing a mound at the distance of 100 stadia from Memphis, towards the south, diverted its course. The ancient course is not unknown at present, and may be traced across the desert, passing through the Natrix River. It is called by the Arabs Bahr-bela-Match. "The first branch of the Nile... over water," and presents itself to the view in a valley which runs parallel to that containing the lakes just mentioned. In the sand with which its channel is everywhere covered, trunks of trees have been found in a state of complete petrifaction, and also the vertebral bone of a large fish. Jasper, quartz, and petrosilex have likewise been observed scattered over the surface of the original bed of this river as it flowed through the valley of the Dry River," observes Russell (Engel. Us. Knovel, vol. 16, p. 302, seqq.), "is admitted by the most intelligent among modern travellers. M. Denon, for example, regards as proofs of this fact the physical conformation of the adjoining country; the existence of the bed of a river extending to the sea, but now dry; its depositions and incrustations; its extent; its bearing towards the north on a chain of hills which run east and west, and turn off towards the northwest, sloping down to follow the course of the valley of the dry channel, and likewise the Natron Lakes. And, more than all the other proofs, the form of the chain of mountains at the north of the Pyramid, which shuts the entrance of the valley, and appears to be cut perpendicularly, like almost all the mountains at the foot of which the Nile flows at the present day; all these offer to the view a channel left dry, and its several remains. (Denon, vol. 1, p. 159.)

The course of the river of Egypt penetrated into the Libyan desert, even to the westward of Fayoum, is rendered probable by some observations recorded in the second volume of Belzoni's Researches. In his journey to the Oasis of Ammon, he reached, one evening, the Bahri-bela-Match. 'This place,' he remarks, 'is singular, and deserves the attention of the geographer, as it is a dry river, and has all the appearance of water, the banks being as high and as full of stones and sand. There are several islands in the centre; but the most remarkable circumstance is, that at a certain height upon the bank there is a mark evidently as if the water had reached so high; the colour of the materials, also, above that mark, is much lighter than that of those below. And what would almost determine that there has been water there is, that the island has the same mark, and on the same level with that on the banks of the supposed river. I am at a loss to conjecture how the course of this river is so little known, as I only found it marked near the Natron Lakes, taking a direction of northwest and southeast, which does not agree with its course here, which is from north to south, as far as I could see from the summit of a high rock on the west side of it. The Arabs assured me that there are two or three different courses, and that it is the same which passes near the Natron Lakes. If this be the case, it must pass right before the extremity of the lake Moris, at the distance of two or three days' journey in a western direction. This is the place where several petrified stumps of trees are found, and many pebbles, with moving or quick water inside.' (Belzoni, vol. 2, p. 183.)

Ninus, I, son of Belus, and king of Assyria. His history is known to us merely through Ctesias, from whom Diodorus Siculus and Justin have copied. (Hoyne, de Fontibus, Diod. Sic., p. liii., seqq., vol. 1, ed. Bip.) Ctesias and Julius Africanus make him to have ascended the throne 2048 B.C., and from the narrative of Diodorus he would appear to have been a warlike prince, who signalized himself by extensive conquests, reducing under his sway the Babylonians, Armenia, and Assyrians, and even the whole of the eastern world. Even Egypt felt his sway. In his expedition against the Bactrians he met with the famous Semiramis, with whom he united himself in marriage. After completing his conquests, Ninus, according to the Greek writers, erected for his capital the celebrated city of Nineveh (vid. Ninus II.—Compare, however, remarks under the article Assyria), and on his death was succeeded by Semiramis, who was interred in a tomb of vast dimensions over his grave. Much of what is stated respecting this monarch is either purely fabulous, or else various legends respecting different conquerors are made to unite in one. He occupies the boundary between fable and history. (Cites., ap. Diod. Sic., 2, 1, seqq.—Cites., Fragm., ed. Bahr, p. 389, seqq.—II. The capital of the Assyrian Empire, called by the Greeks and Romans Ninus (Ninus), but in Scripture Nineveh, and in the Septuagint, Ninus. See also the trait of the secret in the plains of Aturia, on the Tigris (Strabo, 737. Herod., 1, 193.—Id., 2, 150.—Post, 6, 1, and not on the Euphrates, as Diodorus states on the authority of Ctesias. (Diod. Sic., 2, 3.) 'The Hebrew and Greek writers concur in describing Nineveh as a very large and populous city. Jonah speaks of it as "an exceeding great city, of three days' journey" (Jon., 3, 3), and states that there were more than 120,000 persons in it at their state; as many as from their left (4, 11). Rosenmüller and other commentators suppose this to be a proverbial expression to denote children under the age of three or five years, and accordingly estimate the entire population at two millions; but the expression in Jonah is too vague to warrant us in making any such conclusion. Strabo says that it was larger than Babylon (Strab., 737); but he did not place it on the right account of Diodorus (2, 3), who states that it was 490 stadia in circumference, it must have been about the same size as Babylon. (Herod., 1, 178.) The walls of Nineveh are described by Diodorus as 100 feet high, and so broad that three chariots might be driven on them abreast. Upon the walls stood 1500 towers, each 200 feet in height, and the whole was said as being so as to be deemed impregnable. (I. Diod., 3, 2. Nahun, c. 2.) According to the Greek writers, Ninus was founded by a king of the same name (vid. Ninus I.); but in the book of Genesis it is stated to have been built: X
Ninus.

...Assur, or, if we adopt the marginal translation, by Nimrod. (Vid. Assyria.) Possibly Nimrod and Ninus were the same,—Nineveh was the residence of the Assyrian monarchs (2 Kings, 19, 36; Isaiah, 37, 37. —Compare Strabo, 84, 737), and it is mentioned with great importance, whence Nahum speaks of its merits as more than the stars of heaven (3, 16). But, as in the case of most large and wealthy cities, the greatest corruption and licentiousness prevailed, on account of which Nahum and Zephaniah foretold its destruction.—Nineveh, which for 1450 years had been mistress of the East, to whom even Babylon itself was subject, was first taken in the reign of Sardanapalus, B.C. 747, by the Medes and Babylonians, who had revolted under their governors Arbaces and Belesis. This event put an end to the first Assyrian empire, and divided its immense territory into two lesser kingdoms, those of Assyria and Babylon. But Nineveh itself suffered little change from this event; it was still a great city; and, soon after, in the reign of Esarhaddon, who took Babylon, it became again the capital of both empires, which continued 64 years; when Nabopolassar, a general of the Medes, and father of Nebuchadnezzar, seized on Babylon and proclaimed himself king: after which Nineveh was no more the seat of government of both kingdoms. It was, in fact, now on the decline, and was soon to yield to the rising power of its great rival. The Medes had again revolted, and in the year 633 B.C., their king Cyaxares, having defeated the Assyrians in a great battle, laid siege to Nineveh; but its time was not yet come, and it was delivered on this occasion by an invasion of Media by the Scythians, who obliged Cyaxares to withdraw his army to repel them. But in the year 612, having formed an alliance with Nabopolassar, king of Babylon, he returned, accompanied by that monarch, to the siege of Nineveh, and finally took the city. The prophecy made by Zephaniah, of its utter destruction, must refer to this latter event. Strabo says that it fell into decay immediately after the dissolution of the Assyrian monarchy; and this account is confirmed by the fact, that, in the history of Alexander the Great, the place is not mentioned, although in his march along the Tigris, previous to the battle of Arbela, he must have been very near the spot where it is supposed to have stood. Under the Roman emperors, however, we read of a city named Ninus (Tacit., Ann., 12, 13) or Ninive (Amm. Marcill., 18, 7); and Abulpharag, in the 13th century, mentions a castle called Ninive.

—Little doubt can arise that Ninive was still in existence near the Tigris, and yet the exact site of that once mighty city has never been clearly ascertained. On the eastern bank of the Tigris, opposite the town of Mosul, and partly on the site of the modern village of Nujia or Nebbi Yunus, are some considerable ruins, which have been described at different periods by Benjamin of Tudela, Thevenot, Tavernier, &c., as those of ancient Nineveh. But it is thought by others, following the real from the supposed, that the ruins must have been mistaken; and that the remains described by them were those of some city of much smaller extent and more recent date than the Scripture Nineveh. Mr. Kinneir, who visited this spot in the year 1808, says, that "On the opposite bank of the Tigris (that is, over against Mosul), and about three quarters of a mile from that stream, the village of Nujia and sepulchre of the prophet's being go to point the spot of Nineveh:—"A city being afterward erected near this spot, bore the name of Nineus; and, in my opinion, it is the ruins of the latter, and not of the old Nineveh, that are now visible. I examined these ruins in November, 1810, and found them to consist of a rampart and a fosse, forming an oblong square not exceeding four miles in compass, if so much. I saw neither stones nor rubbish of any kind. The wall is, on an average, 20 feet in height; and, as it is covered with grass, the whole has a striking resemblance to some of the Roman intrenchments which are extant in England." Mr. Kinneir's opinions are in everything worthy of respect, and with regard to these ruins, the traces of the wall point them out very evidently as belonging to some city or building of much less dimensions than ancient Nineveh; while these traces being visible at all would seem to place their date long subsequent to that of the structure of the Scripture Nineveh. It cannot be supposed, that while the walls of Babylon, which were at least as high and as thick, according to the concurrent testimony of historians, as those of Nineveh, and were entire long after the destruction of that city, it was ever intended that those of Nineveh should still be visible. Mr. Rich, indeed, supposes that he has discovered in these intrenchments the ruins of the palace of Nineveh; which he describes as an enclosure of a rectangular form, corresponding with the cardinal points of the compass; the area of which is not larger than that of the town of Mosul. The boundary of this enclosure may, he says, be perfectly traced all around, and looks like an embankment, with a mound of earth, and has attached to it, and in its line at several places, mounds of greater size and solidity. The first of these forms the southwest angle; and on it is built the village of Nebbi Yunus, where they show the tomb of the prophet Jonas. The next, and largest of all, which Mr. Rich supposes to be the monument of Ninus, is situate near the centre of the western face of the enclosure, and is joined, like the others, by the boundary wall; the natives call it Kounyuk Tepce. Its form is that of a truncated pyramid, with regular steps sides and a flat top, and composed of stones and earth; there being sufficient of the latter to admit of cultivation by the inhabitants of Kounyuk, which is built at the northeast extremity. This mound, according to measurements taken by Mr. Rich, is 178 feet high, 1850 long from east to west, and 1147 broad from north to south. The other mounds on the boundary wall offer nothing worthy of remark; but out of one of these, a short time since, an immense block of stone was dug, on which were sculptured the figures of men and animals; cylinders, like those of Babylon, with some other antiquities, and stones of very large dimensions, are also occasionally dug up. Whether these ruins be really what Mr. Rich supposes them to be, or a part only of the more recent city referred to by Mr. Kinneir, cannot be decided. It is quite clear, however, that whatever structure there was, the remains, their dimensions will not allow us to consider them as those of the walls of Nineveh; they must either be those of a palace, as supposed by Mr. Rich, or of some other stupendous building of that city, or of a more modern one erected on this spot; and the uncertainty which exists on this point is alone sufficient to testify the fulfilment of the prophecies. In fact, these prophecies run through the whole of their entire completion; "an utter end is made of the place," and the true site may for ever be sought in vain. (Mansford's Scripture Gazetteer, p. 339, seqq.—Drummond's Originals, p. 172, seqq.)

NINAS, a son of Ninus and Semiramis, king of Assyria, who succeeded his mother on her voluntarily abdicating the crown. (Vid. Semiramis.) Altogether inhuman and heartless, like her own father, he, under the pretext of devotion to the gods, poisoning his own wife, and abdicated himself up to a life of seclusion and pleasure, in which he was imitated by his successors. (Diod. Sic., 2, 21.)

NIÖSE, daughter of Tantalus, king of Lydia, was married to Amphion, but she whom she had, according to Ovid and other ancient writers, seven sons and seven daughters. This is the most commonly received opinion, though Homer (Il., 24, 602) and others give the number variously. The pride of Niobe at having this
NIOBE

numerous offspring was so great, that she is said to have insulted Latona, the mother of Apollo and Diana, by refusing to offer at the altars sacred to her in honour, declaring that she herself had a better claim to the adoration and sacrifice than one who was the mother of only two children. Latona, indignant at this insolence and presumption, called upon her children for revenge. Apollo and Diana heard her prayer, and obeyed the entreaty of their outraged parent. All the sons of Niobe fell by the arrows of Apollo, while the daughters, in like manner, met their death from the hands of Diana. These sons and daughters escaped the common fate.

She was the wife of Neleus, king of Peleus. This terrible judgment of the gods so affected the now heart-sickened and humiliated Niobe, that she was changed by her excessive grief into a stone on Mount Sipylos, in Lydia. Amphion also, in attempting, in retaliation, to destroy the temple of Apollo, perished by the shafts of that deity. (Ovid, Met., 6, 146, seqq.—Hygin., fab. 9. —Apol., 3, 6, 6.—Soph., Antig., 823, seqq.) Pausanias says, that the rock on Sipylos, which was by the name of Niobe, and which he had visited, “was merely a rock and precipice when one came close up to it, and bore no resemblance at all to a woman; but at a distance you might imagine it to be a woman weeping with downcast countenance.” (Pausan., I., 21, 3.)—The myth of Niobe has been explained by Volcker and others in a physical sense. According to these writers, the name Niobe (Niob, i.e. Nisbia or Nisiea) is derived from Niobes, she is the daughter of the Flourishing—Chloris, and the mother of the Green—Chloris. In her, then, we may view the young, verdant, fruitful earth, the bride of the sun (Amphin), beneath the influence of whose fecundating beams she pours forth vegetation with lavish profusion. The revolution of the year, however, denoted by Apollo and Diana (other forms of the sun and moon), withers up and destroys her progeny; she falls from the stone (the torrents and frosts of winter); but Chloris, the Green—Chloris, in her spring clothes the earth anew with its smiling verdure. (Volcker, Myrth. der Jap., p. 359.—Keightley’s Mythology, p. 338.)—The legend of Niobe and her children has afforded a subject for art, which has been finely treated by one of the greatest ancient masters of sculpture. It consists of a series, rather than a group, of figures of both sexes, in all the disorder and agony of grief and suffering; and yet, however, the hapless Niobe, in the midst of her suffering, and with an expression of deep grief, her eyes turned upward, implores the justly-offended gods to moderate their anger and spare her offspring, one of whom, the youngest girl, she strains fondly to her bosom. It is difficult, however, by description, to do justice to the various excellence exhibited in this admirable work. The arrangement of the composition is supported, adjusted, by the contour and the pavement, or pediment. The figure of Niobe, of colossal dimensions compared with the other figures, forms, with her youngest daughter pressed to her, the centre. The execution of this interesting monument of Greek art is attributed by some to Scopas, while others think it the production of Praxiteles. Pliny says it was a question which of the two was the author of it. The gigantic statue of Apollo Sosianus at Rome. (Pilgr., 30, 10.—Silius, Phal. 325.) This tremendous piece of sculpture is now in the gallery of the Grand-duke of Tuscany at Florence, though some regard it merely as a copy.—The subject of Niobe and her children was a favourite one also with the poets of antiquity. Besides the beautiful allusion to it in the Antigone of Sophocles (v. 823, seqq.), and the equally beautiful story in Ovid (Met., 6, 146, seqq.), there are numerous epigrams in the Greek Anthology, several of which have great merit, and appear to be descriptive either of the group of figures which still exists, or of some similar group. (Enryel. Us. Knoel., vol. 16 p. 238.)

NIPHAVES, a range of mountains in Armenia, forming the southwestern boundary of Taurus, and lying to the southeast of the Araxas Palus, or Lake Van. It was, therefore, a subject of the Araxa. (Geog. 3, 30—Horat., Od., 2, 9.—Metel., 1, 15.—Pliny, 5, 27.—Ann. Marcell., 23, 6.—Cellarius, Geogr., vol. 2, p. 321.)

NIREUS, a king of Naxos, son of Charops and Agnia. He was one of the Grecian chiefs during the Trojan war, and was celebrated for his beauty. (Hom., II, 2, 671.—Horat., Od., 3, 20, 15.)

NISAEA, I. a city and district of Upper Asia, near the sources of the river Ochus, now the Margab. According to Strabo, it would appear to have been situated between Parthiemia and Hervania. (Strab., 611. —Compare Mannert, Geogr., vol. 5, pl. 1, p. 100.) The same writer states elsewhere (p. 509) that it belonged in part to Hervania, and was in part an independent district. The city of Nissa, however, is generally considered to have been the chief city of Parthiemia, becoming such, no doubt, on the first spread of the Parthian power. Mannert, in consequence, seeks to identify it with the Assak (probably Arskak) of Isidorus of Charax (p. 7). The famous Nisanian horses are themselves borne from this city. (D’Anville gives Nisa as the modern name of the city of Nissaea, and remarks that it “has before it vast plains, proper for the Parthian Nomades, or shepherds, as they were characterized. And it was thence that the Turkish Sultan, ancestor of the Ottoman family, departed for the banks of the Euphrates” vol. 2, p. 69, Am. ed.). Mannert merely places Nissa near the modern Herat, town of Zar. The harbour of Megara, situate on the coast in the Arabian Gulf, and connected with the main city by long walls. The citadel was also called by the same name, and stood on the road between Megara and the port. It was a place of considerable strength. The cycloptides states (4, 66) that the citadel might be cut off from the city by effecting a breach in the long wall. (Cramer’s Anc. Greece, vol. 2. p. 433.)

NISINUS, a large and populous city of Mesopotamia, about two days journey from the Tigris, the ruins of a spacious and fertile plain at the foot of Mons Masis, and on the river Mygdonius. The name was changed by the Macedonians into Antiochia Mygodonii (‘Antioicja Mygodonii’), but this new appellation only lasted as long as their power. When the Macedonian sway ceased, the old name of Nisibis was resumed. The Romans became acquainted with it for the first time during the war carried on by Lucullus against the King of Armenia (Plut., Vit. Lucull.,) and it was at first represented as a large and populous city, situate in the midst of a fruitful territory. It was taken and plundered by Lucullus. (Dio Cass., 35, 7.) The Parthians subsequently became masters of the place, and held it until the time of Trajan, who took it from them. (Dio Cass., 68, 23.) Hadrian gave back to the Parthians the provinces conquered from them, and yet Nisibis appears as a Roman city in the 2nd century. The province of a pleasant and fertile plain at the foot of Mons Masis, and on the river Mygdonius. The name was declared it a Roman colony, and the capital of the province: he also adorned and strengthened it. (Dio Cass., 75, 3.—fd., 30, 6.—Spanheim, de usu N., p. 606.) From this period it remained, for the space of two centuries, a strong bulwark of the Roman empire in this quarter, against which all the attacks of the Persian power were directed in vain, with the exception of the Persian power were directed in vain, with the exception of the Persian power were directed in vain, with the exception of the Persian power were directed in vain, with the exception of the Persian power were directed in vain, with the exception of the Persian power were directed in vain, with the exception of the Persian power were directed in vain.
After the death of Julian, Nisibis was ceded to Sapor, king of Persia, by Jovian, and remained henceforth for the Persians, what it had thus far been to the Romans, a strong frontier town. The latter could never regain possession of it. — The modern Nisibin or Nisibas, which occupies the site of the ancient city, is represented as being little better than a mere village. (Mannert, Geogr., vol. 5, pt. 2, p. 297, seqq.)

Nisus, I. a son of Hyrcacus, born on Mount Ida, near Troy. He came to Italy with Euryalus, and was united by ties of the closest attachment to Euryalus, son of Opheltes. During the prosecution of the war with Turnus, Nisus, to whom the defence of one of the entrances of the camp was intrusted, determined to rally forth in search of tidings of Euryalus. Euryalus accompanied him in this perilous undertaking. Fortune at first seconded their efforts, but they were at length surprised by a Latin detachment. Euryalus was cut down by Volscus; the latter was as immediately despatched by the avenging hand of Nisus; who, however, overpowered by numbers, soon shared the fate of his friend. (Virg. Aen., 9, 176, seqq.—Compare Aen., 5, 334, seqq.—II. A king of Megara. In the war waged by Minos, king of Crete, against the Athenians, on account of the death of Androgeus (vid. Androgeus), Megara was besieged, and it was taken through the treachery of Scylla, the daughter of Minos, who, having made a long hair growing on his head; and as long as it remained uncut, so long was his life to last. Scylla, having seen Minos, fell in love with him, and resolved to give him the victory. She cut off her father's precious lock as he slept, and he immediately died: the town was then taken by the Cretans. But Minos, instead of rewarding the maiden, disgusted with her unnatural treachery, tied her by the feet to the stern of his vessel, and thus dragged her along until she was famished. (Apollod., 3, 15, 1.—Schol. ad Eurip., Hippol., 1195.) Another legend adds, that Nisus was changed into the bird called the Sea-eagle (däurero), and Scylla into that named Ciris (keipos), and that the father continuously the daughter to punish her for her crime. (Ovid., Met., 8, 145.—Virg., Cir.—Id. Geogr., 1, 403.) According to Eschylus (Chorop., 609, seqq.), Minos bribed Scylla with a golden collar. (Knightley's Mythology, p. 348.) This island in the Ægean, one of the Sporades, about sixty stadia north of Telos. Strabo describes it as a lofty and rocky isle, with a town of the same name. Mythologists pretended, that this island had been separated from Cos by Neptune, in order that he might hurl it against the giant Polybotes. (Strabo, 448.—Apollod., 1, 6, 2.—Pausan., 1, 2.—Steph. Byz., s. v.) Herodotus informs us that the Nisrians were subject at one time to Artemisia, queen of Caria (7, 99). The modern name is Nises. From this island is procured a large number of good mill-stones. (Cramer's Anc. Greece, vol. 3, p. 418.)—II. The chief town in the island of Carpathus. (Strabo, 489.)

Nitrêa, a daughter of Apries, king of Egypt, married by his successor Amasis to Cambyses. Herodotus states (3, 1), that Cambyses was instigated to ask in marriage this daughter of Apries, certain plots against him from Amasis had compelled to go to Persia when Cyrus, the father of Cambyses, was suffering from weak eyes, and requested the Egyptian king to send him a man skilled in medicine. The physician did this, either that Amasis might experience affliction at the loss of his daughter, or provoke Cambyses by a refusal. Amasis, however, did not send his own daughter, but Nitetis, who discovered the deception to Cambyses, which so exasperated that monarch that he determined to make war on Amasis. Prideaux denies the truth of this account, on the ground that Apries having been dead above forty years, no daughter of his could have been young enough to be acceptable to Cambyses. Larcher, however, endeavours to reconcile the apparent improbability, by saying, that there is great reason to suppose that Apries lived a prisoner many years after Amasis had dethroned him, and that, therefore, Nitetis might have been more than 20 or 22 years of age when she was sent to Cambyses. (Larcher, ad Herod., i. e.)

Nîtròbas, a people of Greece, of Celic origin, but who settled among the Aquisani. Their chief city was Nitiobrigum or Agennium, on the Garunna, now Agen, and their territory answers to l'Agennais, in the Department de Lot et Garonne. (Cas., B. G., 7, 7.—Lemaire, Ind. Geogr., ad Cas., s. v.)

Nîtròcris, I. a queen of Babylon, generally supposed to have been the wife of Nebuchodonosor or Nebuchadnezzar, and grandmother, consequently, to Labynetus or Naboneodus, who is called in Daniel Belshazzar or Beltsazar. (Heeren, Idem., vol. 1, pt. 2, p. 154—Larcher, ad Herod., 1, 184.) Wesseling, however, and others, make her the queen of Evilmerodon, son of Nebuchadnezzar. (Wesseling, ad Herod., i. e.)—Herodotus informs us, that Nîtôcris, in order to render her territories more secure from the Medes, altered the course of the Euphrates, and made it so very winding that it came in its course three times to Arderica. (Vid. Arderica.) She also faced the banke of the Tigris, and made a lake, which has since been called Scylla, in the island of Babylon, with burned bricks, and connected the two divisions of the city by a bridge of stone. (Herod., 1, 186.) The historian likewise informs us, that she prepared a sepulchre for herself over the most frequented gate of the city, with an inscription to this effect, that if any of her successors should find himself in want of money, he should open this sepulchre and take as much as he might think fit; but that, if he were not reduced to real want, he ought to forbear: otherwise he would have cut his throat. The sepulchre remained untouched till the reign of Darius; who, judging it unreasonable that the gate should remain useless to the inhabitants (for no man would pass under a dead body), and that an inviting treasure, moreover, should be rendered unserviceable, broke open the sepulchre: but, instead of money, he found only the remains of Nîtôcris, and the following inscription: "Hadst thou not been inexcusably covetous, and greedily sought what did not belong to thee, thou wouldst not have violated the sepulchres of the dead." (Herod., 1, 186.) Plutarch tells the same story of Semiramis. (Apophth., Reg. et Duc.—vol. 6, p. 561, ed. Reiske.) The custom, however, of depositing treasures in the tombs of deceased monarchs was very common with the ancients. Solomon did this in the case of David's sepulchre; and Hyrcanus, and after him Herod, both opened the tomb and obtained large portions of treasure from it. (Jos., Ant. Jud., 7, 15.—Id. ib., 13, 8.)—II. A queen of Egypt, who succeeded her brother. The Egyptian, having dethroned and put to death the latter, set over them. She took a singular revenge, however, for the death of her brother; for, having constructed a large subterranean apartment, and having invited to an entertainment in it those individuals who had been most concerned in his brother's murder, She let in a pit to the bottom of the room, and put them into it. She then destroyed herself. (Herod., 2, 100.) Heeren takes this Nîtôcris for a queen of Æthiopian origin: so instance of a reigning queen being found among the pure Egyptian dynasties. (Idem., vol. 2, pt. 1, p. 412.) Jablonski approves of the interpretation which Eratosthenes gives to the name Nîtoris, according to which it is equivalent to Ἀθηνή νεκροτος. (Jablonski., Voc. Égypt., p. 182.) Nîtôla, a city of Egypt, to the west of the Canopic branch of the Nile, in the desert near the lakes which afforded niter. It gave name to the Nitricic nome.
receiving its own from the adjacent Natron lakes. Many Christians were accustomed to flee hither for refuge during the early centuries, and cut into the church.

— Id., 31, 10.)

VIARIA, I. one of the Fortunate Insular, off the western coast of Mauritania Tingitana. It is now the island of Tenerife. The name Nivaria has reference to the snows which cover the summits of the island for a great part of the year. It was also called Con-

vallis. (Plin. 4, 36.) — II. A city of Hispania Tar-

racum, consisting of the three towns, and to the north of Caucu. (Hist. Anti., 435.)

Noctiluca, a surname of Diana, as indicating the goddess that shone during the night season. The op-

ithet would also appear to have reference to her temple's being adorned with lights during the same period. This temple was on the Palatine Hill. Compare the remark of Varro: "Luna, quod sola luteo noctu: sicut ea dicit Noctiluca in Palatio, nam ibi notus lucet templum." (L. L., 4, 10.)

Nola, one of the most ancient and important cities of Campania, situate to the northeast of Neapolis. The earliest record we have of it is from Heceatus, who is cited by Stephanus of Byzantium (s. v. No1a). That ancient historian, in one of his works, described it as a city of the Ausones. According to some accounts, Nola was said to have been founded by the Etrurians. (Cf. Pausan. 10, 21. 13.) Others, again, represented it as a colony of the Chalcidians of Chalcis (G. Chalcis, 20, 1, 13.) If this latter account be correct, the Chalcidians of Cuma and Neapolis are doubtless meant. All these conflicting statements, however, may be reconciled by admitting that it successively fell into the hands of these different people. Nola after-

ward appears to have been occupied by the Sam-

nites, together with other Campanian towns, until they were expelled by a body of Roman hosts, under Numa Pompilius. (Cf. Liv., Ann. 16, 50; Strabo, 6, 5, 249.) Though situated in an open plain, it was capa-

ble of being easily defended, from the strength of its walls and towers; and we know it resisted all the ef-

forts of Hannibal after the battle of Cannae, under the able direction of Marcellus. (Liv., 23, 14, seqq. —

Cic., Brut., 3.) In the Social war this city fell into the hands of the confederates, and remained in their possession nearly to the conclusion of the war. It was, however, by the treaty of Apelles, and, after the battle, by the samnite garrison, was burned to the ground. (Liv., Epit., 89. — Appian, Bell. Civ., 1, 42. — Vell. Paterc., 2, 18.) It must have risen, however, from its ruins, since subsequent writers reckon it among the cities of Campania, and Frontinus reports that it was colonized by Vespasian. (Plin., 3, 5. — Front., de Cot.) Here Augustus breathed his last, as Tacit-

us and Suetonius remark, in the same house and chamber in which his father Octavius had ended his days. (Tacit., Ann. 1, 5, et 9. — Suet., Aug., 99.)

The modern name of the place is the same as the an-

Aulus Gellius relates a foolish story, that Virgil had introduced the name of Nola into his Georgics (2, 225), but that, when he was refused permission by the inhabitants to lead off a stream of water into his garden (apud seque in loco antiquo aquae omnem ad lusum servantem), he obliterated the name of the city from his poem, and substituted the word ora. (Aul. Gell., 7, 20. — Compare Serv., ad Aen., 7, 740. — Philarg., ad Georg., l. c.) Ambrose Leo, a native of Nola, has taken the trouble of refuting the idle charge (de Nola, 1, 2. — Schott., Script. Hist. Ital. 704. — Consult Heyne, ad Georg., l. c. — Var. Lect. — Voss, ad Georg., l. c.) The only particular of any value to be obtained from the testimony of the ancients is, that an estate by Virgil's farm in the neighbourhood of Nola, in what were called the Campi Phlegrai. (Voss, l. c.)

Nomades (Nomadés), a general name among the Greeks for the pastoral nations of antiquity, which lived in wandering tribes, as the Scythians, Arabs, &c. They are called in the Palladius, Aul. Clem., and in the name in this work (Bell. Jug., 18), without but the least propriety. The term Nomades is evidently of Phoenician origin. Le Clerc explains Numides by Ne-

moum, "wanderers" (Cleric., ad Gen., 10, 6.)

Nomentum, a city of Italy, in the territory of the Sabines, and to the northeast of Rome. It was a col-

ony of Alba (Dion. Hal., 2, 53), and therefore origi-

nally, perhaps, a Latin city (Lis., I, 38), but from its position it is generally attributed to the Sabines. The no-

mentum was finally conquered, with several other towns, A.U.C. 417, and admitted to the participation of the privileges granted to Latin municipal cities. (Liv., 8, 14.) It was, however, but an insignificant place in the time of Propertius (4, 10). Its territory was nevertheless long celebrated for the produce of its vineyards; and, hence, in the time of Seneca and Pliny, ws a find that land in this district was sold for enormous sums. The former had an estate in the vic-

inity of this town, which was his favourite retreat. (Epist., 104. — Plin., 14, 4. — Columella, R. R., 3, 3.)

The wine of Nomentum is commended by Athen-

aeus (1, 49) and Martial (1, 85). The poet had a farm near this spot, to which he makes frequent allu-

sions. (Cramer's Anc. Italy, vol. 1, p. 305.)

Noncarius, a town of Arcadia, to the northwest of Pheneus, and on the confines of Achaia. It is a

mountainous town, situated among considerable anticlinal rocks, over which the celebrated torrent Styx precipitated itself to join the river Crathis; the waters were said to be poisonous, and to possess the property of dissolving metals and other hard substances exposed to their ac-

tion. (Pausan., 8, 18. — Plin., 2, 104. — Vitrus., 8, 3.)

Herodotus describes the Nonacrian Styx as a scanty rill, distilling from the rock, and falling into a hollow basin surrounded with rocks, "which are only a little removed from Nonacrias. (Compare Stephan. Byz., s. v. Nonas.'') Pouqueville informs us, that the fall of the Styx, which is now called Maurrom, or the "Black Water," is to be seen near the village of Vounari, and somewhat to the south of Calavrita. He describes it as streaming in a sheet of foam from one of the loftiest precipices of Mount Chelmos, and afterward uniting with the Crathis in the Valley of Ptoelemais. (Voyage de M. de Cassini, 2, 174.)

The city of Nonacria is sometimes called a city of "Arcadian." Thus, Ovid employs it in speaking of Evander, as being an Arcadian by birth (Fast., 5, 97), and also of Atalanta. (Met., 6, 426.)

Nonius Marcellus, a Latin grammanian. The

period when he flourished is not exactly known. It has been supposed, however, from his citing no writer later than Apuleius, that he lived towards the end of the second century. Hamburger believes him to have been contemporary with Constantine (Zuverl. Nachr. von den vorn. Schriftst., vol. 5, p. 783), while Fucuccius, relying on a passage of Aulusiius (Profes. Burdeg., c. 18), where mention is made of a Marcellus, a grammanian of Narbo, thinks that our poet was born earlier than the beginning of the 5th century. (Fuc., de ineriti ac decr. ling. Lat. senect., p. 302.) Nonius Marcellus is surnamed, in some manuscripts, Peripateticus Tiburienensis, because perhaps he had studied the philosophy of Aristotle in the library ap-

pended to Hadrian's Tiburtine villa. He has left be-

hind him a work entitled "De proprietate sermonum," divided into nineteen chapters, which treats of matters connected principally with the subject of archaology. (Greek., Auct. Lat. ling., p. 492.) In the extracts from the ancient grammari-
NONNUS.

various for three while together any have question.

Nonnus in the Greek literature, of the uncertainty.

But lived in that city, where all the Greek erudition centered during the first ages of the Christian era.—Was he born a Christian, or did he embrace Christianity after he had reached a certain age? We have here a question about which the ancients have left us in complete uncertainty. The author of the Dionysiaca must have been a pagan; for it is difficult to believe that any Christian, even supposing that he had made the Greek mythology a subject of deep study, would have felt inclined to turn his attention to a theme, in treating of which he must inevitably shock the feelings and incur the censure of his fellow-Christians. And yet Nonnus composed also a Christian poem.—It is probable, then, that he was at first a pagan, and embraced the new religion at a subsequent period of his life. But here a new difficulty presents itself. How comes it that no Christian writer of the time makes mention of the conversion of a man who must have acquired a high reputation for learning? To explain this silence, it has been supposed that Nonnus was one of those pagan philosophers and sophists, who were a party in the tumult at Alexandria, which had been excited by the intolerance of the bishop Theophilos. To escape the vengeance of their opponents, some of these philosophers expatriated themselves, others submitted to baptism. If Nonnus was in the number of the latter, it may easily be conceived that the ecclesiastical writers of the day could derive no advantage to their cause from his conversion. (Weichert, de Nonno Panopolitano, 20.) This hypothesis fixes the period of Nonnus's flourishing at the close of the fourth century, and the commencement of the fifth century. He was then contemporary with Synesius. Now, among the letters of this philosopher, there is one (Ep. 43, ad Anastas.) in which he recommends a certain Sosena, son of Nonnus, a young man who, he says, has received a very careful education. He speaks, on this same occasion, of the misfortune into which Sosena's father had fallen, of losing all his property, and adds, that this very misfortune was perfectly well the case of one who had been involved in the troubles at Alexandria, which had for their result the pillaging of the dwellings of the pagans.—We have already remarked that there exist two poems composed by Nonnus: one of these, the fruit, probably, of his old age, is a stranger to profane literature; it is a paraphrase on the gospel of St. John. The other is entitled Dionysiaca or Bacchanaia. It is in 48 books or canons, and gives an account of the adventures of Dionysus or Bacchus, from the time of his birth to his return from his expedition into India; and the early books also contain, by way of introduction, the history of Europa and the exploits of Cadmus, and other well-known mythological stories. There are few works about which the merits of the learned have been more divided than this last-mentioned production of Nonnus. He who would be a competent judge in this matter, must possess as much taste as erudition, and, unfortunately, these two qualities are not often found united in the same individual. The first editor of Nonnus, Faleckenberg, a philologist of the 18th century, carried his admiration so far as to place the canons on a level with Homer. Julius Caesar Scaliger even preferred him to Homer; while Politian and Muretus, without carrying their enthusiasm to such an extreme, held him, however, in the highest estimation. On the other hand, Nicholas Heinimi, Peter Cunnuus, Joseph Scaliger, and Rapin, allowed Nonnus no merit whatever. The truth probably lies between these two extremes.—In order to judge fairly of Nonnus, we must take into account the circumstances of his position. The car- verse was, as far as we know, only one of a regular epic poem, and must consider the Dionysiaca merely as a species of exercise or declamation (ἐνέργεια) in verse, which has served the author for a groundwork on which to display the fruits of vast reading and research. If we view the poem in this light, we shall find that it is not even wanting in a regular plan, and that there reigns throughout it all that order and method which suffice for such a production. A man of taste very probably would never have selected such a theme, yet Nonnus has displayed great spirit in the management of its details. His work is distinguished by a great variety of fables, by the beauty of the images employed, and by the correctness of the sentiments which it contains; yet his style is unequal, sometimes bordering on simplicity, often emphatic; sometimes easy and graceful, but much more frequently languid, prolix, and trivial. (Consult Ousearck, Nonnus von Panopolis, der Dichter, &c., Petersb., 1817, 4to.) But, whatever may be the rank which is to be assigned to Nonnus in the list of poets, his Dionysiaca certainly possess a strong interest for us as a rich storehouse of mythological traditions. It is sufficient, in order to appreciate the importance of the work, when considered in this light, to recollect the great number of poems of every kind of which Bacchus and his mysterious rites were the subject, and of which nothing remained to us but the mere titles of a few fragments preserved by the erudition of Nonnus. Among these works that have thus perished may be enumerated five tragedies, bearing each the title of "The Bacchantes," and having for their authors Aeschylus, Cleophon, Iophon, Xenocles, and Epigenes; two other tragedies of Aeschylus, namely, "The Bassarides" and "Semele;" a piece by Carcinus; three pieces of Aeschylus, Euripides, and Iophon, nothing now remains of but the mere titles of. Two other tragic pieces entitled "Alkamas;" a satyrlic drama under the same name by Xenocles; various comedies entitled the "Bacchantes," by Epicharmus, Antiphanes, Diocles, and Lyssippus; together with a host of dithyrambs, and other works both in prose and verse.—Herrmann remarks, that Nonnus ought to be regarded as the restorer of the hexameter. After the example of Homer, that poet turned his attention to this metrical form, and put the penthemimeral pause on the first syllable of the third foot (called the penthemimeral pause in the language of the grammarians); they did not, however, at the same time, consider that the verses of the Iliad and Odyssey are rich in dactyls, and that their own hexameters were rendered harsh by reason of the many spondees they contained. What also interfered with the harmony of their lines was the practice of regarding as short
This Nonnus must not be confounded with the preceding. (Bentley on Phalaris, p. 80, ed. 1816.) He was the author of a commentary on Gregory Nazianzen's invectives against Julian, and of another on the funeral discourse pronounced by the same father in memory of St. Basil. The first of these commentaries, if they strictly deserve this name, contains a collection of all the mythological notices and legends to which the bishop in the course of his two works against Julian: the second contains all the notices of Greek history introduced into the funeral discourse on St. Basil. An edition of the former was given by Montague, Eton, 1610, 4to, and of the latter in Creuzer's Opuscula Mythologica, etc., Laps., 1817. 8vo. Bentley gives some amusing examples of the mistakes committed by this Nonnus. (Diaz on Phal., i. c.—III. (sometimes called Nonnus) A Greek phil.-Lepidus, one of Sulla's generals, it was commonly titled "Epitome of the whole Medical Art." Nothing is known of his life, except that he composed his work at the command of the Emperor Constantine Porphyrogenitus (to whom also it is dedicated), who was most probably the seventh of that name, and who died A.D. 959. The real name of Nonnus is supposed by Freind, Sprengel, and Bernard to have been Theophonas, as he is called in the New Testament, and the name is found to have lived in the 10th century. In three MSS. the work is anonymous, and there is only one which mentions the name of Nonnus. This epitome is divided into 297 chapters, and contains a short account of most diseases and their treatment. It contains very little that is original, and is almost entirely compiled from Aetius, Alexander Trallianus, and Paulus Aegina, from whom whole sentences are translated with hardly any variation. There are only two editions of this work. The first is by Martius (who writes the author's name Nonnus), Argent., 1568, 8vo. The last and best is by Bernard, and was published after his death in two vols. 8vo, Gotica et Amst., 1794, 1795, with copious and learned notes by the editor. 

Norba, a town of Latium, northeast of Antium, the position of which will nearly agree with the little place now called Norma. It is mentioned among the early Latin cities by Pliny (3, 5); and Dionysius of Halicarnassus speaks of it as no obscure city of that nation (7, 13). It was early colonized by the Romans as an advantageous station to check the invasions of the Volsci. (Liv., 2, 34.) The zeal which it displayed, at a later day, in the cause of Marius, drew upon it the vengeance of the adverse faction. Besieged by them, it surrendered itself to him by treachery; but the unsatisfied inhabitants chose rather to perish by their own hands than become the victims of a bloody conqueror. (Appian, Bell. Civ., 1, 94.) The name of C. Norbanus, who was descended from a distinguished family of this city, occurs frequently in the history of those disastrous times as a conspicuous leader on the side of Marius. (Cramer's Anc. Ital., vol. 2, p. 105.) III. Cassarea, a city in the northwestern part of Lusitania. It was also called Colonia Norbanesia or Cassarina. (Plin., 4, 22. — Id., 4, 35.) The ruins of the palace are still visible in the vicinity of the modern town. (Idem. Geogr., v, p. 293.) Norba, C. native of Norba, of a distinguished family, and a conspicuous leader on the side of Marius. (Vid. Norba I.)

Noricum, a province of the Roman empire, was bounded on the north by the Danube, on the west by Vindelicia and Rhaetia, on the east by Pannonia, and...
on the south by Illyricum and Gallia Cisalpina. It was separated from Vindelicia by the Cenus or Issus, and from Gallia Cisalpina by the Alpes Carnic peace or full, but he is difficult to determine the limits between Noricum and Pannonia, as they differed at various times. During the later periods of the Roman empire, Mount Celius and part of the river Muris (Mur) appear to have formed the boundaries, and Noricum would thus correspond to the modern Styria, Carinthia, and Salzburg, and to part of Austria and Bavaria. A geographer who wrote in the reign of Constantius, the son of Constantine the Great, includes Germania, Raetia, and the Agri Noricius in one province. (Bode, Mythographi Vacant., vol. 2.) Noricum is not mentioned by name in the division of the Roman empire made by Augustus, but it may be included among the Eparchies of the Caesar. (Strabo, vii.)—Noricum was divided into two nearly equal parts by a branch of the Alps, called the Alpes Norici. These mountains appear to have been inhabited from the earliest times by various tribes of Celtic origin, of whom the most celebrated were the Norici (whence the country obtained its name), a remnant of the Taurisci. Noricum was conquered by Augustus; but it is uncertain whether he reduced it into the form of a province. It appears, however, to have been a province in the time of Claudius, who founded the colony Sabaria, which was afterward included in Pannonia. (Plin., iii. 27.) It was under the government of a procurator. (Tacit., Hist., i. 11.) From the "Notitia Imperii" we learn, that Noricum was subsequently divided into two provinces, Noricum Pannonicum and Noricum Mediaterraneum, which were separated from each other by the Alpes Norici. In the former of these, which lay along the Danube, a strong military force was always stationed, under the command of a Dux. In addition to the Norici, Noricum was inhabited in the west by the Sevaces, Alans, and Ambisontii, and the east by the Ambidravi or Ambdrani: but of these tribes we know scarcely anything except the names. Of the towns of Noricum the best known was Noreia, the capital of the Taurisci or Norici, which was besieged in the time of Caesar by the powerful nation of the Boii. (Cass. B. G., i. 5.) It was subsequently destroyed by the Romans. (Plin., iii. 23.) The only other towns worthy of mention were, Juvarum (Salzburg), in the western part of the province; Boiodurum (Innstadt), at the junction of the Inn and Danube; and Ovilia, or Ovilaba, or Ovilava, which was the capital of Noricum. It was founded by Marcus Aurelius. —The iron of Noricum was in much request among the Romans (Plin., vii. 41), and, according to Polybius, gold was once found in this province in great abundance. (Polyb. ap. Strab., vi. 208.—Encycl. Us. Knmz., vol. 16, p. 27A.)

NOTRI, a name given to the goddess of Fortune among the Volscini. (Livy, vii. 3.) Tertullian calls her Nersia. (Apolog., c. 24.)

Notho, a daughter of Darius Ochus among the Greeks. (Vid. Ochus.)

NOTRIUM, the harbour of Colophon, in Asia Minor. After the destruction of Colophon by Lysimachus, and the death of that prince, Notium became a flourishing city, and would seem from some authorities to have assumed the name of Colophon instead of its own. New Colophon certainly occupied a different site from the ancient city. (Plin., vi. 29, ep. 22, p. 27, 30.) It was situated from the Gulf of Smyrna, and corresponding to the Latin Auster. The term vorto itself is supposed to be derived from the same root with voris, "dampness" or "humidity," with reference to the damp and humid character of the south wind in both Greece and Italy. (Aul. Gell., ii. 22.) It is also spoken of by the ancients as a stormy wind. (Horat., Epod., 10, 19.—Virg., En., 6, 355.—Ovid., Her., 2, 12.)

NORVARIA, a town of Cisalpine Gaul, about ten miles northeast of Vercelli, and to the west of Mediolanum. The modern name is Novara. It was situate on a river of the same name, now la Gogna. (Tacit. Hist., i. 70.—17 n. 1.)

NOVÆRIUM, a town of the Ubii, on the west of the Rhine, now called Neu, and situate near Cologne. (Tacit. Hist., iv. 26.) Ptolemy calls itNonavise, and Gregory of Tours Numisma. The name Nove- rium occurs among the writers of the middle ages. (Pertz., Mon. Germ. Hist., vol. i, p. 218, 459.)

NOVIODEMN, i. a city of the Bituriges Cubi, in Gallia Aquitanica. (Cass., B. G., 7, 12.) D'Anville and Mannert agree in placing its site near the modern Novan. The more correct location, however, would be Nouan-le-Fuzelier. (Lemarié, Ind. Geogr., ad Cass., e. v.)—II. A city of Gallia Lugdunensis, on the river Liger or Loire. It corresponds to the modern Nexus. (Cass., B. G., 7, 55.) In the Itin. Ant., p. 367, it is called Nivirum.—III. A city of the Sue- sones, in Gallia Belgica, now Sossesa. It was more commonly called Augusta Suessonum or Sussonium. (Cass., B. G., 2, 12.—Bischoff and Müller, Wörterbuch der Geogr., p. 139.)

NOVIOMAGUS, or NOUMAGUS, i. or NOVIMAGUS, a city of the Batavi, now Nimmen. In the Peutinger Table it is called Niumaga.—II. The capital of the Lexubi or Lixovii, in Gallia Lugdunensis. According to Mannert, it corresponds to the modern Caen; others, however, are in favour of the modern Lisieux. —III. Or Augusta Nemetum, the capital of the Neme- tuses, now Spires.—IV. A city of the Bituriges Vivisci, in Gallia Aquitanica. According to Mannert, it is now Castillon, not far from the mouth of the Gironde. Reichard, however, decides in favour of Castrinam de Medoc.—V. A city of Britain, the capital of Regni, the remains of which may be traced at Woodcote, near Croydon. (Mannert, Geogr., vol. 2, pt. ii, p. 159.)—VI. A city of the Treveri, on the Moselle, now Novagum or Nenugam.—VII. A city of the Ver- mandui, in Belgica Secunda, now Noyon. It is also called Noviomagus or Novionum. (Perz., Mon. Germ. Hist., vol. i, p. 30, 63, 146, &c.)

N O X, one of the most ancient deities, daughter of Chaos. From her union with her brother Erebus, she gave birth to the Day and the Light. She was also the mother of the Parca, Hesperides, Dreams, of Discord, Death, Monus, Fraud, &c. She is called by some of the poets the mother of all things, of gods as well as men, and was worshipped with great solemnity. A black sheep and a cock, the latter as announcing the approach of day, were sacrificed to her. —Night was represented under various forms: as riding in a chariot preceded by the constellations, with wings, to denote the rapidity of her course; as traversing the firmament seated in her car, and covered with a black veil studded with stars. Sometimes her veil seems to be floating on the wind, while she approaches the earth to extinguish the sun and make day dark; sometimes she holds in her hand. She has often been confounded with Diana, or the moon: and her statue was placed in the temple of that goddess at Ephesus. (Hygin., Praef.—Serv. ad Virg., En., 6, 250.—Tibull, 3, 4, 17.—Virg., En., 5, 721, &c.)

NUCERIA, i. a town of Cisalpine Gaul, north of Brissium, now Lucca. (Piol. p. 64.)—II. A city of Umbria, so called by Pliny, which is said to have been situated on the Flaminian Way. It is now Nocera. It is noticed by Strabo for its manufacture of wooden vessels. (Strab., 227.)—III. A town of Campania, about twelve miles north of Nola, now Nocera de' Pagani. The appellation of Alfterna was commonly attached to it, to distinguish it from the other places of the same name. (Liv., 10, 41.—Plin., 3, 5.) It was said to have been founded by the Pelasgi Sarastes. (Com., ap. Serv. ad En., 7, 738.) Nuceria was
Numa Pompius, the second king of Rome, was, according to traditional authority, of the Sabine town of Cores. On the death of Romulus, the senate at first chose no king, and took upon itself the government of the state; but, as the people were more oppressively treated than before, they insisted that a king should be appointed. A contest, however, arose, respecting the choice of a monarch, between the Romans and Sabines, and it was at length agreed that the latter should appoint a king, and the former a rex. Their choice fell upon Numa Pompius, who was revered by all for his wisdom, which, according to a popular tradition, he had derived from Pythagoras. Numa would not, however, accept the sovereignty till he was assured by the auspices that the gods approved of his election. Instructed by the Camena or Nymph Egeria, he founded the whole system of the Roman religion; he increased the number of augurs, regulated the traffic in sacred vessels, took the Flamines, the Vestal Virgins, and the Salii. He forbade all costly sacrifices, and allowed no blood to be shed upon the altars, nor any images of the gods to be made. In order to afford a proof that all his institutions were sanctioned by divine authority, he is said to have given a plain entertainment in earthenware dishes, to the noblest among his subjects, during which, upon the appearance of Egeria, all the dishes were suddenly filled with golden vessels, and the food into viands fit for the gods. Numa also divided among his subjects the lands which Romulus had conquered in war; and he secured their inviolability by ordering landmarks to be set on every portion, which were consecrated to Terminus, the god of boundaries. He divided the artisans, according to their trades, into nine companies or corporations. During his reign, which is said to have lasted thirty-nine years, no war was carried on; the gates of Janus were always kept closed, and a temple was built to Faith. He died of gradual decay, in a good old age, and was buried under the hill Janiculum; and near him, in a separate tomb, were buried the books of his laws and ordinances. —Such was the traditional account of the reign of Numæ Pompius, who belongs to a period in which it is impossible to separate truth from fiction. According to Niebuhr, and the writers who adopt his views of Roman history, the reign of Numa is considered, in its political aspect, only as a representation of the union between the Sabines and the original inhabitants of Rome, or, in other words, between the tribes of the Titientes and the Rameses. (Liv., 1, 18, seqq.—Dion. Hal., 2, 58, seqq.—Cic. de Repub., 2, 12, seqq.—Plut., Vit. Num.—Histories of Rome, by Niebur, Arnold, and Mallet.—Encycl. Us. Knowl., vol. 16, p. 363.)

Numantia, a celebrated town of the Celtiberi in Spain, on the river Durus (now the Douro), at a distance of five miles from its source. (Strabo, 162.—Appian, Rom. Hist., 6, 91.) It appears to have been the capital of the Arevaci (Appian, 6, c. 46, 66, 76.—Plut., 2, 6), but Pliny states that it was a town of the Pelendones, a people who lived a little to the north of the Arevaci. Numantia was situate on a steep hill of moderate height. According to Florus (2, 18), it possessed no walls, but was surrounded on three sides by very thick woods, and could only be approached on one side, which was defended by ditches and palisades. (Appian, 6, c. 76, 91.) It was twenty-four stadia in circumference. The site of this place has been a subject of considerable dispute; but it appears most probable that its ruins are those near the town of Planeta de Don Garay. (Uberti, Geog., vol. 2, p. 455.)

Numantia is memorable in history for the war which it carried on against the Romans for the space of fourteen years. (Flor., 2, 18.) Strabo states that the war lasted twenty years; but he appears, as Cassaubon has remarked, to include in this period the contest which was carried on by Virilius. (Strab., 165.—Cassaub., ad loc.) The Numantines were originally induced to engage in this war through the influence of Virilius. They were first opposed by Quintus Pompeius, the consul, B.C. 141, who was defeated with great slaughter (Oros., 5, 4), and who afterward offered to make peace with them, on condition of their paying thirty talents of silver. This negotiation was broken off by M. Popilius, who succeeded Pompeius, B.C. 139. Popilius, however, did not meet with any better success than his predecessor; he was ignominiously defeated, and obliged to retire from the country. His successors, Mancinus, Emilius, Lepidus, and Piso, met with similar disasters; till at length the Roman people, alarmed at the long continuance of the war, appointed the younger Scipio Africanus consul, B.C. 134 (twelve years after the destruction of Carthage), for the express purpose of conquering the Numantines. After levying a large army, he invested the place; and having the town surrounded by a wall, he made the Numantines pass the siege into a blockade, and obtained possession of the place, B.C. 133, at the end of a year and three months from the time of his first attack. The Numantines displayed the greatest courage and heroism during the whole of the siege; and, when their provisions had entirely failed, they set fire to the city, and perished amid the flames. (Appian, lib. 6.—Flor., 2, 17, seqq.—Liv., Epit., 57.—Vell. Patere, 2, 4.—Encycl. Us. Knowl.)

Numenius, I. A Greek philosopher of the Platonic school, who is supposed to have flourished about the beginning of the third century of our era. He was born at Apamea in Syria, and was regarded as an oracle of wisdom. Both Origen and Plotinus mention him with respect. He was the author of a treatise entitled Peri tis tōn "Akhāmatikōn περὶ Πλατωνικών διασ-τάσεων; "Of the arrangement among the Academic philosophers respecting Plato," Eusebius has preserved a few fragments of this work. (Schöl, Hist. Lit. Gr., vol. 5, p. 107.)—II. A Greek rhetorician, who flourished in the time of the Antonines. He wrote two works, which have been printed in the Al-dine Rhetorical Collection. (Schöl, Hist. Lit. Gr. vol. 4, p. 328.)—III. An epigrammatic poet, a native of Tarus. (Jacobs, Catal. Poet. Epigpr., p. 926.)

Numenius, Marcus Aurelius, succeeded to the throne conjointly with his elder brother Carinus, after the death of their father Carus, at the beginning of A.D. 284. Numerianus was with the army in Mesopotamia at the death of Probus; but, instead of following up the advantage which his father had gained over the Persians, he was compelled by the army to abandon the conquests which had been already made, and to retreat to Syria. During the rest of his reign, he was more intent on confining the himself to the darkness of a litter, which was strictly guarded by the pretorians. The administration of all affairs, civil as well as military, devolved on Arius Aper, the pretorian prefect, his father-in-law. The army was eight months on its march from the banks of the Tigris to the Thracian Bosporus, and during all that time the imperial authority was exercised by the emperor, who never appeared in the camp except on the orders of his solders. Reports at length spread among them that their emperor was no longer living; and when they reached the city of Chalcedon, they could not be prevented from breaking into the imperial tent, where they found only his corpse. Suspicion naturally fell upon Arius; and
NUM

an assembly of the army was accordingly held, for the purpose of avenging the death of Numerianus, and electing a new emperor. Their choice fell upon Dio-
clesian, who, immediately after his election, put Arrius
to death with his own hands, without giving him an op-
opportunity of justifying himself, which might, perhaps,
have turned, had he been more prudent, to the new emperor.
The virtues of Numerianus are mentioned by most of his biog-
raphers. His manners were mild and affable; and he was
celebrated among his contemporaries for eloquence and
poetic talent. He successfully contended with
Nemesianus for the prize of poetry; and the senate
voted to him a statue, with the inscription, "To Nu-
merianus Caesar, the most powerful orator of his times."

VIA, a Roman road, traversing the north-
ern part of Sammum. It communicated with the Va-
erian, Latin, and Appian Ways, and, after crossing
through part of Apulia, fell into the Via Aquilia in

NOMIDES, a small river of Latium near Lavinum,
in which, according to some authorities, Æneas was
drowned. (Ovid, Fast., 8, 647.—Virg., Æn., 7, 158,
segv. 62, 300.—Ma, 14, 268, seqv.) It is now the
Fiume Torto. (Nibby, Viaggio Antiquario, vol. 2, p. 266.)

NUMIDA, Plotius, a friend of Horace, who had re-
turned, after a long absence, from Spain, where
he had been serving under Augustus in the Cantabrian
war. The poet addresses one of his odes to him, and
bids his friends celebrate in due form so joyous an
event. (Horat., Od., 1, 36.)

NUMIDIA, a country of Africa, bounded on the east
by masses Propria, on the north by the Mediterranean,
and on the west by Mauritania. The Roman province of Numidia was, however,
of much smaller extent, being bounded on the west by the
Ampagass, and on the east by the Tusca (or Zain),
and thus corresponded to the eastern part of Algiers.
The Numidians were originally a nomadic people;
and hence some think they were called by the Greeks
Nomades (Νομάδες), and their country Nomadia (Νο-
μαδία), whence came by corruption Numidae and Nu-
midia. (Compare Polyb., 37, 3.—Sall., Bell. Jug.,
18.—Plin., 5, 2.) Others, however, are in favour of a
Phcenician etymology. (Vid. Nomades.)—When the
Greek and Roman writers speak of the Numidians,
the term is usually limited to the two great tribes of
the Massæyll and Massylli, the former of which ex-
tended along the northern part of Africa, from the Mu-
lucha on the west to the Ampagass on the east; and
the latter from the Ampagass to the territories of Car-
thage. When the Romans first became acquainted with the Numidians, which was during the second
Punic war, Syphax was king of the Massæylli, and
Gala of the Massylli. Masinissa, son of Gala, suc-
cceeded to the throne after various turns of fortune,
and, siding with the Romans during the latter part of
the second Punic war, yielded them very important
assistance and acquired a large share of the
power and wealth which was eventually
ably all the dominions of his rival Syphax, and a consider-
able part of the Carthaginian territory, so that his king-
dom extended from the Mulucha on the west to Cy-
renaica on the east, and completely surrounded the
small district which was left to the Carthaginians on
the coast. (Appian, 8, 106.) Masinissa laid the
foundation of a great and powerful state in Numidia.
He introduced the arts of agriculture and cultivated life,
amassing a considerable wealth, and was
appointed army. (Vid. Masinissus.)—Masinissa left
two sons, Micipsa, Mastanabal, and Gulussa. The
two latter died soon after their father, but Micipsa lived to B.C. 118, and bequeathed the kingdom to his two
sons Adherbal and Hiempsal, and to his nephew Ju-
gurtha. The two former soon fell victims to the am-
bitious schemes of the last-mentioned individual, but
he himself, no long time thereafter, paid the penalty
of his crimes with his own life. (Vid. Jugurtha.)—After
the capture and death of Jugurtha (B.C. 106), the king-
dom of Numidia appears to have been given by the
Romans to Hiempsal II. (Hirtius, Bell. Afr., 56),
who was probably the nephew of Hiempsal the son of
Adherbal, and was regarded by his contemporaries as
by his son Juba I., who took an active part in the civil
contest between Pompey and Caesar, and had the mis-
fortune to espouse the party of the former. After the
victory of Thapsus, therefore, Caesar declared the whole
kingdom of Numidia to be Roman territory, and Sal-
lust the historian was sent thither as its governor.
(Appian, Bell. Civ., 2, 100.) The western district,
around the city of Cirta, was bestowed on Sittius, in
consideration of his services to Caesar. (Vid. Sittius.)
The country, however, still remained in an unsettled
state, a prey to intestine commotions, until it fell into
the hands of the triumvir Lepidus, and after him into
those of Augustus, under the latter of whom the aspect
of affairs was completely changed; and a more regular
administration introduced into Numidia. Juba, son of
the first Juba, an intelligent prince, who had been ed-
ucated at Rome, and had gained the friendship of Au-
gustus, received back from that emperor his father's
former kingdom, but with very important alterations.
The western part of Numidia, included between the
rivers Mulucha and Ampagass, which had formed the
old territory of the Massæylli and Syphax, together
with all Mauritania, were assigned him for his king-
dom, which now assumed the general name of Mauri-
tania. At a later period, in the reign of Claudius, the
western portion of Numidia, from the river Ampagass,
and the inner part of Mauritania as far as the
Malva, were formed into a Roman province under the
name of Mauritania Caesariensis, from Casarea, its
capital; the remainder of Mauritania received the
epithet of Tingitana. In the eighth century Numidia
fell into the hands of the Saracens, and is now nomin-
ally under the Ottoman porto. The Numidians were
a brave and hardy race, and remarkable for their
skill in horsemanship. Hence the epithet of inferni applied
them by Virgil, and poetically denoting a nation who
dispens with the use of bridle. (Mela, 1, 6—Plin., 5, 3.—Virg., Æn., 4, 41.—Encycl. Us.
Knool., vol. 16, p. 369.—Mannert, Geogr., vol. 10,
pt, 2, p. 192, seqv.)

NUMITOR, I. a son of Procas, king of Alba, and
brother of Amulus. (Vid. Amulus.)—II. A son of
Phorcys, who fought with Turus against Æneas.
(Virg., Æn., 10, 342.)

NUMIDIA, a goddess whom the Romans invoked when
they named and purified their children. This happen-
ed the ninth day after their birth, whence the name of
the goddess, Numa dies. (Macrob., Sat., 1, 16.)

NURSE, a town of the Sabines, or more correctly,
perhaps, in the territory of the Equi, and near the
banks of the Anio. Its particular site is unknown.
(Virg., Æn., 7, 744.)

NUMISIUS, a woman of the Sabines, at the foot of
the central chain of the Apennines, and near the sources
of the river Var. It was noted for the coldness of its
atmosphere. (Virg., Æn., 7, 715.—Sil. Ital., 8, 418.)
The modern Norcia corresponds to the ancient site.
Polla Vespassia, the mother of Vespassian, was born
here. (Cramer's Anc. Italy, vol. 1, p. 320.)

NYCRIES, I. a daughter of Nycteus, who was mother
of Labracus.—II. A patroonymic of Antiope, the daugh-
ter of Nycteus, and was descended in turn from
Ammon and Zethus by Ju-
pi ter. (Orid, Met., 6, 110.)

NYCTESTLUS, a surname of Bacchus, because his or-
gies were celebrated in the night (vês, night, and re-
pês, to perform), the words latez Nyctelus thence signify wine. (Senece, Œd., v. 492.—Passian, 1, 40.
—Orid, Met., 4, 15.—Compare Serv. ad. Virg., Æn.,
4, 393.—Liv., 29, 8.)
Nymphes, father of Antipo. (Vid. Antipo.)
Nymphs, certain female deities among the ancients. The imagination of the Greeks peopled all the regions of earth and water with beautiful female forms called Nymphs, divided into various orders, according to the place of their abode. Thus, 1. the Mountain-Nymphs, or Oreads (O*éaides), haunted the mountains; 2. the Dale-Nymphs, or Nereids (Náereidai), the valleys; 3. the Mead-Nymphs, or Lemoiades (Legmowtracks), the meadows; 4. the Water-Nymphs, or Naiades (Náideis), the rivers, brooks, and springs; 5. the Lake-Nymphs, or Limnides (Limnides), the lakes, and ponds. There were also, 6. the Tree-Nymphs, or Hamadryades (Hamadoepiades), who were born and died with the trees; 7. the Wood-Nymphs, or Dryades (Drwides), who presided over the woods generally; and, 8. the Fruit-tree-Nymphs, or Flock-Nymphs (Méliades, Mándides), who watched over gardens or flocks of sheep. —The Nymphs occur in various relations to gods and men. The charge of rearing young deities, and heroes was committed to them: they were, in fact, the nurseries of Bacchus, Pan, and even Jupiter himself, and they also brought up Aristaeus and Eneas. They were, moreover, the attendants of the goddesses; they waited on Juno and Venus, and in huntress attire they pursued the deer over the mountains in company with Diana. The Sea-Nymphs also formed a numerous class, under the appellation of Oceanides and Nereids. —The word Nymph (wv/Nvphv) seems to have originally signified "bride," and was probably derived from a verb wvó, "to cover" or "seal," and which was akin to the Latin nubó and nubes. It was gradually applied to married or marriageable young women, for the idea of youth was always included. It is in this last sense that the goddesses of whom we have been treating were called Nymphs. (Keightley's Mythology, p. 237, seqq.)

The person of Apollo, in Illyricum, remarkable for a mine of asphalt, of which several ancient writers have given a description. Near this spot was some rising ground, whence fire was constantly seen to issue, without, however, injuring either the grass or trees that grew there. (Aristot., Mirand. Asascot. —Elian, Var. Hist., 13, 16. —Plin., 24, 7.) Strabo supposes it to have arisen from the flux of a kind of liquefled pitch, which he noticed in the vicinity when this substance was dug out, the earth which was removed being in process of time converted into pitch, as it had been stated by Posidonius. (Strabo, 316.) Pliny says this spot was considered as oracular, which is confirmed by Dio Cassius, who describes at length the mode of consulting the oracle (41, 45). The phenomenon noticed by the writers here mentioned has been verified by modern travellers as existing on the island of Seleucia, on the left bank of the Aeius, and near the junction of that river with the Sutczita. (Jones's Journal, cited by Hughes, vol. 2, p. 262.) From Livy (42, 36 ct 49) it appears that there was a Roman encampment here for some time during the Macedonian war. (Oram's Anc. Greece, vol. 1, p. 61.) Plutarch (Vit. Syll.) tells an amusing story of a satyr having been caught asleep in this vicinity and brought to Sylla, the Roman commander, who was then on the spot!—II. A promontory of Athos, on the Sinctic Gulf, now Cape S. Georgia. (Iovl., p. 82.)—III. A city in the Taureic Chersonese, on the route from Theodosia to Panticaupem, and having a good port on the Euxine. In Pliny's time it no longer existed (4, 12). The ruins, however, may still be traced in the vicinity of the modern Vosfor. (Mela, 2, 190. —Steph. Byz., p. 506.)

Nymphes, a river of Armenia Major, which, according to Procopius, formed a separation between the Roman and Persia empires. It ran from north to south, entered the town of Martyropolis, and dis-
tcrered about the great sandy deserts of Africa. In
Arabic they are called Wahya. The Arabic and the
Greeks seem to contain the same idea with the
Oasis. Of course, the word may have been originally
taken from the African term. The Oases appear to be de-
pressions in the table-land of Libya. On going from the
Nile westward, the traveller gradually ascends till
he arrives at the summit of an elevated plain, which
continues nearly level, or with slight undulations, for
a considerable distance, and rises higher on advancing
towards the south. The Oases are valleys sunk in this
plain; and, when you descend to one of them, you
find the level space or plain of the Oasis similar to a
portion of the valley of Egypt, surrounded by steep
hills of limestone at some distance from the cultivated
land. The low plain of the Oasis is sandstone or clay,
and from this last the water rises to the surface and
fertilizes the country; and, as the table-land is higher
in the latitude of the Thebans than in that of Lower Egypt,
we may readily imagine that the water of the Oasis is
conveyed from some elevated point to the south, and,
being retained by the bed of clay, rises to the surface
wherever the limestone superstratum is removed.
(Wilkinson, "On the Nile, and the present and for-
mer levels of Egypt."—Journal of the London Geo-
graphical Society, 1839.) The principal Oases are
four in number: 1. The Great Oasis (Oasis Megali, Ptol.), which Strabo calls "the first Oasis" (πρωτη
Oasis, 791). 2. The Little Oasis (Oasis Mi-
kleia) lies between Strabo's Great and Second Oases (Oasis δευτερος). 3. The Oasis of Ammonian,
The Western Oasis, which does not appear to have been
mentioned by any ancient geographer except Olympiodorus, and was never seen by any Euro-
peans until Sir Archibald Edmonstone visited it about
20 years ago.—These four constitute, as has been
said, the principal Oases. The writers of the mid-
dle ages enlarge the number materially, from Arabic
sources, and modern writers have added still more,
making upward of thirty Oases. (Bischoff and Müller,
Wörtererb. der Geogr., p. 795.)—The Great Oasis
is the most southern of the whole, and is placed by
Strabo and Ptolemy to the west of Abyssus. It is the
only one, with the exception of that of Ammon, with
which Herodotus seems to have been acquainted (3,
26). He terms the Oasis into Greek by Maxipwv eino,
"Island of the Blessed," and without doubt, or any other of these notable spots, must
have made part of a new and more or less foreign
acquaintance of the traveller: and he so prized
worthy of such an appendage, after he had suffered,
during many painful weeks, the privations and fatigue
of the desert. To the Greeks and Romans, however,
of a later age, they generally presented themselves in
a less favourable aspect, and were not unfrequently
assigned as places of banishment, where the state-
malefactor and the ministers of the Christian church,
who were sometimes comprehended in the same class,
were, in the second and third centuries, condemned to
waste their days in the remote solitude of the desert.
—The Great Oasis consists of a number of insulated
spots, which extend in a line parallel to the course of the
Nile, separated from one another by considerable intervals of sandy waste, and stretching not less than
a hundred miles in latitude. Its Arabic name is El-
Wah, a general term in that language for Oasis. M.
Perring has visited it in 1818, and states that
many gardens watered with rivulets, and that its palm-
groves exhibit a perpetual verdure. It is the first stage of
the Darfur caravan, which assembles at Siout, be-
ing about four days' journey from that town, and
nearly the same distance from Farsout. The exer-
tions of Browne, Caillaud, Edmonstone, and Henniker
have supplied us with ample details relative to this in-
teresting locality.—The Little Oasis, now El-Kas-
sar, has not been much visited by travellers. We
owe the latest and most distinct account to Belzoni,
shaken rocks in abundance, but nothing that he could positively decide to be ruins; it being very unlikely, he adds, that any should be there, the spot being entirely destitute of trees and fresh water. Major Ren- nell has employed much learning to prove that the Oasis of Sinoah is the site of the famous temple of Jupiter Ammon. He remarks that the variations between all the authorities, ancient and modern, and little more than a space equal, to twice the length of the Oasis in question, which is, at the utmost, only six miles long. "And it is pretty clearly proved," he remarks, "that no other Oasis exists in that quarter, within two or more days' journey; but, on the contrary, that Sinoah is surrounded by a wide desert; so that it cannot be doubted that this Oasis is the same with that which Helena found the remains of the celebrated temple whereas the oracles of Jupiter Ammon were delivered." (Geogr. of Herodotus, vol. 2, p. 230, ed. 1830.) — The Western Oasis, as it is termed, was visited in the year 1819 by Sir A. Edmonstone, in company with two friends. Having joined a caravan of Bedouins at Beni Ali, and entered the Libyan desert, they proceeded towards the southwest. At the end of six days, having travelled almost without a halt, they came to the village called Dacor el Hadjyn, about fifty feet long by twenty-five wide, but presenting nothing either very magnificent or curious. The Oasis is composed of twelve villages, of which ten are within five or six miles of each other. The prevailing soil is a very light red earth, fertilized entirely by irrigation. The latitude of this Oasis is nearly the same as that of the Great Oasis, or about 26° 40'. The longitude eastward from Greenwich may be a little more or less than 29°. — At different distances in the desert, towards the west, are other Oases, the exact position and extent of which are almost entirely unknown to the European geographer. The ancients, who would appear to have had more certain intelligence in regard to this quarter of the globe than is yet possessed by the moderns, were wont to compare the surface of Africa to a lemon, and the Oases to the little islands of fruitlessness among the spots which are known as the spots on that animal. — The fertility of the Oases has always been deservedly celebrated. Strabo mentions the superiority of their wine; Abulfeda and Edrisi the luxuriance of their palm-trees. The climate, however, is extremely variable, especially in winter. Sometimes the rains in the Western Oasis are very abundant, and fall in torrents, as appears from the furrows in the rocks; but the season Sir A. Ed- monstone was in the desert the water was total want of dew in the hot months sufficiently proves the general dryness of the atmosphere. The springs are all strongly impregnated with iron and sulphur, and hot at their sources; but, as they continue the same throughout the whole year, they supply to the inhabitants one of the principal means of life. The water, notwithstanding, cannot be used until it has been cooled (Russell's Egypt, p. 393, seq.)

Oases, a river of Crete, said by Herodotus to be named from Oases, a son of Apollo. (Virg., Eclog., 1, 66. — Serv., ad loc.) It is now the Mylopotomo, and is apparently one of the most considerable streams in the island. Some, however, identify it with the Petrea. (Cramer's Anc. Greece, vol. 3, p. 381. — Bischof und Müller, Wörterb. der Geogr., p. 798.)

Oaxas, a town of Crete, on the northern side of the island, at the mouth, probably, of the Oaxas. It was the capital of a kingdom which had its appropriate sovereign, and was said to have been founded by the Oaxas mentioned in the preceding article. (Herod., 5, 153. — Serv. ad Virg., Eclog., 1, 66. — Steph. Byz., s. v. — Herod., p. 680.)

Oberg, a river of Germany, forming the line of separation between Germania Superior and Inferior. According to Spener, Cluverius, Cellarius, and others, it corresponds to the modern Aar or Ahr. Mannert, however, and Wilhelm, make it the same with the beginning of the Upper Rhine ("den Anfang des Oher Rheins.") — Mannert, Geogr., vol. 3, p. 432.)

Obsequens, Julius, a Latin writer, whose era is uncertain. Vossius places him a short period prior to Honorius the Archbishop. This would indicate an era earlier than the time of Scæuler. Mr. Scæuler makes him to have been before the time of St. Jerome; while Saxæ assigns him to about 107 A.D. (G. J. Voos, de Hist. Lat., 3, p. 710. — Saxæ, Onomast., vol. 1, p. 289. — Funck, de veget. L. L. sect., 8, 11, seq.) He was probably either a Roman or an Italian, and some are inclined to identify him with the M. Livius Obsequens whose name occurs in one of Grueter's inscriptions (Inscript., 241), on the stele of him and Theophania. His name occurs in the Latin MS. in the only MS. that has come down to us of this work. (Fuhrmann, Handbuch., vol. 2, p. 490.) Obsequens has left us a work "On Prodigies" (de Prodigis), containing a brief account of all the prodigies recorded from Rome on the consulship of Scipio and Lucullus, A.U.C. 433, down to that of Paulhus Fabius and Quintus Eiusius, in the time of Augustus, or A.U.C. 742. The portion of the work which comprehended the history of the first five or six centuries is lost. This production is taken in part from Livy; but it contains, at the same time, some historical details which are nowhere else to be found. It is written in a pure style, and is not unworthy of the Augustan age. The contents, however, are full of absurdity. The best edition is that of Kapp, Currie, 1772, Svo. (Fuhrmann, Handbuch., vol. 2, p. 490. — Schill, Hist. Lit. Rom., vol. 2, p. 465. — Bähr, Gesch. Röm. Lit., p. 658, seq.)

Oceandies (Okeanides), the Ocean-Nymphs, daughters of Oceanus and Tethys, and sisters of the rivers. Mythologists make them three thousand in number. (Hesiod, Theog., 364. — Apollon., 1, 2. — Hesiod, Rhet., ad loc.) From their pretended names, as given by some of the ancient writers, they appear to be only personifications of the various qualities and appearances of water. (Theog., 346. — Gust., ad loc.)

Ocuranies, I, the god of the stream Oceanus (vid. Oceanus II.), earlier than Neptune. He was the firstborn of the Titans, the offspring of Cetus and Terra, or Heaven and Earth. Oceanus espoused his sister Tethys, and their children were the rivers of the earth, and the three thousand Oceanides or Nymphs of Ocean. (Hesiod, Theog., 337, seq.) This is the all the account of Oceanus that is given in the Theogony. Homer never speaks of him, and Tethys was his wife. (I., 14, 201, 302.) When Jupiter, he also says, placed his sire in Tartarus, Rhea committed her daughter Ju- no to the charge of Oceanus and Tethys, by whom she was carefully nurtured. (I., 14, 202, 303.) The abode of Oceanus was in the West. (I., 14, 200, 301.) He dwelt, according to Ephorus, in a grotto, beneath his stream, as it would appear. (Pompon. Vit., 380.) In the Prometheus, he has come to the aid of the Roman, and raised the air on a hippo-griff, to console and advise the lofty-minded sufferer; and from the account he gives of his journey, it is manifest that he came from the West. When Hereles was crossing his stream in the cup of the Sun-god to procure the oxen of Geryon, Oceanus rose, and, by agitating his waters, tried to terrify him; but, on the hero's bending his bow at him, he retired. (Pherec.,
OCE and och.

OCE

ep. Athen., 11, p. 470.—Keightley's Mythology, p. 51, seq.—II. Besides being the name of a deity, the term Oceanus (=Ocean) occurs in Homer in another sense also. It is used to signify an immense stream, which, according to the rude ideas of that early age, circulated around the terraqueous plain, and from which the different seas ran out in the manner of bays. This opinion, which is also that of Eratosthenes, was prevalent even in the time of Herodotus (4, 36). Homer terms the ocean ὑφόθρος; because it thus flowed back into itself. (Mus. Crit., vol. 1, p. 254). This same river Oceanus was supposed to ebb and flow thrice in the course of a single day, and the seamen boldly believed to descend into it at their setting, and emerge from it at their rising. Hence the term ὄκεανος is sometimes put for the horizon. (Damm. Lex., s. v. ὄκεανος and Ἳπαλασσα always mean different things, the latter merely denoting the sea in the more modern acceptation of the term. On the shield of Achilles the poet represents the Oceanus as encircling the rim or extreme border of the shield, in full accordance with the popular belief of the day; whereas in Virgil's time, when this primitive meaning of the term was obsolete, and more correct geographical views had come in, we find the sea (the idea being borrowed, probably, from the position of the Mediterranean) occupying in the poet's description the centre of the shield of Ἐδειαν. If it be asked whether any traces of this peculiar meaning of the term ὄκεανος occurs in other writers besides Homer, the following authorities, in favour of the affirmative, may be cited in reply. Hesiod. Theog., 242.—Id., Herc. Cyp., 314.—Eurip. Orest., 1369.—Orph. Hymn., 10, 14.—Id., H., 82.—Id., fragm., 44.—(Malby, ad Morell, Thes. s. v. ὄκεανος.—Compare Völcker, Homerische Geographie, p. 86, seq.) As regards the etymology of the term ὄκεανος, we are left in complete uncertainty. The form ὑφόθρος occurs in Pherecydes (Clem. Alex. Strom., 6, p. 621.—Starr, ad Pherecyd.,) from which it is supposed that the root was connected with the Greek γέα, γη (ὕφεανος, ὑφ-γη-νος). On the other hand, Munter (Rel. der Karthager, p. 63) finds the root of ὑφόθρος in the Hebrew ḫrō, "in orbem ire," as referring to the circular course of the fabled Oceanus. Creuzer is inclined to consider ὑφόθρος as equivalent to παλαθός, "antiquus." (Creuzer und Hermann, Briefe, p. 160.) It is remarkable, in the old names of the Nile, the Egyptians having the Greeks of the ocean (Ter. ad Leuk. sophron., 119), or, more correctly, perhaps, ὑφόθρος. (Diod. Sic., 1, 19.—Compare Ritter's Erdbund, vol. 1, p. 570, 2d ed.) Now in the Coptic, according to Champollion, oukamē means "black," "dark," and according to Marcel, ochamnou, in the same language, denotes "a great collection of water." Will either of these give ὄκεανος as a derivative? The one or the other must be connected either with the Arabic Kāmus, "ocean." (Ritter, loc. cit.) Perhaps, however, the most satisfactory derivation for the term Oceanus is that alluded to in the article Ogyges.

Ocellus, surnamed Lucanus, from his having been a native of Lucania, a Pythagorean philosopher, who flourished about 480 B.C. He wrote many works on philosophical subjects, the titles of which are given by Plutarch (De Orac. 1, 48). All which have been preserved by Diogenes Laertius (8, 80). But the only production of his which has come down to us, is "On the Nature of the Universe" (Περὶ τῆς ἡκτο ἐκ τῶν φύσεων). Its chief philosophical topic is to maintain the eternity of the universe. Ocellus also attempts to prove the eternity of the human race (c. 3, s. 3). These works were, without doubt, written in the Doric dialect, which prevailed in the native country of Ocellus; and hence much privation has been occasioned by the circumstance of the last of these productions, which we still possess, being in Ionic Greek. In consequence of this discrepancy, A. W. and Barth (Affinit., 1, 405, p. 1867), Paris (Oeuvres de Devo et Prodiot, 1678.—Disp., 4, p. 355), Thom- as Burnet (Archaeol. Philos., p. 152), and Meiners (Philolog. Biblioth., vol. 1, pt. 3, p. 100 et 204.—Hist. Doct. de vero Deo, p. 312.—Gesch. der Wis- sensach, p. 584), have attacked the authenticity of the work in question; while, on the other hand, Bentley (Phalaris, p. 307, ed. 1816), Lipsius (Manud. ad Stat. Phil., 1, 1, diss. 6), Adelung (Gesch. der Phi- losophie für Lesebraucher), Tiedemann (Griechen. erste Philosophen, p. 198 et 209), and Bardill (Epochen der vorzüglt. philos. Begriffe, vol. 1, p. 155), declare in favour of the work. These conflicting opinions have been carefully examined and weighed by Rudol- phi, in a Dissertation appended to his edition of the work, and he comes to the conclusion that the treatise in question was written by Ocellus. It would appear that some grammarians of subsequent ages, in copy- ing the text of Ocellus, caused the Doric forms to dis- appear, and translated the work, so to speak, into the more common dialect. This idea was first started by Bardill, and what tends to clothe it with almost absolute certainty is, that the fragments of the same work which we meet with in the selections of Stobaeus have preserved their original Doric form. And yet it must at the same time be acknowledged, that this production of Ocellus is only cited for the first time by the writers of the second century of our era, at a period when the New-Pythagoreans began to forge works under the guise of celebrated names.—The best edition is that of Rudolph, Lips., 1801, 8vo. The edition of Batteux, Paris, 1768, 3 vols. 12mo, is also a very good one. Batteux corrected the text after two Paris MSS., and Rudolph availed himself of Sieben's collection of a Vatican MS. Gale has placed the work of Ocellus in his Opuscula Mythologica. &c., Canabri., 1761. (Schill, Hist. Lit. Gr., vol. 2, p. 311, seq.)

Oceànus. I. a city in Hispania Tarracnosti, in the territory of the Vettones, now Formoselle.—II. A city in Hispania Tarracnosti, in the territory of the Gal- láeci.—III. A city of Gallia Cisalpina, among the Cottian Alps, on the eastern borders of the kingdom of Cottius. According to Mannert, it is now Avigliana, a small town with a castle, in Piedmont, not far from Turin. (Cax., B.C., 1, 408.) This epithet applied to Artaxerxes III., and also to Darius II., Kings of Persia. It is generally thought to indicate illegitimate birth, and to be equivalent to the Greek Nôbòcos (No-than). This explanation is opposed, however, by some Oriental schol- ars, who deduce the term Ochus from the Persian Ochi or Achi, which they make equivalent to the Latin dignus or majestatis dignus. (Consult Genesten, Lex. Heb., s. v. Acha.)—Diog. § 18.—Marcellus. Ochus has been noticed elsewhere (vid. Artaxerxes III.), that of Darius Ochus, or Darius II., will now be given. This prince was the illegitimate son of Artaxerxes Longimanus. Soon after the murder of Xerxes II., Darius succeeded in deposing Sogdianus, and ascended the throne himself, B.C. 423. By his wife Parysatis he had Artaxerxes Memon and Cyrus the Younger. Nothing very re- markable is attributable to him; but he carried on war- ful wars were carried on under Cyrus and other gen- erals. He died B.C. 404, after a reign of nineteen years, and was succeeded by his son Artaxerxes, who is said to have asked him, on his death-bed, by what rule he had acted in his administration, that he might adopt the same, and find the same success. The king's answer is said to have been, that he had always kept, to the best of his knowledge, the strict path of justice and religion. (Xen., Anab., 1, 1.—Diod. Sic, 910)
OCT

12, 71. — Justin, 5, 11.) — II. A river of Bactriana, rising in the mountains that lie northward of the source of the Arius, and falling into the Oxus. (Plin., 6, 17.) Mannert makes it the modern Dehasch. —

OCTAVIUS, L. daughter of Caesars Octavius and Accia, and sister to the Emperor Augustus. All the historians praise the beauty and virtues of this celebrated female. She was first married to Marcus Marcellus, a man of consular rank, and every way worthy of her; and after his death she became the wife of Marc Antony, this latter union being deemed essential to the public welfare, as a means of healing existing differences between Antony and Octavius. It was with this view that the senate abridged the period of her widowhood and of her mourning for her first husband, who had been dead little more than five months. Antony, however, was incapable of appreciating the excellence of her character. After her marriage she followed him to Athens, where she passed the winter with him (B.C. 39), though keeping far aloof from the dissolute pleasures to which he abandoned himself. Without her interposition, civil war would even then have broken out between Octavius and Antony. By urgent prayers she appealed her husband, who was incensed against her brother for his suspicions, and then, disregarding the difficulties of the journey and her own pregnancy, she went with his consent from Greece to Rome, and induced her brother to consent to an interview with Antony, and to come to a reconciliation with him. When he arrived Octavius, the leader of the army of the Panthians, she accompanied him to Corecyra, and at his order returned thence to remain with her brother. New quarrels arose between Octavius and Antony. To have a pretext for a rupture, the former ordered his sister to go to her husband, in the expectation that he would send her back. This actually happened. Antony was leading a life of pleasure with Cleopatra at Leucopolis, when letters from Octavia at Athens informed him that she would soon come to him with money and troops. The prospect of this visit was so unwelcome to Cleopatra, that she persisted in her entreaties until Antony sent his wife an order to return. Even now, however, she endeavoured to pacify the rivals. Octavius commanded her to leave the house of a husband who had treated her so insultingly; but, feeling her duties as a wife and a Roman, she begged him not. She left Athens, alone, and went to Rome, weak in body and in her soul, but strong by the horrors of war. Octavius granted her wish; she remained in the house of Antony, and occupied herself with educating, with equal care and tenderness, the children she had borne him, and those of his first wife Fulvia. This noble behaviour of hers increased the indignation of the Romans against Antony. At last he divorced her, and ordered her to leave his mansion at Rome. She obeyed without complaint, and took with her all her children except Antillus, her eldest son, who was then with his father. The civil war soon after broke out. — On the overthrow and death of Antony, Octavia gave herself up to complete retirement. Her son Marcellus, the issue of her first marriage, was united to Julia, the daughter of Augustus, and treated by the emperor as his successor. By his early death frustrated this design, and plunged his mother and friends in the deepest affliction. It was on Virgil’s reading to Octavia and Augustus the beautiful passage towards the close of the sixth book of the Aeneid, where the premature death of Marcellus is voluntarily declared, that the poet received from the sorrowing parent so splendid a recompense. (Vis. Virgillii.) Octavia, in fact, never recovered from the loss of her son. Her domestic misfortunes were all at an end, and she at last ended her days in deep melancholy, about 12 B.C. Augustus pronounced her funeral oration, but declined the marks of honour which the senate were desirous of bestowing upon her. (Sueton., Vit. Jul., 27. — Id., Vit. Aug., 17. — Id. ib., 61. — Plut., Vit. Ant., 88. — Euncl. Am., vol. 9, p. 367.)

—II. A daughter of the Emperor Claudius by Messa, and sister to the Emperor Tiberius. She offers only one series of misfortunes. While still quite young, she was affianced to Lucius Silanus, the grandson of Augustus; but Agrippina, availing herself of her influence over the imbecile Claudius, broke off the match, and gave Octavia to her own son Nero, when the latter had attained his sixteenth year. Nero, on ascending the throne, repudiated Octavia on the ground of sterility, but, in reality, that he might unite himself to Poppaea; and this last female, dressing the presence of one who was still young and beautiful, and her possible influence at some future day over the capricious feelings of the emperor, accused Octavia of criminal intercourse with a slave. Some pretended testimony having been obtained by means of the torture, Octavia was banished to Campania. The murmur of the people, however, compelled Nero to recall her from exile, and her return was hailed by the populace with every demonstration of joy. Alarmed at this, and fearing lest the recall of Octavia might prove the signal of her own disgrace, Poppaea threw herself at the feet of Nero, and begged him to revoke the order for Octavia’s return. The emperor granted more than she asked; for he caused the infamous Anicius, the author of his mother’s murder, to come forward and testify falsely to his criminality with Octavia. The throngs of people, who hailed Octavia as the happy princess, were turned against her, and she became the object of Poppaea’s enmity, and was soon after put to death there. Her head was brought to Poppaea. Octavia was only twenty years of age at the time of her death. (Tacit., Ann., 24, 63. — Sueton., Vit. Ner., 35.)

OCTAVIUS, the name of Octavius (afterward Augustus), which he assumed on his adoption into the Julian family, in accordance with the Roman custom in such cases. Usage, however, though erroneous, has given the term Brundusian to the name, to the short form of that of Octavius. (Cic., Ep. ad Fam., 12, 25. — Tacit., Ann., 18, 6. — Aurel. Vict., de Cas., c. 1.)

OCTAVIUS, I. Nepos, Cn., was praetor B.C. 168, and appointed to the command of the fleet against Perseus. He followed this monarch, after his defeat by Paulus Amelius, to the island of Samothrace, and there obtained his surrender. For this he was rewarded by Liv. 44, 45. — Id., 44, 45. — Id., a naval triumph (Liv., 44, 45. — Id., 44, 45. — Id., 42). In B.C. 165 he was consul with M. Torquatus. Having been sent, three years after this, into Syria, at the head of a deputation to act as guardians to the young king, Antiochus Eupator, he was assassinated by order, as was supposed, of Lyrius, a relation of the previous monarch, and who claimed the regency during the minority of Antiochus. The arrogant and haughty conduct of Octavius appears to have hastened his fate. The senate, however, erected 911
a statue to his memory.—II. M. a tribune of the commons, deprived of his office by means of Tiberius Gracchus. (Vid. Gracchus II.)—III. Cn., was consul B.C. 87, along with Cinna. Being himself attached to the party of Sylla, and having the support of the senate, he drove his colleague out of the city. Marius, however, having returned this same year and re-entered Rome with Cinna, Octavius was put to death.—IV. C., the father of Augustus, was praetor B.C. 61, and distinguished himself by the correctness and justice of his decisions. After his praetorship he was appointed governor of Macedonia, and defeated the Bassi and other Thracian tribes, for which he received from his soldiers the title of *Imperator.* He died at Nola, on his return from his province. Octavius married Atia, the sister of Julius Caesar, and had by this union Octavius (afterward Augustus) and Octavia, the wife of Antony.—V. The earlier name of the Emperor Augustus. (Vid. Augustus and Octavianus.)

Octoëecta, a town of the Vergrai, in Gallia Narbonensis. It was situate in the Vallis Pennima, on the river Drana or Drance, near its junction with the *Rhône,* at a considerable distance above the influx of the latter into the Lacus Lemanos or Lake of Geneva. It is now Marigny, or, as the Germans call it, Martinach. (Cas., B. G., 3, 1.)

Octoëcia, a town of Spain, a little above the mouth of the Iberus, on the north bank of that river, where it is called the Osca Lus. It is commonly supposed to be answer to the modern Moguinnesta. Ucker, however, places it in the territory of la Granja. (Cas., Bell. Civ., 1, 61.)

Ocyprete, one of the Harpies. The name signifies swift-flying, from ὀκύπρετος, "swift," and πτερός, "to fly." (Vid. Harpyie.)

Odenatus, a celebrated prince of Palmyra, in the third century of the Christian era, who distinguished himself by his military exploits, and who, by his valour and his benevolence, won the respect of the Romans. The accounts of his origin differ. Agathias makes him of mean descent; but the statements of others are entitled to more credit, according to whom he exercised hereditary sway over the Arab tribes in the vicinity of Palmyra. These same writers inform us, that his family had for a long time back been connected by treaties with the Romans, and had received from the latter not only honorary titles, but also the command of the frontiers of Syria. That there existed, indeed, some sort of alliance between this family and the Roman power, is evident from the name *Septimius,* which was borne by some of his predecessors as well as by Odenatus himself, and which would carry us back probably to the time of Septimius Severus, who resided a long time in Syria, and from whom the honorary appellation may have been obtained. (Saint-Martin, in Bogh. Univ., vol. 31, p. 494, seqq.) The manner in which Odenatus attained to the supremacy in Palmyra is not very clearly stated. He appears, independently of his sway over the adjacent tribes, to have held at first the office of decurio or senator in the city itself. When Philip the Arabian proclaimed himself emperor, after the murder of the younger Gordian, A.D. 244, and had set out for Rome, he left the government of Syria in the hands of his brother, Pobius. The latter soon caused a general revolt. Palmyra from this time assumed the rank of an independent city; and we find Septimius Arianes, father of Odenatus, ruling over it as sovereign prince, A.D. 251. He was succeeded by his son, the subject of this article. (Saint-Martin, l. c.) Odenatus was twice married. The name and family of his first wife are not known. He had by her a son called Septimius Odenatus. His second wife was the celebrated Zenobia, daughter of an Arabian prince, or sheik, who held under his sway all the southern part of Mesopotamia. By Zenobia he became the father of two sons, Herennius and Timoslaus. Zenobia herself had also a son by a previous husband. After the defeat and capture of Valerian by the King of Persia, Odenatus, desirous at least to secure the forbearance of the conqueror, sent a magnificent present, accompanied by a letter full of respect and submission; but the haughty monarch, instead of being softened by this expression of good-will, ordered the gift to be thrown into the Euphrates, and returned an answer breathing the utmost contempt and indignation. The Palmyran prince, who read his fate in the angry message of Sapor, immediately took the field, and falling upon the enemy, who had already been driven across the Euphrates by the Roman general Balista, gained a decisive advantage over their main body. He then burst into their camp, seized the treasures and the concubines of Sapor, dispersed the intimidated soldiers, and in a short time restored Caracce, Nisibis, and all Mesopotamia to the possession of the Romans. Trebellius Pollio informs us, that he even proceeded so far as to lay siege to Ctesiphon, with the view of liberating Valerian, who was still alive, but that neither his arms nor his entreaties could effect this benevolent object. (Trebl. Poll., Trigint. Tyrann., 13.—Zonar., 12, 23.—Zosim., lib. 1, p. 661.) The Palmyran prince then turned his arms against Quietus, son of Macrinus, and a candidate for the empire, and overthrew his party in the East. As a recompense for these important services, he was invested with the government of Syria, and the title of Valerian, the senate, with the consent of the emperor, conferred on Odenatus the title of Augustus, and entrusted him with the general command of the East. Zenobia also received the title of Augusta, and Ordoes, Herennius, and Timolans that of Caesar. Odenatus signalized his attainment to these honours by new successes; and by one of the writers of the Augustan history, his name is connected with the repulse of the Goths, in the time of Gallienus, and with the capture of Palmyra by the emperor, in 267 A.D. (Heracles. Trebl. Poll., Gallieni Duo, c. 12.) Of this fact, however, there remains no satisfactory evidence; but it admits not of any doubt that the sovereignty of Palmyra fell soon afterward by the hand of domestic treason, in which his queen Zenobia was suspected to have had a share. The murderer was his own nephew. His son Ordoes was slain along with him. (Trebl. Poll., l. c.)

Oesilvota, a city of the Maenodareans, of Mesia Inferior, to the east of Marcianopolis. It was founded by a colony of Milesians, and is now Varna in Bulgaria. It was also called Odesopoli. Some editions of Ptolemy give the form "Odisocos (Odyssey)," and in the Itin. Ant. (p. 218) Odisos occurs. (Mela, 2, 2.—Pliny, 11.—Ov., Trist., 1, 9, 37.)

Odeum, a musical theatre at Athens. (Suidas, s. v. ὀδεοῦς.—Aristoph., Vesp., 1104.) It was built by Pericles (Plut., Vit. Pericles.—Virg., 5, 9), and was so constructed as to imitate the form of Xerxes' tent. (Plut., Vit. Per.) This shape gave rise to some pleasanties on the part of the Athenians. Thus, for example, Cratinus, in one of his comedies, wishing to express the head of Pericles terminated as it were in a point, said that he carried the Odeum on his head. (Compare Plut., l. c.) This building was destroyed by fire at the siege of Athens by Sylla. It was re-erected soon after (Ariobarzanes, king of Cappadocia. (Pausan., 1, 20.)

Odinus or Odin, the principal deity of the ancient Scandinavians and Northern Germans. Other forms for the name were Wodan, Woden, Godan, Votthin, Othin, &c. Among the Anglo-Saxons, Wodan was the god of merchants, corresponding to the Hermes of the Greeks or the Mercurius of the Latins. The fourth day of the week derived its name from him (Monday, the second man, is represented as having, with his two
brothers, Vîlê and Vô, defeated and slain the frost-giant Ymer, out of whose body they formed the habitable world. Some expounders of mythology make Odin and his brethren, together with their antagonist, as set forth in this fable, to be mere personifications of the elements of the world. But there is another and a younger Odin, who, according to some writers, is partly a mythological and partly a historical personage. In all the Scandinavian traditions preserved by the chroniclers, mention is made of a chief called Odin, who came from Asia with a large host of followers called Aser (vid. Asl), and conquered Scandinavia, where they built a city by the name of Sigtuna, with temples, and established a worship and a hierarchy; he also invented or brought with him the characters of the Runic alphabet; he was, in short, the legislator and civilizer of the North. He is represented also as a great magician, and was worshipped as a god after death, when some of the attributes of the elder Odin are supposed to have been ascribed to him. The epoch of this emigration of Odin and his host is a subject of great uncertainty. Some place it in the time of the Scythian expedition of Darius Hystaspis; others (this has been the most common opinion among Scandinavian archaeologists) fix it about the time of the Roman conquests in Pontus, 50 or 60 B.C. Sühm, in his ""Geschichte der Nordischen Pahztzeit," enumerates four Odines. One was the ""Odin der Freunde,"" from whom the Normans, and introduced into the North the worship of the Sun. A second came with the Aser, from the borders of Europe and Asia, at the time of the invasion of Darius. He brought with him the Runic alphabet, built temples, and established the mythology of the Edda: he is called Mid Othin, or Mittel Othin. A third Odin, according to Sühm, fled from the borders of the Caucasus at the time of Pompey's conquests, 50 or 60 years B.C. The fourth Odin he of the former lived in the third or fourth century of our era. All this, however, is far from being authentic; though the north-western emigration of Odin from the borders of the Caucasus to Scandinavia has the support of a uniform tradition in its favour. Odin was worshipped by the German nations until their conversion to Christianity. (Encycl. Us. Knov., vol. 16, p. 400.)—The legend of Odin evidently points to the introduction of religious rites by the Conquest. The Danes, through their nationalities, were a powerful nation from the East, who was himself, in some degree, identified after death with the deity whose worship he had brought in with him. This deity appears to have been none other than the Buddha of the East, just as the traditions of the North respecting the Aser connect the mythology of Scandinavia in a very remarkable manner with that of Upper Asia. (Vid. Asl.)—The striking resemblance that exists between Buddha and Odin, not only in many of their attributes, but also in substantial parts of their worship, has been fully established by several Northern writers. (Consult Magnusen, Edalldoregen und Dens Opinodelse, vol. 4, pref. v., seqq.—Id. th., vol. 4, p. 474, 478, seqq.; 512, seqq.; 534, seqq.; 541, seqq.—Palmblad, de Budda et Wodon, Upsal, 1832, 4to.—Wallman, om Odin och Budda, Helm, 1824, 8vo.—Compare Ritter, Vorhalle, p. 472. On the sources of W. Jones, Antiques Researches, vol. 1, p. 511.—Id. th., vol. 2, p. 343.) One feature, however, in which these two deities approximate very closely, is too remarkable to be here omitted. The same planet, namely, Mercury, is sacred to both; and the same day of the week (Wednesday) is called after each of them respectively. Thus we have the following apppellations for this day among the natives of India: in the Birman, Buddhaun; in the Malabar, Buddha; in the Dutch, Pudde; in the Tartars, Budde; in the Siam and the Chinese, Buddha; in the Japanese, Bodda; in the Persians, Boodha; in the Hindoos, Boodha; in the Burmans, Budde; and in the Magyars, Budde. A very remarkable fact is, that at the time of the first mission from India to the West, in the year 1172, the name of Buddha was universally known in the countries of the East. Thus we may compare the Godama, Gotama, and Samana-Codam, of the former, with the Godan, Gutan, Guodan, &c., of the latter. (The Westphalians still call Wednesday Godensttag.) We may even advance a step farther, and compare the names of both Odin and Budda with one of the earliest appellations of Deity among many nations of Asia and Europe. Thus we have in Sanscrit, Codā; in Persian, Choda, Chuda, and Ghuda; in the language of the Kurds, Chuda; in that of the Afghans, Chudai; in the Gothic and German, God and Gott; in the Icelandic and Danish, Guod, &c. It is curious to observe, moreover, that a trace of the worship of Odin or Budda appear even in American mythology among the ancient Indians. Collected by the Spanish bishop Nunez de la Vega, there is one which was current among the Indians of Chiapa respecting a certain Wodan or Votan. This individual is said to have been the grandson of one who, together with his family, was alone saved from a universal deluge. He aided in the erection of a great edifice, by which men attempted to reach the skies; but the execution of this daring project was frustrated, for each family of men received a different language; and the Great Spirit (Teotl) ordered Wodan to go and people the country of Anahuac, or Mexico. This same Wodan, moreover, like Odin and Budda, gave name to a particular day. So strong, indeed, does the resemblance between Odin and the Mexican Wodan appear, that even Humboldt himself hesitates not to use the following language in relation to it: "'Ce Votan, ou Wodan, American par excellence of the Casus pandrus, is a god of the Wodas, die Otins des Gotha et des peuples d'origine Celtique." (Monumens de l'Amérique, vol. 1, p. 382.) It would appear, then, from all that has been said, that the worship of Odin or Budda is to be referred in its origin to the earliest periods of the history of our race, these names being nothing more than early appellations for Deity, and being afterward shared also by those individuals who had spread this particular worship over different parts of the earth. (Consult Magnusen, Mythol. Boreal. Lex., p. 261, seqq.—Niemeyer, Sagen, betreffend Othin, &c., Erf., 1821, 8vo.—Leo, über Othins' Verbreitung in Deutschland, Erfl., 1822, 8vo.—Klemm, Germ. Alterthumskus, p. 280, seqq.)—

Odoicer, a Gothic chief, who, according to some authorities, was of the tribe of the Heruli. He originally served as a mercenary in the barbarian auxiliary forces of the Roman emperor Valerian, and fought for the Macedonians, who, in the war of the Persians, March 913, crossed the Danube to pay for the defeat of Italy. After the two rival emperors, Glycerius and Julius Nepos, were both driven from the throne, Orestes, a soldier from Pannonia, clothed his own son Romulus, yet a minor, with the imperial purple, but retained all the substantial authority in his own hands. The barbarian troops now asked for one third of the lands of Italy, to be distributed among them as a reward for their services. Orestes having rejected their demand, they chose Odoacer for their leader, who immediately marched against Orestes, who had shut himself up in Ticinum or Pavia. Odoacer took the city by storm, and gave it up to be plundered by his soldiers. Orestes himself was taken prisoner, and led to Placentia, where he was publicly executed, A.D. 475, exactly a twelvemonth after he had driven Nepos out of Italy. Romulus, who was called Augustulus by way of comparison, was in Raven- na, where he was seized by Odoacer, who stripped him of his imperial ornaments, and banished him to a castle in Campiglia, but allowed him an honourable maintenance. Odoacer now proclaimed himself King of Italy, rejecting the imperial titles of Caesar and Augustus. For this reason the Western empire is considered as having ended with the deposition of Romulus Augustulus, the son of Orestes. Odoacer's authority did not extend beyond the usual boundaries of Italy. Little is known of his reign until the invasion of Theodoric, king of the Ostrogoths, who, at the instigation, as some historians assert, of Zeno, emperor of the East, marched from the banks of the Danube to
dispossess Odooer of his kingdom. Theodorice, at the head of a large army, defeated Odooer near Aquileia, and entered Verona without opposition. Odooer shut himself up in Ravenna, A.D. 489. The war, however, lasted for several years; Odooer made a brave resistance, but was compelled by famine to surrender, A.D. 493. This appeal to fortune saved his life, but in a short time caused him to be put to death, and proclaimed himself King of Italy. (Encycl. Us. Knowl., vol. 16, p. 400.)

Odyssea, one of the most numerous and warlike of the Thracian tribes. Under the dominion of Sitelles, a king of theirs, was established what is called in history the empire of the Odyssea. Thucydides, who has entered into considerable detail on this subject, observes that the empire of the Odyssea embraced the Ionian Gulf and the Euxine, this was the most considerable, both in revenue and opulence. Its military force was, however, very inferior to that of Scythia both in strength and numbers. The empire of Sitelles extended along the coast from Abdera to the mouths of the Danube, a distance of four days' and nights' sail; and in the interior, from the sources of the Strymon to Byzantium, a journey of thirteen days. The Odysseans, without any great force, have been to the assistance of the Persians under Teres. (Hercod., 7, 137. — Thucydi., 2, 29.) For farther remarks on the Odyssea, see the article Thracia.

Odyssea, a city of Hispania Baetica, north of Abdera, among the mountains. It was founded, according to a fabulous tradition, by Ulysses. (Posidon., Artemidor., Asclep., Myrpl., ap. Strab., 149. — Eustath. ad Od., p. 1379. — Id. ad Dionys. Perieg., 281. — Steph. Byz., s. v. — Tzschucke ad Mel., 3, 1, 6.) Some have supposed it to be the same with Ulissipo or Ulyssipon (now Livorno), and very probably we owe Odyssea to the same fabulous legend which assigns Ulysses as the founder of Ulyssipon. There must have been a town in Batcia, the name of which, resembling in some degree the form Odyssea (Odowazia), the Greeks, in their usual way, converted into the latter, and then appended to it the fable respecting a founding by Ulysses. (Consult Ubert., Geogr., vol. 2, p. 351. — Merula, Cosmogr., pt. 2, l. 2, c. 28.)—II. A promontory of Sicily, near Pachynum, supposed by Paeselus to be the same with the present Cabo Marzo. (Bischoff and Möller, Wörterb. der Geogr., p. 798.)—III. The second of the two great poems ascribed to Homer. It consists, like the Iliad, of twenty-four books; and the subject is the return of Ulysses (Odowose), after the fall of Troy, from a land lying beyond the range of human intercourse or knowledge, to a home invaded by a band of insolent intruders, who seek to rob him of his wife and kill his son. Hence, the Odyssey begins exactly at that point where the hero is considered to be farthest from his home, in the island of Oggygia, at the navel, that is, the central part of the sea; where the nymph Calypso (Kalyphe, "the Concealer") has kept him hidden from all mankind for seven years; thence, having, by the help of the gods, who pity his misfortunes, passed through the dangers prepared for him by his implacable enemy, Poseidon or Neptune, he gains the land of the Phaeacians, a careless, peaceable, and effeminate nation, to whom war is only known by means of poetry. Borne along by a marvellous Phaeacian vessel, he reaches Ithaca sleeping; here he is entertained by the honest swineherd Eumaeus, and, having been introduced into his own house as a beggar, he is there made to suffer the hardest treatment from the suitors, in order that he may afterward appear with a victory and a strong arm. As related by the simple story a poet might have been satisfied; and we should, even in this form, notwithstanding its smaller extent, have placed the poem almost on an equality with the Iliad. But the poet to whom we are indebted for the Odyssey in a complete form, has interwoven a second story, by which the poem is rendered much richer and more complete; although, indeed, from the union of two actions, some roughnesses have been produced, which, perhaps, with a plan of this kind, could scarcely be avoided. While the poet represents the son of Ulysses, stimulated by Minerva, coming forward in Ithaca with newly-excited courage, and multiplied the difficulties of his father, he then afterward describes him as travelling to Pylas and Sparta in order to obtain intelligence of his lost father, he gives us a picture of Ithaca and its anarchical condition, and of the rest of Greece in its state of peace after the return of the princes, which produces the finest contrast; and, at the same time, he prepares Telemachus for playing an energetick part in the work of vengeance, which by this means becomes more probable. It is thus a series of adventures between the Iliad, a poem possessing a unity of subject; nor can any one of its chief parts be removed without leaving a chasm in the development of the leading idea; but it differs from the Iliad in being composed on a more artificial and more complicated plan. This is the case partly, because, in the first and greater division of the poem, up to the sixteenth book, two main actions are carried on side by side; and partly, because the incidents of the narrative, at the beginning, are new, and, as it were, beneath our eyes, is greatly extended by means of an episodical narration, by which the chief action itself is made distinct and complete, and the most marvellous part of the story is transferred from the mouth of the poet to that of the hero himself. —It is plain that the plan of the Odyssey, as well as that of the Iliad, offered many opportunities for enlargement by the insertion of new passages; and many irregularities in the course of the narration, and its occasional diffuseness, may be explained in this manner. The latter, for example, is observable in the amusements offered to Ulysses when entertained by the Phaeacians; and some of the ancients even questioned the genuineness of the passage about the dance of the Phaeacians, and the song of Demodocus respecting the loves of Mars and Venus, although this part of the Odyssey appears to have been at least extant in the 50th Olympiad (B.C. 580—577), when the chorus of the Phaeacians was represented on the throne of the Amryan Apollo. (Pausan., 3, 18, 7.) So likewise Ulysses' account of his adventures contains many interpolations, particularly in the neklya, or invocation of the dead, where the ancients had already attributed an important passage (which, in fact, destroys the unity and connexion of the narrative) to the diast髅sia, or interpolators; among others, to the Orphic Onomacritus, who, in the time of the Pisisstatois, was employed in collecting the poems of Homer. (Schol. ad Od., 11, 104.) Moreover, the Alexandrine critics, Aristophanes and Aristarchus, considered the whole of the last part (from Od. 23, 296, to the end), from the recognition of Penelope, as added at a later period. Nor can it be denied that it has great defects; in particular, the description of the arrival of the suiters in the infernal regions is only a second and feeble neklya, which does not precisely accord with the first, and is introduced in this place without sufficient reason. At the same time, the Odyssey could never have been considered as concluded until Ulysses had embraced his father Laertes, who is often mentioned in the course of the poem, and until a peaceful state of things had been restored, or begun to be restored, in Ithaca. It is not, therefore, likely that the original Odyssey altogether wanted some passage of this kind; but it is also probable that the Odyssey was probably written by Virgil before the time of Ovid, and assumed the form in which we now possess it. —That the Odyssey was written after the Iliad, and that many differences are apparent in the character and manners both of men and gods, as well as in the management of the language, is quite clear; but it is difficult and hazardous to raise upon this foundation any
definite conclusions as to the person and age of the poet. With the exception of the anger of Neptune, who always works unseen in the obscure distance, the gods and heroes, from Homer downwards, form a consistent race without dissension or contest, for the relief of mankind, not, as is so often the case in the Iliad, for their destruction. It is, however, true, that the subject afforded far less occasion for describing the violent and angry passions and vehement combats of the gods. At the same time, the gods all appear a step higher above the human race; they are not represented as descending in a bodily form from their dwellings on Mount Olympus, and remaining in the tumult of the battle, but they go about in human forms, only discernible by their superior wisdom and prudence, in the company of the adventurous Telémachus and the intelligent Ulysses. But the chief cause of this difference is to be sought in the nature of the story, and, we may add, in the fine tact of the poet, who knew how to preserve unity of subject and harmony of tone in his picture, and to exclude everything irrelevant.

The attempt of many learned writers to discover a different religion and mythology for the Iliad and the Odyssey, leads to the most arbitrary dissection of the two poems. M. Constant, in particular, in his celebrated work "De la Religion" (vol. 3), has been forced to go to this length, as he distinguishes "trois espéces de mythologie" in the Homeric poems, and determines from them the age of the different parts. It ought, however, above all things, to have been made clear how the gods of the Iliad could have been treated by a professor of this supposed religion of the Odyssey, without introducing quarrels, battles, and vehement excitement among the gods; in which there would have been no difficulty, if the difference of character in the gods of the two poems were introduced by the poet, and did not grow out of the subject. On the other hand, the human race appears, in the houses of Nestor, Menélash, and especially of Alcimós, in a far more agreeable train than we are used to in the Iliad; without comfort and luxury, than in the Iliad. But where could the enjoyments, to which the Atridas, in their native palace, and the peaceable PhæAcas could securely abandon themselves, find a place in a rough camp? Granting, however, that a different taste and feeling is shown in the choice of the subject and in the whole arrangement of the poem, yet there is not a greater difference than is found in the inclinations of the same man in the different parts of his work. And indeed, without any other argument, adduced by the Chorizantes both of ancient and modern times, for attributing the wonderful genius of Homer to two different individuals. It is certain that the Odyssey, in respect of its plan and the conception of its chief characters, of Ulysses himself, of Nestor and Menélash, stands in the closest affinity with the Iliad; that it always presupposes the existence of the earlier poem, and silently refers to it; which also serves to explain the remarkable fact, that the Odyssey mentions many occurrences in the life of Ulysses which lie out of the compass of the action, but not one which is celebrated in the Iliad. If the completion of the Iliad and the Odyssey seems too vast a work for the lifetime of one man, we may, perhaps, have recourse to the supposition, that Homer, after having sung the Iliad in the vigour of his genius, continued his labours with old age to complete the devoted disciple the plan of the Odyssey, which had long been working in his mind, and left it to him for completion. (Müller, Hist. Gr. Lit., p. 57, seqq.)

Eæ, I. a town in the island of Ægina, above 20 stadia from the capital. (Herod., 5, 83.)—II. A town in the island of Thera, called also Calliste. —III. A city on the coast of Africa, between the two Syrtes, and forming, together with Sabrata and Lepitis Magna, the district called Tripolis. This city first grew up under the Roman sway, and was founded by a noble consisting of the natives and certain Sicilians intermingled. (Compare Silus Ital., 3, 257.) It was a small place in comparison with the neighbouring Lepitis, but it was united by the Romans, and submitted without dissension or contest, for the relief of mankind, not, as is so often the case in the Iliad, for their destruction. It is, however, true, that the subject afforded far less occasion for describing the violent and angry passions and vehement combats of the gods. At the same time, the gods all appear a step higher above the human race; they are not represented as descending in a bodily form from their dwellings on Mount Olympus, and remaining in the tumult of the battle, but they go about in human forms, only discernible by their superior wisdom and prudence, in the company of the adventurous Telémachus and the intelligent Ulysses. But the chief cause of this difference is to be sought in the nature of the story, and, we may add, in the fine tact of the poet, who knew how to preserve unity of subject and harmony of tone in his picture, and to exclude everything irrelevant.

The attempt of many learned writers to discover a different religion and mythology for the Iliad and the Odyssey, leads to the most arbitrary dissection of the two poems. M. Constant, in particular, in his celebrated work "De la Religion" (vol. 3), has been forced to go to this length, as he distinguishes "trois espéces de mythologie" in the Homeric poems, and determines from them the age of the different parts. It ought, however, above all things, to have been made clear how the gods of the Iliad could have been treated by a professor of this supposed religion of the Odyssey, without introducing quarrels, battles, and vehement excitement among the gods; in which there would have been no difficulty, if the difference of character in the gods of the two poems were introduced by the poet, and did not grow out of the subject. On the other hand, the human race appears, in the houses of Nestor, Menélash, and especially of Alcimós, in a far more agreeable train than we are used to in the Iliad; without comfort and luxury, than in the Iliad. But where could the enjoyments, to which the Atridas, in their native palace, and the peaceable PhæAcas could securely abandon themselves, find a place in a rough camp? Granting, however, that a different taste and feeling is shown in the choice of the subject and in the whole arrangement of the poem, yet there is not a greater difference than is found in the inclinations of the same man in the different parts of his work. And indeed, without any other argument, adduced by the Chorizantes both of ancient and modern times, for attributing the wonderful genius of Homer to two different individuals. It is certain that the Odyssey, in respect of its plan and the conception of its chief characters, of Ulysses himself, of Nestor and Menélash, stands in the closest affinity with the Iliad; that it always presupposes the existence of the earlier poem, and silently refers to it; which also serves to explain the remarkable fact, that the Odyssey mentions many occurrences in the life of Ulysses which lie out of the compass of the action, but not one which is celebrated in the Iliad. If the completion of the Iliad and the Odyssey seems too vast a work for the lifetime of one man, we may, perhaps, have recourse to the supposition, that Homer, after having sung the Iliad in the vigour of his genius, continued his labours with old age to complete the devoted disciple the plan of the Odyssey, which had long been working in his mind, and left it to him for completion. (Müller, Hist. Gr. Lit., p. 57, seqq.)

ECH, I. the ancient name of Laconia, which it received from Ecalbus, one of its ancient kings. (Serv. ad Virg., Georg., 4, 125.) Hence Ecalbus is used by the poets as equivalent to Laconicus or Spartanus, and is applied to Castor and Pollux ("Ecalbi frater,\), Statius, Sylv., 3, 2, 10), to Helen ("Ecalbi pellex,\) Ovid, Rem. Am., 458), to Hysaeinthus ("Ecalbi puero,\) Martial, 14, 173), &c. —II. A name applied to Tarentum, because founded by a Spartan colony. (Strabo, 1, 18, 337.)

Ecalbus, I. a son of Argillus, king of Laconia, which country received from him, among the poets, the name of Ecalbus. He was the father of Tyndarus, and grandfather of Helen. (Hygin., fab., 78.)—III. A son of Telon, king of Capres, and of the nymph Sebehis. (Virg., En., 7, 734.—Seren, ad loc.)

Ecalhia, I. a city of Thessaly, in the district of Estición. (Homer, I., 2, 709.) It is inisyhtris with Tripolis and Ithaka, and of course means by it a Thessalian city. Many poets, however, as Strabo observes, not adhering to the Homeric geography, were of opinion that Ecalhia was in Euboea, as Sophocles, for instance, in his Trachiniam; while others consigned it to Arcadia or Messenia. (Strabo, 438.—Cramer’s Anc. Greece, vol. 1, p. 362.)—IV. A city of Ecalhia, belonging to the tribe of Eurytanes. (Strabo, 448.)—V. A city of Euboea, which Eurytus reigned, and which was destroyed by Heracles. But this opinion, which is maintained by many writers, would seem not to have been a well-grounded one, and we ought to look, in all probability, for the Ecalhia of Eurytus in Thessaly. (Vid. Ecalhia I. —Cramer’s Anc. Greece, vol. 2, p. 139.)—IV. A city of Messenia, according to some the residence of Eurytus. (Pausan., 4, 33.) This is, however, a question not attested by anything certain on Homer; for, as Strabo observes, the poet seems to speak of two places of that name, both belonging to Eurytus, one in Thessaly, the other in Messenia; it was from the latter that Themistocles, the Thracian bard, was proceeding on his way to Dorium, another Messenian city, when he encountered the Muse, who deprived him of his art. (I., 2, 594.) Apollodorus, however, acknowledges that the names of only one Ecalhia of Eurytus, which he placed in Thessaly, but Demetrius of Scそこで admitted also the Messenian city, which he identified with Andanis, a
well-known town of that province on the Arcadian frontier. (Strabo, 339.—Cramer's Anc. Greece, vol. 3, p. 146, seqq.)

*CEdipus.*

Edipus. Lardner, but, Polynices of Thebes. He was the son of Laius, king of Thebes, and of Jocasta, the daughter of Meneceus. Homer calls his mother Epicasta. An oracle had warned Laius against having children, declaring that he would meet his death by means of his offspring; and the monarch accordingly refrained, until, after some lapse of time, having indulged in festivity, he forgot the injunction of the god, and Jocasta gave birth to a son. The father immediately delivered the child to his herald to expose on Mount Citheron. The herdsman, moved to compassion, according to one account (Soph., *Ed. Tyr.* 1038), gave the babe to a shepherd belonging to Polybus, king of Corinth, or, as others say (Eurip., *Phœmias*, 28), the shepherds of Polybus found the infant after it had been exposed, and brought it to Periboea, the wife of Polybus, who, being childless, reared it as her own, and named it OEdipus, on account of its swollen feet (from oifieu, to swell, a foot). For Laius, previous to its exposure, had pierced its ankles, and had inserted through the wound a leathern thong. The foundling OEdipus was brought up by Polybus as his heir. Happening to be reproached by some one at a banquet with being a supposititious child, he besought Periboea to inform him of the truth; but, unable to get any satisfaction from her, he went to Delphi and consulted the oracle. The god directed him to shun his native country, or else he would be the slayer of his father and the sharer of his mother's bed. He therefore resolved never to return to Corinth, where so much crime, as he thought, awaited him, and he took his road through Phocis. Now it happened that Laius, at this same time, was on his way to Delphi, for the purpose of ascertaining whether the child which had been exposed had perished or not. He was in a chariot, accompanied by his herald Polyphron; few attendants were with him. The father and son, total strangers to each other, met in a narrow road in Phocis. OEdipus was ordered to make way, and, on his disregarding the command, the charioteer endeavoured to crowd him out of the path. A contest thereupon ensued, and both Laius and the charioteer, together with all the attendants except one, who fled, were slain by the hand of OEdipus. Immediately after the death of Laius, June, always hostile to the city of Bacchus, sent a monster named the Sphinx to ravage the territory of Thebes. It had the face of a woman, the breast, feet, and tail of a lion, and the wings of a bird. This monster had been taught riddles by the Muses, and she sat on the Pheiccan Hill, and propounded one to the Thebans. It was this: 'What is that which has one voice, is four-footed, two-footed, and at last three-footed?' or, as others give it, 'What animal is that which goes on four feet in the morning, on two at noon, and on three at evening?' The oracle told the Thebans that they would not be delivered from her until they had solved her riddle. They often met to try their skill; and when they had failed, the Sphinx always carried off in her arm the life, or the wife, of some Theban warrior. After the death of Laius, son of Creon, having become her victim, the Thebans offered by public proclamation the throne, to which he had succeeded on the death of Laius, and the hand of his sister Jocasta, to whoever should solve the riddle of the Sphinx. OEdipus, who was then at Thebes, hearing this, came forward and answered the Sphinx that it was Man; who, when an infant, creeps on all fours; when he has attained to manhood, goes on two feet; and when old, uses a staff, a third foot to the left. Thereupon she flung herself down to the earth and perished; and OEdipus now unknowingly accomplished the remainder of the oracle. He had by his two mother sons, Eteocles and Polynices, and two daughters, Antigone and Ismene.—After some years Thebes was afflicted with famine and pestilence; and the oracle being consulted, ordered the land to be purified of the blood which defiled it. Inquiry was set on foot after the murderer of Laius, and a search was made for the tracing of the circumstances brought the guilt home to OEdipus. Jocasta, on the discovery being made, hung herself, and her unhappy son and husband, in his grief and despair, put out his eyes. He was banished from Thebes; and, accompanied by his daughters, who faithfully adhered to him, he came, after a tedious period of miserable wandering, to the grove of the Furies at Colonus, a village not far from Athens, and there found the termination of his wretched life. Having mysteriously disappeared from mortal view, and been received into the bosom of the earth. (Apollod., 3, 5, 8, seq.—Soph., *Ed. Col.*) The history of his sons will be found under the articles Eteocles and Polynices.—Such is the form in which the history of OEdipus has been transmitted to us by the Attic dramatists. We will now consider its more ancient shape. The hero of the Odyssey says, "I saw (in Erebus) the mother of OEdipus, the son of Laius of Thebes; she was the woman, the daughter of the Cadiim, the goddess of the mountain." When OEdipus appeared to her, she, in ignorance, did an awful deed, marrying her own son, and he married, having slain his own father, and immediately the gods made this known unto men. Now he ruled over the Cadiims in desirable Thebes, suffering woes through the perrnicious counsels of the gods; but she, oppressed with grief, went to the abode of Aides, the strong gate-keeper, having fastened a long halter to the lofty roof, and left to her many woes, such as the Furies of a mother produce." (Od., 11, 271, seqq.) In the Iliad (23, 679) the funeral games are mentioned which were celebrated at Thebes in honour of the "fallen OEdipodes." Hesiod (Op. et D., 162) speaks of the heroes who fell fighting at the seven-gated Thebes, on account of the sheep of OEdipodes. It would also seem that, according to the above passage of the Odyssey, and to the epic of the Goddess (R. 9.5, 11), Epicasta had not any children by her son; Eurygénis, the daughter of Hyperphas, being the mother of his well-known offspring. According to the cyclic Thebais, the fatal curse of OEdipus on his sons had the following origin: Polynices placed before his father a silver table which had belonged to Cadmus, and filled a golden cup with wine for him; but when OEdipus perceived the heirloom, he harried the family of Cadmus, and set his sons to work, and prayed that his sons might never divide their inheritance peaceably, but ever be at strife. Elsewhere (ap. Schol. ad Soph., *Ed. Col.*, 1440) the Thebais said, that his sons having sent him the loin, instead of the shoulder of the victim, he flung it to the ground, and prayed that they might fall by each other's hands. The motives as
signed by the tragians are certainly of a more digni-
sified nature than these, which seem trifling and insig-
nificant. It is therefore probable of course it is not one
great liberties which the Attic tragedians allowed them-
themselves to take with the ancient myths. It was purely
and simply to gratify Athenian vanity that Sophocles, contrary
to the current tradition, made Edeipus die at Colonus.
His blindness also seems a tragic fiction. Euripides
makes Jocasta survive her sons, and terminate her life
by the sword. (Keightley's Mythology, p. 340, seqq.)

CEneus, a king of Calydon in Ætolia, son of Par-
thus. He married Althaca, the daughter of Thestius,
by whom he had, among other children, Meleager and Deanara.
After Althaca's death, he married Peribos, the
daughter of Hipponous, by whom he became the fa-
ther of Tydeus. In a sacrifice which CEneus made
unto all the gods, upon reaping the rich produce of his
fields, he forgot Diana, and the goddess, to revenge
this neglect, sent a wild boar to lay waste the terri-
tory of Calydon. The animal was at last killed by Me-
leager and the neighbouring princes of Greece, in a
celebrated chase known by the name of the chase of
the Calydonian boar. (Vid. Meleager.) After the
death of Meleager, CEneus was dethroned and impris-
oned by the sons of his brother Agrius. Diomede,
having come secretly from the city of Argos, slew all
the sons of Agrius but two, who escaped to the Pe-
lonnese, and then, giving the throne of Calydon to An-
dreas, son-in-law of CEneus, who was himself now too
old to reign. Later on, the Argives, when CEneus
was afterward slain by the two sons of Agrius,
who had fled into the Pelonnese, Diomede buried him
in Argolis, on the spot where the city of CEnos,
called after CEneus, was subsequently erected. CEn-
eus is said to have been the first that received the vine
from Bacchus. He taught the god how to cultivate it,
and the juice of the grape was called after his name
(oliv; "wine"—Apollod., 1, 8.—Hygin., fab., 129).
CEnisa, a city of Arcadia, near the mouth of the
Achelous. Thucydides represents it as situated on the
Achelous, a little above the sea, and surrounded
by marshes caused by the overflowing of the river,
which rendered it a place of great strength, and de-
terred the Athenians from undertaking its siege; when,
unless the other cities of Arcadia, it embraced the
cause of the Pelonneseans, and became hostile to Ath-
enes. (Thucyd., 1, 111; 2, 102.) At a later pe-
riod of the war, the Arcadians compelled the
Arcadian confederacy to enter into an alliance with
that power. (Thucyd., 3, 77.) The same writer
gives us to understand, that CEnidias was first founded
by Alcmæon, according to an oracle which he consult-
ad after the murder of his mother; and that the pro-
vince was named after his son Acarnan (2, 102). Ste-
phanus asserts that this city was first called Ersychia,
a fact of which the poet Alcman had made mention
in a passage cited by more than one writer; but Strabo,
on the authority of Apollodorus, places the Ersychia
in the interior of Arcadia, and consequently appears
to distinguish them from the CEnidias. From Pausan-
ias we learn (4, 25), that the Messenians, who had
been settled at Naupactus by the Athenians not long
after the Persian invasion, made an expedition from
that city to CEnidias, which, after some resistance,
yielded to the Persians, and held for one year, when they
were in their turn besieged by the united forces of the
Arcadians. The Messenians, despaiiring of being
able to defend the town against so great a number of
troops, cut their way through the enemy, and reached
Naupactus without experiencing any considerable loss.
The Ætolians having, in process of time, conquered
that part of Arcadia which lay on the left bank of the
river, and through whose territory they had to pass when they expelled the inhabitants under circumstan-
ces apparently of great hardship and cruelty, for which,
way, it was said, they were threatened with the vengeance
of Alexander the Great. (Plut., Vit. Alex.) By the
advice of Cassander, the Æniadæ settled at Saura
(probably Thyris), another Acarnanian town. Many
years afterward, the Ætolians were compelled to eva-
uate Æniadæ by Philip the son of Demetrius, king of
Macedon, in an expedition related by Polybius.
This monarch, aware of the advantage to be derived
from the occupation of a place so favourably situated with
regard to the Pelonneseans, fortified the citadel, and
enclosed within a wall both the fort and arsenal. (Po-
lyb., 4, 65.) In the second Persian war this town was
taken by the Romans, who defeated the Ætolians Lusavius,
and gave up to the Ætolians their allies (Liv., 36, 24,
Polyb., 9, 39); but, on a rupture taking place with
that people, it was finally restored to the Acarnanians.
(Liv., 38, 11.—Polyb., fragm., 22, 15.) The precise
site of this ancient city remains yet unsacertained;
and, though many antiquaries have supposed that it
is represented by a place called Trigardan, close to the
mouth of the Acheilous, and on its right bank, there
are several strong objections against the correctness
of this. A principal obstacle to the reception of such
an opinion is found in the fact, that Trigardan is
situated on the right bank of the Achelous, whereas
the ancient town was evidently on the left. The ruins
which Sir W. Gell describes as situated above Misso-
longhi and the lake of Anatolico, on the spot named
Karia Irene, seem to possess many of the characteris-
tic features appertaining to Æniadæ. (Itin. of Greece,
293, seqq.) And later on the Ætolians decided against
Karia Irene, and in favour of Trigardan. (Cramer's Anc.
Greece, vol. 2, p. 21, seqq.)

CEnidæ (Oliveγ), a patronymic of Meleager, son of
CEnes. (Ovid, Met., 8, 414.)

CEnidæ, 1. a town, and demus or borough, of At-
tica, classed by Harppocrat and the other lexicogra-
phers under the tribe Ætis. We are informed by
the same writers that it was part of the Tetrapolis. (Harp-
pack, "s. v. Olenis—Steph. Byz., s. v. Olenis—Strabo,
283.) From Dodwell we learn (vol. 2, p. 163) that the site
of this town still retains its name and some vestiges
near the cave of Pan.—II. Another borough of Atti-
ca, on the confines of Beotia, near Eleutherias.—III.
A small Corinthian fortress, near the promontory of
Olimne. (Strabo, 380.) Xenophon states (Hist. Gr.,
4, 6, 5) that it was taken on one occasion by Ages-
ilas,—"that the king of Els, supposing him by now to
come with EphyriAMES near the sea on the road
leading from Els to the coast, and 120 stadia from
that city. (Strabo, 338.)—V. A town of Argolis, be-
tween Argos and Mantinea, and on the Arcadian fron-
tier. It was said to have been founded by Diomede,
and named after his grandfather CEnus. (Pausan.,
2, 25.—Apollod., 1, 8, 6.) The site of this place,
according to modern maps, is still called Enoa. (Gra-

CEnomus, a son of Mars by Sterope, the daughter of
Atlas. The legend connected with his name will be
found under the article Pelops.

CEnone, a nymph of Mount Ida, daughter of the
river Cebrenus in Phrygia. Paris, when a shepherd
on Mount Ida, and before he was discovered to be a
son of Priam, had united himself in marriage to
CEnone; and as she had received a present from the
gift of prophecy, she warned her husband against
the consequences of his voyage to Greece. She at
the same time told him to come to her if ever he was
wounded, as she alone could cure him. Paris came
to her, accordingly, when he had been wounded by
one of the arrows of Philoctetes, but CEnone, offended
at his desertion of her, refused to aid him, and he
died on his return to Ilium.

CEnone, a town in Phrygia, with a pleasant
Olmic relief; but, coming too late, she threw herself on his funeral pile and perished.
(Apollod., 3, 12, 6.—Quint., Smyr., 10, 559, seqq. —
Conon., 22.)
CENOPSIS, one of the ancient names of the island Eginia. (Ovid, Met., 7, 473.)

CENOPHON, a son of Bacchus and Ariadne, and king of Chios. His name is connected with the legend of Orion. (Vid. Orion.)

CENOTRIA, the inhabitants of Cenotria. The name is derived from an ancient race of the Cenotri, and in early use among the Greeks to designate a portion of the southeastern coast of Italy. The name is derived by some from dirv, "to dive," and they maintain that the early Greeks called the country Cenotria, or the "swim-land," from the number of vines they found growing there when they first became acquainted with the region. (Manuerti, Geogr., vol. 9, pt. 1, p. 542.) With the poets of a later age it is generally connected with all Italy. The Cenotiri, as they were called, appear to have spread over a large portion of Southern Italy, and may be regarded, not as a very early branch of the primitive Italian stock, but rather as the last scion propagated in a southerly direction. (Cramer's Anc. Greece, vol. 2, p. 336.)

CENOIDES, small islands, two in number, off the coast of Lucania, and a little above the promontory of Palinurus. They lay in front of the city of Velia, where the river Hiles empties into the sea. (Plin., 7, 7.)

CENOTRUS, a son of Lycaon. He was fabled to have passed with a body of followers from Arcadia into Southern Italy, and to have given the name of Cenotria to that part of the country where he settled. (But consult remarks under the article Cenotria, where a more probable etymology is given for the name of the country.)

CENAE or CENAEUM, I. small islands in the Aegean Sea, between Chios and the mainland, now Spermati, or (as the modern Greeks more commonly term them) Egonusae. (Herod., 1, 165.—Thucyd., 8, 24.—Plin., 5, 31.—Bischoff und Moller, Wörterb. der Geogr., p. 800.) II. Small islands off the coast of Messenia, and nearly facing the city of Methone. They are two in number, and are now called Sapienza and Cabrera. (Pausan., 4, 34.—Plin., 4, 11.)

CENUS, I. a town of Laconia, supposed to have been situated on the river of the same name flowing near Sellasia. (Polyb., 2, 65.—Liv., 34, 28.) The modern name is Tichelaera. Sir W. Gell describes the river as a large stream which falls into the Eurotas a little north of Sparta. (Itin. of the Morea, p. 223.)—II. or Eunus, a river of Germany, separating Noricum from Vindelicia, and falling into the Danube at Boedurum or Passau. It is now the Inn. (Tactix, Hist., 3, 5.—Id., Germ., 28.—Ptol., 2, 14.)

CETA, a celebrated chain of mountains in Thessaly, whose eastern extremity, in conjunction with the sea, forms the famous pass of Thermopylae. It extended its ramifications westward into the country of the Dorians, and still farther into Etolia, while to the south it was connected with the mountains of Locris, and those of Boeotia. (Liv., 36, 15.—Strabo, 428.—Herod., 7, 217.) Its modern name is Katachora. Sophocles represents Jove as thundering on the lofty crags of Ceta. (Trach., 436.) As regards the expression of Virgil, "ibi desértus Hesperus Cetam," the meaning of which many have misconceived, consult the remarks of Heyne (ad Eclog., 8, 30). The highest summit of Ceta, according to Livy, was named Calidromus: it was occupied by Cato with a body of troops in the battle fought at the pass of Thermopylae between the Romans and under Acilius Glabrio. The Roman army of Antiochus, and, owing to this manœuvre, the latter was entirely routed. (Liv., 36, 15.—Plin., 4, 7.)

HERODOTUS describes the path by which the Persian army turned the position of the Greeks as beginning at the Dophus, "Its name, as well as that of the mountain, is Anopea. It leads along this ridge as far as Alponus, the first Loerian town (7, 216). On the summit of Mount Ceta were two castles, named Tichus and Rhodunita, which were successfully defended by the Athenians against the Romans. (Liv., 36, 19.—Strabo, 428.—Cramer's Anc. Greece, vol. 1, p. 445.)

OGLASIA, a small island off the coast of Etruria, some distance below Plataisia, famed for its wine, now Monte Cristo. (Plin., 3, 7.)

OGLUS or OGLUS (Olygus or Olycus) is said to have been the king of Styra and of Thessaly. (Tzetze, ad Lyocph., 1206.) Thus, Pausanias tells us that the Etruscan, who were the most ancient inhabitants of Boetia, were the subjects of Ogyges, and that the Thebans itself was called Ogygian, an epithet which is also applied to it by Eschylus. (Pausan., 9, 5, 1.—Esch., Pers., 37.) That Ogyges was closely connected with Thebes as well as Attica, appears from the tradition, according to which he was said to be the son of Moliusus. (Schol. ad Apollon. Rh., 1, 3178.) It may also be mentioned, that the oldest gatia in Thebes was called Ogygian. (Pausan., 9, 8, 3.) The name of Ogyges is connected with the ancient deluge which preceded that of Deucalion, and he is said to have been the only person saved when the whole of Greece was covered with water. We possess scarcely any particulars respecting him; and the accounts which have come down to us are too vague and unsatisfactory to form any definite opinion on the subject. He clearly belongs to mythology rather than to history. The earlier Greek writers. Herodotus, Thucydides, Xenophon, &c., make no mention of his name; but the accounts preserved by Pausanias and other authors appear to indicate the great antiquity of the traditions respecting him. Varro places the deluge of Ogyges, which he calls the first deluge, 400 years before Inaeus, and, consequently, 1600 years before the first Olympiad. This would refer to a period of 2376 years before Christ; and the deluge of Noah, according to the Hebrew text, is 2349, being only 27 years difference. Varro's opinion is mentioned by Censorinus (de Die Nat., c. 21). It appears from Julius Africanus (ap. Euseb., Prep. Ev.) that Acusilas, the first author who placed a deluge in the reign of Ogyges, made this prince contemporary with Phoroneus, which would have brought him very near the first Olympiad. Julius Africanus makes only an interval of 1020 years between the two epochs; and there is even a passage in Censorinus conformable to this opinion. Some also read Erogius in place of Ogygium, in the passage of Varro which we have quoted. But what would this be but an Erogius titular, of which nobody has ever heard! (Cunier, Theory of the Earth, p. 144, Jameson's tranal.)—In a note appended to Lemaire's edition of the "Recherches d'histoire naturelle," the compiler enumerates the Moscovite, Grecian, Assyrian, Persian, Indian, and Chinese traditions concerning a universal deluge, and concludes from them that the surface of the globe, five or six thousand years ago, underwent a general and sudden revolution, by which the lands inhabited by the human beings who lived at that time, and by the
various species of animals known at the present day, were overflowed by the ocean; out of which emerged the present habitable portions of the globe. This celebrated naturalist maintains, that these regions of the earth were peopled by the few individuals who were saved, and that the tradition of the catastrophe has been preserved among these new races of people, variously modified by the difference of their situation and their social condition. According to Cuvier, similar revolutions of nature had taken place at periods long antecedent to that of the Mosaic deluge. The dry land was inhabited, if not by human beings, at least by land animals at an earlier period; and must have been changed from the dry land to the bed of the ocean; and it might even be concluded, from the various species of animals contained in it, that this change, as well as its opposite, had occurred more than once. (Theory of the Earth, Jameson’s transl., p. 418.) This theory, however, has been ably attacked by Jameson.—Various etymologies have been proposed for the name Ogyges. Kenrick supposes that the word was derived from the root γογγ, signifying darkness or night, and quotes a passage of Hesychius in support of his view, which appears, however, to be corrupt. The more favourite theory of modern scholars connects the name with Oceanus: which etymology is supported, as is thought, by the tradition that places Ogyges in the time of the deluge. In support of this view, it is remarked that Ogyges is only a reduplication of the radical syllable Ογ or Ος, which we find in Oceanus (vid. Oceanus I.), and also in Ογλη (this is explained by Hesychius as equivalent to Oceanus: Ογλης, Ογλαιας). A similar reduplication appears to take place in οτυμος, οτυμος οτυμος, οτυμος οτυμος, (Kenrick, Philol. Museum, vol. 5, p. 6.) On the early Kings of Achaia, see Schwenck, Philol. Mus. vol. 8, p. 143. Ogyges.—Creuzer and Hermann, Briefe über Homer und Hesiodus, p. 105, in nótis.—Wöckler, Myo. des Iap. Gesch., p. 67.—Scheenck, Andeut., p. 179.) Regarding, therefore, the name Ogyges as a general type of the waters, we may trace a resemblance between its radical syllable and the forms οτυμ, οτυμ, οτυμ, οτυμ, (compare the Latin aqua; aq; e.g., “the seawater,” Aq-λης, “the water-god.” Aq-λης, another name of the sea, ruler over the island Aq-λης. (Scheenck, l. c.) But, whatever may be the etymology of the name, the adjective derived from it is frequently employed by the Greek writers to indicate any thing ancient or unknown. We learn from the scholiast on Hesiod, that, according to one tradition, Ogyges was the king of the gods, and some think that the name originally indicated nothing more than the high antiquity of the times to which it referred. (Encycel. Gr. K. n., vol. 16, p. 412.)

Ogygia, I. an ancient name of Boeotia, from Ogyges, who reigned there. (Vid. Ogyges.)—II. The island of Calypso. (Vid. Calypso.) The name Ogygia is supposed to refer to its being in the middle of the ocean. (Vid. Ogyges.)

Oileus, king of the Locricians, was son of Odadocus, and father of Ajax the Less, who is called, from his parent, the Oilean Ajax. Oileus was one of the Argonauts. (Apol., 10, 10; Ἡγγ., fab. 14, 18.)

Olbia, I. a city of Bithynia, in the eastern angle of the Sinus Olbianus, and probably the same with Astacus. (Plin., 5, 27.—Steph. Byz., p. 512.)—II. A city on the coast of Pamphylia, west of Attalea. (Ptol. —Steph. Byz., p. 512.)—III. A town on the coast of Gaul, founded by Massilia. It was also called Astacus. (Ptol. —Steph. Byz., p. 512.) It is mentioned to have been the same with Telo Martius, or Toloun, these three ancient names indicating, as he thinks, one and the same city. (Mannert, Geogr., vol. 2, p. 81.)—IV. A town on the eastern coast of Sardinia, in the northern part of the island. According to Reichard, some traces of it still remain on the shores of the bay of Volpe. (Jtin. Ant., p. 79.)—V. Or Borysthenes, called also Olybiopolis and Miletopolis, a city of European Sarmatia, according to Stephanius of Byzantium and Mela, at the mouth of the Bysthenes, and according to other writers, at some distance from the sea. It was colonized by the Milesians, and is at the present day, not Oichahone, as some have thought, but Oudak, a small place in the vicinity. (Bischoff and Möller, Wörterb. der Geogr., p. 192.) The latest of the ancient names of this place was Borysthenes, and the one preceding it Olbia.

Olichnium or Olicnium, now Dulcigno, a town of Dalmatia, on the coast of the Adriatic. (Livy, 45, 26.)

Ocears. —Vid. Antiparos.

Olén (OIJIo), the name of one of the earliest bardsmentioned by the Cramer’s As. Greece, vol. 3, p. 70.)—Plin., 3, 22.)

Oen. —Vid. Antiparos.

Olen (Οlijο), the name of one of the earliest bardsmentioned, in the Cramer’s As. Greece, vol. 3, p. 70.)—Plin., 3, 22.)

Olenus, I. an ancient city of Ætolia, in the vicinity of Phebou, and known to Homer, who enumerates it in his catalogue. (II, 6, 638.) It was destroyed by the Ætolians, and preserved but few vestiges in Strabo’s time. (Strab., 460.) The goat Amalthea is called Olenus by the poets (Ovid, Met., 2, 594), because, it is said, it was nurtured by the goats of one of the most ancient of the cities of Achaia, situate on the western coast, at the mouth of the river Peyrus. According to Polybius (2, 41, 7), it was the only one of the twelve cities which refused to accede to the confederation, upon its renewal after an interruption of some years. In Strabo’s time it was deserted, the inhabitants, as Pausanias affirms, having retired to the adjacent country, in order to supply the Gothic name Olen flourished is uncertain. It is supposed to have been before Orpheus. (Schol. Hist. Lie. Gr., vol. 1, p. 33.—Müller, Hist. Lie. Gr., p. 24.)

Olhen, I. an ancient city of Ætolia, in the vicinity of Phebou, and known to Homer, who enumerates it in his catalogue. (II, 6, 638.) It was destroyed by the Ætolians, and preserved but few vestiges in Strabo’s time. (Strab., 460.) The goat Amalthea is called Olenus by the poets (Ovid, Met., 2, 594), because, it is said, it was nurtured by the goats of one of the most ancient of the cities of Achaia, situate on the western coast, at the mouth of the river Peyrus. According to Polybius (2, 41, 7), it was the only one of the twelve cities which refused to accede to the confederation, upon its renewal after an interruption of some years. In Strabo’s time it was deserted, the inhabitants, as Pausanias affirms, having retired to the adjacent country, in order to supply the Gothic name Olen flourished is uncertain. It is supposed to have been before Orpheus. (Schol. Hist. Lie. Gr., vol. 1, p. 33.—Müller, Hist. Lie. Gr., p. 24.)

Oliarpe, a city of Lusitania, at the mouth of the Tagus, near the Atlantic Ocean. (Plin., 4, 35.—Id., 8, 67.—Varro, R. R., 2, 1.) It was the only municipal city in this section of the country, and, as such, had the appellation of Fálicidas Julia. It was very probably of Roman origin, and the story of its having been founded by Ulysses is a mere fable, arising out of an accidental coincidence of name. The horses brought to Italy by Ulysses from Scythia and Thessaly, were certainly remarkable for their speed. (Plin., 8, 42.) Mannert and many other geographical writers make Oliarpe coincide with the modern Lisbon (Lissabon), but others oppose this. (Mannert, Geogr., vol. 1, p. 342.—Compare Utter, vol. 2, p. 394.) The name of this city is variously written. Thus we have Olisti in some authors, and in others, who favour the account of its foundation by Ulysses, we find Olisti. (Consort Wörterb. der Geogr., 416.—Tesche, ad Mel., 3, 1, vol. 2, p. 3, 25.)

Ollis, a river rising in the Alps, and falling into the Po. It is now the Oglio, and forms in its course the Lake Sebino, now Lago d’Iseo. (Plin., 3, 19.)
OLYMPIA.

Olympia (orum), I. the chief of the four great national games or festivals of the Greeks. They were celebrated at Olympia, a sacred spot on the banks of the Alpheus, near Elis, every fifth year. The exact interval at which they occurred was one of forty-nine and fifty lunar months alternately; so that the celebration was sometimes interfered with (July) sometimes in the month Parthenius (August). (Böckh, ad Pind., Olymp., 3, 18.—Müller’s Dorians, vol. 1, p. 281, Eng. transl.) The period between two celebrations was called an Olympia.—The Olympic festival lasted five days. Its origin is concealed amid the obscurity of the mythic period of Greekian history. Olympia was a sacred spot, and had an oracle of Jupiter long before the institution of the games. The Eleans had various traditions, which attributed the original foundation of the festival to gods and heroes at a long period prior to the Trojan war, and among these to the Idas Hercules, to Peloia, and to Hercules the son of Acrisius. The Eleans farther stated, that, after the Eolians had possessed themselves of Elis, their whole territory was consecrated to Jupiter; that the games were revived by their king Iphitus, in conjunction with Lycurgus, as a remedy for the disorder and civil wars which prevailed in Elis. The institution of the Delphic oracle to the institution, and appointed a periodical sacred truce, to enable persons to attend the games from every part of Greece, and to return to their homes in safety. This event was recorded on a disc, which was preserved by the Eleans, and on which the names Iphitus and Lycurgus were inscribed. (Plut., Vit. Lycurg., 1.—Pausan., 5, 20, 21.) Other accounts mention Cleothesthenes of Pisa as an associate of Iphitus and Lycurgus in the revival of the festival. All that can safely be ascertained of this tradition, which has been embellished with a variety of legends, seems to be, that Sparta concurred with the two states most interested in the plan, and mainly contributed to procure the consent of the other Peloponnesians. (Thirwald’s Greece, vol. 1, p. 386.) The date of the revival by Iphitus is, according to Eratosthenes, 834 B.C.; according to Callimachus, 829 B.C. Mr. Clinton prefers the latter date. (Fast. Hell., vol. 1, pp. 67 and 107.) This conclusion is arrived at, because of the year 776 B.C., in which year Coroebus was victor in the foot-race. We have lists of the victors from that year, which always include the victors in the foot-race, and in later times those in the other games. (Pausan., 5, 3, 3.)—The Olympic, like all the other public festivals, might be attended by all who were of the Hellenic race; though at first probably the northern Greeks, and perhaps the Acheans of Peloponnesus, were not admitted. Spectators came to Olympia, not only from Greece itself, but also from the Greekian colonies in Europe, Asia, and Africa. Among them were solemn deputations sent to represent their respective states. Women, however, were forbidden to appear at Olympia, or even to cross the Alpheus, during the festival, under pain of death. But at a later period we find women taking part in the chariot-race, though it is doubtful whether they ever drove their own chariots. An exception was made to this law of exclusion in favour of the priestess of Ceres and certain virgins, who were permitted to be present at the games, and had a place assigned to them opposite the judges. The management of the festival was in the hands of the Eleans. Originally, indeed, Pisa, in whose territory Olympia lay, seems to have had an equal share in the administration; but in the fiftyieth Olympiad the Eleans destroyed Pisa, and from that time the entire management of the games was in their hands. They proclaimed the sacred truce, first in their own territories, and then throughout the whole of Greece. This truce took effect from the time of its proclamation in Elis, and while it lasted the Elean territory was inviolable, any armed invasion of it being esteemed an act of sacrilege. On this privilege the Eleans founded a claim to have their territory always considered sacred, though in fact they themselves did not abstain from war. As the preserving nation, they gave laws for the regulation of the festival, imposed penalties on individuals and states, and had the power of concurring in all the acts of decision of a games to the Elean senate. They actually thus excluded the Lacedaemonians on one occasion, and the Athenians on another. The Eleans appointed the judges of the contest, who were called Hellanodikai (Ελλανοδικαί). These were instructed in the duties of their office, for a period of ten months before the festival, by Elean officers called Nomophylacés (Νόμοφυλάκες); they were sworn to act impartially, and an appeal might be made from their decision to the Elean senate. This number varied at different periods: in the 106th Olympiad it was fixed at ten, which was the number ever afterward. The judges had under them other officers, called ἀθληταί, whose business it was to keep order. These officers were called μαστιγοφόροι in the other Greekian games. (Consult, in relation to these details, Pausanias, 5, 9, 4, seq. —6, 24, 3.)—The Olympic festival consisted of religious ceremonies, athletic contests, and races. Who presided in the latter Olympiad, whose temple at Olympia, containing the ivory and gold statue of the god, was one of the most magnificent works of art in Greece. The worship of Apollo was associated with that of Jupiter (Müller’s Dorians, vol. 1, p. 279, seqq., Eng. transl.); and the early traditions connect Hercules with the festival. (Id. ib., p. 453.) This is another proof of the Dorian origin of the games, for Apollo and Hercules were two of the oldest divinities of the Doric race. There were altars at Olympia to other gods, which were said to have been erected by Hercules, and at which the victors sacrificed. The most magnificent sacrifices and presents were also offered to Jupiter Olympius by the competitors, and by the different states of Greece.—The games consisted of horse and foot races, leaping, throwing, wrestling and boxing, and combinations of these exercises. 1. The earliest of these games was the foot-race (πάλη), in which the Doric was the only one retained by Iphitus. The space run was the length of the stadium, in which the games were held, namely, about 600 English feet. In the 14th Olympiad (724 B.C.), the διάπλος was added, in which the stadium was traversed twice. The δίπλωσ, which consisted of several lengths of the stadium (seven, twelve, or twenty-four, according to different authorities), was added in the 15th Olympiad (B.C. 720). A race in which the runners wore armour (ὑπέρπορον θρόμφον) was established in the 65th Olympiad, but soon after abolished. 2. Wrestling (πάλη) was introduced in the 18th Olympiad (B.C. 708). The wrestlers were matched in pairs by lot. When there was an odd number, the person who was left by the lot without an antagonist wrestled last of all with him who had conquered the others. He was called ἱππορν. The athlete who gave his antagonist three throws gained the victory. There was another long-distance wrestling (ζώνανταρικά), in which, if the combatant who fell could draw down his antagonist with him, the struggle was continued on the ground, and the one who succeeded in getting uppermost and holding the other down gained the victory.—3. In the same year was introduced the pentathlon (πένταθλον), or, as the Romans called it, quintertiwm, which consisted of the five exercises enumerated in the following verse, ascribed to Simonides:—

"Αλμοι Πολυκρίνις, δόκοι, δύκατα, πάλα, παίζετε, that is, "leaping, running, throwing the quoit, throwing the javelin, wrestling."

Others, however, give a different enumeration of the exercises of the pentathlon. In "leaping, they carry weights in their hands or on"
OLYMPIA.

their shoulders: the object was to leap the greatest distance, without regard to height. The discus, or quoit, was another amusement of the Greeks, and here again neither this nor the javelin was aimed at a mark, but he who threw farthest was the victor. In order to gain a victory in the pentathlon, it was necessary to conquer in each of its five parts.—4. Boxing (πυγμή) was introduced in the 23d Olympiad (B.C. 689). The boxers had their hands and arms covered with thongs of leather, called cestus, which served both to defend them and to annoy their antagonists. Virgil (En., 6, 485) describes the cestus as armed with lead and iron, but this is not known to have been the case among the Greeks.—5. The Pancratium (πανκρατίον) consisted of boxing and wrestling combined. In this exercise, and in the cestus, the vanquished combatant acknowledged his defeat by some sign; and this is supposed to be the reason why Spartans were forbidden by the laws of Lycurgus to practise them, as it would have been esteemed a disgrace to his country that a Spartan should confess himself defeated. In these games the combatants fought naked.—The horse-races were of two kinds. 1. The chariot-race, generally with four-horse chariots (παραστώς ὀμόθρονας), was introduced in the 25th Olympiad (B.C. 680). The course (παραστώς) had two goals in the middle, at the distance probably of two stadia from each other. The chariots started from one of these goals, passed round the other, and returned along the other. The lever of the charioteers was fixed at the middle of the course when it was not less than twelve times. The great art of the charioteer consisted in turning as close as possible to the goals, but without running against them or against the other chariots. The places at the starting-post were assigned to the chariots by lot. There was another sort of race between chariots with two horses (διόμης or δύομες). A race between chariots drawn by mules (αμβλοτόμος) was held in the 33th Olympiad, and abolished in the 84th.—2. There were also two sorts of horse races on horseback, namely, the καλαπτής, in which each competitor rode one horse throughout the course, and the καλατής, in which, as the horse approached the goal, the rider leaped from his back, and, keeping hold of the bridle, finished the course on foot.—In the 37th Olympiad (B.C. 632), racing on foot and wrestling between boys was introduced.—There were also contests for those who excelled at wrestling. All persons were admitted to contend in the Olympic games who could prove that they were freemen, that they were of genuine Hellenic blood, and that their characters were free from insamy and immorality. So great was the importance attached to the second of these particulars, that the kings of Macedon were obliged to make out their Hellenic descent before they were allowed to contend. The equestrian contests were necessarily confined to the wealthy, who displayed in them great magnificence; but the athletic exercises were open to the poorest citizens. An example of this is mentioned by Pausanias (6, 10, 1). In the equestrian games, moreover, there was no occasion for the owner of the chariot or horse to appear in person. Thus Alcibiades, on one occasion, sent seven chariots to the Olympic games, three of which obtained prizes. The combatants underwent a long and rigorous training; the nature of which varied with the game in which they intended to engage. Ten months before the festival they were obliged to appear at Elis, to enter their names as competitors, stating at the same time the prize for which they meant to contend. This interval of ten months was spent in preparatory exercises; and for a part of it, the last thirty days at least, they were thus engaged in the gymnasia at Elis. At the festival, names, sound though they were, were not disqualifying from taking part in the games, they were led to the altar of Jupiter the guardian of

olaths (Ζεὺς ὄλαθιος), where they swore that they had gone through all the preparatory exercises required by the game, and that they would not be guilty of any fraud, nor of any attempt to influence the fair course of the games. Any one detected in bribing his adversary to yield him the victory was heavily fined. After they had taken the oath, their relations and countrymen accompanied them into the stadium, exhorting them to acquit themselves nobly.—The prizes in the Olympic games were at first of some intrinsic value, like those given in the games described by Homer. But, after an age of leisure passed, the fair was a garland of wild olive, cut from a tree in the sacred grove at Olympia, which was said to have been brought by Hercules from the land of the Hyperboreans. Palm-leaves were at the same time placed in the hands of the victors, and their names, together with the games in which they had conquered, were proclaimed by a herald. A victory at Olympia, besides being the highest honour which a Greek could obtain, conferred so much glory on the state to which he belonged, that successful candidates were frequently solicited to allow themselves to be proclaimed citizens of states to which they did not belong. Fresh honours awaited the victor on his return home. He entered his native city in triumph, through a breach made in the walls for his reception; banquets were given to him by his friends, at which odes were sung in honour of his victory; and his steed was often decorated, or he himself received a garland, as in the festival of the Isthmians, in the Altis, as the sacred grove at Olympia was called. At Athens, according to a law of Solon, the Olympic victor was rewarded with a prize of 500 drachms: at Sparta the foremost place in battle was assigned him. Three instances are on record in which altars were built and sacrifices offered to conquerors at the Olympic games.—It seems to be generally admitted that the object of the Olympic festival was to maintain national character for the Greek states. Besides this, the great importance which such an institution gave to the exercises of the body must have had an immense influence in forming the national character. Regarded as a bond of union, the Olympic festival seems to have had but little success in promoting kindly feelings between the Greek states, and perhaps the rivalry of the contest may have tended to exacerbate envy and hatred. But as an exhibition of the patriotism of the Greeks, of the distinction between them and other races. Perhaps the contingent effects of the ceremony were after all the most important. During its celebration, Olympia was a centre for the commerce of all Greece, for the free interchange of opinions, and for the publication of knowledge. The concourse of people from all Greece afforded a fit audience for literary productions, and gave a motive for the composition of works worthy to be laid before them. Poetry and statuary received an impulse from the demand made upon them to aid in perpetuating the victor's fame. But the most important and most difficult question connected with the subject is, whether their influence on the national character was for good or evil. The exercises of the body, on which these games conferred the greatest honour, have been condemned by some philosophers, as tending to unfit men for the active duties of a citizen (Aristot., Politt, 7, 14, 18. Athenaeus, 10, p. 413); while they are regarded by others as a most necessary part of a manly education, and as the chief cause of the bodily vigour and mental energy which marked the character of the Hellenic race. The description which we have given of the Olympic games will, for the most part, serve women, and other classes of the Hellenic race. The description which we have given of the Olympic games will, for the most part, serve for the Athenians, and the Isthmian, the Nemean, and Pythian games. (Pausan., lib. 5, 6, soeg.)—West's Panh., Prelim. Disc.—Wackmuth, Hel- len., AlterhUsk, vol. 1, p. 108.—Potter's Greek

6 A
Antiquities, vol. 1, p. 495.—Thirwell's Greece, vol. 1, p. 384, seqq.—Encyclop. Us. Knoell, vol. 16, p. 430, seqq.—II. A name given to the aggregate of temples, altars, and other structures on the banks of the Alpheus. In Elis, the spot where the Olympic games were celebrated. It was not, as many have incorrectly supposed, a city, nor did it at all resemble one. The main feature in the picture was the sacred grove Alcis, planted, as legends told, by Hercules, and which he dedicated to Jupiter. (Pind., Olymp., 10, 51.) Throughout this grove was scattered in rich profusion the most splendid monuments of architectural, sculptural, and pictorial art. The temple was already celebrated in the mind of an oracle: but it was not until the Eleans had conquered the Pisa together, and destroyed their city, that a temple was erected to the god with the spoils of the vanquished. This temple of the Olympic Jove was of Doric architecture, with a peristyle. It was sixty-eight feet in height from the ground to the pediment, ninety-five in width, and two hundred and thirty in length. Its roof, at each extremity of which was placed a gilt urn, was covered with slabs of Pentelic marble. The architect was a native of the country, named Libo. In the centre of one of the pediments stood a figure of victory, with a golden shield, on which was sculptured a Medusa's head. Twenty-one gilt bucklers, the offering of the Roman general Mummius on the termination of the Achaean war, were also affixed to the outside frieze. The sculptures of the front pediment represented the race of Pelops and Oenomaus, with Myrtilus and Hippodamia; also Jupiter, and the rivers Alpheus and Cladeus; these were all by Polyxenus, an artist of Mende in Chalcidic Thrace. In the rear pediment, Alcmene had sculptured the battle of the Centaurs and Lapiths. The other parts of the building were enriched with subjects taken from the labours of Hercules. On entering the gates, which were of brass, the spectator passed the statue of Iphitus crowned by Eecheria, on his right; and, advancing through a cloister, a row of columns supporting porticoes, reached the statue of Jupiter, the chef-d'oeuvre of Phidias. The god was represented as seated on his throne, composed of gold, ebony, and ivory, studied with precious stones, and further embellished with paintings and the finest carved work. (Pausan., 5, 11.) The Olympic deity was portrayed by the great Athenian artist in the sublime attitude and action conceived by Homer. (I., 1, 228, seqq.) The figure was of ivory and gold, and of so fine proportions that, though seated, it almost reached the ceiling, which suggested the idea that in rising it would bear away the roof. (Strabo, 354.) The head was crowned with olive. In the right hand it grasped an image of victory, and in the left a sceptre, curiously wrought of different metals, on which was perched an eagle. Both the sandals and the vesture were of gold; the latter was also enriched with paintings of beasts and flowers by Panasenus, the best of the sculptors of this age. The works of Phidias (Pausan., l. c.—Strabo, l. c.) An enormous number surrounded the whole, by which spectators were prevented from approaching too near; this was also decorated with paintings by the same artist, which are minutely described, together with the other ornamental appendages to the throne and its supporters, by Pausanias. The ivory parts of the statues were constantly rubbed with oil as a defence against the damp (Pausan., 5, 19), and sometimes an alternate appointment was made to keep it well polished. The veil of the temple was of wool dyed with Phrygian purple, and adorned with Assyrian embroidery, presented by King Antiochus. Various other offerings are mentioned by Pausanias, to whom the student is referred for an account of these, as well as a description, &c., of the other buildings at Olympia. Among the altars, the most remarkable was that in the temple of Pelops. It was entirely composed of ashes collected from the thighs of victims, which, being diluted with water from the Alpheus, formed a kind of cement.—A conspicuous feature at Olympia was the Altis, or Hill of Saturn, often alluded to by Pindar, and on the summit of which a temple named Basile offered sacrifices to the god every year at the vernal equinox. (Pind., Olymp., 10, 66.) Xenophon mentions (Hist. Gr., 7, 4, 14) that, in a war waged by the Eleans with the Arcadians, Mount Cronius was occupied and fortified by the latter. Below that hill stood the temple of Lucina Olympia, where Sospilus, the protecting genius of Elis, was worshipped. The foundations of this temple were of earth, with seats for the Helenidism, who entered, as we are told, by a secret portico. The hippodrome, which was contiguous to the stadium, was likewise surrounded by a mound of earth, except in one part, where, on an eminence, was placed the temple of Ceres Chamype. Not far from this were the Olympic gymnasia, for all sorts of exercises connected with the games.—Olympia now presents scarcely any vestiges of the numerous buildings, statues, and monuments so elaborately described by Pausanias. Chandler could only trace "the walls of the cell of a very large temple, standing many feet high and well built, the stones all injured, and manifesting the labour of persons who have endeavored by boiling to get at the metal with which they were cemented. From a massive capital remaining, it was collected that the edifice had been of the Doric order." (Travels, vol. 2, ch. 11.) Mr. Revett adds, that "this temple appears to be rather smaller than that of Theseus at Athens, and in no manner agrees with the temple of the Olympic Jove." The ruins of this latter edifice, as Sir W. Gell reports, are to be seen towards the Alpheus, and fifty-five geographic paces distant from the Hill of Saturn. There are several bushes that mark the spot, and the Turks of Laila are often employed in excavating the stones. Between the temple and the river, in the descent of the bank, are vestiges of the hippodrome, or buildings serving for the celebration of the Olympic games. These accompany the road to Miracce on the right for some distance. The whole valley is very beautiful. (Cramer's Anc. Greece, vol. 3, p. 90, seqq.) Olympia, I. an Olympic, or the space of time intervening between any two celebrations of the Olympic games. (Vit. Olympia I.) The Greeks computed time by means of them, beginning from 776 B.C., and each Olympic age was reckoned as equal to four years. The last one (the 304th) fell on the 440th year of the Christian era. (Consult remarks at the commencement of the article Olympia I.—II. daughter of Neoptolemus, king of Epirus, and wife of Philip, king of Macedon, by whom she had Alexander the Great. The conduct of Olympias had given rise to the suspicion that Alexander was not the son of Philip; and the brilliant career of the Macedonian was afterwards attributed to a parent the Father of the Gods. Olympias herself, in the intoxication of female vanity, hesitated not, at a later date, to sanction the story, and Jupiter was said to have approached her under the form of a serpent. (Consult Wieland, ad Lucian. Pseudomant. s 13—Sueton., Vit. Aug. 3.2.—Böttiger, Sabina, p. 212.) The haughtiness of Olympias, or, more probably, her infidelity, led Philip to repudiate her. A second child was born to him with Cleopatra, the niece of King Attalus. The murder of Philip, which happened not long after, has been attributed by some to her intrigues, though with no great degree of probability. Alexander, after his accession to the throne, treated her with great respect, but did not allow her to take part in the government. At a subsequent period, after the death of Antipater, Polyperchon, in order to confirm his power, recalled
OLY

Olympia from Epirus, whither she had fled, and confided to her the guardianship of her young son, of Alexander the Great. She was cruelly put to death Arideus, son of his wife Eurydice, also as Nicanor, the brother of Cassander, together with many leading men of Macedonia who were m aimical to her interests. Her cruelties, however, did not remain long unpunished. Cassander besieged her in Pydna, and she was obliged to surrender after an obstinate siege, and was put to death. (Vid. Cassander.—Justin, lib. 7, 9, 11, 14, vol. 3, 8vo).—Nemesianus.

Olympiodorus, a name common to many individuals. The most deserving of our notice are the following: I. A native of Thebes in Egypt, flourished in the beginning of the fifth century of our era. He continued the history of Eunapius from 407 to 425 A.D. He was the son of Olympias and the brother of Alexander, who, he says, intrusted to him a copy of his History on the Phenicians. This work which he copied in the seventh consulship of the Emperor Honorius, and was brought down to the accession of Valentinian. It was dedicated to the younger Theodosius. The work begins with the seventh consulship of the emperor Honorius, and was brought down to the accession of Valentinian. It was dedicated to the younger Theodosius. The history appears to have been employed also on public business, for he mentions his having being sent on a mission to Donatus, king of the Huns. In his description of the African Oases, he speaks of wells being made to the depth of 200, 300, 1,000 fathoms. He takes no pleasure in describing the rising of the sun and flowing from the aperture. Some have supposed that these must have been Artesian wells. Olympiodorus was a heathen. II. An Alexandrian philosopher, who flourished about the year 430 B.C. He is celebrated for his knowledge of the Aristotelian doctrines, and was the master of Proclus, who attended upon his school before he was 20 years of age. This philosopher is not to be confounded with a Platonist of the same name, who wrote a commentary upon Plato. He is also to be distinguished from a peripatetic of a still later age, who wrote a commentary on the Meteorology of Aristotle. III. A Platonist, who flourished towards the close of the sixth century. He was the author of Commentaries on four of Plato's dialogues, the first Alcibiades, the Phaedon, Gorgias, and Philebus. The first of these contains a life of Plato, in which we meet with certain particulars relative to the philosopher not to be found elsewhere. Olympiodorus was a native of Alexandria, and enjoyed great reputation in that capital, as will appear from a distich appended to his commentary on the Gorgias. The title which his commentators bear appears to indicate the words ἀπὸ φωνῆς ("from the mouth" of Olympiodorus) that they were copied down by the hearers of the philosopher. Sainte-Croix, however, thinks that this phrase is merely employed to indicate that the doctrine contained in the commentaries was traditional in its nature. (Magasin Encycl., 3 ann., vol. 1, p. 195.) Fragments of the commentary on the Phaedon are given in Fischer's edition of four Platonic dialogues (Lips., 1783, 8vo), and in Foster's edition of five of Plato's dialogues (Oxon., 1752, 8vo). Fragments of the commentary on the Gorgias were published by Routh, in his edition of the Gorgias and Euthydemus (Oxon., 1794, 8vo). The commentary or scholia on the Philebus will be found in Stallbaum's edition of that dialogue (Lips., 1820, 8vo). The commentary on the first Alcibiades forms the second part of Creuzer's Initia Philosophiae ac Theologiae, &c. (Francof., 1820, 8vo).—IV. A native of Alexandria, a peripatetic, who flourished during the latter half of the sixth century. He was the author of a commentary on the Meteorology of Aristotle, which was edited by Alciati in 1551, fol. (Schill., Hist. Lit. Gr., vol. 7, p. 132, &c.)

Olympius, I. a surname of Jupiter at Olympia, where the god had a celebrated temple and statue, which passed for one of the seven wonders of the world (Vid. Olymp., I. II).—II. Alciati (1551), Vid. Neumanius. Olympia, I. a celebrated mountain on the coast of Thessaly, forming the limit, when regarded as an entire range, between the latter country and Macedonia. The highest summit in the chain, to which the name of Olympus was specially confined by the poets, was fabled to be the residence of the gods, and well deserved the honour. Travellers who have visited these shores dwell with admiration on the colossal magnificence of Olympus, which seems to rise from the sea to hide its snowy head amid the clouds. Dr. Holland, who beheld it from Litochori at its foot, observes, "We had not before been aware of the extreme vicinity of the town to the base of Olympus, from the thick fogs which hang over us for three successive days while traversing the country; but on leaving it, and accidentally looking back, we saw through an opening in the fog a faint outline of vast precipices, seeming almost to overhang the place, and soaring in their aspect, that for a few minutes we doubted whether it might not be a delusion to the eye. The fog, however, dispersed yet more on this side, and partial openings were made, through which, as through arches, we saw the sunbeams resting on the snowy summits of Olympus, which rose into a dark blue sky far above the belt of clouds and mist that hung upon the sides of the mountain. The transient view we had of the mountain was of such a nature as to suggest the idea of those pieces of vast height, forming its eastern front towards the sea, and broken at intervals by deep hollows or ravines, which were richly clothed with forest-trees. The oak, chestnut, beech, plane-tree, &c., are seen in great abundance along the base and skirts of the mountain; and, towards the summit of the first ridge, large forests of pine spread themselves along the declivities, giving that character to the face of the mountain which so much attracts the eye. (Olymp. IV., pars. 27.) The modern name of the mountain with the Greeks is Elimo, and with the Turks Semvrat Evi. (Kruse, Hellas, vol. 1, p. 282.—Cramer's Anc. Greece, vol. 1, p. 211, seqq.) "Few of the Greek mountains," remarks Dodwell, "soar to the height of Olympus." Plutarch (Vit. Eumil. Paul.), citing the philosopher Xenagoras, says that it is more than ten stadia in height, and M. Berlandier says it is 1017 toises, or 6,600 feet. It forms a gigantic mass, and occupies a very extensive space. Its southern side constitutes the boundary of Thessaly, and its northern base encloses the plains of Macedon. To the west it branches out towards Othrys, where its remote swells are blended with those of Pindus, which terminates in the Athenian with the abrupt and stormy promontory of Accrocorinna. Its rugged outline is broken into many summits, from which circumstance Homer gives it the epithet of ποιωδής. It is never completely free from snow, and Hesiod (Theog., 118) characterizes it with the epithet of νυφίως. Homer, in his Iliad, calls it ἄγαννυφος, whereas in his Odyssey he says that it is never agitated by the wind, rain, or snow, but enjoys a clear and luminous air. (II., 1, 420.—Od., 6, 45.) Nothing is easier, says an ingenious author, than to reconcile these apparent contradictions. M. Bonn, indeed, employs for this purpose a maxim of singular conjecture. He supposes a heavenly Olympus, which he turns upside down, with its foot in the heavens, where it never snows, and its summit towards the earth; to which part he conceives Homer gave the epithet of snowy. As the gods and mortals were Anticephali, he maintains Homer imagined mountains to be in similar situations! (Mem. de Litt., t. VII., v. 1, 37; 5, 29.) But the poet represents the seat of the gods as on the summit of Olympus, under the clouds, and of course he does not imagine it turned upside down. —Olympus is full of breaks, glens, and forests, when it had the epiphanes
OLYMPUS.

of OLYMPUS and OLYMPOS. (Doddell’s Tour, vol. 2, p. 105, seq.)—Near the top Dowdwell encountered large quantities of snow, and at last reached a part where the mountain became bare of all vegetation, and presented only a cap of snow and ice, on which it was impossible to be maintained. At this time the season was about the middle of July; the heat was extremely intense, and towards the base of the mountain, as well as in the plain, while the masses of snow near its summit gave no signs of melting. The view from the highest accessible part of Olympus is described as being very extensive and grand. The mountain seemed to touch Pelion and Ossa, and the vale of Tempe appeared only a narrow gorge, while the Peneus was scarcely perceptible. There are hardly any quadrupeds to be seen beyond the foot of the mountain. Even birds do not pass this limit.—The idea has been started, on mere conjecture, however, that the name Olympus may have some reference to the idea of a “limit” or “boundary,” and it is a curious fact that the positions of most, if not all, of the mountains that bear this name would seem to countenance the assertion. The most remarkable instance, after the one we have just been considering, are the following.—II. A range of mountains from the Black Sea, passing through the Crimea, Mount Olympus, the loftiest of the range, rose above Prusa, and was one of the highest summits in Asia Minor, being covered with snow during great part of the year. (Browne’s Travels, in Walpole’s Collection, vol. 2, p. 112.) The lower parts, and the plains at the foot, especially on the western side, had from the earliest period been occupied by the Mysians, whence it was generally denominated the Mysian Olympus. (Plin., v. 32.) Its sides were covered with vast forests, which afforded shelter to wild beasts, and not unfrequently to robbers, who erected strongholds there. (Strab., 574.) We read in Herodotus, that in the time of Cressus, an immense wild boar, issuing from the woods of Olympus, laid waste the fields of the Mysians, and became so formidable that the inhabitants were obliged to send a deputation to the Lydian monarch to request his aid for deliverance from the monster. (Herod., 1, 36.) The lower regions of this great mountain are still covered with extensive forests, but the summit is rocky, and destitute of vegetation. The Turks call it Anatoli Dagh. (Cramer’s Asia Minor, vol. 1, p. 178.)—III. A mountain range of Lycia, on the eastern coast, above the Sacrum Promontorium. A city of the same name was situated in a part of the range. Mount Olympus would appear to be the chain to which Homer alludes in the Odyssey (5, 292, seq.), under the name of the Solyman mountains, whence he supposes Neptune to have beheld in his wrath Ulysses sailing towards Phocis. The mountains rising at the back of the perpendicular cliffs which line the shore in this quarter, attain to the height of six and seven thousand feet. The highest, as we learn from Captain Beaufort, bears the name of Adrachan, and appears to answer to the Olympus of Strabo. (Caramanian, p. 43.—Cramer’s Asia Minor, vol. 2, p. 387.) IV. A city of Lycia, alluded to in the preceding paragraph. It ranked among the six communities of Lycia. (Strab., 606.) Cicero also bears testimony to its importance and opulence. Having become the residence and haunt of pirates, it was captured by Servilius Isauricus, and became afterward a mere fortress. (Cic. in Verr., 1, 21.—Eutrop., 6, 3.—Plin., 5, 27.) Strabo states, that it was the strongest of all the Lycian cities. (Strab., 671.) We are indebted to Captain Beaufort for the discovery of the ruins of this place, which exist in a small circular plain, surrounded by the chain of Adrachan (vid. Olympus III.), and at a little distance from the sea. The only way leading to the site is by a natural aperture in the cliff; it is now called Deliktash, or “the perforated rock.” (Cramer’s Asia Minor, vol. 2, p. 257, seq.)—V. A mountain on the eastern coast of Cyprus, just beyond the promontory Dinarum. It is now Monte Santa-Croce. This mountain had on it a temple sacred to Venus Acrea, from which a statue of Venus, which was carried away by the Persians and used by them as a breastplate, was said to have been brought. The mountain itself was shaped like a breast. (Strab., 683.)—Cramer’s Asia Minor, vol. 2, p. 379, 385.)

OLYMY, a powerful city of Macedonia, in the district of Chalcidic, at the head of the Sinus Toro- nacius. It was founded probably by the Chalce- ians and Eretrians of Euboea. (Strabo, 447.) He rodotes relates, that it was afterward held by the Bot- tini, who had been expelled from the Thracian Gulf by the Mysians. The city was afterwards occupied by the Persians, and other towns on this coast, from the Persians, it was besieged and taken by Artabazus, a commander of Xerxes, who put all the inhabitants to the sword, and delivered the town to Critoebulus of Torone and the Chalceians. (Herod., 8, 127.) Perdiccas, some years after, persuaded the Bottini and Chalceians to abandon their other towns and make Olympus their principal city; previous to their engaging in hostility against the Pindar, they were at one time expelled from the town. The Chalceians had obtained some decisive advantages over that republic; and the expedition of Brasidas enabled them effectually to preserve their freedom and independence, which was distinctly recognised by treaty. From this time, the republic of Olym theus gradually acquired so much power and importance among the northern states of Greece, that it roused the jealousy and excited the alarm of the more powerful of the southern republics, Athens and Lacedaemon. The Olymians, apparently proceeding on the feder- al system, afterward so successfully adopted by the Achæans, incorporated into their alliance all the smaller towns in their immediate vicinity; and, by degrees, succeeded in detaching several important places from the dominions of Amyntas, king of Macedonia, who had not the power of protecting himself from these encroachments. At length, however, a deputation from the Chalceic cities of Apollonia and Acan- thus, whose independence was at that time immedi-ately threatened by Olymthus, having directed the attention of Sparta, then at the height of its political importance, to this rising power, it was determined, in a general assembly of the Peloponnesian states, to despatch an army of ten thousand men into Thrace. (Xen., Hist. Gr., 5, 5, 14.) Teleutias, brother of Agesilus, and one of the most distinguished com- manders of Sparta, was appointed to conduct the war. Having collected his forces, and those of Amyntas and his allies, he marched against the Olymthians, who ventured to give him battle before their walls; but, after a well-fought action, they were compelled to take refuge within their city. If a skirmish, however, which happened not long after, the Peloponnesian forces, in their disorderly pursuit of a body of Olymthian cavalry close to the town, were thrown into confusion by a sortie of the enemy which communicated such a panic to the whole army, that, notwithstanding the efforts of Teleutias to stop the flight of his troops, a total rout ensued, and he himself was slain. (Hist. Gr., 5, 3.) This disaster, instead of disheartening, called forth fresh exertion on the part of the Spartan government. Agesipolis one of the kings, was ordered to take the command, and prepared to march with the army which had already obtained some advantages over the enemy, when he was seized with a disorder, which, baffling all remedies, soon proved fatal: he died a’s Aphyte, near the temple of Bacchus. Polybiades, his successor, had thus the credit of putting an end to the war; for the Olymthians, left to their own resources, found themselves unable to cope with their powerful
and persevering antagonists, and were at length forced to sue for peace, which was granted on condition that they should acknowledge their dependance on Sparta, and take part in all its wars. (Xen., Hist. Gr., 5, 4, 27.) Olynthus, though awed and humbled, was far from being effectually subdued; and not many years elapsed before it renewed its attempts to form a confederacy, and again dismember the Macedonian states. In 86, after an alliance which it entered into with Amphipolis, once the colony of Athens, it became involved in hostilities with the Athenians, supported by Philip, son of Amyntas, who had just ascended the throne of Macedon; and Potidaea and Methone were successively wrested from its dominion. Indeed, Olynthus itself could not long have resisted such powerful enemies, had it not, or some success, spread alarm among the states who were induced then to form the alliance of Shorty Ombos, or the Find Philip and the Olynthians in league against Athens, with the view of expelling that power from Thrace. (Demosth., Olynth., 2, p. 19.) Amphipolis was besieged and taken by assault; Potidæa surrendered, and was restored to Olynthus, which for a time became as flourishing and powerful as at any former period of its history. Of the circumstances which improved it to shed the shadow of Macedon in favour of Athens, we are not well informed; but the machinations of the party hostile to Philip led to a declaration of war against that monarch; and the Athenians were easily prevailed upon by the eloquence of Demosthenes to send forces to the support of Olynthus under the command of Chares. Although these troops were at first successful, it was evident that they were unable effectually to protect the city against the formidable army of Philip. The Olynthians, beaten in two successive actions, were soon confined within their walls; and, after a siege of some duration, were compelled to surrender, not without suspicion of treachery on the part of Eurythennes and Lasthenes, who were then at the head of affairs. On obtaining possession of this important city, Philip gave it up to plunder, reduced the inhabitants to slavery, and razed the walls to the ground. (Diod. Sic., 16, 59.—Demosth., Phil., 3, p. 113.—Justin, 8, 4.—Cramer’s Anc. Greece, vol. 1, p. 249, seqq.) Ombos, a city of Egypt, a little north of Syene, on the eastern side of the Nile. The Antonine Itinerary calls it Ambos (p. 165), and Ptolemy, Ombi (Ομβι). The edition of Erasmus has *Ομβος by a mistake of the press.* Pliny speaks of the Ombisæa Prefectura, whence we may conclude that Ombos was at one period the capital of a Nome. (Ptol., 6, 9.) Its position is now lost; we may however conjecture that it was on the Hill of Ombro. Between the inhabitants of this place and Tentyra constant hostilities prevailed, the former adoring, the latter killing, the crocodile. A horrible instance of religious fury, which took place in consequence of their mutual discord, is the subject of the 15th satire of Juvenal. (Consult Ruberti ad Nat. cit.) In relation to the Omboites worshipping the crocodile, while the inhabitants of Tentyra adored the horse, it may give the explanation of two of the French savans (Chabrol and Jomard, Descript. de l’Egypte, vol. 1.—Antiq., c. 4, p. 8, seqq.) They suppose, that the crocodile was revered by those cities which were more or less removed from the immediate vicinity of the Nile, by reason of its swimming towards them when the river began to overflow its banks, and thus bringing the first intelligence of the approach of inundation. (Compare Crouzer, Comment. Herod., 84.) Olympias, a queen of Lydia, daughter of Iarodanus. She married Tmolus, who, at his death, left her mistress of his kingdom. Omphale had been informed of the great exploits of Hercules, and wished to see so illustrious a hero. Her wish was soon gratified. After the murder of Iphitus, Hercules fell into a malady, and was told by the oracle at Delphi that he would not be restored to health, unless he allowed himself to be sold as a slave for the space of three years, and gave the purchase-money to Eurytus as a compensation for the loss of his son. Accordingly, in obedience to the oracle, he was conducted by Mercury to Lydia, and there sold to Omphale. During the period of his servitude which it entered into with Amphipolis, once the colony of Athens, it became involved in hostilities with the Athenians, supported by Philip, son of Amyntas, who had just ascended the throne of Macedon; and Potidæa and Methone were successively wrested from its dominion. Indeed, Olynthus itself could not long have resisted such powerful enemies, had it not, or some success, spread alarm among the states who were induced then to form the alliance of Shorty Ombos, or the Find Philip and the Olynthians in league against Athens, with the view of expelling that power from Thrace. (Demosth., Olynth., 2, p. 19.) Amphipolis was besieged and taken by assault; Potidæa surrendered, and was restored to Olynthus, which for a time became as flourishing and powerful as at any former period of its history. Of the circumstances which improved it to shed the shadow of Macedon in favour of Athens, we are not well informed; but the machinations of the party hostile to Philip led to a declaration of war against that monarch; and the Athenians were easily prevailed upon by the eloquence of Demosthenes to send forces to the support of Olynthus under the command of Chares. Although these troops were at first successful, it was evident that they were unable effectually to protect the city against the formidable army of Philip. The Olynthians, beaten in two successive actions, were soon confined within their walls; and, after a siege of some duration, were compelled to surrender, not without suspicion of treachery on the part of Eurythennes and Lasthenes, who were then at the head of affairs. On obtaining possession of this important city, Philip gave it up to plunder, reduced the inhabitants to slavery, and razed the walls to the ground. (Diod. Sic., 16, 59.—Demosth., Phil., 3, p. 113.—Justin, 8, 4.—Cramer’s Anc. Greece, vol. 1, p. 249, seqq.) Ombos, a city of Egypt, a little north of Syene, on the eastern side of the Nile. The Antonine Itinerary calls it Ambos (p. 165), and Ptolemy, Ombi (Ομβι). The edition of Erasmus has *Ομβος by a mistake of the press.* Pliny speaks of the Ombisæa Prefectura, whence we may conclude that Ombos was at one period the capital of a Nome. (Ptol., 6, 9.) Its position is now lost; we may however conjecture that it was on the Hill of Ombro. Between the inhabitants of this place and Tentyra constant hostilities prevailed, the former adoring, the latter killing, the crocodile. A horrible instance of religious fury, which took place in consequence of their mutual discord, is the subject of the 15th satire of Juvenal. (Consult Ruberti ad Nat. cit.) In relation to the Omboites worshipping the crocodile, while the inhabitants of Tentyra adored the horse, it may give the explanation of two of the French savans (Chabrol and Jomard, Descript. de l’Egypte, vol. 1.—Antiq., c. 4, p. 8, seqq.) They suppose, that the crocodile was revered by those cities which were more or less removed from the immediate vicinity of the Nile, by reason of its swimming towards them when the river began to overflow its banks, and thus bringing the first intelligence of the approach of inundation. (Compare Crouzer, Comment. Herod., F. 84.) Omphale, a queen of Lydia, daughter of Iarodanus. She married Tmolus, who, at his death, left her mistress of his kingdom. Omphale had been informed of the great exploits of Hercules, and wished to see so illustrious a hero. Her wish was soon gratified. After
posts of antiquity, from Homer to Lycurphon. Sir W. Gell noticed, on the ascent uniting Mount Phaga or Spinax on the left, with the projecting hills from Helicon on the right, an immense tumulus of earth and stones, calculated to contain many other vestiges, probably of Ophæus. (Istn., p. 125.—Oram's Anc. Greece, vol. 2, p. 231, seqq.)

Onesicritus, a Cynic philosopher, a native of Ægina, and, according to Diogenes Laërtius, a disciple of Diogenes of Sinope. He accompanied Alexander into Asia, and officiated as pilot to the principal vessel in the fleet of Nearchus. He wrote a history of Alexander's expedition, a work swarming with falsehood and absurdities. (Zehln. H. A. t. 16, 39.—Dug. Laërt. 6, 4.—Sainte-Croix, Examen des Hist. d'Alex., p. 38.)

Onion, a city of Egypt, southwest of Heroopolis. It was inhabited by Jews, who had a temple here, which continued from the time of Onias, who built it, to that of Vespasian. Onias was nephew to Menelaus, and the rightful successor to the priesthood at Jerusalem; but, being rejected by Antiochus Eupator, who made Alcimus high-priest, he fled to Egypt, and persuaded Ptolemy Philometor to let him build this temple there, about 173 B.C. This structure remained for the space of 248 years, when it was destroyed by order of Vespasian, after the fall of Jerusalem. (Josephus, Ant. Jud., 14, 14.—Id., Bell. Jud., 1, 7.)

Onomacritus, a Greek poet in the time of the Pisistratidae, who is said to have written the "hymns of initiation" (αρεταί) ascribed to Orpheus. (Vid. Orph.) He was accused also of interpolating the poems of Musæus, mention of which has already been made in another article. (Vid. Musæus.) The oracles of this latter poet were collected by Onomacritus, in compliance with the orders of Hipparchus; but the poet Lasus of Hermione having discovered the fraud committed by him in interpreting his own verses among the ancient predictions, Onomacritus was thereupon driven into exile as an impostor by Hipparchus. It appears that from this time it was no longer possible to distinguish what was genuine in the poetry of Musæus from what was mere interpolation. (Herod., 7, 6.—Pausan., 1, 22.)

Onosander, or as Corea writes the name, Onesander, a Greek author and Platonic philosopher. Concerning the period in which he flourished, nothing more can be ascertained than that he lived about the middle of the first century. He was the author of a work in much celebrity among the Platonists, Ετέργετον, or DYG, being a treatise on the duties of a general. This production is the source whence all the works on this subject, in Greek and Latin, that were subsequently published, derived their origin. It is still held in estimation by military men. The best editions are, that of Schwobel, Norim., 1762, fol., and that of Corea, Paris, 1822, 8vo. Appended to the latter are the first elegy of Tyrtaeus and a translation of Onosander, both in Greek. The profits of his editions were not enjoyed by the unfortunate sufferers of Chios. (Söldl, Hist. Lit. Gr., vol. 5, p. 261, seqq.)

Opheltes, son of Lycurgus, king of Nemea. Hyphasis, the Lennian princess, whom her countrywomen had sold into slavery when they found that she had saved her father, was nurse to the infant Opheltes, when the army of Adrastus marched to Nemea, on its way to Thebes. She undertook to guide the new-comers safely toward it, for, near the place, a child was lying on the grass, where a serpent found and killed it. The Argive leaders slew the serpent and buried the child. Amphiaraus, the famous soothsayer and warrior, augured ill-luck from this event, and called the child Archemorus (Pate-beginner), as indicative of the evils that were to befall the chiefs. His other name, Opheltes, is derived, according to the mythologists, from σπίς; as he died by the bite of a serpent. Adrastus and the other chiefs then celebrated funeral games in his honour, which were the commencement of what were afterward called the Nemean games. (Apollod., 9, 6, 4.—Heyne, ad loc.)

Ophiopogon, a plant commonly called the Squaw-grass, and to the neighbouring nations as early as the time of Job, and was famed for producing such an abundance of excellent gold, that "the gold of Ophiopus" became a proverbial expression for fine gold. (1 Chron. 29, 4.—Job, 22, 24.—Id., 23, 16.—Psalm 45, 9.—Isaiah, 13, 12.) The Septuagint version gives Σωφίρα (Σωφίρη) as the name of the region; but various forms occur in the MSS., such as Σωφίρ, Σωφί, Σωφίρ, Σωφίρ, Σωφίρ, Σωφίρη, Σωφίρα, and Σωφίρα. We meet with this last also in Josephus (Ant. Jud., 8, 6, 4.—Consult Haerencamp, ad loc.). The position of Ophiopus is very difficult to determine, and much diversity of opinion exists among biblical critics on the subject. We are informed in Scripture, that Solomon, in conjunction with Hiram, king of Tyre, sent a navy from Ezion-geber, at the head of the Red Sea, to Ophiopus, and that this navy returned, bringing four hundred and twenty (in Chronicles 450) talents of gold, sandal-wood (called in our translation, almug or aln tree), and precious stones. (1 Kings, 9, 26—28.—Job, 10, 11.—Compare 2 Chron. 8, 17, 18: Is, 9, 10;) and also that Jehoshaphat built ships of Tarshish to go to Ophiopus for gold (in Chronicles it is said that he built ships to go to Tarshish), which were wrecked at Ezion-geber. (1 Kings, 22, 48, 49.—Compare 2 Chron. 20, 36, 37.) We are also told, in 1 Kings, 10, 22, that Solomon had at sea a navy of Tarshish with the navy of Hiram. Once in three years (or every third year) came the navy of Tarshish, bringing gold and silver, ivory, and apes, and peacocks. Now, since both Solomon and Jehoshaphat built the navies bound for Ophiopus at Ezion-geber, at the head of the Red Sea, it is clear that we must seek for Ophiopus somewhere on the shores of the Indian Ocean; for it is highly improbable that Solomon's ships went farther than the Cape of Good Hope in one direction, or than the Indian Archipelago in the other: it is not likely, indeed, that they went so far either way. Nearly all the inquiries into the position of Ophiopus have proceeded on the assumption, that the passage in 1 Kings, 10, 22, refers to the same navy which is spoken of in 1 Kings, 9, 27, seqq., and, consequently, that Tarshish and Ophiopus were visited in the same voyage. It has therefore been necessary for those who make this assumption, not only to find a place for Ophiopus in their maps, but to assign to Tarshish "gold, sandal-wood, and precious stones," but also to account for the "silver, ivory, apes, and peacocks" which were brought by the navy of Tarshish, and for the three years consumed in the voyage. But Tarshish was probably the same place as Tartessus in Spain; and therefore, if Tarshish and Ophiopus are to be connected, we must make the gratuitous supposition that there was another Tarshish in the East. Besides, the king of Tarshish and Ophiopus are not mentioned as part of the account of Solomon's voyages: the ships that went to Ophiopus (1 Kings, 9, 28) seem to have made only a single voyage, for the purpose of fetching only a specified quantity of gold, while the "navy of Tarshish," which "the king had" (not going to Ophiopus, but) "at sea," made its voyage every three years; and, moreover, the products of the two voyages were different, gold being the only article common to the two. These considerations are incorrect in saying "that two distinct kinds of voyages were performed by these fleets: that to Ophiopus from the Red Sea, and that to the coast of Guinea (or to Tarshish, wherever it was) from the Mediterranean." (Rennell, Geogr. of Herodotus, vol. 2, p. 353.) The conjoint mention of Ophiopus and Tarshish, in the account of Jehoshaphat's navy, admits of easy explanation. There may be some mistake in the account in 2 Chron. 20, 36, seq,
which differs materially from that in 1 Kings, 22, 48, seq., or "Tarshish" in the former passage may mean only "a distant voyage;" and we know that the phrase in the latter passage, "ships of Tarshish," is frequently used in the Old Testament for large, strong ships. The question, therefore, as to the position of Ophir must not be encumbered with any considerations that refer to Tarshish. (Encycl. U.S. Knowlt., vol. 16, p. 447.) It has been shown to be impossible that they had found Ophir in the modern Sofala, on the eastern coast of Africa, opposite the island of Madagascar, and this same opinion was subsequently maintained by Dapper (Africa, p. 395), Montesquieu, and Bruce (Travels, vol. 2, p. 352). The improbability, however, of this position being the true one, has been fully shown by Vincent (Periplus, p. 266) and Salt (Voyage to Abyssinia, p. 102). The chief ground, in fact, in the former opinion of the Sofala being the true Ophir, is the fact that the Jews down to the time of Solomon, who, in conjunction with Hiram, king of Tyre, first sent an expedition to the latter. This latter Ophir he considers to be identical with Ceylon. (Geogr. Sacr., l. c.—Op., vol. 2, ed. 141.) Wells places Ophir in India, in the vicinity of Cabul. (Sacr. Geogr. sacr., s. v.) Schleusener is in favour of Spain. (Lex. Vét. Text, vol. 3, p. 75.) Tychose also decides in favour of India, and supposes Ophir to have been one of the Isles of Sunda, an island called Ophir lying near Sumatra at the present day. (De Commer. et Navigat. Hebraorum, &c.—Comment. Gött., vol. 16, p. 164, seqq.) Michaelis supposes Ophir to have been in Arabia, and condemns the opinion of Bochart, who finds another in India, as already stated. (Spicerlegum, Geogr. Hebr. ext. pars, 11, p. 164, seqq.) Prideaux, Gossellin (Reck, vol. 2, p. 118), Vincent (Periplus, p. 265, seqq.), Niebuhr, and others, likewise declare for Arabia Felix, or the country of the Sabai, where Aphalt (Saphar) and the ruins of the ancient Himarite dwellings make it probable to them that we must here look for the Ophir of Solomon. Mannert comes to the same conclusion. (Geogr., vol. 10, pt. I, p. 123.) It is most probable, therefore, that Ophir was in the southern part of Arabia. It is mentioned in connexion with the names of Arabo-Persian tribes in Genera 10, 29. The "gold of Ophir" is spoken of in the book of Job, a work most probably of Arabian origin. The products of the voyage, too, might easily have been obtained from Arabia; for, though gold is not found there now, we have the testimony of many ancient writers that it was in ancient times. It is, however, very probable that Ophir was an emporium of the Phœnicians for their eastern trade; and it is possible, as to the productions it is once removed.—Before bringing this article to a close, it may not be amiss to notice the very singular opinion of Arius Montanus, who finds Ophir in Peru, the gold of Paraim (2 Chron, 3, 6) being, according to him, the gold of that country (Peru-ain). It is of this that Scaliger remarks, "Puia Arium Montanaum illius joculatorum interpretationem autorem esse." (Scaliger, Epist., 237.)

Ophir, L. Nepos, was consul 121 B.C. He made himself conspicuous by his inveterate hostility to Caius Gracchus, and was the leader in the affair which terminated with the death of the latter. He was afterward convicted of having received a bribe from Jugurtha, and was banished. He ended his days in great poverty and wretchedness at Dryrachium. (Cic., Orat., 2, 132.—Id., pro Planc., 69.—Sall., Bell. Jug., 12.—Vell. Patere, 2, 6.) From all that we can gather relative to this individual, it would appear that he was a victim to the spirit of party. His conduct towards Caius Gracchus and his followers is represented as cruel in the extreme; and yet, when brought to trial by the tribune Duilius for having put to death a great number of persons during his consulship without observing the forms of justice, he was acquitted through the powerful eloquence of the consul Papirus Carbo. So, again, his trial and condemnation for bribery are pronounced by Cicero (pro Sestio) decidedly unjust. (Compare Scheuck. ad Vell. Patere, 2, 7.)—During the consulship of Opimius, the best of the

OPH (‘Οφις) or ORPHUS (‘Ορφύς), a name given to many places in ancient geography, and referring to their having been, at one time or other, more or less infested by serpents (ὄφις, a serpent). The most worthy of notice are the following: I. An island in the Mediterranean, off the coast of Spain, and forming one of the Pityusae, or Pine Islands. By the Romans it was generally called Colabaria, a translation of the Greek name, Ὀφυρία, the name of the island. It is now called la Colom- bretes, or Mont Colibre. Strabo and Ptolemy confound it with Formontera. (Uberti, Geogr., vol. 2, p. 471.)—II. A city of European Scythia, on the left bank of the river Tyras, which in Pliny’s time was also called Tyra. The modern Palanca, not far from the mouth of the Dnieper, is supposed to correspond to the ancient city. (Pliny, 4, 12.—Bischoff and Müller, Wörterb. der Geogr., p. 806.)—III. The ear-

OPHIBA (‘Οφιβα) or ORPHUBA (‘Ορφυβα), a name given to many places in ancient geography, and referring to their having been, at one time or other, more or less infested by serpents (ὄφις, a serpent). OPIMUS, L. NEROS, was consul 121 B.C. He made himself conspicuous by his inveterate hostility to Caius Gracchus, and was the leader in the affair which terminated with the death of the latter. He was afterward convicted of having received a bribe from Jugurtha, and was banished. He ended his days in great poverty and wretchedness at Dryrachium. (Cic., Orat., 2, 132.—Id., pro Planc., 69.—Sall., Bell. Jug., 12.—Vell. Patere, 2, 6.) From all that we can gather relative to this individual, it would appear that he was a victim to the spirit of party. His conduct towards Caius Gracchus and his followers is represented as cruel in the extreme; and yet, when brought to trial by the tribune Duilius for having put to death a great number of persons during his consulship without observing the forms of justice, he was acquitted through the powerful eloquence of the consul Papirus Carbo. So, again, his trial and condemnation for bribery are pronounced by Cicero (pro Sestio) decidedly unjust. (Compare Scheuck. ad Vell. Patere, 2, 7.)—During the consulship of Opimius, the best of the
summer was so great as to produce an extraordinary fertility and excellence in all the fruits of the earth throughout the whole of the Oppian wine; but his songs, which became famous to a late period. (Vid. Faler."

Opius, a city on the river Tigris, in Assyria, west of Artemita. It is probably the same with that which Pliny calls Antiochia. (Herodotus, 1, 189. - Xen., Anab., 2, 4. - Pliny, 6, 27.)

Oppetrium, a city of Venetia in Northern Italy, on the right bank of the river Plavis. It is now Oderzo, a town of some consequence. (Strabo, 214. - Pliny, 3, 16.) The Oppetrians recommend the neighbourhood of this place, and among them rises the Ligna Livenza or Livenza.

Oppia Lex, by C. Oppius, a tribe of the commons, A.U.C. 540. It required that no woman should have in her dress above half an ounce of gold, nor wear a garment of different colours, nor ride in a carriage in the city or in any town, or within a mile of it, unless upon occasion of a public sacrifice. This summery law was made during the public distress consequent on Hannibal's being in Italy. It was repealed eighteen years afterward, on the petition of the Roman ladies, though strenuously opposed by Cato. (Liv., 34, 1. - Tacit., Ann., 3, 33.)

Oppianus, an eminent Greek grammarians and poet of Cilicia, two of whose works are still extant under the titles "Cynegetica" (Κυνηγητικα), or "On Hunting," and "Halieutica" (Αλιευτικα), or "On Fishing." The time and place of his birth are not fully agreed upon. Syncellus (Chronog., p. 352, seq.) and Jerome (Chron.) place him in the reign of Marcus Aurelius Antoninus; but Sozomen (Praf. ad Hist. Eccles.), Suidas (s. v. Ὕππιανος), and others, make him to have lived in the time of Severus; and though Oppian, in both his poems, addresses the emperor by the name "Antoninus," it is more than probable that Caracalla is meant, as this appellation was conferred upon him when he was associated with his father in the empire (A. D. 193 - Herodian, 2, 10), and as this is the name by which he is commonly designated by the ancient historians, Herodian, Dio Cassius, &c. As to his birthplace, Suidas supposes it to have been Corycus, but the anonymous author of the Greek life of Oppian, and most other authorities, say that he was born at Anazarba, a city which also gave birth to Dioscorides. His father appears to have been a person of some consideration in his native city, for he was banished by the Praetor for writing in the Hadrianic era, by some means, for suffering himself to be so entirely engrossed by his philosophical studies as to neglect coming in person, along with his fellow-citizens, to pay his respects to the emperor, when, in taking a progress through Cilicia, the latter made his entrance into Anazarba. He was accompanied in his exile by his son Oppian, who had enjoyed the advantage of an excellent education under the superintendence of his father, and who now began to devote himself to poetry. According to Syncellus, he now composed his poem on fishing, and presented it to the Emperor Severus (Sozomen, Praf. ad Hist. Eccles.), or, more probably (Suidas, s. v. Ὕππιανος. - Oppian, Halieut., 1, 3. - Id. ib., 4, 5), to his son Caracalla, who was so much pleased with it that he not only repealed the sentence of his father's banishment, but also presented Oppian with a piece of gold for each verse that it contained. Suidas says that he received some 20,000 amphorae, which he must have counted the verses contained in all Oppian's poems, since the Halieutica consisted of only 3500. Reckoning the aureus at about $3.40 cts. of our currency, the sum received by the poet will be nearly $12,000. The verses of Oppian might forthwith well be called χρυσαί τῆς, "golden verses." (Sozomen, l. c.) Oppian died of the plague shortly after his return to his native country, at the early age of thirty, leaving behind him three poems, on "Hunting" (Ιζηντικα), "Hunting" (Κυνηγητικα), and "Fishing" (Αλιευτικα). — The Ιζηντικα consisted of two books. Oppian, according to the anonymous Greek author of Oppian's life, and are no longer extant; but a Greek paraphrase in prose, by Euteneus, of three books, was published in 1792 (Hamme, 8vo, ed. E. Windingus), which is also inserted in Schneider's edition of Oppian, Argent., 8vo, 1776. — The "Cynegetica" are written in hexameter verse, consist of about 2100 lines, and are divided into four books. They display a very fair knowledge of natural history; and however, a good many absurd fables are mixed up. — The "Halieutica" are also written in hexameter verse, and consist of five books, of which the first two contain the natural history of fishes, and the last three the art of fishing. In this poem, as in the "Cynegetica," the author displays considerable zoological knowledge, though it contains several fables and absurdities. The "Halieutica" are much superior to the "Cynegetica" both in style and poetical embellishment, and it is partly on account of this great disparity that it has been supposed that the two poems were not composed by the same person. But there are other and stronger reasons in support of this opinion (which was first put forth by Schneider, in the preface to his first edition of Oppian's works), rendering it almost certain that, though by the universal consent of antiquity Oppian wrote a poem on hunting, yet it cannot be that which now goes under his name. Oppian was, as we have seen, a Cilian, but the author of the "Cynegetica" was distinctly, in two different passages, that his native place was a city on the Orontes in Syria (probably Apamea, lib. 2, v. 125, seqq. - Ib., v. 156, seqq.). Schneider supposes that the two Oppians were either father and son, or uncle and nephew. This opinion, respecting two Oppians has been denied by Belin de Balli, who published an edition of the "Cynegetica" in 1786, Argent., 8vo and 8vo, and who, as Dibdin says, has condemned it, as having been "formed almost expressly with a determination to oppose the authority and controvert the positions of Schneider;" but it is only by altering the text in both passages (and that, too, not very skilfully) that he has been able to reconcile them with the commonly-received opinion that the poem is the work of Oppian. In Schneider's second edition he continues to hold his former opinion, and rejoins to the objections of Belin de Balli. It appears, from a comparison of the two poems, that Schneider, in the first book of the "Cynegetica" (v. 77, seqq.), that this poem was composed after the "Halieutica," and as a sort of supplement or companion to it; and this has tended to confirm the common opinion that both poems were written by the same author. — With regard to the poetical merits of Oppian, he seems to be one of those poets whose works have been more praised than read. Julius Caesar Scaliger pronounces him to be "a sublime and altogether incomparable poet," and among the Greeks, and the only one of them that ever came up to Virgil. (Poet., 5, 9.) Sir Thomas Browne calls him "one of the best epic poets," and "wonders that his elegant lines should be so much neglected (Vulgar Errors, 1, 8); and if, as Rapin says, he is sometimes dry (Reflex. sur la Politique, p. 176), it may fairly be accounted for and excused when we consider the unprofitable habit of his subject." His style is florid in a proper sense, the language used is refined, though (as is noticed by Heinasius, ad Nonni Dionys., p. 197) it is now and then deformed by Latinisms. — The last and (as far as it goes) the best edition of Oppian's two poems is Schneider's second one, which unhappily is unfinished, Lapa., 8vo, 1813. The most complete edition is that published by Schneider in 1776, Argent., 8vo, containing also the paraphrase of the "Izraeta," by Euteneus, to which we have already referred. Schneider published some additions to this.
ORA

Ors, called also Tellus, the goddess of the Earth, and the same with the Rhea, (Vid. Rhea.) Another form of her name was Opis. The appellations Opis or Opis is plainly connected with opis, "wealth," of which the earth is the bestower; and her festival, the Opisla, was on the same day with the original Saturnalia. (Macrob. Sat. 1, 10.—Varro, L. L. 5, p. 57.—Knightley's Mythology, p. 525.)

Opis (gen. Opintis), one of the most ancient cities of Greece, the capital of the Locri Opuntii, whose territory, together with that of Boscoreale, extending to Strabo, it was twenty stadia from the sea, and the distance between it and Cygnus, its suburb, was sixty stadia. (Strabo, 425.) Livy places Opis, however, only one mile from the sea (22, 6). This place is celebrated by Pericles as the domain of Deucalion and Pyrrha (Of., 9, 62), and by Homer as the birthplace of Patroclus. (Iliad, 18, 325.) The form of government adopted by the Opontians was peculiar, since, as we learn from Tyrannicides, the sole administration was to be exercised by a solo magistracy. (Polit., 3, 16.) Plutarch commends their piety and observance of religious rites. Herodotus informs us that they furnished seven ships to the Greek fleet at Artemisium (8, 1). They were subsequently conquered by Myronymides, the Athenian general. In the war between Antigonus and Cassander, Opis, having favoured the latter, was besieged by Ptolemy, a general in the service of Seleucus, which city was obliged to surrender thirty years after by Attalus, king of Pergamus, in the Macedonian war; but, on the advance of Philip, son of Demetrius, he was forced to make a precipitate retreat to his ships, and narrowly escaped being taken. (Livy, 28, 6.)—The position of this town has not been precisely determined by the researches of modern travellers. (Wheler's Travels, p. 575.—Melet., Geogr., 2, p. 229.—Diodor. vol. 2, p. 58.—Geas' Itiner. 229.) Its ruins are laid down, in Lapie's map, a little to the southwest of Alachi, and east of Talanta. (Cramer's Anc. Greece, vol. 2, p. 117, seqq.)

ORACULUM, an oracle. The primary and proper signification of the term is that of a response from an oracle, and Cicero says that "oraculum" were so called "quod inest in his Deorum orato."" (Top., 20.) The word, however, is frequently employed to designate the places, or the events, of the oracles, as regarded the events of the future, were supposed to be obtained. Oracular responses were called by the Greeks χρησμοι ορατος; the name μαντειος was also given to the oracular place, or seat of the oracle. —Curiosity regarding the future, and the desire to penetrate its mysteries, are dispositions which excite a powerful control over the minds of men in every stage of society. Among nations that have made little advancement in civilization and intelligence, they operate with peculiar force; and in these dispositions, combined with the belief that the gods had both the ability and the inclination to afford the knowledge so eagerly sought after, the oracles of the pagan world had their origin. Of these oracles the most famous were those of Greece, and among them the three most noted were those of Dodona, Delphi, and Trophonius. In the number of oracles, it is impossible to classify them all; we may distinguish among them the temple of Jupiter Ammon in the deserts of Libya, of the Branchidae in Ionia, of Pella in Macedonia, of the head of Orpheus at Lesbos, &c. There were also current in Greece numerous so-called prodigies, the production of individuals who were probably supposed to speak under a divine influence. Such were those of Bacis and Musaeus, in which the battle of Salamis was predicted; and that of Lyssistratus, an Athenian. (Herod., 8, 95.)—Though the Romans had various modes of ascertaining the will of the deities, it does not appear that oracles, like those of Dodona or Delphi, were ever established among them; and we find that the oracles of Greece, and particularly the far-famed one of Delphi, were confirmed by a single document, one of which is the table of Names (Pall. 5, 15. — Id., 22, 57, &c.) The importance attached by the Greeks and Romans to oracular responses is a striking feature in the history of that people. Hardly any enterprise, whether public or private, of any moment, was undertaken without recourse being had to them, and their sanction being obtained. In later times, indeed, their influence was greatly diminished, and thus gradually fell into disrepute. Cicero says that, although the original Delphic oracle was regarded by many with contempt; and there is little doubt that oracles were considered by philosophers as nothing different from what they really were, and by politicians as instruments which could be used for their purposes. —The modes in which oracular responses were delivered were various. At Dodona they issued from the sacred oaks, or were obtained from the sounds produced by the lashing of a brazen caldron. At Delphi they were delivered by the Pythia after she had inhaled the vapour that proceeded from the sacred fissure. At Memphis, a favourable or unfavourable answer was supposed to be returned, according as Apis received or rejected what was offered him. (Vid. Apis.) Sometimes the reply was given by letter; and sometimes the required information was obtained only by casting lots, the lots being dice with certain characters engraved on them, which were cast, and the result was obtained by referring to an explanatory table. Dreams, visions, and premonitions also announced the will of the deities. —Bishop Sherlock, in his discourse concerning the use and intent of prophecies, expresses his opinion that it is impious to disbelieve the heathen oracles, and to deny them to have been given out by the Evil Spirit. Dr. Middleton, however, in his Examination, &c., confessed he was quite convinced of the very impiety, and that he thinks himself warranted to pronounce, from the authority of the best and wisest heathens, and the evidence of these oracles, as well as from the nature of the thing itself, that they were all mere imposture, wholly invented and supported by human craft, without any supernatural aid or interposition whatever. He adds that Eusebius declares that there were 600 authors among the heathens who composed oracles, and whose writings were universally received with reverence of them. Although the primitive fathers constantly affirmed them to be the real effects of a supernatural power, and given out by the devil, yet M. de Fontenelle maintains, that while they preferred this way of combating the authority of the oracles, as most commodious to themselves and the state of the controversy between them and the heathens, yet they believed them at the same time to be nothing else but the effects of human fraud and contrivance, which he has illustrated by the examples of Clemens of Alexandria, Origen, and Eusebius. —Another circumstance respecting the ancient oracles, which has given birth to much controversy, is the time when they ceased altogether to give responses. Eusebius was the first who propounded the opinion that they became silent ever after the birth of Christ; and many writers, willing thus to do honour to the author of Christianity, have added their weight to this theory also in the most magnificent of all his minor poems, "The Hymn of the Nativity." But the circumstance that may be made available for the purpose of poetical ornament happens unfortunately to be contrary to the fact. It appears from the edicts of the emperors Theodosius, Gratian, and Valentinian, that oracles existed, and were occasionally, at least, practised as late as A.D. 365. About that period they entirely ceased, though for several centuries previous they had sunk very low in public esteem. So few resorted to them,
ORACULUM.

ORC

that it was no longer a matter of interest to maintain them. Towards this consummation Christianity powerfully contributed, by the superior enlightenment which it carried along with it wherever it was introduced, and by the display which it made of the falsehood and folly of the superstitions which it was destined to overthrow. (Engel. Ut. Knowl., vol. 16, p. 464, seq.)—The Grecian oracles, or, at least, the most celebrated of them, were of foreign origin, and were established either in magnificence or, but, among strangers. (Heeren, Ideen, vol. 6, p. 94.—Compare Knight's Inquiry, § 43, 71, 223.) But it was impossible for these sacredoral settlements to assume in Greece the aspect which they took in Africa. The character of the country and the spirit of the people were alike opposed to it. For though the popular religion in Greece was not wholly unconnected with politics, the state, having never, as in Egypt, been founded entirely upon religion, nevertheless retained its central and prevailing sacra-
ments, however, continued as oracles, of which the Greek stood in need both in public and private life. (Heeren, Ideen, l. c.—Politics of Ancient Greece, p. 78.) Somewhat analogous to this view of the subject is the position assumed by the advocates for the existence of early sacredoral castes or colleges in Greece; and they consider the oracles as a remnant supposed to confer the power of sacred utterance, and undertake to explain why the oracles play so subordinate a part, and exercise so little influence in the earlier periods of Grecian history; for the struggle between the sacredoral caste and the warlike portion of the population had been too recent for this, and the hatred of the latter was still ardent against those who had endeavoured to reduce them under their sway. (Constant, de la Religion, vol. 3, p. 369.) Homer speaks of no oracle except in their definitions; no oracle, absolutely; no oracle, in a proper sense, of Delphi in either of his periods. What had, however, been wrested by force from the sacredoral caste, was in a great measure regained by the influence of these very oracles on the weak and superstitious. Everything that could tend to keep up a feeling of awe in the visitor was carefully exhibited. The seats of the oracles were established in the bosoms of forests, by the lonely sources of rivers, on wild and craggy declivities, on the verge of mountains, on the summits of the dead; and, notwithstanding the efforts of philosophy, and the r Gailey and sarcasm of the comic muse, they succeeded in acquiring a power which often placed in the hands of their expounders the common fortunes of Greece.—The ambiguity of the oracular responses has always been a subject of remark: in this, indeed, all the artifice and adroitness of the priests directly centred. Every prediction was susceptible of a double meaning and apparent to both parties of the gods in this way remained safe from impeachment. It must be remarked, however, that this fatal ambiguity on the part of the oracles does not confine itself merely to the ages of tradition and fable. On the contrary, it becomes more frequent the more men part with the improper and degrading notions of the deity which they had originally entertained. As long as men are still sufficiently rude and ignorant to believe in the gods, capable of voluntary falsehood, the predic-
tions of oracles need be marked by no ambiguity; a deviation from truth on the part of the deity is in such a condition of society regarded merely as a mark of divine anger. But when the character of the gods is better understood, and when their attributes are made to assume a more perfect and becoming form, their honour is consulted, and the hypothesis of in-
tentional falsehood is no longer admitted.

The predictions of Jupiter in the Iliad are false, but not obscure, whereas the oracles mentioned in He-
robdous are obscure in order not to be false. Thus it is not merely Laïus who, by exposing his newly-
born child, prepares the accomplishment of the very

prediction which he believed he was eluding: it is not Crousus alone who rushes to his own destruction by marching against the King of Persia, because the gods had announced to him that, by crossing a certain river, he would overthrow a great empire; at a much later period than all this we find the Pythons inducing the Lacedaemonians by a response of similar ambiguity to engage in a war with the Tegerns, who put them to the rout (Horod., 1, 66); and again we see the orac-
les of Delphi, after having promised the Boeotians to induce them in Sicily, excite them to engage in a war with Syracuse, which proved the primary cause of their downfall and ruin, while the all the time the Sicily indicated by the oracle was merely a small hill in the neighbourhood of Athens (Pausan., 8, 2.) In fine, it was at a period characterized by the general diffu-
sion of mental culture that Epaminondas, who had always avoided maritime expeditions, because the gods had warned him to beware of pelagos, that is, of the

thought, the sea, died in a wood which bore this name in the vicinity of Mantinea. These anecdotes, wheth-
er we regard the occurrences connected with them as authentic facts or otherwise, serve nevertheless to show the prolongation of popular belief on this all-engrossing topic.—When a religion has fallen and been succeeded by another, the more zealous advocates of the false hope, find themselves in a curious state of embarrassment. So it is with regard to the heathen system and the Christian code. Among the numerous oracles given to the world in former days, some have chanced to find a remarkable accomplish-
ment; and the pious but ill-judging Christian, unable to ascribe them to deities in whom man no longer be-
lieves, is driven to create for them a different origin. "God," says Rollin, "in order to punish the blindness of the heathen, sometimes made them resemble the truth." (Hist. Anc., 1, 387.) The only evil spirit which had an agency in the oracular responses of antiquity was that spirit of crafty imposture which finds so congenial a home among an artful and cunning priesthood. (Constant, de la Religion, vol. 3, p. 369, seqq.)

Oribullus Pupillus, a grammarian of Beneventum, who was the first instructor of the poet Horace. He was born in the year 84, and died in 15 (Pliny, Hist. 4, 15). He wrote a book,Commentary on the works of Cicero. From the account which Suetonius gives of him, as well as from the epithet "plagous" applied to him by Horace, he appears to have been what we would call at the present day a rigid disciplinarian. Oribullus, in early life, had served as a soldier. On settling at Rome he acquired more fame than profit, and is said to have alluded to his poverty in one of his writings. He published also a work entitled "Patria," containing complaints against parents on ac-
count of the treatment which instructors of youth were accustomed to receive at their hands. Oribullus reached nearly his 100th year, and for a long time before his death had completely lost his memory. A statue was erected to him at Beneventum. He left a son, named also Oribullus, who, like himself, was an in-
structor. (Sueton., de Illustri Gramm. 9.—Horat., Epist., 2, 1.)

Orons, islands to the north of Britain, answering to the modern Orkney and Shetland islands. They are supposed to have been first discovered by the fleet of Germanicus when driven in this direction by a storm. Agricola afterward made the Romans better acquainted with their existence as islands, separate from the mainland of Britain, when he circumnavigated the northern coast of that country. Mela (3, 6), following the oldest accounts, makes the number of these islands to be thirty, and this statement is received by subse-
quently writers, with the exception of Pliny (4, 16), who gives forty as the amount, provided the reading be correct. Orosius, in a later age, would seem to have had more recent information on this point, since

930
be the states the number at thirty-three, of which twenty, according to him, were inhabited, and the remaining thirteen deserted. -The Orkneys at the present day are still called Orcades by the French. They are separated from the northern extremity of Scotland by the Pentland Straits or Frith, in which the sea is so boisterous that the passengers in the regular mail cannot, without the risk of being blown to a league's distance within the land: no wind, however strong, will enable the mariner to stem the current in this place. The group consists of 67 islands and islets, 27 of which are inhabited. Red sandstone is the prevailing rock. The soil of some of the islands is of inferior quality, but that of others is excellent. The Sketland or Zetland islands are eighty-six in number, of which forty are inhabited. They contain granite and rocks of igneous origin, with red sandstone: their vegetation is poorer than that of the Orkneys, and their soil for the most part is marshy. (Malte-Brun, vol. 8, p. 684.)

O R C H O M E N U S. I. a celebrated city of Boeotia, near the Cephissus, and to the northwest of the Lake Copais. It was the second city of the land, and at one time even rivalled Thebes itself in wealth, power, and importance. Its first inhabitants are said to have been the Thebans, who, regarded neither as gods nor men, but laid the whole country under contribution by their frequent and daring robberies. (Hom., Hymn. Apoll., 278. — Schol. in Apollon. Rhod., 1, 735. — Hom., II., 13, 302. — Pausan., 9, 36.) Pausanias, however, reports that a city named Andreis existed before the time of Philegys, who is said to have been a son of Mars. The Philegys having been destroyed by the gods for their impious treatment of the oracle, which regarded neither gods nor men, but laid the whole country under contribution by their frequent and daring robberies. (Hom., Hymn. Apoll., 278. — Schol. in Apollon. Rhod., 1, 735. — Hom., II., 13, 302. — Pausan., 9, 36.) Pausanias, however, reports that a city named Andreis existed before the time of Philegys, who is said to have been a son of Mars. The Philegys having been destroyed by the gods for their impious treatment of the oracle, which regarded neither gods nor men, but laid the whole country under contribution by their frequent and daring robberies. Pausanias, however, reports that a city named Andreis existed before the time of Philegys, who is said to have been a son of Mars. The Philegys having been destroyed by the gods for their impious treatment of the oracle, which regarded neither gods nor men, but laid the whole country under contribution by their frequent and daring robberies. Pausanias, however, reports that a city named Andreis existed before the time of Philegys, who is said to have been a son of Mars. The Philegys having been destroyed by the gods for their impious treatment of the oracle, which regarded neither gods nor men, but laid the whole country under contribution by their frequent and daring robberies. Pausanias, however, reports that a city named Andreis existed before the time of Philegys, who is said to have been a son of Mars. The Philegys having been destroyed by the gods for their impious treatment of the oracle, which regarded neither gods nor men, but laid the whole country under contribution by their frequent and daring robberies. the Achaean league. Surprised again by Cleomenes, it was retaken by Antigonus Doson, who placed there a Macedonian garrison. After his death, however, it appears to have reverted to the Achaeans. (Polub. 2, 46.—Id., 2, 54.—Id., 4, 6.—Strabo, 338.) The plain of Orchomenus was in a great measure occupied by a small lake, formed by the rain-water which descended from the surrounding hills: one of these, situated over against the town, was named Trachys. The modern village of Kalpaki is built on the ruins of Orchomenus. (Cramer's Anc. Greece, vol. 3, p. 306, seqq.—III. A city of Thessaly, on the eastern boundary of Macedonia. (Schol. in Apoll. Rhod., 2, 1186.—Van Stuaveren, ad Hygin, jul., 1.—Müller, Orchomenos und die Miney, p. 249.—IV. A city of Pontus, according to the scholiast on Apollonius Rhodius (2, 1186). Consult the remarks of Müller (Orchomenos, &c., p. 238).

Orestes, the god of the lower world, in the old Latin religion, corresponding to the Hades or Pluto of the Greeks. Vettius says that the ancients pronounced Oraus as if written Urgus, or, rather, Urgus, whence it would signify the Driner (from urgo), answering to the Hades-Agesilus of the Greeks. This etymology, however, is very doubtful. (Festus, s. v.—Keightley's Mythology, p. 527.)

Oroboics, a people of Britain, occupying what would correspond at the present day to the northern portion of Wales, together with the isle of Anglesey. (Tacit. Hist., 12, 39.—M. Hay, in History of Wales, 2, p. 187.) It was probably owing to the nature of their country, and to the vicinity of Deva, now Chester, where a whole Roman legion was quartered, that the Romans had so few towns and stations among the Oroboics. Mediomannum was their capital, and was probably situated at Maynwod or Mesjaf, in Montgomeryshire. (Mela, 3, 6.—Plin., 4, 16.—Mannert, l. c.)

Oriades, nympha of the mountains, so called from the Greek ὄρας, "a mountain." Another form of the name is Oriestes (Osoriades). They generally attended upon Diana, and accompanied her in hunting. (Virg., Æn., 1, 504.—Ovid, Met., 8, 787.—Hom., Il., 6, 420.)

Orestēs, a people of Epirus, situate apparently to the southeast of the Lyncesta, and, like them, originally independent of the Macedonian kings, though afterward annexed to their dominion. At a later period, having revolted under the protection of a Roman force, they were declared free on the conclusion of peace between Philip and the Romans. (Liv., 33, 34.—Id., 42, 39.) Their country was apparently of small extent, and contained but few towns. Among these Orestia is named by Stephanus Byzantinus, who states it to have been the birthplace of Poltemy, the son of Lagus. Its foundation was ascribed by tradition to Orestes. This is probably the same city called by Strabo (326) Argos Oresticum, built, as he affirms, by Orestes. Hierocles also (p. 641) recognises an Argos in Macedonia. (Cramer's Ancient Greece, vol. 1, p. 197.)

Orestēs, son of Agamemnon and Clytemnestra. On the assassination of Agamemnon, Orestes, then quite young, was saved from his father's fate by his sister, Electra, who had him removed to the court of their uncle Strophius, king of Phoeia. There he formed an intimate friendship with Pylos, the son of Strophius, and with him concerted the means, which he successfully adopted, of avenging his father's death, by slaying his mother and Agisthus. (vid. Clytemnestra, and Agisthus.) After the murder of Clytemnestra, the Furies drove Orestes into insanity; and when the oracle at Delphi was consulted respecting the duration of his malady, an answer was given that Orestes would not be restored to a sane mind until he went to the Tauric Cereros, and brought away from that quarter the statue of Diana to Argos. It was the custom in Taurica to sacrifice all strangers to this goddess, and the people and expenses which made the journey together, and having both been taken captive, were brought as victims to the altar of Diana. Iphigenia, the sister of Orestes, who had been carried off by Diana from Aulis when on the point of being imolated (vid. Aulis, and Iphigenia), was the priestess of the goddess among the Tauri. Perceiving the strangers to be Greeks, she offered to spare the life of one of them, provided he would carry a letter from her to Orestes. This occasioned a memorable contest of friendship between them, which should sacrifice himself for the other, and it ended in Pylices' yielding to Orestes, and agreeing to be the bearer of the letter. The letter was for Orestes, and a discovery was the consequence. Iphigenia, thereupon, on learning the object of their visit, contrived to aid them in carrying off the statue of Diana, and all three arrived safe in Greece. Orestes resigned many years in Mycene, and became the husband of Hermione, after having slain Neoptolemus. (vid. Hermione, and Pyrrhus I.)—Such is the ordinary form of the legend of Orestes. The tragic writers, of course, introduced many variations. Thus, it is said, that when the Furies of his mother persecuted him, he fled to Delphi, whose god had urged him to commit the deed, and thence went to Athens, where he was acquitted by the court of Areopagus. (Eschyl., Eumen. —Compare Müller, Eun. —M. Hay, History of Wales.) Orestes was afterwards accompanied to Athens by his brother Pylades, and the remnant of the family of Agamemnon and Penthius, who were driven from their country by the Heraclids. (Apollod., 2, 8, 5.—Eurip., Orest.—Soph., Electr.—Eschyl., Agam., &c.)

Orestēum of Orestēum, called by Pausanias (8, 3) Orestesthium, a town of Arcadia, southeast of Megalopolis, in the district of Orestis. Its ruins, according to Pausanias, were to be seen to the right of the road leading from Megalopolis to Tegesa (8, 25). Allusion is made to it by Euclidides. (Orest., 1643.—Electr., 1273.) It would seem from Thucydides and Herodotus to have been on the road from Sparta to Tegesa. (Thucyd., 5, 64.—Herod., 9, 11.) Orestes died here. (Cramer's Anc. Greece, vol. 3, p. 947.)

Orestēia, vid. Orestes.

Orestēas, the primitive name of Adrianopolis, in Thrace, and which the Byzantine authors frequently employ in speaking of that city. The name is derived from Orestes, and was introduced in this country on the spot after the murder of his mother. Three rivers had here their confluence, the Hebrus, receiving the Arducus or Arda on one side, and the Tomsus or Tonsa on the other. (vid. Adriano polis.)

Orestēa, a people ofHispania Tarraconensis, whose territory is supposed to have corresponded to the eastern part of Extremadura, the middle section of La Mancha, the eastern extremity of Jaen, and the northwestern extremity of Granada. (Liv., 21, 11.—Id., 35, 7.—Plin., 3, 3.—Polub., 10, 38.—Id., 11, 20.)

Oreus (Ureos), an ancient city of Eubœa, in the northeastern part of the island, founded, as was said, by an Athenian colonist. It was situate in the district of Ellopia. (Strabo, 445.) Scymnus of Chios, however, ascribes a Thessalian origin to the place. Its primitive name was Histaia, and it retained this appellation until it was destroyed by the Goths and driven off the gulf of Athens, after the close of the Persian war; it met with a cruel punishment at the hands of that power. The inhabitants were expelled, and Athenian colonists were sent to occupy the lands which they had evacuated. (vid. Evacuated.) Strabo, on the authority of Theopompos, informs us, that the Histrians withdrew on this occasion to Macedonia (l. c.). From henceforth we find the name of the place changed to Oreus, which at first was that of a small place dependant on Histiaeus, at the foot of Mount Telethrius, and near the spot called Drymos, on the banks of the riv-
ORIBASUS.

Ori Callas. Thucydides first notices Oreus at the close of
his history, as the last place retained by the Athen-
ians in Eubea (8, 95). From Xenophon we learn,
that, having been subsequently occupied by the Laced-
demonians, who had expelled Neogeones the tyrant,
it escaped from them previous to the battle of Leuctra.
(Hist. Gr., 5, 4, 57.) After that period we find His-
tius, or Oreus, governed by another tyrant named Phil-
istides, who, as Demosthenes asserts, was secretly sup-
ported and befriended by Philip of Macedon (Phil., 3, p. 125): he was afterward defeated and slain by the Athenians and Chalcidians. (Steph. Byz., s. v.) Ex-
cines, on the other hand, cites a decree of Oreus, to
prove that Demosthenes had been bribed by the maced-
onian king (Ath. Hist. 6, 46a).—In the second
Punic war, Oreus, when besieged by Attalus and Sulpicius, a Roman general, was betrayed into
their hands by Plator, who had been intrusted by Phil-
ip with the command of the place. (Lett., 28, 6.)
It must have been restored, however, to that monarch on
peace being concluded; for, in the Macedonian war,
we find it sustaining another obstinate siege against
the same enemies, which it was afterward reduced to a
ruin. (Lett., 34, 1, 29.)—Oreus, 6. Id., 18, 28.)—This cit
y, which long existed in Pliny’s time (4, 12), its ruins are
still to be seen near the coast, opposite to Cape Velo
of Thessaly. (Cramer’s Anc. Greece, vol. 2, p. 126.)

ORIBASUS, an eminent physician, and the intimate friend
of the Emperor Julian, was born at Sardis, in Lydia,
according to Suidas and Philostorgius (Hist. Eclog., 7, 18), or, rather, according to Eunapius (De Vitis Philosoph. et Sophist.,) who is his contempo-
rary, at Pergamus, a celebrated city of Mysia, and
the birthplace of Galen. After enjoying the advantages
of a good education, he became a pupil of Zeno, an able
physician of Cyprus, to whom the Emperor Julian ad-
dressed a letter, still extant. (Epist., 47.) Oribasius
soon became so famous in the practice of his profession,
as to induce Julian, upon being raised to the rank of
Consul, to take him with him into Gaul as his private
physician. (A.D. 355.) He had his days entirely
occupied; and, indeed, he owed him a debt of gratitude, if,
we may believe Eunapius, Oribasius aided in procuring
for him the empire. How this was effected by Oribasius,
the writer just mentioned does not state, and history is si-
len on the subject. It is this circumstance which has led
Boissoneade, the last editor of Eunapius, to doubt
the accuracy of the meaning commonly attached to
the words of this writer, that it is not simply a pas-
sage in question, “O θεότοκον επελευκέται της Ελ-
λαιος ἀρεταί, ὡς καὶ βασίλεα τὸν ἰαυλανόν ἀνέ-
δεξε, may not in fact mean that Oribasius had in-
stilled into the bosom of Julian, both by precept and ex-
ample, such virtues as made him truly a king? But,
however this may be, it is certain that they were upon
the most intimate terms, as is proved by one of Ju-
lian’s letters, addressed to Oribasius, which still re-
mains, and is, at least, a manifest proof of their su-
personal and pagan idolatry. When Julian succeeded to the empire, A.D. 361, he raised Oribasius to the rank of quaestor of Constantiople, and afterward sent him to consult the oracle at Delphi, whence he brought back the celebrated anser, that the oracles had ceased to utter predictions. (Cedr-
enus, Chron., p. 394, ed. Paris, 1647.) Oribasius ac-
companied the emperor in his expedition against Per-
sia, and was present at his death. He afterward fell
into disgrace through the envy of his enemies, and had
all his estate confiscated, and was banished by Valentinian
and Valens. He supported his misfortunes with fort-
titude, and by his medical talents gained so much love
and reverence, that the barbarians (as they were called)
were255. He had come to an almost to adore him as a
God. At last the emperors, feeling the loss of his pro-
fessional skill, recalled him from banishment, restored
his confiscated fortune, and loaded him with honours.
He was still alive when Eunapius, who was his inti-
mate friend, wrote his account of his life, which is
placed by Lardner about the year 400; and as this
was more than 50 years after his attending Julian in
Gaul, he must have come to an age when his
works are in the Greek Anthology top epigrams, written
in honour of him.—Oribasius composed, by order of the
Emperor Julian, an abridgment of the works of Galen,
under the title of Παράγαντες λατινά ("Treatise on
Medicine"), in four books, a compilation entirely lost.
He afterward, at the instance of the same monarch,
made a collection of extracts from the writings of pre-
vious physicians; these he arranged in methodical or-
der, and distributed into seven books. The compilation
indicates, Εθελοντικάδελακς. (Pho-
tius, cod., 217.) Suidas, however, says that it con-
sisted of seventy-two. Of this large work we possess
rather more than one third part, namely, books, 1-15,
24, 25, 43, 44, 45, 46, 47, 48, 49, 50. Dietz states,
in the preface to his unedited "Scholia in Hippocr.
tem et Galenam" (Regim. Fruez., 1834, 2 vols. 8vo),
that he discovered two more books that had been
omitted above which they are. These he intended to insert in their proper places in the new edition of Oribasius which he was preparing for the press at the time of his death. Among these are books 43d to 47th inclusive, which treat of various matters connected with surgery, and are taken from the works of Galen, Heliodorus, Archigenes, Asclepi-
adés, and other ancient writers on medicine. Orib-
asus subsequently made an abridgment of this great
work, which he entitled Σημανηκή, in nine books. Al-
though these two works are merely compilations, they
are, notwithstanding, important for the history of the
healing art: besides, the paraphrases of Oribasius
serve frequently to explain passages in the originals
which would be otherwise difficult to understand.
Oribasius finally composed a treatise on Simples (Ει-
πομονία), in four books. A commentary on the Aph-
idius, or the ancient prototype, which Savard, in his translation, has been erroneously ascribed to him; it
is the work of a Christian writer, who, in order to
make the production pass for an ancient one, feigned
that it had been composed by order of Ptolemy Euer-
getes. (Enycl. Us. Knovel., vol. 17, p. 10.—Schöll,
Hist. Lit. Gr., vol. 7, p. 248, seqq.)—"Oribasius,
observes Mr. Adams, "is the first medical writer of
celebrity after Galen, from which he borrows so freely
from the writings of the ancient school of Athens.
But, although this appellation might indicate that he is a
service copyist from his prototype, his work contains
many curious things, which are either original or de-
rived from some other source of information, which is
now lost. He describes minutely the mode of letting
blood by scarification, which, as described by him,
is an operation that does not appear to have been
ever practised by his predecessors. He gives a particu-
larly full view of his practice of perfuming baths, and
gives from Herodotus an account of the manner of practising with most advan-
tage the bath of oil. This appears to have been a
very powerful remedy, which has now been laid aside
for no other reason than the expense attending it. No
ancient writer on the Matera Medica has given so cir-
cumstantial an account of the mode of preparing the
intoxicating balsam as he has done in the 8th book. In the
24th and 25th books of the Collectanea, he gives a
complete treatise on anatomy, which, although mostly

933
copied from Galen, is highly valuable from its accuracy and precision. As Dr. Freind remarks, he gives a correct account of the salivary glands, which appear to have been overlooked by Galen; at least no description of them is to be found in such anatomical works of his as have come down to us. His method of treating epilepsy is also deserving of attention, as it appears to be a rational one, and yet is not clearly recommended by any other ancient authority. It consists in first abstracting blood several times, then administering drastic purgatives, such as coloquynth, senna, molyb, and black or white hellebore, applying cupping instruments to the occiput, and afterward sinapisms and other stimulants. In confirmation of the beneficial effects of hellebore in epilepsy, I would refer the reader to a case related by Anius Gallius (17, 15). As a professed copyist from Galen, Orbiasius may be safely consulted for a correct exposition of his doctrines.

—We have no complete edition of Orbiasius. The 40th chapter of the first book of the Hepend-metabolos, treating of waters, and the first six chapters of the fifth book, were edited by Riccius, Roma, 1548, 4to. The first two books were edited by Gruner, Jenæ, 1784, 4to. The 24th and 25th books, treating of anatomy, &c., were edited by Dandas. Lood, Bat., 1735, 4to. The 46th and 47th books, treating of fractures, &c., as well as the fragments of the books respecting bandages and dressings, are contained in the following:—The life of Orbiasius was divided into the 3d to the 15th books, and from the 43d to the 45th inclusive; and there remain to be discovered from the 16th to the 23d, and from the 26th to the 42d, inclusive. Latin translations, however, have been printed of some of the books that are yet unpublished in the Greek text. —The text of the Abridgment has never been printed. A Latin translation by Rasarius appeared at Venetia, 1535, 8vo, and at Paria, 1545, 24mo. The 24th and 25th books appeared at the end of Sidichard's edition of Celsius Aurelianus, Bâle, 1559, fol. Another translation by Rasarius is contained in the Bâlo edition of the works of Orbiasius. —The Commentary on the Aphorisms of Hippocrates was published at Paris by Winter (Quintus), 1533, 8vo, and reprinted at Bâle in 1535, at Rome in 1535, and at Padua in 1558, in 8vo. (Scholl, Hist. Lit. Gr., vol. 7, p. 250, seq.)

Oricum, at the head of a bay, the outer side of which is formed by the Acrocorian promontory. Scylax (p. 10) and other early writers place it in Ilyria, while Ptolemy enumerates it among the cities of Epirus. Herodotus (9, 94) speaks of it as a port not far from Apollonia and the mouth of the Aoös. It was known also to Hecateus and Appollodorus (ap. Steph. Byz., s. v. Ὀρίκα). Seymara of Chios appears to be the only writer who gives any account of its foundation; he ascribes it to the Euboeans after their return from Troy. These are the same people with the Abantes (v. 440). Apollonius speaks of the arrival of a party of Colchians in this port (4, 1216), whence Pliny calls it a colony of that people (3, 23). Oricum, however, is much more known in history as a haven frequented by the Romans in their communication with Greece, being very conveniently situated for that purpose from its proximity to the strait of Otranto. After the second and American war, this town was taken by Philip, king of Macedonia, but was afterward recovered by the praetor Valerius Lavinus, who surprised the enemy in his camp before Apollonia during the night, and put him to the rout. Philip having retired into Macedonia, the Roman general established winter-quarters at Oricum. (Livy, 24, 40.) It was from this place that Paulus Emilius sailed back to Italy, after having so happily terminated the Macedonian war. We find it subsequently occupied by Cesar, soon after his landing on this coast. (Bell. Civ., 3, 11.) Horace, Proper. 931.
ORIGENES.

eventually became acquainted with it. Surprised at the hardness of the deed, and yet forced to respect such ardent and devoted piety in so young a man, he encouraged him to persevere. Origen himself was subsequently converted of his error, and confuted in his writings the literal interpretation of a text which had led him to this extreme.—After a visit to Rome, where Zephyrinus was then bishop, Origen turned his attention to the acquiring of the Hebrew tongue, a thing very unusual at that time (Hieron., de Vir. Illust., c. 56); but his knowledge of the language was never very great. About the year 212, his preaching exclaimed from the Valentinian heresy a wealthy per- son, the former bishop of Ambrase, who afterwards assisted him materially in the publication of his Commentaries on the Scriptures. His reputation kept continually in- creasing, and he became eminent not merely as an in- structor in religion, but also in philosophy and human sciences. The governor of Arabia, having heard won- derful accounts of his abilities, requested Demetrius and the patriarch of Egypt to send Origen to him, that they might converse together on literature and the sciences. Origen’s answers showed the curiosity of the ruler was gratified, Origen returned to his native capital. This city, however, he soon after quittd, and fled to Caesarea to avoid the cruelties ex- ercised upon the Alexandrians by the odious Caracal- la. At Caesarea he gave public lectures, and, though not yet a priest, was invited by the bishops in this quarter to expound the scriptures in the assemblies of the faithful. Origen took off at this, and Ori- gen, at his earnest request, returned to the capital of Egypt and resumed his former functions. About this time the Emperor Alexander Severus had stopped for a while at Antioch, to expedite the preparations for war against the Persians; and the Empress Mammea, who accompanied her son, sent letters and an escort to Origen, inviting him to Antioch. The opportunity was eagerly embraced, and Origen unfolded to his il- lustrious hearers the prophecies and the mysteries of the Gospel. At a later period also he had a correspondence with the Emperor Philip and his wife Severa. On his return once more to Alexandria, he directed his attention to the writing of commentaries on the Old and New Testaments, at the instance principally of Am- brose, whom he had both instructed in the sciences, and, as we have already observed, reclaimed from his heretical opinions. This disciple, well known in Alex- andria by the name of Firmilianus, had a richly supplied the former master with all the means requisite for pursuing his studies. Origen had around him several secretaries, to whom he dictated notes, and seven others to arrange these notes in order: the former were called notarii, the latter librarii. Other copyists were em- ployed in transcribing works. Origen commented first on the Gospel of St. John, then on Genesis, the first twenty-five Pauls, and the Lamentations of Jeru- salem. Obliged as a priest to make yearly the journey to Athens, for the purpose of succouring the churches of Achaia, he again visited Caesarea on his way, where the bishop of this church and the bishop of Jerus-alem ordained him priest. He was at this time forty- five years of age. Demetrius vehemently disapproved of this ordination, and made known the act committed by Origen on his own person, and which he had thus lately committed; that he could not be admitted to sacred orders, and he insisted that this point of ancient discipline could not be abandoned by the church. An assembly was convened, and Origen received orders to leave Alexandria, whither he had returned. In a second assembly or council, Demetrius pronounced sentence of deposition against him, and excommunicated him for the errors which he had prop- agated in his writings. These errors were principally contained in his Treatise on First Principles, and one of the most prominent is said to have been the opin-
logic, geometry, arithmetic, music, grammar, rhetoric, and all the sects of the philosophers; so that he was resorted to by many students of secular literature, whom he received chiefly that he might embrace the opportunity of instructing them in the faith of Christ" (de Vir. Illust., c. 84). Elsewhere he calls him the greatest teacher since the Apostles. We find this same Jerome, however, at a later period of his life, vilifying both Origen and approving of the persecution of his followers. Sulpicius Severus says, that in reading Origen's works he saw many things that pleased him, but many also in which (Origen) was undoubtedly mistaken. He wonders how one and the same man could be so different from himself; and adds, "where he is right, he has not an equal since the Apostles; where he is in the wrong, no man has erred more shamefully." (Dialog., I, 3.) All agree that he was a man of an inordinate vivacity; and of fervent piety; fond of investigating truth, and free from all mean prejudices, of the most profound learning, and the most untiring industry. His whole life was occupied in writing, teaching, and especially in explaining the Scriptures. No man, certainly none in ancient times, did more to settle the true text of the sacred writings, and to spread them among the people; and yet (it is perhaps), has introduced more dangerous principles into the interpretation, be it whether from a defect in judgment or from a fault in his education, he applied to the Scriptures the allegorical method which the Platonists used in interpreting the heathen mythology. He says himself, "that the source of many evils lies in adhering to the carnal or external part of Scripture. Those who do so shall not attain the kingdom of God. Let us therefore seek after the spirit and the power, and drink the fruit of the word, which are hidden and mysterious." And, again, "the Scriptures are of little use to those who understand them as they are written."—In the fourth century, the writings of Origen led to violent controversies in the Church. Epiphanius, in a letter preserved by Jerome, enumerates eight erroneous opinions as contained in his works. He is charged with holding heretical notions concerning the Son and the Holy Spirit; with maintaining that the human soul is united with the body, but has a previous existence; that in the resurrection the body will not have the same members as before; and that future punishments will not be eternal, but that both fallen angels and wicked men will be restored, at some distant period, to the favour of God. (Hieron. adv. Ruf., lib. II., vol. IV, p. 403.) These opinions were not generally held by his followers, who maintained that the passages from which they had been drawn had been interpolated in his writings by heretics. In 401, Theophilus, bishop of Alexandria, held a synod, in which Origen and his followers were condemned, and the reading of his works was prohibited; and the monks, most of whom were Origenists, were driven out of Alexandria. His opinions were again condemned by the second general council of Constantinople, in A.D. 553. We will now consider the various peculiar accounts of his life. Several works of this father, as far as they have come down to us, or are known from the statements of other writers. 1. Ἱεροσολυμων ("On First Principles"). This work was divided into four books; but we possess only a short notice of it in the Myriobiblon of Photius (cod., 8), an extract in Eusebius (contra Mar. cell, Ancyran, lib. I), and some fragments in the Philolocia. Rufinus made a Latin version of the first century, which has reached us; but he has, by his own confession, added so much to Origen's work, that it cannot be taken as a fair exhibition of his opinions. In the first book, Origen treats of God: he explains in it also his views with regard to the Trinity, which are in accordance with the principles of the Platonic school; and it is in this particularly that he deviates from the path pointed out by the church though it must be confessed that she had not yet expressed herself as clearly in relation to this fundamental doctrine, as she subsequently did at the Council of Nice. In this same book Origen starts the strange idea, that the stars are animated bodies. In the second book he discusses the origin of the world, which, like the Platonists, he regards as having been created from all eternity; in the third, he illustrates the nature of the soul, which he assigns also to the brute creation; the resurrection of the dead, and eternal life. The third book treats of Free Agency; Demons or Evil Spirits, and the various ways in which men are tempted by them. The fourth book is devoted to the Interpretation of the Bible. —2. Φιλοσοφία ἡ Φίλωνδ ("Doctrines of the Philosophers"). This is properly the first book of a work entitled Κατὰ Φίλωνδ μεταφρασθέντας ἢ Λογική τῆς Εὐαγγελίας ("Refutation of all sects"), and consisting of two books. In it Origen briefly explains the doctrines of the different Greek schools of philosophy, and the second book was devoted to their refutation. There is some doubt, however, whether Origen was actually the author of it. —3. Commentaries on the Old and New Testaments, the greater part of which, however, is now lost. In these Commentaries Origen gave full scope to his learning and imagination, in which he did not fail to him to express his mystical, and moral sense of the Bible. His grand fault, as we have already remarked, is that of allegorizing the Scriptures too much; and this method of interpretation he adopted from the Alexandrine philosophers, in the hope of establishing a union between heathen philosophy and Christian doctrine. His fundamental canon of criticism was, that wherever the literal sense of a passage was not obvious or not clearly consistent with his peculiar tenets, the words were to be understood in a spiritual and mystical sense; a rule by which he could easily incorporate any fancies, whether original or borrowed, with the Christian creed. —4. Scholia, or short notes explanatory of difficult passages of Scripture. Of these some extracts only are preserved in the collection made by Gregory Nazianzen and Basil the Great, entitled Φιλολογία —5. Hexapla, or the manuscripts of the Greek poets. In which, he addressed himself to the capacities of the people. —6. Hexapla (Ἐξαπλαί). The great work which had been made by the Jews of the Septuagint, previously to their rejection of it, and the constant use of it by the Christians, naturally caused a multiplication of copies; in which, besides the alterations designedly made by the Jews, numerous errors became introduced, in the course of time, from the negligence, or interposition of transcribers, and from glosses, or marginal notes, which had been added for the explanation of difficult words, being suffered to creep into the text. In order to remedy this growing evil, Origen, in the early part of the third century, undertook the laborious task of collating the Greek text then in use with the original Hebrew, and with the other translations then in existence, and from the whole to produce a new apparatus of text, of which six were devoted to the preparation of this arduous task, in the course of which he collected manuscripts from every possible quarter, aided by the pecuniary liberality of Ambrose. Origen commenced, as has already been stated, his labour at Cesarea, and, it appears, finished his Polyglott at Tyre, but in what year is not precisely known. This noble critical work is designated by various names among the ancients; as Theogoni, Hexapla, Octapla, and Enneaapla. The Tetrapla contained the four Greek versions of Aquila, Symmachus, the Septuagint, and Theodotion, disposed in four columns; to these Origen added two columns more, containing the Hebrew text in its original characters, and also in Greek letters; these six columns, according to Epiphanius, formed the Hexapla. Having subse-
ORIGENES

Origen, a celebrated giant, was said by one legend to have been the son of Neptune and Euryale. His father, according to this same account, gave him the power of walking on the sea, or, as others say, of walking on its surface. (Hesiod, ap. Schol. ad Nicaandr., Ther., 15.) He married Side, whom Juno cast into Erebus for contending with her in beauty. (Apollod., 1, 4, 3.) Another and more common account makes Hyrieus, a town of Boeotia, to have been the birthplace of Orison, and the story of his origin is told as follows: As Jupiter, Neptune, and Pluto, three divinities at that time occupying the earth, came late in the evening, to the house of a farmer named Hyrieus. Seeing the wayfarers, Hyrieus, who was standing at his door, invited them to enter, and pass the night in his humble abode. The gods accepted the kind invitation, and were hospitably entertained. Pleased with their host, they inquired if he had any wish which he desired to have gratified. Hyrieus replied, that he once had a wife whom he loved so tenderly that he had made the request to another, that she was dead: he was childless; his vow was binding; and yet he was desirous of being a father. The gods took the hide of his only ox, which he, on discovering their true nature, had sacrificed in their honour; they buried it in the earth; and ten months afterward a boy came to light, whom Hyrieus named Orison or Orion (from ὄρος ox).—Exilop. ap. Schol. ad H., 18, 1, 86.—Ovid, Fast., 6, 495, seqq.—Hygin., fab., 195.—Id., Port. Astron., 2, 34.) This unparalleled legend owes its origin to the name Orison, and was the invention of the Athenians. (Müller, Or. chom., p. 99.) In Hyginus, Hyrieus is Byseus (from the hide, ἑιδῆς).—When Orion grew up, he went, according to this same account, to the island of Chios, where he became enamoured of Merope, the daughter of Cienopion, son of Bacchus and Ariadne. He sought her in marriage; but, while wooing, seized a favourable opportunity, and offered her violence. Her father, incensed at this conduct, and having made Orion drunk, blinded him, and cast him on the seashore. The blinded hero contrived to reach Lemnos, and came to the forge of Vulcan, who, taking pity on him, gave him Kedalion (Guardian), one of his men, to be his guide to the abode of the Sun. Placing Kedalion on his shoulder, Orion proceeded to the East; and, when he arrived there, meeting aliens, he occluded them in his beams. Anxious for revenge on Cienopion, he returned to Chios; but the Chians, aware of his intention, concealed the object of his search under the ground, and Orison, unable to find him, returned to Crete. (Hesiod, l. c.—Apollod., l. c.—Hygin., l. c.)—The death of Orion is variously related. As all the legends relating to him are evidently later than the time of Homer, none ventures to assign any other cause to it than that of his lovers, and that he had made the request to another (who rather says the contrary) he drew on himself. Some said that he attempted to offer violence to the goddess herself; others to Opis, one of her Hyperborean maids, and that Diana slew him with her arrows; others, again, that it was for presuming to challenge the goddess at the discus. It was also said that, when he came to Crete, he boasted to Latona and Diana that he was able to kill anything that he shot at from the earth. When they asked if he would try his shot, they sent a scorpion, which stung him, and he died. It was said finally that Diana loved Orison, and was even about to marry him. Her brother was highly displeased, and often chid her, but to no purpose. At length, observing one day Orison wading through the sea with his head just above the waters, he pointed it out to his sister, and maintained that she could not hit that black thing on

ORISON

Orison (Upion), a celebrated giant, was said by one legend to have been the son of Neptune and Euryale. His father, according to this same account, gave him the power of walking on the sea, or, as others say, of walking on its surface. (Hesiod, ap. Schol. ad Nicaandr., Ther., 15.) He married Side, whom Juno cast into Erebus for contending with her in beauty. (Apollod., 1, 4, 3.) Another and more common account makes Hyrieus, a town of Boeotia, to have been the birthplace of Orison, and the story of his origin is told as follows: As Jupiter, Neptune, and Pluto, three divinities at that time occupying the earth, came late in the evening, to the house of a farmer named Hyrieus. Seeing the wayfarers, Hyrieus, who was standing at his door, invited them to enter, and pass the night in his humble abode. The gods accepted the kind invitation, and were hospitably entertained. Pleased with their host, they inquired if he had any wish which he desired to have gratified. Hyrieus replied, that he once had a wife whom he loved so tenderly that he had made the request to another, that she was dead: he was childless; his vow was binding; and yet he was desirous of being a father. The gods took the hide of his only ox, which he, on discovering their true nature, had sacrificed in their honour; they buried it in the earth; and ten months afterward a boy came to light, whom Hyrieus named Orison or Orion (from ὄρος ox).—Exilop. ap. Schol. ad H., 18, 1, 86.—Ovid, Fast., 6, 495, seqq.—Hygin., fab., 195.—Id., Port. Astron., 2, 34.) This unparalleled legend owes its origin to the name Orison, and was the invention of the Athenians. (Müller, Or. chom., p. 99.) In Hyginus, Hyrieus is Byseus (from the hide, ἑιδῆς).—When Orion grew up, he went, according to this same account, to the island of Chios, where he became enamoured of Merope, the daughter of Cienopion, son of Bacchus and Ariadne. He sought her in marriage; but, while wooing, seized a favourable opportunity, and offered her violence. Her father, incensed at this conduct, and having made Orion drunk, blinded him, and cast him on the seashore. The blinded hero contrived to reach Lemnos, and came to the forge of Vulcan, who, taking pity on him, gave him Kedalion (Guardian), one of his men, to be his guide to the abode of the Sun. Placing Kedalion on his shoulder, Orion proceeded to the East; and, when he arrived there, meeting aliens, he occluded them in his beams. Anxious for revenge on Cienopion, he returned to Chios; but the Chians, aware of his intention, concealed the object of his search under the ground, and Orison, unable to find him, returned to Crete. (Hesiod, l. c.—Apollod., l. c.—Hygin., l. c.)—The death of Orion is variously related. As all the legends relating to him are evidently later than the time of Homer, none ventures to assign any other cause to it than that of his lovers, and that he had made the request to another (who rather says the contrary) he drew on himself. Some said that he attempted to offer violence to the goddess herself; others to Opis, one of her Hyperborean maids, and that Diana slew him with her arrows; others, again, that it was for presuming to challenge the goddess at the discus. It was also said that, when he came to Crete, he boasted to Latona and Diana that he was able to kill anything that he shot at from the earth. When they asked if he would try his shot, they sent a scorpion, which stung him, and he died. It was said finally that Diana loved Orison, and was even about to marry him. Her brother was highly displeased, and often chid her, but to no purpose. At length, observing one day Orison wading through the sea with his head just above the waters, he pointed it out to his sister, and maintained that she could not hit that black thing on
the sea. The archer-goddess discharged a shaft: the waves rolled the dead body of Orion to the land; and, bewailing her fatal error with many tears, Diana placed him among the stars. —The hero Orion is not mentioned in the Iliad; but in the Odyssey (5, 121) we are told by Calypso, that ruddy-fingered Aurora took him, and that Diana slew him with her gentle darts in Ortygia. In another place his size and beauty are praised. (Od., 11, 305; Keightley's Mythology, p. 401, seqq.) "The constellation of Orion, which represents a man of gigantic stature wielding a sword, is mentioned as early as the time of Homer and Hesiod (II., 17, 486. —Op. et D., 589, 615, 619.) Both poets, in alluding to it, use the expression σθένος Ωρίωνος, "the strength of Orion" (i.e., the strong or powerful Orion), analogous to the βηγ Ηρακλῆς. We must connect, therefore, with the idea of Orion, as represented on the celestial planisphere, that of a powerful warrior, armed with a spear. The name Φανός, therefore, will be derived from Φανός 'ερως. —Buttman.

Indeed, the English term Warrior is almost identical in form with the Greek Ωρίων, and the word War connects itself as plainly with the root of Ωρ-νς or Mars. It is worthy of remark, too, that the constellation Orion was called by the Boeotians Καυδάων, a derivative in all likelihood of Καυδών, a name given to the god Mars. (Lycohor. 328.—Ptolemy, ad loc.—Lycohor. 329.) That part of the legend, also, which relates to the ox's birthplace, only explained by the term eminent of scholar, on the supposition of some resemblance having been discovered, between the position of the stars in this constellation and the hide of an ox. Thus the four stars, α, β, γ, κ, will indicate the four extremities or corners, and the feeble stars, which now form the head, will represent the neck. In the same way, the three brilliant stars in the middle may have suggested the idea of three deities, Jupiter, Neptune, and Mercury (Buttman. (Buttman and Strab. 219.)

The cosmical setting of Orion, which took place towards the end of autumn, was always accompanied with rain and wind. Hence the south wind is called by Horace "the rapid companion of the setting Orion" (Od., 1, 28, 21), and Orion himself as "fraught with harm to mariners." (Epod., 13, 7.—Compare Od., 3, 27, 18.—Virg., Æn., 1, 535.—Id. lib., 4, 131.) As the Arabs express it, Σαυριάς, or as the Greeks have called it, "some of the origin of the name Orion, it will be seen at once how erroneous is the etymology assigned by Isidorus, when he says, "Orion dictus ab urina, id est ab inundatione aquarum. Tempore enim hiemis obortus, mare et terras aquis et tempestatibus terratur."

(Orig., 3, 70.) There is also another error here. It was not the rising, but the cosmical setting, of the constellation which brought stormy weather. (Ideler, Sterennamen, 427.)

ORTHYIA (four syllables), a daughter of Erechtheus, king of Athens, by Praxiteia. She was carried off by Boreas, the god of the northern wind. (Vid. Boevoes.)

ORNEMIN, a city of Thessaly, in the district of Magnesia, near the shores of the Sinus Pelasgicus, and southeast of Demetrias. It is noticed by Homer, in the catalogue of the ships, as belonging to Euryppus. (II., 2, 731.) According to Demetrius of Scipio, it is attributed to the origin of the horse of Achilles. (Strabo, 438.—Eustath., ad ll., p. 762.) Strabo affirms, that in his time it was called Orminium; and that it contributed, with many of the neighbouring towns, to the rise and prosperity of the city of

OROM
Orósios, I., a city on the confines of Boeotia and Attica, on the lower bank of the Asopus, and not far from its mouth. The possession of this place was long the object of eager contest between the Boeotians and the Athenians. Here there is little doubt but that the former could prove priority of possession; but, as the Athenians were anxious to enlarge their territory at the expense of their Boeotian neighbours, and to make (as all nations have been anxious to do) a river (the Asopus) their boundary, and also to secure their communication with Euboea, they used their rising power to appropriate this place to themselves. (Bloom. ad Thucyd., 2, 23.) In the Peloponnesian war we find that the Athenians, towards the close of that contest, we hear of the city being surprised by the Boeotians, who retained possession of it for many years. (Thucyd., 8, 60.) In consequence of a sedition which occurred there, the Thebans changed the site of the place, and removed it about seven stadia from the sea. (Diód. Sicíc., 14, 17.) After the overthrow of Thebes, Orósios was ceded to the Athenians by Alexander. Herod. Livy, Pausanias, and Philostratus all mention the site of Athens on the bank of the Orósios, in the days of halves such as those of Hesiod and the Corinthians. Stephanus, on the other hand, ascribes it to Boeotia. Dicæarchus (Stat. Gr., p. 11) styles Orósios "the dwelling-house of Thebes, the traffic of retail vendors, the unsurpassable aversive of excisemen versed in excess of wickedness for ages, ever imposing duties on imported goods. The generality are rough in their manners, but courteous to those who are shrewd; they are angry at the Athenians, but friendly to the Boeotians." The meaning of the last phrase is perhaps that, this the Athenians on this border were so much mixed with the Boeotians as to have lost their usual characteristics of acuteness and intelligence. "Orósios," says Dodwell, "is now called Ropo, and contains only few and imperfect ruins" (vol. 2, p. 156. —Cramer's Anc. Græcia, vol. 2, p. 272.) -II. A city of Macedonia, mentioned by Stephanus (p. 770), but otherwise unknown.—III. A city in the land of Euboea. (Amm. Marcell., 30, 4. —Steph. Byz., p. 770.)

Orosius, Paulus, a presbyter of the Spanish Church, and a native of Hispania Tarraconensis, who flourished about the beginning of the fifth century, under Arcadius and Honorius. The Invasion of his country by the barbarians, and the troubles excited by the Priscillianists, a sect of the Gnostics or Manichaeans, caused him, about A.D. 414, to betake himself to St. Augustin in the Gōsa, who received him, and sent him to Rome. The latter prelate was then in Palestine. Orosius acted in this country the part of a turbulent man, and embroiled St. Jerome with Pelagius and John of Jerusalem. He wrote also a treatise against Pelagius, who was at that time spreading his opinions concerning original sin and grace. The title of this production is "Liber Apologeticus contra Pelagium, de Arbitrio libertatis." The treatise is annexed to the "History" of Orosius. From Palestine he returned to Hippo Regius in Africa, to his friend St. Augustin, and thence to Spain. The calamities which had befallen the Roman empire, and, above all, the capture and pillage of Rome by Alaric (A.D. 410), afforded to the heathens, and to Symmachus among the rest, a pretence for accusing the Christian religion of being the cause of all these disasters, and of saying that, since the abandonment of the Roman faith, the Roman army was, in the eyes of the heathens, forsaken by the Roman gods. To refute this charge, Orosius, at the advice of St. Augustin, composed a history, in which he undertook to show that ever since the creation, which he dated back 5618 years, the habitable world had been the theatre of the greatest calamities. The work consists of seven books, divided into chapters. It begins with a geographical description of the world, then treats of the origin of the human race according to the book of Genesis, and afterwards relates the various accounts of the mythologists and poets concerning the heroic ages. Then follows the history of the early monarchies, the Assyrian, Babylonian, and Persian, the conquests of Alexander, and the wars of his successors, as well as the early history of Rome. The contents being chiefly taken from Trogus Pompeius, and his abridg'd work, "Historia de Poplo," this book contains the history of Rome, from the wars of Pyrrhus to the fall of Carthage. The fifth book commences the period from the taking of Corinth to the war of Spartacus. Orosius quotes among his authorities several works which are now lost. The narrative in the sixth book begins with the war of Sylla against Mariædates, and ends with the birth of our Saviour. The seventh and last book contains the history of this period till A.D. 416, including a narrative of the capture and sack of Rome by Alaric, which was the great event of the time. Orosius intermixes with his narrative moral reflections, and sometimes whole chapters of advice and consolation, addressed to his Christian brethren, and intended to confirm their faith amid the calamities of the times, which, however heavy, were not, as he asserts, unprecedented. The Romans, he says, in the conquests they had inflicted, had done no wrongs on other countries. His tone is that of a Christian moralist, impressed with the notions of justice, retribution, and humanity, in which the heathen historians show themselves so deficient. As an historical writer, Orosius shows considerable critical judgment in general, though in particular passages he appears quite credulous, as in chapter 10th of the first book, where, after the return of the book, he refers to the chariot-wheels of Pharaoh's last dream as being found at the bottom of the Red Sea. —As an instance of the incidental value of the passages taken by Orosius from older writers, consult Savigny (Das Recht des Besitzes, p. 176). King Alfred made a free translation of the History of Orosius into the Anglo-Saxon language, which was published by Daines Barrington, with an English version, London, 1778, 8vo. —The work of Orosius, in some MSS., is entitled "Adversus Pa­gonos Historiarum libri vii." In others it is called "De totius Mundi Calamitatis;" in others again, "De Cladibus et Missieris Antiquorum." The most singular title, however, given by some MSS., is "Hormesta" or "Ormesta." The general opinion is, that this has arisen from a mistake made by some old copyist. The true title, in all probability, was Pauli Orosi­ni meteors mundi, from which, by abbreviation, was first made & by Jerome, and finally by Alcuin, Ormesta, or simply Ormysta. (Withof., Relat. Divis­burg, 1762, N. 47, 52.) —One of the best editions of Orosius is that of Havercamp, Lugd. Bat., 1738, 4to. (Encycl. Us. Knowel., vol. 17, p. 36. —Schell, Hist. Lit. Rom., vol. 3, p. 36. —Bähr, Gesch. Röm. Lit., vol. 1, p. 477.)

OROSPEDA. Viz. Ortopedus.

Orpheus (two syllables) is a poet, musician, and philosopher, whose name is very prominent in the early legends of Greece. The traditions respecting him are remarkably obscure. According to Cicero (N. D., 1, 38), Aristotle believed that no such person as Orpheus the poet had ever existed; but perhaps he only means that the poems ascribed to him were spurious. Orpheus is mentioned as a real person by several of the ancient Greek writers, namely, by the lyric poet Bacchylides, and by Pindar, Pherecydes, and the Athenian tragedians: he is not mentioned by Homer or Hesiod. Some ancient writers reckon several persons of this name, and Herodotus speaks of two. In later times a number of marvellous stories were connected with his name. —The following is the legendary history of Orpheus. His native country was Thrace. It is a remarkable fact that many of the traditions respecting Greek civilization are connected with the Thracians, who in later times spoke a language unintelligible to the Greeks, and were looked
upon them as barbarians. Müller explains this by pointing out that the Thracians of these legends were not the same people as those of the historical period, but a Greek race who lived in the district called Pireis, to the east of the Olympus-range, to the north of Thessaly, and to the south of Emathia or Macedonia. (Müller, Hist. Gr. Lit., p. 26.) The time at which Orpheus lived is placed by all writers not long before the Trojan war, and by most at the period of the Argonautic expedition, about twelve or thirteen centuries before our era. He was said to have been the son of Apollo and the muse Calliope, or, according to another account, of Oeagrus and a muse. The poets represent him as a King of Thrace, but the historians are generally silent about his station. According to Clements of Alexandria he was the disciple of Musæus, but the more common accounts make him his teacher. He was one of the Argonauts, to whom he rendered the greatest services by his music; the enchanting tones of his lyre made the Argo move into the water, delivered the heroes from many difficulties and dangers while on the voyage, and mainly contributed to their success in obtaining the golden fleece. After the voyage, Orpheus returned to the cavern in Thrace in which he commonly dwelt. He is said by some authors to have made a voyage to Egypt before the Argonautic expedition.—The skill with which Orpheus was said to have enchanted the animals and birds seems to have been studied to move the very trees and rocks, and the beasts of the forest assembled round him as he touched its chords. He had for his wife a nymph named Eurydice, who died from the bite of a serpent, as she was flying from Aristæus. Orpheus, disconsolate at her loss, determined to descend to the lower world, to endeavour to mollify its rulers, and obtain permission for his beloved Eurydice to return to the regions of light. Armed with a lyre, he descended to the shades, and gained an easy admittance to the palace of Pluto. At the music of his “golden shell,” to borrow the beautiful language of ancient poetry, the wheel of Ixion stopped, Tantalus forgot the thirst that tormented him, the vulture ceased to prey on the vitals of Tityos, and Pluto and Proserpina lent a favouring ear to his prayer. Eurydice was allowed to return with him to the upper world, but only on condition that Orpheus did not look back but must walk with his eyes fixed on the path of the Hades. He consented, but, looking behind him, the kingdom of darkness. He broke the condition, and she vanished from his sight. His death is differently related. The most common account is, that he was torn in pieces by the Thracian women, at a Bacchic festival, in revenge for the contempt with which he had shown towards them through his sorrow for the loss of Eurydice. (Apollod., i. 3.—Virg., Georg., 4, 454.) His limbs were scattered over the plain, but his head was thrown upon the river Hebrus, which bore it down to the sea, and the waves then carried it to Lesbos, where it was buried. (Vid. Lesbos.) The Musea collected the fragments of his body and interred them at Libethra, and Jupiter, at their prayer, placed his lyre in the skies. (Apollod., i. c.—Apoll. Rhod., i. 23.—Hermea, ap. Athen., 13, p. 597.)—The poets and fabulists have attributed to Orpheus many great improvements in the condition of the Hellenic race. Indeed, his having moved even animals, and trees, and the flinty rocks by the sweetness of his strains, would seem to indicate nothing more than his successful exertions in civilizing the early race of men. (Horat., Ep. ad Pis., 391.) Nearly all the ancient writers state, that Orpheus introduced into Greece the doctrines of religion and the worship of the gods. The foundation of mysteries is also ascribed to him. (Aristoph., Rax., 1105—Erat., Eryx., 945.—Plato, Craties, p. 216.) Herodotus (2, 91) speaks of Orphic and Bacchic mysteries. These mysteries seem to have been different from those of Eleusis. The establishment of social institutions, and the commencement of civilization, are, as we have just remarked, ascribed to Orpheus. Anaxophanes says, that he taught men to abstain from murder. (Ren., 1030.) He is said to have been the author of many fables. A passage in an epigram, to which, however, no authority can be attached, ascribes to him the invention of letters. (Fabric., Bib. Grac., vol. i, p. 178.) The discovery of many things in medicine is also ascribed to him (Plin., 25, 2), and the re- call of Eurydice from the lower world is sometimes explained as referring to his skill in the healing art. He was said to have been a soothsayer, an augurer, and he had a famous oracle in Lesbos. A share in the invention of the lyre is also ascribed to him: he received it from Apollo with seven strings, and added to it two more. According to Plutarch, he was the first that accompanied the lyre with singing. The fable that, after his death, his head floated to Lesbos, is a poetical mode of representing the skill of the natives of that island in lyric poetry. Orpheus is said to have imbibed his religious and philosophical opinions in poems, but the works ascribed to him are evidently spurious. An account of these will be found under the article Orphica. (Encycl. Us. Knowl., vol. 17, p. 37.)—It is stated of Orpheus by some ancient authorities, that he abstained from the eating of flesh, and had an abhorrence of eggs, considered as food, from a persuasion that the egg was the principle of all beings. Many other accounts are given of his virtues; he seems to have been of the same character as Thamyris or Thamyris, a great obstreperous hero of the ancient world, who, with his lyre, was called the saviour of the gods, and to whom, on occasion, they would be indebted for the prevention of dangers. He was a member of the family of the Bacchantes, and his name, according to the Greek philosophers, is said to have been derived from the name of a god Bacchus, who was the god of the Bacchantes. He was the son of Apollo and the nymph Cyrene, named by Homer Bacchus, and celebrated by the early poets. He was the son of Apollo and the nymph Tyro, and the name Orphica appears to be compounded of the adverbial form ερυθής, πώς, or perhaps the adjective ερυθής, considered as being of two terminations (Matthew, Gr. Gr., vol. 1, § 120.—Kühner, Gr. Gr., vol. 1, p. 353, § 309), and the noun διάκομα, and it would seem to be nothing more than an appellation for that system of mystic and religious ceremonies which Orpheus was the first to establish, and which was afterwards continued by the earlier progenitors of the Grecian race, and the foundations of which had been laid broadly and deeply by him in the minds of his hearers. According to the statements of the ancient mythologists, Aristæus, the son of Apollo and the nymph Cyrene, became enamoured of Eurydice, the wife of Orpheus, and pursued her into a wood, where she ended her days from the sting of a serpent. It has already been stated, in another part of this volume (vid. Aristæus), that the hero Cybele, to whose temple Orpheus went to be initiated, and of whom he became the chief, would seem to be in reality an early deity of the Greeks, presiding over flocks and herds, over the propagation of bees and the rearing of the olive. At the same time, we find among the ancient writers the
name of Aristaeus connected, in a greater or less degree, with the rites and mysteries of Bacchus. Thus, Diodorus Siculus (3, 92) cites a legend, in which Aristaeus is mentioned, as the instructor or governor of the young Bacchus. From the same source (3, 71) we are informed, that Aristaeus was the first who sacri-

ficed to Bacchus as to a god. Nonnus represents him as one of the principal leaders in the expedition of Bacchus against India; and in Greece his history is connected with that of the time of Cadmus, the found-
er of Thebes, the birthplace of Bacchus in Grecian mythology. (Nonni Dionys. 5, p. 155, ed. 168o, Svo.) Prayag, from whom Bacchus, according to this author, it otherwise seems that there had been some union effected be-

tween the religious worship of Aristaeus and Bac-

chus. Regarding this latter deity as emblematic of the great productive principle, which imparts its ani-

mating and fertilizing influence to everything around, it is not difficult to conceive how a union should have taken place between this system and that of Aristaeus, the god of agriculture and of the flocks. Now the religious system introduced by Orpheus, though itself connected with the worship of Bacchus, was very different from the popular rites of this same deity. The Orphic worshippers of Bacchus did not indulge in unrestrained pleasure and frantic enthusiasm, but rather aimed at an ascetic purity of life and manners. The consequence, therefore, would seem to be that, these two systems, the Orphic and the popular, having attained a certain degree of popularity, the one was sent to succumb. In the figurative lan-
guage of poetry, Aristaeus (the type of the popular sys-
tem) pursues Eurydice ( Insets- ilx, the darling in-
tutions of Orpheus), and the venom of the serpent (the gross license connected with the popular orgies) occa-
sions her death. Orpheus, say the poets, lamenting the loss of his beloved Eurydice, descended in quest of her to the shades. The meaning of the legend evidence that this idea of the Orphic system is most often found at the same event which had succeeded to his purer precepts of moral duty, he endeavoured to reclaim men from the sensual indulgences to which they had be-

come attached, by holding up to their view the terrors of the future punishment in another world. Indeed, that he was the first who introduced among the Greeks the idea of a future state of rewards and punishments, is expressly stated by several writers, as the origin of the Orphic system. Wesseling, ad Diod., t. c.—Banier's Mythol-
ogy, vol. 4, p. 159.) The awful threatenings that were thus unfolded to their view, and the blissful en-

joyments of an Elysian which were at the same time promised to the faithful, succeeded for a time in bring-

ing back men to the purer path of moral rectitude, and to a fairer and brighter state of things; but either the impatience of their instructor to see his efforts realized, or some act of heedlessness and inattention on his part, frustrated all his hopes, and mankind relapsed once more into moral darkness. In the fanciful phra-

seology of the poet, the doctrine of a future state of punishment, as taught by Orpheus, was converted into his descent to the shades. His endeavour to re-es-
blish by these means the moral system which he had originally promulgated, became, to the eye of the ear-

lier bards of Greece, even amid the dark-
ness of the lower world, for the lost object of conjugal affection; and by the tones of the lyre, which bent even Pluto and Proserpina to his will, appear to be indicated those sweet and moving accents of moral harmony, in which were described the joys of Elysium, and whose power would be acknowledged even by those whom the terrors of punishment could not intimidate. In this sense, certain works falsely ascribed to Orpheus, which imbibed the opinions of a class of persons termed 'Orphikoi,' were the followers of Or-

pheus, that is to say, associations of persons who, under the guidance of the ancient mystical poet Orpheus, dedicated themselves to the worship of Bacchus, in which they hoped to find the gratification of an ardent longing after the soothing and elevating influence of the sys-
tem. The Bacchus, to whose worship these Orphic rites (τὰ Ὀρφικά καλελγέμα καὶ Βασχικά, Herod., 2, 81) were annexed, was the Chthonian deity, Bacchus or Dionysus Zagreus, closely connected with Ceres and Proserpina, and who was the personified expres-
sion, not only of the most rapturous pleasure, but also of a deep sorrow for the miseries of human life. The Orphic legends and poems related in great part to this name Bacchus, whom, as he came from the inferno, was connected with Pluto or Hades (a doctrine given by the philoso-
pher Heracitus as the opinion of a particular sect), and upon whom the Orphic theologers founded their hopes of the purification and ultimate immortality of the soul. But their mode of celebrating this worship was very different from the popular rites of Bacchus. The Orphic worshippers of Bacchus did not indulge in unrestrained pleasure and frantic enthusiasm, but rather aimed at an ascetic purity of life and manners. The followers of Orpheus, when they had the mystic sacrificial feast of raw flesh torn from the ox of Bacchus (ἀἰσχύροντς), partook of no other animal food. They were also white linen garments, like Oriental and Egyptian priests. (Muller, Hist. Lit. Gr., p. 231, seqq.)—Of the Orphic writers, the most celebrated are, Onomacritus, who lived under Pissa-

deus, and who was called Bacchus; and BaKxtKu, who lived about B.C. 504. Works ascribed to Orpheus were extant at a very early period. Plato mentions several kinds of Orphic poems; but he intimates that they are not genuine. Aristotle speaks of them as the so-called (τὰ καλολγέμα) Orphic poems. In later times, all manner of works on mysteries and religion were ascribed to him. There are also Orphic poems later than the Christian era, which are difficult to be classed as such. The writings ascribed to Orpheus, and which have reached our times, are as follows:—1. Hymns (Ὑμνοι), eighty-eight in number. They are in hexameter verse, and were most of them, as is thought, composed by Onomacri-
tus.—2. An historical or epic poem on the Expedition of the Argonauts (Αργοναυτικά), in 1384 verses, prob-
ably by Onomacritus; at least, by some one not earlier than Homer.—3. A work on the Muses (Μουσοτέκτια), in 768 hexameters, showing how they may be used as preservatives against poisons, and as a means of conciliating the favour of the gods.—4. Fragments of various other works; among which is placed a poem of 66 verses, entitled πεπτε Ἐσωτέρων, concerning Earthquakes, that is, of the prognostics to be derived from this species of phenomenon; a production sometimes ascribed to the fabulous Hermes Trismegistus. Many other fragments of the Orphic poems, some in a metrical form, others converted into prose, and scattered throughout the com-

mentary of Proclus on the Cratylus of Plato, were col-
lected from the Munich MSS. by Wesseling, and inserted in the Philological Transactions of Munich. (Acta Philologorum Monacensium, vol. 2, p. 113, seqq.)—Other writings, also ascribed to Orpheus, but which have not come down to us, except in the most fragmentary form, are the following:—1. Sacred Legends (Ἱστορία), a complete system of Orphic theology, in twenty-four books. It was as-

cribed by some to Cercopes and Diogenes, but was probably the production of several authors.—2. Proph-
ecies (Χρηματικά).—3. Ἁρχαία, probably stories relative to Bacchus and his mysteries. They were ascribed by some to Arigones, a pupil of Orpheus, and by others to Orphus.4. The descent of Hades (Ἡ ἠθόη Καταβά-

τικά), a poem of great antiquity, ascribed, among oth-

ers, to Cercopes.—5. Religious Rites or Mysteries (Τεκτέται), directions for worshipping and appeasing
the gods; probably by Onomacritus.—As late as the 17th century, no one doubted but that the different works which bear the name of Orpheus, or, at least, the greater part of them, were either the productions of Orpheus himself, or of Onomacritus, who was regarded as the restorer of these ancient poems. The learned Huet was the first who, believing that he had discovered the Orphic works of Christian authors, expressed the opinion that they might be the work of some pious impostor. In 1751, when Ruhnken published his second critical letter, he attacked the opinion of Huet, and placed the composition of the works in question in the tenth century before the Christian era. Gesner went still farther, and in his Proteologomena Orphica, which were read in 1759 at the University of Göttingen, and subsequently placed in Hamberger's edition of Orphica, published after Gesner's death, he declared that he had found nothing in these poems which prevented the belief that they were composed before the period of the Trojan war. He allowed, however, at the same time, that they might have been retouched by Onomacritus. Gesner found an opponent in the celebrated Valckenaer, who believed the author of the poems in question to have belonged to the Alexandrian school. (Valck, ad Herod., ed Wesseling.) In 1759, Valck published a criticism and defence of Huet. (Schneider, de dubia Carm. Orph. auctoritate et vetustate.—Analect. Crit., fasc. 1.) The same poems, in which Ruhnken had found a diction almost Homeric, and Gesner the simple style of remote antiquity, appeared, to the German professor, the work of a later Platonist, initiated into the tenets of Judaism and the mysteries of Christianity. His arguments, deduced entirely from the style of these productions, were strengthened by Thomson's Neo philolog. Bibliothek, vol. 4, p. 298), who discovered in these poems historical and geographical errors such as could only have been committed by a writer subsequent to the age of Ptolemy Euergetes. And yet it is singular enough, that Mannert, arguing from the acquaintance with geographical terms displayed by the author of these poems, places him between Herodotus and Pythias. (Geogr., vol. 4, p. 67.) In 1782 Ruhnken published a complete edition of his criticism, in which he endeavoured to refute the opinion of Schneider, allowing, at the same time, that the position assumed by Valckenaer was not an improbable one. The discussion rested here for twenty years, when Schneider, in his edition of the Argonautica published in 1803, defended the theory which he had supported in his younger days, adding, at the same time, however, some modifications; for he allowed that the author of the Argonautica, although comparatively modern, had appropriated to himself the style and manner of the Alexandrian school. Two years after, Hermann, in a memoir annexed to his edition of the Orphica, and subsequently in a separate dissertation, supported with rare erudition the opinion of Huet, and that which Schneider had advanced in 1777. After giving a brief account of the state of the controversy, Hermann proceeds to examine the structure of the Orphic verse. He first indicates the progressive modification of the hexameter verse, through the series of the epic and didactic hexameter writers, pointing out the gradual changes which it underwent from the time of Homer till it was wholly remodelled by Nonnos. He detects, in the hexameters of the Orphic poems, those peculiarities which show, as he thinks, that their author must have lived in the fourth century of the Christian era, just before the hexameter verse received its last considerable changes under the influence of Nonnos. (vid. Nonnos.) Five German critics, Heyne, Voss, Wolf, Huschke, and Königsmann, opposed the hypothesis of Schneider and Hermann, and declared in favour of Valckenaer's theory. (Voss, Dedic. der übersetz. des Hesiodus.—Id., Recens. Jen. L. Z., 1805, p. 138, 912)
mainland of Sicily. Osigia was famed for containing the celebrated fountain of Arethusa. The earliest mention of this island is found in Hesiod (Theog., 1018). On it is now situate the greater part of modern Syracuse. (Güller, de Sicie et Orig. Syracus., p. 39, sqq.)—II. One of the early names of the island of Delos. (Vid. Delos.)

Osir, an Egyptian deity, son of Osiris and Isis. (Vid. Horus.)

Osca, a town of Hispania Baetica, in the territory of the Turdetani. According to Mannert, it corresponds to the modern Huessa, in Aragon. (Geog., vol. vii. p. 320.) It was, however, the name of a great part of the western coast of the city. It was in Osca that Sertorius collected together, from the various nations of Spain, the children of the nobility, and placed masters over them to instruct them in Greek and Roman literature. Plutarch states that this had the appearance only of an education, to prepare them for being admitted citizens of Rome; but that the children were, in fact, so many hostages. (Vit. Sertor.)

Osci or Osch, a people of ancient Italy, who seem to have been identical with the Ausones or Aurunci, and who inhabited the southern part of the peninsula. Some ancient writers consider the Ausones to be a branch of the Osci; others, as Polybius, have spoken of them as distinct tribes, but this appears to be an error. The names Opicus and Osca are undoubtedly the same. Aristotle (Polit., 7, 10) calls the country from the Osci; and Pliny the Elder, in his Natural History, xi. 34, calls the region Oscan, and Osca, and other ancient writers extended the name much farther, to the Straits of Sicily; but the southern extremity of the peninsula appears to have been occupied previously by the Lconitians, a Pelasgic race, who were conquered by the Lucanians and Bruttii. Cuma, one of the earliest Greek colonies on the coast of Italy, was in the country of the Opci. The early immigrations of the Illyrians or Liburnians along the eastern coast of Italy, drove the aboriginal inhabitants from the lowlands into the fastnesses of the central Apennines, whence they issued under the various names of Sabini, Casci, or Latini veteres. There was an ancient tradition in Italy, in the time of the historian Dionysius, of a sudden irruption of strangers from the opposite coast of the Adriatic, which caused a general commotion and dispersion among the aboriginal tribes. Afterward came the Hellenic colonies, which occupied the northern and eastern coasts, and, in the hands of the Greeks, as it were, gave a new aspect to the peninsula, and in the first and second centuries of Rome; in consequence of which, the population of the southern part of the Italian peninsula became divided into two races, the tribes of Aboriginal or Oscan descent, such as the Sabini, Samnites, Lucani, and Bruttii, who remained in possession of the highlands, and the Greek colonists and their descendants, who occupied the maritime districts, but never gained possession of the upper or Apennine regions. Such is the view taken by Micali and other Italian writers. But Niebuhr describes the Sabini, and their colonies the Samnites, Lucani, and other tribes, which the Roman writers called by the general name of Sabellians, as a people distinct from the Osci or Opici. He says, after Cato and other ancient historians, that the Sabini issued out of the highlands of the central Apennines near Ambrussum, long before the epoch of the Trojan war, and, driving before them the Cassani or Prisci Latini, who were an Oscan tribe, settled themselves in the country which has to this day retained the name of Sabina. Thence they sent out numerous colonies, one of which penetrated into the land of the Opicians, and became the Samnite people; and afterward the Samnites occupied Campania, and, in clearing their land, solved the more numerous tribes of the Osci by mutual cultivation, and affected to despise them, and they applied to the native Italian tribes, including the Romans, to the epithet "Oscan," as a word of contempt, to denote barbarism both in language and manners (Cato, ap. Plin., 29, 1); and the later Roman writers themselves adopted the expression in the same sense: "Oscé loquus" was tantamount to a barbarous way of speaking. Juvenal may be quoted for the Latin expression from the early part of the Roman republic: "Eoquus longa carens, where Opici is equivalent to "barbari ty" and Ausonius (Prof., 29, 3) uses "Opicas caritas" in the sense of rude, unpolished compositions. The Oscan language was the parent of the dialects of the native tribes from the Tiber to the extremity of the peninsula, Sabini, Hernici, Marsi, Samnites, Sidicini, Lucani, and Bruttii, while in the regions north of the Tiber the Etrurian predominated. Livy (10, 50) mentions the Oscan as being the language of the Samnites. The older Latin writers, and especially Ennius, have many Oscan words and Oscan terminations. The Oscan language continued to be understood at Rome down to a later period of the empire, and the Fabula Atellanae, which were in the Oscan tongue, were highly relished by the great body of the people. In the Social war, the Confederates, who were chiefly the Oscan tribes from Campania and Samnium, have their own language for their own purposes. In Campania and Samnium, the Oscan continued to be the vulgar tongue long after the Roman conquest, as appears from several monuments, and especially from the Oscan inscriptions found at Pompeii. (Micali, Storia degli Antichi Popoli Italiani, ch. 29.—Id., Atlas, pl. 120.—De Iorio, Plan of Pompeii, pl. 4.)—The Oscan race, like the Etruscan, appears to have been, from the remotest times, strong- ly under the influence of religious rites and laws, the "Pictae, s. v. Oscum); and the primitive manners and simple morals of the Oscan and Sabine tribes, as well as their bravery in arms, have been extolled by the Roman writers, among others by Virgil (En., 7, 772, seqq.) and Silius Italicus (5, 926, seqq.).—Concerning the scanty remains of the Oscan language which have come down to us, the following may be consulted: "Lingua Oscan Specimen," by J. Grotefend, in his "Specimen nau- rum Musarum Seminarii," which is given by Passeri in his "Pictura Etruscorum in Vasculis," &c., Rome, 3 vols., fol., 1767-75, and also by Guarini, in his "In Oscé Epigrammata nonnulla Commentaria," Naples, 1830, 8vo, where several Oscan inscriptions are found collected; but particularly the learned work of Grotefend, "Rudimenta Lingae Oscan," Hannover, 1840. Another work of the last-mentioned writer, entitled "Rudimenta Lingae Umbriac," Hannover, 1835, &c., is also worthy of being consulted. Grotefend makes both the Oscan and the Latin come from the Umbrian language. (Encycl. Us. Knowl., vol. 17, p. 47.—Niebuhr, Rom. Hist., vol. i, p. 55. Camb. trans.)

Osiris, one of the principal Egyptian deities, was brother of Isis, and the father of Horus. His history is given in the first book of Diodorus, and in Plutarch's "Moralia," but it is improbable that the genuine Egyptian traditions respecting the deity had been considerably corrupted at the time of these writers. According to their accounts, however, Osiris was the first who reclaimed the Egyptians from a state of barbarism, and taught them agriculture and the various arts and sciences. After he had introduced civilization among his more barbarous subjects, he re- moved them to distant parts of the world and con- ferred on them the same blessing. He accordingly com- mitted the administration of his kingdom to Isis, his sister and queen, and gave her Hermes to assist her
in council, and Hercules to command her troops. Having collected a large army himself, he visited in succession Ethiopia, Arabia, and India, and thence marched through Central Asia into Europe, instructing the nations in agriculture, and in the arts and sciences.

He left his son Macedon in Thrace and Macedon, and having crossed the landing-place of the Attica into Triplemus. After visiting all parts of the inhabited world, he returned to Egypt, where he was murdered soon after his arrival by his brother Typhon, who cut up his body into twenty-six parts, and divided it among the conspirators who had aided him in the murder of his brother. These parts were afterward, with one exception, discovered by Isis, who enclosed each of them in a statue of wax, made to resemble Osiris, and distributed them through different parts of Egypt. Other forms of the legend may be found in Creuzer's elaborate work (Symbolik, vol. 1, p. 259, seqq.—Symbolik, par Guigniaut, vol. 1, pt. 1, p. 389, seqq.) For some remarks explanatory of it, consult the article Isis.—Herodotus informs us (2, 48), that the festival of Osiris was celebrated in almost the same manner as that of Bacchus. It appears, however, not improbable, that the worship of Osiris was introduced into Greece from Egypt, in the same manner as we are informed from, the Egyptian Meroe. We learn from Herodotus (2, 29), that Ammon and Osiris were the national deities of Meroë, and we are told by Diodorus (3, 3) that Osiris led a colony from Egypt into Ethiopia. Osiris was venerated under the form of the sacred bulls Apis and Mnevis (Diod. Sic., 1, 21); and as it is usual in the Egyptian symbolical language to represent their deities with human forms, and with the heads of the animals which were their representatives, we find statues of Osiris with the horns of a bull. (Egyptian Antiquities, vol. 2, p. 295.) Osiris, in common with Isis, presided over the world below; and it is not uncommon to find him represented on rolls of papyrus, as sitting in judgment on departed spirits. His usual attributes are the high cap, the flail or whip, and the cresser. (Encycl. Us. Knorr., vol. 17, p. 49.—Cory, Horapollo Nilois, p. 164, pl. 2.)

Osset.; a people of Gallia Lugdunensia Tertia, on the coast of the Mare Britannicum, and at the south-western extremity of the Tractus Armoricanus. Their country, according to some, answers to the modern Léon and Trégori; but, according to D'Anville, their chief city was Vorgannum, now Kerbez, in Basse Bretagne. (Cass., B. G., 2, 34.—Id. ib., 3, 9, &c.—Lemaire, Int. Geogr., add. Cass., s. c.)

OSSAB'é, a district of Mesopotamia, in the north-western section of the country. (Vid. Mesopotamia.)

Ossa, I. a celebrated mountain, or, more correctly, mountain-range of Thessaly, extending from the right bank of the Peneus along the Magnesian coast to the chain of Pelion. It was supposed that Ossa and Olympus were once united, but that an earthquake had rent them asunder (Herod., 7, 132.—Elian, V. Hist., 3, 1), forming the valle of Tempe. (Vid. Tempe.) Ossa was one of the mountains which the giants, in their war with the gods, piled upon Olympus in order to ascend to the heavens. (Hom. Od., 11, 312, seqq.—Virg., Georg., 1, 282.) The modern name is Kisso, or, according to Dodwell, Kissabos (Kissavos).

"Mount Ossa," observes Dodwell, "which does not appear so high as Pelion, is much lower than Olympus. It rises gradually to a point, which appears about 5000 feet above the level of the plain; but I speak only from conjecture." (Tour, vol. 2, p. 106.—Cramer's Asia, vol. 1, p. 119.) In the north of Macedonia, in the territory of Biszalis, and situate on a river (probably the Basaltes) falling into the Strymon.

Östä, a celebrated town and harbour, at the mouth of the river Tiber, in Italy. It was the port of Rome, and its name even now continues unchanged, though few vestiges remain of its ancient greatness. All historians agree in ascribing the foundation of Ostia to Anius Marcianus. (Liv., 1, 33.—Dion. Hal., 3, 44.—Flor., 1, 4.) That it was a Roman colony we learn from Florus (c. Compare Senece, 1, 15.—Tactit., Hist., 1, 80). When the Romans began to have ships of war (368 B.C.), Ostia was chosen as the port where the fleet was constantly stationed there to guard the mouth of the Tiber. (Liv., 22, 11 et 27.—Id., 23, 38.—Id., 27, 22.) It was here that the statue of Cybele was received with due solemnity by Scipio Nasica, when the public voice had selected him for that duty, as the best citizen of Rome. (Livy, 29, 14.—Herodian, 1, 11, 10.) In the civil wars, Ostia fell into the hands of Marius, and was treated with savage cruelty. (Luc, ciu., 12, 6.) The town was built up with indignation to the capture of the fleet stationed at Ostia by some pirates. (Proc. L. Manil.) The town and colony of Ostia were distant only thirteen miles from Rome, but the port itself, according to the Itineraries, was at the mouth of the Tiber; unless it be thought with Vulpius, that the town and harbour, with all their dependencies, might occupy an extent of three miles along the river. (Vet. Lat., 2, 1, p. 293.) The term Esina, as applied to the town, and the region of the same name, seems to be derived from the name of the river Esina; but is more probably a contraction of the name Esina, a name of the river, and Esi, a term for a channel of water, and suggests the idea of the river Esina being a river of navigable breadth. (Liv., 24, 20.—Compare Dio Cass., 60, 11.—Plin., 36, 9.—Id., 36, 15 et 40.) It is generally supposed that Trajan subsequently improved and beautified the port of Ostia; but the only authority for such a supposition is derived from the scholiast on Juvenal, in his last stanza on the passage where that poet describes the entrance of Catullus into this haven (12, 75). It is not improbable, however, that the scholar might confound the harbour of Ostia with that of Centumcellae.

In process of time, a considerable town was formed around the harbour of Ostia, which was itself called Portus Augusti, or simply Portus; and a road was constructed thence to the capital, which took the name of Via Portuensis. Ostia, as has been remarked, attained the summit of its prosperity and importance under Claudius, who always testified a peculiar regard for this colony. It seems to have flourished likewise under Vespasian, and even as late as the reign of Trajan; for Pliny the younger informs us, when describing his Laurentine villa, that he derived most of his household supplies from Ostia. In the time of Propertius, however, this city was nearly deserted, all its population and most of its inhabitants having been transferred to the neighbouring Portus Augusti. The same writer gives a full account of the trade and navigation of the Tiber at this period; from him we learn, that the island which was formed by the separation of the two branches of that river was called Sacra. (Ret. Got., 1.—Compare Rutil., Itin., 1, 169.) The salt marshes form
ed by Ancus Marcius, at the first foundation of Ostia (Livy, 1, 33), still subsist near the site now called Casone del Sale. (Cramer's Anc. Italy, vol. 2, p. 11, seqq.)—"Nothing," observes a modern traveller, "can be more dreary than the ride from Rome to this desolate spot.\footnote{\[\textit{Compare} Cramer, \textit{Ancient Rome}, vol. 2, p. 11, seqq.\]}"

but 94 ft. and 263 miles, the Tiber, rolling turbidly along in its solitary course, seems solely to behold the altered scene that has withered around him. A few miles from Ostia we entered upon a wilderness indeed. A dreary swamp extended all around, intermingled with thickets, through which roamed wild buffaloes, the only inhabitants of the waste. A considerable part of the way was upon the ancient pavement of the Via Ostiensis, in some places in good preservation, in others broken up and destroyed. When this failed us, the road was scarcely visible. The modern fortifications of Ostia appeared before us long before we reached them. At length we entered its gate, guarded by no sentinel; on its bastions appeared no soldier; no children ran from its houses to gaze at the rare splendour of a carriage; no passenger was seen in the grass-grown street. It presented the strange spectacle of a town without inhabitants. After some beating and halloowing, on the part of the coachman and lackey, at the shut-up door of one of the houses, a woman, unclasping the shutter of an upper window, presented her ghastly face; and, having first carefully reconnoitred us, slowly and reluctantly admitted us into her wretched hovel. 'Where are all the people of the town?' we inquired. 'Dead,' was the brief reply. The fever of the malaria annually carries off almost all whom necessity confines to this pestilential region. But this was the month of April, the season of comparative health, and we learned, on more strict inquiry, that the population of Ostia, at present, nominally consisted of twelve men, four women, no children, and two priests.—The ruins of old Ostia are farther in the wilderness. The sea is now two miles, or nearly, from the ancient port. The cause of this, in a great measure, seems to be, that the extreme flatness of the land does not allow the Tiber to carry off the immense quantity of earth and mud from which streams bring down, and the more that is deposited, the more sluggishly it flows; and thus the shore rises, the sea recedes, and the marshes extend. The marby insula sacra, in the middle of the river, is now inhabited by wild buffaloes. We had intended to cross to the sacred island, and from thence to the village of Fiumecono, on the other side, where there are said to be still some noble remains of ancient Porto, particularly of the mole, but a sudden storm prevented our proceeding further (\textit{Rome in the Nineteenth Century}, vol. 2, p. 449.)

Ostorius Scapula, a governor of Britain in the reign of Claudius, who defeated and took prisoner the famous Caractacus. He died A.D. 55. (Tacit., Ann., 12. 36.)

Ostrogothi, or Eastern Goths, a division of the great Gothic nation, who settled in Pannonia in the fifth century of our era, whence they extended their dominion over the Thracian, Moesian, and Dacian provinces (Livy, 29, 482 or 483 A.D.). Their king Theoderic was serving as an auxiliary under the Emperor Zeno, and distinguished himself in Syria. On his return to Constantinople, Theodoric, according to the statement of the historian Evagrius, fearing Zeno's jealousy of his success, retired into Pannonia in 487, where he collected an army, and in the following year marched into Italy, with all his tribe, men, women, and children, and as appears, with the consent of Zeno himself, who wished to remove the Ostrogoths from his territories. Theodoric defeated Odoacer in various battles, took him prisoner, and some time after put him to death. Upon this event, Theodoric sent an ambassador to the emperor of Constantinople, who transmitted to him, in return, the purple vest, and acknowledged him as King of Italy. It appears that both Theodoric and his predecessor Odoacer acknowledged, nominally at least, the supremacy of the Eastern emperor. The rest of the history of the Ostrogoths is connected with that of Theodoric, who established his dynasty over Italy, which is generally styled the reign of the Ostrogoths in that country. (\textit{Encycl. Ue. Knowl.}, vol. 17, p. 55.)

Osvmandyas, a king of Egypt, the same with Ame proph or Phasemoph. (\textit{Vit. Memnon, and Memnonium.}) Jablonski makes Osvmandyas equivalent in meaning to "\textit{dans vocem}," voice-emitting. (\textit{Voc. Egypt.}, p. 29, p. 97. \textit{Compare} Creutzer, Symbolik, par Guigniaut, vol. 1, p. 482.)

Otho, I. Marcus Salvius, was born A.D. 31 or 32. He was descended of an honourable family, which originally came from Herennium, and which traced its origin to the Lucumones of Etruria. His grandfather, who belonged to the equestrian order, was made a senator through the influence of Livia Augusta, but did not rise higher in office than the praetorship. His father, Lucius Otho, was advanced to offices great honour and trust by the Emperor Tiberius, whom he is said to have resembled so closely in person as to have been frequently mistaken for him. His son Marcus Otho was an intimate friend of Nero during the early years of his reign, and his associate in his excesses and debaucheries; but Nero's love for Poppea, whom Otho had seduced from her husband, and to whom he was greatly attached, produced a coolness between them, and this rivalry for the affections of an unprincipled woman would soon have terminated in the ruin of Otho, but had Seneca procured for the latter the government of Lusitania, to which he was sent as into a kind of honourable exile. In this province, which he governed, according to Suetonius (\textit{Vit. Otho- nis}, 3), with great justice, he remained for ten years; and afterward took an active part in opposition to Nero, and in placing Galba on the throne, A.D. 68. Otho appears to have expected, as the reward of his services, that he would be declared his successor; but when Galba proceeded to adopt Piso Licinianus, Otho, who had previously seated himself on the throne, proclaimed emperor, and put Galba to death after a reign of only seven months. Otho commenced his reign by ingratiating himself with the soldiery, whom Galba had unwisely neglected to conciliate. He yielded to the wishes of the people in putting to death Tigellinus, who had been the chief minister of Nero's pleasures, and he acquired considerable popularity by his wise and judicious administration. He was, however, afterwards called upon the Rhine guards who were called upon to oppose Vitellius, who had been proclaimed emperor by the legions in Germany a few days before the death of Galba. Vitellius, who was of an indolent disposition, sent forward Ceccina, one of his generals, to secure the passes of the Alps, while he himself remained in his camp upon the Rhine. Otho quickly collected a large army and marched against Ceccina, while he sent his fleet to the standards of the Gallicarii (\textit{Compare Tacitus, Agric., c. 7.}) At first Otho was completely successful. Liguria and Galliciaarbonensis submitted to his authority, while Ceccina was repulsed with considerable loss in an attack upon Placentia. Ceccina encountered subsequently a second check. But, shortly after, Otho's army was completely defeated by the troops of Vitellius, in a hard-fought battle near Bertharius, a village on the Po, southwest of Mantua. Otho, who 945
does not appear, however, to have been deficient in bravery, had been persuaded, for the security of his person, to retire before the battle to Braxelium; a step which tended, as Tacitus has observed, to occasion his defeat. When he was informed of the result of the conflict, he refused to make any farther effort for the empire, but put an end to his own life by falling into the sea at the age of 57 according to Tacitus (Hist., 2), or of 58 according to Suetonius (Vita Oth., c. 11), after reigning 95 days. Plutarch, in his life of Otho, relates that the soldiers immediately buried his body, that it might not be exposed to indignity by falling into the hands of his enemies, and erected a plain monument over his grave, with the simple inscription, “To the memory of Marcus Otho.” The early debaucheries of Otho threw a stain upon his reputation, which his good conduct in Lusitania, and his kindness as emperor did not altogether remove. The treatment which he received from Nero might in some degree justify his rebellion against that prince; but no palliation can be found for the treason and cruelty with which he was chargeable towards Galba. In all things his actions were marked by a culpable extreme; and perhaps both the good and the evil which appeared in his life were the result of circumstances rather than of virtuous principles or of fixed and incurable depravity. (Trist., 4, 10.)

Otho, the last emperor of the house of Nerva, was a man of the highest birth. He was the son of the celebrated Galba, and grandson of Otho, his predecessor. Tacitus remarks of him, "Otho the man of mark, who under the reigns of four emperors (Nero, Vespasian, Titus, and Domitian) and by his own election, had reigned with the name of the Roman people.

TACITUS.

OVIDUS.

OVIDUS, NARS, P., a celebrated poet, born at Sulmo (now Sulmona), a town lying on the river Pescara, in the territory of the Peli, was at the distance of ninety miles from Rome. Ovid came into the world A.D. 711, the memorable year in which Cicero was murdered, and on the very day when the two consuls, Hortius and Pansa, fell at the battle of Mutina. The events of his life are chiefly known from his own writings, and more particularly from the tenth elegy of the fourth book of the Tristia. Ovid was of an equestrian family, and was brought to Rome at an early period of life, and was probably instructed in the arts and learning of the capital. (Trist., 4, 10.) He soon disclosed an inclination towards poetry; but he was for some time dissuaded from a prosecution of the art by his father, whose chief object was to make him an accomplished orator and patron, and thereby open up to him the path to civic honours. The time was indeed past when political harangues from the rostra paved the way to the consulship or to the government of wealthy provinces; but distinction and emolument might yet be attained by eminence in judicial proceedings, and by such eloquence as the servile deliberations of the senate still permitted. Ovid, accordingly, seems to have paid considerable attention to those studies which might qualify him to shine as a patron in the Forum, or procure for him a voice in a submissive senate. He practised the art of oratory, and not without success, in the school of Porcius Latro, the second of the two most eminent teachers of their time. Seneca, the rhetorician, who himself had heard him practising declamation before Fuscus, informs us, that he surpassed all his fellow-students in ingenuity; but he had acquired in a sort of poetical prose; he was deficient in methodical arrangement, and he indulged too freely in digressions, as also in the introduction of the commonplace of disputation. He rarely declaimed, however, except on ethical subjects; and prefaced deliveries of those sort of persuasive harangues which have been termed Suasoriae. (Senec., Controv., 2, 10.) After having assumed the Toga Virilis, and completed the usual course of rhetorical tuition at Rome, he proceeded to finish his education at Athens. It is not known whether he made much progress in philosophy during his stay in that city; but, from the tenour of many of his works, it appears probable that he afterwards had embraced the tenets of the Epicurean school. In company with Æmilius Macer, he visited the most illustrious cities of Asia (Ep. e Ponto, 2, 10); and on his way back to Rome he passed with him into Sicily. He remained nearly a year at Syracuse, and thence made several agreeable excursions through different parts of the island. After his return to Rome, and on attaining the suitable age, Ovid held successively several of the lowest judicial offices of the state, and also frequently acted as arbiter, highly to the satisfaction of litigants whose cases he decided. (Trist., 2, 93.) These avocations, however, were speedily relinquished. The father of Ovid had for some time restrained his son's inclination towards poetry; but the arguments he deduced against its cultivation, from the stale example of the poverty of Homer (Trist., 4, 10), were now receiving an almost practical refutation in the court favour and influence of Virgil and Horace. The death, too, of his elder brother, by leaving Ovid sole heir to a fortune ample enough to satisfy his wants, finally induced him to abandon the profession to which he had been destined, and bid adieu at once to public affairs and the amours of the Forum. Henceforth, accordingly, Ovid devoted himself to the service of the Muses; though he joined with their purer worship the enjoyment of all those pleasures of life which centred in the centre of easy and agreeable amusement, could afford. He possessed an agreeable villa and extensive farm in the neighbourhood of Sulmo, the place of his birth; but he resided chiefly at his house on the Capitoline Hill (Trist., 1, 3), or his

946
OVIDIUS.

gardens, which lay a little beyond the city, at the junction of the Clodian and Flaminian Ways, near the Ponte Milvius, where he composed many of his verses. He was fond, indeed, of the rural pleasures of flowers and of the sweetly fragrant and delightful odours of them in these suburban gardens. (Ep. e Ponte, 1, 8.) Far from hiding himself amid his groves, like the melon-ancholy Tibullus, he courted society, and never was happier than amid the bustle of the capital. One day, when Augustus, in his capacity of censor, according to ancient custom, made the whole body of Roman knights pass before him in review, he presented our poet with a beautiful steed. (Tristia, 2, 99.) The gift was accounted a peculiar mark of favour, and showed that, at the time when it was bestowed, he had incurred no moral stain which merited the disapprobation of his prince. While frequenting the court of Augustus, Ovid was well received by the politest of the courtiers. The titles of many of the epistles written during his banishment, show that they were addressed to persons well known to us, even at this distance of time, as distinguished statesmen and imperial favourites. Messala, to whose house he much resorted, had early encouraged the rising genius, and directed the studies of Ovid; and the friendship which the father had extended to our poet was continued to him by the sons. But his chief patron was Q. Fabius Maximus, the long friend of Augustus, and, in the closing scenes of that prince's life, the chief confidant of his weaknesses and domestic sorrows. (Tacit. Ann., 1, 5.) Nor was Ovid's acquaintance less with the celebrated poets of his age than with its courtiers and senators. Virgil, indeed, he had merely seen, and premature death cut off the society of Tibullus; but Horace, Maecenas, and Propertius were long his familiar friends, and often communicated to him their writings previous to publication. While blessed with so many friends, he seems to have been undisturbed, at least during this period of his life, by the malice of a single foe: neither the court favour he enjoyed nor his poetical renown procured him enemies; and he was never assailed by that spirit of envy and defection by which Horace had been persecuted. His poetry was universally popular (Tristia, 1, 1, 64): like the stanzas of Tasso, it was often sung in the streets or at entertainments; and his verses were frequently recited in the theatre amid the applause of the multitude. Among his other distinctions, Ovid was a favourite of the fair, with whom his engagements were numerous and his amours successful. (Amores, 2, 10, 65.) He was extremely susceptible of love, and his love was ever changing. His first wife, whom he married when almost a boy, was unworthy of his affections, and possessed them but a short while. The second, who came from the country of the ancient Falisci, led a blameless life, but was soon repudiated. After parting with her, Ovid was united to a third, who was of the Fabian family. In her youth she had been the paramour of the young Marcus Fabius Maximus, and a favourite of Marcia's mother, who was the maternal aunt of Augustus. She was a widow at the time of her marriage with Ovid, and had a daughter by her former husband, who was married to Sulpicius, the friend of Germanicus. (Ep. e Ponte, 4, 8.) But these successive legitimate connexions did not prevent him from forming others of a different description. Corinna, a wanton, enticing beauty, whose rank and fortune made her the commonest subject of the elegiacs of our poets have never really laboured ineffectually to discover, allured him in his early youth from the paths of rectitude. It is quite improbable that Corinna denoted Julia, the daughter of Augustus, and impossible that she represented Julia, his granddaughter, who was but an infant when Ovid recorded his amours with Corinna. Ovid passed nearly thirty years in the voluptuous enjoyment of the pleasures of the capital, blessed with the smiles of fortune, honoured with the favour of his prince, and fondly anticipating a tranquil old age. (Tristia, 4, 8, 29.) He now remained at Rome the last of the constellation of poets who had brightened the poetry of the Augustan age, and who had by this time lost his favourite ministers, Maecenas and Agrippa: he was less prosperous than during former years in the external affairs of the empire, and less prudently advised in his domestic concerns: he was insidiously alienated from his own family, and was sinking in his old age under the sway of the imperious Livia and the dark-souled Tibertius. Ovid's friendships lay chiefly among those who supported the political pretensions of Ovidius Naso, the unfortunate offspring of Julia and Agrippa. He thus became an object of suspicion to the party in power, and had lost many of those benefactors who might have shielded him from the storm which now unexpectedly burst on his head, and swept from him every hope and comfort for the remainder of his existence. It was in the year 762, and when Ovid had reached the age of 51, that Augustus suddenly banished him from Rome to a wild and distant corner of the empire. Ovid has derived nearly as much celebrity from his misfortunes as from his writings; and, having been solely occasioned by the vengeance of Augustus, they have reflected some dishonour on a name which would otherwise have descended to posterity as that of a generous and almost universal protector of learning and poetry. The real cause of his exile is the great problem in the literary history of Rome, and has occasioned as much doubt and controversy as the circumstances by which he was banished. {Ep. e Ponte, 2, 6; but, as its discovery has deeply wounded the feelings of Augustus (Tristiae, 2, 209), no contemporary author ventured to disclose it. Ovid himself has only dared remotely to allude to it, and when he does mention it, his hints and suggestions are scarcely reconcilable with each other, sometimes speaking of his offence as a mistake or chance, in which he was more unfortunate than blameable, and at other times as if his life might have been forfeited without injustice. (Tristiae, 5, 11.) No subsequent writer thought of revealing or investigating the mystery till it was too late, and it seems to have been closed for ever within the tomb of the Castra. The most ancient opinion (to which Sidonius Apollinaris refers) is that of the third proconsul of Thrace, who love Julia, the daughter of Augustus, and for having celebrated her under the name of Corinna (Sidon. Apoll., Carm., 23, v. 188); and it was considered as a confirmation of this opinion, that exile was the punishment inflicted on Sempronius, the most known and best beloved of all her paramours. This notion was adopted by Crinitus and Lylius Gyraldus; but it was refuted as early as the time of Aldus Manutius, who, in his edition of Tristiae, 2, 10, has been engaged in the amour with his pretended Corinna in his earliest youth; and it certainly is not probable that such an intrigue should have continued for about thirty years, and till Ovid had reached the age of fifty-one, or that Augustus should have been so slow in discovering the intercourse which subsisted. Julia, too, was banished to Pandataria in the year 752, which was nine years before the exile of Ovid, and why should his punisher have delayed so long after the discovery of his transgression? Besides, had he been guilty of such an offence, would he have dared in his Tristiae, when soliciting his recall from banishment, to justify his morals to the emperor, and to declare that he had committed an involuntary error! Or would he have been befriended and supported in exile by the greatest men of Rome, some of whom were the favourites and counsellors of Augustus?—Subsequently

947
from Livia. A few months before his own death, Augustus, attended by Fabius Maximus alone, privately visited Agrippa in his retirement of Planasia; and the object of his journey from Rome having been discovered by Livia, the death of this counsellor followed shortly after. It will be remarked, however, that this voyage was undertaken in 666, four years subsequently to the exile of Ovid, and was disclosed through the indiscretion of the wife of Fabius. (Tactii, Ann., 1, 5.) But the French authority conjectures, that the scene to which Ovid alludes in his writings of the very last, witnessed, had some close connexion with the ensuing visit to Planasia, and gave a commencement to those suspicions which terminated in the death of his friend. His chief objection to the theory of Tiraboschi is, that Augustus would not have banished Ovid for discovering or revealing the disgrace of Julia, when, by her exile, he had already proclaimed her licentiousness to the whole Roman people. But, in fact, Ovid was not banished for the sake of concealment. The discovery which proved so fatal to himself was no secret at Rome; and, had secrecy been the emperor's object, banishment was the very worst expedient to which he could have resorted. Ovid might better have been bribed to silence; or, if sentence of death could have served the purpose more effectually, the old triumvir would not have scrupled to pronounce it. The secret, however, was already divulged, and was in the mouths of the enemies of his friend. He was, however, induced, for his temerity, as a precaution against further discoveries, and to remove from the imperial eye the sight of one whose presence must have reminded Augustus of his disgrace both as a sovereign and parent. Whatever may have been the real cause of the exile of Ovid, the pretext for it was the licentious verses he had written. (Ep. ad Pont. 2, 9.) Augustus affected a regard for public morals, and condemned in verse the defects of Augustus, which by which he was actuated, he claimed a merit with the senate, and all who were zealous for a reformation of manners, in thus driving from the capital a poet who had reduced licentiousness to a system, by furnishing precepts, deduced from his own practice, which might aid the inexperienced in the successful prosecution of lawless love. He carefully excluded from the public libraries not merely the 11th Art of Love, but all the writings of Ovid. (Trist., 3, 1, 65.) It is evident, however, that this was all colour and pretext. Ovid himself ventures gently to hint, that Augustus was not so strict a moralist who that seriously have thought of punishing the composition of a few licentious verses with interminable exile. (Trist., 2, 524.) In point of expression, too, the lines of Ovid are delicate compared with those of Horace, whom the emperor had always publicly favoured and supported. Nor was the sentence of banishment passed until many years after their composition; yet, though so long an interval had elapsed, it was suddenly pronounced, as on the discovery of some recent crime, and was most rapidly carried into execution. The mandate for his exile arrived unexpectedly in the evening. The night preceding his departure from Rome was one of the utmost grief to his family, and of consoling reflection to himself. In a fit of despair, he burnt the copy of the Metamorphoses which he was then employed in correcting, and some others of his poems. He made no further preparations for his journey, but passed the time in loud complaints, and in adjuration to the gods of the Capitol. His chief patron, Fabius Maximus, was absent at the time, and his only daughter was with her husband in Africa; but several of his friends came to his house, where they remained part of the night, and endeavoured, though in vain, to console him. After much irreolution, he at length departed on the approach of dawn, his dress neglected and his hair dishevelled.

948
His wife, who had wished to accompany him, but was not permitted, parted the moment he left the house. — After his departure from Rome, Ovid proceeded to Brundisium, where he had an interview with Publius Plautius Maximus. He recommended his wife to the care of his friend, and received repeated assurances of his support. — The destined spot of his perpetual exile was Tomi, the modern Temeswar, on the shore of the Exuine, a few miles to the south of the spot where the most southern branch of the Danube unites with that sea. (Vid. Tomi.) The place had been originally an Athenian colony, and was still inhabited by a few remains of the Greeks, but it was chiefly filled with rude barbarians. The most severe habits of the poet draw a most vivid description. The town was defended by but feeble ramparts from the incursions of the neighbouring Getes, or still more formidable tribes to the north of the Danube. Alarms from the foe were constant, and the poet himself had sometimes to grasp a sword and buckler, and place a helmet on his gray head, on a signal given by the sentinel (Tristia, 4, 1, 76), when squadrons of barbarians crossed the sea, which Tomi overlooked, or surrounded the town in order to surprise and pillage it.— Without books or society, Ovid often wished for a field (Ep. e Ponto, 1, 8) to remind him of the garden near the Flaminian Way, in which, in his happier days, he had bathed his love-sighs and composed his amorous verses. Some of the barbarian inhabitants were along with our poet in the small and inconvenient huts they occupied (Tristia, 6, 3), and kept him in a state of constant alarm by their ferocious appearance. They neither cut their beards nor hair, which, hanging dishevelled over the face, gave a peculiar horror to their aspect. The whole race were clothed in the shaggy skins of various animals (Tristia, 3, 10), and each barbarian carried with him constantly a bow, and a quiver containing poisoned arrows. (Tristia, 5, 7.) They daily filled the streets with tumult and uproar, and even the litigants sometimes decided their cause before the tribunals by the sword. (Tristia, 5, 10.) But if there was danger within the walls of Tomi, destruction lay beyond them. Tribes, who foraged from a distance, carried off the flocks and burned the cottages. From the insecurity of property and severity of climate, the fields were without grain, the hills without vines, the mountains without oak, and the banks without willows. (Tristia, 3, 10, 71.) Augustus was so grieved and appalled at the misfortunes of the province that he proceeded to inspect them in person. (Ep. e Ponto, 4, 8.) Spring brought with it neither birds nor flowers. In summer the sun rarely broke through the cloudy and foggy atmosphere. The autumn shed no fruits; but, through every season of the year, wintry winds blew with prodigious violence (Tristia, 3, 10, 17), and lashed the waves of the boisterous Exuine, on its desert shore. (Tristia, 4, 5, 57.) The only animated object was the wild Sar- matian driving his car, yoked with oxen, across the snows, or the frozen depths of the Exuine (Tristia, 3, 10, 32), clad in his fur cloak, his countenance alone uncovered, his beard glistening and sparkling with the hoar-frost and flakes of snow. (Tristia, 3, 10, 21.)—Such was the spot for which Ovid was compelled to exchange the theatres, the baths, the porticoes, and gardens of Rome, the court of Augustus, the banks of the Tiber, and the purple and gold of his wife and home, driving him to the most remote and savage extremity of his empire. Augustus softened the sentence he had pronounced on Ovid with some alleviating qualifications. He did not procure his condemnation by a de- cree of the senate, but issued his own mandate, in which he employed the word "relegation" (relegation), and not "banishment" (exsilia), leaving him, by this choice of terms, the enjoyment of his paternal fortitude and some other privileges of a Roman citizen. (Tris- tia, 5, 11, 21.—Ibid., 4, 9.) Nor were other circum-
stances wanting in his fate which might have con- tributed to impart consolation. His third wife, to whom he was tenderly attached, though not permitted to accompany him on the voyage to Scythia, continued faithful to her husband during his long exile, and pro- tected his property from the rapacity of his enemies. (Tristia, 1, 5.) Many of his friends remained unshaken by his misfortunes, and from time to time he re- ceived letters from them, giving him hopes of recall. The Getes, though they at length became diseased with his incessant complaints of their country (Ep. e Ponto, 4, 14), received him at first with kindness and sympathy, and long paid him such distinguished hon- ors. At last they drove him from his abode, and crept the battle of Orpheus and Amphion, in softening their native ferocity by the magic of the Roman lyre. (Ep. e Ponto, 4, 9.—Ibid., 4, 14.)—Nothing, however, could compensate for the deprivations he suffered; nor was anything omitted on Ovid's part which he thought might prevail on the emperor to recall him to Rome, or assign him, at least, a place of milder exile; and Sicily was particularly pointed out as a suitable spot for such a mitigation of punishments. (Tristia, 2, 13.) This is the object of all his epistles from Pontus, the name of the district of Mœsia in which Tomi was sit- uated, and not to be confounded with the Pontus of Asia Minor. He flattered Augustus during his life with an extravagance which bordered on idolatry (Ep. e Ponto, 4, 6.—Tristia, 2); and the letters addressed to his friends inculcate skilful lessons of choosing one's friends. Ovid was prepared to sacrifice his last goods for propagating the despot. It does not appear, however, that Ovid availed much of his numerous and powerful acquaintances ventured to solicit his recall, or to entreat Augustus in his behalf. Yet the poet seems to suppose that Augustus, pre- vious to his decease, was beginning to feel more favourably towards him. (Ep. e Ponto, 4, 6.) After the death of the emperor, with a view, doubtless, of propitiating his successor, Ovid wrote a poem on his Amphitheatrum, and consecrated to him, as a new deity, a temple, where he daily repaired to offer incense and worship. (Ep. e Ponto, 4, 9.) Nor was he sparing in his panegyrics on the new emperor (Ep. e Ponto, 4, 13); but he found Tiberius equally inexorable with Augustus. — The health of Ovid had been early and severely affected by his exile and confinement at Tomi. He was naturally of a feeble constitution, and, in the place of his banishment, every circumstance was com- bined to contribute to his speedier destruction. The rigour of the climate bore hard on one who had passed a delicate youth of pleasure and repose under an Italian sky. In consequence, soon after his arrival at Tomi, he totally lost his strength and appetite (Ep. e Ponto, 1, 10), and became thin, pale, and exhaust- ed. From time to time he recovered and relapsed, till at length, at the age of 60, he sunk under the hardships to which he had been so long subjected. His death happened in the year 721, in the ninth year of his exile, and the fourth of the reign of Tiberius. Before his decease, he expressed a wish that his ashes might be carried to Rome; even this desire, however, was not complied with. His bones were buried in the Scythian soil, and the Getes erected to him a monu- ment near the spot of his earthly sojourn. — It would seem that Ovid had commenced his poetical labours when only 16 years of age, particularly the Gigantomachia. But he soon directed his attention from such topics to others which were more consonant to his disposition. Accordingly, the earliest writings of Ovid now extant are amatory elegies in the style of Tibullus and Propertius. These elegies are styled Amores, amounting in all to forty-nine, and were orig- inally divided by the poet into books. There are now only three books in the printed editions of Ovid; but it has been doubted whether all the elegies he wrote be still included in this division, or if two
books have been suppressed. These elegies, with a very few exceptions, are of an amatory description.—

As an elegiac writer, Ovid has more resemblance to Propertius than to Tibullus. His images and ideas are for the most part drawn from the real world. He dwells not alone the visionary scenes of Tibullus, he indulges not in transitory and chimerical dreams, nor pours forth such tenderness of feeling as the latter. The passion of Cydippe, the Amores of Ovid have all the brilliancy and freshness of the period of life in which they were written. They are full of ingenious conceptions, graceful images, and agreeable details. These are the chief excellences of the elegies of Ovid. Their faults consist in an abuse of the facility of invention, a repetition of the same ideas, an occasional affectation and antithesis in the language of love, and (as in the elegies of Propertius) the too frequent suppositions that a beautiful woman may be obtained in the same way as a young man—sometimes by the most improper allusion to mythological fables.—Before finishing the elegies styled Amores, Ovid had already commenced the composition of the Heroides (Am., 2, 18), which are likewise written in the elegiac measure. They are epistles supposed to be addressed chiefly from queens and princesses who figured in the heroic ages, to the objects of their vehement affections, and are not inferior to some of our eighteenth-century ones; but there is some doubt with regard to the authenticity of some of them, namely, Paris to Helen, Helen to Paris; Leander to Hero, Hero to Leander; Acontius to Cydippe, Cydippe to Acontius. These six, though they appear in the most ancient MSS. under the name of Ovid, along with the others, are of doubtful authenticity, and have been generally ascribed by commentators to Aulus Sabinus, a friend of Ovid’s, who was also the author of several answers to the epistles of our poet, as Ulysses to Penelope, and Eneas to Dido. The Heroides present us with some of the finest and most popular fictions of an amorous antiquity, resounding with the names of Helen, Ariadne, and Phaedra. Julius Scaliger pronounces them to be the most polished of all the productions of Ovid. (Poet., 6, 7.) But there is a tiresome uniformity in the situations and characters of the heroines. The injudicious length to which each epistle is extended has occasioned a repetition of the same ideas; The number of complaints uttered by these forsaken damsels has produced a monotony, which renders a perusal, at least of the whole series of epistles, insupportably fatiguing. There is also a neglect of a due observance of the manners and customs of the heroic ages: and in none of the works of Ovid is his indulgence in exuberance of fancy so remarkable to the reader, because many of the episodes are those of Penelope and Briseis, Medea, Ariadne, and Dido, lead us to a comparison of the Latin author with Homer, the Greek tragedians, Catullus, and Virgil, those poets of true simplicity and unaffected tenderness. The work of Ovid entitled De Arte Amandi, or, more properly, Artis Amatoriae Liber, is written, like the Amores and Heroides, in the elegiac measure. There is nothing, however, elegant in its subject, as it merely contains a catalogue of the manners and customs of ancient love, and those lessons in the Art of Love which were the fruits of the author’s experience, and had been acquired in the course of the multifarious intrigues recorded in the Amores. This poem was not written earlier than the year 752; for the author mentions in the first book the representation of a sea-battle between the Greek and Persian fleets, which was exhibited at that period in the Numantian, under the direction of Augustus. The whole work is divided into three books.—

This work is curious and useful, from the information it affords concerning Roman manners and antiquities in their lighter departments; and, though not written in the tone or form of satire, it gives us nearly the same insight as professed satirical productions into the minor follies of the Augustan age. Whatever object the poet may have had in view when composing this work, it may be safely concluded that the poem itself did not in any degree tend to the corruption of the morals of his fellow-citizens, since the indulgence of every vice was then so licensed at Rome that they could hardly receive any additional stain; on the contrary, this very depravation of manners gave birth to the many comic and decorous observances as well as the quaint and ingenious counsels, and obtained for it the popularity with which it was crowned.—The book De Remedia Amoris is connected with that De Arte Amandi, and was written a short while after it. This poem discloses the means by which those who have been unsuccessful in love, or are enslaved by it to the prejudice of their health and fortune, may be cured of their passion. Occupation, travelling, society, and a change of the affections, if frequent, will occasion a cure. These are the only solutions which the author chiefly relies on. This work, on the whole, is not so pleasant and entertaining as the De Arte Amandi. It is almost entirely destitute of those agreeable episodes by which the latter poem is so much beautified and enlivened. It has fewer sportive touches and fewer fascinating descriptions.—The Metamorphoses of Ovid had been composed by him previous to his exile. But he received the mandate for his exile from Augustus himself, for the purpose of continuing the task of correction, and when he had completed this labour only on the first three books. Finding himself thus condemned to banishment from Rome, he threw the work into the flames, partly from vexation and disgust at his verses in general, which had been made the pretext for his punishment, and partly because he considered it an unfinished poem, which he could no longer have any opportunity or motive for perfecting. (Trist., 1, 6.) Fortunately, however, some transcripts had been previously made by his friends of this beautiful production, which was thus preserved to the world. After Ovid’s departure from Rome, these quickly passed into extensive circulation; they were generally read and admired, and a copy was placed in this library, which was still preserved and kept up by his family. (Tristia, 1, 118.) In the depths of his dreary exile, Ovid learned, perhaps not without satisfaction, that his work had been saved; and he even expressed a wish that some of his favourite passages might meet the eye of Augustus. (Tristia, 2, 557.) But he was annoyed by the recollection that the poem would be read in the defective state in which he had left it. (Tristia, 3, 14, 23.) He had no copy with him at Tomi, on which he could complete the corrections which he had commenced at Rome. He therefore thought, it necessarily apprize his friends in Italy, that the work had not received his last emendations; and, as an apology for its imperfections, he proposes that the six following lines should be prefixed as a motto to the copies of his Metamorphoses which were then circulating in the capital. (Tristia, 1, 6.)

"Orba parente suo quiuecumque vulnuma tangis;  
Sed vetern vestra detur in urbe locus.  
Quoque magis faves, non haec sunt edita ab ipso;  
Quaeque in his ignior vitii rude carmen habebit,  
Emendaturus, si licisset, evat."

The Metamorphoses, therefore—at least the twelve concluding books—should be read with some degree of that indulgence which is given to the last six books of the Æneid; though, from what we see in the perfected works of Ovid, it can hardly be supposed that, even if he had been permitted, he would have expunged conceits and retrenched redundancies with the pure taste and scrupulous judgment of the Mantuan bard.

In the composition of his Metamorphoses, Ovid can lay no claim to originality of invention. Not one of the immense number of transmutations which he has recorded, from the first separation of Chaos till the
OVIDIUS.

apothecy of Julius Caesar, is of his own contrivance. They are all fictions of the Greeks and Oriental nations, interspersed, perhaps, with a few Latin or Etruscan fables. In fact, a book of Metamorphoses which were feigned by the poet himself, would have possessed no charm, being unauthorized by public belief, or even that species of popular credulity which bestows interest and probability on the most extravagant fictions. And, indeed, Ovid had little motive for invention, since, in the relations of those who had gone before him in this subject, he could enter the most extensive field ever opened to the career of a poet.—

The Metamorphoses of Ovid are introduced by a description of the primeval world, and the early changes it underwent. All that he writes of Chaos is merely a paraphrase of what he had found in the works of the ancient Greeks, and is more remarkable for poetic beauty than philosophic truth and consistency. The account of the creation, which is described with expressive brevity, is followed by a history of the four ages of the world, the war with the giants, Deucalion's deluge, and the self-production of various monsters in those early periods by the teeming and yet unexhausted earth. This last subject leads to the destruction of the serpent Python by Apollo, and the institution of the Eleusinian mysteries. At the first celebration, the conquerors were crowned with oak, the laurel being unknown till the transformation of Daphne, when it became the prize of honour and renown. Our poet thus glides into the series of his metamorphoses, which are extended to fifteen books, and amount in all to not less than two hundred and fifty. The stories of this description related by Ovid's predecessors were generally insulited, and did not hang together by any association or thread of discourse. But the Roman poet continues as he had commenced, and, like the Cyclic writers of Greece, who comprehended, in one book, a whole circle of fables, he proceeds from link to link in the golden chain of fiction, leading us, as it were, through a labyrinth of adventures, and passing imperceptibly from one tale to another, so that the whole poem forms an uninterrupted recital. In themselves, however, the events have frequently no relation to each other, and the connexion between the preceding and succeeding fable often consists in nothing more than that the transformation occurred at the same place or at the same time, or had reference, perhaps, to the same amorous deity. —In such an infinite number, the merit of the stories must be widely different; the following, however, may be mentioned as among the best: the fables of Phaethon, of Pyramus and Thisbe, of Keleos and Hippomenes and Atalanta, the flight of Daladus and Icarus, the loves of Pyramus and Thisbe. But of the whole, the story of Phaethon is, perhaps, the most splendid and highly poetical. —It has been objected, however, to the Metamorphoses, that, however great may be the merit of each individual tale, there is too much uniformity in the work as a whole, since all the stories are arranged in a series of the same kind, with metamorphoses, one after another. (Kaineus's Elements of Criticism, vol. 1. c. 9.) But this objection, if it be one, can only lie against the choice of the subject; for if a poet announces that he is to sing of bodies changed and converted into new forms, what else than metamorphoses can be expected? Besides, in the incidents that lead to these transformations, there is infinite variety of feeling excited, and the poet intermingles the figures and the ray with the horrible or tender. Sometimes, too, the metamorphosis seems a mere pretext for the introduction of the story, and occupies a very inconsiderable portion of it. The blood which flowed from Ajax, when he slew himself in a transport of indignation, because the arms of Achilles were adjudged to Ulysses, produced a lyavincen, and on this feeble stem the poet has ingraved the animated and eloquent speeches of the contending Grecian chieftains. In the tragic history of Pyramus and Thisbe, the lovers themselves are not metamorphosed, but the fruit of the mulberry-tree under which their blood was shed assumes a crimson dye. It would be endless to point out in detail the blenishes and beauties of such an extensive work as the Metamorphoses. The luxuriance of thought and expression which pervade all the compositions of Ovid, prevails likewise here, but his comparisons are pleasing and appropriate, and his descriptions are rich and elegant, whether he exhibits the palace of the Sun or the cottage of Philemon. The many interesting situations displayed in the Metamorphoses have formed a mine for the exertion of human genius in all succeeding periods, not merely in the province of narrative but, in the department of the drama and fine arts —and to this work, with the exception of the Gospels, the Scriptures, has supplied so many of the most happy subjects for the pencil. The Greek books from which the Metamorphoses were chiefly taken having been lost, the work of Ovid is now the most curious and valuable record extant of ancient mythology. It would be difficult to reduce every story, as some writers have attempted, into a moral allegory (Garth, Pref. to Translation), it would be impossible to add in this work what has given it the name of the Old Testament, and types of the miracles and sufferings of our Saviour, or even the complete ancient history of Greece, systematically arranged (compare Müller, Einleitung, vol. 4. p. 163, &c.—Fabric., Bibl. Lat., vol. 1. p. 447.—Goujet, Bib. Franc., vol. 6. p. 16, 52.) It cannot be denied, however, that the Metamorphoses are immense archives of Grecian fable, and that, beneath the mask of fiction, some traits of true history, some features of manners and the primeval world may yet be discovered. In this point of view, the Fasti of Ovid, though written in elegiac and not in heroic measure, may be considered as a supplement or continuation of the Metamorphoses. Its composition was commenced at Rome by the author previous to his exile. The work was corrected and finished by him at Tomi (Fasti, 4, 81), and was thence sent to Rome, with a prefatory dedication to the great Germanicus. The plan of this production was probably suggested by the didactic poem which Callimachus had published under the title of Aria, in which he signifies that, being transported to Helicon, he was there instructed by the Muses in the nature and origin of various religious usages and ancient ceremonies. It would appear that, before the time of Ovid, some vague design of writing a poem on the calendar and the regular division of the year (Eleg., 4, 1). But Ovid, in his Fasti, executed the work which Propertius did not live, or, perhaps, found himself unable, to accomplish. In the Latin language, the work Fasti originally signified, in opposition to Nefasti, the days on which law proceedings could be legally held, or other ordinary business transacted; and thence it came, in course of time, to denote the books or tables which exhibit, in the calendar, the Fasti or Nefasti which were exhibited. The term at length was applied to any record digested in regular chronological order, as the Fasti Consulares; and with Ovid it signifies the anniversaries of religious festivals, of dedications of temples, or of other memorable events, indicated in the calendar under the name of Dies Fasti, and which in general belonged, in the ancient meaning, to the class of Those rather than Fasti or Nefasti, and which were the oldest histories of these festivals in prose: but their works were dry and uninteresting; and Ovid first bestowed on the subject the embellishments of poetry and imagination. The object of the Fasti of Ovid is to exhibit in regular order a history of the origin and observance of the different Roman festivals, as they occurred in the course of the year; and to associate the celebration of these holy days with the
The names, however, of the friends and patrons whom he addressed are not mentioned (Tristia, 1, 4, 7), since, during this time, his relatives and acquaintances were afraid lest they should incur the displeasure of Augustus by holding any communication with the unhappy exiles. He was therefore in the happy position which, perhaps, had been all along imaginary, was no longer entertained; and, accordingly, the epistles which he wrote from Pontus during the remainder of his severe sojourn are inscribed with the names of his friends, among whom we find the most distinguished characters of the day. These elegiac epistles differ from the Tristia merely in the poet's correspondents being addressed by name, instead of receiving no appellation whatever. Their subjects, however, are generally religious and conventional titles. The subjects of the four books of epistles from Pontus are precisely the same with those in the Tristia, complaints of the region to which the poet had been banished, and exhortations to his friends to obtain his recall. From the first line of the Tristia to the last of the epistles from Pontus, the lyric of the exiled bard sounds but one continued strain of wailing and complaint. All the melancholy events of his former life, and his present misfortunes, are given in a manner so generally so unsuitable to the ancient and extensive erudition displayed in the Fasti. (Poe., 6, 7.) In particular, much mythological information may be obtained from this, as to the points in which the superstitions and rites of the Romans differed from those of the Greeks, and also the manner in which they were blended. "The account," says Gibbon, "of the different etymologies of the month of May, is curious and well expressed. There may distinguish in it an Oriental allegory, a Greek fable, and a Roman tradition." Some truths concerning the ancient history of Rome may be also elicited from the Fasti. It may appear absurd to appeal to a poet in preference or contradiction to annalists and chroniclers; but it must be recollected, that these annalists themselves originally obtained many of their facts from poetical tradition. Ovid, besides, had studied the Register of the Pontifex Maximus, which is now lost, and which recorded, along with religious observances, many historical events. Occasional light may therefore be thrown by the Fasti of Ovid on some of the most ancient and dubious points of Roman story. For example, our poet completely vindicates Romulus from the charge of having slain his brother in a momentary transport of passion. Remus was legally sentenced to death, in consequence of having violated a salutary law enacted by the founder of Rome, and which, in an infant state, had been repressive to maintain inviolably. —The circumstance of the melancholy exile of Ovid gave occasion to the last of his works, the Tristia, and the Epistola e Ponte. The first book of the Tristia, containing ten elegies, was written by Ovid at sea, during his perilous voyage from Rome to Pontus. (Tristia, 1, 1, 42.—Ibid., 1, 10.) It may be doubted, however, whether this, which is the generally received opinion, will hold good with respect to the first part of the six books assigned to him in the sixth of copies of his Metamorphoses being circulated at Rome, and it is not likely that he could receive this intelligence while on his way to Pontus. The first book is chiefly occupied with detailing the occurrences at his departure from the capital, the storms he encountered, and the places he saw in the course of his navigation. The remaining four books were composed during or shortly after his residence at Tomi. In the second book, he addressed to Augustus, he apologizes for his former life and writings. In some of the elegies of the third, fourth, and fifth books, he complains to himself of the hard fate he had suffered in being exiled from Italy to the inhospitable shores of the Euxine: in others he exults in his correspondents at Rome to endeavour to mitigate the anger of Augustus and obtain his recall.

euton: and we find in Pliny the names of several fishes which are not mentioned by any other author, but perhaps were natives of the sea on the shore of which Ovid commended this poem towards the close of his Art of Love. Notwithstanding this authority, W. Dufford is of opinion that it was not written by Ovid, as it is not found in any MS. of his works; and he assigns it to Gratius Faliscus. Ovid also wrote a poem De Medicina faciei, as we learn from two lines in his Art of Love (3, 205). It is doubted, however, if the fragment remaining under this title be the genuine work of our poet.—During his residence at Tomi, Ovid acquired a perfect knowledge of the language which was there spoken. The town had been originally founded by a Greek colony, but the Greek language had been gradually corrupted, from the influx of the Getæ, and its elements could hardly be discovered in the jargon now employed. Ovid, however, composed a poem in this barbarous dialect, which, if extant, would be a great philological curiosity. The subject he chose was the praises of the imperial family at Rome. When completed, he read it aloud in an assembly of Scythian ladies, aiming at much spirit and animation the effect it produced on his audience.

—After what has been already said of the different works of Ovid in succession, it is unnecessary to indulge in many general remarks on his defects or merits. Suffice it to say, that the brilliancy of his imagination, the liveliness of his wit, his wonderful art in bringing every scene or image distinctly, as it were, before the view, and the fluent, unlaboured ease of his versification, have procured to his name the title of wit with a too profuse and his fancy too exuberant. The natural indolence of his temper, and his high self-esteem, did not permit him to become, like Virgil or Horace, a finished model of harmony and proportion. (Diodorus Romanum, vol. 3, p. 349, seqq.)—The best editions of Ovid are, that of Burmann, Amst., 1727, 4 vols. 4to, and that of Lemaire, Paris, 1820—24, 10 vols. 8vo. The edition of N. Heimius, Amst., 1661, 3 vols. 12mo, is also a valuable one.

Oxæs, small pointed islands, near the Echinades, off the coast of Acarnania. Their ancient name has reference to their form (O'cetis). Strabo reports, that these are the same which Homer calls Theoi. (Od. 15, 298; Strabo, 458.) Stephanus supposes the Oxæs to be Dulichium (σ. λ. Δυλιχίου). This group is now commonly known by the name of Curzolada (Curzola). The inhabitants of Oxæs were among them retain the appellation of Oxæs. (Gell's Itinerary.)

Oxus, a large river of Bactriana, rising in the northeastern extremity of that country, or, rather, in the southeastern part of Great Bactharia, and flowing for the greater part of its course in a northwest direction. It receives numerous tributaries, and falls, after a course of 1200 miles, into the Sea of Aral. The Oxus is now the Amou or Jihon (the latter being the name given to it by the Arabs); and the parts according to the ancient writers, it flowed direct into the Caspian, and this statement is to be confirmed by the existence of its former channel; but, in all probability, they were ignorant of the existence of the Sea of Aral. Some writers think that Herodotus speaks of the Oxus under the name of Araxe in (1, 201, seqq.; 4, 11; but it is more likely that he there refers to the Volga. The historian, however, certainly confounds it with the Araxes of Armenia, though not with the Oxus of the Matieni (1, 202), and flows towards the east (4, 40). According to his account, there were many islands in it, some as large as Lesbos, and it emptied itself by forty mouths, which were all lost in marshes, with the exception of one, that flowed into the Caspian (1, 202). Strabo says, that the Oxus rose in the Indian Mountains, and flowed into the Caspian (Strab., 509, 519), which is also the opinion of Melas (3, 5) and Ptolemy. Pliny (6, 18) makes it rise in a lake called Oxus; but it is not improbable that, with his usual carelessness in matters relating to geography, he confounds its source with its termination. The Oxus is a broad and rapid river, and receives many affluents. It has been the subject of most important mention by the ancients was the Oxus, which, when most accounts, flowed into the Oxus near its mouth, though some make it to have entered the Caspian by a separate channel. (Strab., 509, 518.)—The Oxus has exercised an important influence upon the history and civilization of Asia. It has in almost all ages formed the boundary between the great monarchies of Southwestern Asia and the wandering hordes of Scythia and Tartary. The conquerors of Scythia were at one period the Greeks were to its most important affluents, the Zeran, turned by its banks, and those of the Macedonians for a few and unimportant beyond it. The Oxus appears also to have formed one of the earliest channels for the conveyance of the produce of India to the western countries of Asia. Strabo informs us, on the authority of Aristobulus, that goods were conveyed from India down the Oxus to the Caspian, and were thence carried by the river Cyrus into Albania and the countries bordering on the Caspian sea. This statement is also confirmed by the statement of Varro (ap. Plut., 6, 19), who informs us, that Pompey learned, in the war with Mithradates, that Indian goods were carried by the Oxus into the Caspian, and thence through the Caspian to the river Cyrus, from which river they were conveyed, by a journey of five days, to the river Phasis in Pontus. The breadth of the Oxus, immediately to the north of Balch, is 800 yards, and its depth 20 feet. (Curt. 509.) This statement is also confirmed by the statement of Bokhara the river is only 650 yards wide, but from 25 to 29 feet deep. (Burne's Travels, vol. 2, p. 5.—Encyc. Us. Knowel., vol. 17, p. 108.)—According to Wahl, the term Oschan in Pehlevi meant “river,” and he thinks that this name was softened down by the Greeks into Oxus, the intermediate form having been probably Ochos or Ochus. A Hindoo name for the same river is said to be Kasch, which means “water,” and has a strong resemblance to the German Waser. The Oxus, therefore, may have been so called καρ' ἵσηρης, as being in an emphatic sense the great river of Upper Asia. The root in Oschan (or Och-i) bears some analogy to that in the old names Ogyges and Oceanus. (Vid. Ogyges. —Wahl, Mütte-und Vorder-Asien, vol. I, p. 753.—Ritter, Erdkunde, vol. 2, p. 22.—Bähr, ad Ctes., p. 186.)

Oxyrhynchus, a city of Egypt, in the district of Heptanomis, and capital of the Oxyrhynchite Nome. It was situated on the canal of Moira, south of Hermopolis Magna, and received its name (a translation of Oxyrhynchus) very properly; for it is supposed that the city was named ὁξυρύχυς in Greek, a species of pike, being worshiped and having a temple here. This place became a great resort of monks and hermits when Christianity was spread over Egypt. Nothing remains of this city, in the village called Behnese, built on its ruins, but some fragments of stone pillars, and a single column left standing, and which appears to have formed part of a portico of the composition of Hiero (Strab. Ritter, Am. Pith. Patum, c. 5.—Mannert, Geogr., vol. 1, p. 412.)

Ozoë, one of the divisions of the Locri in Greece. Besides the explanation of their name as given in a previous article (sid. Lcrici.), the following etymologies are mentioned by Pausanias. 1. During the reign of Oreetes, son of Deucalion, a bitch brought forth a stick (Eolos) instead of a whelp. Oreetes planted this, and a vine shot up, from the branches (ζυγος) of which the race derived their name. 2. An-

Callimachus

"for ever, commander. {Justin, 5, 7.} The Romans served

Pachynus (Πάχυνος ἄρα), a promontory of Sicily, forming the southeastern extremity of the island, and called also, by some of the Latin writers, Pachynum. (Mela, 2, 7. — Plin., 3, 8.) It is one of the three promontories that give to Sicily its triangular figure, the other two being Pelorus and Lilybaeum. The modern name is Capo Passaro. Its southernmost point is called by Ptolemy Odyssey Aeta (Ὀδυσσεία ἄρα), and coincides with the projection of the coast before which the islands delle Correnti lie. Between Pachynus and the coast of Calabria there is a small island called at the present day Porto di Palo, and the same with Cicero terms Portus Pachyni. (In Verr., 5, 34.) It served merely as a temporary refuge for mariners in stress of weather. This harbour is very probably meant by the Itin. Marit. when it gives the distance "a Syracusis Pachyono" at 400 stadia or 45 geographical miles along the coast, since the direct line from Syracuse to the promontory of Pachynus is less than this. (Itin. Marit., p. 492, ed. Wesseling.—Mannert, Geogr., vol. 9, pt. 2, p. 341.)

Pacorus I. the eldest of the sons of Orodes, king of Parthia, and a prince of great merit. After the defeat of Crassus, he was sent by his father to invade Syria, having Ossaces, a veteran commander, associated with him. The Parthians were driven back, however, by Caius Cassius, and Ossaces was slain. After the battle of Philippi, Pacorus invaded Syria in conjunction with Labienus, and, having many exiled Romans with him, met with complete success, the whole of the country being now reduced under the Parthian sway. From Syria he passed into Judaea, and placed on the throne Antigonus, son of Hyrcanus. The Roman power having been re-established in Syria by the efforts of Ventidius, Pacorus again crossed the Euphrates, but was defeated and slain by the Roman commander. His death was deeply lamented by Orodes, who for several days refused all nourishment. (Justin, 42, 4. — Vell. Patere, 12, 78. — Tacit., Hist., 5, 9.) — II. Son of Vonones II., king of Parthia. He received from his brother Vologases, who succeeded Vonones, the country of Media as an independent kingdom. His dominions were ravaged by the Alani, who compelled him to take shelter for some time in the mountains. (Tacit., Ann., 15, 2 et 14.)

Pactolus, a river of Lydia, rising in the southeastern part of Mount Tmolus, and falling into the Hellespont after having passed by Sardes, the ancient capital of Caria. Its sands were auriferous, the particles of gold being washed down by the mountain torrents (Plin., 5, 29), and hence it was sometimes called Chrysorrhoas. The poets accounted for the golden sands of the river by the fable of Midas having bathed in its waters when he wished to rid himself of the transmuting powers of his touch. (Vid. Midas.) It was from the gold found amid the sands of Pactolus that Scipio Aemilianus, to have enriched his great riches. At a time when this precious metal was scarce, the labour of procuring it in this way was no doubt well bestowed. At a later period, however, the stream was neglected; and Strabo, passing over the true reason, informs us that the river yielded no more (ὑπὸ τοῦ σφιχθῆναι χρυσοῦ."—Strab., 627). Callimachus and Dionysius Periegetes speak of the swans of the Pactolus. (Callim., H. in Del., 249. — Dionys. Perieg., 830.) The Turkish name of this stream is the Bagrivu. (Cramer's Asia Minor, vol. 1, p. 442.—Mannert, Geogr., vol. 6, pt. 3, p. 361.)

An early Roman dramatic poet, the nephew of Ennius by a sister of his (Plin., 35, 4), was born at Brundisium, A.U.C. 534. At Rome he became intimately acquainted with Lalius, who, in Cicero's treatise De Amicitia, calls him his host and friend. There is an idle story, that Pacuvius had three wives, all of whom successively hanged themselves on the same tree; and that, lamenting this to Attius, who was married, he begged for a slip of it to plant in his own garden; an anecdote which has been seriously confuted by Annibal de Leo, in his learned memoir on Pacuvius. A story somewhat similar to this is told of a Sicilian by Cicero (de Orat., 2, 69). Pacuvius, besides attending to poetry, employed himself also in painting. He was one of the first Romans who attained any degree of eminence in that elegant art, and he particularly distinguished himself by the picture which he executed for the temple of Hercules in the Campus Martius. It was at the request of Pacuvius that Cicero had his last piece at the age of eighty (Cic., Brut., c. 63); after which, being oppressed with old age, and afflicted with perpetual bodily illness, he retired to Tarentum, where he died, after having nearly completed his ninetieth year. (Aul. Gell., 13, 2. — Hieron., Chron., p. 39.) An elegant epitaph, supposed to have been written by himself, is quoted with much commendation by Aulus Gellius, who calls it verum suissimum et parissimum (1, 24). It appears to have been inscribed on a tombstone, which stood by the side of a public road, according to the usual custom of the Romans.—

Though a few fragments of the tragedies of Pacuvius remain, our opinion of his dramatic merits can only be formed at second hand, from the observations of those critics who wrote while his works were yet extant. Cicero, though he blames his style, and characterizes him as a poet male locuus (Brut., c. 74), places him on the same level for tragedy as Ennius for epic poetry, or Ennius for comedy; and, he mentions, in his treatise De Oratore, that his verses were by many considered as highly laboured and adorned: "omnes apud hunc ornatiti elaboratique sunt versus." It was in this laboured polish of versification, and skill in the dramatic conduct of the scene, that the excellence of Pacuvius chiefly consisted; for so the lines of Horace have been usually interpreted, where, speaking of the public opinion entertained concerning the dramatic writers of Rome, he says (Ep., 2, 1, 55),

"Ambiguitatem quoties utero utri sit prior, auctur Pacuvius docet famam sensis, Attius ali sit;"

and the same meaning must be affixed to the passage in Quintilian: "Viritum tamen Attius plus tribuitur; Pacuvium videri doctorem, qui esse doctissimus et diligentissimus, volat. {Inst., Orat., 10, 1.) Most other Latin critics, though on the whole, he say, "the Attius, or Pacuvius, does not seem the more correct writer. The names are still preserved of about 20 tragedies of Pacuvius. Of these the Antiope was one of the most distinguished. It was regarded by Cicero as a great national tragedy, and an honour to the Roman name. (De Fin., 1, 2.) Persius, however, ridicules a passage in this tragedy, where Antiope talks of propping her melancholy heart with misfortunes (1, 76). With regard to the Dolores (Orat. 43, 25), another of these tragedies, there has been a good deal of discussion and difficulty. Navius, Ennius, and Attius are all said to have written tragedies which bore the title of Dolores; but a late German writer has attempted, at great length, to show that this is a misconception; and that all the fragments which have been classed with the remains
of these three dramatic poets, belong to the Dulorestes
of Pacuvius, who was, in truth, the only Latin poet that
wrote a tragedy with this appellation. What the ten-
cure or subject of the play, however, may have been, he
admits, is difficult to determine, as the different pas-
sages still extend to different periods of the life of
Orestes; which is rather adverse, it must be ob-
served, to his idea, that all these fragments were writ-
ten by the same person, unless, indeed, Pacuvius had
utterly set at defiance the observance of the celebrated
unities of the ancient drama. On the whole, however,
he has been regarded, by some, as the author of the
Vampor of Aeschylus, that of the Choephoroi, which
is the vengeance taken by Orestes on the mur-
surers of his father, is also that of the Dulorestes of
Pacuvius (Eberhard, Zustand der schönen Wissen-
schaften bei den Römern, p. 35, seqg.).—In the Ilios,
the scene where the shade of Polydorus, who had been
assassinated by the King of Thrace, appears to his
mother, was long the favourite of a Roman audience,
who seemed to have indulged in the same partiality for
such spectacles that we still entertain for the goblets in
Hamlet and Macbeth.—All the plays of Pacuvius were
either imitated or translated from the Greek, except
Paulus. This was of his own invention, and was
the first Latin tragedy formed on a Roman subject.
Unfortunately, there are only five lines of it extant, and
these do not enable us to ascertain which Roman of the
names that followed, imitated the tragic tragedy.
It was probably either Paulus Eumesius, who fell at
Cannae, or his son, whose story was a memorable in-
stance of the instability of human happiness, as he
lost both his children by his second marriage, one
days before and the other five days after, his Macedo-
nian triumph.—From no one play of Pacuvius are there
more than fifty lines preserved, and these generally
very much detached. It does not appear that his trag-
cy was longer than his own oratory. He was obliged to
have recourse for his subjects to foreign mythology and
unknown history. Iph-
igenia and Orestes were always or less strangers
to a Roman audience, and the whole drama in which
these and similar personages flourished, never attained
in Rome to a healthy and perfect existence. (Dioscor.
S Ran Literatur, vol. 1, p. 343, seqg.)—The frag-
ments of Pacuvius are given in the collections of
Stephen of Reading, Mairast. Padas, now the Po,
the largest river of Italy, an-
ciently called also Eridanus, an appellation which
is frequently used by the Roman poets, and almost al-
wars by Greek authors. —Vid. Eridanus.) This lat-
ner name, however, belongs properly to the Ostium
Spineticum of the Padas. (Plin, 3, 20.—Müller, Etrusker, vol. 1, p. 226.) The name Padas is said to
have been derived from a word in the language of the
Gauls, which denoted a pine-tree, in consequence of
the great number of those trees growing near its
source. (Plin, 3, 16.) Whatever be the derivation of
the term Padas, the more ancient name of the river,
which was Bodinus, is certainly of Celtic origin, and
is said to signify "bottomless." (Compare the Ger-
man bodenlos.)—Dalecamp, ad Pliin, 3, 16.) The
poises in Mons Vesuvius, now Monte Vito, near the
source of the Padas, is said to be the exact direc-
tion for more than 500 miles, and discharges its
waters into the Adriatic, about 30 miles south of
Portus Venetus or Venice. It is sufficiently deep
to bear boats and barge at 30 miles from its source,
but the navigation is at all times difficult, and not unfre-
quently hazardous, on account of the rapidity of the
current. Its waters are liable to sudden increase from
the melting of the snows and from heavy falls of rain,
the rivers that flow into it being almost all mountain-
streams; and in the flat country, in the lower part of
its course, great dikes are erected on both sides of
the river to protect the lands from inundation. During its
long course it receives a great number of tributaries,
its channel being the final receptacle of almost every
stream which rises on the eastern and southern decliv-
es of the Apennines, and the northern declivity of
the Apennines. The mouths of the Po were anciently
reckoned seven in number, the principal one, which
was the southernmost, being called Padus, and now
Po di Primaro. It was this mouth also to which the
appellations Eridanus and Spineticum Ostium wereap-
plicated. It sends off a branch from itself near Tragaboli,
the modern Ferrara, which was anciently styled Vol-
ca or Plavca; and the Ostium Spineticum corresponded
(Polyb, 2, 16.) Pliny mentions the following other branches or mouths of the Po: the Caprasie Ostium,
now Bocca di bel Ochouo; Sagis, now Fossage; and
Carbonaria, now Po d'Ariano (3, 16.) The Fossa
Philistina is the Po grande. (Cramer's Anc. Italy,
vol. 1, p. 115.)—The Padas is rendered famous in the
legends of mythology by the fate of Paesthon, who fell
into it when struck down from heaven by the thunder-
bolt of Jove. (Vid. Paesthon.)

Padesa, the same with the Ostium Spineticum, or
southernmost branch of the river Padas. (Vid. Pa-
dus.) A canal was cut by Augustus from the Padusa
to Ravenna. (Valg, cl. ap. Serv. ad Virg., En,
11, 456.) Virgils speaks of the swans along its banks
(I. c.—Cramer's Anc. Italy, vol. 1, p. 114.)

Paean, an appellation given to Apollo, who under
this name was worshiped in Latium; this name is also
used for a protecting and healing deity, who frees
the mind from care and sorrow (paean, "to cause
to cease"). The tragedians, accordingly, by an ana-
logical appellation of the word, also called Death,
to whom both these attributes belonged, by the title of
Paean. (Eurip, Hippol, 1373.—Aesch, ap. Stob,
Serm, p. 121.) And thus this double character of
Apollo, by virtue of which he was equally formidable
as a god of war and as a god of medicine, was authorized by the ambiguity of the name. Homer
speaks of Paean (Naiaros) as a separate individual,
and the physician of Olympus; but this division ap-
ppears to be merely poetical, without any reference
to actual worship. Hesiod also made the same distinc-
tion. (Schol ad Hom., Od., 4, 331.) Still, however,
Apollo must be regarded as the original deity of the
healing art. For in the Prytaneum, in which the
Pythian temple, was appointed to be sung in hon-
or of Apollo. (Hom, Hymn ad Apoll.—Eurip,
Ion, 125, 140.—Pind, Pea, ep. Fragn.) The
song, like other hymns, derived its name from that of
the god to whom it was sung. The god was first
called Paean, then the hymn, and lastly the singers
themselves. (Hom., Hymn ad Apoll., 272, 320.)
Now we know that the paean was originally sung at
the cessation of a plague and after a victory; and gen-
erally, when any evil was averted, it was performed as
a purification from the pollution. (Proclus, ap. Phot.
—Soph, OEd. T., 152.—Schol ad Soph, OEd. T.
174.—Suid., s. v. Inipou.) The chant was loud and
joyous, as celebrating the victory of the preserving and
healing deity. (Callim, Hymn ad Apoll, 21.) Be-
side the paens of victory, however, there were others
that were sung at the beginning of a banquet (Eur, Sept. c. Thek. 250) and an ancient custom, that the
chorus of Delphian virgins had chanted "To Peaun at
the contest of Apollo with the Python. (Callim,
ad Apoll., 113.—Apoll, Rh., 3, 710.—Compare Ath-
naeus, p. 15, 701, c.) The paean of victory varied ac-
cording to the different tribes; all Dorian, namely,
Spartans, Argives, Corinthians, and Syracusans,
and the same one. (Thucyd, 7, 4.—Compare 4, 43.)
This use of the paean as a song of rejoicing for vic-
tory, sufficiently explains its double meaning; it bore
a mournful sense in reference to the battle, and a joy-
os one in reference to the victory. (Müller's Dori-
ans, vol. 1, p. 319, seq, Eng. transl.)
PÆS

PÆMANI, a people of Belgic Gaul, supposed by D'Anville and Weserebe to have occupied the present district of Famene, in Luxemburg. (Caz., B. G., 2, 4.—D'Anville, Notice de la Gaule, p. 188.—Weserebe, über die Völker, des alten Teutschlands, Hannö, 1826.) Lemaire, however, thinks the analogy between the ancient and modern names, on which this opinion is founded, too far-fetched. (Ind. Geogr. ad Caz., s. c.)

Paeconia, a name, according to older and Homeric form of the name, Pæœon (Paaon), the physician of the gods. Nothing is said in Homer about his origin. All we are told is, that he cured Mars when wounded by Diomed (II., 5, 889), and Pluto of the wound in his shoulder given him by Hercules (II., 5, 401), and also that the Egyptian physicians were of his race. (Od., 4, 235.) He would seem to have been, in the Homeric conception of the legend, distinct from Apollo, though perhaps originally identical with him. (Keightley's Mythology, p. 200.—Consult remarks under the article Paan.)

PÆNÖNIX (Paaenov), a numerous and ancient nation, that once occupied the greatest part of Macedonia, and even a considerable portion of what is more properly called Thrace, extending along the coast of the Ægean as far as the Euxine. This we collect from Herodotus's account of the war of the Paeones with the Persians (Book II., 170), and from the story of the Propontis, at no great distance from Byzantium. Homer, who was apparently well acquainted with the Paeones, represents them as following their leader Asteropaeus to the siege of Troy in behalf of Priam, and places them in Macedonia, on the banks of the Axios. (II., 11, 489.) We know also from Livy (40, 3) that Emathia once bore the name of Paeonia, though at what period we cannot well ascertain. From another passage, indeed, the same historian's, it would seem that the Dardani of Illiricia had once exercised dominion over the whole of Macedonian Paeonia (45, 29). This passage seems to agree with what Herodotus states, that the Paeones were a colony of the Teucri, who came from Troy (5, 13.—Compare 7, 20), that is, if we suppose the Dardani to be the same as the Teucri, or at least a branch of them. But these transactions are too remote and obscure for examination. Herodotus, who appears principally on the history of the Paeones, round about the year 480 B.C., when the Persians were early divided into numerous small tribes, most of which were transplanted into Asia by Megabyzus, a Persian general, who had made the conquest of their country, by order of Darius. The circumstances of this event, which are given in detail by Herodotus, will be found in the fourth book, c. 12. It appears, however, from Herodotus, that these Paeonians afterward effected their escape from the Persian dominions, and returned to their own country (3, 98). Those who were found on the line of march pursued by Xerxes were compelled to follow that monarch in his expedition. Herodotus seems to place the main body of the Paeonian nation near the Styron; but Thucydides (2, 59), with Homer, extends their territory to the river Axios. But if we follow Strabo and Livy, we shall be disposed to remove the western limits of the nation as far as the great chain of Mount Olympus and the borders of Illyria. In general terms, then, we may affirm, that the whole of northern Macedonia, from the source of the river Erigonus to the Styron, was once named Paeonia. This large tract of country was divided into two parts by the Romans, and formed the second and third regions of Macedonia. (Liv., 44, 29.)

PÆONIA, the country of the Paeones. (Vid. Paeon.)

PÆSTANUS SINUS, a gulf on the lower coast of Italy, its upper shore belonging to Campania, and its lower to Lucania. According to Strabo (251), it extended from the Siren's Cape to the Promontory of Posidonia. The modern name is the Gulf of Salerno. Its ancient appellation was derived from the city of Pæstum.

Pæstum, a celebrated city of Lucania, in Lower Italy, built on the river Aselli, and on the western coast. Its Greek appellation was Posidonia, the place being so called in honour of Neptune (Poseidōn). The name Pæstum is used by the Latin writers more commonly. This latter Mazocchi, on no very good grounds, derives from the Phoenician Pœstan or Pozian, the alleged root, with some Oriental scholars, for the Greek Poseidōn. (Vid., however, remarks under the article Neptunus.) Nothing, however, can be more fallacious than Phoenician etymologies. The origin of this once flourishing city has afforded matter of much conjecture and discussion to antiquaries. Mazocchi, who has just been referred to, makes Pæstum to have been founded by a colony from Dora, a city of Phoenicia, to which place he also assigns the origin of the Dorian race! This same writer distinguishes between Pæstum and Posidonia, the latter place having been founded, according to him, in the time of the Persian kings, by the Phœnicians, a Phœnician colony, who expelled at the same time the primitive inhabitants of Pæstum. Eustace (Class. Tour, vol. 3, p. 92), following this authority, has fallen into the same error of making Pæstum and Posidonia distinct places. Those who contend for an earlier origin than that which history assigns to Pæstum, adduce in support of their opinion the Æscaen or Ætsacan coins of this city, with such barbarous legends as PHISTV, PHISTVΛ, PHISTELIA, PHISTELIS, and PHISTOVΛ. A very eminent Latin antiquarian writer, however, attributes them to a different town. But, even supposing that they ought to be referred to Pæstum, it must be proved that they are of an earlier date than those with the retrograde Greek inscriptions PÔM, PÔSElei, PÔSEIAΔN, PÔSEΔIN, PÔSEIDAΝEΔIA. Others inscribed PÆSE, PIAE, PIAΣTANO, are more recent, and belong to Pæstum in its character of a Roman colony. (Sestini, Mem. Hist. vol. 1, 251.)

PÆSTUM, di Pesto Tum., 49.—Micali, Italia antica ti dei Romani, vol. 1, p. 233.—Romanellii, vol. 1, p. 332.—Cramer's Anc. Italy, vol. 2, p. 362.)—It seems now generally determined, that whether the Enoari or Tyrrheni were the original possessors of this coast, they can lay no claim to those majestic piles which, under the name of the ruins of Pæstum, form at the present day the admiration and wonder of all who have visited them. The temples of Pæstum too closely resemble in their plan and mode of structure the early edifices of Greece and Sicily, to be the work of any of the native tribes of Italy. The Tuscan, to whom alone they could be referred, have left us no example of a similar style in any of their architectural monuments. Strabo is the only ancient writer who has transmitted to us any positive account of the foundation of Posidonia. He states, that it was built by a colony of Sybarites, close to the shore in the first instance, but that it was afterward removed more into the interior. (Strab., 251.) This account is farther confirmed by Seyninus of Chios, and agrees with what we know of the extent of dominion possessed by Sybaris at an early period on this sea, where she founded also the towns of Lais and Scidirus. (Herod. 6, 21.) We are left in uncertainty as to the exact date of this establishment of the Sybaritae; but we have two other dates, viz. that of the rise of the Eburae, and of the conclusion of the war with Paestum. (Vid. Eubœa, the work of Paestum, against the Antante, an Illyrian horde, who had invaded his country. (Diod. Sic., 20, 19.—Cramer's Anc. Greece, vol. 1, p. 266, seqq.)

P. E. S. T. U. M.

nearly 540 B.C. It will be seen by that historian's account of the events which induced the Phocæans to settle on the shores of Lucania, that they were chiefly led to form this resolution by the advice of a citizen of Posidonia (1, 167). It may thence reasonably be supposed, that the latter city had already existed for twenty or thirty years.—There are but few other particulars on record relative to its history. That it must have attained a considerable degree of prosperity, is evident from the circumstance of its name having been selected by the Etruscans, as the name of the gulph of Salerno (formerly of Posidonia Sinus); and we possess yet further confirmation of the fact in the splendid monuments which age has not yet yet been able to deface or destroy. It appears from Strabo that the Posidoniæ, jealous of the aggrandizement of Vela, endeavoured more than once to reduce that town to subjection: these attempts, however, proved fruitless; and, not long after, they were called upon to defend themselves again by the aggressions of the Lucani, the most determined and dangerous of all the enemies with whom the Greeks had to contend. After an unsuccessful resistance, they were at length compelled to acknowledge the superiority of these barbarians, and to submit to their authority. It was probably to rescue Posidonia from their yoke that Alexander of Epirus landed here with a considerable army, and defeated the united forces of the Lucanians and the Posidoniæ (Liv. 1, 117). The Romans, having subsequently conquered the Lucani, became possessed of Posidonia, whether they sent a colony A.U.C. 450. (Liv. Epit. 14, et 27, 10.—Strab., 251.) The loss of their liberty, even under these more distinguished conquerors, and still more the abolition of their usages and habits as Greeks, seem to have been particularly afflicting to the Posidoniæ. Aristoxenus, a celebrated musician and philosopher, who assembled together in order to revive the recollection of their ancient rites and language, and to lament and shed tears in common over their sad destiny: after which they retire in silence to their homes. —The unhealthy situation of Paestum, which has been remarked by Strabo, may probably have prevented that colony from attaining to any degree of importance; and as it was placed on an unfrequented coast (Cic. ad Att., 11, 17), and had no trade of its own, it soon decayed, and we find it only noticed by subsequent writers for the celebrity of its roses, which were said to bloom twice in the year. (Virg. Georg., 4, 118.—Propert., 4, 5.—Ovid, Met., 15, 708.—Id., ep. e Pont., 2, 4.—Aust., Idyll., 14.—) The ruins of Paestum, as it has already been remarked, form a great object of attraction to the modern tourist. Eustace has given a very spirited description of the beautiful temples of this ancient city, the most striking edifices, unquestionably, are the chief monuments of its time and the barbarians in Italy. (Class. Tour., vol. 3, p. 94, seqq.) "Within these walls," he remarks in conclusion, "that once encircled a populous and splendid city, now rise one cottage, two farmhouses, a villa, and a church. The remaining space is covered with thick matted grass, overgrown with brambles spreading over the ruins, or buried under yellow undulating corn. A few rosebushes, the remains of biferi ro- saria Petri, flourish neglected here and there, and still blossom twice a year, in May and in December, as if to support their ancient fame, and justify the descriptions of the poets. The roses are remarkable for their fragrance. Amid these objects, and scenes rural and ordinary, rise the three temples, like the mausoleums of the ruined city, dark, silent, and majestic.—Paestum stands in a fertile plain, bounded on the west by the Tyrrhenian Sea, and about a mile distant on the south by fine hills: on the north by the Bay of Saler- no and its rugged border; while to the east the country swells into two mountains, which still retain their ancient names Callimara and Cantena, and behind them towers Mount Alburnus itself with its pointed summits." (Class. Tour., vol. 3, p. 99, seqq.—Cramer's Anc. Italy, vol. 2, p. 365, seqq.)

PETUS, Cæcina, the husband of Arias. (Vid. Arias.)

PA.GA.SUS, a maritime town of Thessaly, on the Sinus Pagassius, and just below the mouth of the river On- chestus. It was the port of Iolcos, and afterward of Phere, and was remarkable in Grecian story as the harbour whence the ship Argo set sail on her distant voyage. It was, indeed, asserted by some, that it derived its name from the construction of that famous vessel (πολύγυς, "to construct") . But Strabo is of opinion that it rather owed its appellation to the nu- merous springs which were found in its vicinity (πολύγυς, a spring), and this, indeed, seems the preferable ety- mology. (Strab., 436.—Compare Schol. ad Apoll. Rhod., 1, 237.) Apollo was the tutelary deity of the place. (Apoll. Rhod., 1, 411.) Herrimpass, a comic poet, cited by Athenæus (1, 49), says of this town, "

al hYXalat dòlounos kai στγυματιας παρέχουσι.

Its site is nearly occupied by the present castle of Volos. (Gell's Itinerary of Greece, p. 260.—Cra- mer's Anc. Greece, vol. 1, p. 431.) Pagassa gave its name to the extensive gulf, on the shores of which it was situated; and which we find variously designated, as Pagasæus Sinus (Segy., p. 332.—Strab., 438), or Pagassius, or Pagassius; and the site is still marked by a 5. (Gell, p. 237.) Apollo was the tutelary deity of the place. (Apoll. Rhod., 1, 411.) Herrimpass, a comic poet, cited by Athenæus (1, 49), says of this town, "

PA.GA.SUS SINUS, a gulf of Thessaly, on the coast of Magnesia; now the Gulf of Volos. (Vid. Pagass.)

P.A.L.E.M.O.N, I. a sea-deity, son of Athamas and Ino. His original name was Melicerta, and he assumed that of Palæmon after he had been compelled to become a deity by Neptune. (Vid. Athamas, and Leucothea.) Roth Palæmon and his mother were held powerful to save from shipwreck, and were invoked by mariners. Palæmon was usually represented riding on a dolphin. The Isthmian games were celebrated in his honour, and indeed his name (Παλαάμον, "Champion") appears to refer to them. (Kightley's Mythology, p. 219.) II. A Roman grammarian (M. Q. Remmius), the preceptor of Quintilian, and who flourished under Tiberius and Claudius. From the account of Sueto- nius, he appears to have been a man of very corrupt morals. He was also excessively arrogant, and boasted that true literature was born and would die with him. (Jut. 6, 452.—Id., 7, 215.—Suet. de Illust. gramm., 23.—Dodwell, Ann. Quin., p. 183, seqq.) III. or Palæmonius, a son of Vulcan, one of the Argo- nauts. (Apoll. Rhod. 1, 202, seqq.—Krause, ad loc.)

P.A.L.E.R.M.I.T.O, I. a town of Thessaly, in the north- western section of the country, plundered by Philip, in his retreat through Thessaly, after his defeat on the banks of the Aoës. (Livy, 32, 13.) II. An early Athenian epic poet, mentioned by Suidas. The lex- icographer states, that, according to some, he lived be- fore the time of Pheonœ, the first priestess of Del- phi, while others placed him after her. Suidas cites the following translations of his. 1. A Cosmopæia, in five books.—2. The Nativity of Apollo and Diana, in four books.—3. Di courses of Venus and Læn (Δροματις και Ερωτης φωνι αναι και λόγοι), in five books.—4. The dispute between Minerva and Nep

Digitized by Microsoft® 957
tune.—S. Latona's tress (Δοτός πλόκαμος). (Schöll, Hist Lit Gr., vol. 1, p. 36.)—III. A native either of Paros or Priene, who lived in the time of Antaxeres Menon, and wrote, according to Suidas, a work in five books, entitled Απεστα. "Incredible Things." (Suid., s. e.)—IV. A native of Abydos, and a great friend of Aristotle's. He wrote a philosophical treatise. (Suid., s. v.—V. A grammarian of Alexander, according to Suidas, but called by Tzetzes and others a Periapatetic philosopher. The period in which he lived is not stated. (Fabric. Bibl. Gr., lib. 1, c. 21.) Suidas mentions a work by him, entitled "Explanations of things related in Mythology." This seems to be the production which has come down to us, in one book, divided into 60 short chapters, under the title "Explanations of things related in Mythology., and which is commonly entitled "On Incredible things" (Περὶ Απεστατον). The author explains, according to his fashion, the origin of many of the Greek fables, such as those of the Centaurs and Lapithes, Pasiphae, Acteon, &c. All these legends have, according to him, an historical basis, and more or less truth connected with them, but which has been strangely distorted by the ignorance and credulity of men. Palephatus, therefore, may be assigned, as a mythologist, to what is termed the class of pragmatists. The work is written in a very good style, and, notwithstanding the forced nature of many of the explanations, may be regarded as, in some respects, an instructive book. Virgil alludes to Palephatus in his Cirris, "Docta Palaphatia testatur voce papyrus." The term docta would seem to refer to the productions of some Alexanderian writer, and the word papyrus, to imply that his work consisted merely of a single book. Simson places Palephatus in 409 B.C. (Chron. Caehol., col. 779), while Saxius assigns him to 322 B.C. (Onomast., vol. 1, p. 88).—The best edition of the treatise περὶ Απεστατον is that of Fischer, Laps., 1789, 8vo, in the prolegomena to which is contained much information from Fabricius, relative to the various individuals who have borne the name of Palephatus. There are also two other pieces published with this work under the name of Palephatus, one on the invention of the purple colour, and the other on the first discovery of iron. (Schöll, Hist. Lit. Gr., vol. 3, p. 194.)

PALEÓPOLIS. Vid. Neapolis.

PALESTE, a little harbour of Ephirus, on the Chaonian coast, and south of the Ceraunian promontory. Here Caesar landed his forces from Brundisium, in order to carry on the war against Pompey in Illyria. (Bell. Cis. 3, 6.) It must be observed, however, that in nearly all the MSS. of Caesar, this name is written Pharsalos; but, on the other hand, Lucan certainly seems to have read Palesta (5, 458, seqq.). Some trace of the ancient name is perceptible in that of Paleassa, marked in modern maps as being about twenty-five miles southeast of the Acroceranian cape. (Crarner's Anc. Greece, vol. 1, p. 95, seqq.)

PALESTINA, a country of Asia below Syria, though properly speaking, forming part of that land. In its earliest acceptations, the name was applied to the tract of coast between Egypt and Phoenicia, having Ascalon for its chief city. (Josephus, Bell. Jud. 3—Id., Ant. Jud., 1, 19.) It was extended at a later period to the territory of the Jewish nation, and the terms Palestine and Holy Land are now regarded as synonymous. The Jews were not acquainted with the name Palestine; it is thought to be derived from that of Phalas, the name of the described country. A late writer (Russell, Egypt, p. 71) has revived Wilford's etymology for the name Palestine, namely, Pali-stan, "Shepherd-land," and has adopted the theory relative to the migration of the Pals, or Shep-

herd race, from India towards the West. It is very surprising that such a derivation as this should be gravely advanced at the present day, when there are few who do not know how little faith is to be reposed in the researches of Captain Wilford, and how grossly he was imposed upon by the pundits of India.

It was the ancient town of Tyre on the Continent. (Vid. Tyrus.)

PALAMÉDES, son of Nauplius, king of Euboea, and a pupil of the famous Chiron. He is celebrated in fable as the inventor of weights and measures; of the games of chess and backgammon; as having regulated the year by the sun, and the twelve months by the moon; and as having introduced the mode of forming troops into battalions. He was said to have been the first also who placed sentinels upon the seashore, to observe their vigilance and attention by giving them a watch-word. (Philast. Heroic, p. 682, ed. Morelli.—Pausan., 10, 31. —Eudocia, p. 321. —Schol. ad Eurip., Orest., 426.) Pliny ascribes to him the addition of the four letters Θ, Φ, Χ, to the Greek alphabet (Pliny, 7, 57); for which Suidas gives Ζ, Π, Χ (Suid., s. v. Halapetros. —Consult Salmas, ad Inscript. Hero., p. 25, seqq., 221, seqq.—Fischer, Antiach., ed. Fischer, Gr. vol. 36, p. 426.)

Pliny, ad Eruip., Orest., 426. Pliny ascribes to him the addition of the four letters Θ, Φ, Χ, to the Greek alphabet (Pliny, 7, 57); for which Suidas gives Ζ, Π, Χ (Suid., s. v. Halapetros. —Consult Salmas, ad Inscript. Hero., p. 25, seqq., 221, seqq.—Fischer, Antiach., ed. Fischer, Gr. vol. 36, p. 426.)
of the successive edifices which have stood upon it have raised the soil around its base considerably above the ancient level. About one half of the surface of it is called the Villa Parma, which is let and cultivated as a kitchen-garden. Adjoining on the south is the Villa Spada.—"With all my respect for this venerable mount," observes a modern tourist, "I must say, that it is very little of its size. I had previously been disappointed in the lowly height of the Capitol; but I stood yet more amazed at the square, flat-topped, and dwarfish elevation of the Palatine. It must certainly have been materially degraded by the fall of the successive edifices which have covered it, from the straw-roofed cottages of Romulus and his Roma quadrata to the crumbling erections of popes and cardinals. The ruins of these multiform edifices, heaped up round its base, have raised the surface at least twenty feet above the ancient level: still, with all the allowances one can make, it must originally have been very little of a hill indeed." (Rome in the Nineteenth Century, vol. 1, p. 152.)

**PALATINUS.** I. An appellation sometimes given to the Palatine Hill. The plural form (Palatia) is more frequently used, and contains a particular reference to the Caesars.—II. The residence of Augustus, on the site of which, toward the foot of the Velabrum, was set the palace of the Caesars. Augustus appears to have had two houses on the Palatine; the one in which he was born, and which after his decease was held sacred, was situated in the street called Capita Bubula (Suet., Vit. Aug., 5); the other, where he is said to have resided for forty years, formerly belonged to Hortensains. After the battle of Actium, he decreed that this last should be considered as public property. (Suet., Vit. Aug., 72—Sert. ad Verg., 4, 410.) Tibullus made considerable additions to the house of Augustus, which neither in size nor appearance was worthy of an emperor of Rome, and from that time it exchanged the name of Domus Augusti for Domus Tiberiana. (Tact., Hist., i, 77.—Suet., Vit. Vellit., 15.) Caligula augmented still farther the imperial abode, and brought it down to the verge of the Forum, connecting it with that of Octavius (Cuvigny, Ed. 75, 4, 410.) Tibullus also turned it into a vestibule for this now overgrown pile. He also formed and executed the gigantic project of uniting the Palatine and Capitol by a bridge; and concluded by erecting a temple to himself. (Suet., Vit. Calig., 22.) But even his folly was far surpassed by the extravagance of Nero, whose golden house extended from the Palatine to the Caelian Hill, and even reached as far as the Esquiline. (Suet., Vit. Ner., 31.—Tact., Ann., 15, 42.) It was not, however, destined to be of long duration; that portion of the building which interfered with the projects of Vespasian and Titus, on the Caelian, was soon destroyed, and little remained of this huge and glittering palace, except the part which stood on the Palatine Hill. (Vid. Nero, where an account of the "Golden House" is given.) Domitian again, however, renewed and even enlarged the favourite mode of decoration which he had adopted in this manner. It appears to have been the lavish magnificence which he displayed in these works, that Plutarch, quoting a sentence of Epicharmus, compares him to Minas, who converted everything into gold. (Vit. Publ.) Stripped by Trajan of its gaudy decorations, which were destined to adorn the temple of Jupiter Capitolinus (Mart., 12, 75), it was afterward destroyed or much injured by fire under Commodus, but was once more restored; and from this time was regarded as the natal day of Rome. (Vid. Pales.)—The Palatine Mount at the present day is about a mile and a half in circuit, and is nearly square. The ruins of...
P A L

It was the famous temple of the Palatine Apollo, erected by the emperor in fulfillment of a vow made to that deity on the morning of the battle of Actium. Ovid was permitted to describe it among the grand structures of white marble. (Ov., Tratt. 3, 1. — Propert., 2, 31.)

The portico more especially was an object of admiration; it was adorned with columns of African marble, and statues of the Danaids. Connected with the temple was a magnificent library, filled with the works of the best Greek and Latin authors. (Suet., Vit. Aug., 29.) It contained, according to Pliny (34, 7), a colossal statue of Apollo, in bronze, of Tuscan workmanship, which was much esteemed. (Cramer's Anc. Italy, vol. 1, p. 448, seqq.)

"The fact is," says the latest writer on the Caesars," observes a late writer, "like that of almost every other monument of antiquity, was less the work of foreign barbarians than of the Romans themselves. The Goths, in the fifth century, pillaged it of its gold, its silver, its ivory, and most of its portable treasures. Genseric seized its bronze, and all its remaining precious metals; and the shipload of statues which the capricious Vandal sent to Africa, was, as it is supposed, chiefly of the interior of the imperial palace. The troops of Belisarius lodged in it; so also did the soldiers of Totila, during his second occupation of Rome; but that is no proof of its destruction; on the contrary, the spoils of modern excavations have proved how vast were the treasures of art and magnificence, which had been spared or despoiled by their forbearance or ignorance; and, however the interior splendour of the palace of the Caesars might suffer by these barbarian intruders, we know, at least, that its immense exterior, its courts and corridors, and walls, and roofs, and pavements, were in perfect preservation at a much later period; for in the days of Heraclius, the beginning of the seventh century, it was still fit to receive a royal guest, and it appears to have been entire in the eighth century, from the mention made of it by Anastasius. In the long feudal wars of the Roman nobles, during the barbarous ages, its ruin began. It was attacked and fortified, taken and retaken, and for a length of time was the central fortress of the Frangipani family, who possessed a chain of redoubts around it, erected on the ruins of Rome. But its final destruction was consummated by the Farnese popes and princes, who laboriously destroyed its ruins to build up its palaces and villas with the materials; buried these magnificent halls beneath their wretched gardens, and erected upon them the hideous summer-houses and grovettts, the deformity of which still impeaches the taste of their architects, Michael Angelo Buonarotti. — In the southern part of the palace, about 150 years ago, a room full of Roman coins was discovered, and a magnificent hall hung with cloth of gold, which fell into dust as soon as the air was admitted. About one hundred years ago, a hall forty feet in length was discovered on the Palatine, the walls of which were entirely covered with paintings. They were taken off and sent to Naples; and there they were used as moulds until every vestige of the paintings had disappeared." (Rome in the Nineteenth Century, vol. 1, p. 164, seqq.; Am. ed.)

Pales, the goddess who presided over cattle and pastures among the ancient Romans. Her festival, called the Paliata, was celebrated on the 21st of April, and was regarded as the day on which Rome had been founded. The shepherds, on the Palatia, lustrated their flocks by burning sulphur, and making fires of olive, pine, and other substances. Millet, and cakes of it and milk, were offered to the goddess, and prayers were made to her to avert disease from the cattle, and to bless them with fecundity and abundance of food. Fires of straw were kindled in a row, and the rustics leaped thrice through them; the blood of a horse, the ashes of a calf, and bean-stalks, were used for purification. (Ovid, Fast, 4, 721, seqq. — Keightley, ad loc. — Tibull., 1, 1, 36. — Id., 2, 5, 87, seqq. — Propert., 4, 1, 19.)

The statue of Pales was represented bearing a sickle. (Tibull., 2, 5, 28. — Keightley's Mythology, 358, 3.) The worshippers blended with that of Vesta (Serv. ad Virg., Æn., Georg., 3, 1), and sometimes, again, she was represented as an androgynous divinity. (Spangenberg, De Vet. Lat. Rel. Dom., p. 60.) Among the Etrurians we meet with a male deity of this name. (Müller, Etrusker, vol. 2, p. 139.) — For the etymology of the term Pales, consult Zoega (de Obelicae, p. 213, seqq.).

PALIOHOTRA (Παλιοθύρα, Strabo — Plin., or Palini- hotræ, or Palinhotra) was a large city of ancient India, at the junction of the Eranobos with the Ganges. (Arrian, Ind., c. 10.) It appears, from the accounts of the ancient writers, to have been defended by wooden ramparts, having 570 towers and 64 gates, to which Diodorus Siculus (2, 39) adds the equally incredible statement that the place was founded by Hercules. Making all due allowance for Oriental exaggeration, the city of Palibothra would appear to have been the capital of the Indian empire. This position of Palibothra has been much disputed. Robertson places it at Allahabad; but the opinion of Major Rennell, who assigns it to the neighbourhood of Patna near the confluence of the Ganges and the Sone, appears more correct. Strabo says it is at the confluence of the Ganges with another river (Strab., 702), but he does not mention the name. Arrian, as above quoted, makes it to have been situated at the junction of the Ganges with the Eranobos. Sir W. Jones remarks, is evidently the Sanscrit Hiranyavāhā. The "Amarā Kosha," an ancient Sanscrit dictionary, gives this river as synonymous with Sone. (Schlegel, Réflexions sur l'Étude des Langues Asiaitiques, p. 100. — Id., Indische Bibliothek, vol. 2, p. 394. — Wilson's Theatre of the Hindus, vol. 2, p. 135, 2d ed.)

Palici or Palici, two deities, sons of Jupiter by the Sicilian nymph Thalia, or, as others give the name, Ætna. Thalia having been united to Jupiter near the river Symmuthus, and not far from the city of Catana, and fearing the wrath of Juno, entreated the god to conceal her from that deity. Jupiter complied, and hid her in the bowels of the earth; and, when the time of her delivery had arrived, the earth opened again, and two children came forth. These were called Palici, either from παλίν, "again," because they came forth into the light on the earth's having again opened; or from παλίν, "again," and from λοχος, "to come," because, after having been consigned to the bowels of the earth, they had again come forth thence. The Palici were worshipped with great solemnity by the Sicilians, and near their temple were two small lakes of sulphureous water, which were supposed to have sprung out of the earth at the same time that they were born. These pools were properly craters of volcanoes, and their depths were unknown. (Diod. Sic., 11, 39.) The water kept continually bubbling up from the earth, emitting at the same time a fuming stench. The neighbouring inhabitants called them Delli, and supposed them to be the brothers of the Palici. (Macrob., Sat., 5, 19.) A curious custom, tending to show the power of the priesthood, was connected with these lakes. All controversies, of whatsoever kind, were here decided; and it was sufficient, in order to substantiate a charge or clear one's self from an accusation, to swear by these waters and depart thence. (Diod. Sic., l. c.) The temple also was an inviolable asylum for slaves, especially those who had cruel masters; and the latter were compelled to promise a more
gentle mode of treatment, and to ratify their promise with an oath, before the fugitives returned. — The Sicilian leader Ducetius founded a city named Palice in the vicinity of the temple and lakes. It did not, however, flourish for any length of time, but was already in ruins in the time of Diodorus. We are not acquainted with the causes of its overthrow. — The Sicilian Palici, or Palatins, were subject to Creuzer, &c. by moving to Palic, a fortified town, and by changing some of the movements of the elements. Some authorities make Jupiter, changed into a vulture, to have been their father; while others mention Menanus or Amenanus, a deified stream (perhaps the stream of the year), as their parent. (Clem. Homil. 6, 13.) Creuzer, ad Cic. de N. D., 3, 22.) Vulcan, the god of fire, was one of these subterranean genii. The story of their birth and subsequent movements, when stripped of its mythical character, is simply this: the Palici denote the elements of fire and water in a state of activity; engendered by the eternal power of nature, but, subjected, like it, to eternal vicissitudes, they alternately escape from the bowels of the earth in torrents of flame or water, and again, when their fire is spent, plunge into its bosom. (Creuzer, Symbolik, vol. 2, p. 229. — Guigniaut, vol. 3, p. 186.)

PALIA, a festival celebrated in honour of the Roman, in honour of the goddess of the same name. (Vid. Palaces.)

PALINURUS, I, the son of Iassus, a Trojan, and the pilot of the vessel of Eneas. While the fleet was sailing near Carpea, he yielded to sleep and fell into the sea; a circumstance which Virgil has dignified, by representing Morpheus as overpowering Palinurus, who had been already exhausted by the fatigue of watching. He floated in safety for three days, but, on landing near Velia, he fell a victim to the ferocity of the inhabitants, who (it seems) were wont to assign and plunder the shipwrecked mariner. When Eneas visited the lower world, he assured Palinurus that, though his bones had been deprived of sepulture, andthough he was thereby prevented from crossing the Stygian Lake, there should yet be a monument dedicated to his memory on the spot where he had been inhumanely murdered. This eventually took place. The Lucani, being afflicted by a pestilence, were told by a priest according to Virgil, that Palinurus had appeased them, and that the name of his father must appease the manes of Palinurus. A tomb was accordingly erected to his memory, and a neighbouring promontory called after his name. (Virg. Aen., 5, 840, seqq. — Id. ib. 6, 337, seqq. — Serv. ad loc.) II. A promontory of Italy, on the western coast of Lucania, just above the Lake Sinus. It was also called Palinurus, and Palinuri Promontorium. Tradition ascribes its name to Palinurus, the pilot of Eneas. (Virg. Aen., 6, 380.) The modern appellation is Capo di Palinuro. Orosius (4, 9) records a disastrous shipwreck on the rocks of Palinurus, sustained by a Roman fleet on its return from Attica, when 150 vessels were lost. Augustus also encountered great peril on this part of the coast, when, according to Appian, many of his ships were dashed against this headland. (Bell. Civ., 5, 98. — Cramer's Anc. Italy, vol. 2, p. 377.)

PALICOURUM STAGNA, sulphureous pools in Sicily. (Vid. Palaces.)

PALLADIUS, a celebrated status of Minerva, said to have fallen from the skies, and on the preservation of which depended the safety of the city of Troy. The traditions respecting it were innumerable. According to Apollodorus, it was made by Minerva herself, and was not an image of that goddess, but of Pallas, daughter of Triton, whom Minerva had slain, and who, having been thrown into the sea, was first placed in the skies with Jupiter; but when Electra had been corrupted by the latter, and had polluted the statue by her touch, it was thrown by Minerva upon earth, and fell in the Trojan territory, where Ilus placed it in a temple which he had founded. (Apollod., 3, 13, 3. — Heyne, ad loc.) One of the scholiasts to the Iliad (6, 311) describes it as ἄγνοιον μικρὸν θησαυρόν, "a small wooden figure of an animal," made by a sage named Ausius, and given to Tros, when he was building the city of Troy, as a talisman on the preservation of which the safety of his capital depended. (Compare Tzetzes ad Lyophor., 563.) Another legend, alluded to by Pausanias, says that some of the bones of this statue had been formed of the bones of Pelops. (Clem. Alex. Admon. ad Gent., p. 30, D, ed. Paris, 1639.) But, whatever may have been the origin of this famous statue, the Greeks, while before Troy, had discovered, it seems, from Helenus, whom they had made captive, that the Palladium was the chief obstacle to the fall of the city. He informed them also that, in order to ensure the safety of this revered image, and to diminish the size of its being stolen, it was made like it, but that the true statue was the smallest one of the whole number. Helenus, it seems, was induced to make these disclosures partly by threats and partly by presents, but most of all by reasonment towards the Trojans, in consequence of Helen's having been given to Deiphobus. The Greeks now resolved to carry off this fated image, and the enterprise was intrusted to Ulysses and Diomedes. When these two heroes had accompanied the fleet of the citadels, they raised himself on the shoulders of Ulysses, and thus ascended the rampart; but he would not draw up Ulysses, although the latter stretched out to him his arms for that purpose. Diomedes then went and took the Palladium, and returned with it to Ulysses. The latter beginning to inquire into all the particulars, Diomedes, knowing the art of the man, determined on overreaching him, and told him that he had not taken the Palladium which Ulysses had mentioned, but another image. The statue, however, having moved in a preternatural manner, Ulysses immediately knew that it was the true one; and, having come behind Diomedes as he was returning through the plain, was going to despach him, when Diomedes, attracted by the brightness of the weapon (as it was moonlight), drew his own sword in turn, and frustrated the purpose of the other. He then compelled Ulysses to go to Troy, and ordered him to fetch Helen from her house, thus compelling Diomedes to attack him behind, where he forced him to stand back with the flat part of his sword. Hence arose, say the mythographers, the proverb, "Diomedae necessitas" (ἡ Διομήδους ἀνάγκη), applicable to one who is compelled to act directly contrary to his inclination. (Consult Erasmus, Adag. Chil., 1 cent. 9, col. 290, where other explanations are given.) The narrative which we have just been detailing is taken from Pliny (NH., 8, 185), and is corroborated by Pausanias (6, 13, 7, ed. Bekker.) The scholar to Homer (II. 6, 311) states, that after the Greeks had become possessors of the Palladium, and Troy had fallen, a quarrel arose between Ajax and Ulysses as to which of the two should carry the image home. Evening having come on, and the dispute being still undecided, the statue was intrusted to Diomed for safe-keeping until the next morning; but during the night Ajax had it secretly murdered. Other accounts make it that some of the Palladians, who had willingly accompanied Ulysses and Diomedes (Ovid. Fast., 6, 431.—Triphiodor., 54), and both heroes to have been equally concerned in the enterprise. (Proc. Arg. II. Parv. — Heyne, Excerps., 9, ad Aen., 2, p. 308.) Pausanias relates, that Diomedes, on his return from Troy, brought away the Palladium along with him; and that, having reached the coast of Attica, near the promontory of Phaleron, he followed his former stratagem, misusing it for an enemy's country, landed by night and made himself master of it. Demophoon, however, came out against them, and being equally ignorant, on his part, of the real character of his opponents, attacked them, and took from them the Palladium, which was preserved thereafter in the Athenian Acropolis. (Pausanias, 1, 23.) Harpocrates, who is fol-

and

"Minerva.

PALLADIUS.

and

"Minerva.

This was regarded as the fated pledge of the continuance of their empire, and not even the Pontifex Maximus was allowed to behold it. (Ovid, Fast., 6, 424, seq.)

Hence on ancient gems we sometimes see Vestra represented with the Palladium. (Maffei, Gemm. Ant., p. 2, n. 76.) Herodian relates (1, 114), that when, in the reign of Commodus, the temple of Vestra was consumed, the Palladium was for the first time exposed to public view; the Vestal Virgins having conveyed it through the Via Sacra to the palace of the emperor. This was the only instance of its having been disturbed since the time when Metellus the Pontifex rescued it from the flames on a similar occasion. (Ovid, Fast., l. c.)

In the reign of Elagabalus, however, that emperor, with daring impolicy, caused the sacred statue to be brought into his bedchamber, πρός γάμον τοῦ θεοῦ. (Herodian, 5, 6, 8.)—In order to account for the changing of the Palladium among these places pretended that Dionysius had, in order to save it from the will of heaven, restored it to Vestra when the latter had reached Italy; and that Vestra being engaged at the time in a sacrifice, an individual named Nautes had received the image, and hence the Nautes, not the Julian, family had the performance of the rites of Minerva. (Varro, ap. Serv. ad Virg., Aen., 2, 166.)

This story deserves to be classed with another, which states, that the Iliennes were never deprived by the Gauls of their Minerva, but kept it in their city, in the cavern until the period of the Mithradatic war, when it was discovered and sent to Rome by Simbricia. (Serv., l. c.)—From all that has been said, it would appear, that the ancient cities in general were accustomed to have tument images, which they held peculiarly sacred, and with which their safety was thought to be intimately connected; and as Pallas or Minerva was in an especial sense the " protectress of cities" (σωτηρίας θεότητος), this title that most naturally tend for the honour of having the true image of that goddess contained within its walls. (Du Thiel, Mem. de l'Acad. des Insocr., &c., vol. 39, p. 238.—Heune, Excurs., 9, ad Æn., 2.—Spanheim, ad Callim., H. in Lav. Pall., 39.)

PALLADIUS, I. a sophist, a native of Methone, who lived in the time of Constantine the Great. He wrote Dissertations or Declaratory Essays, and also a work on the Roman festivals (Plutarch, cad., 132, vol. 1, p. 97, ed. Bekker.—Schöll, Hist. Lit. Gr., vol. 6, p. 312).—II. An eastern prelate and ecclesiastical writer, a native of Galatia, born about A.D. 368, and made bishop of Hellenopolis in Bithynia. He was ordained by Chrysostom, to whose party he attached himself, and, on the banishment of Chrysostom, fell under persecution, and, being obliged to withdraw from his see, returned to Italy, and took refuge at Rome. Some time after, venturing to return to the East, he was banished to Syene. Having regained his liberty, he resigned the see of Hellenopolis, and was appointed to the bishopric of Alexandria. He is thought to have died A.D. 431. He wrote the "Lausiac History" about the year 421, which contains the lives of persons who were at that time eminent for their extraordinary austerities in Egypt and Palestine. It was called "12 statues of the Galilean," from Lausus, an officer in the imperial court at Constantinople, to whom it was dedicated. It is by no means certain whether Palladius, author of the "Lausiac History," and Palladius, author of the "Life of Chrysostom," were different persons, or one and the same. Dupin thinks that these were the productions of the same individual; but Tilmouth and Fabricius adopt the opposite opinion. The best edition of the history is that of Meursius, L. Bat., 1616. A work on the nations and Brahmins of India (Πατων της Ινδιας έθνων και των Βραχμανων) is also ascribed to him by the MSS. It would appear, however, that the author of this book had been actually in India, which cannot be affirmed with any certainty of the authorship. This latter work is given in the gnemologic Collection of Camerarius. An edition also appeared from the London press in 1665, 4to, and, with a new title-page merely, in 1668. The editor (Bisseus) speaks of the work as previously unedited, not knowing that it had already appeared in the Collection of Camerarius. (Schöll, Hist. Lit. Gr., vol. 7, p. 34.)—III. A physician of Alexandrea, distinguished from other individuals of the same name by the appellation of "Laportianus." This title he is supposed to have gained by having been a professor of medicine at Alexandria. His age is very uncertain; but as he quotes Galen, and as he is several times mentioned by Rases, we may safely place him somewhere between the beginning of the third and the end of the ninth century A.D. Palladius wrote a commentary on the work of Hippocrates respecting Fractures, which has reached us in an imperfect state, so that what remains is enough to let us see that we have not lost much, the text being as full and as instructive as the annotations. He has left also Scholia on the sixth book of Epidemics; others, still unpublished, on the regimen to be observed in acute maladies, and a treatise on Fevers. The scholia on the Epidemics of Hippocrates has, like the work on Fractures, reached us only in part, but is more valuable. In it, according to its author, a work on Fever is given that illustrates not only Hippocrates, but also several passages of Galen. The treatise on Fevers is too short, to be of much value, and almost the whole of it is to be found in Galen, Ætius, and Alexander Trallianus. A work on alchemy is also ascribed to him, but very probably the author of this last production has merely borrowed his name. The commentary is published with the works of Hippocrates. The scholia on the Epidemics has been published by Crussus, Basil, 1581, 4to. The Greek text has lately been published, for the first time, by Dietz, in his "Scholia in Hippocrateum et Galenum," &c., Regiomont, Pruss., 1834, 2 vols. 8vo. The treatise on Fevers was edited, with a Latin version, by Chartier, Paris, 1646, 4to; the last and best edition is by St. Bernard, Lugd. Bat., 1745, 8vo. The commentary on Fractures was translated into Latin by Santalibius, and is inserted in the edition of Hippocrates by Fessius, and in that of Hippocrates and Galen by Chartier. Dietz, in his preface, mentions another work by Palladius, which he found in MS. in the library at Florence, consisting of Scholia on Galen's work "De Secta," which he intended to publish, but he found the MS. so corrupt that he was obliged to give it up. Palladius appears to have been well known to the Arabians; since it is being quoted by Rases, he is mentioned, among other commentators on Hippocrates, by the unknown author of "Philosoph. Biblioth.," quoted in Casiri, "Biblioth. Arabico-Hisp. Escorial," vol. 1, p. 237. (Encyclop. Use. Knovel, vol. 17, p. 171. Schöll, Hist. Lit. Gr., vol. 7, p. 259.)—IV. Rutilius Taurus Æmilianus, the last of the Latin writers on agriculture. His work is entitled "De Re Rustica," and is divided into fourteen books. It contains maxims and apophthegms of ancient authors on this subject, and especially from Columella, who is often literally copied. Nevertheless, Palladius treats, in a much more exact manner than Columella, the respective heads of fruit-trees and kitchen-gardens, having followed in these the work of Gargilus Martialis.
What he states respecting the mode of preserving fruits, &c., is taken from the Greek Geoponica, of which he appears to have possessed a much more complete copy than the abridgment which has come down to us.

Of the fourteen books of his work, the first contains a general introduction; each of the twelve following bears the name of one of the months of the year, and treats of the labours proper to each season; the fourteenth book is a poem, in elegiac measure, on the graffity of trees. The style of Palladius is incorrect and full of neologisms. In his poems he displays some talent by the variety which he introduces in describing the operation of graving as suitable to different kinds of trees. He is, however, obscure, and too figurative. Critics have not been able to agree as to the period when this writer lived; some placing him at the beginning of the second century, others at the end of the fourth. Some suppose him to be St. Martin, the relative of whom the poet Rutilius speaks in his Itinerary (1, 208), while others very justly remark, in opposition to this, that the last-mentioned writer was a young Gaul, sent by his father to the capital of the empire, to study law there, whereas Palladius had possessions in Italy and Sardinia: they add, that the name of Palladius does not occur among those of the prefects and other high magistrates during the first half of the fifth century, while the titles of Vir illustrius, which the manuscripts give to our author, indicate that he was invested with some high official dignity. Wernsdorff has attempted another mode of ascertaining the age of Palladius. The fourteenth book of his work being dedicated to a certain Pasiphaeus, he has endeavoured to discover the period when this latter individual lived, whom Palladius styles a wise man, and whose fidelity he praises (ornatus fidei). Among his works, Marcellinus (29, 1), in an account of the conspiracy against Valens, which was discovered in 371, relates, that the proconsul Europius, who was among the accused, was saved by the courage of the philosopher Pasiphaeus, from whom the torture could wring no confession. These circumstances harmonize in some degree, according to Wernsdorff, with the epithets bestowed by Palladius on his friend; and if this is the same Pasiphaeus who, in 393, was rector of a presbytery, in Epirus, from a town of the same name (L. 8. — Cod. Theod., 1, 2, tit. 1), we may suppose that the fourteenth book of Palladius, where no allusion is made to this official rank, was written between 371 and 395. (Schöll, Hist. Lit. Rom., vol. 3, p. 243, seqq.)

Pallantium, an ancient town of Italy, in the vicinity of Reate, in the territory of the Sabines. It was said, in tradition, to have been founded by the Arcadians, and so united with the Aborigines. (Dion. Hal. 1, 14.) From it, according to some, the Palaistine Mount at Rome is said to have derived its name. (Varro, L. L. 4.) Holstenius (ad Steph. Byz., s. v.) thinks it must have occupied the site of Palzazza, on the hill called Ponte di Rieti. The real name of this place was Palacium, as appears from a rare coin published by Sestini from the Museo Fontana. (Classes Gen. seu Mon. Vet., p. 12.—Cramer's Anc. Greece, vol. 1, p. 317.)

Pallantia, I. a name of Aurora, as being related to the giant Pallas, whose cousin she was. Pallas was son of Creus (χρεις Kpeις), Aurora was daughter of Hyperion, and Hyperion and Creus were brothers, offspring of Ceos and Terra. (Hesiod, Theog., 134, 391, seqq. — Ovid. Fast., 4, 373.— Id., Met., 9, 420.— Id. ib., 14, 191.) II. An appellation given to the Tritons in Libya, because Minerva (Pallas) was fabled by some to have been first seen on its banks. (Pliny, 5, 4.—Mela, 1, 7.—Serv. ad Virg., En., 2, 171.)

Pallantium, the fifty sons of Pallas the brother of Aegeus, and next heirs to the latter if Theseus had not been acknowledged as his son. They had recourse to arms in order to enforce their claim to the sovereignty, but were defeated by Theseus. (Plut., Vit. Thes.)

Pallantium (Παλλαντίνων), a town of Arcadia, north-west of Tegea. The Romans affirmed, that from this place Evander led into Italy the colony which settled on the banks of the Tiber. (Pausan., 8, 43.— Enn., 54.—Plin. 4, 6.) Pallantium was subsequently united to Megalopolis, and became a Roman colony, but in the reign of Antoninus it was again restored to independence, and received other privileges from that emperor, in consideration of the ancient connexion which was supposed to exist between its inhabitants and the Romans. The vestiges of this town are discernible near the village of Thana, on the right of the road leading from Tripolis to Leontari. (Gell's Itin., p. 136.—Cramer's Anc. Greece, vol. 3, p. 349.)

Pallas (γεν. αδίδης), an appellation given to the goddess Minerva (Παλλάς Α'να—Pallas Athena). For a probable etymology of the term, consult remarks at the close of the article Minerva. The ordinary derivation makes the goddess to have obtained this name from having slain the Titan, or Giant, Pallas. (Vid. Pallas, —antis, I.)

Pallas (γεν. —αντίς). I. a son of Pandion, who became the husband of Clytem, Butes, and the "fifth Minerva," according to Cicero's enumeration. (N. D. 3, 23.) He was destroyed by his daughter for attempted violence to her person. (Cic. l. c.—Ovid. Met., 7, 500)—II. One of the Titans, but enumerated by Claudian (Gigantom., 94), and others, among the Giants. He was the son of Creus, and grandson of Celus and Terras, and was also cousin to Aurora. (Vid. Pallanias I.) III. King of Arcadia, the grandfather of the great-grandfather of King Evander. (Serv. ad Virg. Æn., 8, 54.)—IV. The son of Evander, according to Virgil. (Æn., 8, 104.) This poetic legends, however, made him the offspring of Hercules and Dyme the daughter of Evander. Pallas followed Æneas to the war against Turnus, by whose hand he fell, after having distinguished himself by his valour. The belt which Turnus tore from the body of the young prince, and wore as a trophy of his victory, was the immediately after his own death was gratefully received. Æneas in single combat, he had almost persuaded the victor to spare his life, when the sight of Pallas' belt rekindled the wrath of Æneas, and he indignantly slew the destroyer of his youthful friend. (Virg., Æn., 10, 439.—Id. ib., 12, 941.)

Pallene, a peninsula of Macedonia, one of the three belonging to the district of Chalcidice. It was situated between the Sinus Thermaicus and Gulf of Salonic, and the Sinus Torosanum or Gulf of Cassandria. This peninsula was said to have borne the name of Phlegra, and to have witnessed the conflict between the gods and the earth-born Titans. (Pind., Nem. 1, 100.—Id., Isth., 6, 47.—Lycephon., 1408.) It is connected with the mainland by a narrow isthmus of little more than two miles in breadth, on which once stood the rich and flourishing city of Potidæa. (Styl., Peripl., p. 26.) Among other towns on this peninsula Stephanus of Byzantium. (Cramer's Anc. Greece, vol. 1, p. 244.)

Palmária, a small island in the Tyrrhenian Sea, off the coasts of Latium and Campania, and south of the promontory of Circei. It is now Palmarola. (Plin., 3, 5.)

Palmira, a celebrated city of Asia, situate in an oasis of the Syrian desert, nearly half way between the Orontes and Euphrates, and about 140 miles east-northeast of Damascus. Its Oriental name was Tadmor, which, according to Josephus, signifies the same as Palmira, "the place of palm-trees." There seems to be sufficient evidence that the Palmira of the
The Greeks was the "Tadmor in the wilderness" built by Solomon: from which two things may be inferred; first, that this monarch extended his arms and his ter-

ditory thus far; and, secondly, that he must have had some adequate object for so doing, and for main-

	aining an establishment and erecting a city, at incredible pains and expense, on a spot so remote from the habitable

grounds of the desert. The city of Palmyra's being situated in a oasis, sheltered by hills to the west and northwest, and supplied with wholesome wa-

ter, and also on a line leading from the coast of Syria to the regions of Mesopotamia, Persia, and India, must have pointed it out, in very early times, to the caravans, as a convenient halting-place in the midst of the desert. The Phoenicians, in all probability, were

familiar with the idea of establishing an emporium here. We read in the second book of Chronicles (8, 4), that Solomon "built Tadmor in the wilderness, and all the store-cities which he built in Hamath." Hamath was a town and territory extending along the banks of the Orontes, and bordering on the Syrian desert. After this, we read no more of Tadmor in the Scriptures; but John of Antioch, probably from some traditions communicated by Nestorius, writes that it was destroyed by Nebuchadnezzar. The first notice which we have of it in Roman history is at the commencement of the war with the Parthians, when we find it mentioned as a rich and powerful city, and permitted to maintain a state of independence and neutrality between the con-

tending parties in this struggle. Marc Antony, indeed, attempted to plunder it, but the inhabitants removed their most valuable effects over the Euphrates, and de-

dended the passage of the river by their archers; and when he pretended he made use of, to give such conduct a colour of justice, was, that they did not preserve a strict neu-

trality; but Appian says his real motive was to en-

rich his troops with the plunder of the Palmyrenes. In the time of Pliny it was the intermediate emporium of the trade with the East, a city of merchants and factors, who carried on traffic with the Parthians on the one hand, and the Romans on the other. The produce of pomegranates, figs, and its canals, were brought by a Roman way to Palmyra, through Palmyra. Pliny has very happily collected in a few lines the most striking circumstances with re-

gard to this place, except that he takes no notice of the buildings. "Palmyra is remarkable for situation, a rich soil and pleasant streams; it is surrounded on all sides by a vast sandy desert, which totally separates it from the rest of the world, and has preserved its in-

dependence between the two great empires of Rome and Parthia, whose first care when at war is to engage it in their interest." Palmyra afterward became alli-

eed to the empire as a free state, and was greatly fa-

voured by Hadrian and the Antonines, under whom it attained its greatest splendour. We find, from the inscrip-

tions, that the Palmyrenes joined Alexander Severus in his expedition against the Persians. We do not meet with the mention of the city again until the reign of Gallienus, when it makes a principal fig-

ure in the history of those times. By a few years the city had experienced the greatest vicissitudes of good and bad fortune. After attaining to a widely-extended sway under Odenatus and his queen Zenobia, who survived him, it fell at length, together with the latter, under the power of Aurelian. (Vid. Odenatus, and Zeno-

bia.) A revolt, on his departure, compelled him to return, and, having retaken the city, he delivered it without mercy to the pillage. Then the ruins of the city were destroyed, though some were damaged, by the soldiers of Aurelian. From this time Palmyra had a Roman governor. The first Ilyrian legion was stationed here about A.D. 400. But Procopius states that the place had been for some time almost desert, when Justinian repaired the town, and supplied it with water for the use of a garrison which he left there. We hear no more of Palmyra in the Roman history, and the ecclesiastical historians supply us with no information respecto its subsequent fortunes. The Moslems are said to have made it a demesne under the name of the governor of Palmyra's successor. That it has been made use of as a place of strength by the Saracens and Turks appears from the alterations made in the temple, as well as from the modern temple on the hill. Benjamin of Tudela, who visited it about A.D. 1172, states that it then contained about 2000 Jews. Abulfeda, who wrote about 1321 A.D., mentions very briefly its situation, refer-

ting to its many ancient columns, its palm and fig trees, its walls and castle; he only calls it Todros. The ancient ruins of Palmyra are said to present a fine view at a distance, but disappointment succeeds when they are examined in detail. "On opening upon the ruins of Palmyra," says Captain Mangles, "as seen from the valley of the tombs, we were much struck with the picturesque effect of the whole, presenting altogether the most imposing sight of the kind we had ever seen. It was rendered doubly interesting by our having trav-

eleried for more than twenty hours in a row, and the view we suddenly opened upon these immemorial columns and other ruins, on a sandy plain on the skirts of the desert. So great a number of Corinthian columns, mixed with so little wall or solid building, and the snow-white appearance of the ruins contrasted with the yellow sand, produced a very striking im-

pression." Great, however, he proceeds to say, was the disappointment of himself and his fellow-traveler Mr. (Irby), when on a more careful examination, they found that there was not a single column, pediment, architrave, portal, frieze, or other architectural rem-

nant worthy of admiration. None of the columns ex-

ceeded forty feet in height or four feet in diameter; those of the boasted avenue have little more than thirty feet of altitude; whereas the columns of Bal-

bec are nearly sixty feet in height and seven in di-

ameter, supporting a most rich and beautifully-wrought epistyle of twenty feet in height, and the pillars of the temple of Thebes, constructed of only three pieces of stone, while the smallest columns at Palmyra are formed of six, sev-

en, and eight parts. In the centre of the avenue, however, are four granite columns, each of one sin-

gle stone, about thirty feet high: one only is still standing. "Take any part of the ruins separately," says this traveller, "and they excite but little inter-

est; and, altogether, we judged the visit to Palmy-

ra hardly worthy of the time, expense, anxiety, and fatiguing journey through the wilderness which we had undergone to visit it. The projecting pedestals in the centre of the columns of the great avenue have a very unsightly appearance. There is also a great sameness in the architecture, all the capitals being Corinthian, excepting those which surround the Temple of the Sun. These last were fluted, and, when decorated with their brazen Ionic capitals, given very hard and con-

structed of only three pieces of stone, while the smallest columns at Palmyra are formed of six, sev-

en, and eight parts. In the centre of the avenue, how-

ever, are four granite columns, each of one sin-

gle stone, about thirty feet high: one only is still standing. "Take any part of the ruins separately," says this traveller, "and they excite but little inter-

est; and, altogether, we judged the visit to Palmy-

ra hardly worthy of the time, expense, anxiety, and fatiguing journey through the wilderness which we had undergone to visit it. The projecting pedestals in the centre of the columns of the great avenue have a very unsightly appearance. There is also a great sameness in the architecture, all the capitals being Corinthian, excepting those which surround the Temple of the Sun. These last were fluted, and, when decorated with their brazen Ionic capitals, given very hard and con-

structed of only three pieces of stone, while the smallest columns at Palmyra are formed of six, sev-

en, and eight parts. In the centre of the avenue, how-

ever, are four granite columns, each of one sin-

gle stone, about thirty feet high: one only is still standing. "Take any part of the ruins separately," says this traveller, "and they excite but little inter-

est; and, altogether, we judged the visit to Palmy-

ra hardly worthy of the time, expense, anxiety, and fatiguing journey through the wilderness which we had undergone to visit it. The projecting pedestals in the centre of the columns of the great avenue have a very unsightly appearance. There is also a great sameness in the architecture, all the capitals being Corinthian, excepting those which surround the Temple of the Sun. These last were fluted, and, when decorated with their brazen Ionic capitals, given very hard and con-

structed of only three pieces of stone, while the smallest columns at Palmyra are formed of six, sev-

en, and eight parts. In the centre of the avenue, how-

ever, are four granite columns, each of one sin-

them as hardly repaying the toils and expense of the journey, it must be recollected that he was already satisfied with the wonders of Egypt. Yet, taken as a tout ensemble, he admits that they are more remarkable by reason of their extent (being nearly a mile and a half in length), than any which he had met with; they have the advantage, too, of being less encumbered with modern fabrics than almost any ancient ruins. Exclusive of the Arab village of Tadmor, which occupies the peristyple court of the Temple of the Sun, and the Turkish burying-place, there are no obstructions whatever to the antiquities. The temple itself is disfigured, indeed, by modern works, but it is still a most majestic object. The natives firmly believe, Mr. Wood, it was used for Socrates' fountain at the works of King Solomon. "All these mighty things," say they, "Solyman Ebn Daoud (Solomon the son of David) did by the assistance of spiritus." King Solomon is the Merlin of the East, and to the genius in his service the Persians as well as the Arabs ascribe all the magnificent remains of ancient art. From the dates in the inscriptions, in which the era of Seleucus is observed, with the Macedonian names of the months, it is evident that the temple was not the more than the birth of Christ; nor is there any inscription so late as the destruction of the city by Aurelian, except one in Latin, which mentions Dioclesian. "As to the age of those ruinous heaps," says Mr. Wood, "which belonged evidently to buildings of greater antiquity than those which are yet partly standing, it is difficult even to guess; but if we are allowed to form a judgment by comparing their state with that of the monument of Lamba at Pri- myra, we must conclude them extremely old: for that building, erected 1750 years ago" (Mr. Wood published in 1753), "is the most perfect piece of antiquity I ever saw." (Mansfield's Scripture Gazetteer, p. 451, seqq. — Modern Traveller, part 5, p. 10, seqq.)

Pamisos, I. a river of Thessaly, now the Panarti, falling into the Pusos to the west of Troct, (He- rod., 7, 132.)—II. Major, a river of Messenia, falling into the Sinus Messeniacus at its head. It is now the Pimatzo. (Wadpole, vol. 2, p. 35.) Pausanias affirms, that the waters of this river were remarkably pure, and abounded with various kinds of fish. He adds, that it was navigable for ten stadia from the sea (4, 34.—Compare Polyb., 16, 16.)—III. A torrent of Messenia, falling into the Sinus Messeniacus near Lacedaemon, and forming the remaining boundary between Laconia and Messenia. (Strab., 361.)

Paphia, a Grecian female, whom Photius makes a native of Egypt, but who, according to Suidas, Diogenes Laertius (1, 24), and others, was born at Epidauros in Argolis. She wrote several works, the contents of which were chiefly historical. One of these was entitled Ἐντοιχία ἑτοιμεῖα (Historical Abridgment). Another, which Photius has made known to us, is called Ἄνων ιστορίας (Historical Miscellany). It was a species of note or memorandum book, in which this female regularly inscribed, every day, whatever she heard most deserving of being remembered, in the conversations between her husband Socraticus and the literary friends who visited his house, and also whatever she had met with worthy of being recorded, in the course of her historical researches. (Phot., 1, 17, p. 177.—Silig., Diet. Art., s. v.)—III. A bishop of Caesarea in Palestine, and the intimate friend of Eusebius, who, in memory of him, appended "Pamphylia" (i. e., the friend of Pamphylus) to his own name (vid. Eusebius). He is said to have been born at Berytos, and educated by Pierius. He spent the greater part of his life in Caesarea, where he suffered martyrdom in the year 299. For seven years before, this same profound learning, and devoted himself chiefly to the study of the Scriptures and the works of the Christian writers. Jerome states, that he wrote out with his own hand the greater part of Origen's works. He founded a library at Caesarea, chiefly consisting of ecclesiastical works, which became celebrated throughout the ancient world. It was destroyed, however, before the middle of the seventh century. Both Eusebius and Jerome
speak in the highest terms of his piety and benevo-

lence. Jerome states, that Pamphilus composed an

apology for Origen, before the death of the

apologist, and that he wrote anything except short letters to his friends.

The truth seems to be, that the first five books of the

"Apology for Origen" were composed by Eusebius and Pamphilus jointly, and the sixth book by Euse-

bius alone. On the death of the latter work, which Pamphilus effected in conjunction with Eusebius, was an edition of the Septuagint, from

the text in Origen's Hexapla. This edition was generally used in the Eastern church. Montfaucon and Fabricius have published "Contents of the Acts of the Apostles" as a work of Pamphilus; but this is in all probability the work of a later writer. Eusebius wrote a "Life of Pamphilus," in three books, which is now entirely lost, with the exception of a few frag-

ments, and even of these the genuineness is extremely doubtful. We have, however, notices of him in the "Ecclesiastical History" of Eusebius (7, 32), and in the "De Viris Illustris," and other works of Je-

rome. (Lardner's Credibility, pt. 2, c. 59.)

PAMPHILUS, an early Athenian bard, and a disciple, as

was said, of Linus. Philostratus has preserved two rem-

nants of musical compositions handed down to him, which was a symbol under which the Egyptians typified the Crea-

tor of the universe, or the author of animal life. The

lines are as follows:

Ζεὶ, κοίματε, μέγισται θεοί, ελεύθερος κόσμω

Μηραῖ τε και ἀπειρεί καὶ ἱμωνίς,

"Oh Gods, most glorious, most mighty of the gods,

thou the art enveloped in the dung of sheep, and

horses, and mules." (Philostr., Heroic, c. 2, p. 98, ed.

Boissonade.) — According to Pausanias (9, 27),

Pamphilus composed hymns for the Lycomedes, a fam-

ily which held by hereditary right a share in the Eleu-

sinian worship of Ceres. Pamphilus is said to have

first sung the strain of lamentation at the tomb of Li-

mus. (Scholl, Hist. Lit. Gr., vol. 1, p. 33.—Müller, Hist.

Lit. Gr., p. 25.)

PAMPHYLIA (Παμφυλία), a province of Asia Minor,

extending along the coast of the Mediterranean from

Olbia to Ptolemais, and bounded on the north by Pi-

sidia, on the west by Lycia and the southwestern part

of Phrygia, and on the east by Cilicia. Pliny (5, 26) and Mela (1, 14) make Pamphylia begin on the coast at Phaselis, which they reckon a city of Pamphy-

lia, but the majority of writers speak of it as a Lycian
city. Pamphylia was separated from Pisidia by Mount Taurus, and was drained by numerous streams which flowed from the high land of the latter country. The

eastern part of the coast is described by Captain Beau-

fort as flat, sandy, and dreary; but this remark does not

apply to the interior of the country, which, accord-

ing to Mr. Fellows' account (Excursion in Asia Minor,

p. 204), is very beautiful and picturesque. The wes-

tern part of the coast is surrounded by lofty mountains which separate it from the sea, and attains its highest point at height in Mount Solyma, on the eastern borders of Lycia. The

western part of the country is composed, according to Mr. Fellows (p. 184), "for thirty or forty miles, of a

mass of incrusted or petrified vegetable matter, lying

imbossomed, as it were, in the side of the high range of

marble mountains which must originally have formed the

coast of this country. As the streams, and, in

deed, large rivers which emptied themselves into the

sea, they formed this porous mass, they almost totally disappear beneath it; a few little streams only are

kept on the surface by artificial means, for the pur-

pose of supplying aqueducts and mills, and, being car-

ried along the plain, fall over the cliffs into the

sea. The course of the rivers beneath these deposited plains

is continued to their termination at a short distance

out at sea, where the waters of the rivers rise abun-

dantly all along their coasts, under the influence of the

wind, of a quarter of a mile from the shore." (Encycl. U. Knoel., vol. 17, p. 177.)—The Greeks, ever prone to those
derivations which flattered their national vanity, attached to the word "Pamphylia" (Παμφύλια) that which means the component words παῖς and φύλος

would in their language naturally convey, namely, "an

assemblage of different nations." (Strab., 668.) It

was a name of Lycia necessary to account for the im-

portation of Greek terms among a people as barba-

rous as the Carians, Lycians, and other tribes on the

same line of coast; and the siege of Troy, so fertile a

source of fiction, gave rise to the tale which supposed

Calchas and Amphipolchus to have settled on the Pam-

phylian shores with portions of various tribes of the

Greeks. This story, which seems to have obtained

general credit, is to be traced, in the first instance, to

the father of history (Herod., 7, 91), and after him it has been repeated by Strabo (l. c.), Pausanias (7, 3),

and others. Of the Greek origin of several towns on the Pamphylian coast we can indeed have no doubt; but there is no reason for supposing that the main popu-

lation of the country was of the Hellenic race. It is

more probable that they derived their origin from the

Cilicians or the ancient Solyms. Other etymologies

had been suggested. The term "Pamphylia" is proba-

bly a corruption of Pamphilus, or a form of the

Pamphilos, of which the Greek poet Mosopes, proba-

bly celebrated, was possessed. The etymology has little

interest in an historical point of view. It became

subject in turn to Crusæus, the Persian monarchs, Al-

exander, the Ptolemies, Antiochus, and the Romans.

The latter, however, had considerable difficulty in ex-

tirpating the pirates, which swarmed along the whole of the

coast, and bore the name of Asia Minor, which sounds as

insult the galleys of those proud republicans off the

shores of Italy, and in sight of Ostia. Pamphylia was en-

tirely a maritime country: its coast is indented by a
deep gulf, known to the ancients by the name of Mare

Pamphylicum, and in modern geography it bears that of

"Gulf of Attalia." The Turks call this part of Cara-

manea by the appellation of Tekê-His. (Cramer's Asia

Minor, vol. 2, p. 273, seq.) Mr. Leake gives the follow-

ing account of the natural features of part of this coun-

try, which may be compared with that of Mr. Fell-

ows. From Alaya (the ancient Coracesium) to

Alara (the ancient Ptolemais) are eight reputed or car-

avan hours. The road leads along the seashore, some-
times just above the seashore, upon high woody

banks, connected on the right with the great range of

mountains which lies parallel to the coast; at others,

across narrow fertile valleys, included between branch-

es of the same mountains. There are one or two fine

harbours, formed by islands and projecting capes; but

the coast for the most part is rocky and without shel-

ter. From Alara to Menagat (situate near the mouth

of the ancient Melas) the road proceeded at a distance of three or four miles from the sea, crossing several fertile and well-cultivated valleys, and passing some

points where the mountains, and ravines were occu-

pied by streams coming from a range of lofty mount-

ains, appearing at a great distance on the right." (Lea-

ke's Journal, l. c.)—The Melas is described as a large river, and the adjacent valleys as well-cultivated and inhabited. From Menagat to Dashaher (the

ancient Syarium) the country is represented as be-

ing a succession of fine valleys, separated by ridges

branched from the mountains, and among which is a

stream of greater or less magnitude. (Leake's Jour-

nal, l. c.)

PAN (Πάν), the god of shepherds, and in a later age

the guardian of bees, and the giver of success in fish-

ing and fowling. He haunted mountains and pastures,

was fond of the pastoral recit and of entrapping nymphs.
In form he combined that of man and beast, having a red face, horned head, his nose flat, and his legs, thighs, tail, and feet those of a goat. His voice was described as being offered to him. This is not understood by Homer. He was visited by Pan. He was the son of Mercury by an Arcadian nymph. (Hom., Hymn., 19.) So monstrous was his appearance, that the nurse, on beholding him, fled away in affright. Mercury, however, immediately caught him up, wrapped him carefully in a hare-skin, and carried him away to Olympus: then taking his seat with Jupiter and the other gods, to his gods, and especially Bacchus, were delighted with the little stranger; and they named him Pan (i.e., "All"), because they had charmed them all! — Others fabled that Pan was the son of Mercury by Penelope, whose love he gained under the form of a goat, as she was tending in her youth the flocks of her father on Mount Taygetus. (Herod., 2, 145.—Schol. ad Theocr., 7, 109.—Eudocia, 323.—Tzetzes, ad Lycopeir., 772.) Some even went so far as to say that he was the offspring of the amours of Penelope with all her suitors. (Schol. ad Theocr., 1, 3.—Eudocia, t. c.—Serv. ad Aen., 2, 44.) According to Epimenides (Schol. ad Theocr., l. c.), Pan and Arcas were the children of Jupiter and Callisto. Aristippus made Pan the offspring of Jupiter and the nymph Céneis; others, again, said that he was a child of Heaven and Earth. (Schol. ad Theocr., 7, 123.) There was also a Pan said to be the son of Jupiter and the nymph Ama, or the nymph Ama, the see-structurer of Apollo in divination. (Apolloid., 1, 4.)

—The worship of Pan seems to have been confined to Arcadia till the time of the battle of Marathon, when Philippiades, the courier who was sent from Athens to Sparta to call on the Spartans for aid against the Persians, declared that, as he was passing by Mount Parthenius, near Tegesa in Arcadia, he heard the voice of Pan calling to him, and desiring him to ask the Athenians why they paid no regard to him, who was always, and still would be, friendly and willing to aid. After the battle, the Athenians consecrated a cave to Pan under the Acropolis, and offered him annual sacrifices. (Herod., 6, 105.—Plut., Vit. Arist., 11.) Long before this, the Grecian and Egyptian sys-tems of religion had begun to mingle and combine.

The goat-formed Mendes of Egypt was now regarded as identical with, and the mode of worship of the Arcadian herdsmen (Herod., 2, 46); and Pan was ele-vated to great dignity by priests and philosophers, be-coming a symbol of the universe, for his name signified all. Moreover, as he dwelt in the woods, he was called "Lord of the Hyle" (O τῆς θάλας κύριος); and as the word hyle (θύλη), by a lucky ambiguity, signified either wood or primitive matter, this was another ground for exalting him. It is amusing to read how all the attributes of the Arcadian god were made to accord with this notion. "Pan," says Servius, "is a rustic god, formed in similitude of nature, whence he is called Pan, i. e., Alt: for he has horns, in simili-tude of the rays of the sun and the horns of the moon; his face is ruddy, in imitation of the ether; he has a spotted fawnskin upon his breast, in likeness of the stars; his lower parts are shaggy, on account of the trees, shrubs, and wild beasts; he has goat's feet, to denote the stability of the earth; he has a pipe of seven reeds, on account of the harmony of the heav-ens, in which there are seven sounds; he has a crook, that is, a curved staff, on account of the year, which runs back on itself, because he is the god of all nature. It is feigned by the poets that he struggled with Love, and was conquered by him, because, as we read, Love conquers all. "Omnis vincit amor." (Serv. ad Virg., Eclog., 1, 25, Schol. Heid.) —In Arcadia, his native country, Pan appears never to have attained to such distinction; on the contrary, we find in Theocritus (7, 106) a ludicrous account of the treatment which this deity received from the Arcadians when they were unsuccessful in hunting. (SchoL. ad Theocr., l. c.)—The Homerid already quoted, who is older than Pindar, described in a very pleasing manner the occupations of Pan. He is lord of all the hills and dales: sometimes he ranges along the tops of the mountains, sometimes pursues the game in the valleys, roams through the woods, floats along the streams, or drives his sheep into a cave, and there plays on his reeds, producing music not to be excelled by that of the bird — which, among the leaves of this annual spring, laments, pouring forth her moan, a sweet-sounding lay. In after times, and we have already remarked, the care of Pan was held to extend beyond the herds. We find him regarded as the guardian of the beasts (Anthol., 9, 226), and as the goer of success in fishing and fowling. (Anthol., 7, 11, seqq.; 179, seqq.)—The origin of the syrinx or pipe of Pan is given as follows: Syrinx was a Naiad, of Nonaercis in Arcadia, and devoted to the service of Diana. As she was returning one day from the chase, and was passing by Mount Lycaeus, Pan beheld her: but when he would address her, she fled. The god pursued: she reached the river Lado, and, unable to cross it, implored the aid of her sister-nymphs; and when Pan thought to grasp the object of his pursuit, he found his arms filled with reeds. While he stood sighing at his disappointment, the wind began to agi-tate the reeds, and produced a low musical sound. The god then took this reed, and formed a pipe, made from them his syrinx (σίριγξ) or pastoral pipe. (Od., Met., 1, 690, seqq.) Another of his loves was the nymph Pitys, who was also beloved by Boreas. The nymph favoured more the god of Arcadia, and the wind god, in a fit of jealousy, blew her down from the summit of a lofty rock. A tree of her own name (πηντρο, πῦνη) sprang up where she died, and it became the favourite plant of Pan. (Nonnus, 260, seqq.—Geopon., 11, 4.) — What are called Pan's pipes were ascribed to Pan; for loud noises, whose cause could not easily be traced, were not unfrequently heard in mountainous regions; and the gloom and loneliness of forests and mountains fill the mind with a secret horror, and dispose it to superstitious apprehensions. — The ancients had two modes of representing Pan: the first, according to the description already given, as horned and goat-formed; but not now by artists, however, sought to soften the idea of the god of shepherds, and they portrayed him as a young man hardened by the toils of a country life. Short horns sprout on his forehead to characterize him, he bears his crook and his syrinx, and he is either nak-ed, or clad in the light cloak denominated chlamys. (Sil. Ital., 13, 326, seqq.) Like many other gods who were originally single, Pan was multiplied in course of time, and we meet with Pan in the plural. (Plat., Leg., 7, 815.—Aristoph., Eccles., 1089.—Moceus, 3, 22.) — The name Pan (Πάν) is probably nothing more than παῖς, "feeder" or "owner" — Buttmann connects Pan with Apollo Nomius, regarding his name as the contraction of Pana (Πάνα). (SchoL. ad Theocr., l. c.), and, in support of his opinion, to the forms Alemman from Ale-mann, Amthan from Amythax, &c. (Mythologus, vol. 1, p. 169.) This, however, is the derivation of the reeds, and not after all time. The name Pan is the derivation of Pan from Pan, as first given. Welcker says that Pan was the Arcadian form of Πάν, *Pan (Phaon, Phan), apparently regarding him as the sun. (Welcker, Kret. Kol., p. 45.—Schween., Am dent., p. 213,—Keightley's Mythology, p. 229, seqq.)

Panagia, a daughter of Ἀσκαλούσης. (Vid. Ἀσκαλούσης.)

Pameus, a Greek philosopher, a native of Rhodes. —Pameus was born under Diogenes the Stoic, and afterward came to Rome, about 140 B.C., where he gave lessons in philosophy, and was intimate with Scipio Aemilianus, the younger Lelius, and Polybius.
After a time Panathenius returned to Athens, where he became the leader of the Stoic school, and where he died at a very advanced age. Posidonius, Scylax of Halicarnassus, Hecaton, and Menarchus are mentioned among his disciples. Panathenius was not apparently a strict Stoic, but rather an eclectic philosopher, who tempered the austerity of his sect by adopting something of the more refined style and milder principles of Plato and the other earlier Academicians. (Cic., de Fin., 4, 29.) Cicero, who speaks repeatedly of the works of the highest generation, and acknowledges that he borrowed much from them, says that Panathenius styled Plato "the divine," and the "Homer of Philosophy," and only disserted from him on the subject of the immortality of the soul, which he seems not to have admitted. (Tusc. Quest., 1, 32.) Aulus Gellius says (12, 5) that Panathenius rejected the principle of apathy adopted by the later Stoics, and returned to Zeno's original meaning, namely, that the wise man ought to know how to master the impressions which he receives through the senses. In a letter of consolation which Panathenius wrote to Q. Tubero, mentioned by Cicero (De Fin., 4, 9), he instructed him how to endure pain, but he never laid it down as a principle that pain was not an evil. He was very temperate in his opinions, and he often replied to difficult questions with modest hesitation, saying, έτιπου, "I will consider." — None of the works of Panathenius have come down to us; but those titles, and a few sentences from them, are quoted by Cicero, Diogenes Laertius, and others. He wrote a treatise "On Duties," the substance of which Cicero merged in his own work "De Officiis." Panathenius wrote also a treatise "On Divination," of which Cicero probably made use in his own work on the same subject. He wrote likewise a work "On Tranquillity of Mind," which some suppose may have been made use of by Plutarch in his work both with the same title. Cicero mentions also a treatise "On Providence," another "On Magistrates," and one "On Heresies," or sects of philosophers. His book "On Socrates," quoted by Diogenes Laertius, and by Plutarch in his "Life of Aristeides," made probably a part of the last-mentioned work. Laertius and Seneca quote several opinions of Panathenius concerning ethics and metaphysics, and also physics. (Encycl. Us. Kanet., vol. 17, p. 178.—Van Lynden, Resp. Historico-Crit. de Panaetius. Socrates.—De la Rochette, Melanges, &c., vol. 1, Paris, 1812.)

Panathenea (Παναθηναία), the greatest of the Athenian festivals, was celebrated in honour of Minerva (Athens) as the guardian deity of the city. It is said to have been instituted by Erechthonius, and to have been called originally Athenea (Ἀθηνα) but it obtained the name of Panathenaea in the time of Theseus, in consequence of his uniting into one state the different independent communities into which Athens had been previously divided. (Pausan., 8, 2, 1.—Plut., Vit. Thes., c. 20.—Thucyd., 2, 15.) There were two Athenian festivals which had the name of Panathenaeas; one of which was called the Great Panathenaea (Μεγάλα Παναθηναϊκά), and the other the Less (Μικρά). The Great Panathenaea was celebrated once every five years, with very great magnificence, and attracted spectators from all parts of Greece. Large processions decorated every part of the Piræus. (Harrov., s. v. Παναθ.—Plut., Rep., 1, 1.) When the Greeks write speak simply of the festival of the Panathenaea, it is sometimes difficult to determine which of the two is alluded to; but when the Panathenaea is mentioned by itself, and there is nothing in the context to mark the contrary, the presumption is that the Great Panathenaea is meant; and it is thus spoken of by Herodotus (5, 56) and Demosthenes (De Falsa Leg., p. 294).—The Great Panathenaea was celebrated on the 28th day of Hecatombeion (Clinton, Fast. Hell., vol. 1, p. 325), the first of the Athenian months; which agrees with the account of Demosthenes (contra Timocr., p. 708, seq.), who places it after the twelfth day of the month. There is considerable dispute as to the time when the Lesser Panathenaea was celebrated. Meursius places the celebration in Thargelion, the eleventh of the Athenian months; but Petitius and Corsini in Hecatombeon. Mr. Clinton, who has examined the subject at considerable length (Fast. Hell., vol. 1, p. 322, seq.), supports the opinion of Meursius; and it does not appear improbable that the Lesser Panathenaea was celebrated in the same month as the Great, and was perhaps omitted in the year in which the great festival occurred. The celebration of the Great Panathenaea only lasted one day in the time of Hipparchus (Thucyd., 6, 56), but it was continued in later times for several days.—At both of the Panathenaea there were gymnastic contests (Pind., Isthm., 4, 42.—Polite., 8, 93), among which the torch-race seems to have been very popular. In the time of Socrates there was introduced at the Lesser Panathenaea a torch-race on horseback. (Plat., Rep., 1, 1.) At the Great Panathenaea there was also a musical contest, and a recitation of the Homeric poems by rhapsodists. (Lycurg., contra Leocr., p. 209.) The victors in these contests were rewarded with vessels of sacred oil. (Pind., Nem., 10, 64.—Schol. ad loc.—Schol. ad Soph., (Ed. Col., 698).—The most celebrated part, however, of the grand Panathenaea was the solemn procession by which the Peisistratian or sacred robe of Athena, was carried through the Ceramicus, and the other principal parts of the city, to the Parthenon, and suspended before the statue of the goddess within. This Peisistrus was covered with embroidery (ποιημένα), a.—Plat., Euthyp., c. 6), on which was represented the battle of the Gods and the Giants, especially the exploits of Jupiter and Minerva (Plat., i. c.—Eur., Fr., 127), a procession of the gods and heroæ in the Attic mythology, whereas Aristophanes speaks of "men worthy of this land and of the Peisistrus." (Equit., 564.) The embroidery was worked by young maidens of the noblest families in Athens (called Παναθηναίας), of whom two were superintendents, with the name of Arephora. When the festival was celebrated, the Peisistrus was brought down from the Acropolis, where it had been worked, and was suspended upon the Peisistratian b as it were a glory over the city, and then drawn through the principal parts of the city. The old men carried olive-branches in their hands, whence they were called Thallophori (Τάλλοφοροι); and the young men appeared with arms in their hands, at least in the time of Hipparchus (Thucyd., 6, 65). The young women carried baskets on their heads, whence they were called Canephoroi (Κανεφόροι). The sacrifices were very numerous on this occasion. During the supremacy of Athens, every subject state had to furnish an ox for the festival. (Schol. ad Aristoph., Nub., 385.) It was a season of general joy; even prisoners were accustomed to be liberated, that they might take part in the general rejoicing. (Schol. ad Demosth., Timocr., p. 184.) After the battle of Marathon, it was usual for the herald at the Great Panathenaea to pray for the good of the Plataeans as well as the Athenians, and每逢 every subject state had to adorn the procession. In the last memorable fight. The procession which has just been described formed the subject of the bas-reliefs which embellished the exterior of the Parthenon, and which are generally known by the name of the Panathenaeic frieze. A considerable portion of this frieze, which is one of the most splendid of the ancient works of art, is now in the British Museum, and belongs to the collection called the "Elgin Marbles." —A full and detailed account of the Panathenaeic festivals given by Meursius in a treatise on the subject, which is printed in

Pandæa, a fabled island in the Eastern or Indian Ocean, which Euhemerus pretended to have discovered, and to have found in its capital, Panaura, a temple of the Triphylian Jupiter, containing a column inscribed with the date of the births and deaths of many of the gods. (Vid. Euhemerus.)—Virgil makes mention of Pandæa and its "turrisa arenae." (Georg., 2, 139.) The poet borrows the name from Euhemerus, but evidently refers to Arabia Felix. (Compare Heyne and Von, ad loc.)

Pandærus, son of Lyconus, and one of the chieftains which Euhemerus pretended to have discovered, and to have found in its capital, Panaura, a temple of the Triphylian Jupiter, containing a column inscribed with the date of the births and deaths of many of the gods. (Vid. Euhemerus.)—Virgil makes mention of Pandæa and its "turrisa arenae." (Georg., 2, 139.) The poet borrows the name from Euhemerus, but evidently refers to Arabia Felix. (Compare Heyne and Von, ad loc.)

Pandæus, son of Lyconus, and one of the chieftains which Euhemerus pretended to have discovered, and to have found in its capital, Panaura, a temple of the Triphylian Jupiter, containing a column inscribed with the date of the births and deaths of many of the gods. (Vid. Euhemerus.)—Virgil makes mention of Pandæa and its "turrisa arenae." (Georg., 2, 139.) The poet borrows the name from Euhemerus, but evidently refers to Arabia Felix. (Compare Heyne and Von, ad loc.)

The banks of the "Asopus in Mycia, and was famed for his skill with the bow." (II. 2, 824, seqq.) It was Pandæus that fought the truce between the Greeks and Trojans by wounding Menelaus. (Ill. 4, 93, seqq.) He was afterward slain by Diomedes. (II. 5, 590.) In one part of the Iliad (5, 105) he is spoken of as coming from Lycia, but the Lycia there meant is only a part of Troas, forming the territory around Zelea, and inhabited by Lycian colonists. (Consult Eustath. ad II., 2, 824.—Heyne, ad loc.)

Pandæra, an island in the Mare Tethys, in the Sinus Puteolanus, on the coast of Italy. It was the place of banishment for Julia, the daughter of Augustus, and many others. It is now Isola Vandotina. (Iliad, 33, 14.— Met, 2, 7.—Pliny, 3, 6.—Ibn. Marz., 515.)

Pandion, I., an early king of Athens, belonging to mythology rather than to history. He was the son of Eriochthonius, and succeeded his father in the kingdom. In his reign Ceres and Bacchus are said to have come to Attica. The former was entertained by Celesus, the latter by Icarus. Pandion married Heuxippe, the sister of his mother, by whom he had two sons, Eriochthonus and Butes, and two daughters, Proce and Philomela. Pandion was a rival of Theseus with respect to boundaries, he called to his aid Tereus, the son of Mars, out of Thrace; and, having, with his assistance, come off victorious in the contest, he gave him his daughter Proce in marriage, by whom Tereus had a son named Itys. The tragic tale of Proce and Philomela is related elsewhere. (Vid. Philomela.)

Pandion is said to have died of grief at the misfortunes of his family, after a reign of 40 years. He was succeeded by Butes. (Arg., 3, 14, 5, seqq.)

The visit paid by Ceres and Bacchus to Attica, during the reign of Pandion, refers merely to improvements in agriculture which were then introduced. (Wordsworth's Greece, p. 96) II. The second of the name, was also king of Attica, and succeeded Cecrops II., the son of Eriochthonus. He was expelled by the Melionides, and retired to Megara, where he married Pyila, the daughter of King Pylos. This last-mentioned monarch, according to Ovid, was put out of office by his brother Bias, resigned Megara to his son-in-law, and, retiring to the Peloponnesus, built Pylos Pandion had four sons, Ægeus, Pallas, Nius, and Lycus, who conquered and divided among them the Attic territory. Ægeus, as the eldest, having the supremacy. (Apoll., 3, 15, 4.—Consult Heyne, ad loc.)

Pandora, the first created female, and celebrated in the most widely differing future, is regarded as having been the cause of the introduction of evil into the world. Jupiter, it seems, incensed at Prometheus for having stolen the fire from the skies, resolved to punish men for this daring deed. He therefore directed Vulcan to knead earth and water, to give it human voice and strength, and to make it assume the fair form of a virgin like the immortal goddesses. He desired Minerva to endow her with artist-knowledge, Venus to give her beauty, and Mercury to inspire her with an impudent and artful disposition. When formed, she was attired by the Seasons and Graces, and each of the deities having bestowed upon her the commanded gifts, she was named Pandora (All-gifted—Pandora, pandros, and Saf, a gift). Thus furnished, she was brought by Mercury to the dwelling of Epimetheus; who, though his brother Prometheus had warned him to be on his guard, and to receive no gifts from Jupiter, dazzled with her charms, took her into his house and made her his wife. The evil effects of this imprudent step were speedily felt. In the dwelling of Epimetheus stood a closed jar, which he had been forbidden to open. Pandora, under the influence of female curiosity, overturning the injunction, seized the lid, and all the evils hitherto unknown to man poured out, and spread themselves over the earth. In terror at the sight of these monsters, she shut down the lid just in time to prevent the escape of Hope, which, however, managed to get out. (He- siod, Op. et D., 41, seqq.—Id., Theog., 570, seqq.)—An attempt has frequently been made to trace an analogy between this more ancient tradition and the account of the fall of our first parents, as detailed by the inspired penman. Prometheus, or for'thought, is supposed to denote the purity and wisdom of our early progenitor before he yielded to temptation; Epimetheus, or after-thought, to be indicative of his change of resolution, and his yielding to the arguments of Eve; which the poet expresses by saying that Epimetheus received Pandora after he had been cautioned by Prometheus. But, if we do not violate the law, it is said, the positive injunction about not opening the jar, just as our first parent Eve disregarded the commands of her Maker respecting the tree of knowledge. Pandora, moreover, the author of all human woes, is, as the advocates for this analogy assert, the author likewise of their chief, and, in fact, only sole source; for she closed the lid of the fatal jar before Hope could escape; and this she did, according to Hesiod, in compliance with the promise of Zeus. What hope, they ask, thus secured, be that hope and expectation of a Redeemer which has been traditional from the earliest ages of the world? Even so our first parents commit the fatal sin of disobedience, but from the seed of the woman, who was the first to offend, was to spring one who should be the hope and the only solace of our race. This is extremely ingenious, but, unfortunately, not at all borne out by the few words of the poet which this theory is built upon. The jar contains various evils, and, as long as it remains closed, man is free from their influence, for they are confined closely within their prison-house. When the lid is or top is raised, these evils fly forth among men, and Hope alone remains behind, the lid being shut down before she could escape. Here, then, we have man exposed to suffering and calamity, and no hope afforded him of a better lot, for Hope is imprisoned in the jar (λυβίζονς ἐν μέσῳ τοῦ κάδυς). Did this not been allowed to come forth and exercise her influence through the world. Again, how did Hope ever find admission into the jar? Was it placed there as a kindred evil? It surely then, could have nothing to do with the promise of a Redeemer. Or, was it placed in the jar to lure man to the commission of evil, by constantly exciting dissatisfaction at the present, and a hope of something better, in the hope of which man becomes discontent. Yet the poet would actually seem to have regarded hope as no better than an evil, since, after stating that the exit of Hope from the jar was arrested by the closing of the lid, he adds, "but countless other woes wander among men" (ἄλλα δ' ἄλλα μενα ἐν τοῖς ἄλλας ἀνακάμηνοι). It is much more rational, then, to regard the whole legend as a figment of the imagination of that spleen against the female sex occasionally exhibited by the old Greek bards. The resemblance it bears to the Scripture account is very unsatisfactory.
Pan

Pan was tempted, Pandora was not; the former was actuated by a noble instinct of the love of knowledge, the latter by mere female curiosity—It seems strange that the ancients should have taken so little notice of this myth. There is no allusion to it in Pindar or the tragedians, excepting Sophocles, one of whose lost satyric dramas was named "Pandora, or the Hammerers." It was equally neglected by the Alexandrians. Apollodorus merely calls Pandora the first woman. In fact, with the exception of a dubious passage in Thucydides (Perus. 1385 seqq.), where Hope is said to have been the only goddess that remained among men, we find no allusion to it in Greek literature except in the fables of Babrius, in Nonnus (Dionys. 7, 56), and in the epigrammatic Macedonius. (Anthol. Palat. 10, 71.) It seems to have had as little charms for the Latin poets, even Ovid passing over it in silence. It is also deserving of notice, that Hesiod and all the others agree in naming the vessel which Pandora opened a jar (πίθηκος), and never hint at her having brought it with her to the house of Epimetheus. Yet the idea has been universal among the moderns, that she brought all the evils with her from heaven, shut up in a box (πύρικος). The only way of accounting for this is, that, at the restoration of learning, the narrative in Hesiod was misunderstood. (Keightley's Mythology, p. 292 seqq.—Buttmann, Mythologus, vol. 1. p. 48, seqq.)

Pandora, I. a city of Lucania, in Lower Italy, on the banks of the Acheloüs, and not far from Herculea. The modern Anglona is thought to represent the ancient place. (Cramer's Anc. Greece, vol. 2. p. 351.)—II. A city in the territory of the Bruttii, near the western coast, and often confounded with the preceding. It was anciently possessed by the Cenotri, as Strabo reports, but is better known in history as having witnessed the defeat and death of Alexander, king of Epirus. (Strabo, 6. 3.-Lit. 39, 95.) The precise limits of the district to be assigned to the ancient Pandora remains yet uncertain. The early Calabrian antiquaries placed it at Castel Franco, about five miles from Consenza. D'Avnile lays it down, in his map of ancient Italy, near Leo and Coreila, on the confines of Lucania. Cluverius supposes that it may have stood between Consentia and Thurri; but more modern critics have, with greater probability, sought its ruins in a more westerly direction, near the village of Malga Cosenza, and in a tract which, with three summits having been remarked there, which answers to the fatal height pointed out by the oracle, Pandrosia tríkóλυνε, πολύν ποτε λαών βλέπεισ, together with the rivulet Maresanto or Arcanti, which last name recalls the Acherson, denounced by another prediction as so inauspicious to the Molossian king. (Cramer's Anc. Italy, vol. 2. p. 436.)—III. A city of Epirus, not far removed from the Acherson and the Achusuan Lake, as we may infer from the passage in which Livy speaks of this city with reference to the oracle delivered to Alexander, king of Epirus (8, 24). It is not improbable that the antiquities which have been discovered at Paramythia, on the borders of the Soulouti territory, may belong to this ancient place. (Hughes' Travels, vol. 2. p. 306.—Holland's Travels, vol. 2. p. 294.—Plin., 4, 1.—Cramer's Anc. Greece, vol. 1. p. 139.)

Pandrosos, a daughter of Ceeroeps, king of Athens, sister to Aglauros and Herse. For an explanation of the name, consult remarks under the article Ceeroeps.

Pangæus, a celebrated ridge of mountains in Thrace, apparently connected with the central chain of Rhodope and Hæmus, and which, branching off in a southeasterly direction, closed upon the coast at the defile of Acanthia. The name of this range often appears in the poets. (Pind., Pyth. 4, 319.—Esch., Pers., 500.—Europ., Rhes., 972.—Virg., Georg., 4, 970.

462.) It is now called Pandhur Dagh, or Castagats, according to the editor of the French Strabo. Herodotus has told us (7, 112), that the Pannonnesus contained gold and silver mines, which were worked by the Piers, Odomants, and Satres, clans of Thrace, but especially the latter. Euripides confirms this account (Rhes., 919. seqq.). These valuable mines naturally attracted the attention of the Thasians, who were the first settlers on this coast; and they accordingly formed an establishment in this vicinity at a place named Crescides. (Vid. Philostr. Phil.)—Theophrastus speaks of the rosa centifolia, which grew in great beauty and was indigenous on Mount Pangeus (ap. Athen., 15, 29). Nicander mentions another sort, which grew in the gardens of Midas (ap. Athen., 16, 31.—Cramer's Anc. Greece, vol. 1, p. 302.)

Pannionium, a sacred spot, with a temple and grove, at the foot of Mount Mycale in Ionia. It derived its name from having been the place where delegates from the Ionian states were accustomed to meet at stated periods. Not only the place, but also the temple and the assembly itself were called Pannionium. The temple was dedicated to the Heliconian Neptune, whose worship had been imported by the Ionians from Achaià in Peloponnesus; and the surname of Heliconian was derived from Helice, one of their cities in that country. (Strab., 6, 39.—Pausan., 7, 24.) But the assembly was not merely convened for religious purposes: it was also a political body, and met for deliberative purposes. (Vid. Curt. xvi, 2, 1, 3.) The remains of this ancient institution were preserved till very late in the Roman empire, if it be true, as Chandler imagines, that there is a medal of the Emperor Gallus which gives a representation of a Pannonian assembly and sacrifice. (Travelis, p. 192.) The site of this celebrated convention is supposed, with great probability, to answer to that of Thancaged, a Turkish village close to the sea, and on the northern side of Mycale, which is now called the Barley (Vol. 7, p. 329.)

Paniüm (Pânov êpoc), a mountain of Syria, forming part of the chain of Mount Libanus. It makes part of the northern boundary of Palestine, and at the foot of it was situated the town of Pania, afterward called Caesarea Philippi. Herod, out of gratitude for having been put in possession of Trachonitis by Augustus, erected a temple to that prince on the mountain. On the partition of the kingdom of the Herods, the district Paniüm was given to the city Panaea the name of Caesarea, to which was annexed, for distinction's sake, the surname of Philippi. This did not, however, prevent the resumption of its primitive denomination, pronounced Bania, more purely than Bânelus, as it is written by the historians of the crusades. (Josephus, Bell. Jud., 1. 21.—Euseb., Hist. Eccles., 7, 17.—II. Panium (Havell.), a cavern at the sources of the Jordan. (Vid. Jord. a.)

Pannonia, an extensive province of the Roman empire, bounded on the west by the range of Mount Ceas, separating it from Noricum; on the south by Illyria, including in this direction the country lying along the lower bank of the Savus; and on the north and east by the Danube. It answered, therefore, to what is now the eastern part of Austria, Styria, a part of Carinthia, that portion of Hungary which lies on the southern side of the Danube, the greater part of Salcaonia, and the portion of Bosnia which lies along the Saipa. Ptolemy distinguishes between Upper and Lower Pannonia, Pannonia Superior and Inferior, and separates the two divisions by an imaginary line drawn from Bregacketium to the Savus. In the fourth century, the Emperor Galerius formed out of a part of Lower Pannonia the province of Valeria, and then Pannonia Superior changed its name to that of Pannonia Prima, while the part of Pannonia Inferior that remained after Valeria was taken from it, received the appellation
of Pannonia Secunda.—The Pannonii were of Illyrian origin, and their earlier seats extended from the river Colapis, on the southern side of the Savus, in a south-easterly direction, as far as the Dardani and the confines of Macedonia. With one branch of their race, under the name of Paeones, the Greeks were acquainted from an early period, along the southern coast of Thrace. That the Paeones, however, were one and the same race with the distant Pannonii to the north-west, they first discovered at a later period, and from this time the appellation of Paeones was applied by the Greek historical writers to both divisions. (Manneri, Geogr., vol. 3, p. 502.—Cramer's Anc. Greece, vol. 1, p. 587, ed. 1807.) They were evidently a very ancient people, having been acquainted with the race from the west, learned the name Pannonii as the national appellation, and retained it as such. The etymology assigned to this name by some, from the patches (panni) of which their long-sleeved tunics were formed, is too ridiculous to require refutation. (Dio Cass., 49, 36.) They were reduced under the Roman sway in the reign of Augustus, especially during the campaigns of Tiberos and Julius Caesar; and, after their subjugation, were transplant ed to the country beyond the Savus, which had been occupied by the Scordisci, and which now received from them the name of Pannonic. The Pannonians becoming, in process of time, completely romanized in laws, customs, and language, served as a rampart that might be confided in against the Scelavian Illyrians and the Marcomanni, beyond the Danube.—After the fall of the Roman Empire, Pannonic became a name of the barbarian power of the barbarians, especially the Huns, Avarcs, and Bulgarians. (Manneri, Geogr., vol. 3, p. 304.) The chief city in Pannonia Superior was Carnuntum, now Altenburg, a little to the east of Vindobona or Vienna. The chief city in Pannonia Inferior was Sirmium.

Panopheus, a surname of Jupiter, from his being the parent source of omen and augury, "omnia omnis omnium magica visque aquarum". (Heyne ad Il., 8, 250.)

Panopé or Panop’é, one of the Nereids, named by Virgil as a representative of the whole number, and often invoked by mariners. (Hesiod, Theog., 250.—Virgil, Georg., 1, 437.—Id., Aen., 5, 240, &c.).

Panôpolis, a city of Egypt in the Thebaid, on the eastern bank of the Nile, and south of Antaeopolis. It was the capital of the Panopilefs, or Panopolites, as the Greeks called them, for Pan (“City of Pan”). According to the later traditions, however, it would seem to have been sacred to the Pans or wood-deities collectively, and hence we find it in Strabo (812) designated by the appellation of Πανωπόλις. (Compare Diod. Sic., 1, 18.—Plut., de Is. et Os.) In some of the subsequent writers we find the place called Panos, the term polis being omitted. (Ibn. Ant., p. 166.) The name Panopolis (Panôpolis) is supposed to be merely a translation of the Egyptian term Chemmis, by which this city was known to the natives of the land. This Chemmis, however, must not be confounded with the place of that name mentioned by Herodotus (2, 91), and by which that historian intends evidently to designate Coptos. (Manneri, Geogr., vol. 10, pt. 1, p. 374.) The modern Akhem or Al-khem is supposed to occupy part of the site of the ancient Panopolis. (Ibn. Ant., p. 166.) Sacred Boadicea Pan (“City of Pan”).

Panzar, a town of Asturias, inhabited in ancient times by a people of the same name. (Diod. Sic., 22, 14.) It is uncertain, however, whether this name originated with the Greeks, or was merely a translation of the Phoenician one. From the Phoenicians Panzor passed into the hands of the Carthaginians, and was for a long period an important stronghold of the latter people, though little noticed by the Greek writers. Here was the chief station of their fleet, and here also were the winter quarters of their army. (Polyb., 1, 21, 24.) It was taken by the Romans, with their fleet of 300 sail (A.U.C. 505), and carefully guarded by them to prevent its again falling into the hands of the foe. (Polyb., 1, 38.) It was subsequently ranked among the free cities of Sicily. (Cit. in Verr., 3, 6.—Mannert, Geogr., vol. 9, pt. 2, p. 400.) II. A harbour on the eastern coast of Attica, south of the promontory of Cynoessa, and opposite to the southern extremity of Euboea. It is now Porto Raphiti.—III. A harbour on the eastern coast of Thessaly, south of the promontory of Nysa, and opposite Acheron. It is now Teketi. (Thucyd., 2, 86.—Plin., 4, 5.)—IV. A name given to the harbour of Ephesus. (Mela, 2, 7.)—V. A harbour in Crete, between Rhithyma and Cytaum. (Plin., 4, 12.)—VI. A town in the Thracian Chersonese, between Cardia and Celos. (Plin., 4, 11.)

Panaia, C. Vibius, consult with Hirtius the year after Caesar's assassination, B.C. 43. He had previously been a senator and governor of Cyrene. It is improbable that he was ever a tribune of the commons in attaining to sovereign power. Though Panaia and Hirtius had obtained the consulship through Caesar's nomination, they nevertheless joined the party of the senate after the death of the dictator, and marched against Antony, who was besieging Brutus in Mutina. In the first engagement Antony had the advantage, and Panaia received two mortal wounds; but Antony himself was defeated the same day, and returned to camp as he was returning to his camp. In a second engagement Hirtius also fell. It was a current report at the time, that Glycon, the physician in attendance on Panaia, having been given over by Octavius, had taken off the Roman consul by poisoning his wounds. (Sueton., Vit. Aug., 11.) Another account stated that Panaia, finding his wounds mortal, sent for Octavius, and engaged him to become reconciled to Antony, willing to join him, at the same time, the project of the senate, which was to destroy the partisans of Caesar by means of one another. Panaia appears to have been a worthy man, and esteemed by Cicero, who, without sharing his political sentiments, lived on terms of intimacy with him. (Biogr. Univ., vol. 32, p. 496.)

Pantagias, a small river on the eastern coast of Sicily, which falls into the sea between Megara and the islets of Gallo and Poggi, running in a short space in rough cascades over a rugged bed. (Virg., Aen., 3, 689.) Potelomy writes the name Πανταγιας, and Theucides Pantagias (6, 4).

Pantheiia, the wife of Abraadates, celebrated for her beauty and conjugal affection. She slew herself on the corpse of her husband, who had fallen in battle on the side of the elder Cyrus. (Xen., Cyrop., 4, 6, 11.)—Id. 7, 3, 14.

Panthéon (or Panthéon), a famous temple of a circular form, built by M. Agrippa, son-in-law of Augustus, in his third consulship, about 27 A.C., and repaired by Septimius Severus, and Caracalla. The architect was Valerius of Ostia. The structure consists of a rotunda, with a noble Corinthian octastyle portico attached to it. That the portico of the Pantheon indeed was erected by Agrippa, as testified by the inscription on the frieze. Yet some have supposed that he merely made that addition to the previously erected rotunda. Hirt, in his work on the Pantheon, very reasonably argues, that, being no direct proof to the contrary, the whole structure may safely be assumed to have been erected according to one original plan, because without the portico it would have been a lumpy and heavy mass. Hirt further refutes the idea of the rotunda's having been originally not a temple, but an open to public baths. It is certain that circular plans were greatly
affected by the Romans both in their temples and other buildings, on which account their architecture presents a variety that does not occur in that of Greece.

—The structure was dedicated to Jupiter Ultor. Besides the space of this god, however, there were in six other niches as many colossal statues of other deities, among which were those of Mars and Venus, the founders of the Julian line, and that of Julius Caesar. About the other three we know nothing; but in all probability they were the images of Æneas, Iulus, and Romulus. The edifice was called the Pantheon (Πάνθεον or Πανθέον), not, as is commonly supposed, from its having been dedicated to all the gods (μεγάλη "εν ολίγον, and ζωος, "εν θάνατον), but from its being dedicated, which, as represented, was the "all-pantheum," or "all-divine" firmament (μεγάλη "εν ολίγον, and ζωος, "εν θάνατον). —The Pantheon is by far the largest structure of ancient times, the external diameter being 188 feet, and the height to the summit of the upper cornice 102, exclusive of the flat dome or calotte, which makes the entire height about 148 feet. The portico (106 feet wide) is, as has been said, octastyle, yet there are in all sixteen columns, namely, two at the return, exclusive of those at the angles, and two others behind the third column from each end, dividing the portico, internally, into three aisles or avenues, the centre one of which is considerably the widest, and contains the great doorway within a very deep recess, while each of the others has a large semicircular tribune or recess. But, although, independently of its recessed parts, the portico is only three intercolumns in depth, its flanks present the order continued in pilasters, making two additional closed intercolumns, and the projection there from the main structure about 70 feet; which circumstance produces an extraordinary air of majesty. The columns are 47 English feet high, with bases and capitals of white marble, and granite shafts, each formed out of a single piece. The interior diameter of the rotunda is 142 feet, the thickness of the wall being 23 feet through the piers, between the exedrae of recesses, which, including that containing the entrance, are eight in number, and each, except that facing the entrance, is divided into three intercolumns by two columns (34.7 feet high), between antes or angular pilasters. But as, besides being repaired and altered by Septimius Severus, the interior has undergone many changes, or, rather, corruptions, it is hardly possible now to determine what it originally was. —The dome has five rows of coffers (now stripped of their decorative covering) and a circular opening in the centre, 25 feet in diameter, which not only lighted the interior perfectly, but in the most charming and almost magical manner. Indeed, there has scarcely ever been but one opinion as to the captivating effect thus produced, and the exquisite beauty of the whole as regards plan and general proportions. (Encyclop. Us. Knoetl, vol. 17, p. 132. —Hirt, Geschichte der Baukunst, vol. 2, p. 928, seqq.). —The Pantheon is now called the cathedral in its classical form. It was given to Boniface IV. by the Emperor Paulus III., and was dedicated as a Christian church to the Virgin and the Holy Martyrs, a quantity of whose relics were placed under the great altar. In 830 Gregory IV. dedicated it to all the saints. This consecration of the edifice, however, seems to have afforded it no defence against the subsequent spoliations, both of emperors and popes. The plates of gilded bronze that covered the roof, the bronze reliefs, and the silver that adorned the interior of the dome, were carried off by Constans II. (A.D. 655), who destined them for his imperial palace at Constantinople; but, being murdered at Syracuse when on his return with them, they were conveyed by their next proprietors to Alexandria; and thus the spoils of the Pantheon, won from the plunder of Egypt after the battle of Actium, by a kind of poetical justice, reverted to their original source. Urban the Eighth carried off all that was left to purloin, the bronze beams of the portico, which amounted in weight to more than forty-five million pounds. He records his plunder with great complacency, "But the most valuable of all the ornaments of the portico, as if it were a meritorious deed; seeming to invite me to enrich myself on having melted it down into the frugal tabernacle of St. Peter's, and the useless cannon of the castle of St. Angelo. Urban, who was one of the Barberini family, also gave a share of it to his nephew, for the embellishment of the Barberini palace; and this gave rise to the pasquinade, "Quod non fecerunt Barbari fecerunt Barberini."

But he did more mischiefs by adding than by taking away, for he bestowed upon it two hideous belfries, as a perpetual monument of his bad taste. —Beautiful as the Pantheon is, it is not what it was. During eighteen centuries it has suffered from the dilapidations of time and the cupidity of barbarians. The seven steps which elevated it above the level of ancient Rome are buried beneath the modern pavement. Its rotunda of brick is cracked and decayed; its leaden dome, overlooked by the modern cupolas of every neighbouring church, boasts no imposing loftiness of elevation; the marble statues, the basi reliivi, the brazen columns, have disappeared; its ornaments have vanished; its granite columns have lost their lustre, and its marble capitals their purity; all looks dark and neglected, and its splendour is gone for ever. Yet, under every disadvantage, it is still beautiful, pre-eminently beautiful. No eye can rest on the noble simplicity of the matchless portico without admiration, and without feeling, what is so rarely felt, that there is nothing wanted to desire, nothing committed to rectify. Its beauty is of that sort which, while the fabric stands, time has no power to destroy. (Rome in the Nineteenth Century, vol. 1, p. 254.)

PANTHEON, or PANTHEUS, a Trojan, son of Orychus, and priest of Apollo. He fell in the nocturnal combat described by Virgil as attendant on the taking of Troy (Enni., 2, 429). He was father of Polydamus, Euphorbus, and Hyperenor. (Hom., Il., 3, 146, 15, 522.) —The story which Servius, and also Eustathius relate, of Pantheus's having been by birth a Delphian, and of his having been brought away from Delphi to Troy to explain an oracle for King Priam, is a fiction of the posthomeric bards. (Eustath. ad. II., 12, 225.

—Heyne ad Virg., Enn., 2, 318.)

PANTHEUS, a patronymic of Euphorbus, the son of Pantheus. Via Euphorbae—Horat., Od., 1, 28, 10.)

PANTICAPAEMON, a city in the Tauric Chersonese, on the shore of the Cimmerian Bosporus, and opposite to Phanagoria on the Asiatic shore. Ptolemy gives the name as Panticapaeum (Παντικάπαια). It was founded by a Milesian colony, and lay on a hill, and was in circumference 20 stadia. On the east side was a good harbour, and also an inner and stronger one (σεβούρα). This place was the capital of the kings of Bosporus, and was also known by the name of Bosporus as early as the time of Demosthenes. Some writers erroneously distinguish between the two appellations, as if they belonged to different cities. (Eutrop., 7, 9.) —The modern Kertsch lies near the site of the ancient Panticapaeum. (Mannert, Geogr., vol. 4, p. 307, seqq.) Here Mithradates the Great endeavoured to found a passage to Thrace (Mithrid., 2, 18, 19.)

PANYIUS, a native of Samos, or, according to others, of Halicarnassus (for his country is uncertain; we only know that he was an uncle of Herodotus). He flourished about 490 B.C., and was regarded as an excellent epic poet, the Alexandrian critics having subsequently assigned him the fourth place in the Epic canon. He was the author of an Herculeid, in fourteen books, to which, according to Valckenaer's conjecture, belong two
fragments found in the collection of the works of Theocritus, but which others attribute to Pisander. Both parties, however, agree in regarding them as worthy of a writer of the first merit, and above the strength of Theocritus. Hermann, however, does not adopt this opinion. He recognizes, it is true, in these pieces an imitation of Homer; but he discovers in the prosody certain licenses which were unknown to the epic poets, and only introduced by the bucolic ones. (Orphica, ed. Hermann, p. 691.) Besides, these pieces are written in Doric, whereas Panyasis made use of the Ionic dialect. According to Suidas, he also composed Elogies entitled δαίμωνικα. There exist, likewise, some other fragments of Panyasis. They are all found in the editions of the Septuagint, and thus did not escape the notice of Winterton. After the death of Alexander, Paphlagonia, together with Cappadocia, fell to the share of Eumenes. (Did. Sic., 18, 3.) It subsequently formed part of the kingdom of Pontus; but, after the conquest of Pontus by the Romans, it appears to have been allowed to have kings of its own, the last of whom was Deiotarus, the son of Cæsar. (Strabo, 564.) Under the early Roman empire it did not enjoy any particular importance, but was united to Galatia till the time of Constantine, who first erected it into a separate province. (Encycl. Us. Knowl., vol. 17, p. 216.)—The chain of mountains in the southern part of Paphlagonia was covered with forests, which yielded abundance of excellent timber for ship-building, and various kinds of wood for tables and other ornamental works. They supplied also many kinds of fish, among which the most esteemed were those caught in the salt fish were likewise to be found in some parts of the country. (Strabo, 561, 563.) The plains afforded rich pastures for horses and cattle, and the mules of the Paphlagonian Heneti were celebrated as early as the days of Homer (II., 2, 852). The sheep of the country adjoining the Halys furnished wool much esteemed for the fineness of its quality (Strabo, 546); and the Euxine, along the whole extent of coast, supplied great quantities of excellent fish; especially the kind of tunny called pelamys. (Strabo, 545.—Atheneus, 7, p. 307.)—Cramer thinks that the Paphlagonians were of the same race with the Bithyni, Myss, and Phryges; that is, that they were a Thracian people, and that they came in from the West, driving the Leuco-Syri from the country, and finally compelling them to retire beyond the Halys. (Cramer’s Asin Minor, vol. 1, p. 217, seq.)

Paphos, L. Palamaphos (Old Paphos), a very ancient city of Cyprus, on the southwestern side of the island, situated on a rising ground near the little river Bocarus. (Heyseh, a. v. Бокарос.) Strabo places it ten stadia from the coast. It was peculiarly famed for the worship of Venus, who was fabled to have been wafted hither after her birth amid the waves. (Mela, 2, 7. —Tacitus, Hist., 2, 3.) The city is the birthplace of the Muses, and was celebrated for its temple, Cinyras, the son of Apollo, or Paphos the son of Cinyras, about the time of the Trojan war. Apollodorus also makes Cinyras to have been a Syrian monarch (3, 14.—Compare Heye, ad loc. Obs., p. 325.) Tacitus makes it to have been founded by Aërias; at least he names him as the founder of the temple; he adds, however, that a later tradition assigns the origin of the temple to Cinyras. (Hist., 2, 3.—Ann., 3, 62.) Eusébius carries back the founding of the city to the time of the Hebrew Gideon. (Chron., n. 590.)—The Phoenician or Syrian origin of the place was clearly shown by the worship established here; for Venus Urania was here adored under the same attributes and with the same licentiousness as the Syrian goddess at Ascalon, Elæsa, and elsewhere in that country. The effigy of the goddess was not of human form, but was represented as that of a naked female, sitting upright, cornal stone. (Tyrræus Max. Diss., 38. —Tacit., Hist., 2, 3. —Clem. Alex., protrept., 29, seqq.) The office of high-priest was next in rank to the regal dignity. The worship of the goddess continued long after the ancient city was completely sunk in importance, and had been supplanted by the Paphos of later origin. Annual processions were still made to the earlier temple, which was regarded as the most sacred of any, and acquired great fame by an oracle connected with it. —Pococke found many ruins on this ancient site.
having brutally murdered his brother Geta, enjoined on Papinian to compose a discourse in accusation of the deceased, in order to excise his barbarity in the eyes of the senate and people. With this mandate the prefect not only refused to comply, but he nobly observed that it must be done at a parricide than to excuse it, and that slander of inheritance to a second parricide. Caracalla, enraged by this refus-

sal, secretly induced the praetorian guards to mutiny, and demand their leader’s head; and, apparently to satisfy them, Papinian was executed in 212, and his body dragged through the streets of Rome.

The reputation of Papinian as a lawyer was so high, that Valentinian III. ordered that, whenever the opinions or decrees of the praetorians were required, his name should be read. The Roman law-students, too, when they had reached the third year of their studies (the whole number of years being five), were called Papinian-

ists (Papinianista), and a festival was celebrated on the occasion of commencing his work. Papinian composed several works, among which were twenty-seven books of "Questions on the Law": nineteen of "Responses" or "Opinions," two of "Definitions;" and three of "Questions on the Law." (Schöll, Hist. Litt. Rom., vol. 3, p. 285.)

Papiti, the name of a patrician and plebeian gens in Rome, who were at first called Papissi. (Cic., Ep. ad Fam., 9, 21.) This gens was divided into several families, such as the Mugillani, Cassi, Cursores, and Massones, and the most celebrated of the different indi-

viduals of these families was L. Papirius Cursor. He was the grandson of the L. Papirius Cursor who was censor in the year in which Rome was taken by the Gauls, and son of Spurius Papirius Cursor, who was military tribune B.C. 379. (Liv., 6, 27.)—We first read of L. Papirius Cursor as master of the horse to J. Papirius Crassus, who was created dictator B.C. 339, by the consul Manlius, in order to carry on the war against the Antiates. (Liv., 8, 12.—Cic., Ep. ad Fam., 9, 21.) The time of his first consulship is doubtful. Livy mentions C. Patillius and L. Papirius Mugillanus as consules B.C. 325; but he adds, that, instead of Papirius Mugillanus, the name of Papirius Cursor was found in some annals. (Livy, 8, 28.)

During the year of their consulship the Lex Patilia-
Papiria was passed, which enacted that no one should be kept in fetters or bonds except for a crime which deserved them, and only until he had suffered the pun-
ishment which the law exacted; that all to whom creditors should have a right to attach the goods, but not the persons, of their debtors. (Liv., l.c.)

In the following year, Papirius Cursor, who is said by Livy (8, 29) to have been considered at that time the most illustrious general of his age, was appointed dictator to carry on the war against the Samnites. He ap-

pointed Q. Fabius Maximus his master of the horse: and during his absence at Rome to renew the au-

spices, Tibetan fetishes, and auguries, and gained a signal victory. On his return to the camp he commanded Fabius to be put to death; but the soldiers espousing the cause of the latter, the execution was delayed till the following day, before which time Fabius had an opportunity of escaping to Rome, where he placed himself under the protection of the senate. The proceedings which followed are interesting to the student of the constitutional history of Rome, as they show that an appeal could be made to the people from the decision of a dictator, which is in accordance with a remark of Livy in another part of his history (3, 55), that, after the decemvirs were expelled from Rome, a law was passed, enacting that, in future, no magistrate should be made from whom there should be no appeal. Papirius demanded Fa-

bias of the senate; and as neither the entreaties of
the senators nor those of the father of Fabius, who had been dictator and three times consul, could induce Pappius to pardon him, the father of Fabius appealed to the people, and at length, at the earnest entreaties of the people and the tribunes of the commons, the life of Fabius was spared. He was at one time master of the horse, and, on his return to the army, defeated the Samnites, and put an end to the war at the time. (Liv., 8, 29, seqq.) Pappius was elected consul a second time, with Q. Publius Philo, in B.C. 320, and again defeated the Samnites; and apparently a third time in the following year, though there appears to be some doubt upon the latter point. (Liv., 9, 7, seqq.) He was consul for the fourth time in B.C. 319 (Liv., 9, 22, vol. 3) and for the fifth time in B.C. 318. (Liv., 9, 38.) He was again named dictator in B.C. 309, to carry on the war against his old enemies the Samnites, whom he defeated with great slaughter, and obtained, on account of his victory, the honours of a triumph (Liv., 9, 38, seqq.) after which time we find no more mention of him. Pappius Cursor, says Livy (9, 16), was considered the most illustrious man of his age, and it was thought he would be equal to contend with Alexander the Great, if the latter, after the conquest of Asia, had turned his arms against Europe. (Encycl. Use. Knowl., vol. 17, p. 218.)—II. One of this family received the surname of Praxestatus, from an action of his while still wearing the pretexa, or youthful gown, and before he had assumed the toga virilis, or gown of manhood. It was customary in those days for fathers to take their young sons to the senate-house when anything important was under discussion, in order that they might become early familiarized with public affairs. The father of young Pappius took him on one of these occasions, while a matter of considerable moment was pending; and it having been deemed advisable to adjourn the debate until the morrow, an injunction of secrecy was laid upon all who were present. The mother of young Pappius wished to know what had passed in the senate; but the son, unwilling to betray the secrets of that assembly, amused his parent by telling her that it had been debated whether it would be more advantageous to the republic to give two wives to one husband, or two husbands to one wife. The mother of Pappius was alarmed, and she communicated the secret to the other Roman matrons, and on the morrow they assembled in large numbers before the senate-house, bathed in tears, and earnestly entreating that one woman might have two husbands, and another two wives. The senators were astonished at so singular an application; but young Pappius modestly explained the cause, and the fathers, in admiration of his ready tact, passed a decree, that for the future boys should not be allowed to come to the senate with their fathers, except Pappius alone. This regulation continued until the time of Augustus, who rescinded it. (Macrobi., 1, 1, 5.)

PAPPUS, a celebrated mathematician of Alexandria, who lived towards the end of the fourth century. He is known by his Mathematical Collections (MATHyMAToikovingwv), in eight books, and by other works, among which were a Commentary on Ptolemy's Almagest, a work on Geography, a Treatise on Military Engines, a Commentary on Aristarchus of Samos, &c. His Collections have chiefly come down to us; of his other productions we have merely some fragments. The fifth book, which contains sections on the Elements, the third is aepoepaioa, wanting the commencement. Wallis published a fragment of the second. The first two books contained the Greek Arithmetick What we have of the work is interesting, on account of the extracts it contains from works that are now lost, and it merits the careful perusal of those who make researches into the history of the exact sciences. Montucla ascribes to Pappus the first idea of the principle often referred to by mathematicians, the use, namely, of the centre of gravity for the dimension of figures. We owe to Pappus also an elegant though indirect solution of the famous problem of the trisection of an angle. Pappus," observes a writer in the American Quarterly Review, "was the first to mention (21, 18, 24) is the only name worthy of note that occurs to fill up the great blank between Archimedes and the Italian mechanicians of the sixteenth century. He attempted to ascertain the principle of all the simple machines, in the same manner that his illustrious predecessor had that of the lever; his attention, however, was principally directed to the inclined plane. In this he failed, owing to the fundamental error upon which all his investigations proceeded. He has been described as a man of great honesty by Wallis at the end of his Aristarchus, Oxon., 1688, Svo, and in the third volume of his Opera Mathematica. The second part of the fifth book was published by Eisenmann, professor in "L'Ecole royale des ponts et chaussées," Parts, 1824, fol. A part of the preface of the seventh book is given in the Prolegomena of Gregory's Euclild, Oxon., 1703, fol., and the entire preface in the edition of Apollonius of Perga, Oxon., 1706, Svo. Membries has inserted a lemma from the seventh book in his Dialogi de Proportionibus, Hafnia, 1655, fol. (Schöll, Hist. Lit. Gr., vol. 7, p. 49.—Biogr. Univ., vol. 32, p. 538.)

PARAXTICE or -TACEN, a people of Persia, occupying the mountain range between that country and Media. Their territory was called by the Greeks Paratanece, and Stephanus Byzantinus makes mention of a city in it by the name of Parastrepe, 626.—Diod. Sic., 12, 34.—Arrian, 3, 19.—Plin., 6, 26.)

PARACETON, a strongly-fortified place, the frontier of Egypt on the side of Libya, and situates on the coast of the Mediterranean. It had, including its harbour, a circuit of about 40 stadia. (Strab., 798.) Justinian repaired and strengthened it. (Procop., de Edif., 6, 2.) Strabo gives the distance from Alexandria at about 1300 stadia: Selys makes it 1786, and Pliny 1600—both being too small. The city had an area of 20° 30', or 35 geographical miles. The modern name is Al Baraton. (Mannert, Geogr., vol. 10, pt. 2, p. 29, seqq.)

PARASANGES (Παρασάνγγες), in Latin Parasanga, a parasang, or Persian measure of length, which, according to Herodotus (2, 6, 5: 53; 6, 42), was equal to 30 stadia; and if we reckon eight stadia as equal to one English mile, the parasang was consequently equal to about four English miles. The Suidas also give the length of the parasang at 30 stadia; and Xenophon must have calculated it at the same length, since he says (Anab. 2, 2, 6) that 16,050 stadia are equal to 535 parasangs (16,050 x 30 = 535—30). Pliny (6, 30), however, informs us, that the length of the parasang was reckoned differently by different authors; and Strabo (518) states, that some reckoned it at 60, others at 40, and others at 30 stadia. The ancient geographical standard or unit of distance (Lib. Arab. s. v. Faraxkh) reckon it equal to three miles, which agrees with the statements of English travellers (quoted by Rödiger, in Ersch and Gruber's Enzyklopädie), who estimate it variously at from 2½ to 3½ miles. Franklin (Tour to Persia, p. 17) reckons it at four miles: Osley (Travels, vol. 1, p. 23) at between 3½ and 3½ miles; and Kinneir (Geogr. of Persia, p. 57) at 5½ miles. —Parasang is a Persian word, and is derived from the
ancient Farsangi, which is pronounced in modern Persian Parsang. It has been changed in Arabic into Parsakh. Various etymologies have been proposed for the term. The latter part of the word is thought to be the Persian word "a stone" and the term might thus be derived from the stones which were placed to mark the distances in the road. Bohlen (quoted by Rödiger) supposes the first part of the word to be the preposition fera, and compares the word with the Latin ad lapidem. (Encycl. U. Knott., vol. 17, p. 241.)

Parcae, the Fates, also called Fata, and in Greek Moirai (Moirae). In the Iliad, with the exception of one passage (20, 40), the Moira is spoken of as the singular number, and as a person, almost exactly as we use the word Fate. But in the Odyssey this word is employed as a common substantive, followed by a genitive of the person, and signifying decree. The Theogony of Hesiod limits the Fates, like so many other goddesses, to three, and gives them Jupiter and Themis for their parents. (Theog., 904.) In an interpolated passage of the same poem (v. 217) they are classed among the children of Night; and Plato, on his part, places them in the body of the universe (Rep., 10, 617). Their names in Hesiod are Clotho (Spinner), Lachesis (Allotter), and Atropos (Unchangeable); but he does not speak of their spinning the destinies of men. This office of theirs is, however, noticed in both the Iliad and Odyssey. It is probable that Homer, in accordance with the sublime fiction in the Theogony, regarded the Fates as the offspring of Jupiter and Oi, for in him they are but the ministers of Jupiter, in whose hands are the issues of all things. (Nitzch, ad Od., 3, 236.) Aeschylus makes even Jupiter himself subject to the Fates. (Prom. Vinct., 515. — Kiechly's Mythology, p. 195.) According to the popular mythology, Clotho held the distaff, Lachesis span each one's portion of the thread of existence, and Atropos cut it off; hence the well-known line expressing their respective functions:

"'Clotho colum retinet, Lachesis net, et Atropos occitat.
"

The more correct explanation, however, is to make Clotho spin, Lachesis mark out each one's portion, and Atropos sever it. — The Latin writers indulge in various views of the functions of the Parcae, as suggested by their own ingenuity of elucidation. Thus Apuleius (De Mundo, sub fin.) makes Clotho preside over the present, Atropos the past, and Lachesis the future; an idea probably borrowed from Plato, who introduces the Moira singing: Fates preside — τά μελλόντα. (Rep., 10, 617.) So in the Scandinavian mythology, the Norns or Destinies, who are also three in number, are called Urdur, Verdandi, and Skuld, or "Past," "Present," and "Future." — According to Fulgentius (Mythol., 1, 7), Clotho presides over nativity, Atropos over death, and Lachesis over each one's lot in life. — The term Moira (Moirae) comes from μοίρα, "to divide," or "to portion out." The ordinary etymology for the word Moira is antiphrasis from parco, "to spare," because they never spared. (Serv. ad Aen., 1, 26. — Martian. Capell. — Donat. — Diomed., ap. Voss., Etymol.) Varro derives it "a pariendo," because they presided over the birth of men (Aul. Gell., 3, 16); or, to quote his own words, "Parcae, immutata litera una, a partu nominata." Scaliger makes it come from parco, "to spare," in a different sense from Servius and the other grammarians quoted above, because, according to them, Clotho on one hand of Venus cuts the thread of existence, whereas of the other two, one gives life and the other prolongs it. Perhaps, after all, the best explanation (supposing the word Parcae to be of Latin origin) is that which makes it come from parco, "to spare," by antiphrasis, not in accordance with Scaliger's notion, but because these deities were invoked in prayer to spare the lives of mortals. (Consult Scheller, Lat. Deutsch. Worterb., s. v.)

Paris, the son of Priam, king of Troy, by Hebe, and also called Alexander. He was destined, even before his birth, to become the ruin of his country, and when his mother, being about to lie-in of him, dreamed that she brought forth a torch which set all Íthma in flames, the soothsayer Æscacus declared that the child would prove the ruin of his country, and recommended to expose it. As soon as born, the babe was given to a servant to be left on Ída to perish. The domestic obeyed, but, on returning at the end of five days, he found that a bear had been nursing the infant. Struck with this strange event, he took some of the infant, reared him as his own son, and named him Paris. When Paris grew up he distinguished himself by his strength and courage in repelling robbers from the flocks, and the shepherds, in consequence, named him Alexander (Man-protector), or, according to the Greek form, Ἀλέξανδρος (απὸ τοῦ ἀλέξεν τῶν ἀθρός). In this state of seclusion, too, he united himself to the nymph Ênone, whose tragic fate is elsewhere related. (Vid. Ênone.) Their conjugal happiness was soon disturbed by the marriage of Æneas and Thetis, the goddess of Discord, who had not been invited to partake of the entertainment, showed her displeasure by throwing into the assembly of the gods who were at the celebration of the nuptials a golden apple, on which were written the words Η καλὴ λαβέτε, "Let the beauty (among you) take me." Juno, Minerva, and Venus laying claim to it, and Jove being unwilling to decide, the god commanded Mercury to lead the three deities to Mount Ída, and to intrust to the decision of the affair to the shepherd Alexander, whose judgment was to be definitive. The goddesses appeared before him, and urged their respective claims, and each, to influence his decision, made him an alluring offer of future advantage. Juno endeavoured to secure his preference by the promise of a kingdom, Minerva by the gift of intellectual superiority and martial renown, and Venus by offering him the fairest woman in the world for his wife. To Venus he assigned the prize, and brought upon himself, in consequence, the unrelenting enmity of her two dishonoured rivals, which was extended also to his whole family and the entire Trojan race.

Soon after this event, Priam proposed a contest among his sons and other princes, and promised to reward the conqueror with one of the finest bulls of Mount Ída. Persons were sent to procure the animal, and it was found in the possession of Paris, who reluctantly yielded his prize, but swore that he would not give it back, since he had won it in fair combat. The new-comer again this favourite animal, went to Troy, and entered the lists of the combatants. Having proved successful against every competitor, and having gained an advantage over Hector himself, that prince, irritated at seeing himself conquered by an unknown stranger, pursued him closely, and Paris must have fallen a victim to his brother's resentment had he not fled to the altar of Jupiter. This sacred place of refuge preserved him, as long as he continued to offer sacrifice. But struck with the similarity of the features of Paris to those of his brothers, inquired his birth and his age.

From these circumstances she soon discovered that he was her brother, and as such she introduced him to her father and to his children. Priam, thereupon, forgetful of the alarming predictions of Æscacus, acknowledged Paris as his son, and all enmity instantly ceased between the new-comer and Hector. Not long after this date, a priestess of Æscacus, who had promised him his promise to him, Paris proceeded on his memorable voyage to Greece, from which the soothsaying Helenus and Cassandra had in vain endeavoured to deter him. The ostensible object of the voyage was to procure information respecting his father's sister Hesione, who had been given in marriage by Hercules to his follower Telamon, the monarch of Salamis. The real motive,
PAR

however, which prompted the enterprise, was a wish to
visit the person of Helen, then the fairest
woman of her time, a fulfilment of what Venus had
offered him when he was deciding the contest of
beauty. Arriving at Sparta, where Menelaüs, the hus-
band of Helen, was reigning, he met with an hospitable
reception; but, Menelaüs soon after having sailed away
to Crete, the Trojan prince availed himself of his ab-
sence, seduced the affections of Helen, and bore her
away to his native city, together with a large portion
of the wealth of his household. (Consult remarks under
the article Helena.) Hence ensued the war of Troy,
which ended in the total destruction of that ill-fated
city. (Vid. Troja.) Paris, though represented in
general as effeminate and vain of his personal appear-
ance, yet distinguished himself during the siege of
Troy by wounding Diomedæ, Machæron, Antiochus,
and Palæmedæ, and subsequently by discharging the
dart which proved fatal to Achilles. Venus took him
under her special protection, and, in the fight of
battle with Menelaüs, rescued him from the vengeance
of the latter. The circumstances of his death are men-
tioned under the article Æone. (Dict. Cret., 1, 3.)

Tzetz. ad Lycoçphr., 57, 61, 63, 86, &c.

Paris, a British nation lying to the north of the
Coritani, and occupying the district which is called
Hiberna, or, according to Camden, the whole East-
Ridings of Yorkshire. The Britons, having de-
rived their name from the two British words pâer têas,
which signify low pasture, and which are descriptive of
the situation and uses of their country. Their cap-
itual was Petuaria. (Mannert, Geoégr., vol. 2, pt. 2,
p. 187.)

Paris, a people and city of Gaul, now París, the
capital of the kingdom of France. (Vid. Lutetia.
Cons. C. G., 6, 3.)

Parisium, a city of Pannonia, falling into the Dan-
bæ; according to Mannert, the Mur, in the Hungarian
part of its course. (Mannert, Geoégr., vol. 3, p. 489.)

Parium, now Camanar, a town of Asia Minor, in
Mysia Minor, on the Propontis, southwest of Linus,
and northeast from Pæus. It was founded by the
Mileanians and Parians. (Plin., 5, 32. — Paul. Lex.,
viii, de Censit.)

Parma, a town of Italy, south of the Po, on the small
river Parma. It was founded by the Etrurians, taken
by a tribe of Gaul called the Boii, and at last colon-
ized by the Romans, A.D. 569. (Liv., 39, 55.)

From Cicero it may be inferred that Parma suffered
from the adverse factions in the civil wars. (Ep. ad
Fam., 10, 33. — Id. ibid., 12, 5. — Id., Philipp., 14,
3.) It was probably re-colonized under Augustus, as
some inscriptions give it the title of Colonia Julia
Augusta Parma. Strabo (916) speaks of it as a city of
note. From Martial we learn that its wool was highly
prized (14, 63; 5, 13.). In the ages that immedi-
ately succeeded the fall of the Roman empire, we find
this city distinguished also by the appellation of Chry-
ospholis (Gold-city), but are unacquainted with the
causes that led to the adoption of the name. (Geogr.
Ravenßas, 4, 33. — Domitz, Vit. Mathilda, 1, 10.)
The modern name is Parma. (Mannert, Geoégr., vol.
9, pt. 1, p. 218.)

Parmenides (Παρμενίδης), the second in the series of
the Eleatic philosophers, was a native of Elea. He
was descended from a noble family, and is said to have
been induced to study philosophy by Aminias. (Diog.
Laert., 9, 21.) He is also stated to have received
instruction from Diocles, the Pythagorean, to whom he
erected an heroion. Later writers inform us that
he heard Xenophanes, the founder of the Eleatic school,
but Aristotle (Met. 1, 3, 14, 63) speaks of it with some doubt.
We read that Parmenides gave a code of laws to his
native city, which was so highly esteemed that at first
the citizens took an oath every year to observe it,

(Diog. Laert., 9, 23. — Plut., Adv. Colot., 32. — Stra-
bo, 252.) The work to which he lived has been much
disputed. According to Plato (Parmenides, 137 a), Par-
menides, at the age of sixty-five, accompanied by Zeno,
his disciple, at the age of forty, visited Athens during the
great Panathenæa, and stopped at the house of Polydorus.
As this visit to Athens probably occurred about B.C.
454 (Clinton, Fast. Hell., p. 364), Parmenides would
have been born about B.C. 519. But to this date two
objections are urged: first, that Diogenææ Laerrius (9,
252) says that Parmenides flourished (ζωονέως) in the
69th Olympiad; and, second, that Socrates was visited
by Plato, in his dialogue entitled Parmenides, to have
conversed with Parmenides and Zeno on the doctrine of
ideas, which we can hardly suppose to have been
the case, as Socrates at that time was only thirteen or
fourteen. Athenæus, accordingly (11, p. 505), has cen-
sulted Plato for saying that such a dialogue ever took
place. But in reply to these objections it may be re-
marked, that the least remains can be placed upon
the vague statement of such a careless writer as Dio-
genès; and, secondly, that the dialogue which Plato
represents Socrates to have had with Parmenides and
Zeno is doubtless fictitious; yet it was founded on a
fact, that Socrates, when a boy, had heard Parmenides
at Athens. Plato mentions, both in the "Theaetetus"
(p. 183) and the "Sophistes" (p. 127), that Socrates
was very young (ναύς γενέσθαι) when he heard Par-
menides. We know nothing of the circumstances of
Parmenides. He taught Empedocles and Zeno, and
with the latter lived on the most intimate terms. (Plato,
Parmen., 127.) He is always spoken of by the ancient
writers with the greatest respect. In the "Theate-
tus" (p. 183) Plato compares him with Homer; and
in the "Sophistes" (p. 237) he calls him "the Great." (Compare Aristotle, Met., 1, 5.) Parmenides wrote a
poem, which is usually cited by the title of "On Nature"
Laert., 8, 55), but which also bore other titles. Suidas calls it phusioyia (s. l. ἡ παρ
mēνιν) and adds, on the authority of Plato, that he also
wrote works in prose. The passage in Plato (Soph.,
p. 237), however, to which Suidas refers, perhaps only
means an oral exposition of his system, which inter-
pretation is rendered more probable by the fact
that Sextus Empiricus (Mathæus, Mathæus, 1, 16) ex-
pressly states that Parmenides only wrote one work.
Several fragments of this work "On Nature" have come
down to us, principally in the writings of Sextus Empiricus and Simplicius. They were first published by Stephanus in his "Poe-
sis Philosophica" (Paris, 1573), and next by Fülle-
born, with a translation in verse, Züllichau, 1795.
Brandis, in his "Commentationes Eleaticæ," Hafnia,
1813, also published the fragments of Parmenides, to-
gether with those of Xenophanes and Melissus; but
the most recent and complete edition is by Karsten,
in the second volume of his "Philochronum Gracorum
veterum, praecipitum qui ante Platonem, floruerunt,
Opeùm Resignio," Brux., 1835. The fragments of his
work which have come down to us are sufficient to en-
able us to judge of its general method and subject.
It opened with an allegory, which was intended to exhib-
ti the soul's longing after truth. The second part of the
work is supposed as drawn by steeds along an undrowned
road to the residence of Justice (Δικαίωμα), who promises to reveal
everything to it. After this introduction the work is
divided into parts; the first part treats of the knowl-
edge of truth, and the second explains the physiological
system of the Eleatic school. (Encyclop. Useful
Knowl., vol. 17, p. 283.)

Parmenio, a Macedonian general, who distinguished
himself under the service of Philip, father of Alexander
the Great. He gained a decisive victory over the Illyri-
s against the time of Alexander's birth, and the news
of both events reached Philip, who was then absent

6 II

977
from his capital on some expedition, together with that of his having won the prize at the Olympic games. Philip, while preparing to invade the Parthians as an Epicurus, and he chose Parthenio and Artacus as the leaders of the expedition. These commanders began by expelling the Persian garrisons from several Greek towns of Asia Minor. Parthenio took Gryneum in Eolis, the inhabitants of which, having sided with the Persians, and fought against the Macedonians, were sold as slaves. When Alexander set out on his Asiatic expedition Parthenio had one hundred squadrions in the army. At the head of the Thessalian cavalry he contributed much to the victory of the Granicus; and at Issus he had the command of the cavalry on the left wing, which was placed near the seacoast, and had to sustain for a time the principal attack of the Persians. At Arbela he advised Alexander not to give battle until he had well reconnoitred the ground. Being in command of the left wing, he was attacked in flank by the Persians, and was for a time in some danger, until Alexander, who had been successful in another part of the field, came to his assistance. Parthenio afterward pursued the fugitives, and took possession of the Persian camp, with the elephants, caissons, and all the baggage. When Alexander marched beyond the Caspian gates in pursuit of Darius and Bessus, he left Parthenio, who was now advanced in years, in Media, at the head of a considerable force. Some time after, while Alexander was encamped at Artacana, a conspiracy is said to have been discovered against his life, in which Philotas, the son of Parthenio, was accused of being implicated. He was, in consequence, put to the torture, and, after enduring dreadful agonies, confessed, though in vague terms, that he had conspired against the life of Alexander, and that his father Parthenio was cognizant of it. This being considered sufficient evidence, Philotas was stoned to death, and Alexander despatched a messenger to Media, with secret orders to Cleander and other officers who were serving under Parthenio, to put their commander to death. The unsuspecting veteran, while conversing with his officers, was run through the body by Cleander. This is the substance of the account of Curtius (lib. 6 et 7). Artian's account is somewhat different (lib. 3). Whatever may be thought of the trial and execution of Philotas, it appears to have been at least a summary and unsatisfactory proceeding, the consequence of Parthenio, and the manner of it, one of the darkest blot of Alexander's character. Parthenio was evidently sacrificed in cold blood to what have been styled, in after ages, "reasons of state." He was seventy years of age; he had lost two sons in the campaigns of Alexander, and Philotas was the last one remaining to him. Parthenio appears to have been a steady, brave, and prudent commander. (Engel. Us. Knowl., vol. 17, p. 293, seq.)

PAR

A mountain-chain in Phocis, which extends in a northeasterly direction from the country of the Locri Ozois to Mount Oeta, and in a southwesterly direction through the middle of Phocis, till it joins Mount Helicon on the borders of Boeotia. Strabo (316) says that Parthenius divided Phocis into two parts; but the name was more usually restricted to the lofty mountain upon which Delphi was situated. According to Stephanus of Byzantium, the ancient name of this mountain was Delphos, because the peak or larnax of Deucalion landed here after the flood. (Compare Oud. Met., 1, 318.) Pausanias (10, 6, 1) derives the name from Parnassus, the son of Neptune and Cleodora. It is called at the present day Liakura. Parnassus is the highest mountain in Central Greece. Strabo (379) says that it could be seen from the Acrocorinthus in Corinth, and also states (409) that it was of the same height as Mount Helicon; but in the latter point he was mistaken, according to Colonel Leake, who informs us (Travels in Northern Greece, vol. 2, p. 527) that Liakura is some hundred feet higher than Parnassus, which is the greater part of the year with snow, whence the epithet of "snowy" so generally applied to it by the poets. (Soph., Oed. Tyr., 473.—Eurip., Phae., 214.) When Brennus invaded Greece, we learn from Pausanias (10, 23, 3 et 4) that it was covered with snow. Above Delphi there were two lofty rocks, from which the mountain is frequently called by the poets the two-walled (ktesouros), one of which Herodotus (8, 39) names Hyampous, but which were usually called Phan-driades. Between these two rocks the celebrated Ca-talian fount flows from the upper part of the mountain. The water which oozes from the rock was in ancient times introduced into a hollow square, where it was retained for the use of the Pythia and the oracular priests. The fountain is ornamented with pendant ivy, and overshadowed by a large fig-tree. (Diodor. Sicul., lib. 5, 172.) Above the spring, at the distance of 60 stadia from Delphi, was the Corycian cave, sacred to Pan and the Corycian nymphs, which Pausanias (10, 32, 2, 5) speaks of as superior to every other known cavern. (Compare Strabo, 417.) When the Persians were marching against Delphi, a part of the inhabitants took refuge in this cavern. (Herod., 8, 37.) It is described by a modern traveller (Raisks, in Walpole's Collection, &c., vol. 1, p. 320) as 320 feet long and nearly 200 wide. As far as this cave the road to Delphi was accessible by horses and mules, but beyond it the ascent was difficult even for an active man (ιπερενεχόμενος).—Pausan., 10, 32, 5, 5. Above this cave, and near the summit of Parnassus, at the distance of 80 stadia from Delphi (Pausan., 10, 32, 6) was the town of Tithorea or Neous, the ruins of which are near the modern village of Velitza. (En- gel. Us. Knowl., vol. 17, p. 294, seq.)—II. A son of Neptune, who gave his name to a mountain of Phocis. Parthenius (gen. —etis), a mountain of Atica, north of Athens, famous for its vines. It was the highest mountain in the whole country, rising on the northern frontier, and being connected with Pentelicus to the south, and towards Boeotia with Cithæum. Pausanias says (1, 32) that on Mount Parnes were a statue of Jupiter Parnemus, and an altar of Jupiter Semelus. It abounded with wild boars and bears. (Pausan., i. c.—Pliny, 11, 37.) The modern name is Næsææ. Mount Parnassus is called by the ancient geographers with a multiplicity of names, crataeæ and well-wooded rocks and precipices, and richly diversified with scenery which is at once grand and picturesque: its summit commands a view over a vast extent of country. (Tour, vol. 1, p. 504.)

Paropamisus, a province of India, the eastern limit of which, in Alexander's time, was the river Cophenes. According to the ideas of Ptolemy, it lay between the countries of Paropamisus and Hellespont, and also between the countries of Scythia and Asia. (Ephor., ap. Stephan. Byz., s. v. Φασθόν.—Herod., 6, 28, seq.) After the battle of Marathon it was besieged in vain by Miltiades for twenty-six days, and thus proved the cause of his disgrace. (Herod., 9,
134.) The Parions, according to the historian just cited, did not take part with the Persians in the battle of Salamis, but kept aloof near Cythnos, awaiting the issue of the action. (Herod., 8, 67.) Themistocles, however, subsequently imposed upon them a heavy fine. (Herod., 8, 112.) Paros was famed for its marble. The quarries were on Mount Marpessa. (Vitr., Arch. Ital., 3, 34. — Hor., Od., 1, 19, 5. — Steph. Byz., s. v. Μαρπισσα.) Some remarks on the Parian marble will be offered below. — Paros was the birthplace of the poet Archilochus. (Strabo, l. c. — Fabr., Bibl. Gr., vol. 2, p. 107.) It was in Paros that the famous marble was disinterred, known by the name of the Parian Chronicle, from its having been kept in this island. It is a chronological account of the principal events of its history, during a period of 1318 years, from the reign of Cecrops, B.C. 1450, to the archonship of Diogenetus, B.C. 264. But the chronicle of the last 90 years was lost, so that the part now remaining ends at the archonship of Diotimus, B.C. 354. The authenticity of this chronicle has been called in question by Mr. Robertson, who, in 1788, published a Dissertation on the Parian Chronicle. — His objections, however, have been ably and fully discussed, and the authenticity of this ancient document has been fully vindicated by Porson, in his review of Robertson's essay, (Monthly Review, January, 1789, p. 690. — Porson's Tracts, ed. Kidd, p. 57. seqq. — Consult also the Encyclopaedia Metropolitana, Art. "Arundelian Marble.") The chronicle is given, with an English version, in Hale's Analysis of Chronology (vol. 1, p. 107, seqq.). — The following very interesting account of the quarries and marbles of Paros is given by Dr. Clarke. "This day we set out upon mules for the ancient quarries of the famous Parian marble, which are situated about a league to the east of the town, upon the summit of a mountain, nearly corresponding in altitude with the situation of the Grotto of Antiparos. The mountain in which the quarries are situated is now called Capresse: there are two of these quarries. When we arrived at the first, we found in the mouth of the quarry heaps of larger quarried fragments, detached from the interior: they were tinged, by long exposure to the air, with a reddish, ochreous hue; but, upon being broken, exhibited the glittering sparry fracture which often characterizes the remains of Grecian sculpture: and in this we instantly recognised the beautiful marble, which is generally named, by way of distinction, the Parian, although the same kind of marble is also found in Greece: the marble of Paros, however, differs from the Thasian and Parian in exhibiting a more advanced state of crystallization. The peculiar excellence of the Parian is extolled by Strabo; and it possesses some valuable qualities unknown even to the ancients, who spoke so highly in its praise. These qualities are, that of hardening by exposure to atmospheric air (which, however, is common to all homogeneous limestone), and the consequent property of resisting decomposition through a series of ages; and this, rather than the supposed preference given to the Parian marble by the ancients, may be considered as the cause of its prevalence among the remains of Grecian sculpture. That the Parian marble was highly and deservedly extolled by the Romans, is well known: but in a very early period, when the arts had attained their full splendour in the age of Pericles, the marble of Paros, as that of Mount Pentelicus, because it was whiter; and also, perhaps, because it was found in the immediate vicinity of Athens. The Parthenon was built entirely of Pentelic marble. Many of the Athenian statues, and of the works carried on near Athens during the administration of Pericles (as, for instance, the temple of Ceres at Eleusis), were executed in the marble of Pentelicus. But the finest Grecian sculpture which has been preserved to the present time, is generally of Parian marble. The Medicean Venus, the Belvidere Apollo, the Antinous, and many other celebrated works, are made of it; not withstanding the preference which was so early bestowed upon the Pentelic; and this is easily explained by the fact that Parian marble retain, with all the delicate softness of wax, the mild, lustre even of their original polish, those which were finished in Pentelic marble have been decomposed, and sometimes exhibit a surface as earthy and as rude as common limestone. This is principally owing to veins of extraneous substances which intersect the Pentelicarian quarries, and which appear more or less in all the works executed in this kind of marble, as the Kouros Port for instance, is sometimes splinterly, and partsake of the foliated texture of the schistus, which traverses it; consequently, it has a tendency to exfoliate, like cipollino, by spontaneous decomposition. — We descended into the quarry, whence not a single block of marble has been removed since the island fell into the hands of the Turks: and perhaps it was abandoned long before, as might be conjectured from the ochreous colour by which all the exterior is tinged, and has been invested. We seemed, therefore, to view the grotto exactly in the state in which it had been left by the ancients: all the cavities, cut with the greatest nicety, showed to us, by the sharpness of their edges, the number and the size of all the masses of Parian marble which had been removed for the sculptures of ancient Greece. If the stone had possessed the softness of potter's clay, and had been cut by wires, it could not have been separated with greater nicety, evenness, and economy. The most evident care was everywhere displayed, that there should be no waste of this precious marble: the larger squares and parallelograms corresponded, as a mathematician would express it, by a series of equimultiples, with the smaller, in such a manner that the remains of the entire vein of marble, by its dipping inclination, resembled the degrees or seats of a theatre. — We quitted the ancient quarries, and visited another somewhat less elevated. Here, as if the ancients had resolved to mark for posterity the scene of their labours, we observed an ancient bas-relief on the rock. It is the same which Tournefort describes (Voy. du Lev., vol. 1, p. 239), although he erred in describing the subject of it. It is a more curious relic than is commonly supposed. It represents, in three departments, a festivity of Silenus, the god of wine, and of the vine, who is seated in the midst of all the countries, especially where the populace are to be fed by some supposed prodigy: and thus the cause is explained why this singular piece of sculpture, so rudely executed, yet remains as a part of the natural rock. 'A wonderful circumstance," says Pliny, 'is related of the Parian quarries. The mass of entire stone being separated by the wedges of the workmen, there appeared within it a effigy of Silenus (36, 5). In the existence of this bas-relief, of the natural part, in the allusion made to it by Pliny, we have sufficient proof that these were ancient quarries; consequently, they are the properest places to resort to for the identical stone whose colour was considered as pleasing to the gods (Plato, de Leg., 12, p. 296), which was used by Praxiteles (Proper., 3, 7, 16. — Quintil., 2, 19) and by other illustrious
Greek sculptors, and celebrated for its whiteness by Pindar (Nem., 4, 292) and by Theocritus (6, 38).

We collected several specimens: in breaking them we observed the same whiteness and brilliant fracture which characterizes the marble of Naxos, but with a particular distinction before mentioned, the Parian marble being whiter and clearer. It is a little grit eccentric, and a crystalline texture. Three different stages of crystallization may be observed, by comparing the three different kinds of marble dug at Carrara in Italy, in Paros, and in Naxos: the Carrara marble being milk-white, and less crystalline than the Parian; and the Parian whiter, and less crystallized than the Naxian.

(Clarke's Travels, vol. 6, p. 133, seqq., Lond. ed.)—Parian marble has been frequently confounded not only with the Greek, but also with alabaster, though differing altogether in nature from the latter substance, and in character from the former. The true Parian marble has generally somewhat of a faint bluish tinge among the white, and often has blue veins in different parts of it. (Elme's Dict. of the Fine Arts, s. v.)

Parrhasius, a people of Arcadia, apparently on the Laconian frontier; but the extent and position of their territory are by the modern writers uncertain. Theopompus says their district was under the subjection of Mantinea, and near Sciritis of Laconia (5, 33). But Parrhasius seems rather to assign the Parrhasii a more western situation; for he names as their towns Lyco-sura, Thocnia, Trapezus, Acaesium, Macarea, and Dasa, all of which were to the west and northwest of Megapollis. (Cramer's Anc. Greece, vol. 3, p. 350.)

Parrhasius, a celebrated painter, son of Eubulus, a native of Athens, who became eventually a citizen of Ephesus, having been presented with the freedom of that place. (Plut., Vit. Thes., 4.—Junius, Catal., p. 143.) The period when he flourished admits of some discussion. From a passage in Pliny (35, 9, 36) it would appear to have been about the 96th Olympiad; and Quintilian (12, 10) places Parrhasius and Zeuxis about the time of the Peloponnesian war, producing, in support of this opinion, the well-known conversation of the former artist with Socrates (Themist., Lem., Mem., 3, 10). Now Socrates died in the first year of the 95th Olympiad, and this date fully accords with the year to which Parrhasius is assigned by Pliny. (Sillig, Dict. Art., s. v.)—Parrhasius raised the art of painting to perfection in all that is exalted and essential. He compared his three great predecessors with one another, rejected what was exceptionable, and adopted what was admirable in each. The classic invention of Polygnotus, the magic tone of Apollodoros, and the exquisite design of Zeuxis, were all united in the works of Parrhasius; what they had produced in practice, he reduced to theory. He so circumscribed and defined, says Quintilian (12, 10), all the powers and objects of art, that he was termed the legislator; and all contemporary and subsequent artists adopted his standard of divine and heroic proportions. Parrhasius gave, in fact, to the divine and heroic subject, the grandeur which the painter had given to the human in sculpture, by his Do- ryphorus, namely, a canon of proportion. Phidias had discovered in the nod of the Homeric Jupiter the characteristic of majesty, inclination of the head: this hinted to him a higher elevation of the neck behind, a bolder protrusion of the front, and the increased perpendicular of the profile. To this conception Parrhasius fixed a maximum; that point from which descends the ultimate and heroic grandeur, the dignity of nature which moves whatever is inferior, beyond which what is portentous.—Parrhasius himself was aware of his own ability: he assumed the appellation of the "Elegant" ("Aphodiotetos), and styled himself the "Prince of Painters." (Parrhasius is also called the "Epic Painter," or "Epic Enthroner." He also wrote an epigram upon himself (Athen., 12, p. 543), in which he proclaimed his birth-place, celebrated his father, and pretended that in himself the art of painting had attained to perfection. He likewise declared himself to be descended from Apollo, and carried his arrogance so far as to dedicate his own portrait in a temple as Mercury, and thus receive the adoration of the multitude. (Themist., 14.) He wore a crown of corn, as his character was equated with a rich man.
traction of the contest, an evil threatening the existence of the state, no children being born to supply the waste of war and natural decay. The remedy said to have been adopted was a strange one, highly characteristic of Lacedaemon, and such as no other people would have used. The young men who had come to maturity since the Peace of Nicias were numbering about 1,000, and the Spartan constitution permitted sending them to war, if the state was in any danger. This was done, and the young men were sent home to cohabit promiscuously with the marriageable virgins. But even at Sparta this expedient in some degree ran counter to the popular feelings. When the war was ended, and the children of this irregular intercourse, called Parthenium (φαρθηνία), had attained to manhood, they found themselves, though bred in all the discipline of Lycurgus, becoming more and more the sport of Fortune. A woman of high rank, and a conspiracy was accordingly formed by them against the state, in conjunction with the Helots; but the public authorities, aware of the existence of disaffection among them, obtained information of all their plans, by means of certain individuals whom they had caused to join the Parthenium, and to pretend to be friendly to their views. The festival of the Hypacinthia was selected by the conspirators as the day for attempting their design, and the leader, who was to place his felt-cap upon his head, this was to be the signal for commencing. The appointed time arrived, and the festival had begun, when a public crier coming forth, made proclamation, in the name of the magistrates, that "Phalanthus should not put his felt-cap on his head" (δυν θα παραβιάσει κυρίως Φάλαντος). The Parthenium immediately perceived that their plot was discovered, and were soon after sent off in a colony, under the guidance of Phalanthus, who had founded the city of Tarentum in Italy. (Strab., 270.) It is more than probable that so much of this story as relates to the oath taken by the Spartans, and the sending home of their young men, is a mere fiction. On the other hand, however, it would seem that the emergencies of the state had actually induced the Spartans to relax the rigour of their principles, by permitting marriages between Spartan women and Laconians of inferior condition. Theopompus (ap. Athen., 6, p. 271) says, that certain of the Helots were selected for this purpose, who were afterward admitted to the franchise under a peculiar name (πατριώπαι). Still, however, even supposing that the number of the Spartans was thus increased by a considerable body of new citizens, drawn from the servile or the subject class of Laconians, or from the issue of marriages formed between such persons and Spartan women, it would nevertheless remain to be explained, how this act of wise liberality could be connected with that discontent, which is uniformly mentioned, certainly not without some historical ground, as the occasion of the migration to Tarentum. And this seems inexplicable, unless we suppose that a distinction was made between the new and the old citizens, which provoked a part of the former to attempt a revolution, and compelled the government to introduce the usual means of getting rid of disaffected and turbulent subjects. (Thirlwall's Greece, vol. 1, p. 353.)

**Parthenium Mare**, a name sometimes given to that part of the Mediterranean which lies on the right of Egypt. It was also called Iniacum Mare. (Amn. Marcell., 14, 8.—Id., 22, 15.) Gregory Nazianzen styles the sea around Cyprus Παρθενικὸς πέλαγος. (Or., 19.)

**Parthenium**, I. the southwestern extremity of the Tauric Chersonese. It received its name (Παρθενικὸς ἀκρωτήριος, "Virgin's Promontory") from Iphigenia's having been fabled to have offered up here her human sacrifices to the Tauric Diana. It is now called Felten Bouron, and is the monastery of St. George. (Plin., 4, 12.—Bischoff and Möller, Wörterb. der Geogr., p. 829.)—II. A city of Mytilene in the territory of Trosos. (Xen., Anab., 7, 8.—Plin., 5, 30.)

**Parthenius, I.** a river of Asia Minor, forming the boundary between Paphlagonia and Bithynia, and falling into the Euxine to the southwest of Amastris. Strictly speaking, it separates Bithynia from Paphlagonia. It is a chain of lakes, and runs through a country where considerably within the limits of the latter country. The modern Greek inhabitants in this quarter call it the Barcis; the Turkish name is the Dolap. (Apoll. Rhod., 2, 938.—Xen., Anab., 6, 2.)

The Greek name of this river was very probably a corruption of the original appellation, or, rather, an adaptation of it to a Greek ear; and the name Parthenes (Παρθένης, Anon. Peripl., p. 8) would seem to be an intermediate form. The Greeks, who were never at a loss for explanations derived from their national mythology, made the stream obtain its title of Parthenius (Virgin's River) from the circumstance of Diana's having dedicated to bathe in its pure waters and hunt along its banks. (Apoll. Rhod., l. c.—Schol. ad Apoll. Rhod., l. c.—Steph. Byz., s. v.—Anon. Peripl., p. 70.)—II. A mountain in Arcadia, forming the limit between that country and Argolis, and lying by the sea (Strab., p. 356).—IV. A native of Nicaea, in Asia Minor, taken prisoner by Cinna in the war with Mithradates (B.C. 81), and brought to Rome, where he instructed Virgil in Greek. Suidas states that he lived till the time of the Emperor Tiberius. The same lexicographer informs us that he gained his freedom on account of his learning. Of the numerous works written by Parthenius, only one now remains. Its title is Περὶ ἀπειρίας καταφύγίων ("On Amatory Afections"), and it is addressed to Cornellius Gallus, the elegiac poet. It is a collection of thirty-six erotic tales, all of a melancholy cast. At the period when he wrote, the corruption of taste had not, as yet, become strongly marked, and hence he may almost be regarded as one of the classic Greek writers. Virgil and Ovid have imitated him. He has preserved for us some interesting extracts from various ancient poets, especially those of the elegiac class; as, for example, Alexander the Eolian, and Ephiphanius of Chalcis. (Le Beau, Mem. de l'Acad. des Inscri., &c., vol. 34, p. 63, seqq.) The ancients cite other works of Parthenius, such as his Metamorphoses, which, perhaps, first suggested to Ovid the idea of his mythological poem. If any reliance is to be placed on a marginal note in a Milan manuscript, the Metamorph of Virgil is a mere imitation of one of the poems of Parthenius. (Voss, de Poet. Gr., p. 334.) The best edition of this writer is that of Passow, Lips., 1830, 12mo. There is only one MS. of Parthenius (Best, Epist. Crit., p. 168, 208), from which the early editions often depart without any necessity. Passow has made this MS. the basis of his edition. (Schoell. Hist. Lit. Gr., vol. 3, p. 42, seqq.)

**Parthenon**, a celebrated temple at Athens, on the summit of the Acropolis, and sacred to Minerva, the virgin-goddess (παρθένος ἑρωίδια). It occupied the site of an older temple, also dedicated to Minerva, and which was denominated Heactopemdon (Ἑκατομπέδον), from its having been one hundred feet square. This earlier temple was destroyed in the Persian invasion, and the splendid structure of the Parthenon, enlarged and modelled after a more perfect plan, arose in its place. In beauty and grandeur it surpassed all
PARTHENON.

other buildings of the kind, and was constructed entirely of Pentelic marble. It was built during the splendid era of Pericles, and the expense of its erection was estimated at six thousand talents. The architects were Ictinus and Callicrates, and the work was adorned with sculptures from Delos, the island of Phidias, and Samos. The following animated description, by a modern scholar, may afford some idea of the appearance presented by this splendid edifice in the days of its glory. — "Let us here suppose ourselves as joining that splendid procession of minstrels, priests, and victims, of horsemen and of chariots, which ascended the Acropolis at the quinquennial solemnity of the great Panathenaea. Alcibiades, above the heads of the train, the sacred Peplus, raised and stretched like a sail upon a mast, waves in the air; it is variegated with an embroidered tissue of battles, of giants, and of gods; it will be carried to the temple of the Minerva Polias in the citadel, whose statue it is intended to adorn. In the bright season of summer, on the twenty-eighth day of the Athenian month Hecatomboleon, let us mount with this procession to the western slope of the Acropolis. Towards the termination of its course we are brought in face of a colossal frieze, composed of marbles brownish-white, grown by the steep, and stretches itself from north to south across the whole western part of the citadel, which is about 170 feet in breadth. The centre of this frieze consists of a portico 60 feet broad, and formed of six fluted columns of the Doric order, raised upon four steps, and intersected by a road passing through the midst of the columns, which are 30 feet in height, and support a noble pediment. From this portico two wings project about 30 feet to the west, each having three columns on the side nearest the portico in the centre. The architectural mouldings of the fabric glitter in the sun with brilliant tints of red and blue: in the centre the coffers of its soffits are spanned with stars, and the ante of the wings are fringed with an azure embroidery of ivy-leaf. We pass along the avenue lying between the two central columns of the portico, and through a corridor leading from it, and formed by three Ionic columns on each hand, and are brought to the front of five doors of bronze; the central one, which is the loftiest and broadest, being immediately before us. This structure which we are describing is the Propylaea, or vestibule of the Athenian citadel. It is built of Pentelic marble. In the year B.C. 437 it was commenced, and was completed by the architect Mnesicles in five years from that time. Its termination, therefore, coincides very nearly with the commencement of the Peloponnesian war. We shall now imagine that the great bronze doors of which we have spoken are thrown back upon their hinges, to admit the riders and charioteers, and all that long and magnificent array of the Panathenian procession, which stretches back from this spot to the area of the Agora, at the western foot of the citadel. We behold through this vista the Interior of the Athenian Acropolis. We pass under the gateway before us, and enter its precincts, surrounded on all sides by massive walls; we hear the sound of the soil upon which the greatest men of the ancient world have walked, and behold buildings ever admired and imitated, but never equalled in beauty. We behold before and around us almost a city of statues, raised upon marble pedstals, the works of noble sculptors, of Phidias and Polycle- tus, of Alcamenes, and Praxiteles, and Myron; and commemorating the virtues of benefactors of Athens, or representing the mythological alarms of which the gods are wont to inspire us, or daunt ourselves by their presence. We perceive large slabs of white marble inscribed with the records of Athenian history, with civil contracts and articles of peace, with memorials of honours awarded to patriotic citizens or munificent strangers. Proceeding a little farther, we have, on our left, raised on a high base, a huge statue of bronze, the labour of Phidias. It is seventy feet in height, and looks towards the west, upon the Areopagus, the Agora, and the Pnyx, and far away over the Aegean Sea. It is armed with a long spear and oval shield in its left hand, and bears on its head; the point of the lance and the crest of the cap, where the loftiest building of the Acropolis, are visible to the sailor who approaches Athens from Sestium. This is Minerva Promachus, the champion of Athens, who, looking down from her lofty eminence in the citadel, seems, by her attitude and her accoutrements, to promise protection to the city beneath her, and to bid defiance to its enemies. Passing onward to the right, we arrive in front of the great marble temple, which stands on the most elevated ground of the Acropolis. We see eight Doric columns of huge dimensions elevated on a platform, ascended by three steps at its western front. It has the same number of columns on the east, and seventeen on each side. At either end, above the eight columns, is a lofty pediment, extending to a length of eighty feet, and furnished with nearly twenty figures of superhuman size. The group which we see before us, at the western front, a statue of Athena, we are told, was intended for the soil of Athens; the other, above the eastern front, exhibits the birth of the Athenian goddess. Beneath the cornice, which runs on all sides of the temple, is the frieze, divided into compartments by an alternating series of triglyphs and metopes, the latter of which are ninety-two in number, namely, fourteen on either front, and thirty-two on each flank; they are a little more than four feet square, and are occupied by one or more figures in high relief; they represent the actions of the goddess, to whom the temple is dedicated, and of the heroes, especially those that were natives of Athens, who fought under her protection and conquered by her assistance. They are the works of Phidias and his scholars; and, together with the pediments at the two fronts, may be regarded as offering a history in sculpture of the most remarkable subjects contained in the mythology of Athens. Attached to the temple, beneath each of the metopes on the eastern front, hang round slabs covered with gold; below them are inscribed the names of those who dedicated them as offerings to Minerva, in testimony of their gratitude for the victories they had won; the spoils of which they shared with her, as she partook in the labours which achieved them. The members of the building above specified are enriched with a profusion of vivid colours, which throw around the fabric a joyful and festive beauty, admirably harmonizing with the brightness and transparency of the atmosphere that encircles it. The cornice of the pediments is decorated with painted ovoli and arrows; coloured meanders twine along its annulets and beads; and honeysuckle ornaments wind beneath them; the pediments themselves are studded with disks of various hues; the triglyphs of the frieze are streaked with tints which terminate in plate-bands and guttae of azure dye; gilded festoons hang on the architrave below them. It would, therefore, be a real service to posterity if we could show in this temple which we are describing merely as the best school of architecture in the world. It was also the noblest museum of sculpture, and the richest gallery of painting. We ascend by three steps, which lead to the door of the temple at the posticum or west end, and stand beneath the roof of the peristyle. Here, before the end of the cells, and also at the prostyle, consisting of four columns, is an altar dedicated to heroes and gods; we perceive large slabs of white marble inscribed with the records of Athenian history, with civil contracts and articles of peace, with memorials of honours awarded to patriotic citizens or munificent strangers. Proceeding a little farther, we have, on our
the treasury of Athens; the eastern is the temple properly so called: it contains the colossal statue of Minerva, the work of Phidias, composed of ivory and gold; and is peculiarly termed, from that circumstance, the Parthenon, or Residence of the Virgin Goddess, a name by which, however, the whole building is most frequently described." (Wordsworth's Greece, p. 135, seqq.)—The statue of Minerva, to which allusion has just been made, was 39 feet high. It was ornamented with gold to the amount of 40 talents according to Thucydides, but according to Philochorus 44 talents, or about $465,000. Of this, however, it was stripped by Lachares, somewhat more than a century and a quarter after the death of Pericles.—This magnificent temple, which had resisted the outrages of time, had re-emerged in turn converted into a Christian church and a Turkish mosque; but still subsists entire when Spon and Wheeler visited Attica in 1676. It was in the year 1687 that the Venetians besieged the citadel of Athens, under the command of General Königsgärt. A bomb fell most unconventionally on the devoted Parthenon, set fire to the powder which the Turks had made therein, and thus the roof was entirely destroyed, and the whole edifice reduced to ashes. But the Venetian general, being afterward desirous of carrying off the statue of Minerva, which had adored the pediment, had it removed; thereby assisting in the destruction of the temple, without any good result to himself, for the group fell to the ground and was shattered to pieces. Since this period, every man of taste must have deplored the demolition of this noble structure, and have regarded, as forming, under the Parthenon, a separate spot the history of Athens, in place of the Athenian antiquities. Chandler, and other travellers in Greece, have also described what came under their eye of the remains of the Parthenon, of which many models have likewise been executed, but not in a style from these illustrative labours and publications, more modern travellers have borne away with them the actual spoils of the Parthenon. The foremost of these was Lord Elgin, who, about the year 1800, removed a variety of the matchless friezes, statues, &c., which were purchased of him by parliament on the part of the nation, and now form the most valuable and interesting portion of the British Museum. This act of Lord Elgin had resisted the outworn of time, had been, as it were, a translation of an ancient structure, though it is now well known that there was imminent danger of those relics of art being totally destroyed by the wanton barbarism of the Turks and others. (Elme’s Dictionary of the Fine Arts, s. v. Parthenon.)

Parthenopæus, son of Milon (according to some, of Mars) and Atlantia. He was one of the seven chiefs who engaged in the Trojan war. (Vid. Elgin.) 48, 2, 2, 13.)—He was slain by Amarynthus, or, as others state, by Pericles. (Apol. of Athens, i. 3, 6, 8.—Consult Heyne, ad loc.)

Parthenope, one of the Sirens. (Vid. Neapolis.)

Parthia, called by Strabo and Arrian Parthvna (Parthvna), was originally a small extent of country to the southeast of the Caspian Sea, of a mountainous and sandy character, with here and there, however, a fruitful soil. The conquest of the Persians, who invaded it from Rome, one state with the province of Hyrcania, which lay to the west of it. The inhabitants, a nomadic race, were of Scythian descent. Under the successors of Alexander, the Parthian Arsaces, a man of obscure origin but great military talents, succeeded in founding a separate kingdom, which gradually extended itself, under those who came after him, until it reached the Euphrates, comprehending the fairest province of the old Persian monarchy. This new empire took the name of Parthian from the country where it first arose, and, in its fullest extent, reached to the Indus on the east, the Tigris on the west, the Mare Erythreum on the south, and the range of Caucasus, together with a portion of Scythia, on the north. The name of Parthia was now regarded, under the name of Parthvna, as the royal province, and contained Hecatompylos, the capital, until succeeded by Ctesiphon, of the whole empire. The Parthian empire lasted from B.C. 256 to A.D. 226. Its history may be divided into three periods.—First Period, from B.C. 256 to B.C. 130. During this period the Parthians were engaged in almost continual struggles with the Syrian kings. Under Mithradates I., the king of Syria, who, having defeated the Persians in 130, returned to Asia Minor from the attacks of the Syrian kings. (Joseph., Ant. Jud., 13, 8.—Appian, Bell. Syr., 68.)—Second Period, from B.C. 130 to B.C. 53. During the early part of this period, the Parthians were constantly engaged in war with the nomadic tribes of Central Asia, who, after the destruction of the Greek kingdom of Bactria, attempted to obtain possession of the western parts of Asia. Under Mithradates II., the second successor of Arsaces fell in battle against these invaders; but the further progress was effectually stopped by Mithradates III., who met, however, with a powerful rival in Tigranes, king of Armenia. Tigranes obtained possession of some of the western provinces of the Parthian empire; but, after his overthrow by the Romans, the Parthians acquired their former power, and were brought into immediate contact with Rome.—Third Period, from B.C. 53 to A.D. 226. This period comprises the wars with the Romans. The invasion of Crassus, during the reign of Orodos, terminated in the death of the Roman general and the destruction of his army, B.C. 53. In consequence of this victory, the Parthians obtained a great increase of power. They invaded Syria in the following year, but were driven back by Cassius. In the war between Caesar and Pompey they took the side of the latter, and after the death of Pompey, Cæsar the conqueror, being desirous of securing the name of Labienus, sent an arm into Syria commanded by Pacorus and Labienus, but they were defeated the following year by Ventidius, B.C. 48, and again in B.C. 38. In B.C. 37, Orodus was murdered by his son Phraates IV., an ambitious and energetic prince, who, as soon as he obtained the throne, made great preparations for renewing the war with the Romans. Antony marched into Media against him, with great loss. Phraates, however, was unable to follow up his victory, in consequence of having to contend with Tigrates, a formidable competitor for the Parthian throne. After an obstinate struggle, Tigrates was defeated (B.C. 25), but he contrived to get into his power the youngest son of Phraates, with whom he fled to Rome, and sought the aid of Augustus. Menaced by the arms of his own subjects, Phraates willingly made great concessions to Augustus. He sent four of his sons to Rome as hostages, and restored to Augustus the Roman standards which had been taken on the defeat of Crassus, an event which is frequently alluded to by the poets of the Augustan age. The history of Parthia after this becomes of less importance, and is little more than a record of civil wars and revolts, which tended greatly to diminish the power of this once formidable empire;
and it was the great object of Roman policy to support, as much as possible, pretenders to the throne, and there- 
by prevent all offensive operations on the part of the Par- 
thians. The great subject of contention between the Romans and Parthians was the kingdom of Armenia, which had monarchs of its own, and was nominally in- 
dependent; but its rulers were always appointed either by the Romans, who placed a favourite of their own in 
each nation to place its own dependants on the throne, 
led to incessant wars between them. In the reign of 
Trajan, Armenia and Mesopotamia were converted into 
Roman provinces, and a new king of the Parthi- 
ans was appointed by the emperor. Under Hadrian, 
however, the conquered territory was given up, and the 
Euphrates again became the boundary of Parthia. 
The two nations now remained at peace with each other 
until the reign of Marcus Aurelius and Lucius Verus. 
Cassius, the general of Verus, met with great 
success in the war, and at length took and almost 
destroyed the powerful city of Seleucia on the Tigris, 
A.D. 105. Under the reign of Vologeses IV., the 
Parthian dominions were invaded by Septimius Sever- 
us, who took Ctesiphon and several other important 
places, A.D. 198, and annexed to the Roman empire the 
important province of Osrohoea. Caracalla 
ensured the successes of his father; and though Ma- 
crinus, who had proved himself, made a sort of peace 
with the Parthians, their power had become greatly 
weakened by the conquests of Verus, Severus, and 
Caracalla. Artaxerxes, who had served with great 
reputation in the army of Artabanus, the last king of 
Parthia, took advantage of the weakened state of the 
monarchy to found a new dynasty. He represented 
himself as a descendant of the ancient kings of Persia, 
and called upon the Persians to recover their independ- 
tence from the Romans, who had, it was said, destroyed 
a large Persian army which was collected; the Parthians were de- 
fated in three great battles, and Artaxerxes succeed- 
ed to all the dominions of the Parthian kings, and 
became the founder of the new Persian empire, which is 
usually known as that of the Sassanides. 
(Vid. Artaxer- 
The Parthians, as we have already remarked, were of 
Scythian origin; and, according to Justin (41, 1), their 
name was derived from the Scythians, "she-shep- 
ished" or "exiles." Isidorus makes the same 
statement, and adds, that they were driven out of Scythia 
by domestic strife. 
(Orig., 10, 2, 44.—Compare 
Wahl, Vorder- und Mittel-Asien, p. 545, in nosis.) 
The mode of fighting adopted by their cavalry was pecu-
uliar, and well calculated to annoy. When apparent-
ly in full retreat, they would turn round on their steeds 
and discharge their arrows with the most unerring ac-
curacy; and hence, to know the language of an 
ancient writer, it was victory to them if a counterfeited 
flight threw their pursuers into disorder. 
(Plut. Vit. Crass. 24.—Horat., Od., 1, 19, 11. —Id. ib., 2, 13, 
17.—Lucan, 1, 230.—Herodian., 3, 4, 20.) 
Parthvne, the original, and subsequently the roy-
al province of Persia. 
(Vid. remarks near the com-
mencement of the preceding article.) 
Parvades or Parvades (Ptol.), a branch of Car- 
cassia, running off to the southwest, and separating 
Cappadocia from Arminia. On the confines of Cap-
padocia the name was changed to Scordiscus: it here 
united with the chain of Antitaurus, and both stretched 
 onward to the west and southwest through Cappado-
cia. The highest elevation in this range was Mons Ar- 
garius, Ptolemy gives the name of Parvades, in par- 
cular, to that part of the chain in which the Euphra-
tes and Araxes meet. This mountain is now called 
Ararat. 
(Plin., 5, 27.—Strebö, 520.) 
Parvatis, a Persian princess, queen of Darius 
Ochus, by whom she had Artaxerxes Meneon and 
Cyrus the younger, the latter of whom was her fa-
vourite. 
(Xen., Anab., 1, 1.) She is represented as 
a very cruel woman, and wreaked her vengeance, as far 
as she was able, on all who had been instrumental 
in the fall and death of her son. One of the principal 
sufferers was the eunuch Mesabates, who had cut off 
the head and right hand of Cyrus by order of Artax- 
erxes. She also poisoned Statins, the wife of the 
kng. 
(Plut., Vit. Artax., 17.) Von Hammer makes 
say that there is a name very frequent in the 
ancient Perso-Greek authors to "Persis, or Persia.
(Wien. Jährb., vol. 8, p. 394.) Strabo, on the other hand (a very poor authority in such a matter), 
says that the original Persian name was Pharsiris. 
(Strebö, 785.—Bähr, ad Ctes., p. 186.) 
Parargyæ, sometimes written Passargades, and 
also, but only by Ptolemy and Solinus, Passargada, 
a very ancient city of Persia, and the royal residence 
previous to the foundiug of Persepolis. Some dis-
ference of opinion has existed relative to its site, 
but, from the accounts of Ptolemy and other writers, 
it would appear to have stood to the southeast of 
Persepolis, and near the confines of Carmania. 
(Mannert, Geogr., vol. 5, pt. 2, p. 529.—Bähr, ad Ctes., 
p. 118.) Hence Morier is wrong in fixing the position 
of this place at the modern Mouranga (vol. 1, p. 206), 
which lies to the north of Persepolis, an error in which 
he is followed by Malte-Brun. Passargades was situate 
in Cilie-Persia, on the banks of the Cyrus or Koren 
River. Strabo (730) has correctly pointed to the 
point to the modern Pasa or Fasa as occupying its 
site. 
(Compare the remarks of Lassen, in Erath und 
Gruhers Encyclopädie, s. v. Passargada.) It was said 
to have owed its origin to a camp which remained on 
the spot where Cyrus defeated Astyages, and the 
name of the city has been explained as signifying "the camp 
of the Persians." 
(Steph. Byz., s. v.— Curt., 5, 6. 
Strebö, 730.) Lassen, however, says that it means 
"the Persians of the field," which is the attempt of a 
Persian to name the place which the Persians had 
built a treasury, and erected his own tomb in an adja-
cent part. 
Strebö (730) and Arrian (6, 30) have given a descrip-
tion of this sepulchre, taken from the work of 
Aristobulus, who had visited the spot. According 
to their accounts, the tomb was situated in a well-watered 
park, and surrounded by numerous trees. The lower 
part of it, which was solid, was of a quadrangular 
shape, and above it was a chamber built of stone, with 
its walls composed of large blocks, and the 
entrance, which was a square, having an embrasure 
in its left hand side. In the upper portion there was a 
portal, with a door that held up passage. Aristobulus 
entered this chamber by the command of Alexander, 
and found in it a golden couch, a table with cups upon 
it, a golden coffin, and many beautiful garments, 
swords, and chains. Aristobulus says, that the inscrip-
tion on the tomb was, "Oh man, I am Cyrus, who ac-
quired sovereignty for the Persians, and was King 
of Asia. Do not then grieve me this monument." There 
were certain Magi appointed to guard this tomb, who 
received every day a sheep, and a certain quantity of 
wine and wheat, and also a horse every month as an 
ofering to Cyrus. This tomb was plundered during 
the lifetime of Alexander by some robbers, who carried 
off everything except the couch and the coffin. 
According to Plutarch, the kings of Persia were conse-
crated at Passargades by the Magi. 
(Vit. Artax., 3.) 
Those modern travellers who make Mouranga cor-
spond to the site of the ancient Passargades, have 
discovered a building in the plain which they have 
imagined to be the tomb of Cyrus. This building 
is called by the people of the country "Kubur Moderni 
Suleiman," i. e., the tomb of the mother of Solomon; 
and the description given by Sir Robert K. Porter 
(Travels, vol. 1, p. 498) corresponds in many particu-
larsto that of Arrian and Strabo. The tomb contains 
no inscription, but on the northern face there is a 
uniform inscription, which Grotefend, in an essay on 
the subject, appended to Heeren's work on Asia 
(vol. 2, p. 360, seqq., Eng. trans.), interprets to 
mean "Cyrus the King, ruler of the universe." 
Saint-Martin, however (Journal Asiatique for Febru-
PASSA, a daughter of the Sun and of Perseis, and wife of Minos, king of Crete. The ordinary legend connected with her name has been given in a different article (vid. Minotaurus), and the opinion has there been advanced, that the whole story rests on some astronomical basis, and that Pasiphaë is identical with the moon. Thus we find the epithet Πασιφαίας ("all-illumining" or "all-bright") applied to Diana in the Orphic hymns (35, 3), after having been given to the Sun in a previous effusion (7, 14). The same term, together with Πασιφαίας, is applied to Selene, or the full-moon, by a later bard. (Pausan. Phials. πέρι καταρχῶν, ap. Fabric. Bibl. Gr., vol. 6, p. 415. —Creuzer, Symbolik, vol. 4, p. 88.) The "all-illumining" Pasiphaë, then, is, with every appearance of probability, a goddess in the sphere of the Cretan lunar worship. With regard to Pasiphaë, considered as a divinity, we have no direct proof from the island of Crete itself: in Laconia, however, which derived so many of its institutions from Crete, several confirmatory circumstances do point to their present themselves. Tertullian mentions the ora le of Pasiphaë in Laconia as one of the most celebrated in that country (de Anim., c. 46. —Op., vol. 4, p. 911, ed. Semel). Plutarch also speaks of a temple and oracle ofPasiphaë at Thalame, though he leaves it undecided what particular deity is meant by the name. (Vit. Agid., c. 9.) It would seem, however, to have been an oracle of one of their most ancient and revered deities, and therefore, in all likelihood, a Cretan one, since it was consulted on all great political occasions by the Spartan Ephors. (Compare, Cis., de Divesin., 1, 43. —Plut., Vit. Cleom., c. 7.)—Pausanias mentions this same sanctuary (3, 26). He calls it, indeed, the temple and oracle of Ino; and yet he informs us that without was a statue of Pasiphaë, and another of the sun. We must here read Πασιφαίας with Sylburgius and Murett, and place it in the city of Lacon, as appears from the context, in relation to the Laconian Pasiphaë, Menurias, Misc. Lacon., 1, 4; and, on the subject of Pasiphaë generally, Höck, Kreta, vol. 2, Vorrede, p. xxix.—Id. ib., vol. 2, p. 49, seqq.)

PASITRIGIS. Vid. Tigris.

PASSARA, a town of Epirus, the capital of the Mo- lossi. Here, according to Plutarch (Vit. Pyrrh.), the kings of Epirus convened the solemn assembly of the whole league in the month of March, and at the outset of the ordinary sacrifices, they took an oath that they would govern according to the established laws, and the people, in return, swore to maintain the constitution and defend the kingdom. After the termination of the war between the Romans and Perseus, king of Macedon, Passarom did not escape the sentence which doomed to destruction so many of the unfortunate cities of Epirus that had shown an inclination to favour the cause of the Romans under Antiochus. The city was leveled to the ground. (Liv., 45, 34.)

With regard to the site of this ancient place, it seems highly probable that it is to be identified with some remarkable ruins, described by more than one traveller, near Joannina, in a S.S.W. direction, and about four hours from that city. (Hughes's Travels, vol. 2, p. 486. —Cramer's Anc. Greece, vol. 1, p. 138, seqq.)

PASITHÊNEUS, Paulus, a Roman knight, nephew to the poet Propertius, whose elegiac compositions he successfully imitated. He likewise attempted lyric poetry with equal success, and chose for his model the writings of Horace. (Pliny, Ep., 6, 9. —Critz., de Poet. Lat., c. 75.)

PASAMA. Vid. Patavala.

PASA, (or Patasa), a city of Lycia, on the left bank and at the mouth of the river Xanthus. (Arrian, 1, 24. —Leake's Tour, p. 183.) According to Strabo (665), it was built by Patarus, whom mythology made a son of Apollo. (Eustath. ad Dionys. Perieg, v. 129.) Hence the high estimation in which the god was here held, and the famous oracle which he had in this place. Hence also his surname of Pataurus (Hor., Od., 3, 4, 84), and the legend that he spent the first winter-months at Patara, and the summer at Delos. (Serr. ad Virg., Æn., 4, 143.) Strabo speaks of the numerous temples in this city, without particularizing the temple and oracle of Apollo. The oracle, probably, had by this time declined in reputation, and Mela, the geographer, speaks of its former fame (1, 15). We learn from Strabo, that Ptolemy Philadelphia restored Patara, and attempted to change its name to "Arsinoë in Lycia;" but the alteration does not appear to have lasted, and Livy and other writers always use the other appellation. (Liv., 37, 15. —Id., 38, 39. —Polyb., 22, 26.) Patara was a city of considerable size, and had a good harbour, though too small to contain the allied fleet of the Romans, Rhodians, and other Greek states in the war with Antiocos. (Liv., 37, 17.) It is now entirely choked up by encroaching sands. Appian remarks, that Patara was like a port to Xanthus; which city appears from Strabo and the Stadiasmus to have been on the banks of the river Xanthus, eight or nine miles above Patara. —The modern Patara occupies the site of the ancient city, but is nothing more than a collection of ruins, being entirely uninhabited. Captain Beaufort describes the harbour of Patara as a swamp filled with sand and bushes, and all communication with the sea being cut off by a straight beech, through which there is no opening. The sand has not only filled up the harbour, but has accumulated to a considerable height between the ruins and the river Xanthus. The ruins are represented as extensive. (Cramer's Asia Minor, vol. 2, p. 250. —Leake's Tour, p. 182.)

PATAVIUM, a city of Cisalpine Gaul, in the district of Venetia, and situated between the Medecus Major and Minor, in the lower part of their course. From the certainty with which this city is identified with the ancient Patavium, has been considered as the capital of ancient Venetia. The story of its foundation by Antenor is one which will scarcely be believed in the present day, though so universally accredited by the poets of antiquity. (Æn., 1, 242. —Compare Melo, 2, 4. —Solin., 8. —Senec., Consol. ad Helv., 7.) It seems as difficult to refute as to prove a fact of so remote an era; but, granting the origin of Patavium, as far as regards the Trojan princes, there is an instance of something not far removed from the actual history of the place, which does not follow that the tradition should be wholly desti- tute of foundation: perhaps a similarity of name be- tween the Antenor of Homer and the chief of the Heneti might not unreasonably be fixed upon as ac- counting for this otherwise improbable story; most improbable, indeed, when we consider that, in the Iliad, Antenor is represented as of the same age with Priam (3, 148). —An interesting event took place here, recorded at some length by Livy, who naturally dwells on it as honourable to his native city (10, 2). A Spartan fleet, under the command of Cleomenes, king of Lacedaemon, being driven by contrary winds from the neighbourhood of Tarentum, to the aid of which city he had been summoned against a threatened attack on the part of the Romans (Strabo, 208), arrived unexpectedly in the Adriatic,
and anchored at the mouth of the Medusus Major, and near the present villages of Chiozza and Faso. A party of these adventurers, having advanced up the river in some light vessels, effected a landing, and proceeded to burn and plunder the defenceless villages. Later, however, the marauders of this unexpected attack soon reached Patavium, whose inhabitants were kept continually on the alert and in arms, from fear of the neighbouring Gauls. A force was instantly despatched to repel the invaders; and such was the skill and promptitude with which the service was performed, that the marauders were surprised and their vessels taken before the news of this reverse could reach the fleet at the mouth of the river. Attacked as they were, they managed to escape, and reached the ships; and, the Spartan commander effected his escape. The shields of the Greeks and the beaks of their galleys were suspended in the temple of Juno, and an annual mock-fight on the Medusus served to perpetuate the memory of so proud a day in the annals of Patavium. This event is placed by the Roman historian in the 450th year of Rome. Strabo speaks of Patavium as the greatest and most flourishing of all the towns of Italy. Ation was met by a fleet and armed in time 500 Roman knights among its citizens, and could at one period send 20,000 men into the field. Its manufactures of cloth and woollen stuffs were renowned throughout Italy, and, together with its traffic in various commodities, sufficiently attested the great wealth and prosperity of its inhabitants. (Strab., 213.—Compare Martial, 14, 141.) Vessels could come up to Patavium from the sea, a distance of 250 stadia, by the Medusus. About six miles to the south of the city were the celebrated Patavium Aquae. (Plin., 11, 103.—Id., 31, 6.) The principal source was distinguished by the name of Aponus Fons, from whence it of Barni d'Abano, where these waters are at present known, has evidently been formed.—The modern Padua (in Italian Padova) occupies the site of the ancient Patavium. (Cramer's Anc. Italy, vol. 1, p. 120, seqq.)

**Paterculus, an historian. (Vid. Velleius Paterculus.)**

Patmos, a small rocky island in the Empire, south of Icaria, and southwest of Samos. It belonged to the group of the Sporades. This island appears to have had no place which deserved the name of a city. It became a spot of some consequence, however, in the early history of the church, from St. John's having been banished to it, and having here written his Apocalypse. It is the general opinion of commentators on Scripture, that St. John was banished to Patmos towards the close of the reign of Domitian. It is not known how long his captivity lasted, but it is thought that he was released on the death of Domitian, which happened A.D. 96, when he retired to Ephesus. (Iren., 2, 22, 5.—Euseb., Hist. Eccles., 3, 18.—Dio Cass., 68, 1.) A small bay on the east side, and two others on the western shore, divide Patmos into two portions, of which the southern is the more considerable. The modern name of the island is Patmore or Patmosa. It contains several churches and convents; the principal one is dedicated to the apostle. There are also the ruins of an ancient fortress, and some other remains. (Whittington, in Walpole's Memoirs of Turkey, vol. 2, p. 43.) Dr. Clarke, in speaking of Patmos, declares that there is not a spot in the Archipelago with more of the semblance of a volcanic origin than this island. (Travels, vol. 6, p. 76, Let. ed.) Patmos is washed by the Sea of Rethym, and at the opening of the Corinthian Gulf. It is said it has been built on the site of three towns, called Areo, Anthea, and Messatia, which had been founded by the Ionians when they were in possession of this island. On their expulsion by the Achæans, the small towns above mentioned fell into the hands of Patres, an illustrious chief of that people; who, uniting them into one city, called it by his name. Patres is enumerated by Herodotus among the 12 cities of Achaea (1, 46). We are informed by Thucydides, that, during the interval of peace which occurred in the Peloponnesian war, Alcibiades reduced its inhabitants to build long walls down to the sea (5, 53). This was one of the first towns which renewed the federal system after the interval occasioned by the Macedonian dominion throughout Greece. (Polyb., 2, 41.) Its maritime situation, opposite to the coast of Ætolia and Acarnania, rendered it a very advantageous port for communicating with these countries; and in the Social war, Philip of Macedon frequently landed his troops here in order to attack Peleustris and Patras. The Greeks sustained such severe losses in the different engagements fought against the Romans during the Achaean war, that the few men who remained in the city determined to abandon it, and to reside in the surrounding villages and boroughs. (Pausanias, 7, 18.) Patras was, however, raised to its former flourishing condition after the battle of Actium by Augustus, who, in addition to its dispersed inhabitants, spared not that a large body of colonists should be sent from Italy to form a new city, and grant to the city, thus restored under his auspices, all the privileges usually conceded by the Romans to their colonies. Strabo (387) affirms, that in this day it was a large and populous town, with a good harbour. The modern Patras occupies the site of the ancient city. (Cramer's Anc. Greece, vol. 3, p. 67.)

**Patroclus, one of the Grecian chieftains during the Trojan war, son of Menestes, and of Sthenebrus, the daughter of Acaius, and the beloved friend of Achilles. Having in his youth accidentally killed Glonium, the son of Amphidamas, in a moment of unprovoked fury, he was compelled to fly from Opus, where his father reigned, and found an asylum with Peleus, king of Thetis, who educated him with his son Achilles under the centaur Chiron; and thus was contracted between the two youthful heroes a friendship that never suffered the slightest diminution. Upon the conclusion of the war thousands of men Achilles retired from the war after his quarrel with Agamemnon, Patroclus, impatient at the successes of the Trojans, obtained permission from his friend to lead the Thessalians to the conflict. Achilles equipped him in his own armour, except giving him the spear called Pelias, which no one but the hero himself could wield; and which he had received from his father Peleus, on whom Chiron had bestowed it. (II., 16, 140, seqq.) The stratagem proved completely successful; and from the consternation into which the Trojans were thrown at the presence of the supposed Achilles, Patroclus was enabled to pursue them to the very walls of the city. The protecting hand, however, of their tutelary god, Apollo, at last prevailed, and the brave Greek fell beneath the arm of Hector, who was powerfully aided by the son of Latona. A fierce contest ensued for the dead body of Patroclus, of which Ajax and Memnon ultimately obtained possession. The grief of Achilles, and the funeral rites performed in honour of his friend, are detailed in the 18th and 23d books of the Iliad. Patroclus was surnamed Menestrides from his father, and Actorides from his grandfather (Hom., II., 1, 13.—Apollod., 3, 13.—Hygin., Fab., 97, 275.—Ovid, Met., 13, 273.)

**Patulus, a surname of Janus. (Vid. Janus.)**

**Patulus, a Roman commander. (Vid. Sextus Julius.)**

**Patulus, L. Aemilius, son of the consul of the same name, who fell in the battle near Canus (B.C. 216), after using his utmost efforts to check the rashness of his colleague. Young Aemilius was a mere boy at the death of his father, yet by his personal merits, and the powerful influence of his friends, he eventually at-
PAULUS.

...Paulus...but and voted, three Spain arms. The following year (191 B.C.) he held the office of prator, and in that capacity was governor of the southwestern part of the Spanish peninsula, with a considerable force under his command. The appointment was renewed the following year, but with enlarged powers, for he now bore the title of proconsul, and was accompanied by double the usual number of lieutenants. In an engagement, however, with the Lusitani, 6000 of his men were cut to pieces, and the rest only saved behind the works of the camp. But this disgrace was retrieved in the third year of his government, by a signal defeat of the enemy, in which 18,000 of their men were left upon the field. For this success a public thanksgiving was voted by the senate in honour of Paulus. Soon after he returned to Rome, and found that he had been appointed, in his absence, one of the six aurii, and was to enter upon the duties of that office the following year. It was this part of Western Asia which had lately been wrested by the two Scipios from Antiochus the Great. Paulus was a member also of the college of augurs from an early age, but we do not find any means of fixing the period of his election. As a candidate for the consulship he met with repeated repulses, and only attained that honour in 182 B.C., nine years after holding the office of praetor. During the first year he commanded an army in Liguria, and succeeded in the complete reduction of a powerful people called the Ingauini (who have left their name in the maritime town of Albenga, formerly Albinum Ingaunum). A public thanksgiving of three days was immediately voted, and, on his return to Rome, he had the honour of a triumph. For the next ten years we lose sight of Paulus, and at the end of this period he is only mentioned as the leader of the army to which Rome sent in 168 years, to Spain to protect their interests at Rome, an honour which at once proved and added to his influence. It was at this period (B.C. 171) that the last Macedonian war commenced; and though the Romans could scarcely have anticipated a struggle from Perseus, who inherited from his father only the shattered remains of the great Macedonian monarchy, yet three consuls, in three successive years, were more than baffled by his arms. In B.C. 168 a second consulship, and with it the command against Perseus, was intrusted to Paulus. He was now at least 60 years of age, but he was supported by two sons and two sons-in-law, who possessed both vigour and ability. By Papiria, a lady belonging to one of the first families in Rome, he had two sons and three daughters. Of the sons, the elder had been adopted into the family of the Fabii by the celebrated Quintus Fabius Maximus, and the younger was rescued the day of Q. Pompeius Fabius Maximus, with the addition of Paulus, to mark his original connexion with the house of the Scipios. The younger, only seventeen years of age at this period, had been adopted by his own cousin, the son of Scipio Africanus, and was now called by the same name as his grandfather by adoption, viz., P. Cornelius Scipio, with the addition of Paulus, as in his brother's case. The care and reading of Roman history often confounds these two persons, and the more so as the younger eventually acquired the same title of Africanus. By the marriage of his daughters, again, Paulus was father-in-law to Marcus Porcius Cato, son of the censor, and to Cælius Tubero. These four young men accompanied Paulus to the war in Macedonia, and all contributed in a marked manner to his success. Perseus was strongly besieged in the range of Olympus to defend the passes from Perrhasia into Macedonia, but he allowed himself to be out-manoeuvred. Paulus made good his passage through the mountains, and the two armies were soon in view of each other near Pydna. On the evening before the battle, an officer in the Roman army, named Sulpicius, obtained the consuls' permission to address the troops upon a point which was of no little importance in the army. An eclipse of the sun, known to Sulpicius, would occur that night, and, he thought prudent to prepare the soldiers for it. When the eventful moment arrived, the soldiers went out, indeed, to assist the moon in her labours with the usual clamour of their kettle-pans, nor omitted to offer her the light of their torches; but the scene was one of amusement rather than fear. In the Macedonian camp, on the other hand, superstition produced the usual effect of horror and alarm; and on the following day the result of the battle corresponded to the feelings of the night. In a single hour the hopes of Perseus were destroyed for ever. The monarch fled with scarcely a companion, and on the third day reached Amphipolis, where he soon after fell into the hands of the conqueror. The date of the battle of Pydna has been fixed by the eclipse to 168 B.C. Sulpicius was P. Pompeius, the third consul of 161, and Julius Caesar's grandfather. The eclipse, the early part of September; but it is not impossible that the difference may be owing to some irregularity in the Roman calendar, which, prior to the Julian correction, must often have differed widely from the present distribution of the year. The Romans were careful in recording the date of every important battle. After reducing Macedonia to the form of a Roman province, Perseus was allowed to retire to Macedonia, and stationed, by the order of the senate, he treacherously surprised seventy towns, and delivered up to his army 150,000 of the inhabitants as slaves, and all their property as plunder. On his arrival in Rome, however, he found in this army, with whom he was far from popular, the chief opponents to his claim to a triumph. This honour he at last obtained, and Perseus, with his young children, some of them too young to be sen- ral in the triumphal procession, were forced to pass five days through the streets of Rome. But the triumphant general had a severe lesson from affliction in the midst of his honour. Of two sons by a second wife (he had long divorced Papiria), one, aged twelve, died five days before the triumph, the other, aged fourteen, a few days after; so that he had now no son to hand down his name to posterity. Paulus lived eight years after his victory over Perseus, in which period we need only mention his censorship, B.C. 164. At his death, 160 B.C., his two sons, who had been adopted into other families, Fabius and Scipio, honoured his memory in the Roman fashion by the exhibition of funeral games; and the Adelphi of Terence, the less comedy the poet wrote, was first presented to the Roman public on this occasion. The fact is attested by the inscription still prefixed to the play. Paulus, it is true, was not himself of that name; he was unable to commemorate, perhaps to exaggerate, his virtues. Few Romans have received so favourable a character from history. (Enceol. Us. Not., vol. I, p. 143.)—II. Aegina, a medical writer. (Vid. Aegi- neta.)—III. A native of Alexandria, who wrote, A.D. 378, an Introduction to Astrology (Eisayagw eis tyn 'Apostolokratirikh), dedicated to his son Cronommon, which has come down to us in a badly, but apparently Arabian name of Apomar. Another writ-
PAUSANIAS.

PAUSANIAS, I. son of Cleombrotus, was of that royal house in Sparta which traced its descent from Euryphe- nes. Aristotle calls him "king," but he only gov-

Aristotleerned as the "cosin-german and guardian of Pleistarchus, who succeeded to the throne on the death of Leonidas. Pausanias comes principally into notice as commander of the Greekian army at the battle of Platae. The Spartan contingent had been delayed as long as was possible; but, owing to the representa-
tions made by the Athenian ministers at Lacedae-

mon, it was at last despatched, though not until the Persians had advanced into Boeotia. This delay, how-

ever, had one good effect, that of taking the Argives by surprise, and defeating their design of intercepting any communication between Sparta and the other Asiatic forces. Pausanias, with the Persian army, marched through their territory. The Spartans, under the command of

Pausanias, got safe to the Isthmus, met the Athenians at Eleusis, and ultimately took up that position which led to the battle of Platae. The result is well known. Pausanias, elated by his success, took all methods of showing his own unfiness to enjoy good fortune. Be-

ning sent with 20 ships, and in the capacity of com-

mander-in-chief of the confederates, to the coast of Asia Minor, he, by his overbearing conduct, disgraced the Greeks under his command, and particularly those Asiatic Greeks who had lately revolted from the Per-

sian rule. To his oppression he added an affection of Eastern luxury; and what we know of Spartan manners seems to lead to the conclusion, that no mixture could possibly be more repugnant to persons ac-
customed at once to Persian elegance and Ionic re-

finement, than a clumsy imitation of both, such as the conduct of Pausanias in all probability presented. Pref-

udence in favour of the Athenians, who were of the Ionic race, was also active; intrigues commenced, the Athenians encouraged them, and Pausanias was re-

called. Much criminality was imputed to him by those Greeks who came to Sparta from the seat of war, and his conduct was clearly more like the exercise of arbit-

atory power than of regular military command. He

was accordingly put on his trial, and public censure was brought against him; from the former he was acquitted, but his Medism (or leaning to Per-

sia) seemed to be clearly proved. Dorcis was sent in his place; but the Spartan supremacy had received its death-blow, and thenceforward Lacedæmon interfered only sparingly in the prosecution of the contest with Persia. Pausanias, however, with the feelings of a disappointed man, went in a private capacity to the Holy Land; and there by the desire of joining in the taking of Byzantium, which happened during his command, he had winked at the escape of certain Per-

sian fugitives of rank, and, by means of an accomplice, had conveyed a letter to the Persian monarch, containing an offer to subjugate Greece to his dominion, and subjoining the modest request of having his daughter to wife. A favourable answer had enabled him to such a degree as to disgust the allies in the manner already stated. On his return from this journey of joint

pursuit, he prevented from entering Byzantium, upon which he re-
tired to a city in Tros. There, too, his conduct was unfortunately reported at home, and a messenger was despatched with orders for his immediate return, under threats of declaring him a public enemy. Pausanias returned, but it was still hard to bring home any defi-
nite charge against him, and the Spartans were shy of adding any but the strongest evidence. At last, however, one of his emissaries, having discovered that

he was, like all his predecessors, the bearer of orders for his own death, as well as of his master's treason, de-

nounced him to the ephori. By their instructions, this person took sanctuary, and, through a partition made by him, settled for a long time at a place where he had found refuge, they had the opportunity of hearing him acknowledge his own treason, during a visit which he paid to his refractory messenger. The ephori proceed-

ed to arrest Pausanias; but a hint from one of their number enabled him to make his escape to the temple of Minerva of the "Brazen House," only, however, to suffer a more lingering death. He was shut up in the temple, and, when on the brink of starvation, was brought out to die (B.C. 467).

His mother is said to have occupied the first stone to the tomb, with the sole purpose of immuring him within. (Thucyd., i., 139, seqq.—Encycl. Us. Knool., vol. 17, p. 350.)

A youth of noble family, at the court of Philip, and who filled, according to Diodorus Siculus, a post in the royal guards. He is rendered memorable in history for the murder of Philip of Macedon, father of Alexander the Great. The motive that impelled him to the deed was, that he had suffered and endured from the courtiers, for which Philip had refused to give him satisfaction. (Vid. Philippus.) After committing the deed, the murderer rushed towards the gates of the city, where horses were waiting for him. He was chased by some of the great officers of the royal body-guard, but he would have mounted be-

fore they had overtaken him if his sandal had not been caught by the stump of a vine, which brought him to the ground. In the first heat of his passion and impa-

tiency, he despatched them. (Justin, 9, 6.—Dio-

sic., i¢., 16, 93.)—III. A traveller and geographical writer, whose native country has not been clearly ascertained. He is supposed by some to have been born in Lydia, from a passage in his own work (5, 13, 4.—Compare the remarks of Siebelis, Prof. ad Pausan., p. v., seqq.), and to have flourished during the reigns of Hadrian and the Antonines. (Siebelis, Prof. ad Pausan., p. vi.)

He travelled in Greece, Macedonia, Asia, Egypt, and even in Africa as far as the temple of Jupiter Am-

mon. After this he appears to have taken up his resi-

dence at Rome, and to have there published his Travels through Greece (Ελληνικὸς περίηγησις), in ten books. It is an important work for antiquities and archaeology, combining with a description of public edifices and works of art, the historical records and the legends connected with them. Hence he has earned the name of a "Guide of the Ancients," and the discussions on which he enters, serve not only to throw light upon the Grecian mythology, but also to clear up many obscure points of ancient history. Pausanias displays judgment and erudition; occasion-

ally, however, he falls into errors. He describes,

moreover, many things too much in the style of a trav-

er who has not had sufficient leisure to examine ev-

ery thing with the care due to a scientific writer. He,

too, on the supposition that Greece would always remain nearly in the same state in which he himself saw it. In consequence of this, he is satisfied oftentimes with merely indicating objects; and, even when he gives an account of them, he does it in a manner that is

very concise, and sometimes actually obscure. (Con-

pare Heyne, Antiq. Ausf., vol. 1, p. 11.—Manso, Ver-
suchen, &c., p. 377.—Helm., ed. Arm., vol. ii. 125, 151.—Vencl. and Heredot., i., 7, 50.—Siebelis, Prof. ad Pausan., p. xix.) In respect of style, Pausanias cannot be cited as a model. His own, which is a bad imitation of that of Herodotus, offends frequently by an affection of conciseness. In the first book of his work Pausanias describes Attica and Megara; in the second, Corinth, Sicilyonia, the territory of Phlius, and Argolis; in the third, Laconia; in the fourth, Mes-

enia; in the fifth and sixth, Elis; in the seventh, Arcadia; in the eighth, Arcadia; in the ninth, Boeotia; in

988
PAU

and in the thenth, Phocis.—The best edition of Pausani-
as is that of Siebelis, Lips., 1822-25, 5 vols. Svo. A
new edition has recently appeared, by Schubart and Wall,
Cassareas ad Argumum, in Cappadocia. He is
often confounded with the preceding. (Philosor., Vit.
Sophist, 2, 13. — Siebelis, Pref. ad Pausan., p. iv., seq.)

PAUSIAS, a painter of Sicyon, contemporary with
Apelles. After he had learned the rudiments of his
art from his father Bnetes, he studied encaustic in the
school of Pamphilus, where he was the fellow-pupil of
Apelles and Melanthius. Pausias was, the first painter
who acquired a great name for encaustic with the cen-
trum. He excelled particularly in the management
of the shadows; his favourite subjects were small pic-
tures, generally of boys, but he also painted large com-
positions. He was the first who introduced the cus-
tom of painting the ceilings and walls of private apart-
ments with historical and dramatic subjects. The
practice, however, of decorating ceilings simply with
stars or arabesque figures (particularly those of com-
templates) was of very old date. Pausias undertook
the restoration of the paintings of Polygnotus at Thebes,
which had been greatly injured by the hand of time;
but he was judged inferior to his ancient predecessor,
for he contended with weapons not his own; he gen-
erally worked with the cestrum, whereas the paintings
of Polygnotus were with the pencil, which Pausias,
consequently, also used in this instance. The most
famous work of his was the sacrifice of an ox, which
in the time of Pliny was in the hall of Pompey. In
this picture the ox was foreshortened; but, to show
the animal to full advantage, the painter judiciously
threw his shadow upon a part of the surrounding crowd,
and he added to the effect by painting a dark ox upon
a light ground. Pausias, in his youth, loved a native of
his own city named Glycera, who earned her living by
making garlands of flowers and wreaths of roses, which
led him into competition with her, and he eventually
acquired great skill in flower-painting. A portrait of
Glycera, with a garland of flowers, was reckoned among
his masterpieces; a copy of it was purchased by Lu-
cullus at Athens at the great price of two talents (near
$2200). Pausias was reproached by his rivals for be-
ing a slow painter; but he silenced the censure by
completing a picture of a boy, in his own style, in a
single day. He was also celebrated as the author of the
called the "Hemeness" (Ἡμενεσ), or the work "of a single
day." (Plin., 35, 11, 40. — Sillig, Dict. Art., s. v.—
331.) At a later period, the Sicyonians were obliged
to part with the pictures which they possessed of this
distinguished artist, to deliver themselves from a
heavy debt. They were purchased by M. Scarrus
when exilis, and were brought to Rome to adorn the
new temple of Venus, which is called the "Hemeness".

PASCHALYMUS, a celebrated mountain and grotto near
the city of Naples. It took its name from a villa of
Vedius Pollio, erected in the time of Augustus, and
called Passilymum, from the effect which its beauty
was supposed to produce in suspending sorrow and anxi-
ety (πάθων ἀπόκουσιν, "about to make care cease"). This mountain is said to be beautiful in the extreme,
and justly to merit the name bestowed upon it. The
route was not easy, the portico was 400 feet long, the
tunnel 20 feet in breadth, and 30 in height. On the
mountain, Vedius Pollio had not only a villa, but
also a reservoir or pond, in which he kept a number of
lampreys, to which he used to throw such slaves as had
committed a fault. When he died, he bequeathed,
another part of his possessions, his villa to Au-
gustus; but this monarch, abhorring a house where so
many ill-natured creatures had lost their lives for very
slight faults, caused it to be demolished, and the finest

materials in it to be brought to Rome, and with them
raised Julia's portico. Virgil's tomb is said to be
above the entrance of the grotto of Passilymus. Clus-
ivius and Addison, however, deny this to be the tomb
of the poet. Virgilus, where an account of this
sepulchre is given.)

PAXOS, a small island southeast of Corcyra, now
Paxo. It is one of the seven Ionian islands. (Plin.,
4, 12.) The distance from Corcyra is about six miles.
No fresh spring-water has been discovered on it; the
land does not yield much corn or pasture, but is fruit-
ful in oil and wine. It is peopled by six or seven thou-
sand inhabitants. (Malte-Brun, Geogr., vol. 6, p. 172. —
Papenig, Voyage de la Grèce, vol. 5, p. 145.)

PEDASUS, I. the mortal one of the three steeds of
Achilles, and which that hero obtained when he sacked
the city of Eteon. (Il., 16, 153.) He died of a
wound received from Sarpedon, in the contest between
the latter and Patroclus. (Il., 16, 467, seqq.)—II. A
town of the Leleges in Tros, on the river Satnöeis.
(Ili., 21, 86.) The situation of this Homeric town
remains undefined. It appears from Pliny, that some
authors identify it with a city of the same name in
Asia Minor. (Plin., 307.)—III. More commonly Pedasus or Pedass, a city of the
Leleges in Caria, and the capital of a district which
included no less than eight cities within its limits.
It was situated above Halicarnassus, towards the east,
and not far from Stratonicae, and the site corresponds
probably to the modern Peischin. (Strab., 611.)

Herodotus also notices Pedas, on account of a strange
phenomenon which was observed there; and the in-
habitants were threatened with any calamity, the chin
of the priestess of Minerva became furnished with a
beard: this prodigy was reported to have happen-
d three times. (Herod., 1, 175. — Compare Aristotle,
Hist. An., 3, 11.)—IV. The Homeric name, according
to some, for Methone, in Messenia. (II., 9, 294.)

P E D O  A L B I N O V A NUS. Vid. Albino
avus II.

PEDUM, an ancient town of Latium, often named in
the early writers of history, between the 3rd and 4th
tenth, of Pausanias. It was brought by Sienaeus to Rome, and which must be placed in
the vicinity of Praeneste. The modern site of Zagorai,
seems best to answer to the data which are supplied
by Livy respecting its position. For, according to
this historian (8, 11), Pedum was situate between Ti-
brum, Praeneste, Bursa, and Labicum. (Nibby, Viagg.
Antig., vol. 1, p. 261.) It was taken by storm, and
destroyed by Camillus. (Livy, 8, 13.) Horace men-
cions the Regio Pedani in one of his epitaphs (1, 4. —

PEGASIDES, a name given to the Muses from the fountain Hippocrene, which the winged steed Pegasus
is said to have produced with a blow of his hoof.
(Propert., 3, 1, 19. — Ovid, Heroid., 15, 27. — Colu-
mella, 10, 273.)

PEGASUS, a winged steed, the offspring of Neptune
and Medusa, and which sprang forth from the neck of
the latter after her head had been severed by Per-
ses. (Pliny, 30, 2. — Strab., 15, 17.) Hesiod says he
was called Pegasus (Πηγασός) because born near the sources (πηγῶι) of Ocean. (Theog., 252.) As soon as he was born he flew upward; and fixed his abode on Mount Helicon, where with a
blow of his hoof he produced the fountain Hippocrene.
(Out, Met., 5, 256, seqq.) He used, however, to
come and drink occasionally at the fountain of Prone,
the Acrocorinthus, and it is related that he drove his
enterprise against the Chimera. After throwing off Bellerophon when the
latter wished to fly to the heavens, Pegasus directed
his course to the skies, and was made a constellation by
Jupiter. (Consult remarks under the article Beller-
ophon.) Pegasus was the favourite of the Muses,
who derived from him, among the poets, the appli-
cation of "Pegasides." The fountain of Hippocrene
was likewise called from him "Pegasides unda" or "Pe-
gasus unda." (Tzetz. ad Lycophr., l.c. — Apollod.,
989.)
l. c.— Ovid, Met., 4, 785.—Hygin., fab., 57.—Van Staveren, ad Hygin., l. c.)—"The horse," observes Knight, "was sacred to Neptune and the rivers; and employed as a general symbol of the waters, on account of its speed, affinity which was noted by the modern naturalists have observed. Hence came the composition, so frequent on the Carthaginian coins, of the horse with the asterisk of the sun, or the winged disk and hooved snakes, over his back; and also the use made of him as an emblematical device on the medals of many Greek cities. In some instances the body of the animal terminates in plumes; and in others has only wings, so as to form the Pegasus, fabled by the later Greeks to have been reared by Bellerophon, but only known to the ancient theologians as the bearer of Aurora, and of the thunder and lightning to Jupiter, an allocution of which the meaning is obvious." (Inquiry into the Symb. Lang., &c., § 111.—Class. Journ., vol. 25, p. 34.)—As regards the constellation Pegasus, it may be remarked, that the Greek astronomers always gave it the simple appellation of "the Horse" (Πελαγός). The name Πελαγός first comes in among the later mythological poets. It does not even occur in Homer, but merely remarking that Πελαγός is supposed to be the same horse whose hoof produced the fountain Hippocrene. (Arat. Phan., 219) Era- totheneus, however, says (c. 18) that this is the steed, as some think, which, after Bellerophon had been thrown from it, flew upward to the stars. The opinion, however, is, according to him, an erroneous one, since the steed in the heavens has no wings. It would appear, therefore, from this remark of Eratotheneus, that the custom of representing Pegasus with wings came in at a later period. They are added in Ptolemy. The Romans, in imitation of the Greeks, call the constellation simply Equus, for which the poets substitute Sonipes, Sonipes ales, Cornipes, and other similar expressions. The name Pegasus appears to occur only in Germanicus (v. 221, 282). Ovid has Equus Gorgonius, in allusion to the fabulous birth of the steed. (Past., 3, 450.—Ideler, Sennemann, p. 115.)

Peloponnesus. I, a district of Macedonia bordering on Illyria. The Pelagonias, though not mentioned by Homer as a distinct people, were probably known to him, from his naming Pelagon, the father of Aeteporeus, a Macedonian warrior. (Compare Strabo, 331.) They must at one time have been widely spread over the north of Greece, since a district of Upper Thessaly bore the name of Pelagonia Tripolitis, and it is ingeniously conjectured by Gatterer, in his learned commentary on Strabo (Comm. ad loc., vol. 6, p. 67), that these were a remnant of the remote expedition of the Teucri and Mysi, the progenitors of the Peonians, who came from Asia Minor, and conquered the whole of the country between the Strymon and Penus. (Herod., 7, 20.—Strabo, 327.) Frequent allusion is made to Pelagonia by Livy, in his account of the wars between the Romans and the kings of Macedon. It was exposed to invasion from the Dardani, who bordered on the north from the Oetaeans. (Livy, 45, 29.) Little is known of its history. In the 3rd B.C., it passed under the Syracusan and Byzantine dynasties of Hierocles, and the Byzantine historian Malchus, who speaks of the strength of its citadel. (Cramer's Anc. Greece, vol. 1, p. 270.)-III. Tripolitis or Tripolis, a district of Thessaly, around the upper part of the course of the river Titarus. It was called Tripolitis from the circumstance of its containing three principal towns; which, as Livy informs us (42, 53), were Azoros, Doliche, and Pythium. This district was connected with Macedonia by a narrow defile over the Cambonian mountains. Livy describes this same canton in one part of his history under the name of Agei Tripolitanus (36, 10). Cramer's Anc. Greece, 7, 1 p. 266.)—The Pelasgi (Πελασγοί), were the most ancient inhabitants of Greece, as far as the knowledge of themselves extends. A dynasty of Pelasgic chiefs existed in Greece before any other dynasty is mentioned in Greek traditions. Danaus is in the ninth, Decaloon in the eighth, and Cadmus in the seventh generation before the Trojan war; but Phoroneus, the Pelasgian, is in the eighteenth generation before that event. The Pelasgians are said to represent the Pelasgic race as spread most widely over almost all parts of Greece and the islands of the Ægean. The whole of Hellas, according to Herodotus (2, 56), was originally called Pelasgia; and Ἀσχυλιος (Συντ., 550) introduces Pelasgus, king of Argos, as claiming for the people named after him all the country through which the Alus flows, and to the west of the Strymon. We find mention of the Pelasgi in the Peloponnesus, Thrace, Thesprotia, Attica, Beotia, and Thessos. (Strabo, 2, 335.) The Pelasgian name and Delphi were originally Pelasgic (Strab., 402.)—Herod., 2, 52, and Clinton (Past. Hell., vol. 1, p. 22) and Niebuhr (Rom. Hist., vol. 1, p. 27) have adduced reasons for believing that the Macedonians were also a Pelasgic race. We likewise find traces of the Pelasgi in many of the islands of the Ægean Sea, as Lemnos, Imbros, Lesbos, Chios, &c. (Strab., 621), and Herodotus informs us (7, 96), that the islands were inhabited by the Pelasgic race till they were subdued by the Ionians. The neighbouring coast of Asia Minor was also inhabited in many parts by the Pelasgi. (Strab., 621.) The country afterward called Ἀκολίs was occupied by Pelasgians (Herod., 7, 95), and hence Antandros was called Pelasgic in the time of Herodotus (7, 42). Tralles in Caria was a Pelasgic town (Niebuhr, Rom. Hist., vol. 1, p. 33), and two of their towns on the Hellepons were still extant in the time of Strabo. These Pelasgic traditions are sufficient to show the wide diffusion of the Pelasgic race; but it is a difficult matter to determine from what quarter they originally came. Many modern writers conclude, from our knowledge of the original seats of the human race, that the Pelasgians spread themselves from Asia into Europe across the Hellepons, and around the northern shores of the Ægean Sea. (Madden, Hist. of Rome, p. 69.—Marsh, Hora Pelasgica.) There seems, however, to be no sufficient reason to believe that the Pelasgan race is connected with the Peloponnesian. It was always regarded by the Greeks themselves as pure Pelasgians, and a Pelasgian dynasty reigned in Arcadia until the second Messenian war. (Herod., 14, 124.)—It is evident, therefore, that wandering tribes, which had been dispossessed of their lands by the Libyans or the Libyco-Berber, spread into Attica from the earliest times, and had undergone no change except by receiving a new name and adopting a new language. In most parts of Greece, however, the Pelasgic race became intermingled with the Hellenic; but the Pelasgi probably at all times formed the principal part of the population of Greece. The Hellenes excelled the Pe-
The connexion between the Pelasgic and Hellenic races has been a subject of much controversy among modern writers. Many critics have maintained that they belonged to entirely different races, and some have been disposed to attribute to the Pelasgians an Etrurian or Phoenician origin. It is true that many of the Greek writers speak of the Pelasgians and their language as barbarous, that is, not Hellenic; and Herodotus (1, 57) informs us, that the Pelasgian language was spoken in his time at Placia and Scylace on the Hellespont. This language he describes as barbarous; and on this fact he mainly grounds his general argument as to the ancient Pelasgian tongue. It may, however, be remarked, that it appears exceedingly improbable, if the Pelasgic and Hellenic tongues had nore one or a very slight relation to each other, that the two tongues should have so readily amalgamated in all parts of Greece, and still more strange that the Athenians and Arcadians, who are admitted to have been of pure Pelasgic origin, should have lost their original language and learned the pure Hellenic tongue. In addition to which, it may be remarked, that we scarcely ever read of any nation entirely losing its own language and adopting that of its conquerors. Though the Persians have received many new words into their language from their Arab masters, yet twelve centuries of Arab domination have not been sufficient to change, in any essential particular, the grammatical forms and general structure of the ancient Persian; and, notwithstanding all the efforts that were used by the Norman conquerors to bring the French language into general use in England, the Saxons remain to the present day the main element of the English language. It is therefore reasonable to suppose that the Pelasgic and Hellenic tongues were different dialects of a common language which formed by their union the Greek language of later times. — The ancient writers differ as much respecting the degree of civilization to which the Pelasgians attained before they became a Hellenic people, as they do respecting their original language. According to some ancient writers, they were little better than a race of savages till conquered and civilized by the Hellenes; but others represent them, and perhaps more correctly, as having attained to a considerable degree of civilization, before being subjected to the Greek yoke. Many traditions represent the Pelasgians as cultivating agriculture and the useful arts. Pelasgus in Arcadia, said the tradition, taught men to bake bread. (Pausan., 1, 14, 1.) The ancient Pelasgic Bozgyses yoked bulls to the plough (Etym. Mag., s. v. Bouzqym); Pelasgians invented the gourd for the purpose of driving animals (Etym. Mag., s. v. akvva.—Bekker, Anecd. Gr., 357); and a (Pelasgic) Thessalian in Egypt taught the name Hellen (Etym. Mag., s. v. Hellen, sup.).—It is a curious fact, which has been noticed by Mr. Malden (Hist. of Rome, p. 70), that the Grecian race which made the most early and the most rapid progress in civilization and intellectual attainments, was one in which the Pelasgian blood was least adulterated by foreign mixture, namely, the Ionians of Attica and of the settlements in Asia; and that we probably owe to the Pelasgic element in the population of Greece the qualities of race which have made it the vehicle of the human mind. The Dorians, who were the most strictly Hellenic, long disdained to apply themselves to literature or the fine arts.—Some writers have maintained, that the Greeks derived the art of writing and most of their religious rites from the Pelasgians; but, without entering into these questions, it may be asserted, with some degree of certainty, that the most ancient architectural monuments in Europe clearly appear to have been the work of their hands. The structures in Greece, Italy, and along the western coast of Asia Minor, usually called Cyclopean, because, according to the Greek legends, the Cyclopes built the walls of Troy and Mycenae, may properly be assigned to a Pelasgic origin; and the stones and structures which are characterized by the immense size of the stones with which they are built. The most extraordinary of them all is the treasury, or, as others call it, the tomb of Atreus at Mycenae. It remains but to add a few remarks respecting the name of this race. The most ancient form of the name was Pelegrpoj, and Mr. Thirlwall rather fancifully supposes that the appellation was derived from pele (wale) and peia (race), and that it signified "inhabitants" or "cultivators of the plains." The analogy, however, of alpha, taoe, ompeo, &c., seems, as Mr. Thirlwall himself confesses, unfavourable to this etymology. (Hist. of Greece, vol. 1, p. 59.) There is also another objection. Such a derivation of the name makes the Pelasgians to have been solely addicted to agricultural pursuits, a statement which is not borne out by facts. We are told, it is true, that they loved to settle on the rich soil of alluvial plains. The powers, too, that produce over husbandry, and protect the fruits of the earth and the growth of the flocks, appear to have been the oldest Pelasgian divinities; but this is taking too narrow a view of the subject. Even if it were not highly probable that a part of the nation crossed the sea to reach the shores of Greece, and thus brought with them the rudiments of the arts connected with navigation, it would be incredible that the tribes settled on the coast should not have required them. Accordingly, the islands of the Aegean are peopled by Pelasgians, the piracies of the Leleges precede the rise of the first maritime power among the Greeks, and the Tyrrhenian Pelasgians are found infesting the seas after the fall of Troy. (Thirlwall's Greece, vol. 1, p. 60.)—Mr. Kenrick, in a very ingenious paper "On the names of the Antehellenic inhabitants of Greece" (Philol. Museum, vol. 1, p. 609, seq.), maintains, that the name Pelasgian (Pelegrpoj) was given to the race on account of their readiness of speech, which sounded "to the exquisite fineness of the Hellenic ear" like the cry of the stork (pietapgoj). Hence the people who spoke thus were called Pelegrpoj or storks. And he seeks to confirm this etymology by endeavours to show that, "among birds, the stork laboured under the heaviest charge of defective elocution;" that he was held to have no tongue at all; that, as being defective in this particular, he was careless in all others; that he repre- sent a people of barbarous speech; and that we find, in the time of Homer, the inhabitants of the Thracian side of the Hellespont called Kkosc, a name which appears to be closely analogous to the Latin Gcmonia. This etymology, however, proves too much. It is based on the supposition that there was a radical difference between the Pelasgic and Hellenic forms of speech, which, from what has already been premised, may be fairly supposed to represent a people of barbarous speech; and that the derivation of the name from that of pietapgoj; "a stork," appears also among the Greek writers, but there the explanation is founded on the erroneous idea that the Pelasgians were a roaming race. Myrsus of Lesbos related, according to Dionysius of Halicarnassus, that the Tyrrenians, flying from public calamities with which they were chastised by heaven, because among other tithes they had not offered that of the children, had long roamed about before they again acquired a fixed abode; and that, as they were seen thus going forth and returning, the name of Pelargi, or storks, was given to them. (Dion. Hal., 1, 23.) This etymology is about as valuable as the one which deduces Pelasgus from Pele, or Granius from Reu. Nor is that derivation much superior which traces Pelasgus to πηλαγος, "the sea," and makes the name refer to the maritime habits of the race. It is sanctioned, indeed, by the authority of Hermann
PEL

(Orph., vol. 2, p. 174), but it offends grievously against analogy (Lobeck, ad Phryn., p. 108); and if it is to be adopted (Lyc. p. 171), in numbers of luminous times, it certainly is not so to the original Pelasgians of Dodona or Thessaly. Perhaps the peculiar style of building ascribed to the Pelasgic race may furnish us with an etymology for their name, equal, at least in point of plausibility, to any of those which have thus far been enumerated. The term Pelargi may mean "stone-builders" or "stone-workers," as indicating a race whose massive style of architecture may have excited the wonder of the early Greeks, and have given rise to a species of national appellation. Thus, in the Macedonian dialect, πέλας signified "a stone" (τὰς πέλας, τὸς λίθον, κατὰ τὴν Μακεδόναν φωνήν), Ulpiam, de Demost. de fals. leg., p. 376, B. ed. Francof., 1604. Compare Rhukken, ad Tim. Lex., p. 270), and ἄργα (or ἄργαν) is an earlier form for ἄργαν. (Büch. Corp. Inscrip., fasc. 1, p. 29, 83.) The two old forms, then, πέλας ("a stone") and ἄργα ("work"), may perhaps have produced, by their combination, the name of Πελαγός. (Encycl. U. Kneal., vol. 17, p. 377, seqq.—Clinton, Fast. Hell., vol. 1, p. 1, seqq.—Curtius, de Antiqua Italia incisis, § 6, seqq. — Kruse, Hellas, vol. 1, p. 404, seqq. — Thirlwall's Greece, vol. 1, p. 33, seqq.—Philological Museum, vol. 1, p. 613.)

Pelasgicum (Πελασγικόν), a name given to the most ancient part of the fortifications of the Acropolis at Athens, from its having been constructed by the Pelasgi, who, in the course of their migrations, settled in Attica, and were employed by the Athenians in the erection of these walls. The rampart raised by this people is often mentioned in the history of Athens, and included also a portion of ground below the wall at the foot of the rock of the Acropolis. This had been allotted to the Pelasgi while they resided at Athens, and on their departure it was forbidden to be inhabited or cultivated. (Thucyd., 2, 7. — Pollux, 1, 102. — Myresi, ap. Dion. Hal., 1, 18. — Herod., 2, 51. — Id., 6, 137.) It was apparently on the northern side of the citadel, as we are informed by Plutarch, that the southern wall was built by Cimon, from whom it received the name of Cimonion. (Cramer's Anc. Greece, vol. 2, p. 382.)

Pelasgitiis, a district of Thessaly, occupying the lower valley of the Peneus as far as the sea. It was originally inhabited by the Perrhai, a tribe of Pelasgic origin. (Alcinn., ap. Strab., 441.—Cramer's Anc. Greece, vol. 1, p. 363.)

Pelasgos, an ancient monarch of the Pelasgi. (Vid. Pelasgi.)

Pelethroni, an epithet given to the Lapithæ, because they dwelt in the vicinity of Mount Pelethronium, in Thessaly. (Virg., Georg., 3, 115.) Pelethronium appears to have been a branch of Pelion.

Pelus, a king of Thessaly, son of Æacus mon- arch of the Phociæans, and the daughter of Chiron. Having been accessory, along with Pela- mon, to the death of his brother Phoecus, he was ban- nished from his native land, and found an asylum at the court of Eurytus, son of Actor, king of Phthia in Thessaly. He married Antigone, the daughter of Eurytus, and received with her, as a marriage portion, the third part of the kingdom. Pelus was present with Eurytus at the chase of the Calydonian boar; but Eurytus, neglecting the un-lawful task, fell by a blow of the javelin which he had hurled against the animal, he was again doomed to be a wanderer. His second benefactor was Acatus, king of Iolcos; but here again he was involved in trouble, through a false charge brought against him by Astydamia, or, as Horace calls her, Hippolyte, the queen of Acatus. (Vid. Acatus.) To reward the virtue of Pelus, as fully shown by his resisting the blandishments of Astyda- mia, the gods resolved to give him a goddess in mar- riage. The spouse selected for him was the sea- nymph Thetis, who had been wooed by Jupiter himself. Pelus was not seduced by her blandishments, but Thetis having declared that her child would be greater than Pelus, the gods withdrew. (Pind., Isth., 8, 58, seqq.) Other- wise that she was courted by Jupiter alone, till he was informed by Prometheus that, if he had a son by her, that son would dethrone him. (Apollod., 3, 13, 1. — Schol. ad ll., 1, 519.) Others, again, maintain that Thetis, who was reared by Juno, would not as- sent to the wishes of Jupiter, and that the god, in his anger, redeemed her with a mortal. So Juno, no herself selected Pelus for her spouse. (ll., 24, 59. — Apoll. Rhod., 4, 793, seqq.) Chiron, being made aware of the will of the gods, advised Pelus to aspire to the bed of the nymph of the sea, and instruct- ed him how to win her. He therefore lay in wait, and seized and held her fast, though she changed herself into every variety of form, becoming fire, water, a serpent, and a lioness. (Pind., Nem., 4, 101. — Soph. frag. ap. Schol. ad Nem., 3, 60.) The wedding was solemnized on Mount Pelion; the gods all honoured it with their presence, and bestowed armour on the bridegroom. (ll., 17, 195. — Ib., 18, 84.) Chiron gave him the famous ashen spear afterward wielded by his son; and Neptune bestowed on him the immortal Harry-born steeds Batus and Xanthus. The offspring of this union was the celebrated Achilles. According to one account, Pelus was deserted by his goddesse-wife for not allowing her to cast the infant Achilles into a caldron of boiling water, to put it to death; but another reports that she was delivered to her, to try her husband, and she raised him, and made him immortal. (Vid. Achilles.) This, however, is a posthomeric fiction, since Homer represents Peleus and Thetis as dwelling together all the lifetime of their son. Of Pelus it is farther related, that he sur- vived his son, and even grandson (Od., 11, 493. — Eurip. Androm.), and died in misery in the island of Cos. (Callim., ap. Schol. ad Pind., Pyth., 3, 167. —Kingsley's Mythology, p. 313, seqq.) It was at the nuptials of Peleus and Thetis that the goddess of Discord threw the apple of gold into the middle of the assembled deities, with which was connected so much misfortune for both the Trojans and the Greeks. (Vid. Helena, and Paris.)

Pelidæi, daughters of Pelias. (Vid. Jason, and also Pelias, towards the end of the latter article.)

Pelias, the twin brother of Neleus, was son of Neptune by Tyro, the daughter of Salmoneus. The mother, to conceal her disgrace, attempted to drown her twin sons, but were saved by a troop of mares, followed by their keeper, passing by where they lay, one of the mares touched the face of one of the in- fants with her hoof, and made it livid (πελαθόν). The keeper took and reared the babes, naming the one with the mark Pelias, the other Neleus. When they grew up they discovered their mother, and resolved to kill her stepmother Sidero, by whom she was cruelly treated. They pursued her, accordingly, to the island of Julis; but when she turned away, who knew for what that goddess, slew her before it. The brothers afterward fell into discord, and Pelias abode at Iolcos, but Neleus settled in Elis, where he built a town named Pylos. Tyro afterward married her uncle Cretheus, to whom she bore three sons, Æson, Phere- roses, and Amythaon. Cretheus was succeeded in the kingdom of Iolcos by Æson, who became by Alc- i- laeus, the real foundress of the Macedonian line, deprived Æson of his kingdom, and then sought the life of the infant Jason; but the parents of the latter gave out that he was dead, and meantime conveyed him by night to the cave of the centaur Chiron, to whose care they committed him. —The rest of the leg- end of Pelias will be found under the article Jason. (Apollod., 1, 9, 7, seqq.—Od., 11, 255, seqq.) Pelias married Anaxibia the daughter of Bias, or, as others say, Philomache the daughter of Amphion, and became
by her the father of one son, Acacius, and of four daughters, Psindace, Pelopoea, Hippothoë, and Alecas.

(Apoll. 1, 9, 10.) These daughters were called Pelaiades, and became, unwittingly, through the arts of Medea, the slayers of their sire. (Vid. Jason.)

Pailides, a patronymic of Achilles, as the son of Peleus. (Vid. Peleus.)

Peli, an Italian tribe, belonging to the Sabine race, according to Ovid (Fast. 3, 95), but, according to Festus, deriving their origin from Illyria. The statement of Ovid appears the more probable one, if we consider the uniformity of language, customs, and character apparent in all the minor tribes of central Italy, as well as in the Samnites, between whom and the Sabines these tribes may be said to form an intermediate link in the Ocean chain.—The Peligni were situated to the east and northeast of the Marsi, and had Corfinium for their chief town. They derive some consideration in history from the circumstance of their chief city having been selected by the allies in the Social war as the seat of the new empire. Had their plans succeeded, and had Rome fallen beneath the influence of this event, Corfinium would have become the capital of Italy, and perhaps the nucleus of a new Roman State. (241.)—The country of the Peligni was small in extent, and mountainous, and noted for the coldness of its climate, as well as for the abundance of its springs and streams. (Horace, Od. 3, 19.—Ovid, Fast. 4, 685.) That some portion of it, however, was fertile, we learn also from the latter poet. (Am. 2, 16.—Cramer's Anc. Italy, vol. 1, p. 332.)

Pellae, a range of the Alps in Thessaly, along a portion of the eastern coast. Its principal summits rise behind Iolcos and Ormenium. The chain extends from the southeastern extremity of the Lake Bœbius, where it unites with one of the ramifications of Ossa, to the extreme promontory of Magnesia. (Strabo, 443.—Herod. 7, 129.—Cramer's Anc. Greece, vol. 1, p. 429.) In a fragment of Dioclearchus which has been preserved to us, we have a detailed description of Pelion and its botanical productions, which appear to have been very numerous, both as to forest-trees and plants of various kinds. (Cramer, l. c.) On the most elevated part of the mountain was a temple dedicated to Jupiter Actaeus, to which a troop of the noblest youths of the city of Demetrias ascended every year by appointment of the priest; and such was the cold experienced on the summit, that they wore the thickest woolen fleeces to protect themselves from the cold during the winter season. (Dioclearch. p. 29.) It is with propriety, therefore, that Pindar applies to Pelion the epithet of stormy. (Pyth. 9, 6.)—Homer alludes to this mountain as the ancient abode of the Centaurs, who were ejected by the Lapithae. (Il. 2, 743.—Compare Pind. Pyth. 2, 83.) It was, however, more especially the haunt of Chiron, whose cave, as Dioclearchus relates, occupied the highest point of the mountain. (Dioclearch. p. 28.) This point was the scene of the Slaughters of the Gods, by the Giants, and the battle between the Gods and Giants, in which the latter were defeated. (Virg. Georg. 1, 281, seq.) The famous spear of Peleus, which descended to his son Achilles, and which none but the latter and his parent could wield, was cut from an ash-tree on this mountain, and thence received its name of Pelus. (Hom. Il. 16, 144.—Il. 11, 875.) It was on the banks of the river Pelus that the Romans engaged the Barbares, and commanding a pass leading into that country. It was a place of considerable importance from its situation; and Arrian speaks of it as some length in his account of an attack made upon it by Alexander. (Exp. Ali. 1, 5, seqq.) We must look for it, most probably, in the mountains which separate the district of Castoria (the ancient Orestis) from that of Ovrida.

It cannot have been far from the modern town of

Bichisias, situated on a river of the same name.—(Cramer's Anc. Greece, vol. 1, p. 76.)

Pella, a city of Macedonia, near the top of the Sinus Thermaicus, on the confines of Emathia. It became the capital of the kingdom when Idessa was annihilated, according to Pueiow, and owed its grandeur to its son Alexander, who was born there, and who was hence-styled Pellensecumus by the Roman poets. According to Stephanus Byzantinus, its more ancient appellation was Bunomus and Bunomisia, which it exchanged for the name of its founder Pellas. Livy describes it as situate on a hill which faced the southwest, and surrounded with morsasses formed by stagnant waters from the adjacent lakes, so deep as to be impassable either in winter or in summer. In the morass nearest the city, the citadel rose up like an island, being built on a mound of earth formed with immense labour, so as to be capable of supporting the wall, and secure against any injury from the surrounding moisture. At a distance it seemed to join the city rampart, but it was divided from it by a river which ran between, and over which was a bridge of communication. This river was called Ludias, Ladius, and Lydius. (Liv. 44, 46.) The baths of Pellaea were so well known as to be held in abeyance by letters being cited to the Romans (Strutt. 241.)—The country of the Peligni was small in extent, and mountainous, and noted for the coldness of its climate, as well as for the abundance of its springs and streams. (Horace, Od. 3, 19.—Ovid, Fast. 4, 685.) That some portion of it, however, was fertile, we learn also from the latter poet. (Am. 2, 16.—Cramer's Anc. Italy, vol. 1, p. 332.)

Pelle, a range of the Alps, in Thessaly, along a portion of the eastern coast. Its principal summits raise behind Iolcos and Ormenium. The chain extends from the southeastern extremity of the Lake Bœbius, where it unites with one of the ramifications of Ossa, to the extreme promontory of Magnesia. (Strabo, 443.—Herod. 7, 129.—Cramer's Anc. Greece, vol. 1, p. 429.) In a fragment of Dioclearchus which has been preserved to us, we have a detailed description of Pelion and its botanical productions, which appear to have been very numerous, both as to forest-trees and plants of various kinds. (Cramer, l. c.) On the most elevated part of the mountain was a temple dedicated to Jupiter Actaeus, to which a troop of the noblest youths of the city of Demetrias ascended every year by appointment of the priest; and such was the cold experienced on the summit, that they wore the thickest woolen fleeces to protect themselves from the cold during the winter season. (Dioclearch. p. 29.) It is with propriety, therefore, that Pindar applies to Pelion the epithet of stormy. (Pyth. 9, 6.)—Homer alludes to this mountain as the ancient abode of the Centaurs, who were ejected by the Lapithae. (Il. 2, 743.—Compare Pind. Pyth. 2, 83.) It was, however, more especially the haunt of Chiron, whose cave, as Dioclearchus relates, occupied the highest point of the mountain. (Dioclearch. p. 28.) This point was the scene of the Slaughters of the Gods, by the Giants, as the poets relate, placed Ossa upon Pelion, and "rolled upon Ossa the leafy Olympus," in their daring attempt to scale the heavens. (Virg. Georg. 1, 281, seq.) The famous spear of Peleus, which descended to his son Achilles, and which none but the latter and his parent could wield, was cut from an ash-tree on this mountain, and thence received its name of Pelus. (Hom. Il. 16, 144.—Il. 11, 875.) It was on the banks of the river Pelus that the Romans engaged the Barbares, and commanding a pass leading into that country. It was a place of considerable importance from its situation; and Arrian speaks of it as some length in his account of an attack made upon it by Alexander. (Exp. Ali. 1, 5, seqq.) We must look for it, most probably, in the mountains which separate the district of Castoria (the ancient Orestis) from that of Ovrida.

It cannot have been far from the modern town of

Pelopis or Pelopia, a daughter of Thestes, the brother of Areus. She became, by her own parent, the mother of Egisthus. (Vid. Areus.)

Pelopidas, son of Hippocles, belonged to one of the principal families of Thebes. He distinguished himself at the battle of Mantinea (B.C. 365), in which the
Thebans took part as allies of the Lacedaemonians, under the Spartan king Agesipolis. In this battle, Pelopidas being wounded and thrown down, was saved from death by Epaminondas, who protected him with his shield, maintaining his ground against the Arcadians until the Lacedaemonians came to their relief, and saved him. From this he was not invincible; for a ship was formed between Epaminondas and Pelopidas, which lasted till the death of the latter. When the Lacedaemonians surprised the citadel of Thebes, and established the power of the aristocracy in that city, Pelopidas, who belonged to the popular party, retired to Athens, together with a number of other citizens. After a time, he and his brother exiles formed a plan, with their friends in Thebes, for surprising and overthrowing the oligarchy, and restoring the popular government. Pelopidas and some of his friends set off from Athens disguised as hunters, found means to enter Thebes unobserved, and concealed themselves in the house of a friend, whence they issued in the night, and, having surprised the leaders of the aristocratic party, put them to death. The people then rose in arms, and, having proclaimed Pelopidas their commander, they obliged the Spartan garrison to surrender the citadel by capitulation (B.C. 379). Pelopidas succeeded in getting the exiles out of Sparta, and Athens, and thus divide the attention of the former power. The war between the Thebans and the Lacedaemonians was carried on for some years in Boeotia by straggling parties, and Pelopidas, having obtained the advantage in several skirmishes, ventured to encounter the enemy in the open field at Tegyra, near Orchomenus. The Lacedaemonians were defeated, and thus Pelopidas demonstrated, for the first time, that the armies of Sparta were not invincible; and this, which was afterward confirmed by the battle of Leuctra (B.C. 371), in which Pelopidas fought under the command of his friend Epaminondas. In the year 359 B.C., the two friends, being appointed two of the Boeotarchs (Plut., Vit. Pelop., c. 24), marched into the Peloponnesus, obliged Argos, and Arcadia, and other states to renounce the alliance of Sparta, and carried their incursions into Laconia in the depth of winter. The king of Sparta, Mnesicles, of the Peloponnesian party, and the descendants of its former inhabitants, who had gone into exile about two centuries before, to come and repopulate their country. They thus confined the power of Sparta to the limits of Laconia. Pelopidas and Epaminondas, on their return to Thebes, were tried for having retained the command after the expiration of the year of their office, but were acquitted; and Pelopidas was afterward employed against Alexander, tyrant of Pherae, who was endeavouring to make himself master of all Thessaly. He defeated him. From Thessaly he was called into Macedonia, to settle a quarrel between Alexander, king of that country, and son of Amyntas II., and his natural brother Poltomu. Having succeeded in this, he returned to Thebes, bringing with him Philip, brother of Alexander, and thirty youths of the chief families of Macedonia as hostages.

A year after, however, Poltomu murdered his brother Alexander, and took possession of the throne. Pelopidas, being applied to by the friends of the late king, enlisted a band of mercenaries, with which he marched against Poltomu, who entered into an agreement to hold the government only in trust for Perdiccas, a younger brother of Alexander, till he was of age, and to keep the alliance of Thebes; and he gave to Pelopidas his own son Philoxenus and fifty of his companions as hostages. Some time after, Pelopidas, being in Peloponnesia on an expedition to the temple of the god, in the custody of a certain prisoner named Alexander of Pherae, but the Thebans sent Epaminondas with an army, who obliged the tyrant to release him. The Thebans, soon after, having discovered that the Spartans and Athenians had sent ambassadors to conclude an alliance with Artaxerxes, king of Persia, sent on their part Pelopidas to support their own interest at the same court. His fame had preceded him, and he was received by the Persians with great honour, and Artaxerxes showed him peculiar favour. Pelopidas obtained a treaty, in which the Thebans were styled the king's hereditary friends, and in which the Athenians were promised the same; and all the Greek states, including Messenia, was fully recognised. He thus disappointed the ambition of Sparta and of Athens, which aimed at the supremacy over the rest. The Athenians were so enraged at this, that they put their ambassador Timagoras to death on his return to Athens. Pelopidas, after his return, was appointed to march against Alexander of Pherae, who had committed fresh encroachments in Thessaly. But, when the army was on the point of marching, an eclipse of the sun took place, which so dismayed the Thebans that Pelopidas was obliged to set off with only 300 volunteers, trusting to the Thessalians, who joined him on the route. Alexander met him with a large army at a place called Cynosscephalae. Pelopidas, by great exertions, although his army was much inferior in numbers, obtained an advantage, and the troops of Alexander were retreating, when Pelopidas, venturing too far amid the enemy, was slain. The grief of both Thebans and Thessalians was increased by his having in this battle shown, that he was entitled to the honours to his remains. The Thebans avenged his death by sending a fresh army against Alexander, who was defeated, and was soon after murdered by his own wife.—Pelopidas was not only one of the most distinguished and successful commanders of his age, but he and his friend Epaminondas rank among the most estimable public men of ancient Greece. (Plut., Vit. Pelop.—Aen., Hist. Gr.—Pausan., 9, 12, &c.—Encycl. Brit., vol. 17, p. 388, seq.)

PELOPONNESIACUM BELLUM is the name given to the great contest between Athens and her allies on the one side, and the Peloponnesian confederacy, headed by Sparta, on the other, which lasted from 431 to 404 B.C. The war was a consequence of the jealousy with which Sparta and Athens regarded each other, as states each of which was aiming at supremacy in Greece, as the heads respectively of the Dorian and Ionian races, and especially of the two colonies, Corinth and Messenia, which had invited the Greeks to maintain the government, oligarchy and democracy. The war was eagerly desired by a strong party in each of those states; but it was necessary to find an occasion for commencing hostilities, especially as a truce for thirty years had been concluded between Athens and Sparta in the year B.C. 445. Such an occasion was presented by the affairs of Corcyra and Potidæa. In a quarrel, which soon became a war, between Corinth and Corcyra, respecting Epidamus, a colony of the latter state (B.C. 436), the Corcyreans applied to Athens for assistance. Their request was granted, as far as the conclusion of a defensive alliance between Athens and Corcyra, and an Athenian fleet was sent to their aid, which, however, soon engaged in active hostilities against the Corinthians. Potidæa, on the isthmus of Pallene, was a Corinthian colony, and, even after its subjection to Athens, continued to receive every year from Corinth certain functions or offices (tribus exul). The Athenians, suspecting that the Potidæans were inclined to join in a revolt, to which Perdicæa, king of Macedon, was inciting the towns of Chalcidice, required them to dismiss the Corinthian functionaries, and to give other pledges of their fidelity. The Potidæans refused; and, with most of the other Chalcidian towns, revolted from Athens, and received aid from Corinth. The Athenians sent an expedition against them, and, after some fighting, put an end to the colony (B.C. 432). The Corinthians now obtained a meeting of the Peloponnesian confederacy at Sparta, in which they complained of the conduct of Athens with regard to Corcyra and Potidæa. After others of the allies had brought their charges against Athens, and
after some of the Athenian envoys, who happened to be in the city, had defended the conduct of their state, the Spartans first, and afterward all the allies, decided that Athens had broken the truce, and they resolved upon immediate war; King Archidamus alone recommended some delay. In the interval necessary for preparation, an attempt was made to throw the blame of commencing hostilities upon the Athenians, by sending three several embassies to Athens with demands of such a nature as could not be accepted. In the assembly which was held at Athens to give a final answer to these demands, Pericles, who was now at the height of his power, urged the people to engage in the war, and laid down a plan for the conduct of it. He advised the people to bring all their moveable property from the country into the city, to abandon Attica to the ravages of the enemy, and not to suffer themselves to be provoked to give them battle with inferior numbers, but to expend all their strength upon their navy, which might be employed in carrying the war into the enemy's territory, and in collecting supplies from subject states; and farther, not to attempt any new conquest while the war lasted. His advice was adopted, and the Spartan envoys were sent home with a refusal of their demands, but with an offer to refer the matters in difference to an impartial tribunal, an offer which the Lacedaemonians had no intention of accepting. After this, the usual peaceful intercourse between the Peloponnesian allies was discontinued; and Thucydides (2, 1) remarks, The beginning of the war from the early spring of the year 431 B.C., the fifteenth of the thirty years' truce, when a party of Thebans made an attempt, which at first succeeded, but was ultimately defeated, to surprise Plataea. The truce being thus openly broken, both parties addressed themselves to the war. The Peloponnesian confederacy included all the states of Peloponnesus except Arcadia, whose citizens joined Athens and Arcadia. But without the Peloponnesus, Megarids, Phocis, Locris, Euboea, the island of Lesbos, and the cities of Arcadia and Anactorium. The allies of the Athenians were Chios and Lesbos, besides Samos and the other islands of the Aegarian which had been reduced to subjection (Thera and Melos, which were still independent, remained neutral), Plataea, the Messenian colony in Naupactus, the majority of the Acarnanians, Corcyra, the cities of Thrace, and the Euboeans in the island of Chios, in Thrace and Macedonia, and on the Hellespont. The resources of Sparta lay chiefly in her land forces, which, however, consisted of contingents from the allies, whose period of service was limited; the Spartans were also deficient in money. The Athenian strength lay in their fleet, which was manned chiefly by foreign sailors, whom the wealth they collected from their allies enabled them to pay. Thucydides informs us, that the cause of the war was the more popular, as they professed to be deliverers of Greece, while the Athenians were fighting in defence of an empire which had become odious through their tyranny, and to which the states which yet retained their independence feared to be brought into subjection. In the summer of the year 431 B.C., the Peloponnesians invaded Attica under the command of Archidamus, king of Sparta. Their progress appears to have been still anxious to try what could be done by intimidating the Athenians before proceeding to extremities. Yet their presence was found to be a greater calamity than the people had anticipated; and, when Archidamus made his appearance at Acharnæ, they began loudly to demand to be led out to battle. Pericles firmly adhered to his plan of defence, and the Peloponnesians returned home. Before their departure, they sent out a fleet of 100 sail, which was joined by fifty Corcyrean ships, to waste the coasts of Peloponnesus; and towards the autumn Pericles led the whole dispo- sable force of the city into Megaris, which he laid waste. In the same summer the Athenians expelled the inhabitants of Ægina from their island, which they colonized with Athenian settlers. There was a public funeral at Athens for those who had fallen in the war, and Pericles pronounced over them an oration, the substance of which is preserved by Thucydides (2, 35-46). In the following summer (B.C. 430) the Peloponnesians again invaded Attica under Archidamus, who now entirely laid aside the forbearance which he had shown the year before, and left scarcely a corner of the land unseized. The invasion lasted forty days. In the mean time, a grievous pestilence broke out in Athens, and raged with the more virulence on account of the crowded state of the city. Of this terrible visitation Thucydides, who was himself a sufferer, has left a minute and apparently faithful description (3, 46, 47). The murmur of the people against Pericles were renewed, and he was compelled to call an assembly to defend his policy. He succeeded so far as to prevent any overthrow of peace being made to the Lacedaemonians, but he himself was fined, though immediately afterward he was re-elected general. While the Peloponnesians were in Attica, Pericles led a fleet to ravage the coasts of Peloponnesus. In the winter of this year Potidas surrendered to the Athenians on favourable terms. (Thucyd., 2, 70.) The next year (B.C. 429), instead of invading Attica, Pericles led the Peloponnesian siege to Plataea. The brave resistance of the inhabitants forced their enemies to convert the siege into a blockade. In the same summer, an invasion of Acarnania by the Ambrians and a body of Peloponnesian troops was repulsed; and a large Peloponnesian fleet, which was to have joined in the attack on Acarnania, was twice defeated by Phormion in the mouth of the Corinthian gulf. An expedition sent by the Athenians against the town of Agora, which the Peloponnesians had been making there, saw no great loss. In the preceding year (B.C. 430) the Athenians had concluded an alliance with Sitalces, king of the Odyres in Thrace, and Pericles, king of Macedon, on which occasion Sitalces had promised to aid the Athenians to subdue their revolted subjects in Chalcidice. He now collected an army of 150,000 men, with which he first invaded Macedonia, to revenge the breach of certain promises which Pericles had made to him the year before, and to attempt the reduction of the lands of the Chalcidians and Bottiwans; but he did not attempt to reduce any of the Greek cities. About the middle of this year Pericles died. The invasion of Attica was repeated in the next summer (428 B.C.); and, immediately afterward, all Lesbos except Methymna revolted from the Athenians, who laid siege to Mytilene. The Mytileneans begged aid from Sparta, which was promised, and they were admitted into the Spartan alliance. In the same winter a body of 1,200 Plataians, amounting to 220, made their escape from the besieged city in the night, and took refuge in Athens. In the summer of 427 the Peloponnesians again invaded Attica, while they sent a fleet of 42 galleys, under Alcides, to the relief of Mytilene. Before the fleet arrived Mytilene had surrendered, and Alcides, after a little delay, sailed home. In an assembly which was held in order to determine whether the Mytileneans, it was resolved, at the instigation of Cleon, that all the adult citizens should be put to death, and the women and children made slaves; but this barbarous decree was repealed the next day. The land of the Lesbians (except Methymna) was seized and divided among Athenian citizens, to whom the inhabitants paid a rent for the occupation of their former property. In the same summer the Plataians surrendered; and their city was given up to the Thebans, who razed it to the ground. In the year 426 the Lacedaemonians were deterred from invading Attica by earthworks. An expedition against Aetolia, under the Athenian general Demos-
thenes, completely failed; but afterward Demosthenes and the Acarnanians routed the Ambracians, who nearly all perished. In the winter (426–5) the Athenians purified the island of Delos, as an acknowledgment to Apollo for the cessation of the plague. At the beginning of the summer of 425, the Peloponnesians invaded Attica for the fifth time. At the same time, the Athenians, who had sent their thoughts towards Sicily, sent a fleet to aid the Leon-tini in a war with Syracuse. Demosthenes accompanied this fleet, in order to act, as occasion might offer, on the coast of Peloponnesus. He fortified Py- lus on the coast of Messenia, the northern headland of the modern Bay of Navarino. In the course of the operations which were undertaken to dislodge him, a body of Lacedaemonians, including several noble Spartans, got blockaded in the island of Sphaleria, at the mouth of the bay, and were ultimately taken prisoners by Cleon and Demosthenes. Pylus was garrisoned by a colony of Messenians, in order to annoy the Spartans. After this event the Athenians engaged in vig- orous offensive operations, of which the most impor-tant was the capture of the island of Cythera by Nic- ias early in B.C. 424. This summer, however, the Athenians suffered some reverses in Boiotia, where they had garrisoned Delium. As a consequence, Macedonia and Thrace, where Brasidas, among other exploits, took Amphipolis. The Athenian expedition to Sicily was abandoned, after some operations of no great importance, in consequence of a general pacifica-tion of the island, which was effected through the in-fluence of Hermocrates, a citizen of Syracuse. In the year 423, a year's truce was concluded between Spar-ta and Athens, with a view to a lasting peace. Hos-tilities were renewed in 422, and Cleon was sent to cope with Brasidas. The Athenians took Argos and Corinth's garrison in the island of Euboea; they failed in their operations even during the truce. A battle was fought be-tween these generals at Amphipolis, in which the de-feat of the Athenians was amply compensated by the double deliverance which they experienced in the deaths both of Cleon and Brasidas. In the following year (421) Nicias succeeded in negotiating a peace with Sparta for fifty years, the terms of which were, a mu-tual restitution of conquests made during the war, and the restoration of the Athenians taken prisoner in Thrace. This war, which was ratified by all the allies of Sparta except the Boeotians, Corinthians, Eleans, and Megarians. This peace never rested on any firm basis. It was no sooner concluded than it was discovered that Sparta had not the power to fulfil her promises, and Athens insisted on their performance. The jealousy of the other states was excited by a treaty which was concluded between Sparta and Athens immediately after the peace; and intrigues were commenced for the formation of a new confederacy, with Argos at the head. An attempt was made to draw Sparta into al-liance with Argos, but it failed. A similar overture, subsequently made to Athens, met with better suc-cess, chiefly through an artifice of Alecibiades, who was at the head of a large party hostile to the peace, and the Athenians concluded a treaty offensive and defense with Argos, Elis, and Mantinea for 100 years (B.C. 420). In the year 419, the Argive con-federacy was broken up by their defeat at the battle of Mantinea, and a peace, and soon after an alliance, was made between Sparta and Argos. In the year 416 an expedition was undertaken by the Athenians against Melos, which had hitherto remained neutral. The Melians surrendered at discretion; all the males who had attained manhood were put to death; the women and children were made slaves; and subsequently 500 Athenians were sent to the island of Aegina (Thucy-d., 5, 116.). The fifty years' peace was not considered at an end, though its terms had been bro-ken on both sides, till the year 415, when the Atheni-ans undertook their disastrous expedition to Sicily.
The word, however, does not occur, Homer. The original name of the peninsula appears to have been Apia (Hom., II., 1, 270 — Id. ib., 3, 49), and it was so called, according to Ephes. (Suppl., 5, 14, 10, according to Apia, or according to Panassas, 2, 5, 5), from Apia, a son of Telech, and descendant of Aegialeus. When Argos had the supremacy, the peninsula, according to Strabo (371), was sometimes called Argos; and, indeed, Homer seems to use the term Argos in some cases, as including the whole peninsula. (Thucyd., 1, 9.) The origin, therefore, of the name Peloponnesus still remains open to investigation. It is possible that Pelops, instead of having actually existed, may have been a mere symbol representing an old race by the name of Pelopes, according to the analogy which we find in the national appellations of the Dryopes, Mecopes, Dolopes, and others. The Peloponnesus, then, will have derived its name from this old race, and the very term Pelopes (or Pelopides) itself will receive something like confirmation from the ingenious remarks of Buttmann relative to the early population along the shores of the Mediterranean and Asia Minor. The name of the mythic Pelops had become celebrated in epic poetry as the lords of all Argos and of many islands, the name of Peloponnesus would appear to have come into general use, and, by a common error, to have been transferred from the race or nation of the Pelopes to their fabulous leader. (Vid. Pelops.)—Peloponnesus, though inferior in extent to the northern portion of Greece, may be looked upon, says Strabo, as the acropolis of Hellas, both from its position, and the power and celebrity of the different people by which it was inhabited. In shape it resembled the leaf of a plane-tree, being indented by numerous bays on all sides. (Strab., 335. — Plin., 4, 5. — Diónys. Per., 403.) It is from this circumstance that the modern name of Messenia is doubtlessly derived, that word signifying a mulberry leaf. — Strabo estimates the breadth of the peninsula at 1400 stadia from Cape Chelonias, now Cape Tornice, its westernmost point, to the isthmus, being nearly equal to its length from Cape Malea, now Cape St. Angelo, to Egium, now Vostizza, in Achaia. Peloponnesus reckons its periphery, setting aside the sinuosities of the coast, at 4000 stadia, and Artemidorus at 4000; but, if these are included, the number of stadia must be increased to 5600. Pliny says that "Isidorus computed its circumference at 503 miles, and as much again from its breadth. Homer says it was the size of the narrow stem from which it expands is called the isthmus. At this point the Egium and Ionian seas, breaking in from opposite quarters north and east, eat away all its width, till a narrow neck of five miles in breadth is all that connects Peloponnesus with Greece. On one side is the Corinthian, on the other the Saronic Gulf. Lechsum and Cenchreae are situated on opposite extremities of the isthmus, a long and hazardous circuit, and workmen, who have the instinct of their being carried over land in wagons. For this Demetrius Caesar, Caligula, and Nero, but in every instance without success." (Plin., 4, 5.) — On the north the Peloponnesus is bounded by the Ionian Sea, on the west by that of Sicily, to the south and southeast by that of Libya and Crete, and to the northeast by the Myrtoan Gulf. There were formerly five extensive gulfs along its shores: the Corinthian Sinus, now Gulf of Corinth or Lepanto, which separated the northern coast from Ætolia, Arcadia, and Phocis; the Sinus Messeniacus, now Gulf of Corinth, on the coast of Messenia; the Sinus Laconicus, now Gulf of Caleythis, on that of Laconia; the Sinus Argolicus, now Gulf of Nauplia; and, lastly, the Sinus Saronicus, a name derived from Sarion, which in ancient Greek signified an oak leaf (Plin., 4, 5), now called Gulf of Ægina. (Strab., 1, c.) — The principal mountains of Peloponnesus are, those of Cyllene (Ætoma) and Erymanthus (Olones) in Arcadia, and Taygetus (St. Elias) in Laconia. Its rivers are, the Alps, or, more correctly, Rophaea, passing through Arcadia and Elis, and discharging itself into the Sicilian Sea; the Euoras, or Balsipotamo, watering Laconia, and falling into the Sinus Laconicus; the Parnassus, or Pirnaës, a river of Messenia, falling into the Sinus Messeniacus. The Peloponnesus contains but one small lake, which is that of Stymphalus, or Zarauca, in Arcadia. — According to the best modern maps, the area of the whole peninsula may be estimated at 7800 square miles; and in the midst of this prospering people, in the dim history, an approximate computation of the population of its different states furnishes upward of a million as the aggregate number of its inhabitants. — The divisions of the Peloponnesus were Achaia, Elis, Messenia, Laconia, Arcadia, Argolis, and Arcadia. (Cramer's Anc. Greece, vol. 3, p. 1, seqq.) — Pelops, son of Tantalus king of Phrygia, and celebrated in both the mythic and historical legends of ancient Greece. At the time of the marriage of Pelops with Hippodamia, the daughter of Tantalus, the latter, in order to try their divinity, is said to have killed and dressed his son Pelops, and to have set him for food before them. The assembled deities, however, immediately perceived the horrid nature of the banquet, and all abstained from it with the exception of Ceres, who, engaged with the loss of her daughter Proserpina, in a moment of abstraction ate one of the shoulders of the boy. At the desire of Jupiter, Mercury put all the parts back into the caldron, and then drew forth the young Pelops alive again, and perfect in all his parts except the shoulder, which was replaced by an ivory one, that was said to possess the power of removing every disorder and healing every complaint by its touch. Hence, says the scholar to Pindar, the descendants of Pelops had all such a shoulder as this (τοιοῖ δε ψυχρώ τοῦ ὠσμον. — Schol. ad Pind., Ol., 1, 35). The ivory shoulder of Pelops became also a subject for the painter, as appears from Philostratus ( Imag., 1, 30, p. 807), where Pelops is said δρασάσθαι τῷ ὠσμῷ, "to flash forth rays of light from his shoulder." The shoulder of the son of Tantalus also plays a conspicuous part in the legend of Troy. The soothsayers, it seems, had declared that the city of Priam would never be taken until the Greeks should have brought to their camp the arrows with which the hero, Hector, had wounded Aeneas. Accordingly, the shoulder-blade (γερανάρχα) of the son of Tantalus was brought from Prias to Troy. (Pausan., 5, 13, 3. — Böckh, ad Pind., l. c.) Another legend states, that the Palladium in Troy was made of the bones of Pelops. (Vid. Palladium.) — But to return to the regular narrative: Neptune, attracted by the beauty of Pelops, carried him off in his golden car to Olympus, where he remained until his father, Tantalus, had drawn the young hero to the golden cup of the gods, when they sent Pelops once more down to the "swift-raced fur of men." (Pind., Ol., 1, 60, seqq.) — When Pelops was detained to manhood, he resolved to seek in marriage Hippodamia, the daughter of Ænomoas, king of Pisa. An oracle having told this prince that he would lose his life through his son-in-law, or, as others say, being unwilling, on account of loss of surpassing beauty, to part with her, Pelops determined that he would give her to the one who should conquer him in the chariot-race. The race was from the banks of the Cladius in Ellis to the altar at Nemus at the Isthmus of Corinth, and was run in the following manner: Ænomoas, placing his daughter in the chariot with the squire, gave him the start; he himself followed with a spear in his hand, and, if he overtook the unhappy lover, he ran him through.
Thirteen had already lost their lives when Pelops came. In the dead of the night, says Pindar, Pelops went down to the margin of the sea, and invoked the god who rules it. On a sudden Neptune stood at his feet, and Pelops convinced him, by the memory of his former affection, to grant him the means of obtaining the lovely daughter of Óenomáus. Neptune heard his prayer, and bestowed upon him a golden chariot, and horses of winged speed. Pelops then went to Pisa to contend for the prize. He bribed Myrtilus, son of Mercury, the charioteer of Óenomáus, to leave out the linchpins of the wheels of his chariot, or, as others say, to put in waxen ones instead of iron. In the race, therefore, when Pelops approached him, he fell out and was killed, and thus Hippodamia became the bride of Pelops. (Schol. ad Pind., Ol., 1, 114.—Hygin., fab. 84.—Pind., Ol., 1, 114, seqq.—Apoll. Rhod., 1, 752.—Schol., ad loc.—Tzetz. ad Lyçophr., 156.) Pelops is said to have promised Myrtilus, for his aid, one half of his kingdom, or, as other accounts have it, to have made a most dishonourable agreement of another nature with him. Unwilling, however, to keep his promise, he took an opportunity, as they were driving along a cliff, to throw Myrtilus into the sea, where he was drowned. To the vengeance of Myrketos for the death of his son were ascribed all the future woes of the line of Pelops. (Sopht., Elector., 504, seqq.) Hippodamia bore to Pelops five sons, Atreus, Thyestes, Copreus, A-Leaethus, and Pittheus, and two daughters, Nicippe and Lysis-ice, who married Sibeneus and Mestor, sons of Perseus.—The question as to the personality of Pelops has been considered in a previous article (vid. Peloponnexus), and the opinion has there been advanced which makes him to have been merely the symbol of an ancient race called Pelopes. To those, however, who are inclined to regard Pelops as an actual personage, the following remarks of Mr. Thrall may not prove uninteresting: "According to a tradition, which appears to be sanctioned by the authority of Thucydides, Pelops passed over from Asia to Greece with treasures, which, in a poor country, afforded him the means of founding a new dynasty. His descendants sat for three generations on the throne of Argos: their power was generally acknowledged throughout Greece; and, in the historian's opinion, united the Grecian states in the expedition against Troy. The renown of their ancestor was transmitted to posterity by the name of the southern peninsula, called after him Peloponnexus, or the isle of Pelops. Most authors, however, for his native place, place him in the Lydian town of Sipylus, where his father Tantalus was fabled to have reigned in more than mortal prosperity, till he abused the favour of the gods, and provoked them to destroy him. The poetical legends varied as to the marvellous causes through which the abode of Pelops was transferred from Sipylus to Pisa, where he won the daughter and the crown of the bloodthirsty tyrant Óenomáus as the prize of his victory in the chariot-race, however, for his native place, which happened to be the same thing in the story but a political transaction, related that Pelops had been driven from his native land by an invasion of Ilus, king of Troy (Pausan., 2, 22, 3); and hence it has very naturally been inferred, that, in leading the Greeks against Troy, Agamemnon was merely avenging the wrongs of his ancestor. (Kruse, Hellas, vol. 1, p. 485.) On the other hand, it has been observed that, far from giving any countenance to the above tradition, the story, in the words of Xenophon, is but a taleology by which the sceptre of Pelops was transmitted to Agamemnon, nowhere alludes to the Asiatic origin of the house. As little does he seem to have heard of the adventures of the Lydian stranger at Pisa. The zeal with which the Eleans maintained this part of the story, manifestly with a view to exalt the antiquity and the lustre of the Olympic games, over which they presided, raises a natural suspicion that the hero's connexion with the East may have been a mere fiction, occasioned by a like interest, and propagated by like arts. This distrust is confirmed by the political allusions with which the progress of Pelops in Greece (Thucyd. I. p. 1, vol. 1, 70.) Mr. Kruse observes in Pelops the dark-faced one (πέλαγος καὶ οὐκ), and thinks that the reference is to a system of religion, characterized by dark and mysterious rites, which spread from Phrygia into Greece. (Philol. Museum, No. 5, p. 553.) For another explanation of the legend of Pelops, consult remarks under the article Tantalus.

PELOPS (πελός, v. πέλος, v. παλος) now Cape Favor, one of the three great promontories of Sicily. It lies near the coast of Italy, and is said to have received its name from Pelorus, the pilot of the ship which carried Hannibal away from Italy. This celebrated general, as it is reported, was carried by the tide into the straits between Italy and Sicily; and, as he was ignorant of the coast, and perceived no passage through (for, in consequence of the route which the vessel was pursuing, the promontories on either side seemed to join), he suspected the pilot of an intention to turn him into the hands of the Romans, and killed him on the spot. He was soon, however, convinced of his error, and, to atone for his rashness and pay honour to his pilot’s memory, he gave him a magnificent funeral, and ordered the promontory on the Sicilian shore after his name, having erected on it a tomb with a statue of Pelorus. (Val. Max. 9, 8.—Mela, 2, 7.—Strab., 5.—Virg., En., 3, 411, 867.—Ovid., Met., 5, 350; 18, 727; 15, 706.) This whole story is fabulous; nor is that one in any respect more worthy of belief, which makes the promontory in question to have derived its name from a colossal (πέλαγος) statue of Orion placed upon it, and who was fabled to have broken through and formed the straits and promontory. (Diod. Sic., 4, 85.—Mannert, Geogr., vol. 9, pt. 2, p. 264.) The name is, in fact, much older than the days of Hannibal. Polybius, a contemporary of the Carthaginian commander, gives the appellation of Pelorus to this cape when he mentions the invasion of Hannibal, and the story of the pilot: Thucydides, long before the time of Hannibal, speaks of Pelorion as being included in the territory of Messana (4, 25); and, indeed, it may be safely asserted that Hannibal never was in these straits.—The promontory of Pelorus is sandy, but Sílius Italicus errs when he speaks of its being a lofty one (14, 79). It is a low point of land, and the sand-flats around contain some salt-meadows. Solinus (Chron. Sarac., 325, ed. Cellarius) says Pelorus is 11l. The passage directly across to Italy is the short-est; but as there is no harbour here, and the current runs to the south, the route from the Italian shore is a southwestern one to Messana. The Italian promontory facing Pelorus is that of Càmys. (Mannert, Geogr., vol. 9, pt. 2, p. 265.)

PELTÉ, a city of Phrygia, southeast of Cotyaeum, mentioned by Xenophon in his narrative of the retreat of the forces of Hannibal. (Xen., Hell., vol. 2, p. 331.) The place was not inhabited. Pliny (5, 27) speaks of Peltae as belonging to the Conventus Juridicus of Apamea. In the notices of the ecclesiastical writers it appears as the seat of a bishopric. Xenophon makes the distance between it and Cotaeum ten parasangs. We must look for the site of this place to the north of the Meander, and probably in the valley and plain framed by the
PEN

Peleusium, an important city of Egypt, at the entrance of the Thebian coast of the Nile, and about 20 stades from the sea. It was surrounded by marches, and was with truth regarded as the key of Egypt in this quarter. An Arabian horde might indeed traverse the desert on this side without approaching Peleusium; but an invading army would be utterly unable to pass through this sandy waste, where water completely failed. The route of the latter would have to be more to the north, and here they would encounter Pelusium, surrounded with lakes and marshes, and which extended from the walls of the city down to the very coast. Hence it was that the Persian force sent against King Nectanebo did not venture to attack the city, but sailed into the Mendesian mouth with their vessels (Diod. Sic., 15, 42.). Subsequently, however, the Persians diverted the course of that arm of the Nile on which the city stood, and succeeded in throwing down the walls and taking the place for plunder, after this, was again more than once taken, and gradually rank in importance. Pelusium does not even name it as the capital of a Nome. In the reign of Augustus, however, it became the chief city of the newly-erected province of Augustamnica. The name of this city is evidently of Grecian origin, and is derived from the term πελος, net, in allusion to its peculiar situation. It would seem to have received this name at a very early period, since Herodotus gives it as the usual one, without alluding to any older term. Most probably the appellation was first given under the latter Pharaohs, and a short time previous to the Persian sway, since about this time the Greeks were first allowed to have any regular commercial intercourse with the ports of Egypt. To give a more reputable explanation of the Grecian name than that immediately suggested by its root, the mythologists failed that Peleus, the father of Achilles, came to this quarter, for the purpose of purifying himself, from the murder of his brother Phocus, in the lake that afterward washed the walls of Pelusium, being ordered so to do by the gods; and that he became the founder of the city. (Amm. Marcell., 22, 16.—)

As soon as the easternmost or Pelusiac mouth of the Nile was diverted from its usual course, Pelusium, as has already been remarked, began to sink in importance, and the title, not only of the state, but of all its consequences as a frontier town, and even as a place of trade. It fell back eventually to its primitive mire and earth, the materials of which it was built having been merely burned bricks; and hence, among the ruins of Pelusium at the present day, there are no remains of stone edifices, no large temples; the ground is merely covered with heaps of earth and rubbish. Near the ruins stands a dilapidated castle or fortress named Tisich, the Arabic term for a town.

Penates, a name given to a certain class of household deities among the Romans, who were worshipped in the innermost part of their dwellings. For the points of distinction between them and the Lares, consult the latter article.

Penelopé, a princess of Greece, daughter of Icarius, brother of Tyndareus of Sparta, and of Polynice or Periboea. She became the wife of Ulysses, monarch of Ithaca, and was celebrated about the same time with that of Menelaus and Helen. Penelope became by Ulysses the mother of Telemachus, and was obliged soon after to part with her husband, whom the Greeks compelled to go to the Trojan war. (Vid. Ulysses.) Twenty years passed away, and Ulysses returned not to his home. Meanwhile, his palace at Ithaca was crowded with numerous and importunate suitors, aspiring to the hand of the queen. Her relations also urged her to abandon all thoughts of the probability of her husband's return, and not to disregard, as she had, the solicitations of the rival aspirants to her favour. Penelope, however, exerted every resource which her ingenuity could suggest to prolong the period of her desolation; among others, she declared that she would make a web of which she would complete a web as soon as she should have completed a web that she was weaving (intended as a funeral ornament for the aged Laertes); but she baffled their expectations by undoing at night what she had accomplished during the day. This artifice has given rise to the proverb of "Penelope's web," or "to unweave the web of Penelope" (Penelopes telam retexisse), applied to whatever labour appears to be endless. {450.}

Penæus, I. a river of Thessaly, rising in the chain of Pindus, and falling into the Sinus Tharmina after traversing the whole breadth of the country. Towards its mouth it flows through the celebrated Vale of Tempe. (Vid. Tempe.) It seems to have been the general opinion of antiquity, founded on very early traditions, that the great basin of Thessaly was at some remote period covered by the waters of the Peneus and its tributary rivers, until some convulsion of nature had rent asunder the gorge of Tempe, and thus afforded a passage to the pent-up streams. This opinion, which was first reported by Herodotus in his account of the march of Xerxes (7, 129), is repeated by Strabo, who observes in confirmation of it, that the Peneus in his day was still liable to frequent inundations, and also that the land in Thessaly is higher towards the sea than towards the mountains. It now flows from the Peneus is called Salambria by Tzetzes (Chl., 9, 707), and Salabria and Salambria by some of the Byzantine historians, which name appears to be derived from Θαλάβρα, "an outlet," and was applicable to it more particularly at the Vale of Tempe, where it has forced a passage through the rocks of Ossa and Olympus. (Dodwell, 'Toar, vol. 2, p. 102.) The Peneus is said to be never dry, though in summer it is shoal, and the netting of the snow on Pindus, it sometimes overflows its banks, when the impetuous torrent of its waters sweeps away houses and inundates the neighbouring plain. (Aelian, in his description of Tempe ('Y. H., 3, 1), makes the Peneus flow through the vale as smoothly as oil; and Dodwell remarks, that, in its course through the town of Larissa, it has at the present day a surface so smooth as oil. The intelligent trilingual sign more commonly observed in this river, "Many authors have extolled the diaphanous purity of the Peneus, although it must in all periods have exhibited a muddy appearance, at least during its progress through the Thessalian plain; for who can expect a current of lucid crystal in an argillaceous soil! Strabo, Pliny, and others have misunderstood the meaning of Homel ('Y., 2, 750) when he speaks of the confluence of the silvery
Peneus and the beautiful Titaresius, which he says do not mix their streams, the latter flowing like oil on the silver waters of the former. Strabo, in complete contradiction to the meaning of Homer, asserts that the Peneus is clear, and the Titaresius muddy. Pliny has committed the same error. The mud of the Peneus is perhaps higher than, for it reduces its stream to the epitome of silver. The Titaresius, and other smaller streams, which have rolled from Olympus and Ossa, are so extremely clear, that their waters are distinguished off from those of the Peneus to a considerable distance from the point of their confluence. Barthelemy has followed Strabo and Pliny, and has given an interpretation to the descriptive lines of Homer which the original was never intended to convey. The same effect is seen when muddy rivers of considerable volume mingle at short distances. The Plata, after the fall of the Hydaspis, the river of the Punjab, is falling over a distance of about half a mile and is seen from a distance of several miles. The Plata is mingled with the Ganges, and its muddy waters are distinguished from the clear of the river of the Punjab. The same effect is seen when muddy rivers of considerable volume mingle at short distances. The Plata, after the fall of the Hydaspis, is falling over a distance of about half a mile and is seen from a distance of several miles. The Plata is mingled with the Ganges, and its muddy waters are distinguished from the clear of the river of the Punjab. The same effect is seen when muddy rivers of considerable volume mingle at short distances. The Plata, after the fall of the Hydaspis, is falling over a distance of about half a mile and is seen from a distance of several miles. The Plata is mingled with the Ganges, and its muddy waters are distinguished from the clear of the river of the Punjab.
PERDICCAS.

...archs, and begin with the dynasty of the Temenide. (Compare Clinton, Fast. Hell., vol. 1, p. 221.) Little is known of the reign of Perdiccas. On his deathbed he is said to have given directions to his son and successor Argeus, where he wished his remains to be interred; and to have told him also, that, as long as the remains of the Macedonian kings should be deposited in the same place, so long the crown would remain in his family. (Strab., I. 15, 77, seqq.; — Id., 4, 79, — Id., 2, 99, d. c.) There is great uncertainty about the beginning and the length of this marriage or period. (Thucyd., I. 57, seqq.; — Id., 4, 79.)...Diod. Sic., 16, 2 — Clinton, Fast. Hell., vol. 1, p. 227.)—IV. Son of Orontes, was one of the generals of Alexander the Great, to whom that conqueror, on his deathbed, delivered his royal signet, thus apparently intending to designate him as protector or regent of his vast empire. Alexander's wife Roxana was then far advanced in pregnancy, and his other wife, Statira, the daughter of Darius, king of Persia, was expected to be in the same situation. In the mean time, the Macedonian generals agreed to recognise as king, Arideus, a natural son of Philip, a youth of weak intellects, with the understanding that, if the child of Roxana should prove a son, he should be associated in the throne with Arideus. Perdiccas contented himself with the command of the household troops which guarded the person of King Arideus; but in that capacity he was in reality the guardian of the young prince, who was expected to be born at any moment. He distributed among the chief generals the government of the various provinces, or, rather, kingdoms, subject to Alexander's sway. Roxana being soon after delivered of a son, who was called Alexander, became jealous of Statira, from fear that the child she was pregnant with might prove a rival to her own son; and, in order to remove her apprehensions, Perdiccas did not scruple to put Statira to death. He devoted himself to strengthen himself by an alliance with Antipater, whose daughter he asked in marriage, while, at the same time, he was aspiring to the hand of Cleopatra, Alexander's sister. Olympias, Alexander's mother, who hated Antipater, favoured this last alliance. Antipater, having discovered this intrigue, refused to give his daughter to Perdiccas, who, in the end, obtained neither. The other generals, who had before distrusted the young prince, considered themselves independent, and refused to submit to Perdiccas and his puppet-king. Perdiccas, above all, fearing Antigonus as the one most likely to thwart his views, sought to destroy him; but Antigonus escaped to Antipater in Macedonia, and represented to him the necessity of uniting against the ambitious views of Perdiccas. Antipater, having just brought to a successful conclusion a war against the Athenians, prepared to march into Asia, and Perdiccas joined the confederacy against Perdiccas. The latter, who was then in Cappadocia, with Arideus and Alexander the infant son of Roxana, held a council, in which Antipater, Antigonus, and Ptolemy being declared rebels against the royal authority, the plan of the campaign against them was devised. Eumenes, who remained faithful to Perdiccas, was appointed to make head against Antipater and Antigonus, while Perdiccas, having with him the two kings, marched to attack Ptolemy in Egypt. He was, however, unsuccessful, owing to his ill-conceived measures; he lost a number of men in crossing a branch of the Nile, and the rest became discontented, and, in the end, Perdiccas was murdered in his tent, B.C. 251, after holding his power for two years from the death of Alexander. (Encycl. Useful Knowl., vol. 17, p. 435.)

PERDIX, nephew of Darius. He is said to have shown a great genius for mechanics; having, from the contemplation of a serpent's teeth, or, according to some, of the back bone of a fish, invented the saw. He also discovered the compasses. Darius, jealous of his skill, and apprehensive of the rivalry of the young man, cast him down from a window of the palace at Athens that strick him. The poets fabled that he was changed after death into the bird called Perdix or "partridge." (Hygin., fab., 274.—Ovid, Met., 8, 241, seqq.) The cry of the partridge resembles very much the noise made by a saw in cutting wood, and this circumstance, in all likelihood, gave rise to the fable. (Buffon, Hist. Nat., vol. 6, n. 25. — Gierig, ad Ovid, l. c.)

PERCIVAL. See Adam's Percival, a city of Pamphylia, at the distance of sixty stadia inland from the mouth of the river Cestrus. It was renowned for the worship of Diana Perga. The temple of the goddess stood on a hill near the city, and a festival was annually celebrated in her honour. (Callim., H. in Dion., 187.—Strab., 607.) Alexander occupied Perga with part of his army after quitting Phaselis; and we are informed by Arrian that the road between these two places was long and difficult. (Ap. Mau., 1, 26.) Polybius leads us to suppose that Perga belonged rather to Pisidia than to Pamphylia (5, 73, 9.—Compare 22, 25.—Liv., 38, 37.) We learn from the Acts of the Apostles (14, 24, seq.), that Paul and Barnabas, having "passed through Pisidia, came to Pamphylia. And when they had preached the word in Perga, they went down into Attalia." This was their second visit to the place, since they had come thither from Cyprus. It was here that Paul, as Cramer's "Asia Minor," p. 191, says, "the first object the traveller on arriving here (at Perga) is the extreme beauty of the situation of the ancient town, lying between and upon the sides of two hills, with an extensive valley in front, watered by the river Cestrus, and backed by the mountains of Taures." He speaks also of the ruins here of an immense and beautiful theatre; and likewise of the remains of an enormous building, which he thinks can have been nothing but a palace erected by Pergamus or Pergamus' Asia Minor, vol. 2, p. 279.)

PERGAMUS (gen. -i, in the plural Pergama, gen. -orum), the citadel or acropolis of Ilium (Hom., Il., 4, 608), and sometimes used by the poets as a term for the city itself. (Seneo., Troad., 14,—Id., Agam., 421.—Virgil, En., 1, 466, &c.) The relationship of the word Pergamus to the Greek πόργας and the Teutonic berg, is obvious. The buildings in Thrace and Pergamum in Pamphylia, contain the same element berg. (Compare the Gothic baerga; the German berg, "a castle, fort, citadel;" the Irish bróg and brug, "a grand house or building; a fortified place; a palace or royal residence," &c.) The writers on Linguistic seek to trace these and other cognate expressions to the Sanscrit root pár or pár, "to fill," "to
furnish," but with no very great success. (Consult remarks under the article Mesembria.—Eichkoff, Paral-\(l\)lel des Langues, p. 348.—Kaltschmidt, Vergleichung der Sprachen, p. 238.)—II. of PERGAMUS (Περγάμου or Περγάμου), the most important city in Mysia, situated in the southern part of that country, in a plain watered by the River Cius, the Scythian, which afterward joined the Caicus. This celebrated city is mentioned for the first time in Xenophon's Anabasis (7, 84). Xenophon remained here for some time as the guest of Gorgion and Gongsylus, who appear to have been the possessors of the place. (Compare Hist. Gr., 3, 1, 4.) It would seem to have been at first a fortress of considerable natural situation, situated on the top of a conical hill, and, when the city began to be formed around this hill, the fortress served as a citadel. In consequence of the strength of the place, it was selected by Lysimachus, Alexander's general, as a place of security for the reception and preservation of his great wealth, said to amount to the enormous sum of 9000 talents. The care of this treasure was confided to Philocrates of Tium in Bithynia, in whom he placed the greatest confidence. Philocrates remained for a long time faithful to his charge; but, having been betrayed by Arsinoe, the wife of Lysimachus, who sought to prejudice the mind of her husband against him, he was induced to withdraw his allegiance from that prince, and declare himself independent. The misfortunes of Lysimachus prevented him from taking vengeance on the offender, and thus Philocrates remained in undisturbed possession of the town and treasure for twenty years, having contrived, by dexterous management and wise measures, to remain at peace with all the neighbouring powers. He transmitted the possession of his property to his nephew, Eumenes, his nephew. An account of the reign of this monarch, and of the other kings of Pergamus, has been already given. (Vid. Eumenes II., III.; Attalus I., II., III.)—After the death of Attalus III., who left his dominions by will to the Romans, Aristocles, a natural son of Eumenes, the father of Attalus, opposed this arrangement, and endeavoured to establish himself on the throne; but he was vanquished and made prisoner by the Romans. Full of the pride of his former station, he returned to the kingdom, which henceforth became a province of the empire under the name of Asia. (Strab., 624, 646.) Pergamus continued to flourish and prosper as a Roman city, so that Pliny (5, 32) does not scruple to style it "longe clarissimum Asia Pamphagum." To the Christian the history of Pergamus affords an additional interest, since it is one of the seven churches of Asia mentioned in the Book of Revelations. Though condemnation is passed upon it as one of the churches infected by the Nicolaitan heresy, its faithful servants, more especially the martyr Antipas, are noticed as holding fast the name of Christ. (Rev. 2, 12, seqq.)—Pergamus was famed for its library, which yielded only to that of Alexandria in extent and value. (Strab., 624.—Athenaeus, 1, 3.) It was founded by Eumenes II., and consisted of no less than 200,000 volumes. This noble collection was afterward given by Antony to Cleopatra, who exported it to Alexandria, where it formed part of the splendid library in the latter city. (Plut., Vit. Att., 58.) It was from being their first used for writing in this library that parchment skins were called "Pergamena charte" (Varro, ap. Plin., 13, 11), but it is erroneous to say that parchment was invented at Pergamus. What drove Eumenes to employ it for books, was the circumstance of Polemy's having forbidden the exportation of papyrus from his dominions. The Pergamian, however, invented the "Pergamenian" library, and prevent it from rivaling his "own."—Pergamus was the native place of the celebrated Galen. In the vicinity of the city was a famous temple of Asclepius, which, among other privileges, had that of an asylum. The concourse of individuals to this temple was almost without number or cessation. They passed the whole year there to invoke the deity, who communicated remedies, either in dreams or by the mouths of his priests, who distributed drugs and performed chirurgical operations. The Emperor Caracalla, A.D. 215, repaired to Pergamus in the hope of his health; but the deputation, which afterward joined the Caicus, was performed to some extent by his prayers. When Prusias, second king of Bithynia, was forced to raise the siege of Pergamus, he nearly destroyed this temple, which stood contiguous to the theatre, without the city walls. The modern town retains the name of Bergama or Berga, and is still a place of considerable importance. Mr. Fellows, who visited it in 1838, says that it is as busy and thriving as heavy taxation will allow, and has seven or eight kilns. (Tour in Asia Minor, p. 107.)—Pergamus was the seat of the Church of Smyrna. (Rev. 2, 13.)—Pergamus contains many extensive ruins. Col. Leake informs us, that remains of the temple of Asclepius, of the theatre, stadium, amphitheatre, and several other buildings, are still to be seen. (Journal, p. 266.) Mr. Fel- lows remarks, that the walls of the Turkish houses are full of the relics of marbles, with ornaments of the richest Grecian art (p. 34. Cramer's Asia Minor, vol. 1, p. 156, seqq.).—Pergamus.—PERIANDER, son of Cypselus, tyrant of Corinth. He succeeded his father in the sovereignty of the city; and in the commencement of his reign displayed a degree of moderation unknown to his parent. Having subsequently, however, contracted an intimacy with Thraisybulus, tyrant of Miletus, he is said by Herodotus to have surpassed, from that time, his father Cypselus in cruelty and crime. It is certain that, if the particulars which the historian has related of his conduct towards his countrymen are true, Periander would have justified the execution he has expressed for the character of this disgusting tyrant (5, 92; 3, 50, &c.). Notwithstanding these enormities, Periander was distinguished for his love of science and literature, which entitled him to be ranked among the seven sages of Greece. (Diog. Laer. Vit. Periand.) According to Aristotle, he reigned 44 years, and was succeeded by his nephew Pammetichus, who lived three years only. (Cramer's Asia Minor, vol. 3, p. 246.)—Periander, having sent a messenger to Thraisybulus of Miletus, to ascertain from him in what way he might reign most securely, Thraisybulus led the messenger out of the city, and, taking him through a field of standing corn, kept interrogating him about the object of his mission, and every now and then striking down an ear of grain that was taller than the rest. After having passed through the field, he dismissed the man without any answer to his message. On his return to Corinth, the messenger reported to Periander all that had occurred, and the latter, quickly perceiving what Thraisybulus meant by his apparently strange conduct, put to death the most prominent and powerful of the citizens of Corinth. (Herod., 5, 92.) Niebuhr thinks that this story furnished the materials for the somewhat similar one related of Sextus Tarquinius and the people of Gabii. (Rom. Hist., vol. 1, p. 460, Engl. tr.) Plutarch, however, seems to have disapproved of the advice which Thraisybulus silently gave him, and not to have followed it. (Sept. Super. Conviv.—Op. ed. Reiske, vol. 6, p. 558.) Aristotle, on the other hand, reverses the story, and says that Periander was applied to by Thraisybulus, and did what Herodotus makes the latter to have done. (Polit., 3, 11.—Id., 5, 10.—Consult Creuzer, ad Herod., 5, 92.) P decrees (Пе(?)κцес) was son of Xanthippus, who defended his native city of Thebes, when it was besieged by the famous Clitenithes. (Herod., 6, 131.) He was thus the representative of a noble family, and he improved the advantages of birth by those of education. He attended the teaching of Damon, who communica- ted political instruction in the form of music lessons; of
PERICLES.

Zeno the Eleatic; and, most especially, of the subtle and profound Anaxagoras. Plutarch's account shows that he acquired from Anaxagoras moral as well as physical truths; and that, while he learned enough of astronomy to raise him above vulgar errors, the same teachers supplied him with those notions of the orderly arrangement of society which were afterward so much the object of his public life. But all these studies had a political aim, and the same acuteness which led him into physical inquiries, gave him the will and the power to become ruler of Athens. In his youth, old men traced a likeness to Pisistratus, which, joined to the obvious advantages with which he would have entered public life, excited distrust, and actually seems to have retarded his appearance on the stage of politics. However, about the year 465, two years after the ostracism of Themistocles, and about the time when Aristides died, Pericles came forward in a public capacity, and before long became head of a party opposed to that of Cimon the son of Miltiades. Plutarch accuses Pericles of taking the democratic side because Cimon headed that of the nobles. A popular era usually strengthens the hands of the executive, and is therefore unfavourable to public liberty; and the Persian war seems to have been well managed. After his own nomination, the found herself under the guidance of a strong man who partook more of the character of a general than of the prime minister. (Thee's Polit. Antiq. of Greece.) Cimon's character was in itself a guarantee against aggrandizement, either on his own part or others; but we may perhaps give Pericles credit for seeing the danger of so much power in less scrupulous hands than Cimon's. Be this as it may, Pericles took the popular side, and became the opponent of Cimon. About the time when Cimon was procured and fined (B.C. 461), Pericles began his first attack on the aristocracy through the side of the Areopagus; and in spite of Cimon, and of an advocate yet more powerful (the poet Eschylus), succeeded in depriving the Areopagus of its judicial powers, except in certain inconsiderable cases. This triumph preceded, if it did not produce, the ostracism of Cimon (B.C. 461). From this time forward, Cimon's recall, which Mr. Thirlwall places, though doubtfully, in the year 453, we find Pericles acting as a military commander, and by his valour at Tanagra preventing the regret which Cimon's absence would otherwise undoubtedly have created. What caused him to bring about the recall of Cimon is doubtful; perhaps, as Mr. Thirlwall suggests, to strengthen himself against his most virulent opponents by conciliating the more moderate of them, such as their great leader himself. After the death of Cimon, Thucydides took his place, and for some time stood at the head of the stationary party. He was a better rhetorician than Cimon; in fact, more statesman than warrior; but the influence of Pericles was irresistible; and in 444 Thucydides was ostracized, which period we may consider as the turning point of Pericles' power, and after which it was well-nigh absolute. We are unable to trace the exact steps by which Athens rose from the situation of chief among allies to that of mistress over tributaries; but it seems pretty clear that Pericles sided in the change, and increased their contributions nearly one third. His finishing blow to the independence of the allies was the conquest of Samos and Byzantium, a transaction belonging rather to history than biography; he secured his success by planting colonies in various places, so as to accustom the allies to think of the Athenian empire, of which they themselves were component parts, but still possessed no independent existence. From this time till the beginning of the Peloponnesian war Pericles appears engaged in peaceful pursuits. He constructed a third wall from Athens to the harbour of the Piraeus. He covered the Acropolis with magnificent buildings, and encouraged public taste by the rest of all methods, the customing the eye to statuesque and architectural beauty. At Athens, as is usually the case, poetry had the start of the kindred arts; but, during the age of Pericles, it attained to a greater height than had ever before been reached. The drama was then at perfection in the hands of Sophocles; and, by enabling the poor to attend these theatrical representations, Pericles nurtured their taste and increased his own popularity by thus throwing open the theatre to all. This precedent, whether made by Pericles or not, ultimately proved more ruinous to the state than any defeat. It made the people a set of pleasure-takers, with all that restlessness in the pursuit of pleasure which usually belongs to the privileged few. Another innovation, of which Pericles is supposed to have been the author, was his attempt to set up, on a false view of civil rights and duties, such an Athenian, with the highest possible sense of the dignity of Athens, would be the most likely to fall into. Pericles, no doubt, had an honest and serious wish to establish such an empire for Athens as should enable her citizens to subsist entirely on the contributions of their dependant allies, and, like a class of rulers, to direct and govern the whole of that empire, or, as such, to exercise more brutality in the use of it than that which Athenians were to supply by a less noble race. Pericles was descended, as we have seen, by the mother's side from the family of Clisthenes, and he was thus implicated, according to the religious notions of those times, in the guilt of the murder of Cylon's partisans, which was committed at the very altar of the Acropolis. (Thucy., 1, 136.—Herod., 5, 70, &c.) The Lacedæmonians, before the actual commencement of the Peloponnesian war, urged on the Athenians the necessity of banishing the members of the family who had committed this offence against religion, which was only an indirect way of attacking Pericles and driving him into exile. The Athenians retorted by urging the Lacedæmonians to cleanse themselves from the guilt incurred by the death of Pausanias. (Vid. Pausanias.) Pericles lived to direct the Peloponnesian war for two years. His policy was that of a strong man, though a philosopher in his consequences, that, namely, of paying the debts in the courts. At first the pay was only moderate; but it operated as a premium on the attendance at lawsuits, the causes became a mode of excitement for a people whose intellectual activity made them particularly eager for anything of the kind, and thence resulted that litigious spirit which is so admiringly ridiculed in the "Wasp" of Aristophanes. But we may well excuse Pericles, who taught the people to look with a false view of civil rights and duties, such as an Athenian, with the highest possible sense of the dignity of Athens, would be the most likely to fall into. Pericles, no doubt, had an honest and serious wish to establish such an empire for Athens as should enable her citizens to subsist entirely on the contributions of their dependant allies, and, like a class of rulers, to direct and govern the whole of that empire, or, as such, to exercise more brutality in the use of it than that which Athenians were to supply by a less noble race. Pericles was descended, as we have seen, by the mother's side from the family of Clisthenes, and he was thus implicated, according to the religious notions of those times, in the guilt of the murder of Cylon's partisans, which was committed at the very altar of the Acropolis. (Thucy., 1, 136.—Herod., 5, 70, &c.) The Lacedæmonians, before the actual commencement of the Peloponnesian war, urged on the Athenians the necessity of banishing the members of the family who had committed this offence against religion, which was only an indirect way of attacking Pericles and driving him into exile. The Athenians retorted by urging the Lacedæmonians to cleanse themselves from the guilt incurred by the death of Pausanias. (Vid. Pausanias.) Pericles lived to direct the Peloponnesian war for two years. His policy was that of a strong man, though a philosopher in his consequences, and his great effort was to induce the Athenians to consider Attica in the light merely of a post, to be held or resigned as occasion required, not of hollowed ground, to lose which was to be equivalent to the loss of all. In the speech which he made before war was declared, as it is recorded by Thucydides, he impressed the Athenians with these opinions, representing the superiority of their navy and the importance of avoiding conflicts in the field, which, if successful, could only bring temporary advantage; if the contrary, would be irretrievable. At the end of the first campaign, Pericles delivered an oration upon those who had fallen in the war, as he had done before at the close of the Samian war. From that speech (at least if Thucydides reported well) we learn what Pericles considered to be the character of a good citizen, and we see in what strong contrast he placed the Athenian method of bringing up members of this class. The speech, the most remarkable of all the compositions of antiquity—the full transusion of which into a modern language is an impossibility—exhibits a more complete view of the intellectual power and moral character of Pericles than all that the histo
P E R I C L E S.

rier and orators have said of him. The form in which the great orator and statesman has embodied his lofty conceptions, is beauty chastened and elevated by a noble severity. Athens and Athenians are the objects which his ambition seeks to immortalize, and the whole world is the theatre and the witness of her glorious exploits. His philosophy teaches that life is a task to be endured, death nothing to be feared. The stage at Athens soon followed the habituating effects made restraint less irksome to the people; but, while it dampened their activity, it increased their impatience of war. In spite of another harangue, in which he represented most forcibly how absurd it would be to allow circumstances like a plague to interfere with his well-laid plans, he was brought to trial and fined, but his influence returned when the fit was over.

In the third year of the war, having lost his two sons, and a man of his wife, he fell ill, and, after a lingering sickness, died. Some beautiful tales are told of his deathbed, all tending to show that the calm foresight and humanity for which he was so remarkable in life did not desert him in death.

It is an interesting question, and one which continually presents itself to the student of history, how far those great men, who always appear at important junctures for the assertion of some principle or the carrying out of some great national object, are conscious of the work which is appointed for them to do. Would, for instance, be most instructive, could we now ascertain to what extent Pericles foresaw that approaching contest of principles, a small part only of which he lived to direct. Looking from a distance, we can see a kind of necessity imprinted on his actions, and we think trace their dependance on each other and the manner in which they harmonize. Athens was to be preserved by ascensions of power, wealth, and civilization; the conflict with Sparta could not be long delayed; the conquered, the peculiar character of Spartan institutions might have irreparably blighted those germes of civilization, the fruit of which all succeeding generations have enjoyed. But how should this be? Her leader must have been a single person, for energetic unity of purpose was needed, such as no cluster of contemporary or string of successive rulers could have been expected to show. That ruler must have governed according to the laws, for a tyrant would have been expelled. A tyrant is the servant of the Spartans or so many other tyrants were, or by the voice of the commonly, every day growing into greater power. Moreover, without being given to change, he must have been prepared to modify existing institutions so as to suit the altered character of the times. He must have been above his age in matters of religious belief, and yet of so catholic a temper as to respect prejudices in which he had no share; for otherwise, in so tolerant an age, he would have been expelled. And he must have known the spirit of the Spartans and the power of the Pericles. He had not possessed oratorical skill, he would never have won his way to popularity; and later in life he must have been able to direct an army, or the expedition to Samos might have been fatal to that edifice of power which he had been so long in building. Lastly, had he not lived to strengthen the resolve of the wavering people while the troops of Sparta were yearly ravaging the Thrasian plain, the Peloponnesian war would have been premature, unwise, and that lesson, so strikingly illustrative of the powers which a free people can exercise under every kind of misfortune, would have been lost to posterity. (Encycl. Useful Knoci., vol. 17, p. 445, seqq.)—As regards the connexion that existed between Pericles and the celebrated Aspasia, consult remarks under the latter article.

PERILLUS, an ingenious artist, who made a brazen bull as an instrument of torture, and presented it to Phalaris, tyrant of Agrigentum. His native city has not been ascertained. In the pseudo-epistles of Phalaris, he is called an artist, as if to intimate that he was a Sicilian, perhaps an Agrigentine. (Bentley on Phalaris, p. 352, ed. 1816.) The brazen image which he fabricated was hollow, and had an opening or door (Ψπικ) on the upper part of the back, where the shoulder-blades approach each other (πέπη των συνωμολογ.).—Polib., 12, 25.) Through this opening the victim of the tyrant's cruelty was introduced into the body of the bull, and, a fire being kindled beneath it was so much heated that the victim perished, while the cry of the sufferer, as it came forth from the mouth of the bull, resembled the roaring of a living animal. Phalaris is said to have tried the experiment first upon the artist himself. He lost his own life, too, according to Ovid, in this same manner, having himself been burned in the bull when stripped of his tyranny, and having had his tongue previously cut out. (Val. Max., 3, 3.—Phil., Epist., 105.—Plin., 34, 8.)—Lucian, Phalaris prior, 11.——Oed. Ibis, 441.) According to Lucian's story, Phalaris was introduced into the nostrils of the bull when a person was about to suffer, and the cry of the victim would come forth with a kind of low, moaning music (τι βοϊν δε δια των αυτων μελα ἀποτελετο, αυ λεγεφται, και επαιλινηται δραπεδες, και μυκητας γεροτατως.)—Lucian, I. c.) This, however, is all embellishment; and in the same light, no doubt, are we to regard what this writer also tells us, that Phalaris, after having punished the artist, offered him an offering to Apollo at Delphi; unless, as Bentley inclines to believe, there was some tradition that the bull had been so sent, and that, having been rejected by the priests, it was carried back to Agrigentum. (Bentley on Phalaris, p. 393.)—Timaeus, the Sicilian historian, who wrote about the 128th Olympiad (B.C. 268-254), maintained, as we are informed by Polybius (12, 25) and Diodorus Siculus (13, 90), that the whole story of the bull of Phalaris was a mere fiction, though it is not unlikely that the story was transmitted to the poets. The two writers just mentioned, however, undertake to refute this assertion of Timaeus, and inform us that the brazen bull of Phalaris was carried off from Agrigentum by the Carthaginians; and that, when Carthage was taken by the younger Scipio, the image was restored to Agrigentum by the Roman commander, its identity having been fully proved by the opening on the back alluded to above. (Polybius, I. c.—Diod. Sic., I. c.) The scholar on Pindar (Pyth., 1, 185) gives the narration of Timaeus in a different way; for he tells us, from this historian, that the Agrigentines cast the bull of Phalaris into the sea; and that the bull in Agrigentum, which in his (Timaeus' time) was shown for that of Phalaris, was only an effigy of the river Gela. From this it would appear, that Timaeus did not deny that the tyrant had a brazen bull, but only censured the mistake of those historians as to the circumstances; but Bentley thinks, however, that few will prefer the account of the scholiast to that of Polybius and Diodorus (Phal., p. 380), but perhaps the solution which Gellier proposes is the best, namely, that the bull of Phalaris had been carried away to Carthage, and that the one which Timaeus saw at Agrigentum was actually a tau- riform effigy of the river Gela. The only difficulty that remains is the statement respecting the height of the bull, which may possibly be an error on the part of the scholiast. (Gellier, de Situ et orig. Syracuse, p. 274.——Compare
the remarks of Böckh, *Ad Schol., t.*., in not. — *Pind. Op.*, vol. 2, p. 310.) As regards the name of the artist himself, most authors adopt the form *Perillus*, as we have given it; Lucian, however, and the scholiast on Pindar have *Periullus*, and Herodotus *Perillus*. The change, though it takes place from *Περιλλος* to *Περιλλαός*, is so extremely similar, that one or the other must be a mere error of transcription. A similar name has been critically discussed by Hermann in his work entitled, "Über Bücher Behandlung der Griech. Inschriften" (p. 106.—Sillig, *Dict. Art., s. v.*).

**Perinthus,** a city of Thrace, on the coast of the Proponent, west of Byzantium. It was originally colonized by the Samians (*Seydewitz*, vol. 713.) Seydewitz says, that it received its name from the Epidaurian Perinthus, one of the followers of Orestes. Another account, however, assigns its foundation to Hercules, and the inhabitants themselves would seem to have believed this, from their having a figure of Hercules on the reverse of their coins. Perinthus soon became a place of great trade, and, surpassing in this the neighbouring Selymbria, eventually rivaled Byzantium. When this last-mentioned city, however, overthrew the Spartan power, Perinthus was compelled to follow its example. It subsequently suffered from the attacks of the Thracians, but principally from those of Philip of Macedon, who besieged and vigorously pressed the city, but was unable to take it. The city was situated on a small peninsula, and the isthmus connecting it with the mainland was only a stadium broad, according to Ephorus, but Pliny (4, 11) makes it somewhat more. The place was built along the slope of a hill, and afforded to one approaching it the appearance of a theatre, the inner rows of dwellings being overtopped by those behind. (*Diod.*, 16, 76.)

Perinthus continued to be a flourishing city even under the Roman power, and received a great accession of power when its rival Byzantium fell under the displeasure of the Emperor Severus. The case was altered, however, when Constantine transferred the seat of empire to Byzantium, and during this period we find Perinthus appearing with the additional name of Herclea, without our being able to ascertain either the exact cause or period of the change. Ptolemy, it is true, says "Perinthus or Herclea," but this is evidently the interpolation of some later scholiast. The coins of this place reach upward to the time of Aurelian: they bear no other name but that of Perinthus. With the writers of the fourth century, on the other hand, it is Herclea; though they almost all add that the city was once called Perinthus, or else, like Ammianus Marcellinus, join both names together. Hence it would appear that the change of appellation was a gradual one, and not suddenly made, in accordance with the command of any emperor, as in the case of Constantinople. After this last-mentioned place Perinthus was the most important city in this quarter of Thrace. Justinian rebuilt the ancient palace in it, and repaired the aqueducts. (*Procop., Edif., 4, 9.*) It could not, indeed, be an unimportant city, as all the main roads to Byzantium from Italy and Greece met here. The modern *Erekti* occupies the site of the ancient city. (*Mangnet, Geogr.*, vol. 7, p. 174, seqq.)

**Peripatēτις** (*Peripatēτικος*), a name given to the followers of Aristotle. According to the common account, the sect were called by this appellation from the chair of the master, which they were accustomed to talk with as he discoursed with his pupils (*Περιπατητικός, ἀπὸ τοῦ περιπατεῖν*). Others, however, more correctly derive the name from the public walk (*περιπάτευος*) in the Lyceum, which Aristotle and his disciples were accustomed to frequent. (*Brucker, Hist. Crit. Phil.*, vol. 1, p. 783.) A summary of the doctrine of this school will be found under the article *Aristoteles.* Before withdrawing from his public labours, Aristotle appointed Theophrastus his successor in the chair (end. *Theophrastus*), and the latter was followed consecutively by Strato of Lampsacus, Lycon or Glycon of Tros, Ariston of Coes, and Critolaus the Lycian. *Theophrastus* was a friend of Diodorus of Tyre, who came immediately after Critolaus. The interrupted succession of the Peripatetic school terminated, about the 149th Olympiad. The Peripatetic doctrines were introduced into Rome, in common with the other branches of the Greek philosophy, by the embassy of Critolaus, Carneades, and Diogenes, but were little known until the time of Syllogism. *Tyronnian* the grammarian and Andronicus of Rhodes were the first who brought the writings of Theophrastus into notice. The obscurity of Aristotle's works tends much to hinder the success of his philosophy among the Romans. *Julius Caesar* and *Augustus* patronized the Peripatetic doctrines. Under *Tiberius*, *Caligula*, and *Claudius*, however, the adherents of this school, in common with those of other sects, were either banished or obliged to remain silent on the subject of their peculiar tenets.

This was the case, also, during the greater part of the reign of *Nero*, although, in the early part of it, philosophy was far less neglected. Theophrastus had great exertions to extend the authority of Aristotle; but about this time the Platonists began to study his writings, and prepared the way for the establishment of the Eclectic Peripatetics under *Ammonius Saca* who flourished about a century after *Ammonius* the Peripatetic. After the time of *Justinian*, philosophy in general languished. But in that mixture of ancient opinions and theological writings, which constituted the philosophy of the middle ages, the system of Aristotle predominated. About the 12th century it had many adherents among the Saracens and Jews, particularly in *Spain*; and at the same period, also, it began to be diligently studied, though not without much opposition, among the ecclesiastics of the Christian Church. Out of this latter circumstance gradually arose the Scholastic philosophy, which took its tone and complexion from the writings of Aristotle, and which continued long to perplex the minds of men with its frivolous though subtle speculations. The authority of Aristotle received a severe shock at the Reformations, but it survived the fall of the scholastic system. His opinions were patronised by the Catholic Church on account of their supposed favourable bearing upon certain doctrines of faith; and, although Luther and others of the Reformers determinedly opposed them, they were much maintained by *Bentley* tended much anything. *Bacon* himself commented upon several portions of the works of the Stagirite. Many individuals, distinguished for their genius and learning, exerted themselves to revive the Peripatetic philosophy in its primitive purity; nor did it cease to have numerous illustrious supporters until the time of *Bacon*, *Grotius*, and *Des Cartes.* (*Brucker, Hist. Crit. Phil.*—*Enfleld, Hist. Phil.*, vol. 2, p. 95, seqq.—*Tenmann, Hist. Phil.*, p. 121, 189, 215, 255.)

**Perrnuss**, a river of Bœotia, rising in Mount Helicon, and which, after uniting its waters with those of the Olimus, flowed along with that stream into the Copae Lake near Halirius. Both the Olimus and Perrnuss received their supplies from the fountains of Aganippe and Hippocrone. The river Perrnuss, as well as the fountain Aganippe, were sacred to the Muses. (*Strab., 407.*) *Perrnuss*, daughter of *Nucleus*, king of *Pylus*, by *Chloris*. She married *Bias*, son of *Amymon*. (*Vid. Melampus.*)

**Perenna, I. M.,** was consul B.C. 130, and defeated and took prisoner *Aristonicus* in Asia. (*Liv., 44, 27.—Id., 44, 32.—*Vell. Pat., 2, 4.*)—H. M. *Ventor*, was proscribed by *Sylla*, whereupon he passed into Spain, and became one of the hecatombs of *Sertorius*. Dissatisfied eventually with playing only a secondary role.

1005
part, and envious of the fame and successes of his leader, he conspired against him, along with others of his officers. Sertorius was assassinated by the conspirators at a banquet, and Perpenna took the command of the forces; but he soon showed his utter incapacity, and was defeated by Pompey and put to death. (Plut., Vit. Sertor.)

Persepolis, a district of Thessaly. Strabo, in his critical examination of the Homeric geography of Thessaly, mentions the ruins of this ancient city as far as the sea, had been first occupied by the Pherihebi, an ancient tribe, apparently of Pelasgic origin. (Sic.)

On the northern bank of the great Thessalian river, they had peopled also the mountainous tract bordering on the Macedonian districts of Eumaeus and Phermona, while to the south they stretched along the base of Mount Ossa, as far as the shores of Lake Babaeus. These possessors were, however, in course of time, wrested from them by the Lapithæ, another Pelasgic nation, whose original abode seems to have been in the vales of Ossa and the Magnesian district. Yielding to these more powerful invaders, the greater part of the Pherihebi retired, as Strabo informs us, towards Dolopia and the ridge of Pindus; but some still occupied the valleys of Olympus, while those who remained in the plains became incorporated with the Lapithæ, under the common name of Ph.lithæ. (Strab., I. 7, 17.) The Pherihebi are noticed in the catalogue of Homer among the Thessalian clans who fought at the siege of Troy. (I., 2, 794.) Their antiquity is also attested by the fact of their being enrolled among the Amyclianic states. As their territory lay on the borders of Macedonia, and comprised all the defiles by which it was possible for an army to enter Thessaly from that province, or return thence into Macedonia, it became a frequent thoroughfare for the troops of different nations. The country occupied by them seems to have been situated chiefly in the valley of the river Titarus, now Saranta Poros. (Cramer's Anc. Greece, vol. I. p. 363, seqq.)

Perse, the inhabitants of Persia. (Vid. Persia.)

Persephone, the Greek name of Proserpina. (Vid. Proserpina.)

Persepolis, a celebrated city, situate in the royal province of Persia, about twenty stadia from the river Araxes, was founded by Cyrus the Great at the time of Alexander as the capital of Persia. The name, however, does not occur in Herodotus, Ctesias, Xenophon, or Nehemiah, who were well acquainted with the other principal cities of the Persian empire, and make frequent mention of Susa, Babylon, and Ecbatana. Their silence may be accounted for by the fact that Persepolis never appears to have been a place of residence for the Persian kings, though we must conclude, from the account of Arrian and other writers, that it was from the most ancient times regarded as the capital of the empire. The kings of Persia appear to have been buried here or at Pasargadae. There was at Persepolis a magnificent palace, which, at the time of Alexander's conquest, was full of immense treasures, that had accumulated there since the time of Cyrus. (Diód. Sic., 17, 71.—Strab., 729.) We know scarcely anything of the history of Persepolis. The palace of the Persians was burned by Alexander (Arrian, 3, 18, 21.— Curt., 5, 7.—Strab., 729.—Diód. Sic., 17, 70), and Persepolis was plundered by the Macedonian soldiers in retaliation, according to Diódoros Siculus (17, 69), for the cruelties inflicted by the Persians upon the Greek prisoners that had fallen into their hands; for Alexander had met, in his approach to the city, with a body of about 800 Greek captives shamefully mutilated. Curtius, after speaking of the plundering of Persepolis, states that Alexander, while under the influence of wine, was instigated by Thais, the courtesan, to set fire to the royal palace, an account which Diódoros also concurs. The city was not destroyed by fire or this occasion, as some suppose. The palace was the only building that suffered, Alexander having repented of the rash act almost the very instant after the work of destruction had commenced. That the city was not laid in ruins on this occasion is proved by the circumstance of Peucetes, the satrap of Persia, having given in Persepolis, only a few years after, a splendid entertainment to the whole army. (Died., 19, 22.) Alexander subsequently founded a town on the site of the return from India. (Arrian, 7, 1.) Persepolis is mentioned also by subsequent writers, and even under the sway of Mohammedan princes, this city, with its name changed to Istarakhar, was their usual place of residence. Its destruction was owing to the fanatical Arabs. (Langlé, Voyages, &c., vol. 3, p. 199.)

Oriental historians say that the Persian name for Persepolis was likewise Istarakhar or Estakhar. (D'Herbelot, Bibl. Orient.) The fullest account of the ruins of Persepolis is to be found in the Travels of Sir Robert Ker Porter. The most remarkable part of these ruins is the Shekel-Minar, or Forty Columns. The general impression produced by this part of the ruins is said to be the strong resemblance which they bear to the architectural taste of Egypt. It is somewhat doubtful, however, whether the ruins called Shekel-Minar are in reality those of Persepolis, and whether the name itself would not rather refer to the ancient city more to the north. The sculptures of Persepolis, though of no value as works of art, serve to elucidate some passages in Greek and Roman writers which relate to Persian affairs. (Compare the remarks of Hirt, Geschichte der Baukunst, vol. I. p. 168.)

Perses, a son of Perseus and Andromeda. From him the Persians, who were originally called Cepheus, are said to have received their name. (Herod., 7, 61.)

Perses, I. a son of Jupiter and Danae the daughter of Acrisius. A sketch of his fabulous history had already been given under a previous article (viz. Danae); and it remains here but to relate the particulars of his enterprise against the Gorgons. When Perseus had made his rash promise to Polydeuces, by which he bound himself to bring the latter the Gorgon's head, full of grief, he retired to the extremity of the island of Scyllus, where Mercury came to him, promising that he and Minerva would be his guides. Mercury proposed the enterprise to Perseus as a task of three days, and the head of Medusa was to furnish him with directions to the abode of the Nymphs, who were possessed of the winged shoes, the magic wallet, and the helmet of Pluto which made the wearer invisible. Having obtained from the Grai the requisite information, he came unto the Nymphs, who gave him their precious possessions: he then flung the wallet over his shoulder, placed the helmet on his head, and fitted the shoes to his feet. Thus equipped, and grasping the short curved sword (harpe) which Mercury gave him, he mounted into the air, accompanied by the gods, and flew to the ocean, where he found the three Gorgons asleep. (Vid. Gorgones.) Fearing to gaze on their faces, which changed the beholder to stone, he looked on the head of Medusa as it was reflected on his shield, and Minerva guiding his hand, he severed it with one glance. The decapitation of Medusa being done, he took the winged steed Pegusas, and Chrysaor the son of Geryon, for Medusa was at that time pregnant by Neptune. Perseus took up the head, put it into his wallet, and set out on his return. The two sisters awoke, and pursued the fugitive; but, protected by the helmet of Pluto, he eluded their vision, and they were obliged to give over the fruitless chase. Perseus pursued his aerial route, and after having, in the course of his journey, punished the inhospitality of Atlas by changing him into a rocky mountain (vid. Atlas), he came to the country of the Ethiopians. Here he lib-
erated Andromeda from the sea-monster, and then returned with the Gorgon's head to the island of Ser- 

These words are not fully visible.

phus. This head he gave to Minerva, who set it in the middle of her shield. The remainder of his his- 

Appollonius had never looked for it, so he was astonished when he learned that Perseus, his grandson, had found it. The Gorgon's head was a symbol of power and fear, and it was believed that anyone who held it could control the gods.

But Perseus had other adventures. He went to the land of Colchis, where he received the golden fleece from Medea. This fleece was a symbol of power and wealth, and it was a test of strength and courage. Perseus succeeded, and he became a hero in the eyes of the people.

The Perseus of the Greeks is more than just a symbol. He is a hero, a representative of the ancient world, and a symbol of the power of myth.

In conclusion, the symbols of Perseus are complex and multifaceted. They represent the power of myth, the power of the gods, and the power of the human spirit. They are a testament to the enduring power of myth, and the importance of symbols in our lives.
also worshipped, received its name from the imprint made by the fertilizing foot of Pegasus or Bellerophon, who followed in the track of the high deeds achieved by Perseus in Lower Asia, so the Clemenses pretended and still maintain, until this day, by the fanciful sandal left by the demi-god upon earth at the periods of his frequent visitations. (Herod., 2, 91.) They alone of the Egyptians celebrated games in honour of this warlike hero of the Sun, this conqueror in his celestial career, this worthy precursor of Hercules, his grandson.—If we connect what has been here said with the traces of Mithriac worship in Ethiopia and Egypt, as well as in Persia and Greece, we will be tempted to conjecture, that those two branches of a very early religion, the fundamental idea in which was the contest incessantly carried on by the pure and fertilizing principle of light against darkness and sterility, unite in one parent trunk at the very centre of the East. (Crouzer, Symbolik, paq. Guignaut, vol. 3, p. 156, seqq.)—II. Son of Philip V., king of Macedonia, began at an early age to serve in his father's army, and distinguished himself by some successes against the barbarous nations which bordered on Macedonia. His younger brother Demetrius was carried away as hostage by the consul Flamininus, at the time of the peace between Rome and Philip, and, after remaining several years at Rome, where he won the favour of the senate, was sent back to Macedonia. After a time, he was again sent by his father to Rome, on a mission, in consequence of fresh disagreements which had sprung up between the two states. Demetrius succeeded in maintaining peace, but, after his return to Macedonia, he was accused of ambitious designs, of aspiring to the crown, and of being in secret correspondence with Rome. Perseus, who was jealous of him, supported the charges, and Philip doomed his younger son to death; but, not daring to have him openly executed, through fear of the Romans, he caused him to be poisoned. It is said that, having discovered his innocence, his remorse and his indignation against Perseus assailed his death. Perseus ascended the throne B.C. 179. This monarch had been brought up by his father with sentiments of hatred against the Romans, for the humiliation which they had inflicted on Macedonia. He dissembled his feelings, however, at the beginning of his reign, and confirmed the treaty existing between his father and the senate. Meanwhile he endeavoured, by a prudent and diligent administration, to strengthen his power, and retrieve the losses which his kingdom had sustained under the preceding princes. But the habit of saying what he thought; the man who governed with suspicion these indications of rising opposition, sought an early opportunity of crushing their foe, before his plans could be brought to maturity. Pretexts were not long wanting for such a purpose, and war was declared, notwithstanding every offer of concession on the part of Perseus. After a campaign of no decisive result in Thessaly, the war was transferred to the plains of Pieria in Macedonia, where Perseus, with his followers, was long engaged in foraging the banks of the river Enipeus. But the consul Paulus Æmilius having despatched a chosen body of troops across the mountains to attack him in the rear, he was compelled to retire to Pydna, where a battle took place, which terminated in his entire defeat, 20,000 Macedonians having fallen on the field. This single battle decided the fate of the ancient and powerful Kingdom of Mac- donia, after a duration of 530 years. Perseus fled alone, more than once, who was waiting for the end of the conflict. He went first to Pella, the ancient seat of the Macedonian kings, then to Amphipolis, and thence to the island of Samothrace, whose asylum was considered inviolable. From this quarter he attempted to escape by sea to Thrace; but a Cretan master of a vessel, after having shipped part of his treasure, sailed away, and left the king on the shore. The attendants hav- ing also forsaken him except one, Perseus fled with his eldest son Philip, came out of the temple where he had taken refuge and surrendered to the Romans. He was treated at first by Æmilius with considerable indulgence, but was obliged to parade the streets of Rome in a charming and princely manner. This was his conqueror. He was afterward confined, by order of the senate, at Alba Fucens, near the lake Fucinus, where he died in a few years. His son Philip also died at Alba. Another and younger son is said to have become a scribe or writer to the municipality of the same. (Liv., 44, 42.—Plut., Vit. Æmili. —Engel. Us. Notit., vol. 17, p. 466.—Cramer's Anc. Greece, vol. 1, p. 191.) Persia was a small branch of Asia, comprehending, in its utmost extent, all the countries between the Indus and the Mediterranean, and from the Euxine and Caspian to the Persian Gulf and Indian Ocean. In its more limited accetpation, however, the name Persia (or rather Persis) denoted a particular province, the original seat of the conquerors of Asia, where they were inured to hardship and privation. This region was bounded on the north and northwest by Media, from which it was separated by a mountain range known to the ancients under the name of Paracobo- atras (Ptol., 6, 4.—Strab., 522); on the south by the Persian Gulf; on the east by Carmania; and on the west by Susiana, from which it was separated by rugged and inaccessible mountains. (Strab., 728.) The country included within these limits is, according to Chardin's estimate, as large as France. The southern part of it, near the coast, is a sandy plain, almost uninhabitable, exposed to the heat and the pesti- tential winds that blow from the desert of Carmania. (Plin., 12, 20.—Strab., 727.) But, at some distance from the coast, the ground rises, and the interior of the country, towards the north, is intersected by numerous mountain-ranges. The soil upon these mountains is very dry and barren, and, though there are some fertile valleys among them, they are in general fit only for the residence of nomadic shepherds. In the inner part of the country, however, there are many well-watered and fertile plains, in the largest of which Persepolis is situated. (Strab., 727.—Ptol., 6, 4.)

1. Names of Persia.

Persia is called, in the Old Testament, Paras. Another name employed by the sacred writers is Elam. Moses first uses this appellation in Genesis 10, 42. After the death of the Persian empire, many who regarded the ancient Elamites as the forefathers and progenitors of the whole nation of the Persians. The term Elam, strictly speaking, belongs only to one particular province of the Persian empire, called by the Greek writers Elymais, and forming part of the modern Chou- sistan. The geographical notions of the ancient He- brews were extremely limited: and as they first became acquainted with the inhabitants of the province of Elymais, before they knew anything respecting the rest of the Persians, they applied the term Elam to the whole of Persia.—Some modern writers have also regarded the name Chouta (Cutha), in the Scriptures, as designating Persia; and, in forming this opinion, they have been guided by the passage in the 2d book of Kings, 17, 24, where a Chouta is mentioned, which Josephus (Ant. Jud., 9, 14, 5) places in Persia. Michaelis, however (Spicileg. Geogr. Herc. Ext., p. 108), seeks to prove that Chouta was in Phoenicia, not in Persia; while Hyde and Reland place it in Babylonia. If we adopt, in preference to the two last-mentioned writers, the testimony of Jo- sephus, we may, with great probability, conclude that Chouta, like Elam, only denoted in fact a part, but, like it, was used to designate a whole. — Among the Greek and Roman writers, Persia occasionally takes the name of Achemenia, and the Persians themselves the name of Achemenii ('Ayâuovioi) Hence Hesychius
PERSIA.

The Persians, of whom the classic text of his history, gives Achemenian as equivalent, in the Persian tongue, to "Rez regius imperans"; but Valois (Valesius) corrects the common reading by the substitution of Susa-san, which closely resembles the modern title of Royalty in Persia, Schaahinshachah. — The name Achemenian comes in reality from that of Achemenides, the founder of the royal line of Persia. In the word Achemenides, the first word, Achme, is the name of the place, Artaxerxes,) which, owing their existence to the well-known custom, on the part of the Greeks, of altering foreign, and particularly Oriental names, in such a way as to adapt them to their own finer organs of hearing (Compare Josephus, Ant. Jud., 1, 6. — Plin., Ep., 3, 4.) We have, then, Achemenides (Aryaz) remaining. The initial letter is merely the Oriental αγ pronounced as a soft breathing, and the root of the word is Chaem (Xaun). On comparing this with the Oriental name Djasmedj (in which the final syllable, skid, is a mere addition of a later age), we cannot fail to be struck by the resemblance. And this resemblance will become still more marked if we consider that Djas (Djoemo) in the Zend-Avesta) begins properly with a species of sibilant G, which, being pronounced more roughly in some dialects of that in others, approaches very closely to the sound of G in Basutos; all that the Persians tell us of the Achemenides corresponds very exactly with what the East relates of its Djasmedj. Achemenides was the founder of the royal line of Persia, and to him Cyrus, Darius, and Xerxes were proud of tracing their origin. With the Persians of the present day, the name of Djasmedj is held in the highest veneration as that of the founder of Persepolis, and a great and glorious monarch. — Herodotus, 8. 11, states that the Persians were anciently (παλας) called by the Greeks Cephones (Κυφονές), but by themselves and their neighbours Artai (Ἀρταῖοι). As regards the name Cephones, there is an evident mistake on the part of the historian, and the appellation beyond a doubt belongs only to certain tribes of the ancient Northern Chaldaes, who actually bore this name. With respect to the term Artai it may be remarked, that it merely designates a brave and warrior-like people, being (ατρί) the Indian art or ard, "strong," or "brave." (Consult remark at the end of the article Artaxerxes.) — One of the earliest names of Persia and the Persian empire, and the one most usual with the Persians themselves up to the present day, is Iran, while all the country beyond the Oxus was designated Turan. The former of these appellations is identical with the Eroine of the Zend-Avesta, and will be alluded to again in the course of the present article.—The name Persia would seem to have come from that of the province of Faursi-stan or Paarsi-stan, called also Faars or Paars, and the same with the Persis (Περσίς) of the Greeks. (Compare the Scripture Pasars already mentioned.) In this province we find the genuine race of Iranians; and it was here that the magnificent city of Isfakh, which the Greeks have made known to Europe by the name of Persepolis, was a seat of the civilisation and literature, and of the arts of the Persians. The origin of the term Faars or Paars has been much disputed by philologists (Wahl, Vorder und Mittel-Asien, p. 225, seqq.); the root is evidently to be sought for in the term Aria or Eriene, and this would bring Iran and Persia, as names of the same country, in close approximation. (Vid. Aria.) One explanation of the name "Persian" will be given farther on.

2. Origin and Early History of the Persians.

The first historical and religious epochs of Persia are enveloped in such obscurity, and so many have erred in relation to the character, far more mythic than historical, of the early Oriental traditions, that we need not wonder at the earnest enthusiasm with which such men as Sir W. Jones and J. von Müller have adopted the fictions of Dabistan. These fictions have far more connexion with the Brahminical traditions than with those of the Zend-Avesta, though they are found, in fact, ingrained on the latter. The fourteen Abads; the institution of the four castes by the great Abad; in a word, that ideal empire, as unlimited in geographical extent as in the immensity of the periods (indeed in appearance, but at bottom purely artificial and arbitrary), that are connected with it; all this is evidently a fiction, and yet we are told that this is the same as the name of Mahabali, supposed to be identical with Baal or Belus, was thought to furnish a wonderful confirmation of the favourite hypothesis of a great ante-Diluvian monarchy, which had embraced India, Persia, and Assyria in a common bond of language, religion, and national institutions. In this way it was believed that a solution could be given of all the difficult problems presented by the earliest portion of the history of the world. These traditions, however, have an air of philosophic abstraction, or, to speak more candidly, of premeditated invention, which ill agrees with the native simplicity that marks the legends of the Zend-Avesta. It is from the Zend-Avesta, carefully compared with the more genuine portion of the Schah-Nahem, and with the scanty information which the Hebrews and Greeks have transmitted to us on this subject, that the Persians derived their national ideas, and are essentially representative of the first periods of Persian history. At first view, indeed, there seems to be the widest possible difference between the narratives of the Jews and Greeks, and the national recollections of the people of Iran; and critics have heaped hypothesis upon hypothesis, in order to reconcile this discrepancy: some have even regarded the thing as altogether impossible. Before the discovery of the Zend books, it was easy to suppose that the Oriental writers, coming as they did at so late a period upon the stage, had confounded together the Assyrians, Medes, and Persians as one and the same people, or else that they had designedly, and from feelings of national vanity, connected their own history with that of the powerful communities which had preceded them in the sovereignty of Western Asia. (Consult Auguistus du Perron, Mem. de l'Acad. des discouvertes of the Zend books, 2. 197, seqq., etc.) At the present day, however, this opinion is accompanied with great difficulties; for the same names, and, in general, the same ancient facts, are found, with some slight shades of difference, in the Zend-Avesta and in Ferdousi or his copyists. Everything, therefore, depends upon the period to be assigned for the composition of the Zend books. — Most writers distinguish between Medes and Persians, from their very origin; and to the former of these two nations they refer Zoroaster, his laws, the books that bear his name,—in a word, the whole system of the Magian worship, and the civilization of the Persians themselves. This theory makes the Medes to have formed originally a part of a great Bactrian nation, a Bactro-Median empire, and to have received from the Bactrians the elements of their own civilization, — or, as Herodotus, 1. 136, expresses it, "they gained that wisdom which the Medes possessed on the banks of the Oxus, whom Aristotle and Clearchus regarded as having enjoyed, at so remote a period, the blessings of civilization." (Diog. Laert., proem, vi.) — As regards the origin of the Medes, Persians, and other ancient nations of the remote East, as well as their early history, all remains uncertain and obscure. It
is generally conceded, however, that the Bactrians, Medes, and Persians bore at first the common name of Arī or, which recalls to mind that of Iran; but with respect to the primitive country of these Arī there is little unanimity of opinion. Some make them to have come from Caucasus, others from the Caspian Sea, and still others would imagine an earlier settlement among the mountains to the northeast of India, and, it must be confessed, with great probability. Göres persists in his hypothesis of making the Assyrians, Medes, and Persians to have descend-

ed from the chain of Caucasus, speaking the same lan-
guage, and forming one and the same race; and to this race, thus combined, he assigns a great monarchy of Iran, extending from Caucasus to the Himmalyan Mountains. He does not undertake to separate each other the names Iran, Aria, Aturia, Assyria, Assur, and, appears to identify Sem with Dēm or Dērmashid, the first mythical chief of this early empire. (Mythengesch., vol. 1, p. 213, seqq.—Compare Schah. Nameh, Einleit., p. vi., seqq.) Another sys-
tem has been more recently started by Rhode, and has been developed with great ability. According to this writer, the Bactrians, Medes, and Persians composed the three first races speaking the same language or different dialects, and which origin-
ally from Eriene Vedidjo, and from Mount Alborůj, which he finds near the sources of the Oxus and the mountains to the north of India, the names of which were transferred in a later age to Caucasus and Ar-
menia. The arguments adduced by this writer in support of his hypothesis are drawn from the Zend books, and in particular from the Vendidad, at the commence-
ment of which latter work an account is given of the creation, or, as Rhode expresses it, of the successive inhabitations of various countries, and in the number of which we find, after Eriene Vedidjo, Soğdho (Sogdiana), Moore (Merou), Bakhti (probably Bulak), Nêsa (Nyssa), Harouw (Herat), &c. Rhode sees in this enumeration an ancient tradition respect-
ing the migrations of a race, for a long period of nom-
adic habits, who kept moving on gradually towards the south, under the conduct of Dērmashid, as far as Ver or Var, a delightful country, where they finally established themselves, and where Dērmashid built a city and palace, Var-Dērmeshgherd, which Rhode, after Herder, takes for Persia proper (Persis) or Pars, with its capital Persepolis, identifying at the same time Achememen with Dērmashid. M. V. H. von Hammer adopts, in general, this opinion of Rhode in regard to the geography of the Zend-books, and the plan in which it is set forth, the Zend-Avesta refers under the names already mentioned, as well as under that of Dērmashid. Without presuming to offer any opinion on this disputed point, we may take the liberty of remarking, that the Greeks themselves speak of the Arī as a large family of nations, to which the Magi, and, in general, all the Median tribes or castes were considered as belonging. (Mayol dē ka πάν ti Ἀρην άνεας.—Damaic. ap. Winton, p. 68; Heilige Sage, p. 65, and 1, 101.) The Persians called their ancient heroes Ἀρηοῖς (Herod., 7, 61.—Id. 6, 98.—Hellen-
icae, ap. Stephan. Byz., s. v., Ἀρηοῖς), and Artaxertes is said to signify, as an appellation, "a great warrior," and to be compounded of Art or Ard, "strong," and the Zendic Khāhetra, "a warrior," which is almost identi-
cal in form with the Sanscrit Aria-Khāhtra. More-
over, the terms Aria and Ari or Arian, together

with Arias and Ari or Eris (a root found in various Zendic terms, such as Arians, Erienes, Eriemones, Eriene-Vedidjo, &c.), re-appear in the Arian and Aria-

Verta of the Sanscrit books, "the illustrious," and the "land of the illustrious," or "of heroes." (Com-
pare Greek Heroes, a word of the same origin.) All these analogies, joined to the striking resemblance between the Zend, the Parsi, and the Sanscrit, point to a primitive race of one and the same origin, speaking at first one and the same language, but subsequently divided into various nations and dialects. The tribes in Bactria and the neighbouring country, continuing to dwell in the neighbourhood of the parent source, remained more faithful to others of the ancient name and language. Other tribes migrated in different direction, and towards the region of Caucasus, whither they transported with them the names of both Alborůj and Arians (Armenia). Hence we have both Eastern and Western Arī, and these last came in time a separate nation, the Medes, known to the Hindus under the name of Pahlavi (Pehlevan is "a hero" in Firoudb, which recalls to mind the Pehlevi, their language, the fruit of their intermixture with people and language. Finally, the Persians, the ancient of whose name (Persi, "the clear," "the pure," "the brilliant," "the inhabitants of the country of light"), as well as their idolom, worship, and traditions, would seem to indicate a close and long-continued connexion with the first branch, established themselves, we know not at what epoch, in the country of Pars or Pars, which became, in the time of Cyrus, the centre of an empire, that recalled to mind in some degree the fa-

is, the first dynasty in Iran is that of the Pisch-
dadans. Keiourmaraz, say the same legends, was the first who governed in the world. He lived a thou-
sand years, and reigned thirty. Covered with the skin of a tiger, he descended from the mountains and taught men the use of vestments and more nutritive food. Ahriman, the genius of evil, sent a demon to attack him. Samek, the son of Keiourmaraz, was slain in the conflict. Houcheng avenged the death of his fa-
nal with the aid of two men who had been converted to the Zend religion. He reigned with justice, taught men the art of culti-
vating and sowing the fields, and made them acquaint-
ed with the use of grain. Meeting, on one occasion, a monster in a forest, he seized an enormous stone to attack him; the stone, striking against a rock, flew into a thousand pieces, and fire was discovered. With the aid of this element he invented the art of working metals: he thus formed the pincers, the saw, and the file. The Zend religion was rejected, and the Zend-Avesta destroyed by fire. He taught his subjects, more-
over, the art of raising cattle and of substituting wool-
len stuffs for the skins of animals. Theiounourmaraz, son of Houcheng, succeeded. He was the first that purs-
ued the chase with the onca and the falcon, and taught music to men. An angel, sent from heaven, presented him with a lance and horse, to combat and subdue the evil spirits. He gave them battle at the head of his people, and in that battle he took a great number prisoners. These begged for life, and, in return for the boon, taught him writing and the elements of knowledge. Theiounourmaraz, the con-
queror of these demons, reigned thirty years. He was succeeded by his son Dērmashid. The birds, and the pers or good spirits, obeyed him. He invented the cuirass, precious stuffs, and the art of embroidery. He built the city of Var Dērmashid, divided his sub-

010
PERSIA.

Of marriage and of Persia.

The Persians, as we have seen, were a proud and warlike people. They were divided into three classes, and each of these classes was divided again into nine parts. The first class was the nobility, consisting of the Persian nobility, the second class was the common people, and the third class was the slaves. The Persian nobility was divided into nine parts, each of which was called a tribe. The common people were divided into nine parts, each of which was called a clan. The slaves were divided into nine parts, each of which was called a servile class.

The Persians were a warlike people, and they were always ready to take up arms. They were noted for their bravery and their courage. They were also noted for their skill in the arts of war, and they were able to make and use various kinds of arms and weapons.

The Persians were also noted for their religious beliefs. They believed in a god called Ahura Mazda, and they worshiped him with great devotion.

The Persians were also noted for their love of beauty and luxury. They were fond of fine clothes, and they were fond of fine food and drink. They were also fond of fine music and dancing.

The Persians were a proud people, and they were always ready to defend their country and their religion. They were also ready to defend their rights and their privileges, and they were always ready to fight for their freedom.

The Persians were also noted for their love of learning. They were fond of books, and they were fond of learning. They were also fond of poetry, and they were fond of music.

The Persians were a great and powerful nation, and they were always ready to take up arms and fight for their country and their religion.
PERSIA.

...overthrew the Assyrian empire. The Assyrian princes, or Tarsi, did not inhabit Jerusalem, as one might be inclined to suppose from the name Beit-ul-makaddes, "the holy dwelling," given by Firdousi to their residence, and which is that by which the Arabs designate the capital of the Jews. The Persian poet himself gives us the requisite information on this point, by adding that Beit-ul-makaddes also bore the Tarsi name of Hameh-ct-Harran. It was probably, therefore, Harran, in Mesopotamia, in the region called Diar Medzer. According to traditions still existing, this city was built a short time after the deluge; and it is regarded by the people of the East as one of the most ancient in the world. Albourz is the ancient name of the great chain of mountains which commences on the west of the Cimmerian Bosporus, borders the Caspian Sea to the southeast and south, and, proceeding eastward, joins the Himalayan chain which separates Hindooostan from Tibet. It comprehends, therefore, the Caucasus of our days, the mountains of Ghilan, Mount Damavand, the chain of Chorasan, and the Paropamissus or Hinnu-Khos. Feridoun, coming from Media to found the new Median empire on the ruins of the Assyrian, descended Mount Albourz. Eastern Persia, comprising Sedjestan and Babolistan, which is the country of Ghizneh, was subject to the schah, but governed under him by the princes of the race of Saim. As to Kaboul, it was only tributary, and the seat of the chief of the Dosts, which is, that is, to princes of Assyrian origin who had treated with the Medes. The third analogy between the Greek and Persian traditions is found in the inroads of barbarous tribes from Eastern Persia. The invasions of the Scythian Nomades, mentioned by the Greek writers, will agree very well with those of the princes of Touran, coming from beyond the Dijken or Oxus. From the earliest periods, Persia has been known to the Greeks as a country inhabited by direct posterity of the Hittites of the Caucasus, the Caspian, and the Oxus. The Greeks called all these tribes Scythians, because they had no other name by which to designate these barbarous communities. The Persians call them Turan and Djin (Turks and Chinese), although at this time (700 B.C.) neither the one nor the other of the two last-mentioned people were to be found on the eastern borders of Persia. When, however, the Schah-nameh was written, the Persians knew the Turks of the Oxus to be Chinese, and they gave their names to all those who had at any time preceded them. The ancient princes of Persia, in this quarter, were probably Humnic and Tudese tribes, to whom, about the era of the Sasanides, succeeded the Turks and Chinese.—The main fact that results from a comparison of these traditions is, that two empires followed in succession: one, coming from Assyria, ruled over Media and all Eastern Asia; the other, coming from Media, reacted on the first, and drove the Semitic communities across the Tigris and Euphrates; and, finally, to these two great revolutions were joined frequent inroads on the part of the barbarous tribes coming from Caucasus, Scythia, and the banks of the Oxus.—To the Pischedddan succeeded the Kaizianai dynasty. The recital of the Schah-nameh respecting this second dynasty is as digested by table as that from Media, the first; and it would not be difficult to seek in it any exact co- 

PERSIA.

no mention of this monarch; he probably confounds his reign with that of his father. Nevertheless, a Mohammedan author mentions this second Pharaoh, and he states that Kai K'owus was the son of Aphra and grandson of Kai K'obad. It would appear, moreover, that the history of Kai K'owus, as given by Firdousi, is at one and the same time that of Cyzares and Astyages. The blindness of Kai K'owus and his army is probably nothing else but the total eclipse of the sun, which took place between Cyzares and the Lydians, and which had been prophesied to the Persian by Thales. The expedition against Hamatab appears to coincide with the siege of Nineveh mentioned by the Greek writers; and these same writers also agree with Firdousi, when they make the operations of the siege to have been broken off by an invasion of the Scythians. The statement also, made by Herodotus, respecting the marriage of Astyages with the daughter of the Lydian monarch, agrees with that of the Persian author, who informs us of the marriage of Kai K'owus with Scandab. With regard to Kai K'osrou, or simply K'osrou, it appears evident that he was the same with the Cyrus of the Greek writers. K'osrou, however, according to Firdousi, was not the grandson of the schah of Persia, but of Afsarash, king of Touran, and the scene of the history of his youth is laid entirely in this latter country. After K'ai K'osrou, the narrative of the Mohammedan writers begins to diverge. Two heroes are seen in succession. A Darius, who, at the time of Alexander, there are only two points of resemblance between the two statements: the first is the name of Gouchass, who in the Darius Hystaspis of the Greeks; and the other, that of Ardecher Dirazdest (Arzaxtes Longimanus), given to Bahmen of the Schah-nameh by Mirkhond. (Klaproth, Tableaux Historiques de l'Asie, &c., p. 5, seqq.)

3. Later history of Persia.

The accession of Darius Hystaspis is fixed by chronicologists in the year 521 B.C.; and in his reign, supposing him to be the same with Goucass, all authorities seem to agree that the famous Zerdusht, the Zoroaster of the western writers, succeeded in establishing his new religion. The reign of Gouchass is extended by the Persian historians till the time of Cyrus the son of Phrayates, in the twenty-first year of his reign. It is from the Western historians only that we learn anything of the leading events of the reign of Darius Hystaspis. In like manner, all the great events of the history of Xerxes, which form the most brilliant page in the history of Greece, are passed over in silence in the Persian annals. The assassination of Xerxes, by his relative Arataban, took place B.C. 461, in the twenty-first year of his reign. He was succeeded by his third son, Arzaxtes Longimanus, the Bahman or Djazdest of the Persian annals, and the Abasspurus of the book of Esther. Something like a disguised or confused account of these transactions is found in the pages of Firdousi. After Isfundeer had subdued all the foreign enemies of his father Gouchass, he is sent to reduce to obedience the King of Segistan, who had thrown off his allegiance. In this expedition he is represented as engaging with the greatest reluctance, and that meets his death from the hands of Roustem, to whom, nevertheless, the dying hero commits his son, Bahmen, enthralling him to educate him as a warrior. That son, however, on ascending the throne, soon became jealous of Roustem, and, having invaded
and subdued his hereditary province, put him to death with his family, on the pretext of avenging the blood of his father. The general facts, that Rousam, a powerful chief, slew Isfunde, yet protected his son; that a civil contest attended the accession of Ardecheer; and that it terminated in the massacre of Rous-tem and his family, so far accord with what the Greek historians state respecting the character and fate of Artaxerxes. The same story has been related, however, to the same personages. Of the identity of Ardecheer with Artaxerxes Macsejwir or Longimanus, there can be no doubt. His surname, Dirazdest ("Long arms") is a full proof of this. The author of the Tarikh Tabree states, that under this monarch, to whom he erroneously ascribes the overthrow of Belshazzar, the Jews had the privilege granted them of being governed by a ruler of their own nation; and the favours they experienced, it is added, were owing to the express orders of Bahmen, whose favourite lady was of the Jewish nation. Josephus expressly affirms, that Artaxerxes Longimanus was the husband of Es- ther; and the extraordinary favour which he showed to the Jews strengthens this testimony. He would seem, indeed, to have been the first monarch of Persia who, after attaining the throne, by the subjugation of Segistan, "reigned from India to Ethiopia, on twenty provinces and twenty-seven provinces." Persian historians as- sign to this great monarch a reign of a hundred and twelve years, but the Greek writers limit it to forty, and his death is fixed in the year B.C. 424. He was succeeded, according to the Persian annals, by his daughter Homaim, who, after a reign of thirty-two years, resigned the crown to her son, Darab I, the Darius Nothus of the Greeks. It is natural that no notice should be taken of the ephemeral reigns of Xerxes II. and Sogdianus, which together occupied only eight months; and in Ptolemy’s canon, Darius Nothus is made the immediate successor of Artaxerxes Longi- manus, his reign extending from 424 B.C. to 405. Homaim appears to be the Parysatis whom the Greek writers make to be the queen of her half-brother Da- rius, and to whom they attribute a very prominent part in the transactions of his reign. Her son Arsaces is stated to have succeeded to the throne under the title of Artaxerxes, to which the Greeks added the surname of Mnemon, on account of his extraordinary memory. No sovereign, however, besides Longimanus or Di- razdest, is ever noticed by Oriental writers under the name of Ardecheer; it is therefore highly probable, that Mnemon is the Darab I. of the Persian annals, and that he succeeded his mother’s husband, Parysa- tis, who reigned conjointly with Darius Nothus, whether as her husband or her son. The banishment of Queen Parysatis to Babylon, in the reign of her son Artaxerxes, may answer to the abdication of Queen Homaim. This is a most obscure epoch in the native annals. The Egyptian war which broke out in the reign of Darius Nothus, the revolt of the Medes, and the part taken by Persia in the Peloponnesian war, are not noticed by the Greek historians. Curiously enough, is not noticed by any of the Oriental writers, nor is the slightest allusion made to the celebrated expedi- tion which has given immortality to its commander. The pages of Herodotus, Thucydides, and Xenophon leave little room, however, for regret that these events have not found an Oriental historian. With respect to the second Darab of the Persians, who is made the immediate successor of the first, his identity with the Darab of the Persians is completely disproved by the conquest of Persia during his reign by Alexander of Macedon. The intermediate reigns of Artaxerxes Ochus, the most barbarous and abandoned monarch of his race, and of his son Arsês, both of whom were assassinated, appear to be passed over, or to be included in that of Darab I. The reign of this Darab is distinguished in the native annals by the breaking out of a war with Philippius of Roon (Ma- cedon), which, though at first unsuccessful, is stated to have terminated gloriously for the Persians; and Philip was glad to make peace, on the terms of giving his daughter to Darab, and becoming his tributary. This daughter is said to have been the mother of the Macedonian conqueror. Darab I. built Darabjird, a city about 150 miles east of Shiraz. (Malcolm, vol. ii. p. 62.) The character of the Persians, however, to have been transferred by the Persians to the unfortunate and noble-minded Darius, who is alleged to have been deformed in body and depraved in mind; as, if Sir John Malcolm remarks, "to reconcile the vanity of the nation to the tale of its subjugation." It is nevertheless true, that the crimes of their monarchs, the mal-administration into which the affairs of the government had fallen, the assassinations and massa- cres occasioned by the repeated disputes for the throne, we come to the establishment of the Parthian kingdom,
PERSIA.

As the mention of which falls naturally under the present article, from the circumstance of the Parthians being designated as Persians by many of the Roman writers, particularly the poets, although they were, in fact, of Scythian rather than Persian origin—Seleucus was succeeded in his Asiatic empire by his son Antiochus Soter, who reigned nineteen years, and left his throne to his son Seleucus II., who reigned another nineteen years, and was succeeded by his son Demetrius, and then by a man of obscure origin, whom some, however, make to have been a tributary prince or chief, and the native writers a descendant of one of the former kings of Persia, slew the viceroy of Parthia, and raised the standard of revolt. His name was Ashk, or Arsaces, as the Western historians write it. After having slain the viceroy, he fixed his residence at Rhes, where he invited all the chieftains of provinces to join him in a war against Seleucus; promising at the same time to exact from them no tribute, and to deem himself only the head of a confederacy of princes, having for their common object to maintain their separate independence, and to free Persia from a foreign yoke. Such was the commencement of that era of Persian history which is termed by the Oriental writers the Moulool al Towdaif, or commonwealth of tribes, and which extended for nearly five centuries. Pliny states that the Persian (meaning probably Parthian) empire was divided into eighteen kingdoms. The accounts of this period given by Persian writers are vague and contradictory. "They have evidently," Sir John Malcolm remarks, "no materials to form an authentic narrative; and it is too near the date at which their real history commences to admit of their indulging in fable. Their pretended history of the Askians and Ashgians is, consequently, little more than a mere catalogue of names; and even respecting these, the dates they assign to the different princes, hardly two authors are agreed. Ashk the First is said to have reigned fifteen years; Khondemir allows him only ten. Some authors ascribe the defeat and capture of Seleucus Callinicus, king of Syria, to this monarch; and others to his son, Ashk II. The latter prince was succeeded by his brother Shahpoor (or Sapor), who, after a long contest with Antiochus the Great, in which he experienced many reversals, concluded the treaty of communion with that monarch, by which his right to Parthia and Hyrcania was recognised. From the death of this prince there appears to be a lapse of two centuries in the Persian annals; for they inform us that his successor was Babaram Gudurz; and if this is the prince whom the Western writers term Gutzaras, as there is every reason to conclude it is, we know from authentic history that he was the third prince of the second dynasty of the Arsacides. From the death of Alexander till the reign of Artaxerxes (Ardecheer Babigian) is nearly five centuries; and the whole of that remarkable era may be termed a blank in Eastern history. And yet, when we refer to the pages of Roman writers, we find this period abounds with events of which the vainer nation might be proud, and that Parthian monarchs, whose names cannot now be discovered in the history of the Orient, were sovereigns upon whom the Roman army, when that nation was in the very zenith of its power, could make no impression. But this, no doubt, may be attributed to other causes than the skill and valour of the Persians. It was to the nature of their country, and their singular mode of warfare, that they owed those frequent advantages which they gained over the disciplined legions of Rome. The frontier which the kingdom of Parthia presented to the Roman empire extended from the Caspian Sea to the Persian Gulf. It consists of lofty and barren mountains, of rapid and broad streams, and of wide-spreading deserts. In whatever direction the legions of Rome advanced, the country was laid waste. The war was made, not against the army, but the supplies by which it was supported; and the mode in which the Parthian warrior took his unerring aim, while his horse was carrying him from his enemy, may be viewed as a personification of the system of warfare by which his nation, during this era of its history, maintained its independence. The system was suited to the soil, to the man, and to the fleet and robust animal on which he was mounted; and its success was so certain, that the very first of them who saw their troops murmured when their leaders talked of a Parthian war." (Malcolm, vol. I., p. 84, seqq.)—The blank which occurs in the native annals may be accounted for, Sir John Malcolm thinks, by the neglect into which the rites of Zoroaster fell during the policy of the Arsacides, and the decay of letters consequent upon the depression of the priesthood. In that nation, as in others similarly circumstanced, the literati and the priesthood were synergetic, however, represent them as despised editors, so they would be prompted to avenge themselves on the enemies of their faith and order by consigning their race, so far as they had the power, to oblivion. The Arsacides, Gibbon affirms (but without citing his authority), "practised, indeed, the worship of the magi, but they disgraced and polluted it with a various mixture of foreign idolatry."—According to the Western historians, it was under Mithridates I., that the Parthian part of the eastern empire of the Arsacides, that the Parthian power was raised to its highest pitch of greatness. That monarch, having subdued the Medes, the Elymean, the Persians, and the Bactrians, extended his dominions to the Indus, and, having vanquished Demetrius, king of Syria, finally secured Babylonia and Mesopotamia also to his empire. (Prideaux, vol. II., p. 404.)—Justin states that this monarch, having conquered several nations, gathered from every one of them whatever he found best in its constitution, and from the whole collection framed a body of most wholesome laws for the government of his empire. If one half of this be true, what is history, that it should have preserved no more minute record of such a sovereign!—The remainder of the history of Parthia will be found under that article.

5. Dynasty of the Sassanidae.

Artaxerxes is said to have sprung from the illegitimate commerce of a tanner's wife with a common soldier. The tanner's name was Babec, the soldier's Sassan; from the former Artaxerxes obtained the surname of Babigian (son of Babec), from the latter all his descendants have been styled Sassanida. (Gibbon, Decline and Fall, c. 8.)—The flattery of his admirers, representation as a descendant of a branch of the ancient kings of Persia, though true and misfortune had gradually reduced his ancestors to the humble station of private citizens. (D'Herbelot, Bibl. Orient., Ardecheer.)—The establishment of the dynasty of the Sassanidae took place in the fourth year of the Emperor Severus, 226 years after the Christian era. One of the first acts of the new monarch was the re-establishment of the magi and of the creed of Zoroaster. A reign of fourteen years ensued, which formed a memorable era in the history of the East, and even in that of Rome. Having, after various alternations of victory and defeat, established his authority on a basis which even the Roman power could not shake, he left behind him a character marked by those bold and commanding features that generally distinguish the princes who conquer from those who inherit their power. Till the last period of the Persian monarch, his code of laws was respected as the groundwork of their civil and religious policy. Artaxerxes bequeathed his new empire, and his ambitious designs against the Romans, to Sapor, a son not unworthy of his great father; but those designs were too extensive for the power of Persia, and served only to involve both nations in a long series of destructive wars and
reciprocal calamities. (Gibbon, c. 8.)—The subsequent history of the dynasty of the Sassanide will be found detailed in part under the articles Sapor, Chosroes, &c.

Cyrus and Cambyses had conquered nations: Darius was the true founder of the Persian state. The dominions of his predecessors were a mass of countries only united by their submission to the will of a common ruler, which expressed itself by arbitrary and irregular exactions. Darius first organized them into an empire, where every member felt its place and knew its functions. His realm stretched from the Egean to the Indus, from the steppes of Scythia to the cataracts of the Nile. He divided this vast tract into 20 satrapies or provinces, and appointed the tribute which each was to pay to the royal treasury, and the proportion in which they were to supply provisions for the army and for the king's household. A high road, on which distances were regularly marked, and spacious buildings were placed at convenient intervals to receive all who travelled in the king's name, connected the western coast with the seat of government: along this road, couriers trained to extraordinary speed successively transmitted the king's messages. The satrapies were accountable for the imposts of their several provinces, and were furnished with forces sufficient to carry the king's pleasure into effect.—Compared with the rude government of his predecessors, the institutions of Darius were wise and vigorous; in themselves, however, unless they are considered as foundations laid for a structure that was never raised, as outlines that were never filled up, they were weak and barbarous. He had done little more than cast a bridge across the chaos over which he ruled: he had introduced no real uniformity or subordination among its elements. The king, indeed, may have been grounded on relations which we do not perceive, and may, therefore, have been less capricious than it seems. But it answered scarcely any higher end than that of conveying the wealth of Asia into the royal treasury, and the satraps, when they were most faithful and assiduous in their office, were really nothing more than farmers of the revenue. Their administration was only felt in the burdens they imposed on the people: in the main, they governed retained their peculiar laws and constitution. The Persian empire included in it the dominions of several vassal kings, and the seats of powerful, independent hordes, who preyed on its more peaceful subjects with impunity. In this, however, there was much good and comparatively little mischief. The variety of institutions comprehended within the frame of the monarchy, though they were suffered to stand, not from any enlarged policy, but because it would have been difficult or dangerous to remove them, and there was nothing better to substitute for them, did not impair, but rather increased its strength; and the independence of a few wild tribes was more a symptom than a cause of weakness. The worst evil arose from the constitution of the satrapies themselves. The provinces were taxed not only for the supply of the royal army and household, but also for the support of foreign troops, each of which had an assigned garrison in the pay of, and who had some kept up a court rivalling in magnificence that of the king himself. The province of Babylon, besides its regular tribute and the fixed revenue of its satrap, which was equal to that of a modern European prince of the first rank, defrayed the cost of a stately and a hunting equipage for his private use, such as no European prince was ever able to maintain. Four large villages were charged with the nourishment of his Persian, and exempted from all other taxes. It must, however, be observed, that when an extraordinary bur-
that fills the Persian chronicles with their most horrid stories: and we learn from the same sources the dreadful depravity of their character, and the vast extent of their influence. Cramped by the rigid forms of a pompous and wearisome ceremonial, surrounded by the ministers of their artificial wants, and guarded from every breath of truth and freedom, the successors of Cyrus must have been more than men if they had not become the slaves of their priests, their monks, and their wives. The contagion of these vices undoubtedly spread through the nation: the Persians were most exposed to it, as they were in the immediate neighbourhood of the court. Yet there is no difficulty in conceiving that, long after the people had lost the original purity and simplicity of their manners, the noble youth of Persia may have been still educated in the severe discipline of their ancestors, which is represented as nearly resembling the Spartan. They may have been accustomed to spare diet and hard toil, and trained to the use of horses and arms. These exercises do not create and are not sufficient to keep alive the warlike spirit of a nation, any more than rulers and precepts to form its moral character. The Persian youth may still have been used to repeat the praises of truth and justice from their childhood, in the latter period of their history, as they had when Cyrus upbraided their fathers with their sins; and yet in their riper years they might surpass them, as at Cunaxa, in falsehood and cunning, as much as they were below them in skill and courage. Gradually, however, the ancient discipline either became wholly obsolete or degenerated into empty forms; and the nation sank into that state of utter corruption and imbecility which Xenophon, or, rather, the author of the chapter that concludes his historical romance, has painted, not from imagination, but from the very life.

**PERSICUS SINUS**, a part of the Indian Ocean, on the coast of Persia and Arabia, now called the Persian Gulf.

**Persis, or Persia Proper**, the original province of the Persians. (Vid. Persia.)

**Persius, or Aulus Persius Flaccus**, a Roman satirist, was born at Volaterrae, a town of Eturia, about the commencement of the 1st cent. B.C. 24 to 34; his father was of equestrian rank. He lost his father at the age of six years, and his mother, Fulvia Sisenna, married a second time, but the stepfather whom she gave her son lived only a short period. Persius appears to have shown towards his mother the strongest filial affection. He was trained at Volaterrae till his twelfth year, and then proceeded to Rome, where he studied grammar under Rhennius Palemon, and rhetoric under Virginius Flaccus. At the age of sixteen he became a pupil of Annanus Cornutus, a Stoic philosopher, who had come from Leptis in Africa to settle at Rome. Lucan, the poet, was his fellow-disciple in the school of Cornutus. Persius and Cornutus were bound to each other by feelings more like those of father and son, than such as usually subsist between preceptor and scholar. This friendship continued without interruption till the death of Persius, which took place in his 28th or 29th year. The poet bequeathed his books and a large sum of money to Cornutus, who, however, declined to receive the latter, and gave it up to the sisters of Persius. The materials for a life of Persius are scanty, but they are sufficient to show him in a very favourable light. Amid prevailing corruption, he maintained a high moral character. He consistently applied his principles as a Stoic to the purposes of self-discipline. His acquaintance with men and events, and his constitution made him more than an adept of actual converse with the world, so that, as his writings testify, he viewed human life as he thought it should be, rather than as it really was. Different opinions are formed of Persius as a satirical poet.

**Quintilian** and **Martial**, with some of the early Christian writers, bear a high testimony to his merits, as do likewise several modern critics. Others consider him not worth reading. Gifford, who studied him thoroughly, says, among many eulogies of him, "His life may be contemplated with unabated pleasure; the virtue he recommends he practises in the fullest extent; and, at an age when few have acquired a determinate character, he left us and Roman antiquity with equals in genius, learning, and worth."—The works of Persius consist of six satires, with a prologue. The metre of the latter is of the kind called Choliambic (lame Iambic), being an Iambic trimeter, with a spondee in the sixth place instead of an iambus. The Satires contain altogether only 650 hexameters; and in some manuscripts they are given as one continuous work. Whether Persius wrote more than we now possess, as the author of his life attributed to Suetonius affirm, we know not; but since Quintilian and Martial speak of his claims to distinction, though he left "only one book," we should conclude that no other production of his was known in their time. The chief defect of Persius is an affected obscurity of style, which is so great and so general that there are few scholars who read these performances for the first time, whose progress is not arrested at almost every line by some difficulty of the vocabulary and syntax. But, although the Satires are not without some show of reason, that one of the causes of the great obscurity of Persius is the caution with which he constantly conceals his attacks upon Nero. The scholar, moreover, expressly states, with regard to several verses of the poet, that they were intended for the emperor. This may be a sufficient apology for Persius as far as Nero is concerned; but why allow the same obscurity to pervade the rest of his poem? The Satires of Persius would, in fact, be absolutely unintelligible for us, if we had not the labour of an ancient scholar, or, rather, a collection of extracts from several scholars, to guide us; and even with this aid we are frequently unable to comprehend the meaning of the satirist. The conclusion seems irresistible, that much of this obscurity is owing to the peculiar character of the poet's mind, to his affected consciousness, and to the show of erudition which he affects. But, instead of condemning the negligent style of Horace, give the preference to Persius as a satirist on account of the greater harmony of his hexameters. Melody of diction, however, cannot compensate for the want of perspicuity; besides, the style of Horace, in his satires, is purposely made to approximate to that of familiar life. It must appear surprising that Persius is so reserved respecting the gross vices and immorality of the age in which he lived. The best way of accounting for this is to ascribe it to the reticent life led by the youthful poet in the bosom of a virtuous family, and his consequent want of experience in the excesses of the day. The best editions of Persius are, that of Isaac Casaubon, revised by his son Merc, *Lond.*, 1647, 4to; Bond, *Norh.*, 1631, 8vo; Koenig, *Göt.*, 1803, 8vo, and also with Rapet's edition of *Juvenal*, *Glasg.*, 1825.

**Pertinax**, Publius Helvius, a Roman emperor after the death of Commodus, was born about A.D. 126, at Villa Martis, near Alba Pannopeia, on the banks of the Tanarus, in the modern *Piedmont*. His father was a freedman, who dealt in charcoal, an important article of fuel in Italy even at the present day. He received from his parent a good education, and was placed by him under the tuition of Sulpicius Apollinaris, a celebrated grammarian, who is repeatedly mentioned by Aulus Gellius. Pertinax became a proficient in his studies, and was even recommended to the emperor by the father of his master, he taught grammar himself. But, being dissatisfied with the small profits of his profession, he entered the army; and, being assisted by the interest of Lollianus Avitus, a man of consular fami-
ly, and his father’s *patronus*, he was promoted to a command. He was sent to Syria at the head of a cohort, and served with distinction against the Parthians, under I. Verus, the colleague of Marcus Aurelius. He was afterward sent to Britain, where he remained for some time. He subsequently served in Moesia, Germany, and Dacia, but, upon some suspicion of his fidelity, he was recalled by Marcus Aurelius. Having cleared himself, he was made praetor, and commander of the first legion, and obtained the rank of senator. Being sent to Rhedia and Noricum, he drove away the hostile German tribes. His next promotion was to the *consulate*, and he publicly received the praise of Marcus Aurelius, in the senate and in the camp, for his distinguished services. In Syria he assisted in repressing the revolt of Avitus Cassius. He was next removed to the command of the legions on the Danube, and was made governor of Moesia and Dacia, and afterward returned to Syria as governor, where he remained up to the death of Marcus. Capitolinus says, that his conduct was irreproachable till the time of his Syrian government, when he enriched himself, and his conduct became the subject of popular censure. On his return to Rome, he was banished by Perennis, the favourite of Commodo, to his native country, Liguria. Here he adored Villa Martis with sumptuous buildings, in the midst of which, however, he left his house and moved into a country dwelling three years in Liguria. After the death of Perennis, Commodo commissioned him to proceed to Britain, where the licentiousness of the troops had degenerated into mutiny. On his arrival, the soldiers wished to salute him as emperor, and were with difficulty prevented by Pertinax, who seems to have found the discipline of the legions in a most deplorable state. One of the legions revolted against him; and, in trying to repress it, he, by means he collected money to pay, on his recovery he punished the mutineers, and solicited the emperor for his recall, as his attempts at restoring discipline had rendered him obnoxious to the army. He was then sent as proconsul to Africa, and was afterward made prefect of Rome, in which office he showed much moderation and humanity. After the murder of Commodo, two of the conspirators, Latus and Electus, went to Pertinax and offered him the empire. Pertinax consented, and the senate, on the 13th of January, 193, solemnly accepted, and was proclaimed emperor by the senate on the night previous to the first of January, A.D. 193. In the speech which Pertinax delivered on the occasion, he said something complimentary to Latus, to whom he owed the empire, on which Q. Sosius Falco, one of the consuls, observed, that it was easy to foresee what kind of an emperor he would make, if he allowed the ministers of the aromities of Commodo to retain their places. Pertinax replied, “You are but a young consul, and do not yet know the necessity of forgiving. These men have obeyed the orders of their master Commodo, but they did it reluctantly, as they have shown whenever they had an opportunity.” He then repaired to the imperial palace, where he gave a banquet to the magistrates and principal senators, according to ancient custom. The historian Dio Cassius places them one of the guests. Pertinax recalled those who had been exiled for treason under Commodo, and cleared from obloquy the memory of those who had been unjustly put to death. But his attempts to restore discipline in the army alienated the affections of the soldiers, who had been accustomed to license during the reign of Commodo. As he found the treasury empty, he sold the statues, the plate, and all the valuable objects amasscd by his predecessors, but, as he had collected money to pay the praetorians, and to make the usual gifts to the people of Rome. He publicly declared that he would receive no legacies or inheritance from any one, and he abolished several taxes and tolls which had been imposed by Commodo. Pertinax was cherished by the senate and people; but the praetorians, secretly encouraged by the traitor Latus, conspired against the new emperor. After offering the empire to several persons, they went to the palace three hundred in number. The friends of Pertinax urged him to conceal himself until the storm had passed; but the emperor said that such conduct would be unworthy of his rank; and he appeared before the mutineers, and calmly demonstrated with them upon the guilt of their attempt. His words and conduct produced an impression upon them, when one of the soldiers, a German by birth, threw his spear at him, and wounded him in the breast. Pertinax then covered his face, and, praying the gods to avenge his murder, was slain by the other soldiers. Electus alone defended him as long as he could, and was killed with him. The soldiers cut off the head of Pertinax and carried it into their camp, and then put up the empire at auction, offering it to the highest bidder. It was purchased by Didius Julianus. Pertinax was 67 years of age, and had reigned 87 days. (Capitol., Vit. Pert.—Dio Cass., 73, 1.—Encycl. Useful Knowl., vol. 17, p. 509.)

**Perusa**, now Perugia, one of the most ancient and distinguished cities of Etruria, situate at the south-eastern extremity of Lucus Trasymenus, or Lago di Perugia. The era of its foundation long preceded the time of the Romans. It was the residence of Camillus, who was of the Etrurian, and those of the other Etruscan states, it long resisted the Roman arms, but, when reduced, it became a powerful and wealthy city. It was a Roman colony about 709 B.C., under the consulsip of C. Vibius Pansa; and, some years after, sustained a memorable siege, in which Antonius held out against Octavius Caesar, but was at last forced by famine to surrender. On this occasion, (109 B.C.) many of the inhabitants were put to death, and the city was accidentally burned; a madman having set fire to his own house, a general conflagration ensued. (Appian, Bell. Civ., 5, 49.—Compare Vell. Patere, 2, 74.—Plorus, 4, 5.—Suet., Vit. Aug., 96.) Perusia appears, however, to have risen again from its ruins, according to Appian and Dio Cassius (48, 15); and under the Emperor Justinian we find it maintaining a successful siege against the Goths. (Cracmer. Hist. It. ed. Malasp. tom. 2, p. 219.)

**Pescennius.** Vid. Niger.

**Pessinus** (gen. -unita; in Greek Ἑπεσσωτος; gen. -ουτος), a city of Galatia, on the river Sangarius, and near the western confines, according to D’Anville’s map. It was of very early origin, but chiefly famous on account of the worship of Cybele. Strabo says, that Mount Dindymus (whence she was named Dindyneta) rose above the town. So great was the shrine and the statue of the goddess, that the Romans, joined, as it is said, by the Sibylline books, caused the latter to be conveyed to Rome, since the safety of the state was declared to depend on its removal to Italy. A special embassy was sent to King Attalus, to request his assistance on this occasion: this sovereign received the Roman deputies with great kindness and hospitality, and, having conveyed them to Pessinus, gave them a banquet in honor of the statue of the mother of the gods, which was no thing else but a great stone. On its arrival at Rome, it was received with great pomp and ceremony by the Roman senate and people, headed by Scipio Nasica, who had been selected for this office by the national voice as the best citizen, according to the injunction of the Ptolemaic oracle. This took place in the year 547 U.C., near the close of the second Punic war. (Liv., 51, 16. Strab., 567.) Stephanus of Byzantium affirms, that Pessinus originally bore the name of Arabyzus, when the district in which it stood was longed to the Caucones; but he does not mention from what author he derives this information. (Steph. P. 1017)
PET

byz., s. v. 'Αγίαξ. — Herodian and Ammianus give various derivations of the name of Pessinus, which are not worth repeating. (Herod., i, 11.—Ammian. Marcell., 22, 22.—Compare Steph. Byz., s. v. Πεσσινοῦτος.) It would seem that the inhabitants of Byzus, after parting with the image of their goddess to the Romans, had still another one in store, for we learn from Livy, that the worship of Cybele was still observed in this city after its occupation by the Gauls, since the priests of the goddess are said to have sent a deputation to the inhabitants of Byzus on the banks of the Sangarius. (Livy, 38, 19.) Polibius mentions the names of the individuals who then presided over the worship and temple of Cybele. (Polyb, fragm., 20, 4.) In the fourth century, also, the Emperor Julian turned away from his line of march against the Persians, for the purpose of visiting the shrine. (Amm. Marcell., 22, 9.)—Pessinus was the chief city of the Tolstoioli, who settled in this part of the country, and, according to Strabo's account, was a place of considerable trade. It sank in importance under the Romans; and although Constantine, in his new arrangement of the provinces, made Pessinus the capital of Western Galatia (Galatia Saturaris,—Hierocles, p. 697), yet the city gradually disappeared from notice after the commencement of the sixth century. Great uncertainty exists with regard to the site of this place, since its ruins have not been explored by any modern traveller. From the Antonine Itinerary we know that it was ninety-three miles from Ancyra, with which it communicated through Germa, Vindia, and Papiria. Germa, the first of these stations, is known to answer to Yerma, on the modern road leading from Eski-cher to Ancyra; the Itinerary would lead us to place it sixteen miles from that site, towards the Sangarius. The Table Itinerary, on the other hand, gives a route from Dorylamine to Pessinus, by Mideaum and Tricoma, and allows seventy-seven miles for the whole distance. But the road from Dorylamine to Ancyra did not pass by Pessinus, but by Arrhaeum and Germa, as appears from another route in the Antonine Itinerary (p. 202), so that it is evident that Pessinus could not have been situated where Colonel Leake would place it, beyond Juliiopolis, or Gordium, on the right bank of the Sangarius, and near its junction with the Hierus, as it would then have been exactly on the road to Ancyra, and such a route as that by Germa would have been given in the Antonine Itinerary. We ought, therefore, to look for the ruins of Pessinus not far from the left bank of the Sangarius, somewhere in the great angle it makes between its junction with the Yerma and the Pursek. In Lapie's map, the ruins of Pessinus are laid down in the direction which we have just mentioned, on a site called Kakê, but the authority for this is not given. (Oram's Asia Minor, vol. 2, p. 58, seqq.—Leake's Travels and Researches in the Country of Cybele at Pessinus, as also its porticoes, were at one time inhabited by marble carvers, surrounded by a beautiful grove. The city was indebted for these decorations to the kings of Pergamus. The priests of the goddess were at one time high in rank and dignity, and possessed of great privileges and emoluments. (Strab., 567.)

PETRA, i. a town of Italy, in the territory of the Bruttii, on the coast of the Tarentine Gulf, and to the northward of which there was a place called Marmas, or HMinas, the site of which has been explored by Philochoios after the Trojan war (Virg., 3, 401.) In the opinion of the most judicious and best informed topographers, it occupied the situation of the modern Strongoli. (Holsten., ad Steph. Byz., p. 307.—Romanelli, vol. 1, p. 206.) This small town, of whose earlier history we have no particulars, gave a striking proof of its fidelity to the Romans in the second Punic war, when it refused to follow the example of the other Bruttian cities in joining the Carthaginians. In consequence of this resolution, it was besieged by Hannibal, and, though unassisted by the Romans, it held out until relieved by the inactivity of famine; nor was it till all the weather in the town, as well as the bark and young shoots of trees, and the grass in the streets, had been consumed for subsistence, that they at length surrendered. (Vell. Paterc., 6, 6.—Liv., 23, 30.) Ptolemy incorrectly classes Pettilas with the inland towns of Magna Graecia (p. 67), and Strabo confounds it with the Lucanian Petili. (Oram's Anc. Italy, vol. 2, p. 389.)—It is called by some the Lucuan confounded by Strabo with the Bruttan Petili. It is supposed to have been situated on what is now the Monte della Stella, not far from Paestum. (Oram's Anc. Italy, vol. 2, p. 368.) Petilius, an individual at Rome, surnamed Capitolinus. According to the scholiasts on Horace (Sat., i, 4, 94), he had been governor of the Capitol. They add, that he was accused of having stolen, during his office, a gold crown consecrated to Jupiter, and that, having pleaded his cause in person, he was acquitted by the judges in order to gratify Augustus, with whom he was on friendly terms. Hence, they say, arose his surname of Capitolinus. One part, at least, of the story is incorrect, since the Capitolini were a branch of the Petilian family long before this. (Compare Vatianl, Num. Fam. Rom., vol. 2, p. 222.) What degree of credit is due to the rest of the narrative it is hard to say. A full examination of the whole point is made by Wieland (ad Hvorat., l. c.)

Petrus, a celebrated astrologer and philosopher of Egypt. He wrote, according to Suidas, an astrological work, compiled from the sacred books; a treatise concerning the mysteries of the Egyptians, &c. (Suidas, s. v.—Pliny,' 2, 23.—Juv., 6, 581.—Athenaeus, 3, p. 114.—Jacobs, ad Anthol. Gr., vol. 2, pt. 2, p. 470.—Salmas., de Ann. Clim., p. 66, 353.) Ptolemy everywhere calls him Ἁρχαίος, and says that he and Necepsus were the authors τῆς κλαμακτικῆς διογνασίας, that is, of the art of counting the number of "climactic years," reference being also had at the same time to the position of the stars. (Salmas., l. c.)

PETRA, i. a city of Arabia, the capital of the Nabataeans, and giving name to the division of the country called Arabia Petraea. It was situate a short distance below the southern boundary of Palestine. The ordinary form of the name is Petra (ἡ Πέτρα); Josephus, however, in some places speaks of Petra as the feminine plural of Petra (ἡ Πέτρας). The appellation given to the city originated in the peculiar nature of its situation. It stood on an elevated plain, and was well supplied with fountains and trees; but all around were rocks, which only allowed an access to the place on one side, and that a difficult one. Hence the name of the place, from πέτρα, a rock. The country beyond this, especially towards the borders of Palestine, was inhabited by a race of Semites. According to Dioscorus SiculoS (19, 55), there was no city in this quarter in the time of Antigonus, but only a place strongly fortified by nature, and supplied with numerous caves that were used as dwellings. Here, upon a rock (ἐρήμων πέτρας), the Nabataeans were accustomed to leave their families and plunder whenever they went on distant expeditions, and this served them as a stronghold. The troops of Antigonus were repulsed in this spot a large quantity of frankincense and myrrh, and also five hundred talents in silver. (Diod., l. c.) The incense and myrrh show that they carried on an overland traffic with the neighbouring communities, and it is to this same traffic that the city of Petra owed its origin. All subsequent writers speak of Petra as a city, and an important place of trade. Eckel gives a coin, on which we find the inscription Ἀρδούντι Πέτρα Μυροφόρος. If the coin be genuine, it shows that in the time of the Emperor
Hadrian, Petra not only belonged to the Roman away, but had also adopted the name of its conqueror. (Die Cax., 68, 14.) The Syrians (and the Church fathers) call this place Rhehem (Petra) which also is supposed to be a "rock;" and Arhehem (Arkeiyin).—Josephus, Ant. Jud., 4, 7. Josephus states that Aaron died in its neighbourhood; he calls it in this passage Arke (Arke) by contraction. (Ant. Jud., 4, 4.) St. Jerome makes it the same with the Sea of Scripture (2 Kings, 14, 7). Traces of the Syran name remained at a late day, and we find it mentioned by Abulfeda under the appellation of Ar Rakim, with the remark that there were dwellings here cut out of the rock. D'Anville names it incorrectly Karak. Petra seems not to have continued a place of trade for any very long time; at least Ammianus Marcellinus is silent respecting it, though he enumerates very carefully the important places in this region. Petra lay, according to Diodorus (19, 168), at the distance of 60 miles from the Dead Sea; and, according to Strabo (779), three or four days' journey, or from twelve to sixteen geographical miles in a southern direction from Jericho. The remains of the ancient city were for a long time undiscovered by modern travellers. Burckhardt and Bane, at last, discovered them at Wady Mousa, in 1812, but could not give them a close examination through fear of the Arabs. In 1838, two French travellers, first made a closer examination of this place, and gave a description of the ruins; but the best and fullest account is that afforded by the pages of Mr. Stephens, who was at Petra in 1836. (Incidents of Travel, vol. 2, p. 50, seqq.—Mannert, Geogr., vol. 6, pt. 1, p. 137, 5th ed.)—II. A fortress of Macedonia, among the mountains beyond Libethra, the possession of which was disputed by the Peribheli of the Thessaly and the kings of Macedonia. (Lee, 39, 20.—Id., 44, 3.) It confers upon the country a refined and elegant beauty which led to Pythium in Thessaly by the back of Olympia.—III. A fortress on Mount Hæmus. (Liv., 40, 22.)—IV. A Corinthian borough or village, of which Ætien, the father of Cypselus, was a native. (Herod., 5, 91)—V. A rock-fortress in Sogdiana, taken by Alexander. (Quint. Curt., 7, 11.) It was also called Ozi Petra, probably from its being near the river Oxus. 

Petræa, one of the divisions of Arabia, so called, not properly the capital, but composed of a rocky or rocky character (πηρά, "a rock;" "a stone"), but from its celebratedemporium Petra. (Vid. Petra, 1.) It was bounded on the east by Arabia Deserta, on the west by Egypt and the Mediterranean, on the south by the Red Sea, which here divides and runs north in two branches, and on the north by Palestine. This country contained the southern Edonites, the Amalekites, the Cushites, who are improperly called of the Edomites, the Hivites, &c. Their descendants are at present known by the general name of Arabians; but it is of consequence to notice the ancient inhabitants as they are mentioned in the text of Scripture. (Vid. Arabia.)

Petrius, Marcus, a Roman commander. He was lieutenant to the consul C. Antonius, and was intrusted by the latter, who feigned indisposition, with the command of the Roman forces against the army of Cassius Gallicianus, at Edessæ, Bell. Civ., c. 59, seq.) To the cause of the republic, he became one of Pompey's lieutenants in Spain during the civil contest, and endeavoured, in conjunction with Afranius, to oppose the progress of Caesar in that country. They were both, however, compelled to surrender (Cax., Bell. Civ., 1, 38, seq.), and retired after this to Greece, where they joined the army of Pompey. After the battle of Pharsalia, Petreus fled to Petra (Cæs., Bell. Civ., c. 59, seq.) and there subsequently accompanied Scipio into Africa. Here again, however, the defeat at Thapsus disappointed his hopes, and he fell, according to Polyby, by his own hand, after having performed the same sad office for Juba, the partner of his flight. (Liv., Epit., 114.) According to Hirtius, however, Juba and Petreus having agreed to die by each others' hands, the African prince easily killed his Roman friend, who was already advanced in years; but having attempted, without effect, to slay himself, persuaded one of his own slaves to become his executioner. (Hirtius, Bell. Afr., c. 94.)—Compare Florus, 4, 2, 69.—Appian, Bell. Civ., 2, 100.—Senec., Serm., 7.—Id., de Provid., 2.)

Petra, an Arabic emporium, within the district of Sinuessa, in Italy. (Hor. Epist., 1, 5, 5.)

Petropocit, a Gallic tribe, belonging originally to Celtic Gaul, but subsequently forming part of Gallia Aquitania, when this last was detached from Celtica. Their territory corresponded to the modern Perigord, and their capital Petropociti answers to the present Periguen. These both modern names retain manifest traces of the ancient appellation. (Cax., B. G., 7, 73, 7, 78, 7, 80, 7, 82, &c.)

Petronius, Titus, surnamed Arbitrius, because Nero had named him Arbitrius elegantius. He was born, according to some modern scholars, at Massilia (Marcellis) or somewhere in its vicinity, of a good family, but received his education at Rome. No one knew better how to unite the love of letters with the most unrestrained desire for pleasure. His portrait has been drawn by Tacitus with the kindness of an admirer. It is not the Petronius of Tacitus who has the præmon of Cæsars, and the Petronius of whom we are now treating that of Titus. There prevails, indeed, much uncertainty respecting the præmon of Petronius; Pliny (37, 7) calls the Petronius of Tacitus, Titius; while the scholar on Juvenal gives him the name of Publius.—We will here insert the passage of the historian above mentioned, which gives so graphic a description of the character of the man: Gay and airy in his conversation, he charmed by a certain graceful negligence, the more engaging as it flowed from the natural frankness of his disposition. With all his delicacy and careless ease, he showed when he was governor of Bithynia, and afterward in the year of his consulsiphip, that vigour of mind and softness of manner may well unite in the same person. From his public station he returned to his usual gratification, and the pursuit of pleasures that bordered upon it. His gayety recommended him to the notice of the prince. In being in favour at court, and cherished as the companion of Nero in all his select parties, he was allowed to be the arbiter of taste and elegance. Without the sanction of Petronius nothing was exquisite, nothing rare or delicious. Hence the jealousy of Tigellinus, who dreaded a rival, in the good graces of the emperor almost as much as himself in the good graces of luxury. Tigellinus determined to work his downfall, and accordingly addressed himself to the cruelty of the prince; that master passion to which all other affections and every motive were sure to give way. He charged Petronius with having lived in close intimacy with Sävins the conspirator; and, to give colour to that assertion, he bribed a slave to inform against his master. The ruin of the domestics were loaded with iron. Nor was Petronius suffered to make his defence. Nero at that time happened to be on one of his excursions into Campania. Petronius had followed him as far as Cumas, but was not allowed to proceed farther than that place. He seemed to linger in doubt and fear, and yet he was not in a hur-
PETRONIUS.

ry to leave a world which he loved. He opened his veins and closed them again, at intervals losing a small quantity of blood, then binding up the orifice, as his own inclinations prompted. He conversed during the whole time with his usual gayety, never changing his habitual manner, nor talking sentences to show his contempt of death. He listened to his friends, who endeavoured to entertain him, not with grave discourse

on the immortality of the soul or the moral wisdom of philosophy, but with strains of poetry, and verses of a gay and natural turn. He distributed presents to some of his servants, and ordered others to be chastised. He walked out for his amusement, and even lay down to sleep. In his last scene of life he acted with such calm tranquillity, that his death, though an act of ne-

cessity, seemed no more than the decline of nature. In his will, he scorned to follow the example of others, who, like himself, died under the tyrant's stroke: he neither flattered the emperor nor Tiggellius, nor any of the creatures of the court; but having written, under the fictitious names of profligate men and women, a narrative of Nero's debauchery, and his new modes of vice, he had the spirit to send to the emperor the tablets, sealed with his own seal, which he took care to break, that, after his death, it might not be used for the destruc-

tion of any person whatever." *(Tacitus, Ann., 16, 18, seqq.)*—Some critics have thought that the Petronius to whom Tacitus alludes in this passage was the real author of the work that has come down to us, entitled *Satyricon.* Their chief argument is, that the work which, according to Tacitus, Petronius, when dying, caused to be sent to Nero, was written on portable tablets *(codicilli)*, a circumstance that militates against the idea of its being a production of any length. It is urged, moreover, that the accomplices in the tyrant's debaucheries and crimes were named in the work, whereas in the Satyricon the bearers of fictitious names. It is evident, indeed, that the Satyricon is not the piece of which Tacitus makes mention, and that Nero caused the latter to be destroyed; but it would seem that the critics who advocate this opinion go too far when they deny also the identity of the writers. What is there to prevent our supposing that Petronius, having now no measure to keep with the world, amused himself with tracing on his testamentary and fictitious writings, such a narrative of his whose general manners he was content with depicting in his larger work? Those critics, on the other hand, who do not see in the author of the Satyricon the friend and intimate companion of Nero, are divided in opinion as to the period when he lived. Some carry him up as high as the era of Augustus, while others place him under the Antonines, or even in the fourth century. Both parties ground their respective argu-

ments on his style. The former discover in it the purity of the golden age, while the latter find it marred by many low and trivial expressions, and with many solciscs that indicate the decline of the language. Without wishing to throw the blame of some of these faults on the manuscript itself, which is in so deplor-

able a state that many passages remain incapable of being deciphered, notwithstanding all the efforts of the commentators, it appears that these pretended solciscs have been purposely put by the author in the mouths of individuals of the lower class, and that the unusual words employed by him only appear such to us, because we are unacquainted with the language of debauchery and intoxication among the Romans?—

Some critics, surprised that Seneca makes no mention of Petronius, think that this silence is owing to the cir-

cumstance of that philosopher's believing himself to be alluded to in the following lines aimed by Petronius against the Stoics:

"Ipsi qui cynica traducunt tempora scenæ,
Nonnuncquam nummis venderè verba solent."—

1020

If it were certain, as some suppose, that Terentianus Maurus was the contemporary of Marzial, there would remain but little doubt respecting the epoch when Petronius lived, since Terentianus cites him once under the name of Arbiter, and another time under that of Petronius. In 1770, a learned Neapolitan, Ignarra, supported, with some new reasons, the opinion that Pe-

tronius lived towards the end of the era of the Anto-

nines. It appears more than probable, he maintains,

that the Satyricon was written in the city in which the scene of the banquet of Trimalcion is laid, and that its object is to depict the manners of the Ne-

apolitans. Many hellenisms and solciscs, some of which still remain among the lower orders at Naples, prove, he thinks, that Petronius was either born in that city, or received his education there. As to the peri-

od in which he lived, he indicates it himself, according to Ignarra, in the 44th, 57th, and 76th chapters, and elsewhere, by giving to the city of Naples the title of colony, or in speaking of the colonial magistrates. Ig-

narra then proceeds to show that Naples only became a Roman colony towards the close of the reign of Com-

modus. Finally, he remarks that Petronius, in the 76th chapter, makes mention of the mathematician Serapion, who lived under Caracalla, as appears from a passage in Dio Cassius (78, 4). Ignarra thinks that Petronius, born under the Antonines, had, by a careful study of the literature of the age, become ac-

quainted with its elegance; that is to say, with the elegance of the golden age, without getting entirely rid of the corruption of that in which he happen-

ed to live. *(De Palæstra Neapolitana, &c., p. 182, seqq.)* Wytenbach appears to favour the opinion of Ignarra, in some of its features *(Bibl. Crit., pt. 5, p. 84, seqq.)*; but some arguments might be cited against it.—Some critics, again, have thought that the author of the Satyricon was not called Petronius, but that, as the whole work is not genuine, but is a mixture of the Satyricon and the Distichs Cato, so this Menippine Satire has been styled *Petronius* by the author: this opinion, however, is altogether untenable.—The Satyricon of Petronius is written in the Varronian or Menippine style of satire. We have merely a fragment of it, or, to speak more correctly, a succession of fragments, which some lover of loose and indecent reading would seem to have selected from the work, and scattered in the modern ages, for the amusement of the individual that had existed in the twelfth century. The fragments that remain form so many episodes: the most witty of these is the well known history of the Ephesian Matron; but the longest, and the one most descriptive of the manners of the day, is the Banquet of Trimalcion, a ridiculous per sonage, intended, as some think, to represent the Em peror Claudioii. This fragment was found in the 17th century at Trau in Dalmatia, in the library of the City. Nicolauus Cuprius, and was published for the first time at Padua, in 1662. It gave rise to a very warm con-

test among the scholars of the day. Adrien de Valois and Wagensiel attacked its authenticity, which was defended in its turn by Petit, the celebrated physician, in a treatise in which he assumed the name of Mar-

inus Staliueus. The manuscript was sent to Rome and examined by some of the first critics of the day. It passed after this into the library of the King of France. At present there is no doubt as to its authen-

ticity.—The noise which this discovery made in the literary world induced a French officer named No-

dot to attempt an imposture, which did not, however, answer his hopes. He published, in 1693, at Rotter-

dam, a pretended Petronius, complete in all its parts, which he said had been found at Belgrad, in 1688, by a certain Dupin. At first, some members of the academ-

ies of Nime and Arles suffered such losses as to impose upon them; the fraud, however, was soon discover-

ed. We must not confound with this last-mentioned individual a Spaniard named Marchenf, who, in 1800, amused himself with publishing a new fragment
of Petronius, found, according to him, in the library at St. Gall. (Reperoire de Litter. Anc., vol. 1, p. 239.)—A poem in 295 verses, on the fall of the Roman republic, forms a fine episode to the Satyricon of Petronius. The Satyricon itself, it may be remarked, in concluding, is admirable for the truth with which the author delineates the characters of his personages. It contains many pleasing pictures, full of irony; and it is characterized by great spirit and gaiety of manner; but it is to be regretted that the author has employed his abilities on a subject so truly immoral and disgusting. The style is rich, picturesque, and energetic; but often obscure and difficult, either from the unusual words which we meet with in it, or by reason of the corrupt state of the text. The best edition is that of Burman, 4to, Utrajr., 1709; to which may be added that of Reinesius, 1731, 8vo; and that of C. G. Anton, Lips., 1781, 8vo. (Schöll. Hist. Lit. Rom., vol. 2, p. 416, seqq.—Bähr, Gesch. Róm. Lit., vol. 1, p. 577, seqq.)

Peuce, a name applied to the land insulated by the two principal arms of the Danube at its mouth. The ancient appellation still partly remains in that of Pizcina. It was called Peuce from πεύκον, a pine-tree, with which species of tree it abounded. From this island the Peucini, who dwelt in and adjacent to it, derived their name. We find them reappearing in the Lower Rhine in many names of Pizcinae and Patinacitae. (Lucan, 3, 202.—Plin., 8, 27.)

Puccetia, a region of Apulia, on the coast, below Daunia. The Puccetii, like the Dionysii of Halicarnassus, derived their name from Puccetius, son of Lycaon, king of Arcadia, who, with his brother Cenotrus, migrated to Italy seventeen generations before the siege of Troy. But modern critics have felt little disposed to give credit to a story, the improbability of which is increased by the fact that the country whence these pretended settlers are said to have come, or the state of navigation at so remote a period. (Frenel, Mem. de l'Acad., &c., vol. 18, p. 87.) Had the Puccetii and the Cenotri really been of Grecian origin, Dionysius might have adduced better evidence of the fact than the genealogies of the Arcadian chiefs, cited from Pherecydes. The most respectable authority he could have brought forward on this point is the history of Antiochus the Syracusan; but this historian is only quoted by him in proof of the antiquity of the Cenotri, not of their Grecian descent. (Dion. Hal., 1, 2.—Strabo, 283.—Plin., 3, 11.) The Puccetii are always spoken of in history, even by the Greeks themselves, as barbarians, who differed in no essential respect from the Daunii, Iapyges, and other neighbouring nations. (Cramer's Anc. Italy, vol. 2, p. 296.)

Phacæa, a town of Egypt, on the Pelusiac arm of the Nile. The ruins are found near the modern Tell Phaclus (hill of Phacæa). (Steph. Byz., s. v.)

Phacæus, one of the Sparodes, now Gaphonissi. (Plin., 4, 12.—Steph. Byz., s. v. Phácouc.)

Phæaca, the Homeric name for the island of Corcyra. (Vid. Corcyra.) When visited by Ulysses, Alcinoëos Eræus king, and his gardens are beautifully described by the poet. The Phæacians are representable as an easy-tempered and luxurious race, but remarkable for their skill in navigation. They were fabled to have derived their name from Phmæ, a son of Neptune. (Hom. Od., 6, 1, seqq.—Id. ib., 7, 1, seqq.—VöLcker, Homerische Geographie, p. 66.)

Phædon, a native of Elis, and the founder of the Eliac school. He was descended from an illustrious family of the beloved Aigisthis, who, as he supposed, was deprived of his patrimony, and sold as a slave at Athens. It happened that Socrates, as he passed by the house where Phædon lived, remarked in his conversation traces of an ingenious mind, which induced him to per-
since his retirement to the island of Caprea, was be-

come an object of general contempt, that Phaedrus
meant him, in the second fable of the first book, by
the log given to the frogs as their king. But, if Phae-
drus has indeed represented Tiberius under the alle-
gory of a log, the hydra, which takes its place, will
indicate the successor of the monarch, unless we sup-
pose Sejanus and Casar (when the latter was still
this instant in force) to have been the avatars of Ai-
vius, and Phae-
drus. This point, however, appears extremely forced. Titze
thinks that Phaedrus may have been at first a favourite
of Sejanus, and afterward involved in his disgrace; and
that Eutychus, in the reign of Caligula, had given
him hopes of a restoration to imperial patronage.
This theory, however, is contradicted by the prologue to the
third book of the fables (v. 41.—Titze, Introduct. in
Phaedr.—Id., de Phaedri vita, scriptis, et saev.);—
Phaedrus composed five books of fables, containing, in
all, ninety fables, written in Jambic verse. He has
merited of the first made the Romans acquainted with
the fables of Ἀσωπ; not that all his own fables are
merely translations of those of the latter, but because
the two thirds of them that appear original, or, at least,
with the originals of which we are unacquainted, are
written in the manner of Ἀσωπ. Phaedrus deserves
the praise of attention for the way in which he has ar-
ranged his fables; and for this we are quite indebted to
Fontaine, who, like him, has taken from other sources
besides the fables of Ἀσωπ the materials for a large
portion of his own. He is distinguished for a precision,
truthfulness, and a neatness of style and manner
which have never been surpassed. The air of simplicity
which characterizes his pieces is the surest guarantee
of their authenticity, which some critics have contest-
ed. His diction is at the same time remarkable for its
eloquence, though this occasionally is pushed rather
too far into the regions of refinement. The manu-
scripts of Phaedrus are extremely rare. The one from
which Pithou (Pithecus) published, in 1596, the editio
princeps of the fables, passed eventually, by marriage,
to the hands of the Lepelletier family; and is now in
the library of M. Lepelletier de Rosanbo (De Xy-
vey, ad Phaedr., p. 23, seqq.—Id. ib., p. 40, seqq.).
A second manuscript, which Rigalt used in his edition
of 1617, was in 1684 destroyed by fire in the library of
Fontaine, but we have remaining of this a very accurate colla-
tion. A third one, or, rather, the remains of one,
now in the Vatican library, and is said to contain from
the first to the twenty-first fable of the first book.
(Nott. Literar. de Cod. MSS., Phaedr., No. 3, de
Cod. Daniela.) This rarity of manuscripts is one cause
of the doubts that have been entertained by some respect-
ing the authenticity of the fables ascribed to him,
and even the very existence of the poet. Some
other circumstances lend weight to these doubts: the
silence, namely, of the ancient writers concerning Phae-
drus, and the positive declaration of Seneca, who re-
marks (Consol. ad Polyb., c. 27) that the Romans had
never attempted to compose after the manner of the Ἀσωπ fables.
(No autudo uque pro producere, ut fabellas quaee et Ἀσωπον logos, inventarium Romanum ingenios opus, solita tibi unciatate connectas.) Another
passage (de consol. ad Marc., 2, 23, 25) asks the question in
these words:—Nicolas Perotti, who, about the middle
of the 16th century, was archbishop of Manfredonia, and
one of the patrons of Greek literature in Italy, cites
in his Cornut Copiae a fable which he says he took in
his early days from the fables of Avienus. (Allusit
ad fabulam, quam nos ex Avieno in fabellas nostras
adolescentes Iambico carmine translatimus.) At
Cornut Copiae 2, 7, 10 (ed. Basili, 1592, fol.) the
fable, however, is not in the collection of Avienus, but
forms the 17th of the 3d book of Phaedrus; and from
this inaccurate of citation, which was regarded as a
falsehood, some concluded that Perotti was a plagia-
rist, while others regarded Phaedrus as a supposititious
author. Both these opinions were a little too precipi-
tate; and the discovery that was made, at the begin-
ing of the 18th century, of the manuscripts of the fables of Perotti, cleared up at once the whole mys-
tery. One of the titles of this MS. is as follows:
"Nicolaus Perotii Epitome Fabularum Ἀσωπ., Avieni.
Et Phaedri," &c.; and to this are subjoined some
verses, in which Perotti openly declares that the fables
in the manuscript were not merely copied from this instant Phae-
drus, but from the fables of Tiberius. The sections of
Perotti are the 6th, 7th, and 8th of the first book,
together with the epilogue; a large number of the sec-
ond book; from the 19th to the 24th of the fourth
book, and the first five of the 5th book. Perotti,
therefore, is by no means the plagiarist some suppose
he to be, since he names the authors from whom he bor-
dows. Two other arguments may also be adduced
in favour of the opinion which makes the fables of
Phaedrus much earlier than Perotti's time: one is afforded
by a monumental inscription, found at Apulum, in Da-
cia, and consisting of a verse of one of the fables of
Phaedrus (3, 17.—Mannert, Res Trajani ad Danub.,
etc., p. 78); the other argument is deduced from the
age of the MSS., which is much earlier than the era of
the Bishop of Manfredonia, and falls in the ninth
or tenth century. It has been conjectured, and with
great reason, that a poet, who was behind the age of Phae-
drus, frequently taken by the writers of the twelfth,
thirteenth, and fourteenth centuries, and con-
verted into prose, and in this way we are to account
for the great destruction of M.S.—There is, however,
another question connected with this subject. The
manuscript of Perotti, to which we have just alluded as
having been discovered near the beginning of the eight-
teenth century, had, by some fatality or other, been
again lost, and remained so until 1586, when it was
rediscovered at Naples, and in 1809 a supplement of
32 new fables of Phaedrus (as they were styled) was
published by Casitio and Jannelli. A literary warfare
immediately arose respecting the authenticity of these
productions, in which several eminent scholars took
part; and the opinion is now very generally enter-
tained, that they are not, as was at first supposed, the
composition of Perotti, but of some writer antecedent
to his time, who, during the 17th century, had
sufficiently preserved his work, and who, if not himself,
ought to be known to posterity. He is supposed to
be either Rutilio, or Titius, who, according to
Avienus, and of course by this is meant the same
Perotti, the first of whom was bishop of Manfredonia,
and the other a priest in Aquileia, and eventually a
broad, who, according to Avienus, and of course by
this is meant the same Perotti, the first of whom was
bishop of Manfredonia,
Phaethon, son of Helios and the Ocean-nymph Clymene. His claims to a celestial origin being disputed by Epaphus, son of Jupiter, Phaethon journeyed to the palace of his sire, the sun-god, from whom he extracted an unwary oath that he would grant him whatever he asked. The ambitious youth instantly demanded permission to guide the solar chariot for one day, to prove himself thereby the undoubted progeny of the immortal Helios. The sun-god, at the prayer of Earth, launched his thunder, and hurled the terrified driver from his seat. He fell into the river Eridanus. His sisters, the Heliades, as they lamented his fate, were turned into poplar-trees on its banks, and their tears, which still continued to flow, became amber as they dropped into the stream. Cynus, the friend of the ill-fated Phaethon, also abandoned himself to mourning, and at length was changed into a swan (Livy, xiv. 42. 4.; Ovid, Met. i. 204. 51.; Schol. on Met. i. 205. 2.).

The legend of Phaethon is regarded by the exponents of mythology at the present day as a physical myth, devised to account for the origin of the electron, or amber, which seems to have been brought from the Baltic to Greece in the very earliest times. The term ἀκτέαρ, as Wecker observes, resembles ἀκτής, an epithet of the sun. In the opinion of this last-mentioned writer, the story of Phaethon is only the Greek version of a German legend on the subject. The tradition of the people of the country in question is said to be (Apoll. Rhod. 4. 611.), that the amber was produced from the tears of the sun-god. The Greeks made this sun-god the same with their Apollo, and added that he shed these tears when he came to the land of the Hyperboreans, an exile from heaven on account of his avenging upon the Cyclops the fate of his son Ἀσκαλών. But, as this did not accord with the Hellenic conception of either Helios or Apollo, the Heliades were devised to remove the inconsistency. The foundation of the fable lay in the circumstance of amber being regarded as a species of resin, which drops from the trees that yield it. That part of the legend which relates to the Eridanians, confounds the Po with the true Eridanus in the north of Europe. (Wecker, Aesch. Trag. p. 610.,; Nightingale's Mythology, p. 57., seq.)

Phaethontides or Phaethontides, the sisters of Phaethon, changed into poplars. (Vid. Heliades, and Phaethon.)

Phalaris, a Lacedaemonian, one of the Parthénies, and the leader of the colony to Tarentum. (Vid. Parthenie.)

Phalaris, a tyrant of Agrigentum in Sicily, whose age is placed by Bentley in the 57th Olympiad, or about 550 B.C. This, however, is done by that eminent scholar, in the course of his well-known controversy with Boyle and others, merely to give more force to his own refutation, since it is the latest period that history will allow, and, therefore, the most favourable to the pretended letters of Phalaris, which provoked the discussion. (Monk's Life of Bentley, p. 62.) It is from these same letters that Boyle concluded a large correspondence with this tyrant. Phalaris, however, but the inventions of authors, and productions from which he drew his information, and the absence of more authentic documents, cast an air of suspicion on the whole biography. According to this life of him, he was born in Astypales, one of the Sporades, and was banished from his native island for allowing his ambitious views to become too apparent. Proceeding thereupon to Sicily, he settled at Agrigentum, where he eventually made himself master of the place and established a tyranny. (Compare Polygnot. Agr. 4. 4.) He at first exercised his power with moderation, and drew to his court not only poets and artists, but many wise and learned men, whose counsels he promised to follow. Deceived by this state of things, the people of Himera were about to request his aid in terminating a war which they were carrying on with their neighbours, when Steischorns dissuaded them. (Vid. Steischorns.)

The seditions which afterward took place in Agrigentum compelled Phalaris to adopt a severer exercise of his authority, and hence his name has come to us as that of a cruel tyrant. The instrument of his cruelty, also, namely the brazen bull made by the artist Perillus, is often alluded to by the ancient writers. (Vid. Perillus.) The manner of his death is variously given. Some make him to have been put to death for his cruelty by the people of Agrigentum; others relate that his irritated subjects put him into his own bull and burned him to death. (Vid. Perillus.)—We have remaining, under the name of Phalaris, a collection of letters, supposed to have been written by him, but which Bentley has shown to be mere forgeries of some sophist, who lived at a later period. The letters of Phalaris were first published by Bartholomaeus Jonaspolitanus in 1436, Veneti. 4to. This edition, which is very rare, ought to be accompanied by a Latin version; since Bartholomaeus promises one in his prefatory epistle to Peter Contarenas; but no copy occurs with one. (Lauri, Index Libr. Hoffmann, Lex. Bibliogr., vol. 3. p. 210.) The most esteemed among subsequent editions is that of Van Lennep, completed by Valckenear, Groning. 1777, 4to, republication of the original of Freind, Lips., 1823, 8vo, maj. The edition of Boyle, which gave rise to the controversy between the Christ-Church wits and the celebrated Bentley, was issued from the Oxford press in 1695, 8vo, and reprinted in 1718. It owes its only notoriety to the lashing which Bentley inflicted upon the editor, the Hon. Charles Boyle, brother to the Earl of Orrery, and, at the time of the first publication, a member of Christ-Church. In preparing the translation, Boyle was assisted by Mr. John Freind, one of the junior students of the college, afterward the celebrated physician, who officiated as his private tutor. The preface contained a remark, reflecting, though without any just grounds whatever, on Bentley's want of courtesy in not allowing a manuscript in the King's Library, of which he was keeper, to be collated for Boyle's edition. This drew from Boyle his first Dissertation on the life of Phalaris, in the form of Letters to Mr. Wotton, a work which, though afterward eclipsed by the enlarged dissertation, is no less amusing than learned. The author is completely successful in proving the epistles spurious. His arguments are drawn from chronology, from the language of the letters, from their matter, and, finally, from their late discovery. Having overthrown the claim of Phalaris to
a place among royal or noble authors, Bentley examines certain other reputed pieces of antiquity, such as the Letters of Themistocles, of Socrates, and of Euripides; all which he shows not to be the productions of the individuals whose names they bear, but forgeries of some sophists many centuries later. The publication of this work excited a sensation in the literary and critical circles that was unexampled. The society of Christ-Church was thrown into a perfect ferment, and the task of inflicting a full measure of literary chastisement upon the audacious offender was assigned to the ablest scholars and wits of the college. The leaders of the confedecracy were Atterbury and Smalridge, but the principal share in the attack fell to the lot of the former. In point of classical learning, however, the joint stock of the coalition bad been at that time considerably to few; while wit and ratiocination found numerous and eager readers. The consequence was, that when the reply of the Christ-Church men appeared, this motley production of theirs, which is generally known by the name of "Boyle against Bentley," it met with a reception so uncommonly favourable as to form a kind of paradox in literary history. But the triumph of his opponents was short-lived. Bentley replied in his enlarged Dissertation, a work which, while it effectually silenced his antagonists, and held them up to ridicule as mere sciolists and blunderers, established on the firmest basis his own claims to the character of a consummate philologion. (Monk's Life of Bentley, p. 49, seqq.)

Phaleron, the most ancient of the Athenian ports; but which, after the erection of the docks in the Piraeus, ceased to be of any importance in a maritime point of view. It was, however, enclosed within the fortifications of Themistocles, and gave its name to the southernmost of the long walls, by means of which it was connected with Athens. Phaleron supplied the Athenian market with abundance of the little fish named Aphyra, so often mentioned by the comic writers. (Aristoph., Acharn., 901.—Id., Ar., 96.—Athen., 7, 8.—Aristot., Hist. An., 6, 15.) The lands around it were marshy, and 'produced very fine cabbage' (Herod., I. 1, 19.) The modern name of Phaleron is Porto Fanari. "Phalerum," says Hobbson (vol. 1, p. 301, Am. ed.),'is of an elliptical form, smaller than Mynychia; and the remains of the piers on each side of the narrow mouth are still to be seen. The line of its length is from east to west, that of its breadth from north to south. On the northeast side of the port, the land is high and rocky until you come to the fine sweep of the bay of Phalerum on the east side of which two promontories terminated on the northeast by a low promontory, one that of Colias. The clay from this neighbourhood was preferred to any other for the use of the potters."

Phare, a harbour of the island of Chios, with a temple of Apollo and a palm-grove in its vicinity. Near it also was a promontory of the same name. (Strabo, 645.—Liv., 36, 43.—Id., 44, 28.) Phare was from the heights of this part of the island, and not from the promontory which was remarkable for its excellent wine. (Virg., Georg., 2, 98.) The promontory is called at the present day Cape Mastico. (Mannert, Geogr., vol. 6, p. 3, p. 326.)

Phanote, a town of Chaonia in Epirus, corresponding to the modern Cardiki, a fortress once belonging to the Suliots. (Cramer's Greece, vol. 1, p. 99.)

Phaon, a mariner of Lesbos, accustomed to ferry passengers across from the island to the mainland (τραβήγμα προς Φαλαιας.—Pereph. de Incred., 49.) Lucian calls him a native of Chios. (Dial. Mort., 9, 2.) According to one legend, he was beloved by Venus, who concealed him amid lettuce. (Elian, V. H., 12, 18.) Another version of the fable stated, that Venus condescended on one occasion, under the form of an aged female, and, having requested a passage, was ferried across to the main land by him, free from charge, such being his wont towards those who were in indigent circumstances. The goddess, out of gratitude, presented him with an alabaster box, containing a peculiar kind of ointment, and, when he had rubbed himself with this, he became the most beautiful of men. Among others, Sappho became enamoured of him, but, finding that he was a mariner, and not a divinity, committed suicide. (Plut., 24.) Phaon was the god of the sea from the promontory of Leucate. (Vid. Sappho, and Leucate.—Pereph. I. c.—Elian, I. c.—Arcas, Violar., p. 461, ed. Walz.—Eudocia, p. 419.—Suid., s. v. Φαω.)

Phare, a borough of Tanagra in Boiotia. (Strabo, 405.)—II. One of the twelve cities of Achaia, situate on the river Pirus, about 70 stadia from the sea, and to the south of it. It was an island, and was annexed by Augustus to the colony of Priae. The shores were observed by Dodwell on the left bank of the Camenita (vol. 2, p. 310.)—III. A town of Crete. (Steph. Byz., s. v. Φαρα.)—IV. A town of Messenia, on the Sinus Messeniacus, northwest of Cardamyla. Among other divinities worshipped here were Nicomachus and Gorgonzis, sons of Machano. They had both governed this city after the death of their father, to whom, as well as themselves, was attributed the art of healing maladies. (Steph. Byz., s. v.)

Pharmaces, a two islets a short distance from the Attic shore, in the Sinus Saronicus, east of Salamis. In the larger of these Circe was said to have been interred. (Strabo, 395.—Steph. Byz., s. v. Φαρμακωβοσα.) They are now called Kyra. (Chandler's Travels, vol. 3, p. 220.)—II. An island of the Ægean Sea, southwest of Miletus, and about 120 stadia distant from that place. It is known as the place where Julius Cesar was taken by the pirates. (Plut., Vit. Cez.)

Pharnaces, I, grandfather of Mithradates the Great, and son and successor of Mithradates IV. of Pontus. He conquered Sinope and Tium (Strab., 545.—Diod. Sic., Frag.), and was engaged in a war with Eumenes, king of Pergamus, which lasted for some years, and was put an end to chiefly through the interference of Rome. (Polyb., 34, 4.) By the treaty of Polyaurum he was forced to surrender his kingdom. He was assigned by Augustus to the colony of Priae. There are several records of Pharnaces that he was more wicked than all the kings who had preceded him. (Polyb., 27, 15.)—II. Son of Mithradates the Great, proved treacherous to his father when the latter was forming his bold design of advancing towards Italy from Asia, and crossing the Alps as Hannibal had done before him. Although the favourite son of that celebrated monarch, he incited the army to open rebellion, disconcerted all his father's plans, and brought the death of the Pontic monarchy upon him. As a reward of his perfidy, Pharnaces was proclaimed King of Bosporus, and styled the ally and friend of the Roman nation. (Appian, Bell. Mithr., c. 103, seqq.) During the civil war waged by Caesar and Pompey, Pharnaces made an attempt to recover his hereditary dominions, and succeeded in taking Sinope, Amisus, and some other towns of Pontus. But Julius Cesar, having joined his forces with those of Pompey, marched into Pontus, and, encountering the army of Pharnaces near the city of Zela, gained a complete victory; the facility with which it was gained being expressed by the victor in those celebrated words, "Vent, Vidi, Vici." (Hirt, Bell. Alex., c. 72.—Plut., Vit. Ces.—Sueton, Vit. Ces., 37.—Dio Cass., 42, 47.) After his defeat, Pharnaces retired to the Bosporus,
where he was slain by some of his own followers. (Appban, Bell. Mithrad., c. 120.—Die Cass., l. c.)

Pharnacia, a city of Pontus, on the seacoast, and in the territory of Maresus. According to Tzetze it was confounded with Cerasus by Arrian (Perip., p. 17), while the anonymous geographer, though in this instance he copies that writer, yet afterward places Cerasus 530 stadia farther to the east (p. 13). It should be observed, also, that Strabo says that Cerytonium, and not Cerasus, had contributed to the foundation of Pharos (Strabo, 548) ; and he afterward names Cerasus as a small place distant six miles from and nearer Trapezus. Mannert, however, distinguishes Pharnacia and Cerasus, and he besides informs us that the former was 100 miles from Trapezus (6, 4). Xenophon and the Greeks were three days on their march from Trapezus to Cerasus, a space of time too short to accomplish a route of 100 miles over a difficult country. (Anab., 5, 3, 5.) It is apparent, therefore, that the Cerasus of Xenophon is not to be identified with Pharnacia, though it might be thought so in Arrian's time; and it is remarkable that this erroneous opinion should have prevailed so strongly as to leave the name of Kerosous to the site occupied by the ancient Pharnacia. With respect to this latter place, it appears to have been founded by Pharnaces, grandfather of Mithradates the Great, though we have no positive authority for the fact. We know only that it existed in the time of the last-mentioned monarch, since it was visited by Lucan's poet with the help and authority of Josephus, who expressly says (Ant., 1, 12, 2, 12) that in his time the island was no more than 36,000 cubits, from which it would appear that the tower must have lost a portion of its original height. (Palatmer, ad Strab., l. c.) The name Pharos itself would seem to have been given to the tower first, and after that to the island, if the Greek etymology be the true one, according to which the term comes from the Greek φαραω, "to shine" or "be bright" (φαω, φαω, φατω, φατω). Jablonski, however, makes the word of Egyptian origin, and deduces it from phers, "a watch-tower" or "look-out place." (Voc. Egypt., s. v. Phers.)—Opus. The great embellishment of the island of Pharos, or of the old island, by the Romans, who first build a foundation to the modern name of Libans, or Lampsacus, in the time of Tiberius, is mentioned by Valerius Maximus (4, 25) and by Suetonius (Aug., 11). This foundation, which appears to have been connected with the works of any strength, the whole being accommodated to the inequality of the ground on which it stands. Out of the midst of this emblazon building rises a tower, which serves for a lighthouse, but which has nothing of the beauty and grandeur of the old one.—II. An island off the coast of Illyricum, to the east of Issa, and answering to the modern Lessina. It was settled by a colony from Pharsalus (Sклaz, p. 8.—Seymon, Ч., 5, 368). The name is given to it by the ancient Voss., of whom of the ancients. Pharsalia (Pharsalia) I. the region around the city of Pharsalus in Thessaly, celebrated for the battle fought in its plains between the armies of Caesar and Pompey. (Vid. Pharsalus.)—II. The title of Lucan's epic poem. (Vid. Lucanus.)

Pharsalus, a city of Thessaly, situate in that part of the province which Strabo designates by the name of Thessaliotis. It lay southwest of Larissa, on the river Enipeus, which falls into the Apidanus, one of the tributaries of the Peneus. Although a city of considerable size and importance, we find no mention of it prior to the Persian invasion. Thucydides reports that it was besieged by the Athenian general Myronides after his success in Beotia, but without avail (1, 111). The prudent policy of the services rendered to the Athenian people by Thucydides the Pharsalian, who performed the duties of a praefectus to his countrymen at Athens (8, 92); and he also states that the Pharsalians generally favoured that republic during the Peloponnesian war. At a later period, the plains in the vicinity of this city became celebrated for the battle fought between the armies of Caesar and Pompey. (Vid. Pharsalia.)—II. The distinction between the old and new town, as he speaks of Paleo-Pharsalus (441.—Compare Strabo, 431). Dr. Clarke (Travel., vol. 7, p. 328, Lond. ed.) observes, that there are few anti
Phaselis, a town of Lycia, on the eastern coast, near the confines of Pamphylia. Livy remarks, that it was a conspicuous point for those sailing from Cilicia to Rhodes, since it advanced out towards the sea; and, on the other hand, a fleet could easily be detached from it (37, 23). Hence the epithet of ἱσσυοῦσσα applied to it by Dionysius Periegetes (v. 854). We are informed by Herodotus (2, 178), that this town was colonized by some Dorians. Though united to Lycia, it did not form part of the Lycian confederacy, but was governed by its own laws. (Strabo, 667.) Phaselis, at a later period, having become the haunt of pirates, was attacked and taken by Servilius Paulus, in the year 156 B.C., (Eutrop., 6, 3.) Lucan speaks of it as nearly deserted by the end of the Punic war. (Pharsalus.) Nevertheless, Strabo asserts that it was a considerable town, and had three ports. He observes, also, that it was taken by Alexander, as an advantageous post for the prosecution of his conquests into the interior. (Strab. 666. —Compare Arrian, Exp. Al. 1, 24. —Plut., Vit. Alex.) Phaselis, according to Atheneum, was celebrated for the manufacture of rose perfume (14, 723, 7). Ponger considers this its chief product. (ap. Athenaeum, p. 683.)—"On a small peninsula, at the foot of Mount Tukhtalos (the highest point of the Solyman mountains)," says Captain Beaufort, "are the remains of the city of Phaselis, with its three ports and lake as described by Strabo. The lake is now a mere swamp, occupying the middle of the isthmus, and was probably the source of those bauxite exhalations which, according to Livy and Ciceron, rendered Phaselis of such importance. The modern name is Tekvra." (Karvanania, p. 56.)—"The harbour and town of Phaselis," observes Mr. Fellows, "are both extremely well built and interesting, but very small. Its theatre, stadium, and temples may all be traced, and its numerous tombs on the hills show how long it must have existed." (Tour in Asia Minor, p. 211.)—Beyond Phaselis the mountains press in upon the shore, and leave a very narrow passage along the strand, which at low water is practicable, but, when storms prevail and the sea is high, it is extremely dangerous: in this case, travellers must pass the mountains, and proceed into the interior by a long circuit. The defile in question, as well as the mountains overhanging it, was called Climax, and it obtained celebrity from the fact that Alexander led his army along it, after the conquest of Caria, under circumstances of great difficulty and danger; for, though the wind blew violently, Alexander, impatient of delay, hurried his troops forward, along the shore, where they had the water up to their middle, and had great difficulty in making their way. (Strab., 666, seq. —Arrian, Exp. Al. 1, 26. —Plut., Vit. Alex.) Captain Beaufort remarks, that "the shore at present exhibits a remarkable coincidence with the account of Alexander's march from Phaselis. The road along the beach is, however, intersected in some degree by imposing cliffs, which would have been difficult to surround, but round which the men could readily pass by wading through the water." (Karamaniana, p. 115, seq. —Compare Leake's Tour, p. 190.)

Phænēs (Φηνής), a city in the northern part of Arcadia, at the foot of Mount Cylene. It was a town of great antiquity, since Hercules is said to have resided there after his departure from Tyrins, and the Phænisci, in the time of Hecuba, are called Phœnisci. (II., 2, 605.) The place was surrounded by some extensive marshes, which are said to have once inundated the whole country, and to have destroyed the ancient town. They are more commonly called Phezian, a district of Armenia Major, through which the river Phasis or Araxes flows; whence the name of the region. The beautiful birds, which we call pheasants, still preserve in their name the traces of this their native country. (Vid. Araxes I.) Phænis, a patronymic given to Medes, as being born in Colchis, on the banks of the Phasis. (Ovid, A. A. 2, 381.) Phænis, a river of Asia, falling into the Euxine after passing through parts of Armenia, Iberia, and Colchis. According to Strabo and Pliny, it rose in the southern portion of the Moschian mountains, which were regarded as belonging to Armenia. (Strabo, 498. —Plin., 6, 4.) Procopius states that in the early part of its course it was called Boas, but that, after reaching the confines of Iberia, and becoming increased in size by several tributaries, it took the name of Phaenis. (Procop., Pers. 2, 29.) Its modern name is Rion or Rint, which would seem more properly to belong to the Rhen, one of its tributaries. The Turks call it the Fasch. The Phasis is famous in mythology from Jason's having obtained in its vicinity the golden fleece of Grecian fable. Arrian (Peripl., Mar. Eux.) says, that the colour of the water of the Phasis resembled that of water impregnated with lead or tin; that it, was of a bluish cast. It was said, also, not to intermingle with the sea for some distance from land. (Plin., 6, 4.)—Phasis, the river of Phasis, consult remarks at the end of this article. (Mannert, Geogr., vol. 4, p. 394, seq.)—II. A city at the mouth of the Colchian Phasis, founded by a Milesian colony. (Mel. 1, 85.) It does not appear to have been a place of any great trade. In Hadrian's time it was a mere fortress, with a garrison of 400 men. (Arrian, Peripl.—Ammian. Marcell., 22, 8.) The place is not mentioned by Procopius. In the vicinity of this spot, the Turks mention a place called Phasiana, which Procopius in the Dacian wars had been important. (Potti. (Mannert, Geogr., vol. 4, p. 396.)—III. A river of Armenia Major, the same with the Araxes. (Vid. Araxes, I.)—The name Phasis would seem to have been a general appellation for rivers in early Oriental geography, and the root of it may be very fairly traced in the Indo-Germanic dialects. (Phas.—Was—German Wasser, "Water."—Consult Ritter, Vorhalle, p. 468.) Phænus (Φηνός), (in Greek Φηνός), a native of Arcate in Gaul, who lived at Rome during the reigns of Trajan and Hadrian, and enjoyed a high degree of consideration. He wrote numerous works, but no part of them has reached us except a few fragments in Stobæus. Aulus Gellius, however, has preserved for us some of his dissertations in a Latin dress. (Not. Att., 12, 1; 14, 1, 2; 17, 10.) Phavorinus loved to write on topics out of the common path, and more or less whimsically; he composed, for example, a eulogium on Therates, another on Quartian Fever, &c. Having had the misfortune to offend the Emperor Hadrian, his statues, which the Athenians had raised to him, were thrown down by that same people. He bequeathed his library and mansion at Rome to Herodes Atticus. Phavorinus was a friend of Plutarch's, who dedicated a work to him. For farther particulars relating to this individual, consult Philostorgius, (Vit. Sophisti., 1, 8, 1), and Lucian. (Eunuch., c. 7—Demon. —Schöll, Gesch. Gr. Lit., vol. 2, p. 607.) Phazania, a region of Africa, lying to the south of Tripolis. It is now Fezzan. (Plin., 5, 3.)

Ppa : 1026
the Lake of Pheneus, and were principally formed by the river Ararpanis or Olbias, which descends from the north of Pheneus, and usually finds a vent in some natural caverns or katabathra at the extremity of the plain; but when, by accident, these happened to be blocked up, the waters filled the whole valley, and, associating with the Ladon and Alpheus, overflowed the beds of those rivers as far as Olympia. (Eratosth., ap. Strab., 389.) Pausanias reports, that vestiges of some great works undertaken to drain the Phenean marshes, and ascribed by the natives to Hercules, were to be seen near the city 7, 14). The vestiges of the town itself are visible, according to Dodwell, near the village of Phoenia, upon an insulated rock. The lake is said to vary according to the season of the year. (Dodwell, vol. 2, p. 436—Cramer’s Anc. Gr., vol. 3, p. 321.)

PHEM. I. a city of Pelasgiotis, in Thessaly, one of the most ancient and important places in the country. It was the capital of Admetus and Eumeus, as we learn from Homer (II., 2, 711, seq.) and Apollonius. (Arg., 1, 49.—Compare Hom., Od. 4, 798.) Phere was once a colonist, and was not at all a city of Lacedaemon, who, having raised himself to the head of affairs by his talents and ability, became master not only of his own city, but of nearly the whole of Thessaly. (Vid. Jason, II.) After the death of Jason, Phere was ruled over by Polydorus and Polyphon, his two brothers. The latter of these was succeeded by Alexander, who continued for eleven years the scourge of his native city and of the whole of Thessaly. (Xen., Hist. Gr., 6, 5.) His evil designs were at last checked by the brave Pelopidas, who entered that province at the head of a Boeotian army, and occupied the citadel of Larissa; but, on his falling into the hands of the tyrant, the Boeotian army was placed in a most perilous situation, and was only saved by the presence of mind and ability of Epaminondas, then serving as a volunteer. The Thebans subsequently rescued Pelopidas, and, under his command, marched upon Alexander of Phere, whom they defeated, but at the expense of the life of their gallant leader, who fell in the action. (Plut., Vit. Pelop.—Polyb., 8, 1, 6, seqq.) Alexander was not long after assassinated by his wife and her brothers, who continued to tyrannize over this country until it was liberated by Philip of Macedon. (Xen., Hist. Gr., 6, 4.—Diod. Sic., 16, 38.) Many years after, Cassander, as we are informed by Diodorus, found it prudent to leave Thessaly, and the city was conquered by the Poisians, and afterwards by secret negotiations, to obtain possession of both the town and citadel. (Diod. Sic., 20, 110.) In the invasion of Thessaly by Antiochus, Phere was forced to surrender to the troops of that monarch after some resistance. (Liv., 36, 9.) It afterward fell into the hands of the Roman consul Atilius. (Id., 36, 14.) Strabo observes, that the constant tyranny under which this city laboured had hastened its downfall, since it was a fertile and fruitful place, and the suburbs, as we collect from Polybius, were surrounded by gardens and walled enclosures (18, 2). Stephanus Byzantinus speaks of an old and new town of Phere, distant about eight stadia from each other. Phera, according to Strabo, was ninety stadia from Pagasa, its emptorium. (Cramer’s Ancient Greece, vol. 1, p. 393.) II. a town of Attica. (Steph. Byz., s. v. Phere.)—III. A town of Messenia, to which the ancient Phean inhabitants made Telemachus and the son of Nestor to have been entertained by Diocles, on their way from Pylos to Sparta. (Od., 15, 186.) It is also alluded to in the Iliad (5, 543). Phere was one of the seven towns offered by Agamemnon to Achilles. (II., 9, 151.) It was annexed by Augustus to Laconia, after the battle of Actium. (Pausan., 4, 30.—Cramer’s Ancient Greece, vol. 3, p. 141.)

Pheræs, a surname of Jason, as being a native of Phera. (Vid. Jason, II.)

PHERÉCTES, a comic poet of Athens, contemporary with Plato, Phrynichus, Aristophanes, and Eupolis. (Suid., s. v. Πθρικύς.—Clinton, Fast. Hell., vol. 1, p. xI.) Little is known of him. He is said to have written a few comedies, of which a few fragments remain. The following are the titles of some of his pieces: "The Deserters," "Chiron," "The Old Wom-en," "The Painters," "The False Herocles," &c. Such was the license which prevailed at this period on the Greek stage, that Pherécetes was particularly commended for having abstained entirely in his pieces from any personal attacks. He was also the inventor of a species of verse, which was called from him the Pherécetean or Pheréctic. This verse is the Glyconic deprived of the final syllable, and consists of a spondee, a choriambus, and a catalectic syllable. The first foot was sometimes a trochee or an anapest, rarely an iambus. When this species of verse a spondee in the first station, it may then be scanned as a dactylic trimeter. It has been conjectured that the trochee was originally the only foot admissible in the practice of the native place of Jason, who, as having raised himself to the head of affairs by his talents and ability, became master not only of his own city, but of nearly the whole of Thessaly. (Plut., Vit. Pelop.—Polyb., 8, 1, 6, seqq.) Alexander was not long after assassinated by his wife and her brothers, who continued to tyrannize over this country until it was liberated by Philip of Macedon. (Xen., Hist. Gr., 6, 4.—Diod. Sic., 16, 38.) Many years after, Cassander, as we are informed by Diodorus, found it prudent to leave Thessaly, and the city was conquered by the Poisians, and afterwards by secret negotiations, to obtain possession of both the town and citadel. (Diod. Sic., 20, 110.) In the invasion of Thessaly by Antiochus, Phere was forced to surrender to the troops of that monarch after some resistance. (Liv., 36, 9.) It afterward fell into the hands of the Roman consul Atilius. (Id., 36, 14.) Strabo observes, that the constant tyranny under which this city laboured had hastened its downfall, since it was a fertile and fruitful place, and the suburbs, as we collect from Polybius, were surrounded by gardens and walled enclosures (18, 2). Stephanus Byzantinus speaks of an old and new town of Phere, distant about eight stadia from each other. Phera, according to Strabo, was ninety stadia from Pagasa, its emptorium. (Cramer’s Ancient Greece, vol. 1, p. 393.) II. a town of Attica. (Steph. Byz., s. v. Phere.)—III. A town of Messenia, to which the ancient Phean inhabitants made Telemachus and the son of Nestor to have been entertained by Diocles, on their way from Pylos to Sparta. (Od., 15, 186.) It is also alluded to in the Iliad (5, 543). Phere was one of the seven towns offered by Agamemnon to Achilles. (II., 9, 151.) It was annexed by Augustus to Laconia, after the battle of Actium. (Pausan., 4, 30.—Cramer’s Ancient Greece, vol. 3, p. 141.)
probably, to have taught the doctrine of the transmigration of the soul; for this was a tenet commonly received among the Egyptians, and afterward taught by Pythagoras. Whether it was that Pherecydes instituted no sect; or that his writings fell into disuse through their obscurity; or that Pythagoras disregarded them. After him the regular historians begin the oracles of the author of the doctrines which he had learned from his master; or whatever else might be the cause, we are left without farther information concerning his philosophy. (Enfield's History of Philosophy, vol. 1, p. 362, seqq.) There are extant some fragments of a Theogony composed by him, which bear a strange character, and have a much closer resemblance in the Orphic poems to than to those of Hesiod. They show, by this time, the characteristic of the theogonic poetry had been changed, and that Orphic ideas were in vogue. (Müller, Hist. Gr. Lit., p. 234.) The fragments of Pherecydes, together with those of his namesake of Leos, were edited by Sturz, Gera, 1789, 8vo, and a new edition appeared in 1824, Lips., 8vo, with additional fragments, and more enlarged explanations. The preface to this latter edition contains the greater part of Matthiae's dissertation, which Sturz undertook to refute. The dissertation itself was written by Matthiae, in 1814, Allenk., 8vo, and was reprinted in Wolf's Anthol., vol. 3, p. 321, seqq.—Pherecydes, and Cadmus of Miletus, are said to have been the first of the Greeks that wrote in prose. (Schöll, Hist. Lit. Gr., vol. 1, p. 212.—Hoffmann, Lex. Bibliogr., vol. 3, p. 219.)—II. A native of Leos, one of the Sporades, and a contemporary with Herodotus. He was the last of the Logographers, or compilers in prose of historical traditions (λόγοι, and γραμματεύματα). The first to be published by Matthiae, in 1814, Allenk., 8vo, and was reprinted in Wolf's Anthol., vol. 1, p. 321, seqq.—Pherecydes, and Cadmus of Miletus, are said to have been the first of the Greeks that wrote in prose. (Schöll, Hist. Lit. Gr., vol. 2, p. 140.) Phereus, son of Cretheus, and of Tyro the daughter of Salmoneus. He founded Phere in Thessaly, where he afterward became, and became the father of Athamatus, and of Lycurgus, king of Nemea. (Apollod., 1, 9, 11.—Id., 1, 9, 13.) Phidias, a celebrated statue, son of Charmidas, and a native of Athens. Nothing authentic is related concerning his earlier years, except that he was instructed in statue by Hippidas and Ageladas, and that, when quite a youth, he practiced painting, and made a picture of Jupiter Olympus. (Plin., 35, 9, 34.—Slebel, Indic. Winckeln, p. 334.—Jacobs, Amalth, vol. 2, p. 247.) Respecting Hippidas we have little information. In what period Phidias was a pupil of Ageladas is likewise uncertain; but as Pausanias makes Ageladas a contemporary of Onatas, who flourished about the 78th Olympiad (Pausan., 8, 42, 4), and as in this period Ageladas was both distinguished by his own productions as an artist, and was at the head of a very celebrated school of statuaries, we may properly suppose this as the time in which Phidias was under his tuition. Between the date just mentioned and the third year of the 85th Olympiad, there is an interval of 30 years. If with these conclusions we attempt to ascertain the time of the birth of Phidias, it is by no means an improbable conjecture that he was about 20 years of age when he received the instructions of Ageladas, and, therefore, was born in the first year of the 73d Olympiad, or B.C. 489, a date very nearly accords with that given by Muller. He will explain the fact, that in B.C. 438, Phidias, then 50 years of age, represented himself as bald on the shield of the Athenian Minerva. He must also have been about 50 years of age at the time of his death. (Silius, Dict. Art. s. v.)—Phidias brought to his pro-

PHIDIAS.
PHIDIAS.

1. His guilty god

2. Müller, on (made statue to his instants.

3. Miiller, on the most memorable circumstance

4. of the Olympian Jupiter graced the temple of that god at Olympia in Elis, and was chryselephantine (made of gold and ivory), like that of Minerva. Like it, too, the size was colossal, being sixty feet high.

5. The god was represented as sitting on his throne: in his right hand he held a figure of Victory, also made of gold and ivory, in his left a sceptre beautifully adorned with all kinds of metals, and having on the top of it a golden eagle. His brows were encircled with a crown, made to imitate leaves of olive; his robe was of massive gold, curiously adorned, by a kind of encaustic work probably, with various figures of animals, and also with lilies. The sandals, too, were of gold.

6. The throne was inlaid with all kinds of precious materials, ebony, ivory, and gems, and was adorned with sculptures of exquisite beauty. On the base was a lofty pedestal. It was pointed out to me by Schomann, Pausan., 5, 11. — Compare Quatremer de Quincy, Sup. Olymp., p. 310. — Siebelis ad Pausan., i. c.) Lucian informs us, that, in order to render this celebrated work as perfect in detail as it was noble in conception and outline, Phidias, when he exposed it for the first time after its completion to public view, placed himself behind the door of the temple, and listened attentively to the audience. As the multitude of visitors, who had crowded in after the temple gates were closed, he revised and corrected his work, wherever the objections he had just heard appeared to him to be well-grounded ones. (Lucian, pro Imag., 14.) It is also said, that when the artist himself was asked, by his relation Panenus, the Athenian painter, who, it seems, sided him in the work, whence he had derived the idea of this his grandest effort, he replied, from the well-known passage in Pliny: "Sixty statues he had cast of Olympus to tumble on its base by the mere movement of his sable brow. (L. i, 528.) The lines in question, with the exception of their reference to the "sambrosial curls," and the brow of the god, contain no allusion whatever to external form, and yet they carry with them the noble idea of the Supreme Being nodding benignant assent with so much true majesty as to cause even Olympus to tumble. (Strab. 354.—Poët. Lyric. i., xxx. 15, 4, 3.—Menon, de Phil. Vitr., p. 62.) Of the whole work Quintilian remarks, that it even added new feelings to the religion of Greece (Inst. Or., 12, 10, 9), and yet, when judged according to the principles of genuine art, neither this nor the Minerva in the Parthenon possessed any strong claims to legitimate beauty. It does not excite surprise, therefore, to learn that Phidias himself disapproved of the effect produced by a work in marble in different circumstances, nor will it appear presumptuous in us to condemn these splendid representations. In these compositions, exposed, as they were, to the dim light of the ancient temple, and from their very magnitude imperfectly comprehended, the effects of variously reflecting substances, now gloom, now glowing with unearthly lustre, must have been rendered doubly imposing. But this influence, though well calculated to increase superstitious devotion, or to impress mysterious terror on the bewildered sense, was meretricious, and altogether diverse from the solemn repose, the simple majesty of form and expression, which constitute the true sublimity of sculptural representation. (Memes, History of the Fine Arts, p. 52.)

7. In the time of Pausanias, there was still shown, at Olympia, the building in which this state of Jupiter was made, and the posterity of Phidias had the care of keeping the image free from whatever might sully its beauty, and were, on this account, styled Phidiaeosi. (Pausan., 5, 14, 5.)—We have already remarked that, according to the best critics, this statue was executed subsequently to that in the Parthenon, and not, as the common accounts have it, before. It was on his return to Athens, after completing the Olympian Jupiter, that Phidias (Pausan., 12, 14, 8) — contended, an embezzlement, which many erroneously suppose to have preceded his visit to Elis. According to Plutarch, his friendship and influence with Pericles exposed the artist to envy, and procured him many enemies, who, wishing, through him, to try what judgment the people might pass upon Pericles himself, persuaded Menon, one of his workmen, to place himself as a suppliant in the forum, and to entreat the protection of the state while he lodged an information against Phidias. The people granting his request, Menon charged the artist with having embezzled a portion of the forty talents of gold with which he had been furnished for the decoration of the statue in the Parthenon. The allegation, however, was disproved in the most satisfactory manner; for Phidias, by the advice of Pericles, had put on the gold-en decorations in such a way that they could be easily removed and replaced. The statue was accordingly taken off, and, at the order of Pericles, weighed by the accusers; and the result established the perfect innocence of the artist. His enemies, however, were not to be daunted by this defeat, and a new charge was, in consequence, soon prepared against him. It was alleged that, in his representation of the battle of the Amazons upon the shield of Minerva, he had inscribed his own name, and kept up, in looking up a large stone with both hands, and a highly-finished picture of Pericles contending with an Amazon. This was regarded as an act of impiety, and Phidias was cast into prison, to await his trial for the offence; but he died in confinement before his cause could be heard. (Plut. Vit. Pericl.—Müller, de Vit. Phid., p. 33, seqq.—Schomann, de Comit., p. 219.—Platner, der Prozess, und die Klagen, vol. i, p. 388.)

8. The two most remarkable ones, the statues of Minerva and Jupiter. Among his works in bronze may be enumerated the following: 1. The celebrated statue of Minerva Promachus, to which we have alluded in a previous article. (Vid. Parthenon.)—2. A statue of Minerva, placed, like the previous one, in the Athenian Acropolis, and highly praised by Pliny (34, 8, 19). Lucian prefers it to every other work of the artist's. (Imag., 4.)—3. Another statue of Minerva, belonging to Paula Emilius, placed in the temple of Fortune. (Plin., l. c.)—4. Thirteen bronze statues, dedicated at Delphi, by the Athenians, out of the spoils taken at Marathon. (Pausan., 10, 30, 1.)—The following were among the productions of Phidias in marble. 1. A statue of Venus Urania, placed in a temple dedicated to this goddess, not far from the Ceramicus at Athens. (Plin., 36, 4, 4.)—2. Another statue of Venus, of exquisite beauty, which was in the collection of Octavia at Rome. (Plin., 36, 5, 4.)—3. A statue of Mercury, placed in the vicinity of the Thebes. (Pau
PHIDON.

... - Phidias not only practised statuary, the art in which he was pre-eminent, but also engraving, as we learn from Martial (Epigr. 9, 38), and from Pliny (Epist. 8, p. 377). The models of the most distinguished artists were, Agoracritus, Alcamenes, and Colotes. (Silig., Dict. Art., s. v.)

Junius, Catal. Artific., p. 151, seqq. — Müller, de Phid. Vit., p. 37, seqq.) - The sublime style perfected by Phidias seems almost to have expired with himself; not that the art declined, but a predilection for subjects of beauty and the softer graces, in preference to more heroic and masculine character, with the exception of the grand reliefs on the temple at Olympia, may be traced even among his immediate disciples. In the era and labours of Phidias, we discover the utmost excellence to which Greek genius attained in the arts; and in the marbles of the British Museum, the former ornaments of the Parthenon, we certainly behold the conceptions, and, in some measure, the very practice of the great Athenian sculptor. Of the intellectual character of these admirable performances, grandeur is the prevailing principle; the grandeur of simplicity and nature, devoid of all parade or ostentation of art; and their author, to use the language of antiquity, united the three characteristics, of truth, grandeur, and minute refinement; exhibiting majesty, gravity, breadth, and magnificence of composition, with a practice scrupulous in detail, and with truth of individual representation, yet in the handling rapid, broad, and firm. This harmonious assemblage of qualities, in themselves dissimilar, in their result the same, gives to the productions of this master an ease, a grace, a vitality, resembling more the spontaneous overflowings of inspiration than the laboured offspring of thought and science. (Menes, History of the Fine Arts, p. 52, seqq.) — In the course of this article, we have frequently referred to the Life of Phidias by Müller. We will end with a brief account of it, which may also serve, in some degree, as a recapitulation of what has been already stated. Phidias, in his young days, 1827, three dissertations relative to Phidias, read before the Royal Society of Sciences at Göttingen. The first is a biographical sketch of Phidias, and establishes beyond doubt that Phidias began to embellish Athens with his works of sculpture in Olympic 82 or 83, when Pericles was kynostaros; that he finished, in the third year of Olympic 85, the statue of Minerva for the Parthenon; that the Elians, when the name of Phidias had been communicated to all Greece, and all the works had he executed at Athens, induced him to come to Elis, and that he made there the statue of the Olympic Jove between Olympics 85.3, and 86.3; and, finally, that after his return to Athens, he was thrown into prison by the enemies of Pericles, on a charge of impiety, and that he died in prison, in the first year of Olympic 87, in which year the last work of Pericles, the Propylaia, had been finished. The second shows, that Phidias, in the first years of his career, besides the splendour of his statues, executed in Athens, and the wealth they were carried by his genius. - The third gives a new explanation of the statues on the western front of the Parthenon at Athens. The work is in Latin, and has the following title: "C. Odor. Muelleri de Phidiae Vita et Operibus Commentationes tres, &c." (Götting., 1827, 4to.)

PHIDON. I. a king of Argos, of the race of the Heraclides, who, breaking through the constitutional checks by which his predecessors had restrained him, dissolved in his native city. He soon became possessed of extensive rule by various conquests, reducing, about the 3d Olympiad, the city of Corinth under his sway, and subsequently, about the 8th Olympiad, the greater part of the Peloponnesus. (Müller, Ägicetin., p. 51, seqq.) The Lacedaemonians were at this time too much occupied with the first Messenian war to be able to check his progress, while he himself, as the descendant of Temenus, one of the Heraclides, founded his conquests upon his claim to the possessions of his progenitor. (Müller, p. 52.) Phidias is described by Herodotus (6, 127) and Pausanias (6, 22) as having been chosen in the most arbitrary manner of any of the Greeks. Among other arts, high-handed power was his driving out the Elia agonothete, or president of the games, and presiding himself in their stead. (Herod., l. c.—Pausan., l. c.) Phidias is said to have been the first who established a common standard of weights and measures for the Peloponnesians. Not that, as some maintain, he was the inventor of weights and measures, for these were in existence long before (Salmasius, vita Ulp., p. 428); but he caused one uniform kind of weights and measures to be used by those of the Peloponnesians whom he had reduced beneath his sway. (Herod., l. c.—Müller, p. 56.) He is reported also to have been the first that stamped money, or, in other words, introduced among the Greeks a regular coinage. This can only mean, not, as Salmassius thinks, that he merely stamped a certain mark on silver and brass laminæ, which had before been estimated by weight, but that he abolished the use of metallic bars or spits, and brought in stamped laminae for the first time. (Müller, Ägicetin., p. 57.)

Id., Doria, vol. 2, p. 386, Eng. transl.—Eylom. Mag., s. v. "Ωδήμα." This early mint was established in the island of Ægina, at that time subject to his sway, and the very place for one, since its inhabitants were famed for their industrious and commercial habits. (Strach., 376.—Usur. Ad II, 6, p. 428.—Mar. Mor. Par. p. 25, ep. 31.) The scholiast on Pindar (Ol., 13, 27) makes Phidias to have been a Corinthian; ἵππεις θέουν τινά, Κυρίναυς αὖρῃ, ἕνε ἵππω κατ σταθμία. This, however, can only mean, that Phidias, on the conquest of Corinth, introduced there the same weights and measures, and the same stamped money as at Ægina. Hence the more correct remark of Didymus (ad v. 36), τί θέουν, δί πρότερον κόμψα τοῦ θεοῦ ἔκατον, ἵππω κατ σταθμία. (Epigr., p. 55.) But what are we to do with the authority of Aristotle, who speaks of Phidias as a Corinthian, and very early legislator (Polit., 2, 3, 7, ed. Schen.), while elsewhere he makes mention of Phidias, the tyrant περὶ Ἀργοῦ (Polit., 5, 8, 4, p. 218, Schen.),! The best answer is that contained in the words of Müller: "Fostet Aristoteles, de instituto veteres Corinthiorum, quod ad Phidionem legislatorem referebatur, certior factum, quod ad Phidionem statui diu presidiante Corinthiorum, (Aegiasticen., p. 56.) The question, however, still remains open to discussion, and Heyne, among others, expressly distinguishes the Corinthian from the Argive Phidias. (Opusc. Acad., vol. 2, p. 255, in notis.) In a fragment also of Heraclides Ponticus (p. 22), mention is made of a Cumaean Phidias, who πλησίου μετέθυκε τὸς πολιτείας. So that the name appears to have been longer to one than one legislator. — The power of Phidias is nowhere found to have been taken away by the Lacedaemonians about the 11th Olympiad, when leisure was allowed them to attend to the affairs of the Peloponnesus, the first Messenian war having been brought to a close. The chronology of Phidias's reign has been satisfactorily settled by Müller, in his "Ægintaica," a work to which we have already more than once referred, and in the course of the discussion he examines critically the computation of the Parian Marbles, and other works of Phidias. The evidence, however, may be viewed away the difficulty in the text of Herodotus (6, 127), by supposing that the historian confounded a later Phidias with the ruler of Argos. There is no need, therefore, of any of the emendations proposed by Gronovius, Reitz, and others, although the correction suggested by Gronovius meets with the approbation of Larcher, Porson, and Gasdorf. (Larcher, ad Herod., l. c.—Porson, Tracts, p. 325.—Gasd. ad Herod., l. c.—Compare Munusrat, Dissert. 1030
nons, p. 178, seqq.) In the Brandenburg collection, there is a coin, described by Beger, which bears on one side a diota, with the inscription PHIO, and on the other a Boeotian shield. This is often taken for a coin of Phidion the Argive, but on no good grounds, as the known device of Argis in is almost without an exception, a tortoise, while the shield portrayed upon this coin is as exclusively a badge of Boeotia, and is too highly executed for so remote a period. It appears, also, that it was a common prac-
tice in Boeotia to inscribe the name of some magistrate upon their coins. (Beger, Theaforus Brandenb., p. 279.—Cardewell, Lectures on Ancient Coins, p. 117.) An entire coin of Corinth. (Vid. Phidon I.)

PHILEISTEUS, (Φιλειστέου), is generally regarded as a Lydian, but is by some supposed to have been of Lydia, southeast of Sardis. It stood on a root of Mount Tmolus, by the river Cogamus, and derived its name from its founder, Attalus Philadelphus, brother of Eumenes. The frequent earthquakes which it experienced were owing to its vicinity to the region called Catoceceamone. Even the city walls were not secure, but were shaken almost daily, and dispersed. The inhabitants lived in perpetual apprehension; and were almost constantly employed in repairing their places of habitation, which were few in number, the people chiefly residing in the country, and cultivating the soil, which was very fertile. (Strabo, 628.) Tacitus mentions it among the cities restored by Tiberius, after a more than ordinary calamity of the kind to which we have just alluded. (Ann., 2, 47.) In the midst of these alarms, however, Christianity flourished in Philadelphia, and the place is mentioned (Josephus, Antiq. vol. I. p. 228) amongst the seven churches of Asia (3, 7). At a later day, the zeal of the Philadelphiaans showed forth conspicuously in the gallant defence they made against the Turks on more than one occasion. (G. Pachym. p. 290.) At length they were conquered by Bajazet in 1390. M. Duc. p. 70.—Chalcoud., p. 33.) The place is now called Allah-sehr, and preserves some remains of Christianity, and also a few monuments of heathen an-
tiquity. Chandler states, "that it is now a considerable town, of large extent, spreading up the slopes of three or four hills. Of the walls which en-
compassed it, many remnants are standing, but with large gaps." (Travels, p. 310, seq.) Mr. Arundell, who visited this place in 1826, was informed by the Greek bishop that there were "twenty-five churches in it, but that divine service was chiefly confined to five only, in which it was regularly performed every week in the month of March, afternoon." (Visit to the Seven Churches of Asia, p. 170.) Mr. Fellows, who visited the spot in 1838, remarks, "Of the ancient city of Philadelphia but little remains; its walls are still standing, enclosing several hills, upon the sides of which stood the town, but they are fallen into ruins. They are built of unhewn stone, massed and cemented together with fragments of old edifices; and they remain, as one of the Lugus, of the churches of Philadelphia, which was the residence of the bishop of Philadelphia, and was considered one of the most important in Asia. In the 1st century, the bishop of Philadelphia was a metropolis of the modern name, Allah-sehr, is "the city of God," an appellation which forms a strange kind of coinci-
dence with the departed glories of the place. (Arm-
dell, p. 169.—Compare Milner's History of the Seven Churches, p. 317.)—II. A city of Cilicia Trachae, on the river Ca1ycadnus, to the north of Seleucia Trachae. The site is thought by Leake to correspond to the modern Ermenek. (Journal, p. 112.) Captain Beaufort, on the other hand, suggests that Phil-
delphia may be represented by Mout or Mood, a town of some size, near the junction of the two principal branches of the Calycadnus. (Karamania, p. 233.) Leake, however, makes Mout to be Claudopolis. (Cramer's Asia Minor, vol. 2, p. 332.)—III. The capital city of the Ammonites, situate among the mount-
ains of Gilead, near the sources of the jeboc or Jo-
baccus. It received its name from Ptolemy Philadel-
phus. (Steph. Byz.) Its Oriental appellation was Rabbaith Ammon. Stephanus of Byzantium informs us, that it was first called Ammam (Ammon), after-
ward Asarte, and at last Philadelphia. It was one of the cities of Decapolis. Pliny, in enumerating these ten cities, names Raphana after Philadelphia, which was said to be the ancient name of it (see the topography of Syria, xxi. 329). The territory of Philadelphia is in the south of Syene, and extends a little to the north. (Steph. Byz.)—IV. A city of Egypt, situated near the river Nile, and was the residence of the Ptolemies. (Iamb. ap. Steph. Byz.)—V. Philadelphi, the surname of the second Ptolemy of Egypt. (Vid. Ptolemaeus II.)—VI. Philæ, an island and city of Egypt, south of Syene. The city appears to have owed its existence to the Ptolemies, who intended it as a friendly meeting-place between the and Egyptians and the Ethiopians from Moero. Hence, according to some, the name of the place. (Philæ, from Φιλάς—Compare Servius, ad Ænon, 6, 323, "locum quem Philas, hoc est amicam, vocant.") Others, however, derive it from the Egyptian ὕψι, "the end" or "extre-
mity" (i.e., of Egypt), and others, again, from the Arabic Phil, "an elephant," making Philæ and Ele-
phantine identical. (Iohnes Ptolemaus, de Egypt., ed. Vol. I. p. 255, seq. ed. Tz Wesc.)—VII. A name borne by a number of places in Egypt, like Philae, viz. Philæ, of Egypt, (Vid. Philæ, p. 456, seq. ed. Tz Wesc.) The island contains at present many splendid remains of antiquity. In its immediate vicinity was a small rocky island called 'Abara (Abatos) by the Greeks, from the circumstance of its being permitted the priests alone to set foot on it, and its being inaccessible to others. In this place was the tomb of Osiris, Isis having here deposited his remains. (Tzetz. ad Ly-
ophr., p. 219.—Zoega, de Obeisac, p. 265.—Descrip-
tion de l'Egypte, Antiq., vol. 1, p. 44.—Cruzer, Com-
ment. Herod., p. 182, seq.) The modern name is Gezirat-el-Birbe ("Temple-island"), in allusion to the remains of antiquity upon it. (Mannert, Geogr., vol. 10, pt. 1, p. 235, seq.)—VIII. PHILENI, two Carthaginian brothers, whose names have been handed down to modern times for a signal act of devotion to their country. A contest, it seems, arose between them respecting the point where their respective territories met, and this was the more difficult to be determined, since the country on the borders of the two states was a sandy desert, and without anything that might serve as a common landmark. It was agreed at last, that two individuals should set out at the same time from Carthage and Cyrene respectively, and that the spot where they might meet should be regarded as the me-
tering point. The parties accordingly set out, the two Phileni having been selected by the Carthaginians for this purpose; but the two Cyrenaics travelled more slowly than their Car-
thaginian antagonists, and only met the Phileni after the latter had advanced a considerable distance into the disputed territory. The Cyrenaics thereupon ac-
cused the Phileni of unfairness, and having seized the Phileni on their part, offered to do anything to show that they had acted fairly, and the two Cyrenaics then gave them their choice, either to be buried alive on the spot where they were standing, or else to allow them, the Cyre-
neans, to advance as far as they pleased into the disput-
ted territory, and there be buried alive on their part. The Phileni accepted the former part of the offer, and were accordingly entombed. The Carthaginians erect-
ning a pillar on the spot, which were thenceforth re-
arded as the limits of their territory in this direction. (Sall., Bell. Jugr., 19.—Id. ib., 79.) These altars stood in the innermost bend of the Syrtis Major, and not, as Sallust erroneously states, to the west of both the cities. The information given by the Roman historian, seems to wear a doubtful appearance, from the circumstance of Cyrene's being so much nearer the point in question than Carthage. If the distance between these two cities be divided into eight equal parts, the Phœniçians will be found to have travelled six, and the deputies from Cyrene only two, of these parts. 'The truth, therefore, was probably this: the territory in dispute lay between Helippa on the Cyrenaean side, and Lepis Magna on the Carthaginian; and the deputies started from these two places, not from Carthage and Cyrene. (Manu. Geogr., vol. 10, pt. 2, p. 116.)

PHILOMON, an ancient bard, belonging to the worship of Apollo at Delphi, and whose name was celebrated at that place. To him was attributed the formation of Delphian choruses of virgins, which sang the bithry of Latona and of her children. ( Müller, Hist. Gr. Lit., p. 54.) He is said to have taken part in the Argonautic expedition, and passed for a son of Apollo. (Plut. de Mus., p. 629, ed Wyttenb.)

PHILOMEN, 1. a comic poet, the rival of Menander. According to some authorities, he was a native of Syracuse (Suidas, s. v.), while others make him to have been born at Soli, in Cilicia. (Strabo, 671.) He seems to have been a writer of considerable powers. His wit, ingenuity, skill in depicting character, and expression of sentiment, are praised by Apuleius. (Florid., 3. n. 16), while he pronounces him inferior, however, to his more celebrated antagonist. The popular voice, on the other hand, often gave Philemon the prize over Menander (Aul. Gell., 17, 4), perhaps because he studied more the tastes of the vulgar, or used other adscititious means of popularity. This, at least, Menander gave him to understand, when on one occasion he met his rival and asked him: "Pity thee, Philemon, dost thou not blush when thou gains the prize over my head?" (Aul. Gell., l. c.) We may see a favourable specimen of his construction of plots in the Trinumus of Plautus, which is a translation of his Φιλιμην. (Pro! Trinumum, 18, seqq.)

Temperance of body, with cheerfulness of mind, prolonged his life to the great age of ninety-seven years (Lucian, Macrob., 25), during which period he composed ninety-seven comedies. The manner of his death is variously related. One account is, that he was killed by a horse; another, that he had died of laughter on seeing an ass eat figs. The statement of Apuleius, however, is the most probable, according to which he expired without pain or disease, from the pure exhaustion of nature. (l. c.—Val. Max., 12, 6.)—Philemon began to exhibit comedy during the reign of Alexander, a little time before Menander, and before the 113th Olympiad. He died in the reign of the second Antigonid, son of Demetrius. His works are stated to have lived to the age of ninety-seven years; Suidas, however, makes it ninety-six, and other authorities ninety-nine. (Diöd., Εκλ. lib. 23, ed. Bip., vol. 9, p. 318.)—Clinton's Fasti Hellenici, 2d ed., p. 157.) The fragments of Philemon are usually printed along with those of Menander. The best edition of these conjunctly is that of Meineke, Berol., 1823, 8vo. (Theatre of the Greeks, p. 121, ed. 4.)—II. A son of the preceding, also a comic poet, but in a more innocent manner than his father. He was the younger (διόπερος.—Ath.én., 7, p. 291, d.)

PHILÆRUS, a eunuch made governor of Pergamus by Lysimachus. (Vid. Pergamus II.)

PHILÊTAS, a native of Cos, and the only poet that we know of at the court of Ptolemæus I., who made him preceptor to his son and successor Ptolemy Philadelphus. Philætus was both a grammarian and poet. He composed elegies, which were the model of those of Propertius, and he is said to have given quite a new character to this species of poetry, in his description of the joys and sorrows of love. He wrote also lyric and lighter poems. The ancients prized him very highly, and a statue of him was erected from statue to him. Quintilian ranks him next to Callimachus (10, 1, 58). We have only a few fragments remaining of his elegies, and some verses also in the anthology. Philætus was remarkable for his devotion to study, and reduced himself by his great application to so emancipated a habit of body, that, according to the story told in Elian, he used to wear leaden soles to his shoes or sandals (μονόδυνον πεποιημένη εν τοῖς ποδίσκοις ἐπικότοις) to prevent his being blown over by the wind! (Elian., V. H., 9, 14.) Ategenes says, that he wore balls of lead around his feet (σφαιρας εν μονόδυνον πεποιημένας ἕτοιμα περι τὸ πόδι, 12, p. 552, b.) The wonder is how he could have walked. Ategenes also states that he fairly wore himself away in fruitless endeavours to solve the sophism called by the ancients ψεύδωνον (or ψευδολογία), and the epiph- thet on his tomb, which this writer cites, corroborates the statement. (Athen., 9, p. 403, c.—Cassub., ed loc.)

PHILIPP, a city of Thrace, to the northeast of Amphipolis, and in the immediate vicinity of Mount Pan- gæus. It was founded by Philip of Macedon, on the site of an old Thasian settlement. The Thasians had been attracted by the valuable gold and silver mines in this quarter, and the settlement formed by them was called Crenides, from the circumstance of its being surrounded by numerous sources which descended from the neighbouring mountain (σφαίρη, a spring). Philip of Macedon having turned his attention to the affairs of Thrace, the possession of Crenides and Mount Pangæus naturally entered his views. Accordingly, he invaded this country, expelled the feeble Cotys from his throne, and then proceeded to found a new city on the site of the old Thasian colony, as above mentioned, which he named after himself, Philip. (Died. Gr., 16, 8.) When Macedonia became subject to the Romans, the advantages attending the peculiar situation of Philippæus induced that people to settle a colony there; and we know from the Acts of the Apostles that it was already at that period one of the most flourishing cities in this part of their empire (16, 12.—Compare Plin., 4, 10). It is, moreover, celebrated in history from the great victory gained here by Antony and Octavianus over the forces of Brutus and Cassius, by which the Roman republic was saved from the danger of being divided into two fragments (see Zon's Sac. Hist., Bell. Civ., 4, 107, seqq.—Dio Cass., 47, 41.) Philippi, however, is rendered more interesting from the circumstance of its being the first place in Europe where the Gospel was preached by St. Paul (A.D. 51), as we know from the 16th of the Acts of the Apostles, and also from the Epistle he has addressed to his Philippian converts (4, 13), where the zeal and charity of the Philippians towards their apostle are described in the most eulogistic manner. We hear from this time onwards of the bishops of Philippi, and the town is also often mentioned by the Byzantine writers. Its ruins still retain the name of Philibah. (Cramer's Anc. Greece, vol. 1, p. 301, seqq.—Manuet. Geogr., vol. 7, p. 232.)

PHILIPPÔPOLIS, a city in the interior of Thrace, on the southeast side of the Hebrus, and some distance to the northwest of Hadrianopolis. It was situated in a large plain, on a mountain with three peaks, and was the principal city of Thrace. It was founded by Philip of Macedon. In the Roman times it became the capital of the province of Thracia. The modern name is Filibe or Philioppeî. (Steph. Byz., 4, v.—Itin. Ant., 136.—HierocL., p. 685.—Taci- tit., Ann., 3, 38.—Polyb., 5, 100.—Ann. Marc., 26, 10.)

PHILIPPUS, I. one of the earlier kings of Macedo- nia, and the first of the name. He succeeded his
father Argus, about 649 B.C. according to some chronologers, and reigned, as Eusebius states, thirty-eight years, but, according to Diodorus, thirty-five. (Euseb., p. 57. — Dizipp., ap. Syncell., p. 262, seq.) These numbers, however, are obviously conjectures, by chronologers, upon no certain or positive testimony, since none existed. (Clinton, Fast. Hell., vol. 1, p. 221.)—II. The second of the name was the son of Amyntas II. of Macedonia. This latter monarch left three sons at the time of his death, under the care of their mother Eurydice. Of these, Alexander, the eldest, had just attained to man's estate; but Perdiccas, and Philip the youngest of the three, were still under age. Philip, who appears to have been a prince of great promise, had scarcely ascended the throne, when he lost his life by the hand of an assassin. (Diod. Sic., 15, 71.) During his reign, however, short as it was, he was engaged in a contest with Ptolemy of Alorus. We do not know whether Ptolemy was in any way related to the royal family, nor whether he laid claim to the crown. But it seems clear that he was favoured by the queen Eurydice, the widowed mother, and was probably a supporter of Paramas. According to Diodorus and Plutarch, Pelopidas, the Theban commander, came into Macedonia to arbitrate between Alexander and Ptolemy, and Philip was one of the hostages delivered on this occasion to the umpire. As this, however, is expressly contradicted by the testimony of the contemporary orator. Eschines, who relates that Philip was still in Macedonia at the time of the conference, his deal with Thirwall, applies to the following opinion: According to Plutarch, after the murder of Alexander, which must have happened a very short time after the compromise, Pelopidas, who was in Thessaly, on his second expedition against the tyrant of Phere, was invited into Macedonia by the friends of the deceased king, and obliged Ptolemy to enter into an engagement to preserve the crown for the younger brothers. Ptolemy, it is said, gave fifty hostages as a security for the performance of his promises, among whom was his own son Philoxenus. It seems more natural, according to Mr. Thirwall, that Philip should have been committed to the custody of the Thebans under these circumstances, than on the occasion of the contest between Ptolemy and Alexander. (History of Greece, vol. 3, p. 163.) Ptolemy kept possession of the government three years: Diodorus simply says that he reigned so long. Alexander, who appears never to have been a prince of any other title than that of regent, though he may have had no intention of ever resigning his power to the rightful heir. And it was, perhaps, as much in self-defence, as to avenge his brother's murder or his mother's shame, that Perdiccas killed him. Concerning the reign of Perdiccas III. we have but very scanty information. He was slain in battle by the Illyrians, in the fifth year of his rule, leaving behind him an infant son by the queen. At the age of twenty-three years, Diodorus supposes that he was still at Thebes, but that, on receiving intelligence of his brother's death, he made his escape and suddenly appeared in Macedonia (16, 2). It is not difficult to understand how the story may have taken this form: a hostage so important, it might easily be supposed by writers acquainted with his subseq- uent career, that he had escaped and was afterwards received by the Thebans; it is certain, however, from better authority, that he had been already restored to his country, and, it is probable, early in the reign of Perdiccas, when the Thebans could have no motive for detaining him. Extravagantly as some modern writers have indulged their imagination with regard to the manner in which his time was employed during his sojourn at Thebes, it is hardly possible to overrate the importance of the opportunities it afforded him for the acquisition of various kinds of knowledge, or to doubt that he availed himself of them with all the energy and perseverance which belonged to his character. It is, perhaps, less probable that the house of Polyannus, the father of Epanomidas, should have been chosen for his residence, as Diodorus relates, than that of Pammenes, according to Plutarch's statement: and the fable of his Pythagorean studies, worthy of Diodorus, is below criticism. But a certain tincture of philosophy was at this time deemed almost an indispensable requisite in a liberal education. It was undoubtedly, however, not the study of philosophy, either speculative or practical, that chiefly occupied Philip's attention during the period of his residence at Thebes, which, whether the story of his escape be passed, he may have been mainly indebted for that command of the Greek language, which enabled him both to write and speak it with a degree of ease and eloquence not inferior to that of the most practised orators of the day. But the most important advantages which he gained from his stay at Thebes were probably derived from the military and political lessons, with which the conversation of generals and statesmen would naturally be steeped, and, as his intimate friends, could not fail to absorb. It was by them that the art of war had been carried to the highest point it had yet reached in Greece; or rather they, more particularly Epanomidas, had given it a new form; and the details of their battles and campaigns would be eagerly collected by an intelligent and ambitious youth. Thebes was at this time the great centre of political power, the mould by which the point from which the policy, determination, interests, and mutual relations of the Grecian states might be most distinctly surveyed. Here, too, were gained the clearest ideas of the state of the parties of the nature and working of republican, especially of democratical, institutions: here probably Philip learned many of those secrets which often enabled him to conquer without drawing the sword. And as he was placed in one of the most favourable positions for studying the Greek character, so the need which his situation imposed on him, of continual caution and self-control must have served very greatly to sharpen his natural sagacity, and to form the address which he afterward displayed in dealing with men, and winning them for his ends. Nature had gifted him with almost every quality that could fit him for the station which he was destined to fill: a frame of extraordinary robustness, which was, no doubt, well trained in the exercises of the body, and the skill of the Theban, which, dwelling among and proposing upon men, which won respect and inspired confidence in all who approached him: ready eloquence, to which art only applied the cultivation requisite to satisfy the fastidious demands of a rhetorical age: quickness of observation, acuteness of discernment, presence of mind, fertility of invention, and dexterity in the management of men and things. There seem to have been two features in his character, which, in another or under different circumstances, might have gone near to lower him into an ordinary person, but which were so controlled by his fortune as to contribute not a little to his success. He appears to have been by his temperament prone to almost every kind of sensual pleasure. But as his life was too busy to allow him often to indulge his bias, his occasional excesses were the air of an amiable companion, in which the character of a man of the world was often too much to forget his dignity in his intercourse with his inferiors. But to Philip, the great king, the conqueror, the restless politician, these intervals of relaxation occurred so rarely, that they might strengthen his influence with the vulgar, and could never expose him to contempt. From that he was secured by the energy of his will, which made all his faculties, and the movements of mind and body, as well as what he called, in a lower sense, his virtues, his affability, clemency, and generosity, always subservient;
to the purposes of his lofty ambition. A moral esti-
mate of such a man's character is comprised in the bare
mention of his ruling passion, and cannot be enlarged
by any investigation into the motives of particular ac-
tion. It is worth while to consider whether he was,
in any other light than as an instrument of Providence
for fixing the destiny of nations.—It was in the 106th
Olympiad, and about 360 B.C., that Philip took charge
of the government of Macedonia, not as monarch, but
as the nearest kinsman, and as guardian of the royal
infant, the son of his brother Perdicas. The situa-
tion in which he was now placed was one of great
apparent difficulty and danger, and the throne which he
could, if he had wished, have obtained was in the
hands of a youth not yet fifteen years old. Both
Philip and Theopompos, the Spartan king, had then
powers worth while; and the results of Philip's
actions in these countries were the subject of consid-
erable dispute. (Diod. Sic., 16, 3.)

Philip, however, generously granted
them their liberty, and immediately sent a deputation
of Paeonians, as well as of the Illyrians, to Athens
with proposals of peace, which were gladly
accepted. (Demosth. in Aristoc., § 144.) By
the death of the reigning prince of the Illyrians in the
summer following, Philip, nearly or exactly the same
time, may be regarded as having conquered
them without a struggle. The loss of the enemy is said
to have amounted to 7000 men; and they were compelled to accept
the terms of peace imposed by the conqueror. They ceded
him all that they possessed east of the Lake of Lych-
nitis, and thus not only gave him the command of the
country, but that it was to be of perpetual duration;
N. Greece, vol. 3, p. 531.) It may safely be presumed
that, after this brilliant success, Philip no longer hesi-
tated to assume the kingly title. His usurpation, for
such it appears to have been according to the laws of
Macedon, was, however, most probably sanctioned by
the unanimous consent of both the army and nation.
How secure he felt himself in their affections is mani-
fest from his treatment of his deposed nephew. He was
willing to forgive the young prince, to receive him
back into court, and, in time, bestowed the hand of one of
his daughters upon him. (Polyb., 8, 60.—Arrian,
Epit. 1, 5.—Athenaeus, 13, p. 557.) The trans-
fer of the crown was so quiet and noiseless that it
seems not to have reached the ears of the Athenian
orators, whose silence may, at all events, be admitted
as a proof that there was nothing in the transaction on
which the Greeks could find occasion to blame. His
victory over the Illyrians is connected by Diodorus,
with the institution of the Macedonian phalanx, which
he is said to have invented. The testimony of the
ancients on this point has been very confidently reject-
ed in modern times, without any just reason. We
may indeed doubt whether this body, as it existed in
the beginning of Philip's reign, differed in any impor-
tant feature from that which was already familiar to
the Greeks, and more especially from Athens. There is
an uncertainty on this plan; and there is nothing to prevent us from admitting the statement
of authors, certainly better informed than ourselves, that
it was first introduced by Philip. Nor is there any
difficulty in believing, that he at the same time made
improvements in the arms on the structure of the
phalanx, which entitled it to its peculiar epithet, and
him to the honour of an inventor. (List of the tactics
and the discipline of the army seem to have been in
Macedonia, as in a very low state under his predecessors; and this was,
perhaps, the main cause of the defeats which they so
often experienced from the neighbouring barbarians.
Philip, on the contrary, was able to carry his phalanx more
than to the organization of his forces; and his regulars
were enforced with inflexible severity.—In the course
of about a year from his brother's death, Philip had
freed himself from all his domestic embarrassments,
and had seated himself firmly on the throne. In
these circumstances he ordered the deputation
which had arrived at Athens to bring him the letters
of the ambassadors; and, by a mild word and a
friendly air, immediately induced them to present
the rest of their papers to the Athenians. The
Athenians were so deeply moved by his kindness,
that they not only presented his letter to their
people, but also read aloud the rest of the papers;
and, finding Philip's address to his countrymen
to the utmost of their satisfaction, they sent a
congratulatory message to him, and asked him to
visit them. (Justin, 8, 2. Polyb., 9, 33.) Meanwhile,
the republic of Olynthus, which had recovered its strength under the protection of
Macedonia, came to a rupture with that power, probably at the instigation of a party in Athens. War was, in
sequence, determined upon, and the Olynthians, sup-
pported by the Thebans, under the command of
Perdiccas, marched into the territory of the
Phocians, as a retaliation of Philip's attempt to
force the Phocians, Paghese, and the whole of
Thessaly, which henceforth warmly espoused the interests of
Philip on every occasion. (Justin, 8, 2. Polyb., 9,
1034

aced the security of his dominions, gave up the town to plunder, and reduced the inhabitants to slavery. Intimidated by these reverses, the Athenians, not long after, sought a reconciliation with Philip, and sent a deputation, consisting of eleven of the most distinguished orators and statesmen, among whom were Aeschines, Demosthenes, and Ctesiphon, to negotiate a treaty. (Aeschin., de Fals. Leg., p. 30.) These ambassadors were most graciously received by Philip, and on his sending envoys to Athens, with full power to settle the preliminaries, peace was concluded. (Demost., de Leg., p. 414.) Philip was now enabled to terminate the Sacred War, of which he had been invited to take the command, by the general voice of the Amphictyonic assembly. (Vid. Phocis.) Having passed Thermopylae without opposition, he entered Phocis at the head of a considerable army, and was enabled to put an end at once to this obstinate struggle without further bloodshed. He was now unanimously elected a member of the Amphictyonic council, after which he returned to Macedon, having reaped in this expedition a vast accession of fame and popularity. He was so far successful, not however, as to seduce Philip to the conclusion, that the success of Philip in this quarter was calculated, however, to awaken the jealousy and fears of Athens, and the party which was adverse to his interests in that city took advantage of this circumstance to urge the people to measures that could only end in a renewal of hostilities with Macedon. The Athenian commanders in Thrace were encouraged to thwart and oppose Philip in all his undertakings, and secretly to favor and promote the objects of the latter; but accordingly, when that monarch was engaged in besieging the cities of Perinthus and Selymbria, near the Hellespont, the Athenians on several occasions assisted them with supplies, and did not scruple even to make incursions into the Macedonian territory from the Chersonese. These measures could not fail to rouse the indignation of Philip, who, finally abandoning his projected invasion of Hellespont, turned entirely to the overthrow of the Athenian power. Meanwhile another Sacred War had arisen, which, though of trifling magnitude in itself, produced very important results to two of the leading states of Greece. The Amphissians, who belonged to the Locri-Ozolae, had occupied by force, and cultivated a portion of the territory of Cirrha, which had been declared accursed by the Amphictyones, and unfit for culture. This act of defiance was not attended with success. Of the Sacred assembly; and it was as to be feared that the people of Amphissa would be supported by Athens and other states, it was determined to elect Philip general of the Amphictyonic council, and to commit to him the sole direction of the measures to be pursued. (Aeschin. in Cziz., p. 71.—Dem., de Cor.) The Amphissians were of course, easily reduced and punished; but the Athenians, who had avowedly favoured their cause, flocked to the defence of their corrupted compatriots. The Athenian general, was not only procured the support of Sicyon, but also of the territory of Cirrha, and the influence upon the near approach of Philip. Finding, therefore, that he had already occupied Elatea, which commanded the principal pass into Phocis, the council was summoned, and it was determined to muster all the forces of the republic, and, if possible, to induce the Thebans to espouse their interests. An embassy was accordingly despatched to Thebes, at the head of which, was sent to invite their alliance, the effect of their great orator's eloquence, that he succeeded in persuading the Booteans to join the Athenians, notwithstanding all the arguments urged against this step by the deputy of Philip, who was present at the debate. The combined forces of the two republics took the field, and, marching towards the Phociian frontier, encamped at Chersonae, in Boeotia. Here, after some partial and indecisive actions, a general engagement at length took place, which was obstinately contested on both sides, but finally terminated in the total discomfiture of the Athenians and their allies. This result might easily have been foreseen. Thebes possessed at the time no general of sufficient note to be even mentioned, except Theagenes, who is named elsewhere to have been branded as a traitor (Dinarchus in Dem., § 75), and the name of Chares, Lycicles, and Statius, who commanded the Athenians, could inspire little confidence. In numbers, the confederates appear to have at least equalled the enemy; but though the Sacred Band still preserved its excellent discipline and spirit, the Athenians, who had now for many years been little used to military service, were ill-matched with the Macedonian veterans led by their king, and by the fact that they had been in his schools, and animated by the presence of the young man Alexander, whom his father intrusted with the command of one wing, where, however, some of his best generals were stationed at his side. We know very little more of the causes which determined the event of the battle, and these are amply sufficient to account for it. If we may believe Polyxenus, Philip at first restrained the ardour of his troops, until the Athenians had spent much of their strength, and then he let loose his army, which, according to Theagenes, would have been a match for the enemy (4, 2, 7). Then it appears Alexander made a charge, which broke the enemy's ranks, and decided the fortune of the day. (Ibid., 16, 86.) Alexander was in the wing opposed to the Thebans, and first charged the Sacred Band. The Thebans seem to have kept their ground longest, and probably suffered most. The Sacred Band was cut off to a man, but fighting where it stood. Demosthenes was not the amount of these he bore, however, that was gazed at with cowardice, because he escaped in the general flight, only by those who wished that he had been left on the field. Of the Athenians not more than 1000 were slain, but 2000 were taken prisoners: among these, Demades fell into the enemy's hands. The loss of the Thebans is not reported in numbers, but the prisoners were probably fewer than the slain. It was not the amount of these he bore, however, that gave such importance to the battle of Chersonae, that it has been generally considered as the blow which put an end to the independence of Greece, any more than it was the loss sustained by Sparta at Lestra which deprived her of her supremacy. But the event of this day broke up the confederacy which had been formed against Philip, as it proved that its utmost efforts could not raise a force sufficient to meet him, with any chance of success. Such was his influence, that he was therefore left at his mercy. The consternation which the tidings of this disaster caused at Athens was probably greater than had ever been known there, except after the loss at £egos Potamos. As long as it remained uncertain what use Philip would make of his victory, there was certainly reason to fear the worst: and if it be true that at first he rejected the application of the heralds, who came from Lebanon to ask leave to pay his respects (Plut., Vit. X., Orat. Hyperid., p. 849, a.), we might suppose that he wished to keep the vanquished a while in suspense as to their fate. That he should ever have forgotten himself for a time on the scene of his triumph, intoxicated by the complete success which had suddenly crowned the plans and labours of so many years, would not be at all inconsistent with his character. He is said to have risen from the chair on which he was seated, on the sight of the bodies of the slain, though the sight of the Sacred Band drew from him an exclamation of sympathy, to have paraded and sung the commencement of one of the decrees of Demosthenes. (Plut., Vit. Demosth., 20.) This anecdote is more credible than that he exposed himself to the rebuke of Demades by his behaviour to his prisoners. (Ibid., 16, 87.) It would be absurd to suppose, with Diodorus, that such a man as Demades, however the king might be pleased at such a moment with his freedom and wit,
could have had any influence over him; but it seems that Philip did not disdain to gain him for his own ends, and to communicate his designs to him, and employ him as his agent. The manner in which Philip finally treated his conquered enemies excited general surprise, and has earned, perhaps, more praise than it deserves. He dismissed the Athenian prisoners without ransom, several of them even newly clothed, and all with their baggage; and rent Antipater, accompanied, Justin says, by Alexander, to bear the bones of their dead. He also received the envoys of Philip with the greatest marks of respect. (Polyb., 5, 10), to Athens, with offers of peace, on terms such as an Athenian would scarcely have ventured to propose to him. The commonwealth was required, indeed, to resign a part of its foreign possessions, perhaps all but the Chersonesus, Lemnos, Imbros, and Samos (Plut., Vit. Alex., 28); but it was left in undisputed possession of all its domestic resources, and its territory was even enlarged by the addition of Oropus, which Thebes was forced to resign. (Pausan., 1, 34.) The value of these concessions was greatly enhanced by comparison with the conditions on which peace was granted to the Thebans. They were obliged to ransom not only their prisoners, but their dead. Not only Oropus, but the sovereignty of the Boeotian towns was taken from them. Platea and Orchomenus were restored to as many as could be found of their old inhabitants; at least they were filled with individuals from the newly enslaved district. These offers were probably hostile to Thebes. But this was the lightest part of her punishment. She lost not only power, but freedom. She was compelled to admit a Macedonian garrison into the citadel, and to recall her exiles. The government was lodged in their hands; a council of three hundred, selected from them, was invested with supreme authority, both legislative and judicial. (Justin, 9, 4.)

Philip's treatment of the Athenians has been so much condemned as to merit no defence. It need be said, that in them he did honour to the many resistance of open enemies, while in the case of the Thebans he punished treachery and ingratitude, and, knowing the people to be generally hostile to him, he crushed the power of the state, and used the faction which depended on him as the instrument of his vengeance. On the other hand, it must be remembered that, when this was done, he had the less reason to dread the hostility of Athens: he might safely conciliate the Cyprians; for merely to give them a pretext for exposing him to the strictest of lenity and moderation. It is not improbable that this was the course to which he was inclined by his own prepossessions. But, had it otherwise been, there were reasons enough to detest so wary a prince from violent measures, which would have driven the Athenians to despair. He had probably very early intelligence of the preparations for defence which they had begun while they expected an invasion. He might, indeed, have ravaged Attica, and have carried on a Decelean war; but it was by no means certain that he could make himself master of the city and Piræus: and nothing but a very clear prospect of immediate success could have rendered the attempt advisable. The danger of a failure, and even the inconvenience of delay, was far greater than the advantage to be reaped from it. Philip's offers were gladly, if not thankfully received by Athens; and having carried on a war against the Peloponnesians, Proceeding to Corinth, whither he had invited all the states of Greece to send their deputies, he held a congress, as in the time of the ancient league against Persia. The avowed object of this assemblage was indeed to settle the affairs of Greece, and to put an end to intestine feuds by the authority of a supreme council. But it was well known, that Philip meant to use it for the purposes of an enterprise, which he had long cherished, the invasion, namely, of the Persian empire. All his proposals were adopted. War was declared against Persia, and he was appointed to command the national forces with which it was to be waged. One object only now remained to detain Philip in the south of Greece: to fulfil the promises which he had made some years before to his Peloponnesian allies, to animate them by his presence, and to make Sparta feel the effects of his displeasure, for having been the only Grecian state which did not send ministers to the congress at Corinth. His march through the Peloponnesus was for the most part a peaceful, triumphant progress, and hence it may be that so few traces of it are left in our historical fragments. It is chiefly by some casual allusions to it in Polybius and Pausanias that the fact itself is ascertained. In Laconia Philip made a longer stay, and encountered some resistance. It appears, however, that in the end Sparta was compelled to submit to the terms which he prescribed. The western states beyond the isthmus likewise acknowledged his authority: the leaders of the anti-Macedonian party in Acrarnania were driven into exile, and Ambracia consented to receive a Macedonian garrison. (Diod. Sic., 17, 3.) Byzantium also, it seems, entered into an alliance with him, which was little more than a decent name for subjection. Thus crowned with new honours, having overcome every obstacle, and having established his power on the firmest foundation in every part of Greece, he returned in the autumn of 338 B.C. to Macedonia, to prepare for the great enterprise which he now triumphantly described to himself. This brilliant fortune, however, was before long overcast by a cloud of domestic troubles. Philip, not less from temperament than policy, had adopted the Oriental usage of polygamy, which, though repugnant to the ancient Greek manners, did not in this age, as we find from other examples, shock public opinion in Greece. Thus, it seems, before his marriage with Olympias, he had formed several matrimonial alliances, which might be described as all conditions of a marriage, even Illyrian princess, a Macedonian lady, apparently of the Lyncestian family, which had some remote claims to the throne, and two from Thessaly, one a native of Phere, the other from Larissa, are mentioned before Olympias in the list of his wives. After his marriage with Olympias, he did not reject the hand of a Thracian princess, which was offered to him by her father. In each of these cases, however, there was an apparent motive of policy, which made the transaction appear more tolerable than it would otherwise have been to Olympias, a woman of masculine spirit and violent passions, and who, as a daughter of the house of Epirus, which traced its pedigree to Achilles, no doubt regarded herself as far superior to them all in rank, and as Philip's sole legitimate consort. But after his return to Macedonia from his victorious campaign in Greece, perhaps early in the following spring, he contracted another union, for which it does not appear until both Philip and his princess were much beset with wine. Attalus had secreted cherished the presumptuous hope, that his niece's influence over the king might induce him to alter the succession, and to appoint a child of hers heir to the throne. When the wine had thrown him off his guard, he could not refrain from disclosing his wishes, and called on the company to pray that the gods would crown the marriage of Philip and Cleopatra by the birth of a legitimate successor to the kingdom. Alexander took fire at this expression: and exclaiming, "Do you then, count me a bastard!" hurled the gob-
PHILIPPUS.

let out of which he was drinking at his head. The hall became a scene of tumult. Philip started from his couch, and, instead of rebuking Attalus, drew his sword and rushed at his son; but, before he reached him, stumbled and fell. Alexander, before he withdrew, is said to have pointed to his father as he lay on the floor, with the taunt: "See the man who would pass over from Europe to Asia, upset in crossing from one couch to another." (Plut., Vit. Alex., 9—Atheneus, 14, p. 657.) The quarrel did not end with the main point of the evening, as the offence which had been given to the prince was much deeper than the momentary provocation. He and his mother quitted the kingdom; she found shelter at the court of her brother Alexander, who, after the death of Amybas, had succeeded, through Philip's intervention, to the throne of Epirus, having supplanted Aciscles, the lawful heir. Alexander took up his abode in Illyria, and Philip was obliged at last to employ the good offices of a Corinthian, named Demaratus, to induce his son to return to Macedonia. (Plut., Vit. Alex., 9.) It was not so easy to appease Olympias; and it was most likely with a view to baffle her intrigues that Philip negotiated a match between his brother-in-law and their daughter Cleopatra. When the brother-in-law had been gained by this offer, her sister saw that she must defer her revenge, and returned, apparently reconciled, to her husband. This happy discord was the result of the continued apprehension of hostile movements on the side of Illyria and Epirus, which may have been the causes which prevented Philip from crossing over to Asia in person in 337 B.C. In the course of this year, however, he sent over a body of troops, under the command of Parmenio, Amyntas, and Attalus (whom, perhaps, he was glad to remove in this honourable manner from his court), to the western coast of Asia, to engage the Greek cities on his side, and to serve as a rallying point for all who were disaffected to the Persian government. It was in this same year that Pixodarus, the usurper of the Carian throne, sought the alliance of Philip, and proposed to give his eldest daughter to Arideus, Philip's son by his Larissian wife, Philinna, a youth of imbecile intellect. Olympias was, or affected to be, alarmed by this negotiation; several of Alexander's young companions shared her suspicions, and the unsuccessful intrigue at the intended marriage was a step by which Philip designed to raise Arideus to the throne. Under this impression he despatched Thessalus, a Greek player, who was exercising his profession at the Macedonian court, on a secret mission to Caria, to induce Pixodarus to break off the match with Arideus and to transfer his daughter's hand to Alexander himself. Pixodarus joyfully accepted the prince's offer. But Philip, having discovered the correspondence, alarmed his son out of his suspicions by an indignant expostulation, which he addressed to him in the presence of his young friend, Parmenio's son, Philotas, on the unworthiness of the connexion which he was about to form with a barbarian, who was not even an independent prince, but a Persian vassal. Alexander dropped the project, which had so strongly excited his father's resentment, that the latter wrote to Corinth to demand that Thessalus should be sent to him in chains, and banished four of Alexander's companions, Harpalus, Nearchus, Phrygius, and Poltemus, from Macedonia: to one of them the beginning of a wonderful elevation. So passed the year 337. Towards the end of the next spring, Philip's preparations for his Asiatic expedition were far advanced. He had summoned the Greek states to furnish their contingents, and, as became the general of the Amphictyon council, had consulted the Delphic oracle on the event. He received a favourable response, and received an answer worthy of its ancient reputation for its political ambiguity: "Crowned is the victim, the altar is ready, the stroke is impending" (Diod. Sic., 16, 91), though the event renders this anecdote somewhat suspicious. It only remained, to take the precaution which he had meditated, for securing the peace of his dominions during his absence, by a closer alliance with the King of Epirus, which might also sooth Olympias. The day of the marriage was fixed, and Philip determined to celebrate the event with the utmost splendour. It afforded an opportunity which he never let slip, of attracting Greeks from all parts to his court, of dazzling them by his magnificence, and winning them by his hospitality. A sumptuous triumphal arch, national one of the Muses, or the Olympic games instituted by Archelaus, was proclaimed to be held in the ancient capital of Pege. Musical and dramatic contests were announced, for which artists of the greatest celebrity were engaged. When the time arrived, the city was crowded with strangers; not only guests invited by the king and his courtiers, but envoys depooted by most of the leading cities of Greece to honour the solemnity, and to offer presents, chiefly crowns of gold, to the king. A splendid banquet followed the nuptials. On the morrow an exhibition was to take place in the theatre: it was filled at an early hour with spectators. The entertainments began with a solemn procession, in which, among other treasures, were carried images of exquisite workmanship, and gorgeously adorned, of the twelve Olympian gods: a thirteenth, which was supposed to represent the person of the king, was carried on the shoulders of a slave, who, holding the neck of a woman, and drawing her towards the king, was supposed to represent Philip himself. The shouts of an admiring, applauding multitude then announced the king's approach. He advanced in white robes and festal chaplet, with his son and the bridegroom on either side, a few paces behind him. His guards had ordered to keep at a distance, that all might have a view of his person, and that it might not be supposed he doubted the universal good-will of the Greeks. This was the moment when, we may think, the young man stepped forth from the crowd, ran up to the king, and, drawing a Celtic sword from beneath his garments, plunged it into his side. Philip fell dead. The murderer rushed towards the gates of the town, where horses were waiting for him. He was closely pursued by some of the great officers of the royal body-guard, but would have mounted before they had overtaken him if his sandal had not been caught by the stump of a vine, which prevented him from running. At the first sight of his failure on the king's behalf, his passion his pursuers despatched him. His name was Pausanias; and the motive that impelled him to the deed was, that he had suffered an outrage from Attalus for which Philip had refused to give him satisfaction. (Aristot., Politi., 5, 8, 10.) Both Olympias and Alexander were suspected of having been privy to the deed, but, as would seem, without any very strong grounds. Indeed, the character of Alexander instanced only reeled from every species of baseness, and yet Niebuhr, in his lectures, expresses a suspicion, almost amounting to a full conviction, of Alexander's guilt!—Thus, in the 47th year of his age and the 24th of his reign, perished Philip of Macedon, at the end of one great stage of a prosperous career, near the outset of another which opened immeasurable ground for hope. A great man certainly, according to the common scale of princes, though not a hero like his father, to be held by a philosophical mind. But it was something great, that one who enjoyed the pleasures of animal existence so keenly, should have encountered so much toil and danger for glory and empire. It was something still greater, that one who was so well acquainted with the worst sides of human nature, and who so often profited by them, should yet have been so capable of sympathy and esteem. If we charge him with duplicity, we must remember that he used it in his political transactions, only to exalt the higher ways of gratifying his ambition to those of violence and bloodshed: that he at least desired the imitation of mercy and humanity. If he once asked whether a fortress was so inaccessible that
not even an ash laden with gold could mount to it, we may as well believe the anecdote which relates of him, that he replied to his counsellors who urged him to treat Athens with rigour, that they were advising him to destroy the theatre of his glory. (Plut., Reg. et Imp. Apophth., 11.)

The many examples of generous forbearance reported in Plutarch's collection of his apophthegms cannot be all groundless fictions: and the more amiable appears, by contrast, the self-control which he exercised, when he was tempted to an unjust or harsh use of his power. He is one of the men of whom we wish to know more, whose familiar letters and conversation must have been worth preserving. But even the history of his outward life is like an ancient statue, made up of imperfect and ill-adjusted fragments. He left the task of his life unfinished, and succeeded his father on the throne of Macedon about 298 B.C. He was carried off by sickness after a reign of one year. (Justin, 15, 4.—Id., 16, 1.)

VI. The sixth of the name, was still an infant at the death of his father, Demetrius III. of Macedon. He was left under the care of his uncle Antigonus Doson, who, being guardian of his nephew, became, in fact, the reigning sovereign. (Polyb., 2, 45.—Plut., Vit. Arat. —Justin, 28, 3.)

Antigonus ruled over Macedonia for the space of twelve years, when his exertions in defeating the Illyrians, who had made an inroad into his territories, caused the bursting of a blood-vessel, which terminated his existence. (Polyb., 2, 70.) His nephew Philip, though only fifteen years of age, now assumed the reins of government, and showed himself deficient neither in energy nor talents. Adopting the policy of his wise and able predecessor in protecting the Acheans against the ambitious designs of the Boeotians, who were now become one of the most powerful states of Greece, he engaged in what Polybius has termed the Social War, during which he obtained several important successes, and effectually pressed the daring spirit of that people. (Polyb., lib. 4 et 5.)

The great contest which was now raging in Italy, between Hannibal and the Romans, naturally attracted the attention of the King of Macedon; and it appears from Polybius and Livy that he actually entered into an alliance with the Carthaginian general. By securing, however, the co-operation of the Etonians, the Romans were enabled to keep in check the forces of Philip; and, on the termination of the struggle with Carthage, sought to avenge the injury the prince had meditated by invading his hereditary dominions. Philip, for two campaigns, resisted the attacks of the Romans and their allies, the Etonians, Dumazes, king of Perugia, and the Sabine's plundering, and ultimately, however, he sustained a signal defeat at Cyzicus, in the plains of Thessaly, and was compelled to sue for peace on such conditions as the victors chose to impose. These were, that Demetrius, his younger son, should be sent as a hostage to Rome, and that he should not engage in any war without their consent. They farther imposed a fine of one thousand talents, and demanded the surrender of all his galleys. (Liv., 33, 30.)

In the war which the Romans afterward carried on with Antiochus, king of Syria, Philip actively co-operated with the former; but, jealous of his talents, and aware also of his ambitious spirit, the Romans seized every opportunity of counteracting his efforts to restore the empire of Macedonia. Philip was compelled to take part in the wars of the Peloponnesian League, to behold this course of conduct with ill-disguised vexation and disgust; and it is probable that this mutual ill-will would have led to an open rupture if the death of Philip had not intervened. This event is said to have been hastened by the domestic troubles which concurred to embitter the latter years of his life. Dissensions had long subsisted between his two sons Perseus and Demetrius; and, by the arts of the former, who was suspected of having cut off a certain Guido, it is said that he had been raised in the mind of Philip against the latter, who had resided at Rome for some years as a hostage, even after peace was concluded with that power. The unfortunate Demetrius fell a victim to his brother's treachery, and his father's credulity and injustice. (Liv., 40, 24.) But Philip having discovered, not long after, the fatal error into which he had been betrayed, was so strong with remorse, that he voluntarily renounced power. (Vid. Perseus.) He died B.C. 179, after a reign of forty-two years. (Clinton, Fast. Hell., vol. 1, p. 243.)

VII. M. Julius, a Roman emperor, of an obscure family in Trachonitis, a province of Arabia, to the south of Damascus, and hence called the Arabian. Zonaras (12, 19) and Cedrenus (vol. 1, p. 257) make Bostra, the capital of the country, to have been his native city; but the language of Aurelius Victor would rather intimate that he was born in the environs of that city, since he calls him in one part "Arabs Trachonitis" (de Cas., 28), and in another speaks of his father as having been "nobilissimus latronum ductor." (Epit., 28.) His first act, also, on attaining to the empire, was to found a city not far from Bostra, which he dignified with the name of Philipopolis. St. Jerome, who speaks of this foundation, confounds with the Arabic city another of the same name in Thracia. Jornandes falls into the same error (p. 108). Burckhardt found in the environs of Bostra a Greek inscription bearing the name Philipopolis, which sets the matter at rest. (Travels, p. 98.)

Philip entered the Roman armies, and soon distinguished himself by his services, until he was at length appointed commander of the body-guard, in the reign of Gordian III., having succeeded Mithilus, whom he was suspected of having cut off. In taking the place of Mithileus, Philip became, in fact, as his predecessor had been, the guardian of the young prince, and the master of the empire. Gordian had, under the auspices of Mithilus, undertaken, the year previous, an expedition against the Persians, which ended gloriously for the Roman arms; and he now prepared for a second campaign against the same foe, when Philip produced an artificial scarcity by intercepting the supplies of corn that were raised by the division of power, consummated by forcible means, could not prove of very long duration, and the young monarch was soon after deposed and put to death. His ashes were conveyed to Rome, and a splendid monument was erected to his memory, near Circus Maximus, in the Esquiline. Meanwhile the letters of Philip to the senate put...
ported that Gordian had died of illness, and that the choice of the army had fallen upon him. Argantius, king of Scythia, was encouraged to advance by the tidings of the death of Mithaesus; but Philip, sacrificing the interests of the state to his own, and paying no regard to this new invasion, hastened to secure his election at Rome, where he professed to venerate the statues of Gordian, which had been defiled by the senate. The palace was surrounded by one of those juggles of public pageantry which are found to be so useful in turning the attention of the people from the flagitiousness of their rulers. The thousandth anniversary of the building of Rome was celebrated by splendid games, and by contests in the amphitheatre. But the claim of the "Arabian" to the empire of Rome was disputed by Decius, who had been appointed to a position in Cremona, and who joined the revolters. Philip lost a battle near Verona, and this event was to his soldiers the signal for his assassination (A.D. 249). His son was slain in the Pratorian camp. (Capitol, Vit. Gord. Tert., 29, seqq.—Aurel. Vict., l. c.—Casaub., de ipsis qui post Gord. Tert., principes fuere, § 18.)— VIII. An Acanian, and physician to Alexander the Great. When that monarch had been seized with a fever, after bating while overcaring in the Syrian camp, had the Cyrus, and most of his medical attendants deserted of his life, Philip, who stood high in his confidence, undertook to prepare a medicine which would relieve him. In the mean while, a letter was brought to the king from Parmenio, informing him of a report, that Philip had been bribed by Darius to poison him. Alexander, it is said, had the letter in his hand when the physician came in with the draught, and, giving it to him, drank the potion while the other read; a theatrical scene, as Plutarch unsuspiciously observes, but one which would not have been invented except for such a character, and which Arrian was therefore induced, though doubtingly, to record. The remedy, or Alexander's excellent constitution, prevailed over the disease; but it was long before he had regained sufficient strength to resume his march. (Plut., Vit. Alex.—Arrian, Exp. Al., 2, 4, 12, seqq.)—The whole story is now regarded as a very apocryphal one. We cannot very well understand what Parmenio was doing, that he did not come himself instead of writing. One sees from Curtius (3, 6) how the narrative was embellished. In Arrian, Parmenio's letter only mentions a report which he had heard, that Philip had been bribed. In Curtius, it is asserted that he had been promised one thousand talents, and the hand of the sister of Darius. There was an imaginary connection between this story and that of Alexander the Lyncean. Seneca (de Ira, 2, 23) says, that it was Olympias who sent the warning letter about Philip. (Thirwall's History of Greece, vol. 6, p. 173.)—IX. A pretender to the crown of Macedonia, after the overthrow of Perseus. He is commonly known by the appellation of "Pseudophilippus." His true name was Andricus. (Vid. Andricus.)—X. The Grecian of the course of the Sicilian fleet. From the internal evidence afforded by the translation itself, he is supposed to have lived a century or two later than Heracleitus; and at a time when every remnant of actual knowledge of the subject, on which Heracleitus treats, must have vanished. (Cory, Hieroglyphics of Heracleitus, pref., p. ix.)—XI. A comic poet of Athens, son of Aristophanes. He does not appear to have inherited any considerable portion of his father's wanton and derisive talents. (Théâtre de la Grèce, 115, 4th ed.)—XII. A native of Opus, and a disciple of Plato. Diogenes Laertius informs us (3, 37), that Plato died before publishing his "Laws," and that Philip of Opus gave to the world the manuscript of the work, which he found among his master's tablets. (Vid. Plato.)—Philip wrote "On Eclipses, and on the size of the Sun, and Earth" (περί ἐκλειψιών, καὶ μεγεθύνης ἡλίου καὶ σελήνης καὶ γης). The work is cited by Stobæus. (Scholl, Hist. Lit. Gr., vol. 3, p. 8.)—XIII. An epigrammatist, a native of Thessalonica, who flourished during the reign of Tiberius. He is sometimes called "the Macedonian," but more frequently "Philip of Thessalonica." We have eighty-five epigrams of his remaining. They display little originality, being for the most part the works of preceding poets. (Jacobs, Catal. Poet. Epigr., p. 935.) Philip of Thessalonica is the compiler of what is termed the "Second Anthology," thus continuing the work commenced by Meleager. The interval between the two compilations was about 150 years. (Jacobs, l. c.—Scholl, Hist. Lit. Gr., vol. 4, p. 49, 50.)—PHILISICUS, I. an orator, and also an epigrammatist; one of whose effusions has been preserved by Plutarch, who speaks of him as a contemporary of Lysias, and a pupil of Isocrates. He was the master of Miletus in Ionia; and, besides his poetical pieces, left several harangues and a life of Lycurgus. (Ruhnken, Hist. Crit. Orat. Gr., p. lxxx.)—Plut., X. Orat. Vit., p. 836.—Suidas, s. v.—Jacobs, Catal. Poet. Epigr., p. 936.)—II. or perhaps Philiscus, a tragic poet, a native of Corcyra, and contemporary with Thucydides. Being the editor, to a particular species of jambic verse (Matrum Philistecum or Philistecum). (Scholl, Hist. Lit. Gr., vol. 3, p. 86.)—III. A tragic poet, a native of Egi- na, and contemporary with Philiscus of Corcyra. (Scholl, l. c.)—IV. A sculptor of Rhodes, whose era is uncertain. He made, among others, two statues, one of Apollo, the other of Venus, which were placed in the collection of Octavia. (Plin., 36, 5, 4.)—Philiscus, a wealthy native of Syracuse, who employed his riches in procuring the soveraign power for Dionysius the younger. He became, subsequently, the confident, minister, and general of the tyrant; but he lost his favour by having secretly married one of his nieces, and was driven into exile. He retired to Adria, where he wrote on the "Antiquities of Sicily," in seven books, which was carried down to the third year of the 83d Olympiad, and embraced a period of eight centuries. He composed also a "Life of Dio- nysius," in four books. Having been recalled from banishment by Dionysius the younger, he became the antagonist of Dion and Plato, who had gained an ascendency over the mind of that prince. Philiscus commanded the fleet of Dionysius in the naval battle with Dion and the Syracusans, which cost the tyrant his throne, and his vessel having run aground, he was taken prisoner, and afterwards put to death. Besides the two works already mentioned, Philiscus wrote the life of Dionysius the younger, in two books. These three productions being united, bore the common name of Συλλογικα. Cicero praises this historian, and calls him "almost a little Thucydidides." (paece pu- sillinus Thucydidides.—Ep., ad Q. Frat., 2, 13.—Com- pare de Diet., 1, 20.) But Plutarch and Pausanias reproach him with having sacrificed the authenticity of the facts of his master. Dionysius of Halicarnassus also observes, that if he has managed to resemble his model, Thucydidès, it is only in two respects, in having left behind him unfinished writings, and in the disorder which prevails throughout his works. In point of sentiment and feeling, there is, according to Dionysius, no resemblance whatever between the two: Thucydidès had a lofty and noble spirit; Philiscus, on the other hand, yielded to tyrants, and sacrificed truth to them. Dionysius confesses, however, that the style of Philiscus was clear, and marked by "roundness" and energy, though without figures and ornament. — Alexander the Great is said to have greatly admired the works of Philiscus, and they formed part of his portative library. The fragments of this writer have

1039

PHILO, I. a statutory, in the age of Alexander the Great. This is evident from the circumstance of his having made a statute of Hephaestion. (Tatian, Oral. ad Graec. Gr., 55.) This artist is undoubtedly referred to in a well-known inscription given by Wheler (Ibn., 209. - Compare Spalatin, Misc. Erud. Antiq., 325. - Chishull, Antiq. Asiât., p. 59, seqq. - Jacobus, Anthol. Gr., 3, 1, p. 192. - Silius, Dict. Art., s. v.) II. A native of Byzantium, who flourished about 150 B.C. He must not be confounded with the architect Philo, who, in the time of the orator Lycurgus, built the arsenal in the Piraeus. - Philo of Byzantium was the author of a treatise having relation to mechanics, in five books, of which only the last two remain to us. These treatises, "Ars Mechanica" ("Oratoiou koinon," or "Opyranotoukia," of the construction of towers, walls, ditches, as well as other works required for the siege of cities. There is ascribed to him also a work on the "Seven Wonders of the World" (Πεπε των Επτα Θεαμάτων). These wonders are, the gardens of Seiramis, the pyramids of Egypt, the statue of Jupiter at Olympia, the colossus of Rhodes, the walls of Babylonia, the temple of Diana at Ephesus, and the Mausoleum at Halicarnassus. The last, it is worthy of remark, and the last but one is in a very mutilated state. It is a production of very little value, excepting the chapter which treats of the Colossus of Rhodes, and the fragment, that remains of the description of the Ephesian temple, two monuments which Philo himself saw. As he no doubt also had beheld the tomb of Mausolus, we have to regret the loss of the last chapter, in which this was described. The style, however, of the two last books is less refined than that of the author of the Βεζονοτικία. The two books of the treatise relating to Missiles, &c., are to be found in the collection of the "Ancient Mathematicians" (Mathematici Veteres, Paris, 1693, p. 49-104). The first five chapters of the "Seven Wonders" were published, for the first time, by Leo Allatius, Rom., 1640, 8vo, with a very careless Latin version. A corrected edition was given by De Boisguet, who accompanied M. de Crequi in his embassy to Rome, and delivered a harangue before Urban VIII. This edition was corrected by the Vatican MS., and appeared at the end of the Ibis of Ovid published in 1661, at the Lyons press, 8vo. It is rarely met with, and was unknown to Bast, who, when the Vatican MS. was published, published the variations contained in it, though they were already given in the edition of Boisguet. This edition, like Bast in the Greek, has a typographical error; but it is accompanied by a good Latin version. The edition of Allatius, corrected by Gronovius, was reprinted in the Thesaurus Antiq. Crit., vol. 7, with the fragment of the sixth chapter, which Holstenius had found. Teucher promised a new edition in 1811, but it never saw the light, the editor having died before he could complete it. In 1816, Orelli published a new edition, with the text corrected after Boisguet and Bast, and with "The Antiq. Papyrus," &c. This is the best edition: it contains also the fragments of the Sophist Callinicus, and of Adrian of Tyre. (Schöll, Hist. Lit. Gr., vol. 3, p. 367. - Hoffmann, Lex. Bibliogr., vol. 3, p. 224.) III. Called, for distinction sake, Judeus (Ludovoc) or the Jew, was a native of Alexandria, a member of a sacerdotal family, and flourished about 40 A.D. He belonged to the sect of the Pharisaees, and was a great zealot for the religion of his fathers. On occasion of a tumult which had taken place at Alexandria, the Hellenistic Jews of this city sent him to Rome to carry their justification before the Emperor Caligula; but the latter refused to receive him into his presence. Philo was a man of great learning. He had carefully studied all the Grecian systems of philosophy, and he made an admirable use of this knowledge in accomplishing the object which he had in view, of presenting the pagans, namely, with the sacred Scriptures of his nation as the perfection of all human wisdom. Of all the systems of profane philosophy, no one suited his views so well as the Platonic. His inclination towards a contemplative life was nurstured by the perusal of Plato's writings, while their mystic tendency served to inflame his imagination. The ideas of Plato were amalgamated with Philo's doctrine respecting the Scriptures, and he may thus be regarded as the precursor of that strange philosophy which, one hundred and fifty years after his time, developed itself in Egypt. The style of Philo is expressly modelled after that of Plato. A perusal of his works, which are quite numerous, is not only interesting for the study of the history of the Hellenic philosophy, but extremely important for understanding the Septuagint and the books of the New Testament. Mai discovered, in 1816, some unedited fragments of this writer. An Armenian translation was also found at Lemberg, in Galicia, by Zohrab, an Armenian, in 1791, which contained thirteen productions of Philo, of which eight no longer exist in Greek. (Mai de Philionis Judeus et Eusebii Pamphili scriptis ineditis Dissertatio, Mediolani, 1816, 8vo.) The last, known of Melville's "According to the method," published in 1742, 2 vols. fol.: the latest is that of Richter, forming the second part of the "Bibliotheca Sacra," Lips., 1828-1830, 8 vols. 12mo. It contains merely the text. The two works found by Mai were published at Milan in 1818, 8vo, and Aucher published at Venice, in 1822, a Latin translation of the three works of Philo, of which Zohrab had found the Armenian text. The Hebrew Lexicon of Philo, which exists only in a Latin version and is contained in the third volume of the works of St. Jerome, published in Paris, 1633. (Schöll, Hist. Lit. Gr., vol. 5, p. 65, seqq. - Hoffmann, Lex. Bibliogr., vol. 3, p. 225, seqq.) IV. An epigrammatic poet, who flourished from the reign of Nero to that of Hadrian. He celebrated, in a separate production, the reign of the latter. Eudocia states (p. 424), that he composed four books of epigrams. Only one small which relates mainl. (Jacobus, Catag. P-oet. Epigr., p. 936.) V. A native of Larissa, the pupil and successor of Cleomachus in the chair of the New Academy. He also taught at Rome, having retired to that city from Athens during the Mithradatic war, B.C. 100. By some he has been considered the founder of a Fourth Academy. Philo confined a optimism to a contradiction of the metaphysics of the Stoics and their pretended critics, and as he conceived the sphere of logic, made moral philosophy merely a matter of public instruction; and endeavoured to prove that the Old and New Academies equally doubted the certainty of speculative knowledge. Cicero was one of his auditors, and often makes mention of him in his writings. (Tennemann, Manual Hist. Philos. p. 154. - Compare Schöll, Hist. Lit. Gr., vol. 5, p. 198.) PHILOCTETES, a Thessalian prince, son of Poas or Pean. As noted above, Petron. Acc. Tertio. Antiqu. Papyrus, &c. The legend of the amant of Apollodorus and others, which we have followed in the narrative of the death of Hercules, that hero gave his bow and arrows to Poas, father of Philoctetes, as
a reward for having kindled his funeral pile on Mount Cete, when all his immediate followers declined so to do. A different form, however, is given to the story by Hyginus and other authorities, who make Hercules to have bestowed the gift of Philoctetes, the son, for having permitted the name whichadn, to scholars assign to the father. (Hygin. fab. 36.—Schol. ad Hom., Il. 6.—Ovid, Met., 9, 234.—Serv. ad Aen., 3, 402.—Muncker, ad Hygin., l.c.) Sophocles, again, differs from both accounts, in assigning the task of kindling the pile to Hyllus, the son of the hero himself. (Soph., Trach., 1211, 1270, 1273.)—Philoctetes, as one of the suiters of Helen, was compelled to take part in the war against Priam. He bore the found of his parent, and, being informed by the Oracle to make the voyage, sailed from Aulis, along with the rest of the fleet, to the land of Troy. He was not, however, permitted to remain for any long time an inmate of the Grecian camp. A very offensive wound in his foot, and the loud and ill-omened cries of suffering which he was constantly uttering, induced the Greeks to move him from their vicinity, and, having transported him to the island of Lemnos, and to have there Urbanus, or Sophocles, as it is said to have planned and executed the deed. (Soph., Philoct., 5.) The causes of the wound of Philoctetes are differently stated by mythologists. Some ascribe it to the bite of a serpent, which Juno sent to attack him, because he had kindled the funeral pile for Hercules, and had collected his ashes; and they make him to have received the wound in the island of Lemnos, and to have been there abandoned by the Greeks. (Htg. 1025.) Homer (II., 2, 722) says he was bitten in Lemnos, at the altar of Minerva named Chrysa (compare Philostratus, Ion, p. 863, ed. Morell), while Dictys of Crete (2, 14) and Tzetzes (ad Lycophr., 911) make him to have received his wound in the city of Chrysa, near Troy. Others, again, laid the scene of the fable in the small island of Nea, near Lemnos. (Steph. Byz., s. e. Nax.) Theocritus says that he was wounded by the serpent while contemplating the tomb of Troilus, in the temple of the Thymbrean Apollo. (Mers, ad Lycophr., 912.) Finally, the scholiast on Sophocles tells us that Philoctetes was bitten on the shore of Lemnos, while in the act of raising an altar to Hercules. (Schol. ad Soph., Philoct., 269.)—The Greeks, having been informed by an oracle that Troy could not be taken without the arrows of Hercules, despatched Ulysses and Polyphemus. Polyphemus was to proceed to Lemnos, in order, by his presence, to the tedious siege. The chief, whose resentment towards the Greeks, and especially towards Ulysses, the immediate promoter of his removal from the camp, was still unabated, refused to comply with their summons, and would have persisted in his refusal had not Hercules appeared, and enjoined upon him, on a promise that his wounds should be cured, to accede to the request that was made of him. Philoctetes unwillingly left the camp before Troy, where he was cured by Machaon, and where he particularly distinguished himself by his valour, and by his dexterity in the use of the bow. Paris, among others, fell by his hand. (Tzetz. ad Lycophr., 911.—Hygin., fab., 112, 114.) Philoctetes survived the siege; but, instead of returning to Greece, settled with his followers in Italy, where he founded the city of Petilia in the territory of the Bruttii. (Virg., Aen., 8, 479.) When the Greeks, who had left in Italy the body of their great hero, Virgil, gives another and very different legend concerning the Thessalian hero. According to this version of the fable, Philoctetes was the companion and friend of Hercules, and the latter, just before his death, enjoined upon him, with an oath, not to disclose where his ashes were interred, and he gave him, on condition of his preserving the secret, his bow and arrows. When the Greeks were informed by the oracle of Troy could not be taken without the arrows of Hercules, they went in quest of Philoctetes (who, according to this account, had not gone to the Trojan war), and made inquiries of him respecting the son of Alcmena. At first, Philoctetes pretended not to know where he was; at length, however, he informed them that he was then master of which heAug to declare where the hero was buried, Philoctetes, in order to evade his oath, struck the ground with his foot, without uttering a word, and the spot was discovered. He himself was then led away to the war; but, not long after, one of the arrows fell on the foot with which he had betrayed the burial-place of Hercules, and inflicted a painful and most noisome wound. The Greeks for a long time bore with him on account of the oracle. At last, their patience failing, they promised to give him the wound, together with the cries of the suffering, being quite insupportable, Philoctetes was conveyed to the island of Lemnos, his arrows being first taken from him. His wound preventing a return to his native country, he sailed from Lemnos to Italy, and founded Petilia; and here he was finally cured. (Serv. ad Virg., Aen., 3, 401.) Sophocles has made the sufferings of Philoctetes a subject of one of his tragedies. (Vid. Sophocles.)

PHILOLUUS, a Pythagorean philosopher, born at Crotona, but who afterward lived at Thebes, and also at Hercules. He was a disciple of Archytas, and flourished in the time of Plato. It was from him that Plato purchased the written records of the Pythagorean system, contrary to an express oath taken by the society of Pythagoreans, pledging themselves to keep secret everything that existed among them. Plutarch relates, that Philolus was one of the persons who escaped from the house which was burned by Cylon during the life of Pythagoras; but this account cannot be correct. Philolus was contemporary with Plato; and, therefore, certainly not with Pythagoras. Interfering in affairs of state, he fell a sacrifice to political jealousy. Philolus treated the doctrines of nature with great subtility, but, at the same time, with great obscurity; referring everything that exists to mathematical principles. He taught that the world is one whole, which has a fiery centre, about which the ten celestial spheres resolve, heaven, the sun, the planets, the earth, and the moon.—At Thebes, Philolus was the teacher of Simonm and Cebes, before they came to Socrates at Athens. (Plat., Phad., p. 61.) Fragments of the writings of this philosopher have come down to us, the most important of which is contained in two treatises—Plutarch, that Philolus was one of the persons who escaped from the house which was burned by Cylon during the life of Pythagoras; but this account cannot be correct. Philolus was contemporary with Plato; and, therefore, certainly not with Pythagoras. Interfering in affairs of state, he fell a sacrifice to political jealousy. PHI

and became also, and changed to a hoopoe (εφώ). (Apollod., 3, 13.—Ovid, Met., 6, 424, seq. — Hygin., fab. 45.—Schol. ad Aristoph. Av., 212.—Eudocia, 327.)—Like so many others, this story is told with considerable variations. According to some, Tereus had earlier been made ruler of Phthia for Philomela, who obtained her in marriage by pretending that Procris was dead. (Apollod., l. c.—Hygin., l. c.) Again, there is great discrepancy respecting the transformation, some saying that Procris, others that Philomela, was the nightingale. This last, which has the significance of the name in its favour (Philomela being song-loving), was not, however, the prevalent opinion. It was also said that Tereus was changed into a hawk, and that Ibyx became a wood-pigeon.—The legend, which we have been giving is one of those invented to account mythically for the habits and properties of animals. The twitter of the swallow sounds like Ibyx, Ibyx; the note of the nightingale was regarded as lugubrious, and the hoopoe chases these birds. (Keightley's Mythology, p. 379, seq.)

Philoprat, the surname of the fourth Plutarch of Egypt. (Vid. Philomelaus.)

Philopomen, a distinguished general of the Achaean league, born at Megalopolis, in Arcadia, and educated under the best masters. He was no sooner able to bear arms, than he entered among the troops which the city of Megalopolis sent to make incursions into Laconia, and in these inroads never failed to give some remarkable proof of his prudence and valour. When Cleomenes, king of Sparta, attacked Megalopolis, Philopomen greatly signalized himself among the defenders of the place. He distinguished himself no less, some time after this, in the battle of Sellasia, where Antigonus Doson gained a complete victory over Cleomenes, B.C. 222. Antigonus, who had been an eyewitness of his gallant behaviour, and who admired his talents and virtues, offered him a considerable command in his army, but Philopomen declined it, because he knew, as Plutarch observes, that he could not bear the blame under the direction of a vanquished general. Not choosing, however, to remain idle, and hearing that there was war in Crete, he sailed to that island to exercise and improve his military talents. When he had served there for some time, he returned home with high reputation, and was immediately appointed by the Achaeans general of the horse. In the exercise of this command, he acquitted himself with signal ability; so much so, in fact, that the Achaeans horse, heretofore of no importance, was long famous, not only among all Greeks, but beyond the sea. He was not long after appointed to the command of all the Achaean forces, and zealously employed himself in reforming the discipline of the army, and infusing a proper spirit into the soldiers of the republic. An opportunity occurred soon after this, of ascertaining how the troops had profited by his instruction. Machanidas, tyrant of Lacedemon, with a numerous and powerful army, was watching a favourable moment to subdue the Achaean league. At a subsequent time, he, as intelligence was brought that he had attacked the Mantinians, Philopomen took the field against him, and defeated and slew him. The Lacedemonians lost on this occasion above 8000 men, of whom 4000 were left dead upon the field. The Achaeans, in commemoration of the valour of Philopomen, set up at Delphi a brazen statue, representing him in the very act of slaying the tyrant. As a mark of respect, and, however, he experienced a reverse of fortune; for, having ventured to engage in a naval battle with Nabis, the successor of Machanidas, he was not only defeated, but in danger of being lost through the leaky condition of his own vessel, which was an old one fitted up for the occasion. His want of skill, however, on this element was amply compensated not long after by a victory over the land forces of the enemy, commanded by Nabis in person, the greater part of whom were cut off. When Nabis had been assassinated by the Lacedemonians (vid. Nabis), Philopomen performed another distinguished service for his countrymen, by inducing the Spartans to join the Achaean league. Sparta, indeed, was an acquisition of no small importance to the confederacy, which she now became a member. It was also a most acceptable service to the principal Lacedemonians, who hoped henceforth to have him for the guardian of their newly-recovered freedom. Having sold, therefore, the house and property of Nabis by a public decree, they voted the money, which amounted to 120 talents, to Philopomen, and determined to send it by persons deputed from their own quarter. But so high was the private character of the illustrious Lacedemonians, that they determined to try to find any individual who would venture to speak to him on the subject. At last, one Timolaus, who was connected with Philopomen by the ties of hospitality, undertook the task; but when he went to Megalopolis, and observed the purity and simplicity of his private life, he uttered not a word respecting the present, but, having assigned another cause for his visit, returned to Lacedemon. He was sent a second time, but still could not trace the money. In the third, he introduced the subject with much hesitation, and stated to him the kind intentions of Sparta. But Philopomen immediately declined the offer, and, going himself to Lacedemon, advised the people not to tempt the good with the money, but to employ it rather in silencing the opposition of the bad. And yet it was in this same city that he afterward inflicted, as the general of the Achaean league, an act so infamous as to have obliged Lacedemon to violate the terms of the compact, her walls were demolished by Philopomen, the institutions of Lycurgus were abolished, and the laws of the Achaeans were established in their room. Not long after this the city of Messene withdrew from the Achaean league, and a war was the consequence, in which the forces of the confederacy proved altogether superior, until their success was turned into mourning by a great and most unexpected disaster. Philopomen was surprised by the enemy when passing with a small party of cavalry through a difficult defile. It was thought that he might have escaped by the aid of some light-armed Thracians and Cretens in his band: but he would not quit the horsemen, whom he had recently selected from the noblest of the Achaeans; and, while he was bringing up the rear, and bravely covering the retreat, his horse fell under him. He was several times wounded, and his horse was demol-ished, and he lay stunned and motionless under his horse till he was found by the Messenians. The popular feeling was in his favour, since it was remembered that the Messenian state had formerly received important benefits at his hands; but the magistrates were hostile, most of them having been the authors of the revolt, and it was resolved by them that Philopomen should die. He was accordingly compelled to drink a cup mingled with hemlock. Soon after, he was fired by Polybius with the words, that in forty years, during which he played a distinguished part in a democratical community, he never incurred the enmity of the people, though he spoke and acted freely and boldly, nor ever courted popular favour by unworthy compliance. — We have a biography of him by Plutarch. (Polyb., 2, 40. —Ibid., 2, 67, seqq.—Ibid., 11, 10, &c. — Plut. in Vit.)

Philostratus, a celebrated author, was, according to some, the son of Philostratus, who was represented to us as one of the greatest orators of his time. He lived towards the end of the second century of our era, at the court of the Emperor Septimius Severus, and at the commencement of the third, under Alexander. It was to please the Empress Julia, the wife of Severus, who had a strong predilection for literary pursuits, that Philostratus composed the most famous of his works, the Life of Apollonius
PHILOSTRATUS.

of Τύων (ἈΠΟΛΛΟΝΙΟΥ ΤΟΥ ΤΩΝΑΛΩΝ ΒΙΟΣ), a well-known charlatan and wonder-worker, whom his biographer wishes to represent as a supernatural being. Hence Eunapius of Sardis, in speaking of this book, remarks, that, instead of being compiled out of the works of Apolloni, it ought to be entitled, a History of the visit of God unto men (δεινου εικονομα των ανθρωπων θεου καιλει). Three writers before the time of Philostratus had given Lives of Apollonius, namely, Damis of Nisus, his friend, and two unknown writers, Maximus and Meragenses. Their works were of service to Philostratus in framing his compilation; but a compilation entirely destitute of critical arrangement, filled with the most palpable errors and anachronisms and with real and apparent discrepancies, it is difficult to exculpate him from such an intention. Various particulars in the biography of Apollonius, such as the announcement of his nativity, made to his mother by Proteus; the incarnation of this Egyptian divinity in the person of Apollonius; the miracles by which his birth was accompanied; those that are attributed to the individual himself; and his ascension into heaven, appear borrowed from the life of our Saviour; and within less than sixty years from Philostratus, the time of Dioclesian, Hierocles of Nicomedia opposed this work to the gospels. Huet was the first that ascribed an evil intention to Philostratus (Demonstr. Evan. Propos., 9, c. 147); while the opposite side is maintained by Meiners (Gesch. der Wissensch. &c., vol. 1, p. 258) and by Tiedemann (Gest. der Spectual. Philos., vol. 3, p. 116).—Philostratus has also imitated the style of Hesiod (Lex. et conc.); the fabulous history of twenty-one heroes of the Trojan war. This work is in the form of a dialogue between a Phoenician mariner and a vinodresser of Thrace, who had heard all these particulars from the lips of Protælaus. Another work is the Eidōkôs, in two books. It is a discourse on a gallery of paintings which was at Naples, and contains some valuable remarks on the state of the arts at this period. We have also the Libri de vita virtutum; in two books, containing the first containing the lives of the philosophical sophists, the second those of the rhetorical. The former are twenty-six in number; the latter thirty-three. It is an interesting work, and gives an amusing account of the sophists of the day, their vanity and impudence, their jealousies and quarrels, their corrupt morals; a living picture, in fine, of the fall of the art and the corruption of literary men. There exist also from the pen of Philostratus thirty-three letters, and an epigram in the Anthology. There are only two editions of the entire works of Philostratus; that of Morell, Paris, 1608, fol., and that of Olearius, Lips., 1709, fol. The latter is the better one of the two, although in numerous instances it only copies the errors of the former. Olearius is said to have appropriated to his own use the notes of Reinesius, written on the margin of a scholar's copy of a disquisition, which he obtained from the library of Zeitz, and that of Heidelb., called the dissertation edit, by this copy. (Hoffmann, Lex. Bibliogr., vol. 3, p. 235.)

In 1806, Boissonade published a good edition of the Heroïca, from the Paris press, in 8vo, and Weleker an edition of the Eidōkôs of both the elder and younger Philostratus, with archaeological illustrations by himself, and a commentary by F. Jacobs, Lips., 1825, 8vo. Among the works that may be consulted in relation to Philostratus are the following: Badekem, de arte et judicio Philostrati in describendis imaginibus, Hafm., 1792, 4to.—Bekker, Specimen var. lect. et observat. in Philostraturn, Acc. F. Creuzerui Annot., Hedd., 1818, 8vo.—Hamaker, Lectiones Philostratiae. Lugd. Bat., para 1, 1816, 8vo.—Heyne, Philostrati imagine, &c., Stuttgart., 1796, 1801 (Progr.), fol.—Zeyer, Exercitationes Criticae in vol., 2, Lips., 1797, 8vo.—II. A nephew of the former, called, for distinction sake, Philostratus the younger. He was the author of a work which has come down to us under the title of Eidōkôs (like that of the elder Philostratus). It is contained in a single book, and is less a description of paintings that have actually existed, than a collection of subjects for artists. This work is commonly printed along with the Eidōkôs of the elder Philostratus. The latest and most exact edition of the latter is that of Weleker, Lips., 1825, 8vo. (Scholl, Hist. Lit. Gr., vol. 4, p. 288, seqq.)

PHILÔTAS, son of Paramenio. He distinguished himself on many occasions, but was at last accused of conspiring against the life of Alexander. The monster was encamped at Artacana when information of this design was brought to him. The informer was a boy of infamous character, and the persons accused were officers, though not of exalted rank. The informer said, that he had at first told his secret to Philotas, who had daily access to Alexander, but who had taken no notice of it for two days, at the end of which time, through the means of another officer near Alexander's person, the information was conveyed to the king. This threw strong suspicion on Philotas, who, however, was not implicated by either the informer or any of those拷t close to him in the army. He was, who had an old jealousy against Philotas, on account of the favour which the latter enjoyed with the king, encouraged the suspicions of Alexander, who recollected what Philotas had said at the time when the former claimed Jupiter Ammon for his father, that he pitted those who were doomed to serve a man that fancied himself to be a god. Craterus had also, for some time previous, been in the king's confidence; but Philotas, who reported to him, and, through him, to the king, all the boastful vapourings and expressions of discontent uttered by Philotas in his unguarded moments. In short, Alexander, according to Quintus Curtius, was induced to order Philotas to be tortured in consequence of the suggestions of Craterus, Hephaestion, and others of the king's companions. Cenus, who had married the sister of Philotas, was one of the most violent against the assassin, and took much part of being thought an abettor of his brother-in-law. The torture was administered by Craterus himself, and Philotas, after enduring dreadful agonies, confessed, though in vague terms, that he had conspired against the life of Alexander, and that his father Paramenio was cognizant of it. This being considered sufficient evidence, Philotas was stoned to death; and Paramenio suffered not long after him. (Vid. Paramenio.—Quint. Curti, 6, 7, 18.—Arrian, Exp. Al., 9, 36, seqq.)

PHILÔXENUS, I. a native of the island of Cythera, born 439 B.C. He is highly praised as a dithyrambic poet by the ancient writers. The inhabitants of Cythera having been subjected by the Lacedemonians, Philoxenus, while still a boy, came as a slave into the hands of a Spartan, and afterward into those of the younger Melanippides, who, being an exalted and happy poet, purchased his freedom. Philoxenus lived subsequently at the court of Dionysius the elder, tyrant of Syracuse, where he acquired the character of a bon vivant and a wit. Dionysius, on one occasion, gave him one of his dramas to correct, and the poet is said to have run his pen through the whole. The offended tyrant sent him to the quarries, and the poet is said to have there composed, under the eye of his dungeon, the following lines, which Elian says, that the hole or chamber in which he wrote his play was shown a long time after to strangers, and went by the poet's name. (Var. p. 472. seqq.)
Philothenus was afterward restored to favour, and the tyrant, imagining that he would now find in him a more complimentary critic, invited him to attend the reading of one of his poems. Philothenus, after enduring the infliction for a while, rose from his knees, and said: "My lord, I have been banished from this place, and it appears to me that I shall be no more able to write a poem to your honour than I was to write a poem to the gods, to which they were so much offended, as you have related to me."

Eustathius gives a curious account of his having escaped on this occasion, by dexterously using a word susceptible of a double meaning. Dionysius, according to this version of the story, read one of his tragedies to Philothenus, and then asked him what kind of play it appeared to him to be.

The poet answered, "A sad one (oistros), meaning sad stuff; but Dionysius thought he meant a drama full of pathos, and took his remark as a compliment. (Eustath. ad. Od., p. 1691.) According to the scholiast on Aristophanes (Plut., 290), Philothenus was sent to the quarries for having riven the tyrant in the affections of a concubine named Galatea. Having escaped, however, from this confinement, he flung himself into the sea, and, finding himself on the point of being drowned, began the following ode:

The poet answered, "A sad one (oistros), meaning sad stuff; but Dionysius thought he meant a drama full of pathos, and took his remark as a compliment. (Eustath. ad. Od., p. 1691.) According to the scholiast on Aristophanes (Plut., 290), Philothenus was sent to the quarries for having riven the tyrant in the affections of a concubine named Galatea. Having escaped, however, from this confinement, he flung himself into the sea, and, finding himself on the point of being drowned, began the following ode:

"Philothenus was noted for his gluttony, and Atheneus records a wish of his (8, p. 341, d.), that he might have a throat three cubits long, in order that the pleasure arising from the tasting of his food might be the more prolonged. (Compare Athien. 10, 9.) He is said to have died of a surfeit, in eating a polypus two cubits in size. (Atheneus, 8, p. 341. — Scholl, Gesch. Lit. Gr., vol. 1, p. 206.)"

II. A native of Leucadia. Bökisch considers this one to have been the glutton, and the Cytherean the poet. (Scholl, Gesch. Lit. Gr., vol. 1, p. 207. Annm. 1.) — III. or Flavius Philothenus, was consul A.D. 525, and is commonly known as the author of a Latin-Greek Lexicon, in which the Latin words were explained in Greek. H. Stephens gave this Lexicon, without knowing the name of the compiler, in his "Glossaria duo et sita extantur critar," Paris, 1784, fol. It appears under the name of Philothenus of the collection in Bonav. Vulcianus. It forms part also of the London edition of Stephens's Thesaurus, 1826. (Scholl, Gesch. Lit. Gr., vol. 3, p. 193.)

Philippeis, a patronymic of Chiron, the son of Philyra. (Virgil, G., 3, 550.)

Phineus, I. a son of Agenor (or, according to some, of Neptune), who was gifted with prophetic powers, and reigned at Salmydessus, on the coast of Thrace. He married Cleopatra, the daughter of Boreas and Orthynthia, and became by her the father of two sons, Plexippe and Pandion. Cleopatra having died, he married Ideas, the daughter of Dardanus, who, becoming jealous of her step-children, maligned them to their father, and the latter, believing the slander, deprived them of their lands and stripped them of their wealth. According to the commonly-received account, the gods, to punish him, struck him with blindness, and sent the Harpies to torment him. These fell monsters came flying in the instant food was set before him, carried off the greater portion of it, and so defiled what they left that no mortal could endure to eat it. The Argonauts coming to consult Phineus about their future course, he promised to direct them, on condition of their delivering him from the attacks of the Harpies. The table was spread; the Harpies instantly descended, screaming, and seized the viands. Zetes and Calais, the winged sons of Boreas, then drew their swords and pursued them through the air. The Harpies flew along the Propontis, over the Ægean Sea and Greece, to some islets beyond the Peloponnesus, where their pursuers came up with them, and were about to slay them, when Iris, appearing, forbade the deed, and the Harpies put themselves under the protection of Iris. Phineus was thereupon asked for more food, and the Harpies forever more to molest Phineus. The inles were thenceforth named the Strophades (Στρόφαδες, from στρόφος, "to turn"), because the sons of Boreas there turned back from the pursuit. (Apollon. Rh., 2, 284.) — The legend of Phineus appears to have assumed a variety of shapes among the ancient writers, and this would seem to have been owing to its being frequently made the subject of dramatic composition. Thus, there was a "Phineus" composed by Aristophanes; another by Sophocles; not to speak of inferior dramatists. (Heine, ad Apollod., 1, 9, 21.) One version of the story made Phineus to have been blinded by Neptune, because he pointed out to Phryxus the route to Scythia. This was given in particular by Hesiod in his "Zeus". (Schol. ad Apollod. Rhod., 2, 181.) The same poet, according to Strabo (463), gave another legend elsewhere, which related that Phineus had been carried off by the Harpies to the northern regions of the earth, the land of the Galactiophagi. (Compare Orphica, v. 678, seq.) Another account, mentioned by Apollodorus, makes Phineus to have been blinded by Boreas and the Argonauts (Apollod., 1, 9, 21. — Id., 3, 15, 4); while Diodorus Siculus states, that Zetes and Calais, in conjunction with Hercules, made war upon the Thracians, liberated the two sons of Phineus from confinement, and that Hercules slew the king himself in battle. (Diod. Sic., 4, 44.) Finally, some innovator, guided probably by this passage of Diodorus, would seem to have changed οὐν Βορεάς in the text of Apollodorus (3, 15, 4), into οὐν Βορεάδας, and hence arose another version of the fable, that Phineus had been blinded by the sons of Boreas, for his cruel treatment of their relatives. (Heine, ad Apollod., l. c.) — II. The brother of Cepheus, king of Æthiopis. Andromeda, daughter of the latter, had been promised him in marriage; and when she was given to him, a vast rose, in which Phineus was changed to stone by the Gorgon's head which Perseus had brought with him. (Vid. Andromeda and Danæ.)

Phintias, I. a city of Sicily, to the east of Gela, on the southern coast. It was founded by Phintias, a tyrant of Agrigentum, who began to reign the next year after the death of Agathocles. Phintias transferred to his new city the inhabitants of Gela (Diad. Thes., 23, 3), in order to make his new city desert and cease to exist. (Strabo, 272.) Clever makes Phintias correspond to the modern Alcata; but Mannert proves very conclusively from Diodorus and Polybius, that it lay to the east of Gela, not to the west, as it appears on D'Anville's map, near the mouth of the river Drillo. (Geogrs., vol. 9, pt. 2, p. 349, seqq.) — II. A tyrant of Agrigentum, the year after the

PHI

PHI
death of Agathocles. He was the founder of Phintias, a city of Sicily to the east of Gela. (Vid. Phintias I.)

PHLEGRON, I. a native of Tralles, in Lydia, one of the Emperor Hadrian's freedmen. He wrote a species of universal chronicle, commencing with the first Olympiad, since he regards all that preceded this period as fabulous. In this work he recounted all the events that had taken place in every quarter of the globe, during the four years of each Olympiad. Hence it bore the title of Ολυμπιονικοῖς καὶ Χρονίκοις συγγεγραμμένα ("A Collection of Olympic Contemporaries, and of Events"). Independently of a fragment, which appears to have formed the introduction to the work, we have only remaining of it what relates to the 176th Olympiad. Photius has preserved this for us; and from this it would appear that Phlegron confined himself to a simple enumeration of facts, without taking any trouble about ornament of style, or without accompanying his work with any reflections. Photius, therefore, has had good reason, no doubt, to consider its perusal as somewhat fatiguing. The loss of the work, however, is the more to be lamented, since ancient historians in general neglect chronology too much. It was in this work that Phlegron made mention of the famous eclipse of the sun in the eighteenth year of the reign of Tiberius, which, according to him, produced so great an obscurity that the stars were seen at the sixth hour of the day (12 o'clock at noon), and which was accompanied with an earthquake. It was the eclipse that occurred at our Saviour's crucifixion. (Euseb., ap. Synccll., p. 325.) Numerous works have appeared in England on this passage of Phlegron, where the eclipse is mentioned. We may reproduce a version of one of the most remarkable:- "Sykes, Dissertation upon the Eclipse mentioned by Phlegron," London, 1732, 8vo. — "The Testimony of Phlegron vindicated, &c., by W. Whiston," London, 1732, 8vo. To this work there was a reply by Sykes, to whom Whiston rejoined. — "Phlegron examined critically and impartially, by John Chapman," London, 1743, 8vo, &c. — We have remaining two small works of Phlegron: one, entitled Περὶ Σαμηναίων, "Of a collection of marvellousward stories, which could only have been made by a man equally destitute of critical acumen and sound judgment; the other treatis "Of Persons who have attained to a very advanced old age (Περὶ Μακροζωόν), and is a dry catalogue of individuals who had reached the age of 100 to 140 years. Phlegron was the author of several other works, which are now lost, such as, "An Abridgment of the Work on the Olympiads," a "Description of Sicily," a "treatise on the Roman Festivals," another "on the most Remarkable Points of the City of Rome," and "a Life of Hadrian." Spartanus informs us, that this biography was believed to have been written by the emperor himself, who borrowed for the purpose the name of his freedman. (Spart., Vit. Hadr., 15.) Phlegron is thought to have been the author also of a small work, on "Females distinguished for Skill and Courage" (Ἀνδραρχοί), containing several edifying doxes),, containing short notices of Semiramis, Nicanor, &c. The best editions of Phlegron are, that of Myers, Lexag. Bat., 1620, 4to, and that of Franz, Hal., 1822, 8vo, containing the critical observations of Bast. The latter, however, which is very negligently printed, does not comprehend the work on remarkable women. This last-mentioned production was published by Heeren, in the Bibliothek für alte Lat. und Kunst, Nos. VI. and VII. After a MS. belonging to the Escurial, which was copied by Tytchen, and after another copy which was in the Barberini library at Rome, and which Holstenius had made from Nismes. (Schöttl, Hist. Lit., vol. 4, p. 201, second ed.) One of the four horses of the sun. The name means "the Burning one" (Φλῆγειαν, from φλῆγη, "to burn"). (Ovid, Met., 2, 154.) The names of the Sun-god's steeds are differently given by different poets. (Consult Munker, ad Hymn., ftb., 158.—Spanheim, ad Callim., H. in Del., 169.)

PHLEGREA, I. the earlier name of the peninsula of Pallen in Thrace (afterward Macedonia). The appellation is derived from φλῆγας, "to burn," and the place was failed to have witnessed a conflict between the gods and the earth-born Titans. The spot most probably had been volcanic at an early period. (Pind., Nem., 1, 100.—Schol. et Böck, ad loc.)—II. More commonly Phlegrae, Campi, a region of Italy, respecting which a tradition was related similar to that in the case of the peninsula of Pallen. (Vid. Phlegra I.)

The territory of Italy thus denominated formed part of ancient Campania, and appears to have experienced in a very great degree the destructive effects of subsurface fires. Here we find Mount Vesuvius; the Solfaterra, still smoking, as the poets have pretended, from Jupiter's thunder; the Monte Nuovo, which was suddenly thrown up from the bowels of the earth on the day of St. Michael's feast, in the year 1538; the Monte Barbaria, formerly Mox Gaurus; the grotto of the Sybil; the wonderful and gloomy lakes of Avernus and Acheron, &c. It is probable that the object Phlegreus, or the Greeks in their first voyages to the coast, and that they were afterward embellished and exaggerated by the fancy and fiction of the poets. (Plin., 3, 5.—Sil. Itat., 8, 540.—Propert., 1, 20, 8.)

PHLEGARY (Φλῆγαριος), the followers of Phlegray, in Bocotia. (Vid. Phlegray.)

PHLEGAY, son of Mars and Chrysogenes, the daughter of Haimus. Pausanias relates (9, 34), that the country about Phlegyoneus in Boeotia was that where Andreas, the son of the river Peneus, who named it from himself Andreas. He was succeeded by his son Eteocles, who is said to have been the first that sacrificed to the Graces. Eteocles gave a portion of his territory to Haimus, the son of Sisyphus of Corinth, to whose posterity, on Eteocles dying childless, the kingdom came: for Haimus had two daughters, Chrysogenea and Chrysse, the former of whom, as is commonly said, was born by Mars and Phlegyoneus; the latter bore to Neptune a son named Minyas. Phlegray obtained the dominion after Eteocles, and named the country Phlegeylonitis. He also built a city called Phlegra, into which he collected the bravest warriors of Greece. These separated themselves from the other people of the country, and took to robbing and plundering. They even ventured to assail and burn the temple of Delphi; and Jupiter, on account of their impious, finally destroyed them by lightning and pestilence. A few only escaped to Phocis. (Keightley's Mythology, p. 346.)—

The Phlegrays are regarded by Buttman as belonging to the universal tradition of an impious people being destroyed by fire from heaven. Müller regards the Phlegrays as being the same with the Lapithæ and the military class of the Minyas. Their name probably (Φλῆγας, from φλῆγα, "to burn") is connected by the legend of their destruction. (Keightley, l. c.)

PHILUS, a small independent republic of the Peloponnese, adjoining Corinth and Scydon on the north, Arcadia on the west, and the Nemean and Cleonian districts of Argolis on the south and southeast. (Strabo, 382.) It is sometimes, however, referred to Argolis, since Homer represents it, under the name of Arachus, as dependent on the kingdom of Mycenæ. (Hdt., 2, 668.) The remains of the city of Philus are to be seen not far from Agios Giorgios, on the road
PHO

PHO to the Lake of Stymphalus in Arcadia. (Gell, Itin. of
the Morca, p. 169.)

PHOCAEA, a maritime town of Ionia, in Asia Minor, southwest of Cyzicus, and the most northern of the Ionian cities. It was founded by the inhabitants of Phoïs, under the guidance of two Athenian chiefs, named Philogenes and Damon. The city was built, with the consent of the Cymæans, on part of their territory; nor was it included in the Ionic confederacy till its citizens had consented to place at the head of the government princes of the line of Codrus. Its favourable situation for commerce made it known from a very early period; and, as Malta

able, in a corrupt age, for purity and simplicity of character, and, though he erred in his political views, yet in his private relations he certainly deserved the praise of a virtuous and excellent man. Civil war and naval warfare was under Chabrias, to whom he proved himself, on many occasions, of signal utility, urging him on when too slow in his operations, and endeavouring to bring him to act coolly when unreasonably violent. In this way he eventually gained a remarkable ascendancy over that commander, so that Chabrias intrusted him with the most important commissions, and assigned to him the most prominent commands. In the naval battle fought off Naxos, Phocion had charge of the left wing of the fleet, and contributed essentially, by his gallant bearing, to the success of the day. The Athenians began now to regard him as one who gave promise of distinguished usefulness to the state. In entering on public affairs, Phocion appears to have taken Aristides and Pericles for his models, and to have endeavoured to attain to eminence in both civil and military affairs, a union of characters by no means common in his time. He was elected general five and forty times, without having once attended at the election; having been always appointed in his absence, at the free motion of his countrymen. This was the more honourable to him, as Phocion was one who generally opposed their inclinations, and never said or did anything with a view to recommend himself. In his military capacity, Phocion signalized himself on several occasions. He defeated the forces of Philip of Macedon, which they had sent into Euboea, with the view of getting a footing in that island: he saved Byzantium from Philip; took several of his ships, and recovered many cities which had been parcelled by his troops. As a statesman, however, Phocion seems less deserving of praise. His great error was too strong an attachment to pacific relations with Macedon, a line of policy which brought him into direct collision with Demosthenes, and led to his subsequent disfavour and removal, and for this Phocion had to bear. In this, however, there was nothing corrupt: the principles of Phocion were pure, and his desire for peace was a sincere one; but his great fault was in despairing too readily of his country. Alexander, to testify his regard for Phocion, sent him a present of 100 talents, which the latter, however, unhesitatingly refused. The same monarch offered him his choice of one of four cities in the province of Phocis, and Phocion declined the gift, and Alexander died soon afterward. We find Phocion, at a later period, in pursuance of his usual line of policy, opposing the Laman war; and, in consequence, sent to Antipater to treat of peace, when that war had eventuated unsuccessfully for Athens. When the city had submitted, and a Macedonian garrison was placed in Mynchias, the chief authority at Athens was vested in Phocion, who was recommended by his superior character and talents, and by the high esteem in which he was known to be held by Antipater. On the death of the latter, however, new troubles commenced. ( Vid. Polyperchon.) The Athenian people held an assembly, with every circumstance of tumult and confusion, in which they voted the complete re-establishment of democracy, and the death or banishment of all who had borne office in the oligarchy, of which the most conspicuous was Phocion. The exiles fled to the two nearest states from Greece, to Athens, from Polyperchon, and to Megara, from Phocion; and were sent by him to his father, and recommended to his favour. They were followed thither by an Athenian embassy, sent to accuse them and to demand their surrender. Polyperchon basely gave up the fugitives, in word, to stand their trial, but, in truth, to perish by the party-fury of their bitterest enemies. When the victims were brought before the assembly, their voices were drowned by the clamour of their judges, who were mostly of the persons newly restored to a share in the government, from which they had been excluded after the victory of Antipater. One eye was hooted down who attempted to speak in favour of the accused, and a tumultuous vote was passed condemning all the surviving citizens, whether free or slaves, in whose estimation there were others who vented in insults that envious malice which, while its objects were in prosperity, had been prudently suppressed. One of these wretches is said have spit on Phocion as he was led to prison; but the outrage failed to ruffle the composure of the captive, who only looked towards the chariots and asked, "Will none of you save this man's indecency?" Before he drank the hemlock he was asked if he had any message for his son Phocus: "Only," he said, "not to bear a grudge against the Athenians." As the draught prepared proved not sufficient for all, and the jailer demanded to be paid for a fresh supply, he desired one of his friends to satisfy the man, observing that Athens was a place where one could not even die for nothing. His body, according to law in cases of treason, was carried to the waste ground between Megaris and Attica, where, as his friends did not venture to take part in the funeral obsequies, it received the last offices from the hands of hirelings and strangers. His bones were collected by a Megarian woman, who interred them by the hearth of her dwelling, as a sacred deposit for better times. When the angry passions of the people had subsided, the remembrance of his virtues and the fear that he might become a check to Athens and publicly interred, and a bronze statue was erected to his memory. Agonides, one of those most instrumental in effecting his condemnation, had sentence of death passed against him by the popular assembly, and two of his other accusers having fled from the city, were overthrown by the vengeance of Phocus. These were effects of a change rather in the times than in the opinions of men. But the Athenians resigned themselves to the prospect of permanent subjection to foreign rule, the better they were disposed to revere the character of Phocion. Had he lived in an earlier period, he might have served his country, like Nicias, with unsullied honour. In a later age he might have passed his life in peaceful obscurity. His lot fell on dark and troubled times, when it was difficult to act with dignity, and when the best patriot might be inclined to succumb to the pressure of the degrading yoke which he had helped to impose. Towards the close of his life he descended lower and lower, constant only in his opposition to whatever bore the aspect of freedom. The fellow who spat on him, in his way to execution, was perhaps a more estimable person than the man to whom he would have surrendered Athens as well as himself. He left a character politically worse than doubtful: one which his private virtues have not redeemed, and in the number of the names of a Callimel- don and a Demades: a warning to all who may be placed in like circumstances, to shun his example, whether they value their own peace or the esteem of posterity. (Phit. Vit. Phoc. Thirhaed's Greece, vol. 7, p. 256. seq.)

PHOCIS.

The PHOCIS.

(Pausan., 2, 517.) From Herodotus we learn that, prior to the Persian invasion, the Phocians had been much engaged in war with the Thessalians, and had often successfully resisted the invasions of that people (9, 27, seqq.—Pausan., 10, 1). But when the defection of Thermopylæ was forced by the army of Xerxes, the Thessalians, who had espoused the cause of that monarch, are said to have urged him, out of enmity to the Phocians, to ravage and lay waste with fire and sword the territory of this people. (Herod., 8, 32.) Delphi and Parnassus on this occasion served as places of refuge for many of the unfortunate inhabitants; but numbers fell into the hands of the victorious Persians, and were compelled to serve in their ranks under the command of Mardonius. (Herod., 9, 17.) They seized, however, the earliest opportunity of joining their fellow-countrymen in arms; and many of the Persians, who were dispersed after the rout of Plataea, are said to have fallen victims to their revengeful fury. (Herod., 9, 31. Pausan., 10, 2.) A little prior to the Peloponnesian war, a dispute arose respecting the temple at Delphi, which threatened to involve in hostilities the principal states of Greece. This dispute was adjusted amicably by the Phocians as the common property of the whole nation, whereas the Delphians asserted it to be their own exclusive possession. The Lacedaemonians are said by Thucydides to have declared in favour of the latter, whose cause they maintained by force of arms. The Athenians, on the other hand, were less favourable to the Phocians, and, on the retreat of the Spartan forces, sent a body of troops to occupy the temple, and defend it from the hands of war. The service thus rendered by the Athenians seems greatly to have cemented the ties of friendly union which already subsisted between the two republics. (Thucyd., 3, 95.) After the battle of Leuctra, Phocis, as we learn from Xenophon, became subject for a time to Boeotia (Hist. Gr., 6, 5, 22), until a change of circumstances gave a new impulse to the character of this small republic, and called forth all the energies of the masses of its adherents. These were not long since had been imposed on them by an edict of the Amphictyons for some reason, which Pausanias professes not to have been able to ascertain, and which they themselves conceived to be wholly unmerited. Diodorus asserts that in consequence of their having cultivated a part of the Cithæan territory which had already been declared sacred (16, 23). By the advice of Philomenus, a Phocian high in rank and estimation, it was determined to oppose the execution of the hostile decree, and, in order more effectually to secure the means of resistance, to seize upon the temple of Delphi and its treasures. This measure having been carried into immediate execution, they were thus furnished with abundant supplies for raising troops to defend their country. (Pausan., 10, 2.—Diod. Sic., i. c.) These events led to what the Greek historians have termed the Sacred War, which continued for the second year of the 166th Olympiad, B.C. 355. The Thebans, supported by the Leucippion, took up arms in the cause of the Phocians, which had been thus openly violated by the Phocians; and, in a battle that took place soon after the commencement of hostilities, the latter were defeated with considerable loss, and their leader Philomenus perished in the rout which ensued. (Diod. Sic., 16, 31.—Pausan., 10, 2.) The Phocians, however, were not intimidated by this ill success, and, having raised a fresh army, headed by Onomarchus, they obtained several important advantages against the Amphictyonic army, notwithstanding the accession of Philip of Macedon to the confederacy. Onomarchus, having united his forces with those of Lycopolis and the remainder of the confederates, was enabled to vanquish the latter in two successive engagements, and compel him to evacuate Thessaly. Philip, however, was soon in a state to resume hostilities and re-enter Thessaly, when a third battle was fought, which terminated in the discomfiture and death of Onomarchus. Diodorus asserts that he was taken prisoner, and put to death by order of Philip; Pausanias, that he perished by the hands of his own soldiers. (Diod. Sic., 16, 35.—Pausan., 10, 2.) He was succeeded by his brother Phyllus, who at first appears to have been successful, but was at length overthrown in several engagements with the Boeotian troops; and was soon after seized with a disorder which terminated fatally. On his death the command devolved upon Phalæcus, who, according to Pausanias (10, 2), was his son, but Diodorus affirms that he was the son of Onomarchus. This leader being long after deceased, the army was intrusted to a commission, at the head of which was Philo, whose total want of probity soon became evident, by the disappearance of large sums from the sacred treasury. He was, in consequence, brought to trial, condemned, and put to death. Diodorus estimates the whole amount of what was taken from Delphi during the war at 10,000 talents (16, 56.) Phalæcus was now restored to the command; but, finding the resources of the state nearly exhausted, he was compelled to seek new support, and in the council of the Thebæans, deliberations occurred in which the King of Macedon was present, and in which the question was raised whether the Macedonians should be admitted to the confederacy. (Diod. Sic., 16, 60.) Phchos, however, soon after recovered from this state of degradation and subjection, by the assistance of Athens and Thebes, who united in restoring its cities in a great measure to their former condition. In return for these benefits, the Phocians joined the confederacy that had been formed by the two republics against Philip; they also took part in the Lamic war (1, 44). After the conclusion of that conflict, and after the fine renewal of friendship which had been made on both sides by a treaty, the Macedonian king sent a commissioner to the temple of Delphi, they are said by Pausanias to have displayed the greatest zeal and alacrity in the pursuit of the common enemy, as if anxious to efface the recollection of the disgrace they had formerly incurred. (Pausan., 10, 3.) Other passages, which serve to illustrate the history of Phchos, will be found in Demosthenes (de Pals. Legat.), Isocrates (ad Phil.), Aristotle (Anal. Pr., 2, 24).—The maritime part of this province occupied an extent of coast of nearly one day's sail, as Dicarchus reports (v. 79), from the border of the Locri Ozolae to the confines of Boeotia. (Cramer's Anc. Greece, vol. 2, p. 147, seqq.) Phchos, the son of Phocio. He was remarkable only for a dissolute mode of life, and was in no respect worthy of his parent, although Phocion had sent him to Sparta to be educated under the strict discipline of Lycurgus. (Plut., Vita Phoc.) Phocylides, a gnomic poet contemporary with Theogonis, and a native of Miletus, whom Suidas calls a philosopher, and whose birth-year he makes to have been 647 after the fall of Troy, or Olympiad 59. The ancient writers are silent respecting his life, and the few genuine fragments which we possess of his poems contain no allusion to his personal circumstances. He composed epic and elegiac poems, which the ancients ranked, like the productions of Theognis, in the gnomic class. (Isocr. ad Niccol., c. 11.—Id. ib. c. 12.—
PHOENICIA.

 Dio Chrysost. Or., 2, init.) Suidas says, his verses were filched from the Sihylline books, a remark derived, in all probability, from some father of the church, and to be understood in just the opposite sense. In order to stamp his productions with the impress of genuineness, Phocylides found it necessary to accompany them with the perpetually-recurring introduction, "This, too, is a saying of Phocylides;" just as Theognis, at the end of his poem on Cynnos, appended his name as a mark of literary property. What we at present remaining of Phocylides consists, for the most part, of hexameters, and breathes a quite different spirit from the earlier gnomes of Theognis, with which the Ionic precepts of the Milesian poet are often directly at variance. For example, in place of coming forward as an ardent defender of aristocratical principles, and as a martyr to his political creed, the advantages of birth are to him altogether indifferent. The contest, in fact, between aristocracy and democratical principles was by no means so obstinate and violent in the Ionian cities as in those of Dorian extraction. There is more of a philosophical character in the poetry of Phocylides, more reference to the common weal, and a greater wish to promote its true interests, than in the aristocratical gnomes of Theognis. He composed his gnomic precepts in two or three verses each, and was considered as not belonging to those who produced long continuous poems, but rather as loving the philosophical conciseness of separate and independent adagia. The longest fragment we have of Phocylides consists of eighteen verses, in which he draws a picture of the different classes of females, and compares them with as many classes of animals. In treating of individual or personal subjects, however, he appears to have employed the elegiac measure, as in the case of the satirical effusion against the islanders of Leros. The verses of Phocylides were so highly esteemed, that they were recited by the rhapsodists along with the more famous poems of Homer, as is shown by the gnomes of Minnemaus. A poem that still exists, under the title of Ποιημα νονθετηκων (Echoration), in 217 hexameters, is sometimes, though incorrectly, ascribed to him. It is probably the production of some Christian writer of the twelfth or thirteenth century. The fragments of Phocylides are found in the collections of Stephens, Brunnck, Gaisford, Boissoneaud, and others. Schier gave a separate edition of them in 1751, Lips., svo. (B. de Gesch. der Lyrischen Dichter, der Hel., vol. 1, p. 243, seqq.—Schilling, Hist. Lit. Gr., vol. 1, p. 340, seqq.)

PHERE, Ι. one of the female Titans, the offspring of Heaven and Earth (Caelus and Terra). From her union with Ceus, another of the Titans, sprang Latona and Asteria. The name Phere (Φερε) signifies the bright one (from φαω, "to shine"); and Ceus (Κους), the burning (from καω, "to burn"). (Keightley's Myth., p. 64.)—The name of the daughters of Diana, or the Moon. (Vid. Diana.)

PHŒBE, one of the names of Apollo, derived from φαω, "to shine." (Vid. Apollo.)

PHŒNICE or PHŒNIXI (Φωικίας), a country of Asia, extending along the coast of Syria, from the river Eucharus and the city and island of Aradus, on the north, to Mount Carmel on the south. In all probability, however, as Gesenius remarks, the coast between Carmel may likewise have belonged to Phoenicia, and hence Ptolemy carries the southern limit of the country as far down as the river Choruses, on which Cesarea lay. In general parlance, indeed, the whole line of coast was termed Phoenicia, from Aradus to the confines of Egypt, though the stricter limits are those first given. The tract of country thus denominated was only 185 geographical miles from Aradus to Carmel, or 100 in its greatest extent. The breadth was very limited, the ranges of Libanus and Antilibanus forming its utmost barrier to the east. The surface of the country was in general sandy and hilly, and not well adapted for agriculture; but, to counterbalance this, the coast abounded in good harbours, the fisheries were excellent, while the mountain-ranges in the interior afforded, in their cedar forests, a richness of timber for naval and other purposes. Hence the early prosperity which the Phoenicians made in navigation, and hence the flourishing commercial cities which covered the whole line of coast.

1. Origin of the name Phoenicia.

Respecting the etymology of the name Phœniciæ or Phoenicia, various conjectures have been offered. Bochart maintains, that the appellation comes from Beni-Anak (or Ben-Anak, contracted Beinak), "the sons of Anak," a name by which, according to him, the people of Phoenicia designated themselves in their own language. From this he says the Greeks first made Phœacæ, and afterward Phœacæ and Phœnix, softening down the Oriental appellation in their usual way. (Bochart, Canaan, 1, 1, col. 347.) To this etymology it is well objected by Gesenius, that the domestic appellation of the Phoenician race was not Beni-Anak or Bein-Anak, but Kenaanim, and their country Kenaan. That this was the native name of the nation is also clear from the Phoenician coinage, on which we read Kenaan. (Geusius, Phœn. Monument., p. 338, not.—Id. ib., p. 271.) The Punic settlers in Africa, moreover, gave themselves the same appellation. Thus, Strabo, Mr. Smith, in the true country people near Hippo, on being asked whence they derived their origin, answered that they were Kenanites, or from Kenaan. (Augustin, Expos. ad Rom.—Echelle, Doctr. Num., p. 409.—Gesenius, Gesch. des hebr. Sprachre., &c., p. 16.) Equally unfortunate with Bochart's is the etymology proposed by Arius Montanus and others, who deduce Phœnicæ and Phœnix from Phenakim, contracted from Phe-nakim, "the mark of the印章." The prefix Phe being an-"Unogous, in their opinion, to the Egyptian article Ph, as it appears in the term Pharaoh (P-Ro, i.e., "the king"). The same argument may be urged against this as against Bochart's derivation. There are other Oriental etymologies; such as Scaliger's, from the Hebrew-Phœnician Pinchas (the same with the proper name Phineas); and Pulfer's, from the Syracan pana, "to bring up delicately." These scarcely deserve mention, as not needed by the present common opinion, at the present day, is that which makes the terms Phœnice and Phœnicia of Greece and not of Oriental origin, and which deduces them from the Greek term φοινίς, in its signification of "a palm-tree;" so that Phœnicæ or Phœnix will signify "the land of palm-trees;" or "Palm-land." Gesenius, however, doubts the accuracy of this explanation, and is inclined to trace the names in question to φοίνις, in its sense of "purpurum," making Phœnicæ therefore to mean "the land of the purple-dye," in allusion to the famous purple or crimson of Tyre: Videant autem eruditii, eisne foinis appellatio ducta est foinis, purpur a, causa ait foinis, foinis (II, 12, 202), purpuræs, sanguineus (consp. fones), foinis o wlo nubificato; ita est foinis appellativum purpurarium designatum. (Phœn. Monument., p. 338, not.) This suggestion of Gesenius is more natural to suppose, that the purple cloths of Phœnicæ were made known to the Greeks by the Phœnician traders, for a long period before the Greeks themselves were allowed to visit in their own vessels the Syrian coast, and become acquainted with the physical features of the country. Before quitting this subject, it may not be amiss to remark that among many of the Roman writers, the names Pheniciæ and Phœnix (Phœnicus) are made so far to differ in meaning, as that the first indicates the Phœnicians, properly so called, and the latter their descendants of
colonists in Africa, such as the Carthaginians, &c. This distinction, however, has no good ground on which to rest. The term Φοινικής, in Greek, comprises not only the Phoenicians, but also the Carthaginians as well as the other Puni (Herod. 5, 46.—Eurip. Troad., 222.—Böckh, ad Prod. Pyth., 1, 72), a name first given by the Greeks to the Phoenicians when they had in Silius Italicus (13, 730) the form Phoeniciam for Paxorum, and (16, 25) Phoenis for Panas. Indeed, the term Panus is nothing more than Φοινικής itself, adapted to the analogy of the Latin tongue; just as from the Greek Ψευδόνη comes the old Latin form Punicus, found an Cato and Varro, and from this the more usual Punicus. (Compare currare and curare; menia, munia, and munire; penna and punio.—Georg. vol. i.—Phœnicus, ed. Müller, p. 241; Fragm. et Cod. Fam., L. 16.)

The Phoenicians were a branch of that widely extended race known by the common appellation of Aramaean or Semitic. To this great family the Hebrews and the Arabsians belonged, as well as the inhabitants of the wide plain between the northern waters of the Euphrates and the Persian Gulf. The Phoenicians themselves, according to their own account, came originally from the shores of the Persian Gulf (Herod., 7, 89), and Strabo informs us, that in the isles of Tyrsus and Aradus, in the gulf just named, were found temples similar to those of the Phoenicians, and that the inhabitants of these isles claimed the cities of Tyre and Aradus, on the coast of Phoenicia, as colonies of theirs. (Strabo, 7, 666.) The establishment, indeed, of the earlier Phoenician race in the Persian Gulf, and the enterprising habits which always characterized this remarkable people, would seem to point to a very active commerce carried on in the Indian seas, at a period long antecedent to positive history, and may perhaps furnish some clew to the marks of early civilization that are discovered along the western shores of the American continent. (Compare Ritter, Erdkunde, vol. 2, p. 163.)—The loss of the Phoenician annals renders it difficult to investigate the history of this people. Our principal authorities are the Hebrew writers of the second book of Kings, and Ezekiel and Isaiah. Herodotus, Josephus, and Strabo help to supply the deficiency. Incidental notices are found in other writers also. The Phoenician towns were probably independent states, with a small territory around them: the political union that existed among them till the era of the Persians, was preserved by a common religious worship. The town of Tyre seems to have had a kind of supremacy over the rest, being the richest city, and containing the temple of the national god, whom the Greeks call the Tyrian Hercules. The several cities were governed by supreme hereditary magistrates named kings. Hiram was king of Tyre, and a friend of Solomon, the king of Israel. When Xerxes invaded Greece, there was a King of Tyre, and also a King of Sidon in his army. (Herod., 8, 67.) We infer from a few passages of the ancient writers, and from the enterprises of the Phoenician colonies, that the despotism of Asia did not exist among them. The Sidonians are the first people recorded in history who formed a commercial connexion between Asia and Europe; the articles which they manufactured, or procured from other parts of Asia, were distributed by them over the coasts of the Mediterranean. These long voyages led to colonial establishments, and to the diffusion of the useful arts. These natural predispositions of the Phoenician colonists: they established themselves in many of the small islands of the Archipelago, particularly in those where the precious metals were found. The island of Thasus exhibited, in the time of Herodotus, manifest traces of their excavations. (Herod., 6, 47.)

With the early Greeks of the main land the Phoenicians had occasional commercial connexions: they furnished the natives with tinkets and female ornaments, and sometimes carried off the people. (Herod., 1, 1.) Slave-dealing was one source of wealth to the Tyrians (Ezekiel xxvii., 12): the simple narrative of Eumeus, in the 16th book of the Odyssey, presents a beautiful picture of the art of navigation of Phoenician settlements in Italy; but they occupied Sicily before the Greeks, and retired towards the western parts, as the nation became more numerous and powerful in the island. (Thucyd., 6, 2.) The great object of the enterprise of the Phoenicians, and the seat of their chief colonial establishments, was the southern part of Spain, or the modern province of Andalusia. The silver-mines and the gold-dust of the Minyanides formed a vast commerce to the Tyrians, and was known to the Spaniards. Not far from the mouths of the Bétis are two small islands: on one of these the Tyrians founded the city of Gadeira or Gadès, Cadiz, and built a temple to their national god, which existed even in the age of Strabo, and was justly considered a curious monument of antiquity. The advantageous situation of Gades, west of the Pillars of Hercules, and on the waters of the Atlantic Ocean, would naturally make it a natural centre of commerce, not confined to coasting. Of these voyages no records are preserved. The Phoenicians are said to have supplied the Greeks and the Asiatics with two articles, which are supposed to indicate an acquaintance with the southwestern angle of Britain and the coast of Prussia, on the Baltic Sea. These were tin and amber. With regard to the first, however, though there can be little doubt that the Phoenicians, and the Romans after them, traded for it to the Cassiterides, or Scilly Isles, yet the Greeks, in all probability, obtained their supply of it by an overland trade from India. (Vid. India.) The amber certainly came from the shores of the Baltic, but whether it was obtained by actual sailing thither, or procured by an overland trade at the head-waters of the Adriatic, remains, among modern scholars, a disputed point. An argument in favour of the former of these opinions may be drawn from the fact of the Phoenicians' having been acquainted with the existence of the Kodaun, a small river near Danzig, on the Prussian coast. (Vid. Eridanus.)—The connexion between the parent city of Tyre and her distant possessions in Europe and Africa was probably only a commercial one. Whatever might have been their original condition, they were independent places in the time of Herodotus (1, 163). The Phoenician colonies on the northern coast of Africa were at least as old as the settlements in the south of Spain. They were situated in a fertile region, which, by its position, formed, between Central Africa and the shores of the Mediterranean, a point of union similar to that which Tyre furnished between Asia and Europe. Utica was the first establishment on the African coast: Carthage, called by the Greeks Carchedon, was the next: other towns afterward sprang up. For the history of Phoenician commerce, particularly the commerce with Asia, we possess the most valuable document in the 27th chapter of Ezechiel. The Hebrew prophet lived at the time of the greatest splendour of Tyre, before her Eastern conquerors diminished her traffic and deprived her of national independence. At an earlier period, the Phoenicians had friendly connexions with the Hebrews. Solomon, the most powerful of their kings, made Jerusalem, during his life, the chief of their merchant ports. The Tyrians gladly formed an alliance with this potentate, and by his permission obtained the navigation of the Red Sea. The town of Eziongeber, which Solomon had taken from the people of Edom, was the point to which the Tyrian and Hebrew navies brought the gold and precious stones of Ophir. The Phoenicians also established trading-posts
PHOENICIA.

on the west side of the Persian Gulf. Here the ancient geographers placed the isles of Aradus and Tyre, to which the Tyrians brought the products of India. They were taken by the caravans across the Arabian desert to the Phoenicians, at that time the great mart of the world.—A commercial road between Tyre and the Euphrates would be necessary to diffuse the products of Tyrian industry and commerce, and also to procure the valuable wool furnished by the nomadic tribes. In the Syrian desert, about three days' journey from the old ford of the Euphrates, modern travellers behold with astonishment the magnificent and extensive ruins of Palmyra. The Arabs of the desert still call it Tyre, and attribute these buildings to the magic power of Solomon. We are told that Solomon built Baalath and Tadmor in the wilderness. The latter was no doubt intended as a great entrepôt between the Euphrates and the sea. Its situation, and the possession of springs of water in an arid desert, would not fail to attract a prince so wise as Solomon, and a merchant with such extensive dealings as Hiram. —From the mountains of Armenia, the Tyrians procured fine timber and slaves: timber from the Caucasus, at the present day, supply the haresns of the Turks and Persians with the females of Georgia and Circassia. —The Phoenicians seem, in the earlier ages, not to have had very extensive dealings with the Egyptians: but cotton and cotton cloths are enumerated among the articles which they received from Egypt. When Tbebes, in Upper Egypt, ceased to be the chief mart of the Nile, some of the Tyrians and Jews took up residence there, and availed themselves of the favourable situation of Memphis, at the apex of the Delta, made it the chief mart of Egypt; and the Tyrians who traded there were so numerous, that a part of the city was inhabited by them. —Grain of various kinds was carried to Tyre from the country of the Hebrews and other parts of Syria. Solomon gave Hiram wheat and oil; and the Tyrian, in exchange, furnished him with the pines and cedars of Lebanon. —The commercial intercourse between the Greeks and the Tyrians appears never to have been great: the two trading nations of the Mediterranean were probably jealous of one another; and, besides this, their colonies led them in different directions. Sicily was the point where the Greek and Tyrian merchant met in competition. When the Phoenicians were obliged to submit to the Persians, we find their navy willingly and actively employed against their commercial rivals. —Tyre was the entrepôt of the traffic of the ancient world; in her markets were found the products of all the countries between India and Spain, between the extremity of the great peninsula of sandy Arabia, and the snowy summits of Caucasus. Her vessels were found in the Mediterranean, on the Atlantic, and in the Indian Ocean. There was even a tradition, that in the time of Necho, king of Egypt, some Tyrian ships, at the desire of that king, were sent to cross the Indian Ocean, and, exploring the continent of Africa, entered the Mediterranean at the Strait of Gibraltar. (Vid. Africa.) —The Phoenicians furnished the world with several articles produced by their own industry and skill. The dyed cloths of Sidon, and the woven vests and needlework of Phoenician women, were in high repute among the ancient Greeks. The name of Tyrian purple is familiar. —Tyre never procured great fortunes: to acquire them, it is probable that a single colour is to be understood: deep red and violet colours were those which were most highly prized. The liquor of a shellfish, that was found in abundance on their coast, supplied them with the various colours denominated purple. (Plin., 9, 36.) It was principally woolen cloths the Tyrians used to dye, though cotton and linen dyed garments are mentioned also. —The Phoenicians are said to have possessed the art of making glass: it is probable they had manu-

sarepta. Little trinkets and ornaments were also made by this people. The Phoenician merchant offers for sale to the females of Syria a string of amber beads with gold ornaments. (Hom., Od., 14, 459.) The ivory, which they supplied to the Persians and India, received new forms under the skilful hands of the Tyrians; and all the costly decorations of Solomon's temple were made under the direction of an artist of Tyre, whose mother was a woman of the daughters of Dan, and his father a man of Tyre. (Chronicles, 2, 1, 14; 2, 4, 17. —Long's Ancient Geography, p. 3, seqq.—Heeren, Ideen, vol. 2, p. 1, seqq.)

3. Decline of Phoenician Commerce.

The Phoenicians, from what has just been remarked, were then a manufacturing and a trading people, depending on others for their subsistence, in some points resembling the English, in others more like the Dutch. The prosperity of such a people could not be everlasting, and it is interesting to examine into the causes of their decline. It is probable that the increase of the wealth and power of Carthage was in some degree prejudicial to the imperial states of the Phoenicians, and to their possessions also, the demand for Phoenician goods decreased. It is also supposed, that the Phoenicians must have suffered by the planting of the Grecian colonies in Africa, and the defeat of them by Carthage, which likewise manufactured to a great extent, and, it is almost certain, traded directly, by means of caravans, with Thapsacus to the Euphrates, by which the goods of Babylon and India were brought up the river. We doubt, however, if they interfered much with the Phoenicians, as their trade took chiefly a northern direction, extending into Tartary, and perhaps to China. The settlement of the Greeks in Egypt, however, must have been highly injurious to them, as the wine-trade of that country, of which they appear before this to have had the monopoly, must have been now, in great measure, carried on by the Greeks in their own bottoms; and perhaps this is the true reason of the hostility which the Phoenicians are said to have evinced to the Greeks in the time of the Persian war. It is remarkable enough, that in the accounts which we have of the trade of Athens and Corinth, no mention is made of any with the Phoenicians. Perhaps states of the Phoenicians, which their chief commerce was with the colonies in Asia. From the Hebrew prophet it appears that they traded with the Ionians (of Asia) and with the people of the Peloponnese. The rivalry just noted, however, could have but little affected the prosperity of the Phoenicians. The real cause of their decline was the communications that took place in Western Asia, which caused the downfall of so many states; for independent states are always most injurious to one another, and those people than which are under the yoke of foreigners. While the kingdoms of Israel, Judah, Damascus, and others flourished, the demand for Phoenician manufactures must have been far greater than after they became subject to the monarchs of Babylon and Persia. Let any one, for example, compare Judah under her kings with Judah after the return from captivity. The very circumstance of their being thus enabled to supply a great demand to those who supplied them with luxuries. The conquest and reduction to provinces of Babylonia and Egypt by the Persian monarch must have greatly affected the Phoenician commerce; but it was the foundation of Alexandria by the Macedonian conqueror which proved the ruin of the trade of both Phoenicia and Babylon, just as the discovery of the passage to India by the Cape of Good Hope ruined, in a great measure, Bagdad, Alexandria, and Venice—The Tyre of the middle ages. From that time

4. Did Phoenicia give an alphabet to Greece?

On this point, though for a long time made the subject of learned discussion, there is now no room for dispute. The names of most of the letters, their order, and the forms which they exhibit in the most ancient monuments, all confirm the truth of the tradition, that the Greek alphabet was derived from the Phoenician; and every doubt on this head, which a hasty view of it, in its later state, might suggest, has long since received the most satisfactory solution. Several changes were necessary to adapt the Eastern characters to a foreign and totally different language. The powers of those which were unsuited to the Greek organs were exchanged for others which were wanting in the Phoenician alphabet; some elements were finally rejected as superfluous from the written language, though they were retained for the purpose of numeration; and, in process of time, the peculiar demands of the Greek language were satisfied by the invention of some new signs. The alterations which the figures of the Greek characters underwent may be partly traced to the inversion of their position, which took place when the Greeks instinctively dropped the Eastern practice of writing from right to left; a change the gradual progress of which is visible in several extant inscriptions. This fact, therefore, is established by evidence, which could scarcely borrow any additional weight from the highest classical authority. But the epoch at which the Greeks received their alphabet from the Phoenicians is a point as to which we cannot expect to find similar proof; and the event is so remote, that the testimony even of the best historians cannot be deemed sufficient immediately to remove all doubt upon the question. A statement, however, deserving of attention, both on account of its author, and of its general marks of dignity and inquiry, is given by Herodotus. The Phoenicians, he relates, who came with Cadmus to Thebes, introduced letters, along with other branches of knowledge, among the Greeks: the characters were at first precisely the same as those which the Phoenicians continued to use in his own day; but their powers and form were gradually changed, first by the Phoenician colonists themselves, and afterward by the Greeks of the adjacent region. These characters derived from Phoenician teachers, named them Phoenician letters; and the historian adds, that, in his own time, the Ionians called their books or rolls, though made from the Egyptian papyrus, skins, because this was the material which they had used at an earlier period, as many barbarous nations even then continued to do. It cannot be denied that this account appears, at first sight, perfectly clear and probable; and yet there are some parts of it which, when closely inspected, raise a suspicion of its accuracy. The vague manner in which Herodotus describes the Ionians, who were neighbours of the Phoenician colony, seems to imply that what he says of them is not grounded on any direct tradition, but is a mere hypothesis or inference. The fact which he appears to have ascertained is, that the Asiatic Ionians, who were, according to his own view, a very mixed race, and mixed with the Ionians of other Grecian tribes in the Art of writing: they called their books or rolls by a name which probably expressed the Phoenician word for the same thing, and they described their alphabet by the epithet which marked its Oriental origin. But, as the historian thought he had sufficient grounds for believing that it had been first communicated to the Greeks by the Phoenician colony at Thebes, he concludes that the Asiatic Ionians must have received it, not directly from the Phoenicians, but through their European forefathers. Still, if this was the process by which he arrived at his conclusion, it would not follow that he was in error. But if we examine the only reasons which he assigns for his belief that the present Greek alphabet was found at Thebes, we find that they are so vague as which they rely on, though to him they would seem perfectly demonstrative. He produces three inscriptions in verse, which he had seen himself, engraved on some vessels in a temple at Thebes, and in characters which he calls Cadmean, and which he says nearly resembled the Ionian. These inscriptions purported to record donations made to the temple before the Trojan war, and to be contemporaneous with the acts which they recorded. And that they were really ancient need not be questioned, though limitations of an obsolete mode of writing were not uncommon in Greece; but their genuineness cannot be safely assumed as the ground of an argument. Other grounds he may indeed have had; but, since he does not mention them, they are to us none, and we are left to form our own judgment on the disputed question of the Cadmean colony at Thebes. (Thirlwall's Greece, vol. i, p. 258, seq.) We have already, in a previous article (vid. Cadmus), shown the utter improbability of any Phoenician colony under Cadmus, and have traced this latter name to a Pelasgic origin. In this way, perhaps, the two traditions may be reconciled; one of which makes the Phoenicians to have introduced letters into Greece, while the other states that they were previously known to, and invented by the Pelasgi. It is probable that both assertions are in a certain degree true; and that, as here alluded to, an earlier and a later introduction of them; in both instances, however, from Phoenicia. When the alphabet of this country was first brought in, its use may have been extremely limited; it may have come in, as Knight supposes, with the first Pelasgic settlers, who may have brought an alphabet much less perfect, and, therefore, probably more ancient than the so-called Cadmean. The second introduction of letters found the Greeks, in all likelihood, much more advanced in civilization, and it therefore took a firmer hold, and became the subject of more established and general tradition. (Consult Knight, Analytical Essay on the Greek Alphabet, p. 120.—Sandford, Remarks on Thiersch's Gr. Gr., p. 6.—Hug, die Erfindung der Buchstabenklasse, p. 7.)

5. Remains of the Phoenician language.

The remains of the Phoenician language at the present day consist of 1. Coins and inscriptions. 2. Glosses and Phoenician proper names, occurring in the Greek and Latin writers. 3. A Phoenician passage of considerable length (together with some shorter specimens) in the Ptolemaic Papyrus. —The coins and inscriptions give us the written forms of the language with great accuracy, but throw no light on the sounds of the Phoenician tongue or its system of pronunciation, since in almost every instance the vowels are omitted. The ablest work on these is that of Gesenius, entitled "Scriptura Linguæ Phœnicæ Monumenta quartum supersunt," &c., Lips., 1837, 4to. —On the other hand, the Punic words that occur in the Greek and Roman writers, give, it is true, a sound expressed in the characters of those languages, and show thereby the nearest connexion with the language of the Phœnicians: still, however, there is often very great difficulty in tracing back these same words to a Phœnician orthography, since the common or vulgar mode of pronouncing was accustomed to contract certain forms, and to neglect in others the letters that were necessary to indicate the etymology of the term. —The most curious remnant, however, of the Phoenician tongue is the passage, already spoken of, in Plautus. It occurs in the first scene of the fifth act of the Pænus, and consists of ten entire Punic verses, expressed in Latin characters (for the remaining six are Liby-
PHENICIA.

Phenician, or, as some think, vulgar Punic), to which are to be added fourteen short sentences, intermingled with independent paragraphs. Careful students of the subject, Modern scholars have, at various times, exercised their skill in remodelling and explaining these specimens of the Phenician, and in attempting to recall them to the analogy of the Hebrew tongue. Some have confined their attention to particular words or individual sentences, such as Joseph Scaliger (ad fragm. Graecorum, p. 32), Aldrete (Antiguedades, p. 207); Selden (de Dis Syria, proleg., c. 2), Le Mouy (Variae Sacra, p. 100, 113), Hyde (ad territor., p. 45). Riveaux (Lettres, sur la langue Punicque, c. 12), Tychsen (Now. Act. Upsal., vol. 7, p. 100, seqq.), and many others, enumerated by Fabricius (Bibl. Lat., vol. 1, p. 5), and by the Bipont editor of Plautus (vol. 1, p. xix). A smaller number have undertaken to interpret all the Punic specimens contained in the three scenes alluded to. The first of these was Mr. Petibus (Petite), who, in his work entitled "Miscellaneorum Libri novem" (p. 55, seqq., Paris, 1640, 4to), endeavoured to mould the Punic of the three scenes into Hebrew, and gave a translation of them in Latin. Parece, who came after, also exhibited the Punic of Plautus in a Hebrew dress, and even added vowel points; but the whole is done so carelessly and strangely, that the words resemble Chinese and Mongul as much as they do Hebrew. This was in the first and second editions of his Plautus. In the third edition of 1680, the whole was re-ordered by him, and even enlarged upon it in a poetical paraphrase. Many subsequent editors of Plautus have followed in the same path, such as Bochorn, Operarius, Gronovius, and Ernesti. Sixteen years after Petibus, the learned Bochart published the result of his labours on the Punic of the first scene, in his Sacred Geography (Canaan, 2, 6), and executed the task with so much learning and ability, that, during nearly two centuries, until the days of fabricius, his was deemed the unapproached. Whether there may have been some who have given more probable interpretations of particular phrases and words, no one was found more successful in explaining the passage as a whole. (Gesen., Phan. Mon., p. 359.) Clericus (Le Clerc) closely follows the interpretation of Bochart (Biblioth. Univ. et Hist., vol. 9, p. 556), though he errs in thinking that each verse consists of two hemistichs, which have a similarity of ending. Punic and Hebrew. The writer, who, on the same subject, we come to the three most recent expounders of this much-contested passage; namely, Bellermann (Vorversuch einer Erklärung der Phenicischen Stellen im Pannathus des Plautus. Stöck, 1-3, Berlin, 1806-1808, ed. 2, 1812), Count de Robiano (Etudes sur l'écriture, &c., suivies d'un essai sur la langue Punicque, Paris, 1834, 4to), and Gesenius (Phen. Mon., p. 386, seqq.). The first two, abandoning the true view of the subject, as taken by Bochart, regard the whole sixteen verses as Punic, and endeavour, after the example of Petibus, to adapt them, by every possible expedient, to the analogy of the Hebrew tongue. Bellermann, however, in doing this, confines himself within the regular limits of Hebrewism, whereas Robiano calls in to his aid, at one time the Syriac, at another the Arabic, and discovers also many peculiarities in the structure of the Punic language, of which no one dreamed before, and the sole authority for which is found in his own imagination. The explanation of Gesenius, as may readily be inferred from his known proficiency in Oriental scholarship, is now regarded as having borne away the palm, though some parts have been made the subject of criticism by the learned of his own country. (Gesen., Phan. Mon., p. 366.—Jahrbücher für wissenschaftliche Kritik, 1839, p. 639, seqq.) The writers thus far mentioned, and with the exception, perhaps, of Robiano, attempted to illustrate the Punic of Plautus by a reference to the Hebrew, occasionally calling in the Chaldee and Syriac. This undoubtedly is the more correct course, and far superior to the plan pursued by those who have had recourse to the Hebrew tongue. Hesnard exemplifies Casiri (Bibl. Escorial., vol. 2, p. 27), or to the Modern linguist, as Agius de Soldanis (Disertazione cioè spirizione della scena della comedia di Plauto in Panulo, Rom., 1751, 4to) another class of writers hardly deserve mention. They are those dreamy visionaries, who call in to their aid the Irish language! such as Valency (Essay auf den Antig. des Irland. Lüb, 1722, 8vo; Lond., 1803, 8vo). O'Connor (Chronicles of Erin, &c., from the original MSS, in idiom Phenician dialect (!) of the Scythian language, London, 1822, 2 vols. 8vo), Villaneuva, (Phenician Ireland, translated by H. O'Brien, Lond., 1833, 8vo), or who have resource to the Basque, as De l'Ecluse (Grammaire Basque, Toulouse, 1826, 8vo), and Santa Teresa, (Robiano, Etudes, &c., p. 78.—Gesenius, Phan. Mon., p. 357, seqq.).

6. General character of the Phenician tongue.

That the Phenician or Punic language was closely allied to the Hebrew, we learn from the express testimony of St. Jerome and St. Augustine. The latter, in particular, is a very high authority on this subject, since he lived in Africa at a period when the Punic tongue was still spoken in that country, and since, in one part of his writings, he even acknowledges himself to be of Punic origin. He thus speaks of himself and another generation, referring to the Hebrew and Punic, he remarks, "Iste lingua non multum inter se different." (Quest. in Jud., lib. 7, qu. 16.—Op., ed. Benedict., vol. 3, p. 477.) So again, speaking of our Saviour, he says, "Hunc Hebrew diciunt Messiam, quod verbum linguae Punicae consanuo est, sicut alia permuta et pane omnia." (Contra lit. Petil., 2, 161.—Op., vol. 9, col. 198.) Again, in another part of his writings, he remarks, "Item, et eos in lingua Phoeniciam et vicinam, Hebrew, Punicia et Syra." (in Joann. tract. 15.—Op., vol. 3, col. 302.) In commenting on the words of our Saviour (Serm. 35), where he explains what is meant by the term "Mammon," he says, "Hebraeum verbum est, cognomina linguae Punicae: itae enim lingua significatione quadam vicinitate sociantur." To the same effect St. Jerome: "Tyrua et Sidon in Phonicis literis principes civitatis, Hebrewi et Punici, sunt in civitate sacra; Quaerat igitur corrupto quasi Phani appellantur. Quadrum lingua lingua Hebraea magna ex parte confinis est." (in Jerem., 5, 25.) So again, "Lingua quoque Punicae, quae de Hebraeorum fontibus manaret discurrit, propri virgo alta appellatur." (in Jes., 3, 7.)—Modern scholars, as many as have turned their attention to the subject, have come to the same conclusion, although on one point there exists among them a great difference of opinion. Some of them maintain, for instance, that, with the exception of a slight difference in the mode of writing and pronouncing, the Phenician was identical with the Hebrew, and free from any forms derived from the cognate dialects. (Tychsen, Comment. de ling. Phen. et Heb. mutua aequitiate, p. 89.—Akerblad, de Inscr. Osmen., p. 26.—Fabricy, de Phen. lit. fontibus, p. 29, 221.—Gessenius, Gesch. des Heb. Sprache, &c., p. 221.) Others affirm, that the Phenician is like the Hebrew, it is true, but, at the same time, intermingled with Arabic, Syriac, Chaldee, and Samaritan forms. Among these latter may be mentioned Bochart, Mazoči, Clericus, Sappuhn, Peyron, and Hamaker. The last-mentioned writer, indeed, exceeds all bounds, and blends, in his explanations, all the Semitic tongues, so that he forms for himself a Phenician language, very far removed from the Hebrew, Diatrip., p. 65.—Id., Miscell. Phen. prof., p. viii, &c.)—If we follow the authority of Gesenius, and we do not know a safer one to take for our guide, the chief features in the
Phoenician language may be briefly stated as follows:—
1. The Phoenician agrees in most, if not all, respects with the Hebrew, whether we regard roots, or the mode of forming and inflecting words.—2. Wherever the usage of the earlier writers of the Old Testament differs from that of the later ones, the Phoenician agrees with the latter rather than with the former.—3. Only a few words are found that savour of Aramaism, nor will more Aramaisms be found in the remains of the Phoenician tongues than in those books of the Old Testament.—4. There are still fewer resemblances to Arabism. The most remarkable of these is in the case of the article, which on one occasion occurs under the full form a, and often under that of a, though most frequently it coincides with the Hebrew form.—Other words, which now can only be explained through the medium of the Arabic, were undoubtedly, at an earlier period, equally with many ἄρας λέγεινσ of the Old Testament, not less Hebrew than Arabic.—5. Among the peculiarities of the Phoenician and Punic tongues, the following may be noted:—(a) A defective mode of orthography, in which the mātress lectiones are employed as sparingly as possible. (b) In pronouncing, the Phoenicians (the Carthaginians certainly) expressed the long o by ō; as, supes, tu, aleah, &c. (c) Instead of Segol and Schwa mobile, they appear to have employed an obuse kind of sound, which the Roman writers expressed by the vowel y: as, yth (Hebrew ech, the mark of the accusative), yammi, (eex euwum), &c. (d) The syllable əl they contracted into o, analogous somewhat to the French cheval (chevau), cheval. For other peculiarities consult Gesenius (Phmn. Mon., p. 336).

PHŒNIX.  
Vid. Phenice.

PHŒNIX. I. A fabulous bird, of which Herodotus gives the following account in that part of his work which treats of Egypt. "The Phœnix is another sacred bird, which never has eggs, of the same family as the eagle. He rarely appears in Egypt; once only in five hundred years, immediately after the death of his father, as the Heliopolitans affirm. If the painters describe him truly, his feathers represent a mixture of crimson and gold; and he resembles the eagle in outline and size. They affirm that he contrives the following thing, which to me is not credible. They say that he comes from Arabian, and, bringing the body of his father enclosed in myrrh, buries him in the temple of the sun; and that he brings him in the following manner. First he moulds as great a quantity of myrrh into the shape of an egg as he is well able to carry; and, after having tried the weight, he hollows out the egg, and puts his parent into it, and stops up with some more myrrh the hole through which he had introduced the body, so that the weight is the same as before: then he carries the whole mass to the temple of the sun in Egypt. Such is the account they give of the phœnix." (Herod., 2, 73.)—The whole of this fable is evidently astronomical, and the following very ingenious explanation has been given by Marcoz. He assumes as the basis of his remarks the fragment of Hesiod preserved by Plutarch in his treatise De Oraculorum Defecta. (Pern twn ekleiston. chrn. — Op., ed. Reiske, vol. 7, p. 635.)

ενιατα τοι .overflowing λακεδείας κατωθι ανδρών μηδένων: Ἐκαρσ' δὲ τε τετράκροσων: τρεῖς είς ἐλάφων κόρας γηρακησαν: αυτῶν δ' ἐφοίνις ἐνατα τῶν κόρας: δέκα δ' ἡμέρας τός φωίνικας ἤγορα τύπκλωμα, κοφήν δ' ἀγίανων.

"The noisy crow lives nine generations of men who are in the bloom of years; the stag attains the age of four cows; the raven, in its turn, equals three stage in the progress of life. For Phœnix lives nine ravens. We nymphs, fair-of-tresses, daughters of Jove theegis-bearer, attain to the age of ten phœnices." (Compare Amson., Ital., 18. — Plin., 7, 48. — Gaisford, 1054.)

PÆT. MIN. GRAEC., vol. 1, p. 189.)—The whole computation here turned upon the meaning of the term generation (γενεσία). Marcoz takes the moon for his guide; and as this luminary ceases, like man, to exist, only, like him, again to rise, the period of its revolution becomes the standard required. Twenty-seven days and a third, then, converted into twenty-seven years and a third, give the measure of a generation among men. Reducing this, in order to make the analogy with the moon as complete as possible, he gives twenty-six years and two thirds as the result of the computation. The computation is then as follows:

Nine generations of men, or the life of one country, make 240 years.

Four lives of the crow, or that of a stag, make 260 years.

Three lives of a raven, or that of a raven, make 2680 years.

Nine lives of the raven, or that of the phœnix, make 25920 years.

This period of 25920 years is precisely the duration of the Great Year (Magnus Annum) of the fixed stars, having for its element exactly 50°, the annual precess- sion of the equinoxes. From this computation also we will be enabled to perceive how 50°, converted into years, and multiplied by 1-2-3-4-5-6-7, is that, by 10, gave the Egyptians 500 years as the duration of the phœnix. These numbers, 1-2-3-4-5-6-7, the Egyptians, Marcoz affirms, received from the Phœnicians, as Marcoz considers them, as two successive periods of the equinoxes, in order to form the Great Year, the astronomical duration of the life of the phœnix. (Marcoz, Astronomie Solaire d'Hipparque, p. xvi., seq.)—II. Son of Amyntor, king of Argos, and the preceptor of Achilles, to whom he was so attached that he accompanied him to the Trojan war. According to the Homeric account (IL., 9, 447, seq.), Amyntor having transferred his father’s estate to a concubine, the former besought her son Phœnix to gain the affections of his father’s mistress, and alienate her from Amyntor. Phœnix succeeded in his suit, and his enraged father imprecated upon him the bitterest curses. The son, therefore, notwithstanding the entreaties and efforts of his relations to detain him at his parent’s court, fled to Phthia, in Thessaly, where he was kindly received by King Peleus and his court, and the myrrh of the temple of Peleus, which was assigned to a terminus on the confines of Phthia, and the sway over the Dolopians. He intrusted him also with the education of his son Achilles. —Such is the Homeric account. Later writers, however, make Amyntor to have put out his son’s eyes, and the latter to have fled in this condition to Peleus, who led him to Chiron, and persuaded the centaur to restore him to sight. (Lyceophon, 422. — Tzetz. ad Lyphon., l. c.) The curse uttered against Phœnix was, that he might remain ever childless, and hence Tzetzes seeks to explain the story of his blindness, by making it a figurative allusion to his childless condition, a father’s offspring being as it were his eyes in the language of antiquity. (Tzetz., l. c.— Müller, ad schol. Tzetz., l. c.) — Apollodorus says that Phœnix was blinded by his father, on a false charge preferred against him by the concubine (χαθρασκείνης φυλακαί, ἐν τοις τῆσαν παλαίκοις.) — Apollod., 3, 13, 8, The variations in the legend arose probably from the circumstance, of the tragic poets having frequently made the story of Phœnix the subject of their compositions, and having, of course, introduced more or less variations from the original tale. (Heyne, ad Apollod., l. c.) There was a Phœnix of Sophocles, another of Euripides, and a third of Ion. (Vat., Dativb., c. 24.) To return to the story of the sons of Amyntor, after the death of Achilles, Phœnix was one of those commissioners to return to Greece and bring young Pyrrhaus to the war. On the fall of Troy, he returned with that prince to Thessaly, in which country he con-
tumed until his death. He was buried, according to Strabo, near the junction of the small river Phenix with the Aegopus, the former of these streams having received its name from him. (Strab., 428.—III.) A son of Agenor, sent, as well as his brothers Cadmus and Cilix, in quest of their sister Europa. Not having succeeded in finding her, he was fabled to have settled in and given name to Phenicia. (Apol., 3, 1. — Consult Heyne, ad loc.)

Argos, a mountain of Elis, at the base of which stood town of Pylas, between the heads of the rivers Peneus and Sellis. (Strab., 339.)

Pholus, a centaur, son of Silenus and the nymph Melia, and residing at Pholoe in Elis. In the performance of his fourth task, which was to bring the Erymanthian boar alive to Eurytheus, Hercules took his road through Pholoe, where he was hospitably entertained by Pholus. The centaur set before his guest roast meat, though he himself fared on raw. Hercules asking for wine, his host said he feared to open the jar, which was the common property of the centaurs; but, when pressed by the hero, he consented to uncloze it for him. The fragrance of the wine spread over the mountain, and soon brought all the centaurs, armed with stones and pine sticks, to the cave of Pholus. The first who ventured to enter were driven back by Hercules with burning brands; he hunted the rest away. This was a heroic exploit of Hercules. When he returned to Pholoe from this pursuit, he found Pholus lying dead along with several others; for, having drawn the arrow out of the body of one of them, while he was wondering how so small a thing could destroy such large beings, it dropped out of his hand and stuck in his foot, and he died immediately. (Apol., 2, 5, 4, seq.—Keightley's Mythology, p. 355, seq.)

Phorbas, a son of Priam and Epithesia, killed during the Trojan war by Menelaus. The god Somnus borrowed his features when he deceived Palinurus, and hurled him into the sea from the vessel of Eneas. (Vid. Palinurus.)

Phorcys or G nurse, the daughters of Phorcys and Ceto. They were hoary-haired from their birth, whose other name of G Nass ("the Gray Mares"). They were two in number, "well-robed" Pephredo (Horrific), and "yellow-robed" Enyo (Shaker). (Hesiod, Hymn to Selene.) We find them always united with the Gorgons, whose guards they were, according to Eschylus. (Eratost., Cat., 22.—Hygin., P. A., 2, 12.—Vögel. Myth. Geol., 41.) This poet described them as three long-lived maids, swan-formed, having one eye and one tooth in common, on whom neither the sun with his beams, nor the nightly moon ever looks. (Prom. Vinct., 500, seq.) Perseus, it is said, intercepted the eye as they were handing it from the one to the other, and, having thus blinded the guards, was enabled to come on the Gorgons unperceived. The name of the third sister given by the later writers is Deino (Terror). (Apol., 2, 4, 2.—Keightley's Mythology, p. 252.)

Phoroneus, son of Inachus and the ocean-nymph Melia, and second king of Argos. He was the first man, according to one tradition, while another makes him to have collected the rude inhabitants into one society, and to have given them fire and social institutions. (Apol., 2, 1. — Pausanias, 2, 15, 5.) He also decided a dispute for the land, between Juno and Neptune, in favour of the former, who thence became the tutelar deity of Argos. By the nymph Laodice Phoroneus had a son named Apis, from whom the peninsula, according to one account, was called Apia; and a daughter Niobe, the first mortal woman who enjoyed the love of Jupiter. Her offering by the gods was taken from Phoroneus, and he was fabled to have been named from the former, the people from the latter. (Keightley's Mythology, p. 405.)

Photius, a patriarch of Constantinople in the ninth century, of a noble family, and who enjoyed the reputation of being the most learned and accomplished man of his age. He was a native of the capital, and for some time a layman, having been sent as an ambassador to Assyria by the Emperor Michael. In this capacity Photius acquired himself so well as to gain the favour of his imperial master, who appointed him, on his return, commander of the imperial guard (Ippocratinarches), and subsequently chief secretary (Ippocratopappos, Proctoezeriarches). These dignities gave him as at least the privilege, until the privilege of taking part in their deliberations; and his ambition being now awakened, he strove to ingratiate himself with Bardas, the uncle of the emperor, whom the latter had associated with himself on the throne, and whom who had thrown all the cares of government. Bardas, having become displeased with the patriarch Ignatius, sent him into banishment, and appointed Photius to the vacant see (December 29, A.D. 857), who went through all the ecclesiastical orders in six successive days, having been consecrated monk, anagnostes, subdeacon, deacon, priest, and patriarch. During the succeeding ten years, a controversy was carried on with much acrimony between him and Pope Nicholas the First, in the course of which each party excommunicated the other, and the consequence was a complete separation of the Eastern and Western church.

Photius, Pope, a member of the imperial family, and was a nephew and associate in the empire, Michael the Third, that prince was in his turn assassinated by Basilius, the Macedonian, who then ascended the throne in 866. But Photius, denouncing him for the murder, was in the following year removed, to make way for his old enemy Ignatius, and was forced to retire into banishment. He was recalled in 878. An anecdote, related by Simon Logothetes (Annal. in Basili., n. 6, p. 341, ed. Ven. 1596.), is as follows. In his recall, Photius forged a document which traced the genealogy of Basilius to Tiridates, king of Armenia. He imitated so skilfully the ancient characters, that, when the work in question, placed by his means in the imperial library, and found, as by chance, by one of his confidential friends, was placed before the emperor, there was no one able to decipher it but Photius. He maintained himself in the patriarchal chair during the rest of his reign; and he was not long after charged with having conspired against the new sovereign, Leo the Philosopher, when that prince once more removed him, and sent him, in 886, into confinement in an Armenian monastery, where he died in 891. Photius appears to have been very learned and very wicked—a great scholar and a consummate hypocrite—not only neglecting the occasions of doing good which presented themselves, but profiting the finest talents to the worst purposes. This learned though corrupt prelate was the author of a work entitled Απολογία τοῦ Μιχαήλ (Myriobiblon), or Bibliotheca, containing extracts from, and a critical judgment upon, two hundred and eighty (the title says 279) works, which were read by him during his embassy to Assyria, and a summary of the contents of which had been requested by his brother Ta- rautus. If this statement be correct, the amount of work must have been prodigious; but little is to be done by his capacity. There is a story, that, as often as he had read an author, and made his extracts from him, he threw the manuscript into the fire, in order to enhance the value of his own abridgment. This statement, indeed, is sufficiently improbable; but it may possibly have originated from some known propensity of the patriarch to literary dishonesty. It is highly probable that some grammarian pursued this, or perhaps a stray, with Photius, whose original lexicon he first epitomised, and then destroyed. The Myriobiblon of Photius was the precursor, and has served as the model, of works of a critical and bibliographical nature. It is characterized by neither order nor method. Pagan

and Christian writers, ancient and modern, follow one another as chance caused their works to fall into the hands of the author; thus we pass from a work of an erotic nature to one that treats of philosophy or theology, from an historian to an orator; the productions of the same writer are not even considered together. Generally speaking, the greater number of the productions of which Photius gives us critical notices and extracts, have reference to theology, to the decrees of councils, and to religious disputes; profane literature with him occupies an inferior place. Nevertheless, among the works of historians, philosophers, orators, grammarians, romancers, geographers, mathematicians, and physicians, that Photius has read, and on which he gives his opinion, or from which he favours us with extracts, there are between seventy and eighty that are lost, and of which we would know nothing or next to nothing without the aid of the Myriobiblon. In the case of some works, Photius contents himself with giving merely a short literary notice, while from others he makes extracts of greater or less size. He was the author, likewise, of a work called Nomocanon, or a collection of the canons of the church. He compiled also a glossary or Lexicon (λεξικόν συναγωγής), which has only reached us in an imperfect and mutilated state. The various MSS. of this work in different libraries on the Continent are mere transcripts from each other, and originally from one, venerable for its antiquity, and containing an imperfectly celebrated Thomas Gale, and which is now deposited in the library of Trinity College, Cambridge. This manuscript, which is on parchment, bears such evident marks of great antiquity, that it may not unreasonably be supposed to have been a transcript from the author’s copy. The various transcripts from this ancient MS. were miserably faulty and corrupt, and it was natural that scholars, who wished for the publication of this lexicon, and who trusted to copying it directly from the Greek MS. in preference to the other. Hermann, indeed, published an edition in 1818, from two transcripts, but he gives merely the naked text, with scarcely a single correction, or any attempt whatsoever towards the restitution of the text. At the end of the volume, however, are some ingenious and valuable observations of Schneider. Poison, meanwhile, had transcribed and corrected this lexicon for the press, from the Galenic MS.; and when unfortunately his corrections were appropriated by the publisher in the interval, and utterly destroyed by him, he published a second edition and completed another transcript in his own excellent handwriting. His death, however, for a time prevented the appearance of the work, until at length his labours were given to the world by Doree, in 1822, Lond., 8vo. This edition, however, notwithstanding all the praise so justly bestowed upon it, is greatly injured by want of more editorial skill and labour, the Addenda and Corrigenda occupying 44 pages. Photius, who threw together his lexicon upon a much more confined plan than Hesychius, probably brought to his undertaking greater learning and judgment than the latter, and seems to have given most of his authorities from his own knowledge of the authors whom he cites. Yet even his work is little more than a compilation, of which many parts are copied verbatim from the scholia on Plato, the Lexicon of Harpocratus, that of Pausanias, and a book by a certain Ἐρεύνη τῶν Πατριάρχων. From which latter the grammarians derived most of their explanations of the scismatic phrases of the Greeks. These dramatic Lexicons are unfortunately lost; but there is in the royal library of Paris a MS., which seems to be an epitome of one of them, under the title of Αλέγος Αληθομογράφος. And, with a little care and discrimination, a very considerable part of them might be recovered from the pages of existing grammarians. Photius also enriched his library with a work from the Lexica Rheticora, and the Platonic Lexicon of Timæus; nor has he forgotten the Lexicon Technologicum of Phileno. The patriarch informs us, in his preface, that his dictionary is intended principally for the explanation of the remarkable words which occur in the Greek orators and historians, but occasionally to illustrate the phraseology of the poets. Several lacunæ occur in the MSS., the leaves being torn out from the Galenic copy, from ἀποκατεργασίας τῆς ἑπονόμασθος.—Photius has left also a collection of letters, in one of which, addressed to the Bulgarian prince Michael, there is a brief history of Seven Ecumenical Councils. The best edition of the Myriobiblon or Bibliotheca is that of Bekker, Berol., 1824, 2 vols. 4to. The text is corrected from a Venice manuscript, and also three Paris ones. The previous editions are accompanied by a Latin version of Schott’s, which is far from accurate. Bekker’s edition gives the Greek text without a version.—The Nomocanon was first printed in 1615, Paris, 4to, with the commentaries of Balsamon, patriarch of Antioch. A second edition appeared in 1661, with a Latin version, and with additions and corrections. It is much superior to the previous one.—The Epistles were edited by Montague, bishop of Norwich, Lond., 1651, fol.; but he has given only 248 letters, whereas a much greater number exists. A curious and rare edition was also published in 1705, fol., under the care of Doisetheus, patriarch of Jerusalem, and others. (Skeat, Hatt. Lit. Gr., vol. 6, p. 256. — Id. ib., p. 301. — Id. ib., vol. 7, p. 31. — Id. ib., p. 238. — Edinburgh Review, No. 42, p. 329, seqq. — Weiss, in Biogr. Univ., vol. 34, p. 218, seqq. — Hoffmann, Lex. Bibliogr., vol. 3, p. 246, seqq.)

PHRAITES, a name common to several Parthian kings. (Vid. Parthia.)

PHRAITES, the same as Phraates. (Vid. Phraates.)

PHRAON, son of Seleucus, of Decebalus in the throne of the Medes. He reigned from B.C. 657 to 635, greatly extended the Median empire, subdued the Persians, and many other nations, but fell in an expedition against the Assyrians of Ninive or Nineveh. (Herod., 1, 102.—Vid. Media.)

PHRIGNIS, a surname given to Cyma in Æolis. (Vid. Cyma.)

PHRIXUS, son of Athamas, king of Orchomenus in Boeotia, and Nephele. (Consult the commencement of the tale of the golden ram.)

PHRYGIA, a country of Asia Minor, bounded on the north by Paphlogonia and Bithynia, on the south by the range of Taurus and Pisidia, on the west by Caria and Lydia, and on the east by Cappadocia and Pontus.—Herodotus relates (2, 2), that Psammitichus, king of Egypt, having made an expedition to discover which was the most ancient nation in the world, ascertained that the Phrygians surpassed all other people in priority of existence. (Vid. Psammitichus.) The story itself is childishly absurd; but the fact that the Egyptians allowed the highest degree of antiquity to this nation is important, and deserves attention. What the Greeks knew of the origin of the Phrygians does not accord, however, with the Egyptian hypothesis. Herodotus has elsewhere reported that they came originally from Macedonia, where they lived under the name of Briggs (or Brigueis, Brigeis, &c.); that, when they crossed the Hellespont, they took the name of Byzges, and eventually became Phryges or Phrygia, this was changed to Phryges (7, 73). This account has been generally followed by subsequent writers, especially Strabo (295), who appears to quote Xanthus, and Menecrates of Elea, Artemidorus, and others, who made the origin of nations and cities the object of their inquiries. (Strab., 572. — Id. 650.—Compare Plin., 5, 32.—Steph. Byz., s. v. Βυζγες.) It is certain, indeed, that there was a people named Briggs or Bryges, of Thracian origin, living in Macedonia at the time that Herodotus was writing (6, 45; 7, 185); and tradition had long fixed
PHRYGIA.

The abode of the Phrygian Mbadas, who was a chief or monarch of this people, near Mount Bermius, in Macedonia. (Herod., 8, 138.—Compare Nicand., ap Athen., 15, p. 683.—Bion, ap. encl., 2, p. 45.) Again, the strong affinity which was allowed to exist between the Phrygians, Lydians, Carians, and Mysians, who were all supposed to have crossed from Thrace into Asia Minor, serves to corroborate the hypothesis which regards the Phrygian migration in particular; but, while there seems no reasonable doubt of the Thracian origin of this people, it is not so easy to establish the period of their settling in Asia. Xanthus is represented by Strabo (680) as fixing their arrival in that country somewhat after the Trojan war; but the geographer justly observes, that, according to Homer, the Thracians were already settled on the banks of the Sangarius before that era, and were engaged in a war with the Amazons (Il., 3, 187); and, if mythological accounts are to have any weight, the existence of a Mbadas in Asia Minor, long before the period alluded to, would prove that there had been a Phrygian migration in times to which authentic history does not extend. (Compare Conon, Narrat., ap Phydr., 69.)

The Thracian stock, however, of the Thracian stock, produced by many of the tribes of that vast family pouring in at various times, there must have entered into the composition of the Phrygian nation some other element besides the one which formed its leading feature. It has been conjectured, and with great show of probability, that the Thracian Bryges found the country, which from them took the name of Phrygia, occupied by some earlier possessors, but who were too weak to resist the invaders. What name this people bore cannot now be ascertained; but there can be little doubt that they were of Asiatic origin; probably Lycu-Syrians or Cappadocians. Herodotus, indeed, has stated a circumstance, which, if true, would go far to overthrow the theory of a Thracian origin for the Phrygian people.

In the muster which he makes of Xerses' miydias, he informs us that the Phrygians and Armenians were armed alike; the latter being, as he observes, colonists of the former. (Herod., 7, 73.) Herodotus, however, is quite singular in this statement, which is, moreover, at variance with all received notions on the subject. The Armenians are a people of the highest antiquity, and we must not seek for their primitive stock beyond the upper valleys of the Tigris and Euphrates; in other words, they are a purely Asiatic people; and if there existed any resemblance between them and the Phrygians, it was the fact of their being accoutered for it by supposing that the latter were not altogether Europeans, but mingled with an indigenous race of Asia, whose stock was also common to the Armenians. — The political history of the Phrygians is neither so brilliant nor so interesting as that of their neighbours the Lydians. What we gather respecting them from ancient writers is, generally, that they crossed over from Europe into Asia, under the conduct of their leaders, Mygdon and Beryctes, and followed the Trojan war. (Conon, p. Phot., cod. 186.) That they settled first on the shores of the Hellestrop and around Mount Ida, whence they gradually extended themselves to the shores of the Ascanian lake and the valley of the Sangarius. It is probable that the Doli-ones, Mygdones, and Beryctes, who held originally the coasts of Mysia and Bithynia, were Phrygians. The Mygdones, Beryctes, and the Bryges of the Maces in Macotian Thrace, and they are often described as the Phrygians by the poets. Driven afterward from the Helle- spont and the coast of the Propontis by the Teucri, Mysii, and Byzthyni, the Phrygians took up a more central position in what may be called the great basin of Asia Minor. Still preserving the line of the Sangarius, they occupied, to the southwest of that great river, the upper valleys of the Macestus and Rhyndacus, w
people, named Galatia and Galatea, or Gallo-Gracii.—The Phrygians are generally stigmatized by the ancients as a slavish nation, destitute of courage or energy, and possessing but little skill in anything save music and dancing. (Ath. Hen., 1, 27.—Virg., Aen., 12, 99.—Strab., 678.—Id. Orig., 1447.)—Ath. Hen., 14, p. 928, sqq. —Phrygia—Phrynichus, considered with some probability the author of the Ph-Th. Suidas, by the ancients, for the same reason as by the Persians, from whom it is supposed, he was separated. (Cramer's Asia Min., vol. 2, p. 1, sqq.)

Phrynichus, I., an Athenian tragic poet, a scholar of Theocritus. The dates of his birth and death are alike uncertain, but he is probably the same author as the Phrynichus of Athenaeus (v. 1294, sqq.). (Clint., Fast. Hell., vol. 2, p. xxxi, note (1).)

He gained a tragic victory in 511 B.C., and another in 476, when Themistocles was his choragos. (Plut., vii. Themist., 14.)

The play which he produced on this occasion was probably the Phænissiæ, and Aeschylus is charged with having made use of this tragedy in the composition of his Persæ, which appeared four years after (Arg. ad Per.), a charge which Aeschylus seems to rebuff in the Proge (of Aristophanes (v. 1294, sqq.).) In 494 B.C. Miletus was taken by the Persians, and Phrynichus, unfortunately for himself, selected the capture of that city as the subject of an historical tragedy. The skill of the dramatist, and the recent occurrence of the event, affected the audience even to tears, and Phrynichus was fined 1000 drachmas for having recalled so forcibly a painful recollection of the misfortunes of an ally. (Herod., 6, 21.)

According to Suidas, Phrynichus was the first who introduced a female mask on the stage, that is, who brought in female characters; for, on the ancient stage, the characters of females were always supplied by males in appropriate dress. Bentley is thought to have purposely mistranslated this passage of Suidas, in his Dissertation on Phalaris (vol. 1, p. 291, ed. Dyce.—Donaldson, Theatre of the Greeks, p. 47). Phrynichus seems to have been chiefly remarkable for the sweetness of his melodies, and the great variety and clearness of his figures. (Aristoph., Av., 748.—Id., Vesp., 269.—Id. ib., 219.—Plutarch, Symp., 9, 9.) The Aristophanic Agathon speaks generally of the beauty of his dramas (Theatres, 164, sqq.), though, of course, they fell far short of the grandeur of Aeschylus, and the perfect art of Sophocles. The names of seventeen tragedies attributed to him have come down to us, but it is probable that some of these belonged to two other writers, who bore the same names (Theatre of the Greeks, ed. 4, p. 59, sqq.)—II. A comic poet, who must be carefully distinguished from the tragedian of the same name. He exhibited his first piece in the year 435 B.C., and was attacked as a plagiarist in the Phoebocæ of Hermippus, which was written before the death of Sitalces, or, in other words, before 424 B.C. (Clint., Fast. Hell., vol. 2, p. 67.)

In 414 B.C., when Amepeias was first with the Koosorgi, and Aristophanes with the Phtheras, Phrynichus was in the third with the Moneprætia. (Arg. Av.) In 405 B.C., Philonides was first with the Batrævi of Aristophanes, Phrynichus second with the Moisasi, and Plato third with the Kæplaw. (Arg., Run.) He is ridiculed by Aristophanes in the Batrævi for his custom of introducing grumbling slaves on the stage. The names of ten of his pieces are known to us. (Fabric., Bibl. Gr., vol. 2, p. 483, ed. Harl.—Theatre of the Greeks, ed. 4, p. 101.)—III. A native of Arabia, as is supposed, but who established himself in Bithynia in the latter half of the second century of our era. He compiled a Lexicon of Attic forms of Exagoge, (Exag. Att., 194, sqq.)—Plutarchus, a celebrated dramatic and historical writer, in thirty-seven books, a production of considerable importance on account of the numerous quotations which it contains from ancient writers. Phrynichus distinguishes between words, according to the style to which they are adapted, which is either the oratorical, the historical, or the familiar kind. As models of genuine Atticism, he recommends Plato, Democritus, and the other Attic orators, Thucydides, Xenophon, Æschines the Socratic, Critias, and the two authentic discourses of Antisthenes; and among the poets, Aristophanes and the three great tragic writers. He then makes a new arrangement of these authors, and places Plato, Democritus, and Æschines in the first rank. As regards his own style, Phrynichus is justly chargeable with great prolixity.—The best edition of his works is that of Dr. Linn. vol. 180, sqq. Of the "Sophistic Apparatus," Montfaucon published a portion in his "Catalogus Bibliothecæ Cossitiani," p. 465, sqq. Best made another extract from the MS. (No. 345, Biblioth. Cosinit., at present in the Royal library at Paris), accompanied with critical remarks, which has passed from the Continent to England. In 1814, Becker published a part in the first volume of his "Anecdota Graeca," under the title, "Ex Æschyli Theocriticæ Æneiæ Phrynichæ" of Sophisticorum (Scholl, Hist. Lit. Gr., vol. 5, p. 12.)

Phthia, a district of Thessaly, forming part of the larger district of Phthiotis. (Vid. Phthiotis.)

Phthiotis, a district of Thessaly, including, according to Strabo, all the southern portion of that country, as far as Mount Ætna and the Mætis Gulf. To the west it bordered on Doliopia, and on the east reached the confines of Magnesia. Referring to the geographical arrangement of Æginétæ, as described by Pomponius Mela, we shall find, that he comprised within this extent of territory the districts of Phthia and Hellas properly so called, and, generally speaking, the dominions of Achilles, together with those of Proteus and Eurytus. (Strab., 432, sqq.) Many of his commentators have imagined that Phthia was not to be distinguished from the divisions of Hellas and Achaea, also mentioned by him. But other critics, as Strabo observes, were of a different opinion, and the expressions of the poet certainly lead us to adopt that notion in preference to the other. (II., 2, 683.—II., 1, 478.—Cramer's Ancient Greece, vol. 1, p. 397.)

Phya, a tall and beautiful woman of Attica, whom Pisistratus, when he wished to re-establish himself in his usurped power, arrayed like the goddess Minerva, and led to the city in a chariot, making the populace believe that the goddess herself came to restore him to power. Such is the account of Herodotus (1, 59). Consult, however, remarks under the article Pisistratus.

Phycus (gen. -unis: in-Greek, Phycos: gen. -ovos), a promontory of Cyrenœcia, northwest of Apolloonia, and now Ras Sem.

Phylace, I. a town of Macedonia, in the interior of Pheria, according to Polybius (p. 94), and of which Pliny (his Hist. Nat. vi. 51) speaks as though the ancient name is discoverable in that of Philit, situate on the Haliacmon, somewhat to the west of Servia. —II. A town of Epirus, supposed to correspond with the vestiges observed by Hughes (vol. 2, p. 483) near the village of Velchista, on the western side of the lake.
PICENTS, a people of Italy, occupying what was called Picenum. (Vid. Picenum.)

PICENTIA, a city of Campania, about seven miles beyond Salernum, and once the capital of the Picentini. (Strabo, 251.—Mel. 2, 4. —Pliny, 3, 5.) It is now Vicenza or Vicenzo.

PICERWAS, a people of Italy, south of Campania, occupying an inconsiderable extent of territory, from the promontory of Minerva to the mouth of the river Silarus. We are informed by Strabo, that these were a portion of the inhabitants of Picenum whom the Romans transplanted thither to people the shores of the Gulf of Posidonia or Paestum. It is probable that their removal took place after the conquest of Piceum, as a complete subjugation of this portion of ancient Campania, then occurred. (Strabo, 251.) Clucer fixes the date at A.U.C. 469. (Ial. Ant., vol. 2, 1188.) According to the same writer, the Picentini were at a subsequent period compelled by the Romans to abandon the few towns which they possessed, and to reside in villages and hamlets, in consequence of having sided with Hannibal in the second Punic war. As a further punishment, they were excluded from the right of sending envoys and ambassadors to Athens, and were compelled only to perform the duties of couriers and messengers. (Strabo, 251.)

PICENUM, a district of Italy, along the Adriatic, south and east of Umbria. Little has been ascertained respecting the Picentes, its inhabitants, except the fact that they were a colony of the Sabines, sent out in consequence of a vow of a sacred spring, and said to have been guided to this land by a woodpecker (Strabo, 240). The produce of its fruit-trees was particularly esteemed. (Hor., Sat., 2, 4, 70.—Id., Sat., 2, 3, 272.—Juv., Sat., 11, 72.) It may be regarded as limited to the north by the river AEsus. To the west it was separated from Umbria and the Sabine country by the central chain of the Apennines. Its boundary to the south was the river Matrinus, if we include in this division the Frutulati, a small tribe confined between the Matrinus and the Elvinus. (Cramer's Anc. Italy, vol. 1, p. 279, seqq.)

PICTI, a Caledonian race, first mentioned under this denomination in a panegyric of Eunennus, A.D. 297. Various derivations have been assigned for their name, among which the most common is that which deduces it from the Latin picti ("painted"), in reference to the custom which the ancient Britons had of painting their bodies. In this eulogy, however, it can hardly be correct, since the custom to which we have just referred was common to all the Britons, not confined to one particular tribe. The simplest derivation, therefore, appears to be that which makes the name in question come from the Gaelic picti, "rubbers" or "plunderers," the Picts being famed for their marauding expeditions into the country to the south of them. According to Adelung, their true nations name was Cruitini, "corn-eaters," from their hav
P-icons of a part of their territory to the raising of grain.

(Adelung, Mithradates, vol. 2, p. 96.)

Pictūnus, a people of Aequitanic Gaul, a short distance below the Liguria or Loire. Their territory corresponds to the modern Pictou. Polemy assigns them a city on the coast, Aequitanorum, and mentions that the former in strictness belonged to the Lernovices. The city of Limonum, the true capital, answers to the modern Poitiers. Strabo gives the name of this people to their short penult, Polemy with the long one. The short quantity is followed by Lucan (1, 436). Ammianus Marcellinus uses the form Pictavi. (Amm. Marc., 15, 11.)

Pīcumenīs and Pīlumunus, two deities of the Latins, projected in Sancti Dei auspices. (Non., c. 12, n. 360.) —Varro, ap. Non., l. c.) The new-born child, too, was placed by the midwife on the ground, and the favour of these deities was propitiated for it. Pīlumunus was also one of the three deities who kept off Silvanus from lying-in women at night. (Varro, frag., p. 231.) The other two were Intericido and Deverra. Three men went by night round the house, to signify that these deities were watchful: they first struck the threshold with an axe, then with a pāleum (pilum), and finally swept (denerez) with brooms; because trees are not cut (caduntur) and pruned without an axe, corn bruised without a pāleum, or heaped up without brooms. Hence the names of the deities, who prevented the wood-spirit Silvanus from molesting parturient females. (Keightley's Mythology, p. 537.) Sērvius, in place of Pīcumenus, uses the name Pilumunus, and makes this deity to have been the brother of Pīlumunus, and to have discovered the art of manuring land; hence he was also called Stercūrinus and Sterqulusinus, from stercus, "manure." The same authority makes Pilumunus to have invented the art of pounding corn in a mortar (pilum), whence his name. (Serv. ad Virg., En., 9, 4. —Compare Plin., 3, 18.) Some of the ancient grammarians regarded these two deities as identical with Castor and Pollux, than which nothing can be more erroneous. Pīcūrus, one of this class of writers, deduced the name Pilumunus from pēlo, "to drive away" or "avert," because he asserted the evils that are incident to infancy, "quia petuit mala infantia." (Spangenberg, V. L. Relig. Dom., p. 65.)

Pīcaus, a fabulous king of Latium, son of Saturn, and celebrated for his beauty and his love of steeds. He married Canens, the daughter of Janus and Venilia, renowned for the sweetness and power of her voice. One day Pilacus went forward to the chase clad in a purple cloak, bound round his neck with gold. He entered the wood where Circe happened to be at that time gathering magic herbs. She was instantly struck with love, and implored the prince to respond to her passion. Pīcūus, faithful to his beloved Canens, indignantly spurned her advances, and Circe, in revenge, struck him with her wand, and instantly he was changed into a bird with purple plumage and a yellow tail which still recalls this form and his name Pīcūs, "the woodpecker." (Ovid, Met., 14, 320, seqq. —Plut., Quest. Rom., 21.) Servius says that Pīcūus was married to Pōmona (ad En., 7, 190).

—This legend seems to have been devised to give an origin for the woodpecker after the manner of the Greeks. (Keightley's Mythology, p. 538. —Compare Spangenberg, V. L. Rel. Dom., p. 62.)

Pīria, I. a region of Macedonia, directly north of Thessaly, now forming the Therian Gulf. It formed one of the most interesting parts of Macedonia, both in consideration of the traditions to which it has given birth, as being the first seat of the Muse, and the birthplace of Orpheus; and also of the important events which occurred there at a later period, involving the destiny of the Macedonian empire, and other parts of Greece. The name of Pīria, which was known to Homer (II, 14, 226), was derived apparently from the Piers, a Thracian people, who were subsequently expelled by the Thesmides, the conquerors of Macedonia, and driven north beyond the Styx, into the Therian Gulf, in the spring of 552 B.C. (Olympiad 64.3), and who died, according to a probable statement, at the age of eighty. (Pindar, ed. Baekh, vol. 3, p. 12. —Compare Clinton, Fast. Hell., vol. 1, p. 17, who makes his birth-year 518 B.C.) He was, therefore, nearly in the prime of life at the time when Xerxes invaded Greece, and when the battles of Thermopylae and Salamis were fought.
and he thus belongs to that period of the Greek nation when its great qualities were first distinctly unfolded, and when it exhibited an energy of action and a spirit of enterprise never afterward surpassed, together with a love of poetry, art, and philosophy, which produced much, and promised to produce more. His native place was Cynocephalas, a village in the territory of Thebes, and the family of the poet has been traced back to an ancestor who, as we learn from the ancient biographies of him, that his father or his uncle was a flute-player. But Pindar, very early in life, soared far beyond the sphere of a flute-player at festivals, or even a lyric poet of merely local celebrity. Although, in his time, the voices of Theban bards, and of epic poets of the Hesiodean school, had long been mute in Boetia, yet there was still much love for music and poetry, and they vied with each other in the competition of lyric and choral compositions. That these arts were widely cultivated in Boetia is proved by the fact that two females, Myrtis and Corinna, had attained celebrity in them during the youth of Pindar. Both were competitors with him in poetry. Myrtis strove with the bard for a prize at public games; and although Corinna said, "It is not meet that the clear-toned Myrtis, a woman born, should enter the lists with Pindar," yet she said, "Tell me the day (ενός) of the competition the Polyb., 10, 20, 30, 31, 35.—frag. incert., 125, 3d. docks; and after the war was ended, he openly proclaims, in odes intended for theAEginetans and Athenians, his admiration of the heroism of the victors.—Having mentioned nearly all that is known of the incidents and proceedings of the Olympic games of the succeeding periods, we proceed to consider him more closely as a poet, and to examine the character and form of his poetical productions. The only class of poems which enable us to judge of Pindar's general style are the επινικία, or triumphal odes. Pindar, indeed, excelled in all the known varieties of choral poetry; namely, hymns to the gods, poems, and dithyrambs appropriate to the worship of particular divinities, odes for processions (προσδόσια), songs of maidens (παρθένια), mimic dancing songs (ταρθήματα), drinking songs (σκολία), dirges (Θρόνοι), and encomiastic odes to princes (εὔχομαι), which last approached most nearly to the επινικία. The poems of Pindar in these various styles were nearly as renowned among the ancients as the triumphal odes, which is proved by the numerous quotations of them. Horace, too, in enumerating the different styles of Pindar's poetry, puts the dithyrambs first, then the hymns, and afterward the epinikia and the dirges. Nevertheless, there must have been some decided superiority in the epinikia, which caused them to be more frequently transcribed in the later period of antiquity, and thus rescued them from perishing with the rest of the Greek lyric poetry. At any rate, these odes, from the vast variety of their subjects and style, and their refined and elaborate structure, seem to belong to a different order from the scolia and hyperchymes, serve to indemnify us for the loss of the other sorts of lyric poetry. We will now explain, as briefly as possible, the occasion of an epinikian ode, and the mode of its execution. A victory has been gained in a contest at a festival, particularly one of the four great games most prized by the Greeks. Such a victory as this, which shed a luster upon the victor as on his countrymen, and, especially, and even on his native city, demanded a solemn celebration. This celebration might be performed by the victor's friends on the spot where the prize was obtained; as, for example, at Olympia, when, in the evening, after the termination of the contests, by the light of the moon, the whole sanctuary resounded with joyful songs after the manner of encomia; or it might be deferred till after the victor's return to his city. In any case, it was sometimes repeated in following years, in commemoration of his success. A celebration of this kind always had a religious character; it often began with a procession to an altar or temple, in the place where the games had been held, or in the native city of the conqueror; a sacrifice, followed by a banquet, was then offered at the temple, or in the house of the victor; and the whole solemnity conclud
PINDARUS.

At this sacred and, at the same time, joyous solemnity (a mingled character frequent among the Greeks) the whole victory of the poet, whether by himself or some other skilled person, for the purpose of reciting the triumphal hymn, which was considered the fairest ornament of the festival. It was during either the procession or the banquet that the hymn was recited, as it was not properly a religious hymn, which could be combined with the sacrifice. The form of the poem must, to a certain extent, have been determined by the occasion on which it was to be recited. From expressions which occur in several epinikian odes, it is probable that all odes consisting of strophes without epodes were sung during a procession to a temple or to the house of the victor; although there are others which contain expressions denoting movement, and which yet have epodes. It is possible that the epodes in the latter odes may have been sung at certain intervals when the procession was not advancing; for an epode, according to the statements of the ancients, always required that the chorus should be at rest. But by far the greater number of the odes of Pindar were sung at the Comus, at the jovial termination of the feast; and hence Pindar himself more frequently names his odes from the Comus than from the victory. The occasion of the epinikion ode—a victory in the sacred games—and its end—the ennobling of a solemnity connected with the worship of the gods—required that it should be composed in a lofty and dignified style. But, on the other hand, the beauteous mirth of the feast did not admit the severity of the antique poetic style, like that of the hymns and nomes; it demanded a free and lively expression of feeling, in harmony with the occasion of the festival, and suggesting the noblest ideas connected with the victor. Pindar, however, gives no detailed description of the victory, as this would have been only a repetition of the spectacle which had already been held before the assembly of the races and the whole host of victors. The victory, in truth, is always the point upon which the whole of the ode turns; only he regards it, not simply as an incident, but as connected with the whole life of the victor. Pindar establishes this connexion by forming a high conception of the fortunes and character of the victor, and by representing the victory as the result of them. And as the Greeks were less accustomed to consider a man in his individuality than as a member of some particular family, so Pindar considers the renown of the victor in connexion with the past and the present condition of the race and state to which he belongs. Even, however, when the skill of the victor is put in the foreground, Pindar, in general, does not content himself with celebrating this bodily prowess alone, but he usually adds some moral virtue which the victor has shewn. The moral virtue and the heroism of the victor are sometimes moderation, sometimes wisdom, sometimes filial love, sometimes piety to the gods. The latter is frequently represented as the main cause of the victory; the victor having thereby obtained the protection of the deities who preside over gymnastic contests, as Mercury or the Dioscuri. Whatever might be the theme of one of Pindar’s epinikian odes, it would naturally not be developed with the systematic completeness of a philosophical treatise. Pindar, however, has undoubtedly meant much of that sententious wisdom, which began to show itself among the Greeks at the time of the Seven Wise Men, and which formed an important element of elegiac and choral lyric poetry before the time of Pindar. This element of his poetry, his mythical narratives, occupies, however, far more space in most of his odes. That these are not mere digressions for the sake of ornament has been fully proved by modern commentators. This admixture of apophthegmatic maxims and typical narrations would alone render it difficult to follow the thread of Pindar’s meaning; but, in addition to this cause of obscurity, the entire plan of his poetry is so intricate that a modern reader often fails to understand the connexion of the parts, even where he thinks he has found a clew. Pindar begins an ode full of the lofty conception which he has formed of the glorious destiny of the victor; and he seems, as it were, carried away by the flood of images which this conception pours forth. He does not attempt to express directly the general idea, but follows the strain of thought which it suggests into its details, though without losing sight of their reference to the main object. Accordingly, when he has pursued a train of thought, either in an apophthegmatic or mythical form, up to a certain point, he breaks off, before he has gone far enough to make the application to the victor sufficiently clear; he then takes up another thread, which is, perhaps, soon dropped for a fresh one; and at the end of the ode he gathers up all these different threads, and weaves them together into one web, in which the general idea predominates. The variety of style and expression which belongs to this class of poems. Every epinikian ode of Pindar has its peculiar tone, depending upon the course of the ideas and the consequent choice of the expressions. The principal differences are connected with the choice of the rhythms, which again is regulated by the musical style. According to the last distinction, the epinikia of Pindar are of three sorts, Doric, Æolic, and Lydian; which can be distinguished, as far as the metre is concerned, by the different declensions of their syllables and by the various metres. In respect of metre, every ode of Pindar has an individual character, no two odes being of the same metrical structure. In the Doric ode the same metrical forms occur as those which prevailed in the choral lyric poetry of Stesichorus, namely, systems of dactyls and trochaic diphodies, which most nearly approach the staleness of the hexameter. Accordingly, a severe dignity pervades these odes; the rhythm and metre are alike rich in meaning and variety, and the ideas are limited to the subject, and are free from personal feeling: in short, their general character is that of calmness and elevation. The language is epic, with a slight Doric tinge, which adds to its brilliancy and dignity. The rhythms of the Æolic odes resemble those of the Lesbian poetry, in which light dactyls, trochaics, or logaëic metres prevailed: these rhythms are light, connected, and animated; and the ideas were rendered far more various, and thus often acquired a character of greater volubility and liveliness. The Æolic odes, from the rapidity and variety of their movement, have a less uniform character than the Doric odes; for example, the first Olympic, with its joyous and glowing images, is very different from the second, in which a lofty melancholy is expressed, and from the ninth, which has an air of proud and complacent self-reliance. The language of the Æolic epinikia is also bolder, more difficult in its syn-
tax, and marked by rarer dialectic forms. Lastly, there are the Lydian odes, the number of which is inconsiderable: their metre is mostly trochaic, and of a picturesque sort, character, to us, peculiar, the tone of the poetry. Pindar appears to have preferred the Lydian rhythms for odes which were destined to be sung during a procession to a temple or at the altar, and in which the favour of the deity was implored in an humble spirit. (Muller, Gr. Lit., p. 216, seq.) —The scholar comes to the study of Pindar, as to that of one whom fable and history, poetry and criticism, have mythologized, and harrowed. He hearth Pindar, the speaker of him as the man whose birth was celebrated by the songs and dances of the deities themselves, in joyous anticipation of those immortal hymns which he was to frame in their praise; to whom in after life the God of Poetry himself devoted a share of the offerings brought to his shrine, and conceded a chair of honour in his most favoured temple. These were indeed fables, but fables that evinced the truth: the reputation which they testified went on increasing in magnitude and splendour. The glory of succeeding poets, the severity of the most refined criticism, the spread of sceptic philosophy no way impaired it; it was not obscured by the literary darkness of his country; it was not overpowered by the literary brightness of rival states. The fastidious Athenian was proud of the compliment paid to his city by a Boeotian; the eloquent Rhodian inscribed his verses in letters of gold fitted to guard the eyes of his gods. A king, to the age, Alexander, the son of Philip, "bade spare the house of Pindarus," when Thebes fell in ruins beneath his hand. Pindar has not improperly been called the Sacerdotal Poet of Greece; and that he has been of high consideration with the priesthood will be easily believed. He stood forth the champion of the "graceful religion of Greece;" and he seems to have laboured, like other such deities, to win the smiles and professions of the philosophers; and, on the other, to spiritualize it, and to prevent its degenerating into the mere image-worship of the vulgar. His deities, therefore, are neither like those of Homer, nor the insulted Olympians of Æschylus; they come in visions of the night; they stand in a moment before the eyes of the mortal who prays to them, and whom they deign to favour; they see and hear all things; they are gods with hands and feet, and the statements yield, and are innoxious to their impassable forms. But these forms are not minutely described; the fables respecting them are rejected in the whole as untrue, or better versions of them are given. With Pindar the deity is not the capricious, jealous being, whose evil eye the fortunate man has reason to tremble at; but just, benignant, the author and wise ruler of all things; whom it is idle to contend: he moulds everything to his will; he bestows the spirit of the high-minded, and crowns with glory the moderate and humble: he is the guardian of princes, and he deign not to be a guide to the ruler of the city, it is hard indeed to restore the people to order and peace. Nor is this all. Pindar is not merely a devout, but he is also an eminently moral poet. Plato observes of him, in the Menon, that he was alike devoted to war and peace, and he came down, with remarkable distinctness, the doctrine of future happiness or misery. On principles such as these, it is no wonder that Pindar's poetry should abound with maxims of the highest morality in every part; not a page, indeed, is without them. They spread a colour over the whole, of which no idea can be given by a few extracts. (Quarterly Review, No. 56, p. 410, seq.) —We have remaining, at the present day, forty-five of the Epinikia, or triumphal odes of Pindar, together with some few fragments of his other productions. The Epinikia are divided into four classes or kinds, and derive their names respectively from the four great games of Greece. Thus we have, 1st, Olympic Odes, to the number of fourteen; 2d, Pythian, to the number of twelve; 3d, Nemean, eleven in number; and, 4th, Isthmian, amounting to eight. This division, however, is not that of the poet himself; we owe it to the grammarian Aristophanes of Byzantium. This individual selected out of the general collection of Epinikia a certain number of pieces that had reference, more or less, to victories gained at the several games of Greece. It did not suffice, in the eyes of this critic, that an ode should celebrate some victory gained by a hero in a battle or in a conflict; he required it to have some fragmentary remaining of the poems of Pindar which have direct allusion to such subjects, and yet were excluded by Aristophanes. On the other hand, we find, in the selection made by him, one ode, having no reference to any particular victory, namely, the second Pythian; as well as some others, which, though they celebrate deeds of martial prowess, contain no mention whatever of those peculiar exploits, of which the great national celebrations of the Hellenic race were respectively the theatres. —Hermann has shown, that the basis of Pindar's diction is epic, but that he employs Doric forms as often as they appear more expressive, or are better adapted to the metre which he employs. Sometimes he gives the preference to Æolic forms, which was his native dialect. Hermann also remarks, that the verses of Pindar abound in hiatus, without there being plain successions of syllables. —In the fragments remaining of the poems from the Æolic dialect, and which Alceus and Sappho had only occasionally employed. After the example of the ancient poets, he makes the vowel long which is followed by a mute and liquid. The remark of Hermann respecting the mixture of dialects in Pindar has been acquiesced in by Böckh, who observes, that the Æolic corruption is employed with greater facility in the Æolic verses from the Olympic Odes, while they have been preserved more carefully in the other works of the poet. —The best edition of Pindar is that of Böckh, Lips., 1811-22, 3 vols. 4to. The text is corrected by the aid of thirty-seven MSS. Previous to the appearance of this edition, that of Heyne was regarded as the best. Heyne's work appeared in 1773, Götting., 2 vols. 8vo. A second edition of it was published in 1798, Götting., 1 vol. 8vo. This was improved, and the text corrected, on the merits of Pindar. The third edition appeared, after Heyne's death, in 1817, under the supervision of Schaeffer. An excellent school and college edition, by L. Dissen, based on that of Böckh, forms part of Jacob's and Rost's "Bibliotheca Graec., Goth. et Erfurt.," 1830, 8vo. (Schöll, Gesch. Gr. Lit., vol. 1, p. 196, seqq. —Id. ib., vol. 3, p. 598.) Pindemus, a city of Cilicia, belonging to the Eleutherio-Ciliciæ. It was situated on a height of great elevation and strength, forming part of the range of Amanus. Cicero took it after a siege of 57 days, and compelled the Tibareni, a neighbouring tribe, to submit likewise. The modern Bukant is supposed to occupy its site. (Cic., Ep. ad Fam., 15, 4. —Id., Ep. ad Att., 5, 20.) Pindus, I, a name applied by the Greeks to the elevations which separate Thessaly from Epirus, and the waters falling into the Ionian Sea and Ambracian Gulf, from those streams which discharge themselves into the Ægean. Towards the north it joined the great Illyrian and Macedonian ridges of Bora and Scardus, while to the south it was connected with the ramifications of Óita, and the Ætolian and Acarnanian mountains. (Herodotus, 2, 125; Pindus, Pyth., 9, 27 —Vergil, Æcl., 10, 11 —Ovid, Metamorphoses, 2, 224. —Cramer's Ancient Greece, vol. 1, p. 353.) II. A town and river of Doris in Greece. The river flowed into the Cephissus at Liris, a Phocian town. According to Strabo, the
1. Athenian Imports and Exports.

The commodities which Attica did not produce within her own territory, were obtained by foreign commerce, and, unless the importation was greatly assisted by some extraordinary obstacle, such, for example, as war, there could be no danger of a scarcity, even in the case of a failure of the crops, because it consumed the surplus produce of other countries. (Xen., Repub. Ath., 2, 6.)

Although not an island, yet it possessed all the advantages of insular position, that is, excellent harbours conveniently situated, in which it received supplies during all winds; in addition to which, it had sufficient facilities for inland traffic: the intercourse with other countries was promoted by the purity of the coin, as the merchant, not being obliged to take a return freight, had the option of carrying out bullion, although Athens abounded in commodities which would meet with a ready sale. (Xen., de Vect., 1, 7.)

If a stagnation in trade was not produced by war or piracy, all the products of foreign countries came to Athens; and articles which in other places could hardly be obtained single, were frequently to be had in the Pireus. (Thucyd., 2, 38.—Isocr., Paneg., p. 34, ed. Hall.)

Besides the corn, the costly wines, iron, brass, and other objects of commerce, which came from all the regions of the Mediterranean, they imported from the coasts of the Black Sea slaves, timber for ship-building, salt fish, honey, wax, tar, wool, rigging, leather, goaskins, &c.; from Byzantium, Thrace, and Macedonia, timber, slaves, and salt fish; also, slaves from Thessaly, whether they came from the interior; and carpets and fine wool from Phrygia and Miletus. "All the finest products," says Xenophon, "of Sicily, Italy, Cyprus, Lydia, the Pontus, and the Peloponnesians, Athens, by her empire of the sea, is able to collect into one spot." (Repub. Ath., 2, 7.)

To this far-extended intercourse the same author attributes the mixture of all dialects which prevailed at Athens, and the admission of barbarous words into the language of ordinary life. On the other hand, Athens conveyed to different regions the products of her own soil and labour; in addition to which, the Athenian merchant trafficked in commodities which they collected in other countries. Thus, they took up wine from the islands and shores of the Ægean Sea, to Peperthus, Cos, Thasus, and elsewhere, and transported it to the Euxine. (Demosth. in Laecri., p. 935.)

The trade in wine and oil went on, whilst the advances in Greece, a branch of industry which was more widely extended in the Roman Empire after the reign of Augustus. There was, it is true, a book-market (τὰ βιβλία) at Athens (Jul. Pomp., 9, 47), and books were exported to the Euxine and to Thrace (Xen. Anab., 7, 5, 14), but there can be no doubt that the books meant were merely blank volumes.

The trade in manuscripts was in the time of Plato so little confined, that Herodorus, who said to the writer in Sicily, gave occasion to a proverb, "Hermodorus carries on trade with writings." (Cic., Ep. ad Att., 13, 21.—Stud., s. v. λόγους Εὐγράφων ἱμεροπείναι.) At a subsequent period, while Zenodotus was still a youth, dealers in manuscripts are mentioned as having been at Athens. (Dio. Laer., in Vit.)

The merchant-vessels appear to have been of a single class of galleys, and, on a moderate instance, we find in Demosthenes (in Phorm.) a vessel of this kind, which, besides the cargo, the slaves, and the ship's crew, carried 300 free inhabitants. (Böckh, Public Economy of Athens, vol. 1, p. 65, sqq., Eng. transl.)

2. Credit System of the Athenians.

The advocates for a credit system at the present day will be exceedingly surprised to find one fully established among the Athenians, and deemed by that in-
telligent people essential to commercial operations. The system of banking pursued at Athens gave occasion to a new kind of money, constructed upon the credit of individuals or of companies, and acting as a substitute for the legal currency. In the time of Demosthenes (vol. 2, p. 1236, ed. Reiske), and even at an earlier period, banks appear to have been numerous, not only in Piraeus, but also in the upper city; and it was principally by their means that capital, which would otherwise have been unemployed, was distributed and made productive. Athenian bankers were, in many instances, manufacturers or speculators in land, conducting the different branches of their business by means of partners or confidential servants, and acquiring a sufficient profit to remunerate themselves, and to pay a small rate of interest for the capital intrusted to them. But this was not the only benefit they imparted to the operations of commerce. Their legers were books of transfer, and the entries made in them, although they cannot properly be called a part of the circulation, acted in all other respects as bills of exchange. In this particular their banks bore a strong resemblance to modern banks of deposit. A depositor desired his banker to transfer to some other natural person the credit assigned to him in the books of the bank (Demosth. τρο καλλιτικ. — vol. 2, p. 1236, ed. Reiske) and by this method, aided, as it probably was, by a general understanding among the bankers (or, in the modern phrase, a clearing house), credit was easily and constantly converted into money in ancient Athens. "If you do not know," says Demosthenes, "that credit is the readiest capital for acquiring wealth, you know positively nothing." (Ει τε ουτοι δοκειτη των πασοι δεισιτι πετρι) ιτα ιαίας προς χρηματισμον, πων η ν ουγοστινον — vol. 2, p. 938, ed. Reiske.) The spirit of refinement may be traced one step farther. Orders were certainly issued by the government in anticipation of future receipts, and may fairly be considered as having had the force and operation of exchequer bills. They were known by the name of ανωλογίσματα. We learn, for instance, from the inscription of the Cheiron marble (Bühck. Corp. Inscrip., vol. 1, p. 219), written near the close of the Peloponnesian war, that bills of this description were drawn at that time by the government at Athens on the receiver-general at Samos, and made payable, in one instance, to the paymaster at Athens; in another, to the general of division at Samos. These bills were doubtless employed as money, on the credit of the in-coming taxes, and entered precisely in the same manner as the rights of kings into the circulation of the period. (Cardwell's Lectures on the Coinage of the Greeks and Romans, p. 20, seqq.)

Piréne, a fountain near Corinth, on the route from the city to the harbour of Lechaion. According to the statement of Pausanias (2, 3), the fountain was of white marble, and the water issued from various artificial caverns into one open basin. This fountain is celebrated in the ancient poets as being sacred to the Muses, and here Bellerophon is said to have seized the winged horse Pegasus, preparatory to his enterprise against the Chimæra. (Pind. Ολυμπ. 13, 85. — Eurip. Med., 67. — Id. Iphig. 205. — Soph. Electr., 475, &c.) The fountain was fabled to have derived its name from the nymph Piréne, who was said to have dissolved in tears at the death of her son Cenchrus, accidentally slain by Diana. (Pausan. l. c.) On the south side of the basin was one only chieftain (or, according to another account, the monarch) of the Lapithæ. He is memorable in mythological narrative for his friendship with Theseus, which, though of a most intimate nature, originated nevertheless in the midst of arms. The renown of Theseus having spread widely over Greece, Pirithoüs, it seems, became desirous of not only beholding him, but also of witnessing his exploits, and he accordingly made an irruption into the plain of Marathon, and carried off the herds of the King of Athens Theseus, on receiving information, went to repel the plunderers. The moment Pirithoüs beheld him, he was seized with secret admiration, and, stretching out his hand as a token of his respect, he exclaimed, "Friendship, dost thou require it?"—"Thy friendship," replied the Athenian; and they thereupon swore eternal fidelity. Theseus and Pirithoüs were both present at the hunt of the Calydonian boar; and the former also took part in the famous conflict between the Centaurs and Lapithæ. The cause of this contest was as follows: Pirithoüs, having obtained the hand of Hippodamia, daughter of Acrisius, king of Argos, the chief of his nation, the Lapithæ, were all invited to the wedding, as were also the Centaurs, who dwelt in the neighbourhood of Pelion. Theseus, Nestor, and other strangers were likewise present. At the feast, Eurytion, one of the Centaurs, became intoxicated with the wine, and attempted to offer violence to the bride. A dreadful conflict thereupon arose, in which several of the Centaurs were slain, and they were finally driven from Pelion, and ordered to retire to the regions of Lapithæ as horrid companions. Theseus and Pirithoüs sided each other in every project, and, at the death of Hippodamia having subsequently left Pirithoüs free to form a new attachment, the two friends, equally ambitious in their love, resolved to possess each a daughter of the king of the gods. Theseus fixed his thoughts on Helen, then a child of but nine years. The friends planned the carrying her off, and succeeded. Placing her under the care of his mother Electra, at Aphidnae, Theseus prepared to assist his friend in a bolder and more perilous attempt: for Pirithoüs resolved to venture on the daring deed, of carrying away from the palace of the monarch of the under-world his queen Proserpina. Theseus, though aware of the risk, would not abandon his friend. They descended together to the region of shadows; but Pluto, knowing their design, seized them, and placed them upon an enchanted rock at the gait of his realm. Here they sat, unable to move, till Hercules, passing by in his descent for Cereberus, freed Theseus, having taken him by the hand and raised him up; but when he would do the same for Pirithoüs, the earth quaked, and he left him. Pirithoüs therefore remained everlastingly on the rock, in punishment of his audacious attempt. (Apollod., 1, 8, 2. — Id. 1, 5, 12. — Plut. Vit. Thes. — Hygin. fab. 14, 79, 155. — Verg. Aen., 7, 904. — Keightley's Mythology, p. 516, 323, 392.)

Pisa, an ancient city of Elis, giving name to the district of Pisatis, in which it was situated. Tradition assigned its foundation to Pius, grandson of Αεόλus (Pausan., 6, 22); but, as no trace of it remains, its very existence was questioned in later ages, as we are informed by Strabo (350), some affirming that there was only a fountain of the name, and that those who spoke of Pisa referred either to the kingdom or to the sovereignty of the Pisatis, originally composed of eight towns. Other authors, however, have acknowledged its existence (Pind., Ολ. 2, 4 — Id. Ol. 19, 51); and Herodatus states that the distance from Pisa to Athens was 1485 stadia (2, 7). Its site was commonly supposed to be on a hill between two mountains, named Ossa and Olympus, and on the bank of the Alpheus (Strabo, 9, 89, 6). Pisa was the vestiges of a town, the soil being entirely covered with vines. (Pausan., l. c. — Pith., 4, 5. — Schol. ad. Pind., Olymp., 10, 55.) It is generally agreed that the Pisatis were in possession of the temple of Olympia, and presided at the celebration of the games from the earliest period of their institution, till their rights were usurped by the Eleans and Heraclids. They did not, however, namely sub-
put to this injury on the part of their more powerful neighbours, and, having procured the assistance of Pisander, who joined them, performed the exploit. When, however, the eighth Olympiad, they again celebrated the festival; but the Eleans, in their turn, obtaining succour from Sparta, defeated Phidon, and once more expelled the Pisaee from Olympia. (Epiphon., ad Strab. 358. Pausan., 6, 22.) These, during the 34th Olympiad, being at that time under the authority of Panta-leon, who had possessed himself of the sovereign pow-er, made another effort to regain their ancient pre-rogative, and, having succeeded in vanquishing their op-ponents, retained possession of the disputed ground for several years. The final struggle took place in the forty-eighth Olympiad, when the people of Pisa, as Paussanians affirm, supported by the Triphylans, and other neighbouring towns which had revolted from Elis, made war upon that state. The Eleans, how-ever, aided by Sparta, proved victorious, and put an end for ever to this contest by the destruction of Pisa and the other confederate towns. (Pausan., 6, 22. — Strabo, 355.) According to the scholar on Pindar, the city of Pisa was distant only six stadia from Olympia, in which case we might fix its site near that of Miracca, a little to the east of the celebrated spot now called Antialla; but Paussanias evidently leads us to suppose it stood on the opposite bank of the river. (Cramer's Anc. Greece, vol. 3, p. 93, seqq.)

Pisae (or Pisa, as it is sometimes written), a city of Elis, was founded by the Ligurians, according to some accounts, from its mouth. We learn from Strabo (222), that formerly it stood at the junction of the Ausar (Serchio) and Ariss, but now they both flow into the sea by separate channels. The origin of Pisa is lost amid the fables to which the Trojan war gave rise, and which are common to so many Italian cities. If we are to believe a tradition recorded by Strabo (l. c.), it owed its foundation to some of the followers of Nestor, in their wanderings after the fall of Troy. The poets have not failed to adopt this idea. (Virg., Aen., 18. 179. — Rutlli, Itin., 1, 565.) Lycophron says it was taken by Tyrrhenus from the Ligurians (v. 1241). Servius reports, that Cat quo had not been able to discover who occupied Pisa before the Tyrrheni under Tarcho, with the exception of the Teutoines, from which account it might be inferred that the most ancient possessors of Pisa were of northern origin (Serv. ad Aen., 10, 179.) Dionysius of Halicarnassus names it as an Ionian town, colonized by the Ligurians in the territory of the Siculi. The earliest mention we have of this city in Roman history is in Polybius (2, 16, and 27), from whom we collect, as well as from Livy (21, 39), that its harbour was much frequented by the Romans, in their communication with Sardinia, Gaul, and Spain. It was here that Scipio landed his army when returning from the mouths of the Rhone to oppose Hannibal in Italy. It became a colony 372 B.C. (Liv., 41, 43.) Strabo speaks of it as having been formerly an important naval station: in his day it was still a very flourishing commercial town, from the supplies of timber which it furnished to the fleets, and the costly marbles which the neighbouring quarries afforded for the splendid palaces and villas of Rome. (Consult Plin., 3, 5. — Ptol., p. 64.) Its territory produced wine, and the species of wheat called siligo. (Plin., 14, 3, 56.; 42, 9, 90.) The Pisaee at the mouth of the Arrius, and is described by Rutlli. (Itin., 1, 591. — Cramer, Anc. It., vol. 1, p. 173.) The modern Pisa occupies the site of the ancient city.

Pisander, 1. an early Greek poet, born at Camirus, in the island of Rhodes, and supposed to have flourished about 650 B.C., although some made him earlier than Hesiod, and contemporary with Empolus. He wrote a poem, entitled "Hercules," on the labours and exploits of Hercules, of which frequent mention is made by the grammarians. The Alexandrian critics assigned him a rank among epic poets after Homer, Hesiod, Panyasis, and Antimachus. We have an epic poem, among those ascribed to Theocritus (ep. 20), and Strabolikewise mentions, as an author of the eminent natives of Rhodes. (Strab., 655 — Id., 658. — Compare Quintilian, 10, 1, 56.) Reiske has advanced the opinion, that the 24th and 25th Idyls of Theocritus are portions of the poem of Pisander. Both these Idyls, though of considerable length, are imperfect. One is entitled "Ἡράκλης," "The Young Hercules," the other "Παλαιὸς Λεοντόφορος," "Hercules, the lion-slayer." (Pisander, the 1st, is also an Idyl of Moschus, the 4th, entitled Μεγάρα, γυνή Ὡμήρου, "Megara, wife of Hercules," which Reiske assigns to the same source with the two other pieces just mentioned. (Consult Harles, ad Theocrit., Id. 25. — Heyne, Excurs., 1, ad Aen., 2, p. 285.)—II. A Greek poet, born at Larisa, a city of Lyceania, in Asia Minor, and who lived during the reign of Alexander Severus. He composed a long poem, entitled "Hesperia Oxyqueis, in which he sang of the nuptials of gods and heroes. The 16th book of this poem is cited, and Suidas calls the whole production a history varied after the epic manner. One of the interlocu- tors in the Satnailia of Macrobius (5, 2) accuses Virgil of having translated from Pisander almost all the second book of the Æneid, and particularly the story of the wooden horse. It is evident that Macrobius refers to this in Pisander of Camirus: but he is alto-gether mistaken. The wood-earner of this piece is Proclus, that Virgil borrowed from Arctinus and Lescha the history of the horse; and, in fact, the later Pisander, who lived in the time of Severus, borrowed from Virgil himself. (Heyne, Excurs., 1, ad Aen., 2, p. 287. — Scholl, Hist. Lit. Gr., vol. 5, p. 381.) III. An epigrammatic poet, supposed by Jacobs to be the same with the native of Camirus above mentioned. (Catai. Poët. Epigr., p. 392.) Heyne, however, thinks that he was identical with the Pisander of Moschus. (Excurs., 1, ad Aen., 2, p. 288.)—IV. An Athenian, one of the leaders of the oligarchical party, and instrumental in bringing about the establishment of the Council of Four Hundred. (Plut., Vit. Alcib.)—V. A Spartan admiral, in the time of Agesilaus, slain in a naval battle with Conon near Cnidus, B.C. 394. (Corn. Nep., Vit. Con.—Justin, 6, 3.)

Pisaum, a city of Umbria, on the seacoast, below Annuminum, on the river Arno. Its origin is most uncertain. It became a Roman colony A.D. 568 (Liv., 39, 44), but whether it was colonized again by Julius Caesar or Augustus is uncertain. Inscriptions, however, give it the title of Col. Julia. The climate of Pisaum seems to have been in bad repute, according to the opinion of Catullus (81, 3). The modern name of the place is Pisaio. (Cramer's Anc. Italy, vol. 1, p. 256.)

Pisaurum, a river of Umbria, running into the Adriatic near Pisaum. Lucan (2, 406) writes the name Isaurum. (Consult Corti, ad loc.) The modern appellation is la Foggia.

Pisidia, a country of Asia Minor, bounded on the west and north by Phrygia, on the east by Issuria, and on the south by Pamphyilia. It was a mountainous country, inhabited by a race of the same origin probably as the rude inhabitants of Cicilia Trachis. The origin of its territory is uncertain. It became a Roman colony A.D. 568 (Liv., 39, 44), but whether it was colonized again by Julius Caesar or Augustus is uncertain. Inscriptions, however, give it the title of Col. Julia. The climate of Pisaum seems to have been in bad repute, according to the opinion of Catullus (81, 3). The modern name of the place is Pisaio. (Cramer's Anc. Italy, vol. 1, p. 256.)

Pisidian, a river of Umbria, running into the Adriatic near Pisaum. Lucan (2, 406) writes the name Isaurum. (Consult Corti, ad loc.) The modern appellation is la Foggia.

Pisidia, a country of Asia Minor, bounded on the west and north by Phrygia, on the east by Issuria, and on the south by Pamphyilia. It was a mountainous country, inhabited by a race of the same origin probably as the rude inhabitants of Cicilia Trachis. The origin of its territory is uncertain. It became a Roman colony A.D. 568 (Liv., 39, 44), but whether it was colonized again by Julius Caesar or Augustus is uncertain. Inscriptions, however, give it the title of Col. Julia. The climate of Pisaum seems to have been in bad repute, according to the opinion of Catullus (81, 3). The modern name of the place is Pisaio. (Cramer's Anc. Italy, vol. 1, p. 256.)
unincreased, while in the interior the old republics, such as Termessus, Selge, and others, mere mountain-fortresses, still remained unrepressed, so that it was very evident any of the towns paid tribute to the metress of the world. It is true that Augustus did subject the whole of Pisidia to the Roman empire, but it was only in name. Even the Goths could do nothing against it. History, therefore, does not recognise it as the province of any great kingdom. — The boundary-line between Pisidia and Pamphylia is a matter not very clearly ascertained. The following remarks of Rennell are worthy of quoting: "The ancients seem to have agreed in the opinion that Pamphylia occupied the seacoast from Phaselis to Corasæsium; but the boundary between it and Pisidia appears not to have been decided. For instance, Termessus is said to be in Pamphylia by Livy (38, 15), and also by Ptolemy; but Strabo places it in Pisidia, and Arrian calls it a colony of Pisidia. Livy and Ptolemy arrange Pamphylia and Pisidia as one country, under the name of Pamphylia. The former, who describes in detail the history of the Roman wars there, and who may be supposed to have studied its geography, includes Pisidia, if not Isauria, in Pamphylia. For he says that part of Pamphylia lay on one side, and part on the other side of Taurus (38, 39). Now Pisidia is said by Strabo to occupy the summits of Taurus, between Sagallassus and Homonada, together with a number of cities, which he specifies, on both sides. Again, at Pusias, in his note to the passage, Livy, then, actually includes in Pamphylia the province described by Strabo as Pisidia, and appears to include Isauria also. At the same time, he admitted the existence of a province under the name of Pisidia; for he repeatedly mentions it, and says that the people of Sagallassus are Pisidians. On the whole, therefore, one cannot but believe that he regarded Pisidia as a province of Pamphylia. Ptolemy, as we have observed, placed it between Pamphylia, Pisidia, and Isauria proper, and subdivides it into Pisidia proper and Pisidia of Phrygia. He has also a province of Pamphylia. In the distribution of the parts of Pamphylia at large, Tlos assigns to the province of that name the tract towards the sea, which includes Olbia, Attalea, and Side, on the coast; Termessus, Selge, Aspendus, Perge, &c., and more inland. And Pisidia contains the tracts northward, and containing the cities of Baris, Ambala, Lysinoc, Cornasa, &c. Moreover, his Pisidia extended to the neighbourhood of Celanze and Apamea Cibotus. Pliny is much too brief on the subject. It is only to be collected from him (5, 27), that the capital of Pisidia was Antiochia; and that the other principal cities were Sagallassus and Oraonda. That it was shut in by Ly西亚, and had for neighbours the people of Phrygia, Isauria, Pamphylia, Pelyæ, &c. And, finally, that the state of Homonada, formed of close and deep valleys, within Taurus, had the mountains of Pisidia lying above it. From all this we may collect, that the Pisidia of Pliny extended along the north of Pamphylia and of Taurus, from the district of Sagallassus westward, to that of Homonada eastward; the latter being on the common frontier of Ly西亚, Cilicia Trachea, and Pisidia. The Pisidia of Pliny, therefore, does not extend west of Tlos, or north of Pusias, was found to agree also with that of Strabo. Strabo (667) distinctly identifies Pisidia and Pamphylia as two distinct countries: that is, Pamphylia as a maritime country, extending from Ly西亚 to Cilicia Trachea, in length along the coast, 640 stadia; and Pisidia (p. 569, seqq.) occupying the summits of Taurus, or rather, the whole base of that region, from Sagallassus and Termessus to Homonada; and that it occupied certain tracts of land below Taurus on both sides. And besides the general extent given by it, this description, he classes so many places belonging to it as to prove that it has a great extent in point of breadth; for Selge appears to have been at a great distance to the south of the main ridge, and Antiochia of Pisidia is from thirty to thirty-five miles to the north of it." (Rennell's Geography of Western Asia, vol. 2, p. 71, seqq.)

Pisistratide, a patronymic appellation given to Hippias and Hipparchus, the sons of Pisistratus.

Pisistratus, a celebrated Athenian, who obtained the tyranny at Athens. His family traced their descent from Peleus; and Codrus, the last king of Athens, belonged to the same family. (Larter, vol. 1, Herod., 50.) Herodotus relates, that Hippocrates, the father of Pisistratus, being present on one occasion at the Olympic games, met with a remarkable prodigy. According to the historian, he had just offered a sacrifice, and the caldrons were standing near the altar, filled with pieces of the flesh of the victim and with water when, on a sudden, there bubbled up without the agency of fire, and began to run over. Chilo, the Lacedaemonian, who happened to be present, and was a witness of what had taken place, advised Hippocrates not to marry, or if he had already a wife, to repudiate her. His counsel, however, was disregarded, and Pisistratus was born to Hippocrates. (Herod., 1, 89.)— Not long after the legislation of Solon had been established at Athens, and while the lawgiver himself was away in foreign lands, the state became again disordered and divided. Pisistratus, however, we have observed, of his own volition, shut up the Plain, the Coast, and the Highlands. The first of these was headed by Lycurgus; the second by Megacles, a grandson of the archon who brought the memorable chain and curse upon his house by the massacre of the adherents of Cylon; and the third by Pisistratus. Solon, therefore, on his return to Athens, found that faction had been actively labouring to pervert and undo his work. He had early detected the secret designs of Pisistratus, and Pisistratus, in his turn, had nothing: but his ambition prevented him from displaying the highest qualities of a man and a citizen. But it was in vain that he endeavoured to avert the danger, which he saw threatened by the struggle of the factions, and in vain did he use all his influence to reconcile their chiefs. This was the more difficult, because the views of all were perhaps equally selfish, and none was so conscious of his own integrity as to rely on the professions of others. Pisistratus had long been listened respectfully to Solon's remonstrances; but he waited only for an opportunity of executing his project. When his scheme appeared to be ripe for action, he was one day drawn in a chariot into the public place, his own person and his mules disfigured with recent wounds, inflicted, as the sequel proved, by his own hand, which he showed to the multitude, while he told them that on his way into the country he had narrowly escaped capture by assassins, who had been employed to murder the friend of the people. While the indignation of the crowd was fresh, and from all sides assurances were heard that they would defend him from his enemies, an assembly was called by his partisans, in which one of them, named Aristo, came forward with a motion, that a guard of fifty citizens, armed with clubs, should be deputed to protect the person of Pisistratus. Solon, the only man who had been employed to oppose the measure, opposed the assembly of its pernicious consequences, but in vain. The body-guard was decreed; and the people, who eagerly passed the decree, not keeping a jealous eye on the manner of its execution, Pisistratus took advantage of this to raise a force and make himself master of the citadel. Perhaps his partisans represented this as a necessary precaution, to guard its security. But the people, Megacles and the Alcmeonides left the city. Solon, after an ineffectual attempt to rouse his countrymen against the growing power which was making de
such rapid strides towards tyranny, is said to have taken down his arms, and laid them in the street before his door, as a sign that he had made his last effort in the cause of liberty and the laws. Lycurgus and his party seem to have submitted quietly for a time; but Pisistratus, whose conduct at the梭 event showed, for a more favourable opportunity of overthrowing him. The usurper was satisfied with the substance of power, and endeavoured as much as possible to prevent his dominion from being seen and felt. He made no visible changes in the constitution, but suffered the ordinary magistrates to be appointed in the usual manner, the tribunals to retain their authority, and the laws to hold their course. In his own person he affected the appearance of a private citizen, and displayed his submission to the laws by appearing before the Areopagus to answer a charge of murder, which, however, the accuser did not think fit to prosecute. He continued to show honour to Solon, to court his friendship, and ask his advice, which Solon did not think himself bound to withhold where it might be useful to his country, lest he should appear to sanction the usurpation which he had denounced. He professed to have adopted the democracy of Lycurgus, though at variance with the principles of his constitution, as a less evil than would have ensued from the success of either of the other parties; and even as good, so far as it prevented them from acquiring a similar preponderance. Solon died the year following that in which the revolution took place (B.C. 559), and Pisistratus soon after lost the power which he had usurped, the rival factions of Lycurgus and Megacles having united to overthrow him. But no sooner had these two parties accomplished their object, than they quarrelled among themselves, and, at the end of five years, Megacles, finding himself the weaker, made overtures of reconciliation to Pisistratus, and offered to bestow on him the hand of his daughter, and to assist him in recovering the station he had lost. The contract being concluded, the two leaders concerted a plan for executing the main condition, the restoration of Pisistratus. For this purpose Herodotus supposes them to have devised an artifice, which excites his astonishment at the simplicity of the people on whom it was practised, and which appears to him to degrade the national character of the Greeks, who, he observes, had of old been distinguished from the barbarians by their superior sagacity. Yet, in itself, the incident seems neither very extraordinary, nor a proof that the contrivers reckoned on an enormous measure of credulity in their adversaries. In a country of people by the women they found a woman, Phya by name, of unusually high stature, and comely form and features. Having arrayed her in a complete suit of armour, and instructed her to maintain a carriage becoming the part she was to assume, they placed her in a chariot, and sent heralds before her to the city, who proclaimed that Minerva herself was bringing back Pisistratus to her own citadel, and exhorted the Athenians to receive the favoured guest in their midst. In truth, the device of the women was only designed to add extraordinary solemnity to the entrance of Pisistratus, and to suggest the reflection that it was by the especial favour of Heaven he had been so unexpectedly restored. The new coalition must have rendered all resistance hopeless. As the procession passed, the populace no doubt gazed, some in awe, all in wonder; but there is no reason to think that the result would have been different if they had all seen through the artifice. Pisistratus, restored to power, nominally performed his part of the compact by marrying the daughter of Megacles; but it was soon discovered that he had no intention of really uniting his blood with a family which was commonly thought respectable with an evil name. The result was, that he treated his young wife as one only in name. The Alcmæonides were indignant at the affront, and at the breach of faith, and once more determined to make common cause with the party of Lycurgus. Once more the balance inclined against Pisistratus, and, unable to resist the combined force of his adversaries, he retired into exile to Eretria in Euboea. Here he deliberated with his sons Hippias, Hipparchus, and Hippias, the result of a prolonged conference, and he resolved of a peaceful marriage, whether he should not abandon all thoughts of returning to Attica. They appear to have been divided in their wishes or opinions; but Hippias, the eldest, prevailed on his father again to make head against his enemies. He possessed lands on the river Styron in Thrace, which yielded a large revenue, and his interest was strong in several Greek cities, especially at Thebes and Argos. He now exerted it in the cause of Pisistratus. He endeavoured to secure his projected enterprise, and by the end of ten years he had completed his preparations: a body of mercenaries was brought to him from Argos, the Thebans distinguished themselves by the liberality of their subsidies, and Lygdamis, one of the most powerful men in the island of Naxos, came to his aid with all the troops and money he could raise. In the eleventh or twelfth year after his last expulsion, he set sail from Eretria, and landed on the plain of Marathon, to recover his sovereignty by open force. The Government of his opponents was not popular, and Pisistratus had many friends in the country and in Athens, who, on his arrival, flocked to his camp. The result proved a fortunate one. The leaders of the hostile factions found themselves deserted eventually by all but their most zealous adherents, who, with them, abandoned the city, and left Pisistratus undisputed master of Athens. What he had so hardly won, he prepared to hold henceforth with a firmer grasp. He no longer relied on the affections of the common people, but took a body of foreign mercenaries into constant pay; and seizing the children of some of the principal citizens, who had not made their escape, and whom he suspected of being ill-disposed towards him, he sent them to Naxos, which he had reduced under the power of his friend Lygdamis, to be kept as hostages. To the Athenians Solon left to have maintained a considerable naval force, and to have extended the Athenian power abroad; while at home he still preserved the forms of Solon's institutions, and courted popularity by munificent largesses, and by throwing open his gardens to the poorer citizens. (Athenaeus, 12, p. 532) At the same time he tightened the reins of government, and he appears to have made use of the authority of the Areopagus to maintain a vigorous police. At this time the Athenians, in giving to every citizen to give an account of his means of gaining a subsistence, and punished idleness: and hence by some he was supposed to have been the author of it. It afforded him a pretext for removing from the city a great number of the poorer sort, who had no regular employment, and for compelling them to engage in rural occupations, in which, however, he assisted the indigent with bounty. He endeavoured to give every man, not perhaps, than love for the arts, to adorn Athens with many useful or magnificent works. Among the latter was a temple of Apollo, and one dedicated to the Olympic Jove, of which he only lived to complete the substructions, and which remained unfinished for 700 years, exciting the wonder, and sometimes the despair, of posterity by the vastness of the design, in which it surpassed every other that he
ancient world ever raised in honour of the father of the gods. Among the monuments in which splendour and usefulness were equally combined, were the Lyceum, a garden at a short distance from Athens, sacred to the Lycurgus, the founder of Sparta, and destined by the exercises of the Athenian youth, rose amid shady groves, which became one of the most celebrated haunts of philosophy; and the fountain of Callirrhoe, which, from the new channels in which Pisistratus distributed its waters, was afterward called the fountain of the Nine Springs (Evevapovouc). To defray the expense of these and his other undertakings, he laid a tithe on the produce of the land: an impost which seems to have excited great discontent in the class affected by it, and, so far as it was applied to the public buildings, was, in fact, a tax on the rich for the employment of the poor; but which, if we might trust a late and obscure writer, was only revived by Pisistratus after the example of the ancient kings of Attica. (Diog. Laert., 1. 58.) He is also believed to have been the author of a wise and beneficent law, which Solon, however, is said to have suggested, for supporting citizens disabled in war at the public expense. According to a tradition once very generally received, posterity has been indebted to him for a benefit greater than any which he conferred on his contemporaries, in the preservation of the Homeric poems, which till now had been scattered in unconnected rhapsodies. After every abatement that can be required in this story for misunderstanding and exaggeration, we cannot doubt that Pisistratus at least made a collection of the poet's works, superior in extent and accuracy to all that had preceded it, and thus certainly diffused the knowledge of them more widely among his countrymen, perhaps preserved something that might have been lost to future generations. In either case he might claim the same merit as a lover of literature; and this was not a taste which derived any part of its gratification from the vanity of exclusive possession. He is said to have been the first person in Greece who collected a library, and to have earned a still higher praise by the genuine liberality with which he imparted its contents to the public. On the whole, though we cannot approve of the steps by which he mounted to power, we must own that he made a princely use of it; and may believe that, though under his dynasty Athens could never have risen to the greatness she afterward attained, she was indebted to his rule for a season of repose, during which she gained a great degree of the habit of life by which Pisistratus retained his sovereignty to the end of his life, and died at an advanced age, thirty-three years after his first usurpation, B.C. 527. He was succeeded by his sons, Hippias, Hipparchus, and Thessalus. (Thirnical's Greece, vol. 2, p. 55, seq.)

Piso, the name of a celebrated family at Rome, a branch of the Calpurnian gens, which house claimed descent from Calpurnus, the son of Numa Pompilius. The family were both patrician and plebeian on the mother's side. The principal individuals of the name were: I. C. Calpurnius Piso, city prefect in 212 B.C., and who had the command of the Capitol and citadel when Hannibal marched out against Rome. He was afterward sent into Etruria as commander of the Roman forces, and at a subsequent period had charge of Capua in Campania, after which his command in Etruria was resumed. (Liv., 25, 41.—Id., 26, 10, 15, et sqq.—App., 27, 6, &c.) He was afterward, B.C. 187. He obtained Farther Spain for his province, where he signalized his valor, and, in conjunction with L. Quintius Crispinus, prefect of Spain, gained a decisive victory over the revolted Spaniards. More than thirty thousand of the enemy fell in the battle. On his return to Rome he obtained a triumph. He subsequently attained to the consulsiphip (B.C. 180), in which office he died, having been poisoned, as was believed, by his wife Hostilia. (Liv., 39, 6.—Id., 32, 8 et 21.—Id., 39, 30, seq.—Id., 40, 35.—Id., 40, 37.) III. L. Calpurnius Piso, a celebrated man of the commonwealth B.C. 148, and afterward twice consul (B.C. 135) and acted a part in the most remarkable men of the Roman state, from the union of talents and virtues that marked his character. An able speaker, a learned lawyer, a sound statesman, and a wise and valiant commander, he distinguished himself still more by his purity of morals, and by a frugality and old-Roman plainness of life which obtained for him the surname of Frugi. He quoted the troubles to which the revolt of the slaves had given rise in Sicily, and signalized his valor against the insatiable Piso wrote memoirs or annals of his time, which, according to Cicero (Brut., 27), were composed in a very dry and lifeless manner, although Aulus Gallius (11, 14) speaks of their "simplicissima suavisit." (Cic. de Orat., 2, 29.—Id., pro Font., 24.—Id., in Ver r., 6, 99.—Val. Max., 2, 7.—Id., 4, 3.—Le Cicero, Journaux chez les Romains, p. 28, 150.)—IV. L. Calpurnius Piso, son of the preceding, inherited, if not the talents, at least the virtues, of his father. He was sent preator into Spain, where he died soon after. (Cic., in Ver r., 1, 35.—Id., ib., 3, 65, &c.)—V. C. Calpurnius Piso, was consul with Acilius Glabrio, B.C. 57, and signalized his magnificence by warmly defending the prerogatives of the consular office against the attacks of the commons and their tribunes. He was also the author of a law against bribery at elections. (Cic., pro Flacc., 75.—Val. Max., 3, 8.)—VI. A young Roman, whom infidelity (the result of fratricidal hatred) and a turbulent disposition induced to take part in the conspiracy of Catiline. The leading men at Rome, anxious to get rid of a troublesome and dangerous individual, caused him to be sent as questor, with praetorian powers, into Hither Spain. He was not long after assassinated in his province, (Sall., Cat., 18, seq.)—VII. C. Calpurnius Frugi, a descendant of the individual mentioned above (No. III.), and son-in-law of Cicero. He was the first husband of Tullia, and is highly praised by Cicero for his virtues and oratorical abilities. Piso exerted himself strenuously for the recall of his father-in-law, but died a short time before this took place. (Cic., ad Q. post red., 3.—Id., Ep. ad Fam., 14, 1.—Id., Brut., 78, &c.)—VIII. L. Calpurnius Piso, father-in-law of Caesar, and consul B.C. 58. Before attaining to this office he had been accused of extortion, and only escaped condemnation by the influence, which was afterwards eventually allied to Piso by marriage, and the latter had given him many marks of friendship and confidence; but Cicina eventually gained Piso over to his views, by promising to obtain for him the province of Macedonia, and he accordingly joined the demagogue in his efforts to procure the banishment of Cicero, which event took place in Piso's consulship. Having obtained the reward of his perfidy, he set out for his province; but his whole conduct at Thermopylae evinced the rapine, and cruelty. The senate recalled him, chiefly through the exertions of Cicero, who in this way aven- ged himself on Piso for his previous conduct. On Piso's return, he had the hardihood to attack Cicero in open senate, and complain of the treatment he had received at his hands. He reproached him also with the disgrace of exile, with excessive vanity, and other weaknesses. Cicero replied, on the contrary, that the above speech was indeed the more contemptible that ever fell from the lips of any man, in which the whole life and conduct of Piso are portrayed in the darkest colours, and which must hand him down as a detestable character to all posterity. Notwithstanding this, however, Piso was afterward censor along with Appius Claudius (A.U.C. 702); and we find, at a subsequent period, appointed one of the three commissioners who were sent by the senate to treat with An-
PIT

Tony. Piso, in his outward deportment, if we believe the picture drawn of him by Cicero, affected the mien and garb of a philosopher; but this garb of rigid virtue covered a most lewd and vicious mind. (Cic. in Piso.—Middleton, ed. of Cicero Ep. IX. 7.) Piso, son of the preceding, inherited many of the vices of his father, but redeemed them, in some degree, by his talents. He was at first one of the warmest opponents of the party of Caesar, and took an active part in the war in Africa. (Hirt., Bell. Af.) After the death of Caesar, he followed the fortunes of Brutus and Cassius, until the overthrow of the republican forces. Being at length restored to his country, he first endeavored to gain the confidence of Augustus; and, until Augustus promised him on his return to accept the consulship. Thereupon, T. Act. 312. 731, Augustus himself being his colleague. He was afterward named governor of Pamphylia, and conducted himself with great ability in his province. Having subsequently received orders to pass into Europe, in order to oppose the Bessi, a Thracian tribe, he gained a complete victory over them. He was appointed, after this, prefect of the city by Tiberius, whose favour he is said to have gained by drinking with him for two nights in succession. (Plin., vol. 14, 28.) Piso appears to have been a man of pleasure, who passed his evenings at table, and slept till noon; but he possessed such capacity for business, that the remainder of the day sufficed for the despatch of those important affairs with which he was successively intrusted by Augustus and Tiberius. It was to this individual and his two sons that the epistle of Horace, commonly called the "Art of Poetry," was addressed. (Sat. vol. 6, 42, 43.—Senec. Ep. 83.—Vell. Patr. 2, 22.)—X. Cn. Calpurnius Piso, son of the preceding, was a man of violent passions, impatient of control, and possessing much of the haughty spirit of his sire. To the pride derived from such a father he united the insolence of wealth, acquired by his marriage with Plancina, who, besides her high descent, possessed immoderate riches. Tiberius appointed him governor of Syria, and was said to have given him secret instructions to thwart the movements of Germanicus. Plancina, in like manner, had her lessons from Livia, with full instructions to mortify, in every possible way, the pride of Agrippina. These machinations proved but too successful. Germanicus was cut off, and Piso, accused of having poisoned him by both his widow Agrippina and the public voice, and finding himself deserted by all, even by the emperor, put an end to his existence, A.D. 20. (Tacit. Ann. 2, 43.—Id. 55.)—XII. C. Calpurnius Piso, leader of the celebrated conspiracy against Nero. His eloquence and his amiable qualities had conciliated to such a degree the public esteem, that the majority of the conspirators intended him as the successor of the emperor. The plot was discovered on the very morning of the day intended for its execution, and Piso, instead of at once adopting energetic measures, and attempting to seize upon the throne by open force, as his friends advised him to do, stayed himself up in his mansion and opened his veins. (Tacit. Ann. 15, 48, seqq.)—XII. C. Piso Licinius, adopted son of the Emperor Galba, made himself universally esteemed by his integrity, his disinterestedness, and by an austerity of manners that recalled the earlier days of Rome. He was put to death, by order of Otho, after the fall of Galba, at the age of 31 years. (Tacit. Hist. 1, 14.—Id. ib., 3, 68.—Id. ib., 4, 11, 40.) Pithecus, a native of Mytilene in Lesbos, and one of the so-called wise men of Greece, was born about 650 B.C. Having obtained popularity among his countrymen by successfully opposing the tyrant Melanichus, he was intrusted with the command of a fleet, in a war with the Athenians concerning some territory which they had seized in the island. In the course of this war, the Athenian commander Phrynos, a man of uncommon size and strength, challenged him to single combat. Providing himself with a net, which he concealed under his buckler, he took the first opportunity to throw it over the head of his antagonist, and by this means gained an easy victory. (Diog. Laert. Vit. Pito. Polyen. 1, 25.) According to Strabo's account, Pittacus came into the field armed with a casting-net, a trident, and a dagger (Strab., 590), and it is said that from this stratagem of the Mytileneans he bestowed the mode of casting a trident, and one half of this small portion he afterward dedicated to Apollo, saying, concerning the remainder, that the half was better than the whole. (Plut., de Herod. Malign., p. 857. —Op. ed. Reiske, vol. 9, p. 255. —Hex., Op. ed. D., 40.) Cornelius Nepos says, that the Mytileneans offered him many thousand acres, but that he took only a hundred. (Vit. Thrasyb. 4, 11.) Pittacus displayed great moderation in his treatment of his conquered enemies. It is said that when the poet Alcman, who frequently made him the object of his satire, finding it necessary to lay severe restrictions upon drunkenness, to which the Lesbians were particularly addicted, Pittacus passed a law which subjected offenders of this class to double punishment for any crime committed in a state of intoxication. When he had established such regulations after raised the siege. (Ovid. Fast. 6, 377, seqq.—Lactant., 1, 20.) Pittorila, a town of Etruria, northeast of Luca, and at the foot of the Apennines. Pliny calls it Fis. (5, 6), but Ptolemy (p. 64) and others give it the appellation of Licaniun. This is the history of Pistoria. This town is memorable in the history of Rome as having witnessed in its vicinity the close of Catiline's desperate but short career. (Sall., Cat., 62.) The spot on which the action was fought is too imperfectly marked by the concise narrative of Sallust to be now recognised. We may conjecture that it was to the north of Pistoria, and near the modern road from Fano to Modena. (Cramer's Anc. Greece, vol. I. p. 177.) Pitane, a town of Aeolis, in Asia Minor, to the northwest of the mouth of the river Caicus. Scylax makes mention of it, and Strabo gives it two harbours. (Scylax, Peripl., p. 37.—Strab., 614.) The small river Evenus flowed near its walls. Herodotus names this place among the eleven cities of Aeolis. (Man. A. Geogr., vol. 6, pt. 3, p. 398.) Priscus, Vitt. 4869. Pittacus, the author of some silly epigrams, in which Greek and Latin expressions were intermingled together. (Schol. ad Hor., Sat., 1, 10, 22.) Bentley thinks that the individual to whom Horace refers was the same of whom Suetonius (Vit. Jul., 75) makes mention, under the name of Pittolus, as having been the author of some defamatory verses against Julius Caesar, and that Horace styles him Phoebus, because Pittolus would have been unmanly in hexameter verse. (Bentl. ad Horat., l. c.) Priscus, a native of Mytilene in Lesbos, and one of the so-called wise men of Greece, was born about 650 B.C. Having obtained popularity among his countrymen by successfully opposing the tyrant Melanichus, he was intrusted with the command of a fleet, in a war with the Athenians concerning some territory which they had seized in the island. In the course of this war, the Athenian commander Phrynos, a man of uncommon size and strength, challenged him to single combat. Providing himself with a net, which he concealed under his buckler, he took the first opportunity to throw it over the head of his antagonist, and by this means gained an easy victory. (Diog. Laert. Vit. Pitt.—Polyen., 1, 25.) According to Strabo's account, Pittacus came into the field armed with a casting-net, a trident, and a dagger (Strab., 590), and it is said that from this stratagem of the Mytileneans he bestowed the mode of casting a trident, and one half of this small portion he afterward dedicated to Apollo, saying, concerning the remainder, that the half was better than the whole. (Plut., de Herod. Malign., p. 857. —Op. ed. Reiske, vol. 9, p. 255. —Hex., Op. ed. D., 40.) Cornelius Nepos says, that the Mytileneans offered him many thousand acres, but that he took only a hundred. (Vit. Thrasyb. 4, 11.) Pittacus displayed great moderation in his treatment of his conquered enemies. It is said that when the poet Alcman, who frequently made him the object of his satire, finding it necessary to lay severe restrictions upon drunkenness, to which the Lesbians were particularly addicted, Pittacus passed a law which subjected offenders of this class to double punishment for any crime committed in a state of intoxication. When he had established such regulations...
in the island as promised to secure its peace and prosperity, he voluntarily resigned his power, which he had held for ten years, and retired to private life.

The following maxims and precepts are ascribed to him. The first office of prudence is to foresee threatening misfortunes, and prevent them. Power discovers the man. Never talk of your schemes before they are executed, lest, if you fail to accomplish them, you be exposed to the double mortification of disappointment and ridicule. Whatever you do, do it well. Do not that to your neighbour which you would take ill from him. Be watchful of opportunities. (Diog. Laert. Vit. Plut., Comm. Sup. — Herod., 1, 27. — Ensefl., Hist. Phil., vol. i. p. 144.)

Plinthus, a king of Trozene in Argolis, son of Pelops and Hippodamia. He gave his daughter Euthra in marriage to Aegeus, king of Athens, and brought up Theseus at his court. (Vid. Theseus.) He also reared Hippolytus, the son of Theseus. (Euryp. Hippol., 11. — Schol., ad loc.) Pittheus was famed for his wisdom, and Pausanias ascribes to him a work on the art of speaking, given to the world by a native of Epidauros, and which he says he himself saw. He also states, that Pittheus taught this same art in a temple of the Muse at Trezene. The same writer likewise mentions the tomb of Pittheus, which was still seen in his day, and on which were three thrones or seats of white stone, on which the monarch and two assistants were accustomed to sit when dispensing justice. The whole story of this monarch, however, appears to be fictitious in its character. (Pausan., 2, 11. — Plut., Vit. These.)

Pythoneus, a small island off the coast of Argolis. It lay opposite to Epidauros, and was situate six miles from the coast, and seventeen from Egeina. (Plin., 4, 11.)

Pityuses, a small island off the coast of Argolis, near Aristera. The modern name is Tides. (Plin., 4, 11.)

Pityusae, a group of small islands in the Mediterranean, off the coast of Spain, and lying to the southwest of the Balearics. They derived their name from the number of pine-trees (pityus, a pine) which grew in them. The largest is Ebusus or Eicca, and next to it is Ophiussa or las Columbretes. (Mela, 2, 7. — Plin., 3, 5.)

Placentia, a city of Gallia Cisalpina, at the confluence of the Trebia and Padus. It is now Placentia. This town was conquered by the Romans, along with Cremona, A.U.C. 535, to serve as a bulwark against the Gauls, and to oppose the threatened approach of Hannibal. (Polyb., 3, 40. — Liv., 21, 25. — Vell. Patr., 1, 14.) Its utility in this latter respect was fully proved, by its affording a secure retreat to the Roman generals after the battle of Ticinum, and more especially after the disaster of Trebia. (Polyb., 3, 66. — Liv., 21, 56.) Placentia withstood all the efforts of the victorious Hannibal, and also, eleven years after, the attempts which his brother Hasdrubal made to obtain possession of it. The resistance which it offered to the latter caused a delay that led to his overthrow, and thus eventually, perhaps, saved the empire. After the termination of the second Punic war, it was, however, taken and burned by the Gauls, headed by Hamilcar the Carthaginian (Liv., 31, 10), but soon after was re-occupied by Valerius, 557 A.H.C. (C. I. L. 4, 93. — 21.) Placentia had acquired the rights of a municipal city in Ciceron's time. (Or. in Piz., 1.) Strabo speaks of it as a celebrated town (216), and Tacitus extols it as a powerful and opulent colony. (Hist., 2, 17, seqq.) Its theatre, situated without the walls, was burned in the civil war between Otho and Vitellius. (Suet. Oth., 9. — Plin., 3, 15. — Cramer's Anc. Italy, vol. i., p. 79, seqq.)

Placida, a daughter of Theodotius the Great, and sister to Arcadius and Honorius. She resided most commonly at the court of the latter, and was present when Rome was first invested by the arms of Alaric, being then about twenty years of age. Placida became a hostage in the hands of the victor, according to some a captive, with his personal attractions was for her the hand of Ataulphus or Adolphus, the brother in-law of Alaric, and king of the Visigoths. After the death of Ataulphus, she married Constantius, and became the mother of Valentinian III. Having lost her second husband, she acted as guardian for her son, and reigned twenty-five years in his name, and the character of that unworthy emperor gradually counterbalanced her spinous, that Placida had enervated his youth by a dissolute education, and directed his attention from every manly and honourable pursuit. Amid the decay of military spirit, her armies were commanded by two generals, Aetius and Boniface, who may be deservedly named as the last of the Romans. Placida died at Rome, A.D. 450. She was buried at Ravenna, where her sepulchre, and even her corpse, seated in a chair of cypress wood, were preserved for ages. (Ducange, Fam. Bynum, p. 72. — Tillemont, Hist. des Emp., vol. 5, p. 260, 286, &c. — Id. ib., vol. 6, p. 240. — Gibbon, Decline and Fall, c. 31, 33, 35.)

Planaria, a small island between Corsica and Ilyas, now Planaora. Tacitus relates, that Augustus was persuaded by Livia to banish his nephew Agrippa Posthumus hither. (Ann., 1, 3. — Ibid., 2, 39.) This island is also noticed by Strabo (120) and Ptolemy (p. 67).

Plancina, a granddaughter of L. Munatius Plancus, and wife of Piso, governor of Syria in the reign of Tiberius. (Vid. Piso X.) She was supposed to have been an accomplice with her husband in shortening the days of Germanicus, but was saved by the influence of Livia, her protectress. As long as Piso, who had been put to his trial, had any hope of acquittal, her language was that of a woman willing to save her husband, and, if he was doomed to fall, determined to perish with him. But, when she had obtained safety for herself, she left him to his fate. At a later period, however, she was about being proceeded against for her criminal conduct, when, in despair, she laid violent hands on herself, and suffered at last the slow but just reward of a flagitious life. (Tacit. Ann., 2, 43, 55, 75; 3, 9, 15; 6, 26.)

Plancus, I. T. Born at Celio near Rome in 58 B.C. Was early in the troubles excited by the death of Clodius, and, on the expiration of his office, was accused and condemned, notwithstanding the interest made by Pompey in his behalf. (Cic. Ep. ad Fam., 2, 9.)—H. I. Munatius, a native of Thur, was in early life a pupil of Cicero's, and obtained considerable eminence in the oratorical art. He afterward commanded a legion under Caesar in Gaul. On the assassination of that individual, Plancus acted at first a very equivocal part, and frequently changed sides, attaching himself successively to each party according as it became powerful. Thus we find him, after the victory at Mutina, affecting the utmost zeal for the cause of Brutus and freedom; and subsequently, when he saw Antony re-established in power, he went over to him with four legions which he had at the time under his command. He obtained upon this occasion the command of Languedoc. Tired at last of Antony, he sided with Octavius, who received him with the utmost cordiality. It was Plancus who proposed in the senate that the title of Augustus should be bestowed on Octavius. The ancient writers reproach him, besides his political versatility, with a total forgetfulness on one occasion of all dignity and self-respect. This was at the court of Cæsar at Alexandria, when he appeared upon the public stage in the character of a sea-god, having his person painted green, and in a state of almost complete nudity; wearing a crown
of reeds on his head, and with the tail of a fish attached to his body behind. Planeus, however, appears to have been a man of literary skill, and an ode in his honor by Horace on one occasion when he had become suspected of disaffection by Augustus, and was mediating his departure from Italy. (Plin. Nat. H. N. 34, 3.)

Planeus, Maximus, a Greek monk, commonly designated "of Constantinople," probably by reason of his having long resided there; for he was, in fact, a native of Nicomedia. Homer, the man of great learning, and various acquirements, and flourished in the fourteenth century. In 1327, the Emperor Andronicus Palmologus sent him as ambassador to the Russian republic. He is said to have been the first Greek that made use of the Arabic numerals, as they are called. Planeus has given us 1. A collection of Aesopic fables, together with a very absurd life of the ancient fabulist himself; 2. An Anthology, selected from that of Constantine Cophilas; 3. A poetical Eloge on Claudius Ptolemaeus; 4. Some grammatical works; 5. A Greek translation of Caesar's Commentaries of the Gallic war; 6. A prose translation of the Metamorphoses and Heroides of Ovid; 7. A translation of the Dictisch of Cato into Greek verse; 8. Various unedited works. (Scholl, Hist. Lit. Gr., vol. 1, p. 252.)

Platea (gen. -æ) and Plateae (gen. -ærum), a town of Boeotia, of very ancient date, situated at the foot of Mount Cithæron, and near the river Asopus, which divided its territory from that of Thebes. (Strabo, 412.) Homer writes the name in the singular (Πλατα), but the historians use the plural (Πλαταια). The Plateans, animated by a spirit of independence, had early separated themselves from the Boeotian confederacy, conceiving the objects of this political union to be hostile to their real interests; and had, in consequence of the enmity of the latter city, been induced to form themselves into a confederacy with other states of Boeotia and Phocis. (Herod., 6, 108.) Grateful for the services which they received on this occasion from that power, they testified their zeal in its behalf by sending a thousand soldiers to Marathon, who thus shared the glory of that memorable day. (Herod., 1, c.) The Plateans also joined some of the Athenian vessels at Artemision, and fought in several battles which took place off that promontory; though not at Salamis, as they have been alleged to their homes after the Greeks withdrew from the Euripus, in order to place their families and valuables in safety, and could not, therefore, arrive in time. (Herod., 8, 45.) They also fought most bravely in the great battle which took place near their city against Mardonius the Persian general, and earned the thanks of Pausanias and the confederate Greek commanders for their gallant conduct on this as well as other occasions. (Herod., 9, 29.-Thucyd., 3, 53, seq.) But it is asserted by Demostenes that they afterward incurred the hatred of the Lacedaemonians, and more especially of their kings, for having caused the inscription set up by Pausanias, in commemoration of the victory over the Persians, to be altered. (In Nucer., p. 1378.) Platea, which was afterward burned by the army of Xerxes (Herod., 3, 50), was soon restored with the assistance of Athens, and the alliance of Athens afterward extended to the city, not before that. The attack made upon Platea by a party of the Thebans at night was the first act of aggression committed on the Peloponnesian side in the war which took place not long after. The enterprise failed. (Thucyd., 2, 1, seqq.) The natural eminence of Thebes against this little republic was now raised to its height by this defeat, and pressing solicitations were made by the Spartan government to assist in taking signal vengeance on the Plateans for their adherence to the Athenian interests. Accordingly, in the third year of the war, a large Peloponnesian force, under Archidamus, king of Sparta, arrived under the walls of Platea, and, having summoned the inhabitants to abandon the city, was resisted by them, and drove them from their refusal, to lay siege to the town. The narrative of these operations, and the heroic defence of the Plateans, the circumvallation and blockade of the city by the enemy, with the daring and successful escape of a part of the garrison, are given with the greatest detail by Thucydides, and certainly form one of the most interesting portions of his history. (Thucyd., 2, 71, seqq.-Id., 9, 20, seqq.) Worn out at length by hunger and fatigue, those Plateans who remained in the town were compelled to yield to their persevering and relentless foes, who, instigated by the implacable resentment of the Thebans, caused all who surrendered to be put to death, and razed the town to the ground, with the exception of one building, constructed out of the ruins of the city, which they consecrated to Juno, and employed as a house of reception for travellers. From Pausanias we learn, that Plataia was again restored after the peace of Antalcidas; but when the Spartans and Spartans seized on the Cadmean citadel, the Thebans, suspecting that the Plateans were privy to the enterprise, took possession of the town by stratagem, and once more levelled its foundations to the ground (9, 1). Though it seems to have been the intention of Philip, and also of Alexander, to restore Plataea (Arrifan, 1, 9.-Plut., Vit. Alex., c. 34), this was not carried into effect till the reign of Cassander, who is said to have rebuilt both Thebes and Plataea at the same time. (Pausan., 9, 3.) Dicewarchus, who lived about that period, represents the town as still existing, when he says, "The inhabitants of Plateia have nothing to say for themselves, except that they are colonists of Athens, and that the battle between the Persians and the Greeks took place near their town." (Stat. Græc., p. 14.)—The ruins of Platea, according to Dr. Clarke, are situated upon a promontory, and form a conspicuous object in the landscape. The place has now the usual appellation bestowed upon the ruins of Grecian citadels; it is called Palæo Castro. The walls are of the earliest kind of military structure, consisting of very considerable masses, evenly hewn, and well built. (Clarke's Travels, vol. 7, p. 106. Lond. ed.)—The walls of Platea, according to Sir W. Gell, may be traced near the little village of Koklia in their circuit. The whole forms a triangle, having the river Castor, which rises at the foot of Mount Cithæron, with a gate towards the mountain at the point. The northwestern angle seems to have been the portion which was restored after the destruction of the city. The north side is about 1025 yards in length, the west 1154, and the east 1120. It is about six geographical miles from the Cadmeia of Thebes. (Inn., p. 111.-Cramer's Anc. Greece, vol. 2, p. 212, seqq.) As the battle of Platea, between the Greeks and Persians, formed an important feature in their history, some account of it may be here appended.—Mardonius, being informed by the Argives, who were secretly in his interest, that the Lacedaemonians were in motion, withdrew his army into Boeotia, for the sake of engaging near the friendly city of Thebes, and in a more level country, and, therefore, more favourable to his cavalry. Before leaving Athens he burned and demolished the city and its environs, crossed from Salamis, and the confederate army being assembled at Eleusis, advanced to Erythrae, on the border of Boeotia, where it took up a position on the roots of Mount Cithæron. The heavy-armed troops of the Grecian army amounted to 38,700, of whom the Lacedaemonians contributed 10,000. Of these 5000 were Spartans, from the city, each of whom was attended by seven light-armed Helots. In the rest of the army there was one light-armed attendant. Besides, there were
1800 light-armed Thespians, the remaining strength of that little state, all its heavy-armed troops having fallen at Thermopylae, and those who remained being probably the poorer citizens, who were unable to purchase the full armament, or to maintain themselves in distant war. With those the entire numbers were nearly 110,000. The army was led by Pausanias, the Spartan commander, who was cousin and guardian to the minor-king Pleistarchus, the son of Leonidas. The Athenian force of 8000 heavy-armed men was led by Aristides. Mardonius's army consisted of 300,000 Asiatics and about 50,000 Macedonian and Greek auxiliaries.—The first attack was made by the Persian cavalry, who, generally riding up in small parties, dismounted their armament and retired, allowing the Greeks without any retaliation. The Megarians being placed in the most exposed part of the line, sent to Pausanias to say that they could no longer maintain their ground, and a picked band of 300 Athenians volunteered to relieve them. They took with them some archers, a service which the Athenians cultivated with an attention and success unusual in Greece; and soon after their arrival, Masista, the general of the Persian cavalry, his horse being wounded, was dismounted and killed. All the horse now making a desperate charge, forced back the 300, till the rest coming up to support the Athenians, they were repulsed with great slaughter. The army was encouraged by this success, but its present position was inconvenient, particularly for want of water, and it was resolved to move into the territory of Platea. A dispute arose between the Athenians and the Tegeans for the post of honour at the extremity of the left wing; but it was prevented from proceeding to extremity by the wise moderation of the Athenian commanders, who, still maintaining their claim of right, professed themselves willing, nevertheless, to take their place wherever the Lacedaemonians might appoint. The Lacedaemonians decided in their favour, placing them at the extremity of the left wing, and the Tegeans in the right, next to themselves. —Mardonius now drew up his army according to the advice of the Thebans, opposing the Persians to the Lacedaemonians and Tegeans, the Boiotians and other Greeks in his service to the Athenians, and to the other bodies that occupied the centre the Medes and the rest of the Asiatics. The soothsayers on each side predicted success to the party which received the attack; in compliance, probably, with the policy of the commanders, each of whom, being anxious for his own cavalry, preferred his own brother-in-law, being unwilling to leave it and enter on that which had been chosen by his adversary. Ten days were spent in action, except that the Persian horse were harassing the Greeks, and, latterly, intercepting their convoys; but, on the eleventh, Mardonius, growing impatient, called a council of war, and resolved, against the opinion of Artabazus, to attack the Greeks on the following day. The same night Alexander the Macedonian, riding up with secret orders, came to Pausanias, and asked to speak to the commanders, and gave them notice of the resolution taken —Pausanias, being informed of this by the Athenian generals, proposed a change in the order of battle, by which the Athenians should be opposed to the Persians, of whose mode of fighting they alone had experience, while in their place the Lacedaemonians should act against the Boiotian and other Asiatic auxiliaries. The Athenians readily consented, and they began to move while the morn was breaking; but Mardonius made a countermovement of his Greek and Persian troops, and the Lacedaemonians desisted from their purpose when they saw that it was known. Mardonius sent a herald to reproach them with their fear, and then commenced the action with his horse, who harassed the Greeks severely, and filled up the spring from which their water had been supplied. The Greeks were surprised both from the attacks of the cavalry, and from the want of water and food, their convoys being cut off; and it was resolved to proceed at night to a position nearer Platea, where water abounded, and the ground was less favourable to horse. Accordingly, in the night the army was moved; but the Greeks of the left side had been so disheartened by the attacks of the cavalry, that, instead of taking up the appointed position, they fled to the city of Platea. There remained on the one wing the Lacedaemonians (10,000 heavy-armed) and the Tegeans (1500); on the other, the Athenians (8000), with the Plataens (600), who always accompanied them, and who had carried their zeal so far, that, though an inland people, they helped to man the Athenian cavalry. Mardonius, in the movement of the allies, went by the plain Mardonius, on seeing the Greeks, as it seemed, retreating, was filled with exultation, and immediately led the Persians after them, while the other Asiatics followed tumultuously, thinking the day won. The Lacedaemonians, on the approach of the cavalry, sent to the Athenians for assistance, begging that, if they were unable to come, they might be left undisturbed; but the Athenians, when preparing to comply with the summons, were prevented by the attack of the Greeks in the Persian service.—The battle was joined on both sides. The Persians fought with great bravery; but neither bravery nor vast superiority in numbers could compensate for their inferiority in arms and discipline, and they were at length defeated with great slaughter, Mardonius being killed. The other Asiatics fled immediately in the same manner as their commanders; but the Athenians, when preparing to comply with the summons, were prevented by the attack of the Greeks in the Persian service. —The fateful day ended with the defeat of the Persians, and the victory of the Greeks. The presence was in a great degree protected by the Asiatic and Boiotian horse, who furnished a screen against the Archives. Of the Grecian auxiliaries opposed to the Athenians, many were sack in their exertions, as not being hearty in the cause; but the Boiotians, who formed the strongest body, were zealous for the success of Mardonius, and they fought long and hard before they were defeated. The Boiotians fled towards the Thesee, the Asiatics to their intrenched camp, their flight being in some degree protected by the Asiatic and Boiotian horse. As soon as the battle was over, the victorious Greeks of the centre returned in haste and disorder to the field; and the Megarians and Philisians, going by the plain, were charged and broken with considerable loss by some Theban horse. —The fugitives who escaped into the camp were in time to close the gates and man the walls against the Lacedaemonians and Tegeans; and, the assailants being unskilled in the attack of fortifications, they made a successful defence till the arrival of the Athenian cavalry. —Of the Greeks, who entered the plain with much exultation and confidence that the work would be more skilfully, and soon gained entrance. The passions of the Persians were inflamed to the utmost by long distress and danger, and no mercy was shown. Of the 300,000 men who were left with Mardonius, 40,000 had been led from the field by Artabazus when it first became evident that the Persians were losing the battle; but of the others not 3000 were said to have escaped the slaughter. (Herod, 9, 25, sqq. —Lib. II. 9, 25., sqq.)
PLATO.

His birth is commonly placed in the first year of the 88th Olympiad (B.C. 428), but, perhaps, may be more accurately fixed in B.C. 429. (Clivert, Fast. Hellen., p. 88.) Plato's grandfather is said to have been Apollo. (Plato, Symposium. Plut.)

He was originally named Aristocles, from his grandfather, and he received that of Plato (Πλάτων) from either the breadth of his shoulders or of his forehead, the appellation being derived from πλατές, "broad." This latter name is thought to have been given him in early youth. (Diog. Laert. 3, 4. — Sene., Ep., p. 38. — Apuleius, de dogm. Plat. — Gell. ed. Oudend., vol. 2, p. 180.) Plutarch relates that he was brought up not on the bosom, but, this, perhaps, was not a natural defect; it may have first appeared late in life, as a result of his severe studies. (Plut., de Audien. Poti., 26, 53.)

Other ancient writers, on the contrary, speak in high terms of his manly and noble mien. The only authentic bust that we have of him is at present in the gallery at Florence. It was discovered near Athens in the 15th century, and purchased by Lorenzo de Medici. In this bust, the forehead of the philosopher is remarkably large. (Visconti, Icon. Gr., vol. 1, p. 172, ed. 4to.) — Plato first learned grammar, that is, reading and writing, from Dionysius. In gymnastics, Aristotle was his teacher; and he excelled so much in these physical exercises, that he went, as is said, into a public contest at the Isthmian and Pythian games. (Diog. Laert., 3, 4. — Apul. — Olympiad, Vit. Plat.) He studied painting and music under the tuition of Draco, a scholar of Damon, and Metellus of Agrigentum. But his favourite employment in his youthful years was poetry. The lively fancy and powerful style which his philosophical writings so amply display, must naturally have impelled him, at an early period of life, to make some attempts at composition, which were assuredly not without influence on the beautiful form of his later works. After he had made use of the instruction of the most eminent teachers of poetry in all its forms, he proceeded to write an essay of himself in heroic verse; but when he compared his production with the masterpieces of Homer, he consigned it to the flames. He next tried lyric poetry, but with no better success; and finally turned his attention to dramatic composition. He elaborated four pieces, or a tetralogy, consisting of three separate tragedies and one satyric drama; but an accident induced him to quit for ever this career, to which he was naturally disposed by nature. A dream, therefore, the festival of Bacchus, when his pieces were to be brought upon the stage, he happened to hear Socrates conversing, and was so captivated by the charms of his manner as from that moment to abandon poetry, and apply himself earnestly to the study of philosophy. (Aelian, Var. Hist., 10, 21, seq. — Val. Max., 1, 6. — Plin., 11, 29.)

But, though Plato abandoned his poetical attempts, yet he still attended to the reading of the poets, and was a lover of Hesiod, Aristotle, and Socrates, as his favourite occupation (Olympiad, Vit. Plat.); and he appears to have derived from them, in part, the dramatic arrangement of his dialogues. It was then customary for young men who were preparing for the polite world, or to distinguish themselves in any manner, to attend a course in philosophy. Plato had already heard the instructions of Cratylus, a disciple of the school of Socrates. (Aristot., de phrasis, 1, 6.; de anima, 2, 183b.) He procured him to read and to give his name to his dream-man, and to see the objects of the dream; that of Socrates was to enrich his theoretical knowledge; but, according to Apuleius, it was with more especial reference to moral improvement. It is commonly believed that Plato became formally a scholar of the Pythagoreans, and many persons are expressly named as his teachers in the doctrines of that sect of philosophy. But this multitude of teachers is of itself sufficient to excite suspicion; and, besides, Plato must then have been at least thirty years old, and was undoubtedly ac-
PLATO.

quainted with the Pythagorean system long previous to his Italian voyage. How long Plato remained in Italy cannot be determined, since all the accounts relative to this point are defective. But so much is certain, that he did not leave this country before he had gained the entire friendship of the principal Pythagoreans with whom he subsequently maintained open and avowed contact.

From Italy Plato went to Cyrene, a celebrated Greek colony in Africa. It is not certain whether he visited Sicily in passing. According to Apuleius, the object of his journey was to learn mathematics of Theodorus. This mathematician, whose fame, perhaps, surpassed his knowledge, had given instruction to the young in Athens in this branch of science; and Plato, in all probability, merely wished now to complete his knowledge on this subject. (Tennemann's Life of Plato, Edw. tr., p. 336.) From Cyrene he proceeded to Egypt, and, in order to travel with more safety upon his journey to the last-named country, he assumed the character of a merchant, and, as a seller of oil, passed through the kingdom of A\natarxes Mnemon. Wherever he came, he obtained information from the Egyptian priests concerning their astronomical and mathematical science, and learned the doctrines of transmigration and the immortality of the soul; but it is more than probable that he learned the latter doctrine from Socrates, and the former from the school of Pythagoras. It is not likely that Plato, in the habit of a merchant, could have obtained access to the sacred mysteries of Egypt; for, in the case of Pythagoras, the Egyptian priests were so unwilling to communicate their secrets to strangers, that even a royal mandate was scarcely sufficient in a single instance to procure this indulgence. Little regard is therefore due to the opinions of those who assert that Plato derived his system of philosophy from the Egyptians. (Iamblich., Myst. Αἰγ., 1, 2, p. 3.)

That Plato's stay in Egypt extended to a period of thirteen years, as some maintain, or even three years, as others state, is highly incredible; especially as there is no trace in his works of Egyptian research. All that he tells us of Egypt indicates at most a very scanty acquaintance with the subject; and, although he praises the industry of the priests, his estimate of their scientific attainments is far from favourable. (Rep., 4, p. 435.) Nor is there a better foundation for supposing that, during his residence in Egypt, Plato became acquainted with the doctrine of the Hebrews, and by this means has acquired his philosophical books. (Huet, Dom. Pr., 4, 2, § 15.—Gale's Court of the Gentiles.) This opinion has, it is true, been maintained by several Jewish and Christian writers, but it has little foundation beyond mere conjecture; and it is not difficult to perceive that it originated in that injudicious zeal for the honour of revelation, which led these writers to make the Hebrew scriptures or tradition the source of their ideas. As a result of his Egyptian travels Plato came to Sicily, and visited Syracuse when he was about forty years of age, in the eighty-ninth Olympiad, and in the reign of Dionysius the Elder. According to the statement of all the writers who make mention of this tour, his only object was to see the volcano of Etna; but, from the seventh letter ascribed to him, it would seem that higher objects engaged his attention, and that his wish was to study the character of this country, the nature of its laws, and the progress of commerce. At the court of Dionysius Plato became acquainted with Dio, the brother-in-law of the tyrant, and Dio endeavoured to produce an influence upon the mind of Dionysius by the conversation of Plato. But the attempt failed, and had nearly cost the philosopher his life. Dionysius was highly incensed at the result of an argument in which he was worsted by Plato, who took occasion also to advance in the course of it some bold and unpalatable truths, and, in the first hour of his passion, he would almost have punished the hardihood of the philosopher with death, unless Dio and Ariostomenes had together restrained him from it. They conceived, therefore, that Plato could no longer stay at Syracuse without hazard, and accordingly secured a passage for him in a ship which was about to carry home Polis, a Lacedaemonian ambassador, or, according to Olympiodorus, a merchant of Ægina. Dionysius heard of it, and bribed Polis either to throw Plato overboard, or, if his conscience would not allow him to do that, to sell him as a slave.

He was accordingly sold by the treacherous Polis on the island of Ægina, which was then involved in war with Athens. According to some writers, he was sold by the Æginetans. A certain Anniceris, from Cyrene, redeemed him for twenty or thirty mina. Plato's friends and scholars (according to some, Dio alone) collected this sum in order to indemnify Anniceris, who, however, was so noble minded, that with the money he purchased a garden in the Academy, and presented it to the philosopher. When Plato had completed his travels, and had reached the end of his various dangers and calamities, he returned to Athens, and entered upon the duties of his life in the Academy. He had here a home from paternal inheritance, which was purchased for five hundred drachmas; so that, if the story of Anniceris be true, Plato must have had two gardens in this place, which also a passage from Diogenes allows us to conjecture. This writer remarks, that Plato taught philosophy first in the Academy, but afterward in a garden at Colonus. (Diog., 5, 5.) His Academy seems to have been celebrated, and was extremely attended by high-born and noble young men: for he had before, by means of his travels, and probably by some publications, acquired a distinguished name. (Tennemann, Life of Plato, Edw. tr., p. 342, seq.) Plato taught in the Academy for a period of twenty-two years prior to his second journey to Syracuse, which he undertook at the instigation of Dio, who hoped, by the lessons of the philosopher, to influence the character of the new ruler of Syracuse. This prince, it is said, had been brought up by his father wholly destitute of an enlightened education, and it was now the task of Plato to form his mind by philosophy. It seems, at the same time, to have been the plan of Dio and Plato to bring about, by philosophical instruction, a wholesome reform of the Sicilian constitution, by giving it a more aristocratic character. But, whatever may have been their intentions, they were not achieved, because it was this very character of Dionysius which rendered it impossible for Plato to carry out his wishes with regard to Syracusan affairs. He was induced to take a third journey to Syracuse. The reconciliation, which it was his object to effect, completely miscarried; he himself came to an open rupture with Dionysius, and only obtained a free departure from Sicily through the active interposition of his Pythagorean friends at Tarentum. It does not appear that he took any part in the later conduct of Sicilian affairs, though his nephew, Anicetus, and his friend Speusippo, as well as other members of the Academy, rendered personal assistance to Dio, in a warlike expedition against Dionysius. From this time Plato seems to have passed his old age in tranquillity in his garden near the Academy, engaged with the instruction of numerous disciples, and the prosecution of his literary labours. He died while yet actively employed about his philosophical compositions. Having enjoyed the advantage of an athletic constitution, and lived all his life
days temperately, he arrived at the eighty-first, or, according to some writers, the seventy-ninth, year of his age, and died, through the mere decay of nature, in the first year of the 108th Olympiad. He passed his whole life in a state of celibacy, and therefore left no natural heirs, but transferred his effigy, the property of all succeeding friends, to his friend Adiamicus. The grove and garden, which had been the scene of his philosophical labours, at last afforded him a sepulchre. Statues and altars were erected to his memory; the day of his birth long continued to be celebrated as a festival by his followers; and his portrait is to this day preserved in gems; but the most lasting monuments of his genius are his writings, which have been transmitted, without material injury, to the present times. The personal character of Plato has been very differently represented. On the one hand, his enchancers have not failed to adorn him with every excellence, and to express the most superstitious veneration for his memory. His enemies, on the other, have not scrupled to load him with reproach, and charge him with practices shamefully inconsistent with the purity and dignity of the philosophical character. (Athen. 11, p. 507.—Dion. L., 3, 26.) We cannot adopt the panegyrics of the former, as to suppose him to have been free from human frailties; and we have a right to require much better proofs than his calumniators have adduced, before we can suppose him to have been capable of sinking, from the sublime speculations of philosophy, into the most infamous vices. The reproaches with which Plato has been assailed, as having boasted that he could supply their master's place to the bereaved disciples of Socrates, but ill agrees with the pious affection with which he bewailed his death, and ascribed to him, as the fruits of his lessons, his whole philosophy. Nor can we help thinking that there is much injustice in the charge brought against him, of malice and ill feeling towards his fellow-scholars; though, at the same time, we must admit, that, to all appearances, he did not cultivate a very intimate friendship with any one among them, who afterward became illustrious in philosophy: nay, more, it appears that he reviewed with some bitterness the doctrines of Aristippus, Antisthenes, and Euclid. To the more soaring flight of his own lofty views, their incomplete and exclusive notions must unquestionably have appeared unworthy of the school of Socrates; and, as they began by attacking his own system, it was but natural that Plato should retaliate with some degree of bitterness. The phrase by no means exalted opinion entertained by Plato of his philosophical contemporaries necessarily became a farther ground for the charge against him of overweening haughtiness; and it would even appear that other causes existed for the imputation. A certain contempt for the mass of the people stands out prominently enough in his writings, while his commendation of philosophy, as opposed to common sense, might easily have been taken as a compliment. Besides all this, the personal character of the school, especially when compared with the simplicity and even poverty of the Socratic, seems to have bestowed a degree of pretension and display, which naturally brought upon it the ridicule of the comic writers. It cannot be disseminated, that Plato gave to philosophy and to human culture in general a tendency towards ornament and refinement, a splendour of language and form, far removed from the pristine severity of his master. The great school, in general, was the fast-growing spirit of effeminacy. His school was less a school of hardy deeds for all, than of polished culture for the higher classes, who had no other object than to enhance the enjoyment of their privileges and wealth. This remark, however, does not so much apply to Plato as to the age in which he lived, and to which nothing else was left than to moderate and retard the decline of morality by its intellectual progress and enlightenment. (Ritter, History of Philosophy, vol. 2, p. 152, Eng. tr.)—Several anecdotes are preserved, which reflect honour upon the moral principles and character of Plato. Such was his command of temper, that, when he was lifting up his hand to correct his son, who had been reproached by an angry slave, he kept his arm fixed in that posture, and said to a friend, who at that moment asked him what he was doing, "I am punishing a passionate man."—At another time, he said to one of his slaves, "I would chastise you if I were not angry."—At the Olympic games he happened to pass a day with some strangers, who were much delighted with his easy and affable conversation, but were no farther informed concerning him than that his name was Plato; he most carefully avoided saying anything respecting Socrates or the Academy. At parting, he invited them, when they should visit Athens, to take up their residence at his house. Not long afterward they accepted his invitation, and were courteously entertained. During their stay, they requested that he would introduce them to his namesake, the famous philosopher, and show them his Academy. Plato, smiling, said, "I am the person you seek: you will have the advantage of my house exceedingly; for they could not easily persuade themselves that so eminent a philosopher would condescend to converse so familiarly with strangers. (Elian, Var. Hist., 4, 9.)—When Plato was told that his enemies were busily employed in circulating reports to his disadvantage, he said, "I will live so that none shall believe them."—One of his friends, remarking that he seemed as desirous to learn himself as to teach others, asked him how long he intended to be a scholar. "As long," replied he, "as I am not ashamed to grow wiser and better."—It is from the writings of Plato chiefly that we are to form a judgment of his merit as a philosopher, and of the service which he rendered to science. No one can be conversant with these without perceiving that his actions always retained a strong tincture of that poetical spirit which he discovered in his first productions. This is the principal ground of those loftly encomiums which both ancient and modern critics have passed upon his style, and particularly of the high estimation in which it was held by Cicero, who, treating of the subject of diction, says, "That if Jupiter were to speak in the Greek tongue, he would use the language of Plato." (De Orat. 3, 20.)—The accurate Stagirita describes it as "a middle species of diction, between verse and prose." (Arius, ap. Laert.) Some of his discourses, especially those related by himself and by his philosophical contemporaries, are enriched with such copious diction, and flow so harmoniously in a rhythm, that they may be truly pronounced highly poetical. Even in the discussion of abstract subjects, the language of Plato is often clear, simple, and full of harmony. At other times, however, he becomes tur- gid and swelling, and involves himself in obscurities which were either the offspring of a lofty fancy, or borne, with much sublimity and philosophical conceit, which have noticed these blemishes in the writings of Plato. The same inequality which is so apparent in the style of Plato, may also be observed in his conceptions. While he adheres to the school of Socrates, and discusses upon moral topics, he is much more pleasing than when he loses himself with Pythagoras, in abstruse speculations. The dialogues of Plato, which treat of various subjects, are not the morbid productions of the ancients under the two heads of didactic and inquisitive. The didactic are subdivided into speculative (including physical and logical), and practical (comprehending ethical and political). The second class, the inquisitive, is characterized by terms taken from the athletic art, and divided into the gymnastic and agonistic. The dialogues termed gymnastic were imagined to be similar to the exercitia, and were subdivided into the maieutic (as re-
PLATO.

The writings of Plato were originally collected by Hermodorus, one of his pupils. One circumstance it is particularly necessary to remark: that, among other things which Plato received from foreign philosophy, he was careful to borrow the art of concealing his real opinions. His inclination towards this kind of concealment appears from the obscure language with which he abounds in his writings, and may indeed be learned from his own express assertions. "It is a difficult thing," he observes, "to discover the nature of the Creator of the universe; and, being discovered, it is impossible, and would even be impious, to expose the discovery to vulgar understandings." This concealed method of philosophizing he was induced to adopt from a regard to personal safety, and from motives of vanity, to avoid the learned public from the faculties of Philosophy. (Sophist, p. 252; Cratyl., p. 345; 268.) He always considered theoretical and practical philosophy as forming essential parts of the same whole; and thought it was only by means of philosophy that human nature could attain its proper perfection. (De Repub., vol. 7, p. 76, ed. Bip.)—His high acquittance with preceding systems, and his own advantages, enabled Plato to form more adequate notions of the proper end, extent, and character of philosophy. Philosophy he defined to be science, properly so called. The source of knowledge he pronounced to be, not the evidence of our senses, which are occupied with contingent matters, nor yet the understanding, but Reason (Phado, vol. 1, p. 225, ed. Bip.), whose object is that which is insensible and absolute (το δοξος δε.—Phdr., vol. 10, p. 247; ed. Bip.). He held the doctrine of the existence in the soul of certain innate ideas (υπονιστα), which form the basis of our conceptions, and the elements of our practical resolutions. To these Ideas, as he termed them (the subject, or mode, of existence of things, and of the ὑπόθεσις, or principles of our knowledge), we refer the infinite variety of individual objects presented to us (το υπονιστα και το πολυδοκλ). It follows, that all these details of knowledge are not the results of experience, but only developed by it. The soul recollects the ideas, in proportion as it becomes acquainted with their copies (ὁποιατερα), with which the world is filled; the process being that of recalling to the mind (τον ἀναμνησθαι) the true knowledge of things given to us by God, and ever distinguished in his word (De Leg., vol. 10, p. 68; 12, vol. 9, p. 229.—Philob., vol. 4, p. 224.—Epinomias, vol. 9, p. 254, seqq.) He represents the Divinity as the author of the world, inasmuch as he is introduced within matter (φυσις—το μυστηρον) order and harmony, by moulding it after the Ideas, and conferring, together with a rotatory motion, a harmonious body, governed, as in the case of individual animals, by a rational spirit. (Timaeus. Manual de la Philosophie, etc., p. 116; Johnson’s transl.)—In theology, the fundamental doctrine of Plato, as of all other ancient philosophers, is, that from nothing nothing can proceed. This universal axiom, applied not only to the infinite efficient, but to the material cause, Plato, in his Timeus, assumes as the ground of his reasoning concerning the origin of the world. In this dialogue, which comprehends his whole philosophy on the subject of the formation of the universe, matter is so far distinguished from the eternal coexisting with God, that this part of his doctrine could not have been mistaken by so many learned and able writers, had they not been seduced by the desire of establishing a coincidence of doctrine between the writings of Plato and Moses. It is certain that neither Cicero (Acad. Quest, 1, 6), nor Apuleius (1, p. 184), nor Acinomus (c. 12), nor even the later commentator Chalcidius, undertook to master in any other sense than as ad-
mitting two primary and incorruptible principles, God and Matter. The passages quoted by those who maintain the contrary opinion are by no means sufficient for their purpose.—Matter, according to Plato, is an eternal and infinite principle. His doctrine on this head is stated by Cicero (Acad. p. 229): "Matter, from which all things are produced and formed, is a substance without form or quality, but capable of receiving all forms and undergoing every kind of change; in which, however, it never suffers annihilation, but merely a solution of its parts, which are in their nature infinitely divisible, and move in portions of space which are also infinitely indivisible. When that principle which we call quality is moved, and acts upon matter, it undergoes an eternal change, and those forms are produced from which arises the diversified and coherent system of the universe." This doctrine Plato unfolds at large in his Timeaus, and particularly insists on the notion, that matter has originally no form, but is capable of receiving any. He calls it the mother and receptacle of forms, by the union of which with matter the universe becomes perceptible to the senses; and maintains that the visible world contains the eternal and divine intellectual nature.—It was also a doctrine of Plato, that there is in matter a necessary, but blind and refractory, force; and that hence a propensity in matter to disorder and deformity, which is the cause of all the imperfection that appears in the works of God, and the origin of evil. On this subject Plato writes with wonderful obscurity; but, as far as we are able to trace his conceptions, he appears to have thought, that matter, from its nature, resists the will of the Supreme Artificer, so that he cannot perfectly execute his designs; and that this is the cause of the mixture of good and evil which is found in the material world. The principle opposite to matter, in the system of Plato, is God. He taught that there is an intelligent cause, which is the origin of all spiritual being, and the former of the material world. The nature of this great Being he pronounced it difficult to discover, and, when discovered, impossible to divulge. The existence of God he inferred from the marks of intelligence which appear in the form and arrangement of bodies in the visible world; and, from the unity of the material system, he concluded that the mind by which it was formed must be one. God, according to Plato, is the Supreme Intelligence, incorporeal, without beginning, end, or change, and capable of being perceived only by the mind. The Divine Reason, the eternal regulator of Ideas or forms, Plato supposes, to have always existed, and as the Divine principle which established the order of the world. He appears to have conceived of this principle, as distinct not merely from matter, but from the efficient cause, and as eternally containing within itself Ideas, or intelligible forms, which, flowing from the fountain of the divine essence, have in themselves a real existence, and which, in the formation of the visible world, were, by the energy of the effective Ideas, or forms, made manifest to material bodies.—It was another doctrine in the Platonic system, that the Deity formed the material world after a perfect archetype, which had eternally subsisted in his Reason, and endued it with a soul. "God," says he, "produced mind prior in time as well as in excellence to the body, that the latter might be subject to the former.—From that substance, which is indivisible and always the same, and from that part of the corporeal which is permanent, he compounded a third kind of substance, participating in the nature of both."—This substance, which is not eternal, but produced, and which derives the superior part of its nature from God, and the inferior from matter, Plato supposed to be the animating principle in the universe, pervading and adorning all things. This third principle in nature is, in the Platonic system, inferior to the Deity, being de-
an eye to the character and the political difficulties of the Greeks, connecting at the same time the discussion of his metaphysical opinions respecting the soul.—Beauty he considered to be the sensible representation of moral and physical perfection; consequently it is one with Truth and Goodness, and inspires love which leads to virtue, forming what is called Platonic love. (Tennemann, Manual, p. 117.)

I. General View of the Philosophy of Plato.

It requires, indeed, considerable knowledge of the history of philosophy to appreciate the whole influence which Plato has exercised upon the human mind; and, still more, a thorough acquaintance with his works to comprehend their real scope and depth. It is, therefore, not surprising that such an erroneous estimate of his character should generally prevail; so that, as Schleiermacher well observes (Pref. to Intro. to Dialogues), which is also the case with Alexandrian speculations, until Julian brought them to bear practically upon the purification of the heathen polytheism. Such also was scholasticism, and such many of the rival theories which have since sprung up in Germany under the stimulus of a craving curiosity, which found nothing to do but to think. We shall, however, never understand the value of Plato’s philosophy, and still less the arrangement and co-ordination of its parts, without viewing it in this light, as a practical, not a speculative, system. Even considered as a revival of the modified doctrine of Pythagoras, which, probably, is the true point of view, it is still practical. Pythagoras was full of other thoughts than the abstract relation of numbers, when he organized his wonderful society to restore something like right government and religious subordination in the republics of Magna Graecia. Plato was far from being a Pythagorean in empty metaphysics, though high and abstract truth was a necessary condition of his system, as Loyola was from resting in the subtleties of scholastic theology when he created his singular polarity for upholding the Romanist faith. Plato’s great object was man. He lived with man, felt as a man, held intercourse with kings, interested himself deeply in the political revolutions of Sicily, and was the pupil of one whose philosophy have brought down philosophy from heaven to earth, that it might raise man up from earth to heaven; and, above all, he was a witness and actor in the midst of that ferment of humanity exhibited in the democracy of Athens. When states are at peace and property secure, and the wheels of common life move on regularly and quietly upon their fixed lines, men with active minds may sit and speculate upon the stars, or analyze ideas. But it is not so in the great convulsions of society. The object constantly before the eyes of Plato was the incorporated spirit, the μεγάλος φόρμος of human lawlessness. (Rep., 6, p. 219.) He saw it, indeed, in an exhausted state, its power passed away, its splendour torn off, and all the sores and ulcers (Gorgias, p. 109) which other demagogues had pampered and concealed, now laid bare and beyond cure. But it was still a spectacle to absorb the mind of every good and thoughtful man. The state of the Athenian democracy is the real clue to the philosophy of Plato. It would be proved, if by nothing else, by one little touch in the Republic. The Republic is the summary of his whole system, and the keystone of all the other dialogues are uniformly let into it. But the object of the Republic is to exhibit the misery of man left to law, and to the power of Aristocracy making on the state of law, and thus to perfect his nature. It is exhibited on a large scale in the person of a state, and in the masterly historical sketch with which, in the eighth and ninth books, he draws the changes of society. Having painted in the minutest detail the form of a fictitious democracy, he fixes it by the slightest allusion (it was, perhaps, all he could hazard) on the existing state of Athens; and then passes on a frightful prophecy of its tyranny which would inevitably follow. All the other dialogues bring us to the Republic, and the Republic brings us to this its end and aim. On this view every part of his system will fall naturally into place. Even questions apparently farthest from any practical intention are thus connected with the preceding.
with his plan. If in the Sophist he indulges in the most subtle analysis of our notion of being, it is to overthrow the fundamental fallacy of that metaphysical school which was denying all virtue by confounding all truth, and thus poisoning human nature at its source, and justifying the grossest crimes both of the state and of its leaders. If he returns again and again to his noble theory of Ideas, it is to fix certain immutable distinctions of right and wrong, good and evil; and to raise up the mind to the contemplation of a being of perfect goodness, prior in existence, superior in power, unnamable in its independence to those fancies and passions of mankind which had become, before the eyes of Plato, in individuals unbridled lusts, and in the state an insanity of tyranny. If in the Parmenides he takes us into the obscurest mysteries of metaphysics—the nature of unity and number—this also was rendered necessary, not only to obviate objection to his own theory of ideas, but to fix the great doctrine of unity in a Divine Being—unity in goodness—one truth in action and thought—as opposed to that polytheism of reason which makes every man's conscience his god. It grappled also with a mystery which meets us at the foundation of every deep theory, and in the forms of every popular belief, in Christianity as well as in heathenism; a mystery which, true in itself, as wholly distinct from man, has yet a correspondence in the human mind; and which compelled even the heathen philosopher to state the same seeming paradox for the very foundation of his system, which Christianity lays down at once as its grand and all-comprehensive doctrine. All unity implies plurality—all plurality must end in unity. So also the inquiry in the Theaetetus into the nature of science bore no resemblance whatever in its object to any more speculative theories of Kant or his followers. It was a necessary part of that system which was to become the antagonist of the Sophists, and to contend for the preservation of truth against a ruinous sensualism and empiricism, which was sapping all the foundations of society. Even the seemingly frivolous and often wearisome subtleties which occur in the Sophist, the Ethydemus, and the Politicus, are intended as dialectical exercises for the pupil whom Plato is forming to become the saviour and guide of the noble democracy. The main point of the Cratylos are to be explained in the same way. He perpetually suggests the fact in the dialogues themselves. And in the Republic (lib. 7) he gives at length the principles on which they are introduced. Very much of the plan of his dialogues, for reasons which he himself supplies, is purposely left in obscurity. And the test of the statement here made must lie in a careful reference to the works themselves. But it is impossible to believe that Plato, the "first of philosophers," who made practical goodness and duty the one great end of life; whose whole history, as well as his theories, are full of views, not of speculative fancies, but of practical improvement to society (Conway, p. 260); the friend of Dion, the adviser of Dionysus, the pupil of Socrates, the writer of the Republic and the Laws; who recognised, indeed, intellect and truth as necessary conditions of man's perfection, but made "the good and the beautiful," his heart and his affections, the ruling principle of his actions; who never looked down upon minds beneath him without thinking of the task of education, and never raised his eyes to that image of the Deity which he had formed from all imaginal perfection, without seeing in it, not merely an abstraction of intellect, unity, identity, eternity, but goodness, and love, and justice; the Maker of the world, because he delighted in that glimpse of his circle which was most near to all good things, because he was the Cause of all good things (Republic, lib. 10), the Father and King of all: it is impossible to believe that such a man, with strong affections, consummate devo-

1080

tion to his end, absolute unity of purpose inculcated in all his doctrines, and exhibited in the outlines of his work, should have stood before any scene of humanity, least of all before the spectacle of an Athenian democracy, without having his whole soul possessed by man and the relations of man, instead of things and the relations of things; that he should have wasted those powers, so elevated and so pure, in idle subtile-
ties; that he should have thrown out his fancies in fragments, as one whose life was similes; or that, wrought as they are in every line with a contemplative art, linked together to the observing eye by ten thou-
sand of the finest recitations, they were not intended as a system; and as a system will come out to us when the focus is rightly adjusted, and the whole is regarded as a mighty effort to elevate man to his per-
fection, and his perfection where only it can be reached, in a social and political form. We are most anxious to fix attention on this point (let it be a fancy—take it as hypothesis, only try it), because, wherever it has been lost (and we cannot name the commentator who has wholly found it), the whole of Plato's works have been viewed in inextricable confusion. Even Schleier-
macher has failed in his clew. Men seem to have wandered about as in a maze; here admiring, there perplexed, there completely at a stand. No order, no limits, no end. Fragments have been dealt with as wholes, and wholes as fragments; irony mistaken for earnestness, and earnestness as a jibe. The fancy gravely dealt with as meditation for the reason, and exercises for boys treated as the serious occupa-
tion of men. Spurious pieces have been admitted which destroyed all consistency of thought. Doubts raised to remove error or rouse curiosity, have been carried off as final decisions, until Plato, the very dog-
matist of philosophy, has been made the ringleader of Pyrrhonists and sceptics. And even the holiest and purest of the noblest of these philosophers, the honestest, the most sincere, least detached from reality, the most natural, so to speak, was animosus, seeking after an absolute idea, because, as he said in his 345), "a clear, unshaken, absolute, absolute idea"—"the" —"all good things," the "first of philosophers," who awoke from the dream of that city where every intimation of the ideas lay hidden for ever and ever, she stood on the threshold of the "infinite,- that which has never existed in the infinity of days gone by, or even now exists in the East far from our sight and knowledge, or will be permissible hereafter."—But "which, though
it be not on earth, must have a pattern of it laid up in heaven, for him who wishes to behold it, and, beholding, resolves to dwell there." (Rep., lib. 9, p. 349.) So also we shall enter into the educational character of his works; their high practical morality, the mode in which every question is carried up into the nature of truth, and, through truth, is connected with virtue; the position which theology occupies, and the practical mode in which it is applied; the absence of those abstract metaphysical speculations on the nature of the Deity, into which human reason always falls when it analyzes mental conceptions beyond the duties required of the Neo-Platonicians did fall, and, still more, the Gnostics, while they boasted of their own ingenuity, and ridiculed Plato as one who had not, like them, penetrated " into the depths of the Intelligible Essence." (Porphyry, Vit. Plato, c. 14.) Even the form of Plato's works will derive new light and beauty from considering them as instruments of instruction, not vehicles for speculation. The mode in which curiosity is roused by the fractured lines of the dialogue; the arresting the attention by demanding an answer to every position; the gradual opening of difficulties; the carrying of the eye and imagination to the truth by portions of broken winding-stairs of argument, leading to dark recesses, and ruinously hung together in masses, rather than the throwing open before the reader an easy ascending plane, which requires no labour and stimulates no thought. So also the sudden dropping of opinion into deep depths, or sudden starting up of doubts in apparently the most open ground; the skill with which the drama of the argument is broken up into scenes and acts, heightened by a stage decoration, and relieved with the solemn or the grotesque; the rich melo-dramatic myths which so often close them; the character of Socrates himself imbodying the attributes and duties of the Greek chorus; the selection of the parties among the young; the tests which are applied to ascertain if they possess the qualities of mind which, in the Republic (lib. 7), are declared to be necessary for those who make any progress in goodness; the gradual development of the system in exact proportion to the industry and ingenuity of the hearer; and the order of the sceptical dialogue, all more or less destructive of errors without any declaration of the truth, and forming series of enigmas, to lead, like an avenue of sphinxes, to the grand, open portal of truth; and, lastly, all the manner of points which will assume a wholly different character, whether we consider Plato's work as intended to declare his opinions, or as constructed for the purpose of extirpating, by a tried and thoughtful process, the minds which it was still possible to save from the follies, and sins, and miseries in which the madness of the age and a vicious system of education were plunging them. All this, to persons who never read Plato, or read him carelessly and contemnuously, as many in this day do read whatever they do not understand, at the first glimpse will appear exaggerated and enthusiastic. And no answer can be given but a demand that the trial should be made, and the hypothesis taken as a clew. If it is false, it will fail. But none whom wise men would wish to follow have ever approached the name of Plato without reverence and gratitude. All have been impressed especially with his exquisite skill as an artist or constructor of his works (Schleiermacher, Introd. Pref.); and none have drawn a plan which gives harmony and symmetry to them all. Some plans, however, must exist. If we want to form a judgment on the grandeur of some vast cathedral, we do not plant ourselves in a nook, before some disproportionate arch, or out of sight of the central aisle. We stand at a distance, and, beholding himself beheld before he commenced the work, and then the whole fabric comes out. And the illustration will bear to be dwelt on. Whoever studies Plato is treading on holy ground. So heathens always felt it. So even Christianity confessed. (Clem. Alex., i, p. 39, 318.) And we may stand among his venerable works as in a vast and consecrated fabric; view those visions of thoughts opening on every side; high thoughts, that raise the mind to heaven; pillars, and niches, and cells within cells, mixing in seeming confusion, and a veil of tracery, and foliage, and grotesque imagery thrown over all, but all rich with a light streaming through "dim religious forms;" all leading up to God; all blessed with an effulgence from Him, though an effulgence dimmed and lost in the contaminated reason of man. (British Critic and Quarterly Theological Review, No. 47, p. 3, seqq.)

II. Works of Plato.

We have thirty-five dialogues generally ascribed to Plato, and thirteen epistles; or fifty-six dialogues, if we count each book of the Republic and Laws separately. These dialogues have somewhat of a dramatic form, and are intended for the more intelligent class of readers, and those who are habituated to the exercise of reflection. The brilliant imagination of the author has strewed upon them all the flowers of eloquence, and adorned them with all the graces of the Attic diction; and he has frequently interwoven with them poetic allegories, and political and theological fictions. The analogy between the dialogues of Plato and dramatic pieces is in many respects so great, that, if we consider the dramatic form as having been the form of the works of the ancient drama, and as having formed the idea of dividing them into so many tetralogies. Still we must not imagine from this that Plato had proposed to himself to treat of the same subject in a series of works.—Schleiermacher, the celebrated German translator of Plato, divides these dialogues into four classes: those of the first class comprehend the elements of philosophy; as the Phaedrus, Protagoras, Parmenides, Lysis, Laches, Charmides, and Euthyphro. In the dialogues of the second class, these principles receive their application; as in the Gorgias, Theaetetus, Menon, Ethydemus, Sophists, Politicus, Phaedon, and Philebus. In the dialogues of the third class, the investigations are of a more profound character; as the Timaeus, Critias, Republic, and Laws. The fourth class comprehends what he terms dialogues of circumstance, as the Crito, and the Defence of Socrates. This distribution is certainly the one most in general use; and it appears that the first three classes ought to form also three chronological series, and we ought thus to see the system of Plato come into existence, develop itself, and attain to maturity: this, however, is not the case.—Another German writer (Socker, Uber Platos Schriften, Munchen, 1820, 8vo) proposes to group the dialogues in the following manner: 1. Dialogues relative to the trial and death of Socrates: the Euthyphro, Dilectus, Crito, Phaedrus, Cratylus: 2. Dialogues which form a kind of continuation to each other: the Theaetetus, Sophists, Politicus, Republic, Timaeus, and Critias: 3. Dialogues directed against false philosophy: the Ethydemus, Protagoras, Gorgias, Ion, Hippas: 4. Dialogues treating of speculative questions: the Phaedon, Theaetetus, Sophists, Philebus, Timaeus, and Parmenides: 5. Dialogues devoted to politics, or the distribution of wealth: the Politicus, Minos, Republic, Laws, Epinomi: 6. Dialogues treating of rhetorical topics: the Gorgias, Menexenus, Phaedrus, Banquet: 7. Dialogues relative to individuals accustomed to associate with Socrates: the Theages, first Alcibiades, Laches, Theaetetus: 8. Dialogues in which the question is discussed whether virtue can be taught: the Ethydemus, Protagoras, and Menon: 9. Dialogues in which false opinions are combated: the 'benevolent' Sophists, the Theophrastus Sophists, Ethydemus, Cratylus: 10. Dialogues, the titles of which indicate particular subjects; as the Charmides, or of Moderation; the Laches, or of Bravery;
the Lysis, or of Friendship: the Euthyphron, or of Piety, &c.—It will appear from this classification, that the same dialogue may thus belong to different categories at the same time, according to the point of view in which we regard it; which destroys, of course, all the utility of the arrangement.—We come now to another question of much greater importance. Independently of the thirty-five dialogues commonly attributed to Plato, there are eight which the unanimous opinion of all authorities, of whom we have traced the errors of the Liebnitz, and who at that time and at this era, has rejected as spurious. In the number, however, of the thirty-five, there are several of the authenticity of which doubts have been entertained from time to time, until, in our own days, the rigid criticism of Germany has undertaken to eliminate a large number of these dialogues from the list of the works of Plato. Four writers, in particular, have turned their attention to this subject: Tenenmann, Schleiermacher, Ast, and Socher. (Tenenmann. System der Platonischen Philosophie, 4 vols. 8vo. 1792. Schleiermacher, Platonische Werke, 8 vols. 8vo, Berlin, 1817—26. Ast, Platonis Leben und Schriften. Leipzig, 1816, 8vo. Socher, über Platonis Schriften. München, 1829, 8vo.) To these may be added Tiersch, the author of an able criticism on the work of Ast (Jahrbuch der Literatur., Wien., 1818, 3. p. 59, seqq.). What renders the decision of this question peculiarly difficult is, that, of the writers contemporary with Plato, Xenophon alone represents the opinion of Aristotle, his disciple, refers but seldom to his master's dialogues; sometimes he mentions his opinions, but always under the name of Socrates, and that, too, when he even refers to dialogues in which the last-mentioned philosopher is not one of the interlocutors, as in the Laws. All the works of the philosophers of the three following centuries are lost, down to Dionysius of Halicarnassus, who is one of the principal authorities in our time. Schleiermacher, in his work, has been considerably influenced by this; but they lived at a period when that species of criticism which is able to separate the false from the true was as yet completely unknown. The classification of Thrasyllus makes us acquainted with the opinion of the grammarians of his time, relative to the authenticity of the dialogues of Plato: those which he excludes from his categories were regarded as superstitious, but we are unacquainted with the grounds on which they were established. The same was allowed to the rest, unless it be that the claim in their case was never contested. Amid this array of negative authorities, Ast, who of all the moderns has pushed his scepticism on this head the farthest, thinks that the only one deserving of being combat is that of Aristotle, and he endeavours to destroy the weight of his testimony by denying Aristotle any authority in matters of criticism. But can any one for a moment imagine that a man of high intellectual endowments, after having passed twenty years of his life with Plato, could be so grossly deceived respecting the works of his master! Admitting, too, the possibility that one so eminently gifted with discernment and taste could mistake to such a degree the style of his master, is it at all probable that he could have been deceived also as to the fact whether Plato did compose such or such a work! After having rid himself in this unsatisfactory manner of the testimony of Aristotle, Ast, acknowledging the authority of fourteen dialogues, attacks at the same time the remaining twenty-one by arguments deduced from the style in which they are written. He finds them inferior in this point of view to the others, and against some no doubt the charge will hold good; but the question may fairly be asked in reply, whether a writer, in other respects classic, ought, in all his productions, to be considered as the author of one particular section which he appears to have reached in some? Most of the arguments advanced by Ast have been refuted by Tiersch and Socher. The latter writer, however, in assigning to Plato the greater part of the dialogues which Schleiermacher and Ast consider spurious, is unwilling himself to acknowledge the legitimacy of the Sophists, Politicus, and Parmenides. —Another interesting question is that which has reference to the chronological order of the dialogues. This question has a double aspect: it regards both the time when the dialogue is supposed to have taken place, and that when the author is thought to have composed it. It is often impossible to fix the former of these periods, for the reason of the numerous anachronisms with which Plato is justly chargeable. So numerous, indeed, are they, that we are tempted to believe that Plato attached no importance whatever to the giving an air of historic probability to his dialogues. The second period, that of their composition, is important in a different point of view; for, were it possible to fix with certainty the time when each dialogue was written, and thus to determine the chronological order of the whole collection, we would be much better able to mark the development of his system. We must bear in mind, however, that the historical data afforded by any one dialogue is often insufficient for fixing the period when it was written, because Plato is very negligent in point of chronology. —The literary life of Plato has been divided into four periods: the first ends with the death of Socrates, and reaches to the thirtieth year of Plato's life; the second extends to the founding of the Academy, or the time of the departure of Socrates, which was the maturity of his life, or about twenty years; the fourth his old age, also of twenty years.—To the first of these periods belong the four dialogues in which reference is made to the trial and death of Socrates, such as the Euthyphron, Crito, Defence of Socrates, and Phaedo. Socher is undoubtedly right in conjecturing that this latter was written immediately after the death of Socrates. The reasons urged by Schleiermacher to this effect are very exceptions to the chronological particular which enables us to assign them to the time that intervened between the death of Socrates and the founding of the Academy; or because, though wanting such an index of their age, they still evidently belong to this period. In all these productions, Plato appears to have had for his object the continuation of the enterprise which had been interrupted by the death of Socrates, namely, the war against the Sophists. These dialogues are the Ion, Euthydemus, the first Hippias, the Protagoras, Gorgias, Theaetetus, Sophist, Politicus, Parmenides, and Philebus. —All the other dialogues of Plato, excepting the Timæus and Critias, namely, the Phædrus, Menexenus, Banquet, Republic, were written by him in the prime of his life, and before age had impaired his mental powers, or during the twenty years in which he directed the Academy. In the fourth period, Plato wrote the lessons: have come down to us (supposing that these are actually his), his great work on the laws, and the two dialogues entitled Timæus and Critias. —We will now proceed to give a brief sketch of the individual productions of the philosopher, premising that most of the Platonic dialogues have, as will presently be perceived, a double title. The former of these is commonly the name of the individual who bears the most prominent part in the dialogue: the latter is the addition of some later hand, and has reference to the contents of the dialogue itself. As these contents, however, are, for the most part, very diversified in their nature, this
second class of titles are frequently apt to mislead the casual observer. (Wolf, ad Sympos., p. 35, seqq.—Ast, ad Repub., p. 915.—Morgenstern, ad Repub., p. 29.)—The first book of the Phædrus, an argument, are called Protagoras, or the Sophists. This dialogue, a chief-d'oeuvre of Plato, is directed against the sophists, who are described in it as exceedingly unfit either to impart knowledge of virtue to others, or to inspire them with the desire of practising it. Protagoras, one of the most celebrated of this class of philosophers, and who, in the course of the dialogue, is made to appear a model of charlatanism, had arrived at Athens. To a certain Hippocrates, unwilling to lose so favourable an opportunity of receiving instruction, requests Socrates to present him to the sophist. Socrates consents, but first impresses Hippocrates with the propriety of his ascertaining the true nature of the science which this stranger has brought with him, before he ventures to become one of his pupils. They, in consequence, pay a visit to Protagoras, and find him surrounded by a numerous and brilliant auditory. A colloquy thereupon begins between the sophist and Socrates, in which Prodicus and Hipplias, friends of the former, also bear a part. The object of Protagoras is to show the possibility of learning virtue as one learns an art or exercise; but the questions put by Socrates embarrass him to such a degree, and the answers he makes from time to time involve him in so many contradictions, that the futility of the pretended science of the sophists becomes fully apparent. No little mistake has been caused by giving to the term "sophists" a wrong etymological signification. It does not mean what is denoted by the word in English, artful and illogical reasons: the Sophists were the persons who professed to make others wise. They were the great instructors. Undoubtedly the office they assumed implied their own personal wisdom; and the necessity of maintaining appearances without any real stock of knowledge, coupled with the principle of pleasing the hearers, put them in a situation to be more or less seduced into the habits of ingenious trickery which have since been known by their name. But, as Protagoras himself states, it was as the original introducers of a wholly new scheme of education that they took their stand, made their money, and incurred, in no few instances, the odium of political innovators. In this light they were regarded by Plato. Nothing could be more tempting than the condition of the youth of Athens, for clever, cunning charlatans, ambitious of getting their own ends, to be thought of as possessing a conscience, and obliged, by a sense of duty, to provide for their own indulgences, to undertake the task of fitting them for those public duties of life which in a Grecian democracy occupied the whole field of action. And rhetoric, as the main engine of political eminence, they were thoroughly capable of teaching. The habit of disputation, which sent Hippies every year to the Olympic games, to challenge a man upon logical and physical questions, and to improve on all possible questions; just as scholasticism, in the middle ages, sent scholars up and down Europe, to post their themes and syllogisms at the gates of universities, had given them a thorough command, not over language alone, but over all the arts of concealing ignorance and misleading weakness which were necessary to a popular demagogue. Language, as the instrument of power over minds; language, as the instrument of seducing and embrazing them in the transfer; language, as the art of pleasing; language, as the never-failing subject for etymological ingenuity to anatomize; language, again, as the natural transcript of the human mind, and the human mind in that low, vulgar form, in which alone a popular leader or an expediency-philosopher can see it, or wish to see it; language, in all these lights, was to the sophists everything. It was their stock in trade; the nostrum they offered for sale, the ready, unblush-
of the Phaedon, the subsequent founder of the school of Elis, and Echecrates. The former of these gives the latter an account of all that happened towards the close of Socrates' life, and relates the conversation of this philosopher with Cebes and Simmias. Socrates undertakes to prove the immortality of the soul by its spirituality; and we have here the first traces of a demonstration, which modern philosophy, under the guidance of revelation, has carried on to so successful a result. The doctrine which Plato here puts forward is opposed to the Pythagorean hypothesis of the metempsychosis, and with all sorts of fables borrowed from the Greek mythology. The Phaedon is regarded by all critics as one of the dialogues of Plato respecting the authenticity of which not the least doubt can be raised. And yet, if we are to believe an epigram in the Anthology (Epitexta, n. 353, Anth. Pal. v 1, 44, Anth. Plan.), the celebrated Panaitus rejected it as supposititious. It is most probable, however, that the author of the epigram in question mistook the sense of the passage in which Panaitus spoke of the Phaedon, and that the philosopher merely meant to say that Plato puts into the mouth of Socrates a doctrine which he, Panaitus, did not admit; for we know from Cicero that Panaitus differed in this point from the tenets of Plato. (Tusc. Disp. i, 122.)—5. θεοίστατος, ἡ ἐπικατο-

ορία τῆς προφητείας, theymore of Cynic, and Cynicreian, he attacks, in particular, the dualistic system of Heraclitus. —6. Ἴρωτος, ἡ ἐπικότος ὁρών, "The Sophist, or concerning that which exists." This dialogue is a kind of sportive dialectic, and leads to no positive result. In it Plato, as usual, combats the sophists: he turns his arms, too, against all the schools that had been produced from the Socratic, namely, the Megaric, Cynic, and Cynicreian: he attacks, in particular, the dualistic system of Heraclitus. —7. Συνοπτικὸς, ἡ περί τοῦ βουτοῦ, "The Sophist, or concerning that which exists." This dialogue is a continuation of their preceding work. It was shown, in the Theetetus, that there exists no science obtained through the medium of the senses, Plato here examines the contrary doctrine, maintained by the Eleatic school, namely, that of existence, and shows its inadmissibility. Although the subject of this dialogue is speculative and abstract in its nature, Plato nevertheless has succeeded in imparting to it a pleasing and varied air, and has sprinkled it with many satirical allusions: the greater part of these last, however, are lost for us, from our limited acquaintance with the circumstances to which they refer.—7. Πολιτικός, ἡ περί βουλής, "The Statesman, or concerning the Art of Government." The preceding dialogues of Plato and the Theetetus and Sophist are applied in this dialogue to the case of the statesman. We are here made acquainted with Plato's ideas respecting Providence, or the manner in which God governs the world, as well as respecting the changes which the latter has undergone. We see in it also his opinion on the different forms of government, among which he gives the preference to that in which the power is vested in the hands of a single person. This dialogue contains an Oriental mythos, according to which the Deity takes rest at certain periods, and during this time abandons to chance the government of the world. Such a doctrine being unworthy of Plato, Socher thinks that this dialogue, as well as the Sophist, cannot be regarded as his. And yet they must, in that event, have been produced by some contemporary, since Aristotle cites the present dialogue, though in truth without assigning it to Plato by name.—8. Παρεμίδης, ἡ περί ἰδεῶν, "Parmenides, or concerning Ideas." This dialogue is a kind of appendage to the three that precede. As in these the false dialectics of the Megarian school had been refuted, so in this Parmenides, the head of the true dialectic system, comes forward to support his doctrine of absolute unity, and does it with great force of reasoning. The Parmenides is the most difficult of all Plato's works, as well from the abstract topics treated in it as from the style in which they are expressed. The author is driven to the necessity of employing terms either entirely new, or else little used, in treating of matters on which no writer had as yet exercised his pen. The Parmenides leads to no positive result; it has merely for its end the demonstration of certain propositions of a philosophical nature; and it tends solely to exercise the mind in metaphysical speculation, and to show, by an example, the true dialectical method. We find in it toward the end of this production. The Parmenides has a form entirely philosophic, and without any dramatic movement. The characters of the several interlocutors are not as distinctly marked as in the other dialogues. Socrates appears in it as a very young person, and as one just beginning to turn his attention to philosophical subjects, and to whom many of the propositions of the schools are as yet new. It has been termed by M. Goetz "The first introduction of Socrates into the world. We give credit to the tradition that Socrates had seen Parmenides in his youth. Socher rejects this dialogue, together with the two that immediately follow. (Consi-

ult Schmidt, Parmenides als dialiktisches Kunstkwerk dargestellt, Berlin, 1821. — Goetz, Uebers. des Par-

men., p. iv, p. 107.)—9. Κρατύλος, ἡ περί νομισμάτων ἐρημώτουσα, "Cratylus, or concerning the Correct Use of Words." This dialogue is written in ridicule of the etymologies to which the sophists attached so much importance as to make use of them for demonstrations with which to support their propositions. They even went so far as to assert that we may learn the nature of objects from the words by which they are designated, inasmuch as a perfect accordance prevailed between each thing in nature, and the appellation by which it was known. Agreeing in the main principle, they made of it an application so important that: the followers of the Cratylus school, maintained that the authors of language, in their invention of words, went on the supposition that everything in nature is immutable: the followers of Heraclitus maintained directly the reverse. Setting out from these two points of view, so diametrically opposed to each other, these philosophers analyzed the meaning of words, each in accordance with his favourite theory.—Of the interlocutors of the Cratylus, one, Her-

mogenes, a disciple of Parmenides, maintains that there is an inherent force and propriety in words, in-

1084
dependent of all conventional arrangement; the other, Cratylus, a disciple of Heraclitus, regards them as arbitrary signs of our ideas, imposed on the objects which they designate, either from accident, use, or some fitness which they possess. Socrates shows the insufficiency of each of these systems, without, however, replacing them by a third. This discussion gives rise to several etymological discussions, which cannot now be very interesting for us.—10. Φιλήσοντας συνεκτικής, " Philèus, of concerning Pleasure!" This dialogue is distinguished from those already mentioned in that it is not limited to the doctrines, but examines the subject matter itself with great care. It has an end in view strictly dogmatical, that is, to establish a truth and enunciate a positive proposition: this proposition is, that good consists neither in pleasure nor in knowledge, but in the union of the first and the second with the sovereign good, which is God. The Philebus is almost entirely devoid of irony; it is sometimes a perfect work.

It is one of the principal sources from which to obtain an acquaintance with the moral system of Plato.—11. Συμπόσιον, ἦ τερπό ορος, "The Banquet, or concerning Love." Plato appears to have had a double object in view in writing this dialogue: the first, to discourse upon the nature of love; and the other, to defend Socrates against the calumnies to which he had been exposed. Agathon celebrates by a beautiful speech and victory which he has gained by him. The guests agree that each one, in turn, shall write an eulogy on love. Phaedrus, Pausanias, Eryximachus, Aristophanes, and Agathon, speak each on this subject, according to their respective principles and views; and in this species of oratorical encounter, Aristophanes assumes a character most in accordance with his peculiar talent, that of satire. Socrates, who succeeds, paints metaphysical love, that is, a love which is not founded on the highest and most virtuous, the only true and imperishable source of beauty. The Banquet is that one of the productions of Plato on which he would seem to have bestowed the greatest care. He has spread over it all the riches of his imagination, his eloquence, and his talent for composition.—12. Πολεμαίον, ἦ τερπό δαναίον, "A Republic, or concerning what is Just." The following able title is that of the celebrated prediction of writing insertion. (Southern Review, No. 7, p. 122, sect. 4.) To say of Plato's Republic that it is the idea of a perfect commonwealth, is not to give by any means an adequate, or even a just description of it. It is, in one sense, to be sure, a dream of social and political perfection, and, so far, its common title is not altogether inapplicable to it; but it bears hardly any resemblance to the things that generally pass under that name; to the figures, for example, of Harrington and Sir Thomas More. Compared with it, Teleclus, though a mere epic in prose, is didactic and practical; the Cypriada merits to be regarded as the manual of soldiers and statesmen, and the best scheme of discipline for forming them. Plato's is a mere vision, and that vision is altogether characteristic of his genius as his contemporaries conceived of it. It is something between prose and poetry in style; it is something made up both of poetry and philosophy in the plan and design. But a very small part of it is given to any topics that can pretend to the character of political. Indeed, Socrates expressly says, that the institution of a commonwealth is but a subordinate object with him. His principal aim is to unfold the mystery of perfect justice. Of the title of the work, the latter part (τερπο δαναιον) is unquestionably the more appropriate designation. If it were possible to have any doubts, after reading the work, the repeated and emphatic declarations of the philosopher himself would remove them. It is in the second book that he first alludes to the commonwealth, and then the purpose for which he professes to treat of it is unequivocally explained. He compares himself to one who, not having very good eyes, is required to read a text at such a distance from him, written in distressingly small letters, and who prepares himself for his task by coming over the very same text which he happens to find set forth somewhere else in larger characters. The justice, the high and perfect justice, whose nature he is endeavouring to penetrate and unfold, exists not only in individuals, but, on a grander scale, in the more conceptional and palpable image of that artificial being, a body, a state, conceived as a phenomenon of the universe. Thus it runs through the whole eighth book, which, it may be remarked by the way, is a dissertation of incomparable excellence, and decidedly the most practical part of the work. In this book he treats of in justice. He again resorts to the larger type, to the capital letters. He illustrates the effects of that vice, or, rather, of that vicious and diseased state of the soul. In the formulating disempowers and misadventures of the body politic. We are told that the form of government is an image of the character of the citizen; that whatever may be said of the democracy or the oligarchy, applies as strictly to the democrat and the oligarch; that there are as many shapes or species of polity, as there are types or varieties of the human soul; that, as the most perfect commonwealth is only public virtue imbedded in the institutions of a country, so the state of perfect justice exhibits the highest form of the state, some pernicious disorder, some lawless power incompatible with national liberty. In running this parallel between the individual and the corporate existence, he unfolds his idea of the τὸ δαναίον, not in a prologue, as Tiedemann affirms, but throughout the whole body of his work. He begins by showing that there can be no happiness without it here; and ends by a revelation of other worlds, and a state of beatific perfection, which can only be attained in the human heart. We must take care, however, not to confound this sublime justice with the vulgar attribute commonly known by that name. Plato's justice is that so magnificently described by Hooker, 'that law whose seat is the bosom of God, and whose voice the harmony of the world.'—The whole dialogue is a Pythagorean mystery. Plato finds the key of the universe in mathematics. He Preston the universe in mathematical language, and in them pervading all nature, moral and physical, holding together its most distant parts and most heterogeneous materials, and harmonizing them into order, and beauty, and rhythm. Socrates declares his assent to the Pythagorean tenet, that astronomy is to the eye what music is to the ear. The spheres, with the Sirens that preside over them, and the sweet melodies of that eternal diapason, the four elements combined in the formation of the world, the beautiful melodicity of the seasons, light and darkness, height and depth, all existences and their negations, all antecedents and consequences, all cause and effect, reveal the same mystery to the adept. Man, in like manner, subject throughout his whole nature to this universal law. Of the four cardinal virtues, take temperance for an example. What is it but a perfect discipline of the passions, from which the are all, and which, a perfect concord and sympathy in which each sounds its proper note and no other; in which no desire is either too high or too low; in which the enjoyment of the present moment is never allowed to hurt that of the future, nor passion to rebel against reason, nor one passion to invade the province or to usurp the rights of another. The τὸ δαναίον goes somewhat farther. It is that state of the soul wherein the three abuse or corruption is composed, the intellectual, the irascible, and the sensual, exercise each its proper function and influence; in which the four cardinal virtues are blended together in such just proportion, in such symphonious union; in which all the faculties of the mind, while they are
fully developed, are so well disciplined and disposed, that nothing jarring or discordant, nothing uneven or irregular, is ever perceived in them. And so in the larger type, a perfect polity is that in which the same proportion and fitness are observed; in which the different orders of society move in their own sphere, and do only their appointed work; in which intelligent governors, and strength and passion submit; that is, counselors advise, soldiers make war, and the labouring classes employ themselves in their humble, but necessary and positive duties. This is acknowledged as a fundamental principle of Plato’s legislation, and is enforced by very severe penalties. He considers it as in the highest degree absurd, as out of all reason and proportion, that one man should pretend to be good at many things. — On the other hand, the most fearfully depraved condition of society is that which Polybius calls an ochlocracy; an anarchy of Jacobins and sans-culottes, where every passion breaks loose in wild disorder, and no law is obeyed, no right respected, no decorum observed; where young men despise their seniors, and old men affect the manners of youth, and children are disobedient to their parents, wives to their husbands, slaves to their masters. The justice of which he speaks is not, therefore, the single cardinal virtue known by that name. It is not commutative justice, nor retributive justice, nor (except, perhaps, in a qualified sense) distributive justice. It does not consist in mere outward conformity or specific acts. Its seat is in the mind, in the imagination; the music of the soul; it makes the whole nature of the true philosopher a concert of disciplined affections, a choir of virtues attuned to the most perfect accord among themselves, and falling in with the mysterious and everlasting harmonies of heaven and earth. — This general idea is still further illustrated by the scheme of education in Plato’s Republic. It is extremely simple; for young men it consists only of music and gymnastics; for adepts of an advanced age, it is the study of truth, pure truth, the good, the θεόν, the divine monad, the one eternal, unchangeable. It is in the third book that he orders the former division of the scheme. It is necessary to cultivate with equal care both the parts of which it is composed, and to allow of no excess or imperfection in either. They who are addicted exclusively to music become effeminate and slothful; they, on the other hand, who only discipline their bodies, become rude and savage. This music, as Tiedemann observes, is mystic and mathematical. Pythagoras and Plato thought everything musical of divine origin. — God gave us these great correctives of the soul and of the body, not for the sake of either separately, but that all their powers, and functions, and impulses, should be fully brought out into action; and, above all, be harmonized into mutual assistance and perfect union. Plato’s whole method and discipline is directed to this end. He banishes from his ideal territory the Lydian and Ionic measures as ‘softly sweet’ and wanton, while he retains, for certain purposes, the grave Dorian mode, and the spirit-stirring Phrygian. So, in like manner, he expels all the poets except the didactic, with Homer at their head. The tragic poets were, in reference to moral education, especially offensive to him. In conformity with the same principle, he expels all the popular music and dance, Sicilian feasts, and Corinthian girls, and Attic dauntles, as leading to corruption of manners, and to the necessity of laws and penalties, of the judge and executioner. No innovation whatever is to be tolerated in this system of discipline, especially in what regards music and gymnastics; the slightest change in which Plato affirms to produce decided, however secret and insidious, effects upon the character and manners of a whole people. When his citizens, divided into four orders, to correspond with the cardinal virtues, have gone through their preparatory discipline, and discharged in their day and generation the duties that were respectively allotted to them (that is, the better sort of them) must, in the calm of declining life, turn to the study of the true philosophy; not such as is taught by mercenary sophists, mere shallow fallacies, mountebank tricks to impose upon ignorance, vile arts to ingratiate one self with that savage beast (a favourite image with the ancient writers), the wayward and tyrannical demus. Nor such philosophy as is taught by the philosophers who are mere pedants, so called, or the fluctuating and changeable objects are around us; but that deep wisdom, that rapturous and holy contemplation, which abstracts itself from the senses and the changeable scenes of life and nature, and is wrapped up in the harmony and grandeur of the universe, in communing with the First Good and the First Fair, the infinite and unutterable beauty, fountain of all light to the soul, ‘the bright countenance of truth’ revealed to the purified mind in the quiet and still air of delightful studies. By such contemplations the soul shall attain to the perfection of virtue, and be prepared for the great moral change, the glorious transfiguration that is to crown its aspiring progress to beatitude and immortality.” — 13. Τιμαῦς, ἦ περί φύσεως, “Timaeus, or concerning Nature.” In this dialogue Critias relates the tradition of an ancient Athenian state, anterior to the deluge of Deucalion, and which was governed by laws not unlike those of Egypt. The Athenians, said he, brought up sages in the character of the inhabitants of Atlantis, an island situate beyond the Pillars of Hercules. The inhabitants of Atlantis ruled over Libya and Western Europe, and would have subjugated the Greeks also, had not the Athenians made successful opposition to their progress. After this fable, the philosopher Timæus, of Locri, develops his system concerning God, the origin and nature of the world, men, and animals. Through the whole of this exposition there prevails the spirit and the shade of the Pythagorean school. Plato is commonly supposed to have followed, in the composition of this dialogue, the work attributed to the philosopher of Locri, which we still possess. — 14. Κριτιας, ἦ Ατλαντικός, "Crantas, or the Atlantic." This dialogue is a continuation of the preceding. Critias here gives in detail what he had only sketched forth in the Timæus, respecting an island in the Atlantic (viz. Atlantis), inhabited by a warlike, but civilized, people, who among other things had been ingulphed by the sea. He gives an account of the laws, manners, and institutions of this people. It is easy to perceive that the whole of this recital is a mere fiction, a species of political romance, by which Plato wished to prove the possibility of such a republic being established as he had framed in his own imagination. And yet it is more than probable that the ancients had some obscure tradition among them relative to the existence of a large continent to the west of the Straits of Gibraltar, and of this we find traces even in the pages of Strabo. — The Critias of Plato has given rise to various hypotheses and reveries, and the writers of the last two centuries have very actively exercised their pens on so attractive a subject. Some have found the Atlantis of Plato in Palestine, others in India, and others, again, in the Canaries and Azores. (Concil Voss, Weltkunde der Alten, p. 8. Lamp. Rothen, loc. cit. p. 146.—Baill, Lettres sur l’Atlantide de Platon, etc., Lond., 1775, 8vo.—Vid. Atlantis.) — This dialogue is an unfinished one. It appears that death prevented the author from putting a finishing hand to it. — We have now enumerated the fourteen dialogues which Aristotle believes to be undoubtedly authentic. And yet we have seen that in this number there are three which Soehner rejects. We will now proceed to the ten other dialogues, which, though commonly regarded as the productions of Plato, have nevertheless become
the subjects of critical scepticism, since Schleiermacher, though he had discovered in some of them what was not characteristic of Plato, and since Ast has rejected them all indiscriminately.—15. Νόμον ἡ πεπρωμένη διότι εἰν' , "Twelve books of Laws, or concerning Legislation." This work has, until lately, been regarded as that production of antiquity which most distinguishes itself by the importance of its subject, and the richness of the materials connected with it; as that in which the philosopher, abandoning the paths of imaginative thought, introduces real life, it unfolds a part of his system, the putting of which into practice he considered as possible; for it cannot but be admitted that the Laws are to be viewed as the production of Plato's old age. Böckh makes the work to have been written in Plato's seventy-fourth year (ad Min., p. 73). Plato here traces the basis of a legislation less ideal, and more conformable to the weakness of human nature, than that which he had given in his Republic. The scene of the dialogue is laid in the island of Crete. The author criticizes the codes of Minos and Lycurgus, as having no other object in view but the formation of warriors. He shows that the object of a legislator ought to be to maintain the freedom and union of the citizens, and to establish a wise form of government. Examining the different forms of government that had existed in Greece or other countries, he notices the defects of the code of Minos, and the importance of his work. He announces to the reader a third book, a character of Cyrus far different from that which Xenophon has left. It is commonly supposed that Plato wished, in so doing, to retaliate on Xenophon, whose Cyropædia appeared to him to have been directed against the first two books of his Republic. Böckh, however, has written against this opinion. (De Simillate, quam Plato cum Xenophonite exerc. act. loc. cit. S. 113.) After these preliminary observations, the philosopher enters more directly on his subject in the fourth book. He treats at first of the worship of the gods, the basis of every well-regulated state. The fifth book contains the elements of social order, the duties of children towards their parents, of parents towards their children, the duties of citizens and of strangers. He then considers the political form of the state that is to be founded. Plato does not consider the establishment of the state by the people as the only, or the best means of preserving the independence of the cities. All the citizens of his state own the community of property, and of women and children. In the sixth book he treats of magistrates, of the laws of marriage, of slavery; in the seventh of the education of children; in the eighth of public business and commerce; in the ninth of cities; in the tenth of religion; in the eleventh of contracts, testimony, &c.; in the twelfth of various topics, such as marriage, oaths, right of property, prescription, &c.—Every page of the Laws is in contradiction to the Republic. Neverthe-15. Νόμον ἡ πεπρωμένη διότι εἰν', "Twelve books of Laws, or concerning Legislation." This work has, until lately, been regarded as that production of antiquity which most distinguishes itself by the importance of its subject, and the richness of the materials connected with it; as that in which the philosopher, abandoning the paths of imaginative thought, introduces real life, it unfolds a part of his system, the putting of which into practice he considered as possible; for it cannot but be admitted that the Laws are to be viewed as the production of Plato's old age. Böckh makes the work to have been written in Plato's seventy-fourth year (ad Min., p. 73). Plato here traces the basis of a legislation less ideal, and more conformable to the weakness of human nature, than that which he had given in his Republic. The scene of the dialogue is laid in the island of Crete. The author criticizes the codes of Minos and Lycurgus, as having no other object in view but the formation of warriors. He shows that the object of a legislator ought to be to maintain the freedom and union of the citizens, and to establish a wise form of government. Examining the different forms of government that had existed in Greece or other countries, he notices the defects of the code of Minos, and the importance of his work. He announces to the reader a third book, a character of Cyrus far different from that which Xenophon has left. It is commonly supposed that Plato wished, in so doing, to retaliate on Xenophon, whose Cyropædia appeared to him to have been directed against the first two books of his Republic. Böckh, however, has written against this opinion. (De Simillate, quam Plato cum Xenophonite exerc. act. loc. cit. S. 113.) After these preliminary observations, the philosopher enters more directly on his subject in the fourth book. He treats at first of the worship of the gods, the basis of every well-regulated state. Never-
PLATO.

PLATO.

Breis., 1826.—20. Λύσις, ἡ περὶ φίλιας, "Lyasis, or concerning Friendship." The author here treats with out much reserve or hesitation; a characteristic which has occupied much of the attention both of ancient and modern philosophers, namely, "What produces friendship and love?" (Plato's and Aristotle's ideas on friendship are finely given by Boutewerk, in the fourth volume of the "Neuen Festschr.")) Accordingly to Diog- enes Laertius (3, 24), on hearing this dia- logue read, exclaimed, "By Hercules! how many things does this young man falsely report of me!" Hence it appears to have been the work of Plato's youth. Schleiermacher regards this dialogue as au- thentic. Ast and Socher reject it.—21. Αλήθινα οἱ μείζονι, ἡ περὶ φίλων ἀνήργουν, "The first (or greater) Alcibiades, or concerning the Nature of Man." The second member of this title, added by the com- mentators, does not suit the subject. The dialogue has reference merely to Alcibiades, who, young and presumptuous, without knowledge and without experi- ence, is on the point of presenting himself before the people to be employed in the government of the state. Socrates directs him to study first the principles of law and politics. The end of this piece is to show the true nature of the attachment which Socrates had for this young man, an attachment which made him so desirous of correcting his faults. —As Socrates, in the course of this dialogue, compares the Deity to light, certain commentators have discovered in this expression a mystic allusion to the emanation, in which God is light and master is darkness. —Schleiermacher considers this production as supposititious. —22. Αλήθινας β', ἡ περὶ προσευχής, "The second Alcibiades, or concerning Prayer." Socrates shows Alcibiades the emptiness and inconsist- ency of the prayers which mortals address to the divinity, unable as they are to tell whether the things for which they pray will turn to their advantage or not. —23. Μνήμεον, ἡ ἑττάκας, "Menexenus, or the Funerary Oration." This funeral oration, in honour of those Athenians who had died for their country, is put in the mouth of Aspasia, and is supposed to have been an extemporaneous production on her part. The end of Plato, in composing this satirical piece, was, with- out doubt, to show that oratory was not a very diffi- cult art. Böckh very acutely maintains, in his com- mentary on Menex. Minos, that Plato, in all his dia- logues, comes forth in a polemic attitude against the celebrated Lyssias, and especially in his Menexenus. (Böckh, ad Min., p. 182, sqq.) The events connected with the history of Athens, which are alluded to in the course of this dialogue, reach to the peace of An- talcidas, concluded fourteen years after the death of Socrates. This anachronism, which may be pardoned in a satirical production, has nevertheless induced Schleiermacher to regard as supposititious the begin- ning and end of the dialogue. Schleiermacher's opin- ion, which is also that of Ast, and which was first started by Schlegel, in Wieland's Attische Museum (vol. 1, pt. 2, p. 262, sqq.), has found an opponent in Loers, in his edition of the Menexenus, Colon. Agrripp., 1824.—24. Λάχης, ἡ περὶ ἀνθρώπων, "Laches, or concerning Bravery." The author shows that it is difficult to say how to make as supposititious the begin- ning, however, is, to enforce the necessity of not refining the education of the young to mere bodily exercises. —25. Ἡππίας μείζονι, ἡ περὶ τοῦ καλὸν, "The greater Hippias, or concerning what is Beautiful." A piece of banter against the sophist Hippias. —26. Ἡππίας ὁ ἐλαττῶν, ἡ περὶ φύσεως, "Hippias the Less, or concerning Falseness." In order to ridic- ule more effectually the vanity of Hippias, who pre- tended to a knowledge of all sciences and all arts, so as to boast that he carried nothing about him that was not his own manufacture, as his clothing, his ring, dec., Socrates proves that this universal genius is not able to maintain, with any success, a thesis evidently false. —27. Ἐυθυπραγον, ἡ περὶ ὁποίων, "Euthypyrion, or concerning Piety." This dialogue, written after the accusation of Socrates, and before his condemna- tion, appears to have a double end; first, to establish by the principles of dialectics the idea of piety, which Socrates numbered among the cardinal virtues, but of which only a passing notice is taken in the previ- ous dialogues; and, secondly, that of defending Soc- rates against the charge of irreligion. Plato shows the falsity of the ideas entertained by the vulgar, and even by the priests, in relation to what was agreea- ble to the Deity, and to the religious duties of men; and he justifies Socrates by showing that it was only on this ground the philosopher attacked the national re- ligion. The interlocutors are Socrates and a certain Euthyphron, who, from a sense of religious duty, un- understood by him, was induced to become the accuser of his own father. Socrates compels him to confess that he does not even know in what religious duty consists; he ridiciles the notions which the vulgar entertain of the Deity; but, unhappily, he is satisfied with throw- ing down, without thinking of building up again, for he puts nothing in the place of the system which he has prostrated; it would have been dangerous, however, to have remained silent, for he would then have betrayed the light tone in which the process against. Socrates is alluded to, would seem to show that his friends de- ceived themselves as to the result. —Ast attacks the authenticity of this dialogue, on the ground principally of its not containing any one speculative view. Wig- gers, on the contrary, has defended it, in his " Com- mentatio in Platonis Euthypryanem," Rostock, 1805. —28. Φιλοσόφων, ἡ περὶ Πιτήραν, "Ion, or concerning the Iliad." (more rare.) The interlocutors are Socrates and Ion, the latter a native of Ephesus, and one of those rhapso- dists who roamed through Greece, reciting the poems of Homer, Hesi- od, and other great masters of the art. Much differ- ence of opinion has prevailed in relation both to the merit of this dialogue and the object which Plato had in view in composing it. Sydenham (Synopsis, or General views, of the Works of Plato, Lond., 1799, vol. 37, p. 1, sqq.) considers this production as level- led at the poets, "those eternal enemies of truth." As Plato, however, was afraid of incurring the re- sentment of this irascible class of persons, he only attacked, say the writers just named, the rhaps- odist. Socher also views this dialogue in the light of a satire against poets. Some commentators, on the other hand, think that there is no necessity for go- ing so far in order to discover Plato's object: it was to repress the enthusiasm of the blinded admirers of poetry, which is as distinctly opposed to truth as the false logic of the sophists. (Platonis Ion, ed. Nitsch, Lips., 1822, 8vo.) —29. Σωκράτων ὀπολογούσα, "De- fence of Socrates." Diogenes Laertius (2, 41) in- forms us, that Plato made an attempt to defend Soc- rates before his judges, but that the latter refused to hear his piece, written after the death of Socrates, is a monument erected to his memory, and an εὐθυγραμμάν, pronounced as it were, before all Greece. Placed in the mouth of him whom it undertakes to de- fend, it combines simplicity and modesty with truth, and with that dignity which a good man derives from the consciousness of innocence, when he is attacked by the wicked. We learn, indeed, from Xenophon, that this was precisely the tone in which Socrates ad- dressed his judges, and that, instead of desiring to re- fuse the charges alleged against him, he merely un- fold to their view the history of his past life. Dionysius.
of Halicarnassus calls this production a eulogium un- der the form of an apology (ed. Reiske, vol. 5, p. 295, 355). Böckh maintains, that Plato wrote the "De- fence of Socrates" in a spirit of rivalry towards the one composed by Lysias, and he refers to Plutarch, Serranus, and Halicarnassus (X. Orat. Vit.—Op., ed. Reiske, vol. 9, p. 324). Ast, on the contrary, remarks that Plutarch appears rather to have had in his eye the oration of Lysias mentioned in the Phaedrus. (Böckh, ad Min., p. 182.—Ast, Plato's Leben, &c., p. 492.—Compare Beck Comment. Societ. Philolog. Láp., vol. 4, pt. 1, p. 28.)—30. Krbív, ἕπει πρακτικόν, "Crito, or concerning the Duty of a Citizen." The scene of this dialogue be- tween Crito and Socrates is in the prison where the latter is confined, during the interval between his con- demnation and death. Crito advises him to fly, and hints that the keeper of the prison has been bribed by him, and that all things are ready for his escape. So- crates, on the other hand, maintains that it is not allow- ed a citizen to withdraw himself from that authority which has power over him, nor to break the tacit com- pact by which he has bound himself to obey the laws of his country. Not only Ast, but another writer also, has attacked the authenticity of this dialogue. (Del- brück, Sokrates, Köln., 1819, 8vo.) It has found, how- ever, vigorous supporters in Thiersch, Socher, and Bre- nni. (Philologische Begrün. aus der Schweiz., 1819, 8vo, p. 143.)—31. Θαύμα, ἕπει σοφία, "The- ages, or concerning Wisdom." Democritus having brought to Socrates his son Theages, desires of learn- ing that kind of wisdom by which one is fitted for gov- erning the state, Socrates declines the proposal, on the ground that he has not yet heard the voice of his Ge- nius, without whose approbation nothing that he might undertake would succeed. The end of the dialogue is to show that the method of Socrates differs from that of the sophists, in that the former gives no regular in- struction to his disciples, but forms them to virtue in his society and by his converse. This dialogue con- tains the most advanced position of the Socratic re- gards it as suppositions.—32. Ἀστεραστά, "The Rivals," also entitled Ἐραστά, ἕπει προφοσία, "The Lovers, or concerning Philosophy." A very feeble dialogue, the object of which is to show that Socrates estimated virtue and justice above every- thing else, and cared very little for purely speculative inquiries. —33. Ἡπαράρχης, ἕπει φιλοσοφία, "Hippar- chus, or the Lover of Gain." This dialogue, which is very pitiful and dull, is also found in Wyttenbach. It seems to have been written in order to show the folly of bad men that enter respecting the ac- quisition and love of gain. The author advances in the course of it some historical paradoxes. Socher, who defends several dialogues against the attacks of Schleiermacher and Ast, acknowledges, with them, and also with Wolf (Prolegom. ad Hom., p. civ.), that this is not one of Plato's productions. Valckenear (ad Herod., 5, 55) had already expressed the same opinion. Böckh regarded it as a "Minor work, or concerning Law." Socrates discourses, in this dialogue, with a certain Minos on the nature of law, which he takes, in its most extended sense, as the rule of all our actions. We here find the first elements of the doc- trine of modern philosophers respecting the law of na- ture and the moral law. The authenticity of this dia- logue has been ably attacked by Böckh, with whom Schleiermacher concurs, and the work of Crito, which v长寿um inscriptum Min., &c., Halle, 1806, 4to.)—35. Κλειστοφών, ἕπει προτριτίκω, "Citophon, or the Ex- hortation." This dialogue, in which the nature of virtue is investigated, is not entire. Stephens and Serranus (De Serres) reject it from the list of Plato's works. —We will now give the titles of eight other productions, also attributed to this philosopher, but which bear so openly upon their fronts the stamp of falsification that the ancients themselves, though sometimes far from scrupulous in matters of criti- cism, regarded them as strangers to Plato. 1. Ἐραστ- ς, ἕπει Ἐρασιστάτως, ἕπει προτιτικόν, "Eryxias, or Erazistratus, or concerning Wealth." Diogenes Laertius already regarded this dialogue as spurious (1, 3, 22), and he refers to Plutarch, Serranus, and Lysias ascribed to Ἐρασιστάτως, or concerning Wealth. This dialogue, which is found also among the works of Lucian, treats of the wonders of nature. Diogenes attributes it to the academian Leos. 3. Σίγο- ρος, ἕπει τοῦ μονολόπου, "Sisyphus, or concerning Deliberation."—4. Ἀδικός, ἕπει θανάτον, "Adu- chus, or concerning Death." This dialogue is one of those ascribed to Chalcis, or Xenocrates, of Ela- cedon. (Böckh, Pref. in Sim. Socrat. dial., p. vi.—Wyttenbach, Philomath., pt. 2, p. 47.)—5. Δημοδόκος, ἕπει τοῦ συμβουλευτῆς, "Democodus, or concerning Consultation."—6. Ὀρος, "Definitions."—edc. also to Speusippus.—7. Ἐραστάτως, ἕπει διακό- των, "Concerning Virtue, whether it is a thing to be taught." This dialogue resembles the Menon; it treats of the same subject, but less in detail, and with some different manner. He is a steady writer, and his first sketch, or else an imperfect edition, of the Men- on, and he therefore places it among the genuine works of Plato. Le Clerc attributes it to Ἐρασιστάτως. (Eschinis Socrat. Dial., Amst., 1711.)—8. Πείρος δι- καιοῦ, "Concerning Justice." In 1806, Böckh pub- lished a dissertation on the Minos of Plato, tending to show that the opinion of Schleiermacher, adopted by Wolf, was correct, which made this production to be a secondary work. He advances a similar hy- pothesis respecting the author of the work. Diogenes Laertius (2, 122) informs us, that Socrates was in the habit of frequenting the shop of a certain shoemaker or currier, named Simon, for the purpose of discoursing with him; that this Simon was accus- tomed to commit to writing all that he could remember of these conversations; and that he afterward published thirty-three of these dialogues, among which were four with the following titles: Πείρος νόμον, "Of Law;" Πείρος φιλοκέρευδος, "Of the Love of Gain;" Πείρο δικαιοῦ, "Of Justice;" and Πείρο ἄρετος, "Of Virtue." He adds, that Simon was the first who thought of publishing the Socratic conversations, and that, from the rank in life of the one who gave them to the world, they were called Σωκρατοὶ Διάλογοι, "The Shoemaker-dialogues," and from their contents, Σωκρατικοὶ διάλογοι, "Socratic dialogues." It is, however, by no means certain that Simon was the autho- r, here, as indicating something "low" or "mean," (Compare Heindorff, ad Charmid., p. 83.) Böckh, after having shown that the dialogue entitled Minos originally bore the appellation Πείρο νόμον, and the Hipparchus that of Πείρο φιλοκέρευδος, concludes that these two dialogues, hitherto ascribed to Plato, are of the number of those published by Simon. This hy- pothesis having met with no opponents during three centuries from the time Böckh published it, it might appear that one might regard it as a plausible one, or because it was in accordance with the sceptical spirit that distinguishes the literature of Germany, Böckh grew bolder, and in 1810 actually gave to the world these two dialogues, entitled Πείρο ἄρετος and Πείρο δικαιοῦ, under the name of Simon the Socratic ("Simonis Socratii, ui videret, dialogi iv., de legie, de lucrè cupiünde, de juust, de e vitutte. Ad- dii sunt inserti auctoris dialogi novus. Graece et Latinae translatio. Wintam præmissi A. Böckh," Heidelberg, 1810, 8vo.). His whole theory, however, has been ably refuted by Leetrone. (Journal des Savans, 1829, p. 675, seqq.)—There exists also, under the name of Plato, a correspondence which would be one of great interest if it really came from the founder of the Academy, because it contains particu- lars of an historical, as well as political and philosop- hical, nature. These Letters, some of which are of considerable length, have reference to the visits made
by Plato to Sicily, and to the intrigues of which this island was the theatre, in consequence of the tyranny of the younger Dionysius and the movements of Dion. The correspondence in question appears to have been published by some of the followers of Plato with the view of expiating and justifying themselves from the charge of fomenting troubles in Syracuse. Cicero seems to have entertained no doubt of these letters being genuine, and he cites one of them as "praelata epistolae Platonis." (Trac.Disp., 5, 35.) The following modern scholars have denied their authenticity:

rials have been obtained by us, from this, for our bi-

ographical sketch of Plato. The commentaries on Plato are still numerous, though very many have been lost. A Platonic Lexicon by Timeus has come down to us, of which Ruhnken published an excellent edition in 1764; and to the same modern scholar we owe the publication of some valuable Platonic scholia (Ludg. Bat., 1800, 8vo). A new edition of the Lex-

icon of Timeus, by Koch, appeared from the Leipsic press in 1828.—Of the MSS. of Plato, two possess great value on account of their early date. One of these belongs to the tenth century, and is at present in the Royal Library at Paris, being known among its collection of MSS. as No. 1907. The other is the celebrated one brought over from Greece by Dr. Clarke, the well-known traveller. It is now in the Bodleian Library at Oxford. This is the earlier of the two, having been written in 896 A.D. It contains the first twenty-four dialogues, with the titles precisely as they are given in the Basle edition of 1554. In the margin are written scholia in a very ancient hand. The MS. is on vellum. In 1812, Professor Gaisford published an account of it, in his "Catalogus, sive Notitia Manuscriptorum, qui a cel. E. D. Clarke comparati, in Bibliotheca Bodleiana adserunt," &c., Oxon., 1812, 4to. In 1820, the same scholar published a collation of the same, under the title of "Lectio-

nes Manuscriptae," and Ovon, 1821, 4to. The works of Plato were first published, after the invention of print-

ing, by Aldus Manutius, at Venice, in 1513. The commentaries of Serranus and Ficinus, the former of which accompany the edition of H. Stephens of 1578, and the latter that printed at Lyons in 1590, are very valuable; but, at the same time, are to be read with caution; for Ficinus, having formed his conceptions of the doctrine of Plato after the model of the Alexand-

rean school, frequently, in his Arguments, misrepres-

ents the design of his author, and in his version ob-

scures the sense of the original; and Serranus, for his part, baselessly and consistently, on the doctrine of his author, and through the influence of scholastic pre-

dilection for the scholastic system of theology, some-

times gives an incorrect and scholasticistic interpreta-

tion of the text. Among the most useful editions of

the entire works of Plato, the following may be enumer-

ated: The Bipont edition, 12 vols. 8vo, 1781-1786;

that of Bekker, Berol., 1816-1818, 10 vols. 8vo; that of Ast, 1819-1840, still in a course of publication, of which the text is corrected. —Selections from the commentaries of

modern scholars, Leps. 12 vols. 8vo, 1809-1827, have been published, however, by numerous typographical errors; the London variorum edition, containing selections from thirty-four commentaries, and published under the care of G. Burges, Lond., 1826, 11 vols. 8vo; and, what may, perhaps, be regarded as the best, that of Stalbaum, still in a course of publication, and forming part of Jacob's and Rost's "Bibliotheca Graeca," Leps., 1837, 4 vols. 8vo, contains an English translation of Plato, the best edition is that of Heindorf, Berol., 1802-1810, 4 vols. 8vo, a second edition of which appeared in 1827, under the care of Buttman, Berol., 4 vols. Of separate dialogues numerous ed-

itions have been given by various eminent scholars, for an account of which consult Scholl, Gesch. der Griech. Lit., vol. 1, p. 524, seqq., and Hoffmann, Lex. Bibli-

ograph., vol. 3, p. 285. —The best translations of Plato are, the German one of Schleiermacher, Berlin, 1817-1828, 3 vols. in 6, 8vo, left uncompleted in conse-

quence of the death of the author; and the French ver-

For some remarks on the doctrines of what is called the New Platonic school, consult the article Alexandri-

na Schola.—II. A comic writer, who flourished about

the period of Socrates's death. He composed twenty

comedies. Suidas, Plutarch, and Athenaeus cite a much larger number, but a part of these pieces belong to another Plato, a writer of the Middle Comedy, and who lived about a century after the former. The ancient writers praise him as well as Cratinus for clear-

ness or perspicuity (λαμπρότητα). His patriotic feel-

ings led him frequently to attack the corrupt demag-

gogies of the day, such as Cleson, Hyperbolus, Cleo-

phon, and others. He gave his name to a particular

kind of metre. The fragments of this writer are to be

found in the collection of Grotius. Consult also Meinecke, Curia Critica in Comorum fragmenta, with Athenaei sertata, Berol., 1814. (Scholl, Hist. Lit. Gr., vol. 2, p. 91.)—III. A comic poet, called, for dis-

tinction sake from the preceding, the younger. It is

difficult, indeed impossible, to separate his remains

from those of the elder comic poet of the same name.

He flourished about 300 B.C. (Scholl, Hist. Lit.

Gr., vol. 2, p. 114.)

PLAUTIUS, Fulvius, a native of Africa, and a

relative, according to some, of the Emperor Septimius

Severus. Other accounts, however, have made him to be of obscure origin, and to have been banished for seditious conduct, as well as many acts of a criminal

nature. In his banishment, according to these latter

authorities, he became acquainted with Severus, who

some years after ascended the imperial throne. (He-

rodian, 3, 10.) When Severus attained to the sov-

ereignty, Plautianus was rapidly advanced, and con-

verted, and became a strong partisan of the Emperor

prefect. Statues were erected to him both at Rome and in

the provinces, as well by individuals as by the senate its-

self. The soldiers and senators alike store by his

fortune, as he had been formerly done in the case of Se-

janus, and he wanted but little to be equal in power

with Severus. (Dio Cass., 75, 15.) Plautianus is

1090
PLAUTUS.

charged with having made use of his exorbitant power to oppress the people, and to excite the vindictive passions of his master. By the marriage of his daughter Plautilla with Caracalla, who had already, for some years, enjoyed the rank of Augustus, he obtained admission into the imperial household; where his pride, and the influence which he possessed over the emperor, rendered him an object of suspicion and dislike. Being at a great disadvantage on account of his former conduct at the time of his accession, he was slain by a soldier, at the order of Caracalla, in the presence of Severus. Plautilla was banished by Severus, along with her brother Plautus, to the island of Lipara, where, seven years after, she was put to death by order of Caracalla, A.D. 211. (Herodian, 3, 10. Dio Cass., 75, 14. seqq. Spartan, Vit. Sex.)

Plautus, M. Accius, a celebrated comic poet, the son of a freedman, and born at Sarissia, a town of Umbria, about 525 A.U.C. He was called Plautus from his splay-feet, a defect common to the Umbrians. Having turned his attention to the stage, he soon realized a considerable fortune by the popularity of his dramas; but, by risking it in trade, or spending it, according to others, on the splendid theatrical dresses which he wore as an actor, and theatrical amusements being, at the time, prohibited by the laws prevailing at Rome, he was quickly reduced to such necessity as forced him to labour in a mill for his daily support. (Aulus Gellius, N. A., 3, 3.) Many of his plays were written in these unfavourable circumstances, and, of course, have not obtained all the perfection which might otherwise have resulted from his increased knowledge of life and his long practice in the dramatic art. Twenty plays of this writer have come down to us. But, beside these, a number of comedies now lost have been ascribed to him. Aulus Gellius (N. A., 3, 3) mentions that there were about a hundred and thirty plays which, in his age, passed under the name of Plautus; and of these nearly forty titles, with a few scattered fragments, still remain. From the time of Varro to that of Aulus Gellius, it seems to have been a subject of considerable discussion what plays were genuine; and it appears that the best-informed critics, and even the most numerous of the plays, that were attributed to Plautus, have been shrewdly passed for the productions of Plautus were spurious. Such a vast number were probably ascribed to him from his being the head and founder of a great dramatic school; so that those pieces which he had, perhaps, merely retouched, came to be wholly attributed to his pen. "There is no doubt," says Aulus Gellius, "but that those plays, which seem not to have been written by Plautus, but were ascribed to him, were by certain ancient poets, and afterward retouched and polished by him." Even those comedies written in the same taste with his came to be termed Fabulae Plautinae or Plautanae, in the same way as we still speak of Aesopian fable and Homeric verse. "Plautus guidem," says Macrobius, "ex claris fict, ut post mortem ejus comedie, quas incertae fertur, Plautinae tan cas, manibus prius ejus aut etiam post suos epitomatis." It is thus evident, that a sufficient number of jests stamped a dramatic piece as a production of Plautus in the opinion of the multitude. But Gellius further mentions, that there was a certain writer of comedies whose name was Plautus, and whose plays, having the inscription Plauti, were considered as by Plautus, when they were, in fact, named not Plautinae from Plautus, but Plauitanae from Plautus. And it sufficiently accounts for the vast number of plays ascribed to Plautus, and which the most learned and intelligent critics have greatly restricted. They have differed, however, very widely as to the number which they have admitted to be genuine. Some, says Sercius, maintain that Plautus wrote twenty-one comedies, others forty, others a hundred (ad Virg., En., 1196.).

Gellius informs us that Lucius Aelius, a most learned man, was of opinion that not more than twenty-five were his. Varro wrote a work entitled Questiones Plautina, a considerable portion of which was devoted to a discussion concerning the authenticity of the plays commonly assigned to Plautus; and the result of his investigations was, that twenty-one were unquestionably to be admitted as genuine. These were subsequently designated the genuine plays, on account of having been separated by Varro from the remainder, as being too doubtful, and universally allowed to be by Plautus. The twenty-one Varroonian plays are the twenty still extant, and the Vidularia. This comedy appears to have been originally subjoined to the Palatine MS. of the still existing plays of Plautus, but to have been torn off, since, at the conclusion of the Truculentus, Varro finds the words "Vidularia incept in." (Fabr., Bib. Lat., 1, 1. Osann, Analect. Gr. c. 8.) And Mai has recently published some fragments of it, which he found in the Ambrosian MS. Such, it would appear, had been the high authority of Varro, that only those plays which had received his indubitable sanction were transcribed in the MSS. as the genuine works of Plautus; yet it would seem that Varro himself had, on some occasion, assented to the authenticity of several of these, as the Moschus, by which the Plautine corresponding to that of Plautus. The following remarks may serve to throw some light on the general scope and tenour of the comedies of Plautus. In each plot there is sufficient action, movement, and spirit. The incidents never flag, but rapidly accelerate the catastrophe. But, if we regard his plays in the mass, there is a considerable, and, perhaps, too great, uniformity in his fables. They hinge, for the most part, on the love of some dissolute youth for a courtesan, his retirement of a slave to defraud a father of a sum sufficient for his expensive pleasures, and the final discovery that his mistress is a free-born citizen. The charge against Plautus of uniformity in his characters as well as in his fables has been echoed without much consideration. The portraits of Plautus, it must be remembered, were drawn or copied at the time when the division of labour and progress of refinement had not yet given existence to those various descriptions of profession and artists, the doctor, author, attorney, in short, all those characters, whose habits, singularities, and whine have supplied the modern Thalia with such diversified materials, and whose contrasts give to each other such relief, that no caricature is required in any individual representation. The characters of Alcmaen, Echo, and Peribleptomenen are sufficiently novel, and are not repeated in any of the other dramas; but there is an ample and variety even in those which he most frequently employed, the avaricious old man, the debauched young fellow, the knavish slave, the bragging captain, the rapacious courtman, the obsequious parasite, and the shameless pander. The severe father and thoughtless youth are those in which he has best succeeded. The captain is exaggerated, and the change which has taken place in society and manners has been frequently the occasion of a change in the character of the slave, the parasite, and the pander; but in the fathers and sons he has shown his knowledge of our common nature, and delineated them with the truest and liveliest touches.—The Latin style of Plautus excels in briskness of dialogue as well as purity of expression, and has been exulted by the learned Roman grammarians, particularly Varro, who declares that if a man was a Latin speaker, to speak Latin, they would employ his diction (ap. Quint., Inst. Or., 10, 1); but, as Schlegel has remarked, it is necessary to distinguish between the opinion of philologers and that of critics and poets. Plautus wrote at a period when his country as yet possessed no written or literary language. Every phrase was drawn from the living source of conversation. This early simplicity seems
pleasing and artless to those Romans who lived in an age of excessive refinement and cultivation; but this apparent merit was rather accidental than the effect of poetic art. Making, however, some allowance for this, there can be no doubt that Plautus wonderfully improved and refined the Latin language from the rude form in which it had been moulded by the Latinesque, and he should have effected such an alteration is not a little remarkable. Plautus was nearly contemporary with the Father of Roman song; according to most accounts, he was born a slave; he was condemned, during a great part of his life, to the drudgery of the lowest manual labour; and, as far as we learn, he was not distinguished by the patronage of the great, nor admitted into patrician society. Emnius, on the other hand, who adorned his life, spent it in the exercise of an honourable profession, and was the chosen and familiar friend of Cato, Scipio Africanus, Fulvius Nobilior, and Laelius, the most learned and polished citizens of the Roman republic, whose unrestrained conversation and intercourse must have bestowed on him advantages which Plautus never enjoyed. But perhaps the circumstance of his Greek original, which contributed so much to his learning and to the embellishment of his society, may have been unfavourable to that native purity of Latin diction, which the Umbrian slave imbibed from the unmixed fountains of conversation and nature.—The chief excellence of Plautus is generally reputed to consist in the wit and comic force of his dialogue; and, accordingly, the lines in Horace's Art of Poetry, in which he derides the ancient Romans for having foolishly admired the "Plautinos salus," have been the subject of much reprehension among critics. That the wit of Plautus often degenerates into buffoonery, scurility, and quibbles, sometimes even into obscenity; and that, in his constant attempts at merriment, he often tries to excite laughter by exaggerated expressions as well as by extravagant actions, cannot, indeed, be denied. This was partly owing to the immensity of the Roman theatres and to the masks of the actors, which must have rendered caricature and grotesque inventions essential to the production of that due effect which, with such scenic apparatus, could not be created unless by overstepping the modesty of nature. It must always be recollected, that the plays of Plautus were written solely to be represented, and not to be read. Even in modern times, and subsequent to the invention of printing, the greatest dramatists, Shakespeare, for example, cared little about the publication of their plays; and in every age or country in which dramatic poetry has flourished, it has been intended for public representation, and adapted to the tastes of a promiscuous audience. In the days of Plautus, the smiles of the polite critic were not enough for a Latin comedian; because in those days there were few polite critics at Rome; he required the shouts and laughter of the multitude, who could be fully gratified only by the broadest grins of comedy. Accordingly, many of the jests of Plautus are such as might be expected from a writer anxious to accommodate himself to the taste of the times, and naturally catching the spirit of ribaldry which then prevailed. It being, then, the great object of Plautus to excite the merriment of the rable, he, of course, was little anxious about the strict preservation of the dramatic unities; and it was a greater object with him to bring a striking scene into view, than to preserve the unity of time or place. In the "Asinaria," and in the "Aulularia," the action is laid in the miser's house, and part in the various places where he goes to conceal his treasure; in the "Mostellaria" and "Truculentus," the scene changes from the street to apartments in various houses. But, notwithstanding these and other irregularities, Plautus so enchanted the people by the drollery of his wit and the buffoonery of his scenes, that he continued the reigning favourite of the stage long after the plays of Catullus, Afranius, and even Terence were first represented. (Dunlop's Roman Literature, vol. i, p. 136, seqq.; Lond. ed.)—The best editions of Plautus are, that of Camerarius, Basil, 1558, 8vo; that of Lambinus, Lu- tet., 1576, fol.; that of Gruter, Lugd. Bat., 1592, in which the characteristics of each of the plays are given in a short prologue. Plautus acquires his verses first; that of Taubmann, Wittbe, 1522, 4to; that of Müller, Berol., 1755, 8vo, 2 vols.; that of Ernesti, Lips., 1750, 8vo, 2 vols.; the Bipedit edition, 1770-80, 8vo, 2 vols. in which the text is corrected by Brunck; that of Schneider, Götting., 1804, 8vo, 2 vols.; that of Bothe, Berol., 1809, 8vo, and that forming part of the collection of Lemaire, Paris, 1830, 4 vols. 8vo.

Plautus (Pléodon). I. the daughters of Atlas and the ocean- nymph Pleione. They were seven in number, and their names were Maia, Electra, Taisgeta, Halcyone, Celene, Sterope, and Merope. The first three became the mothers, by Jupiter, of Mercury, Dar- danus, and Lacedemon. Halcyone and Celene bore to Neptune Hyrieus and Lycus; Sterope brought forth Oenomaus to Mars; and Merope married Sisyphus. (Schol. ad II, 18, 486.—Apoll., 3, 1,—Hy- p. Schol. ad II, 18, 491.) The first was, indeed, an exalted poet, and was remarkable for the wit and dignity of his verses; his works were read. (Etym. Mag., s. v. Pléodon.) Hyginus (l. c.) says seven years. (Keightley's Mythology, p. 464.)—The constellation of the Pleiades, rising in the spring, brought with it the spring-rains, and opened navigation. Hence, according to the common etymology, the name is derived from πλεῖον (πλεῖον), "to sail," and is thought to indicate the stars that are favourable to navigation. (Völcker, Mythol. des Iap. Geschlechtes, p. 77.) Indeed, however, it is more probable that the appellation is derived from the Greek πλεύριον, "full," denoting a cluster of stars; whence, perhaps, the expression of Manilius (4, 523), "glomerabilis et- dus." Aratus (v. 267) calls the Pleiades ιπταμόστωσι, "moving in seven paths" (compare Eurip. Iph. in Aul., v. 6), although one can only discern six stars. Hence Ovid says of these same stars (Fast., 4, 170), "Quae septem in die, sex tamen esse solent." On the other hand, Hipparchus asserts (ad Arat., Phars., 14), that in a clear night seven stars can be seen. The whole admits of a very easy solution. The group of the Pleiades consists of one star of the third magnitude, three of the fifth, two of the sixth magnitude, and several smaller ones. It requires, therefore, a very good eye to discern in this constellation more than six stars. Hence, among the ancients, since no more than six could be seen with the naked eye, and yet since, as we have seen, a seventh star, Πλευρίων (πλεύριον, tosteth., c. 14), was mentioned, the conclusion was that one of the cluster was lost. Some thought that it had been destroyed by lightning (Theon, Schol. ad Arat., i. c.); others, making the lost Pleiad to have been Elec- tra, fabled that she withdrew her light in sorrow at the fall of Ilium, and the misfortunes of her descendants, Dardanus having been the son of Electra and Jupiter (Schol. ad Arat., i. c.); other tales regarded the Πλευρίων for the Ίλιου ἄλασκομενον must substitute the Ίλιου ἄλασκομενον.—Compare Ovid, Fast., 4, 177: "Electra Troja spectaculix raes non tuli." According to another account, the "lost Pleiad" was Merope, who withdrew her light because ashamed of having alone married a mortal. (Ovid, Fast., 4, 175.) Others, again, affirmed that the star
in question moved away from its own constellation, and became the third or middle one in the tail of the Greater Bear, where it received the name of 'Αλωνί, "the Fox" (Aler, Sternnamen, p. 145.)—From their rising in the spring, the Pleiades were called by the Romans Vorgilia. (Pestus. — Lidor, Orig., 3, 70.) This constellation appears to have been one of the earliest known by the ancients. Of it is mentioned by Homer (I., 18, 483, seqq. — Od., 5, 275, seqq.); and in Hesiod an acquaintance with it is supposed to be so widely spread, that the daily labours of the farmer can be determined by its rising and setting. (Hex., Op. et D., 383, 615.) The metrical form of the name is Ἑλκείδης and Πελεκέδης, and hence some have been led into the erroneous opinion, that the name of the constellation was derived from its being "suspended in the air," or "done," in allusion to the fancied appearance of the cluster. (Schweck, Mythol. Skiz., p. 2.)—The Pleiades are assigned on the celestial sphere to a position in the rear of Taurus. (Hygin, Poet. Astron., 20.) Proclus and Geminius, however, place them on the back of the animal; while Hipparchus makes them belong, not to Taurus, but to the foot of Perseus. (Theon. ad Arat., Phan., 254. — Maxim., Magie, 18.) A name given to them by Homer of Priene is that of Pleione, and this may have been given to seven tragic writers, and the same appellation to seven other poets, of the Alexandrian school. (Vid. Alexandrina Schola, near the conclusion of the article.)

Pleiône, one of the Oceaniae, who married Atlas, king of Mauritania, by whom she had twelve daughters, and a son called Hyas. Seven of the daughters were changed into a constellation called Pleiades, and the rest into another called Hyades. (Ovid, Fast, 5, 84.)

PLEMMETHRUM, a promontory of Sicily, in the immediate neighbourhood of Syracuse, and facing the island of Ortigia, forming with this island the entrance to the great harbour of that city. Its modern name is Massa d'Oliviero. (Dorroll, Sic., p. 191.—Thuycyd., 7, 4. — Weiseling, ad Diad. Sic., vol. 6, p. 555, ed. Bip.) It was fortified by Nicias during the siege of Syracuse by the Athenians, as being well adapted by its situation for receiving supplies by sea; and here also he erected three forts or castles, the largest of which contained all the warlike implements, and the provisions of the army. At a subsequent period of the war, the Athenians were compelled to abandon this post, and fortified themselves near Dascon, in its vicinity. (Thuycyd., 1 c. — Id., 7, 23.)

The position of Plemmethrum may be regarded as one of the early causes of the failure of the expedition against Syracuse, for, as the enemy was near, the soldiers had to go a distance for it, numbers of them were cut off from day to day by the Syracusans. (Letromene, ad Thuycyd., 7, 4, p. 76. — Gbller, de sigu et oryigne Siccurasurum, p. 76, seqq.)

PLEMOSI, a people of Gaulia Belgica, tributary to the Nervii. Their precise situation is unknown. Lemaire places them in the vicinity of Tornacum, now Tournaise. (Ind. Geogr., ad Cez., p. 339. — Cez., B., 5, 39.)

PLINUS. I. Secundus, C., surnamed the Elder, and also the Naturalist, a distinguished Roman writer, born of a noble family, in the ninth year of the reign of Tiberius, A.D. 23. St. Jerome, in his Chronicle of Eusebius, and a Life of Pliny ascribed to Suetonia, makes him to have been a native of Comum; but since, in the dedicatory epistle prefixed to his Natural History, he calls himself "Plinius, C. Secundus, of Comum" (contubernium), and since Catullus was born at Verona, this last-mentioned city has disputed with Comum the honour of having given birth to the naturalist, and writings without number have been elicited by the controversy. One thing, however, is certain, that the Plinian family was settled at Comum, and possessed a large property in the neighbourhood, and inscriptions have been discovered there relative to several of its members. It was at Comum, too, that the younger Pliny, so well known by his Letters, and the nephew of the naturalist, was born. Pliny the Elder came to Rome at an early period, and attended the lectures of Appion, but it does not appear that he saw the Emperor Tiberius, the latter having already retired to Capreae. From the account of the constitution of the state of the world which he saw at Lollia Paulina's, it has been supposed, that, notwithstanding his youth, he assisted occasionally at the court of Caligula. His attention was attracted, even at this early period, by the interesting productions of nature, and particularly by the remarkable animals which the emperors exhibited in the public spectacles. He relates in detail, and as an eyewitness, the particulars of a combat in the presence of the Roman people, between a large monster of the deep, which had been taken alive in the harbour of Ostia. This event having taken place while Claudius was constructing the port in question, that is, in the second year of his reign, Pliny could not have been at that time more than about nineteen years of age. We learn from himself, that, about his twenty-second year, he resided for a time on the coast of Africa, where he witnessed the change of sex in the case of Larissa, a coast-rider. (Cassius, xxi, 25.) His name of Plinius was also given to seven tragic writers, and the same appellation to seven other poets, of the Alexandrian school. (Vid. Alexandrina Schola, near the conclusion of the article.)

The works of Pliny the Elder, on the various subjects with which he had occupied himself, are considerable in number, and form a part of the most valuable contributions to the investigation of natural history. They consist of the following:

1. Historia Naturalis, or Natural History, comprising the histories of plants, trees, and other productions of nature; of animals, both terrestrial and aquatic; and of the stars in the heavens. It is a work of the highest importance, and is valuable for the lights it affords in many departments of knowledge. It is written in a style of exquisite grace, and is especially celebrated for the readiness with which its various parts combine, and for the conciseness of its style. Pliny’s Natural History is divided into eight books, entitled De Historiis Sermonum, which was,
without doubt, a grammatical treatise on the precise
signification and use of words. And yet it is difficult,
if we follow chronological computation, not to believe
that Nero named him his procurator in Spain; for it
does not escape our notice that, by the death of his
father, he inherited his fortune, and in that office
he was intrusted to Virginius Rufus. On his return,
Pliny would seem to have stopped for a time in the
south of Gaul; for he describes, with remarkable
exactness, the province of Narbonensis, and, in particular,
the fountain of Vauclose. He informs us that he saw
in this quarter a stone said to have fallen from heaven.
Vespasian, with whom he had been on intimate terms
during the wars in Germany, gave him a very favou-able reception. In the course of consoling him every morning
before sunrise; which, according
to Suetonius and Xiphilinus, was a privilege reserved
by that emperor only for his particular friends.
It cannot be affirmed, with any great degree of certainty,
that Vespasian elevated Pliny to the rank of senator.
Some writers state, moreover, though without any
proof, that Pliny served in the war of Titus against the
Jews. What he remarks concerning Judaea is not
sufficiently exact to induce us to believe that he speaks
from personal observation; and, besides, we can hard-
ly assign to any other part of his life except this, the
composition of his work on the History of his own Times,
in thirty-one books, and forming a continu-
tion of that of Aulus Bassus. If Pliny, however,
did not serve in the Jewish war, he was not less the
friend of Titus on that account, having been his com-
ppanion in the course of other contests; and it was to
this prince that he dedicated the last and most impor-
tant of his writings, his Natural History, in thirty-seven
books. The titles given to Titus in the dedication
show that this laborious work was concluded in the
78th year of our era; and it is evident that it must
have occupied the greater part of his life to collect
together the materials. This great work is the only
one of Pliny's that has come down to us. It forms,
as the same time, the last of the most celebrated ages
by antiquity, and is a proof of the most aston-
ing industry in a man whose time was so much oc-
cupied, first by military affairs, and subsequently by
those of a civil nature. In order fully to appreciate
this vast and celebrated work, we must regard it un-
der three different aspects; its plan, its facts, and its
style. The plan is an immense one. Pliny does not
propose to himself to write merely a natural history, in
the recepted sense of the word; he has, on the con-
trary, made it one of his principal objects, to form, as
at the present day, that is, a treatise, more or less de-
tailed, respecting animals, plants, and minerals; he
embraces in his plan astronomy, physics, geography,
agriculture, commerce, medicine, and the arts, as well
as natural history properly so called; and he continu-
ally mingles with his remarks on these subjects a
variety of observations relative to the moral constitu-
tion of man and the history of nations: so that, in
making his work, he may be said to have given to it
in a day a sort of encyclopedia. After having
given, in his first book, a kind of table of contents,
and the names of the authors who are to supply him
with facts and materials, he treats, in the second,
of the world, the elements, the stars, &c. The four fol-
lowing books give a geographical sketch of the then
known world. The seventh treatise of the different
races of men, and of the distinctive qualities of the hu-
man species, of the great characters which it has pro-
duced, and of the most remarkable human inventions.
Four books are then devoted to terrestrial animals,
to fishes, to birds, and to insects. The species belong-
ing to each class are arranged according to their size
and order; and in each of these, the properties that
are injurious or hurtful, and the useful properties, and their most remarkable characters
are also discussed. At the end of the book on insects
he speaks of certain substances produced by animals,
and of the parts that compose the human frame. Bot-
any occupies the largest space in the work. Ten
books are devoted to an account of plants, their cul-
ture, their uses in domestic economy and the arts, and
to an enumeration of their medicinal properties.
Five others treat of the remedies derived from ani-
mals; and in the last five Pliny treats of metals, mi-
ing, earths, stones, and the employment of the latter
for the purposes of life, for the calls of luxury, and for
the arts; while under the head of colours he makes
mention of the most celebrated paintings, and under
the head of stones and marbles treats of the finest pie-
ces of statuary and the most valuable gems. It is
impossible but that, in even rapidly running over this
work, we must be tempted to form a vague idea of
the extent of his information, and of the number and
the vastness of the materials he had thus acquired.
He was not such an observer of nature as Aristotle;
still less was he a man of genius sufficient to seize,
like this great philosopher, the laws and the relations
by which nature has regulated her various productions.
He is, in general, nothing more than a mere compiler,
and often, too, a compiler unacquainted himself with
the things about which he collects the opinions of oth-
ers, and, consequently, unable to appreciate the true
force of these opinions, or sometimes even to com-
prehend their exact meaning. In a word, he is a
writer almost entirely devoid of critical acumen, who,
after having passed a large part of his time in making
extracts from the works of others, has arranged them
under certain chapters, adding thereunto, from time to
time, his own reflections, which have nothing to do
with scientific discussion, properly so called, but either
are the amplification or the repetition of the statements
which are the declamations of a chagrined philos-
opher, who accuses, without ceasing, men, nature, and
the gods themselves. We must be careful, therefore, not to
regard the facts which he has accumulated in their re-
lations to the opinion which he himself forms; but we
must restore them in thought to the writers from whom
he has derived them, and then apply to them
the rules of sound criticism, in conformity with what
we know now of the nature and capacity, and of the con-
sequences in which they found themselves placed.
Studied in this way, the Natural History of Pliny presents
one of the richest mines of learning, since, according
to his own statement, it contains extracts from more
than two thousand volumes, written by authors of ev-
y description, travellers, historians, geographers, phi-
losophers, physicians, &c.; authors, with many of
whom we only become acquainted in extracts of his
own productions of his extracts with the origi-

nal authors, where the latter have come down to
us, and more particularly with the writings of Aris-
totle, will show that Pliny, in making his selections,
was far from giving the preference, on every occasion,
to what was most important or most exact in the
authors whom he consulted. He appears, in general,
to have a strong predilection for things of a singular
or marvellous nature; for such, too, as harmonize
more than others with the contrasts he is fond of insti-
tuting, or the reproaches he is in the habit of making against Providence. He does not, it is true, extend an equal degree of confidence to everything that he reports; but it is at mere random that he either doubts or affirms, and the most puerile tales are not always those which most excite his incredulity. There is not, for example, a single fable of the Greek travellers, concerning men without heads, others without mouths, concerning men with only one foot, or very long ears, which he does not place in his seventh book, and that, too, without sufficient evidence to enable the reader thus to entertain the wondrous with the following remark: "Hec aitque talia ex hominum generis, ludibria sibi, nobis miracula, ingeniosa ficta natura." We may without difficulty, therefore, after observing this facility in giving credence to ridiculous stories about the human species, form an idea of the degree of discernment which Pliny has exercised in his selection of authorities respecting animals either entirely new or but little known. Hence the most fabulous creations, martichor with human heads and the tails of scorpions, winged horses, the catoblepas whose sight alone was able to kill, play their part in his work by the side of the elephant and lion. And yet all is not false, even in those narratives that are most replete with falsehoods. We may sometimes detect the truth which has served them for a basis, by recalling to mind that these are exactly the narratives of travellers, who, in their ignorance, and the love of the marvellous, on the part of ancient travellers, have led them into these exaggerations, and have dictated to them those vague and superfluous descriptions, of which we find so great a number even in modern books of travels. Another very important defect in Pliny is that he does not always give the true sense of the authors whom he translates, especially when designating different species of naturalists was that of fixing a nomenclature, and their inventions and defective method shows itself in Pliny more than in any other. The descriptions, or, rather, imperfect indications, which he gives, are almost always insufficient for recognising the several species, when tradition has failed to preserve the particular name; and there is even a large number whose names alone are given, without any characteristic mark, or any means of distinguishing them from one another. If it were possible still to doubt respecting the advantages enjoyed by the modern over the ancient methods, these doubts would be completely dispelled, on discovering that almost all the ancient writers have said relative to the virtues of their plants is completely valueless for us, from the impossibility of distinguishing the individual plants to which they refer. Our regret, however, on this account, will be great- ly ameliorated by the study of the ancients, and Pliny in particular, have designated the medical virtues of plants. They attribute so many false and even absurd properties to those plants which we know, that we may be allowed to be very indifferent respecting the virtues of those which we do not know. If we believe that part of Pliny's work which treats of the materia medica, there is no human power, the works of travellers, and by redun- dant remedies; and, most unfortunately, for the space of two centuries after the revival of learning, medical men took great pleasure in repeating these pu- rities. — As regards the facts, therefore, detailed in his work, Pliny possesses at the present day no real interest, except as regards certain processes followed by the ancients in the arts, and certain particulars of an historical and geographical nature, of which we would have been ignorant without his aid. Therefore the portion of his work which is devoted to the arts is the one that merits the most careful study. He traces their progress, he describes their products, he names the most celebrated artists, he indicates the manner in which their labours are conducted, and it cannot be doubted but that, if well understood, he would make us acquainted with some of those secrets by means of which the ancients were enabled to carry out a thing that has been able imperfectly to imitate. Here again, how- ever, the difficulties of his nomenclature present them- selves; he names numerous substances, they are substances that must enter into compositions, or be sub- jected to the operation of the arts, and yet we know not what they are. With difficulty are we enabled to divine the nature of a few, by means of certain rather erudite characteristics that are related to them; and hence it is that we may be said to be in want, even at the present day, of a true commentary on Pliny's Natural History, a work that would require the most extensive acquaintance with every department of physical knowledge. — If, however, Pliny has put little merit for us as a critic and a naturalist, the case is different with regard to his talents as a writer, and the immense store of Latin terms and forms of expression with which he has furnished the art of rhetoric, with which he has furnished the art of rhetoric, and which he has used in order to supply himself, and which make his work one of the richest depots of the Roman tongue. It has been justly remarked, that without Pliny it would be impossible to re-establish the Latin language; and this remark must be understood, not only with regard to words, but also their various acceptations, and the turn and movement of sentences. It is certain, also, that wherever he can indulge in general ideas or philo- sophical abstractions, he is reconciled to his subject by the brilliancy of his style, and the vehemence, and vivacity of his thoughts somewhat of unexpected boldness, which make amends for the dryness of previous enumerations, and may find favour for him with the generality of his readers, and stone in some degree for the insufficiency of his scientific indica- tions. It must be confessed, at the same time, however, that he is too fond of seeking for points and antitheses; that he is occasionally harsh; and that, on many occasions, his language is marked by an obscu- rity which arises less from the subject-matter than from the desire of appearing sententious and condensed. But he is everywhere dignified and grave, everywhere full of love for justice and of respect for virtue; of horror for cruelty and baseness, of which he had before his eyes such fearful examples; and of contempt for that unbridled luxury which had so deeply corrupted the spirit of his countrymen. In this point of view, Pliny cannot be too highly praised; and, notwithstanding the defects that we are compelled to notice in him when we view him as a naturalist, we may still regard him among the most distinguished writers, and those most worthy of the epithet of classic, that flourished after the age of Augustus. — In his religious prin- ciples, Pliny was almost an atheist, or, at least, he ac- knowledged only a little more than the rest of his phi- losophers have explained the system of Pantheism in more detail, and with greater spirit and energy, than he has done in his second book. — The Natural His- tory was Pliny's last work, for he perished the year after its publication. The particulars of his death are given in a letter of the younger Pliny to the historian Tacitus, who was anxious to transmit an account of it to posterity, and who visited Pliny in command of the fleet which was appointed to guard all that part of the Mediterranean comprehended be- tween Italy, Gaul, Spain, and Africa. We will give the rest of the account in the words of his nephew: "On the 24th of August, about one in the afternoon, my mother desired him to observe a cloud which ap-
peared of a very unusual size and shape. He had just returned from taking the benefit of the sun, and, after bathing himself in cold water, and taking a slight rest, had retired to his study. He immediately arose and, without any ado, ran out into the city, and, being more distinctly view this very uncommon appearance. It was not, at that distance, discernible from what mountain this cloud issued, but it was found afterward to ascend from Vesuvius. I cannot give you a more exact description of its figure than by resembling it to that of a pine-tree, for it shot up to a great height in the form of a trunk, which extended itself at the top into a sort of branches; occasioned, I imagine, either by a sudden gust of air that impelled it, the force of which decreased as it advanced upward, or the cloud itself, being pressed back again by its own weight, expanded in this manner: it appeared sometimes bright, and sometimes dark and spotted, as it was either more or less impregnated with earth and cinders. This extraordinary phenomenon excited my uncle's philosophical curiosity to take a nearer view of it. He ordered a light vessel to be got ready, and gave me the liberty, if I thought proper, to attend him. I rather chose to continue my studies, for, as it had happened, he had given me employment of that kind. As he was coming out of the house, he received a note from Rentina, the wife of Bassus, who was in the utmost alarm at the imminent danger which threatened her; for the villa being situated at the foot of Mount Vesuvius, there was no way to escape but by the sea; she earnestly entreated him, therefore, to come to her assistance. He accordingly changed his first design, and what he began with a philosophical, he pursued with a heroic, turn of mind. He ordered the galleys to put to sea, and went himself on board with an intention of assisting not only Rentina, but several others; for the villages stand extremely thick on that beautiful coast. When hastening to the place from whence others fled with the utmost terror, he steered his direct course to the point of danger, and with so much calmness and presence of mind as to be able to make and dictate his observations upon the motion and figure of that dreadful scene. He was now so near the mountain, that the cinders, which grew thicker and hotter the nearer he approached, fell into the ships, together with pumice-stones, and black pieces of burning rock. They were likewise in danger, not only of being aground by the sudden retreat of the sea, but also from the vast fragments which rolled down from the mountain to the sea itself. He safely arrived at the village, and stopped to consider whether he should return back again; to which the pilot advising him, "Fortune," said he, "befriends the brave; carry me to Pomponianus." Pomponianus was then at Stabiae, separated by a gulf, which the sea, after several insensible windings, forms upon the shore. He had already sent his baggage on board; for, though he was not at that time in actual danger, yet, being within the view of it, and, indeed, exceedingly near, it should be in the least incense that he was determined to put to sea as soon as the wind should change. It was favourable, however, for carrying my uncle to Pomponianus, whom I found in the greatest consternation. He embraced him with eagerness, encouraging and exhorting him to keep up his spirits; and, the more to dissipate his fears, he ordered the baths to be got ready with an air of complete unconcern. After having bathed, he sat down to supper. The meal was sufficient; (which was equally heroic, with all the appearance of it. In the mean time the eruption from Mount Vesuvius flamed out in several places with much violence, which the darkness of the night contributed to render still more visible and dreadful. But my uncle, in order to soothe the apprehensions of his friendly host, assured him it was only the burning of the villages, which the country people had abandoned to the flames. After this he retired to rest, and it is most certain he was so little discomposed as to fall into a deep sleep; for, being pretty fat, and breathing hard, those who attended without actually heard him snore. The court which was invited to the suppers of Hostilian was, however, this much satisfied with the stones and ashes, if he had continued there any time longer; it would have been impossible for him to have made his way out: it was thought proper, therefore, to awaken him. He got up, and went to Pomponianus and the rest of his company, who were not unconcerned enough to think of going to bed. They consulted together whether it would be most prudent to trust to the houses, which now shook from side to side with frequent and violent concussions, or fly to the open fields, where the calcined stones and cinders, though light indeed, yet fell in large showers, and threatened destruction. In this distress they resolved for the fields, as the less dangerous situation of the two: a resolution which, while the rest of the company were hurried into it by their fears, my uncle embraced upon cool and deliberate consideration. They went out, then, having pillows tied upon their heads with napkins; and this was their whole defence against the storm of stones that fell around them. It was now day everywhere else, but there a deeper darkness prevailed than in the most obscure night; which, however, was in some degree dissipated by torches, and other lights of various kinds. They thought proper to go down farther upon the shore, to observe if they might safely put out to sea; but they found the waves still running extremely high and boisterous. There my uncle, having drunk a draught or two of cold water, threw himself down upon a cloth which was spread for him, when immediately the flames, and a strong smell of sulphur, which was the forerunner of them, dispersed the rest of the company, and obliged him to rise. He raised himself up with the assistance of two of his servants, and instantly fell down dead; suffo- cated, as I conjecture, by some gross and noxious vapour, having always had weak lungs, and being frequently subject to a difficulty of breathing. As soon as it was light again, which was not till the third day after, his body was found entire, and without any marks of violence upon it, exactly in the same posture as he fell, and looking more like one asleep than dead." (Plin., Ep. 6, 16, Meloath's transl.)—The eruption here mentioned is evidently the one of which many historians have made mention, and which, occurring in the first year of the reign of Titus, destroyed the cities of Herculaneum and Stabiae. He speaks of it in a letter to Macer (3, 5), where he gives a list of his uncle's works, states, that he died at the age of fifty-six years. We cannot, therefore, comprehend how Sammonicus Serenus, and, after him, Macrobius, St. Jerome, and St. Prosper, have made him live until the twelfth year of the reign of Trajan, unless they have confounded together the uncle and nephew.—The younger Pliny gives an interesting account of his uncle's indefatigable zeal, and of the "curiosity of in- quiry," he observes, in another of his letters, "how a man so engaged as he was could find time to compose such a number of books, and some of them, too, upon abstruse subjects. But your surprise will rise still higher when you hear that for some time he en- gaged in the profession of an advocate; that he died in his fifty-sixth year; that, from the time of his quitting the bar to his death, he was employed in the highest and most important causes of his time. But let me add, he had a quick apprehension, joined to unwearied application. In summer he always began his studies as soon as it was night; in winter, generally at one in the morning, but never later than two, and often at midnight. No man ever spent less time in bed, insomuch that he would sometimes, without retiring from his book, take a short sleep and then pursue his studies. After a short and light repast at noon (agreeably to the good
old custom of our ancestors), he would frequently, in the summer, if he was disengaged from business, re- pose himself in the sun; during which time some author was read to him, from which he made extracts and observations, as, indeed, was his constant method, whatever book he read: for it was a maxim of his, that no book was so bad but might be learned from it. When this was over, he generally went into the cold bath, and, as soon as he came out of it, just took some slight refreshment, and then re- posed himself for a little while. Thus, as if it had been a new day, he immediately resumed his studies till supper-time, when a book was again read to him, upon which he would make some hasty remarks. I remember once, his reader having pronounced some word wrong, a person at table made him repeat it again, upon which my uncle asked his friend if he un- derstood it. The other acknowledging that he did, Why, then, said he, would you make him go back again? We have lost by this interruption above ten lines: so covetous was this great man of his time. In summer he always rose from supper by daylight, and in winter as soon as it was dark: and this was an inviolable rule with him. Such was his manner of life. Pliny the Younger, and many others in his country his whole time was devoted to study without intermission, excepting only when he bathed. But in this exception I include no more than the time he was actually in the bath, for all the time he was rubbed and wiped he was employed either in hearing some book read to him, or in dictating himself. In his journeys he lost no time from his studies; but his mind at those seasons being disengaged from all other thoughts, applied itself wholly to that single pursuit. A secretary constantly attended him in his chariot, who, in the winter, wore a particular sort of warm gloves, that the sharpness of the weather might not occasion any interruption to his studies; and, for the same reason, my uncle always used a chair in Rome. I remember he once reproved me for walking: 'You might,' said he, 'employ those hours to more advantage.' For he thought all time lost not given to study. By this extraordinary application he found time to write so many volumes, besides one hundred and sixty which he left me, consisting of a kind of common- place, written on both sides, in a very small character; so that one might fairly reckon the number consider- ably more.' (Cuvier, Biogr. Univ., vol. 35, p. 67, seqq.) The best edition of Pliny is that forming part of the collection of Lemaire, Paris, 1827—32, 11 vols. 8vo. It is the translation of De la Place: and ofdalechamp, Paris, 1587, fol.; that of Hardouin, Paris, 1723, 3 vols. fol. (reprinted with additions and improvements from the edition of 1685, in 5 vols. 4to); and more particularly that of Franznius, Lips., 1778—91, 10 vols. 8vo. There is also a French translation, in 20 vols. 8vo., Paris, 1829—33, by De Grand- sagne, with annotations by some of the most eminent scientific men in France. It is an excellent work. In his other writings and letters, you will find, for distinc- tion sake, the "Younger," was born at or near Comum, about the sixth year of the reign of Nero, or A.D. 61. His mother was a sister of the elder Pliny; and as he lost his father, Lucius Caecilius, at an early age, he removed, with his surviving parent, to the house of his uncle. Here he resided for some years, and, having been adopted by his uncle, took the name of the latter in addition to his parent's. In the seventeen or eighteen years that he has been of a delicate constitution, and even in his youth to have possessed little personal activity and enterprise; for, at the time of the famous eruption of Vesuvius, when he was be- tween seventeen and eighteen, he continued his studies at home, and allowed his uncle to set out to the mountain without him. It was on this occasion that the latter lost his life. In literature, however, the younger Pliny made considerable progress even at an early age. His uncle had given him a careful educa- tion; he composed a Greek tragedy when only four- teen, and wrote Latin verses on several occasions throughout his life. His principal attention, however, was devoted to the study of eloquence; and he had the reputation of a very good in that science. The emi- nent and others of the most eminent men of the day. Pliny, as we have already remarked, was nearly eight- teen years of age at the time of his uncle's death. One year after this he appeared as a pleader at the bar. In his twentieth year he served as a tribune in Syria, and remained eighteen months in that country. On his return to Rome he was appointed one of the quaestors of the emperor. The duties of these func- tionaries consisted in reading to the senate the excerpts of the prince. Not long after he became tri- bune of the people. At the age of thirty he was ap- pointed praetor; and after this he passed several years in retirement, in order not to attract the notice of Domitian. He would not, however, have escaped the fate which threatened all the eminent men of the day, had it not been for the death of Domitian, since there was no copy among the papers of the edition of Pliny that has been recently sent to the em- peror. Nerva and Trajan recalled him to the dis- charge of public duties, and the latter prince appoint- ed him administrator of the public treasury, an office which he filled for the space of two years. After attaining to the high offices of consul and augur, Pliny was appointed by Trajan to the government of Bithynia, a province in which many abuses existed, and which it required a man of ability and integrity to re- move. (Epist., 10, 41.) Pliny was then in his forty- first or forty-second year. The trust so honourably committed to him he seems to have discharged with great fidelity; and the attention to every branch of his duties, which his letters to Trajan display, is pecu- liarly praiseworthy in a man of sedentary habits, and accustomed to the enjoyments of his villas, and the stimulants of literary glory at Rome. He remained in his government for the space of two years, and it was during this period (A.D. 107) that he wrote his cele- brated letter to Trajan respecting the Christians in his province. (Epist., 10, 97.) This letter, and the em- peror's reply, furnish numerous important testimonials to the state of Christianity at that early day, and to the purity of Christian principles. —The period of Pliny's death is quite uncertain; he is generally sup- posed, however, to have ended his days, A.D. 109, in the reign of the Emperor Hadrian. —His character was that of a prudent husband, a master, and a friend, was affectionate, kind, and generous. He displayed also a noble liberty to- wards Comum, his native place, by forming a public library there, and devoting a yearly sum of three hun- dred thousand sesterces, for ever, to the maintenance of children, born of free parents, who were citizens of Comum.—A man like Pliny, of considerable talents and learning; possessed of great wealth but not dis- posed, was sure to meet with many friends, and with still more who would gratify his vanity by their praises and apparent admiration of his abil- ities. But as a writer he has done nothing to entitle him to a very high place in the judgment of posterity. Still, however, no Roman, from the time of Cicero, acquired so high a reputation for eloquence. All his discourses, however, are lost, with the single exception of his Oration against the Jews. Pliny, having been appointed consul, addressed to the emperor a discourse, in which he thanked him for the honour bestowed, and, at the same time, eulogized the character and actions of the prince. It was delivered in open senate, and was then enlarged and published. (Epist., 3, 18.) This production belongs to a class of compositions, the whole object of which was to produce a striking effect, and it must not aspire to any greater reward. It is in-
PLUTARCH, one of the most generally known and frequently cited, and hence, if the expression be allowed, one of the most popular, writers of antiquity. He was a native of Chaeronea in Boeotia, but the period of his birth is not exactly ascertained. Plutarch himself informs us, that he was studying under Ammonius, at Delphi, when Nero visited Greece, which would be the 66th year of our era; and hence we may conjecture that he was born towards the close of the reign of Claudius, about the middle of the first century. Plutarch belonged to an honourable family, in which a fondness for study and literary pursuits had long been hereditary. In his early days he saw at one and the same time his father, his grandfather, and great grandfather in being; and he was brought up under this influence of ancient manners, and in this sweet family- converse, which imparted to his character an air of integrity and goodness, that showed itself in so many of his numerous writings. In the school of Ammonius, which he attended when still quite young, and where he formed an intimate friendship with a descendant of Themistocles, he received instruction in mathematics and philosophy. Without doubt, he carefully attended also, under able instructors, to the various departments of belles-lettres, and his works plainly show that the perusal of the poets has had an influence on his style. He seems to have been very young, he was employed by his fellow-citizens in some negotiations with neighbouring cities. The same motive led him to Rome, whither all the Greeks possessed of any industry or talent had been accustomed regularly, to come for more than a century, to seek reputation and fortunes, either by attaching themselves to some powerful individuals, or by giving public lectures on philosophy and eloquence. Plutarch, it may be said, readily accepted the latter mode of acquiring celebrity. He himself declares, that during his sojourn in Italy, he could not find time to become sufficiently acquainted with the Latin tongue, by reason of the public business with which he was charged, and the frequent conferences he had with educated men on matters of a philosophic nature, about which they came to consult him. He spoke, he professed, his own language, the Greek, of which the Greeks had preserved of imposing their idiom on their conquerors, and of making it the natural language of philosophy and letters. These public lectures, these declamations, were evidently the first germe of the numerous moral treatises that Plutarch subsequently composed. The philosopher of Chaeronea exercised at Rome that profession of sophist, the very name of which is now become a by-word, and the mere existence of which seems to indi
cante the decline of national literature, but which was
time more than once rendered illustrious at Rome by
great talents and the effects of persecution. It is well
known, that, under the bad emperors, and amid the
universal slavery that was then the general frame of
philosophy was the
the only asylum to which liberty fled when banished
from the forum and the senate. Philosophy, in earlier
days, had effected the ruin of the republic; it was
then only a vain scepticism, abused to their own bad
purposes by the ambitious and the corrupting. Adopt-
ing a better vocation, it became, at a later period, a
species of religion, embraced by men of resolute spirit;
they needed a wisdom that might teach them how to
speak and act with propriety and decency, and, as it
was called, for this purpose, stoicism to their aid. Plutarch,
the most constant and the most contemptuous opponent
of the Epicurean doctrines; Plutarch, the admirer of
Plato, and a disciple of his in the belief of the soul's
immortality, of divine justice, and of moral good,
taught his hearers truth, less pure, indeed, than those
of Christianity, but which, nevertheless, in some de-
gree adapted themselves to the prevailing wants of his
country and various states. It is not known whether
Plutarch prolonged his stay in Italy until that period
when Domitian, by a public decree, banished all phil-
osophers from that country. Some critics have sup-
posed that he made many visits to Rome, but none
after the reign of this emperor. One thing, however,
appears well ascertained, that he returned, when still
young, to his native country, and that he remained there
throughout his life. It was his long sojourn in the land of his fathers, Plutarch was con-
tinually occupied with plans for the benefit of his
countrymen; and, to give but a single instance of his
zeal in the public service, he not only filled the office
of archon, the chief dignity in his native city,
but even discharged with great exactness, and without
the least reluctance, the duties of an inferior office,
that of inspector of public works, which compelled him, he
tells us, to measure tile, and keep an register of
the loads of stone that were brought to him. All this ac-
cords but ill with the statement of Suidas, that Plu-
tarch was honoured with the consulship by Trajan.
Such a supposition is contradicted both by the silence
of history and the usages of the Romans. Another
and more recent tradition, which makes Plutarch to
have been the preceptor of Trajan, appears to rest on
no better foundation, and can derive no support what-
ever from the writings of the philosopher. An employ-
ment, however, which Plutarch does seem to have filled,
was that of priest of Apollo, which con-
ected him with the sacerdotal corporation at Delphi.
The period of his death is not known; but the proba-
bility is that he lived and philosophized until an advan-
ced age, as would appear both from the tone of some
of his writings and various anecdotes that are related
of him.— The several productions of this writer will
now be briefly examined. The work to which he owes
his chief celebrity is that which bears the title of Βίοι
παράλληλοι ("Parallel Lives"). In this he gives bi-
ographical sketches of forty-four individuals, distin-
guished for their virtues, their talents, and their ad-
vventures, some Greek, others Roman, and gives them in
such a way that a Roman is always compared with a
Greek. Five other biographies are isolated ones;
these he includes under "Lives of Worthy Women." These
are those of Atarxeraes Muemon, Aratus, Galba, Otho,
and Homer, though this last is probably not Plutarch's.
The lives that have been perished are those of Epaminon-
das, Scipio, Augustus, Tiberius, Caligula, Claudius,
Nero, Vitellius, Hessid, Pindar, Crates the Cynic,
Deiphontes, Aristomenes, and Aratus the poet.—Many
regard the Lives of Plutarch as models of biography.
The principal art of the writer consists in the delinea-
tion of character; but it has been objected to him, and
it would seem, with justice, that his characters are all
of a piece; that he represents his heroes either as com-
pletely enveloped by some passion, or as perfectly virtu-
ous, and that he has not been able to depict the almost
infinite variety of shades between vice and virtue.
What renders the perusal of the biography partic-
ularly attractive, is our seeing his personages constitu-
ently in action; we follow them amid public affairs, we
accompany them to the scenes of private life, to the
interior of their dwellings, and into the very bosom of
their families. "We are not writing histories," ob-
serves Plutarch himself, "but lives. Neither is it al-
ways in the most distinguished exploits that men's vir-
tues and vices may be best discerned; but frequently
when contact is made with some more intimate and
more personal acontecements that distinguishes a person's real character more than fields of
commerce, the greatest battles, or the most important
sies. As painters, therefore, in their portraits, la-
bour the likeness in the face, and particularly about
the eyes, in which the peculiar turn of mind most ap-
pears, and run over the rest with a less careful hand,
so must we be permitted to strike off the features of
the soul, in order to give a real likeness of these great
men, and leave to others the circumstantial details of
their toils and their achievements." (Vit. Alex., c. 1.)
This reasoning of Plutarch's is no doubt very just, but
it supposes that the writer does not go in quest of an-
cedotes, and that he exercises a sound and rigid crit-
icism in the selection of those which he actually re-
spects. Such, however, is not the case with Plu-
tarch. Another defect with which he may be unjustly
charged, is the entire neglect of the art of chronology, so
that frequently his narrative pre-
semples only an incoherent mass of facts, and the pur-
usal of his lives leaves behind it, at times, only a
confused impression. On the other hand, the Lives
of Plutarch contain a treasure of practical philosophy,
of morality, and of sound and useful maxims, the
fruit of a long experience: indeed, it may be assert-
et, that oftentimes these Lives are only so many his-
dories, not of an inferior order, but of a high order.
We may well wrong the author in blaming him for
ignorance of chronology, so that frequently his narrative pre-
semples only an incoherent mass of facts, and the pur-
usal of his lives leaves behind it, at times, only a
carful impression. On the other hand, the Lives
of Plutarch contain a treasure of practical philosophy,
of morality, and of sound and useful maxims, the
fruit of a long experience: indeed, it may be assert-
et, that oftentimes these Lives are only so many his-
dories, not of an inferior order, but of a high order.
We may well wrong the author in blaming him for
ignorance of chronology, so that frequently his narrative pre-
semples only an incoherent mass of facts, and the pur-
usal of his lives leaves behind it, at times, only a
biographical sketches of Plutarch, though our limits forbid our entering on the detail. It may be said, in a few words, that Plutarch, in the composition of his Lives, was influenced by the belief that moral or religious did not, however, blindly follow them, but weighed their respective statements. In the balance of justice, and, when their accounts were contradictory, adopted such as seemed to him most probable.—The other historical works of Plutarch are the following: 1. Ἡ Ρωμαϊκή ἡ ΑΛτία Ρωμαϊκή ("Roman Questions"). These are researches on certain Roman usages: for example, Why, in the ceremony of marriage, the bride is required to touch water and fire? Why, in the same ceremony, they light five tapers? Why travellers, who, having been considered dead, return eventually home, cannot enter into their houses by the door, but must descend through the roof, &c.—2. Ἡ Εὐλυκτική ἡ ΑΛτία Εὐλυκτική ("Hellenica, or Greek Questions"). We have here similar discourses on points of Greek antiquity.—3. Περὶ παραλλήλων Ἑλληνικῶν ("Parallelis drawn from Grecian and Roman History"). In order to show that certain anecdotes in Grecian history, which appear fabulous, are entitled to full confidence, Plutarch opposes to them certain analogous events from Roman history. This production is unworthy of Plutarch, and we are probably mistaken in its. It possesses no other merit than that of having preserved a large number of fragments of Greek historians, who are either otherwise unknown, or whose works have not come down to us.—4. Περὶ τῆς Ῥωμαίου τέχνης ("Of the Fortune of the Romans")—5. Ἡ Τῶν συμμετοχῶν τῆς στρατιωτικῆς ("On the Fortune or Value of Alexander"). In one of these Plutarch undertakes to show that Alexander owed his success to himself, not to Fortune. In the other, he attempts to prove, that his virtues were not the offspring of a blind and capricious Fortune, and that his talents and the resources of his intellect cannot be regarded as favours bestowed by this same Fortune: and he shows that the Romans yoke, never ceased detracting from the glory of this republic, and ascribing its rapid progress to some blind and unknown cause. One of the motives that induced Polibius, moreover, to write his history, was to undeceive his countrymen on this point, and prove to them that the prosperity of Rome was owing, not to the caprices of Fortune, but to good conduct and valour.—7. Πέτρου Ἀθραυτοῦ κατὰ πόλεμον ἡ Αἰγαλῆ ("What are more renowned for War or for the Sciences"). The commencement and conclusion are wanting. The text of what remains of this piece is very corrupt.—8. Περὶ Ἰσίου καὶ Ὀσιάρου ("Of Isis and Osiris"). This treatise contains a number of very curious remarks on the Egyptian mythology, but it is, at the same time, that very one of the works of Plutarch in which his want of critical skill is most apparent. The unauthorised interpretation of the Egyptians a philosophical sense, in order to justify them before the tribunal of reason. Hence this treatise can only be employed with great caution in studying this branch of ancient mythology.—9. Ἐπίτομον τῆς συγκρίσεως Μενιδόνου καὶ Ἀριστοτόλαρου ("Abridgment of the Comparison between Menander and Aristophanes"). An extract, probably, from some lost work of Plutarch's.—10. Περὶ τῆς Ἡθοδοσίας ἡ Ἐκκλησίως ("Of the Malignity of Herodotus"). From a mistaken principle of patriotism, Plutarch here attacks the veracity of Herodotus as an historian. The latter has an able advocate in A. B府 dιστ. Inscr., &c., vol. 30, 36, and 38.—11. Περὶ τῶν ὑπερκάλυψεων Ἐπισκόπων ("Biography of the ten Orators"). This work is evidently supposititious. Photius has inserted it in his Bibliotheca, with many omissions and additions, but without stating that it was written by Plutarch. Hence some critics have ascribed it to the patriarch himself. This piece, however, bears the stamp of an age much earlier than that of Photius.—We can only guess at the philosophical, or, as they are more commonly called, the moral, works of Plutarch. He was not a profound philosopher. He had formed for himself a peculiar system, made up from the opinions of various schools, but particularly from those of Plato and the Academicians, which he has sometimes only imperfectly understood. He detested the doctrines of Epicurus and the Porch, and the hatred he had vowed towards their respective schools renders him sometimes unjust towards their founders. He was not the least free from superstition, and he pulled to excess his devotion towards the gods of paganism. His philosophical or moral works are more than sixty in number. They are full of information as regards an acquaintance with ancient philosophy; and they have the additional merit of preserving for us a number of passages from authors whose works have perished.—An analysis of these writings is given by Schöll (Hist. Lit. Gr., vol. 5, p. 77, seqq.).—The best editions of the whole works of Plutarch are, that of Reiske, Lips., 1774–82, 12 vols. 8vo.; that of Hutton, Tubing., 1796–98, 14 vols. 8vo., and that forming part of the Tauchnitz collection. The best edition of the Lives alone is that of Coray, Paris, 1809–15, 6 vols. 8vo.; and the best edition of the Moral Works is that of Wytenbach, Oxon, 1793, 6 vols. 4to, and 12 vols. 8vo. Thoro (Πλούτωρ), called also Hades (Ἁδης) and Aidonius (Ἀδώνιος), as well as Orcus and Dis, was the brother of Jupiter and Neptune, and lord of the lower world, or the abode of the dead. He is described as a being inexorable and deaf to supplication—for from his realms there is no return—and an object of avarice and hatred to both gods and men. (II., 9, 158, seq.) All the latter were sure to be, sooner or later, collected into his kingdom. The name Hades appears to derive its origin from the Greek ἱδέα, which bears the same meaning. "to see," and signification of the nature of the realm over which he bore sway. The apellation of Plato was received by him at a later period, and would seem to be connected with the term πλούτος, "wealth," as mines within the earth are the producers of the precious metals. This notion Voss thinks began to prevail when the Greeks first visited Spain, the country most abundant in gold. (Mythol. Briefe, vol. 2, p. 175.) Hades appears to Trojan epic poetry, that the name in question was first given in the mysteries (ad Apollod., 3, 12, 6). It is employed occasionally by the Attic dramatists (Soph., Antig., 1200. —Eurip., Alcest, 370. —Aristoph., Plut., 727). and it became the prevalent one in later times, when Hades came to signify a place rather than a person.—The adventures of Pluto were few, for the gloomy nature of himself and his realm did not offer many occasions for legend. The story derived from a name, more happily delighted in; yet he too had his love-adventures. The tale of his carrying off Proserpina is one of the most celebrated in antiquity. (Vid. Proserpina.) He loved, we are told, and carried off to Erebus the nympha Leuce; and, when she died, he caused a tree, named from her (εὐκίς, "white poplar"), to spring up in the Elysian fields. (Servius ad Virg., Eclog., 7, 61.) Another of his loves was the nymph Menha, whom Proserpina, out of jealousy, turned into the
PLUTO.

PLUTO, son of Iasion or Isius, by Ceres, the goddess of corn, has been confused by many of the mythologists with Pluto, though plainly distinguished from him as being the god of riches. He was brought, up by the goddess of peace, and, on that account, Pax was represented at Athens as holding the god of wealth in her lap. The ancients represented him as blind, and besowing his favours indiscriminately on the good and bad. He appears as an actor in the comedy of Plautus. He is the judge of the dead, and also bears a part in the Timon of Lucian. The Greek form Πλοῦτος means "wealth." The popular belief among the ancients assigned him a dwelling-place in the subterranean regions of Spain, a country famed for its precious metals. Phadrus relates, in one of his fables, that when Hercules was received into heaven, and was saluting the gods who throned about the throne, among other congratulations, he turned their attention to the beauty of Pluto, who inquired the cause of his strange conduct, that he hated Pluto because he was the friend of the bad.
and, besides, corrupted both good and bad with his gifts. The fable is borrowed, with some slight alteration, from the Greek (Phaedr., fab. 4, 12.)

Pleius, a surname of Jupiter, god of rain. He was invoked by that name among the Romans, whenever it was desired to quench a heat, and was in want of refreshing showers. (Tibull., 1, 8, 26.)

Psxx, the place of public assembly at Athens, especially during elections, so called from the crowds accustomed to assemble therein (ἀπὸ τοῦ πεπενωμένου). The Psxx was situated on a low hill, sloping down to the north, at the western verge of the city, and at a quarter of a mile to the west of the Acropolis. It was a large semicircular area, of which the southern side, or diameter, was formed by a long line of lime-stone rock, hewn so as to present the appearance of a vertical wall, in the centre of which, and projecting from it, was a solid pedestal, carved out of the living rock, ascended by steps, and based upon seats of the same material. This was the celebrated Bema, from which the orators addressed the people. The lowest or most northern part of the semicircular curve was supported by a terrace wall of polygonal blocks. (Wordsworth’s Gr. Ant., p. 150.—Aristoph., Acharn., 20.—Jul. Poll., 8, 10.)

Podalirius, son of Æsculapius and Epione, and a celebrated physician of antiquity. Xenophon calls him and his brother Machson pupils of Chiron the centaur (Cyneget., 1, 14), an assertion which Aristides takes the unnecessary trouble of refuting. (Orat. in Asclepiad., vol. 1, p. 76, ed. Cant.) The two brothers were also distinguished for eloquence, and for their acquaintance with the military arts. (Xen., l.c.) According to Quintus Calaber, Machson was the elder, and also instructed Podalirius. (Paralipom., Hom., 8, 60.) They were both present at the siege of Troy, and made themselves so conspicuous by their valor, that Homer ranks them among the first of the Greek heroes. Their skill in the healing art was also highly serviceable to the wounded, and they were at last excused from the fight, and from all the fatigues of war, in order to have more time to attend to those who were injured. On his return from Troy, Podalirius was driven by a tempest to the coast of Caria, where he either settled in, or founded, the city of Syrana, called by some Syron. (Pausan., 3, 26.—Steph. Byz., s. v. Ἱσμαῖλιτις, ad loc.) The more common account is in favour of his having founded the place, and he is said to have called it after Syrana, the daughter of Damnorus, king of the country. He had cured her, it seems, of the effects of a fall from the point of the Daunian, by bleeding her in both arms at the moment when her life was despaired of; and he received her in marriage, together with the sovereignty of the Carian Chersonese. (Steph. Byz., s. v. Σύρων.) This story furnishes the first instance of a physician’s having practised bleeding, at least among the Greeks. (Sprengel, Hist. de la Méd., vol. 1, p. 131.) Another account makes Podalirius to have been assassinated on the coast of Rhodes by a band of pirate barbarians. He is said to have been worshipped after death under the name of νόσαν ἄκεστας, “healer of diseases.” (Lycoth., 1046, seqq.) Strabo, moreover, says, that the tomb of Podalirius was to be seen at the distance of 100 stadia from the sea, in the country of the Daunians. (Strab., 436.)

Podarces, I. the first name of Priam. When Troy was taken by Heracles, he was rescued from the fire by his brother Heracles, and thence received the name of Priam. (Vid. Priamus.)—II. The son of Iphicles, of Thessaly, and brother of Protesilaus. He went with twenty ships to the Trojan war, and, after his brother’s death, commanded both divisions, amounting to forty vessels. (Hom., II. 2, 698, seqq.—Eustath., ad loc.—Muncker, ad Hygian, fab. 97.)

Podarke, one of the Harpies, mother of two of the horses of Achilles by the wind Zephyrus. (Hom., II., 16, 150.—Consult Heyne, Excurs., ad loc.) The name implies swiftness of feet (from ποῦς, “a foot,” and δυνατός, “swift.”)

Pozar, the father of Philocles. The son is hence called Philocles, “father of PoDARGE.” By Ovid. (Met. 13, 45.)

Pocile, a celebrated portico at Athens, which received its name from the paintings with which it was adorned (ποτήλη στῶν, from ποτίλος, “diversified”). Its more ancient name is said to have been Pessimacrius. (Diog. Laerct., Vit. Zen., Plin., Vit. Cim.) The pictures were by Polygnotus, Micon, and Pamphilus, and represented the battle between Theseus and the Amazons, the contest at Marathon, and other achievements of the Athenians. (Pausan., 1, 15.) It was in this portico that Zeno first opened his school, which was hence denominated the Stoic. (The “school of the porch,” from αρξο.) No less than 1500 citizens of Athens are said to have been destroyed by fire here in the time of the Peloponnesian war. (Pausan., l.c.)

Poeni, a name common to both the Phoenicians and Carthaginians. (Consult remarks under the article Phenicia, page 1049, vol. 2, near the end.)

Pogon, a name given to the harbour of Trozene from its shape, being formed by a curved strip of land which resembled a beard (πογόνος): hence arose the proverbial joke, πελεκεσίας εἰς Τροζίδα, which was addressed to those whose chins were but scantily provided. (Adag. Graec. Zenobat.) This port was formerly so capacious as to contain a large fleet. We are told by Herodotus that the Greek ships were ordered to assemble there prior to the battle of Salamis (§ 42.—Strab., 279). At present it is shallow, obstructed by sand, and accessible only to small boats. (Diod., vol. 2, p. 266.—Chandler, vol. 2, p. 263.—Cramer’s Anc. Greece, vol. 3, p. 266.)

Polia, a town of Istria, on the western coast, near the southern extremity, or Promontorium Poliaticum. It still preserves its name unchanged. Tradition reports it to have been founded by the Colchians, whom Peucetius had sent in pursuit of the Argonauts. It became afterward a Roman colony, and took the name of Pictas Julia. (Pliny, 3, 19.—Mela, 2, 4.—Cramer’s Anc. Italy, vol. 1, p. 130.)

Polemon, I. an Athenian of good family, who in his youth was addicted to infamous pleasures. The manner in which he was reclaimed from his licentious course of life, and brought under the discipline of philosophy, affords a memorable example of the power of eloquence when it is employed in the cause of virtue. As he was one morning, about the rising of the sun, returning home from the revels of the night, clad in a loose robe, crowned with a garland, strongly perfumed and intoxicated with wine, he passed by the school of Xenocrates, and saw him surrounded by his disciples. Unable to resist so fortunate an opportunity of indulging his sportive whim, he rushed into the school, and took his place among the philosophers. The whole assembly was astonished at this rude and indecent intrusion, but all Xenocrates discovered signs of resentment. The philosopher, however, preserved the perfect command of his countenance; and, with great presence of mind, turned his discourse from the subject on which he was lecturing to the topics of temperance and modesty, which he recommended with
so much strength of argument and energy of lan-
guage, that Polemon was constrained to yield to the
force of conviction. Instead of turning Xenocrates
and his doctrine to ridicule, he became sensible of
the folly of his former conduct, was heartily ashamed
of the contemptible figure which he made in so re-
spectable a company, and, as a mark of his clearly
felt remorse, covered his naked arm under his cloth,
assumed a sedate and thoughtful aspect, and, in short,
resolved from that hour to relinquish his licentious pleasures,
and to devote himself to the pursuit of wisdom. Thus
was this young man, by the powerful energy of truth
and eloquence, converted from an infamous liber-
tine to a respectable philosopher. In such a sudden
change of character, it is difficult to avoid passing
from the extreme to another. Polemon, after his
conversion, in order to brace up his mind to the tone
of rigid virtue, constantly practised the severest austerity
and most hardy fortitude. From the thirtieth year
of his age to his death, he drank nothing but water.
When he suffered violent pain, he showed no exter-
nal sign of anguish. In order to preserve his mind
undisturbed by passion, he habituated himself to speak
in a uniform tone of voice, without elevation or de-
pression, in which he continued, however, to be
warmed with urbanity and generosity. He was
fond of solitude, and passed much of his time in a
garden near his school. He died at an advanced
age, of consumption. Of the tenets of Polemon lit-
tle is said by the ancients, because he strictly adhered
to the doctrine of Plato. The direction of the Acad-
emy devolved upon him after the death of Xenocrates.
He is said to have taught that the world is God;
but this was, doubtless, according to the Platonic system,
which made the soul of the world an inferior divinity.
(Diag. Laert., 4, 16.—Suid., s. v.—Val. Max., 6, 9.
—Cic. de Fin., 4, 6.—Athenaeus, 2, p. 44.—Stob.,
Ecl. Phys., 1, 3.—Enfels' Hist. of Philos., vol.
1, p. 247, seq.)—II. A son of Zeno of Apamea, named
knight of Pontus by Antony, after the latter had de-
posed Darius, son of Pharnaces. (Appian, Bell. Civ.,
5, 75.) This person, who had the art to ingrate
himself alike with Antony, Augustus, and Agrippa,
was made king of that eastern part of Pontus, named
Polemoniacus after him. He was killed in an expedi-
tion against some barbarians of Sindice, near the
Palus Marota; but his widow, Pythodora, was reing-
oring in his stead at the time that Strabo wrote his Geo-
graphy. (Strab., 556, 578.—Die Cass., 53, 25.
—Id., 54, 24.)—III. Son and successor of the pre-
ceding, who according to the same historian, had
his domicile afterward enlarged by Claudius
with a portion of Cilicia. Nero eventually converted
Pontus into a Roman province. (Succt., Vit. Ner., 18,
—Crusius, ad loc.)—IV. Antonius, a celebrated sophis-
tist and public speaker, in the second century of our
era. He was a native of Laodicia on the Lycus, and
of a consular family, and was held in high esteem by
Trajan, Hadrian, and Antoninus Pius. Polemon spent
the greater part of his life in study, and after he opened
a school of rhetoric, and was sent on several occasions
as ambassador to Hadrian. He accumulated a large
fortune by his oratorical talents, but made many ene-
gies by his excessive haughtiness. He became a
great sufferer by the gout, and at the age of fifty-six
years, having become disgusted with life on account
of the tortures to which his complaint subjected him,
he returned to his native city, entered the tomb of his
father, which he was commanded to be opened for him,
and there ended his existence. We have remaining of his
works only two declamations or oratorical exercises,
entitled "Funeral Discourses" (Πολεμονεικα οιόγοι).
They are discourses feigned to have been delivered
in honour of those who fell at Marathon, by their own
fathers. The Emperor Marcus Aurelius, in a letter to
Fronto, describes him as a writer of ability, but less
pleasing than instructive. (Front, Relig., p. 80, ed.
Niebuhr.) The little that we possess of the writings
of Polemon neither authorizes us to adhere to this
opinion nor to contradict it. It is true, however,
that the two declamations which have reached us are writ-
ten in a vigorous style, but are devoid of elegance.
It was principally, too, for his strength and vehemence
that the ancients held Polemon in esteem, and called
him "the Trumpet of Olympia" (Σαλτίνσις Ολυμπια-
κις). St. Gregory Nazianzen studied and imitated
him. The best edition of the two declamations of
Polemon is that of Orellius, Lips., 1819, 8vo. (Scholl,
Hist. Lit. Gr., vol. 4, p. 226, seq.)—V. Surmamed Periigetes,
living during the reign of Polemy Epipha-
nes, about 291 B.C. He was one of thegymnosophists of the Stoic
Pantheism, and wrote a "History of Greece
and the East" (Χρονικ Περιγγαρυς), whence he obtained
the surname of Periigetes (Περιγγατης).
He wrote also a "Description of Illyum" (Περιγγαρυς Ιλλυω),
and, under the title of Κρίτης, a work on the origin
of the cities of Phocis, Pontus, &c. All these are
lost. Strabo and the scholiasts cite another work of
Polemon's; written against Eratosthenes, in which
the latter was accused of never having seen Athens.
—Id. 4. —Id., 4. —Id., 5, 390.—Id. 5. vol. 4, p. 53.)—VI. A writer on Physiognomy, supposed to be the same with the pupil
οι, Ψυγνομον Εγγεγραμ. It was published by
Peruscus at the end of his Ελιαν, Rom., 1545, 4to,
and is also contained in the collection of Franz,
"Scriptores Physiognomicae Veteres," Allocat., 1780,
8vo.
10 was consecrated to the worship of the goddess; and the western, including the northern and southern porticoes, was sacred to the deity of Ceres and her husband, Pleres.

POLLIO. and, as celebrated (Vid. 713), he had recently the highest objects of Athenian veneration, among which the most precious were the olive of Minerva and the fountain of Neptune, both of which sprang up at the bidding of those divinities when there was contention among the gods concerning the guardianship of Athens. Here, too, was the oldest and most deeply-venerated of the statues of the Athenian goddess; a figure carved in olive-wood, but of which the legend affirmed that it had fallen from heaven. (Wordsworth's Greece, p. 144 — Stuart's Antiquities of Athens, p. 37, Lond., 1827, 12mo.) Müller has written an interesting work on the Temple and Worship of Minerva Polias, under the following title: "Minerva Poliadis Sacra et Edem in areâ Athenarum illustravit C. O. Müller." Göttling, 1820, 4to.

POLIOCÉTES (Πολιοκέτης), "the besieger of cities," a surname given to Demetrius, son of Antigonus. (Vid. Demetrius I.)

POLITÉS, I. a son of Piam and Hecuba, killed by Pyrrhus in his father's presence. (Virt., E, 2, 529.) His brother was alive when Pyrrhus fought and conquered the Poliains, who followed Æneas into Italy, and was one of the friends of young Ascanius. (Virt., 5, 564.)

POLLÀ ARGENTARIA, the wife of the poet Lucan. (Vid. Lucanus.)

POLLENTIA, a town of Liguria, southeast of Alba Pompeia. It was a municipium, and is chiefly celebrated for its wool. (Plin., 8, 48.—Colunn., 7, 2.—Sil. Ital., 8, 599.) A battle was fought in its vicinity between Antonius and a few of the legions of his nephew, which appears to have been very doubtful. (Oros., 7, 37.) But Claudian speaks of it as the greatest triumph of his hero. (De Bell. Get., 605.) The modern village of Polenza stands near the site of the ancient city. (Cramer's Anc. Italy, vol. 1, p. 28.)

POLLIO, I. C. Asinius, a Roman consul in the time of Augustus, who, though of humble birth, was one of the most remarkable men and most distinguished statesmen of his age. He was born at Spoleto, and when we consider the brilliant part which he acted as a military commander, politician, and man of letters, it is singular we have so few remains of his writings, and such brief records of his actions. Pollio was born in the 675th year of the city, and he had, consequently, reached the age of thirty before the liberties of his country were subverted. During the times of the republic, he so well performed the parts of a citizen and patriot, that in one of Cicero's letters he is classed with Cato for his love of liberty and virtue. But in pursuing this line of conduct he offended some of the partisans of Pompey, and was forced, as he afterward alleged, to espouse the part of Caesar, in order to shield himself from their resentment. (Cic., Ep. ad Fam., 10, 31.) He became a favourite officer of Julius Caesar, whom he served with inviolable fidelity, and ever entertained for his liberator the highest respect. A short while before the dictator's death, he was sent to Spain at the head of a considerable army, to crush the party which Sextus Pompey had recently formed in that province; but he was not very successful in his prosecution of this warfare. (Dio Cass., 45.) After the assassination of Caesar, he offered his army and services to the senate; and, in his letters to Cicero, made the strongest professions of love of liberty and zeal for the commonwealth, declaring that he would neither desert nor survive the republic. (Cic., Ep. ad Fam., 10, 33.)

The hypocrisies of these protestations was evinced almost as soon as the letters in which they were contained had reached the capital; for his old fellow-soldier, Antony, having retreated into Gaul to rout the Gallic and Goth armies, he set out after them at Medæna, Pollio joined him from Spain with all the troops he commanded. He further contrived to disunite the fickle Plancus from his colleague Decimus Brutus, and to bring him over, with his army, to the enemies of the republic. By these measures he contributed more, perhaps, than any other of his contemporaries, to extinguish all hopes of the restoration of the commonwealth, and to throw the whole power of that country into the hands of the triumvirs. Having thus been chiefly instrumental in ruining the cause of liberty, that proud spirit of freedom or ferocia, as Tacitus calls it, which he afterward assumed, and the restoration of the Atrium libertinatis, which stood on the Aventine Hill, must have been looked on as a farce by his fellow-citizens, and has been considered by posterity as little better than imposture. Pollio was present at the formation of the triumvirate which took place in a small island of the Reno, a stream that passes near Bologna. Amid other sacrifices of friends and relatives then made by the heads of political parties, Pollio gave up his own father-in-law to the resentment of his new associates. He is said, however, to have repressed by his authority many disorders of the times, and to have mitigated, so far as was in his power, the cruelty of the triumvirs. In the year 713, which was that of his first consulship, a quarrel having arisen between Pollio and his fellow-tribune, Antony, the brother of the triumvir, concerning the settlement of the veterans in the lands allotted them, Pollio occupied the north of Italy for the Antonian party. His spirit and valour had acquired him such reputation among the soldiery, that, while his friend Munatius Plancus, though of higher birth and rank, was deserted by his troops, Pollio was enabled to make head against Agrippa and Augustus with not more than seven legions, which, placed in the Venetian territory in the interests of Antony. In order to subjugate his forces, he laid heavy contributions on the towns, and exacted them with the utmost rigour. The Paduans, in particular, who had been always attached to the cause of liberty and the republic, smarted severely under his displeasure and avarice. He stripped their city of everything valuable, whether public or private, and proclaimed a reward to the finder of any object, which he was able to find, to the sum of ten thousand sesterces. The contest between Lucius Antonius and Augustus was followed by the treaty of Brundisium, by which a new division of the empire was made among the triumvirs; and, according to this distribution, the province of Dalmatia was included in the department of the empire allotted to Marc Antony. This rugged country, not yet completely subdued by the Romans, had been constantly in the view of Pollio while he was commanded on the northern coast of Italy. A massacre committed by the natives on a Roman colony formed a pretext for its invasion. With the consent of Antony, if not by his express orders, Pollio led the army, which he had now commanded for five years, to quell the insurrection. He quickly dispersed the tumultuary bodies of natives which had assembled to oppose him; took their capital, Salona (now Spalatro), and returned triumphantly to Rome. This triumph crowned his military and political career. The cause of Antony, which Pollio had supported both by his able conduct and the reputation of his name, had now sunk so low in Italy, that it could no longer be maintained against his rival with any regard to safety, interest, or character. He declined however, to follow Augustus to the battle of Actium; and to the solicitations which were used with the utmost artifice by commissioning him actually to espouse his interests, Pollio is said to have replied, "Mea in Antonium majora meritum sunt, illius in me beneficia notiora; itaque discrimine ves-
POLIO.

Vell. Patr. 2, 86.) From this period till his death, which happened at his Tuscian villa in 755 U.C., when he had reached the age of eighty, Pollio withdrew almost entirely from public affairs. He lived naturally of a bold, assuring, and overbearing temper; he affected a stern predic

lection for the forms and manners of the ancient republic; and, having amassed an enormous fortune during the proscriptions, he never sought to ingratiate himself with Augustus. Accordingly, though he was respected and esteemed, he was not beloved by the emperor. During the contest with Lucius Antoninus, several sting

ing epigrams were directed against him by Augustus. Pollio was attacked, but he did not choose, as he himself expressed it, "in eum scribere qui potest proscibere." (Macrob., Saturn., 2, 4.) His neutrality during the war with Antony and Cleopatra, though permitted by Augustus, would little tend to conciliate his favor; and that prince saw around him so many able ministers who had uniformly supported his interests, that he had no occasion to require the assistance or counsel of Pollio. With the exception, therefore, of occasionally placing in the Forum, Pollio devoted all his time to literary composition and the protection of literary men. No Roman of that period was more capable of enjoying retirement with dignity, or relishing it with taste. He possessed everything which could render his retreat delightful: an excellent education, distinguishing talents, a knowledge of mankind, and a splendid fortune. To all the strength and solidity of understanding, these qualifications were added, and the other virtues of life, he united the most lively and agreeable vein of wit and pleasantness. His genius and acquirements enabled him likewise to shine in the noblest branches of polite literature: poetry, eloquence, and history, in which last department Seneca prefers his style to that of Livy. He had, no doubt, effectually improved the opportunities which the times afforded, of enriching himself with other advantages. More was profited by the forfeited estates during the period of the proscriptions; but it should not be forgotten, that whatever fortune he amassed was converted to the most laudable purposes: the formation of a public library, the collection of the most eminent productions of art, and the encouragement of learning and literary men. Pliny, in his Natural History, informs us, that Pollio was the first person who erected a public library in Rome, which was afterward increased in the vicinage of the Aventine Hill; and the expense of the establishment was defrayed from the spoils of conquered enemies (7, 30; 35, 2). From the same authority we have an account of his fine collection of statues by Praxiteles and other masters (34, 5), which he was extremely desirous should be publicly seen and commended. Among the labours of Praxiteles are mentioned Silenus, an Apollon, a Neptune, and a Venus.

The specimens of the works of other artists exhibited the Centaurs carrying off the Nymphs, by Arcesistas; Jupiter, surnamed Hospitalis, by Pamphilus, a scholar of Praxiteles; a sitting Vesta; and, finally, Zethus, Amphinon, and Dirce, fastened by a cord to the bull, all formed out of one stone, and brought from Rhodes by the direction of Pollio. Still more useful and praiseworthy was the patronage he bestowed on writers. His vast, but not excessive, collection of books united character and conversational talents had rendered him a favourite with the master-spirits of Rome: Caesar, Calvus, and Cassius, who shone in his earlier years; and in more advanced life, he in turn favoured and protected Virgil and Horace, whose eulogies are still the basis of his fame. Pollio commanded in the district where the farm of Virgil lay; and at the division of lands among the soldiers, was of service to him in procuring the indemnity of his property. That distinguished poet composed his elegies, it is said, by the advice of Pollio; and in the fourth of the number he has beautifully testified his gratitude for the friendship and protection which had been extended to him. The odes of Horace show a familiarity with subje

cts between the poet and his patron; the former ventured to give the latter advice concerning the history of the civil wars, on which he was then engaged; and to warn him of the danger to which he might be exposed by treating such a subject. Timagenes, the rhetori

cian and historian, spent his old age in the house of Pollio; though he had incurred the displeasure of Augustus by some bitter railing and sarcasms directed against the imperial family. But, while Pollio protected learned men, he seems to have been a severe, and, according to some, a capricious critic, on the writings both of his own contemporaries and of authors who had immediately preceded him. He was ensnared of the reputation of Cicero, and expressed himself with severity on the blemishes of his style (Sene. Suas, 6.—Quint., Inst. Orat., 18, 1): he called in question the accuracy of the facts related in Caesar's Commentaries (Sueton., de Vit. Grammat.), and he discovered provincial expressions in the noble history of Livy. (Quint., Inst. Orat., 1, 5.) His jealous love of praise and spirit of competition led him to introduce one custom which probably proved injurious to poetry: the fashion of an author reading his productions at private meetings of the most learned and refined of his contemporaries. These recitations, as they were called, led to the dedication of songs for the sake of getting a literary patron, and thus calculated to impede the purity of taste than to engender ostentations display. (Dunlop's Roman Literature, vol. 3, p. 45, seq.)—II. Vedius. (Vid. Pauly,Lucilius Pol, 1, (in Greek Πολλούκης) a son of Jupiter by Leda, the wife of Tyndarus. He was brother to Castor. (Vid. Castor.)—II. (or Πολλούκης) Julius, a native of Naucratis, in Egypt, who flourished about 175 B.C. He is said to have been the patron of the Emperor Commodus. He followed, it would seem, the profession of sophist at Athens, and acquired so much reputation there, that the Emperor Marcus Aurelius intrusted him with the education of his son; but the instructions of the preceptor were unable to correct the vicious propensities of the pupil. It has been supposed that Lucian intended to ridicule Pollio in his Leiphanes and Rhetorum Præceptor (Ρητορῶν διδάσκαλος), but he preserved a greater degree of impartiality than was usual in his works; and, indeed, takes pleasure in the preface to his edition of the Onomastic. The strongest argument adduced by him against this supposition, which rests on the testimony of one of the scholiasts, is that such a satire would be unjust. The principal work of Pollio, and the only one that remains to us, is entitled "Ονομαστικάν ("Onomasticon"). The following is the explanation which Hemsterhous gives of this title. "Onomasticonum nus

mus est coniunctus minus nominem, et docere quisque verborum uteriusque quodam et fiorentem elegantiam rem unam desinare possimus: non enim in Onomastica unquam proprium quodam loco de vocabul diffici
turor interpretatio ageatur, sed quo pacto proprius versus quaeque et pluribus insigniri posset verba."—Pollio does not, like other lexicographers, follow the alphabetical arrangement; he has divided his work into nine books, according to the subject of the entries. Each book contained nine separate works under the general title of "Onomasticon." These nine productions would seem to have been published originally in a separate and consecutive order, from the circumstance of their each having a preface or dedication, addressed to the Emperor Commodus. The subjects of the nine books are as follows: 1. Of Gods, Kings, Swiftness and Slowness, 2. Of Nature, 3. Of the Arts, Fertility and Sterility, 4. Of Plants, 5. Of Houses, Ships, things relating to War, Horses, Agriculture, the component parts of a Plough, those on
POLYBIUS. 

A Chariot, Bees.—2. Of the Age of Men; of what precedes and follows Birth; of the Members of the Human Frame; of the External and Internal Parts of the Body.

3. Of the various relations between the Members of a Family or a City; of Friends, Country, Love; of the Relation between Master and Slave; of Metals, Travels, Roads; of Gayety and Sadness; of Happiness; of Rivers; of the Avaricious, the Industrious, and the Idle; of Buying and Selling, &c.—4. Of the Sciences.

5. Of the Chase, Animals, &c.—6. Of Repasts; of various Crimes, &c.—7. Of various Arts and Trades.

8. Of Justice and the Public Administration of it.

9. Of Cities, Edifices, Games, &c.—10. Of Vases, Utensils, &c.—11. Of the Value of the work, for acquiring not only a knowledge of Greek terms, but also of antiquities, is conceded by all. The interest, moreover, is considerably increased by the citations from authors whose works are lost. Julius Pollux composed many other works that have not come down to us, such as Dissertations (Σιαλείς) and Declamations (Μελές); and among these are mentioned a discourse pronounced on the occasion of the marriage of Commodeus, an eloge on Rome, and an accusation of Socrates.

The best edition of the Onomasticon is that of Hemsterhusius, Amst., 1706, fol. There is a later one by W. Dindorf, Lips., 1824, 5 vols., in 6 parts, containing the notes of former editors.—III. An ecclesiastical writer in the ninth century, not to be confounded with the author of the Onomasticon. He compiled a church history from the beginning of the world. The author calls it Ιατρεία φυσική ("a physical history"), because his work enlarges greatly respecting the creation of the world. It is rather, however, an ecclesiastical than a political history. The best edition is that of Hartd, Monach, 1792, 8vo. Hartd supposed that this work was just newly discovered; but the Abbé Morelli has proved that this is the same work with that entitled Historia Sacra ab ordo conicio ad Valentinianum et Valerianum Imper. a Biancone, Boman, 1773, fol.

POLYBIUS, 1. A native of Lampsacus, and one of the friends of Epicurus. He attended previously to mathematical studies. (Cic., de Fin., 1, 6.)—II. A native of Sardis, a sophist in the time of Julius Caesar, and who is thought to have taken his prenomen (Julius) from the family that protected him. We have four epigrams by him remaining.—III. A native of Macedonia, a rhetorician or advocate, who flourished about the middle of the second century before Christ. He published a treatise, called Aenigmata ("Militarische Stratagemen"), in eight books, of which the sixth and seventh are imperfect. This work, addressed to Marcus Aurelius and Lucius Verus, during their campaign against the Parthians, is of little value to military men, but without interest in the historical point of view. It is well written, though rather affected, and too much loaded with ornament. Polyenus has been justly censured for admitting into his list of stratagems instances of treachery and perfidy unworthy of warriors, and underestimating of being regarded as ruses de guerre. He is inexusable on another point: he mutilates and distorts facts; he wishes to convert every military operation into a stratagem, particularly those of Alexander, a prince who contended openly with his foes, and destratagems of every kind. The most useful edition of Polyenus is that of Mursinna, Berol., 1756, 12mo. A more correct text than that of Mursinna is given by W. and J. Bibl. Hell., Paris, 1809, 8vo, forming the first volume of this collection. A critical edition, however, is still a desideratum. (Schöll, Hist. Lit. Gr., vol. 5, p. 268, seq.)—IV. A native of Athens, an historical writer. (Euseb., Chron., 1, p. 25.)

POLYBIUS, an eminent Greek historian, born at Megapolis, in Arcadia, about B.C. 203. His father Lycontras was prator of the Achaean republic and the friend of Philopomen, and under the latter Polybius learned the art of war, while he received from his own father the lessons of civil and political wisdom. He played a distinguished part in the history of his country as an able officer under the command of the Achian cavalry. At the age of about 15 years he was selected by his father to join an embassy to Egypt, which, however, was not sent. At the age of 40 years he was carried as a hostage to Rome, and continued there for the space of 17 years. He became the friend, the adviser, and the companion in arms of the younger Scipio. In order to collect materials for his great historical work, which he now projected, Polybius travelled in Greece and Asia, again traversed a part of the Atlantic. Scipio gave him access to the registers or records known by the name of libri censuales, which were preserved in the temple of Jupiter Capitolinus, as well as to other historic monuments. On his return to Greece, after the decree of the senate which granted the Achian hostages permission to return to their homes, he proved of great service to his countrymen, and endeavoured, though fruitlessly, to dissuade them from a war with the Romans. The war broke out when he was in Africa, whither he had accompanied Scipio, and with whom he was present at the taking of Carthage. He hastened home, but appears to have arrived only after the fall of Corinth. Greece having been reduced under the Roman power, he traversed the Peloponnesus as commissary, and by his mild and obliging deportment won the affections of all. Some years after he travelled into Egypt; in the latter part of a year 630, he accompanied Scipio into Spain, and finally he returned to Achaea, where he died at the advanced age of about 82 years, of a fall from his horse.—Polybius gave to the world various historical writings, which are entirely lost, with the exception of his General History (Ιατρεία καθολική), in forty books. It embraced a period of 53 years, from the commencement of the second Punic war (A.U.C. 555) to the reduction of Macedonia into a Roman province (A.U.C. 587). Thirty-eight books were devoted to the events of this period; while two others preceded them, and serve as an introduction to the work. In these last the historian runs rapidly over the interval which had elapsed between the taking of Rome by the Gauls and the first descent of the Romans on Sicily, and after this enumerates what had occurred up to the commencement of the second Punic war. His object was to prove that the Romans did not owe their greatness to a mere blind fatality; he wished to be made known that their success was owing to the care which had become masters, in so short a time, of so extensive an empire. (Lucas, Uebcr Polybius Darstellung des alttricherischen Bundes, Königst., 1827, p. 6, seq.) His history is of a general nature, because he does not confine himself merely to those events which related to the Romans, but embraces, at the same time, whatever had passed during that period among every nation of the world. Of the 40 books which it originally comprised, only the first five entire. Of the rest, as far as the 17th, we have merely fragments, though of considerable size. Of the remaining books we have nothing left except what is found in two meager abridgments which the Emperor Constantine Polyphogenitus, in the tenth century, caused to be made of the whole work. The one of these is entitled "Embassies," or the history of treaties of peace; the other is styled Virtues and Vices. Among the fragments which remain there are 10 books from the text of Polybius are from the parts of the sixth book, inclusive, which treat of the Roman art of war, and have often been published separately under this title. That part of the history which is lost embraced a narrative of those events of which the historian was himself an eyewitness; an irreparable loss for us, though Livy made frequent use of it. The history of Polybius possesses, in one respect, a peculiar character, distinguishing it from the works of all the historians who had preceded him.
POLYBIUS, a king of Corinth, and the adoptive father of Cædipus. (Vid. Cædipus.) He was succeeded by Adrastus, who had fled to Corinth for protection. (Pausan., 2, 6.)

POLYCARPUS, a father and martyr of the church, born probably at Smyrna during the reign of Nero. He was a disciple of the Apostle John, and was by him appointed bishop of that city; and he is thought to have been the angélos of 2 Cor. iii. 18, which is 1 Peter iii. 8. Hence the title of his history, Ἰστορία πραγμάτων. Never has a history been written by a man of more good sense, of more perspicacity, or of a sounder judgment, and one more free from all manner of prejudices. Few writers have united in a greater degree a knowledge of military and political affairs; no one has carried farther a rigid impartiality, and a respect for virtue. Cicero gives an animated character of this historian in his address to the Oratorian (2, 15. — Compare the remarks of Ast, Grundriss der Philologie, p. 292).—The style of Polybius is not free from faults. The period when the Attic dialect was spoken in all its purity had long passed away, and he wrote in the new dialect which had arisen after the death of Alexander. A long residence also out of his native country, and sometimes among barbarian nations, had rendered him, in some little, the little judgment he possessed. Though his diction is always noble, yet he occasionally mingleth with it foreign terms, and even Latinisms. We find in him, too, phrases borrowed from the school of Alexandria, and passages taken from the poets; he loves, also, occasional digressions; but, whenever he indulges in these, they are always instructive.—" In Polybius," says Müller, "we find neither the art of Herodotus, nor the strength of Thucydides, nor the conclusiveness of Xenophon, who stands all in a few words: Polybius is a statesman full of his subject, who, caring little for the approbation of literary men, writes for statesmen; reason is his distinctive character." (Allgemeine Geschichte, 5, 2.)—Dionysius of Halicarnassus (De Comp. Verb., c. 4) remarks, that no man of taste can endure to read the work of Polybius to the end. It is strange that he did not take into consideration the highly attractive nature of the events, and the spirit with which the narrative is related. Besides his general history, Polybius wrote "Memoirs of the Life of Ptolomy" (lib. 10, Exc. Peirec., p. 28), a work on "Tactics" (lib. 9, Exc., c. 20), and a letter "on the situation of Laconia," addressed to Zeno of Rhodes (lib. 16, Exc.). From a passage of Cicero, moreover (Ep. ad Fam., 5, 12), it would appear that Polybius had written a detached "History of the Numantine war." It is probable that his visit to Spain, during the second consulship of Scribon, gave him the idea of this last-mentioned work, and furnished him with the materials.—Plutarch relates that Marcus Brutus, the assassin of Caesar, made an abridgment of the history of Polybius, and that he was occupied with this in his tent on the evening preceding the battle of Philippi. Caesaubon is hence led to infer that the abridgment or epitome which we possess, from the 7th to the 17th books, may be the work of Brutus; but that abridgment is made with so little judgment that we cannot properly ascribe it to that distinguished Roman.—The best edition of Polybius is that of Schweighaeuser, Lips., 1789-95, 9 vols. 8vo. Oreilus published in 1818, from the Leipsic press, the commentary of Ενεας Tacitus, in one volume 8vo, as a supplement to this edition. The Excerpta Vaticana of Polybius, which Mai first made known in his "Scriptorium Veterum nova Collectio" (vol. 2, Rom., 1827, 4to, p. 416-454), was afterward rendered in the title of "Polybius Historiarum Excerpta Vaticana," by Geel, Lugd. Bat., 1859, 8vo.; and "Polybii et Appiani Historiarum Excerpta Vaticana," by Lucht, Altona, 1830, 8vo. (Söchüll, Gesch. Griech. Lit., vol. 2, p. 3 seqq. — Id. ib., vol. 3, p. 603.)
which Phidias invented, to perfection. He discovered the art of balancing of figures on one leg; and is said to have been so partial to this mode of representing the human form, that he almost invariably adopted it in his statues. He is accused by Varro of too great uniformity in his figures, and the constant repetition of the same idea. Nothing could exceed the exactness of symmetry with which he framed his statues; but it seems that they were destitute of passion, sentiment, and expression. It is singular that, notwithstanding the refinement, the extreme polish, and exactness of finishing with which his works were in general elaborated, he represented the hair in knots, after the fashion of the primitive and most ancient implements. The effect, however, seem to have derogated but little from his fame, either in his own age or in after times. (Encycl. Metropol., div. 2, vol. 1, p. 400, seqq.)—Polyclitus used, in many of his works, the brass of Aegina. (Plin., 34, 2, 5.)

His highest glory, perhaps, was obtained from a statue made of ivory and gold, and dedicated in the Heraum by the citizens of Argos and Mycenae. The estimation in which this work was held is evident from Strabo (551). The production itself is described in Pausanias, 2, 17, with some accuracy. It was dedicated by Böttiger (Andeut., 122).—Like other statues of the same age, Polyclitus was also distinguished as an architect, and erected a theatre, with a dome, at Epidaurus, on a piece of ground consecrated to Asklepius. This building Pausanias pronounces to be superior, in respect of symmetry and elegance, to every other theatre, not excepting even those at Rome. All ancient writers bestow the highest praises on Poly- claditus. Cicero pronounces his works absolutely perfect. (Brut., 18.) Quintilian mentions his diligence and the gracefulness of his productions, but intimates that they were deficient in majestic dignity. (Quint., 12, 10.) Dionysius of Halicarnassus says of his works, conjointly with those of Phidias, that they were esteemed κατὰ τὸ σεμνὸν καὶ μεγάλοτέρον καὶ αξίωματον (de Isocr., p. 95, ed. Syd.) The breasts of his statues were particularly admired. (Auct. ad Heren., 4, 6.) We find also, in other writers, several narratives illustrative of his skill, and his accurate judgment of the arts. Consult, in particular, Plutarch (Symp., 2, 3) and Ælian (V. H., 14, 8, 16). He wrote also a treatise on the Symmetry of the Members of the Human Body, of which Galen makes mention. (Περὶ τῶν καθ’ ἐπικόρας καὶ Πλάσμ., 4, 3, vol. 5, p. 449, ed. Kuhn.—Silig., Dict. Art., p. 104.)—II. A statue, a native of Argos, who flourished a little before 450 B.C. He was one of the greatest sculptors of his time, a figure of Hecate at Argos, the Amylecan Venus, and a statue of Alcibiades. (Pausan., 2, 22.—Dio Chrys., Orat., 37, vol. 2, p. 122, ed. Reiske.—Silig., Dict. Art., p. 104.)

POLYCRITUS. I. a tyrant of Samos, who raised himself to the chief power, from the condition of a private person, by his abilities alone, about 566 B.C. His history is narrated at length by Herodotus. He shared, at this time, the dignity of his two brothers Pantaleon and Sylosion; but subsequently he caused the former to be put to death, and expelled the latter; after which he reigned with undisputed authority. His successes were great and rapid, and he acquired a power which made him dreaded equally by his subjects and neighbours; and his alliance was courted by some of the most powerful sovereigns of that period. He frequented the courts of the other islands, and had a fleet of 100 ships, a navy superior to that of any one state recorded at so early a date. (Herod., 3, 39.—Thucyd., 1, 13.—Strab., 637.) The Samians attempted to revolt from him; but, though they were assisted in the undertaking by the Lacedæmonians, they failed of success, and many were driven into exile. (Herod., 3, 44, seqq.) The Spartans landed in the island with a large force, and besieged the principal city with vigour, but they were finally forced to abandon the enterprise, after the lapse of forty days. (Herod., 3, 54, seqq.) The Samian exiles then retired to Crete, where they founded Cydonia.—Poly- rates was remarkable for the good fortune which, for a long time, attended his character. His great public spirit, in fact, was the prosperity which he enjoyed, that Amasis, king of Egypt, his friend and ally, advised him by letter to break the course of it, by depriving himself of some of his most valuable possessions. This advice was in accordance with the heathen belief, that a long career of uninterrupted felicity was sure to terminate in the greatest misery. Poly- rates, having resolved to follow the counsels of Amasis, selected an excellent ring which he was accustomed to use as a signet, and which he regarded as his rarest treasure; he then embarked on board a galley, and, when he had reached the open sea, consigned this ring to the waves. Strange to relate, about five or six days afterward, while Poly- rates was still grieving for the loss of the costly jewel, a fisherman brought to his palace, as a present for the monarch, a very large fish which he had caught, and, on opening it, the fisherman found the signet within. The king exclaimed, "This word of this to Amasis, who immediately broke off the alliance with him, through fear of sharing the evil fortune with which he was certain that the tyrant of Samos would ultimately be visited. (Herod., 3, 40, seqq.) The prediction of Amasis was at last verified. Poly- rates fell a victim to the cruel and artful designs of the Persian satrap Oroetes, who lured him on by the temptation of immense wealth; and, having induced him to come to Magnesia, on the river Myander, and thus got him into his power, nailed him to a cross. (Herod., 3, 120, seqq.) Herodotus alleges two reasons for this conduct on the part of Oroetes; one, that he was led to the step by the reproaches of an acquaintance, the governor of Dascylium, who upbraided him for not having added Samos to the Persian dominions, when it lay so near, and had been seized by a private citizen (Poly- rates), with the help of but fifteen armed men; the other, that a messenger from Oroetes had been disrespectfully treated by Poly- rates. The daughter of Poly- rates had dissuaded her father from going to Oroetes, on account of illomened dreams with which she had been visited, but her advice was disregarded. She dreamed, for example, that she saw her father aloft in the air, washed by Jupiter and anointed by the sun. The circumstance of her father's being suspended on a cross fulfilled the dream; and, when washed by the rain, washed by the sun, "which extracted," says Herodotus, "the moisture from his body." (Herod., 3, 125.)—Poly- rates, though tainted by many vices, knew how to estimate and reward merit. He cultivated a friendship with Anacreon, and retained the physician Democedes at his court. Pythagoras was also his contemporary; but, unable to wit- ness, as it is said, the dependance of his country, he quitted Samos in Heraclea to evade the pursuit of his friends in foreign countries. (Herod., 3, 121.—Id., 3, 131.—Strab., 638.)—II. An Athenian rhetorician and sophist, who wrote an encomium on Busiris, and another on Cly- temnestra. His object in selecting these as the subjects of his imaginary declarations appears to have been to attract public notice. (Quintil., 2, 17.) He wrote also an Oration against Socrates; not the one, however, which has been ascribed to him; but a work which he composed, too, after the death of Socrates. Isocrates criticizes both the eulogism on Busiris and the speech against Socrates, in his treatise entitled also Busiris. (Isocr., Busir., 2. Argument. incept. auct. ad Isocr., Busir. Eian, Var. Hist., 11, 10.—Peri. dem. Ad., L.—Atheneus, 8, p. 335, a.)

POLYXENAS. I. a Trojan, son of Antenor by The-
Polydorus, the king of the island of Seriphus when Danae and her son Perseus were wafted thither. (Vid. Danae, and Perseus.)

Polydorus, I. a son of Cadmus and Harmonia. He was the father of the throne of Thebes, and married Nycteus, daughter of Nycteus, by whom he became the father of Labdacus. (Apollo., 3, 4, 2.—Id., 3, 5, 4.—Consult Heyne, ad loc.)—II. A son of Priam and Hecuba, treacherously put to death by Polymnestor, king of Thrace, to whose care his father had consigned him, on account of his early years, towards the close of the Trojan war. (Vid. Polymnestor.)—According to the legend followed by Empedocles, in his play of the "Hecuba," the body of the young Trojan prince was thrown into the sea, and, having been washed up by the waves on the beach, was there found by Hecuba, then a prisoner to the Greeks. Virgil, however, following a different version of the fable, makes him to have been transfigured by many spears, and these spears to have grown into trees over his corpse. When Aeneas visited the Thracian coast, and was driven by bad weather, he landed on the island of Seriphus, and, as he endeavored to pull up some of these trees, in order to procure boughs for shading the altar, from the root of the first tree thus plucked from the earth, drops of blood issued. The same thing happened when another was pulled up; until at last the voice of Polydorus was heard from the ground, entreating Aeneas to forbear. Funeral rites were thereafter prepared for him, and a tomb erected to his memory. (En., 3, 19, 37.)

Polygnotus, one of the most distinguished painters of antiquity. He was a native of Thassos, but obtained the right of citizenship at Athens; and hence Theophrastus calls him an Athenian (ap. Plin., 7, 56). The period when he flourished has been made a matter of dispute. Pliny, observers, that he lived before the 90th Olympiad; some modern philologists, however, conjecture that the period of his fame was about Olymp. 80. (Jen. Lit. Journ., 1805, vol. 3, p. 34.)—As Polygnotus was born at Thassos, and was there instructed by his father Aglaophon, it seems necessary to inquire at what period he removed to Athens; and no time can be fixed on with greater probability than that in which Cimon returned to Athens, after gaining the Persian war, bringing the dominion of his countrymen. (Müller, Nunt. Liter. Gymn., 1812, vol. 4, p. 115.) It is a very consistent supposition, that Polygnotus accompanied Cimon on his return; and there existed a powerful reason for Cimon to solicit the artist to remove with him to Athens, that he might have his assistance, namely, in embellishing with paintings those public buildings which he had either begun to erect or had in contemplation. Among the most important of these buildings must be held the Olympian temple, still existing, reared on the ashes of the ancient hero, which were brought by Cimon from Scyros. This last circumstance took place B.C. 469; and it is highly probable that in the following year the temple itself was commenced. All these particulars concur to support the opinion that Polygnotus flourished about Olymp. 80.—This distinguished painter seems to have contributed more largely to the advancement of his art than any of his predecessors. In the temple of the countenance was represented as destitute of animation and fire, and a kind of leaden dulness pervaded its features. His triumph it was to kindle up expression in the face, and to throw feeling and intellect into the whole frame. He was the Prometheus of painting. He also first represented the mouth open, so that the teeth were displayed, and occasion was given to the spectator part of the visage in the expression of peculiar emotions. He first clothed his figures in light, airy, and transparent draperies, which he elegantly threw about the forms of his women. He was, in short, the author of both delicacy and expression in the paintings of Greece: but his style is said to have been hard, and his colouring not equal to his design.—His great works consisted of those with which he adorned the Parcell (Παρεκκλήσι) at Athens. The description of this building, given by Pliny and Polygnotus, gratuitous (Plut., Vit. Cim., 4); as Mycon, a contemporary artist, who was employed in adorning another part of the same building, received a liberal compensation for the exertions of his genius. Polygnotus, however, was not without his reward. The Amphictyonic council offered him a public expression of thanks for having also gratuitously embellished the temple at Delphi, and decreed that, whenever he should travel, he was to be entertained at the public expense. One of his pictures was preserved at Rome, representing a man on a scaling-ladder, with a target in his hand, so contrived that it was impossible to tell whether he was going upward or descending.—Polygnotus and Mycon were the first who used, in painting, the kind of ochre termed Athenian "oil." (Plut., 33, 12, 56.) The former likened the body of a young girl, styled "tyrignon" (Plin., 35, 6, 25); and he left behind him some paintings in enamel. (Plin., 35, 11, 36.) Cicero mentions him among those who executed paintings with only four colours (Cic., Brut., 18); and Quintilian observes, that his productions were very highly esteemed even in later periods. (Quintil., 12, 10.) Aristotle calls him παρεκκλησιας (Παρεκκλ., 10, 2); and he elsewhere contrasts the three artists, Polygnotus, Panoe, and Dionysius, in that the paintings of the first were more favourable than nature, those of the
Polymnestor of Polyphemus, a son of Polyphemus, king of the Cyclops, by Jocasta. He inherited his father’s throne with his brother Eteocles, and it was agreed between the two brothers that they should reign each a year alternately. Eteocles first ascended the throne by right of seniority; but, when the year was expired, he refused to resign the crown to his brother. Polyneices thereupon fled to Argos, where he married Argis, the daughter of Adrastus, king of the land. Adrastus levied a large army to enforce the claim of his son-in-law to the throne, and laid siege to the city of Thbes. The command of the army was divided among seven chief-tains, who were to attack each one of the seven gates of the city. All the Argive leaders, with the exception of Adrastus, were slain, and the war ended by a single combat between Eteocles and Polyneices, in which both brothers fell. (Vid. Eteocles.)

Polymnestor, a son of Neptune, and one of the Cyclops in Sicily. He is represented as of monstrous size, with but one eye, and that in the centre of his forehead, and as leading a pastoral life. According to the Homeric fable, Ulysses, on his return from Troy, was thrown upon that part of the coast of Sicily which was inhabited by the Cyclopes; and having, with twelve of his companions, entered the cave of Polyphemus during his absence, they were found therein by him on his return, and were kept immured for the purpose of being devoured. Four of the companions of Ulysses, with a judge of the Cyclops, were carried away by the monster; and Ulysses would probably have shared the same fate, had he not adopted the following expedient. Having intoxicated the Cyclops, he availed himself of his state of insensibility to deprive him of sight, by means of a large stake which had been discovered in the cave, and which, after having sharpened it to a point and heated it in the fire, he plunged into his eye. Polyphemus seized the stake with pain, and caused the other Cyclopes from their mountain retreats On inquiring the cause of his outcries, they were told by Polyphemus that No MAN (Oberg), the name which Ulysses had applied to himself, had inflicted the calamity, whereupon they retired to their dens, recommending him to supplicate his father Neptune for aid, since his malady came not, as he himself said, from human hands, and must therefore be a visitation from above. He summoned his friends, having removed the iron stake which blocked up the mouth of the cave, placed himself at its entrance to prevent the escape of his enemies. Ulysses, however, eluded his vigilance by fastening the sheep together, “three and three,” with osier bands, and by tying one of his companions beneath the middle one of every three. In this way the whole party passed out safely, the hero himself bringing up the rear, and clinging to the belly of a thick-necked and favourable ram. (Hyg., Od., 9, 172, seqq.) Virgil has embellished this Eneid by interweaving the story of Ulysses and the Cyclopes. He feigns that the prince of Ithaca, in the hurry of departure, had left behind him one of his followers, Achamenes by name, who, after supporting a miserable existence in the woods by the meager fare of roots and berries, gladly threw himself into the hands of the Trojans when Aeneas was coasting along the island of Licia. (Signul. 380, seq.) The tradition has it further, that the wrath of Neptune for the injury inflicted on his son by Ulysses that induced the god to destroy his vessel on the Phaecean coast. (Od., 11, 101, seqq.—Od., 5, 286, seqq.)

Polysperchon, an Aetolian, a general of Alexander’s, who commanded the Sympheasans in the battle of Arbela, and afterward subdued Babacene for the conqueror. The freedom of his remarks on a subse-quent occasion, when he saw a Persian prostrating himself before Alexander, so offended that prince, that
he threw him into prison, and only pardoned him after a considerable time had elapsed. We find Polysperchon, subsequently to this, again entrusted with a command, and sent to besiege the city of Ora, on Alexander's march to India. He took the place in a short time.

After Alexander's death, he was sent over into Europe, and subdued the Thessalians, who had revolted from the Macedonian power. In B.C. 319, Antipater, then on his deathbed, bestowed the regency of the empire on Polysperchon, as the oldest of all the surviving captains of Alexander, and committed to his care the two kings, who appear to have resided at Pella ever since the death of Perdiccas. Cassander, the bastard son of Antipater, deeply interested, by the promise of a stranger, endeavoured to form a party against the new regent, and with this view engaged Ptolemy and Antigonus on his side. Polysperchon, on his part, neglected nothing that was necessary to strengthen his interests; and he found himself compelled to have recourse to measures, of which some were injurious, and others positively hurtful. The only wise step which he took during this emergency was an alliance with Nicator. In this alliance, in which he appointed sole general of the army serving in Asia, and invested, at the same time, with the uncontrolled disposal of all the resources of the eastern empire. Desirous, too, by all possible means, to increase the popularity of his cause in Macedonia, and to check the influence of Eurydice, who had still a powerful party in the army, Polysperchon advised the recall of Olympias, who had been sent to Greece to encourage the son to repent of this step; for Olympias, still untainted by events, and thirsting for revenge, returned to the Macedonian capital only to gratify her worst passions, and to disturb the tranquility of private life. But all the measures into which Polysperchon was driven by the pressure of affairs, none was more questionable than the following. Eager to retain the Greeks in his interest, and to defeat the plans of Cassander, who, before the death of Antipater was known at Athens, had sent Nicanor thither to succeed Meyllius in the command of the garrison of Munchia, and had soon after made himself master of the Piraus, Polysperchon published an edict for re-establishing democracy in all the states which owned the protection of Macedonia. The policy of this step was not less wicked than its effects were pernicious: the boon of democracy created such a degree of contentment as to allure the popular licentiousness, and most of the arms of the citizens were for a time employed against one another. Almost every individual distinguished by rank or merit was stripped of his property, banished, or put to death. The condition of Athens, controlled by the garrison in the Munichia, prevented the people of that city from partaking of the benefit held out to them by Polysperchon. But when Alexander, the son of the latter, reached Athens with a body of forces, the democracy was restored, and Phocion and others were put to death. (Vid. Phocion.) Cassander, however, soon after made himself master of Athens, and Polysperchon, on receiving intelligence of this, immediately hastened to besiege him in that city; but, as the siege took up much time, he left part of his troops before the place, and advanced with the rest into the Peloponnesus, to force the city of Megalopolis. But the attempt, while the weather was favorable, was a most unsuccessful one; and it was fortunate for the military character of the protector that an apology for his sudden retreat into Macedonia was afforded by the violent conduct of Olympias, who had already embroiled that part of the kingdom so seriously as to endanger the life and power of the elder king. In the contest that ensued, Cassander proved ultimately victorious; Olympias was taken and put to death, and Polysperchon, driven from Macedonia, took refuge among his countrymen the Eetolians. After the murder of Alexander, Eges and his mother Roxana by Cassander, Polysperchon, who still retained some strongholds in the Peloponnesus, invited from Pergamus Hercules, the son of Alexander by Barcine, four years older than his brother recently murdered, but from the illegitimacy of his birth deprived of success. On the arrival of the young prince, Polysperchon began hostile movements: he obtained the hearty cooperation of the Eetolians; his standard was joined by many malcontents from Macedonia, and he stood on the frontiers of that kingdom with an army twenty thousand strong, while the troops which Cassander sent to oppose him wavered in their affections. The young prince, however, was found at the head of his party, and Cassander, the man with whom he had to deal. By bribes and promises he prevailed upon Polysperchon to murder the youth, whom he affected to honour as his sovereign. Polysperchon, however, did not obtain the principal object for which he had been tempted to incur this most enormous guilt. This was the command of the Peloponnesus, towards which country, with the recommendation and aid of Cassander, he now directed his steps. But the inhabitants of that peninsula, by the bay of Kos, opposed his return southward. He was obliged to winter in Locris, and thence returned to a castle commanding a small district between Epirus and Eetolia. The recovery of this stronghold, which had formerly belonged to him, and of which he had been deprived by Cassander, now rewarded his detestable wickedness; and here probably this vete- rated leader of the world, which had once swayed the princely sceptre, ended many years afterward his ignominious life; a life deformed by everything atrocity in cruelty and detestable in crime. (Diod. Sic., lib. 17, 18, 19, &c.—Quint. Curt., 4, 13.—Id., 5, 4.—Id., 8, 5.—Justin, 10, 10.—Id., 13, 6.—Id., 14, 5, &c.—Tzetz. in Lyogroph., 891.) Polyaena, a daughter of Priaem and Hecuba, celebrated for her beauty and malignity. According to the account given by Dicius of Crete, Hecuba, accompanied by many Trojan females, and among the rest by Cassandra and Polyaena, was performing certain sacred rites to Apollo in the vicinity of Troy, when Achilles, who was anxious to witness these ceremonies, came suddenly on the party with some companions of his. Struck by the beauty of Polyaena, the warrior, after fruitlessly contending with his passion for some time, sent a message to her father asking the hand of her in marriage from Hector. The Trojan chief agreed to this, on condition that his sister, provided Achilles would betray to him the whole Grecian army. Achilles returned for answer that he would bring the whole war to a close if Polyaena were delivered to him. Hector replied that he must either betray the whole host, or else slay the Atrides and Ajax. This, of course, irritated Achilles, and the negotiation was broken off. After the death of Hector, Polyaena, according to the same authority, accompanied her father to the tent of Achilles, in order to obtain the restoration of her brother's corpse, and the Grecian chieftain, on beholding her, felt all his former passion renewed. Some time after this, Priaem, taking advantage of a truce occasioned by a sacrifice to the Thymborean Apollo, in which both armies joined, sent a herald to Achilles with a private message relative to Polyaena. This was delivered to the chief of the Achaeans; and, having then entered the temple, was treacherously slain by Paris and Deiphobus. After the capture of Troy, Polyaena was immolated by Neoptolemus to the manes of his father. According to one account, the shade of Achilles appeared on the summit of his tomb, and demanded the sacrifice. (Dict. Creil., 5, 2, seqq.—Id., 4, 10.—Id., 5, 13, &c.—Herod. ladb., 110.—Tzetz., in Lyogroph., 289.—Ovid, Med., 13, 439, seqq.—Engrav., Her., 37.—Virg., En., 3, 321.) Polyo, I. a priestess of Apollo's temple in Lem-
nos. She was also nurse to Queen Hyppipyle. It was by her advice that the Lemnian women murdered their husbands. (Apoll. Rhod. 1, 628.—Val. Flacc. 2, 161, 16.) Helen, however, was a native of Argos, who married Telepomus, son of Hercules. When her husband was compelled to flee, in consequence of the accidental homicide of Licymnius, brother of Alcmena, Polyxho accompanied him to Rhodes, where the inhabitants chose him for their king. On the death of Telepomus, who fell in the Trojan war, Polyxho became sole mistress of the kingdom, and during her reign Helen came to Rhodes, having been driven from the Peloponnesus, after the death of Menelaus, by Nicostratus and Megapenthes. Polyxho, determined to avenge her husband's fall, caused some of her female attendants to habit themselves like Furies, seize Helen while bathing, and hang her on a tree. The Rhodians afterward, in memory of the deed, consecrated a temple to Helen, giving her the surname of Dendritis (Δενδρίτης) from the manner of her death. (Pausan. 3, 19, 10.—Siebel ad Pausan. l. c.—Böttiger, Parthenia, p. 47, seq.)

POLYZELUS, I. a poet of the old comedy, who flourished about the time of the battle of Arginusae. The titles of some of his pieces have reached us. (Fabric., Bibl. Gr. v. 2, p. 488, ed. Harles.—Hemsterhus ad Polluc. 10, 76.)—II. An historian, a native of Rhodes. (Foss, Hist. Gr. 3, p. 406.—Athenaeus, 8, p. 361, c.)

POMPEIA. Vid. Suessa Pompeia.

POMINA (from pomum, "fruit"), a goddess among the Romans, presiding over fruit-trees. Her worship was of long standing at Rome, where there was a Flamen Pomonalis, who sacrificed to her every year for the preservation of the fruit. The story of Pomona and Vertumnus is prettily told by Ovid. This Hamadryad lived in the time of Procas, king of Alba. She was devoted to the culture of gardens, to which she confined herself, shunning all society with the male deities. Vertumnus, among others, was enamored of her, and under various shapes tried to win her hand: sometimes he came as a herdsman, sometimes as a haymaker, sometimes as a ploughman or a vine-dresser: he was a soldier and a fisherman, but to equally little purpose. At length, under the guise of an old woman, he won the confidence of the goddess; and, by enraging on the evils of a single life and the blessings of the wedded state; by launching out into the praises of Vertumnus, and relating a tale of the punishment of females, cruelly, a lover, he sought to make the hand of Pomona: the resuming his real form, he obtained the hand of the no longer reluctant nymph. (Ovid, Met. 14, 623, seqq.—Keightley's Mythology, p. 559.)

Pompeia Græs, an illustrious plebeian family at Rome, divided into two branches, the Ruf and Strabo- nes. A subdivision of the Ruf bore the surname of Bitynicus, from a victory gained by one of their number in Bitinica. From the line of the Strabones Pompeius Græs was a descendant. (Vell. Patrec. 2, 21.—Putea. ad Vell. l. c.)

Pompeia, I. daughter of Q. Pompeius, and third wife of Julius Caesar. She was suspected of criminal intercourse with Clodius, who introduced himself into her dwelling, during the festival of the Bona Dea, in the disguise of a female musician. Caesar divorced Pompeia; but when the trial of Clodius came on for the rape of a Vestal Virgin, the discomfited Clodius, neither did he affirm that he was certain of any injury done to his bed: he only said, "he had divorced Pompeia, because the wife of Caesar ought not only to be clear from such a crime, but also from the very suspicion of it." (Plut., Vit. Cæs.—Id., Vit. Cic.)—II. Daughter of Pompey the Great, was married to Faustus Sylla. After the battle of Thapsus, she fell into the hands of Caesar, who generously preserved her life and property. (Hirt. Bell. Afr. 95, 3, 11.) A daughter of Sextus Pompeius and Scribonia, promised in marriage to Metellus, as a pledge of peace between her father and the triumvirs. She was wedded, however, eventually to a son of Octavius, the great-granddaughter of Theophrastus of Miletus, who had been a firm friend to Pompey. Tiberius put her to death because she belonged to a family that had been hostile to Caesar. (Tacit., Ann. 6, 18.)

Pompeia Lex. I. de Parricideo, a law proposed by Pompey when consul, and enacted by the people. It gave a wider acceptance to the term "parricide," and made it apply to the killing of any near relation. (Heinecc., Ant. Rom. ed. Haubold, p. 790, seq.)—II. De vi, by Pompey when sole consul, A.U.C. 701, that an inquiry should be made into the murder of Clodius on the Appian Way, the burning of the senate-house, and the attack made on the house of Lepidus the interrex. (Sismonis, de Judic., 2, 33, p. 676.—Heinecc., ed Hanbold, p. 796.)—III. De ambitu, by the same, against bribery and corruption in elections, with the infliction of new and severe punishments. (Dio Cass. 39, 37.—Id., 40, 52.)—IV. Judiciaire, by the same; retaining the Aurelian law, but ordaining that the Judges should be chosen from among those of the highest fortune in the different orders. (Cic. in Pia, 39.—Id., Phil. 1, 8.)—V. De Comititia, by the same, that no one should be allowed to stand candidate for an office in his absence. In this law Julius Caesar was expressly excepted. (Sueton., Vit. Jul. 38.—Dio Cass. 40, 66.)

Pompeii or Pompeia (the first being the Latin, the second the Greek, form of its name), a city of Campania in the immediate vicinity of Mount Vesuvius. Of this city it may be truly said, that it has become far more celebrated in modern times than it ever could have been in the most flourishing period of its existence. Tradition ascribed the origin of Pompeii, as well as that of Heracleum, to the deities (Dom. Hal., c. 44), and, like that city, it was in turn occupied by the Oscans, Etruscans, Samnites, and Romans. At the time of the last of these Pompeii and Heracleum took an active part in the Social war, but were finally destroyed by Sulla. (Vell. Patrec., 2, 16.) In the general peace which followed, Pompeii obtained the rights of a municipal town, and became also a military colony, at the head of which was Publius Sylla, nephew of the dictator. This officer being accused before the senate of having excited some tumult at Pompeii, he was defended by his friend Orosius. (Urt. pro Syll. 21.) Other complaints appear to have been subsequently sent thither under Augustus and Nero. In the reign of the latter, a bloody affray occurred at Pompeii, during the exhibition of a fight of gladiators, between the inhabitants of that place and those of Nuceria, in which many lives were lost. The Pompeians were, in consequence, deprived of these shows for ten years, and several individuals were banished. (Tac., Ann., 14, 17.) Shortly after, we hear of the destruction of the temple of the goddess of the town. (Tac., Ann., 15, 22.—Sene., Quest. Nat. 6, 1.) Of the more complete catastrophe which buried Pompeii under the ashes of Vesuvius, we have no positive account; but it is reasonably conjectured that it was caused by the famous eruption in the reign of Titus. (Vid. Heracleum.) The ruins of Pompeii were accidentally discovered in 1748, consequently that part of the town is now known as the "Old Pompeii." The attempt was at once made to follow that indefatigable geographer in his search of its position, which he finally fixes at Scaufati, on the banks of the Sarra. He would have been more correct if he had removed it about two miles from that river, and placed it nearer the base of Mount Vesuvius. (Cramer's Anc. Italy, vol. 2, p. 179.) The opinion generally maintained, that the people of this city were surprised and overwhelmed by the volcanic storm while in the theatre, is not a very probable one. The num-

with Julius Caesar. He was born B.C. 106, the same year with Cicero. As soon as he had assumed the manly gown, he entered the Roman army, and made his first campaign with great success under his leader, Pompey. The beauty of his person, the grace and elegance of his manners, and his winning eloquence, gained him, at an early age, the hearts of both citizens and soldiers; and he even, on one occasion, possessed sufficient influence to save the life of his father, when Cinna had gained over some of the soldiery of Strabo, and a mutiny ensued. After the death of his parent, a charge was preferred against the latter that he had converted the public money to his own use; and Pompey, as his heir, was obliged to answer it. But he pleaded his own cause with so much ability and acuteness, and gained so much applause, that Antistius, the praeator, who had the hearing of the cause, conceived a high regard for him, and offered him his daughter in marriage. After the establishment of Cinna's power at Rome, Pompey retired to Picenum, where he possessed some property, and where his father's memory, hated as it was by the Romans, was regarded with respect and affection. To account for this, we must suppose that, during the long period of his military command in that neighbour- hood, he had prevented his soldiers from being burdensome to the people, and had found means of obliging or gratifying some of the principal inhabitants. Be this as it may, the son possessed so much influence in Picenum as to succeed in raising an army of three legions, or about sixteen or seventeen thousand men. With this force he set out to join Sylla, and, after successfully repelling several attacks from the adverse party, he effected a junction with that commander, who received him in the most flattering manner, and saluted him, though a mere youth, only 23 years of age, with the title of Imperator. So struck, indeed, was Sylla with the merits of the young Roman, that he persuaded Pompey to divorce the daughter of Antistius, and marry his daughter, Emilia, of Sylla's. Three years after this (B.C. 80), Pompey retook Sicily from the partisans of Marius, and drove them also from Africa, in forty days. The Roman people were astonished at these rapid successes, but they served at the same time to excite the jealousy of Sylla, who commanded him to dismiss his forces and return to Rome. On his coming back to the capital, Pompey was received with every mark of favour by Sylla. According to Plutarch, he was invested with the consulship for the following year, and invested him in the most affectionate manner, saluted him aloud with the surname of "Magnus," or "the Great," a title which Pompey henceforward was always accustomed to bear. The jealousy of the dictator, however, was revived when Pompey demanded a triumph. Sylla declared to him that he should oppose this claim with all his power; but Pompey did not hesitate to reply, that the people were sensible of his merit, and that the restoration of Syria and Sylla yielded. Pompey therefore obtained the honour of a triumph, though he was the first Roman who had been admitted to it without possessing a higher dignity than that of knighthood, and was not yet of the legal age to be received into the senate. Sylla soon after abdicated the dictatorship, and, at the consular election, had the mortification to feel his rival's ascendance. After the death of Sylla, Pompey came to be generally considered as the most powerful and ambitious of the two commanders, and was now regarded as heir of the influence exercised by Sylla over the minds of the soldiery. New troubles soon broke out, occasioned principally by the ambitious projects of the consul Lepidus, who aimed at supreme power; but he was soon overpowered by the united forces of Catulus and Pompey. A period of quiet now ensued, and Catulus endeavoured to oblige Pompey to dismiss his troops. This the latter evaded under various pretences, until the progress of Sertorius induced the senate to send Pompey, now thirty years of age, to the support of Metellus, who was unequal to cope with so able an adversary. He was invested with the command of Syria. Two commanders, who acted independently of each other in favour of their respectively good understandings, were both defeated through the superior activity and skill of Sertorius. Pompey lost two battles, and was personally in danger; and as long as Sertorius was alive, the war was continued with little success. But Sertorius having been murdered by his own officers, and succeeded in the command by Perpenna, Pompey and Metellus soon brought the struggle to an end. On his return to Italy the service was raging. Crassus had already gained a decisive victory over Spartæus, the leader of the rebels, and nothing was left for Pompey but to complete the destruction of the remnant of the servile forces; yet he assumed the merit of this triumph, and displayed so little moderation in his success, that he was suspected of wishing to tread in the footsteps of Sylla. He triumphed a second time, and was chosen consul B.C. 70, although he had yet held none of those civil offices, which, with the war, he was then receiving into the consulship. His colleague was Crassus. Two years after the expiration of this office, the pirates, encouraged by the Mithradatic war, had become so powerful in the Mediterranean, that they carried on a regular warfare along a great extent of coast, and were masters of 1000 galleys and 400 towns. The tribune Gabinius, a man devoted to the interests of Pompey, proposed that an individual (whose name he did not mention) should be invested with extraordinary powers, by sea and land, for three years, to put an end to the outrages of the pirates. Several friends of the constitution spoke with warmth against this proposition; but it was carried by a large majority, and the power was conferred on Pompey, with the title of proconsul. In four months he cleared the sea of the ships of the pirates, got possession of their fortresses and towns, and now, free a great number of prisoners, and took captive 20,000 pirates, to whom, no less prudently than humanely, he assigned the coast-towns of Cilicia and other provinces, which had been abandoned by their inhabitants, and thus deprived them of an opportunity of returning to their former course. Meanwhile the war against Mithradates had been carried on with various fortune; and although Lucullus had pushed the enemy hard, yet the latter still found new means to continue his progress. The Senate, therefore, having proposed that Pompey should be placed over Lucullus in the conduct of the war against Mithradates and Tigranes, and likewise over all the other Roman generals in the Asiatic provinces, and that all the armies in that quarter should be under his control, at the same time that he retained the supreme command by sea. This was a greater accumulation of power than had ever been intrusted to any Roman citizen, and several on that account inveighed against him. But Pompey soon saw that the propo- sition so dangerous to freedom with their whole influ- ence; but Pompey was so high in the popular favour, that, on the day appointed for considering the proposition, only Hortensius and Catulus had the courage to speak against it; while Cicero, who hoped to obtain the consulshead through the support of the Pompeian party, advocated it with all his eloquence, and Cæsar, to whom such deviations from the constitution were so fatal, consented, in order to carry on the Massi- cero's oration Pro Lege Manilia contains a sketch of Pompey's public life, with the most splendid eulogy that perhaps was ever made on any individual. The law was adopted by all the tribes, and Pompey, with assumed reluctance, yielded to the wishes of his fel- low-citizens. He arrived in Asia B.C. 67, and re- ceived the command from Lucullus, who was the less able to contest his chagrin, as Pompey industriously abolished his regulations. The operations of Pom-
POMPEIUS.

Pompey, in bringing the Mithradatic war to a close, have been related elsewhere. (Vid. Mithrdates VI.) After Pompey had settled the affairs of Asia, he visited Greece, where he displayed his respect for philosophy by making a valuable gift to the city of Athens. On his return to Italy, he was joined by his army as soon as he landed at Brundisium, and entered Rome as a private man. The whole city met him with acclamations; his claim of a triumph was admitted without opposition, and never had Rome yet witnessed such a display as on the two days of his triumphal procession.

Pompey's plan was now, under the appearance of a private individual, to maintain the first place in the state. He had, two years before, managed to have Lucullus and Crassus superior to him in wealth; the zealous republicans looked upon him with suspicion; and Caesar was laying the foundation of his future greatness.

The last-mentioned individual, on his return from Spain, aspired to the consulship. To effect this purpose, he reconciled Pompey and Crassus with each other, and united them in forming the coalition which is known in history under the name of the First Triumvirate. (See Crassus.) In B.C. 59, and, by the marriage of his daughter Julia with Pompey (Æmilia having died in childbirth), seemed to have secured his union with the latter. From this time Pompey contemned measures which, as a good citizen, he should have opposed as subversive of freedom. He allowed his own eulogist, Cicero, to be driven into banishment by the tribune Clodius, whom he had attached to his interest; but afterward himself quarrelled with Clodius, he had Cicero recalled. He supported the illegal nomination of Caesar to a five-years' command in Gaul; the fatal consequences of which compliance appeared but too plainly afterward.—The fall of Crassus in Parthia left but two masters to the Roman world; and, on the death of Julia in childbirth, these friends became rivals. (Encyclop. Americ., vol. 10, p. 299, seqq.) Pompey's studied deference to the senate secured his influence with that body; and he gained the good-will of the people by his judicious discharge of the duties of commissioned supplies during a time of scarcity. In the mean time, he secretly fomented the disorders of the state, and the abuses practised in the filling up the magistracies, many of which remained vacant for eight months, and others were supplied by insufficient and inglorious men. As the state was in the hands of the few who were capable of sustaining them with ability and honor. The friends of Pompey whispered about the necessity of a dictator, and pointed to him as the man whose great services, and whose devotion to the senate and the people, entitled him to expect the general suffrage; while himself appeared to decline the station, and even made a show of being indignant at the proposal. His position at Rome, while Caesar was absent in his province, was singularly advantageous to his pretensions: he had, in fact, always kept himself in the public eye; and in the triumvirate division of power, which he had himself planned (B.C. 50), in order to strengthen his own influence by the rising talents and activity of Caesar, and the birth and riches of Crassus, he had taken care to reserve to himself Rome, where he continued to reside, governing the state and being invested with all the magistracies of Crassus to Asia and Caesar to the Gauls. He had also acquired a popularity by rescinding, under one of his consulships, the law which Sylla, for his own purposes, had enacted, to restrain the power of the tribunes of the commons. At this time he gratified both senate and people by procuring, through the agency of the tribune Milo (B.C. 57), the recall of Cicero from Cato, with which he had been driven by the tribune Clodius, on a charge of having executed Cæcilius and Lentulus (implicated in the Catilinarian conspiracy) without the forms of law. Cicero had provoked the enmity of Clodius by prosecuting him for intruding, in the disguise of a musician, into a female religious assembly, where he sought an assignation with Pompeia, the wife of Caesar. — Caesar, though he divorced the lady, with the observation that "Caesar's wife should not be suspected," overruled the affront of Clodius to himself, withheld his own evidence against him at the trial, and even furthered his election to the tribuneship. He was actuated in this by resentment towards Cicero, who had termed the triumvirate a conspiracy against the public liberty; and, under a similar feeling, Pompey had at first connived at Cicero's banishment (B.C. 58); but, as Clodius, on the death of his wife, had taken Cicero's property, began to carry himself amicably towards Clodius, Pompey, and conceive himself his equal, Pompey, as has been said, within two years procured the decree to be reversed. The sequel of this intrigue was such as to accelerate his advance to the dictatorship. Clodius, as he was returning to Rome on horseback from the country, was set upon and murdered by Milo and some attendants, who were quitting the city. As Milo was on the point of making the last-mentioned a prisoner of war, Pompey, who had disappointed him of the consulship promised as the price of his services, it should not seem that this affair was the result of Pompey's instigation. The populace, struck with consternation, passed the night in the streets, and, with the dawn of day, brought in the body of Clodius. At the suggestion of some tribunes, his friends, it was carried into the senate-house, either to intimate suspicion of the consuls, or to carry the business of the senate forward. Here the benches were torn up, a pile constructed, and the body consumed; but the confusion caught the senate-house and several adjoining buildings. Milo, less apprehensive of punishment than irritated at the respect paid to Clodius, returned to the city with his colleague Caecilius, and, distributing money to a part of the multitude, addressed them from the tribunal as if they were a regular assembly; decrying the affair as an accidental encounter, and endeavouring to obtain a verdict of acquittal: he ended with inveighing against Clodius. While he was haranguing, the rest of the tribunes, and that part of the populace which had not been bribed, rushed into the forum armed: Milo and Caecilius put on slaves' habits and escaped; but a bloody, indiscriminate assault was made on the other citizens, of which the friends of Milo were now the objects; but he fell in the way of the rioters, especially those who were splendidly dressed and wore gold rings. The tumult continued several days, during which there was a suspension of all government; stones were thrown and weapons drawn in the streets, and houses set on fire. The slaves armed themselves, and, breaking into dwellings under pretence of searching for Milo, carried off everything of value that was portable. The senate assembled in a state of great terror, and, turning their eyes upon Pompey, proposed to him the acceptance of the dictatorship. But, by the persuasion of Catæ, they invested him with the same power under the title of Sole Consul. This was probably with the secret understanding of Pompey himself, as the title of dictator had become odious since the tyranny of Sylla. That Pompey and Catæ were in agreement, appears from this: the latter was appointed by the appointment of quæstor to Cyprus; the senate having decreed the reduction of that island to a Roman province, and the confiscation of the treasures of King Ptolemy, on account of the exorbitant ransom demanded for Clodius when taken by pirates. Pompey proceeded to restore order and to pass popular acts. He condemned Milo for murder. He framed a law against bribery and corruption, and instigated an inquiry into the acts of administration of all who had held magic trances from the time of his own first consulship.
This, although plausibly directed at what Pompey justly called the root of the state disorders, seemed to be aimed covertly at Caesar; though Pompey appeared offended at the suggestion, and affected to consider Caesar as above suspicion. He presided in the court which was sitting to guard the public; these judges could not be intimidated. Several, convicted of intrigue and malversation, were banished, and others fined. With a great appearance of moderation, he declined to hold the single consulship to the extent of the full period, and for the rest of the year adopted his father-in-law, Lucius Scipio, as his colleague; but, even after the return to the regular consulships, as well as for the months during which Scipio was associated with himself he exercised his office, in reality, to direct the affairs of state. The senate gave him two additional legions, and prolonged his command in his provinces. Hitherto Pompey had proceeded with infinite address; but the craftiness of his policy was no match for the frankness and directness of that of Caesar, who acted in this juncture, so critical to the Roman liberty, with a real moderation and candour that absolutely disconcerted his rival. Caesar, indeed, who was made aware that Pompey intended that he should be the only master of all things passing at Rome, and who found himself obliged to stand on the defensive, availed himself of the means which his acquired wealth placed in his hands, and which the practice of the age too much countenanced, to divide the hostile party by buying off the enmity of some of them newly elected to office. Aware of the cabals which were forming against him, Caesar knew that, in returning to a private station, he should be placed at the feet of Pompey and his party. He therefore resisted the decree of his recall till he could assure himself of such conditions as would prevent his obedience from being attended with danger. His demands were reasonable; his propositions fair and open, and his desire of effecting a compromise apparently sincere. The unintermitted continuation of a consul's office through several years, and even his creation in his absence, were not unconstitutional: both had been granted to Marius; and Caesar himself had been re-elected, while absent, by the ten tribunes; Pompey, when he brought in the law against allowing absent candidates to stand, had made a special exception in favour of Caesar, and recorded it. His requests that he might stand for the consulship in his absence; that he might retain his army till chosen consul; that he might have his command prolonged in the province of Hither Gaul, should that be further extended, that he might receive to his command against his will, and that he would cheerfully lay it down, though the time was not yet expired; thus contrasting his own moderation with the unwillingness of Caesar to relinquish office, even at the termination of the full period. Curio, however, contended openly that the promise was not to be taken for the performance; but exclaimed against Pompey's avarice of power; and urged with such adroitness the necessity either of Cassandra or of the Law of Alii. It might be a check on any unconstitutional designs of the other, or of both alike resigning, that he brought the senate over to his opinion, the consul Marcellus bitterly observing to the majority, "Take your victory, and have Caesar for your master." But on a rumour that Caesar had crossed the Alps and was on his march to Rome, the consul ran to Pompey, and, presenting him with a sword, said, "We order you to march against Caesar and fight for your country." Curio fled to Caesar, who had lately returned from Britain, and was approaching Ravenna; and urged him to draw together his forces and advance upon Rome. But Caesar promised that he would not abandon Pompey; and sent, by Curio, letters to the senate, in which he distinctly offered to resign his command, provided Pompey would do the same; otherwise he would not only retain it, but would come in person, and revenge the injuries offered to himself and to the country. This was received with loud cries, as a declaration of war; and Lucius Domitius was appointed as Caesar's successor, and ordered to march with four thousand new-raised troops. Neither Pompey nor the senate appeared prepared. Pompey, with his usual art, had redeployed forces from Caesar the legion which he had lent him, on presence of an expedition to Syria against the Parthians. Caesar had not only sent back the legion, but added another of his own. They halted at Capua, and spread the report, either from ignorance, or, as they were handsomely paid by Caesar, probably from instructions given them, that Caesar's army was disaffected to him, and that he should gladly come over to Pompey. His credulity and policy were such that he neglected to make the necessary levies till the opportunity was lost. While he was at last exercising himself, under the authority of the senate, in collecting 13,000 veterans from Thessaly, and mercenaries from foreign nations, and in making forced contributions of money and munitions of war in the cities of Italy, Caesar, leaving his commanders to concentrate and hasten the march of the rest of his army, took the field with some cavalry and a division of 5000 men. He sent forward a picked detachment to surprise Ariminum, the first Italian city after passing the frontier of Gaul, and, throwing himself into his chariot while his friends were sitting at the supper-table, crossed the Rubicon, with the exclamation, "The die is cast." When the news reached Rome, the senate repented their rejection of Caesar's equitable proposals; and Cicero moved that an embassy should be sent to him to treat for peace, but was overruled by the consuls. Pompey had boasted that, if need were, he could raise an army by stamping with his foot; and Favonius reminded him, in a tone of raillery, that "it was high time for him to stamp." Domitius, who had been sent to supersede Caesar, was by him besieged in Corfinium, taken prisoner, and honourably dismissed, his troops going over to Caesar. Pompey, with the consuls, and the greater part of the Senate and the nobility, had left Rome and passed over into Greece. On entering Rome, Caesar was, by the remnant of the senate, created dictator; but he held the office only eleven days, exchanging it for that of consul, and taking Ser- vilius as his colleague. Having seized the treasury, and secured Sicily and Sardinia, the granaries of Rome, by appointing his governors, he set out for Spain, where, in the hither province, he reduced, by cutting off the trade of Carthage, the danger of Punic war, and Afranius, consisting of five legions, whom he dismissed in safety, and allowed to join Pompey; and in the farther province he compelled the surrender of Varro with his legion. It is singular that his lieutenants were everywhere unsuccessful: Dolabella and Caius Antonius, who had it in charge to secure the Adriatic, were surrounded with a superior fleet by Pompey's lieutenant, Octavius Libo; Domitius, an armistice being concluded, after his troops had suffered much by drinking of poisoned waters, risked a rash action with Varus and Juba, king of Mauritania, the ally of Pompey, and was slain. Caesar himself experienced a reverse in Illyricum, where, his army being reduced to such straits as to eat bread made with herbs, he assaulted, near Dyrrachium, the intrenched camp of Pompey, whose policy had been to decline a battle,
and was repulsed, with the general panic of his troops and the loss of many standards; and his own camp would have been taken if Pompey had not drawn off his forces in apprehension of an ambuscade: on which Caesar remarked that "the war could have been at an end, if Pompey knew how to use victory." Caesar retraced into Thessaly, and was followed by Pompey. A general battle was fought on the plains of Pharsalus; the army of Pompey being greatly superior in numbers, as it consisted of 40,000 foot and 12,000 horse, composed of the transmarine legions and the auxiliary forces of different kings and tetrarchs; while that of Caesar did not exceed 13,000 foot and 1,190 horse. Pompey was, however, out-manoeuvred, his army thrown into total rout, his camp pillaged, and himself obliged to fly, leaving the field with only his son Sextus and a few followers of rank. He set sail from Mytilene, having taken on board his wife Cornelia, and made for Egypt, intending to claim the hospitality of the young King Ptolemy, to whom the senate had appointed him guardian. When he came near Mount Cæsium, the Egyptian army was seen on the shore, and their fleet lying off at some distance, when, presently, a boat was observed approaching the ship from the land. The persons in the boat invited him to enter, for the purpose of landing; but, as he was stepping ashore, he was stabbed in the sight of his wife and son; and his head and ring were sent to Caesar, who, shedding tears, turned away his face, and ordered the head to be burned with perfumes in the Roman manner, to prevent the Greek relations, through intrigue, from raising a howling clamour. (Cic. Tusc. Disp. 3, 27.)—Cornelia and her friends instantly put to sea, and escaped the pursuit of the Egyptian fleet, which at first threatened to intercept them. Their feelings, as is natural, were, for the moment, so engrossed by their own danger that they could scarcely comprehend the full extent of their loss (Cic. Tusc. Disp. 3, 27); nor was it till they reached the port of Tyre in safety that grief succeeded joy. It was not till they began to understand what cause they had for sorrow. But the tears that were shed for Pompey were not only those of domestic affliction; his fate called forth a more general and honourable mourning. No man had ever gained, at so early an age, the affections of his countrymen; none had enjoyed them so largely, or preserved them so long with so little interruption; and, at the distance of eighteen centuries, the feeling of his contemporaries is represented by the stately judgment of history. He entered upon public life as a distinguished member of an oppressed party, which was just arriving at its hour of triumph and retaliation; he saw his associates plunged in rapine and massacre, but he preserved himself pure from the contagion of their crimes; and when the death of Sulla left him at the head of the aristocratic party, he served them ably and faithfully with his sword, while he endeavored to mitigate the evils of their ascendency, by restoring to the commoners of Rome, on the earliest opportunity, the most important of those privileges and liberties which they had lost under the tyranny of their late master. He received the due reward of his honest patriotism in the unusual honours and trusts that were conferred upon him; but his greatness could not corrupt his virtue; and the boundless powers with which he was invested, in the exercise of the highest ability and uprightness to the accomplishment of his task, and then, without any undue attempts to prolong their duration, he honestly resigned them. At a period of general cruelty and extortion towards the enemies and subjects of the commonwealth, the character of Pompey, in his foreign commands, was marked by its humanity and spotless integrity; his conquest of the pirates was effected with wonderful rapidity, and cemented by a merciful policy, which, instead of taking vengeance for the past, accomplished the prevention of evil for the future: his presence in Asia, when he conducted the war with Mithridates, was no less a relief to the provinces from the tyranny of their governors, than it was their protection from the arms of the enemy. It is true that wonders rarely led him, after some return from Asia, to unite himself, for a time, with some unworthy associates; and this connexion, as it ultimately led to all the misfortunes, so did it immediately tempt him to the worst faults of his political life, and involved him in a career of difficulty, mortification, and shame. But after this disgraceful fall, he again returned to his natural station, and was universally regarded as the fit protector of the laws and liberty of his country, when they were assailed by Caesar. In the conduct of the civil war he showed something of weakness and vacillation; but his abilities, though considerable, were far from equal to those of his adversary; and his inferiority was most seen in that want of steadiness in the pursuit of his own plans, which caused him to abandon a system already sanctioned by success, and to persuade himself that he might yield with propriety to the ill-judged impatience of his followers for battle. His death is one of the few tragic events of those times which may be regarded with unmixed compassion. It was not accompanied, like that of Cato and Brutus, with the rashness and despair of suicide; nor can it be regarded, like that of Caesar, as the punishment of crimes, unlawfully inflicted, indeed, yet suffered deservedly. With a character of rare purity and tenderness in all his domestic relations, and equal firmness in all civil, a young man, in the heat of passion, bleeding at the eyes of his wife and son; while flying from the ruin of a most just cause, he was murdered by those whose kindness he was entitled to claim. His virtues have not been transmitted to posterity with their deserved fame; and while the violent republican writers have exalted the memory of Cato and Brutus, Pompey's many and rare merits have been forgotten in the faults of the Triumvirs, and in the weakness before which they displayed in the conduct of his last campaign. (En. cyclic, Metropol. div. 3, vol. 2, p. 252.)—V. Cæsius, elder son of Pompey the Great, was sent by his father into Asia, at the commencement of the civil war, to raise a large naval and land force from all the provinces of the East. After the death of his parent he passed into Spain, where two lieutenants of Pompey had reunited some of the scattered remnants of the army, and taken the provinces of Asia, and he saw himself in a few months at the head of thirteen legions, and in possession of a considerable fleet. Caesar, finding that he must act in person against him, left Rome for the Spanish peninsula, and, by a series of bold manoeuvres, compelled the son of Pompey to engage in battle in the plain of Munda (45 B.C.). This action, the last that was fought between the Pompeian party and Caesar, terminated, after the most desperate efforts, in favour of the latter; and the son of Pompey, having been wounded in the fight, was slain in endeavouring to make his escape. (Auct. Bell. Hisp.—Appian, Bell. Civ., 2, 87, seq.)—VI. Sextus, second son of Pompey the Great, and sur- named sometimes, for distinction's sake, Pompey the Younger, is celebrated in Roman history for the part that he played after the death of Caesar, and for the subsequent boasted pursuit of the Roman dominion. After the battle of Pharsalia, he proceeded, with some senators, to rejoin his father in Pamphylia; but, hearing of the latter's death, he fled to Cyrrhus, thence to Africa, and finally to Spain, where he joined his brother Cænius with a few vessels. The disastrous battle of Munda, however, again compelled him to fly; but he found himself, after some lapse of time, at the head of a considerable force, composed of recruits and remnant of the army at Munda, and he succeeded in defeating two lieutenants of Caesar. After the death of the latter, Sextus Pompey applied to the Roman senate for the
restitution of his father's claim, and Sextus, without obtaining precisely what he solicited, still received as an indemnity a large sum of money from the public treasury, and with it the title of commander of the seas. In place, however, of great vessels the latter offered for his head. Many were saved in consequence by his generous care. At the same time, his fleet increased so large a size in the Mediterranean as to intercept the supplies of grain intended for the Roman capital, and the people, dreading a famine, compelled Antony and Octavius to negotiate for a peace with the son of Pompey. Sextus demanded nothing less than to be admitted into the triumvirate at the expense of Lepidus, who was to be displaced; and he, in all likelihood, had obtained what he sought, had not his friends compelled him to hasten the conclusion of the alliance. As it was, however, the terms agreed upon were extremely favourable to Sextus. Sicily, Sardinia, Corsica, and Achaia were given him; he was promised the consulate for the ensuing year, and the proscribed persons whom he had saved were erased from the fatal list. The peace, however, proved a hollow one. Hostilities soon commenced anew, and Octavius encountered two, one through his lieutenant Calvisius, and another in person. Two years after, however, having repaid his losses, he proved more successful. Agrippa, his lieutenant, gained an important advantage over the fleet of Pompey off Mylae, on the coast of Sicily, and afterward a decisive victory between Mylae and Naulochus. Sextus, now without resources, fled with sixteen vessels to Asia, where he excelled new troubles; but, at the end of a few months, he fell into the hands of Antony's lieutenants, who put him to death B.C. 35.

In allusion to his great naval power, Sextus Pompey used to style himself "the son of Neptune" (Nepturnus.— Horat. Epod. 9, 7.— Mitsch., ad loc. — Dio Cass., 48, 19.— Vell. Patr., c. 72.— Plut., 4, 2.— Plut., Vit. Ant.— Appian, Bell. Civ., 2, 105.— Id. ib., 4, 84, &c.)

Pompeii, a city of Hispania Tarraconensis, in the territory of the paints, now Pompaelona. (Plut., 1, 3.— Strab., 161.)

Pomphilus Numa, the second king of Rome. (Vid. Numa.)

Pomponius, 1. Atticus. (Vid. Atticus.)—II. Mela. (Vid. Mela.)—III. Festus. (Vid. Festus.)—IV. Andronicus, a native of Syria, and a follower of the Epicurean sect. He pursued, at Rome, the profession of a grammarian, but his attachment to philosophical pursuits induced him from being very useful as a practical logical instructor. He was a contemporary of M. Antonius Gnipho, who was one of Cicero's instructors. Finding this latter grammarian, as well as others of inferior note, preferred to himself, he retired to Cumae, where he lived in great poverty, and composed several works. These were published by Orbilius after the death of Andronicus. (Sueton., de Illust. Gram., 9.) He was appointed to him from being very useful as a practical logical instructor. He was a contemporary of M. Antonius Gnipho, who was one of Cicero's instructors. Finding this latter grammarian, as well as others of inferior note, preferred to himself, he retired to Cumae, where he lived in great poverty, and composed several works. These were published by Orbilius after the death of Andronicus. (Sueton., de Illust. Gram., 9.)

Pompeius, the soldier. (Vid. Pompeius,) a marshy tract of country in the territory of the Volsi, deriving its appellation from the town of Suessa Pompeia, in whose vicinity it was situated. These fens are occasioned by the quantity of water carried into the plain by numberless streams which rise at the foot of the adjacent mountains, and, for want of a sufficient declivity, creep sluggishly over the level space, and sometimes stagnate in pools, or lose themselves in the sands. Two rivers principally contributed to the formation of these marshes, the Ufens or Ufente, and the Nympheus or Nynfo. The flat and swampy tract spread to the foot of the Velician mountains, and covered an extent of eight miles in breadth and thirty in length with mud and infection. We are informed by Mucianus, an ancient writer quoted by Pliny, that there were at one time no less than twenty-three cities to be found in this district (3, 5). Consequently, it is to be inferred that formerly these marshes did not exist, or that they were confined to a much smaller space of ground. That it was cultivated appears clearly from Livy (2, 34); and we are told by the same historian that the Pomptinium ager was once portioned out to the Roman people (6, 21). Indeed, it is evident that the waters must have been gradually increasing from the decline of the Roman empire, until the successful exertions made by the Roman pontiffs arrested their baneful progress. When this district was occupied by flourishing cities, and an active and industrious population was ever ready to check the increasing extent of the marsh, it might have been kept under; but after the ambition of Rome and her system of universal dominion had rendered this tract of country desolate, these wastes and fens naturally increased, and, in process of time, gained so much ground as to render any attempt to remedy the evil only temporary and inefficient. It is supposed that, when Appius Claudius constructed the road named after him, he made the first attempt to drain these marshes towards the South; but it is not mentioned in the accounts we have of the formation of this Roman way. (Livy, 9, 29.) But about one hundred and thirty years after, there is a positive statement of that object having been partly effected by the consuls Corn. Cethegus (Livy, Epit., 46.) Julius Caesar is said to have intended to divert the course of the Tiber from Ostia, and carry it through these marshes, but the subject did not reach his time; he, and gave way to the more moderate but more practicable one of Augustus. This emperor endeavoured to carry off the superfluous waters by opening a canal all along the Via Appia, from Forum Appii to the grove of Peronia. It was customary to embark on the canal in the nighttime, as Strabo relates and Herace practised, because the vapours that arise from these swamps are less noxious in the cool of the night than in the heat of the day. This canal
PON

still remains, and is called Castra. These marches were neglected after the time of Augustus until the reigns of Nerva and Trajan, the latter of whom drained the country from Trepoli and Terracina, and restored the Appian Way, which the neglect of the marches in 9 B.C. had made impassable. During the convulsions of the following centuries, the marches were again overflowed, until again drained in the reign of Theodoric, by Caecilius Decius, a public-spirited individual, and apparently with good effect. (Cassiod. 2, Epist. 32 and 33.) They were never, however, completely exhausted of their water until the pontificate of Pius VI., although many preceding popes had made the marches passable. During the French invasion, however, the public-spirited measures of the popes to keep open the canals of communication were neglected, and the waters again began to stagnate. These marches, therefore, are again formidable at the present day, and, though contracted in their limits, still corrupt the atmosphere for many miles around. (Cramer's Anc. Italy, vol. 2, p. 96, seq.)

Pomptus, an able commander of the Sannites, who entered into the defile of Sannius, called the "Caudine Forks" (Forca Caudina), and compelled them to pass under the yoke. (Liv., 9, 2, seq.) He was afterward defeated in his turn, and subjected to the same ignominy by the Romans. (Liv., 9, 15.)

Pontus, 1, a country of Asia Minor. The name implies a political rather than a geographical division of territory: having been applied, in the first instance, to the coast of the Euxine, situated between the Colchian territory and the river Halys, it was, in process of time, extended to the mountainous districts which lie towards Cappadocia and Armenia; and it even, at one time, included Paphlagonia and part of Bithynia. The denomination itself was unknown to Herodotus, who always designated this part of Asia by referring to the particular tribes who inhabited it, and who then enjoyed a separate political existence, though tributary to the Persian empire. Xenophon appears to have been ignorant of it, since he adheres always to the same local distinctions of nations and tribes used by Herodotus; such as the Chalybes, Tibareni, Musynacii, &c. It was not till after the death of Alexander that the Pontic dynasty makes any figure in history; and an account of it will be found under the article Mithradates. —After the overthrow of Mithradates these Greats, Pompey annexed the greater part of Pontus to Bithynia and Thrace. (After Bell. Maced., vol. ii. 129 — Dio Cassiv. 42, seq.)

PONTUS EUXINUS, the ancient name for the Black Sea. According to the common opinion, its earliest name was Αὐρακλάζων ("Auraklaezon", an allusion to the character of the nations along its shores); and this appellation was changed to Εὔκλεος ("eucleös"); and to Herodotus this name is due: Herodotus, in the fourth book of his history, after describing the sea, says that "he had heard that the sea, especially in its eastern part, was so large and so deep, as to have the appearance of a vast lake; and that it bears all the marks of one; flows, like those in North America, through a kind of river, which forms at first the narrow channel of Constantinople, or Thracian Bosporus; it then assumes the appearance of a small lake, called the Propontis, or Sea of Marmora, passes towards the southwest, and takes anew the form of a large river, which has been termed the Hellespont, or Dardanelles. These channels resemble many other outlets of lakes; the great body of water that flows through so narrow an opening need not excite wonder, although it has given rise to various hypotheses. (Vid. Mediterranean Mare. — Malte-Brun, Geogr., vol. 6, p. 121, Am. ed.)

Poplitis, I. M. Popilis Lasis, was consul B.C. 356, and in that same year defeated the Thibetines, who invaded the Roman territory, and had advanced to the city gates. (Liv., 7, 12.) At a subsequent period he accused C. Licinius Stolo under his own law, and effected his condemnation. (Liv., 7, 16.) He obtained the consulship a second time, B.C. 353; and a third time, B.C. 347, in which year he defeated the Gauls, who had made an irruption into the Latin territory, and obtained for his triumph. (Liv., 7, 25, seq.) Two years after this he was consul in the fourth time. (Liv., 7, 1119)
The Populi, or body that bore the surname of Læmus, and this appellation is said to have derived from a peculiarity of Carmenta (Flamen Carmentialis), and conducting a public sacrifice in his sacerdotal robe, or lana, intelligence was brought him that a sedition had broken out among the commons; he hastened to the public assembly arrayed in his lana, and quelled the tumult by his authority and eloquence. (Cicero, Brut., 14.)—If M. Popilius Læmus, was consul 173 B.C. Having marched of his own accord, during the war with the Barbarians, on the territory of the Satellitae, who had committed no sort of hostility against the Romans, and coming to an engagement with them, he obtained a complete victory, and sold those who had survived the battle into slavery. The senate immediately passed a decree, ordering him to restore the money which he had received from the sale of the Satellitae, to set the latter at liberty, give them back their effects and arms, and immediately to quit the province. Popilius, however, disobeyed his mandate; and yet, notwithstanding this open contumacy, he proceeded to Rome, inveighed severely against the assembled senate, and then returned to his province. Being afterward accused for this outrage against the laws, he was sheltered from punishment by the influence of his brother. (Vid. Popilius III.) He afterward accompanied the consul Philippus to Macedonia as military tribune. B.C. 169. (Liv., 40, 43.—Id., 41, 14, seq.—Id., 42, 1, seqq.—Id., 44, 1.)—III. C. Popilius Læmus, brother of the preceding, attained to the consulship B.C. 172, and only signalized his administration of that office by his intrigues in favour of his brother when charged with official misconduct. (Vid. Popilius II.) Not long after this he was sent, with two other senators, to Egypt, on account of the differences subsisting between Cleopatra and Ptolemy Euergetes on the one hand, and Antiochus Epiphanes on the other. Antiochus was at the gates of Alexandria, and preparing to lay siege to the city when the Roman deputies arrived. The decree of the senate, which he communicated to him, was to the following effect: that Antiochus should make peace with Ptolemy and retire from Egypt; but, Antiochus wishing to elude it by evasive answers, Popilius haughtily drew a circle round him in the sand with a rod which he held in his hand, and ordered the monarch to give him an answer to carry home to the senate before he stirred out of the circle which had just been traced, and should he not have been struck with astonishment, but, after a moment’s reflection, promised to obey, and accordingly evacuated Egypt. (Liv., 41, 18.—Id., 42, 9, seqq.—Id., 44, 19, seqq.—Id., 45, 10.—Vell. Patreol., 12, 10.—Justin, 34, 3, 4.)—IV. A tribune, who commanded the party which slew Cicero. It is said that the orator had defended him at one time against a charge of piracy. This, however, some regard as a pure invention of the later grammarians, who sought for brilliant themes on which to work. (Senec. Rhet., 9, controv. 17.)

POPLIÇA. Vid. PUBLICOLA.

Poppæa Sabina, I. daughter of Poppæus Sabinus, and wife of T. Otho. She lived in the time of the Emperor Claudius, and was the most beautiful woman of her time, but disgraced herself by her scandalous excesses. Messalina, having become jealous of her, compelled her to desert her husband. (Tacit., Ann., 11, 18, 11, 4, 10, 15, 16, 14, seqq.—Id., 13, 45—.)—It was thought by the preceding, inherited all her mother’s beauty and fertility. Her father was T. Otho, who had been involved in the disgrace of Sejanus, and she preferred to his name, therefore, that of her maternal grandfather Poppæus Sabinus, who had borne the consulsheat, and had been graced with the insignia of a triumph. (Tacit., Ann., 15, 46.) The young Poppæa united in herself every attraction of wealth, beauty, and nobility. She possessed all things, in fine, to borrow the words of Tacitus, except a virtuous heart. (“Hinc splendida, pictaque virtus, equidem / Pretior honestum animum.” Tacit., l. c.) She was first married to Antyllus, prefect of the praetorian cohorts under Claudius, and bore him a daughter; but, having been seduced by Otho, she left her husband and lived with the latter. Nero was now on the throne, and Otho was the companion of his debaucheries. Either through vanity or indirection, the charms of Poppæa were made a constant theme of eulogy by Otho in the presence of the empress, until the pride of the latter was excited, and he became desirous of beholding her. His licentious spirit soon acknowledged the power of her charms, and the air of modest reserve assumed by this artful and abandoned woman only drew him the more effectually into its toils. Otho was put out of the way by being sent to Lucania with the title of governor; and Poppæa now obtained over the emperor such an irresistible ascendancy, that he no longer listened to the admonitions of Seneca, or to the remonstrances of Burrhus. Having herself violated all the bonds of chastity and connubial faith, the mistress of the emperor wished to become his wife; but, as she could not hope to see the Empire Octavia repudiated while Agrippina lived, she employed every art of intrigue and falsehood upon the mind of her paramour, with the view of exciting suspicion against his mother, and thereby paving the way for that act of parricide which has left so indelible a stain upon his character. After the destruction of Agrippina, Nero divorced Octavia, and the unprincipled Poppæa was raised to the throne. The schemes of this wicked woman did not, however, end here. Fearful lest the mild virtues of Octavia might cause a return of affection on the part of Nero, she procured her banishment from Rome, on false testimony of adulterous conduct; and when, through fear of an insurrection of the people, the emperor was compelled to recall the daughter of Claudius, the artful Poppæa alarmed the fears of Nero by telling him that his former wife was at the head of a numerous party in the state, and the unfortunate Octavia was deprived of existence. In the year 63, Poppæa was delivered of a daughter, an event which threw Nero into transports of joy. He named the infant Claudia, and decreed to her and her mother the title of Augusta. The child, however, the subject of so many hopes, died at the end of four months, and several years after the great Nero was deprived of his existence at its birth. Poppæa herself survived her offspring only two years, having expired from a blow which she received from the foot of her brutal husband, when many months advanced in her pregnancy, A.D. 65. On returning to himself, Nero was the more afflicted at her death, since with her he lost the only hope he had entertained of an heir to his dominions. Her body was embalmed, and placed in the tomb of the Caesars. The emperor himself pronounced her false eulogy, and he did not, indeed, pretend to praise her, considering himself, as Tacitus remarks, with eulogizing her beauty, and the favours which fortune had heaped upon her.—No female ever carried to a greater extent the refinements and luxuries of the toilet. She is said to have been the first Roman lady that wore a mask on her face when going abroad, in order to protect her complexion from the rays of the sun. Whenever she mounted the Triumphal Carriage, she was conveyed by a train of 500 asses, whose milk furnished her with a bath for preserving the fairness and softness of her skin. She was the inventress also of a species of pompadour, made of bread soaked in asses’ milk, and laid over the face at night. (Juvenal, 6, 467.—Böttger, Sabina., p. 14.)—Otho, who never ceased to cherish an attachment for Poppæa, caused her statues, which had been thrown down with those of Nero, to be replaced on their pedestals during the short period.
Porphyry, a celebrated Plotinian philosopher, of the Platonic school, a learned and zealous supporter of pagan theology, and an inveterate enemy to the Christian faith. He was a native of Tyre, and was born A.D. 233. His father very early introduced him to the study of mathematics and philosophy under the Christian preceptor Origen, probably with the view of teaching at Caesarea in Palestine. His juvenile education was completed at Athens by Longinus, whose high reputation for learning and genius brought him pupils from many distant countries. Under this excellent instructor he gained an extensive acquaintance with antiquity, improved his taste in literature, and enlarged his knowledge of the Plotinian philosophy. It is a doubt and much debated, to be ascribed to Longinus, that we find so many proofs of erudition, and so much elegance of style, in the writings of Porphyry. His original name was Melek, which in Syriac signifies king, and hence he was sometimes called king. Afterward Longinus changed his name to Porphyrius, from Porphyra, the Greek for purple, a colour usually worn by kings and princes. From this time we have little information concerning this philosopher, till we find him, about the thirteenth year of his age, becoming at Rome a disciple of Plotinus, who had before this time acquired great fame as a teacher of philosophy. Porphyry was six years a diligent student of the eclectic system, and became so entirely attached to his master, and so perfectly acquainted with his doctrine, that Plotinus esteemed him one of the greatest ornaments of his school, and frequently employed him in refuting the objections of his opponents, and in explaining to his younger pupils the most difficult parts of his writings: he even intrusted him with the charge of methodising and correcting his works. The fanatical spirit of philosophy, to which Porphyry addicted himself, concurred with his natural propensity towards melancholy to produce a resolution, which he formed about the thirty-sixth year of his age, of putting an end to his life; purposing hereby, according to the Platonic opinion, to ascend to the incorporeal heaven, and to escape the double burden of this life. From this mad design he was, however, dissuaded by his master, who advised him to divert his melancholy by taking a journey to Sicily, to visit his friend Probus, an accomplished and excellent man, who lived near Lillybaum. Porphyry followed the advice of Plotinus, and recovered the vigour and tranquillity of his mind. After the death of Plotinus, Porphyry, still remaining at Athens, was advised by his master to be converted to the Christian religion. Some have maintained that in his youth he had been a Christian; but of this there is no sufficient proof. It is not improbable, that while he was a boy under the care of Origen, he gained some acquaintance with the Jewish and Christian scriptures. He wrote fifteen different treatises against Christianity, which the Emperor Theodosius ordered to be destroyed: an iniquitous act of zeal, which the real friends of Chris-
tianity, no less than its enemies, will always regret; for truth can never suffer by a fair discussion; and falsehood and calumny must always, in the issue, serve the cause they are designed to injure. The spirit of those writings of Porphry which are lost, may be in some measure restored from fragments which are preserved by ecclesiastical historians. Many able advocates for Christianity appeared on this occasion, the principal of whom were Methodius, Apollinaris, and Eusebius. So vehement and lasting was the indignation which was excited against the memory of Porphry, that Constantine, in order to cast the severest possible censure upon the Arian sect, published an edict ranking them among the proscribed enemies of Christ. The Arians immediately required that they should, from that time, be branded with the name of Porphyrians. Porphry, after remaining many years in Sicily, returned to Rome, and taught the doctrines of Plotinus; pretending to be not only a philosopher, endowed with superior wisdom, but a divine person, favoured with supernatural communications from Heaven. He himself relates (Vit. Plot., c. 23), that, in the sixty-eighth year of his age, he was in a sacred ecstasy, in which he saw the immortal powers of the gods. This vision is superior to all gods, without an image. This vision Augustine supposed to have been an illusion of some evil spirit: it was more probably the natural effect of a heated imagination; unless, indeed, it be added to the long list of fictions with which the writings of Porphyrury abound. He died about 304 A.D. Of his numerous works, the only pieces which have escaped the depredations of time (except sundry fragments, dispersed through various authors) are his "Life of Pythagoras" (Περὶ τοῦ ἤλιον Ἀφραδίαν), "Homeric Questions" (Ὅμηρος Ἀδίκημα), a fragment "On the Styx" (Περὶ τῆς Στύγης), "An Epistle to Anebo, the Egyptian" (Πρὸς Ἀνεβόν τῶν Αἰγύπτων), a treatise "On the Five Predicables" (Περὶ τῶν πέντε φανών), commonly prefixed to the logical works of Aristotle, "Thoughts on Intellectuality" (Πρὸς τὸν διόνυσον Ἀφραδίαν), a treatise "On Abstinence from Animal Food" (Περὶ ἄγορατος τῶν ζῴων), a "Life of Plotinus" (Περὶ Πλωτίνου βιω), "A Commentary on the Harmonics of Plotinus" (Ἐκ τας Ἀριστοκρατίας ἡμῶν καὶ ἕνας ἐπούστηρος, and a few other unimportant pieces. (Engel's History of Philosophy, vol. 2. p. 63, seqq.-Schöll, Hist. Lit. Gr., vol. 5. p. 131, seqq.) The best edition of the Life of Pythagoras is that given by Kiesling at the end of his edition of Ambrosius' Life of Pythagoras (Lips. 1818, 2 vol. 8vo); of the treatise on Abstinence from Animal Food, the best is that of Roet (Lud. Bat. 1792, 4to), which contains also in the same volume Van Goen's edition of the work on the Cave of the Nymphs. The life of Plotinus is given with the edition of the Emessades of the latter. Porsenna or Porserna (called also Lars Porserna), was Lucumo of Clusium, and the most powerful of all the Etrurians. He raised a large army and marched towards Rome. He was met by the Romans near the fortress on the Janiculum; but almost at the first encounter they took to flight, and the Etrurians pursued them impetuously as they sought safety by crossing the Pons sublicius. It was then, in the very heat of the battle, that Porsenna formed, who, seeing the danger of the city's being taken at once if the enemy should enter it along with the flying Romans, posted himself on the bridge, made head against the pursuers, and, calling on his countrymen to cut down the part of the bridge between him and the city, plunged into the Tiber when this was effected, and swam in safety to the opposite side. Porsenna, however, retained possession of the Janiculum, and, sending his army across the river in boats, pillaged the country, cut off all supplies, and reduced Rome to the utmost distress by famine. In this emergency, Caius Mutius undertook to rid his country of this danger. He made his way into the camp of Porsenna, and entered into a treaty with him in the camp of Porsenna, where he slew the king's secretary, mistaking him, from his appearance, for the monarch himself. He was immediately seized and brought before Porsenna. Here he acknowledged the deed, and told the king that his danger was by no means over. Porsenna threatened him with death by torture unless he divulged the plots by which his life was threatened. Mutius immediately stretched out his right hand, and thrust it into the fire of an altar vehicle, as though, in the king, saying, "Behold how much I regard your threat of torture." He held it in the flames till it was consumed, without a feature of his stern countenance indicating that he felt the pain. Porsenna, struck with his noble daring and contempt of suffering, commanded him to be set at liberty; and Mutius then told him, in requital for his generosity, that he was once the guest of a patrician youths who had vowed to kill the monarch, and was therefore fit for their attempts, which would be not less daring than his own. From that time Mutius was called Sexaola, or "left-handed," because he had thus lost the use of his right hand. Alarmed by the dangers which threatened him from foes so determined, Porsenna offered terms of peace to the Romans. A treaty was at length concluded, according to which Porsenna ceased to maintain the cause of the Tarquins; but demanded the restitution of all the lands which the Romans had at any time taken from the states of Etruria, and that twenty hostages, ten youths and ten maidens, of the first houses, should be given up to him for security that the treaty would be faithfully observed. The legend relates that Ocklia, one of the hostages, escaped from the Etrurian camp, swam across the Tiber on horseback, amid showers of darts from her baffled pursuers; but that the Romans, jealous of their reputation for good faith, sent her back to Porsenna. Not to be outdone in generosity, he gave to her and her female companions their freedom, and permitted her to take with her half of the youths; while she, with the delicacy of a Roman maiden, selected those only who were of tender years. The Romans then, at the final settlement of the treaty, sent, as a present to Porsenna, an ivory throne and sceptre, a golden crown, and a trophy constructed by the Romans, resting on a tripod, by which the Etruscan cities had once acknowledged the sovereignty of Tarquinius. When Porsenna quitted Rome, he entered the Latin territories, and attacked Aricia, the chief town of Latium. The Aricians, being aided by the other Latin cities, and also by the Cumans, under the command of Aristodemus, defeated the Etruscans in a great battle, and put a stop to their aggressions. The Romans received the fugitives from Porsenna's army, and treated them hospitably, and restored to them the lands of which Porsenna restored to them the lands which he had conquered beyond the Tiber. (Liv. 9, 8, &c.-Plut., Vit. Public. Flerus, 1, 10.) Such is an outline of the poetical legends respecting the great war with Porsenna. Niebuhr has examined the subject with great ability, and has been followed by Arnold and other writers. The war with Porsenna was in reality a great outbreak of the Etruscan power upon the nations of the south, and a prelude to those disastrous conflicts into which the Romans fell. The result of the war is, indeed, as strangely disguised as Charlemagne's invasion of Spain is in the Romances. Rome was completely conquered; all the territory which the kings had won on the right bank of the Tiber was now lost. Rome itself was surrendered to the Etrurian conqueror (whence the language of Tacitus: "Sedem Jovis optimi maximi, 1122
POT

... quam non Porssena, dedita urbe, neque Galli capta, ternare pouissent...—Hist., 3, 72; his sov-
ereignty was fully acknowledged by the offerings of the
ivory throne, the sceptre, crown, and triumph-
al robe, the usual badges of submission among the
Bttrian cities, as we have already remarked. (Dion.
Hal., 5, 34.) The Romans, moreover, gave up their
army the condition on their renouncing the use of iron, except
for implements of husbandry. Hence the language
of Pliny (34, 14): "In faedere, quod expulsis regibus
populo Roman Dedit Porssena, nominatum compro-
henium ineuntm, ne ferro nisi in agricultura uet-
uratur." In this latter statement we have an inci-
dental hint of the Eastern origin and customs of the
Bttrians; in proof of which, reference may be made
to the way in which the Philtatines tyrannized over
the Israelioten during one of their periods of conquest.
(Compare 1 Samuel, xiii., 19, seqq.—Niebuhr, Rom.
Hist., vol. 1, p. 475, seqq.—Arnold's History of
Rome, vol. 1, p. 125, seq)—The remains of Porssena
were interred in a splendid mausoleum near Clusium,
for some remarks on which consult the article on
Clusium.

PorSSena, a sea-deity. (Vid. Melicerta.)

Poros, king of a part of Northern India, between
the Hydaspes and Acesines, and remarkable for sta-
ture, strength, and dignity of mien. When Alexander
invaded India, Porus collected his forces on the left
bank of the Hydaspes to defend the passage. The
stream was deep and rapid, and, at the time Alexander
reached it, was perhaps little less than a mile broad.
The Macedonian monarch, however, crossed the river
by stratagem, at the distance of a soldier's march above
his camp, and defeated the son of Porus. In a sub-
sequent action he gained a decisive victory over Porus
himself, who was taken prisoner. On being brought
into the presence of Alexander, all that Porus
would ask of his conqueror was to be treated as a king;
and when Alexander replied that this was no more
than a king must do for his own sake, and bade him
make some request for himself, his reply was still,
that all was included in this. His expectations could
scarcely have equaled the conqueror's munificence.
He was not only reinstated in his royal dignity, but
received a large addition of territory. Yet it was
certainly not pure magnanimity or admiration of his
character that determined Alexander to this proceed-
ing. His object seems to have been, in some de-
gree, to secure the Macedonian ascendancy in the
Pendjahl by a show of force, not to alter the bal-
ce of power between Porus and Taxilis, who might
ever become formidable without a rival. (Plut., Vit.
Alex. —Arran, Exp. Al., 5, 8, &c.—Curt., 8, 8,
&c.—Thirlwall's Greece, vol. 7, p. 22.)

Posidem, I. a promontory in Caria, between Mi-
letus and the Iasian Gulf. (Mela, 1, 17.)—II. A
promontory of Chios, nearest the mainland of Ionia.
—III. The promontory, or cape of the island of
Bithynia, now Tashkente-Aghzii, &c.—The name implies
a promontory sacred to Neptune (Porssenid.)

Posidon (Poseidon), the name of Neptune among
the Greeks. (Vid. Neptunus.)

Posidonion, Vid. Pastum.

Posidonioi Io, a Stoic philosopher, a native of
Apamea in Syria, and the last of that series of Stoics
which have left us a history of the Greek philosophy.
He taught at Rhodes, and, on the death of Poseidonius,
thou came hither, on his return from Syria, after
the close of the Mithratic war, for the purpose of
attending his lectures. When the Roman command-
er arrived at his house, he forbade his lictor to knock,
as was usual, at the door. The hero, who had sub-
dued the Eastern and Western world, paid homage to
philosophy by lowering the fasces at the gate of Posi-
donius. When he was informed that he was at that
time sick of the gout, he visited him in his confinement,
and expressed great regret that he could not attend
upon his school. Upon this, Poseidonius, for-
getting his pain, gratified his guest by delivering a
discourse in his presence, the object of which was to
prove that nothing is good which is not honoured.
(Cic. Tusq., 25.—Plin. Epist. 6, 30.) Poseidonius studied natural
as well as moral science;
and, in order to represent the celestial phenomena, he
constructed a kind of planetarium, by means of which
he exhibited the apparent motions of the sun, moon,
and planets round the earth. (Cic., N. D., 2, 34.)
Cicero says that he himself attended upon this philos-
osopher (N. D., 1, 3); and a later writer asserts,
that he was brought to Rome by Marcellus, A. U. C. 182.
(Suid. s. e.—Engel's Hist. Latin. vol. 2, p. 369, seq.)
Poseidonius was also known as an historical
writer, having composed a continuation of the history
of Polybius, under the title of "A History of the
events that have occurred subsequent to Polybius," (Istoria tou peri PoIybiou,). It appears to have
extended to B.C. 63, or the close of the Mithratic
war. This work is lost, and, though its loss is too
much to be regretted, we have the fragments of the
period of which it treated, yet our disappointment is
somewhat diminished by the consideration that Plu-
tarch drew from it a large part of his materials for
the lives of Marius, Sylla, and Sertorius. (Sohell, Hist.
Lit. Gr., vol. 4, p. 76.) The fragments of Posi-
donius were collected and edited by Bake, Lugd. Bat.,
1810, Svo.—II. An astronomer and mathematician of
Alexandria. He was the disciple of Zeno, and
consulted with, or at least temporary with, other
astrologers, to Ernestoben. He probably flourished about 260 B.C.
He is particularly celebrated on account of his having
employed himself in endeavouring to ascertain the
measure of the circumference of the earth by means
of the altitude of a fixed star. According to Cleom-
edes, he concluded that it was 240,000 stadia; but,
according to Strabo, he made it 180,000 only. He is
the reputed author of a treatise on military tactics,
mentioned in the first chapter of Xelian's work on
the same subject.

No fragments of his writings remain.
(Consult in relation to him, Delambre, in Biogr.
Univ., vol. 35, p. 481, and the work of the same writer
on the History of Ancient Astronomy, vol. 1, p. 219, 223,
&c.)

Potesterta, a goddess at Rome, who presided over
painful travails of women. (Ovid, Fast., 1, 633—
Varro, T. Gall., N. A., 16, 16.—Gruter, Inscript, In
p. 50, 79.)

Potamodes, nymphs who presided over rivers and
fountains, as their name (derived from τοικός, a
river) implies.

Potimos, a philosopher of Alexandria, whose era
is not determined. While he selected what he judged
most tenable from every system, he pretended to form
of these extracts a separate doctrine of his own, con-
mencing with the title of Περί της θεωρίας και της
νοημοσύνης, sufficient details to enable us to judge.
(Diog. Laert., 2, 21.—Tennemann, Manual of Phil., p. 172.)

Potimos, a borough of Attica, connected with the
tribe Leontis, where was the tomb of Jon, the son
of Xanthus. (Pausan., 1, 31.) The remains of Potamn
are laid down in modern maps at the mouth of a small
river to the south of port Raphiti. (Oramer's Ancient
Greece, vol. 2, p. 208.)

Povima, a city of Macedonia, situated on the
isthmus connecting the peninsula of Pallene with the
mainland. It was founded by the Corinthians (Thu-
cyd., 1, 56.—Seymour, ch. v, 628), though at what pe-
riod is not apparent; it must, however, have existed
some time before the Persian war, as we know from
Herodotus that it sent troops to Plataea (9, 28), hav-
ing already surrendered to the Persians on their march
into Greece (Herod., 7, 123.) But, after the battle
1123
of Salamis, it closed its gates against Artabazus, who, at the head of a large detachment from the army des- tined to act under Mardonian, had escorted Xerxes to the Hellespont. On his return, this general laid siege to the place, of which he would probably have obtained the surrender, had not the Persians, with its citizens, had not the plot been actually discovered.

The attempt subsequently made against Potidaea by the Persians proved very disastrous, from a sudden influx of the sea, which occurred as the troops were crossing the bay to attack the town, and which occasioned the loss of a great part of the Persian forces, obliging the remainder to make a hasty retreat. (Herod., 8, 127, seqq.) After the termination of this war, Potidaea, having been 'sacked by the Athenians, as it was then termed a tributary city. We learn from Thucydides, that the harsh conduct of Athens towards the Potidæans, who were naturally inclined to the Dorian interest, compelled them to re- volt, and to seek the protection of Pericles and the Corinthians (1, 56, seqq.). After a severe action, in which the Athenians were finally victorious, the town was regularly besieged by both sea and land; but it was saved only by provisions which the Persians had shipped, when it capitulated, when the Athenian troops, greatly diminished by the plague, which had been conveyed thither from Athens, entered the place, the inhabitants being allowed to withdraw whither they chose. It was afterward recolonized from Athens. (Thucyd., 2, 70.)

On the occupation of Amphipolis, and other towns of Thrace, by Brasidas, that general attempted to seize upon the garrison of Potidaea; but the attack having failed, he withdrew his forces from the walls. (Thucyd., 4, 135.) Many years after this event, Potidaea appears to have revolted from Athens (Xen., Hist. Gr., 5, 216); as we learn from Dio- dorus that it was taken by Timotheus, general of that republic. It was subsequently occupied by Philip of Macedon, who allowed the Athenian troops to return home without ransom. —When Cassander ascended the throne, he founded a new city on the neck of the peninsula of Pallene; thither he transferred the in- inhabitants of several neighbouring towns, and, among others, those of Potidaea, and the remnant of the popu- lation of Olynthus. Cassandra is said to have sur- passed all the Macedonian cities in opulence and splendour. From Procopius we learn that it fell a prey to the barbarian Huns, who left scarcely a vestige of it remaining. (Bell. Pers., 2, 4.—De Edif., 4, 3.—Granger's Anc. Greece, vol. i, p. 244, seqq.)

Potiæa, and Potine, a city of Euboea, about ten stadia to the west of the Thebes. It had a sacred grove dedicated to Ceres and Proserpina. (Xen., Hist. Gr., 5, 451.) It was here that Glauces was said to have been torn in pieces by his infuriated mares. (Strabo, 409. —Virg., Georg., 3, 267.) The site of this place, already in ruins when Pausanias wrote, corresponds nearly with that occupied by the village of Takti. (Gell's Itin. V. Ill. Pl. 110.) Strabo informs us, that some authors regarded Potium as the Hypotheus of Homer. (II., 2, 505.)

PRAENESTE, now Palestrina, an ancient city of Latium, southeast of Rome. Strabo makes the intervening distance 25 miles (200 stadia); but the Itineraries give, more correctly, 23 miles. Its citadel is de- scribed by Strabo as remarkable for its strength of po- sition. It stood on the brow of a lofty hill which overlooks the Tiber, and is protected from its approach by the descent of the chain by a narrow slip of inferior elevation. The origin of Praeneiste, like that of many of the ancient towns in Italy, is fabulous. According to some, it was founded by Ceculus, the son of Vulcan (Virg., Aen., 7, 678); while others ascribe it to a chief of the name of Prænestus, grandson of Ulysses and Circe (Zenodot. Troezent., ap. Stephan. Byz.). Strabo, how- ever, tells us more plainly that it claimed a Greek origin, and had been named formerly Ποτιδαιόσκοπος (238). Pliny (3, 5) also observes that it was once called Stephane. We may infer from Dionysius (1, 31) that Praeneiste was afterward colonized by Al- pas, and that the town was, in consequence of one of its citizens, having been becoming subject to Rome, upon the failure of the attempts made in common to assist the family of Tar- quin. (Liv., 2, 19.) Subsequently, we find the Præneshetini often uniting with the Volsci and other en- mies in their attacks on Rome, than remaining firm in their allegiance to that power. (Liv., 6, 27.) They were defeated, however, by T. Quinctius Cincinnatus, near the river Allia, and eight of their towns and cas- ses fell into the hands of the Romans, who obliged them to submit. (Id., 6, 29.) Again they revolted, and were again conquered by Camillus. (Id., 8, 13.)—

—The strength of Praeneste rendered it a place of too great importance to be overlooked by the contending parties of Sylla and Marius. It was induced to join the cause of the latter by Cinna, and, during the short success which that faction obtained, was its strongest hold and support. But, on the return of Sylla from his successful expedition, the war was renewed, and it was agreed to repel the part it had taken. The younger Marius, defeated by that victorious commander, was soon obli- gated to take refuge within its walls; and, when all at- tempts on the part of his confederates failed in raising the siege, he preferred to die by the sword of one of his own soldiers than fall into the hands of his adver- saries. Præneste was compelled to yield to the vic- tors, who did not fail to satisfy their thirst of vengeance by a bloody massacre of the unfortunate inhabitants, and the entire plunder of their town, which finally was sold by auction. (Appian, Bell. Civ., 1, 94.—Plut. Vit. Syll.—Flor., 3, 21.) It survived, however, these disasters, and, as it would seem, gathered strength from a colony of those very troops which had been so instrumental in hastening its downfall. Even Sylla himself, as if to make some atonement for his cruelty, employed himself in repairing and embellishing one of its public edifices, the famous temple of Fortune, a goddess whose protection he specially acknowledged. Præneste was again threatened in the tumult excited by the seditious Catiline; but, as he himself boasted, was saved by the vigilance and foresight of Cicero. (Cat., 1, 3.) In the wars of Antony and Octavianus, it was occupied by Fulvia, wife of the former, and be- came the chief hold of that party. But it does not appear to have suffered much in the contests. —But the prime breach of the temple of Fortune, and the temples of that city. From this anecdote, it is evident that this tem- ple was much more ancient than the time of Sylla, who has been erroneously supposed by some to have erected it. The veneration in which this temple was held is also apparent from the privilege which it en- joyed of affording an asylum to criminals and fugitives. (Polyb., 6, 11.) Sylla, however, certainly bestowed upon it the edifice; for Pliny says, that when the temple was first dedicated into Italy, was made by order of that general for the temple of Fortune at Praeneste. (Plin., 36, 25.)—Whether the famous Barberini pave- ment, which undoubtedly was taken from the ruins of this building, be the same as that of Sylla, is very doubtful. Suetonius tells us that Augustus often made excursions from Rome to Praeneste, but generally em- ployed two days in journeying thither. (Aug., 27.)
Among the productions of the territory of Praeneste, none are so often remarked as its walnuts. (Cat., R., R., 8.) Hence the Praenestini are sometimes nick-
named Noztai, especially by Cicero, who quotes Lucilius as his authority for so doing. (De Orat., 2, 262.)
But Festus accounts for the name in another manner; he
says, the Præstini were so called from their coun-
trymen having subsisted on walnuts when besieged by Hannibal in Casilinum, the garrison of which they
forced, in the second Punic war. (Lit., 23, 17.—L., 19.) It may be observed, that the Praenestini appear to
have had some peculiarities of idiom which distin-
guish them from their countrymen. This is seen from
Festus (s. v. Tammodo.—Plautus, Truc., 3. 2.—
Quintil., Inst. Or., 1, 5.—Cramer's Anc. Italy, vol.
2, p. 66, seqq.).

PRÆTORIÀ, or AUGUSTA PRÆTORIÀ, a city of Cinal-
pine Gaul, in the territory of the Salassi. It was built
on the site occupied by the camp of Terentius Varro,
when that commander was sent by Augustus to re-
press the plundering movements of the Salassi and to
seize upon their country. Augustus honoured the
rising colony by giving it the name of Augusta Pra-
toria. (Strabo, 205.) It is now known as Aoste,
which gives its name to the fine valley in which it
lies, and where several remains of the ancient city are
still to be seen. According to Pliny (5, 10), Augusta
Prætoria was reckoned the extreme point of Italy to
the north. (Cramer's Anc. Italy, vol. 1, p. 60.)

Pratinas, a Greek tragedian of the 4th century B.C.,
was the inventor of the tragedy. (Eur., Hec., 129.)
Eschylus, and a dramatic poet of considerable talent.
He once obtained a tragic victory. But the manifest
pre-eminence of the youthful Æschylus probably de-
threatened the Phliasian from continuing to cultivate the
governing power of the art, and led him to contrive a novel
and mixed kind of play. Borrowing from tragedy its
external form and mythological materials, Pratinas
added a chorus of Satyrs, with their lively songs, ges-
tures, and movements. This new composition was
called the Satyric Drama, of which he must therefore be
regarded as the inventor. (Suid., s. v. Ἱπποτινα.—
Casaub., Sat. Poc., p. 122, seqq.) Pratinas, ac-
cording to Suidas, exhibited fifty dramas, of which
thirty-two were satyric. On one occasion, when he
was acting, his wooden stage gave away, and, in con-
sequence of that accident, the Athenians built a stone
theatron for him, within which this author gave one of
his plays in the dramatic performances of their city-
man (Schneider, de Orig. Trag., p. 90), and, accord-
ing to Pausanias (2, 13), erected a monument in their
market-place in honour of "Aristias, the son of Prat-
inas, who, with his father, excelled all except Æschylus
in writing satyric dramas." Pratinas wrote also
Hyprochimes. (Athenæus, 14, p. 617; c.—Theatre
of the Greeks, p. 61, 4th ed.)

PRAXAGRAS, an Athenian, who flourished about
345 A.D. At the age of nineteen, he published a
History of the Kings of Attica, and, three years after,
the Life of Constantine, in which he speaks favourably
of that prince, a circumstance which would show that
Praxagoras was not a very bigoted pagan. He wrote
also a Life of Alexander the Great. His works are
lost. (Schüll, Hist. Lit. Gr., vol. 6, p. 355.)

PRAXITÈLES, a sculptor of Corinth, contemporary
with Phidias, who finished together with Euphranor,
about Olympiad 104, B.C. 364. The city of his
birth is uncertain. Cæcurnius (Annal., 265) notices
him as a native of Cnidus; but this is evidently a mis-
take, arising perhaps from the previous mention of
the Venus of Cnidus. Meyer (ad Winck., Op, 6, 2, 163) contends that he was a native of Andros,
and advances in support of this opinion an epigram of
Dionysius of Halicarnassus (Anthol. Pal., 7, 355.) But
no one who peruses the piece in question, free from the in-
fluence of preconceived opinion, can view it as estab-
lishing this conclusion. The writer of the lines speaks,

Indeed, of some Praxiteles of Andros, but the name
Praxiteles was exceedingly common among the Greeks.
The most probable opinion is, that Praxiteles was a
native of Paros. (Silvii, Dict. Art., p. 107.)—In
praising Praxiteles as an original inventor, as the dis-
coverer of a new style, writers very generally have
mistaken the influence exercised by his genius upon the
progress and character of sculpture. Finding the
highest sublimity in the more masculine graces of the
art already reached; perceiving, also, that the
taste of his age tended thitherward, he resolved to
woo extensively the milder and gentler beauties of
art. (Euryp., Hec., 3.)—No one ever more happily succeeded in uniting softness
with force, or elegance and refinement with simplicity:
his grace never degenerates into the affected, nor his
delicacy into the artificial. He caught the delightful
medium between the stern majesty which awes, and
the beauty which merely seduces; between the ex-
ternal allurements of form, and the colder, but lofter
charm of intellectualty. Over his compositions he has
thrown an expression spiritual and at once sen-
sual; a voluptuousness and modesty which touch
the most insensible, yet stulte not the most retiring.
The works that remain of this master, either in originals
or in repetitions—the Faun; the Thespian Cupid, in
the museum of the Capitol; the Apollo with a lizard,
one of the most beautiful, as well as difficult, speci-
mens of antiquity—abundantly justify this character.
Of the Venus Cnidia, whose drapery is so admirably
draped, or Coan and Cnidian Venus of Praxiteles,
fixed each a standard which subsequent invention
dared scarcely to alter. Indeed, he appears to have
been the first, perhaps the sole master, who attained
to the true ideal on this subject, in the perfect union
of yielding feminine grace with the dignity of intel-
llectual expression. The Venus of Cnidus, in her rep-
resentative the Medicean, still enhances the world.
(Mem., History of the Fine Arts, p. 68.) An in-
eration of the works of Praxiteles may be found in
Silvii (Dict. Art., p. 108, seqq.). For some remarks
relative to the Cnidian Venus, consult the article Cni-
dus; and for the story of the Cupid, vid. Phryne.

P'RAMIDES, a patronymic applied to Paris, as being
son of Priam. It is also given to Hector, Deiphobus,
and all the other children of the Trojan monarch.
(Aen., 107, 79, 102.)

PRIAMUS, the last king of Troy, was son of Laomed-
on. When Hercules took the city of Troy (vid. Laomedon), Priam was in the number of his prisoners;
but his sister, Hesione, redeemed him from captivity,
and he exchanged his original name of Podarces for
that of Priam, which signifies bought or ransomed.
(Vid. Hesione, towards the close of that article, and also Podarces.) He was placed on his father's throne
by Hercules, and employed himself with well-directed
diligence in repairing, fortifying, and embellishing
the city of Troy. He had married, by his father's orders,
Aribe, whom now he divorced for Hecba, the daugh-
ter of Dymas the Phrygian (L., 16, 718), or, accord-
ing to others, of Cissaeus. (Euryp., Hec., 3.) Hecba
bore him nineteen children (L., 24, 496), of whom the
chief were, Hector, Paris or Alexander, Deiphobus,
Polydorus, Telamon, Hecules, Trosius, Ajax Polynoe, and the two latter
Crestes and the aged Thoas. After he had reigned for some
