TO

JOHN ANTHON, ESQ.,

COUNSELLOR AT LAW, &c.,

WHO, AMID THE DUTIES OF A LABORIOUS PROFESSION, CAN STILL FIND LEISURE FOR HOLDING CONVERSE WITH THE PAGES OF ANTIQUITY, AND IN WHOM LEGAL ERUDITION IS SO HAPPILY BLENDED WITH THE LIGHTER GRACES OF ANCIENT AND MODERN LITERATURE,

THIS WORK IS

AFFECTIONATELY INSCRIBED,

AS A FEEBLE RETURN FOR MANY ACTS OF FRATERNAL KINDNESS, AND (IF A BROTHER MAY BE ALLOWED TO EXPRESS HIMSELF IN THIS WAY) AS A TESTIMONIAL OF FOND REGARD FOR EMINENT ABILITIES IN UNISON WITH EMINENT INTEGRITY AND WORTH
PREFACE

TO THE FOURTH EDITION.

In laying the result of his labours before the public, the author wishes it to be distinctly understood, that the present volume is not, as some might perhaps imagine, merely an improved edition of the Classical Dictionary of Lempriere, but a work entirely new, and resembling its predecessor in nothing but the name. The author owes it, in fact, to himself to be thus explicit in his statement, since he would feel but poorly compensated for the heavy toil expended on the present work, were he regarded as having merely remodelled, or given a new arrangement to, the labours of another. So far from this having been done, there are, in truth, but few articles, and those not very important ones, wherein any resemblance can be traced between Lempriere's work and the present. In every other respect, the Classical Dictionary now offered to the public will be found to be as different from Lempriere's as the nature of the case can possibly admit.

It cannot be denied that Lempriere's Classical Dictionary was a very popular work in its day. The numerous editions through which it ran would show this very conclusively, without the necessity of any farther proof. Still, however, it may be asserted with equal safety, that this same popularity was mainly owing to the circumstance of there being no competitor in the field. Considered in itself, indeed, the work put forth but very feeble claims to patronage, for its scholarship was superficial and inaccurate, and its language was frequently marked by a grossness of allusion, which rendered the book a very unfit one to be put into the hands of the young. And yet so strong a hold had it taken of public favour both at home and in our own country, that not only were no additions or corrections made in the work, but the very idea itself of making such was deemed altogether visionary. The author of the present volume remembers very well what surprise was excited, when, on having been employed to prepare a new edition of Lempriere in 1825, he hinted the propriety of making some alterations in the text. The answer received from a certain quarter was, that one might as well think of making alterations in the Scriptures as in the pages of Dr. Lempriere! and that all an editor had to do was merely to revise the references contained in the English work. When, however, several palpable errors, on the part of Lempriere, had been pointed out by him, and the editor was allowed to correct these and others of a similar kind, he still felt the impossibility of presenting the work to the American public in that state in which alone it ought to have appeared, partly from the undue estimation in which the labours of Dr. Lempriere were as yet generally held, and partly from a consciousness of his own inability, through the want of a more extended course of reading, to do justice to such a task. With all its imperfections, however, the edition referred to was well received; and when a second one was soon after called for, the publisher felt himself emboldened to allow the editor the privilege of introducing more extensive improvements, and of making the work, in every point of view, more deserving of patronage.

The republication of this latter edition in England, and the implied confession, connected with such a step, that the original work of Lempriere stood in need of improvement, now broke the charm which had fettered the judgments of so many of our own countrymen, and it then began to be conceded on all sides that the Classical Dictionary of Dr. Lempriere was by no means entitled to the claim of infallibility; nay, indeed, that it was defective throughout. When the ownership of the work, therefore, passed into the hands of the Messrs. Carvill, and a new edition was again wanted, those intelligent and enterprising publishers gave the editor permission to make whatever alterations and improvements he might see fit; and the Classical Dictionary now appeared in two octavo volumes, enriched with new materials derived from various sources, and presenting a much fairer claim than before to the attention of the student.

This last-mentioned edition became, in its turn, soon exhausted, and a new one was demanded; when the copyright of the work passed from the Messrs. Carvill to the Brothers Harper. To individuals of less liberal spirit, and more alive to the prospect of immediate
advantage, it would have appeared sufficient to republish merely the edition in two volumes, without any farther improvement. The Messrs. Harper, however, thought differently on the subject. They wished a Classical Dictionary in as complete and useful a form as it could possibly be made; and, with this view, notwithstanding the large amount which had been expended on the purchase of the work, the stereotype plates were destroyed, though still perfectly serviceable, and the editor was employed to prepare a work, which, while it should embrace all that was valuable in the additions that had from time to time been made by him, was to retain but a very small portion of the old matter of Lempriere, and to supply its place with newly-prepared articles. This has now, accordingly, been done. A new work is the result; not an improved edition of the old one, but a work on which the patient labour of more than two entire years has been faithfully expended, and which, though comprised in a single volume, will be found to contain much more than even the edition of Lempriere in two volumes, as published by the Messrs. Carvill. Whatever was worth preserving among the additions previously made by the editor, he has here retained; but, in general, even these are so altered and improved as, in many instances, to be difficult of recognition; while, on the other hand, all the old articles of Lempriere, excepting a few, have been superseded by new ones.

Such is a brief history of the present work. It remains now to give a general idea of the manner in which it has been executed. The principal heads embraced in the volume are, as the title indicates, the Geography, History, Biography, Mythology, and Fine Arts of the Greeks and Romans. The subject of Archaeology is only incidentally noticed, as it is the intention of the author to edit, with all convenient speed, a Dictionary of Greek and Roman Antiquities, which will contain an abstract of all the valuable matter connected with these subjects that is to be found in the writings of the most eminent German philologists. Only a few, therefore, of the more important topics that have a bearing on Archaeology, are introduced into the present volume, such as the Greek Theatre, and theatrical exhibitions in general, the national games of Greece, the dictatorship and agrarian laws of the Romans, and some other points of a similar kind.

If the author were asked on what particular subject, among the many that are discussed in the present volume, the greatest amount of care had been expended, he would feel strongly inclined to say, that of Ancient Geography. Not that the others have been by any means slighted, and the principal degree of labour concentrated under this head. Far from it. But the fact is, that in a work like the present, the articles which relate to Ancient Geography are by far the most numerous, and, in some respects, the most important, and require a large portion of assiduous care. In what relates, therefore, to the Geography of former days, the author thinks he can say, without the least imputation of vanity, that in no work in the English language will there be found a larger body of valuable information on this most interesting subject, than in that which is here offered to the American student. In connexion with the geography of past ages, various theories, moreover, are given respecting the origin and migration of different communities, and some of the more striking legends of antiquity are referred to concerning the changes which the earth’s surface has from time to time undergone. Some idea of the nature of these topics may be formed by consulting the following articles: Ægyptus, Atlantis, Gallia, Græcia, Lectúnía, Mediterraneum Mórë, Méroë, Ogyges, Pelasgi, and Phœnicia. Nor is this all. Books of Travels have been made to contribute their stores of information, and the student is thus transported in fancy to the scenes of ancient story, and wanders, as it were, amid the most striking memorials of the past.

The Historical department has also been a subject of careful attention. Here, again, the origin of nations forms a very attractive field of inquiry, and the student is put in possession of the ablest and most recent speculations of both German and English scholarship. The Argonautic expedition, for example, the legend of the Trojan war, events dimly shadowed forth in the distant horizon of “gray antiquity;” the origin of Rome, the early movements of the Doric and Ionic races among the Greeks; or, what may prove still more interesting to some, the origin of civilization in India and the remote East; all these topics will be found discussed under their respective heads, and will, it is hoped, teach the young student that history is something more than a mere record of dates, or a chronicle of wars and crimes.

Particular attention has also been paid to the department of Biography. This subject will be found divided into several heads: biographical sketches, namely, of public men, of individuals eminent in literature, of scientific characters, of physicians, of philosophers, and
also of persons distinguished in the early history of the Christian Church. The literary biographies, in particular, will, it is conceived, be found both attractive and useful to the student, since we have no work at present in the English language in which a full view is given of Grecian and Roman literature. The sketches of ancient mathematicians, and of other individuals eminent for their attainments in science, will not be found without interest even in our own day. Nor will the medical man depart altogether unrewarded from a perusal of those biographies which treat of persons distinguished of old in the healing art.

In the accounts, moreover, that are given of the philosophers and philosophic systems of antiquity, although half-learned sciolists have passed upon these topics so sweeping a sentence of condemnation, much curious information may nevertheless be obtained, and much food for speculation, too, on what the mind can effect by its own unaided powers in relation to subjects that are of the utmost importance to us all. The ecclesiastical biographies will also be found numerous, and, it is hoped, not uninteresting. None of them fall properly, it is true, within the sphere of a Classical Dictionary, yet they could not well have been omitted, since many of the matters discussed in them have reference more immediately to classical times.

The subject of Mythology has supplied, next to that of Ancient Geography, the largest number of articles to the present work. In the treatment of these, it has been the chief aim of the author to lay before the student the most important speculations of the two great schools (the Mystic and anti-Mystic) which now divide the learned of Europe. At the head of the former stands Creuzer, whose elaborate work (Symbolik und Mythologie der alten Völker) has reappeared under so attractive a form through the taste and learning of Guigniaut. The champion of the anti-Mystic school appears to be Lobeck, although many eminent names are also marshalled on the same side. It has been the aim of the author to give a fair and impartial view of both systems, although he cannot doubt but that the former will appear to the student by far the more attractive one of the two. In the discussion of mythological topics, very valuable materials have been obtained from the excellent work of Keightley, who deserves the praise of having first laid open to the English reader the stores of German erudition in the department of Mythology. The author will, he trusts, be pardoned for having intruded some theories of his own on several topics of a mythological character, more particularly under the articles Amazones, Asi, Io, Odinus, and Orpheus. It is a difficult matter, in so attractive a field of inquiry as this, to resist the temptation of inflicting one's own crude speculations upon the patience of the reader. In preparing the mythological articles, the greatest care has been also taken to exclude from them everything offensive, either in language or detail, and to present such a view of the several topics connected with this department of inquiry as may satisfy the most scrupulous, and make the present work a safe guide, in a moral point of view, to the young of either sex.

The department of the Fine Arts forms an entirely new feature in the present work. The biographies of Artists have been prepared with great care, and criticisms upon their known productions have been given from the most approved authorities, both ancient and modern. The information contained under this head will, it is conceived, prove not unacceptable either to the modern artist or the general reader.

In a work like the present, the materials for which have been drawn from so many sources, it would be a difficult task to specify, within the limits of an ordinary preface, the different quarters to which obligations are due. The author has preferred, therefore, appending to the volume a formal catalogue of authorities, at the risk of being thought vain in so doing. A few works, however, to which he has been particularly indebted, deserve to be also mentioned here. These are the volumes of Cramer on Ancient Geography; the historical researches of Thirlwall; and the work of Keightley already referred to. From the Encyclopædia also, published by the Society for the Diffusion of Useful Knowledge, numerous excellent articles have been obtained, which contribute in no small degree to the value of the present publication. In every instance care has been taken to give at the end of each article the main authority from which the materials have been drawn, a plan generally pursued in works of a similar nature, and which was followed by the author in all the editions of Lempriere prepared by him for the press. A fairer mode of proceeding cannot well be imagined. And yet complaint has been made in a certain quarter, that the articles taken from the Encyclopædia just mentioned are not duly credited to that work, and that the title of the work itself has been studiously changed. Of the fallacy of the first charge, any one can satisfy himself by referring to the pages of the present volume where those articles appear; while, with regard to the second, the author has merely to remark, that in
substituting the title of "Encyclopædia of Useful Knowledge" for the more vulgar one of "Penny Cyclopædia," he always conceived that he was doing a service to that very publication itself. At all events, the change of title, if it were indeed such, appears to have been a very proper one, since it met with the tacit approbation of certain so-called critics, who would never have allowed this opportunity of gratifying personal animosity to have passed unheeded, had they conceived it capable of furnishing any ground of attack.

The account of Coins,Weights, and Measures, which accompanied the edition of Lempriere in two volumes, has been appended to the present work in a more condensed and convenient form. It is from the pen of Abraham B. Conger, Esq., formerly one of the Mathematical instructors in Columbia College, but at present a member of the New-York bar. The very great clearness and ability which characterize this Essay have been fully acknowledged by its republication abroad in the Edinburgh edition of Potter's Grecian Antiquities, and it will be found far superior to the labours of Arbuthnot, as given in the Dictionary of Lempriere.

Before concluding, the author must express his grateful obligations to his friend, Francis Adams, Esq., of Banchory Ternan, near Aberdeen (Scotland), for the valuable contributions furnished by him under the articles Aëtius, Alexander of Tralles, Arethæus, Celsus, Dioscorides, Galenus, Hippocrates, Nicander, Oribasius, Paulus Ægineta, and many other medical biographies scattered throughout the present work. Mr. Adams is well known abroad as the learned author of "Hermes Philologicus," and the English translator of "Paul of Ægina." Whatever comes from his pen, therefore, carries with it the double recommendation of professional talent and sound and accurate scholarship.

With regard to the typographical execution of the present volume, the author need say but little. The whole speaks for itself, and for the unsparing liberality of the publishers. In point of accuracy, the author is sure that no work of its size has ever surpassed it; and for this accuracy he is mainly indebted to the unremitting care of his talented young friend, Mr. Henry Drisler, a graduate of Columbia College, and one of the Instructors in the College-school, of whose valuable services he has had occasion to speak in the preface to a previous work.

Columbia College, August 1, 1842.

In preparing the present edition for the press, the greatest care has been taken to correct any typographical errors that may hitherto have escaped notice, and to introduce such other alterations as the additional reading of the author, and new materials, furnished by works of a similar nature, have enabled him to make. In furtherance of this view, he has appended a Supplement to the present volume, containing all that appeared to him important in the first number of the new Classical Dictionary, now in a course of publication from the London press, as well as in the numbers, which have thus far appeared, of Pauly's "Real-Encyclopädie der Classischen Alterthumswissenschaft," which constitutes, in fact, the principal source of supply from which the authors of the new Classical Dictionary have drawn their materials. The articles contained in the Supplement will be found referred to in the body of the work under their respective heads, thus enabling the reader to ascertain, at a glance, what additions have been actually made.

B


whole earth without tasting food. But there are strong doubts as to the accuracy of the text given by West- seling and Valckenaer. The old editions read ὁ τοῦ διότον περὶκήρε ὀδὴν στῆνεν, which agrees with the account given in the Fragment of Lycurgus cited by Eudocia (Villois. Anecd. 1, 20), where he is said to have traversed all Greece, holding an arrow as the symbol of Apollo. The time of his arrival in Greece is variously given (Bentl. Phil. 95). Some fix it in the 3d Olympiad (Harpocr. — Suid.), others in the 21st, others much lower. One authority is weighty: Pin- dar, as cited by Harpocration, states that Abaris came to Greece while Oracles was king of Lydia. An extra- ordinary story, but one which fits in admirably. The story was ravaged by a pestilence; the oracle of Apollo, being consulted, gave answer that the scourge would only cease when the Athenians should offer up vows for all nations. Another account makes him to have left his native country during a famine (Villois. Anecd. l. c.). He made himself known throughout Greece as a performer of wonders; delivered oracular responses (Clem. Alex. Str. 399); healed maladies by charms or exorcisms (Plato, Charrna, 1, 312, Bekh.); drove away storms, pestilence, and evil influences. He is said to have been the first writer εἰς Ἀπόλλωνα. One of his works was Iliad," the dial with which he spread the knowledge of the Divine World throughout the Greeks. This is according to the 1st place to the east of the Bu- bastard mouth of the Nile, in the Saitic Nome (Joseph. c. Ap. 1, 14). Mannert identifies it with what was afterward called Pelusium; for the name of Abaris disappeared, when the shepherd- race retired from Egypt, and the situation of Pelusium coincides sufficiently with the site of Abaris, as far as authorities have reached us. Manetho, as cited by Josephus, says, that Salatis, the first shepherd-king, finding the position of Abaris well adapted to his purpose, rebuilt the city, and strengthened it with walls, garrisoning it with a force of 240,000 men. To this city Salatis repaired in summer time, in order to collect his tribute, and to pay his troops, and to exercise his soldiers with the view of striking terror into foreign states. Other writers make the term Abaris denote "a pass," or "crossing over," a name well adapted to a stronghold on the borders. Compare the Sanscrit aprati (over, above), the Gothic ufar, the Old High German ufar, the Persian efar, the Latin super, the Greek ἐπάρχων, &c.

Abaris, or Abaris, ιον, a name given to that part of Mysia in which Lampascus was situate. Venus, according to the fable, here discovem (ἐπισκέψαι) her offspring Priapus, whom she had just brought forth, being shocked at his deformity. Hence the appella- tion. The first form Aparnis, was subsequently altered to Abaris (Steph. B.). — II. A city in the above-men- tioned district, lying south of Lampascus (Steph. B.).

Abaris, or Abaris, a mountain of Armenia Major; according to D'Anville, the modern Abi- dag, according to Mannert (5, 196), Abart, giving rise to the southern branch of the Euphrates (Vid. Arsania). — II. A river of Albania, rising in the chain of Caucasus, and falling into the Caspian Sea. Ptolemy calls it Albanus. On its banks Pompey defeated the rebellious Albanians (Plat. Vit. Pom. 35). — III. The 12th king of Ar- gos. (Vid. Supplement.). — IV. A son of Metaneira, changed by Ceres into a lizard for having mocked the goddess in her distress. Others refer this to Ascalan- phus. — V. A Latin chief who assisted Æneas against Turnus, 

Abaris, or Abaris, a district of Phrygia Epictetus, in the vicinity of Mysia; in it was the city of Ancyræ, and here, according to Strabo (570), the Macestus or Megistus arose.

Abaris, or Abaris, a district of Phrygia Epictetus, in the vicinity of Mysia; in it was the city of Ancyræ, and here, according to Strabo (570), the Macestus or Megistus arose.

Abaris, or Abaris, a district of Phrygia Epictetus, in the vicinity of Mysia; in it was the city of Ancyræ, and here, according to Strabo (570), the Macestus or Megistus arose.

Abaris, or Abaris, a district of Phrygia Epictetus, in the vicinity of Mysia; in it was the city of Ancyræ, and here, according to Strabo (570), the Macestus or Megistus arose.
Strabo called Abdera, a town of Thrace, at the mouth of the Nestus: Ephorus (Steph. B. d.) wrote in sing. 'Αβδέρα, but the plural is more usual, τὰ Ἀβδέρα. The Clazomenean Timaeus commenced founding this place, but, in consequence of the Thracian inroads, was unable to complete it; soon after, it was reconstituted by a large body of Teians from Iosia, who abandoned their city, when besieged by Harpagus, general of Cyrus (Heron. 1, 168). Many Teians subsequently returned home; yet Abdera remained no inconsiderable city. There are several other accounts of the origin of this place, but the one given above is best entitled to credit.

The city of Abdera was the birthplace of many distinguished men, as Anaxarchus, Democritus, Hecataeus, and Protagoras; the third, however, must not be confounded with the native of Miletus. (Creuzer, Hist. Antiq. Gr. Fragm. 9, 23.) But, notwithstanding the celebrity of some of their fellow-citizens, the people of Abdera, as a body, were reputed to be stupid. In the Chiliades of Euripides, and the Adagia Veterum, many sayings record this failing; Cicero styles Rome, from the stupidity of the senators, an Abdera (Ep. ad Att. 4, 15)."Abdera," says Abbe de Mortemart, "is the name of the times" (sercicum patriam, 10, 50; compare Martial, 10, 25; "Abderitana pectora plebis"). Much of this is exaggeration. Abdera was the limit of the Odrysian empire to the west (Thuc. 2, 29). It afterward fell under the power of Philip; and, at a later period, was delivered up by one of its citizens to Eumenes, king of Pergamus (Diod. S. Fragm. 30, 9, 413, Bp.). Under the Romans it became a free city (Abdera libera), and continued so even as late as the time of Pliny (4, 11). It was famous for mulets, and other fish (Dio, ap. Athen. 3, 57; — Orat. ep. cunid. 7, 124). In the middle ages Abdera degenerated into a very small town, named Polyistus, according to the Byzantine historian, Cupolapate (Wasse, ad Thuc. 2, 97). Its ruins exist near Cape Balamusta. (French Strabo, 3, 180, § 3.)—II. A town of Hispania Baetica, east of Malaca, in the territory of the Bastuli Perni, lying on the coast; Strabo calls the place Ἀβδώρα (157). Ptolemæus 'Αβδώρα, Steph. B. 'Αβδώρα, a coin of Tiberius Abdera (Vailant, vol. 1, p. 65.—Rasche's Lex. Rei Num. 1, 23). It was founded by a Phœnician colony, and is thought to correspond to this place, but the Abellaniae have given rise to a city of the Hirpini, in Samnium; the inhabitants of which were, called, for distinction's sake, Abellinates Protopies (Plin. 3, 2; — Ptol. 67).—II. A city of Lucania, near the source of the Aciris; called Abellanum Marsicum. It is thought by Cluver (Ital. Antiq. 2, 1280) and D'Anville (Geogr. Anc. 57) to accord with Marsico Vetere.

Abgarus, I. a name common to many kings of Edean and Syriac, or Persian origin; otherwise written Abgarus, Abkarus, Augerus, &c. The first monarch of this name (Euseb. H. E. 1, 13) wrote a letter to our Saviour, and received a reply from him (vid. Edessa). The genuineness of these letters has been much disputed among the learned. (Cave's Lit. Hist. 1, 2.—Lardner's Cred. 7, 22.)—II. The name, according to some authorities, of the Arabian prince or chieftain who perfidiously drew Crassus into a snare, which proved his ruin; called 'Ακτάραρος by Appian (B. P. 34), 'Αραβύρασ (Plut. Crass. 21), Αβγαρος (Dio Cass. 40, 29).

Abia, I. the southernmost city of Messenia, on the eastern shore of the Messenian Gulf. Pausanias (4, 30) identifies it with Ire, 'Ἰρα, one of the places offered by Agamemnon to Achilles (II. 9, 299). Abia, together with the adjacent cities of Thuria and Phere, separated from Messenia, and became part of the Achaean confederacy; afterward they again attached themselves to the Messenian government. At a later period, Augustus, to punish the Messenians for having favoured the party of Antony, annexed these three cities to Lacedæmon. But this arrangement continued only for a few years, and then these cities included again among the cities of Messenia.—II. Nurse of Hyllus, in honour of whom Crespontes changed the name of Ire to Abia. (Paus. 4, 30, 1.)

Abi, a Scythian nation, supposed by the earlier Greeks to inhabit the banks of the Tanais. Homer is thought to allude to them, Σ. 13, 6, where for αγάμον, some read 'Αβιὸν ῶν. By others they are supposed to be identical with the Macrobil. The name 'Αβιος is thought by Heyne (ad II. i. c.) to allude to their living on lands common to the whole nation, or to their having a community of goods, or perhaps to their poverty, and their living in wagons. Curtius (7, 6) states, that these Abi sent ambassadors to Alexander with professions of obedience. But the Macedonians encountered no Abi; they only believed that they had found them. The name they probably had learned from Homer, and knew that they were a people to the north, forming part of the great Scythian race. Supposing themselves, therefore, on the banks of the Tanais, they gave the name Abi to the people, who had sent ambassadors, merely because they had heard that the Abi dwelt on that river.

Abila, or Abi, I. a mountain of Africa, opposite Calpe (Gibraltar), supposed to coincide with Cape Serra. It is an elevated point of land, forming a peninsula, of which a place named Ceuta closes the isthmus. Of the two forms given to the name of this mountain by ancient writers, that of Abyla is the more common. The name is written by Dionysius (Perieg. 336), 'Αβύλα. According to Avienus (Ora Marit. 345), Abila is a Carthaginian or Punic appellative for "any lofty mountain." This name appears to have passed over into Europe, and to have been applied, with slight alteration of form, to the opposite mountain, the rock of Gibraltar. Eustathius (ad Dionys. P. 64) informs us that in his time the latter mountain was named Calpe by the Barbarians, but Abila by the Greeks; and that the true Abila, on the African side, was called Abenna by the natives, by the Greeks Κανθαρικαί. At what time the present Gibraltar began to be called Calpe by the Barbarians, but Abila by the Greeks; and that the true Abila, on the African side, was called Abenná by the natives, by the Greeks Κανθαρικαί. At what time the present Gibraltar began to be called Calpe by the Barbarians, but Abila by the Greeks; and that the true Abila, on the African side, was called Abenna by the natives, by the Greeks Κανθαρικαί. At what time the present Gibraltar began to be called Calpe by the Barbarians, but Abila by the Greeks; and that the true Abila, on the African side, was called Abenna by the natives, by the Greeks Κανθαρικαί. At what time the present Gibraltar began to be called Calpe by the Barbarians, but Abila by the Greeks; and that the true Abila, on the African side, was called Abenna by the natives, by the Greeks Κανθαρικαί. At what time the present Gibraltar began to be called Calpe by the Barbarians, but Abila by the Greeks; and that the true Abila, on the African side, was called Abenna by the natives, by the Greeks Κανθαρικαί.
conspicuous place in the Greek mythology. (Vid. Her- cules Columnus, and Mediterranean Mare—II. A city of Palestine, 12 miles east of Gador (Euseb. v. 'Abe' 4). The Ptolemy is supposed to refer to it under the name Abida (v. Supplement.). The city is probably of Carvites. (Man- nert, 6, 1, 323.)—III. A city of Czecevia, now Belni- nas, in a mountainous country, about 18 miles north- west of Damascus. Ptolemy gives it the common name 'Abda. Josephus calls it 'Abeka, and also 'Abelחאצ, the latter coming from the Hebrew name Abel Beth Maachah, or Malacha (Reland, Palest, 520). Abilen, a district of Czecevia. (Vid. Abila III.) Ablabius. Vid. Supplement. Ablines. Vid. Supplement. Ablabines. Vid. Supplement. Ablatis. Ablatio, Ablatius. Ablatio, Ablatis. Ablatio, Ablatius. Ablinis. Vid. Supplement. Abo, a town of Czecevia. (Vid. Abila III.) Abo, a chain of mountains in Germany, which commenced on the banks of the Meus, now Mayne, and running be- tween what are now Hesse and Westphalia, terminated in the present Duchy of Paderborn. Out of the northwest- eastern part of this range, springs, according to the same authority, the Amius, now Elbe. Subsequent writers, however, seem to have limited the name Abo- bo to that portion of the Black Forest where the Dan- ube commences its course, and in this sense the term is used by Tacitus. A stone altar, with ABROBA inscribed, was discovered in the Black Forest in 1778; and in 1784, a pedestal of white marble was found in the Duchy of Baden, bearing the words DIANAE ABONAE. These remains of antiquity, besides tending to designate more precisely the situation of the ancient Mons Abonia, settle also the orthography of the name, which some commentators incorrectly write Arnoba. (Compare La Germanie de Tacute, par Pancouke, p. 4, and the Atlas, Planche deuxieme.) Aboontichos, a small town and harbour of Phapha- gonia, southeast of the promontory Carambis. It was the birthplace of an impostor, who assumed the char- acter of Escaulapius. Lucian (Pseud. 58) states, that he petitioned the Roman emperor to change the name of his native city to lonopolis, and that the re- quest of the impostor was actually granted. The modern name Involei is only a corruption of Ionopolis. (Marcian, Peripl., p. 72.—Steph. B.) Aboires, a name given by the Roman writers to the primitive race, who, blending with the Siculi, founded subsequently the nation of the Latins. The name is equivalent to the Greek αβρίζω, as indica- ting, as writings alone can transmit through centuries, traditions, they dwelt originally around Mount Velino, and the Lake Fucinus, now Celano, extending as far as Carseoli, and towards Reate. This was Cato's account (Dionys. H. 2, 49); and if Varro, who enumerated the towns they had possessed in those parts (Id. 1, 14), was not imposed on, not only were the sites of these towns distinctly preserved, as well as their names, but also other information, such as writings alone can transmit through centuries. According to the most credible traditions, they dwelt originally around Mount Velino, and the Lake Fucinus, now Celano, extending as far as Carseoli, and towards Reate. This was Cato's account (Dionys. H. 2, 49); and if Varro, who enumerated the towns they had possessed in those parts (Id. 1, 14), was not imposed on, not only were the sites of these towns distinctly preserved, as well as their names, but also other information, such as writings alone can transmit through centuries. Their capital, Lisa, was lost by surprise, and exer- tions of many years to recover it, by expeditions from Reate, proved fruitless. Withdrawing from that district, they came down the Anio; and even at Tibur, An- temus, Ficulea, Tellena, and farther on at Crustum- rium and Aricia, they found Siculi, whom they sub- dued or expelled. The Aborigines are depicted by Sallust and Virgil as savages living in hordes, without marriage or domestic relations. Their diet was fish, chase, and on wild fruits. This, however, does not agree with the traces of their towns in the Apen- nines; but the whole account was, perhaps, little else than an ancient speculation on the progress of mankind from rudeness to civilization. The Aborigines are said to have revered Janus and Saturn. The latter taught them husbandry, and induced them to choose settled habitations, as the founders of a better way of life. From this ancient race, as has already been re- marked, blending with a remnant of the Siculi, sprang the nation of the Latins; and between Saturn and the time assigned for the Trojan settlement, only three reigns of theLatins are enumerated, Picus, Pan- nus, and Latinus. (Nieshur, Rom. Hist. 1, 62, Cambrr.) As to the name of this early race, the old and genuine one seems to have been Cassi or Cassii (Sauveius in Serv. ad En. 1, 10); and the application of Abo- rigines was only given them by the later Roman writ- ers. (Hayne, Excurs. 4, ad Ann. 7.) Cluer, and others, have maintained the identity of the Aborigines and Palesgi, a position first assumed by Dionysius of Halicarnassus. Mannert (9, 436) thinks, that the Palesgi were a distinct race, who, on their arrival in Italy, united with the people in question, and that both became gradually blended into one race, the Eturian. Some are in favour of writing Aberrigines, and refer to the authority of Festus, who so styles them as having been wanderers (ab, erro), when they took possession of that part of the country where they sub- sequently dwelt. In this Festus is supported by the author of the Origin of the Romans, but the opinion is an incorrect one. Aboeras. Vid. Chaboras. Abranditas, a king of Susa, who submitted, with his army, to Cyrus, when he learned that his wife Pan- thea, who had been made prisoner by the latter, was treated by him with great kindness and humanity. He was subsequently slain in fighting for Cyrus. His wife, unable to survive his loss, slew herself upon his corpse. Cyrus erected a monument to their memory. (Xen. Cyrop. 5, 6, &c.) Abrandtai, a nation of Gaul, situate, according to the common opinion, on the western coast, north of the Liger, or Loire, and whose capital, Ingena, is sup- posed to coincide with Avaranches (D'An. Geog. Anc. — Cellar. Geogr. Ant. 1, 161, Schol.). If we follow Ptol- emy, this people rather seem to have occupied what would now correspond to a part of Eastern Nor- manb, in the district of Ocique, and stretching from the vicinity of the Rille to the banks of the Seine (Mannert, 2, 167). Aboo, an Athenian, who wrote on the festivals and sacrifices of the Greeks. His work is lost. (Steph. B. s. v. Bérn.)—II. A grammarian of Rhodes, who taught rhetoric at Rome in the reign of Augus- tus. He was a pupil of Tryphon. (Stud. s. v.)—III. A grammarian, who wrote a treatise on Theocritus, now lost. (Elytis, p. 80.) Abochon. Vid. Arbor. Arbor or Harox. It is rejected by Ptolemy (p. 150), who assigns it to Picus, or Glypha. Abocona, the wife of Nius, king of Megaris. As a memorial of her private virtues, Nius, after her death, ordered the garments which she wore to be- come models of female attire in his kingdom. Hence, according to Plutarch, the name of the Megarian robe φησσαρια. (Quast. Græc. p. 294.) Aborōnium, a town of Africa, near the Syris Mi- nor, and identical with Sibatra. (Vid. Sabatra.) Abosirat, Vid. Apasyannah.
ABY

ABYDIES, islands at the head of the Adriatic, in the Sinus Flanaticus, Gulf of Quarnaro; named, as tradition reported, from Abys, the brother of Medea, who, according to one account, was killed here. (Hygin. 23.—Strabo, 315.—Mela, 2, 7.—Pliny, 3, 26.) Apollonius Rhodius (4, 330) calls them Brygeides, and states (v. 470) that there was in one of the group a temple erected to the Brygian Diana. Probably the name given to these islands was a corruption of some real appellation, which, though unconnected with the fable, still, from similarity of sound, induced the poets to connect it with the name of Medea's brother. The principal island is Absorus, with a town of the same name. (Ptol. 63.) These four islands are, in modern geography, Chesro, Oseo (the ancient Absorus), Ferosina, Chao. (Cramer's Anc. Italy, 1, 137.)

Absyrtus, a river falling into the Adriatic Sea, near which Absyrtus was murdered. The more correct form of the name, however, would seem to have been Abyrtus, or, following the Greek, 'Apsyrtus (Ἀπσυρτος). Consult Grotius and Corte, ad Luc. Pharsal. 3, 190.

Absyrtus (Ἀψυρτος), a son of Eetes, and brother of Medea. According to the Orphic Argonautica (v. 1027), Absyrtus was despatched by his father with a large force in pursuit of Jason and Medea, when their flight was discovered. Medea, on the point of falling into the hands of this young prince, received him by a stratagem, as the Argonauts, having slain him, cast his body into the sea. The corpse, floating about for some time, was at last thrown up on one of the islands, thence called Absyrtides. According to Apollonius Rhodius (4, 207), Absyrtus, having reached the Adriatic before the Argonauts, waited there to give them battle. Mutual fear, however, brought about a treaty, by which the Argonauts were to retain the fleece, but Medea was to be given to one of the neighbouring islands, until some monarch should decide whether she ought to accompany Jason, or return with her brother. Medea, accordingly, was placed on an island sacred to Diana, and the young prince, by treacherous promises, was induced to meet his sister by night in order to persuade her to return. In the midst of their conference he was attacked and slain by Jason, who lay concealed near the spot, and had been informed of the plan of the island in accordance with the wishes of Medea. The body was interred in the island. Both these accounts differ from the common one, which makes Medea to have taken her brother with her in her flight, and to have torn him in pieces to stop her father's pursuit, scattering the limbs of the young prince on the probable route of her parent. This last account makes the murder of Absyrtus to have taken place near Tami, on the Euxine, and hence the name given to that city, from the Greek ροξη, σετσα; just as Absyrtus, or Abyrtus, is said to have been so called from ἄπτω and στροω. (Hygin. 23.—Apollod. 1, 9, 24.—Cic. N. D. 3, 19.—Ovid, Trist. 3, 9, 11.—Huyse, ad Apollod. l. c.) According to the Orphic Poem, Absyrtus was killed on the banks of the Phasis, in Colchis.

ABUS, a river of Britain, now the Hunter. Camden (Brit. p. 634) derives the ancient name from the old British word Aber, denoting the mouth of a river, or an estuary. The appellation will suit the Hunter extremely well, as it is rendered a broad estuary by the waters of the Ouse.

ABYNEUS, I. a pupil of Berosus, flourished 208 B.C. He was in Greek mature, and to the account of the Chaldeans, Babylonians, and Assyrians, some fragments of which have been preserved for us by Eusebius, Cyril, and Syncellus. An important fragment, which clears up some difficulties in Assyrian history, has been discovered in the Armenian translation of the Chronicle of Eusebius.—II. A surname of Palae-thus. (Vid. Palaethus, IV.)

ABYDOS, 1. a celebrated city of Upper Egypt, north-west of Diospolis Parva. Strabo (813) describes it as once next to Thebes in size, though reduced in his days to a small place. The same writer mentions the palace of Memnon in this city, built on the plan of the labyrinth, though less intricate. Osiris had here a temple, which neither vocal nor instrumental music was allowed at the commencement of sacrifices. Plutarch (de Is. et Os. 359, 471, Wc.) makes this the true burial-place of Osiris, an honour to which so many cities of Egypt aspired; he also informs us that the more distinguished Egyptians frequently selected Abydos for a place of sepulture. (Zoega, de Obl. 294.—Creuzer's Comment. Herod, 1, 97.) All this proves the high antiquity of this city, and accounts for the consideration in which it was held. Ammianus Marcellinus states (19, 12) that there was a very ancient oracle of the god Besa in this place, to which applications were wont to be made orally and in writing. (Compare Euseb. H. E. 6, 41.) Abydos is now a heap of ruins, as its modern name, Madfune, implies. The ancient appellation has been made to signify, by the aid of the Gopic, "abode, or habitation, common to many." (Creuzer, l. c., 100.)—II. An ancient city of Macedonia, was captured by the Thracians, and still inhabited by them after the Trojan war. Homer (Il. 2, 837) represents it as under the sway of prince Asius, a name associated with many of the earliest religious traditions of the ancient world (vid. Asia). At a later period the Liessians sent a strong colony to this place to aid their commerce with the shores of the Propontis and Euxine. (Strabo, 691.—Thuc. 8, 62.) Abydos was directly on the Hellespont, and was the narrowest point of the strait. This, together with its strong walls and safe harbour, soon made it a place of importance. It is remarkable for its resistance against Philip the Younger, of Macedon, who finally took it, partly by force, partly by stratagem. (Polyb. 16, 31.) In this quarter, too, was laid the scene of the fable of Hero and Leander. Over against Abydos was the European town Sestos; not directly opposite, however, as the latter was somewhat to the north. The ruins of Abydos are still to be seen on the left bank of the strait (then Xanthion, now, or Pesques Point. (Hobhouse's Jour. 2, 217, Am. ed.) Wheeler has rectified in this particular the mistake of Sandys (Voyage, 1, 74), who supposed the modern castle of Notolla to be on the site of the ancient Abydos. The castles Chanak-Kalesi, or Sultanie-Kalesi, on the Asiatic side, and Chelit-Bauer, or Kelit-Bahar, on the European shore, are called by the Turks Bogaz-Hassarier, and by the Franks the old castles of Notalla and Roumelia. The town of Chanak-Kalesi, properly called Durdanelles, has extended its name to the strait itself (Hobhouse, 215). Over the strait between Abydos and Sestos, Xerxes caused two bridges to be erected when marching against Greece, and it was here that, seated on an eminence, where a throne had been erected for him, he surveyed his fleet, which covered the Hellespont, while the neighbouring plains swarmed with his innumerable troops (compare above). The interpreter of the traveller above quoted remarks: "The Thracian side of the strait, immediately opposite to Nargar, is a strip of stony shore, projecting from behind two cliffs; and to this spot, it seems, the European extremities of Xerxes' bridges must have been applied, for the height of the neighbouring cliffs would have prevented the Persian monarch from adjusting them to any other position. There is certainly some ground to believe, that the exact point of shore called from that circumstance Apobathra (Strabo, 691), since there is, within any probable distance, no other flat land on the Thrace.
Acacus, a town of Arcadia, situate on a hill called Acacaeus, and lying near Lyceourea, in the south-western angle of the country. Mercury Acacaeus was worshipped here (Paus. 8, 36). Some make the epithet equivalent to μέγας κακοῦ παράγας, nullius nali autor, ranking Mercury among the dei averrunci (Spanh. ad Callim. H. in D. 145.—Heyne, ad II. 16, 185).

Acacius, I. A disciple of Eusebius, bishop of Cesaerea, whom he succeeded in 339 or 340. He was summoned by the Presbyters of Alexandria to be Bishop of Sestos, but withdrew to the Left of Eusebius, not extant; 17 volumes of Commentaries on Ecclesiastes; and 6 volumes of Miscellanies. Acacius was the leader of the sect called Acacians, who denied the Son to be of the same substance as the Father. (Socr. Hist. 2, 4.—Epiph. Har. 75.— Fabr. Bibl. Gr. 5, 19.—CARE's Lit. Hist. 1, 206.)—II. A patriarch of Constantinople in 471, who established the superiority of his see over the eastern bishops. He had a favourite with the Emperor Zeno, who protected him against the pope. Two letters of his are extant, to Petrus Trullo, and Pope Simplicius. (Theod. 5, 23.—Case. 1, 417.)—III. A bishop of Berea, assisted at the Council of Constantinople in 381. (Theod. 5, 32.)—IV. A bishop of Melitene, in Armenia Minor, present at the Council of Ephesus in 431, and has left in the Councils (vol. 3) a Homily against Nestorius (Nicphor. 16, 17.—Case. 1, 417.)—V. A bishop of Amida, distinguished for piety and charity, in having sold church-plate, &c., to redeem 7000 Per- sonians on the Tigris, in Mesopotamia. His death is commemorated in the Latin church on April 9th. (Socr. 7, 21.—Fabr. Bibl. Gr. 5, 19.)

Acacus, Vid. Supplement.

Academia, a public garden or grove in the suburbs of Athens, about 6 stadia from the city, named from Academus or Hecademus, who left it to the citizens for gymnastics (Paus. 1, 29). It was surrounded with a wall by Hipparchus (Suid.); adorned with statues, temples, and sepulchres of illustrious men; planted with olive and plane trees; and watered by the Cepheus. The olive-trees, according to Athenian fables, were reared from layers taken from the sacred olive in the Erechtheum (Schol. Ed. Col. 730.—Paus. 1, 30), and afforded the oil given as a prize to victors at the Pana-thenaean festival (Schol. l. c.—Suid. v. Mopid). The Academy suffered severely during the siege of Athens by Xerxes; many trees being cut down to supply timber for machines of war (Appian, B. M. 30). Few retreats could be more favourable to philosophy and the Muses. Within this enclosure Plato possessed, as part of his humble patrimony, a small garden, in which he opened a school for the reception of those inclined to attend his instructions (Diog. L. Vit. Plat.). Hence arose the Academic sect, and hence the term Academy has descended, though born of many early honours, even to our own times. The appellation Academia is frequently used in philosophical writings, especially in Cicero, as indicative of the Academic sect. In this sense, Diogenes Laertius makes a threefold division of the Academy, into the Old, the Middle, and the New. At the head of the Old he puts Plato, at the head of the Middle Academy, Arcesilaus, and of the New, La- cydes. Sextus Empiricus enumerates five divisions of the followers of Plato. He makes Plato founder of the 1st Academy; Arcesilaus of the 2d; Carneades of the 3d; Philo and Charmides of the 4th; Antiochus of the 5th. Cicero recognises only two Academias, the Old and New, and makes the latter commence as above with Archesilaus. In enumerating those of the Old Academy, he begins, not with Plato, but Democritus, and gives them in the following order: Democritus, Anaxagoras, Empedocles, Parmenides, Xenophanes, Socrates, Plato, Suseipus, Xenocrates, Polemo, Crates, and Crantor. In the New, or Younger, he mentions Archesilaus, Laecydes, Evander, Hegesinus, Carneades, Clitomachus, and Philo. (Acad. Quest. 4, 5.) If we follow the distinction laid down by Diogenes, and alluded to above, the Old Academy will consist of those followers of Plato who taught the doctrine of their master without mixture or corruption; the Middle will embrace those who, by certain innovations in the manner of philosophizing, in some measure receded from the Platonic system without entirely deserting it; while the New will begin with those who relinquished the more obnoxious tenets of Archesilaus, and restored to his system a closer resemblance to the doctrine of the Platonic school.—II. A Villa of Cicero near Puteoli (Pliny, 31, 2). As to the quantity of the pelunt in Academia, Forcellini (Lex. Tot. Lat.) makes it common. Bailey cites Dr. Parr in favour of its being always long in the best writers. Malby (in Morell's Thes.) gives &Acaduia, & Acaduia, Hermann (ad Aristoph. Nub. 1001) makes the pelunt of Acaduia short by nature, but lengthened by the force of the accent, as it was in common and frequent use. (Compare the remarks of the same scholar, in his work de Metris, p. 36, Glasc.)

Academus, an ancient hero, whom some identify with Cadmus. According to others (Plut. Thea. 32), he was an Athenian, who disclosed to Castor and Pollux the place where Theseus had secreted their sister Helen, after having carried her off from Sparta; and is said to have been highly honoured, on this account, by Athens. From him the garden of the Academia, presented to the use of the Athenians, is thought to have been named (vid. Academia).

Acandalurus, or Acalynderus, a river of Magna Grecia, falling into the Bay of Tarentum. Pliny (3, 2) places it to the north of Hercules, but incorrectly, since, according to Strabo (283), it flowed in the vicinfty of Thurii. The modern name, according to D'Anville, is the Salamendula; but, according to Mannert (9, 2, 321), the Roccaseille.

Acamantis, I. A name given to the island of Cyprus, from the promontory Acamas. (Steph. B.)—II. An Athenian tribe.

Acamas, I. A promontory of Cyprus, to the north-west of Paphos. It is surrounded by two sugar-loaf summits, and the remarkable appearance which it thus presents to navigators as they approach the island on this side, caused them, according to Pliny (5, 31), to give the name of Acamantis to the whole island.—II. A son of Theseus and Phaedra. He was deputed to accompany Diomedes, when the latter was sent to Troy to demand Helen. During his stay at Troy he became the father of Mimitus by Laodicea, one of the daughters of Priam. He afterward went to the Trojan war, and was one of the warriors enclosed in the wooden horse. On his return to Athens, he gave name to the tribe Acamantis. (Paus. 10, 26.—Quint. Sm, 12.—Higgin. 108.)

Acampris, a river of Colchis, running into the Eux- ine; the Greeks called it Acampis from its impetuous course, which forbade approach to the shore, a, non,
Acarnania, a country of Greece Proper, along the western coast, having Ἑτολία on the east. The natural boundary on the Ἑtolian side was the Achelous, but it was not definitely regarded as the dividing limit until the period of the Roman dominion. (Strab. 450.) Acarnania was for the most part a productive country, with good harbours (Scylax 13). The inhabitants, however, were but little inclined to commercial intercourse with their neighbours; they were almost constantly engaged in war against the Ἑtolians, and consequently remained far behind the rest of the Greeks in culture. Hence, too, we find scarcely any city of importance within their territories; for Anactorium and Leucas were founded by Corinthian colonies, and formed no part of the nation, though they engrossed nearly all its traffic. Not only Leucadia, indeed, but also Cephalenia, Ithaca, and other adjacent islands, were commonly regarded as a geographical portion of Acarnania, though, politically considered, they did not belong to it, being inhabited by a different race. (Mannert, 8, 33.) The Acarnanians and Ἑtolians were descended from the same parent-stock of the Leleges or Curetes, though almost constantly at variance. The most important event for the Acarnanians was the arrival among them of Alcmeon, son of Amphiarous, who came with a band of Argive settlers a short time previous to the Trojan war, and united the inhabitants of the country to the Achaeans on the single condition of their being treated as one nation. His new territories were called Acarnania, and the people Acarnanians. The origin of the name Acarnania, however, is uncertain. It was apparently not used in the age of Homer, who is silent about it, though he mentions by name the Ἑtolians, Curetes, the inhabitants of the Echidnes, and the Teleboans or Taphians. According to some, it was derived from Acarnas, son of Alcmeon (Strabo, 462.—Apollod. 3, 7, 7.—Thuc. 2, 102.—Paus. 28, 42). But the remark just made relative to the silence of Homer about the Acarnanians seems to oppose this. More likely the appellation was grounded on a custom, common to the united states, of wearing the hair in curls, short, ἄκρατος, a intensus, and κείπος, in imitation of the Curetes, who cut their hair close in front, and allowed it to grow long behind (vid. Abantes). The Ἑtolians and Acarnanians were in almost constant hostility against each other, a circumstance adverse to the idea of a common origin. It is curious, however, that the Ἑtolians appear to have had no other object in view, in warring on their neighbours, than to compel them to adopt a different custom. In this lane it is probable they would scarcely have done towards persons of a different race. (Mannert, 8, 46.) This constant and mutual warfare so weakened the two countries, especially that they both fell an easy prey to the Macedonians, and afterward to the Romans. The latter people, however, amused the Acarnanians in the outset with a show of independence, declaring the country to be free, but soon annexed it to the province of Epirus. The people of the Romans went over to Acarnania; the country soon became a mere wilderness; and as a remarkable proof, no Roman road was ever made through Acarnania or Ἑtolia, but the public route lay along the coast, from Nicopolis on the Ambracian Gulf to the mouth of the Achelous. (Mannert, 8, 60.) The present state of Acarnania (now Cariina) is described by Hobhouse (Journ. 174, Am. ed.) as a wilderness of forests and unpeopled plains. The people of Acarnania were in general of less refined habits than the rest of the Greeks; and from Lucian's words (Dial. Meretr. 8, 227, Bsp.), χωρίς καί ἢκατονπλυκός, their morals were generally supposed to be depraved. Independently, however, of the injustice of thus stigmatizing a people on slight grounds, considerable doubt attaches to the correctness of the received reading, and the explanation commonly assigned to it. Guyenet conjectures ἀκατοπλυκός, and Erasmus, explaining the idio, favours this correction. (Compare Bayle, Dict. Hist. 1, 40.) The Acarnanians, according to Censorinus (D. N. 19), made the year consist of but six months, in which respect they resembled the Carians; Plutarch (Num. 19) states the same fact. (Compare Fabrici Mend. p. 7.) Acarnas and Amphiothères, sons of Alcmeon and Callirhoe. Alcmeon having been slain by the brothers of Alphesibora, his former wife, Callirhoe obtained from Jupiter, by her prayers, that her two sons, them in the cradle, might grow up to manhood, and avenge their father. On reaching man's estate, they slew Pronous and Agenor, brothers of Alphesibora, and, soon after, Phgeus her father. Acarnas, according to some, gave name to Acarnania; but vid. Acarnania. (Paus. 8, 24.) Acastus, son of Pelias, king of Iolcos in Thessaly. Peleus, while in exile at his court, was falsely accused by Astydamia, or, as Horace calls her, Hippolyte, the wife of Acastus, of improper conduct. The monarch, believing the charge, led Peleus out, under the pretence of a hunt, to a lonely part of Mount Pelion and there, having deprived him of every means of defence, left him exposed to the Centaurs. Chiron came to his aid, having received for this purpose a sword from Vulcan, which he gave to Peleus as a means of defence. According to another account, his deliverer was Mercury. Peleus returned to Iolcos and slew the Centaurs, and hanged the Centaur in retaliation, however, whether Acastus suffered with his queen on this occasion. He is thought by some to have been merely driven into exile. (Ov. Met. 8, 306.—Heroid. 13, 25.—Apollod. 1, 9, &c.—Schol. ad Apoll. Rh. 1, 224.) Acca Laurentia, I. more properly Latinna.
rendered celebrated for the successful stand which it made, with the aid of the British, under Sir Sidney Smith, and the Elder Bonaparte, who was obliged to raise the siege after twelve assaults. The strength of the place arose in part from its situation. The port of Acre is bad, but Dr. Clarke (Travels, 6, 89) represents it as better than any other along the coast. All the rice, the staple food of the people, enters the country by Acre; the master of which city, therefore, is able to cause a famine over all Syria. This led the French to direct their efforts towards the possession of the place. Hence, too, as Dr. Clarke observes, we find Acre to have been the last position in the Holy Land from which the Christians were expelled.

**Acamium**, a town of Cisalpine Gaul, among the Euganei, north of Pataium, and east of the Medoacus Major, or Brenta. It is now Asola. (Plin. 3, 19.—Plut. 63.)

**Acheron**, a priest of Hercules at Tyre, who married Dido, the sister of Pygmalion the reigning monarch, and his own niece. Pygmalion murdered him in order to get possession of his riches, and endeavoured to conceal the crime from Dido, but the shade of his wife appeared to her, and disclosing to her the spot where he had concealed his riches during life, exhorted her to take these and flee from the country. Dido instantly obeyed, and leaving Phœniciam, which was called Carthage on the coast of Africa, (vad. Dido.) Virgil calls the husband of Dido Sicheurus; but Servius, in his commentary, informs us, that this appellation of Sicheurus is softened down from Sichares. Justin (18, 4) calls him Acheron, which appears to be an intermediate form. Gesenius (Phan. Men., p. 414) makes Sicheus come from Isicharbas ("vir gladii") or Masicharbas ("opus gladii"); i.e., qui gladio omnia sus debet. If we reject the explanation of Servius the name Sicheus may come from Zachi, "purus, justus."

**Acerba**, I. a town of Cisalpine Gaul, west of Cremona and north of Placentia; supposed to have occupied the site of Pizzighetone; called by Polybius (2, 31) Αχερβα, and regarded as one of the strongholds of the insurers. It must not be confounded with another Celtic city, Acarna (Acapua, Strabo, 216), or Acerba (Plin. 3, 14), south of the Po, not far from Fossatum Lupus (Mannert, 170). Tuschke incorrectly reads Αχράβα, for Acerba, assigning the two places identical. (Tzsch. ad Strab. l. c.)—II. A city of Campania, to the east of Atella, called by the Greeks Αχράβα, and made a Municipium by the Romans at a very early period (Liv. 8, 14). It remained faithful when Capua yielded to Hannibal, and was hence destroyed by that commander. It was subsequently rebuilt, and in the time of Augustus received a Roman colony, but at no period had many inhabitants, from the frequent and destructive inundations of the Clanius. (Frontinus, de Col. 102.—Virg. G. 2, 225, et Schol.) The Modern Acerba stands nearly on the site (Mannert, 9, 780).

**Acercamo**, a surname of Apollo, signifying "unshorn," i.e., ever young (Juv. 8, 128). Another form is ἄκερκαμων. Both are compounded of ἄ, privi-, κέρας,  f.,  "horn," κέρας, to cut, κόπα,  the hair of the head, akos, which is shorn, however, as well as Bacchus as to Apollo. (Compare the Lat. intusos, and Ruperti, ad Juv. l. c.)

**Aces**, a river of Asia, on the confines, according to Herodotus, (3, 117), of the Chossmians, Hyrcanians, Parthians, Sarangaeans, and Thamaneans. The territories of all these nations were irrigated by it, through means of water-courses; but when the Persians conquered this part of Asia, they blocked up the outlets of the stream, and made the reopening of them a source of tribute. The whole story is very improbable.

Rennell thinks that there is some allusion
in it to the Oxus or Ochus, both of which rivers have undergone considerable changes in their courses.

**ACH.** Vid. Supplement.

**Ach.** Vid. Supplement.

**Achæas.** Vid. Supplement.

Achæas, a large and rapid river of India, falling into the Indus. It is commonly supposed to be the Ravi, but Rennell makes it, more correctly, the Jenaub. (Vincent's *Comm. and Nat. of the Anc.*)

**Achäe, a surname of Apollo, under which he was worshipped in Elis, where he had a splendid temple in the agora. This surname is the same as Ἀκηφαίος, and means the averter of evil.—II. (Vid. Supplement.)

**Achæi.** Vid. *Ægestias.*

**Achæid.** Vd. Supplement.

**Achæi.** I. an ancient statue mentioned by Pausanias (6, 7, 2). He was a native of Cnosus, of at least exercised his art there for some time, and was the father of that Amphion who was the pupil of Ptolemaus of Corea. Ptolemaus lived about Olympia, 80, 92, and *Acestor* must have been his contemporary. (Stillig., *Dict. of Anc. Artista.*—II. Vid. Supplement.)

**Achaëa, *Acýl*; a surname of Pallas. Her temple among the Daunians, in Apulia, contained the arms of Dionysius and his followers. It was defended by dogs, which fawned on the Greeks, but fiercely attacked all other persons (*Aristot. de Mirab.*).—II. Ceres was also called Achaia, from her grief (δυσοὐ) at the loss of Proserpina (*Plut. in Is. et Os.*). Other explanations are given by the scholiast (*ad Aristoph. Acharn. 674*). Con-

**Acheï, **one of the main branches of the great *Akolic* race. (*Vid. Achaia and Graecia, especially the latter article.*)

**Achæmenes, the founder of the Persian monarchy, according to some writers, who identify him with the *Geim Schid,* or *Demscheid,* of the Oriental historians (*vid. Persia*). The genealogy of the royal line is given by Herodotus (7, 11) from Achemenæs to Xerxes. The earlier descent, as given by the Grecian writers, and according to which, Perses, son of Perseus and Andromeda, was the first of the line, and the individual from whom the Persians derived their national appellation, is purely fabulous. *Eschylus* (*Per. 765*) makes the Persians to have been first governed by a Mede, who was succeeded by his son; then Cyrus, succeeded by one of his sons; next Merdis, Maraphis, Artaphernes, and Darius; the last not being, however, a brother of Perses. A discussion on this subject is found in Stanley, *ad loc.*: Larcher, *ad Herod. 7, 11,* and Schütz, *Eccu. 2, ed. *Ach. Pers.* l. c.

**Achæmenides, I. a branch of the Persian tribe of Pasharga, named from Achemenæs, the founder of the tribe. From this family, the kings of Persia were descended (*Herod. 1, 126*). Cambyses, on his deathbed, entreated the Achæmenides not to suffer the king- dom to pass into the hands of the Medes (3, 55).—II. A division of the royal line, whose Ctesias (398) makes the brother, but Herodotus (7, 7) and Diodorus Siculus (11, 74) call the uncle of Artaxerxes I. The latter styles him Achemenæs. (*Baehr, ed Ctes. l. c.—Wessel. ad Herod. l. c.*)

**Acheus.** *Statio, I. a place on the coast of the Thracian Chersonesus, where Polycena was sacrificed to the shade of Achilles, and where Hecuba killed Polyneus, who had murdered her son Polydorus.—II. The island, the second Portus was given to the Muscovy of Corone, in Messenia.*

**Achæus.** I. a son of Xuthus. (*Vid. Græcia, relative to the early movements of the Grecian tribes.*)—II. A tragic poet, born at Eretria, B.C. 484, the very year *Eschylus* won his first prize. We find him contending with Sophocles and Euripides, B.C. 447. With such competitors, however, he was, of course, not very successful. He gained the dramatic victory only once. *Athenæus,* however (6, p. 2670), accuses Euripides of borrowing from this poet. The number of plays composed by him is not correctly ascertained. *Suidas* (s. v.) gives three accounts, according to one of which he extant 34 plays; to another 20; and to a third 30; while a third assigns to him only 24. Most of the plays ascribed to him by the ancients are suspected by Casaubon (*de Stat. Poet. 1, 5*) to have been satyrlic. The titles of seven of his satirical dramas, and of ten of his tragedies, are still known. The extant fragments of his pieces have been collected and edited by Urfichs, Bonn, 1834. He should not be confounded with a later tragic writer of the same name, who was a native of Syracuse.—III. A river, which falls into the Euxine on the eastern shore, above the Promontory Heracleum. The Greek form of the name is Ἀχαίας,—*Ourops.* (*Artian, Per. Marit. Eur. 130, Blanc.*—IV. An historian mentioned by the scholiast on Pindar (*Ol. 7, 42*), Vossius (*Hist. Gr. 4, p. 501) supposes him to be the same with the *Achaeus* alluded to by the scholiast on Aratus (*s. 171*); but Boeckh throws very great doubt on the whole matter. (*Boeckh, ad Schol. Pind. l. c., vol. ii., p. 166.—V. A general of Antiochus the Great. (Vid. Supplement.)

**Achaia, I. a district of Thessaly, so named from the Achei (*vid. Græcia*). It embraced more than Phthiotis, since Herodotus (7, 196) makes it comprehend the country along the Apidanus. Assuming this as its western limit, we may consider it to have reached as far as the Sinus Pelasgius and Sinus Malacus on the east. (*Manmet. 7, 639*). Larcher (*Hist. d'Herod. 8, 7, Table Geogr.*) regards Melitsa as the limit on the west, which lies considerably east of the Apidanus. That Phthiotis formed only part of Acheai, appears evident from the words of Scymnus (*s. 604*). *Ἑλλιοτική* ἀκαίαν χωρά Πελοπόννησου (*Gail, ad loc.*) Homer (*II. 3, 258*) uses the term Ἀχαιόλα, ἑκατον, in opposition to Argos, ἀργόν, and seems to indicate by the former, according to one scholiast, the Peloponnesus; according to another, the whole country occupied by the Hellenes (*τὸν τερτέαν Ἑλληνικὸν ἔθνος τῆς Ἀχαιαν, *Schol. II. 3, 75*).—II. A harbour on the northeastern coast of the Euxine, mentioned by Arrian, in his *Periplus of the Euxine 131, Blanc.* and called by him Old Achaia (*τὸν τέταρτον Ἀχαιαν*). The Greeks, according to Strabo (416), had a tradition, that the inhabitants of this place were of Greek origin, and natives of the Boetian Orcomensus. They were returning, it seems, from the Trojan war, when, missing their way, they came to the place, which Appian (*B. M. 67, 102, Skev.*) makes them to have been Acheans, but in other respects coincides with Strabo. Müller (*Gesch. Hellen. Städtme, &c., 1, 282*) supposes the Greeks to have purposely altered the true name of the people in question, so as to make it resemble Achei (*Ἀχαιόλα), that they might erect on this superstructure a mere edifice of fame.—III. A country of the Peloponnesus, lying along the Sinus Corinthiacus, north of Nauplia, variously called the region of mountain-streams, descending from the ridges of Arcadia, with which this region, but they were small in size, and many mere winter-torrents. The coast was for the most part level, and was hence exposed to frequent inundations. It had few harbours; not one of any size, or secure for ships. On this account we find, that of the cities along the coast of Acheai, none became famous for maritime enterprise. In other respects, Acheai may be ranked, as the least extensive, of all the Grecian states, and possibly the least effecting countries of Greece. Its principal productions were like those of the rest of the Peloponnesian, namely, oil, wine, and corn. (*Manmet. 8, 384.—Heeren's *Ileen, &c., 3, 27.*) The most ancient name of this region was *Aegiali* or *Aégialis,* *Alyacós, "sea-shore, derived from its peculiar situation. It em* braced originally the territory of Sieyon, since here stood the early capital of the Aegiali or Aegianæs.
ACHAIA.

The origin of the Αχαιόι appears to connect them with the great Ionic race. Ion, son of Xuthus, came from Attica, according to the received accounts, settled in this quarter (την Αχαιαν έπασχον) obtained in marriage the daughter of King Sclinus, and from this period the inhabitants were denominated Αχαιοι Ionians. Pausanias, however, probably from other sources of information, makes Xuthus, not Ion, to have settled here. The Pelasgi appear also to have spread over this region, and to have gradually blended with the primitive inhabitants into one community, under the name of Pelasgi (Αχαιόες) (Herod. 7, 94). Twelve cities, according to Strabo, were founded by Ion. At the period of the Trojan war, these cities were subject to the Achaeans, and acknowledged the sway of Agamemnon as the head of that race. Matters continued in this state until the Dorian invasion of the Peloponnesus. The Achaeans, driven by the Dorians from Argos and Lacedaemon, took refuge in Αχαια, under the guidance of Tisamenos, son of Orestes. The Ionians gave their new visi a new reception, a battle ensued, the Ionians were defeated, and shut up in Hellea; and at last were allowed by treaty to leave this city un molested, on condition of removing entirely from their former settlements. They migrated, therefore, into Attica (Paus. 7, 1), but soon after left this latter country for Asia Minor (vid. Iones and Ionis). The Achaeans now took possession of the vacated territory, and changed its name to Achaea. Tisamenos having fallen in the war with the Ionians, his sons and the other leaders divided the land among themselves by lot, and hence the old division of twelve cantons or districts, as well as the regal form of government, continued until the time of Ogygus or Gygyus. (Strabo, 384.—Paus. 7, 6.—Polyb. 2, 41.) After this monarch’s decease, each city assumed a republican government. The Dorians, from the very first, had made several attempts to drive the Achaeans from their newly-acquired pos sessions, and so far succeeded as to wrest from them Sicyon, with its territory, which was ever after regarded as a Dorian state. All farther attempts at conquest were unsuccessful, from the defence made by the Achaeans, and the aid afforded to them by their Pelasgic neighbours in Arcadia. The result of this was an aversion on the part of the Achaeans to everything Dorian. Hence they took no part with the rest of the Greeks against Xerxes; hence, too, we find them, even before the Peloponnesian war, in alliance with the Athenians, and at the battle of Salamis became free from the yoke that was once on them. They were forced to remain neutral, or else at times, from a consciousness of their weakness, to admit the Dorian fleets into their harbours. (Thucyd. 1, 111 and 115.—Id. 2, 9.—Id. 8, 3.—Id. 2, 84.) The Achaeans preserved their neutrality also in the wars raised by the ambition of Macedon; but the result proved most unfortunate. The successors of Alexander seemed to consider the cities of Achaea as fair booty, and with their speed became fit of that war, which they were forced to remain neutral, or else at times, from a consciousness of their weakness, to admit the Dorian fleets into their harbours. (Thucyd. 2, 20.—Mannert, 8, 530.) This large number, however, did not all dwell in villages, but were scattered over the mountain, which contained some of the finest and most productive land in Attica. From a sarcophagus of Aristophanes (Acharn. 213.—Id. ibid. 332, seqq.) we learn, that many of the Acharnenses (Αχαρνε̂ς) followed the business of charcoal-burning. This borough belonged to the tribe Ενειος (Ovivei̯), and was distant 60 stadia from Athens. (Thucyd. 2, 21.)

Achaeis, a friend of Ενειος, whose fidelity was so exemplary, that Φιδος Αχατης became a proverb. (Virg. Εν. 1, 912.)

Acheléus, a patronymic given to the Syrens as daughters of Achelous. (Ovid, Met. 5, 15.——Gierg. ad loc.)

Acheléus, I. a river of Epirus, now the Aspro Potamo, or “White River,” which rises in Mount Pinthus, and, after dividing Acamania from Αετολία (Strab. 450), falls into the Sinus Corinthiacus. It was a large and rapid stream, probably the largest in all Greece, and formed at its mouth, by depositions of mud and sand, a number of small islands called Echinætes. The god of this river was the son of Ουκενας and Θεθυς, or of the Sun and Terra. Fable speaks of a contest between Hercules and the river god for the hand of Deinara. The deity of the Achelous assumed the form of a bull, but Hercules was victorious and tore off one of his horns. His opponent, upon this, having received a horn from Amalthea, the daughter of Ουκενας, gave it to the victor, and obtained his own in return. Another account (Ovid, Met. 9, 63) makes him to have first assumed the form of a serpent, and afterward that of a bull, and to have retired in disgrace into the bed of the river Thos, which thenceforward was denominated Achelous. A third version of the fable states, that the Naiads took the horn of the conquered deity, and, after filling it with the various productions of the seasons, gave it to the goddess of plenty, whence the origin of the corncrop. They
who pretend to see in history an explanation of this legend, make the river Achelous to have lost, or have been disused by, its frequent inundations, the plains of Calydon. This, introducing confusion into the landmarks, because of the occasion of continual wars between the Ætolians and Acanarians, whose territories the river divided as above stated, until Hercules, by means of dikes, restrained its ravages, and made the course of the stream uniform. Hence, according to this explanation, the serpent denoted the windings of the stream, and the bull its swellings and impetuosity, while the tearing off of the horn refers to the turning away of a part of the waters of the river, and the birth of the river from the roots of which draining was shown in the fertility that succeeded.

(Diod. Sic. 4, 35.)

The Achelous must have been considered a river of great antiquity as well as celebrity, since it is often introduced as a general representative of rivers, and is likewise frequently used for the element of water. (Eustath. ad H. 21, 194. — Eurip. Bacch. 625. — Id. Androm. 167. — Aristoph. Ecostr. 381. — Heg. ad H. 21, 194.)

The reason of this peculiar use of the term will be found in the remarks of the scholiast. The Achelous was the largest river in Epirus and Ætolia, in which quarter were the early settlements of the Pelasgic race, from whom the Greeks derived so much of their religion and mythology. Hence the frequent directions of the Oracle at Dodona, "to sacrifice to the Achelouis," and hence the name of the stream became associated with some of their oldest religious rites, and was eventually used in the language of poetry as an allusion, κατὰ έχων, for the element of water and for rivers, as stated above (Ἀχέλων παν πηγάδοι ένωρ.)—II. There was another river of the same name, of which nothing farther is known, than that, according to Pausanias (8, 38), it flowed from Mount Sipylos. Homer, in relating the story of Niobe (II. 24, 619), speaks of the desert mountains in Sipylos, where are the beds of the goddess-nymphs, who dance around the Achelous. —III. A river of Thessaly, flowing near Lamia. (Strab. 434.)

Achirus, a borough of the tribe Hyppothainois, in Attica (Steph. B. — Aristoph. Eccles. 390.).

Acheiron, I. a river of Epirus, rising in the mountains to the west of the chain of Pindus, and falling into the Ionian sea near Glykys Limen (Γλυκὸς Λίμης). In the early part of its course, it forms the Palus Acherusia (Ἀχερουσία Λίμης), and, after emerging from this sheet of water, disappears under ground, from which it again rises and pursues its course to the sea. Strabo (9, 368) in his mention of this stream only after its leaving the Palus Acherusia, and appears to have been acquainted with the previous part of its course. Thucydidès, on the other hand (1, 46), would seem to have misunderstood the information which he had received respecting it. His account is certainly a confused one, and has given rise to an inaccuracy in D'Anville's map. The error of D'Anville and others consists in placing the Palus Acherusia directly on the coast, Strabo (9, 368), and Epiph. on the eastern extremity; in the position of the latter contradicting the very words of the writer on whom they rely. No other ancient authority places the Palus Acherusia on the coast. Pausanias (1, 17) makes the marsh, the river, and the city, to have been situated in the interior of Thesprotia; and he mentions also the stream Co-cythus (whic he styles ἱδρος ἀρεποστατον), as being in the same quarter. He likewise states it as his opinion, that Achelous was a mountain river, and rivers in the course of his wanderings, assigned them, on account of their peculiar nature and properties, a place among the rivers of the lower world. The poets make Ache- ron to have been the son of Sol and Terra, and to have been precipitated into the infernal regions and there changed into a river, for having supplied the Titans with water during the war which they waged with Jupiter. Hence its waters were muddy and bit-ter; and it was the stream over which the souls of the dead were first conveyed. The Achelous is represented under the name of an old man arrayed in a humid vestiment. He receives upon his head the water of the world. In Virgil and later poets Acheron sometimes designates the lower world.—II. A river of Brut- tum, flowing into the Mare Tyrrhenum a short distance below Pandosia. Alexander, king of Epirus, who had come to the aid of the Tarentines, lost his life in passing this river, being slain by a Lucanian exile. He was broken by an oracle to beware of the Acherusian waters and the city Pandosia, but suppose that his father returned to the road to Italy. (Justus, 12, 2. Liv. 8, 24.)—III. A river of Elis, which falls into the Alpheus. On its banks were temples dedicated to Ceres, Prosperina, and Hades, which were held in high veneration. (Strab. 344.)—IV. A river of Bithynia, near the cavern Acherusia, and in the vicinity of Heraclea. (Apollon. Rhod. 2, 745.)

Acherontia, I. a town of Brut tum, placed by Pline on the river Acheron (Flit. 3, 6.)—I. A city of Lucania, now Azernola, to the confines of Apulia. It was situated high up on the side of a mountain, and from its lofty position is called by Horace nitis Acherontiis, "the nest of Acherontia." Frocopius speaks of it as a strong fortress in his days. (Horat. Od. 3, 4, 14, et schol ad loc. — Procop. 3, 23.)

Acherusa, I. a lake in Epirus, into which the Achelous flows. (Vid. Acheron.)—II. According to some modern expounders of fable, a lake in Egypt, near Memphis, over which the bodies of the dead were thought to be carried by the Nile and the river being judged for the actions of their past lives. The authority cited in support of this is Diodorus Siculus (1, 92). A proper examination of the passage, however, will lead to the following conclusions: 1st, that no name whatever is given by Diodorus for any particular lake of this kind; and, 2d, that each district of Egypt had its lake for the purpose mentioned above, and that there was not merely one for the whole of Egypt. (Diod. Sic. 1, 92, et Westecind. ad loc.)—III. A cavern in Bithynia, near the city of Heraclea and the river Oxinas, probably on the very spot which Arrian (Peripl. Mar. Exe. p. 129, ed. Blancard) calls Tyndardise. Xenophon (Anab. 6, 2) names the whole peninsula, in which it lies, the Acherusian Promontory. This cavern was two stadia in depth, and was regarded by the adjacent inhabitants as one of the entrances into the lower world. Through it Heracles is said to have dragged Cerberus up to the light of day; a fable which procured its origin to the inhabitants of Heracles. (Diod. Sic. 14, 31. — Dionys. Perig. 790, et Eustath. ad loc.) Apollonius Rhodius (2, 730) places a river, with the name of Acheron, in this quarter. This stream was afterward called, by the people of Heraclea, Sonautes (Σωναντος), on account of their fleet having been saved near it from a storm. (Apollon. Rhod. 2, 746, et schol ad loc.) Are the Acheron and the Oxinas the same river?—IV. Achillas, I. a bishop of Alexandria from A.D. 311 to 321. His martyrdom is commemorated on the 7th of November.—II. An Alexandrian priest, banished with Arius, 319 A.D. He fled to Palestine. —III. (Vid. Supplement.)

Achilles, an island near the mouth of the Bors thine, or, more properly, the western part of the Drom Table, described by a small arm of the sea. (Vid. Dromos Achillus and Leuce.)

Achilles, a poet of Statinum, turning the story of Achilles. (Vid. Statinum.)

Achilles, I. a son of the Earth (γενεσθεν), unto whom Juno fled for refuge from the pursuits of Jupiter, and who persuaded her to return and marry that deity. Jupiter, grateful for this service, promised him that all who bore this name for the time to come should be illustrious personages. (Vid. Herkhis 19)
ACHILLES.
apud Photium, Biblioth., vol. i., p. 152, ed. Bekker.) —II. The preceptor of Chiron (Id. —III. The inventor of the ostracism (Id. —IV. A son of Jupiter and Lamia. His beauty was so perfect, that, in the judgment of Pan, he bore away the prize from every competitor. Venus was so offended at this decision, that she inspired Pan with a fruitless passion for the nymph Echo, and also wrought a hideous change in his own person (Id. —V. A son of Gaius, remarkable for his light coloured, or, rather, whitish hair (Id. —VI. The son of Peleus, king of Phthiotis in Thessaly. Homer's account of his marriage with Thetis, and his life there, have been a matter of some dispute among the ancient exponents of mythology (Schol. ad Apoll. Rhod. 1, 558), although the more numerous authorities are in favour of Thetis, one of the sea-deities. According to Lycophron (p. 178), Thetis became the mother of seven male children by Peleus, six of whom she threw into the fire, because, as Tzetzes informs us in his scholia, they were not of the same nature with herself, and the treatment she had received was unworthy of her rank as a goddess. The scholiast on Homer, however, (II. 16, 37), states, that Thetis threw her children into the fire in order to ascertain whether they were mortal or not, the goddess supposing that the fire would consume what was mortal in their natures, while she would preserve what was immortal. The scholiast adds, that six of her children perished by this harsh experiment, and that she had, in like manner, thrown the seventh, afterward named Achilles, into the flames, when Peleus, having beheld the deed, rescued his offspring from this perilous situation. Tzetzes (ubi supra) assigns a different motive to Thetis in the case of Achilles. He makes her to have been desirous of conferring immortality upon him, and states that with this view she anointed him (Expov) with ambrosia during the day, and threw him into fire at evening. Peleus, having discovered the goddess in the act of consigning his child to the flames, cried out with alarm, whereupon Thetis, abandoning the object she had in view, left the court of Peleus and rejoined the nymphs of the ocean. Dictys Cretensis makes Peleus to have rescued Achilles from the fire before any part of his body had been injured but the heel. Tzetzes, following the authority of Apollodorus, gives his first name as Ligyron (Aigryon), but the account of Agamemnor, cited by the same scholiast, is more in accordance with the current tradition mentioned above. Agamemnor, a merchant, who, according to some, was Pyrisosus (Pvovos), i.e., "saved from the fire." What has thus far been stated in relation to Achilles, with the single exception of the names of his parents, Peleus and Thetis, is directly at variance with the authority of Homer, and must therefore be regarded as a mere posthomic fable. The poet makes Achilles say, that Thetis had no other child but himself; and though a daughter of Peleus, named Polydora, is mentioned in the Odyssey (v. 118), this has been, according to the best commentators, only a half sister of the hero. (Compare Heyne, ad loc.) Equally at variance with the account given by the bard, is the more popular fiction, that Thetis plunged her son into the waters of the Styx, and by that immersion rendered the whole of his body invulnerable, except the heel by which she held him. On this subject Homer is altogether silent; and, indeed, such a protection from danger would have derogated from the character of his hero. There are several passages in the Iliad which plainly show, that the poet does not ascribe to Achilles the possession of any peculiar physical defence against the chances of battle. (Compare II. 20, 262: ed. 288: and especially, 21, 166, where Achilles is actually wounded by Asteropaeus.) The care of his education was intrusted, according to the common authorities, to the centaur Chiron, and to Phoenix, son of Amyntris. Homer, however, mentions
of Priam by the reduction of the tributary cities of Asia Minor. With a fleet of eleven vessels he ravaged the coasts of Mysia, made frequent disembarkations of his forces, and explored the country, destroying eleven cities, among which, according to Strabo (584), were Hypocypelian Thebe, Lymeneus, and Pedasus, and in laying waste the island of Lesbos. (Compare Homer, II. 9, 328.) Among the spoils of Lymeneus, Achilles obtained the beautiful Briseis, while, at the taking of Thebe, Chryseis the daughter of Chrysas, a priest of Apollo at Chrysae, became the prize of Agamemnon. A pestilence shortly after appeared in the Grecian camp, and Calchas, encouraged by the promised protection of Achilles, ventured to attribute it to Agamemnon's detention of the daughter of Chrysas, whom her father had endeavoured to ransom, but in vain. The monarch, although deeply offended, was compelled at last to surrender his captive, but, as an act of retaliation, and to testify his resentment, he deprived Achilles of Briseis. Hence arose "the anger of the son of Peleus," on which is based the action of the Iliad. Achilles on his part withdrew his forces from the contest, and neither prayers, nor entreaties, nor direct offers of reconciliation, couched in the most tempting and flattering terms (II. 9, 119, seqq.), could induce him to return to the field. Among other things the monarch promised him, if he would forget the injurious treatment which he had received, the hand of one of his daughters, and the sovereignty of seven cities of the Peloponnesus. (II. 9, 142 and 149.) The death of his friend Patroclus, however, by the hand of Hector (II. 16, 921, seqq.), roared two of his leaders, Briseis was restored. (II. 19, 78, seqq.—Id. 246, seqq.) As the arms of Achilles, having been worn by Patroclus, had become the prize of Hector, Vulcan, at the request of Thetis, fabricated a suit of impenetrable mail for her son. (II. 18, 408, seqq.) Arrayed in this, Achilles took the field, and after a great slaughter of the Trojans, and a contest with the god of the Scamander, by whose waters he was nearly overwhelmed, met Hector, chased him thrice around the walls of Troy, and finally slew him by the aid of Minerva. (II. 22, 136, seqq.) According to Homer (II. 24, 14, seqq.), Achilles dragged the corpse of Hector, at his chariot-wheels, thrice round the tomb of Patroclus, and from the language of the poet, he would appear to have done this for several days in succession. However, many middle ages to this day, Achilles was said to drag the body of Hector thrice round the walls of Troy. In this it is probable that the Roman poet followed one of the Cyclic, or else Tragic, writers. (Heyne, Excurs. 18, ad En. 1.) The corpse of the Trojan hero was at last yielded up to the tears and supplications of Priam, who had come for that purpose to the tent of Achilles, and a truce was granted the Trojans for the performance of the funeral obsequies. (II. 24, 595—Id. 617.) Achilles did not long survive his illustrious opponent. Some accounts place him to have perished the day after Hector was slain. The common authorities, however, interpose the contests with Penthesilea and Memnon previous to his death. (Compare Heyne, Excurs. 19, ad En. 1.—Quint. Smyrn. 1, 21, seqq.) According to the more received account, as it is given by the scholarist on Lykophrion (p. 269), and also by Dicytus Oretensis and Dares Phrygius, Achilles, having become enamoured of Polyxena, the daughter of Priam, signed a treaty with him, by which he would become his ally on condition of receiving her hand in marriage. Priam consented, and the parties having come for that purpose to the temple of the Thymbrean Apollo, Achilles was treacherously slain by Paris, who had concealed himself there, being wounded by him with an arrow in the heel. Another tradition, related by Arctinus, makes him to have been slain (in accordance with Hector's prophecy, II. 21, 452), in the Scenian gate, while rushing into the city. Hygin, or rather the School of Hygin, states that Achilles went round the walls of Troy, bearing off his rival Paris as a deformed captive, until Apollo, in anger, assumed the form of Paris, and slew him with an arrow (Hygin. fab. 107), but, with surprising inconsistency, he mentions in another place (fab. 110), that he was slain by Deiphobus and Alexander or Paris. The scholiast on Lycophron, cited above, says that the Trojans would not give up the corpse of Achilles until the Greeks had restored the various presents with which Priam had redeemed the dead body of Hector. The ashes of the hero were mingled in a golden urn with those of Patroclus, and the promontory of Sigeum is said to mark the place where both repose. A tomb was here erected to his memory, and near it Thetis caused funeral games to be celebrated in honour of her son, which were afterward annually observed by a decree of the oracle of Dodona (vid. Sigeum). It is said, that, after the taking of Troy, the ghost of Achilles appeared to the Greeks, and demanded of them Polyxena, who was accordingly sacrificed on his tomb by his son Neoptolemus, or Pyrrhus. (Eurip. Hec. 95, seqq.—Semen. Troad. 191.—Oed. Met. 13, 441, seqq.—Q. Calab. 14.) Another account makes the Trojan princess to have killed herself through grief at his loss. (Tzetzes ad Lycolph. 323.—Philostрат. Heroeca., p. 714, ed. Morellus.) The Thessalians, in accordance with the oracle just mentioned, erected a temple to his memory at Sigeum, and rendered him divine honours. Every year they brought thither two bulls, one white and the other black, crowned with garlands, and along with them some of the water of the Sperchius. (Gruber, Wörterbuch der altklassischen Mythologie, vol. i., p. 48.) Another and still stranger tradition informs us, that Achilles survived the fall of Troy and married Helen; but others maintain that this union took place after his death, in the island of Leneus, where many of the ancient heroes lived in a separate elysium (vid. I. euce). When Achilles was young, his mother asked him whether he preferred a long life spent in obscurity, or a brief existence of military glory. He decided in favour of the latter. (Compare II. 9, 410, seqq.) Some ages after the Trojan war, Alexander, in the course of his march into the East, offered sacrifices on the tomb of Achilles, and expressed his admiration as well of the hero, as of the hard whom he had found to immortalize his name. (Plutarch, Vit. Alexander. 15.) VII. Tatus, a native of Alexandria, commonly assigned to the fifth or third century B.C. is the most ancient. The best critics, however, such as Huet, Charbon la Rochette, Coray, and Jacobs, make him to have flourished after the time of Heliodorus, since they have discovered in him what they consider manifest indications of the latter writer. Nay, if it be true that Musaeus, whom he has also imitated, composed his poem of Hero and Leander before 430 or 450 of our era, we must then place Achilles Tatus even as low as the middle of the fourth century B.C. (Plut. Alex. 6, 231.) According to Suidas, he became, towards the end of his life, a Christian and bishop. But as the lexicographer makes no mention of his episcopal see, and as Photius, who speaks in three different places of him, is silent on this head, it may be permitted us to doubt the accuracy of Suidas's statement. (Phośli Bibliothec., vol. i., p. 33, ed. Beckler.—Id. ibid., p. 56.—Id. ibid., p. 66.) Equally unworthy of reliance would be the supposition, that the celebrated Grotesque treatise of which it was said, that Achilles Tatus wrote a treatise on the sphere. If this were correct, we ought to put him one or two centuries earlier, inasmuch as Firmicus, a Latin writer of the middle of the fourth century, cites the "Sphere of Achilles." (Astron. 4, 10.) Suidas, however, who is not accustomed to discriminate very nicely between persons bearing the same name, here confounds
ACI

him with the author of the "Introduction to the Phænomena of Aratus" (vid. No. VIII.). Achilles Tatius is a writer of romance, entitled, Τὰ κατὰ Δευ-
κίπτην καὶ Κλήσφωτα, "The loves of Leucippe and Clitophon," as it is commonly translated. Some crit-
icus, such as Hume who Souveny has preferred it to the work of Heliodorus; but Villiozio, Coray, Wyten-
banach, Passow, Villlemaen, and Schoell, restore the pre-eminen-ence to the latter. (Schoell, Hist. Litt. Gr., vol. vi., p. 233.—Foreign Quarterly Review, No. 9, p. 131.) "The books," says Villlemaen, "is written under an influence altogether pagan, and in constant allusion to the voluptuous fables of mythology." The remark is perfectly correct. Pictures of the utmost licen-
tiousness, treachery, filth, and violence are infamous in ancient mians, are seen throughout, without any attempt in imagination, and coarse in sentiment, the author has made his hero despise at once the laws of morality and those of love. Clitophon is a human body, unin-
formed by a human soul, but delivered up to all the instincts of nature and the senses. He neither com-
mands respect by his courage nor affection by his constancy. Struggling, however, in the writer's mind, some inner ideas may be seen wondering through the gloom, and some pure and lofty associations are strangely with the chaos of animal instincts and de-
sires. His Leucippe glides like a spirit among actors of mere flesh and blood. Patient, high-minded, re-
signed, and firm, she endures adversity with grace; preserving, throughout the helplessness and temptations of captivity, irreproachable purity, and constancy un-
changeable. The critics, while visiting with proper severity the side both of the author and the man, do not refuse to render full justice to the merits of the work. It possesses interest, variety, probability, and simplicity. "The Romance of Achilles Tatius," says Villlemaen, "purified as it should be, will appear one of the most agreeable in the collection of the Greek Romances. The adventures it relates present a preg-
nant variety; the succession of incidents is rapid; its wonders are natural; and its style, although somew-
what affected, is not wanting in spirit and effect." Photius also, as rigorous in morals as a bishop should be, praises warmly the elegance of the style, observ-
ing that the author's periods are precise, clear, and euphonous. (Foreign Quarterly Review, No. 9, p. 131.) Saunaises of opinion, that Achilles Tatius had given to the world two several editions of his romance, and that some of the manuscripts which remain be-
long to the first publication of the work, while others supply us with the production in its revised state. Ja-
cobs, however, in the prolegomena to his edition, has shown that the variations in the manuscripts, which gave rise to this opinion, are to be ascribed solely to the negligence of copyists, as they occur only in those words which have some resemblance to others, and in which it was easy to err. Few works, moreover, were as often copied as this of Achilles Tatius. The best edi-
tion is that of Jacobus, 2 vols. 8vo, Lips., 1821, in which may be seen a very just, though unfavourable, critic of the editions of Saunaises and Boden, the latter of which appeared in 1840, 12mo, Lugd. Bat., and the latter in 1776, 8vo, Lips. A French version of the work is given in the "Collection des Romans Grecs, traduits en Français ; avec des notes, par MM. Cou-rrier, Larcher, et autres Hellénistes," 14 vols. 16mo, Paris, 1822-1824.—VIII. Tatius, an astron-
omic writer, supposed to have lived in the first half of the fourteenth century, since he is quoted by Firmicus [Astro., 4, 10], who borrows from the observations of the same writer. Snidas confounds him with the indi-
vidual mentioned in No. VII. We possess, under the title of Εἰκασίας εἰς τὰ Αραῖαν Φανάριαν, "Intro-
tuction to the Phænomena of Aratus," a fragment of his work on the sphere. This fragment is given in the Uranologia of Petavius (Petan), Paris, 1630, fol. ACHILLES. A town on the Cimmerian Bos-aurus, where anciently was a temple of Achilles. It lay near the modern Buschk. (Mannert, 4, 326.) ACHILLES, I. A relation of Zenobia, invested with the purple by the people of Palmyra, when they rebelli-
ated against the Empire (Voss. Hist. Gr. 29, 40). Zosimus calls him Antho-
chus (1, 60).—II. A Roman commander, in the reign of Dioclesian, who assumed the purple in Egypt. The emperor marched against him, shut him up in Alexan-
dria, and took the place after a siege of eight months. Achilles was put to death, having been ex-
posed to lions, and Alexander was given up to pil-
lage. (Ors. 7, 25.—Aur. Vict. de Cas. c. 39.) ACHIV, properly speaking, the name of the Achae-
ian race (Axyoi) Lacedaemonian. The derivation through the Zo-
lic diacritical character is marked by the digamma sound of the letter v (Αχιβος). This appellation was gen-
erally applied by the Roman poets, especially Virgil, as a name for the whole Greek nation, in imitation of the Homeric usage. In legal strictness it should have been confined by the Romans to the inhabitants of the province of Achais. ACHIL, vid. Supplement. ACHMET, vid. Supplement. ACHORNEUS, a general with Brennus in the expedi-
tion which the Galls undertook against Peonia. (Paus. 10, 19.) He was chosen by Brennus as his lieutenant, or, rather, as a kind of colleague, which of-
course the name signifies, in the original language of the Galls, is said to designate. Thus the true Gallic ap-
pellation was Kikhouwauor, or Akikhouwauor, which the Greeks softened into Κυψέως (Diod. Sic. frag. 133, 22—vol. ix. p. 301, ed. Bip.) and Ἀκυψέως (Paus. 10, 19, 10), and which they mistook for a proper name. (Compare Thierry, Histoire des Gaulois, vol. i., p. 145, and Owen's Welsh Dictionary, s. v. Cwicwysa.) Dior-
dorus Siculus (1. c.) makes Cicihorius to have succeed-
ed Brennus. ACHILLES, a surname of Venus, from a fountain of the same name at Orchomenus, in Boeotia, sacred to her. The Graces bathed in this fountain. ACHIAE, vid. Supplement. ACILIA, I. gens, a plebeian family of Rome, of whom many medals are extant. (Rasche, Lex. Rei Num., vol. i., col. 47.) The name of this old and distinguished line occurs five times in the consular fasti, during the time of the republic, and twelve times in those of the empire, down to the reign of Constantine. (Sign. Past. Cons.) The two most celebrated branches of the house were those of Acilia Glabrio and Acius Balbus.—II. Lex, a law introduced by Acius Balbus, A.U.C. 556, for the planting of five colonies along the coast of Italy, two at the mouths of the Vul-
turnus and Liternus, one at Puteoli, one at Salernum, and one at Buxentum. (Liv. 32, 29.)—III. Calpur-
nia Lex (introduced A.U.C. 686), excluded from the senate, and from all public employments, those who had been guilty of bribery at elections. Cicero calls it merely Calpurnia Lex, but others Acilia Calpurnia Lex. (Ernesti, Ind. Legg.)—IV. Lex, a law intro-
duced A.U.C. 683, by the consul Manius Acilius Glab-
rio, relative to actions de pecunia repetundis. It determined the forms of proceeding, and the penalties to be inflicted. (Compare Ernesti, Ind. Legg.) ACILIA, I. a Roman, who wrote a work in Greek on the history of his country, and commentaries on the twelve tables. He lived B.C. 210, and was a con-
temporary of Cicero. His history was translated into Latin by Quintus, who was the above mentioned Claudius, and was enti-
tled, in this latter language, Annales Aciilicenses. (Voss. Hist. Gr. 1, 10.)—II. Quintus, appointed a com-
missioner, about 200 B.C., for distributing among the new colonists the conquered lands along the Po. — III. A tribune, author of the law respecting the maritime col-
onies. (Vid. Acilia II.)—IV. Glabrio M., a consul
with P. Corn. Scipio Nasica, A.U.C. 551, and the conqueror of Antiochus at Thermopylae. (Liv. 35, 21.—Id. 36, 19.)—V. Gisbre M., son of the preceding, a decemvir. He built a temple to Pietty, in fulfilment of a vow which his father had made when fighting against Antiochus. He erected also a gilded statue (statua auratum) to his father, the first of the kind ever seen at Rome. (Val. Max. 5, 5.—Liv. 40, 34. Compare Hase; ad loc.)—VI. A consul, A.U.C. 584, appointed to succeed Lucullus in the management of the Mithridatic war. (Cic. in Verr. 7, 61.)—VII. Aviola Manus, a lieutenant under Tiberius in Gaul, A.D. 19, and afterward consul. He was roused by a trance from the flames of the funeral pile, on which he had been laid as a corpse, but could not be rescued. (Plin. 7, 53.—Val. Max. 1, 8.)—VIII. Son of the preceding, consul under Claudius, A.D. 54.—IX. A consul with M. Ulpian Trajanus, the subsequent emperor. He was induced to engage with wild beasts in the arena, and, proving successful, was put to death by Domitian, who was jealous of his strength. 

Acra, now the Agr, a river of Lucania, rising near Abellinum Marsicum, and falling into the Sinus Tarentinus. Near its mouth stood Heraclea.

Acis, a Sicilian shepherd, son of Faunus and the nymph Simothea. He gained the affection of Galatea, but his rival Polyphemus, through jealousy, crushed his fingers with a fragment of rock, which he hurled upon him. Acis was changed into a stream, which retained his name. According to Servius (ad Virg. Eclog. 9, 39) it was also called Acicius. Cluverius places it about two miles distant from the modern Castello di Acci. Fazellus, however, without much reason, assigns the name of Acis to the Fiume Fredo, near Taormina. Sir Richard Hoare describes the Acis of Cluverius as a limpid though small stream. The story of Acis is given by Ovid (Met. 13, 750, seq.).

Acontios, a youth of Ceo, who, when he went to Delos to sacrifice to Diana, fell in love with Cydippe, a beautiful virgin, and, being unable to obtain her, by reason of his poverty, had recourse to a stratagem. A sacred law obliged every one to fulfil whatever promise they had made in the temple of the goddess; and, in order to procure an apple or quince, wrote on it the following words: “I swear by Diana I will wed Acontios.” This he threw before her. The nurse took it up, and handed it to Cydippe, who read about the inscription, and then threw the apple away. After some time, when Cydippe’s father was about to give her in marriage to another, she was taken ill just before the nuptial ceremony. Acontius thereupon hastened to Athens, and, the Delphic oracle having declared that the illness of Cydippe was the punishment of her perjury, the parties were united.

Acra, 1. a village on the Cimmerian Bosporus. (Strab., p. 494.)—II. A promontory and town of Scythis Minor, now Ekeren or Cavarna.

Acharaina, one of the five divisions of Syracuse, and deriving its name from the wild pear trees with which it is abounded (wild pear-tree). It is sometimes called the citadel of Syracuse, but in correctly, although a strongly fortified quarter. It was very thickly inhabited, and contained many fine buildings, yielding only to Ortigia. (Laporte Du Thiel, ad Strab., vol 2, p. 258, not. 3, French transl.) As regards the situation of Acharhah, and its aspect in modern times, compare Steinmarch, Travels in the Two Sicilies, 5, 569 (French transl.), and Giller, Des Autres et Ordoviciens, p. 49, seqq.

Aclea. Vid. Supplement.

Acineta, a city of Bocotia, situate on Mount Pious, towards the northeast extremity of the Lake Co-
pais. It was founded either by Athamas, or by Acrab-"pheus, a son of Apollo. Pausanias calls the place Acræphium (9, 23.—Compare Steph. Byz. s. v.).

Acracad, end. I. The Greek name of Agrigentum.—II. A river in Sicily, on which Agrigentum was situate. It gave its Greek name to the city. The modern name is Sim Blasio. (Mannert, 9, 2, 354.)—III. An engraver on silver, whose country and age are both obscure. He is said by Pliny (33, 12, 55), who speaks of cups of his workmanship, adorned with sculptured work, preserved in the temple of Bacchus at Rhodes. His hunting pieces on cups were very famous. (Silig. Dict. Art. s. v.)

Acre, a freedman of Nero, sent into Asia to plunder the temples of the gods, which commission he executed readily, being, according to Tacitus (Ann. 15, 45), “cuiusque flagitio promptus.” Secundus Carinas was joined with him on this occasion, whom Lipsius (ad Tac. l. c.) suspects to be the same with the Carinas sent into exile (Dio Cassius, 59, 20) by the Emperor Caligula, for declining against tyrants. Compare Juvenal, 7, 204.

Achilleos, an Epiro nation, who fed upon locusts. Diodorus Siculus (3, 28) says, that they never lived beyond their 40th year, and that they perished miserably, being attacked by swarms of winged lice (πτέρυγων φθισεις), which issued forth from their natural shrubs in droves of ten thousand, which diet is much more probable. The locust is said to be a very common and palatable food in many parts of the East, after having been dried in the sun. This is thought by some to have constituted the food of the Israelites on the occasion mentioned in Exodus (16, 14). Wesseling (ad Dion. Sic. 3, 28) is of this opinion. But the salivam of Mo- ses evidently mean quails, as the received version has rendered the word.

Acolatus, L. Vol., was a Pythagorean philosopher: he is mentioned by Valerius Maximus (8, 7) under the name of Arion, which is a false reading instead of Acri- on. (Cic. Fin. V, 9)

Acrisionesus, a patronymic appellation given to Danae, as daughter of Acrisius. (Virg. Enf. 7, 410, and Servius, ad loc.)

Acrisionesus, a daughter of Perseus, from his grandfather Acrisius. (Ovid, Met. 5, 70.)

Acrisius, king of Argos, by Ocalea, daughter of Mantineus. He was born at the same birth as Perseus, with whom it is said that he quarrelled even in his mother’s womb. After many dissen-
sions, Perseus was driven from Argos. Acrisius had Danae by Eurydice, daughter of Lacedaeon; and an oracle having declared that he should lose his life by the hand of his grandson, he endeavoured to frustrate the prediction by the imprisonment of his daughter, in order to prevent her becoming a mother (vid. Danae). His efforts failed of success, and he was eventually killed by Perseus, son of Danæ and Jupiter. Acris-"ius, it seems, had been attracted to Larissa by the reports which had reached him of the prowess of Per- seus. At Larissa, Perseus, wishing to show his skill in throwing a quoit, killed an old man who proved to be his grandfather, whom he knew not, and thus the oracle was fulfilled. Acrisius reigns a short time. (Hygin. fab. 83.—Ord. Met. 4, fab. 16. Horat. 3, 16.—Apollod. 2, 2, &c.—Paus. 2, 16, &c.—Vid. Danæ, Perseus, Polydectes.)

Acretos, a promontory of Messenia, in the Pelopon- nesus. (Plin. 4, 5.—Mel. 2, 3.) Now Cape Gallo Acrotérion, of Acrotérion. The name Acrotérion properly denotes the promontory of the peninsula of Aethos, now Cape Monte Santo. It is the lower one of the two capes that make the last barrier of the promontory (Promontorium). By Acrotérion (or Acrotério) is meant a town on the peninsula of Athos, situate some distance up the mountain, and of which Melos observes
ACT

(1.3), that the inhabitants were supposed to live beyond the usual time allotted to man. (Compare Thucyd. 4, 109.—Scelax, p. 26.—Steph. Byz. s. v. 'Atheta.—Strab. epit. lib. 7, 381.)

Acrocorinthus, or Acrocorinii Montes. vid. Corinth.

Acrocorinth, a high hill, overhanging the city of Corinth, on which was erected a citadel, called also by the same name. This situation was so important a one as to be styled by Philip the letters of Greece. This citadel, along with Acrocorinth, is described in a brilliant manner by Aratus. (Strab. 8, 380.—Paus. 2, 4.—Plut. Vit. Arat.—Stat. Theb. 7, v. 106.) "The Acrocorinthus, or Acropolis of Corinth," observes Dodwell, "is one of the finest objects in Greece, and, if properly garrisoned, would be a place of great strength and importance. It abounds with excellent water, is in most parts precipitous, and there is only one spot from which it can be annoyed with artillery. This is a pointed rock, at a few hundred yards to the southwest of it, from which it was battered by Mohammed II. Before the introduction of artillery, it was deemed almost impregnable, and had never been taken except by treachery or surprise. Owing to its natural strength, a small number of men was deemed sufficient to garrison it; and in the time of Aratus, according to Plutarch, it was defended by 400 soldiers, 50 dogs, and as many keepers. It was surrounded with a wall by Cleomenes. It is the plain to a considerable height, and forms a conspicuous object at a great distance: it is clearly seen from Athens, from which it is not less than forty-four miles in a direct line. Strabo affirms that it is 312 stadia in perpendicular height, but that the ascent to the top is 330 stadia by the road, the circuitous infections of which render this no extravagant computation. The Acrocorinthus contains within its walls a town and three mosques. Athenians commands the water in the Acropolis as the most salubrious in Greece. It was at this fount that Pegasus was drinking when taken by Bellerophoön." (Dodwell, vol. 2, p. 187.) All modern travellers who have visited this spot, give a glowing description of the view obtained from the ridge. Consult, in particular, Clarke's Travels, vol. 6, p. 750.

Acron, I. a king of the Ceniimenes, whom Romulus slew in battle, after the affair of the Sabine women. His bones were dedicated to Jupiter Feretrius, and his subjects were incorporated with the Roman people. (Plut. Vit. Rom.) Propertius styles him Caminus Acron, from the name of his city and people (4, 10, 7), and also Heracleus (4, 10, 9), from the circumstance of all the Sabine race tracing their descent from Hercules or Sancus.—II. A celebrated physician of Agrigentum in Sicily, contemporary with Empedocles (Diog. Laert. 8, 65). Plutarch speaks of his having been present during the time of the great plague, which occurred B.C. 430. He aided the Athenians on that occasion, by causing large fires to be kindled in their streets. (Plut. Is. et Os. 383.) Acron is generally regarded as the founder of the sect of Empirics or Experimentalists (Pseud. Gal. Isag. 372.) As this school of medicine, however, had a much later date, it is probable that he was merely one of the class of physicians called περατορατητητης, who did not confine themselves to any particular school, but went round and visited patients. His contempt for the mysterious charlatanism of Empedocles drew upon him the hatred of that philosopher. At least it is fair to suppose that this was the cause of their enmity. Acron wrote, according to Suidas, a treatise in Doric Greek, on the healing art, and another on diet. He appears also, from the words of the lexicographer, to have turned his attention in some degree to the influence of climate. (Consult Sprengel, Hist. Med. 1, 273.)—III. Helenius Acron, an ancient commentator. The period when he lived is uncertain: he is thought, however, to have been later than Servius. Acron's scholia on Horace have descended to us in part, or at least only a part was ever published. They are valuable on account of their containing the remarks of C. Ammianus, Julius Modestus, and Q. Terentius Scarrus, the oldest commentators on Horace. Acron also wrote scholia on Terence, which are cited by Charisius, but they have not reached us. Some critics ascribe to him the scholia which we have on Persius. (Schoell, Hist. Litt. Rom. 3, 326.)

Acropolis, in a special sense, the citadel of Athens, an account of which will be given under the article Athens.

Acrotitus, I. son of Cleomenes, king of Sparta, died before his father, leaving a son called Areus, who contended for the crown with Cleonymus his uncle, and obtained it through the sufferages of the senate. Cleonymus, in his disappointment, called in Pyrrhus of Epirus. (Paus. 3, 6.—Plut. vit. Pyrkh.—Paus. 1, 13.)—II. A king of Sparta, son of Areus, and grandson of the preceding. He reigned one year. Before ascending the throne, he distinguished himself by courageously defending Sparta against Pyrrhus. (Plut. vit. Pyrkh.)

Acrotrophus. Vid. Acrothoüs.

Acta or Acte, strictly speaking, a beach or shore on which there were, according to the custom, from Paus. 4, 7, "to break." According to Apollodorus (Steph. B. s. v. 'Actēs), the primitive name of Attica was 'Acētn (Acte), from the circumstance of two of its sides being washed by the sea. The name is also applied by Thucydides to that part of the peninsula of Athos which is below the city of Sane and including it. Besides Sane, the historian mentions five other cities as being situate upon it. (Thucyd. 4, 109.)

Acteōs, a celebrated hunter, son of Aristaeus and Aunomé, the daughter of Caelus. Having inadvertently, on one occasion, seen Diana bathing, he was changed by the goddess into a stag, and was hunted down and killed by his own hounds. (Od. Met. 3, 155, seqq.) The scene of the fable is laid by the poets at Gargaphia, a fountain of Beotia, on Mount Citharon, about a mile and a half from Platea. From a curious passage in Diodorus Siculus (4, 81), a suspicion arises, that the story of Acteōn is a corruption of some earlier tradition, respecting the fate of an intruder into the mysteries of Diana. Wesseling's explanation does not appear satisfactory, although it may serve as a clue to the true one. (Wesseling, ad Dio. Sic. l. c.)

Acteus, the first king of Attica. according to the ancient writers. He was succeeded by Cecrops, to whom he had given one of his daughters in marriage. (Paus. 1, 2.—Clem. Alex. 1, 921.) He is called by some Acteon. (Strab. 387.—Horpric. s. v. Actēs.—Consult Sibellus, ad Paus. l. c.)

Actēs, a freed woman of Asiac origin. Suetonius (Vit. Ner. 28) informs us, that Nero, at one time, was on the point of making her his wife, having suborned certain individuals of consular rank to testify, under oath, that she was descended from Attalus. From a passage in Tacitus (Ann. 14, 9) it would appear, that Seneca introduced this female to the notice of the emperor, in order to counteract, by her means, the dreadful ascendency of Agrippina. (Compare Dio Cass. 61, 7.)

Actēs, games renewed by Augustus in commemoration of his victory at Actium. They are also styled Ludi Acticai by the Latin writers, and were celebrated in the suburbs of Nicopolis. Strabo makes them to have been quinquennial. Previously, however, to the battle of Actium they occurred every three years. (Strab. 7, 325.)

Actēs, one of the Heliodes, or offspring of the Sun,
who, according to Diodorus Siculus (5, 57), migrated from Rhodes into Egypt, founded Heliopolis, and taught the Egyptians astrology. The same writer states, that the Greeks, having lost by a deluge nearly all their memorials of previous events, became ignorant of their claim to the invention of the science in question, and the Egyptians arrogated it to themselves. Wesseling considers this a mere fable, based on the national vanity of the Greeks, who, it is well known, invented so many of the ancient traditions, and in this case, for example, made that pass from Greece into Egypt, which came in reality from Egypt to Greece. (Wess. ad Diod. Sic. l. c.)

Actanes, according to Diodorus Siculus (1, 60), a king of Ethiopia, who conquered Egypt and deposed Amasis. He was remarkable for his moderation towards his new subjects, as well as for his justice and equity. All the robbers and malefactors, too, were collected from every part of the kingdom, and, having had their noses cut off, were established in Rhinocolura, a city which he had founded for the purpose of receiving them. We must read, no doubt, with Stephens and Wesseling, in the text of Diodorus, 'Agamas instead of 'Agramos, for the successor of Actanes. Who the Actanides of Diodorus was, appears to be undetermined. According to Wesseling (ad loc.), Strabo is the only other writer that makes mention of him. (Strabo. 759.)

Actium, originally the name of a small neck of land, called also Acte ('Akte'), at the entrance of the Sinus Ambracius, on which the inhabitants of Anactorium had erected a small temple in honour of Apollo. On the outer side of this same promontory was a small harbour, the usual rendezvous of vessels which did not wish to enter the bay. Scylax (p. 13) calls this harbour Acte. Thucydidus, however, applies this name to the temple itself. Polybius (4, 63) makes mention of the temple, under the appellation of Actium, and speaks of it as belonging to the Acanarians. Actium became famous, in a later age, for the decisive victory which Augustus gained in this quarter over the fleet of Marc Antiochus. The accounts given of it by the Roman writers, Actium appears to have been, about the time of this battle, nothing more than a temple on a height, with a small harbour below. The conqueror beautified the sacred edifice, and very probably a number of small buildings began after this to arise in the vicinity of the temple. (Strab. 325.—Sueton. Vit. Aug. 17.—Cic. ep. ad fam. 16, 9.) Hence Strabo (451) applies it to the epitaph of χωπων. It never, however, became a port, and it is an inattentive reader who would be likely to form this opinion from the language of Mela (2, 3) and Pliny (4, 1). Both these writers, however, in fact confound it with Nicopolis. There are no traces of the temple at the present day, but Pouqueville found some remains of the Hippodrome and Stadium. More within the Sinus Ambracius (Gulf of Argos) lies the small village of Azio. Hence probably, according to Mannert, originated the error of regarding Actium as the successor of all ancient authorities, at some distance within the bay. (Vid. Nicopolis, and compare Mannert, 8, 70.—Pouqueville, 3, 445.)

Actius, a surname of Apollo, from Actium, where he had a temple. (Verg. Aen. 8, v. 704.)

Actius Naucis. Vide Attus Naucis.

Actius, the father of Menestris, and grandfather of Patroclus, who is hence called Actories. The birth of Patroclus was placed in Larisa by other writers, and in Thessaly. As a Thessalian, he is said to have been the son of Myrmidon and Pisidia, the daughter of Zoelus, and husband of Geina, daughter of the Asopus; and to have conceded his kingdom, on account of the rebellion of his sons, to Pelus. (Ov. Trist. 1, 9.) Consult, on the different individuals of this name, the remarks of Heyne, ad Apollod. 3, 18.

ADD

Actoriades, I. a patronymic given to Patroclus, grandson of Actor (Ovid, Met. 13, fab. 1).—II. The sons of Actor and Molione. (Vid. Molonides.)

Actorius. Vide Supplement.

Actarius. Vide Supplement.

Actophilus. Vide Supplement.

Actolus. Vide Supplement.

Actomimus. Vide Supplement.

Acusilus, a Greek historian, born at Argos, and who lived, according to Josephus (conr. Ap. 1, 2), a short time previous to the Persian invasion of Greece, being a contemporary of Cadmus of Miletus. He wrote a work entitled "Genealogies," in which he gave the origin of the principal royal lines among his countrymen. He made historic times commence with Phoroneus, king of Orchomus, and he reckoned 1020 years from him to the first Olympiad, or 776 B.C. We have only a few fragments of his work, collected by Sturz, and placed by him at the end of those of Pherecydes, published at Gera, 2d. ed., 1824.

Acuticus, M., an ancient comic writer, author of various pieces, entitled, Leones, Gemini, Baetia, &c., and ascribed by some to Plautus. (Voss. de poet. Lat. c. 1.)

Ad Actaeon et Aquilas, &c., a form common to very many names of places. The Roman legions, on many occasions, when stopping or encamping in any quarter, did not find any habitation or settlement by which the place in question might be designated, and therefore selected for this purpose some natural object, or some peculiar feature in the adjacent scenery. Thus Ad Aquas indicated a spot near which there was water, or an encampment near water, &c. Another form of common occurrence is that which denotes the number of miles on any Roman road. Thus, Ad Quadrum, "at the fourth mile-stone," supply lapiodem. So also, Ad Quadrum, Ad Decimum, &c.

Ada, the sister of Artemisia. She married Hidricus, her brother (such unions being allowed among the Carians), and, after the death of Artemisia, ascended the throne of Caria, and reigned seven years conjointly with her husband. On the death of Hidricus she reigned four years longer, but was then driven from her dominions by Pisdorax, the youngest of her brothers, who had obtained the aid of the satrap Orontobates. Alexander the Great afterward restored her to her throne. She was the last queen of Caria. (Quint. Curt. 2, 8.)

Adad, an Assyrian deity, supposed to be the sun. Macrobius (Sat. 1, 23) states, that the name Adad means "One" (Unus), and that the goddess Adaegis, was assigned to this deity as his spouse, the former representing the Sun, and the latter the Earth. He also mentions, that the effigy of Adad was represented with rays inclining downward, whereas they extend upward from that of Adaegis. Selden (de Dieis Syria, c. 6, ayut. 1) thinks that Macrobius must be in error when he makes Adad equivalent to "One," and that he must have confounded it with the word Chad, which has that meaning.

Adda, Vide Supplement.

Adamanthea, Jupiter's nurse in Crete, who suspended him in his cradle from a tree, that he might be found neither on the earth, the sea, nor in heaven. To drown the infant's cries, she caused young boys to clash small brazen shields and spears as they moved around the tree. She is probably the same as Annathia.

Adamantios. Vide Supplement.

Adana, a city of Cilicia, southeast of Tarsus, on the Sarus, or Shon. It was at one time a large and well-known place, and was said to have been founded by Adar, son of Uranus and Geo. (Steph. B.)

Adnada, now Adda, a river of Cisalpine Gaul, rising in the Rhodan Alps, traversing the Lacus Larius, and falling into the Po to the west of Cremona. In the old editions of Strabo, it is termed in one passage...
Adem, an engraver on precious stones in the time of Augustus. His country is uncertain. An elegant portrait of Augustus, engraved by him, is described by Mongez, Icon. Rom. tab. 18, n. 6.

Adonis, a festival named for the god Adonis, celebrated both at Byblus and Phoenicia, and in most of the Greco-Greek cities. Lucian (de Syria Dea.—vol. 9, p. 88, seqq., ed. Bip.) has left us an account of the manner in which it was held at Byblus. According to this writer, it lasted during two days, on the first of which everything wore an appearance of sorrow, and the death of the favourite of Venus was indicated by public mourning. On the following day, however, the aspect of things underwent a complete change, and the greatest joy prevailed on account of the failed resurrection of Adonis from the dead. During this festival the priests of Byblus shaved their heads, in imitation of the priests of Isis in Egypt. In the Greek cities, the manner of holding this festival was nearly, if not exactly, the same with that followed in Phoenicia. On the first day all the citizens put themselves in mourning, coffins were exposed at every door; the statues of Venus and Adonis were borne in procession, with certain vessels full of earth, in which the worshippers had raised corn, herbs, and lettuce, and these vessels were called the gardens of Adonis (Ἄδονιδός κήπος). After the ceremony was over they were thrown into the sea or some river, where they soon perished, and thus became emblems of the premature death of Adonis, who had fallen, like a young plant, in the flower of his age. (Historie du Culte d'Adonis: Mem. Acad. des Inscr. &c., vol. 4, p. 136, seqq.—Dupaix, Origine de Cultes, vol. 4, p. 118, seqq., ed. 1822.—Valckenaer, ad Theoc. 'Aδόνιδος, in Arg.)

The lettuce was used among the other herbs on this occasion, because Venus was said to have deposited the dead body of her favourite on a bed of lettuce. In allusion to this festival, the expression Ἀδόνιος κήπου became proverbial, and was applied to whatever perished previous to the period of maturity. (Adagia Veterum, p. 410.) Plutarch relates, in his life of Nicias, that the expedition against Syracuse set sail from the harbours of Athens, at the very time when the women of that city were celebrating the mournful part of the festival of Adonis, during which there were to be seen, in every quarter of the city, images of the dead, and funeral processions, the women accompanying them with dismal lamentations. Hence an unfavourable omen was drawn of the result of the expedition, which event but too fatally realized. Theocritus, in the tenth idyll of his Phoebica, has left us an account of the part of this grand and beautiful narrative he composed of his famous song of the death of Adonis, the resurrection of Adonis, the celebration of it having been made by order of Arsinœ, queen of Ptolemy Philadelphus. Boettiger (Sahnu, p. 265) has a very ingenious idea in relation to the fruits exhibited on this joyful occasion. He thinks it impossible, that even so powerful a goddess as Arsinœ should be able to obtain the favor of the emperor of the world, when this festival was celebrated, fruits which had attained their full maturity (σάπια). He considers it more probable that they were of wax. This conjecture will also furnish another, and perhaps a more satisfactory, explanation of the phrase Ἀδόνιος κήπου, denoting things whose exterior promised fairly, while there was nothing real or substantial within. Adonis was the same deity with the Syrian Tammuz, whose festival was celebrated even by the Jews; they celebrated the festival of Tammuz (Ezekiel, 8, 14); and Tammuz is the proper Syrian name for the Adonis of the Greeks. (Creuzer's Symbolik, vol. ii., p. 86.) ( Vid. Adonis.)

Adonis, I. son of Cinyras, by his daughter Myrrha (vid. Myrrha), and famed for his beauty. He was ardently attached to the chase, and notwithstanding the entreaties of Venus, who feared for his safety and loved him tenderly, he exposed himself day after day to the...
nunt, and at last lost his life by the tusk of a wild boar whom he had wounded. His blood produced the amnæne, according to Ovid (Met. 10, 735); but according to others, the adonion, while the amnæne arose from the tears of Venus. (Bion, Epithaph. Ad. 66.)

The goddess was inconsolable at his loss, and after obtained from Proserpina, that Adonis should spend alternately six months with her on earth, and the remaining six in the shades. This tale is evidently an allegorical allusion to the periodical return of winter and summer. (Apollod. 3, 14.—Or. L. c.—Bion, l. c.—Virg. Ecl. 10, 18, &c.) *Adonis, or Adonai,* observes R. P. Knight, "was an Oriental title of the sun, signifying Lord; and the boar, supposed to have killed him, was the emblem of winter; during which the productive powers of nature being suspended, Venus was said to lament the loss of Adonis until he was again restored to life; whence both the Syrian and Arabic women annually mourned his death and celebrated his renovation; and the mysteries of Venus and Adonis at Byblus in Syria were held in similar estimation with those of Ceres and Bacchus at Eleusis, and Isis and Osiris in Egypt. Adonis was said to pass six months with Proserpina and six with Venus; whence some learned persons have conjectured that the allegory was invented near the pole, where the sun disappears during so long a time; but it may signify more probably the slow return of the productive powers of nature as the sun retires and advances. The Vishnoo or Juggernaut of the Hindus is equally said to lie in a dormant state during the four rainy months of that climate: and the Osiris of the Egyptians was supposed to be dead or absent forty days in each year, during which the people lamented his loss, as the Syrians did that of Adonis, and the Scandinavians that of Frey; though at Upsal, the great metropolis of their country, the sun noontide was continued all day entire below their horizon." *An Inquiry into the Symbolical Language of Ancient Art and Mythology* (Class. Journal, vol. 25, p. 42.—II. A river of Phoenicia, which falls into the Mediterranean below Byblus. It is now called Nahr Ibrahim. At the anniversary of the death of Adonis, which was in the rainy season, its waters were tinged red with the ovarian particles from the mountains of Libanus, and were fabled to flow with his blood. (4, p. 151), with more probability, supposes this red colour to have been a mere artifice on the part of the priest.

**ADRAVTTIUM**, a city of Asia Minor, on the coast of Myiæa, and at the head of an extensive bay (Sinus Adramyttenus) facing the island of Lesbos. (Strabo 6053) makes it an Athenian colony. Stephanus Byzantinus follows Aristotle, and mentions Adramythus, the brother of Cressus, as its founder. This last is more probably the true account, especially as an adjacent district bore the name of Lydia. According, however, to Eustathius and other commentators, the place existed before the Trojan war, and was no other than the Pedasus of Homer (Plin. 5, 32). This city became a place of importance under the kings of Pergamus, and continued so in the time of the Roman power, although it suffered severely during the war with Mithredates. (Strab. 6053.) Here the Consentus Juridicus was held. The modern name is Adramythus, and it is represented as being still a place of some commerce. It contains 1000 houses, but mostly mean and miserably built. Adramyttium is mentioned in the Acts of the Apostles (ch. 27, 2).

**ADRIA,** a river in Germany, in the territory of the Catu, and emptying into the Visurgis. Now the Elder. **ADRANTUS.** (Vid. Supplement.)

**ADRASSTUS** (Αדרαστεύς), 1. a region of Myia, in Asia Minor, near Priæsus, at the entrance of the Propontis, and containing a plain and city of the same name. The appellation was said to have been derived from Adrastus, who founded in the latter a temple to Nemesis. (Strab. 588—Steph. B. z. e.) This etymology, however, appears very doubtful. A more correct one is given under No. II. The city had originally an oracle of Apollo and Diana, which was afterwards removed to Parum in its vicinity. Homer makes mention of Adrastea, but Pliny is in error (5, 32) when he supposes Parium and Adrastea to have been the same place. The daughter of Jupiter and Necessity, so called, not from Adrastus, who is said to have erected the first temple to her, but from the impossibility of the wicked escaping her power: *α'ριτική, and *διαφάς, *to flcte.* She is the same as Nemesis.—III. A Cretan nymph, daughter of Melisseus, to whom the goddess Theseus intrusted the infant Jupiter in the Dictian grotto. In this office Adrastea was assisted by her sister Ida and the Curetes (Apollod. 1, 1, 6; Callim. Hymn. in Jov. 47), whom the scholar of Callim. (Apol. 3, 132, argg.) relates that she gave to the infant Jupiter a beautiful globe (πτερον) to play with, and on some Cretan coins Jupiter is represented sitting on a globe. (Spanheim ad Callim. l. c.)

**ADRUSTUS,** 1. a king of Argos, son of Talalus and Lysimache. (Vid Supplement.).—II. A son of the Phrygian king Gordius, who had unintentionally killed his brother, and was, in consequence, expelled by his father and deprived of his kingdom. He took refuge as a suppliant at the court of Cressus, king of Lydia, who received him kindly and purified him. After some time he was sent out as guardian of Atys, the son of Cressus, who was to deliver the country around the Mysian Olympus from a wild boar which had made great havoc in it. Adrastus had the misfortune to kill the young prince Atys while throwing his javelin at the wild boar; he his brother, and was stoned to death. He saw in this accident the will of the gods and the fulfilment of a prophecy; but Adrastus could not endure to live longer, and accordingly killed himself or the tomb of Atys. (Herod., 1, 35—45.).—III. A Peripatetic philosopher, born at Aphrodias in Caria, and who flourished about the beginning of the second century of our era. He was the author of a treatise on the arrangement of Aristotle's writings and his system of philosophy, quoted by his successors as a kind of Aristotle's (in cat., 1, 32, 11. of the other brother Merops of Parium Rhodius (3, 132, argg.) relates that she gave to the infant Jupiter a beautiful globe (πτερον) to play with, and on some Cretan coins Jupiter is represented sitting on a globe. (Spanheim ad Callim. l. c.)

**ADRUS,** a small city of Cisalpine Gaul, on the river Triarius, near the Po. Its site is still occupied by the modern town of Atri. In the ages preceding the Roman power, Adria appears to have been a powerful and flourishing commercial city, as far as an opinion may be deduced from the circumstance of its having given name to the Adriatic, and also from the numerous canals which were to be found in its vicinity. (Compare Liv. 5, 33—Strab. 218.—Justin, 20, 1.—Plin. 3, 16.) It had been founded by a colony of Etrurians, to whose labours these canals must evidently be ascribed, the name given to them by the Romans (fossiones Phalitanae) proving that they were not the work of that people. (Compare Müller, Etusii, vol. 1, p. 229.) In the excavations of the roads of the Gallic nations, and the consequent neglect of the canals. Livy, Justin, and most of the ancient historians, write the name of this city *Adria;* the geographers, on the other hand, prefer
Aria. In Strabo alone the reading is doubtful. Matnuits and Cellarius, on the authority of inscriptions and coins, give the preference to the form Hadria. Berkel (ad Stephens, Byzant. v. 'Adopia') is also in favour of it. It must be observed, however, that Adria is found on coins as well as the aspired form. (Rasche, Lex Rei Num., vol. 4, col. 9. — Cellarius, Geogr. Ant. 1, 546.)—II. A town of Picenum, capital of the Prefecture of Atria, of the coast of the Adriatic. Here the family of the Emperor Adrian, according to his own account, took its rise. The modern name of the place is Adri or Atri.

Adrianoopolis, or Hadrianoopolis. I. One of the most important cities of Thrace, founded by and named after the Emperor Adrian or Hadrian. Being of comparatively recent date, it is consequently not mentioned by the old geographical writers. Even Ptolemy is silent respecting it, since his notices are not later than the reign of Trajan. The site of this city, however, was previously occupied by a small Thracian settlement named Usukdana; and its very advantageous situation determined the emperor in favour of erecting a large city on the spot. (Amman, Marcell. 14, 11. — Eutrop. 6, 8.) Adrianoopolis stood on the right bank of the Hebrus, now Maritsa, which forms a junction in this quarter with the Arda, or Arborica, now Arda, and the Toronea, or Torone. (Compare Zonaras, 2, 22. — Lomprid. Elagab. 7.) This city became famous in a later age for its manufactories of arms, and in the fourth century succeeded in withstanding the Goths, who laid siege to it after their victory over the Emperor Valens. (Amman, Marcell. 31, 15.) Hierocles (p. 635) makes it the chief city of the Thracian province of Hammontina. The inhabitants were probably ashamed of their Thracian origin, and borrowed the name of Adrian from the emperor for their city from the mythology of the Greeks. (Vid. Orestassis.) Mandat (7, 263) thinks that the true appellation was Odrysos, which they thus purposely altered. The modern name of the place is Adrianople, or rather Edirne. It was taken by the Turks in 1360 or 1363, and the Emperor Amurath made it his residence. It continued to be the imperial city until the fall of Constantinople; but, though the court has been removed to the latter place, the city is still of considerable importance. It is situated on a polluted river, and very important, in case of invasion by a foreign power, as a central point for collecting the Turkish strength. Its present population is not less than 100,000 souls.—II. A city of Bithynia in Asia Minor, founded by the Emperor Adrian. D'Anville places it in the southern part of the territory of the Mariandyni, and makes it correspond to the modern Boh. — III. Another city of Bithynia, called more properly Adrian or Hadrian ('Adopos). It is frequently mentioned in ecclesiastical writers, and by Hierocles (p. 693), and there are medals existing of it, on which it is styled Adrian near Olympus. Hence D'Anville, on his map, places it to the southwest of Mount Olympus, in the district of Olympus, and makes it the same with the modern Edroses. Mandart opposes this, and places it in the immediate vicinity of the river Rhynadiacus.—IV. A city of Epirus, in the district of Thepastria, situate to the southeast of Antigonia, on the river Cebryenus. Its ruins are still found upon a spot named Drinopolis, an evident corruption of its earlier name. (Hughes' Travels, 2, 236.)—V. A name given to a part of Athens, in which the Emperor Adrian or Hadrian had erected many new and beautiful structures. (Gruter, Inscrip. p. 177.)

Adrius, a Roman emperor. (Vid. Hadrianus.)

Adria. This name is applied to several places on the territory in which the city of Atria in Cisalpine Gaul was situated. Herodotus (5, 9) first speaks of it under this appellation ('Adopia'), which is given also by many subsequent Greek writers. (Compare Scaliger, p. 5.) Most of them, however, considered it very properly a name for the Adriatic. Strabo (123,) certainly uses it in this sense ('O δ' Ἄδριας κόπος μέρος ἐστι τοῦ Ἱπποτ ν' Ἀδριανοῦ ἐξομολογεῖτο). More careful writers, however, and especially Polybius, give merely Ἄδριας, without any mention of its referring to the Adriatic. The latter author, although acquainted with the form Adriaticus (τὸν Ἀδριατικὸν μυχόν, 2, 16), yet, when it wishes to designate the entire gulf, has εἰς τῇ Ἀδριανί κόπος (2, 14), or ἐν τῇ Ἀδριανίτι κάτω (2, 14). Hence both Casaubon and Schweighaeusen, in their respective editions of Polybius, are wrong, in translating Ἄδριας by Mare Adriaticum and Sinus Adriaticus.

Adriaticum, or Adriaticum Mare, called also Sinus Adriaticus (or Hadriaticus), the arm of the sea between Italy and the opposite shores of Illyricum, Epirus, and Greece, comprehending, in its greatest extent, not only the present Gulf of Venice, but also the Ionian Sea. Herodotus, in one passage (7, 20), calls the whole extent of sea along the coast of Illyricum and Western Greece, as far as the Corinthian Gulf, by the name of the Ionian Sea (Ἱπποτ ν' Ἀδριατικὸν). In another passage he styles the part in the vicinity of Epidamnus and Azor (7, 11, 12), part of the Ionian Gulf. Scylax makes the Ionian Gulf the same with what he calls Adrius (τὸ τῆς Ἀδριατικῆς ἐπὶ τοῦ Ἰονίου οίκον ἐκ τής τοῦ Ἰονίου κόπον στηότα).—5. He is silent, however, respecting the Ionian Sea, as named by Herodotus. Thucydides, like Herodotus, distinguishes between the Ionian Gulf and Ionian Sea. The former he makes a part of the latter, which reaches to the shores of Western Greece. The latter he observes, in relation to the site of Epidamnus, Ἑπιδάμνης κύκλος ἐπὶ τῆς Παλαιας Ἰονίας ἐπὶ τῆς τοῦ Ἰονίου κόπον (1, 24). These ideas, however, became changed at a later period. The limits of what Scylax had styled Ἄδριας, and made synonymous with Ἰονίον κόπος, were extended to the shores of Italy and the western coast of Greece; so that now the Ionic Gulf was regarded only as a part of Ἄδριας, or the Adriatic. Cassius Dio and Eustathius, in the 3rd century, speak of it as containing all the sea between Italy and Greece, in which the same latter author always observed this distinction (ὁ ἐκ Ὀρθηρίου τοῦ Ἰονίου μέρος τοῦ Ἀδριατικοῦ). Eustath. ad Dionys. Perieg. v. 92). Hence we obtain a solution of Ptolemy's meaning, when he makes the Adriatic extend along the entire coast of Western Greece to the southern extremity of the Peloponnesus. The Mare Superum of the Roman writers is represented on classical charts as coinciding with the Sinus Hadriaticus, which last is made to terminate near Hydruntum, the modern Otranto. By Mare Superum, however, in the strictest acceptation of the phrase, appears to have been meant not only the present Adriatic, but also the sea along the southern coast of Italy, as far as the Sicilian straits, which would make it correspond, therefore, very nearly, if not exactly, to the ὁ Ἀδριατικός of the later Greek writers.

Adrianium, Vid. Hadruimetum.

Adriatum, a city of Gaul, in the territory of the Tungr, who appear to have been the same as the Aduatuci or Aquatati of Casar (B. G. 2, 29), unless the former appellation is to be regarded as a general one for the united German tribes, of whom the Aduatuci formed a part. (Compare Tacitus, de mor. Germ. c. 2.) This city is called Arvociamur by Ptolomæus, and Aquatati Tomorro in the Itinera Timon and Tab Peutinger. At a later period, the name of Tomorri is known to the themselves. Mandart makes it the same with the modern Tomerges, and D'Anville with Polais on the Mechaigne. The former of these geographers, however, thinks that it must have been distinct from the Aduatuka Castellum mentioned by Ca-
sir (B. G. 6, 32), which he places nearer the Rhine. (Mannert, 2, 200.)

Adyatii or Adyntici, a German nation, who originally formed a part of the great invading army of the Teutones and Cimbri. They were left behind in Gaul, to guard a part of the baggage, and finally settled there. Their territory extended from the Scaldis, or Scheldt, as far as Mosse Pons, or Meutrichtz. (Mannert, 2, 199.)

Aulues, called by Pliny (6, 29) Oppidum Adumnum, the principal commercial city along the coast of Ethiopia. It was founded by fugitive slaves from Egypt, but fell subsequently under the power of the neighbouring kingdom of Axumene. Ptolemy writes the name Αὐλύειβις, Strabo Αὐλεύειβις, and Stephanus Byzantinus Αὑλυειβης. Aulues has become remarkable on account of the two Greek inscriptions found in it. Cosmas Indicopleustes, as he is commonly called, was the first who gave an account of them (L. p. 140, apud Montfaucon). One is on a kind of throne, or rather armchair, of white marble, the other on a tablet of touchstone (ἀπάντανη στίλβον), erected against the throne. Cosmas gives copies of both, and his MS. has also a drawing of the throne or chair itself. The inscription on the tablet relates to Ptolemy Evences, and has been supposed to prove, that the inscription on the tablet alone related to Ptolemy, and that the one on the throne or chair was of much more recent origin, probably as late as the second or third century, and made by some native prince in imitation of the former. The principal arguments of which they arrive at this conclusion is, that the inscription on the throne speaks of conquests in Ethiopia which none of the Ptolemies ever made. (Museum der Alterthums-Wissenschaft, 2, Teil 5, 105, seqq.)

Athyrmachides, a maritime people of Africa, near Egypt. Ptolemy (lib. 4, c. 5) calls them Adyrmachides, but Herodotus (4, 168), Pliny (5, 6), and Silius Italicus (3, 279), make the name to be Adyrmachides (Ἀθυρμαχίδαι). Hence, as Larcher observes (Histoire d'Herodote, vol. 8, p. 10, Table Geogr.), the text of Ptolemy ought to be corrected by these authorities. The Adyrmachides were driven into the interior of the country when the Greeks began to settle along the coast.

AEx, the city of king Aethetes, said to have been situate on the river Phasis in Colchis. The most probable opinion is, that it existed only in the imaginations of the poets. (Mannert, 4, 397.)

AExees, a tyrant of Samos, deprived of his tyranny by Aristagoras, B.C. 500. He fled to the Persians, and induced the Samians to abandon the other Ionians in the sea-fight with the Persians. Thence he was restored by the Persians in the year B.C. 494. (Herodotus, 4, 138.)

AExees, I. a patronymic of the descendants of AExus, such as Achilles, Pelesus, Pyrhus, &c. (Virg. Æn. 1, 99, &c.) The line of the AExidae is given as follows: AExus became the father of Telamon and Pelesus by his wife Endis. (Teuctes, ed Lycophr. v. 175, calls her Deis, Δεια.) From the Nereid Eunomus he was born to Phocus (Hesiod. Theog. 1009, seqq.), whom he preferred to his other sons, and who became more conspicuous in gymnastic and naval exercises than either Telamon or Pelesus. (Müller, Ægyst., p. 23.) Phocus was, in consequence, slain by his brothers, who thereupon fled from the vengeance of their father. (Dorothearus, apud Plut. Parall. 25, 277, W.—Heyne, ed Apollod. 12, 6, 6.) Telamon took refuge at the court of Cychreus of Salamin, Pyrhus retired to Phthia in Thessaly. (Apoll. I. c.—Thyreaus, apud Texts. in Lycophr. v. 176.) From Pelesus came Achilles, from Telamon Ajax. Achilles was the father of Pyrhus, from whom came the line of the AExidae. From Teucer, the brother of Ajax, were descended the princes of Cyprus; while from Ajax himself came some of the most illustrious Athenian families. (Müller, Ægyst., p. 23.)—II. The son of Arambas, king of Epirus, succeeded to the throne on the death of his cousin Alexander, who was slain in Italy. (Livy, 28, 24.) AExides married Phthia, the daughter of Menon of Pharsalus, by whom he had the celebrated Pyrhus, and two daughters, Daidalum and Troia. In B.C. 317, he assisted Polyperchon in restoring Olympias and the young Alexander, who was then only five years old, to Macedonia. In the following year he marched to the assistance of Olympias, who was hard pressed by Cassander. But the Epirotes disliked the service, rose against AExides, and drove him from his kingdom. Pyrhus, who was then only two years old, was with difficulty saved from destruction by some faithful servants. But, becoming king of the AExidae, he called AExides in B.C. 313. Cassander immediately sent an army against him under Philip, who conquered him the same year in two battles, in the last of which he was killed. (Pausan. 1, 11.)

AExus, a name given to Circe, because born at AEx. (Virg. Æn. 3, 386.)

AExus, a small settlement on the coast of Troas, near the promontory of Rhyton. It was founded by the Rhodians, and was remarkable for containing the tomb of Ajax, and a temple dedicated to his memory. The old statue of the hero was carried away by Antony to Egypt, but was restored by Augustus. (Strabo, 598.) In Pliny's time this place had ceased to exist, as may be inferred from his expression, "Fuit et Eunomum" (5, 30). Mannert asserts, that Lechevallerier is wrong, in placing the mound of Ajax on the summit of this mountain. (Virg. Æn. 2, 88.)

AExites, I. one of the Tragic Pleiades. (Vid. Alexandrina Schola.) He lived in the time of the second Ptolemy. —II. The tyrant of Lampascus, to whom Hippias gave his daughter Archidice.

AExis, a river of Epirus, thought to be the modern Voousa, falling into the Ionian Sea. Isaac Vossius, in his commentary on Pomponius Mela (2, 3, extr.), charges Ovid with an error in geography, in making this river fall into the Peneus (Met. 1, 577). But Vossius was wrong himself in making the verb conveniunt, as used by Ovid, in the passage in question, equivalent to ingrediuntur. Ovid only means that the deities of the river mentioned by him met together in the cave of the Peneus.

AExius, a town of Euboa in the district Histriotos, famed for its hot baths, which even at the present day are the most celebrated in Greece. The modern name of the place is Lipso. But, according to Sibthorpe (Walpole's Coll., vol. 2, p. 71), Lipsoo. In Plutarch (Sympos. 4, 4), this place is called Gallepus (Γαλληψα), which many regard as an error of the copyists. If the modern name as given by Sibthorpe be correct, it appears more likely that Lipso is a corruption of Gallepus, and that the latter was only another name for the place, and no error.

AExus, I. Vid. Supplement.

AExus, II. a town in Aetolia, called a Platonic, or perhaps, more correctly, an Eclectic philosopher, who lived in the 4th century, and was the friend and most distinguished scholar of Iamblichus. After the death of his master, the school of Syria was dispersed, and AExus, fearing the real or fancied hostility of the
Christian emperor Constantine to philosophy, took refuge in divination. An oracle in hexameter verse represented a pastoral life as his only retreat; but his disciples, perhaps calming his fears by a metaphorical interpretation, compelled him to resume his instructions. He settled at Pergamus, where he numbered among his pupils the Emperor Julian. After the accession of the latter to the imperial purple, he invited Eudesius to continue his instructions, but the latter, being unequal to the task through age, sent in his stead Chrysantes and Eusebius, his disciples. (Eunap. Vit. Edes.)

Eudesius. Vid. Edesa.

A mountain of Gaul.

Eööi, a powerful nation of Gaul. Their confederation embraced all the tract of country comprehended between the Allier, the middle Loire, and the Saône, and extending a little beyond this river towards the south. The proper capital was Bibracte, and the second city in importance Noviodunum. The political influence of the Eööi extended over the Mandubii or Mandubii, whose chief city Alesia traced its origin to the most ancient periods of Gaul, and passed for a work of the Tyrian Hercules (Diod. Sic. 4, 19.) This same influence reached also the Ambarni, the Insubres, and the Segusiani. The Bituriges themselves, who had been previously one of the most flourishing nations of Gaul, were held by the Eööi in a condition approaching that of subjects. (Thierry, Histoire des Gaulois, 2, 31.) When Caesar came into Gaul, he found that the Eööi, after having long contended with the Arverni and Sequani for the supremacy in Gaul, had been overthrown by the two latter, who called in Arioistus and the Germans to their aid. The arrival of the Roman commander soon changed the aspect of affairs, and the Eööi were restored by the Roman arms to the chief power in the country. They became, of course, valuable allies for Caesar in his Gallic conquests. Eventually, however, they embraced the party of Vercingetorix against Rome; but, when the insurrection was quelled, they were still favourably treated on account of their former services. (Cass. B. G. 1, 31, seqq.)

Eëtia, or Eëties, king of Colchis, son of Sol, and Perseis, the daughter of Oceanus, was father of Medea, Absyrtus, and Chalciope, by Idya, one of the Oecinides. He killed Phryxus, son of Athamas, who had fled to his court on a golden ram. This murder he committed to obtain the fleece of the golden ram. The Argonauts, in Colchis, received the golden fleece by means of Medea, though it was guarded by bulls that breathed fire, and by a venomous dragon. (Vid. Jason, Medea, and Phryxus.) He was afterward, according to Apollodorus, deprived of his kingdom by his brother Perseus, but was restored to it by Medea, who had returned from Greece to Colchis. (Apollod. 1, 9, 28.—Heyne, ad Apollod. l. c. — Ov. Met. 7, 11, seqq., &c.)

Eëtis, and Eëtine, patronymic forms from Eëties, used by Roman poets to designate his daughter Medea. (Ovid, Met. 7, 9, 296.)

Égæ, I. A small town on the western coast of Eubea, southeast of Ædipus. It contained a temple sacred to Neptune, and was supposed to have given name to the Égæan. (Strab. 386.) II. A city of Macedonia, this was with Æneas, III. A town of Cilicia near the mouth of the Crathis. It appears to have been abandoned eventually by its inhabitants, who retired to Ægira. The cause of their removal is not known. (Strab. 386.)—IV. A town and seaport of Cilicia Campestris, at the mouth of the Pyramus, and on the upper shore of the Sinus Issicus. The modern village of Ayas occupies its site. (Strab. 376.)—Plin. 5, 27.—Lucan, 3, 225.—

Égæa, I. a city of Mauritia Cesarisania. (Ptol.)—II. A surname of Venus, from her worship in the islands of the Égæan Sea. (Statius, Thebais, 8, 4, 7, 8.)

Égéon, I. one of the fifty sons of Lycaon, whom Jupiter slew. (Apollod. 3, 8, 1.)—II. A giant, son of Uranus by Gaea. (Vid. Supplement.)

Égéum mare, that part of the Mediterranean lying between Greece and Asia Minor. It is now called the Archipelago, which modern appellation appears to be a corruption of Egeo Pelago, itself a modern Greek form for Αἰγαίον πέλαγος. Various etymologies are given for the ancient name. The most common is that which deduces it from Ægenes, father of Theseus; the most plausible is that which derives it from Ægæ in Eubea. (Strab. 386.) In all probability, however, neither is correct. The Ægean was accounted particularly stormy and dangerous to navigators, whence the proverb τὸν Αἰγαίον πλαξίου (scil. κόλπουν). (Erasm. Chil. Col. 632.)

Égæus, a surname of Neptune, given him as an appellation to denote the god of the waves. Compare Mulier, Geschichte, &c. (Die Dorier), vol. 2, p. 298, in note 15.

Égéas, or Ægeas, a mountain of Attica, from the summit of which Xæces beheld the battle of Salamis. (Her. 8, 90.) According to Thucydides (2, 19), it was situate to the left of the road from Athens to Eleusis. Mount Ægeas seems indeed to be a continuation of Corydallas, stretching northward into the interior of Attica. The modern name is Skaramanga. (Cramer's Greece, 2, 835.)

Égeres, or Ígæres, three islands off the western extremity of Sicily, between Drepana and Lilybaea. The name Êgæus (Âyovws) properly belonged to but one of the number. As this, however, was the principal and most fertile one (now Fanignama), the appellation became a common one for all three. The Romans corrupted the name into Êgdes. (Mela, 2, 7.—Florus, 2, 2.) Livy, however (21, 10, &c.), uses the form Êgates. The northernmost of these islands is called Eunides, the middle Eepte, and the southern Agates, i. e., the pasture-island, which the Latin writers translate by Bucina, i. e. Oxen-island, it being probably uninhabited, and used only for pasturing cattle. This island is very rocky, and bears in modern times the name of Leranzo. The third and westernmost island was called Hiera ( Âpovl), which Pliny converts into Hierozenos, i. e. Sacred island. At a later period, however, the Romans changed the name into Mariquina, as it lay in the path of the Roman fleet. In the Itin. Marit. (p. 492) makes mention of it, but erra in giving the distance from Lilybaea as 300 stadia, a computation which is much too large. The modern name is Maretimo. Off these islands the Roman fleet, under Lutatius Catulus, obtained a decisive victory over that of the Carthaginians, and which put an end to the first Punic war. (Livy 21, 10. —id. hist. 41, 32, 54.)

Égesta, an ancient city of Sicily, in the western extremity of the island, near Mount Eryx. The Greek writers name it, at one time Ægesta (Âlyovtra), at another Ægaster (Âyovs). The cause of this slight variation would seem to have been, that the city was one not of Greek origin, and that the name was written from hearing it pronounced. In a later age, when the inhabitants attached themselves to the Roman power, they took their city Segesta, and themselves Segestae, according to Festus (s. v. Segesta), who states, that the alteration was made to obviate an improper ambiguity in the term. (Preposita est ei S. littera ne obsceno nomine appellaretur.) It is more probable, however, that the Romans caused it to be done on account of the ill-omened analogy in sound between Ægesta or Ægaster, and the Latin term egestas, "want." Thucydides (6, 2) states, that after the destruction of Troy, a body of the fugitives found their way to this quarter; and, uniting with the Sicani, whom they
found settled here, formed with them one people, under the name of Elymi. In the course of time their numbers were increased by the occurrence of some wandering Achaei. This seems to have been the generally-received idea among the Greeks, respecting the origin of the Elymi and Egestei. Its improbability, however, is apparent even at first view. When the Romans became masters of these parts, after the first Punic war, they readily adopted the current tradition respecting the people of Egesta, as well as the idea of an affinity, through the line of Anaximenes, between themselves and the Elymi, and the legend is unanswerable also with the subject of the Eneid (5, 36, seqq.—Vid. Egestes). From the circumstance of the Romans having recognised the affinity of the Egesteans to themselves, we find them styled, in the Duilian inscription, "the kinsmen of the Roman people." COC- NATI P. R. (Ciacconius, de Col. Rostri Duil. Lugd. Bat. 1597.) Cicero, too (in Verrem. 4, 38), adopts the current tradition of the day. Whatever our opinion may be relative to the various details of these legends, one thing at least very clearly appears, which is, that Egesta was not of Grecian origin. Thucydides (7, 53), in enumerating the allies of Syracuse, speaks of the people of Himera as forming the only Grecian settlement on the northern coast of Sicily; and in another part (7, 57), expressly classes the Egestaeans among Barbarians (Βαρβάρους Εγεσταίου). The origin of the name was therefore this family connected by a branch of the Pelasgic race, the Trojans themselves being of the same stock. (Vid. Eneas.)

Previous to the arrival of the Romans in Sicily, the Egesteans were engaged in a long contest with the inhabitants of Selinus. Finding themselves, however, the weaker party, they solicited and obtained the aid of Athens. The unfortunate issue of the Athenian expedition against Syracuse, compelled the Egestaeans to seek new allies in the Carthaginians. This they did, to their aid, and Selinus fell; but Egesta also shared its fate, and the city remained under this new control, until, for the purpose of regaining its freedom, it espoused the cause of Agathocles. The change, however, was for the worse; and the tyrant, offended at their unwillingness to contribute supplies,murdered part of the inhabitants, drove the rest into exile, and changed the name of the city to Dicasopolis, settling in it its subjects of defeated Sicily, and them over to him. (Polyb. 20, 71.) The death of Agathocles very probably restored the old name, and brought back the surviving part of the former inhabitants, since we find the appellation Egesta reappearing in the first Punic war (Polyb. 1, 24), and since the Egesteans, during that same conflict, after slaughtering a Carthaginian garrison which had been placed within their walls, were able to declare themselves the kinsmen of the Roman people. (Zonar. 5, 4.) This was the pretended affinity between the two communities that preserved Egesta from oblivion after it had fallen beneath the Roman sway, and we find Pliny (3, 8) naming the inhabitants among the number of those who enjoyed the jus Latinitatis. The ruins of the place are found, at the present day, near the modern Alcamo. (Mannert, 9, 2, 393, seqq.—Hoare's Classical Tour, 2.)

Ægestæ, Egestus, or, as Virgil writes it, Ecestes, a son of the river-god Cirrhus, by a Trojan mother, according to one account, while another makes both his parents to have been of Trojan origin. Laomedon, it seems, had given the daughters of a distinguished person among his subjects to certain Sicilian mariners, to carry away and expose to wild beasts. They were brought to Sicily, where the god of the Cirrhus united himself to one of them, and became father of Egestes. This is the first account just alluded to. The other one is as follows: A young Trojan, of noble birth, being enamoured of one of the three females already mentioned, accompanied them to Sicily, and there became united to the object of his affection. The son born of this union was Egestes. (Dil. Hal. 1, 52.) Both accounts, of course, are purely fabulous. In accordance, however, with the popular legend respecting him, Virgil makes Ægestes, whom he calls, as already stated, Accestes, to have given Eneas a hospitable reception, when the latter, as the poet fables, visited Sicily in the course of his wanderings. (Vid. Ægesta.)

Egesta, a king of Athens, son of Pandion. His legitimacy, however, was disputed; and when, after the death of Pandion, he entered Attica at the head of an army, and recovered his patrimony, he was still the object of jealousy to his three brothers, although he shared his newly-acquired power with them. As he was long childless, they began to cast a wishful eye towards his inheritance. But a mysterious oracle brought him to Trozenae, where fate had decreed that the future hero of Athens should be born. Ætha, the daughter of the sage King Pittheus, son of Pelops, was his mother, but the Trojan legend called Neptune, not Ægeus, his father. Ægeus, however, returned to Athens, with the hope that, in the course of years, he should be followed by a legitimate heir. At parting he showed Ætha a huge mass of rock, under which he had hidden a sword and a pair of sandals: when her child, if a boy, should be able to lift the stone, that offspring might be his heir. The name was therefore be concealed, and to claim Ægeus as his father. From this deposit, Æthera gave her son the name of Theseus (Οὐραξεὶς, from θεῖος, θησεός, to deposit or place). When Theseus had grown up and been acknowledged by his father (vid. Theseus), he freed the latter from the cruel tribute imposed by Minos (vid. Minotaurus); but, on his return from Crete, forgot to hoist the white sails, the preconceived signal of success, and Ægeus, thinking his son had perished, cast up a rock instead (Hyg.); (Apollod. 3, 15, 5, seqq.—Plut. Vit. Theo., &c.) The whole native respecting Ægeus is a figurative legend. He is the same as Neptune; his name Αἴαοςις, indicating "the god of the waves," from αἴας, the waves, of the sea, and hence the Trojan legend makes Neptune at once to have been the father of Theseus. Theseus himself, moreover, appears to be nothing more than a mythical personage. He is merely the type of the establishment of the worship of Neptune (Οὐραξείς, from θεῖος, θησεός, to place or establish). Even his mother's name, Æthera, would seem to allude figuratively to the pure, clear atmosphere of religious worship connected with the rites of Neptune, when firmly established. (Ἀθέρα, i.e., ἀθηρά, pure, clear air.) So, also, the contest between Theseus and the Pallantides (vid. Pallantides), would seem to be nothing more than a religious contest between the rival systems of Neptune and Minerva. The worship of Neptune prevailed originally in the Ionian cities (Müller, Dorianns, 1, 266), and the legend of Theseus is an Ionian one; whereas the worship of Minerva, at Athens, dates back to the time of Cercopes.—II. An eponymic hero at Sparta, son of Eolius. (Vid. Supplement.)
Egeria was a town in Laconia, where Ceres had a temple. Aristomenes, the Messenian leader, endeavoured on one occasion to seize a party of Laconian females who were celebrating here the rites of the goddess. The attempt failed, through the courageous resistance of the women, and Aristomenes himself was taken prisoner. He was released, however, the same night, by Archidamus, the priestess of Ceres, who had before this cherished an affection for him. She pretended that he had burned off his bonds, by moving himself up towards the fire, and remaining near enough to have them consumed. (Paus. 4, 17.)

Egimus, a king of the Dorians, reigning at the time in Tessaly, near the range of Pindus. (Heyne, ad Apollod. 2, 7, 7.) He aided Hercules, according to the Doric legend, in his contest with the Lapithus, and offered him, he related, the cup from which they were driven. (Apollod. l. c.) Egimus is a conspicuous name among the founders of the Doric line, and mention is made by the ancient writers of an epic poem, entitled Aiyiyour, which is ascribed to some by Hesiod, by others to Cercops the Miletian. (Heyne, l. c.) The posterity of Egimus formed part of the expedition against the Peloponnesian, and the Doric institutions of Egimus are spoken of by Pindar (Pyth. 1, 7) as forming the rule or model of government, for the Doric race. (Compare Müller, Dorians, vol. 2, p. 12.)

Egimurus, a small island in the Gulf of Carthage. There were two rocks near this island, called Are Eginurisi, which were so named, because the Romans and Carthaginians concluded a treaty on them. The modern Zocacmaore is the Egimurus of antiquity.

Eginus. I. An augur of the temple of Jupiter Sospeus, carried away by Jupiter, under the form of an eagle, from Phlius to the island of Ægina. (Compare Spanheim, ad Callim. Hymn. in Del. v. 77. — Heyne, ad Apollod. 3, 12, 6. — Sturz, ad Hellanic. p. 50. — Id. ad Pherecyd., p. 178.) She gave her name to the island. Some authorities make Jupiter have to assume, on this occasion, the appearance of a flame of fire; but this evidently is corrupted from another part of the same fable, which states that Asopus was struck with thunder by the god for presuming to pursue him. (Apollod. 3, 12, 6.)

The Asopus here alluded to, is the Sicynian stream which flowed by the walls of Phlius. It must not be confounded with the Boeotian river of the same name. (Compare Pindar, Nem. 9, 9. — Aristarch. ad N. 3, 1. — Pausan. 2, 5, 2.) II. An island in the Sinus Saronicus, near the coast of Argolis. The earliest accounts given by the Greeks make it to have been originally uninhabited, and to have been called, while in this state, by the name of Ægone; for such is evidently the meaning of the fable, which states, that Jupiter, in order to gratify Æacus, who was alone there, changed a swarm of ants into men, and thus peopled the island. (Vid. Æacus, Myrmidonnes, and compare Pausan. 2, 29, and Apollod. 3, 12, 7.) It afterward took the name of Ægina, from the daughter of the Asopus. (Vid. Ægina, I.) But, whoever may have been the earliest settlers on the island, it is evident that its stony and unproductive soil must have driven them at an early period to engage in maritime affairs. Hence they are said to have been the first who coined money for the purposes of commerce, and used regular measures, a tradition which, though no doubt untrue, still points very clearly to their early commercial habits. (Strabo, 375. — Ælian, Var. Hist. 12, 10. — Vid. Phidias.) It is more than probable, that their commercial relations caused the people of Ægina to be increased by colonies from abroad, and Strabo expressly mentions Cretons among the foreign inhabitants who had settled there. After the return of the Hermida, this island received a Dorian colony from Epidauros (Pausan. 2, 29. — Tzetz. ad Lyé, 176), and from this period the Dorians gradually gained the ascendency in it, until at last it became entirely Doric, both in language and form of government. Ægina, for a time, was the maritime rival of Athens, and the competition eventually terminated in open hostilities, in which the Athenians were only able to obtain advantages by the aid of the Corinthians, and by means of intestine divisions among their opponents. (Herod. 8, 46, and 5, 83.) When Darius sent deputies into Greece to demand earth and water, the people of Ægina, partly from hatred towards the Athenians, and partly from a wish to protect their extensive commerce along the coasts of the Persian monarchy, gave these tokens of submission. (Herod. 6, 49.) For this conduct they were punished by the Spartans. In the war with Xerxes, therefore, they sided with their countrymen, and, according to Herodotus, were allowed to be able to contest the prize of valour with the Athenians themselves, and to bear it off, as well by the universal suffrages of the confederate Greeks (Herod. 8, 93), as by the declaration of the Pythian oracle. (Id. ibid. 122. — compare Plist. Vitr. Theistim.) After the termination of the Persian war, however, the strength of Athens proved too great for them. Their fleet of seventy sail was annihilated in a sea-fight by Ptolemyii. (Periplus, 37.) The island was reduced to an island, from the island, while the remainder were reduced to the condition of tributaries. The fugitives settled at Thryeia in Cynuria, under the protection of Sparta (Thucyd. 1, 105, and 108. — Id. 2, 27. — Id. 4, 57), and it was not until after the battle of Ægos Potamos, and the fall of Athens, that they were able to regain possession of their native island. (Xen. Hist. Gr. 2, 2, 5. — Strabo, 8, p. 376.) They never attained, however, the prosperity of their former prosperity.

Ægina made it subsequently a prize for each succeeding conqueror, until at last it totally disappeared from history. In modern times the island nearly retains its ancient name, being called Ægina, or with a slight corruption Engia, and is represented by travellers as being beautiful, fertile, and well cultivated. As far back as the time of Pausanias, the ancient city would appear to have been in ruins. That writer makes mention of some temples that were standing, and of the large theatre built after the model of that at Epidauros. The most remarkable remnant of antiquity which this island can boast of at the present day, is the temple of Jupiter Pannhenius, situated on a mount of the same name, about four hours' distance from the port, and which is supposed to be one of the most ancient temples in Greece, and one of the oldest specimens of the Doric style of architecture. Mr. Dodwell pronounces it the most picturesque and interesting ruin in Greece. For a full account of the Ægina marbles, consult Quarterly Journal of Sciences, No. 12, p. 327, seqq., and No. 14, p. 229, seqq.

Ægineta Pausius, I. or Paul of Ægina, a celebrated Greek physician, born in the island of Ægina. He appears to have lived, not in the fourth century, as René Moreau and Daniel Leclerc (Cherubs) have supposed, but in the third century of the conquest of the town of Omar, and, consequently, in the seventh century. We have very few particulars of his life handed down to us. We know merely that he pursued his medical studies at Alexandria some time before the taking of
of reference. But the cause of Oribasus, which regained the Greek basis of exact descriptions of the ancients, and by its movements, darkness, clouds, thunder and lightning were collected. (II. 17, 594.) Hence, in later poets, it has also the meaning of a storm or hurricane. (Aesch. Chóeph. 584.— Eurip. Iom, 996.) According to some, Minerva had an aegis of her own, distinct from Jupiter's, and she placed in the centre of it the head of Medusa; but the Gorgon's head appears also on Jupiter's shield. (Eustatik. ad II. 5, 741. p. 163 seqq.) As Minerva typifies the mind or wisdom of Jove, there is a peculiar propriety in her wielding the same aegis with her great parent.

The etymology of the term aiyis is disputed. The common derivation makes it come from al(φ), aliyis, "a goat," and to have been so named from its being covered with the skin of the goat that had suckled the infant Jove. This derivation, however, appears to be based entirely on an accidental resemblance between aiyis and al(φ). Hence, the latter word would have been made up by some Greek fabulists. The true etymology is from atlas, aliyis, "to move rapidly," "to rush," "to arouse," &c., and comparts better with the idea of brandishing to and fro a terror-inspiring shield.

The meaning of a coat of mail, or, rather, leathern tunic, with or without plates of metal, belongs to another aiyis, which is correctly deduced from al(φ). (Compare Herod. 4, 189.)

Egisthes, a son of Tyestes by his own daughter Pelopis (Apollod. 3, 11, 4; Soph. Electr.—J. A. Atkinson.) Having been left guardian of Agamemnon's kingdom while that monarch sailed for Troy, he availed himself of his absence to gain the affections of Clytemnestra his queen, and, when Agamemnon returned from the war, caused him to be slain. (Vid. Agamemnon and Clytemnestra.) On the death of the monarch he usurped the throne, and reigned seven years, when he was slain, together with Clytemnestra, by Tyestes, the son of Agamemnon. (Vid. Agamemnon and Clytemnestra.)

Egrium, a town of Ætolia, northeast of Naupactus, and about eighty stadia to the sea. It occupied an elevated situation in a mountainous tract of country. (Thucyd. 3, 97.) Ægium is perhaps Ægina (Aiyais), which Stephanus Byzantinus places in Ætolia. Ægium, a city of Achaea, on the coast of the Sinus Corinthiacus, and northwest of Ægina. After the submersion of Helice it became the chief place in the country, and here the deputies from the states of Achaea long held their assemblies, until a law was made by Philopomen, ordaining that each of the federal cities should become in its turn the place of rendezvous. (Liv. 38, 7, and 30.—Compare Polyb., 2, 54, and 4, 7.) According to Strabo (385, 387), these meetings were convened near the town, in a spot called Ænumarium, where was a grove consecrated to Jupiter. Pausanias (7, 24) affirms, that in his time the Achians still collected together at Ægium, as the Amphilochians did at Delphi and Thermopylae. According to Strabo, Ægium derived its name from the goat (al(φ)) which was said to have nourished Jupiter here. The modern town of Vestalia lies in the immediate neighbourhood.

Ætæ. Vid. Supplement.

Ætæis. A Samian wrestler, born dumb. Seeing some of his opponents pursued in a contest, which would deprive him of the prize, his indignation gave him on a sudden the powers of utterance which had
been denied him from his birth, and he ever after spoke with ease. (Val. Max. 1, 8, 4.—Aug. Gall. 5, 9.)

Ægōiōntes, a surname of Apollo as the god of day. (Ἀγόιοντας, from ἀγόιντος, "brightness." ) In the legend given by Apollodorus (1, 9, 26) respecting the island of Anaph, the epithet Ægōionth appears to point to Apollo as the darter of the lightning also (Apollo Putora. Compare Heyne, ad Apoll. 1, 9, 26, not, crit.)

Ægōbolus, an appellation given to Bacchus at Potnia in Beotia, because he had substituted a goat in the place of a youth, who was annually sacrificed there. (αἰγὸς, and βίλλα.) Compare Pausanias 9, 8, where Kuhn, however, proposes Ἀγόβολος for Ἀγόβωλον.—By Ægōbolus, on the other hand, is meant a species of mystic purification. The catechumens was placed in a pit, covered with perforated boards, upon which a goat was sacrificed, so as to bathe him in the blood that flowed from it. Sometimes, for a goat, a bull or ram was substituted, and the ceremony was then called, in the first case, Taurobolium, in the second Criobolium. (Knight, Inquiry, &c., § 165.)

Ægos potimos, i.e., the goat's river, called also Εγος Potamoj, and by the Latin writers Ægos Flum. potimos, Ἠγος Φλωμός. The Ancients Chersonesus and south of Callipolis, which apparently gave its name to a town or port situate at its mouth. (Herod. 9, 119. —Steph. Byz. s. v. Ἀγός Πόραμος.) Mamert notes, that the town just mentioned was the same with that called Croessa by Seyclax (p. 28), and Cassius by Pliny (4, 9). But consult Gall., ad Scyl. i. e. as regards the meaning of the phrase ἔκ τοῦ Ἀγόου πόρωμος, employed by Seyclax. (Geog. Gr. Min. 1, 439, ed. Gall.) At Ægos Potamos the Athenian fleet was totally defeated by the Spartan admiral Lysander, an event which completely destroyed the power of the former state, and finally led to the capture of Athens. (Xen. Hist. Gr. 2, 19.—Died. Sic. 13, 105.—Plut. Vit. Alcib.—Corn. Nep. Vit. Alcib.) The village of Galata probably stands on the site of the town or harbour. (Crane's Ancient Greece, vol. 1, p. 330.)

ÆgōioΣa, a Gallic nation, who served in the army of Attalus on one of his expeditions. He afterward assigned some of it to his son Seleucus. (Polyb. 5, 77, seq.) Cassaubon, in his Latin version of Polybius, has "Ægosages (sive is sunt Tectosages)." Schweighäuser, misled by this conjecture, introduces Tectosages into the Greek text of the historian in place of Αγόσαγας, the common reading. In his annotations, however, he acknowledges his preciptancy. Compare the Historical and Geographical index to his edition of Polybius (vol. 8, pt. 1, p. 198), in which he conjectures that Πτυγώαγας, which occurs in another passage of Polybius (5, 53), ought to be written Αγόσαγας also.

Ævōs, a town of Laconia, on the borders of Arcadia, and contiguous to Belmina. (Polyb. 2, 54.)

Æygyptus, or more correctly Æygysus, a city of Messia Inferior, in the region called Parra Scythia, and situate on the bank of the Danube, not far above its mouth. It is mentioned by Gal. (Hist. p. 1, 9, 12). Near this place, according to D'Anville, Darius Hystaspis constructed his bridge over the Danube, in his expedition against the Scythians. (As regards the true reading, consult Cellerius, Geog. 2, 463.)

Ægypti, the inhabitants of Egypt. Vid. Ægyptus.

Ægyptus Mare, that part of the Mediterranean Sea which is on the coast of Egypt.

Ægyptus, 1. a son of Belus, and brother of Danaus. He received from his parent the country Arabia to Arabia (or as some say, to their land correspondent to the "black-footed race" (Μαλαμπόδιον), and gave it his name. Ægyptus was the father of 50 sons, and Danaus, to whom Libya had been assigned, of 50 daughters. Jealousy breaking out between Danaus and the sons of Ægyptus, who aimed at depriving him of his dominions, the former fled with his 50 daughters, and settled eventually in Argolis. The sons of Ægyptus came, after some interval of time, to Argos, and entreated their uncle to bury in oblivion all enmity, and to give them their cousins in marriage. Danaus, retaining a perfect recollection of the injuries they had done to those who were about to be bestowed on them, consented to bestow his daughters upon them, and divided them accordingly by lot among the suitors. But on the wedding day he armed the hands of the brides with daggers, and enjoined upon them to slay in the night their unsuspecting bridegrooms. All but Hypermeistra obeyed the cruel order, while she, relenting, spared her husband Lyceus. Her father at first put her in close confinement, but afterward forgave her, and consented to her union with Lyceus. (Vid. Danaus, Danaides, &c.—Apoll. 2, 1, 5, seqq.—Hyg. fab. 168, 170.—On. Heroid. 14, &c.)—II. An extensive country of Africa, bounded on the west by part of Marmarica and by the deserts of Libya, on the north by the Mediterranean, on the east by the Sinus Arabicus and a line drawn from Arsinoe to Rhinocolura, and on the south by Æthiopia. Egypt, properly so called, may be described as consisting of the long narrow belt of land north of the Red Sea, which extends from Syene (or Asaouan) to Cairo, near the site of the ancient Memphis. To the Nile, Egypt owes its existence as a habitable country, since, without the rich and fertilizing mud deposited by the river in its annual inundations, it would be a sandy desert. At three different places, previous to its entering Egypt, this noble stream is threatened to be interrupted in its course by a barrier of mountains, and at each place the barrier is considerably increased. The second extract, in Turkish Nubia, is the most vital and unyielding barrier of the three, and is at Syene, and introduces the Nile into Upper Egypt. From Syene to Cairo the river flows along a valley about eight miles broad, between two mountain ridges, one of which extends to the Red Sea, and the other terminates in the deserts of ancient Libya. The river occupies the middle of the valley as far as the strait called Jebel-el-Silsil. This space, about forty miles long, has very little arable land on its banks. It contains several small lakes and swamps, and is only used to admit of irrigation. At the mouth of the Jebel-el-Silsil (Girard, Mem. sur l'Egypte, vol. 3, p. 13), the Nile runs along the right side of the valley, which in several places has the appearance of a steep line of rocks cut into peaks, while the ridge of the hills on the left side is always accessible by a slope of various acclivity. These last mountains begin near the town of Stict, the ancient Lycopolis, and go down towards Faïyum, the ancient Arsinotic Nome, diverging gradually to the west, so that between them and the cultivated valley there is a desert space, becoming gradually wider, and which in several places is bordered on the valley-side by a line of sandy downs lying nearly south and north. The mountains which confine the basin of the Nile in Upper Egypt are intersected by defiles, which on one side lead to the shores of the Red Sea, and on the other to the desert. Of these narrow passes might be habitable, since the winter rains there maintain for a time a degree of vegetation, and form springs which the Arabs use for themselves and their flocks. The strip of desert land which generally extends along each side of the valley, parallel to the course of the Nile (and which must not be confounded with the barren ocean of sand that lies on each side of Egypt), now contains two very distinct kinds of land; the one consists of sand and round pebbles; the other, composed of light drifting sand, covers an extent of ground formerly arable. If a section of the valley is made by a plane perpendicular to its direction, the surface will be observed to decline from the margins of the river to the bottom of the hills, a circumference
EGYPTUS.

also remarked on the banks of the Mississippi, the Po, part of the Borysthenes, and some other rivers. Near Beni-zeooff, the valley of the Nile, already much widened on the west, has on that side an opening, through which a view is obtained of the fertile plains of Syria. These plains form proper portions of table-land, separated from the surrounding mountains on the north and west by a wide valley, of which a certain proportion, always laid under water, forms what the inhabitants call Birket-el-Karoon. (Vid. Morís.) Near Cairo, the chains which limit the valley of the Nile diverge on both sides. The one, under the name of Jíbbel-al-Nairíw, runs northwest towards the Mediterraneanthe other, called Jíbbel-al-Áttaka, runs straight northward to the East of Syene. In front of these chains a vast plain extends, composed of sands, covered with the mud of the Nile. At the place called Bátu-et-Bahára, near the ancient Cercasaurus, the river divides into two branches; the one of which flowing to Rosetta, near the ancient Ostium Bolbitimum, and the other to Damíetta, the ancient Tamlathis, at the Ostium Pháreticum, contain between them the present Delta. But this triangular portion of inundated land was in former ages much larger, being bounded on the east by the Pelusian branch, which is now choked up with sand or converted into marshy pools; while on the west it was bounded by the Canopic branch, which is now partly confounded with the canal of Alexandria, and partly lost in Lake Elíko. But the correspondence of the level of the surface with that of the present Delta, and its depression as compared with that of the adjoining desert, together with its greater verdure and fertility, still mark the limits of the ancient Delta, although irregular encroachments are made by shifting banks of drifting sand, which are at present on the increase.

Egypt then, in general language, may be described as an immense valley or longitudinal basin, terminating in a Delta or triangular plain of alluvial formation; being altogether, from the heights of Syene to the shores of the Mediterranean, about 600 miles in length, and of various width. (Malte-Brun, Geogr. vol. 4, p. 21, eppp.)

1. Fertility of Egypt.

Almost the whole of the productive soil of Egypt consists of mud deposited by the Nile; and the Delta, as in all similar tracts of country, is entirely composed of alluvial earth and sand. To ascertain the depth of this bed, the French aráza, who accompanied the military expedition to Egypt, sank several wells at distant intervals; and from their observations have been obtained the following results. First, that the surface of the soil, as already mentioned, descends more or less rapidly towards the foot of the hills, which is the reverse of what occurs in most valleys: secondly, that the depth of the bed of mud is unequal, being in general about five feet near the river, and increasing gradually as it recedes from it: thirdly, that beneath the mud there is a bed of sand, similar to that already brought down by the river. The first-mentioned peculiarity is satisfactorily explained by the absence of rain, which, in other countries, washes down the soil from the hills, and, carrying it to the stream in the bottom of the valley, forms a basin, the sides of which have a concave surface; whereas, in Egypt, the soil is conveyed by the inundation from the river into the valley, and the deposits, therefore, will be greatest near the river, and less or even larger further from it. The smaller will be the quantity of mud deposited. The bed of quartzite sand upon which it rests is about thirty-six feet in depth, and is superposed on the calcareous rock which forms the basis of the lower country. The waters of the river filter through this bed of sand, and springs are found as soon as the borer has reached any considerable depth. Ancient Egypt was remarkable for its fertility. The staple commodity was its grain, the growth of which was so abundant as to afford at all times considerable supplies to the neighbouring countries, particularly Syria and Arabia; and at times so great as to cause famine and famines, which were frequently felt in those countries, Egypt alone continuing their numerous population from starving. Egypt, in fact, unlike every other country on the globe, brought forth its produce independent of the seasons and the skies; and while continued drought in the neighbouring countries brought one season of scarcity after another, the granaries of Egypt were full. Hence, too, Egypt became regarded as one of the granaries of Rome. (Var. Paterl. Epit.) Numerous attempts were made to give a striking example of the extraordinary fertility of the soil of Egypt. “I picked up at random,” says he, “a few stalks out of the thick cornfields. We counted the number of stalks which sprouted from single grains of seed; carefully pulling to pieces each root, in order to see that it was but one plant. The first had seven stalks; the next three; the next nine; then eighteen; then fourteen. Each stalk would produce at least a dozen roots which would carry the waters of the Nile to some of those parts which the inundation could not reach, while machinery was employed to convey the means of irrigation to others. Many of these canals still exist, many have long since disappeared, and not a few tracts of sandy country have displayed themselves in modern times where formerly all was smiling and fertile. Nearly the whole extent from the southern confines to the neighbouring of Thèbes is one barren and sandy waste. Assigning to Upper Egypt an average breadth of ten miles, and allowing for the lateral valleys stretching out from the Delta, it is supposed that the portion of territory, at the present day, in Egypt, capable of cultivation, may amount to about 16,000 square miles, or, in round numbers, ten millions of acres. The total population is estimated at about two millions and a half, which would give about 156 to every square mile. Nearly one-half of this territory, it is supposed, is either periodically inundated, or capable of artificial irrigation. The remaining part requires a more laborious cultivation, and yields a more scanty produce. The inundated lands, though they have successively borne one crop, and frequently two, year after year, without intermission, for more than 3000 years, still retain their ancient fertility, without any perceptible impoverishment, and without any further tillage than the adventitious top-dressing of black, slivery mould by the over flowing waters in operations of the inundation; for when the inundation has receded, the crops are very scanty; wheat does not yield above five or six for one; but for maize and millet the soil is particularly adapted, and these, with rice, lentils, and pulse, constitute the principal food of nine tenths of the inhabitants, allowing the exportation of the greater part of the wheat produced. Taking, then, into consideration the quantity of land once arable, which is now covered with sand, the double harvest, and the supplemental yield of the inundation, the smaller quantity of food which is requisite to sustain life in southern latitudes, and the extent to which the more barren soil was formerly rendered available by the cultivation of the olive, the fig-tree, the vine, and the date-palm, we shall no longer be at a loss to account for the immense fertility and populousness of ancient Egypt, a country said to have contained in former days 7,500,000,000 souls—three millions of each of its ways of life. One of the crops of Egypt is the lotus. The plant usually so denominated is a species of water-lily (nymphaea lotus), called by the Arabs nuphar, which, on the disappearance of the inundation, covers all the canals and pools with its broad round leaves, amid which the flowers, in the form of cups of bright white or azure, expand on the surface, and have a most elegant appearance. Somnii, says that its roots form a tuber (tuberculosis), which is gathered when the waters of the 35
Egyptus.

Nile sublime, and boiled and eaten like potatoes, which it somewhat resembles in taste. Herodotus (2, 92) states, that the Egyptians not only ate the root, but made a sort of bread of the seed, which resembled that of the poppy. He adds, that there is a second species, the root of which is very grateful, either fresh or dried. The plant which was chiefly eaten by the ancient Egyptians, and which is so frequently carved on the ancient monuments, is supposed to be the *nymphaea nelmbo, or nelumbium speciosum,* the "sacred..." of India, now found only in that country. Its seeds, which are about the size of a bean, have a delicate flavour resembling almonds, and its roots also are edible. The lotus of Homer, however, the fruits of which so much delighted the companions of Ulysses, is a very different plant, namely, the *ziziphus lotus* (Rhamauns), or jujuhe, which bears a fruit the size of a sloe, with a large stone, and is one of the many plants which have been erroneously fixed on by learned commentators as the *dudaim* (mandrakes) of the sacred writings. The *pappus,* not less celebrated in ancient times than the lotus, and which is believed to have disappeared from the banks of the Nile, has been re-discovered in the *cyperus papyrus* of Linnaeus. The *colocasia* is still cultivated in Egypt for its large edible roots. It is the same plant as the *beloglobo* of the Coptic, sometimes present coppieces of acacia and mimosa, and there are groves of rose-laural, willow, cassia, and other shrubs. Faioom contains impenetrable hedges of *cactus,* or Indian fig. But, though so rich in plants, Egypt is destitute of timber, and all the firewood is imported from Caramania. (Malte-Brun, Geogr., vol. 4, p. 38, seqq.—Modern Traveller (Egypt), p. 18, seqq.)

2. Animal Kingdom.

The animal kingdom of Egypt will not detain us long. The want of meadows prevents the multiplication of cattle. They must be kept in stables during the inundation. The Mamelukes used to keep a beautiful race of saddle-horses. Asses, mules, and camels appear here in all their vigour. There are also numerous herds of buffaloes. In Lower Egypt there are sheep of the Barbary breed. The large beasts of prey found here are the hyena, jackal, which is the young of many noxious reptiles. The eggs of crocodiles form its favourite food; and in addition to this its favourite repast, it eagerly sucks the blood of every creature which it is able to overcome. Its body is about a foot and a half in length, and its tail is of nearly equal dimensions. Its general colour is a greyish brown; but, when closely inspected, each hair is found annulated with a paler and a darker hue. Zoology has lately been enriched in several respects by the discovery of forms from Egypt, among which are the *coluber haje,* an animal figured in all the hieroglyphical tables as the emblem of Providence; and the *coluber vipera,* the true viper of the ancients. The Nile seems to contain some singular fishes hitherto unknown to systematic naturalists. Of this the Polyptere bichir, described by Geoffroy-Saint-Hilaire (Annales du Museum, vol. 1, p. 57), is a very remarkable example. That able naturalist observes, in genera., that the birds of Egypt differ not much from those of Europe. He saw the Egyptian swan, represented in all the temples of Upper Egypt, both in sculptures and in coloured paintings, and entertains no doubt that this bird was the *cranes* (poupart) of Herodotus, to which the ancient Egyptians paid divine honours, and had even dedicated a town in Upper Egypt, called by the Greeks *Chenoboscinium.* It is not peculiar to Egypt, but is found all over Africa, and almost all over Europe. The *Ibis,* which was believed to be a destroyer of serpents, is, according to the observations of Cuvier, a sort of curlew, called at present *Abobohamus.* Grobert and Geoffroy-Saint-Hilaire have brought home mummies of this animal, which had been prepared and entombed with much superstition care. (Mémoire de l'Ibis, par M. Cuвиer.—Malte-Brun, Geogr., vol. 4, p. 45, seqq.)

3. Name of Egypt.

The name by which this country is known to Europeans comes from the Greeks, some of whose writers inform us that it received this appellation from *Egypt,* son of funis, by way of emblem of the Egyptian rivers of the same name. (Compare Eusebius, Chron., lib. 2, p. 284, ed. Mansi et Zohreb.) In the Hebrew Scriptures it is styled *Mesirnsm, and also Mtsor, and haret Cham:* of these names, however, the first is the one most commonly employed. The Armenians and other Orientals still know it by the name of *Mesir* or *Mtsir.* According to general opinion, Egypt was called *Mesirma* after the second son of Ham. Bouchart, however, opposes this. (Geogr., vol. 4, 24, seqq.) contends that the name of Mesirn, being a dual form, indicates the two divisions of Egypt into Upper and Lower. Calmet (Dict., art. Mesirn), supposes, that it denotes the people of the country rather than the father of the people. Josephus (Ant. Jud. 1, 6) calls Egypt *Mesntra*; the Septuagint translators, *Messtain:* Eusebius and Suidas, *Messtira.* The Coptic name of Old Cairo is still *Misra,* and the Syrians and Arabs call it *Mtsor* or *Mesnato.* To this appellation, however, Bouchart has clearly proved to mean a *fortress* and, according to him, Egypt was so called, either from its being a region fortified by nature, or from the word *tsor,* which signifies narrow, and which he thinks sufficiently descriptive of the valley of Upper Egypt. Sir W. Drummond (Origines, 2, 55) inclines to the first of these two etymologies, because Diodorus Siculus (1, 30) and Strabo (9,20) remark, that Egypt was a country extremely difficult of access; and Diocterus, speaking of the Upper Egypt, observes, that it seems not a little to excel other limited places in the kingdom, by a natural fortification (*b.trisypq. woskbi) and by the beauty of the country. The third appellation mentioned above, namely, *haret Cham,* "the land of Ham," seems to have been the poetical name for Egypt among the Hebrews, and accordingly it occurs only in the Psalms and the Hebrew Psalms, having been written out of its old as the time of St. Jerome, that the land of Ham was so named after the son of Noah. (Quast. in Genesis.—Drummond's Origines, 2, 45, seqq.) There may, however, be reason to think, that the patriarch was named after the country where it is supposed he finally settled. In Hebrew, *cham* signifies "calidus," and *chom,* "fuscs," "niger." In Egyptian we find several words which are nearly the same both in sound and sense. Thus *qnm,* *chm,* signifies "calidus," and *qom,* "cham," "niger." The Egyptians always called their country *Chemoeia* or *Chame,* probably from the burned and black appearance of the soil. (Compare Plut. de Is. et Os., p. 364.—Shawe's Travels, fol. ed., p. 432.—Calmet's Dict., art. Ham.) The name Aeria has a similar reference, and would seem to have been a translation of the native
word, the primitive ἄσπρο denoting obscurity, dustiness. Thus, the scholar on Apollonius Rhodius (1, 580) says, that Thessaly was called Ἱπτύα, according to one explanation, on account of the dark color of its soil, and adds that Egypt was denominated Ἱπτύα for a similar reason. Bryant (6, 149), who cites this passage of the scholar, represents it as a vulgar error; but his reasoning is, as usual, unsatisfactory. The etymology of the word Egypt has occupied the attention and baffled the ingenuity of many learned writers. The most common opinion is, that Ἴγγυς is composed of ἄλα (for γαίαν), land, and γυςτρο, or rather κύστρο, and that, consequently, Egypt signifies the land of Kopt, or the Koptans. Others derive it from ἄλα, and γυς, the black vulture, the colour of that bird (whence the Latin subятurritus, "blackish") being, according to them, characteristic of the soil or its inhabitants. Mele conceives the primitive form to have been Ἀτα Cuphr, the land of Cuphr; while Bruce says, that Y Egypt, the name given to Egypt in Ethiopia, means the country of canals. Eusebius, who is supposed to have followed Manetho, the Egyptian historian, states, that Ramses, or Ramesses, who reigned in Egypt (according to Usher) B.C. 1577, was also called Ἐγυττος, and that he gave it his name, as has already been mentioned. (Euseb. Chron. 2, p. 284, ed. Mai, et Zobr.)

4. Divisions of Egypt.

In the time of the Pharaohs, Egypt was divided into the Thebais, Middle, and Lower Egypt. The Thebais extended from Syene, or, more correctly speaking, Philae, as far as Abydos, and contained ten districts, jurisdictions, or, as the Greeks called them, nomes (Νόμοι. Herod. 2, 164). The Coptic word is Phthah. (Cham- polion, l'Egypte sous les Pharaons, 1, 65.) To these succeeded the sixteen nomes of Middle Egypt (Strabo, 787), reaching to Cercusor, where the Nile began to branch off; it hence became the colour of Egypt, or, the Delta, extending to the sea. The whole number of nomes then was thirty-six, and this arrangement is said by Diodorus Siculus (1, 50) to have been introduced by Sesostris (Sethosis-Ramesses) previous to his departure on his expedition into Asia, in order that, by means of the governors placed over each of these nomes, his kingdom might be the better governed during his absence, and justice more carefully administered. It is more than probable, however, that this division was much older than the time of Sesostris (Cham- polion, l'Egypte, &c., 1, 71), and the account given by Strabo, regarding the halls of the labyrinth, would seem to confirm this. The geographer informs us, that the halls of this structure coincided with the number of the nomes, and the building would seem to have occupied a central position with respect to these various districts, having eighteen nomes to the north, and as many to the south, thus answering a civil as well as a religious purpose. ('Ritter, Erdkunde, 2d ed., 1, 704.) Under the dynasty of the Ptolemies the number of the nomes became enlarged, partly by reason of the new and improved state of things in that quarter of Egypt where Alexandria was situated, partly by the addition of the Oases to Egypt, and partly also by the alterations which an active commerce had produced along the borders of the Arabian Gulf. A change also took place in the name of the three principal divisions of the land. Lower Egypt now no longer confined itself to the limits of the Delta, but had its extent enlarged by an addition of some of the neighbour- ing nomes. In like manner, Upper Egypt, or the Thebais, received a portion of what had formerly been included within the limits of Middle Egypt, so that even though seven nomes remained to this last-men- tioned section of country, which therefore received the name of Heptanomia. (Mannert, Geogr. 10, 1, 303.) Under the Roman dominion, Thebais alone was regarded as a separate division of the country; all the rest of the land obtained no further division than that provided by the Province of Philae. Pliny (5, 8), after mentioning eleven nomes as forming the extent of Thebais, speaks of the country around Pelusium as consisting of four others, and then, without any other division, enumerates thirty nomes in the rest of Egypt. At this time, then, the nomes had increased to 45. They became still farther increased, at a subsequent period, by various subdivisions of the older ones. Hence we find Ptolemy enumerating still more nomes than Ptolemy Philo (Strabo, 784), the first account of which was recurred by the latter, which probably existed no longer in his own days. At a still later period we hear little more of the nomes. A new division of the country took place under the Eastern empire. An imperial Prefect exercised sway over not only Egypt, but also Libya as far as Cyrene, while a Comes Militaris had charge of the forces. The power of the latter extended over all Egypt as far as Ethiopia, but a Dux, who was dependent on him, exercised particular control over the Thebais. This arrangement seems to have been introduced in the time of the Emperor Theodo- sius, as appears from the language of the Notitia. From this time, the whole of Middle Egypt, previously named Heptanomia, bore the name of Arcadia, in honor of Arcadius, eldest son of Theodosius. A new province also had arisen a considerable time before this, named Augustamnica, from its lying chiefly along the Nile, extending from the eastern boundary together with a portion of Arabia as far as the Arabian Gulf, and also the cities on the Mediterranean coast as far as the Syrian frontier. Its capital was Pelusium. The name of this province is mentioned by the ecclesiastical writers as early as the time of Constantine, and it occurs also in the history of Ammianus Marcellinus (22, 16). About the time of Justinian, in the seventh century, the position of the chief archbishops and bishops, all subjects to the patriarchate of Alexandria, gave rise to a new distribution of provinc- es. The territory of Alexandria, with the western portion of the Delta in the vicinity of the Ostium Ca- nopici, was called "The First Egypt," and the more eastern part, as far as the Ostium Phatnecum, was termed "The Second Egypt." The northeast- ern quarter of the Delta, on the Pelasian arm of the Mediterranean, named the Nile Plateau, or the eil- lian Gulf, received the appellation of "The First Au- gustamnica," and had Pelusium for its capital. The inner part of the western Delta, as far as the Ostium Phatnecum, was named "The Second Augustam- nica." Its capital was Leontopolis. Thus the Delta, with the country immediately adjacent, embraced four small provinces. Middle Egypt still retained a large part of its previous extent, under the name of Middle Egypt or Arcadia (Μέγα Αύγυπτος, 5 Αρκαδία). Memphis belonged to it as the northernmost state; but it was by this time greatly sunk in importance, and Oxyrhynchus had succeeded it as the metropolis. Amid all these changes, the Thebais was continually regarded as a separate district. It now received new ascensions from the north, and a double appellation arose. The northern and smaller portion, which had originally formed a part of Middle Egypt, was called "Thebais Magna," and the southern, which had formed the Ost- sis Magna, and its Metropolis was Antiochopolis. The southern regions as far as Philae and Thatis, including a small part of Ethiopia, formed "The Second The- bais." Its capital was Coptos. It seems unnecessary to pursue the subsequent changes that gradually en- sued, especially as they are of no peculiar importance either in point of history or geography. (Compare Hecatoës, Synkestemata; in Weselius's Rom. Hist. Amat, 1735; 4to.-Mannert, Geogr., 10, 1, 305, seqq.)

Diodorus Siculus (1, 31) states, on the authority of the ancient Egyptian records, that the land contained, in the time of the Pharaohs, more than 18,000 cities and villages. The same writer informs us, that, in the time of the first Ptolemy, the number was above 30,000. In this latter statement, however, there is an evident exaggeration. Theocritus (Idyll. 17, 82, seqq.) assigns to Ptolemy Philadelphus the sovereignty over 33,333 cities. In this also there is exaggeration, but not so of offensive a character as in the former case, since the sway of Philadelphus did, in fact, extend over other countries besides Egypt; such as Syria, Phoenicia, Cyprus, Pamphylia, Caria, &c. Pomponius Mela (1, 9), and Pliny (N. H. 3, 69), who frequently copy him, confine themselves with good reason to a more moderate number. According to them, the Egyptians occupied, in the time of Amasis, 20,000 cities. This number is borrowed from Herodotus (2, 77), and may be made to correspond with that first given from Diodorus Siculus, if we take into consideration that Amasis had extended his sway over Cyrenaica also, and that this may in part swell the number as given by Herodotus, Mela, and Pliny, leaving about 18,000 for Egypt itself. Diodorus Siculus (l. c.) gives the ancient population of the country as seven millions, an estimate which does not appear excessive, when compared with that of other lands. The number would seem to have been somewhat increased during the reign of the Ptolemies, and to have continued so under the Roman sway, since we find Josephus (Bell. Jud. 2, 16) estimating the population of Egypt, in the time of Vespasian, at 7,500,000, without mentioning that of Alexandria, which, according to Diodorus (17, 52), was 300,000, exclusive of slaves. When we read, however, in the same Diodorus (1, 31), that in his days the inhabitants of Egypt amounted to “not less than three millions” (οὐκ ἑλάττοντο εἰναὶ τριακοσίων σ. μ.ρ.αδῶν), we must regard this number as the interpolation of a scribe, and must consider Diodorus as merely wishing to convey this idea, that, in more ancient times, the population was said to have been seven millions, and that in his own days it was not inferior to this. (Τάν δὲ σύμπαντά λαοῦ τὸ καὶ παλαιόν ψαλι ἐγκρόνον ἔστη ἐπὶ ἑκάτακος μαρίδας, καὶ καθ’ ἕκασς δὲ οὐκ ἑλάττοντο εἰναὶ [τριακοσίων]. Compare Wesseling, ad loc.—Mannt. 10, 2, 309, seqq.)

A few remarks relative to the physical character of this singular people, may form no uninteresting prelude to their national history. There are two sources of information respecting the physical character of the ancient Egyptians. These are, first, the descriptions of their persons incidentally to be met with in the ancient writers; and, secondly, the numerous remains of paintings and sculptures, as well as the human bodies, preserved in the tombs. The number and variety of these unknown passages of Egytptian art is so great, that it is easy to reconcile the evidence derived from these different quarters. The principal data from which a judgment is to be formed are as follows: 1. Accounts given by the ancients. If we were to judge from the remarks in some passages of the ancient writers alone, we should perhaps be led to the opinion that the Egyptians were a woolly-haired and black people, like the negroes of Guinea, and as such were represented by Fidias (Pyth. 4, 377) as being black, with the epithet of κελαϊνώτας, on which passage the scholar observes, that the Choli- chians were black, and that their dusky hue was attributed to their descent from the Egyptians, who were of the same complexion. Herodotus, in another place (2, 57), alludes to the complexion of the Egyptians, as if it was very strongly marked, and, indeed, as if they were quite black. After relating the fable of the foundation of the Dodecanese islands by a black people, which had fled from Thebes in Egypt, and uttered its prophecies from the oaks at Dodona, he adds his conjecture respecting the true meaning of the tale. He supposes the oracle to have been instituted by a female captive from the Thebaid, who was enigmatically described as a bird, and subjoins, that, “by representing the bird as black, they marked that the woman was an Egyptian.” Some other writers have left us expressions equally enigmatic. ( idyll. 2, 198, 722, seqq.), mentions the crew of an Egyptian bark, as seen from an eminence on shore. The person who espies them concludes them to be Egyptians from their black complexion:

πρέσπωσι θ’ ἀνδρός νήματος μελαχρών γυναικεῖν εὖν εἰς πεπλαμάτων ἱδέαν.

There are other passages in ancient writers, in which the Egyptians are mentioned as a swarthy people, which might with equal propriety be applied to a perfect black, or to a brown or dusky Nuban. We have, in one of the dialogues of Lucian (Narigium sau Vota.—vol. 8, 157, ed. Bip.), a ludicrous description of a young Egyptian, who is represented as belonging to the crew of a trading vessel at the Piræus. It is said of him, that, “besides being black, he had projecting lips, and was very slender in the legs, and that his hair and the curls brushed up behind marked him to be of servile rank.” The words of the original are, οὗτος δὲ πρὸς τὸ μελαχρόνον εἶναι, καὶ πρόξενιον κα- τι, καὶ λεπτός ἤγαν τοῖς σκέλοις, . . . ἢ κόμη δὲ, καὶ Εἰτούσα τὸ πλάκωμα συνεπτυμένον, ὥπελε- θέρων φασιν αὐτὸν εἶναι. The expression, however, which is here applied to the hair, seems rather to agree with the description of the bushy curls worn by the Noubans, and with the negroes. Mr. Legh, in speaking of the Barbabras, near Syene, says, “The hair of the men is sometimes frizzled at the sides, and stiffened with grease, so as perfectly to resemble the extraordinary projection on the head of the Sphinx. But the make of the limbs corresponds with the negro.” (Legh’s Travels in Egypt, p. 98.)

In another physical peculiarity the Egyptian race is described as resembling the negro. Alian (Hist. Arab. 7, 1, 2), says, “The Egyptians do not boast that their women, immediately after they were delivered, could rise from their beds, and go about their domestic labour. Some of these passages are very strongly expressed, as if the Egyptians were negroes; and yet it must be confessed, that if they really were such, it is singular we do not find more frequent allu- sion to the fact. The Hebrews were a fair people, taller at least than the Arabs. Yet, in all the instances we have to do with, they had with Egypt, we never find in the sacred history the least intimation that the Egyptians were negroes; not even on the remarkable occasion of the marriage of Solomon with the daughter of Pha- raoh. Were a modern historian to record the nuptials of a European monarch with the daughter of a negro king, such a circumstance would surely find its place. And since Egypt was so closely connected, first with
EGYPTUS.

Grecian affairs when under the Ptolemies, and afterward with the rest of Europe when it had become a Roman province, is very singular, on the supposition that this nation was so remarkably different from the rest of mankind, that we have no allusion to it. We seldom find the Egyptians spoken of as a very peculiar race of men. These circumstances induce us to hesitate in explaining the expressions of the ancients in that very strong sense in which they at first strike us.

2. The second class of data, from which we may form a examination of this subject, are Paintings in Temples, and other remains. If we may judge of the complexion of the Egyptians from the numerous paintings found in the recesses of temples, and in the tombs of the kings in Upper Egypt, in which the colours are preserved in a very fresh state, we must conclude that the general complexion of this people was a chocolate, or a red copper colour. This may be seen in the coloured figures given by Belzoni, and in numerous plates in the splendid "Description de l'Egypte." This red colour is evidently intended to represent the complexion of the people, and is not put on in the want of a lighter paint or flesh colour: for when the limbs or bodies are represented as seen through a thin veil, the tint used resembles the complexion of Europeans. The same shade might have been generally adopted if a darker one had not been preferred, as more truly representing the general complexion of the Egyptian race. (Compare Belzoni's Remarks, p. 239.) Female figures are sometimes distinguished by a yellow or tawny colour, and hence it is probable that the shade of complexion was lighter in those who were protected from the sun. A very curious circumstance in the paintings found in Egyptian temples remains to be noticed. Besides the red figures, which are evidently meant to represent the Egyptians, there are other figures of a black colour, representing captives or slaves, perhaps from the negro countries; but there are also paintings of a very different kind, which occur chiefly in Upper Egypt, and particularly on the confines of Egypt and Ethiopia. In these the black and the red figures hold a singular relation to each other. Both have the Egyptian costume, and the habits of priests, while the black figures are represented as conferring on the red the instruments and emblems of the sacred office of representation," says Mr. Hamilton, "which is often repeated in all the Egyptian temples, but only here at Philae and at Elephantine with this distinction of colour, may very naturally be supposed to commemorate the transmission of religious fables and the social institutions from the tawny Ethiopians to the comparatively fair Egyptians." It consists of three priests, two of whom, with black faces and hands, are represented as pouring two earthen jugs or alternate sickles of Osiris and cruxes ansatae over the head of another whose face is red. There are other paintings which seem to be nearly of the same purport. In the temple of Philae, the sculptures frequently depict two persons who equally represent the characters and symbols of Osiris, and two persons equally answering to those of Isis; but in both cases one is invariably much older than the other, and appears to be of the superior divinity. Mr. Hamilton conjectures that such figures represent the communication of religious rites from Ethiopia to Egypt, and the inferiority of the Egyptian Osiris. In these delineations there is a very marked and positive distinction between the black figures and those of fairer complexion; the former are most frequently conferring the symbols of divinity and sovereignty on the other. Besides these paintings described by Mr. Hamilton, there are in the temples of a very singular representation, of which different examples may be seen in the beautiful plates of the "Description de l'Egypte." In these it is plain, that the idea meant to be conveyed can be nothing else than this, that the red Egyptians were connected by kindred, and were, in fact, the descendants of a black race, probably the Ethiopian. (Compare plate 92 of the work.)

In the same volume of the "Description de l'Egypte" is a plate representing a painting at Elithyia. Numerous figures of the people are seen. It is remarkable that their hair is black and curled. "Les cheveux noirs et frisés, sans être court et crépus comme ceux des Negres," is probably a correct account of the hair of the Egyptian race. - 3. The third class of data for the present investigation is obtained from the form of the scull. In reference to the form of the scull among the ancient Egyptians, and their osteological characters in general, there is no want of information. The innumerable mummies, in which the whole nation may be said to have remained entire to modern times, afford sufficient means of ascertaining the true form of the race and all its varieties. Blumenbach, who has collected much information on everything relating to the history of mummies, in his excellent "Beiträge zur Naturgeschichte," concludes with a remark that the Egyptian race, in his opinion, contains three varieties. These are, first, the Ethiopian form; secondly, the "Hindust-artige," or a figure resembling the Hindust and, thirdly, the "Berber-ähnliche," or, more properly, Berberin-ähnliche, a form similar to that of the modern Arabians. We have, however, that Blumenbach has been led to adopt this opinion, not so much from the mummies he has examined, as from the remains of ancient arts and from historical testimonies. As far as their osteological characters are concerned, it does not appear that the Egyptians differed very materially from Europeans. They certainly had not the character of the scull which belonged to the negroes in the western parts of Africa; and, if it is probable, that this character among them, it must have been rare and in no great degree. Sömmering has described the heads of four mummies seen by him; two of them differed in nothing from the European formation; the third had only one African character, viz., that of a larger space marked out for the temporal muscle; the characters of the fourth are not particularized. Mr. Lawrence, in whose work (Lectures on Physiology, p. 299, Am. ed.) the subject is briefly treated, adds that the Berberin singularity is a variety of statements respecting the form of the head in the mummies deposited in the museums and other collections in several countries. He observes, that in the mummies of females seen by Dénon, in those from the Theban catacombs engraved in the great French work, and in several sculls and casts in the possession of Dr. Leach, the osteological character is entirely European: lastly, he adduces the strong evidence of Cuvier, who says, that he has examined in Paris, and in the various collections of Europe, more than fifty heads of mummies, and that not one among them presented the characters of the negro or Hottentot. (Lawrence's Lectures, p. 301. — "Observations sur le cadavre de la Venus Hottentotite, par M. Cuvier, Mem. du Museum d'Hist. Nat., 3, 173, segu.) It could therefore be only in the features, as far as they depend on the soft parts, that the Egyptian character is considerably resemble to the negro. And the same thing might probably be affirmed of several other nations, who must be reckoned among the native Africans. Particularly it might be asserted of the Berberins or Nubians already mentioned, and of some tribes of Abyssinians. A similar remark might be made of the Copts. In neither of these races is it at all probable that the scull would exhibit any characteristic of the negro; and, if it is probable, then, that we are to look for the nearest representatives of the ancient Egyptians and Ethiopians, and particularly to the Copts, who are descended from the former, and to the copper-coloured races resembling the Berberins or Nubians. Dénon
makes mention of the resemblance which the Copts bear to the human figures painted or sculptured among the ruins of ancient Egypt. He adds the following remarks. "As to the character of the human figure, as the Egyptians borrowed nothing from other nations, they could only copy from their own, which is rather delicate than fine. The female forms, however, were often painted with the face of a man. Foreigners, in the day; round and voluptuous; a small nose, the eyes long, half shut, and turned up at the outer angle like those of all persons whose sight is habitually fatigued by the burning heat of the sun or the dazzling whiteness of snow; the cheeks round and rather thick, the lips full, the mouth large, but cheerful and smiling; displaying, in short, the African character, of which the negro is the most wretched picture, though perhaps the original type." The description of the African on the heads of the sarcophagi may be supposed to give an idea of an Egyptian countenance. In these there is a certain roundness and flatness of the features, and the whole countenance, which strongly resembles the description of the Copts, and in some degree that of the Berberins. The colour of these visages is the red coppery hue of the least mentioned people, and is never so brown but as dark as that of the figures painted in the temple of Abu Simbel and of the tombs. The most puzzling circumstance in this comparison refers to the hair. The Copts are said to have frizzled or somewhat crisp, though not woolly, hair. The old Egyptians, as well as the Ethiopians, are termed by the Greeks οὐδότρεξε. But the hair found in mummies is generally, if not always, in flowing ringlets, as long and as smooth as that of any European. Its colour, which is often brown, may depend on art, or on the substance used in embalming. But the texture is different from what we should expect it to be, either from the statements of ancient writers, or from the description of the races now existing in the same countries. — Conclusion. From what has been adduced, we may consider it as tolerably well proved, that the Egyptians and Ethiopians were nations of the same race, whose abode, from the earliest periods of history, were the regions bordering on the Nile. These nations were not negroes, such as the negroes of Guines, though they bore some resemblance to that description of men, at least when compared with the people of Europe. This resemblance, however, did not extend to the shape of the skull, in any great degree at least, or in the majority of instances. It perhaps only depended on a complexion and physiognomy similar to those of the Copts and Nubiens. These races partake, in a visages degree, of the African countenance. The hair in the Ethiopians and Egyptians must sometimes have been of a more crisp or bushy kind than that which is often found in mummies; for such is the case in respect to the Copts, and the description of the Egyptians by all ancient writers obliges us to adopt this conclusion. In complexion it seems probable that this race was a countenance of the Faulahs, in the west of Africa, nearly in the same latitude. The blacker Faulahs resemble in complexion the darkest people of the Nile; they are of a deep brown or mahogany colour. The fairest of the Faulahs are not darker than the Copts, or even than some Europeans. Other instances of as great a variety may be found among the African nations, within the limits of one race, as in the Bishhane Kafers, who are of a clear brown colour, while the Kafers of Natal on the coast are of a jet black. From some remarks of Diodorus and Ptolemy, it would appear that the birth of fair, and even red-haired individuals, occasionally happened in the Egyptian race. Both these writers say, that Typhon was πυρόσ, or red-haired; the former adds that a few of the native Egyptians were of that appearance: διάγος τινώς. (Diod. Sic. 1, 88.—Plut. de Is. et Os., p. 363.)
2.—Pt. 3, vol. 2, p. 239, ed. Bekker). They had, in the second place, epic traditions, a kind of poetic chronicles, embracing the succession of high priests, and the dynasties of the Pharaohs, or monarchs of the country. Such were the volumes of papyrus, which the priests unrolled to satisfy the questions of Herodotus, and, in the first century of the Christian era, grammarians supposed them to be such and gave the information which Philostratus, p. 28, says, to the emperor Commodus, that they were preserved by the Persians, who, in the first place, preserved the monuments of the state or city of Thebes, and the history of its kings. Hence the reason why Herodotus says so little on these points. (Creuzer, fragm. Hist. Græc. antiquissm.m., p. 16, seq.—Schöll, Hist. Lit. Gr. 2, 135, seqq.) About the same period, Hellanicus of Lesbos also gave a description of Egypt. (Hellamis fragm., ed. Sturz., p. 93, seqq.) Herodotus succeeded. Visiting the country about seventy years after its conquest by the Persians, he traversed its whole extent, and signified to his great work all that he had seen, all that he had heard from the priests, as well with regard to the monuments as the history of Egypt, and added to these his own opinions on what he had passed under his view or been related to him by others. (Herod., lib. 2 et 3.) The state or city of Memphis is the principal subject of his narrative. After him came Theopompus of Chios, Ephorus of Cyme (fragm. ed. Marx., p. 213, seqq.), Eudoxus of Cnidus, and Philistus of Syracuse. But their works have either totally perished, or at best only a few fragments remain. At a later period, and subsequent to the founding of Alexandria, Heceatus of Abdera travelled to Thebes. This took place under the first Ptolemy. (Creuzer, fragm., &c., p. 38, seqq.—Schöll, Hist. Lit. Gr. 3, 211, seqq.) In the reign of Ptolemy Philadelphus, two centuries and a half before the Christian era, Manetho, an Egyptian priest, of Heliopolis in Lower Egypt, wrote, by order of that prince, the history of his own country in the Greek language, translating it, as he states himself, out of the sacred records. His work is, most unfortunately, lost; but the fragments which have been preserved to us by the writings of Josephus, in the first century of the Christian era, as well as by the Christian chronographers, are, if entitled to confidence, of the highest historical value. We have reason to believe the work of Manetho presents us with a chronological list of the successive rulers of Egypt, from the first foundation of the monarchy to the time of Alexander of Macedon, who succeeded the Persians. This list is divided into thirty dynasties. It originally contained the length of reign as well as the name of every king; but, in consequence of successive transcriptions, variations have crept in, and some few omissions have crept in, as it has reached us through the medium of Manetho. The chronology of Manetho, adopted with confidence by some, and rejected with equal confidence by others (his name and his information not being even noticed by some of the modern systematic writers on Egyptian history), has received the most unquestionable and decisive testimony of his general fidelity by the interpretation of the hieroglyphic inscriptions on the existing monuments; so much so, that, by the accordance of the facts attested by these monuments with the record of the historian, we have reason to expect the entire restoration of the annals of the Egyptian monarchy antecedent to the period of Manetho. Manetho's list is already accomplished in part. (Quarterly Journal of Science, New Series, vol. 1, p. 180.) The next authority after Manetho is Eratosthenes. He was keeper of the Alexandrian library in the reign of Ptolemy Euergetes, the successor to Ptolemy Philadelphus. Among the few fragments of his works which have reached us, transmitted through the Greek historians, is a catalogue of thirty-eight or thirty-nine kings of Thebes, which, if it be not a list of the country first presented by the other authorities also as the first monarch of Egypt), and occupying by their successive reigns 1555 years. (Foreign Quarterly, No. 24, p. 358.) These names are stated to have been compiled from original records existing at Thebes, which city Eratosthenes visited expressly to consult them. The names of the first two kings of the first dynasty of Manetho are the same with those of the first two kings in the catalogue of Eratosthenes; but the remaining five present no farther accord, either in the names or in the duration of the reigns. Next to Herodotus, Manetho, and Eratosthenes, the most important authority, in relation to Egypt and its institutions, is Diodo- rus Siculus, who lived under Caesar and Augustus, and who, independent of his own observations and his researches on the spot, refers frequently, in this part of his work, to the old Greek historians, and particularly to Herodotus, who has described the ancient period of the history of Egypt. He has a separate discussion of the ancient kingdom of Thebes, and gives an account of the monuments of this famous city, with surprising fidelity. (Description de I'Egypte, 2, 59, seqq.—Compare Heyne, de fontibus Dion. Sic. in Comment. Soc. Götth. 5, 104, seqq.) Strabo, the celebrated geographer, visited Egypt in the suite of Jéanius Gallus, about the commencement of our era. He does not content himself, however, with merely recounting what fell under his own personal observation, but frequently refers to the earlier writers. Plutarch, in many of his biographies, and especially in his treatise on Isis and Osiris; Philostratus, in his life of Apollonius; Porphyry, Iamblichus, Horapollo, and many other writers, have preserved for us a large number of interesting particulars relative to the antiquities and the religion of Egypt.—We have already alluded to the quarter whence the germe of Egyptian civilization is supposed to have been derived. "The first impression which has been one of a sacrificial character, we find the beginnings of Egyptian history partaking, in consequence, of the same. Hence the tradition, emanating from the priests of Egypt, according to which the supreme deities first reigned over the country; then those of the second class; after these the inferior deities; then the demi-gods; and, last of all, men. The first deity that reigned was Keph or Khurph: this embraces the most ancient period, of an unknown duration. To Keph succeeded Phoébus, the eldest of the fire, and whose reign it is impossible to calculate. Next came the Sun, his offspring, who reigned thirty thousand years. After him, Cronos (Saturn) and the other gods occupied, by their respective rules, a period of three thousand nine hundred and eighty-four years. Then succeeded the Cabiri, or planetary gods of the second generation. After these came the demi-gods; to the number of eight, of whom Osiris was the first. The demi-gods and demi-gods appeared human kings and the first dynasty of Thebes, composed of thirty-seven kings, who succeeded one another for the space of fourteen hundred years, or, according to others, one thousand and fifty-five. (Compare Chron. Egypt., op. Euseb. Thes. Temp. 2, p. 7, and Manetho, F 41
GYPTUS.

ap. Synecdl.) Göthea thinks that these thirty-seven kings, who are given as so many mortals, may have been nothing else but the thirty-seven Decans, with Menes at their head; so that, by rejecting this dynasty as a continuation of the divine dynasties, those of a strictly human nature, and, with them, the historical times of Egypt, will have commenced, according to the Mosaic account, from the year 2712 before the Christian era. (Göthea, Mythengeschichte, vol. 2, p. 412.—Compare Creuzer, Symbolik, 1, 469, seqq., and Guigniaut's note, 1, 2, 841.) Be this, however, as it may, the common account makes Menes to have been the first human king of Egypt, and his name begins the dynasties of Thebes, of This, and of Memphis. Menes completed the work of the gods, by perfecting the arts of life, and dictating the laws of a nation. He lived 430 years. The conquest of Egypt was, to the Egyptians, like the conquests of the gods, or the descent of the gods, of their visitation, of the skies, of their triumphs, or their presence upon earth. This Menes, or Menas, or Mines (a name which Eratosthenes makes equivalent to Dionysos, i. e., Jovialis), can hardly be an historical personage. He resembles a sort of intermediate being between the gods and the human kings of the lands, a divine type of man, a symbol of intelligence descended from the skies, and creating human society upon earth: similar to the Menos of India, the Menos of Crete, &c. He is a conqueror, father, and benefactor of men, like Osiris-Bacchus; like him, he perishes under the blows of Typhon, for he was killed by a hippopotamus, the emblem of this evil genius; like him, moreover, he has the ox for his symbol, Mnevis the legislator being none other than the bull Mnevis of Heliopolis. (Compare Volney, Recherches sur l'Histoire Anc. 3, 282, seqq.—Prichard's Analysis of Egyptian Mythology, p. 381.—Creuzer's Symbolik, par Guigniaut, 1, 2, 780.) The successor of Menes was Thoth, or Athothes, to whom is ascribed the invention of writing, and many other useful arts. We have in the fragments of Manetho a full list of two dynasties seated at This, at the head of the first of which we find these two names. These two dynasties include fifteen kings, and may therefore have continued about 400 years; the duration assigned to their collective reigns, in Eusebius's version of Manetho, is 554 years, but this is probably too long, as it is said that far exceeds what would be the result of a similar series of generations of the usual length. From the time of Menes to that of Moeris, Herodutus leaves us entirely in the dark. He states merely (2, 100) that the priests enumerated between them 330 kings. Diodorus Siculus (1, 45) counts, in an interval of 1400 years between Menes and Busiris, eight kings, seven of whom we may form relative to these obscure and conflicting statements, whether we regard these early dynasties as collateral and contemporary reigns (Creuzer's Symbolik, par Guigniaut, 1, 2, 780), or as belonging merely to the fabulous periods of Egyptian history, the following particulars may be regarded as tolerably authentic. Egypt, during this interval, had undergone numerous revolutions. She had detached herself from Ethiopia; the government, wrested from the priests, passed gradually into the hands of the military order; Thebes, now become powerful in resources, and asserting her independence, had commenced under a line probably of native princes, her career of conquests and brilliant undertakings. On a sudden, in the time of a king called, by Manetho, Timaoos, but who does not appear among the names in his list of dynasties, a race of strangers entered from the east into Egypt. (Josephus, contra Ap. 1, 14.—Compare Eusebius, Prep. Ev. 10, 13.) Everything yielded to these fierce invaders, who, having taken Memphis, and fortified Avaris (or Abaris), afterwar Pelasium, organized a species of government, gave themselves kings, and, if we believe certain traditions, founded (On the Descent of the Gods) the two great dynasties of Pharaohs and of Hycsos, at the apex of the Delta. (Juba, cited by Pliny, 6, 34. Compare Volney, Recherches sur l'Histoire Anc. 3, 247, seqq.—Prichard's Analysis of Egyptian Mythology, p. 66, Append.—Creuzer, Commentarial Herodot., p. 188, seqq.) More than two centuries passed under the dominion of this race. They are commonly called the shepherd race, and their dynasty that of the Hycos, or Shepherd-kings. The sway of these invaders is said by Manetho to have been very long. They exercised the utmost atrocity towards the native inhabitants, putting the males to the sword, and reducing their wives and children to slavery. The conquest of Egypt by the Shepherds, as they are called, dates in the year 2082 B.C. Their dynasty continued to rule at Memphis 260 years, and their kings, six in number, were Salatis, Baon, Apauchas, Apoaphis, Janias, and Asseith. It was during the rule of the shepherd race that Josephus is supposed to have lived. Thus we have it at once explained how, of whom the Egyptians were so jealous, should be admitted into power; how the kingdom should be even glad of new settlers, occupying considerable tracts of his territory; and how the circumstance of their being shepherds, though odious to the conquered people, would render them to a sovereign whose family followed the same occupation. After the death of Joseph, the Scripture tells us that a king arose, who knew not Joseph. This strong expression could hardly be applied to any lineal successor of a monarch who had received such signal benefits from him. It would lead us rather to suppose, that a new dynasty, hostile to the preceding, had obtained possession of the throne. Now this is exactly the case. For a few years later, the Hycos, or Shepherd-kings, were expelled from Egypt by Amosis, called on monuments Amenophis, the founder of the eighteenth, or Amose, dynasty. He then refused to recognise the services of Joseph, and would consider all his family as necessarily his enemies; and thus, too, we understand his fears lest they should join the enemies of Egypt, if any war fell out with them. (Exod. 1, 10.) For the Hycos, after their expulsion, continued long to harass the Egyptians by attempts to recover their lost dominion. (Rosellini, p. 281.) Oppression was tyrannical and ruinous. They were employed to weaken first, and then extinguish, the Hebrew population. The children of Israel were employed in building up the cities of Egypt. It has been observed by Champollion, that many of the edifices erected by the eighteenth dynasty are upon the ruins of older buildings, which had been manifestly destroyed. (2de Lett., p. 7, 10, 17.) This circumstance, with the absence of older monuments in the whole of Egypt during this period, is a strong and confiding testimony of historians, that these conquerors destroyed the monuments of native princes; and thus was an opportunity given to the restorers of a native sovereignty to employ those whom they considered their enemies' allies in repairing their injuries. To this period belong the magnificent edifices of Karnac, Luxor, and Medinet-Abou. At the same time we have the express testimony of Diodorus Siculus, that it was the boast of the Egyptian kings that no Egyptian had put his hand to the work, but that foreigners had been compelled to do it (1, 58). With regard to the opinion entertained by many learned men, that the children of Israel were themselves the shepherd race, it may be sufficient to remark that the Hycos, as represented on monuments, have the features, colour, and other
distinctive, not of the Jewish, but of the Scythian tribes. It was under a king of the eighteenth dynasty that the Israelites went out from Egypt, in the year 1469 B.C., the fourteenth of the line. We have here, in this eighteenth dynasty, the commencement of what may be properly termed the second period of Egyptian history. The names of the monarchs are given as follows by the aid of Champollion's discoveries: 1. Thoutmosis I., of whom there is a colossal statue in the museum at Turin. 2. Thoutmosis II. (Amen-My), whose name appears on the most ancient parts of the palace of Karnac. 3. His daughter Amenem, who governed Egypt for the space of twenty-one years, and erected the greatest of the obelisks of Karnac. This vast monolith is erected in her name to the god Ammon, and the memory of her father. 4. Thoutmosis III., surnamed Mer, the Moeris of the Greeks. The remaining monuments of his reign are the pilaster and granite halls of Karnac, several temples in Nubia, the great Sphinx of the Pyramids, and the colossal obelisk now in front of the church of St. John Lateran at Rome. 5. His successor was Amenophis I., who was succeeded by, 6. Thoutmosis IV. This king finished the temples of the Wady Alfa and Arama, in Nubia, which Amenoph had begun. 7. Amenophis II., whose vocal statue, of colossal size, attracted the notice of the Greeks and Romans. (Vid. Memnon, and Memnonium.) The most ancient parts of the palace at Luxor, the temple of Cnouphis at Elephantine, the temple of Hapy at Syene, and at St. Catherine of Nubia, are monuments of the splendour and piety of this monarch. 8. Horus, who built the grand colonnade of the palace at Luxor. 9. Queen Amencheres, or Thou-Mot, commemorated in an inscription preserved in the museum at Turin. 10. Ramses I., who built the hypostyle hall at Karnac, and excavated a sepulchre for himself at Beban-el-Mouïouk. 11 and 12. Two brothers Moundewelt and Ouxire. They have left monuments of their existence, the temple of Moundewelt at Karnac and the temple of Ouxire near the southern gate of Karnac. The magnificent sarcophagus which formerly enclosed the body of this king, has been removed from the catacombs of Beban-el-Mouïouk, and is now in the Museum of the Louvre. He was succeeded by his son, 16. Ramses V., surnamed Amenophis, who is considered as the last of this dynasty, and who was the father of Sesostris. The acts of none of the kings of this dynasty are commemorated by the Greek historians, with the exception of Moeis. He is celebrated by them for a variety of useful labours, and appears to have done much to promote the prosperity of Egypt, particularly by forming a lake to receive the surplus waters of the Nile during the inundation, and to distribute them for agricultural purposes during its fall. (Vid. Moeris.) The reign of Ramses Amenophis is the era of the Exodus, in which the twelve tribes passes this event as connected with the destruction of a Pharaoh, and the chronological calculation adopted by Rosellini would make it coincide with the last year of this monarch's reign. Wilkinson and Greppo, however, maintain that we need not necessarily suppose the death of a king to coincide with the exit from Egypt, as the Scripture speaks, with the exception of one poetical passage, of the death of Pharaoh's host rather than of the monarch's own death. But in Rosellini's scheme, this departure from the received interpretation is not wanted. Wilkinson makes the Exodus to have taken place in the fourth year of the reign of Thothmes III. (Mat. Hierog., p. 4.—Manners and Customs, &c., vol. 1, p. 143.) Egypt was left in peace during the four years that elapsed between the exit of the Hebrews and the death of Ramses. When his power was at the height of its glory, it was eclipsed by the greater reputation of the chief of the next, or nineteenth dynasty, Ramses VI., the famed Sesostris (called also Sesosiris or Sethros and likewise Egyptian, or Ramses the Great.—Compare Champollion, Syst. Hierog., p. 224, seqq.). Sesostris regenerated, in some sense, his country and nation, by chasing from it the last remnant of thestranger-races which had dwelt within the borders of Egypt, by giving to the Egyptian territory certain fixed titles, by dividing it into homes, and by giving a powerful impulse to arts, commerce, and to the spirit of conquest. One may see in Herodotus and Diodorus what a strong remembrance his various exploits in Africa, Asia, and perhaps even Europe, had left behind them. His labours in Egypt are attested by numerous monuments, not only from the Mediterranean to Syene, but far beyond, in Ethiopia, which at this time probably formed a portion of Egypt. (Champollion, Syst. Hierog., p. 239, 391.) The result of his military expeditions was to enrich his country with the treasures of Ethiopia, Arabia Felix, and India, and to establish a communication with the countries of the East by means of fleets which he equipped on the Red Sea. That the history of his conquests has been exaggerated by the priests of Egypt, whose interests he favoured, cannot be denied. Equally apparent is it that his history cannot be referred to the records of any previous kings. These assimilations, however, of their heroes to their gods, were familiar to the priests of the land. (Vid. Sesostris.) This nineteenth dynasty, at the head of which stands Sesostris, consisted of six kings, all of whom bear, upon monuments, the name of Ramses, with various distinguishing epithets. The last of these is supposed to have been contemporary with the Trojan war, and to be the one called Polybus by Homer. The two last also are supposed to have been kings from Thbes. Their names may still be read upon the temples of Egypt; but the extracts from Manetho do not give their epithets. In the failure of his testimony, Champollion Figeac has had recourse to the list given by Synceillus. The chief of this dynasty is celebrated, under the name of Remphis, or Sempsintsus, for his great riches. Herodotus gives him, for his successor, Cheops, the builder of the largest of the Pyramids. The two last, however, are supposed to have been a brother and sister of the second Pyramid, next in order; and, after him, Mycinerus, for whom is claimed the erection of the third Pyramid. The researches of the two Champollions have not discovered any confirmation of this statement of the father of profane history. The next dynasty, the twenty-first of Manetho, derived its name from Tanis, a city of Lower Egypt. It was composed of seven kings, the first of whom was the Mened of the Greek historians, the Systeme of Manetho, whose name Champollion reads, upon the monument of his reign, Moundotheph. He was the builder of the fabric known in antiquity by the name of the labyrinth. The other kings of this family are also commemorated. The account which has reached us of the building of the labyrinth, throws great light upon the state of the government of Egypt during the reign of Mened and his successors. It was divided into as many separate departments as there were provinces in Egypt, and in them, at fixed periods, assembled deputations, from each of these districts, to decide upon the most important questions. Hence we may infer, that in the change of dynasty, the Egyptians had succeeded in the establishment of a limited monarchy, controlled like the constitutional governments of Europe, if not by the immediate representatives of the people, at least by the expression of the opinion of the notables. The ruins of Bubastis, in turn, present memorials of the reigns of the Bubastite kings. (Bulletin des Sciences Hist., 43
These succeeded the first dynasty of Tanites; and we find Egypt again immediately connected with Judea, and its history with that of the Scriptures. Sesostris, the head of this dynasty, was the conqueror of Rehoboam, the son of Solomon, and the plunderer of the treasures of David. This king, the Scnak of the second Book of Kings, built the great temple of Bubastis, which is described by Herodotus, and likewise the first court of the palace of Karnac at Thebes. His son, Psammiticus (Zeob), who also led an army into Syria, continued the important works commenced by his father. But their successor Tarkelothis, is only known to us by a simple funereal picture, consecrated to the memory of one of his sons. This painting has been broken, and one half is preserved in the Vatican, while the other forms a part of the royal collection at Turin. Various buildings are found among the ruins of Heliopolis, and still more among those of Thebes, at Sais, and at Philae. Bocchoris, the last king of Egypt, which, and immediately preceded his descent to the throne, is not surprising to have been oppressive, as is evident from the number of monuments that exist, not only in Ethiopia, but in Egypt, bearing dedications made in the name of the kings of this race, who ruled at the same time in both countries. The names inscribed on these monuments are Schabak, Senekathep, Taharak, and Amenaza, all of whom are mentioned, either by Greek or sacred history, as kings of Egypt and at Karnac, and at Ammeris. (Bulletin des Sciences Hist., 7, 472.) Upon these the names of three of them have been deciphered, Petubastes, Osoroth, and Psammon. Champollion considers them as having immediately preceded the great Ethiopian invasion, which gave to Egypt a race of kings from that country. Manetho, however, places Bocechoris between these two races, forming his twenty-fourth dynasty of one Saites. This can only be a misprint; it is not surprising to have it to be oppressive, as is evident from the number of monuments that exist, not only in Ethiopia, but in Egypt, bearing dedications made in the name of the kings of this race, who ruled at the same time in both countries. The names inscribed on these monuments are Schabak, Senekathep, Taharak, and Amenaza, all of whom are mentioned, either by Greek or sacred history, as kings of Egypt and at Karnac, and at Ammeris. (Bulletin des Sciences Hist., 7, 472.) More than three of these kings are mentioned in the list of Manetho as belonging to this dynasty, the last being included in that which follows. On the departure of the Ethiopians, the affairs of Egypt appear to have fallen into great disorder. This civil discord was at last composed by Psammiteus I. Memoriais of his reign are found in the obelisk now in Marseilles. This obelisk was set up by Psammiteus, and is the column of the first court of the palace of Karnac at Thebes. (Bulletin des Sciences Hist., vol. 7, p. 471.) The rule of Necho II. is commemorated by several stele and statues. It was this monarch that took Jerusalem, and carried King Jehoshah into captivity. On the isle of Philæ are found buildings bearing the legend of Psammiteus II., as well as of Apries (the Hophra of Scripture). An obelisk of his reign also exists at Rome. The greater part of the fragments of this temple, scattered among the ruins of Sais, bear the royal legend of the celebrated Amasis, and a monolith of rose granite, dedicated by him to the Egyptian Minerva, is in the museum of the Louvre. Psammiteus was the last of this dynasty of Saites. Few tokens of his short reign are extant, besides the inscription of a statue in the Vatican. He was defeated and dethroned by Cambyses: nor did he long survive his misfortune. With him fell the splendour of the kingdom of Egypt; and from this date (525 B.C.), the edifices and monuments assume a character of far less importance. Still, however, we find materials for history. Even the ferocious Cambyses is commemorated in an inscription on the statue of a priest of Sais, now in the Vatican. The name of Darius is sculptured on the columns of the great temple of the Oasis; and in Egypt we still read inscriptions dated in different periods of the reign of Darius. (Bulletin des Sciences Hist., 7, 471.) During the reigns of the last three kings, a constant struggle was kept up by the Egyptians for their independence. The Persian yoke was for a moment shaken off by Amyrteus and Nephemus. Two Sphinges in the Louvre bear the legend of Nephemus and his successor Achoris, who are also commemorated by the sculptures of the temple of Elytha. In the Institute of Bologna there is a statue of the Mendesian Nephemites; and the names of the two Nectanebo, who succeeded him in the conduct of this national war, are still extant on several buildings of the isle of Philæ, and at Karnac, Kourna, and Saft. Darius Ochus, in spite of the valiant resistance of these last kings, again reduced Egypt to the condition of a Persian province; but his name is nowhere to be found among the remains yet discovered in Egypt. Thus, then, the researches of Champollion have brought to our view an almost complete succession of the kings of Egypt, from the invasion of the Hycos to the final conquest by the Persians, whose empire fell to Alexander in 332 B.C. It tallies throughout, in a remarkable manner, with the remains of the historian Manetho; and, by the aid of his series of dynasties, the gaps still left by hieroglyphic discoveries may be legitimately filled up. Before the former era all is dark and obscure; in the next part we have little but a list of names; but, from the reign of Psammiteus I., ample materials exist in the histories of Herodotus and Diodorus; and from the reign of Darius Ochus, the annals of Egypt become incorporated with those of Greece. Any further reference to the history of Egypt will hereafter be superfluous in this place. (Vid. Ptolomeos.) With regard, however, to the discoveries of Champollion, the following interesting particulars may be stated. Philip Aridaus, the brother of Alexander, is commemorated at Karnac, and on the columns of the temple at Aschmounie. The name of the other Alexander, the son of the conqueror by Roxana, is engraved on the granite propylæa at Elephanta. Ptolomy Soter, and his son Ptolomy Philadeph, left the remembrance of their prosperous reigns in various important monuments. Ptolemy I. not only ruled over Egypt, but rendered his name celebrated by his military expeditions, both in Africa and Asia. His titles are, therefore, not only inscribed on the edifices constructed during his reign in Egypt, but are to be met with in Nubia, particularly on the temple of Dakhhe; and the basso relievo, on a triumphal gate constructed by him at Thebes, may be considered one of the most remarkable and interesting of the evidences of the magnificence of the eighteenth dynasty. The temple of Philæ was built by Ptolomy Philopator and Arsinoë his wife. In his reign, too, the ancient palaces of Karnac and Luxor, at Thebes, were repaired. Ptolomy Epiphanes, and his wife Cleopatra of Syria, dedicated one of the many temples of Philæ, as well as the temple of Edfu. Of the Roman emperors we find inscribed in hieroglyphics the names and titles of Augustus, Tiberius, Caligula, Claudius, Nero, Vespasian, Titus, Domitian, Nerva, Trajan, Adrian, Marcus Aurelius, Lucius Verus, and Commodus. This last name is to be read four times among the inscriptions of the temple of Esne; which, before this discovery, was considered to have been erected in an age far more remote than is reached by any of our histories. So far from this, it is, in truth, but with one exception, the most modern of all the edifices yet discovered in the Egyptian style of architecture. This, then, as far down as the year 180 of our present era, the worship of the ancient Egyptian deities was publicly exercised, and preserved all its external splendour; for the temples of Dendera, Esne, and others constructed under the Roman rule, are, for size and labour, if not for their style of art, well worthy of the ages of Egyptian independence. Previous to these discoveries, it had become a matter of almost universal belief that the arts, the writing, and even the ancient religion of Egypt, had ceased to be used from the time of the Persian conquest. (American Quarterly Rev., No. 7, p. 34, seqq. — Quarterly Journal of Science, &c., New Series, 1, 189, seqq.)
writing which they formed, became entirely lost, such
notices on the subject as existed in the early histori-
ans being either too imperfect, or appearing too vague,
to furnish a clue, although frequently and carefully
stated for the purpose. The repossessing of this
knowledge will form, in literary history, one of the most
remarkable distinctions, if not the principal one, of the
age in which we live. Queen Hatshepsut, in a period of
discovery by the French, during their possession of Egypt,
of the since well-known monument, called the Rosetta
Stone, which, on their defeat and expulsion by the
British troops, remained in the hands of the victors,
was conveyed to England, and deposited in the Brit-
ish Museum. On this monument the same inscription
is repeated in the Greek and in the Egyptian language,
being written in the latter both in hieroglyphics and in
the demotic or colloquial character. The words Ptole-
my and Cleopatra, written in hieroglyphics, and recog-
nised by means of the corresponding Greek of the
Rosetta inscription, and by a Greek inscription on the
base of an obelisk at Philae, gave the phonetic charac-
ters of the letters which form those words: by their
means the names were discovered, in hieroglyphic writ-
ing, on the monuments of all the Grecian kings and
Grecian queens of Egypt, and by the comparison of
these names with those already known to us, the value of all the pho-
netic characters was finally ascertained. The first step
in this great discovery was made by a distinguished
scholar of England, the late Dr. Young; the key found
by him has been greatly improved, and applied with
indisputable perseverance, ingenuity, and skill to the
monuments of Egypt, by the celebrated Champollion.

nannica, vol. 4, pt. 1, s. v. Egypt.—Wiseman’s Lect.
ures, p. 255, seqq.)

10. Animal Worship.

There was no single feature in the character and
customs of the ancient Egyptians which appeared to
be more highly characteristic of them than the votive
worship paid to animals. The pompous processions
and grotesque ceremonies of this celebrated people
excited the admiration of all spectators, and their
adoration was turned into ridicule on beholding the object
of their devotions. It was remarked by Clemens
(Padag. lib. 3) and Origen (Adv. Cels. 3, p. 121), that
those who visited Egypt approached with delight its
sacred groves, and splendid temples, adorned with
perch vestibules and lofty porticoes, the scenes of many
solitary and mysterious rites. "The walls," says Cle-
mens, "shine with gold and silver, and with amber, and
sparkle with the various gems of India and Ethiopia;
and the recesses are concealed by splendid curtains.
But if you enter the penetralia, and inquire for the
image of the god for whose sake the fanes was built,
one of the Pastophori, or some other attendant on the
temple, approaches with a solemn and mysterious as-
pet, and, putting aside the vestures you to peep in
and obtain a glimpse of the divinity. There you be-
hold a snake, a crocodile, or a cat, or some other beast,
"a fitter inhabitant of a cavern or a bog than a temple."" To
the devotion with which their sacred animals were
regarded by the Egyptians, displayed itself in the most
whimsical absurdities. It was a capital crime to kill
any of them voluntarily (Herod. 2, 65); but if an
ibis or a hawk were accidentally destroyed, the
foul deed was punished with death by the multitude, with
out form of law. In order to avoid suspicion of such an impious act, and the speedy fate
which often ensued, a man who chanced to meet with
the carcass of such a bird began immediately to wail
and lament with the utmost vociferation, and to protest

45
that he found it already dead. (Diodorus Siculus, 1, 83.) When a house happened to be set on fire, the chief alarm of the Egyptians arose from the propensity of the cats to rush into the flames over the heads or between the legs of the spectators: if this catastrophe looked imminent, there was excited general lamentation. At the death of a cat, the daughters of the priestess burnt off her eyebrows; but at the funeral of a dog, he shaved his head and whole body. (Herod. 2, 66.) The carcasses of all the cats were salted, and carried to Bubastus to be interred (Herod. 2, 67); and it is said that many Egyptians, arriving from warlike expeditions to foreign countries, were known to bring with them dead cats and hawks, which they had met with accidentally, and had armed for sacred purposes of grief and lamentation. (Diod. Sic. 1, 83.) In the extremity of famine, when they were driven by hunger to devour each other, the Egyptians were never accused of touching the sacred animals. Every nome in Egypt paid a particular worship to the animal that was consecrated to its tutelar god; but there were certain species which the whole nation held in great reverence. These were the ox (viz. Apeir), the dog, and the cat; the sauerkh, or holey dog, the sacred cat of the sacred cat, and lepidotus. (Strabo, 812.) In each nome the whole species of animals, to the worship of which it was dedicated, was held in great respect; but one favoured individual was selected to receive the adoration of the multitude, and supply the place of an image of the god. Perhaps this is not far from the sense in which Strabo distinguishes the sacred from the divine animals. Thus, in the nome of Arsinöë, where crocodiles were sacred, one of this species was kept in the temple and worshipped as a god. He was tamed and watched with great care by the priests, who called him "Suchos," and he ate meat and cakes which were offered to him by strangers. (Strabo, 811.) In the same neighbourhood there was a pond appropriated to the feeding of crocodiles, with which it was filled, the Arsinoites carefully abstaining from hunting any of them. Sacred bulls were kept in several towns and villages, and nothing was spared that seemed to contribute to the enjoyment of these horned gods, which were pampered in the utmost luxury. Among insects, the cantharus, scarabæus, or beetle, was very celebrated as an object of worship. Plutarch says it was an emblem of the sun; but Horapollo is more particular, and informs us that there were three species of sacred beetles, of which one was dedicated to the god of Heliopolis, or the Sun; another was sacred to the Moon; and a third to Hermes or Thoth. The reasons he assigns for the consecration of this insect are derived from the notions entertained respecting its mode of reproduction and its habits, in which the Egyptians traced analogies to the movements of the heavenly bodies. It was believed that all these insects were of the male sex. The beetle was said to fecundate a round ball of earth, which it formed for the purpose. In this they saw a type of the sun, in the office of demijurnal, or as forming and fecundating the lower world. (Horapollo. Hieroglyph. 1, 10.—Plut. de Is. et Os., p. 355.—Porphyry, de Abstain., lib. 4.—Euseb. Prep. Evang. 3, 4.) Nor was the adoration of the Egyptians confined to animals merely. Many plants were regarded as mystical or sacred, and none more so than the lotus, of which mention has already been made, in the section that treats of the fertility of Egypt. In the lotus, or nymphæa, of which it flourishes, and in all cases of the water, the Egyptians found an allusion to the sun rising from the surface of the ocean, and it is on the blossom of this plant that the infant Harpocrates is represented as reposing. The peach-tree was also sacred to Harpocrates; and to him the first fruits of lentils and other plants were offered, in the month Mesori. It is well known, too, that the Egyptians worshipped the onion. Plutarch refers this superstitious to a fancied relation between this plant and the moon. Leeks also, and various leguminous, were held in similar veneration. (Minutius Felix, p. 278.) The acacia and the heliotrope are said to have been among the number of those plants that were consecrated to the sun. (Compare Kircher's Debusys, 3, 180.) The latter plant is regarded as a noble of all plants. We learn from Clemens Alexandrinus that there were thirty-six plants dedicated to the thirty-six genii, or deities, who each presided over their portion of the twelve signs of the zodiac. (Pritchard's Analysis of Egyptian Mythology, p. 301, seq.)

The origin of animal worship, and the reasons or motives which induced the Egyptians to represent their gods under such strange forms, or to pay divine honours to irrational brutes, and even to the meanest objects in nature, is an inquiry which has occupied the attention of the learned in various times. Herodotus pretended to be in possession of more information on this subject than he chose to make public. It has been conjectured that he was desirous of concealing his ignorance of the influence of custom in religion. In the opinion of the Greek writers, the representation of the gods under the shape of animals was held in the highest estimation; the Romans, on the contrary, thought that the ancients were under the influence of superstitious folly. The Greek writers seem to have been more intent on offering excuses for the follies of the Egyptians, than on unfolding the real principles of their mythology; and we find various and contradictory opinions maintained with equal confidence. It appears, indeed, that the Egyptian priests themselves, in the time of the Ptolemies, and at the era of the Roman conquest, were by no means agreed on this subject. To endeavour to explain it by a reference to the metamorphoses which the gods underwent, when they fled from Typhon and sought concealment under the forms of animals, is to account for an absurdity by a fable. To go back, as some do, to the standards, or banners, borne by the different tribes or communities that formed the component parts of the earlier population, is to invert the order of ideas. A people may choose for a standard the representation of an object which they adore; but they will not be found to adore any particular object because they may have chosen it for a standard or banner. The opinion, on the other hand, which refers animal worship to the policy of kings, and to their seeking to divide their subjects by giving them different objects of religious veneration, is an awkward application of the system of Euhemerus, according to which all religions were nothing in effect but civil institutions, the offspring of skilful legislation. Petichism has been anterior to all positive law. Favoured by the interests of a particular class, it has been enabled, it is true, to prolong itself during a state of civilization and by the force of authority; but it must spring originally and freely from the very bosom of barbarism. Equally untenable is the position, which supposes, that the Egyptians were induced to pay divine honours to animals, out of gratitude for the benefits which they derived from them; to the cow and the sheep, for the clothing and sustenance which they afford; to the horse for his care in protecting their houses against thieves; to the ibis, for delivering their country from serpents; and to the ibis, for making their eggs for feeding the crocodile. This conjecture is refuted by the well-known fact, that a variety of animals which are of no apparent utility, and even several species which are noxious and destructive, and the natural enemies of mankind, received their appropriate honours, and were regarded with the same reverence as obviously useful members of the animal creation. The shrew-mouse, the pike, the beetle, the crow, the hawk, the hippopotamus, can claim no particular regard for the benefits they are known to confer on the human race; still less can the crocodile, the lion, the wolf, or the venomous asp urge any such pretension. Yet we have seen that all these creatures, and others of a sim-
fiar description, were worshipped by the Egyptians with the most profound devotion: nay, mothers even rejoiced when their children were devoured by crocodiles. It may be further observed, that some of those animals which afford us food and raiment, and which are, on that account, among the most serviceable, were rendered of little or no utility to the Egyptians on account of this very superstition. They regarded it as unlawful to kill oxen for the sake of food, and not only abstained from slaughtering them, but, likewise, under a variety of circumstances, from wearing any garment made of its wool, which was regarded as impure, and defiling the body that was clothed with it. These considerations seem to prove, that the adoration of animals among the Egyptians was not founded on the advantages which mankind derive from them. Another attempt at explaining this mystery, which receives greater countenance from the general character of the latter argument, is the more probable, and the explanation, is the conjecture of Lucian. (De Astrolog. — ed. Bisp., vol. 5, p. 218.) This writer pretends, that the sacred animals were only types or emblems of the asterisms, or of those imaginary figures or groups into which the ancients had, at a very early period, distributed the stars; distinguishing them by the names of living creatures and other terrestrial objects. According to Lucian, the worshippers of the bull Apis, regarded the Bull as identical with the celestial Taurus; and Anubis represented the Dog-star or the constellation of Sirius. This hypothesis has received more attention than any other among modern writers. Dupuis has made it the basis of a very ingenious attempt to explain the mythology of Isis and Osiris, and several other fables of antiquity, which this author resolves into astronomical figments, or figurative accounts of certain changes in the positions of the heavenly bodies. Besides, the great number of the whole series of deified brutes in the heavens, it would still remain doubtful, whether the Egyptian animals were consecrated subsequently to the formation of the sphere, as types or images of the constellations; or the stars distributed into groups, and these groups named with reference to the quadrupeds, birds, and fishes that were already regarded as sacred. There are, indeed, many circumstances which might render the latter argument the more probable. But the relation between the animals of the sphere and those of the Egyptian temples are by far too limited to warrant any such speculation; and Lucian, moreover, is an author who is by no means deserving of much credit on a subject of this nature. Porphyry, in his conjectures, approaches nearer the truth. The divinity, according to him, embraces all beings; he resides, therefore, in animals also, and man adores him wherever he is found. In other words, the worship of animals was intimately connected, according to this writer, with the doctrine of emanation. (Porphyry, de Abstinentia, 4, 9. — Compare Enaeisius, Prop. Evan. 3, 4.) This explanation, however, does not go far enough. It takes no notice of that peculiar combination by which the worship of animals is made to assume a regular form, and to continue itself long after man has placed the deity far above the sphere of physical existence. The discovery of a mode of connecting worship among certain savage tribes in our own days, perfectly analogous to the system of animal adoration which prevailed among the Egyptians, furnishes us with a certain clue amid these conflicting hypotheses, and that clue is Pethism. We perceive, remarks Heeren (Ideen, vol. 2, p. 664), the worship of animals from Ethiopia to Senegal, among nations completely uncivilized. Why, then, seek for a different origin among the Egyptians! Place among the African negroes of the present day corporations of priests arrived at the knowledge of the movement of the heavenly bodies, and preserving in their sanctuary this branch of human science screened from the curiosity of the uninstructed and profane. These sacerdotal corporations will never seek to change the objects of vulgar adoration; on the contrary, they will consecrate the worship that is paid them, and will give that worship more of pomp and regularity. They will seek, above all, to make the intervention of the sacerdotal caste a necessary requisite in every ceremony; they will then attach, in a mystic sense, these material objects of worship to their hidden science; and the result will be a system of religion precisely similar to that of Egypt, with Pethism for its basis, the worship of the heavenly bodies for its outward characteristic, and within, a science founded on astronomy, and by the operation of which the fetichs, that serve as gods for the people, become merely symbols for the priests. It was thus that the priests of Meroë, in sending forth their sacerdotal colonies, carefully observed the rule of attaching to themselves the natives among whom they placed their sanctuary, by imposing upon them external worship, and by assigning to the animals which these natives adored a place in the temples erected by them, which thence became the common sanctuaries and the centres of religion for all. To invent the order to which we have just alluded is a palpable error. What had been for a long time acknowledged for a sign or symbol, could not, on a sudden, be transformed into a god; but it is easy to conceive how that which passed for a god with the gods in one temple became one of the year, and the scarabaeus of the sun. The case was the same with trees and plants, fetichs no less highly revered than animals. The leaves of the palm, the longevity of which tree seemed a special privilege from on high, adorned the couches of the priests, because this tree, putting forth branches every month, marks the renewal of the lunar cycle. (Diod. Sic. 1, 94. — Plin. 13, 17.) The lotus, known also as a sacred plant to the people of India, the cradle of Brahama (Maurice, Hist. of Indost. 1, 60), as that of Harpocrates; the persa, brought from Ethiopia by a sacerdotal colony (Diod. Sic. 1. c. — Schol. in Nicand. Therapeut. v. 764); the amoglossium, whose seven sides recall to mind the seven planets; and which was styled, on this account, the glory of the skies (Kircher, Oed. Egypt. 3, 2); the onion, whose pellicles were thought to resemble so many concentric spheres, and which was therefore viewed as a vegetative image of the universe, always different and yet always the same, and where each part served as the representative of the whole; all these became so many symbols having more or less connexion with astronomical science. In them the people beheld the objects of ancient adoration, and the priestly characteristics that enabled them to mark out and perpetuate their scientific discoveries. To these elements of worship, the influence of localities, that at one time disturbed by partial differences the uniformity which the sacred caste were desirous of establishing, and at another associated with the rites, that had reference to the general principles of astronomical
science, certain practices which resulted merely from peculiarity of situation. Hence, on the one hand, the diversity of animals adored by the communities of Egypt. Had these been merely pure symbols, would the priests, who sought to impart a uniform character to their institutions, have ever introduced them? These varieties in the objects of worship are only to be explained by the yielding, on the part of a sacerdotal order, to the antecedent habits of the people. (Vogel, Rel. der Lég., p. 97, seqq.) Hence, too, on the other hand, those numerous allegories, heaped up together without being connected by any common bond, and forming, if the expression be allowed, so many layers of fable. Apis, for example, at first the manitou-pro- totype of his kind, afterward the depository of the soul of Osiris, is found to have a third meaning, which holds a middle place between the other two. He is the symbol of the Nile, the fertilizing stream of Egypt; and while his colour, the spots of white on his front, and the duration of his existence, which could not exceed twenty-five years, have a reference to astronomy, the festival of his reappearance was celebrated on the day when the river begins to rise. The result, then, of what we have here advanced, is simply this: The animal-worship of the Egyptians originated in fetishism. The sacerdotal caste, in allowing it to remain unmo- lested, arrayed it in a more imposing garb, and, while they permitted the mass of the people to indulge in this grove of idolatry, the connection of these deities with themselves a secret and visionary system of pantheism or emanation. (Constant, de la Religion, 3, 62, seqq. — Prichard's Analysis of Egyptian Mythology, p. 330, seqq.)

12. Egyptian Castes.
Among the institutions of Egypt, none was more important in its influence on the character of the nation, than the division of the people into tribes or families, who were obliged by the laws and superstitions of the country to follow, without deviation, the professions and habits of their forefathers. Such an institution could not fail of impressing the idea of abject servility on the lower classes; and, by removing in a great measure the motive of emulation, it must have created, in all, an apathy and indifference to improvement in their condition. Wherever the division of castes has existed, it has produced a remarkably permanent and uniform character in the nation; as in the example furnished by the natives of Hindostan. These people agree in almost every point with the description given of them by Megasthenes, who visited the court of an Indian king soon after the conquest of the East by the Macedonians. We have no very accurate and circumstantial account of the castes into which the Egyptian people were divided, and of the particular customs of each. It appears, indeed, that innovations on the old civil and religious constitution of Egypt had begun to be introduced as early as the time of Psammetichus, when the ancient aversion of the people to foreigners was first overcome. The various conflicts which the nation underwent, between that era and the time when Herodotus visited Egypt, could not fail to break down many of the fences, which ancient priestcraft had established for maintaining the influence of superstition. Herodotus is the earliest writer who mentions the castes or hereditary classes of the Egyptians, and his account appears to be the result of his personal observation only. Had this historian understood the native language of the people; had he been able to read the books of Hermes, in which the old sacerdotal institutions were contained, we might have expected from him as correct and ample a description of the distribution of the castes in Egypt, as that which modern writers have gained in India from the code of Menu, respecting the orders and subdivisions of the community in Hindostan. Diodorus, who had more favourable opportunities of information, and who seems to have made a very diligent use of them, may be supposed to be more accurate, in what refers to the internal polity of this nation, than Herodotus. Strabo has mentioned, in a very summary manner, the division of the Egyptians into classes. He distinguishes the two higher ranks, namely, the sacerdotal and the military classes, and includes all the remainder of the community under the designation of the agricultural class, to whom he assigns the employments of agriculture and commerce. Diodorus subdivides this latter class. After distin- guishing from it the sacerdotal and military orders, he observes, that the remainder of the community is distributed into three divisions, which he terms Herds- men, Agriculturists, and Artificers, or men who laboured at trades. Herodotus very nearly agrees in his enumeration with that of Diodorus. His names for the different classes are as follows: 1. Priests, or the sacerdotal class. 2. Warriors, or the military class. 3. Cœtherds. 4. Steincherds. 5. Traders. 6. Interpreters. 7. Pilots. In this catalogue the third and fourth classes are plainly subdivisions of the third of Diodorus, whom that writer includes under the gener- al title of herdsmen. The caste of interpreters, as well as that of pilots, must have comprised a very small number of men, since the Egyptians had little intercourse with foreigners, and, until the time of the Greek dynasty, had none whatever. The employment of the sailors is not mentioned by Herodotus, and down the Nile. The pilots were probably a tribe of the same class with the artificers or lab- ouring artisans of Diodorus. The traders of Herod- otus must be the same class who are called agricul- turists by Diodorus. Thus, by comparing the differ- ent accounts, we are enabled to arrange the several branches of the Egyptian community into the following classes. 1. The Sacerdotal order. 2. The Military. 3. The Herdsmen. 4. The Agricultural and Commercial class. 5. The Artificers, or labou- ring artisans. The employments of all these classes were hereditary, and no man was allowed by the law to engage in any occupation different from that in which he had been educated by his parents. It was accounted an honourable distinction to belong either to the sacer- dotal or the military class. The other orders were considered greatly inferior in dignity, and no Egyptian could mount the throne who was not descended from the priestcraft or military orders. (Herodotus: De Bello Hierosolimitano, p. 877, seqq.)

The inquiry respecting the sacerdotal caste of Egypt is rendered a difficult one principally on the following account, because the writers, from whose statements we obtain our information, lived in an age when the Egyptian priesthood had already suffered many and important alterations, and had been deprived of a large portion of their former consideration and in- fluence. Each successive revolution in the state must have had a direct bearing upon them, or, rather, they must have been the first with whom it came in con- tact. Their political influence, therefore, must have been gradually diminished, and their sphere of action circumscribed. Under the Persian sway, in particu- lar, their power must have been reduced to within but narrow limits, and our only wonder is, when we con- sider the strong hostility displayed by these conquer- ors towards the sacerdotal or ruling caste, that it did not fall entirely to the ground. Herodotus then, and still more the writers from whom Diodorus Siculus has received his information on this subject, saw merely the shadow of that extensive power and influence which the priests of Egypt had formerly possessed.
And yet, even in the statements which we obtain from this quarter, traces may easily be found of what the Egyptian hierarchy once was; so that from these, when taken together, a tolerably clear idea of the earlier power which this remarkable order had enjoyed. The sacerdotal caste was spread over the whole of Egypt; their chief places of abode, however, were the great cities, which, at one time or other, had been the capitals of the land, or else had held a high rank among the other Egyptian cities. These were Thebes, Memphis, Sais, Heliopolis, &c. Here, too, were the chief temples, which are so often mentioned in the accounts of Herodotus and other writers.

Every Egyptian priest had to belong to the service of some particular deity, or, in other words, to be attached to some temple. The number of priests for any deity was never determined; nor could it indeed have been subjected to any regulations on this head, since priesthood was hereditary in families, and these must have been more or less numerous according to circumstances. Not only was the priestly caste hereditary in its nature, but also the priesthoods of individual deities. The sons, for example, of the priests of Vulcan at Memphis, could not enter as members into the sacerdotal college at Heliopolis; nor could the offspring of the priests of Heliopolis belong to the college of Memphis. Strange as this regulation may appear, it was nevertheless a natural one. Each temple had extensive portions of land attached to it, the revenues of which, belonging as they did to those whose forefathers had erected the temple, were received by the priests as matters of hereditary right, and made those who tilled these lands be regarded as their dependants or subjects. Hence, as both the temple-lands and revenues were inherited, the sacerdotal colleges had of consequence to be kept distinct. The priesthood, moreover, of each temple was carefully organized. They had a high-priest over them, whose office was likewise hereditary. It need hardly be remarked, however, that there must have been gradations also among the various high-priests, and that those of Thebes, Memphis, and the other chief cities of the country, must have stood at the head of the order. These were, in a certain sense, a species of hereditary princes, who stood by the side of the monarchs, and enjoyed almost equal privileges. Their Egyptian title was Piremis, which Herodotus translates by καθος καθαθες, i.e., noble and good," and which points not so much to a term of respect to nobility (compare Weller, Théognides Réligieux, p. xxiv.) Their statues were placed in the temples. Whenever they are mentioned in the history of the country, they appear as the first persons in the state, even in the Mosaic age. When Joseph was to be elevated to power, he had to connect himself by marriage with the sacerdotal caste, and was united to the daughter of the high-priest at On, or Heliopolis. The organization of the temple of Min was different in different cities, according to the situation and wants of the surrounding country. They formed not only the ruling caste, and supplied from their number all the offices of government, but were in possession likewise of all the learning and knowledge of the land, and the exercise of this last had always immediate reference to the wants of the adjacent population. We must banish the idea, then, that the priests of Egypt were mere ignorant beings, religious observances constituted their principal employment. They were, on the contrary, judges also, physicians, astronomers, architects; in a word, they had charge of every department that was in any way connected with learning and science. It appears, from the whole tenor of Egyptian history, that each of the great cities of the land possessed originally one chief temple, which, in process of time, became the head temple of the surrounding district, and the deity worshipped in it the local or patron deity of the adjacent country. The priests of Memphis were always styled (according to the nomenclature of the Greeks) priests of Vulcan; those of Heliopolis, of Jove; and those of Sais, priests of the Sun, &c. These head-temples mark the first settlements of the sacerdotal colonies as they gradually descended the valley of the Nile. The number of deities to whom temples were erected, in Upper Egypt at least, seem to have been always very limited. In this quarter we hear merely of the temples of Ammon, Osiris, Isis, and Typhon. In Middle and Lower Egypt, the number appears to have been gradually enlarged.— The next subject in importance has reference to the revenues of the sacerdotal order. Here also we must dismiss the too common opinion, that the priests of Egypt were a class supported by the monarch or the state. They were, on the contrary, the principal landholders of the country, and, besides them, the right of holding lands was enjoyed only by the king and the military caste. Changes, of course, must have ensued amid the various political revolutions to which the state has been subject, in this important branch of the sacerdotal power, yet none of such a nature as materially to affect the right itself; and hence we find that a large, if not the largest and fairest, portion of the lands of Egypt, remained always in the hands of the priests. To each temple, as has already been remarked, were attached extensive domains, the common possession of the whole fraternity, and their original place of settlement. These lands were let out for a moderate sum, and the revenue so derived from them went to the common treasury of the temple, over which a superintendent, or treasurer, was placed, who was also a member of the sacerdotal body. From this treasury were supplied the wants of the various families that composed the sacred college. They had also a common table in their respective temples, which was daily provided with all the good things, not excepting imported wines, that their rules allowed. So that no part of their private property was required for their immediate support. For that they possessed private property is not only apparent from the circumstance of their marrying and having families, but it is also expressly asserted by Herodotus. From all that has been said then, it follows, that the sacerdotal families of Egypt were the richest and most distinguished in the land, and that the whole order formed, in fact, a highly privileged nobility. The priests of Egypt were ever the object of the Greek philosophers, respecting the fate of the soul. On this subject we have no precise and satisfactory information. The an-
cient writers have left us only a few hints, more or less obscure, which scarcely afford anything beyond a mere foundation for conjectures. The President de Goguet, relying on a statement of Servius, supposes that the Egyptians embalmed their dead for the sake of maintaining the connexion between the soul and the body, and preventing the former from transmigrating. (Orig. of Laws, &c., vol. 3, p. 68, Eng. transl.) According to the Egyptian doctrine of transmigration, as explained by Herodotus (2, 127), the soul of a man passed through the bodies of living creatures, and returned to inhabit a human form at the expiration of three thousand years. The cycle, however, does not commence until the body begins to perish, and the second human body attended the soul and the body in pains and torments, therefore, of passing through this cycle of three thousand years, and through animals innumerable, might be reserved for those whose actions in life did not entitle them to be made into mummies, and whose bodies would therefore be exposed to decay. In a second trial in the world, the unfortunate penitent might avoid his former errors. Hence, say the advocates for this opinion, the body of a father or ancestor was embalmed and placed in a tomb, and he, that was one that was valued more highly than any other. It was the most sacred of all the obligations which a man could bind himself by, and the recovery of the pledge, by performing the stipulated condition, was an indispensable duty. (Long's Anc. Geog., p. 61.) Others have imagined, that the views with which the Egyptians embalmed their dead bodies were more akin to those which rendered the Greeks and Romans so anxious to perform the usual rites of sepulture to their departed warriors, namely, an idea that these solemnities expeditied the journey of the soul to the appointed region, where it was to receive judgment for its former deeds, and to have its future doom fixed accordingly. This, they maintain, is implied by the prayer, said to have been uttered by the embalmers in the name of the deceased, entreating the divine powers to receive his soul into the regions of the gods! (Pou!

phr. de Abstinent., 4, 10.—Pritchard's Analyses of Egyptian Mythology, p. 200.) Perhaps, however, the practice of embalming in Egypt was the result more of necessity than of choice, and, like many other of the customs of the land, may have been identified by the priests with the national religion, in order to ensure its continuance. The rites of sepulture in Egypt grew out of circumstances peculiar to that country. The sceneries of the Nile, the beauty of the sand, the beauty of the clay, the rocks which bounded the valley denied a grave; and the sands of the deserts afforded no protection from outrage by wild beasts; while the valley, regularly inundated, forbade to be used as a channel-house, under penalty of pestilence to the living. Hence grew the use of antiseptic substances, in which the nation became so skilled, as to render the bodies of their dead inaccessible to the ordinary process of decay.

35. Arts and Manufactures of the Egyptians.

The topics on which we intend here to touch, derive no small degree of elucidation from the paintings discovered in the tombs of Egypt. Weaving appears to have been the employment of a large majority of the nation. According to Herodotus (8, 33), it was an occupation of the men, and, therefore, not merely a domestic employment, but a business carried on also in large establishments or manufactories. The process of weaving is frequently the subject of Egyptian paintings. It is depicted in the most pleasing manner in the drawing given by Minutoli (pl. 24, 2) from the tombs of Beni Hassan. The loom is here very simple construction, and is fastened to four props or supports driven into the ground. The finished part of the work is checked green and yellow, the byssus being generally dyed before weaving. Even as early as the time of Moses, this class of manufactures had attained a very great perfection (Goguet, Origin of Laws, &c., vol. 2, p. 80, seqq.); and, at a still more distant period, the time of Joseph (Genesis, 45, 22), fine vestments were among the articles most usually bestowed. We have no necessity, however, ever to go back to these authorities; the monuments speak a language that cannot be misunderstood. Both in the plates accompanying the great French work on Egypt, as well as the drawings obtained by Belzoni from the tombs of the kings at Thebes, and those given by Minutoli, we see these vestments in all their gay colours, and of various degrees of fineness. Some are so fine that the limbs appear through them. (Compare, in particular, the vestment of the king, as given in Desc. de l'Egypte, Planches, vol. 2, pl. 31, and Belzoni's plates.) Others, on the contrary, are of a thicker texture. The kings and warriors commonly wear short garments; the agricultural and working classes, merely a kind of white apron. The priests have long vestments, sometimes white, at other times with white and red stripes: sometimes adorned with stars, at other times with flowers, and again glittering with all the colours of the East. Whatever vestments can be found among them remains still undecided. (Heeren's Idena, vol. 2, pt. 2, p. 368.)

The Egyptians, from a most remote era, were celebrated for their manufacture of linen. The quantity, indeed, that was manufactured and used in Egypt was truly surprising; and, independently of that made up into articles of dress, the great abundance used for enveloping the mummies, both of men and animals, show the manufacture of linen has been kept ready for the constant demand at home, as well as for that of the foreign market. That the bandages employed in wrapping the dead are of linen, and not, as some have imagined, of cotton, has been ascertained by the most satisfactory tests (Wilkinson, vol. 3, p. 115.). That the skill of the Egyptians in the application of colours kept pace with that displayed in the art of weaving, is constant from what has already been remarked. We find among them all colours; white, yellow, red, blue, green, and black. What the colouring materials themselves were, how far they were obtained from Egypt, or what extent they were brought from Babylonia and India, cannot be clearly determined. That the Tyrians had a share in these will appear more than probable, when we call to mind that they were permitted to have an establishment or factory at Memphis. From early times (8, 35) the Tyrians, and the testimony of all modern travellers in full accordance with his statements. The Egyptians mixed their paint with water, and it is probable that a little portion of gum was sometimes added, to render it more tenacious and adhesive. In most instances we find red, green, and blue, and a union which, for all subjects and in all parts of Egypt, was a particular favourite. When black was introduced, yellow was added in manufacture, or handmade, like manner, they sought for every hue its congenial companion. The following analysis of Egyptian colours, that were brought by Wilkinson from Thebes, is given by Dr. Ure. "The colours are green, blue, red, black, yellow, and white. 1. The green pigment, scraped from the painting in distemper, resists the solu-

School of muriatic acid, but becomes thereby of a brilliant blue colour, in consequence of the abstraction of a small quantity of yellow. 2. The blue powder contains the redsulbute blue powder has a sandy texture; and, when viewed in the microscope, is seen to consist of small particles of blue glass. On fusing this vitreous matter with potash, digesting the compound in distilled muri-

atic acid, and treating the solution with water of am-

monia in excess, the presence of copper becomes manifest. A certain portion of precipitate fell, which, being dissolved in muriatic acid and tested, proved to
EGYPTUS.

be the oxydo of iron. We may hence conclude, that the green pigment is a mixture of a little ochre, with a pulverulent glass, made by vitriol, or dykes of copper and soda. 2. The blue pigment is a pulverulent blue glass, of like composition, without the ochreous admixture, brightened with a little of the chalky matter used in the distemper preparation. 3. The red pigment is merely a red earthy bole. 4. The black is bone black, mixed with a little gum, and containing some traces of iron. 5. The white is nothing but a very pure chalk, containing hardly any alumina, and a mere trace of iron. 6. The yellow pigment is a yellow iron ochre. Wilkinson, vol. 3, p. 301.

Next in importance to weavings must be ranked Metallurgy. As far as we can judge from the colour, which is always green, brass seems to have been constantly employed where in other nations iron would be. The war-chariots appear to be entirely of the former metal. Their green colour, as well as their shape, and the lightness and elegance of their wheels, are thought clearly to indicate this. The arms, moreover, of the Egyptians appear to be nearly all of brass, and not only the swords, but the bows also, and quivers are made of it. These, together with the instruments for cutting that are found depicted among the hieroglyphics, are always green. In the infancy of the arts and sciences, the difficulty of working iron might long withhold the secret of its superiority over copper or bronze; but it cannot reasonably be supposed that a nation so far advanced, and so eminently skilled in the art of working metals as the Egyptians, should have remained ignorant of its use, even if we had no evidence of its having been known to the Greeks and other people; and the constant employment of bronze arms and implements is not a sufficient argument against their knowledge of iron, since we find the Greeks and Romans made the same things of bronze, long after the period when iron was universally known. If he is right in his preliminary view, we must come at once to the conclusion that the Egyptians possessed an art of hardening copper and bronze which is now lost to the world. The skill of the Egyptians in compound metals is abundantly proved by the vases, mirrors, arms, and implements of bronze discovered at Thebes; and the numerous methods they adopted for varying the composition of bronze by a judicious mixture of alloys, are shown in the many qualities of vessel in which we had even the secret of giving to bronze or brass blades a certain degree of elasticity, as may be seen in the dagger of the Berlin museum. Another remarkable feature in their bronze is the resistance it offers to the effects of the atmosphere; some continuing smooth and bright, though buried for ages, and since exposed to the damp of European climates. (Wilkinson, vol. 3, p. 253.) Other lost arts in metallurgy may be evidenced by the well-known facts that the Hebrew legislator inferentially ascribes to the Egyptian chemists the art of making gold liquid, and of retaining it in that state. This we have not the power to do. Still, however, it must be confessed, that the Egyptians cannot properly be considered as at any time acquainted with the science of chemistry; though they were early made aware of various chemical facts, and many and indisputable proofs of this have been given, or two not irreparable waste, or devoted to the subject. Their progress in the manufacture of not only white but coloured glass may also be instanced. Seneca informs us that they made artificial gems of extraordinary beauty. (Epist., 90.) They had a method of purifying natron, and of extracting potash from cinders. They prepared lime by the calcination of calcareous stones, and had an intimate knowledge of the uses to which it may be applied, as also that it renders the carbonate of soda caustic. Litchare, together with the vitriolic and many other salts, were perfectly known to them. They made wine, vinegar, and even beer. Their method of embalming is well known, and is based in a great measure among the evidences of their chemical knowledge. The statements on this subject by Herodotus and Diodorus Siculus are very unsatisfactory; and there is reason to believe, as it was the object of the embalmers to shroud their art in mystery, that those writings were either totally deceived, or, at least, that the mummingly drug was artfully concealed from their knowledge.

Another important branch of the domestic arts was Pottery, in which the Egyptians displayed a skill not at all inferior to that of the Greeks; and they who suppose that graceful forms in pottery, porcelain, bronze, or even more precious materials, were indigenous to Greece alone, will find many things to undeceive them in the paintings of Egypt. The country possessed a species of clay extremely well adapted to this purpose, and which is still found there. (Ryer, Economie des Egypt., p. 274.) Coptos was the chief seat of this branch of industry, as Kefi or Kufi, in its immediate vicinity, is at the present day. The vases thus manufactured served for holding the water of the Nile, to which they were believed to impart an agreeable coolness, an opinion that prevails even in modern times. Besides, however, being applied to household purposes, they were used also for the purpose of holding the mummies of the sacred animals, such as the ibis and others. The vases depicted on the monuments of Egypt are sometimes seen adorned with the most brilliant colours. As to the elegance of form and ornament in domestic and other articles, the Egyptians can stand comparison with any other nation of antiquity, the Greeks not excepted. Their couches and seats might serve as patterns even for our own; their silver tripods, beautiful baskets, and distaffs, as we see them in paintings, were known even in the days of the Odyssey (4, 128), and their music and the art of the plater exhibited those of modern times in the beauty and variety of their shape. Those who wish to examine more fully into this branch of our subject are referred to Rossellini's great work, or the more accessible one of Wilkinson. The productions of the goldsmiths and silversmiths of Thebes are exhibited by Rossellini, and they fully demonstrate the high pitch of refinement to which they had brought the working of the precious metals. He exhibits gold and silver bowls, cups, vases, and other objects of the most exquisitely beautiful workmanship, and of the most tasteful as well as elegant forms. In surveying them, the classical reader will be convinced that Homer drew little on his imagination in describing the gift of plate made to Helen by the wife of the Egyptian king Thone. But Homer ascribes still more extraordinary wonders to the goldsmiths of the same time. They must have succeeded in uniting the most skilful chemical knowledge with the working of gold; for he describes golden statues, statues, and footstools moving about as if instinct with life. It would appear, indeed, that we had made, at the present day, little or perhaps no improvement on the forms of the vases and vessels to which we have above referred, and that an Egyptian buffet or sideboard, with all its details, not excluding dishes, plates, knives, and spoons, near four thousand years old, is no less resembling the sideboards of modern palaces and villas. Still farther, a survey of the trades and manufactures of Egypt, as afforded by the ancient paintings, exhibits, in a great degree, the same tools, implements, and processes, as are employed in workshops and manufactories at the present day. The whole process of manufacturing silk and cotton, with all its details of reeling, carding, weaving, dyeing, and patterning, may be more especially named. (Foreign Quarterly Review, No. 32, p. 308, seq.)
Egyptus.

16. Trade of Egypt.

Nature has destined Egypt, by its products, its general character, and its geographical position, for one of the principal trading countries of the globe. Neither the despotism under which it has groaned for centuries, nor the bloody feuds and wars of which it has so often been the scene, have operated, for any length of time, to deprive it of these advantages; the purposes of Nature may be impeded, but they cannot be wholly destroyed. Egypt, a fertile district, abounding in the first necessaries of life, between the arid deserts of Asia and Africa, has in all ages given it a value which, in another position, it could not have. From the time of Jacob to the present day, it has been the granary of the less fertile neighbouring countries. The natural facilities for internal communication were, at an early period, increased by the formation of canals, which united the various arms of the river that bound or flow through the Delta. From Syene to about lat. 31° N. there is one uninterrupted boat-navigation, which is seldom impeded for want of water. The conveyance of articles up the stream is favoured at certain seasons by the steady winds from the north. A description of the Nile-boat, called Baris, is given by Herodotus (2, 95). One of the great national festivals, that of Artemis at Dusabatis, was celebrated during the annual inundation: the people, in boats, sailed from one town to another, and the prisoners were collected by the inhabitants of every town that was visited. As it was an idle time for the agriculturists, like the winter of other climates, it was spent in carousing and drunkenness. The quantity of wine consumed was immense, and the whole of it was procured by giving in exchange Egyptian commodities. The Egyptians were never a nation of sailors, for their country furnished no materials for building large vessels. Till the time of Psammeticus, foreigners, though allowed to trade there, were subject to many strict regulations, by slave-dealers for procuring this commodity, which was regarded as suspicious persons. Egypt, being a grain-country, would be more likely to receive the visits of foreigners, than to make herself, any active commercial speculations. The later Pharaohs, after Psammeticus, as also the Ptolemies, could only then build fleets when the woods of Phoenicia were under their control; and it is well known what bloody wars were carried on for the possession of these regions between the 7th and 4th centuries B.C. Thucydides imagined, too, that the Tyrians and Sidonians were never anxious to make the Egyptians a maritime people, even if the latter had possessed the inclination to become such. The true reason why the Egyptians forbade all foreigners to approach their coast, is to be found in the peculiar character of early commerce. All the nations that trafficked on the Mediterranean were at that time pirates, with whom the carrying away the inhabitants from the coasts and selling them for slaves had become a lucrative branch of commerce. It was natural, then, that a people who had no ships of their own to oppose to such visitants, should forbid them, under any pretext, to approach their coasts. Passages occur, it is true, in the ancient writers, which render it doubtful whether there were not some exceptions to what has just been remarked. Homer makes Menelaus to have sailed from Egypt, and Diomedes to the land of the Pelasgians, soon after the time of Jason and Thonis, to which he assigns a great antiquity. The colonies, too, that are said to have sailed from Egypt to Greece, as, for example, those of Danaus and Cecrops, suppose an acquaintance with the art of navigation. The question, however, admits of a serious consideration, whether the Phoenicians were not, in these cases, the agents of commerce and transportation. The reign of Psammeticus and his successors changed the character of the Egyptians, or at least altered the old and settled policy of the country. Foreign merchants were sub-
ject to fewer restraints; the exchange of Egyptian commodities was extended; and, as Herodatus expressly remarks, agriculture and individual wealth were not much improved in Egypt as under this system of free trade. The Egyptian kings now acquired a fleet, the materials for which, or the vessels themselves, they could procure from the Phoenicians or the Greeks. Neco, the successor of Psammeticus, and the conqueror of Jerusalem (Herod., 2, 159.—Compare Kings, book 2, ch. 23, and Jeremiah, ch. 46), formed the project of uniting the Nile to the Red Sea by a canal: this canal was not completed till the time of Darius I., the Persian king. The object of the Pharaohs and the monarchs of Persia was to facilitate the transportation of commodities from the Red Sea to Egypt; for the Egyptians had long been accustomed to receive the products of India and Arabia up this gulf. This artificial channel was neglected on account of the difficulty of navigating the northern part of the Red Sea; it existed under the Ptolemies, but a land communication was also formed between Coptos and the ports of Myos-hormos and Berenice on the gulf, and this remained for a long time the great commercial road between the western and the eastern world. In Upper Egypt, the city of Thebes was once the centre of commerce for Africa and Arabia: under its colossal porticoes and market-houses, the wares of southern Africa, and the products of Arabia and India, were collected. Its fame had spread, probably through the Phoenician traders, as far as the country of the Hecatomneric poems (II., 9, 381). A modern traveller, Denon, standing amid the ruins of Thebes, could feel and comprehend the advantages of its situation; he could compute the number of days' journey which separated him from the towns of Arabia, the emporium of Memphis, and the cities of central Africa. In the mountains east of Thebes, the precious metals were once found: the mines were worked by prisoners of war, and the number of workmen, employed was very large. Some of the products were collected by the Pharaohs for the state (Geogr. Gr. Min., vol. 1, p. 212, ed. Hudson), in the time of the sixth Ptolemy, visited these mines, of which he has given a most exact description. Thus Thebes possessed, in the precious metals, one of those articles of commerce which invite strangers. Memphis, in Lower Egypt, was the centre of commerce when Herodotus visited Egypt. The gold, the ivory, and the slaves of Africa, the salt of the desert, wine imported from Phoenicia, and the products of India and Yemen, were collected in this market. In exchange, the merchants received the precious metals, grain, and linen (or perhaps cotton) cloths, which Herodotus compares with those of Colchis. Amasis, who was a usurper, and a prince fond of foreign luxuries, did not scruple to make great innovations. He admitted foreigners more freely into Lower Egypt, and appointed Naucratis, on the Canopic branch, as the residence of the Greek merchants. He carried his liberality so far as to permit non-resident Greeks to build temples to their national gods, and use the precincts as market-places: several Ionian and Dorian cities of Asia, together with the town of Mytilene, built a noble temple, called the Hellenium, and, by their joint votes, appointed the superintendents of the market and the commercial establishment. Some other Greek towns also followed their example. (Homer's Works, Long's Latin Transl., p. 64, seqq.—Herculan. Ideen, vol. 2, pt. 2, p. 372, seqq.)

17. Style of Egyptian Art.

The same veneration for ancient usage and the stern regulations of the priesthood, which forbade any innovation in the form of the human figure, particularly in subjects connected with religion, littered the genius of the Egyptian artists, and prevented its development. The same formal outline, the same attitudes and postures of the body, the same conventional mode of rep-
EGYPTUS.

The earliest inhabitants of Egypt appear to have been of Troglodytic habits, or, in other words, to have inhabited caves. The mountain ranges on either side of the stream would easily supply them with abodes of this kind. From the site of ancient Memphis, until we ascend the Nile beyond Thebes, these mountains are composed of stratified limestone, full of organic remains. Such rocks, it is well known, abound in natural caverns in all eastern countries; and although no cavities are now found in Egypt that do not bear marks of human skill, we have no right to assert that it was not in many cases merely called in the aid of nature, to smooth and embellish abodes originally provided by her. Much of this rock, too, was of a highly secrete and friable nature, and easily worked, therefore, by the hand of man. When the natural caverns then became insufficient for the growing pop- ulation, the art of life had little difficulty in providing an abode. Hence the government of Egypt was monarchical from the very earliest date; and a monarchial and despotic government, if it be only stable, is incontestibly more favourable to the ex- cution of magnificent structures than one more free. Hence one cause for the vast structures of Egypt. The population, too, of the country was probably re- dundant beyond any modern parallel. Consider it! Egypt capable of supporting a population three times as great as one of equal extent in a less favoured climate. It produces, besides, those tropical plants which yield more fruit on a given space of ground than any of the vegetables of the temperate zone, and which grow where, from the aridity of the soil, the cereal grama in cannot vegetate. Domestic animals, too, multiply with great rapidity, and the pro- lific influence of the waters of the Nile is said to extend to the very borders of the desert. With a population created and supported by such causes, we cannot wonder that a government, commanding without fear of accountabili- ty the whole resources of the country, could project and execute works, at which the richest and most pow- erful nations of modern times would hesitate. Many causes must have conspired to induce the abandonment of the cavern habitations of the early inhabitants, or which had on the first three habitations, providing recep- tacles for the embalmed bodies of the dead, and for which purpose these caverns would admirably answer, a growing and improving people could not long endure to be shut up in rocky grottoes during the inundation, or to pursue their agricultural labours at other seasons, far from a fixed abode. A remedy for these incon- veniences was found in the erection of mounds in the plain, and quays upon the banks of the river, exceeding in elevation its utmost rise, and extended with the in- crease of population until they could contain important

EGYPTUS.

resenting the different parts, were adhered to at the latest as at the earliest periods. No improvements, resulting from experience and observation, were admit- ted in the mode of drawing the figure; no attempt was made to copy nature, or to give it action to the limbs. Certain rules, certain models, had been estab- lished by law, and the faulty conceptions of earlier times were copied and perpetuated by every successive artist. Egyptian bas-relief appears to have been, in its origin, a mere copy of painting, its predecessor. The first attempt to represent the figures of the gods, sacred emblems, and other subjects, consisted in paint- ing simple outlines of them on a flat surface, the details, being afterwards inserted. But in process of time, these forms were traced on stone with a tool, and the intermediate space between the various figures being afterward cut away, the once level surface as- sumed the appearance of a bas-relief. It was, in fact, a pictorial representation on stone, which is evidently the character of all the bas-reliefs on Egyptian monu- ments, and which readily accounts for the imperfect arrangement of the figures. Deficient in conception, and as they were, in a proper knowledge of grouping, they were unable to form those combinations which give true expression. Every picture was made up of iso- lated parts, put together according to some general notions, but without harmony or preconceived effect. The human face, the whole body, and everything they introduced, were composed, in the same manner, of separate members, placed together one by one, accord- ing to the laws of proportions; the eye, the nose, and other features, composed a face; but the expression of feelings and passions was entirely wanting; and the countenance of the king, whether charging an enemy's phalanx in the heat of battle, or peaceably offering in- cense in a sombre temple, presented the same outline, and the same inanimate look. The peculiarity of the front view of an eye, introduced in a profile, is thus ac- counted for; it was the ordinary representation of that feature added to a proportion and no proper action to the figure. for any change in the position of the head. It was the same with drapery. The figure was first drawn, and the drapery was then added, not as a part of the whole, but as an accessory. They had no general conception, no previous idea of the effect required to distinguish the warrior or the priest, beyond the impression re- ceived from costume, or from the subject of which they formed a part; and the same figure was dressed accord- ing to the ideas of the artist. Whenever a portion of a picture was conceived by itself, and in- serted as it wanted to complete the scene; and when the walls of a building, where a subject was to be drawn, had been accurately ruled with squares, the figures were introduced, and fitted to this mechanical arrangement. The members were appended to the body, and these squares regulated their form and dis- tribution, in what was posture they might be placed. In placing the figures, the tomb-names were consid- ered in the representation of subjects relating to pri- vate life, the trades, or the manners and occupations of the people; and some indications of perspective in the position of the figures may occasionally be ob- served; but the attempt was imperfect, and, probably, to an Egyptian eye, unpleasing; for such is the force of habit, that, even where nature is copied, a conven- tional style is repeated, and the imperfect is an accurate representation. In the battle scenes on the temple of Thebes, some of the figures representing the mon- arch pursuing the flying enemy, despatching a hostile chief with his sword, and drawing his bow, as his horses carry his car over the prostrate bodies of the slain, are drawn with much spirit; but still the same imperfections of style and want of truth are observed; there is action, but no sentiment, no expression of the passions, or life in the features. In the representation of animals they appear not to have been restricted to the same rigid style; but genius once cramped can scarcely be expected to make any great effort to rise, or to succeed in the attempt; and the same union of the parts of the surface for profile, are observable in these as in the human figures. It must, however, be allowed, that, in general, the character and form of animals were admirably portrayed; the parts were put together with greater truth; and the same license was not resorted to as in the shoulders and other portions of the human body. (Wilkinson, vol. 3, p. 265, sqqq.)

18. Egyptian Architecture.

...
The Egyptians, a celebrated Plebeian house, of which there were various branches, such as the Peti, Lamia, Tuberonas, Galia, &c.—II. The wife of Sylla. (Plut. Vit. Syll.)—III. Patina, of the family of the Tuberos, and wife of the Emperor Claudius. She was repudiated, in order to make way for Messalina. (Sueton. Claud., 26.)—IV. Lex, a law proposed by the tribune Aelius Tubero, and enacted A.U.C. 559, for sending two colonies into Bruttium. (Lett., 54, 53.)—V. Another, commonly called Lex Aelia et Fufius. These were, in fact, two separate laws, though they are sometimes joined by Cicero. The first (Lex Aelia) was brought forward by the consul Q. Aelius Fatus, A.U.C. 556, and ordained, that, when the comitia were to be held for passing laws, the magistrates, or the anger of their authority, might take observations from the heavens, and, if the omens were unfavourable, might prevent or dissolve the assembly. And also, that any other magistrate of equal or greater authority than he who presided, might declare that he had heard thunder or seen lightning, and in this way put off the assembly to some other time.—The second (Lex Fufius or Fusia), proposed either by the consul Furius, or by one Fufius or Fufius, was passed A.U.C. 617, and ordained that it should not be lawful to enact laws on any dies fastus.—VI. Sentia Lex, brought forward by the consuls Aelius and Sentius, and enacted A.U.C. 756. It ordained that no slave who had ever, for the sake of a crime, been bound, publicly whipped, tortured, or brand- ed in the face, although freed by his master, should ob- tain the freedom of the city, but should always remain in the class of the deditis, who were indeed free, but could not aspire to the advantages of Roman citizens. (Suet. Aug., 40.)—VII. A name given to various cities, either repaired or built by the Emperor Hadrian, whose family name was Aelius.—VIII. Capitolina, a name given to Jerusalem by the Emperor Hadrian, when he rebuilt his city, and also called Capitolium, and also from his erecting within that city a temple to Ju- piter Capitolinus. (Vid. Hierosolyma.).

AELIUS, I. A Greek writer, who flourished about the middle of the second century of our era. He composed a treatise on military tactics, which he dedicated to the Emperor Hadrian. The best edition is that of Arceius and Meursius, Lugd. Bat., 1613, 4to. —II. Claudius, a native of Praeneste, who flourished during the reign of Augustus. He left two sons, Aelius and Claudius, and also from his erecting within that city a temple to Jupiter Capitolinus. (Vid. Hierosolyma.)

AELIUS, I. a celebrated Plebeian house, of which there were various branches, such as the Peti, Lamia, Tuberonas, Galia, &c.—II. The wife of Sylla. (Plut. Vit. Syll.)—III. Patina, of the family of the Tuberos, and wife of the Emperor Claudius. She was repudiated, in order to make way for Messalina. (Sueton. Claud., 26.)—IV. Lex, a law proposed by the tribune Aelius Tubero, and enacted A.U.C. 559, for sending two colonies into Bruttium. (Lett., 54, 53.)—V. Another, commonly called Lex Aelia et Fufius. These were, in fact, two separate laws, though they are sometimes joined by Cicero. The first (Lex Aelia) was brought forward by the consul Q. Aelius Fatus, A.U.C. 556, and ordained, that, when the comitia were to be held for passing laws, the magistrates, or the anger of their authority, might take observations from the heavens, and, if the omens were unfavourable, might prevent or dissolve the assembly. nature. Its chief claim to attention rests on its having
preserved from oblivion some fragments of authors, the
rest of whose works are lost. It is to be regretted that
dian, in-tend of giving these extracts in the language of
the writers themselves, has thought fit to array them in
Greek, and also to pretend an history of animals. 

The best editions of the various History are, that of
Grégoire, 4to, 1731, 2 vols, and that of Kuhnus, Lips., 8vo,
1780, 2 vols. The best edition of the History of "
I. of F. Jacobus, Lips., 8vo, 1784. — III. IV.

(Vid. Supplement.)

Èlius, a name common to many Romans, and marr
ing also the plebeian house of the Èlhi. (Vid. Èlia.
Èlia, I.) The most noted individuals that bore this name
were, I. Publius, a questor, A.U.C. 346, the first
year that the plebeians were admitted to this office.
(Liv., 4, 54.) — II. C. Stalenus, a judge, who suffered him-
to himself to be corrupted by Statius Albius. (Cic. pro Scott.
Hist., 81.) — III. Sextus Èlius Catus, an eminent Roman
lawyer, who lived in the sixth century from the founda-
tion of the city. He filled in succession the offices of
killed in succession the offices of

Émius, consul, — instead of as
Mr. Emius, Appius

Lampridius.

I. — A. C. 309, ordaining that the censor
should be elected as before, every five years, but that
their power should continue only a year and a half.
(Liv., 4, 24. — Id., 9, 33.) — II. Seminarius, sel cabia,
a summary law, brought forward by M. Emilius Le-
anicum, and passed A. C. 276. He fixed the kind
quantity of meats to be used at an entertainment. (Mac.
Sat., 2, 13. — Aur. Gall., 2, 24.) Pliny ascribes
this law to M. Scævulus (8, 57).

Émilia, a name of a distinguished Roman family among the patricians, originally written
Amilia. (Vid. Supplement.) — II. The third daugh-
ter of L. Emilius Paulus, who fell in the battle of
Caenenum, and named the wife of the elder Africanus,
and the mother of the celebrated Cornelius. She was
mild disposition, and long survived her husband. Her
property, which was large, was inherited by her adopt-
ved grandson Africanus the Younger, who gave it to
her own mother Papiria, who had been divorced by his own
father L. Emilius. — III. Lepida. (Vid. Lepida, I.)

IV. A part of Italy, extending from Ariminum to
Placentia. It formed one of the later subdivisions of the
country. — Via Lepida, a Roman road. There were
two roads, in fact, of this name, both branch-
ing off from Mediolanum (Milan) to the eastern and
southern extremities of the province of Cisalpine Gaul;
the one leading to Verona and Aquileia, the latter to
Placentia and Ariminum. The same name, howev-
ner, of Via Emilia Lepida, was applied to both. They
were made by M. Emilius Lepidus, who was con-
sul A. U. C. 567, in continuation of the Via Flaminia,
which had been carried from Rome to Ariminum.
— VI. Via Scauri, a Roman road, a continuation of
the Aurelian way, from Pisa to Dertona. (Strab.,
217.)

Émilianus, I. the second agnomen of P. Cornelius
Scipio Africanus the younger, which he received as
being the son of Paulus Emilius. His adoption by
the elder Africanus united the houses of the Scipios
and Emiliis. — II. A native of Mauritiania, who was gov-
ernor of Pannonia and Moesia under Hostilius and
Gallus. Some successes over the barbarians caused
him to be proclaimed emperor by his soldiers. Gallus
marched against him, but was murdered, together with
his son Vosilianus, by his own soldiers, who went
over to the side of Emilianus. The reign of the lat-
ther, however, was of short duration. Less than four
months intervened between his victory and his fall.
Warerian, one of the generals of Gallus, who had been
marched against him by the emperor to bring in the
aid of Germanic tribes to aid, met Emilianus in the plains
of Spoleto, where the latter, like Gallus, was murdered
by his own troops, who thereupon went over to Vale-
rian. (Zosimus, 21, p. 25, seqq. — Aureil. Vict. — Eu-
rop., 9, 6). — III. A prefect of Egypt, in the reign of
Gallienus. He assumed the imperial purple, but was de-
feated by Theodotus, a general of the emperor's, who
sent him prisoner to Rome, where he was strangled.

Émius, I. Censorinus, a cruel tyrant of Sicily. A
person named Aruntius Paterculus having given him a
barren horse, intended as a means of torture, was
the first that was made to suffer by it. Compare the
story of Phalaris and his brazen bull. (Plut. de Fort.
Rom., 315.) — II. 1., three times consul, and the
conqueror of the Volsii; A.U.C. 273. (Liv., 2, 42.)
— III. A Lepidus. — IV. One consul and the first
dictator. Tradition in triumph over the Fidenates, A. U. C. 329.
(Liv., 4, 16.) — IV. Paulus, father of the celebrated
Paulus Emilius. He was one of the consuls slain at
Cannae. (Liv., 23, 49.) — V. Paulus Macedonius
(Vid. Paulus I.) — VI. Scævulus. (Vid. Scævulus.)
— VII. Lepidus, twice consul, once censor, and six times Ponti-
фика Maximi. He was also Princesa Senatus, and
guardian to Plpylon Epiphanes, in the name of the

Émius, A.U.C. 309, ordaining that the censors
should be elected as before, every five years, but that
their power should continue only a year and a half.
Roman people. It was this individual to whom a civic crown was given when a youth of 15, for having saved the life of a citizen, an allusion to which is made on the medals of the Æolianian family. (Liv. 41, 42, Epit. 48.)—VIII. Lepidus, the triumvir. (Vid. Lepidus.)

ÆMONIA. Vid. Hemonia.

ÆNARIA, an island off the coast of Campania, at the entrance of the Bay of Naples. Properly speaking there are two islands, and hence the plural form of the name which the Greeks applied to them, at Ædychouoi (Pitheucæa). This latter appellation, according to Pliny (3, 6), was not derived from the number of apes (πύγαιοι) which the islands were supposed to contain, but from the earthen casks or barrels (πῖθακων, δολίων) which were made there. The Romans called the largest of the two islands Ænaria, probably from the copper which was there worked and exported. Æneas, a volcanic island, and Virgil (En. 9, 716) gives it the name of Inarime, in accordance with the old traditions which made the body of Typhoeus to have been placed under this island and the Phlegrean plain. Homer, however (II. 2, 783), describes Typhoeus as lying in Arima (εἰς Ἀρίμαος). The modern name of Ænaria is Iachia.

ÆNEA or ÆNÉIA, a town of Macedonia, on the coast of the Sinus Thermaicus, northwest from Olympus, and almost due south from Thessalonica. It was founded by a colony of Corinthians and Potidæans. The inhabitants themselves, however, affected to believe that Æneas was its founder, and consequently offered to him an annual sacrifice. Æneas was a place of some importance in the war between the Macedonians and Romans. Soon afterward, however, it disappeared from history. (Seymour, p. 627.—Livy, 40, 45.) It is called Ænea on a small scale. (Livy, 1, 157, &c.)—II. The descendants of Æneas, an appellation given by the poets to the whole Roman nation. Hence Venus is called by Lucretius (1, 1), Æneàdum genetrix.

ÆNÉAS, a celebrated Trojan warrior, son of Anchises and Venus, whose wanderings and adventures form the subject of Virgil's Æneid, and from whose final settlement in Ægium and the Ælian conquests the Ælian name is derived. He was born, according to the poets, on Mount Ida, or, as some legends stated, on the banks of the Sminos, and was nurtured by the Dryads until he had reached his fifth year, when he was brought to Anchises. The remainder of his early life was spent under the care of his brother-in-law Alcathous, in the city of Dardanus, his father's place of residence, at the foot of Ida. He first took part in the Trojan war when Æneas, having spoiled him of his flocks and herds, Priam, however, gave him a cold reception, either because the great Trojan families were at variance with each other, from the influence of ambiguous feelings, or, what is more probable, because an oracle had declared that Æneas and his posterity should rule over the Trojans. Hence, although he married Creusa, the daughter of Priam, he never lived, according to Homer (II. 19, 460) on very friendly terms with that monarch. Æneas was regarded as the bravest and boldest of the Trojan leaders after Hector, and is even brought by Homer in contact with Achilles. (II. 20, 175, seqq.) He was also conspicuous for his piety and justice, and was therefore the only Trojan whom the otherwise angry Neptune protected in the fight. The posthumous bards assign him a conspicuous part in the scenes that took place on the capture of Troy, and Virgil, taking the traditional stories of the Æneid, has done the same in his Æneid. Æneas fought bravely in the midst of the blazing city until all was lost, and then retired with a large number of the inhabitants, accompanied by their wives and children, to the neighbouring mountains of Iscus. It was on this occasion that he signalized his piety, by bearing away on his shoulders his aged parent Anchises. His wife Creusa, however, was lost in the hurried flight. From this period the legends respecting Æneas differ. While, according to one tradition, of which there are traces even in the Homeric poems, he remained in Æneas, and ruled over the remnant of the Trojan population, he wandered from his native land according to another account, and settled in Italy. This latter tradition is adopted by the Roman writers, who trace him to the origin of their nation, and it forms the basis of the Æneid, in which poem his various wanderings are related, until he is brought to the Italian shores. Following the account of Virgil and the poets from whom he has copied, as far as any remains of these last have come down to us, we find that Æneas, in the second year after the destruction of Troy, set sail, with a newly-constructed fleet of twenty vessels, from Æneas, and visited, first Thrace, and then the island of Sicily. From this latter island he proceeded with his ships for Italy, in the seventh year of his wanderings, but was driven by a storm on the coast of Africa, near Carthage. After a residence of some time at the court of Dido, he set sail for Italy, and reached eventually, after many dangers and adventures, the harbour of Únum. From Únum he proceeded along the shore and entered the mouth of the Ætolian. After a war with the Æolians, in which he proved successful, and slew Turnus, the leader of the foe, Æneas received in marriage Lavinia, the daughter of King Latinus, and built the city of Ævium. The Trojans and native inhabitants became one people, under the common name of Latini. The flourishing state of the new community excited, however, the jealousy of the neighbouring nations; and war was declared by them against the subjects of Æneas, and against Æolia, being placed at the head of the coalition. The arms of Æneas proved successful, but he lost his life in the conflict. According to another account, he was drowned during the action in the river Numicus. Divine honours were paid him after death by his subjects, and the Romans also in a later age regarded him as one of the Æsi Indigetes. The tale of Æneas and the Trojans has been utterly rejected by Niebuhr, but he thinks it a question of little importance whether Æneas was domestic or transported. Having shown that several Helenic poets had supposed Æneas to have escaped from Troy, and that Stesichorus had even expressly represented him as having sailed to Hesperia, 1, e., the west; and then noticed the general belief among the Greeks, of Trojan colonies in different parts, he still regards all this as quite insufficient to prove Æneas to have been of Trojan descent becoming an article of state-faith, with so many people as the Romans. The fancied descent must have been domestical, like that of the Britons from Brute and Troy, the Hungarians from the Huns, &c., all of which have been related with confidence by native writers. The only difficulty is to account for its origin, on which Niebuhr advances the following hypothesis: Everything contained in mythic tales respecting the affinity of nations indicates the affinity between the Trojans and those of the Pelasgian stem, as the Arcadians, Epirotes, Ænotrians, and especially the Tyrrhenian Pelasgians. Such tales are those of the wanderings of Æolians from Corythus to Samothrace and thence to the Sminos, the coming of the Trojans to Latium, of the Tyrrhenians to Lemnos. Now, that the Æolians at Latium, which some of the Æolians told Timaeus were Trojan images, were the Samothracian Æolians, and that the Æolians, Æneas, and the Ælian people, were recognized the affinity of the people of that island. From this time Æneas was regarded as a national hero, not only as religious, and the identity of language, it may have happened that various branches of the nation may have been called Trojans, or have claimed a descent from Troy, and have boasted the
possessions of relics which Éneas was reported to have saved. Long after the original natives of Italy had overcome them, Tyrrenians may have visited Samothrace; Herodotus may have heard Cretans and Placianians conversing together; and Larvianins and Gergithians may have met there, and accounted for their affinity by the story of Éneas. "I hope," say the Larvianins, "that we have the same language and religion with you, and we have clay images at home, just like these here." "Then," may the others have replied, "you must be descended from Éneas and his followers, who saved the relics in Troy, and sailed, our fathers say, away to the west with them." And it requires but a small knowledge of human nature to perceive how easily such reasoning as this would be embraced and propagated. (Nicol’s Rom. Hist. 2d ed., vol. 1, p. 150, seqq., Cambridge transl.—Foreign Quarterly Review, No. 4, p. 533)—II. Silvius, a son of Éneas and Lavinia, said to have derived his name from the circumstance of his having been brought up in the woods (in silvis), whither his mother had retired on the death of Éneas. (Vid. Lavinia.) Virgil follows the account which makes him the founder of the Alban line of kings. (En., 6, 786.) According to others, he was the son and successor of a certain Lavinus, or Oenonas, as the different statement. (Compare Liv., 1, 5.—Auréel. Vict., 16, 17.—Dion. Hal., 1, 70.—Ovid, Fast., 4, 41, and consult Heyne, ad Virg., l. c.)—III. An ancient writer, surnamed Tacticus. By some he is supposed to have flourished about 148 B.C.; others, however, make him anterior to Alexander the Great. Casaubon suspects that he is the same with Éneas of Smyræus, who, according to Xenophon (Hist. Gr., 7, 3), was commander of the Athenians at the time of the battle of Mantinea, about 360 B.C. (Compare Sax. Onom., 1, p. 73.) Of his writings on the military art (Στρατηγικα βιβλία) there remains to us a single book, entitled Τακτικῶν τε καὶ Πολεμικῶν υπόγραμμα, &c. This work is not only of great value on account of the number of technical terms which it contains, but serves also to elucidate various points of antiquity, and makes mention of facts which cannot elsewhere be found. The first edition of Arethas of Orellius, Lips., 1518, was published as a supplement to Schweinheuser’s edition of Polybius.—IV. A native of Gaza, a disciple of Hierocles, who flourished during the latter part of the 5th century of our era, or about 480 A.C. He abjured paganism, and was an eyewitness of the persecution which Hurenic, king of the Vandals, instituted against the Christians, 484 A.C. Although a Christian, he professed Platonism. We have a dialogue of his remaining, entitled Θεοφράστου, which treats of the immortality of the soul and the resurrection of the body. The interlocutors are Αίγυπτος an Alexandrian, Αἴθιος a Syrian, and Θεοφράστου an Athenian. Éneas exhibits and illustrates the Christian doctrines in the person of Arethas, and Theophratus conducts the argument for the heathen schools, while Αίγυπτος now and then interrupts the grave discussion by a specimen of Alexandrian levity. Éneas demands the immortality of the soul and the resurrection of the body against the philosophers who deny it. He explains how the soul, although created, may become immortal, and proves that the world, being material, must perish. In conducting this chain of argument, he mingles the Platonic doctrine of the Logos and Anima mundi with that of the Christian Trinity. He then refutes the objections urged against the resurrection of the body: this leads him to speak of holy men who will arise as dead bodies, and become a temple as an eyewitness the miracle of the confessors, who, after having had their tongues cut out, were still able to speak distinctly. This piece is entitled to high praise for the excellence of the design, and the general ability with which the argument is sustained; although, as the author was the school of Plato, there is something in it, of course, that savours of the Academy. (An able analysis of its contents is given in the N. Y. Churchman, vol. 9, No. 4, by an anonymous writer.) There also remains of his writings twenty-five letters. These last are contained in the epistolary work of Suidas and Copias. The latest edition is that of Bath, Lips., 1655, 4to. Énée. Vid. Énæa. Énæs, the celebrated epic poem of Virgil, commemorating the wanderings of Éneas after the fall of Troy, and his final settlement in Italy. (Vid. Virgilius.) Énésidémus, a philosopher, born at Gnossus in Crete, but who lived at Alexandria. He flourished, probably a short period subsequent to Cicero. Énésidémus revived the scepticism which had been silenced in the Academy, with the view of making it aid in re-introducing the doctrines of Heraclitus. For, in order to show that everything has its contrary, we must first prove that opposite appearances are present in one and the same thing to each individual. To strengthen, therefore, the cause of scepticism, he extended its limits to the utmost, admiring and defending the ten Topics attributed to Pyrrho, to justify a suspicion of nothing. He wrote eight books on the doctrines of Pyrrho (Πυρρίωναν λόγια), of which extracts are to be found in Photius, cod. 212. (Tennemann, Gesch. Phil., ed. Wende, p. 196.) Énénés, or Enienés, a Thessalian tribe, apparently of great antiquity, but of uncertain origin, whose frequent migrations have been alluded to by more than one writer of antiquity, but by none more than Plutarch in his Greek Questions. He states them to have occupied, in part at least, the land of the Epirots, and the Dorian plain (compare Gell’s Itinerary, p. 242); after which they wandered to the borders of Epirus, and finally settled in the upper valley of the Sperchiæus. Their antiquity and importance are attested by the fact of their belonging to the Amphictyonic council. (Pausan., 10, 8.—Harpa- crat., s. v. Ἀμφικτυόνες.—Herod., 7, 198.) At a later period we find them joining other Greek states against Macedonia, in the confederacy which gave rise to the Macedonian War. (Diod. Saec. 11, c. 8.) But in Strabo’s time they had nearly disappeared, having been almost exterminated, as that author reports, by the Étolians and Athamanes, upon whose territories they bordered. (Strabo, 427.) Their principal town was Hyppata, on the river Sperchiæus. Énôichoi, vid. Heniochi. Énobarbus, or Ænobarbus, the surname of L. Domitius. When Castor and Pollex amused him with a victory, he discrèted them; upon which they touched his chin and beard, which instantly became of a copper colour, whence the surname given to himself and his descendants. This fabulous story is told by Plutarch, in his life of Paulus Émilius (c. 25); by Suctonius, in his biography of Nero (c. 1), that emperor being descended from Énobarbus; by Livy (45, 1); and by Dionysius of Halicarnassus (6, 18). Many of the descendants of Énobarbus are said to have been marked by beards of a reddish hue. (Dion. A. L., 1, 7.) The victory mentioned above was that at the Lake Regillus. For an account of the members of this family, vid. Supplement. Énos, a city on the coast of Thrace, at the mouth of the estuary formed by the river Hebrus; and where it communicates by a narrow passage with the sea. Scevanus of Chloris ascribes its foundation to Mytilene. (Scevan., c. 8, 690.—Compare Eustath., ad Dionys. Periegesis in Ilium, regum.; and Cic.-Scevan., l. c.) Stephanus Byzantius, however, makes Cunea to have been the parent-city. Apollodorus (2, 5, 9) and Strabo (319) inform us, that its more ancient name was Polybythia ("City of Polyba"), from a Thracian leader. The adjacent country was occupied by the Cicones, whom 57
Homer enumerates among the allies of the Trojans, Virgil supposes Æneas to have landed on this coast after quitting Troy, and to have discovered here the tomb of the murdered Polydorus (Æn., 3, 22, seqq.): he also intimates that he founded a city in this quarter, which was named after himself. Pliny (4, 11) likewise states, that the tomb of Polydorus was at Ænos. But it is certain, that, according to Homer (Il., 4, 520), this city was called Ænos before the siege of Troy. Ænos first makes its appearance in history about the time of the Persian war. It fell under the power of Xerxes, and, after his expulsion from Greece, was always tributary to that state which chanced to have the ascendancy by sea. The Romans declared it a free city. This place is often mentioned by the Byzantine writers. The modern town, or, rather, village of Æno occupies the site of the ancient city, but the harbour is now a mere marsh. The climate of Ænos, it seems, was peculiarly ungenial, since it was observed by an ancient writer, that it was cold there during eight months of the year, and that a severe frost prevailed for the other four. ( Athenaeus, 8, 44—vol. 3, p. 295, ed. Schievel).—II. A small town in Thessaly, near Mount Ossa, situate on a river of the same name. (Steph. Byz., s. v. Alcuc.)

Ænus. Vid. Ænos. Æolus. Æolus, or Æolli, one of the main branches of the Eolians (Iliad. vi. 377, Hellenes), who are said to have derived their name from Æolus, the eldest son of Hellen. The father reigned over Phthiotis, and particularly over the city and district then called Hellas.

To these dominions Æolus succeeded, and his brothers Dorus and Xuthus were compelled to look for settlements elsewhere. ( Strabo, 383.—Conon, Narr., 27 — Pausan., 7, 1—Herod., 1, 56) According to Apollodorus (1, 7, 2), Æolus ruled over all Thessaly; this authority is supported by the opinion of the Phorodes, from whom it appears (1, 56) that the Dorians held Histiaea under their sway. From Æolus, the Hellenes, in Hellas properly so called, and the Phthiotic Pelasgi, who became blended with them into one common race, received the appellation of Æolians. (Compare Herod., 1, 57.—Id., 7, 95.) The sons and later descendants of Æolus spread the name of Æolia beyond these primitive seats of the Æolic tribe. Crete, the island of Æolus, reigned at first over the territories of his parents; Phthiotis and Hellas; subsequently, however, he led a colony to Iolcos (Apollod., 1, 9, 11), and from this latter place, Phereis, his son, colonized Phere, on the Anapolis. ( Apollod., 1, 9, 14.) Magnes, the second son of Æolus, founded Magnesia (Apollod., 1, 9, 6), and his own sons Polyductes and Dictys led a colony to Seriphus. Another son, Pierus, settled in Pieria. (Apollod., l. c.) Siyphus, the third son of Æolus, founded Corinth (Apollod., 1, 9, 13), whose Æolic population, previous to the irruption of the Dorians into the Peloponnesus, is acknowledged even by Thucydides (4, 42). Athamas led an Æolic colony into Bœotia (Apollod., 1, 9, 1), and, as Pausanias informs us, to Orchomenus, and to the district where Halartus and Coronea were afterwards built. (Pausan., 9, 34.—Compare the scholiast on Apollonius Rhodius, 2, 1190, who calls the Orchomenians άρχον τῶν Οήκονων.) Hence Apollodorus calls Orchomenus an Æolic city, although it existed long before this, in the time of Ogyges, under the name of Athena. (Steph. Byz., s. v. Αθηναίων.) Thucydides mentions the Æolic origin of the Boeotians (Thucyd., 3, 2.—Id., 7, 57), and we see from Pausanias (9, 22), that the language of the Boeotians was more Æolic than Doric. The name of Athamas may be traced in that of the Athenian nation, between Mount Acræmonium and the sea (Pausan. 9, 24), and which was called after the Athamanian field, in the primitive Æolic settlements in Thessaly, where Athamas had killed his own son. (Etym. Mag., s. v. 'Αθάματων.)—Rochette, Col. Gr., vol. 2, p. 26, calls this "un canton de la Boiotie" merely, but the words of the etymologist are express: ἂτι τε πέντες εἰς Θεσσαλία καλοῦντες Ἀλεύανα, διά τὸ ἐκκένωσεν κ.τ.λ. Even Thébæ itself, built at the foot of the Phænican mountain Cadmea, would seem, from the remark of the scholiast on Πνέας (Nem., 3, 127), and from the analogy between its name and that of Phthiotic Thebes, to have been an Æolian settlement. From the sons of Athamas and Alcæa, the city of Schemus and Mount Pausa received their appellations. (Steph. Byz., s. v. Ξώναυος— Pausan., 9, 23.) The name, too, of the Boeotian national goddes, the Ionian Minerva, at Orchomenus, is most probably not to be derived from a fabulous hero Itonus (Steph. Byz., s. v. Άυλθονος—Pausan., 9, 34), but from the city of Itonus, in the primitive settlements of the Æolic Boeotians. Aspledon also was founded by the same Æolians who had settled in Orchomenus. (Steph. Byz., l. c.) An Æolic colony, according to Apollodorus (1, 9, 4), was also led into Phoci, under Deion, the fifth son of Æolus, and where Phocus, a later descendant of Sysypheus, gave his name to the race. (Pausan., 2, 22.) The sixth son of Æolus, called by Hesiod the "lawless Salmonæus," remained for a long time in Thessaly (Apollod., 1, 9, 7, and 8), where his daughter Tyro married Crethus. His departure from this country coincides, very probably, with the expulsion of Crethus and the primogeniture of Hellenes. He migrated to the Peloponnesus, and settled in the district of Elis, which had not, as yet, been occupied by Phrygian colonists. He built Salonea, and is called by Hesiod the "lawless," from his attempt to imitate Jove while hurling the thunderbolt. (Ser. hist. V., 6, 853.) Among his posterity we may name Neleus, who founded Pylos in the adjacent region of Messenia (Apollod., 1, 9, 9—Pausan., 4, 36), and in his turn was the father of Aeneas, to whom, his brother Pelias, the Olympic games. (Pausan., 5, 1, 8.)

So also Perieres, king of Messenia, is made a son of Æolus (Hesiod, fragm. v. 75—Apollod., 1, 9, 3), although the Spartans claimed him as a descendant of the royal line of Laconia, and a son of Caytortas. (Apollod., 1, 9, 3.) Besides these sons of Æolus, respecting whose origin the ancient mythographers in general agree, and who spread the Æolic race over middle Greece, we have to notice the Æolians of Epirus, founded by Æolus, Circephus (Demetrius Scopus, ap. Strab., 9, p. 438), whose son founded Ormenium, on the island of Epirus (Steph. Byz., s. v. Ιέλικατος), and Macedon or Macedo (Helames, ap. Const. Porph. Thom., 2, 2—Eustath., ad Dionys. Perieget., v. 427), whose descent from Thyia, a daughter of Deucalion, is alluded to by Hesiod (Hex., ap. Const. Porph. Thom., 2, 2). The posterity of Æolus spread the dominion and name of the Æolic race still farther. Æolus, who was compelled to fly from the court of his father Endymion (a son-in-law of Æolus) at Elis, retired to the land of the Curetes, and gave name to Æolia. ( Vid. Aecarnania.) His sons Pleuron and Calydon founded these two cities, called after them, and established two petty principalities. (Apollod., 1, 7, 7.) Epeus, another son of Endymion, gave to the Eleans the name of Epei (Pausan., 5, 1, 1). While Aegaeon, the third son, settled, with his Æolian followers, on the banks of the Axios, and gave to the united race of Æolians and Pelasgians in this quarter, the name of Paeonians. In the Trojan war, these Paeonians fought on the side of the Trojans (Hom. Il., 2, 848): whence we may infer, that, although the tribes around the Axios were Hellenized, yet the Pelasgic population still retained the numerical superiority. During this time Pelus was taken possession of by the Paeonians, and Mount Athos by the Epei from Olympia. (Pausan., 5, 1, 1.) Eleis, however, the son-in-law of Endymion, had received the kingdom in place of the fugitive Æolus, and from him the Epei were now called Elei, or, according to the Æolic mode of writing, Falei.
The Achaian, but, in Achaia, there was a settlement of Phocian movements, led by Pausan (Pausan. 2, 1), a name first applied to the country around Delphi and Thibotera. The latter of these places was the primitive settlement of Phocus (Pausan. 2, 4), while Hippamias was the early colony of Ornithion. (Schol., ad Eurip., cited by Kuhn, ad Pausan., i. c.) The farther Settlement of Phocis is ascribed by some to another Phocus, who is said to have led an Achaian colony to this quarter, which crossed from the island of Alginon. (Schol., ad Pausan. 2, 26.—Id. 10. 1.—Eustataian, ii. 2, 522.—Schol., ad Apoll. Rhod., 1, 507.) Raoul-Roquette, however, correctly remarks, that the murder of the young Phocus by Telemon and Polens contradicts this tradition. (Colon. Gr., vol. 2, p. 56.)

The Achaian branch of Cretheus finally spread itself through Myathon, the son of Cretheus, over Messenia (Apollod., 1, 9, 11), and through Melampus and Bias, sons of Amythaon, over the coast of Argos and Peloponnesus. They crossed from the island of Alginon, a descendant of Melampus.—From the enumeration through which we have gone, it would appear that the Hellenic-Achaian stem, before the Trojan war, was spread, in northern Greece, over almost all Thessaly, over Pieria, Paeonia, and Athamania: in Middle Greece, over the greater part of Boiotia, Phocis, Locris, Aetia, and Arcamania: in southern Greece, or the Peloponnesus, over Argos, Elis, and Messenia. It would appear, also, that, during this period, Leleges, Cretes, Pelasgi, Hyantes, and Lapithae became intermingled with the Hellenic-Achaian tribes, and that a close union was formed likewise between the latter and the Phocienian Cadmeans in Boiotia. The state of things which has here been described, continued until the Trojan war and the subsequent invasion of the Peloponnesus, by the Dorians, produced an entire change of affairs, and sent forth numerous colonies both to the eastern and western quarters of the world. For some account of these movements, consult the following articles: Achaea, Aetia, Doris, Grecia, Hellenes, and Ionia.

Aolia, or Eolias, a region of Asia Minor, deriving its name from the Aelians who settled there. The Aelians were the first great body of Greek colonists that established themselves in Asia Minor, and, not long after the Trojan war, founded several towns on different coasts of the Eolian islands, both of the Gulf of Helles and of the river Hermus. But it was more especially in Lesbos, which has a right to be considered as the seat of their power, and along the neighbouring shores of the Gulf of Eilea, that they finally concentrated their principal cities, and formed a federal union, called the Aelian league, consisting of twelve states, with several inferior towns to the number of thirty. The Aelian colonies, according to Strabo, were anterior to the Ionian, as well as the Peloponnesian. The Aelians had himself designed to lead the first; but his death preventing the execution of the measure, it was prosecuted by his son Penthius, who advanced with his followers as far as Thrace. This movement was contemporary with the return of the Heraclides into the Peloponnesus, and most probably was occasioned by it. After the decease of Penthius, Archelass, or Echelassus, his son, crossed over with the colonies into the territory of the coast, and on the island of Dascylus. Gras, his youngest son, subsequently advanced with a detachment as far as the Granicus, and not long after crossed over to the island of Lesbos and took possession of it. Some years after these events, another body of adventurers crossed over from Locris, and founded Cyme, and other towns on the Gulf of Eilea. They also took possession of Smyrna, which became one of the twelve states of the league. But this city having been wrested from them by the lonian, the number was reduced to eleven in the time of Herodotus. These, according to that historian (1, 149), were Cyme, Lariass, Neanthichos, Turnessus, Cilla, Nenut, Lycorea, Telamon, Hesperia, Cyme, and Cyrene. Aelias extended in the interior from the Hermus on the south, to the Caicus, or perhaps, to speak more correctly, as far as the country around Mount Ida. On the coast it reached from Cyime to Pitane. All the Aelian cities were independent of each other, and had their own constitutions, which underwent many changes. An attempt was frequently made to restore quiet, by electing arbitrary rulers, with the title of Elymene, for a certain time, even for life, of whom Pitalakes, in Mytilene, the contemporary of Sappho and Alceus, is best known. The Aelians, in common with the other Greek colonies of Asia, excepting those established in the islands, had become subject to Creassus; but, on the overthrow of the Lydian monarch by Cyrus, they submitted, along with many of the islanders, to the arms of the conqueror, and were thenceforward annexed to the Persian empire. They contributed sixty ships to the fleet of Artaxerxes, and, in the contest which followed, their soil was more fertile than that of Ionia, but the climate inferior (1, 149). In the time of Xenophon, Aelias formed part of the Hellespontine satrapy held by Pharadabuz, and it appears to have comprised a considerable portion of the country, that was known at an earlier period by the name of Troas. (Hell., 3, 18.) Wrested by the Romans from Antiochus, it was annexed to the dominions of Eumenes. (Lis., 39, 38, &c.) For an account of the Aelian movements in Lesbos, consult the description of that island, s. a. Lesbos.

Eolias, seven islands, situate off the northern coast of Sicily, and to the west of Italy. According to Mela (2, 7), their names were Lipara, Osteodes, Heraclea, Didyma, Phaneucia, Hiera, and Strongyle. Pliny (3, 9) and Didiodorus (5, 7), however, give them as follows: Lipara, Didyme, Phaneucia, Hiera, Strongyle, Erycusa, and Eunomus. They are the same with Homer’s Iliaca, or “wandering islands.” (Od., 12, 68, &c.) Other names for the group were Hepheuasides and Vulcana Ianuilia, from their volcanic character; and Lipare, from Lipara, the largest. The appellation of Aelias was given to them from their having formed the fabled domain of Eolus, god or ruler of the winds. The island in which he resided is said by some to have been Lipara, but the greater part of the ancient authorities are in favour of Strongyle, the modern Stromboli. (Herod. Exon., d. E. Fam. 1, 51.) A passage in Pliny (3, 9, 14) contains the germ of the whole fable respecting Aelias, wherein it is stated that the inhabitants of the adjacent islands could tell from the smoke of Strongyle what winds were going to blow for three days to come. (Vid. Lipara, Strongyle, and Aelius.)

Eoliades, a patronymic applied to various individuals. I. Athanas, son of Eolus. (Os. Met., 4, 511.) II. Penthilus, a king of Grecia. (Od., 12, 681.) III. Sisyphus, son of Eolus. (Id. ibid., 13, 25.) IV. Ulysses, to whom this patronymic appellation was given, from the circumstance of his mother, Anticlea, having been pregnant by Sisyphus, son of Eolus, when she married Laertes. (Virg. Aen., 6, 529, and Hymne, in Var. Lect., ad loc.) V. Menes, the trumpeter of Aeneas, called Aelides, figuratively, from his skill in blowing on that instrument. Consult, however, Hymnus, in Var. Lect., ad loc. VI. Aelian. (Vid. Aelius.)

Aelites, I. the god or ruler of the winds, son of Hippotas and Melanippe daughter of Chiron. He reigned over the Aelian islands, and made his residence at Strongyle, the modern Stromboli. (Vid. Aelites.) Homer calls him "Aelus Hippotadetes (i. e., son of Hippotas), dear to the immortal gods," from which passage we might perhaps justly infer, that Aelus was not,
properly speaking, himself a god. (Od. 10, 2.) His island was entirely surrounded by a wall of brass, and by water which rose at every sight, until the first cockcrow. And here he dwelt in continual joy and festivity, with his wife and six sons and as many daughters. The island had no other tenants. The sons and daughters were married to each other, after the fashion set by Jupiter (καθ’ δὲ καὶ ὅ Πειρες συνέκυκλο τῆς Ἱππώ, Eustath. ad loc.), and are nothing more than a poetic type of the twelve months of the year. (Compare Eustath. ad loc.) The office of directing and ruling the winds had been conferred on Eolus by Jupiter (Octav. 10, 21, seqq.; Vene. En., 65); but his great protector was also Juno (Virg. Æm. 1, 78, seqq.), which accords very well with the ideas of the earlier poets, who made Juno merely a type of the atmosphere, the movements of which produce the winds.—Ulysses came in the course of his wanderings to the island of Eolus, and was hospitably entertained there for an entire month. On his departure, he received from Eolus all the winds but Zephyrus, tied up in a bag of ox-hide. Zephyrus was favourable for his passage homeward. During nine days and nights the ships ran mercilessly before the wind: on the tenth they were within sight of Itaca; when Ulysses, who had hitherto held the helm himself, fell asleep: his comrades, who fancied that Eolus had given him treasure in the bag, opened it: the winds rushed out, and hurried them back to Eolia. Judging, from what had befallen them, that they were hated by the gods, the ruler of the winds drove them with reproaches from his isle. (Keightley’s Mythology, p. 240.)—The name Eolus has been derived from αὐλός, “earying,” “unsteady,” as a descriptive epithet of the winds.—II. A son of Hellen, father of Sisyphus, Cretheus, and Athamas, and the mythic progenitor of the great Eolic race. —III. A son of Neptune and the nymph Arne. (Eustath. ad Od. 10, 2.)

Éoïnes (αὐλώς), or Éones, a term occurring frequently in the philosophical speculations of the Gnostics. The Gnostics conceived the emanations from Deity to be divided into two classes; the one comprehended all those substantial powers which are contained within the Divine Essence, and which complete the infinite plenitude of the Divine Nature: the other, existing externally with respect to the Divine Essence, and including all finite and imperfect natures. Within the Divine Essence, they, with wonderful ingenuity, imagined a long series of emanative principles, to which they ascribed a real and substantial existence, connected with the first substance as a bunch with its root, or a solar ray with the sun. When they began to unfold the mysteries of this system in the Greek language, these Substantial Powers, which they conceived to be comprehended within the πλήρωσις, or Divine Plenitude, they called αὐλώς, Εώς. (Engel’s History of Philosphy, vol. 2, p. 142.)

Épira, or Epeia, a town in the island of Cyprus. (Vid. Soloe.)

by Eutimos, an engraver on precious stones, who flourished in the second century of our era. One of his gems, with the head of Marcus Aurelius Antoninus, is still extant. (Bracci, P. 1, tab. 3.—Sillig, Dict. Art., s. v.)

Érytus, I. king of Messenia, and son of Cresphontes. His father and his two brothers were put to death by Polyphontes, who usurped, upon this, the throne of the country. Érytus, however, was saved by his mother, Minos, who had him changed into a man from the body of her husband, and was sent by her to the court of her father Cypselaus, king of Arcadia, to be there brought up. On attaining to manhood, he slew Polyphontes, and recovered the throne. His descendants were called Érytidae. (Apollod., 2, 8, 5.—Heyne, ad Apollod., 1.—II. A king of Arcadia, and son of Elatus. He was killed, in hunting, by a small species of serpent, called οὐρ. (Pausan., 8, 4, 4.)—III. A king of Arcadia, son of Hippothous, and contemporary with Orestes, son of Agamemnon, who, in obdation, brought the Delphic oracle, migrated into Arcadia from Mycenæ during this monarch’s reign. Érytus having, on one occasion, boldly entered the temple of Neptune, near Mantinea, which no mortal was allowed to do, is said to have been deprived of sight by a sudden eruption of salt water from the sanctuary, and to have died soon after. (Pausan., 8, 10.)

This story, if true, points of course to some artifice on the part of the priests of the temple. The “salt water” was probably some sour acid. (Compar. Sulp. Nurt. Be, Sciences Occultes, vol. 1, ch. 15.) IV. A monarch who ruled in the Southern part of Arcadia, and who brought up Evadne, daughter of Neptune and the Laconian Pitan. (Pind. Ol., 6, 54.—Compare Böckh, ad loc.)

Équéi or Équeccoli, a people of Italy, distinguished in history for their early and incessant hostility against Rome, more than for the extent of their territory or their numbers. Livy himself (7, 12) expresses his surprise, that a nation, apparently so small and insignificant, should have had a population adequate to the calls of a constant and harassing warfare, which it carried on against the city of Rome for so many years. But it is plain, from the narrow limits which must be assigned this people, that their contests with Rome cannot be viewed in the light of a regular war, but as a succession of marauding expeditions, made by these hardly but lawless mountaineers on the territory of that city, and which could only be effectually checked by the most entire and rigid subjection. (Livy, 10, 1.) The Équéi are to be placed next to the Sabines, and between them and the Marsi, chiefly in the upper valley of the Anio, which separated them from the Latins. They are said at one time to have been possessed of forty towns; but many of these must certainly have been little more than villages, and some also were subsequently included within the boundaries of Latium. The only cities of note, which all geographers agree in assigning to the Équéi, are Varia and Carsooli, on the Via Valeria. (Cramer’s Anc. Italy, vol. 1, p. 322) “Almost inseparable from the Volsci in Roman story,” observes Niebuhr (Rom. Hist., vol. 1, p. 58, Cambridge transl.), “we find the Équéi or Équeccoli, who are described as an ancient people, and threatening Rome. They are so often confounded with the Volsci, that the fortress on the Lake Fucinus, which the Romans took in the year of the 247th Olympiad, they called Équecium, and which Evagrius says that the Volsci had departed from the time of Tarquinius Superbus for more than two hundred years, he considers the Volsci and Équéi as one people.” This remark of Niebuhr’s, however, admits of some modification, as will appear from what precedes. The Équéi and Volsci should undoubtedly be kept distinct, though originating evidently from the same parent-race.

Érythrae, a place at Rome, in the Vicus Jugurthai, at the base of the Capitoline Hill, where once had stood the mansion of Spurius Melius. This individual, having aspired to supreme power, was slain by Ahala, master of the horse to the dictator Cincinnatus, and his dwelling was razed to the ground. Hence, according to Varro (L. L. 4, 32), the etymology of the term Érythraeum, “a cold, gray sea, the Melius domain.” (Compare Liv., 4, 16.) Cicero and Valerius, however, have transmitted an etymology, derived from the just nature of the punishment inflicted upon Melius (“ex aequo suo justo suppticio Melii.”—Consult Cic. pro Dom., c. 38, and Val. Max., 6, 3.)

Éphias, an ancient king of Cyprus, who built the temple of Venus at Paphos. A later tradition made this temple to have been founded by Cinyras. (Tacit. Hist., 2, 3.)
AESCHINES.

Aeschin., I. [Caretus, king of Crete, and grandmother, on the father's side, of Minos. She and her sister Clymene, having been guilty of incontinence, were delivered over by their father, into the hands of Nauplius of Euboea, to be conveyed by him to foreign lands, and there sold into slavery. Nauplius, however, married Clymene to his brother, the king of Grecia, and thereby became the father of Plisthenes, son of Nauplius, and became by him the mother of Agamemnon and Menelaus. Plisthenes, however, dying young, his father, took Aesopé to wife, and brought up Agamemnon and Menelaus as his own sons. Aesopé subsequently was seduced by Thyestes, brother of Atreus, an act which was punished so horribly by the injured husband. (Vid. Atreus and Thyestes.) Aesopé was married also to his own mother, according to some, and to the sea by Atreus. (Apollod., 3, 2, 3.—Heyne, ad Apollod., l.c.—Schol. in Eurip. Orest., 812.—Brunck, ad Soph. Aj., 1255.)—II. Daughter of Cepheus, became the mother of Aëops by the god Mars. She died in giving birth to her offspring. (Pausan., 8, 44.)

AESOPUS, I. [Son of Mars and Aesopé. (Vid. Aëope, II.)—II. Son of Temenus, who, with his two brothers, left Argos, and settled in Macedonia. Perdiccas, the youngest of the three, was the founder of the Macedonian royal line. (Herod., 8, 137. Compare Thucyd., 2, 99, and consult the article Macedonia.)—III. A king of Macedonia, who succeeded, while yet an infant, his father Philip the First. The Illyrians having made an inroad into Macedonia, and having proved successful at first, were afterward defeated by the Macedonians, the infant king being placed in his cradle in the rear of their line. (Justin, 7, 2.—IV. A regent of Macedonia, during the minority of Orestes, the son of Archelaus. He usurped the supreme power, and held it six years, from 400 B.C. to 394 B.C.—V. A mountain of Epirus, now Mount Trebacehna, near the defile anciently called Stena Aoi, or "Gorge of the Aous." On one of the precipices of this mountain stands the fortress of Chissara. (Consult Hughes' Travels, vol. 2, p. 272.)

AESICUS, according to Ovid (Met., 11, 762, seqq.), a son of Priam and Alexirhoe, who at an early age quitted his father's court and retired to rural scenes. He became enamoured of the nymph Hesperia; but she treated his suit with disdain, and, in endeavouring on one occasion to escape from him, lost her life by the bite of a serpent. Esicuc, in despair, threw himself headlong from a rock into the sea; but Tethys, pitying his fate, suspended his fall, and changed him into a cormorant. A different account is given by Apollodorus. According to this writer, Esicuc was the son of Priam, by his first wife Arisia, and married Asterope, who did not long survive her union with him. His grief for her loss induced him to put an end to his existence. Esicuc was endeared by his grandmother Merope with the gift of prophecy; and he transmitted this art to his brother and sister, Helenus and Cassandra. Priam, having divorced Arisia that he might marry Helenus, gave Esicuc to Arisia, and he having dreamed that she had brought forth a blazing torch, which wrapped in flames the whole city, Esicuc predicted that the offspring of this marriage would occasion the destruction of his family and country. On this account, the infant Paris, immediately after his birth, was exposed on Mount Ida. (Apollod., 3, 12, 5, seqq., and Heyne, ad loc.)

AESAR. an Etrurian word, equivalent to the Latin Dares (Darse.—Verg. ctr. 97.) The lightnings, having struck a statue of Augustus at Rome, effaced the letter C from the name Cesar on the pedestal. The augurs declared that, as C was the mark of a hundred, and AESAR the same as Deus, the emperor had only a hundred days to spend on earth, after which he would be taken to the gods. The death of Augustus, soon after, was thought to have verified this prediction. (Sueton., i. c.—Dio Cass., 56, 29.) Cassaubon derives the Etrurian term just referred to from the Greek Aoas, "fate," and Dickinson (Delph. Phanatizc, c. 11) from the Hebrew, comparing it also with the Arabic asara, "to create." Lanzu (Saggio di Ling. Etrusc., vol. 3, p. 708), after quoting Cassaubon's derivation, states that the word Cesar occurs in the same, with amsi, as the root. The Aoi (or, more correctly, Aesir) of Scandinavian mythology will furnish, however, a more obvious and satisfactory ground of comparison. The term Aoi is equivalent to "Deus" or "God," and the plural form is Aesir, "Gods." Hence Asgard, or Aasgard, the old northern term for "heaven." It is curious to observe, that Os in Otic likewise signifies "God" or "Lord," with which we may compare the death of Athena by "holy." So, more correctly, the latter term for "alter" in the Latin language was ana. (Tert. Scaur., p. 2252, 2258.) In Berossus, moreover, the gods are termed Isi; and good deities or geniiesses were called by the ancient Persians Ized. ( Müller, Etrusker, vol. 2, p. 81.—Kanne, System der Indischen Mythol., p. 223.)

AESAR. Vid. Supplement.

AESARUS, a river of Bruttium, on which Crotona was situated. It was navigable, but, however, incommodious compared with those of Tarentum and Brundisium, was long a source of great wealth to this city, as we are assured by Polybius (Frag., 10, 1). The modern name is the Esaro. (Compare Theocr., Id., 4, 17.)

AESCHINES, I. An Athenian philosopher, of mean birth and indigent circumstances, styled the Socratic (δ Σωκρατικος) for distinction sake from the orator of the same name mentioned below. He flourished during the fourth century B.C., and obtained instruction from Socrates, who honoured his ardent zeal for knowledge, and held him in high estimation. (Diog. Laert., 2, 60.—Senec. de Benef., 1, 8.) When Eschines addressed himself to the sage for the purpose of becoming his disciple, it was in the following words: "I am poor, but I give myself up entirely to you, which is all I have to give. The reply of Socrates was characteristic: "You know not the value of your present." After the death of his master, he endeavoured to better his worldly condition, and, having borrowed a sum of money, became a perfumer. It appears, however, that he did not succeed in this new vocation; and, not paying the interest of the sum he had borrowed, he was sued for the debt. Athenaeus (13, p. 611, d) has preserved for us part of a speech delivered by Lysias on this occasion, in which he handles Eschines with considerable severity, and charges him with never paying his debts, and with defrauding a certain individual of his property, corrupting his wife, &c. Not being able to live any longer at Athens, he betook himself to Sicily, and sought to win the favour of the tyrant Dionysius. According to Lucian (de Parasit.—ed. Bip., vol. 7, p. 137), he accomplished his object by reading one of his dialogues, entitled Mitidae, to the tyrant, who liberally rewarded him. Plutarch (de Disc. amic. et adulat. Redakt., p. 2485, ed. Reiske, vol. 6, p. 2454) informs us, that he had been strongly recommended to Dionysius by Plato, in a conversation which they had together subsequent to the arrival of Eschines, in which Plato complained to the tyrant of his neglecting a man who had come to him with the most friendly intention, that of improving him by philosophy. The statement of Diogenes Laer- tius, however, is directly opposite to this, for he informs us that Eschines was slighted by Plato, and that he introduced him. He remained in Sicily till the expulsion of Dionysius, and then returned to Athens. Here, not daring to become a public rival of Plato or Aristippus, he taught philosophy in private, and received payment for his instructions. He also composed orations and pleadings for others. Besides orations and epistles, Eschines wrote seven So-

61
ESCHINES.

ESCHINES.

cratic dialogues in the true spirit of his master, on
temperature, moderation, humanity, integrity, and
two virtues. Their titles were, Μιλήσιας, Κάκιλς, Άσιο-
χος, Άσπαια, Άκλωνδρας, Τηλαύγης, and Πέινος.
On this account they have been, and indeed, three his-
dogmatexts, which go under the name of Eschines,
but the first and second are not his, and very probably
the third also was never composed by him. (Meiners,
Judicium de quibusdam Socracorum reliquis.—Comment.
Dial., p. 23, 49, 107, ed. 1786.) Their titles are
1. Πέρι Ἀρητῆς, εἰ διδασκαλοΰμεν. "Concerning vir-
tue, and whether it can be communicated by instruc-
tion." 2. Ερίτης, ἢ περὶ πλούσιου. "Erethis, or con-
cerning riches." 3. Άσιοχος, ἢ περὶ Χανώτου. "AXiochus,
or concerning death." This last is attributed
by some to Xenocrates of Chalcodon, and, what
makes it extremely probable that Xenocrates was
the author of the piece, is the circumstance of its contain-
ing the word ἀλεκτρονοπόρος, for which Polux cites
the Axiochus of this very philosopher. Diogenes Laer-
tius, moreover, informs us, that Xenocrates wrote a
work on the same subject. The manner in which
this production does not seem to indicate that it had
the form of a dialogue. A letter, ascribed to ᾿Eschi-
nes, is, in like manner, supposed to be the production
of another writer. Eschines pretended to have re-
ceived his dialogues from Xanthippe, the wife of So-
crates; and Diogenes Laertius states that Aristippus,
when reading them, called out, πῶς ἔθετο, ποιήσατε;
"where did you get these from, you thief!" Little
reliance, however, can be placed on either of these ac-
counts. The three dialogues ascribed to ᾿Eschines
are found in the old editions of Plato, since that of
Alc. 1513. The Axiochus is given by Wolf, in the
collection entitled Doctrina recte vivendi ac monendi,
Basl., 1577 and 1586, 8vo. Le Clerc first published
these dialogues separately, at Amsterdam, 1711, in 8vo.
Horræus gave a new edition and a new Latin version
at Leewarde, 1718, in 8vo. Fischer published four
dedications successively at Leipzig, in 1758, 1762, 1786,
and 1788, 8vo. The last contains merely the text
with an Index, so that the third is the most useful to
the student. Fischer's editions are decidedly the
better. The letter mentioned above was published by Sammet,
in his edition of the letters of ᾿Eschines the orator.—II.
An Athenian orator, born 397 B.C., sixteen years be-
fore Demosthenes. According to the account which
᾿Eschines gives of his own parentage, his father was
of a family that had a great deal of power, and, among
the rest, of the Eteobutades. Having lost his property by
the calamities of war, he turned his attention, as the son
tells us, to gymnastic exercises; but, being there-
lessly driven out by the thirty tyrants, he retired to
Asia, where he served in a military capacity, and greatly dis-
tinguished himself. He contributed afterward to the
restoration of the popular power in Athens. One of
the orator's brothers served under Phicrates, and held a
commission of his own, the other of the Ephor. The
younger of them was sent as ambassador from the republic to the King
of Persia. Such is the account of ᾿Eschines himself
(de male gesta leg., p. 47 and 48, ed. Steph.). That
given by Demosthenes, however, in his oration for the
crown, is widely different. According to that,
the father of ᾿Eschines was originally a slave to a
schoolmaster, and his first name was Tropes, which,
upon gaining his freedom, he changed to Atrotemus,
in accordance with his new occupation. His second
name was Enpuma, an appellation which Demosthenes
inform us was given to him on account of her habits
of life, she being a common courtezan. This name
was afterward changed to Glanocines. (Demosth.
de corona, p. 270, ed. Reiske.) The statement of
Demosthenes, coming as it does from the lips of a rival,
might well be suspected of exaggeration; and as ᾿Es-
chines did not reply to the speech of his opponent, we
know not how he might have met these disgraceful
charges. If, however, any inference is to be drawn
from the feeble manner in which he replies to similar
charges, made by the same orator on a different occa-
sion, it must be that ᾿Eschines did not think fit to go
beyond a doubt, been instrumental in producing this rev-
olution in his sentiments, and we find him ever after-
ward a warm partisan of Philip's, and blindly second-
ing all his ambitious designs. From this period ᾿Es-
chines and Demosthenes became open antagonists.
The latter, in concert with Timarchus, having medi-
tated an impeachment of his rival for his conduct
on another embassy, when he and four colleagues purpose-

62
by wasted time in Macedonia, while Philip was prosecuting his conquests in Thrace. Aeschines anticipated their attack by an accusation of Timarchus himself, and spoke with so much energy, that the latter either hung himself in despair, or, according to another authority, was condemned, and deprived of his rights as a citizen. Demosthenes, however, not intimidated by the blow, preferred his original charge against Aeschines, and, according to Photius (Biblioth., vol. 1, p. 20, ed. Bekker), came so near accomplishing the object he had in view, that his rival was only saved by the active interference of a wealthy citizen named Eubulus, an open enemy of Demosthenes, and by the judges rising from their seats before the accusation was brought to a close. After many subsequent collisions, Aeschines was compelled to yield to the patriotism and eloquence of his adversary. Their most famous controversy was that which related to the crown. A little after the battle of Cheronaea, Demosthenes was commissioned to repair the fortifications of Athens. He expended, in the performance of this task, thirteen talents, ten of which he received from the public treasury, while the remaining three were generously given from his own private purse. As a mark of public gratitude for this act of liberality, Ctesiphon proposed to the people to decree a crown of gold to the orator. Aeschines immediately preferred an impeachment against Ctesiphon, alleging that such a decree was an infringement of the established laws, inasmuch as certain public offices, and his accounts had not therefore been settled, and besides, since he was not such a friend to the state as Ctesiphon had represented him to be, who, had, therefore, put upon record documents of a false and erroneous character. Demosthenes, on whom the attack was virtually made, appeared in defence of the accused. This celebrated cause, after having been delayed for some time in consequence of the troubles arising from the war, was brought to a hearing. Ability and eloquence were displayed on both sides, but the palm was won by Demosthenes; and his rival, being found guilty of having brought an unjust accusation, was obliged to undergo the punishment he had intended for Ctesiphon, and was banished from his country. It is stated by Photius (Biblioth., vol. 2, p. 493, ed. Bekker), that Aeschines, when he left Athens, was followed and assisted by Demosthenes, who introduced orators to his office. As he replied, ’How shall I be able to bear my exile from a city, in which I leave behind me enemies more generous than it is possible to find friends in any other.’ Plutarch, however, ascribes this very answer to Demosthenes, when his opponents made a similar offer to him as he was departing from Athens into exile. Aeschines retired to Asia with the intention of presenting himself before Alexander; but the death of that monarch threw down the existing order of things. Aeschines, however, is different from this, and certainly more probable. The auditors of Aeschines at Rhodes expressed, as he informs us, their surprise that a man of so much ability should have been overcome by Demosthenes: ’Had you heard that wild beast (τὸν θησαυρὸν κτητόν),’ exclaimed Aeschines, ’you would have ceased to be at a loss on this head.’ (ἐξ ἀκούσας τοῦ διδομένου ὑπὸ τοῦ τοῖοῦ ὑπάμαχον Φιλοτ. Biblioth., vol. 1, p. 20, ed. Bekker.) He subsequently transferred his school from Rhodes to Samos, where he died at the age of 75 years. We have only three orations of Aeschines, and it would seem that these were his sole remaining productions, even at an early period, since Photius states, that it was customary to designate these speeches by the name of the Graces of Aeschines.” The most celebrated of these harangues is the one ostensibly directed against Ctesiphon, but in reality against Demosthenes. It is remarkable for order, clearness, and precision, and was selected by Cicero to be translated into Latin. The Abbe Barthelmeuy makes the eloquence of Aeschines to be distinguished by a happy flow of words, by an abundance and clearness of ideas, and by an air of great ease, which arose less from art than nature. The ancient writers appear to agree in this, that the manner of Aeschines is softer, more insinuating, and more delicate than that of Demosthenes, but that the latter is more grave, forcible, and convincing. The one has more of address, and the other more of strength and energy. The one endeavours to steal, the other to force, the assent of his auditors. In the harmony and elegance, the strength and beauty of their language, both are deserving of high commendation, but the figures of the one are finer, of the other bolder. In Demosthenes we see a more sustained effort, in Aeschines vivid, though momentary, flashes of oratory. Besides the speeches above mentioned, twelve epistles are attributed to Aeschines, which he is supposed to have written from Rhodes. Photius makes the number fourteen. The few orations, publicly pronounced, by this circumstance, the Muse of Aeschines. One of the best editions of Aeschines is that of Wolf, containing also the orations of Demosthenes. It was first printed at Basle by Opurinus, afterward at the same place in 1549 and 1572, at Venice in 1550, and at Frankfurt in 1604. The orations of Aeschines are also contained in Reiske’s excellent edition of the Greek Orators, Lips., 1770, &c., 12 vols. 8vo, and in the valuable Library of the Athenians, compiled by Mr. Mead, 1769, 8vo, 2827. To these may be added the edition of Foulkes and Friend, Oxon., 1896, 8vo, and that of Stock, Dublin, 1769, 2 vols. 8vo. These last two editions, however, contain merely the orations of Aeschines and Demosthenes respecting the crown. The epistles were published separately by Sammet, Lips., 1771, 8vo.—III. The author of a harangue entitled Deliuca, which some have attributed to Aeschines, was a man of great talents, Demosthenes, and probably of Aescharion. An Arcadian, a disciple of Isocrates. (Id.)—V. A Mytilenean, surnamed the scourge of orators, ἄρρυπομαύρης. (Id.)—VI. A native of Neapolis, and member of the Academic sect, about B.C. 109.—VII. A native of Miletus, and orator, whose style of speaking is represented by Cicero as of the florid and Asiatic kind. (Cic. Brut., c. 95.)—VIII. An Athenian physician who cured the quinsy, affections of the palate, cancers, &c., by employing the cinders of excrements. (Plin. xxv. 4.)—IX. A distinguished individual among the Eretrians, who disclosed to the Athenians the treacherous designs of some of the Persians, when the former had marched to their aid against the Persians. (Herod., 6, 100.) Aeschrion, i. A Mytilenean poet, intimate with Aristotle. He accompanied Alexander in his Asiatic expedition. Consult Vossius de Poet. Græc. ii. An Iambic poet of Samos. He is mentioned by Athen. 7, 296, and Isid. 4, 6, 2 to have sung to his scholia on Lycophron (p. 688-9). Some of his verses are preserved by Athenaeus and in the Anthology. (Compare Jacobs, ad Anthol., vol. 1, part 1, p. 385.)—III. A physician, preceptor to Galen. (Vid. Supplement.)—IV. A Greek writer, who composed a work on husbandry, &c., which is cited by Pliny, and also by Varro, R. R., i. 1. Aescharion, 1. A celebrated tragic writer, son ofEu- phron, born of a noble family at Eleusis in Attica, in the fourth year of the sixty-third Olympiad, B.C. 525. (Compare Vit. Anonym given in Stanley’s ed., 63
and the Arundel Marbles.) Pausanias (1, 14) records a story of his boyhood, professedly on the authority of the poet himself, that, having fallen asleep while watching the statues of Athena and the goddess of Victory in the temple of Athena, he was found by them and bade him attend to his task of watching. He attended to his studies and became a great scholar.

The inspiration of Bacchus, in such a case, can mean nothing more than the true inspiration of poetry. (Mohnke, "Litt. der gr. und Rom., vol. 1, p. 355.) At the age of twenty-five, Æschylus made his first public attempt as a tragic author, in the 70th Olympiad, B.C. 490. (Swin. in Alex.—Clinton's Fasti, Hellen-icci, p. 21, 2d ed.) The next notice we have of him is in the third year of the 72d Olympiad, B.C. 490, when, along with his two celebrated brothers, 

Pausanias, and Aminias, he was granted at Marathon with the praises due to pro-eminent bravery, being then in his 35th year. (Marm. Arund., No. 49.—Vit. Anonym.) Six years after that memorable battle, he gained his first tragic victory. Four years after this was fought the battle of Salamis, in which Æschylus took part with his brother Aminias, to whose extraordinary valor the ἄριστεα were decreed. (Herod., 8, 93.—Ælian, Var. Hist., 5, 19.) In the following year he served in the Athenian troops at Plataea. Eight years afterward (Argument. ad Pers.) he gained the prize with a tetralogy, composed of the Persæ, the Phœbus, the Glaucons, Potineis, and the Prometheus. Æschylus was a satyric drama; or, to give their Greek titles, the Περσαι, Φθεῖς, Πτοινεῖς, and Προμηθεὺς πυρόφρος. The latter part of the poet's life is involved in much obscurity. (Compare Blomfield, ad Pers. prof., p. xxii.—Id. ad Arg. in Agamem., p. xix. et xx.—Böckh, de Græ. Trag. Princip., c. 4, seqq.) That he quit Athens and died in Sicily, is agreed on all hands, but the time and cause of his departure are points of doubt and conjecture. It seems that Æschylus had laid himself open to a charge of profanation, by too boldly introducing on the stage something connected with the sacred mysteries. After having caused the Clemens Alexandrinus, he was tried and acquitted of the charge (μναρττήτω τοῦ γήρου, ὁ θείου φωνῆς, εἰπειρικῆς στόχου μεταμοσχεύων.—Clem. Alex. Strom., 2.) The more romantic narrative of Ælian (Var. Hist., 5, 19) informs us, that the Athenians stood ready to stone him to death, when his brother Aminias, who interceded for him, dexterously dropped his robe and showed the stump of his own arm lost at the battle of Salamis. This act of fraternal affection and presence of mind had the desired effect on the quick and impulsive temper of the Athenians, and Æschylus was pardoned. But the peril which he had encountered, the dread of a multitude ever merciless in their superstitions, indignation at the treatment which he had received, joined, in all likelihood, to feelings of vexation and jealousy at witnessing the preference occasionally given to young and aspiring rivals, were motives sufficiently powerful to induce the poet to seek a change of country. He no doubt, in company with his companions, seek a retreat in the court of the munificent and literary Hiero, prince of Syracuse. (Vit. Anonym.—Pausan., 1, 2.—Plut. de Exil., Op., vol. 8, p. 385, ed. Reiske.) This must have been before the second year of the 78th Olympiad, B.C. 467, for in that year Hiero died. The author of the anonymous life of Æschylus, which has come down to us, mentions, among other reasons for his voluntary banishment, a victory obtained over him by Simonides, in an elegiac contest; and, what is more probable, the success of Sophocles, who carried off from him the tragic prize, according to the account of Pausanias, common to many ancient authors. Plutarch, in his life of Cimon, confirms the latter statement. If so, Æschylus could not have been more than a year in Sicily before Hiero's death. The common account, relative to the cause which drove the poet from his country, is grounded upon an obscure allusion in Aristotle's Ethics, explained by Clemens Alexandrinus and Ælian. In Sicily, Æschylus composed a drama, entitled Κλέων, to gratify his royal host, who had recently found out a new name. During the remainder of his life, it is doubtful whether he ever returned to Athens. If he did not, those pieces of his, which were composed in the interval, might be exhibited on the Athenian stage under the care of some friend or relation, as was not unfrequently the case. Among these dramas was the Orestian tetralogy (Argument. ad Agamem.—Schol. ad Aristoph. Ran., 1155), which won the prize in the second year of the 80th Olympiad, B.C. 488, two years before his death. At any rate, his residence in Sicily must have been of considerable length, as it was sufficient to affect the purity of his language. We are told by Atheneus, that many Sicilian words are to be found in his later plays. Æschylus certainly has some Sicilian forms in his extant dramas: thus πεδαίρως, πεδαίχιμον, πεδάφορον, μάσος, μᾶς, κ(&c., for μετάρασον, μεταίχμιον, μετάφορον, μετέγον, μέγερον, &c. (Comp. Blomfield, Prom. Vinc., 277, Gloss., and Böckh, de Trag. Græc., c. 5.) The poet died at Gela, in the 69th year of his age, in the 81st Olympiad, B.C. 456. His death, if the common accounts be true, was of a most singular nature. Sitting motionless, in silence and meditation, in the fields, his head, now bald, was mistaken for a stone by an eagle, which happened to be flying over him with a tortoise in her claws. The bird dropped the tortoise to break the shell; and the poet was killed by the blow. It is more than probable, however, that this statement is purely fabulous, and that it was invented in order to meet a supposed prophecy, that he would receive his death from on high. The Gelonians, to show their respect for so illustrious a sojourner, interred him with much pomp in the public cemetery.—Æschylus is said to have composed seventy dramas, of which five were satyric, and to have been thirteen times victor. The account of Pausanias, however, would almost imply a larger proportion of satyric pieces; and it is probable therefore that the number respecting the number of plays ascribed to Æschylus. Only seven of his tragedies remain, together with fragments of others preserved in the citations of the grammarians, and two epigrams in the Anthology. The titles of the dramas which have reached us are as follows: 1. Προμηθεὺς ἐθνώμος (Prometheus Victus). 2. Στρατήγους (Septem contra Thebas). 3. Περσαί (Persæ). 4. Αἰγύπτιοι (Agamemnon). 5. Χριστερεῖα (Christeiresia). 6. Κλέων (Kleów). 7. Σικυώνιοι (Sicul. Suppl.) A short account of each of these will be given towards the close of the present article. This great dramatist was the author of the fifth form of tragedy. (Vid. Theatrum.) He added a second actor to the locutor of Thespis and Phrynichus, and thus introduced the dialogue. He abridged the immediate length of the choral odes, making them more subservient to the main interest of the plot, and expanded the short passages of monody and dialogue. Æschylus made considerable improvements in the economy of the drama, he added the decorations of art in its exhibition. A regular stage (Vitruv. Pref. lib. 7), with appropriate scenery, was erected; the actors were furnished with becoming dresses, and raised to the stature of the heroes represented by the thick-soled corthurns (Horat., Ep. ad Pis. 260); while the face was brought to the heroic cast by a mask of proportionate size and strongly...
marked character, which was also so contrived as to give power and distinctness to the voice. He paid great attention to the choral dances, and invented several figure-dances himself. Among his other improvements, it is mentioned the introduction of a practice, which subsequently became established as a fixed and essential rule, the removal of all deeds of bloodshed and murder from the particular plays of Achilles and Ajax, the only vice violated on one occasion, namely, by Sophocles in his play of the Ajax. In short, so many and so important were the alterations and additions of Æschylus, that he was considered by the Athenians as the Father of Tragedy (Philodr., I. c.), and, as a mark of distinguished honour paid to his merits, they passed a decree, after his death, that a chorus should be allowed to any poet who chose to re-exhibit the dramas of Æschylus. (Philodr., I. c.) Aristophanes alludes to this custom of re-exhibiting the plays of Æschylus in the opening of the Acharnians (v. 9, seqq.). Quintilian, however, (10, 1), assigns a very different reason for this practice, and makes it to have been adopted for the purpose of presenting these dramas in a more correct form than that in which they were left by the author himself. What authority he had for such an assertion, does not now appear. In philosophical sentiments, Æschylus is said to have been a Pythagorean. (Cic. Tusc. Disp., 2, 9.) In his extant dramas the tenets of this sect may occasionally be traced; as, deep veneration in what concerns the gods (Agamem., 371), high regard for the sanctity of an oath and the nuptial bond (Eumen., 217), the immortality of the soul (Choepb., 321), the origin of names from imposition and not from nature (Agamem., 682. — Proc. Vinct., 64, 742), the importance of numbers (Proc. Vinct., the theory of physiognomy. (Agamem., 797), the sacred character of supplicants (Suppl., 351. — Eumen., 233), &c. Æschylus, observes Schlegel (Drama. Lat., p. 135, seqq.), must be considered as the creator of tragedy; it sprang forth from his head in complete armour, like Minerva from the brain of Jove. He clothed it as became its dignity, and not only instructed the chorus in the song and the dance, but came forward himself as an actor. (Athenæus, 1. 22.) His sketchy character suits his bold and powerful strokes. His plots are extremely simple. He had not yet arrived at the art of splitting an action into parts numerous and rich, and distributing their complication and denouement into well-proportioned steps. Hence in his writings there often arises a cession of action, which he makes us feel still more by his unreasonably long choruses. But, on the other hand, all his poetry displays a lofty and grave disposition. No soft emotions, but terror alone remains in him; the head of Medusa is hold up before the petrified spectators. His method of considering destiny is extremely harsh; it hovers over mortals in all its gloomy magnificence. The bosom of Æschylus, as it were, the weight of brass; on it none but gigantic forms stalk before us. It almost seems to cost him an effort to paint mere men; he frequently brings gods on the stage, particularly the Titans, those ancient deities who shadow forth the dark primal powers of nature, and who had long been driven into Tannuris, beneath a world governed in tranquillity. In conformity with the standard of his dramatic personae, he seeks to swell out the language which they employ to a colossal size; hence there arise rugged compound words, an over-multiplicity of epithets, and often an extreme intricacy of syntax in the choruses, which is the cause of great obscurity. He is similar to Dante and Shakespeare in the peculiar strangeness of his imaginings; and he can make these imaginations most effective and most descriptive in that terrible grace which the ancients particularly praise in Æschylus. The poet flourished exactly when the freedom of Greece, rescued from its enemies, was in its first strength, with a consciousness of which he seems to be proudly penetrated. He had lived to be an eyewitness of the greatest and most glorious event of which Greece could boast, the defeat and destruction of the enormous hosts of the Persians under Darius and Xerxes, and had fought with distinguished value in the combat of Marathon and Salamis. In the Pers., he displays, not by a direct exhibition, but by a suggestive allusion, the fact that the latter may take advantage of the hero anxious and in a manner a hero cannot be. The tragedies of Æschylus are, on the whole, one proof among many, that in art, as in nature, gigantic proportions preclude those of the ordinary standard, which then grow less and less, till they reach meanness and insignificance; and also that poetry, on its first appearance, is always next to religion in estimation. Delusion for the latter may take advantage of. The tragic style of Æschylus is from far perfect (compare Porson, Prolect. et Eurip., p. 6), and frequently deviates into the Epic and the Lyric, elements not qualified to harmonize with the drama. He is often abrupt, disproportionate, and harsh. It was very possible that more skilful tragic writers might compose after him, but he must always remain unsurpassed in his almost superhuman vastness, since every Sophocles or Euripides or Aristophanes in the race of men then existing. The tragic style of Æschylus is from far perfect (compare Porson, Prolect. et Eurip., p. 6), and frequently deviates into the Epic and the Lyric, elements not qualified to harmonize with the drama. ÆSCULAPIUS.

ÆSCYLUSS.

on the events which preceded it, viz., the "Laius," the "Cedipus," and the "Sphinks." Some critics, how-
ever, maintain that Æschylus, to have been
—the "Ilios" ("The Persians"). This piece is so
called because the chorus is composed of aged Per-
sians. The subject is purely an historical one: it is
the defeat of the naval armament of Xerxes. This
play was performed eight years after the battle of Sal-
amis, and it has been considered by some a defect
that so recent an event should have been represented
on the stage. But, as Racine has remarked in the
preamble to the Latin translation of the play, the want
of distance of time. The scene is laid at Susa,
before the ancient structure appropriated to the great
council of state, and near the tomb of Darius. The
shade of this monarch comes forth from the sepulchre,
for the purpose of counselling Xerxes to cease from
the war against a people whom the gods protect.
The piece contains great beauties; every instant the
trouble of the Persians increases, and the interest augments.
By some it has been supposed to have been written
with a political intent, the poet endeavouring, by an
animated description of the pernicious effects of an
obstinate pride, and by filling the spectators with
a malignant compassion for the vanquished Xerxes, in-
directly disposing them to break off the war which
Themistocles wished to prolong. 4. Ἄγαμέμνων
("Agamemnon"). This prince, returning from
the siege of Troy with his female captive Cassandra, is
assassinated by Clytemnestra and Egisthus. The part
of Cassandra, which predicts the events that are about
to fall upon the house of Agamemnon, forms the chief
interest of the piece, and is one of the finest that has
ever been conceived. The commencement of this
tragedy is somewhat languid, but as the play proceeds
all is movement and feeling.—5. Χένθησας
("The Choëphores"). This drama is so entitled, because the
chorus, composed of female Trojan captives, slaves
of Clytemnestra, are charged with the office of bring-
ing the liquor for making libations at the tomb of Agamem-
non (γείον, a libation, and φησα, to bring).
The subject of the piece is Orestes avenging the death of Agamemnon
on Clytemnestra and her paramour. When this horri-
ble deed has been accomplished, the parricide is deliv-
ered over to the Furies, who disturb his reason.
"The spirit of Æschylus," observes Potter, "passes through
this tragedy; but a certain softening of grief hangs
over the whole, and a grand air suffuses the whole
scene." The characters of Orestes and Electra are finely
supported.—6. Εὐδιάνεως
("The Eumenides") or "Furies"). This play derives its name from the
circumstance of the chorus being composed of Furies
who pursue Orestes. The latter pleads his cause be-
fore the Areopagus, and is acquitted by the vote of
Minerva. This drama is remarkable for its violation
of the unity of place, the scene being first laid at Del-
phi, then at Athens. Æschylus is written a very
able work on the scope and character of this pro-
duction, in which he discusses incidentally some of
the most important points connected with the Greek
drama. As regards the object which the poet had in
view when composing the piece, he considers it to be
a political one. Æschylus was a zealous partisan of
Aristides, and opponent of Themistocles, and evident
symptoms of this partiality are to be found in some of
his plays. The Eumenides is written in forty-eight
lines, every occasion recommends to his countrymen
temperance and moderation in their enjoyment of dem-
ocratic liberty, and in their ambitious schemes against
the rest of Greece. The party of Themistocles had
made themselves obnoxious, in these respects, to the
patrician feelings of Æschylus; and a demagogue
named Ephialtes, having attacked the authority of the
venerable court of the Areopagus, the poet in this play
of the Eumenides appeared in its defence, and strove
to save this excellent institution, though ineffectually,
from the levelling doctrines of the day. Pollux informs
us, that the tragic chorus, up to the time when this
play was produced, consisted of fifty persons,
but that the terror occasioned by a chorus of some
people to be passed, fixing the tragic chorus, for
the time to come, at fifteen, and the comic chorus at
twenty-four. (Iul. Pol., 4, 110.) Pollux evidently is
in error here. The number of choruses for the whole
tetralogy consisted of fifty (originally, as Müller thinks,
of forty-eight), and these choruses it was the poet's
business to distribute into choruses for the individual
tragedies and satyrical drama composing the tetralogy.
Æschylus, therefore, in all probability, mind intended
something which he had learned relative to the number
of choruses for the whole tetralogy, of which number
at least three fourths were on the stage at the end of
the Eumenides. But this was done in order to
afford the people a splendid and expressive spectacle; neither
were the choruses thus combined all habited as friars. (Müller, Eumenides, p. 82, seqq.—With regard to
the number of the tragic chorus in each particular
play, it may be remarked, that Sophocles first brought
in fifteen, the previous number having been twelve,
and that Æschylus employed only twelve in more than
one of his dramas, although in others very possibly he
adopted the number so extended by Sophocles. (Con-
sult the remarks of Müller, Eumen., p. 58.)—This play
did not prove, at first, very successful. It was altered
by the poet, and reproduced some years after, during
his residence in Sicily, when it carried off the prizes.
7. Τιτανίδες
("The Female Suppliants") Danaüs
and his daughters solicit and obtain the protection of
the Argives against Egyptus and his sons. This play
forms one of the finest productions of Æschylus.
It possesses one remarkable feature, that the chorus
acts the principal part. The scene is near the shore,
in an open grove, close to the altar and the images of
the gods presiding over the sacred games, with a view
to the representation of the event connected with
the temple of Minerva, and its consecration to the
furies. In this drama, the present is strongly connected
with the past, and a legend of the oldest times is
the subject matter of the play. The characters of
Danaüs and his children are skilfully drawn, and the
simple and natural character given to the representations
of oaths and vows, and the ceremony of sacrificing
to the gods, is far from being satisfactory to all. The edition
by Schoefield, Cantab., 1828, 8vo, is a useful one. The
best text is that given by W. Dindorf, Lips., 1827.
The best editions of the separate plays are those of
Blomfield, as far as they extend, comprising, namely,
the Prometheus, Septem contra Thebas, Agamemnon,
Persæ, and Choëphora. His edition of the Persæ,
however, was very severely handled by Seidler, in one
of the German reviews, though the work of criticism
was in a great measure blunted by the personal feeling
visible throughout. The editions of Dr. Blomfield
appeared originally from the Cambridge press. There
are good editions of the Agamemnon and Choëphora
by Klausen and Peile. Müller's edition of the Eumen-
ides, appended to the dissertations above alluded to, is
an excellent and scholar-like performance, though it
provoked the ire of Hermann and his school, having been
published in the posthumous edition of his discourses.
A translation of it appeared from the Cambridge press
in 1835.—II., III. (Vid. Supplement.)

ÆSCULAPIUS, son of Apollo and the nymph Coronis, and god of the healing art. Pausianias (2, 26) gives
three different accounts of his origin, on which our lim-
its forbid us to dwell. The one of these that has been
followed by Ovid, makes Coronis to have been unfaith-
ful to Apollo, and to have been, in consequence, put
to death by him, the offspring of her womb having been
first taken from her and spared. Apollo received the

66
information respecting the unfaithfulness of Corinon, from a raven, and the angry deity is said by Apollodorus to have changed the colour of the raven from white to black, as a punishment for his unwelcome officiousness. As Coronis, in Greece, signifies a crow, hence another fable arose that Æsculapius had sprung from an egg of that bird, under the figure of a serpent. The first of the accounts given by Pausanias makes the birthplace of Æsculapius to have been on the borders of Thessaly and Macedonia; the second, in Thessaly; the third in Messenia. Æsculapius was placed, at an early age, under the care of the centaur Chiron. Being of a quick and lively genius, he made such progress as soon to become not only a great physician, but at length to be reckoned the god and inventor of medicine, though the Greeks, not very careful of consistency in the history of those early ages, gave to Apis, son of Phoroneus, the glory of having invented the healing art. Æsculapius accompanied Jason in his expedition to Colchis, and in his medical capacity was of great service to the Argonauts. He married Epione, whom some call Lamptetia, by whom he had two sons, Machaon and Podalirius, and four daughters, Hygies, Egle, Panacea, and Iaso, of whom Hygies, goddess of health, was the most celebrated. In the fabulous traditions of antiquity, Æsculapius is said to have restored many to life. According to Apollodorus (3, 137, 3), he received from Minerva a seventh of the venom that enraged the two veins of Medusa, and with that which proceeded from the veins on the left, he operated to the destruction of men, while he used that which was obtained from the veins on the right for the benefit of his fellow-creatures. (Compare Heyne, ad Apollod., l. c.) With this last he brought back to the light of day Capanes and Lycurgus, according to some, or Eriphyle and Hippolytus according to others, or, as other ancient authorities state, Hymenæus, and Glauce the son of Minos. Jupiter, alarmed at this, and fearing, says Apollodorus, lest men, being put in possession of the means of triumphing over death, might cease to render honour to the gods, struck Æsculapius with thunder. The common account makes this to have been done on the complaint of Pluto, Apollo, enraged at the loss of his son, destroyed the Cyclopes who had forged the thunderbolts of Jove, for which offence the monarch of the skies was about to hurl his terrible vengeance. As the aegis of Latona banished him for a season from Olympus, and compelled him to serve with a mortal (vid. Admetus and Ampyreas).—Thus far we have traced the Greek accounts respecting Æsculapius. If, however, a careful inquiry be instituted, the result will be a decided conviction that the legend of Æsculapius is one of Oriental origin. According to Sanchoniatos, Æsculapius was the same with the Phœnecian Esmun, the son of Sydyk, called "the just," and the brother of the seventh Cabiri. (Sanchoniatos, frag. ap. Euseb., Prep. Evang., p. 39.—Cory's Ancient Fragments, p. 13.) Hence the meaning of Esmun, which signifies "the eighth." According to the Schomnn, or Mendes, of Egypt.) The seven Cabiri are the seven planets; and, in the Egyptian mythology, Pthas is added to them as the eighth. Pthas and Æsculapius, then, are identical, and the latter, like the former, though added to the number of the Cabiri, is adduced as a provincial divinity or guide. (Cretzer's Symbolik, vol. 2, p. 285 and 336.) In Esmun—Æsculapius, then, we have a solar deity, personified in his beauty and his weakness, for he is the same with the youth of Beryus, who mutilated himself and was placed in the number of the gods, and in this quality he receives the name of Paan or Paon, "the physician." He becomes identified also with the beauteous Apollo, for whose son he passes among the Greeks; while, as a mutilated deity, he is the same with the Phrygian Atys, the fair Adonis, and the chained Hercules of the Tyrians, all varied forms of the same idea. He is the sun, without strength at the close of autumn. In all these different points of view, we find Æsculapius corresponding to the Egyptian divinities; to Horus, to Harpocrates, to Sem, and to the god of the earth, Serapis. Egypt was always famed for the knowledge possessed by its priests of the healing art; and it always represented its great deities, the symbols of the power of nature, as endowed with a healing influence. (Creuzer's Symbolik, par Gugniaut, vol. 1, p. 684, seqq.) I need receive, in inscriptions, the epitaph of "salus omnia," (Gruter, p. 83. —Fabreit, p. 470.—Reineis, col. 1, n. 132.) Serapis, whose name frequently occurs by the side of that of his spouse, had, at Canopus, a city already famous by its temple of Hercules, a sanctuary no less renowned for the wonderful cures performed within it, and of which a register was carefully preserved. (Strabo, 801.—Compare Creuzer, Dionys., 1, p. 122, and Gugniaut's dissertation on the god Serapis, "Sur le Dieu Serapis et son origine," p. 20 and 22.) Both of these divinities, in the scenes figured on the monuments, bear serpents, or sphædodems, as the emblems of health: they carry also the chalice, or salutar cup of nature, surrounded by serpents, and which formed, perhaps, the most ancient idol connected with their worship. (Creuzer's Symbolik, par Gugnial, vol. 1, p. 818, seqq.) One thing at least is certain, that these sacred serpents were nourished in their temples as living images of the divine power of health. Asclepius, his name is derived from the serpent, (Compare, vol. 1, p. 19, seqq.) The natures of these national fetishes consisted in cakes of honey, and such was also the food of the serpent consecrated to the powers beneath the earth, the divinities of the dead. In fact, the god of medicine is, at the same time, a telluric power; and it is he that causes the mineral waters, the sources of health, to spring from the bosom of the earth. Æsculapius, then, is identical, in his essence, with the Canopic Serapis: like him, he has for a symbol one surrounded by serpents, and he was originally this same vase, the sacred Canopus. (Compare Creuzer, Dionys., p. 220.—Symbolik, par Gugnial, vol. 1, p. 415 and 818, seqq.) It is curious to observe the strong analogy that exists between the Oriental worship of Serapis, and the Grecian ideas, rites, and usages in the case of Æsculapius. At Aegium, in Achaea, near the ancient temple of Ithiaya, were to be seen the statues of the gods Æsclinus and Æsclapius, (Æsculapius and Hygieia. (Pausan., 7, 23.) At Tiana, a city of Sicily, the first settler of which was, according to tradition, Titan, brother of the Sun, Alexanor, the son of Machaon and grandson of Æsculapius, had erected a temple to this deity. His statue, at this place, was almost entirely enveloped in a tutic of white wool, with a mantle thrown over it, so that the face, and the extremities of the hands and feet, alone appeared to view. Æsculapius was carried, it is said, from Epidaurus to Pergamus; and we are also told that, in this Asiatic city, the Acesius of Epidaurus took the name of Telephorus. (Pausan., 2, 11.) Now Telephorus indicates the autumnal season, the sun that has come to his maturity together with the productions of the earth, and, consequently, verging to his decline. Hence the Arcadian gave to Æsculapius a name called Trygon, an appellation derived probably from the Greek τριγωνον τριγωνον, and referring to the harvest and the gathering of its fruits; moreover, according to a tradition preserved in Attica, offered himself on the eighth day for admission into the Eleusinian mysteries, and was accordingly initiated. (Philostrat., Vit. Apollon., 4, 18.) He is, in this point of view, the tardy one, the last comer assisting at the festival of autumn and the harvest. The subterranean powers and the deities of death, are also the divinities of sleep. Such, too, is the case with Æsculapius. He gives slumber and repose, and by their means bestows health. (Lyd. de Mem., p. 78, ed. Chapeau.) Hence the custom of going to his
Asclepius.

Asclepius, temple at Epidaurus for the purpose of sleeping there-\textendash in, and recovering health by the means which the god of health would indicate in a dream to the invalids. (\textit{Compare Sprengel, Gesch. der Medizin}, vol. 1, p. 107, \textit{seqq.}) The ancient \textit{Asclepius}, introduced at an early period, as the representative of healing, was introduced at Epidaurus, at first in Greece under a form closely assimilated to that of the vase-gods, dwarfs, or pigmies, that were accustomed to be enveloped in garments, and to which was attributed a magic influence. (\textit{Creuzer's Symbolik, par Guigniault}, vol. 2, p. 310, \textit{seqq.}) In these mysterious idols, the richness of hidden meaning was as great as the mode of decking the exterior was whimsical. The spirit of the old Pelasgic belief would seem, however, to have been considerably employed in decomposing, as it were, this body of ideas united in one particular symbol, and in individualizing each for itself. It was thus that, by degrees, there arose around the god of medicine a cortège of genii, of both sexes, regarded either as his wives, or as his sons and daughters, or even as his grandchildren. In the sculptured representations of \textit{Asclepius}, to which the development of Grecian art had subsequently given birth, we find his genealogy, or rather, the little indubitable symbol of this model of the deity. And yet, though the Grecian perception of the beautiful led them to deviate, in general, from the grosser representations of the Pelasgic worship, we find them, in the present case, still retaining an attachment for the ancient, and, at the same time, more significant and mysterious images. Hence, by the side of the new deity is placed one of his personified attributes, under the figure of an enveloped dwarf. In every nation that has a \textit{Asclepiades} (\textit{vid. that article}) taught the principles of the healing art, or cured diseases in the temples of their master and reputed father, \textit{Asclepius} and his good genii were celebrated as saving divinities, on votive tablets, inscriptions, medals, and gems. The Romans, too, in the year of their city 461, in order to be delivered from a pestilence, sent a solemn embassy to Epidaurus to obtain the sacred serpent nourished at that place in the temple of \textit{Asclepius}. A temple was likewise erected to the deity of an island in the Tiber, where the sacred reptile had disappeared among the reeds. (\textit{Val. Max.}, 1, 8, 2.) Not content with this, however, they resolved to have also a family of Asclepiades, and they pretended to have found it in the house of Acilis.\footnote{The principal and most ancient temples of \textit{Asclepius} (\textit{Ἀσκληπιας}), were those at Tition in Sicilyy (Pausan., 2, 11); at Tricca in Thessaly (Strabo, 438); at Tithorea in Phocis, where he was revered under the name of Archegetes (Pausan., 10, 32); at Epidaurus (Pausan., 2, 26); in the island of Cos (Strabo, 657); at Megalopolis (Pausan., 8, 32); at Cyllene in E Elis (Pausan., 6, 26); and at Pergamus in Asia Minor (Pausan., 2, 26). Among all these temples, that of Epidaurus was at first the most celebrated, for it was from this city that the worship of \textit{Asclepius} was carried into Sicily, and also to Pergamus and Cyllene. (Pausan., 2, 10.) It appears, however, that the temple of Cos became the most famous of all, since the Epidaurians, on one occasion, sent deputies thither. (Pausan., 3, 23.) At a more recent period, \textit{Aegrea}, in Cilicia, could boast of a temple of \textit{Asclepius} which was held in high repute. It was here that Apollonius of Tyana practised many of his impostures. (\textit{Philosr.}, \textit{Vit. Apollon.}, 1, 7.) Constantine destroyed this temple in his zeal for Christianity. (\textit{Euseb., Vit. Constant.}, ed. Reading, 3, 56.) Almost all these edifices were restored, one time or another, by the princes, and the fanatic could approach except after repeated purifications. \textit{Asclepius} was called the sacred city (Pausan., 2, 26), a name which also appears on its medals. (\textit{Eckhel, Doctr. Num. Vet.}, vol. 2, p. 290.\textendash Wilsson, \textit{Prolegom.}, p. 111.) The temple at \textit{Asopus} took the appellation of \textit{Hyperboreatoon}, as if it concealed within its walls the most sacred mysteries. (\textit{Pausan.}, 3, 23.) The statue of Hygieia, at \textit{Áegium} in Achaia, could only be viewed by the priests. (\textit{Pausan.}, 7, 24.) No female was allowed to be delivered, and no sick persons were permitted to die, within the environs of the temple. (\textit{Compare Sprengel}, \textit{Hist. de la Medecine}, vol. 1, p. 154, \textit{seqq.}) \textit{Asclepius} was sometimes represented either standing, or sitting on a throne, holding in one hand a staff, and grasping with the other the head of a serpent; at his feet a dog lay extended. (Pausan., 2, 27.\textendash Compare \textit{Mem. et \textit{Antiquitates tropiq.}, vol. 1, p. 127.} At Corinth, Megalopolis, and Ladon, the god was represented under the form of an infant, or rather, perhaps, a dwarf, holding in one hand a sceptre, and in the other a pine-cone. (Pausan., 2, 10.) Most generally, however, he appeared as an old man with a flowing beard. (Pausan., 10, 32.) On some ancient monuments we see him with one hand applied to his beard, and having in the other a knotted staff encircled by a serpent. (\textit{Menius Felix, ed. Eichendorff.}) He often appears bearing a crown of laurel (\textit{Antichia d'Encol.}, vol. 5, p. 264, 271.\textendash Maffei, \textit{Genn. ant.}, 2, n. 55), while at his feet are placed, on one side, a cock, and, on the other, the head of a ram; on other occasions, a vulture or an owl. Frequently a vase of circular form is seen below his statues (\textit{Erizzo, Discorso, &c.}, p. 620), or, according to others, a serpent coiled up. (\textit{Buonarotti, Osservazioni, &c.}, p. 291.) At other times he has his body encircled by an enormous serpent. (\textit{Theodore auct. curt. disp. Op. ed. Shulse}, vol. 4 and 8, p. 906.) Among all the symbols with which \textit{Asclepius} is adorned, the serpent plays the principal part. The gems, medals, and other monuments of antiquity, connected with the worship of this deity, most commonly bear such an emblem upon them. (\textit{Spanheim, Epist. 4, ad Morell.}, p. 217, 218, ed. Lips., 1695.\textendash Compare \textit{Knight's Inquiry into the Symbolical language of Ancient Art and Mythology,} 8, 29.\textendash \textit{Claus, Huygen.}, vol. 23, p. 13.)}
their firm adherence to the Roman power during the war with Hannibal. It was subsequently recollated by Augustus and Nero (Front. de Col.), but Strabo (229 and 240) makes it very clear, having seen it several times, that the modern Isserni is supposed to represent Isserina.

Æson, son of Cretheus and Tyro. He succeeded his father in the kingdom of Iolchos, but was dethroned by his half-brother Pelias. Æson became the father, by Alcimede, of the celebrated Jason, the leader of the Argonauts. Through fear of the Argonauts, Jason was intrusted to the care of the centaur Chiron, and brought up at a distance from the court of Pelias.

On his arriving at manhood, however, he came to Iolchos, according to one account, to claim his inheritance; but, according to another, he was invited by Pelias to attend a sacrifice to Neptune on the seashore. The result of the interview, whatever may have been the cause of it, was an order from Pelias to go in quest of the golden fleece. (Vid. Jason.) During the absence of Jason on this well-known expedition, the tyranny of Pelias, according to one version of the story, drove Æson and Alcimede to self-destruction; an act of cruelty, to which he was prompted by intelligence having been received, that all the Argonauts had perished, and by a consequent wish on his part to make himself doubly secure, by destroying the parents of Jason. He put to death also their remaining child. (Apollod., 1, 9, 16, seqq.—Diod. Sic., 4, 50.—Hygin., 24.) Ovid, however, gives a quite different account of the latter days of Æson. According to the poet (Met., 7, 297, seqq.), Jason, on his return with Medea, found his father Æson still alive, but enfeebled by age; and the Colchian enchantress, by drawing the blood from his veins and then filling them with the juices of certain herbs which she had gathered for the purpose, restored him to a manhood of forty years. The daughters of Pelias having entreated Medea to perform the same operation on their father, she consented to this opportunity of avenging the wrongs inflicted on Jason and his parents by the death of the usurper. (Vid. Pelias.)

Æsonides, a patronymic of Jason, as being descended from Æson.

Æsopus. I. A celebrated fabulist, who is supposed to have flourished about 620 B.C. (Larerch., Hist. d'Herod., Table Chronol., vol. 7, p. 595.) Much uncertainty, however, prevails both on this point, as well as in relation to the country that gave him birth. Some ancient writers make him to have been a Thracian. (Compare MohiDK, Gesch Litt Gr. und R., vol. I, p. 291.) Suidas states that he was either of Samos or Sardis; but most authorities are in favour of his having been a Phrygian, and born at Cotyaeum. All appear to agree, however, in representing him as of servile origin, and owned in succession by several masters. It is, however, by some, or, according to the reading of the Florence MS., Timarchus, who resided at Athens, where Æsop, consequently, must have had many means of improvement within his reach. From Demarchus he came into the possession of Xanthus, a Samian, who sold him to Iadmon, a philosopher of the same island, under whose roof he had for a fellow-slave the famous courtisan Rhodope. (Herod., 2, 184.) Iadmon subsequently gave him to his son in-law, the poet Linus, who, on the death of the latter, he displayed, and Æsop now turned his attention to foreign travel, partly to extend the sphere of his own knowledge, and partly to communicate instruction to others. The vehicles in which this instruction was conveyed were fables, the peculiar excellence of which has caused his name to be associated with this pleasing branch of composition through every succeeding period. Æsop is said to have visited Persia, Egypt, Asia Minor, and Greece, in the last of which countries his name was rendered peculiarly famous. The reputation for wisdom which he enjoyed, induced Croesus, king of Lydia, to invite him to his court. The fabulous narratives and legendary tales which Æsop wrote while residing at Sardis, again journeyed into Greece. At the period of his second visit, the Athenians are said to have been oppressed by the usurpation of Pisistratus, and to console themselves with this state of things, Æsop is related to have invented for them the fable of the frogs petitioning Jupiter for a king. The residence of Æsop in Greece at this time would seem to have been a long one, if, as some ingeniously think, the epitaph which may be drawn from a line of Phdrus (3, 14), in which the epithet of sensé is applied to the fabulist during the period of this his stay at Athens. He returned, however, eventually to the court of the Lydian monarch.

Whether the well-known conversation between Æsop and Solon occurred after the return of the former from his second journey into Greece, or during his previous residence with Croesus, cannot be satisfactorily ascertained: the latter opinion is most probably the more correct one, if we can believe that the interview between Solon and Croesus, as mentioned by Herodotus (1, 30, seqq.), ever took place. It seems that Solon had offended Croesus by the low estimation in which he held riches as an ingredient of happiness, and was, in consequence, treated with cold indifference. (Herod., 1, 33.) Æsop, concerned at the unkind treatment which Solon had encountered, gave him the following advice:—A wise man should resolve either not to converse with kings at all, or to converse with them agreeably. To which Solon replied, Nay, he should either not converse with them at all, or converse with them usefully. (Plut., Vid. Sol., 28.) The particulars of Æsop’s death are stated as follows by Plutarch (de sera numinis vindicta, p. 556. —Op. ed. Reiske, vol. 8, p. 203.) Croesus sent him to Delphi with a large amount of gold, in order to offer a magnificent sacrifice to Apollo, and also to present four minae to some other deity, which Æsop, however, refused. Plutarch does not state what, if any, sacrifice he offered to Apollo, but makes him, after leaving Delphi, go to the island of Erechtheum, where he was treated with great kindness, and died. (Phalaris praor.—Op. ed. Bip., vol. 5, p. 46. —Compare Larerch., Hist. d'Herod., vol. 7, p. 539.) Apollo, offended at this deed, sent all kinds of maladies upon the Delphians, who, in order to free themselves, caused proclamation to be made at all the great celebrations of Greece, that if there was any one entitled so to do, who would descend upon Jason and the Argonauts,满了 the ships on which they were, they would render it unto him. In the third generation came a Samian, named Iadmon, a descendant of one of the former masters of the fabulist, and the Delphians, having made atonement, were delivered from the evils under which they had been suffering. Such is the narrative of Plutarch. And we are also informed, that, to evoke the sincerity of their repentance, they transferred the punishment of sacrilege, for the Delphians were not too far from Delphi, and the one from which he was thrown was, according to Lucian, in the neighbourhood of that city. (Phalaris praor.—Op. ed. Bip., vol. 5, p. 46. —Compare Larerch., Hist. d'Herod., vol. 7, p. 539.) Apollo, offended at this deed, sent all kinds of maladies upon the Delphians, who, in order to free themselves, caused proclamation to be made at all the great celebrations of Greece, that if there was any one entitled so to do, who would descend upon Jason and the Argonauts, and the ships on which they were, they would render it unto him. In the third generation came a Samian, named Iadmon, a descendant of one of the former masters of the fabulist, and the Delphians, having made atonement, were delivered from the evils under which they had been suffering. Such is the narrative of Plutarch. And we are also informed, that Æsop offended the people of Delphi by comparing them to floating sticks, which appear at a distance to be something great, but, on a near approach, dwindle away into insignificance, and that he was accursed, in consequence, of having carried off one of the vases consecrated to Apollo. The scholar on Anthophanes (Vesp., 1458) informs us, that Æsop had irritated the Delphians by remarking of them, that they
had no land, like other people, on the produce of which to support themselves, but were compelled to depend for subsistence on the remains of the sacrifices. Determined to be revenged on him, they concealed a crouseated cup amid his baggage, and, when he was some distance from their city, pursued and arrested him. They found him innocent of the faile cup, and he was thrown from the rock Yzympega, as already mentioned. As they were leading him away to execution, he is said to have recited to them the fable of the eagle and beetle, but without producing any effect.

The memory of Aesop was highly honoured throughout Greece, and the Athenians erected a statue to him (Phadrus, 2, Epit., 2, seqq.), the work of the celebrated Lysippus, which was placed opposite those of the other poets. It must be carefully confessed, however, that little, if anything, is known with certainty respecting the life of the fabulist, and what we have thus detailed of him appears to rest on little more than mere tradition, and the life which Plutarch, a monk of the fourteenth century, is supposed to have given to the world; a piece of biography possessing few intrinsic claims to our belief. Hence some writers have doubted whether such an individual as Aesop ever existed. Since, however, there must have been, however, that little, if anything, is known with certainty respecting the life of the fabulist, and what we have thus detailed of him appears to rest on little more than mere tradition, and the life which Plutarch, a monk of the fourteenth century, is supposed to have written by him. They appear to have been preserved for a long time in oral tradition, and only collected and reduced to writing at a comparatively late period. Plato (Phaedon.—Op., pt. 2, vol. 3, p. 9, ed. Bekker) informs us, that Socrates amused himself in prison, towards the close of his life, with versifying some of these fables. (Compare Plut. de Aud. Poet., p. 16, c., and Wittensbach, ad loc.) His example found numerous imitators. A collection of the fables of Aesop, as they were called, was also made by Demetrius Phalererus (Diog. Laert., 5, 80), and another, between 150 and 50 B.C., by a certain Babrius. (Compare Tyrtuchis, Dissert. de Babrio, Lond., 1776, 8vo.) The former of these was probably in prose; the latter was in choliambic verse (vid. Babrius). But the bad taste of the grammarians, in a subsequent age, destroyed the metrical form of the fables of Babrius, and reduced them to prose. To them we owe the loss of a large portion of this collection. Various collections of Esopian fables have reached our times, among which six have attained to a certain degree of celebrity. Of these the most ancient and colossal is called by the ancients the Aesop of the first century; the author is unknown. It is called the collection of Florence, and contains one hundred and ninety-nine fables, together with a puerile life of the fabulist by Planudes, a Greek monk of the fourteenth century. The second collection was made by an unknown hand in the thirteenth or fourteenth century. The monk Planudes formed the third collection. The fourth, called the Heidelberg collection, together with the latter two, is in prose. The fifth collection, the latter that of the Vatican, are the work of anonymous compilers. These last three contain many of the fables of Babrius reduced to bad prose. Besides the collections which have just been enumerated, we possess one of a character totally distinct from the rest. It is a Greek translation, executed in the fifteenth century by Michael Andreopulus, from a Syriac original, which would seem to have been produced not only from an edition from the Greek, by a Persian named Synaita. (Schill, Hist. Litt. Gr., vol. 1, p. 253.)—As regards the question, whether the fables of the Arabian Lokman have served as a prototype for those of Aesop, or otherwise, it may be remarked, that, in the opinion of De Sacy (Biographie Universelle, vol. 24, p. 631, s. v. Lokman), the apologues of the Arabian fabulist are nothing more than an imitation of some of those ascribed to Aesop, and that they in no respect bear the marks of an Arabian invention. (Compare the observations of Erpenius, in the preface to his edition of Lokman, 1615.)—With respect to the person of Aesop, it has been generally supposed that the statement of Plutarch, which makes him to have been a faithful slave, is derived from a conical shape, his belly protruberant, his limbs distorted, &c., was unworthy of credit. Visconti, however, supports the assertions of Plutarch in this particular, from the remains of ancient sculpture. (Iconografia Greca, vol. 1, p. 155.)—The best editions of Aesop are the following: that of Heusinger, Lips., 1741, 8vo; that of Erneste, Lips., 1781, 8vo; that of Coray, Paris, 1810, 8vo; and that of De Furia, Lips., 1810, 8vo. It must be cautiously confessed, however, that little, if anything, is known with certainty respecting the life of the fabulist, and what we have thus detailed of him appears to rest on little more than mere tradition, and the life which Plutarch, a monk of the fourteenth century, is supposed to have given to the world; a piece of biography possessing few intrinsic claims to our belief. Hence some writers have doubted whether such an individual as Aesop ever existed. Since, however, there must have been, however, that little, if anything, is known with certainty respecting the life of the fabulist, and what we have thus detailed of him appears to rest on little more than mere tradition, and the life which Plutarch, a monk of the fourteenth century, is supposed to have written by him. They appear to have been preserved for a long time in oral tradition, and only collected and reduced to writing at a comparatively late period. Plato (Phaedon.—Op., pt. 2, vol. 3, p. 9, ed. Bekker) informs us, that Socrates amused himself in prison, towards the close of his life, with versifying some of these fables. (Compare Plut. de Aud. Poet., p. 16, c., and Wittensbach, ad loc.) His example found numerous imitators. A collection of the fables of Aesop, as they were called, was also made by Demetrius Phalererus (Diog. Laert., 5, 80), and another, between 150 and 50 B.C., by a certain Babrius. (Compare Tyrtuchis, Dissert. de Babrio, Lond., 1776, 8vo.) The former of these was probably in prose; the latter was in choliambic verse (vid. Babrius). But the bad taste of the grammarians, in a subsequent age, destroyed the metrical form of the fables of Babrius, and reduced them to prose. To them we owe the loss of a large portion of this collection. Various collections of Esopian fables have reached our times, among which six have attained to a certain degree of celebrity. Of these the most ancient and colossal is called by the ancients the Aesop of the first century; the author is unknown. It is called the collection of Florence, and contains one hundred and ninety-nine fables, together with a puerile life of the fabulist by Planudes, a Greek monk of the fourteenth century. The second collection was made by an unknown hand in the thirteenth or fourteenth century. The monk Planudes formed the third collection. The fourth, called the Heidelberg collection, together with the latter two, is in prose. The fifth collection, the latter that of the Vatican, are the work of anonymous compilers. These last three contain many of the fables of Babrius reduced to bad prose. Besides the collections which have just been enumerated, we possess one of a character totally distinct from the rest. It is a Greek translation, executed in the fifteenth century by Michael Andreopulus, from a Syriac original, which would seem to have been produced not only from an edition from the Greek, by a Persian named Synaita. (Schill, Hist. Litt. Gr., vol. 1, p. 253.)—As regards the question, whether the fables of the Arabian Lokman have served as a prototype for those of Aesop, or otherwise, it may be remarked, that, in the opinion of De Sacy (Biographie Universelle, vol. 24, p. 631, s. v. Lokman), the apologues of the Arabian fabulist are nothing more than
according to Tacitus, the mother of the gods, Mertha, and the symbol of her worship was a wild boar. Now, as this animal was sacred to Freya, the Scandinavian Venus, and as Freya is often confounded with Frigg, the mother of the gods in the Scandinavian mythology, Tacitus evidently fell into a similar error, and misunderstood his informer. (Tacit., M. G., 45.—Pinkerton, Diss. on Scythians, &c., p. 168.)

**ÆSULA, a town of Latium, the site of which remains undiscovered.** Horace (Od. 3, 29, 6) speaks of it in the same line with Tibur, whence it is naturally supposed to have stood in the vicinity of that place. Pliny (3, 5) enumerates Æsula among the Latin towns, which no longer existed in his time. Velleius Paterculus (1, 14) calls the place Æsulum, and reckons it among the colonies of Rome. (Cramer's Anc. Italy, vol. 2, p. 66.)

**ÆSYETES, a Trojan prince, supposed by some to have been the parent of Antenor and Ucalleon, while others make him to have descended from a more ancient Ucalleon, who had married Ilios, the daughter of Leomedon. Homer (II., 13, 427) mentions Alcamous as the son of Æsyetes, and the son-in-law of Anchises, who had given him his eldest daughter Hippodamia in marriage. (Heyne, ad II., 2, 793.) The tomb of Æsyetes is alluded to by Homer (II., 2, 793), and is said by Strabo (599) to have been five stadia distant from Troy, and on the road leading to Alexandria. Troas was one of the very convenient places of observation in the Trojan war. "Dr. Clarke gives the following account of it (Travels, &c., vol. 3, p. 92, seqq., Eng. ed.): "Coming opposite to the bay, which has been considered as the naval station used by the Greeks during the Trojan war, and which is situated on the eastern side of the embouchure of the Mender, the eye of the spectator is attracted by an object predominating over every other, and admirably adapted, by the situation, to be mentioned in the narrative of its situation, to overlook that station, together with the whole of the low coast near the mouth of the river. This object is a conical mound, rising from a line of elevated territory behind the bay and the mouth of the river. It has, therefore, been pointed out as the tomb of Æsyetes, and is now called Udeke Têfe. If we had never heard or read a single syllable concerning the war of Troy, or the works of Homer, it would have been the only object to name in the appearance presented by this tumulus, so peculiarly placed as a post of observation commanding all approach to the harbour and river." In another part (p. 198), the same intelligent traveller observes: "The tumulus of Æsyetes is, of all others, the spot most remarkably adapted for viewing the Plain of Troy, and it is visible in almost all parts of Tros. From its top may be traced the course of the Scamander; the whole chain of Ida, stretching towards Lectum; the snowy heights of Gargarus, and all the shores of the Hellespont near the mouth of the river, with Sigeum, and the other tumuli upon the coast." Bryant endeavours to show, that what the Greeks regarded as the tombs of princes and warriors, were not so in reality, but were, for the most part, connected with old religious rites and customs, and used for religious purposes. (Mythology, vol. 2, p. 167, seqq.) Lechevalier, however, successfully refutes this.**

**ÆNNÊETES. Vid. Supplement.**

**ÆTHALÏDES, a son of Mercury, and herald of the Argonauts, who obtained from his father the privilege of being among the dead and the living at stated times. Hence he was called ἔπεθεσαν τὸν κόπον εἰς τὸν Κύκλον, from his spending one day in Hades, and the next upon earth, alternately. It is said also, that he was the inspirer or interpreter of the Pythian oracles, and that he appeared successively as Euphorbus, son of Penthès, Pyrus the Cretan, an Elean, whose name is not known, and Pythagoras. (Schol.**

**ÆTHIOPIA.** 

**ÆΘIÖNIKS, a Thessalian tribe of uncertain but ancient origin, since they are mentioned by Homer (II., 2, 794), who states that the Centaurs, expelled by Pirithous from Mount Pelion, withdrew to the Æthiöni. Strabo (327 and 434) says, that they inhabited the Thessalian side of Pindus, near the sources of the Peneus, but that their possession of the latter was disputed by the Tymphiæ, who were contiguous to them on the Epyrote side of the mountain. Marsyas, a writer cited by Stephanus Byzantinus (v. α. Alchis), described the Æthiöni as a most daring race of barbarians, whose sole object was robbery and plunder. Lycochron (v. 802) calls Poly- 

**ÆTHIOPIA, an extensive country of Africa, to the south of Egypt, lying along the Sinus Arabicus and Mare Erythraenum, and extending also far inland. An idea of its actual limits will best be formed from a view of the gradual progress of Grecian discovery in relation to this region. Æthiope (Æthiops) was the expression used by the Greeks for everything which had contracted a dark or swarthy colour from exposure to the heat of the sun (ἀλβο, "to burn," and ὁμό, "the visage"). The term was applied also to men of a dark complexion, and the early Greeks named all of such a colour Æthiöni, or Æthiops, and Æthiöni, or Æthiops. It is more than probable that the Greeks obtained their knowledge of the existence of such a race of men from the Phoenicians and Egyptians, and that this knowledge, founded originally on mere report, was subsequently confirmed by actual inspection, when the Greek colonists along the shores of Asia Minor, in their commercial intercourse with Sidon and Egypt, beheld there the caravans which had come in from Southern Africa. Homer (II., 2, 794) alludes to the Æthiöni, or Æthiöni, in many parts of his poems, and speaks of two divisions of them, the Eastern and Western. The explanation given by Eustathius and other Greek writers respecting these two classes of men, as described by the poet, cannot be the true one. They make the Nile to have been the dividing line (Eustath., p. 1386, ad Hom. Od., 1, 23); but this is too refined for Homer's geographical acquaintance with the interior of Africa. By the Egyptians, Æthiöni is considered as the inhabitants of the coast of Egypt, and by the ancients, as the inhabitants of the other coast of Æthiopia, in the north. Æthiöni, in many parts of his poems, and speaks of two divisions of them, the Eastern and Western. The explanation given by Eustathius and other Greek writers respecting these two classes of men, as described by the poet, cannot be the true one. They make the Nile to have been the dividing line (Eustath., p. 1386, ad Hom. Od., 1, 23); but this is too refined for Homer's geographical acquaintance with the interior of Africa. By the Egyptians, Æthiöni is considered as the inhabitants of the coast of Egypt, and by the ancients, as the inhabitants of the other coast of Æthiopia, in the north. Æthiöni, in many parts of his poems, and speaks of two divisions of them, the Eastern and Western. The explanation given by Eustathius and other Greek writers respecting these two classes of men, as described by the poet, cannot be the true one.
(2, 29), the Ḫethiopian races begin. As far as the town and island of Tachampos, seventy or eighty miles above Syene, these are mixed with Egyptians, and higher up dwell Ḫethiopians alone. The Ḫethiopians he distinguishes into the inhabitants of Meroë and the Macrobi. In Strabo (800) and Pliny (6, 29) we find other tribes and towns referred to, but the most careful division is that by Agatharchides, whose work on the Red Sea is unfortunately lost, with the exception of some fragments. Agatharchides divides them according to their way of life. Some carried on agriculture, cultivating the millet; others were herdsmen; while some lived by the chase and on vegetables, and others, again, along the sea-shore, on fish and marine animals. The rude tribes who lived on the coast and fed on fish are called by Agatharchides the Ichthyophagi. Along both banks of the Astaboras dwelt another nation, who lived on the roots of reeds growing in the neighbouring swamps; these roots they cut to pieces with stones, formed them into a tenacious mass, and dried them in the sun. Close to these dwelt the Hylophagi, who lived on the fruits of trees, vegetables growing in the valleys, &c. To the west of these were the hunting nations, who fed on wild beasts, which they killed with the arrow. There were also other tribes, who lived on the flesh of the elephant and the ostrich, the Elephasphagi and Struthophagi. Besides these, another and less populous tribe, who fed on locusts, which came in swarms from the southern and unknown districts.

(Agatharch. de Rubr. Mar. — Geograph. Gr. Min., ed. Hudson, vol. 1, p. 37, seq.) The accuracy with which Agatharchides has pointed out the situation of these tribes, does not occasion much difficulty in assimilating them to the modern inhabitants of Ḫethiopia. According to him, they dwelt along the banks of the Astaboras, which separate the Egyptian and Ethiopian river systems, the Abor, or, as it is also called, the Tacezie; they must, consequently, have dwelt in the present Shangoalla. The mode of life with these people has not in the least varied for 2000 years; although cultivated nations are situated around them, they have made no progress in improvement themselves. Their land being unfavourable both to agriculture and the rearing of cattle, they are compelled to remain mere hunters. Most of the inhabitants of Ḫethiopia, whether near or distant, subsist in a similar manner. The D Nebenka, the most powerful tribe among the Shangoalla, still live on the elephant and the rhinoceros. The Baasa, in the plains of Sire, yet eat the flesh of the lion, the wild hog, and even serpents; and farther to the west dwells a tribe, who subsist in the summer on the locust, and at other seasons on the crocodile, hippopotamus, and fish. Diodorus Siculus (3, 49) wrote, that these people die of venereal diseases produced by this food; and Bruce (Travels, 3d ed., vol. 5, p. 83) makes the same observation with respect to the Waite, on the Lake Dambea, who live on crocodiles and other Nile animals. Besides these inhabitants of the plains, Ḫethiopia was peopled by a more powerful, and somewhat more civilized, shepherd-nation, who dwelt in the caves of the neighbouring mountains, namely, the Trogloiddyia. A chain of high mountains runs along the African shore of the Arabian Gulf, which in Egypt are composed of granite, marble, and alabaster, but farther south of a softer kind of stone. At the foot of the gulf these mountains turn inward, and bound the southern portion of Abyssinia. This chain was, in the most ancient times, inhabited by these Trogloiddyia, in the holes and grottoes formed by nature but enlarged by human labour. These people were not hunters; they were herders, and possessed, as the ancient Egyptians, the art of spinning in the sun. Remains of the Trogloiddyia still exist in the Shjpo, Hassoria, &c., mentioned by Bruce (vol. 4, p. 266). A still more celebrated Ḫethiopian nation, and one which has been particularly described to us by Herodotus (3, 17, seq.), was the Maccrobi, for an account of whom, and of the state and city of Meroë, the student is referred to these articles respectively. Under the latter of these heads some remarks will also be offered respecting the trade of Ḫethiopia. — The early and curious belief respecting the Ḫethiopian race, that they stood highest in the favour of the gods, and that the deities of Olympus, at stated seasons, enjoyed among them the festive hospitality of the banquet, would seem to have arisen from the peculiar relation in which Meroë stood to the adjacent countries as the parent city of civilization and religion. Piety and rectitude were the first virtues with a nation whose dominion was founded on religion and commerce, not on oppression. The active imagination, however, of the early Greeks, gave a different turn to this feature in the Ḫethiopian character, and, losing sight of the true cause, or, perhaps, never having been acquainted with it, they supposed that the Ḫethiopians and their colour derived from the Pharaohs at various times, even to a late period before the Persian conquest. The Ḫethiopians had the same religion, the same sacerdotal order, the same hieroglyphic writing, the same rites of sepulture and ceremonies as the Egyptians. Religious processions and sacrifices were celebrated in common between the two nations. The images of the gods were at certain times conveyed up the Nile, from their holy temples at Memphis, and their capitals, to the Pharaohs at various times, even to a late period before the Persian conquest. The Ḫethiopians were intimately connected with the Egyptians in the early ages of their monarchy, and Ḫethiopian princesses and whole dynastic families married the Pharaohs. We learn from Diodorus that the Pharaohs, at the conclusion of a festival, were brought back again into Egypt. (Diod. Sic., 1, 33. — Eustath., ad II., 1, 423.) The ruins of temples found of late in the countries above Egypt (viz. Meroë), and which are quite in the Egyptian style, confirm these accounts; they were, doubtless, the temples of the ancient Ḫethiopians. It is more probable that the Ḫethiopians and Egyptians used the same language, but this seems to be implied, and is not an unusual case in Egypt. This belief led Pliny to suppose that the Ḫethiopians claimed the first invention of the arts and philosophy of Egypt, and even pretended to have planted the first colonies in Egypt, soon after that country had emerged from the waters of the Nile, or rather of the Mediterranean, by which it was traditionally reported to have been covered. The Ḫethiopians, in later times, had political relations with the Ptolemaic and Roman empires, and were admitted to the rank of allies. Other names occur of the countries intervening between Egypt and Abyssinia; and when the term Ḫethiopian is again met with in a later age, it is found to have been transferred to the princes and people of Habesh. Such is the history of Ḫethiopia among the profane writers. By the Hebrews the same people are mentioned frequently under the name of Cush, which by the Septuagint translators is always rendered Alabone, or Ḫethiopians. The Hebrew term is, however, euphonious and after the ancient nations dwelling on the eastern shore of the Red Sea, and hence a degree of ambiguity respecting its meaning in some instances. This subject has been amplly discussed by Bochart and Michaelis. Among the Hebrews of later times, the term Cush clearly belongs to
The #EThiopians. The #EThiopian, who were connected with the Egyptians by affinity and intimate political relations, are by the later Hebrew historians termed Cush. Thus Tzitzakha, the Cushite invader of Judah, is evidently Tearchog the #EThiopian leader mentioned by Strabo, and the same who is termed Tarakos, and is set down by Manetho, in the well-known tale of the dynasties, as the first king of Egypt. In the earlier ages the term Cush belonged apparently to the same nation or race; though it would appear that the Cush or #EThiopians of those times occupied both sides of the Red Sea. The Cush mentioned by Moses are pointed out by him to be a nation of kindred origin with the Egyptians. In the Toldoth Beni Noach, or Archives of the sons of Noah, which Michaelis (Spicileg. Geogr. Hebr. Extr.) has proved to consist a digest of the historical and geographical knowledge of the ancient world, it is said, that the Cush and the Misraim were brothers, which, as it is generally allowed, nations nearly allied by kindred. It is very probable, that the first people who settled in Arabia were Cushite nations, who were afterward expelled or succeeded by the Beni Yektan or true Arabs. In the enumeration of the descendants of Cush in the Toldoth Beni Noach, several tribes or settlements are mentioned in Arabia, and those of Saba and Adelaide. When the same afterward proceeds to the descendants of Yektan, the very same places are enumerated among their settlements. That the Cush had in remote times possession in Asia, is evident from the history of Nimrod, a Cushite chieftain, who is said to have possessed several cities of the Assyrians, among which was Babell, or Babylon, in Shinar. Long after their departure the name of the Cush remained behind them on the coast of the Red Sea. It is probable that the name of Cush continued to be given to tribes which had succeeded the genuine Cushites in the possession of their ancient territories in Arabia, after the whole of that people had passed into Africa, just as the English are termed Britons, and the Dutch race of modern times Belgians. In this way it happened, that people, remote in race from the family of Ham, are yet named Cush, as the Midianite, who were descended from Abraham. The daughter of Jethro, the priest of Midian, was of the tribe of Cush. Now, in the text, for instance, the correspondence of Cush and #EThiopia has been preserved. We find the word rendered "#EThiopissa" by the Septuagint translators, and in the verses of Ezekiel, the Jewish Hellenistic poet, Jethro is placed in Africa, and his people are termed #EThiopians. On the whole, it may be considered as clearly established, that the Cush are the genuine #EThiopian race, and that the country of the Cush is generally in Scripture that part of Africa which lies south of Egypt. In support of these positions may be cited, not only the authority of the Septuagint, and the writers already mentioned, but the concurrent testimony of the Vulgate, and all other ancient versions, with that of Philo, Josephus, Eupolemus, and all the Jewish commentators and Christian fathers. There is only one writer of antiquity on the other side, and he was probably misled by the facts which we have already considered. This single dissenter is the writer of Jonathan's Targum, and on this authority the learned Bochart, supported by some doubtful passages, maintains that the land of Cush was situated on the eastern side of the Arabian Gulf. It has been satisfactorily shown, however, by the authors of the Universal History, and by Michaëlis, that many of these passages require a different version, and prove that the land of Cush was #Ethiopia. (Pritchard, Antiquity of Mankind, vol. 1, p. 285, seqq.)—As regards the physical characteristics of the ancient #EThiopians, it may be remarked, that the Greeks commonly used the term #EThiopian nearly as we use that of negro; they constantly spoke of the #EThiopians, as we speak of the negroes, as if they were the blackest people known in the world. "To wash the #EThiopian white," was a proverbial expression applied to a hopeless attempt. It may be thought that the term #EThiopian was perhaps used vaguely, to signify all or many African nations of dark colour, and that the genuine #EThiopians may not have been quite so black as others. But it must be observed, that though other black nations of the ancient world, such as the negroes, or the negroes of the modern world, may have been, in a wider sense, this can only have happened in consequence of their resemblance to those from whom the term originated. It is improbable that the #EThiopians were destitute of a particular character, the possession of which was the very reason why other nations participated in their name, and came to be confounded with them. And the most accurate writers, as Strabo, for example, apply the term #EThiopian in the same way. Strabo, in the 15th book (886), cites the opinion of Theodectes, who attributed to the vicinity of the sun the black colour and woolly hair of the #EThiopians. Herodotus expressly affirms (7, 70), that the #EThiopians of the west, that is, of Africa, have the most woolly hair of all nations: in this respect, he says, they differed from the Indians and Eastern #EThiopians, who were likewise black, but had straight hair. Moreover, the Hebrews, who, in consequence of their intercourse with the Greeks, were acquainted with the facts, would have made the proper application of the national term Cush, seem to have had a proverbial expression similar to that of the Greeks, "Can the Cush change his colour, or the leopard his spots?" (Jeremiah, 13, 23.) This is sufficient to prove, that the #EThiopian was the darkest race of people known to the Greeks, and, in earlier times, to the Hebrews. The only way of avoiding the inference, that the #EThiopians were genuine negroes, must be by the hypothesis, that the ancients, among whom the foregoing expressions were used, were not acquainted with any people exactly resembling the people of Guinea, and therefore applied the term woolly-haired, flat-nosed, &c., to nations who had these characters in a much less degree than those people whom we now term negroes. It seems possible, that the people termed #EThiopians by the Greeks, and Cush by the Hebrew writers, may either of them have been the same as the Shangalla, Shiluk, or other negro tribes, who now occupy the country bordering on the Nile, to the southward of Semna: or they may have been the ancestors of the present Nuba or Barabra, or of people resembling them in description. The chief obstacle to our adopting the supposition that these #EThiopians were of the Shangalla race, or of any stock resembling them, is the circumstance, that so near a connexion appears to have subsisted between the former and the Egyptians; and we know that the Egyptians were not genuine negroes. Perhaps, after all, however, we would be more correct in considering the Bedjas, and their descendants the Abadhe and Bishareen, as the posterity of the ancient #EThiopians. Both the Abadhe and Bishareen belong to the class of red, or copper-coloured people. The former are described by Belzoni (Travel s p. 310), and the latter by Burckhardt (Travels in Nubia). #Ethra, daughter of Pitheus, king of Troizen, and mother of Theseus by #Egeus. (Vid. #Egeus.) She was betrothed, in the first instance, to Hellephon; but this individual being compelled to fly, in consequence of having accidentally killed his brother, #Ethra remained under her father's roof. When #Egeus came to consult Pitheus respecting an obscure oracle which the former had received from the Delphic shrine, Pitheus managed to introduce #Ethra in the disguise of critic. From this intercourse sprang Theseus. (Vid. #Egeus.) #Ethra was afterwards taken captive by Castor and Pollux, when these two came in quest of Helen, whom Theseus had carried off, and made themselves masters of Athens. She accompa-
AETIUS.  

Aetius undertook to procure for him the assistance of the Huns. John, however, was conquered, and Aetius immediately submitted to Valentinian, who reigned in the west under the guardianship of his mother Placidia. Eagerly desirous of the imperial favours, and jealous of the credit of Count Boniface, Aetius formed a treacherous scheme against him, the result of which was to divide the empire, who invaded Africa and the Vandals under Genseric, and Africa. A friendly reconciliation between Boniface and Placidia came too late to save Africa, but it served to expose the intrigues of Aetius, who at this time was crushing the Franks and Burgundians in Gaul. Placidia did not dare to punish him, but she bestowed new honours upon Boniface. Rendered furious by this, Aetius fled back to Italy with a few troops, encountered and gave battle to his rival, was conquered, but with his own hand would have killed Boniface, who died shortly after. A.D. 432. Placidia was desirous of avenging his death, but Aetius retired among the Huns, and reappeared subsequently at the head of sixty thousand barbarians to demand his pardon. Placidia restored to him his charges and honours, and Aetius returned to Gaul to serve the empire, which he defended with great valour as long as his own ambitious views permitted this to be done. His most brilliant exploit was his defeat of Attila, who had crossed the Rhine and Seine with his Huns, and laid siege to Orleans. Aetius marched against him with a powerful army, and met his adversary, who had raised the siege of Orleans and re-crossed the Seine, in the Catalanuan plains, near the modern Châlons. The contest was bloody but decisive, and three hundred thousand men fell on both sides. Notwithstanding, however, this brilliant achievement, Aetius, in his turn, became the victim of court intrigue, and being sent for by Valentinian, and having approached him without distrust, was on a sudden stabbed to the heart by that suspicious and cowardly emperor. His death happened A.D. 454. (Procop. de Reb. Goth. 5.—Jornandes, de Regn. Success.; c. 19.—Paul Diacon. Hist. Miscell. 19. 16.—Biographe Universelle, vol. 1, p. 267).—III. A physician of Amida, in Mesopotamia, who flourished at the close of the third century. His works are Aetius, of value a valuable collection of medical facts and opinions, being deficient only in arrangement; since on several subjects their merit is transcendent. For example, the principles of the Materia Medica are delivered with admirable precision in the beginning of the first book. Of all the ancient treatises on fever, that contained in the fifth book of Aetius may be instanced as being the most complete; and it would not be easy perhaps, at the present day, to point out a work so full on all points, and so correct in practice. Of contagion, as an exciting cause of fever, he makes no mention; and as his silence, and that of the other medical authors of antiquity, has often been thought unaccountable, it may be proper to say a few words in explanation. Palladius, who has given a most comprehensive abstract of the doctrines of Galen and his successors on the subject of fever, enumerates the following exciting causes of fevers; 1st. The application of a suitable material; as when things of a caustic nature, such as pepper, mustard, and the like, are taken immediately by a person of a hot temperament; 2d. Motion; which may be either mental or corporeal; 3d. Constriction of the pores of the skin, occasioned either by the thickness of the humours, or the coldness and dryness of the surrounding atmosphere. This, by-the-by, accords with Dr. Cullen's Theory of the disease. 4th. Vomiting as a means of reducing the forma- ble Alaric, learned the art of war under this conqueror, and profited by his stay among the barbarians to secure the attachment of a people to whom he was destined to have alternately as enemies and allies. In A.D. 424, the usurper John wishing to seize the sceptre of the west,
out doubt, in cases of malignant fevers, they were aware that the effluvia from the bodies of those afflicted with them contaminated the surrounding atmosphere, and that the fevers were propagated in this manner. Aetius, Celsus, Rhazes, and Avicenna, rank the plague among those complaints which pass from one person to another: and Isidorus defines the plague thus: "Pestilentia est contagium, quod, dum unum apprehenderit, celearit ad plurres transit." At the same time, as they did not ascribe the origin and propagation of these disorders to a peculiar virus, they did not think it necessary to treat of contagion as a distinct cause of fever, because, in this view of the matter, it is clearly referrible to some one of the general causes enumerated above. Thus, the atmosphere of the ill ventilated apartment of a patient in fever becoming vitiated, and being inhaled by a person in health, might occasion fever, either by producing constriction of the pores of the skin, or putrefaction of the fluids, and accordingly would be referred either to the 3d or the 4th class of general causes. In a word, the opinions of the ancients upon this subject seem to have been confined very much to those of the more reasonable Macleanites of the present day, who, although they deny that fever, strictly speaking, is contagious, admit that it is contaminative.

Aetius is the first medical author who has given a distinct account of the Dracunculus, or Vermis Medinis, now commonly known by the name of Guinea-worm. He treats of this disease so fully, that Rhazes and Avicenna have supplied but little additional information, nor have other authors added very much to the knowledge of the ancients. The method of treating Aeneurism at the elbow-joint is deserving of attention, as being a near approximation to the improved method of operating introduced by John Hunter and Abernethy. He directs the operator to make a longitudinal incision along the inner side of the arm, three or four fingers' breadth below the armpit, and having laid bare the artery, and dissected it from the surrounding parts, to raise it up with a blind hook, and, introducing two threads, to tie them separately and divide the artery in the middle. Had he stopped here, his method would have been a complete anticipation of the plan of proceeding now practised; but, unfortunately, not having sufficient confidence in the absorbing powers of the system, he gives directions to open the tumour and evacuate its contents. Many nice operations, the eye and surrounding parts being necessarily described by him. Of the method of practice of surgery he is fuller than any other ancient writer. He has also given an account of many pharmaceutical preparations which are not noticed elsewhere.

The work of Aetius, divided by the copyists into four Tetrabibli and each Tetrabiblius into four discourses, consisted originally of sixteen books. The first eight only were printed in Greek at Venice, by the hand of Anton Mандled very much to the size. The others have remained in MS., in the libraries of Vicenza, Rome, and Paris. Various editions have been published of the Latin translation of the entire work by Janus Cornarius, under the title of Contracta ex velibris Medicinae tetrabibliis, at Venice, 1543, 8vo; at Basle, 1542, 1549, in fol.; another at Basle, 1533, fol., of which the first seven and the last three books were translated by Montanus: two at Lyons, 1549, fol., and 1560. 4to., and one at Basle, 1533, fol., of which the first seven and the last three books were translated by Montanus: two at Lyons, 1549, fol., and 1560. 4to., and one at Paris, 1567, fol., abbreviated, and added to by Menasse Artis Principes.—IV. Sicanius, or Siculus, a physician, and native of Sicily, is as commonly supposed, to whom is ascribed a treatise on Melancholy. The truth is, however, that the treatise in question is nothing more than a selection from the second discourse of the second Tetrabiblus of Aetius of Amida; so that Aetius the Sicilian becomes a mere nonentity.

Ætna, I. A celebrated volcano of Sicily, now Etna, or Monte Gellato (shortened into Mongibello), the latter of these modern appellations being adopted from the Arabic Gellat, or the mountain," given to Ætna on account of its vast size, and reminds us of the Arabian conquests in Sicily. (Compare the Map of Southern Italy and Sicily, accompanying the "Histoire des Conquêtes des Normands," by D'Arc, where the Arabic names are given.) This volcano, so immense in size, that Vesuvius, in comparison, seems merely a hill, rises on the eastern side of Sicily. It is 180 miles in circumference at the base, and attains by a gradual ascent to the height of 9,535 feet above the level of the sea. From Catania (the ancient Catana), which stands at the foot, to the summit, is 30 miles, and the traveller passes through three distinct zones, called the cultivated, the woody, and the desert. The lowest, or cultivated, zone, extends through an interval of ascent of 16 miles, and it contains numerous small mountains of a conical form, about 300 or 400 feet high, each having a crater at the top, from which the lava flows over the surrounding country. The fertility of this region is wonderful, and its fruits are the finest in the island. The woody region forms a zone of the brightest green all around the mountain, and reaches up the side about eight miles. In the desert region vegetation entirely disappears, and the surface presents a dreary expanse of snow and ice. The summit of the mountain consists of a conical hill, containing a crater above two miles in circumference.

The silence of Homer respecting the fires of Etna has given rise to the opinion, that the mountain in his time was in the same state of repose as Vesuvius in the days of Strabo. The earliest writers who make mention of Ætna, and its eruptions, are the author of the Orphic poems (Argonaut., v. 12), and particularly Pindar (Pyth., i., 21, seqq., ed. Boeckh. Compare Aetius Gallus, 17, 10), whose description, in its fearful sublimity, bears with it all the marks of truth, and points evidently to some accurate accounts of the volcano, as received by the bard, perhaps from King Hiero. Thucydides (3, 116) is next in order. He speaks of the stream of lava, which, in his time (Ol. 88, 3, B. C. 426), desolated the territory of Catana; he asserts, that fifty years before, a similar flow of lava had taken place, and, without any farther chronological reference, makes mention also of a third. These were the only three eruptions with which the Greeks had become acquainted since their settlement in Sicily. The Sicans, who had been obliged during the preceding period, given proof of its volcanic character, is evident from the narrative of Diodorus Siculus (5, 6), where we are informed, that the Sicani were compelled to retire to the western parts of the island, by reason of the devastation and terror which the fiery eruptions from the mountain had occasioned. The account which Strabo gives (274) of the state of things on the summit of Ætna, accords pretty accurately with the representations of the Ætna. The Romance years, and the Sicaults survey the island, enclosed by a bank of cinders having the height of a wall. In the middle of the plain was a hill of an ashy colour, like the surface of the plain. Over the hill a column of smoke hung suspended, extending about two hundred feet. After the person to whom Strabo received his information undertook to descend the banks and enter upon the plain, but the hot and deep sand soon compelled them to retrace their steps. The geographer, after this statement, then proceeds to contradict the common story respecting the fate of Impedocles, the party assuring him that the crater, or opening into the bowels of the mountain, could neither be seen nor approached.

The whole number of eruptions on record, in the
case of Ætna, is said to be eighty-one, of which the following may be regarded as an accurate enumeration. Those mentioned by Thucydides amount to three. In 122 B.C. there was one. In 44 A.D. one. In 252 A.D. one. During the 12th century, two happened. During the 13th, one. During the 14th, two. During the 15th, four. During the 16th, four. During the 17th, twenty-two. During the 18th, thirty. Since the commencement of the 19th, nine. (Matte-Brün, Geogr., vol. 4, p. 293, Brussels ed.) That the Greeks did not suffer this mountain to remain unemployed in their mythological legends may easily be imagined, and hence the fable that Ætna lay on part of the giant form of Typhon, enemy of the gods. (Pindar, Pyth., l. c.—Compare Αἰδηφολία, From. Vinc., v. 365.—Hyginus, c. 152.—Apollod., 1, 6, 3, and Heyne, ad loc., where the different traditions are collected.) The mountain, however, has been imagined, and the Ætolians often declared, as their birthplace, to Virgil (Æn., 3, 578), Enceladus lies below this mountain. Another class of mythographers placed the Cyclopes of Homeric fable on Ætna, though the poet never dreamed of assigning the island Thrinakia as an abode for his giant creations. (Mannert, vol. 3, p. 9, seqq.) When the Cyclopes were regarded as the aids of Vulcan in the labours of the forge, they were translated on the wing of fable, from the surface to the bowels of the earth, and the Æolians were more commonly regarded as the scene of Vulcan's art. (Mannert, 9, pt. 2, p. 297.) II. A small city on the southern declivity of Ætna. The first name of the place was Inessa, or Inessos, and Thucy- ides (6, 94) speaks of the inhabitants under the appellation of Inessi ofi (Îνεσια). The form of the name, therefore, as given by Strabo (268), namely, Inessa (Îνεσα), as we find that found in Diodorus Siculus (14, 14), Ennessa (Îнныеа), is uncertain. The name of the place was changed to Ætolia by the remains of the colony which Hiero had settled at Catana, and which the Siculi had driven out from that place. Hiero had called Catana by the name of Ætna, and the new-comers applied it to the city which now furnished them with an abode. This migration to Inessa happened Of. 79, 4. At a subsequent period (Of. 94, 2), we find the Æolians master of the place, a possession of much importance to him, since it commanded the road from Catana to the western parts of the island. The ancient site is now marked by ruins, and the place bears the name of Cas- tro. (Mannert, 10, pt. 2, p. 291, seqq.) Ætolia, a country of Greece, situate to the east of Acarnania. The most ancient accounts which can be traced respecting this region, represent it as formerly possessed by the Æolians, and from them according to received the name of Curetis. (Strab., 465.) A change was subsequently effected by Ætolus, the son of Eun- dyimon, who arrived from Elia in the Peloponnesus, at the head of a band of followers, and, having defeated the Curetis in several actions, forced them to abandon their country (vid. Acarnania), and gave the territories which they had left the name of Ætolia. (Ephor., ap. Strab., 465.—Pausan., 3, 1.) Homer represents the Æolians as a hardy and warlike nation, engaged in frequent conflicts with the Curetis. He informs us, also, that they took part in the siege of Troy, under the command of Thoas their chief, and often alludes to their prowess in the field. (Il., 9, 527—2, 538, &c.) Mythology has conferred a degree of celebrity and interest on this portion of Greece, from the story of the Calydonian boar, and the exploits of Meleager and Tydeus, with those of other Ætolian warriors, with some greater importance; but they have contributed to give renown to this province, Thucydi- des (1, 5) assures us, that the Ætolians, in general, like most of the northwestern clans of the Grecian continent, long preserved the wild and uncivilized habits of a barbarous age. The more remote tribes were especially distinguished for the uncoutnness of their language and the ferocity of their habits. (Thucyd., 3, 94.) In this historian's time they had as yet made no figure among the leading republics of Greece, and are seldom mentioned in the course of the war which he undertook to narrate. From him we learn that the Ætolians favoured the interests of the Lacedaemonians, probably more from jealousy of the Athe- nians, whom they wished to dislodge from Naua- tosia, than from any friendship they bore to the former. The possession of that important place held out induc- ments to the Athenians, in the sixth year of the war, to attempt the occupation, if not the ultimate conquest, of all Ætolia: the expedition, however, though ably planned, and conducted by Demosthenes himself, pro- vided signal dissatisfactions. We scarcely find any subse- quent mention of the Ætolians during the more im- portant transactions of the Peloponnesian war, and in the occupation of the different states of Greece. We may collect, however, that they were at that time engaged in perpetual hostilities with their neighbours the Aca- rnanians. On the death of Philip and the accession of Alexander, the Ætolians exhibited symptoms of hos- tile feelings towards the young monarch (Diod. Sic., 17, 3), which, together with the assistance they afford- ed to the confederate Greeks in the Lamiac war, drew upon them the vengeance of the Macedonians, who, with a powerful army, invaded their country, which they laid waste with fire and sword. The Ætolians, on this occasion, retired to their mountain-fastnesses, where they intrenched themselves until the ambitious designs of Perdiccas forced the Macedonian generals to evacuate their territory. (Diod. Sic., 18, 25.) If the accounts Pausanias has followed are correct, Greece was afterward mainly attacked by Ætolians from a formidable irruption of the Gauls, who had penetrated into Phocis and Æto- lia. On being at length compelled to retreat, these barbarians were so vigorously pursued by the Æto- lians, that scarcely any of them escaped. (Pausan., 10, 23.—Polyb., 9, 30.) From this time we find Ætolia acquiring a degree of importance among the other states of Greece, to which it had never aspired before. The Ætolians, in addition to these brilliancies on the decline, while northern Greece, after the example of Macedonia, was training up a numerous and hardy population to the prac- tice of war. It is rarely, however, that history has to record achievements or acts of policy honourable to the Ætolians: unjust, rapacious, and without faith or religion, they attached themselves to whatever side the hope of gain and plunder allured them, which they again forsake in favour of a richer prize whenever the temptation presented itself. (Polyb., 2, 45 and 46.—Id., 4, 67.) We thus find them leagued with Alex- ander of Epirus, the son of Pyrrhus, for the purpose of dismembering Acarnania, and seizing upon its cities and territory. (Polyb., 2, 45.—Id., 9, 34.) Again with Cleomenes, in the hope of overthrowing the Achæan confederacy. (Polyb., 2, 45.) Frustrated, however, in these designs by the able counsellors of Ara- tus, and the judicious and political policy of Antigonus the Gonatas, they renewed their attempts on the death of that prince, and carried their arms into the Pelopon- nesus; which gave rise to the social war, so ably de- scribed by Polybius. This seems to have consisted rather in predatory incursions and sudden attacks on both sides, than in a regular and systematic plan of operations. The Ætolians suffered severely; for Philip, the Macedonian king, whose forces had been de- spised, after defeating the heart of Ætolia at the head of a considerable force, and avenged, by sack and plundering Thermus, their chief city, the sacrilegious attack made by them on Dodona, and also the capture of Dium in Macedonia. (Polyb., 5, 7, seqq.) When the Romans, already hard pressed by the second Pu-
nc war, then raging in Italy, found themselves threatened on the side of Greece by the secret treaty concluded by the King of Macedon with Hannibal, they saw the advantage of an alliance with the Ætolians in order to avert the storm; and, though it might reflect but little credit on their policy, it accorded with their view, to form a league with a people of such question-able character, the soundness of judgment which dictated the measure cannot be doubted; since they were thus enabled, with a small fleet and an army under the command of M. Valerius Levins, to keep in check the whole of the Macedonian force, and effectually to preclude Philip from affording aid to the Carthaginians in Italy. (Liv., 96, 24.) The Ætolians also provided the Boeotians to the Romans in the Macedonian war, during which they displayed much zeal and activity, particularly in the battle of Cynoscephale, where their cavalry greatly distinguished itself, and contributed essentially to that decisive victory. (Liv., 33, 7.) On the conclusion of peace, the Ætolians flattered themselves that their exertions in favour of the Romans would be rewar ded with a share of the provinces taken from the enemy. But the crafty Romans considered Ætolia already sufficiently powerful to render any considerable addition to its territory impolitic, and even dangerous. The Ætolians were, at this time, no longer confined within the narrow limits which the early history of Greece assigns to them, but they had extended their dominions on the west and north-west as far as Ephira, where they were in possession of Ambracia, leaving to Acarnania a few towns only on the coast; towards the north, they occupied the districts of Amphipolis and Aperrania, a great portion of Dolopia, and, from their connexion with Athamania, their influence in that direction was felt even to the borders of Macedonia. On the side of Thessaly they had made themselves masters of the country of the Êianes, a large portion of Pithiots, with the cantons of the Melians and Trachiniens. On the coast they had gained the whole of the Locrian shore to the Crissaean Gulf, including Naupactus. In short, they wanted but little to give them the dominion over the whole of Northern Greece. The Romans, therefore, satisfied with having humbled and weakened the Macedonian prince, still left him power enough to check and curb the arrogant and ambitious projects of this people. The Ætolians appear to have keenly felt the disappointment of their expectations. (Liv., 33, 13 and 31.) They now saw all the consequences of the final treaty, so long delayed, in operation; they, who had for a time stood against the power of Greece; but, too weak of themselves to eject these formidable intruders, they turned their thoughts towards Antiochus, king of Syria, whom they induced to come over into that country, this monarch having been already urged to the same course by Hannibal. (Liv., 35, 33.) With the assistance of this new ally, they made a bold attempt to seize at once the three important towns of Antipatria, Lacedemon, and Chalcis, from which they partly supported Antiochus prosecuted the war as vigorously as it was commenced, Greece, in all probability, would have been saved, and Italy might again have seen Hannibal in her territories at the head of a victorious army; but a single defeat at Thermopylae crushed the hopes of the coalition, and drove the feeble Antiochus back into Asia. (Liv., 96, 18.) The Ætolians, deserted by their allies, returned alone, but suffered the exposure of the foe. Heraclea, Naupactus, and Amphipolis were seized in turn besieged and taken; and no other resource being left, they were forced to sue for peace. This was granted A.U.C. 563; but on conditions that for ever humbled their pride, crippled their strength, and left them but the semblance of a republic. (Liv., 38, 11. —Polyb., frag. 22, 13.) —The Ætolian policy appears to have consisted of a federal government, somewhat similar to the Achaean league. Delegates from the several states met in a common assembly, called Pan- aeolium, and formed one republic under the administra- tion of a prætor. This officer was chosen annually; and upon him devolved more especially the direction of military affairs, subject, however, to the authority of the public assembly. Besides this, there was also a more select council called Apocleti. In addition to the chief magistrate, we hear of other officers, such as a general of cavalry and a public secretary. (Liv., 31, 29.—Polyb., 4, 5.—Id., frag., 22, 15.—Tittmann, Griechisch. Staatsverfass., p. 386, seqq.) The following are the limits of Ætolia, according to Strabo (480). To the west it was separated from Arc a- nania by a mountain range; to the north it bordered on the mountain districts occupied by the Athamanes, Dolo- pes, and Êianes; to the east it was contiguous to the country of the Locri Ozole, and, more to the north, to that of the Dorian; on the south it was washed by the Corinthian Gulf. The same geogra- pher informs us, that it was usual to divide the country within these boundaries into Ætolia Antiqua and Ætolia Picterea. The former extended along the coast from the Achei- olus, to the east, to the town of Thermopylae, and included also a con- siderable tract of rich champaign country along the Achei- olus as far as Stratus. This appears to have been the situation chosen by Ætolus for his first set- tlement. The latter, as its name implies, was a ter- tory subsequently acquired, and comprehended the most mountainous and least fertile parts of the prov- ince, stretching towards the Athamanes on the north side, and the Locri Ozole on the eastern. (Cramer's Ancient Greece, vol. 2, p. 90, seqq.) Ætolia was, in general, a rough and mountainous country. (Compare Hobhouse, Journey, &c., Letter 16, vol. 1, p. 189, Am. ed.—Pouqueville, Voyage, &c., vol. 3, 231.) Some parts, however, were remarkable for their fertil- ity; such as, 1. The large Ætolian field. (Ατριοες πεδιον μητη.—Dionys., Perieg., s. 432.) 2. Parach- elioi, or the fruitful region at the mouth of the Ache- olus, formed from the mud brought down by the river, and drained or, according to the legend, torn by Her- cules from the river god. (Vid. Acheolus.) 3. The Le- lantian field, at the mouth of the Evenus. (Krouse, Hellas, vol. 2, pt. 2, p. 189, seqq.) Ætolus, son of Endymion (the founder of Elis), and of Neïs, or, according to others, Iphinaessa. Hav- ing accidentally killed Apis, son of Phoroneus, he fled with a band of followers into the country of the Cu- rates, which received from him the name of Ætolia. (Ajax, Com. 1950, 4.) Ætolus, E., a rocky island between Tenos and Chios, deriving its name from its resemblance to a goat (αξη). It is said by some to have given the appella- tion of "Ægean" (Αιαγεια) to the sea in which it stood. (Plin., 4, 11.)—II. The goat that sucked Jupiter, changed into a constellation. Afe, G. Domitius, an orator during the reigns of Tiberius, Caligula, Claudius, and Nero. He was born at Nennacum (Nymphaeum), and was the son of secure parents, and not, as some maintain (Faydit, Remarques sur Virgile), of the Domitian line. After receiving a good education in his native city, he removed, at an early age, to Rome, where he subse- quently distinguished himself by his talents at the bar, and rose to high honours under Tiberius. His ser- vices as an orator, however, most of all endeared him to the reigning prince, and its successor; and it was perhaps at the request of the latter, he numbered among his admirers, Claudia Pulchra, the cousin of Agrippina, and Q. Varus, son of the former. A skilful flatterer, he managed to preserve all his fa- vor under the three emperors who came after Tibe- rius, and finally died of intemperance under the last of the three, Nero, A.D. 59. He was the preceptor of Quintilian, who has left a very favourable account of his oratorical abilities. (Tacit., Ann., 4, 92.—Id., Agric., 11, 14.—Quintil., 5, 7.)
AFRICA.

Afrania gens. Vid. Supplement.

Afranius, I. a Latin comic poet, who flourished about 100 B.C. Cicero (Brut., 45) says, that he imitated C. Titius, and prizes him for acuteness of perception, as well as for an easy style. ("Homo peraragvitus, in fabulis quidem etiam, ut scitis, desertus.") Horace speaks of him as an imitator of Menander. (Epist., 2, 57. Cato min. de Finibus, 41.) Afranius, in his own words, himself admits, in his Commentes, that he derived many even of his plots from Menander and other Greek writers. In other instances, however, he made the manners and customs of his own country the basis of his pieces. Quintilian (10, 1, 100) praises the talents of Afranius, but censures him, at the same time, for his frequent and disguising obscenities. Of all his works, only some titles, and 266 verses remain, which are preserved in C. Curtius Patarenum of Ma Itera, and have also been published by Bothe and Neukirch. (Bähr, Gesch. Rom. Lit., vol. 1, p. 111. — Schol. Hist. Lit. Rom., vol. 1, p. 139.)—II. Nepos, a commander who had served under Pompey, and was named by him consul, A.U.C. 694, a period when Pompey was beginning to dread the power and ambition of Caesar. Afranius, however, performed nothing remarkable at this particular time, having a distaste for public affairs. For some time he went with the army of Caesar, perhaps to come to an open rupture. Afranius was in Spain, as the lieutenant of the former, along with Petreius, who held a similar appointment. Caesar entered the country at this period, and the two lieutenants, uniting their forces, awaited his approach in an advantageous position near Herda (the modern Lerida). Caesar was defeated in the first action, and two days afterward saw himself blockaded, as it were, in his own camp, by the sudden rise of the two rivers between which it was situated; and over every obstacle, and he eventually compelled the two lieutenants of Pompey to submit without a second encounter. They disbanded their troops and returned to Italy, after having promised never to bear arms against Caesar for the future. Afranius, however, either forgetful of his word, or having in some way released himself from the obligation he had assumed, took part with Pompey in the battle of Pharsalia, being intrusted with the right wing of the army, and, notwithstanding his capitulation in Spain had laid him open to the charge of having betrayed the interests of his chief. After the battle of Thapsus, Afranius and Faustus Sylla moved along the coast of Africa, with a small body of troops, in the design of passing over to Spain, and joining the remains of Pompey's party in that quarter. They were encountered, however, by Sittius, one of the partisans of Caesar, who defeated and made them prisoners. It was the intention of Sittius to have saved their lives, but they were both massacred by his soldiers. (Cæs., Bell. Civ., 1, 38. — Cic., ep. ad Att., 1, 18. — Plut., Vit. Pomp. — Sueton., Vit. Cæs., 34. — Florus, 4, 2.)—III. Potitus, a plebeian, in the reign of Caligula, who, in a spirit of foolish flattery, bound himself by an oath, that he would depart from existence in case the emperor recovered from a dangerous malady under which he was labouring. Caligula was restored to health, and Potitus compelled to fulfil his oath. (Dio Cass., 59, 8.)—Compare the remarks of Reimar, ad loc., on the belief prevalent throughout the ancient world, that the life of an individual could be prolonged, if another would lay down his own in its stead.)

AFRICA, one of the main divisions of the ancient world, known to history for upward of three thousand years; yet, notwithstanding its ancient celebrity, and notwithstanding its vicinity to Europe, still in a great measure eluding the examination of science. Modern observation and discoveries make it to be a vast peninsula, 5000 miles in length, and almost 4500 in breadth, presenting in an area of nearly 13,430,000 square miles, few low or easily-navigated rivers.—The Greeks would seem to have been acquainted, from a very early period, with the Mediterranean coast of this country, since every brisk north wind would carry their vessels to its shores. Hence we find Homer already evincing a knowledge of this portion of the continent. (Od., 4, 84.) A tawny-coloured population roamed along this extensive region, to whom the name of Libyans is given; a corruption, probably, of some native term; while the country occupied by them was denominated Libya (ἡ Λιβύη). To this same coast belonged, in strictness, the lower portion of Egypt; but the name of this latter region had reached the Greeks as early as, if not earlier than, that of Libya, and the two therefore remained always disunited. Egypt, in consequence, was regarded as a separate country, until the now firmly-established idea of three continents superinduced the necessity of attaching it to one of the three. By some, therefore, it was considered as a part of Asia; while others made the Nile the dividing line, and assigned part of Libya to Egypt, while the portion east of the Nile was made to belong to the Asiatic continent. As regarded the extent of Libya inland, but little was at that time known. Popular belief made the African continent of small dimensions, and supposed it to be washed on the south by the Indian Ocean, while it was imagined that the whole of what was then supposed to be the flat and circular disk of the earth. In this state, or very nearly so, Herodotus found the geographical knowledge and opinions of his contemporaries. The historian opposes many of the speculations of the day on this subject (4, 36, seqq.); he rejects the earth-encompassing Oceanus, as well as the idea that the earth was round as if made by a machine. He condemns also the division into Europe, Asia, and Africa, on account of the great disproportion which was made to the earth; and he contends, to acquiesce in the more prevalent opinions of the day, he recognises Libya as distinct from Egypt, or, more properly speaking, makes the Nile the dividing line, though, from his own private conviction, it is easy to perceive that he himself takes for the eastern limit of Africa, what is regarded as such at the present day. None of the later geographers, down to the time of Ptolemy, appear to have disturbed this arrangement. (Ptolemy, v. 7, ch. 3, 3, 4.)—Strabo also speaks of it; Strabo also does the same, though he considers the Arabian Gulf, with the isthmus to the north, as affording the far more natural boundary on the east. At Alexandrea, however, was built to the west of the mouths of the Nile, the canal which led off to this city was regarded as a part of the eastern boundary of the continent, and hence we find the city belonging on one side to Libya, and on the other to Asia. (Hierocles, Bèllum Alexandr., c. 14.) The Romans, as in most of their other geographical views, followed here also the usages of the Greeks, and hence Mela (1, 1) remarks, "Quod terrarum jacet a freto ad Nitum, Africam vocamus." As, however, in their subdivisions of territory, the district of Marmarica was added to the government of Africa, they began gradually to contract the limits of Libya, and to consider the Catabathmus Magnus as the dividing point. Hence we find the same Mela remarking (1, 8), "Catabathmus, aedes devisea in Egyptum, finit Africam." In consequence of this new arrangement, Egypt on both sides of the Nile began to be reckoned a part of the continent of Asia. ("Egyptus Asia primum pars, inter Catabathmum et Arabas."—Mela, 1, 9.) Ptolemy laid aside, in his day, all these arbitrary points of separation, and, assuming the Arabian Gulf as the true and natural dividing line on the east, made Egypt a part of Africa, and added to the same continent the whole western coast of the same gulf, which had before been regarded as an appendage of Arabia. (Manucci, 10, pt. 2, B. 1, seqq.)—The name of Africa seems to have been
AFRICA originally applied by the Romans to the country around Carthage, the first part of the continent with which they became acquainted, and the appellation is said to have been derived from a small Carthaginian district on the northern coast, called Frigi. (Ritter, Erdkunde, 1, p. 353, 2d ed.) Hence, even when the name had become applied to the whole continent, there still remains a graphic expression of Africa Proper, on the Mediterranean coast, corresponding to the modern kingdom of Tunis, with part of that of Tripoli. The term Libya, on the other hand, though used by the Greeks to designate the entire country, became limited with the Romans to a part merely; and thus we have with the latter, the region of Libya, extending along the coast from the Greater Syrtis to Egypt, and stretching inland to the limits of the Sahara. Herodotus possessed of this continent was far from extensive. He considered Africa as terminating north of the equinoctial line; and, even in these narrow limits, Egypt alone, ranking it as a part of Africa in fact, is clearly described. If we exclude Egypt, the acquaintance possessed by the historian relative to the other parts of the continent, and which is founded on the information imparted by others, follows merely through the reports of our own the wrong and reaches probably the limit of modern discoveries in that quarter; another, leaving the temple and Oasis of Ammon, loses itself in the great desert; while a third advances along the Mediterranean coast as far as the environs of Carthage. (Malte-Brun, 1, p. 26, Brussels ed.) The natives of Africa are divided by Herodotus into two races, the Africans, or, to adopt the Greek phraseology, Libyans, and the Æthiopians; one possessing the northern, the other the southern part (4, 197). By these appear to be meant the Moors, and the Negros, or the darker-coloured nations of the interior. The common boundary of the Africans and Æthiopians in ancient times may be placed at the southern border of the Great Desert. Hanno found the Æthiopians in possession of the western coast, about the parallel of 19°; and Fliny (5, 31) places them at five journeys beyond Cernae. At present the negroes are not found higher up than the Senegal river, or about 17°, and that only in the inland parts. (Rennell, Geography of Herodotus, p. 427, seqq.) Nothing, however, can be more indeterminate than the terms Æthiopia and Æthiopian; and it is certain that many distinct races were included under the latter denomination. (Vid. Æthiopia.) The whole of Africa, except where it is joined to Asia, was known by the ancients in general to be surrounded by the sea; but of its general figure and extension towards the south they had no accurate knowledge. There is strong reason, however, to believe, that, at an era anterior to the earliest records of history, the circumnavigation of Africa was accomplished by the Phenicians in the service of Necho, king of Egypt. Herodotus, to whom we are indebted for the knowledge of this interesting fact, speaking of the peninsular figure of the continent of Africa, says (4, 49): "This discovery was first made by Necho, king of Egypt, as far as we are able to judge. When he had desisted from opening the canal that leads from the Nile to the Arabian Gulf, he sent certain Phenicians in ships, with orders to pass by the Columns of Hercules into the sea that lies to the north of Africa, and then to return to Egypt. These Phenicians thereupon set sail from the Red Sea, and entered into the Southern Ocean. On the approach they found they had landed in Africa, and planted some grain in the quays in order to see how it would come on; when this was ripe and they had cut it down, they put to sea again. Having spent two years in this way, they in the third passed the Columns of Hercules, and returned to Egypt. Their relation may obtain credit from others, but to me it seems impossible to be believed; for they affirmed, that, as they sailed around the coast of Africa, they had the sun on their right hand." The report which Herodotus thought so strange as to throw discredit on the whole narrative, namely, that in passing round Africa the navigators had the sun to the right, affords to us, as has been well remarked, the strongest presumption in favour of its truth, since the geographical theory held in an age when astronomy was yet in its infancy. The Phenicians must of course have had the sun on their right after having passed the line. (Larcher, ad Herod., l. c.—vol. 3, p. 458.—Compare Rennell, Geography of Herodotus, p. 718.) Many writers, however, have laboured to prove that the voyage, in all probability, never took place; that the time in which it is said to have been performed was too short for such an enterprise; and the date assigned to the discovery was altogether beyond any means which navigation at that era could command. (Gossellin, Recherches, &c., vol. 1, p. 199, seqq.—Mannert, 1, p. 21, seqq.—Malte-Brun, 1, p. 30.) But the learned arguments of Rennell impart to the tradition a strong aspect of probability. (Rennell, Geography of Herodotus, p. 672, seqq.—Compare Larcher, ad Herod., l. c., vol. 3, p. 458, seqq.—Murray, Account of a circumnavigation of the continent of Africa, in 21° 8' 17" E. line, of this first circumnavigation of Africa is supposed to be about 600 B.C. In that rude stage of the art of navigation, however, the knowledge of a passage by the Southern Ocean was as unavailable for any mercantile or practical purposes, as the discovery of a north-west passage in modern days. The precarious and tardy nature of the voyage, as well as the great expense attending it, would necessarily preclude its being made the channel of a regular commerce; nor was there any sufficient inducement for repeating the attempt, as the articles of merchandise most in request were to be had much nearer home. Exaggerated representations, moreover, of the frightful coast, and of the stormy and boundless ocean into which it projected, would naturally concur in intimidating future adventurers. Accordingly, we are informed by Herodotus (4, 43), that Sataspes, a Persian nekatman, who was condemned by Xerxes to be impaled, had his sentence commuted for the task of sailing round the African continent. He made the attempt from the west, passing the Columns of Hercules, and sailing southward along the western coast for several months; till baffled probably by the adverse winds and currents, or finding himself carried out into an immense and apparently boundless sea, he in despair abandoned the enterprise as impracticable, and returned by the way of the Straits to Egypt; upon which the monarch ordered the original sentence to be executed upon him. These attempts to circumnavigate Africa were made under the direction of the most powerful monarchs of the age; the next was undertaken by a private adventurer. We are informed by Strabo (98), who cites Posidonius as his authority, that a certain Eudoxus, a native of Cyzicus, having been deputed by his fellow-citizens to convey their solemn offering to the Isthmian celebration at Corinth, went, after having executed this commission, to Egypt, and had several conferences with the reigning monarch, Euergetes II., and also with his ministers, respecting various topics, but particularly concerning the navigation of the Nile in the upper part of its course. This man was an enthusiast in topographical researches, and not wanting in erudition. It happened that, about this same time, the guard-vessels on the coast of the Arabian Gulf picked up an Indian, alone, in a boat, headed by a man. He was brought to the king; but no one understanding his language, the monarch ordered him to be instructed in Greek; and when he could speak that tongue, the Indian stated that, having set sail from the coast of India, he had lost his way, and had seen all his companions perish through famine. He promised, if the king would send him back, to show
the way to India to those whom the monarch should charge with this commission. Eumereses assented, and Eudoxus was one of those directed to go on this ex-

rand. He sailed with a cargo of various articles calcul-

ated for presents, and brought back in exchange aro-

matics and precious stones. He was disappointed, ho-

wever, in the expectations of profit which he had en-

tertained, since the king appropriated all the return-

cargoes to the use of the household. Eudoxus, who

had married Cleopatra, his widow, assumed the reins of government, and

sent Eudoxus on a second voyage to India with a rich-

er supply of merchandise than before. On his return, he

was carried by the winds to the coast of ~Ethiopia, where,

landing at several points, he consolidated the na-

tives by distributing among them corn, wine, and dried

figs, things of which until then they had been ignorant.

He received in exchange water and guides. He noted

down also some words of their language; and found,

moreover, in this quarter, the extremity of a ship's prow,
carved in the shape of a horse's head. This fragment,

he was told, had belonged to a shipwrecked vessel that

came from the west. Having reached Egypt, he found

the son of Cleopatra on the throne, and he was again

depoited the fruits of his voyage, being charged with

having converted many things to his own use.

As regards the fragment of the shipwrecked vessel

brought home to him, he exposed it in the market-

place for the examination of the shipmasters and arti-

cels, who informed him that it must have belonged to

a ship from Gades (Cudiz). The grounds of their be-

lief were as follows: the traders of Gades, according
to them, had large vessels; but the less wealthy, small-

er ones, which they called horses, from the ornament

on their prows, and which they used in fishing along

the coasts of Mauritania as far as the river Lixus.

Some shipmasters who recognised the fragment as hav-

ing belonged to a certain vessel, related, which

with many others, had attempted to advance beyond the

Lixus, and had never after been heard of. From

these statements Eudoxus conceived the possibility of

circumnavigating Africa. He returned home, disposed

of all his effects, and put to sea again with the money

thus obtained, intending to attempt the enterprise in

question. Having visited Dicearchia, Massilia, and oth-
er cities in the vicinity of the same whereon announced his

project, and collected funds, he set sail from Gades

at length enabled to equip one large and two small ves-

sels, well-stored with provisions and merchandise, man-

ned chiefly by volunteers, and carrying, moreover, a

pompous train of artisans, physicians, and young slaves

skilled in music. Having set sail, he was carried on his

way at first by favourable breezes from the west.

The crews, however, became fatigued, and he was compell

ed, though reluctantly, to keep nearer the shore, and

soon experienced the disaster which he had dreaded.

his ship grounding on a sandbank. As the vessel did

not immediately go to pieces, he was enabled to save

the cargo and great part of her timbers. With

the latter he constructed another vessel of the size of one

of fifty oars. Resuming his route, he came to a place

inhabited by nations who spoke the same language, as

he thought, with those on the eastern coast whom he

had visited in his second voyage from India, and of

whose tongue he had noted down some words. Hence

he inferred that these were a part of the great ~Ethio-

pian race. The smallness of his vessels, however,

induced

d him at length to return, and he remarked on his

way back a deserted island, well supplied with wood

and water. Having reached Mauritania, he sold his

vessels and repaired to the court of Bocchus, and ad-

vised that king to send out a fleet of discovery along

the coast of Africa. The monarch's friends, however,

inspired him with the fear that his kingdom might, in

this way, become gradually exposed to the visits and

incursions of strangers. He made fair promises, there-

fore, to Eudoxus, but secretly intended to have him

left on some desert island; and the latter, having dis-

covered this, escaped into the Roman province, and

then passed over into Spain. Here he constructed

two vessels, one intended to keep near the coast, the

other to sail in deep water; and, having taken on board

agricultural implements, various kinds of grain, and

skillful artificers, he set sail on a second voyage, resolv-

ing; if the navigation became too long, to winter in the

land of the Alani, and then to return by sea to Africa.

Having thus resolved, the king remarked: 'There is no

point, unfortunately, the narrative of Posidonius, as
detailed by Strabo, stops short, leaving us totally in the
dark as to the result. Pomponius Mela (3, 9, 10) tells

us, on the alleged authority of Cornelius Nepos, that

Eudoxus actually made the circuit of Africa, adding

some particulars of the most fabulous description

respecting the nations whom he saw. But no de-

pendence can be placed on this doubtful authority;

whereas the narrative of Posidonius bears every mark

of authenticity (Compare Murray, 1, p. 13, seqq.,

and Malte-Brun, 1, p. 68, where the voyage of Eudoxus

is defended against the remarks of Gossellin in his Re-

cherches, &c., 1, p. 217, seqq.) These are the only

instances on record in which the circumnavigation of

Africa was either performed or attempted by the an-

cients. Other voyages were, however, undertaken

with a view to the exploration of certain parts of its

unknown coasts. The most memorable is that of

Aemilius Paulus, a man of the illustrious and ancient

family of the Roman gens(Periplus, in Geogr. Gr. Min., ed. Gail., 1, p. 113, seqq.) With regard to the extent of coast actually

explored by this expedition, the brief and indistinct nar-

rative affords ample room for learned speculation and

controversy. According to Rennell (Geogr. of Herod.,
p. 719, seqq.), the island of Cerne is the modern Ar-

guen, the Lixus is the Senegal, and the voyage extend-

ed a little beyond. Sierra Leone. M. Gossellin, on the

other hand (Recherches, &c., 1, p. 61, seqq.), contends

that the whole course was along the coast of Maurita-

nia; that the Lixus was the modern Lucos, Cerne was

Fedala, and the voyage extended little beyond Cape

Nun. Malte-Brun (1, p. 33, Brussels ed.) carries

Hanno as far as the bays called the Gulf dos Medanos,

and the Gulf of Gonzalez de Cinta, on the shore of the
desert: and he is induced to assume this distance, in

some degree, from the fact of Himilco, another Car-

thaginian, having advanced in the same direction as

d far to the north as the coasts of Britain, a voyage much

longer and more perilous than that said to have been

performed by Hanno along the African coast. (Plin.,

7, 67.—Fast. Avien. Ora Marit., v. 80, seqq.)

A translation of the Periplus, however, will be found un-
der the article Hanno, from which the student may
draw his own conclusions.—At a much later period this

part of the coast was explored by the Phoenicians.

Polybius, the celebrated historian, was sent out by Scipio

on an exploratory voyage in the same direction; but, from the meager account

preserved by Pliny, M. Gossellin infers that he did not
AFRICA.

sail quite so far as the Carthaginian navigator had done. —Let us now turn our attention, for a moment, to the interior of the country. We have already alluded in general terms to the vast extent of mountaneous region by Grierson and other writers

To what we have stated on this subject may be added the following curious narrative, which we receive from the historian himself (2, 32).

"I was also informed," says Herodotus, "by some Cyrenaeans, that in a journey they took to the oracle of Ammon, they had conferred with Etearchus, king of the Ammonians; and that, among other things, discoursing with him concerning the sources of the Nile, as of so many unknown, Etearchus acquainted them, that certain Nasamones, a nation of Libya inhabiting the Syrtis, and a tract of land of no great extent eastward of the Syrtis, came into his country, and, being asked by him if they had learned anything touching the Libyan deserts, answered that some petitulant young men, sons to divers persons of great power among them, had, after many extravagant actions, resolved to send five of their number to the coast of Libya, to see if they could make any farther discoveries than others had done. The young men chosen by their companions to make this expedition, having furnished themselves with water and other necessary provisions, first passed through the inhabited country; and when they had likewise traversed that region which abounds in wild beasts, they entered the deserts, making their way towards the west. After they had travelled many days through the sands, they at length saw some trees growing in a plain, and they approached, and began to gather the fruit which was on them; and while they were gathering, several little men, less than men of middle size, came up, and, having seized them, carried them away. The Nasamones did not at all understand what they said, neither did they understand the speech of the Nasamones. However, they conducted them over vast morasses to a city built on a great river running from the west to the east, and abounding in crocodiles; where the Nasamones found all the inhabitants black, and of no larger size than their guides. To this relation Etearchus added, as the Cyrenaeans assured me, that the Nasamones returned safe to their own country, and that the men to whom they had thus come were all enchanters." (Compare the remarks under the article Nasamones.) Rennell (Geogr. of Herod., p. 432) observes, that it is extremely probable that the river seen by the Nasamones was that which, according to Strabo (III, 3, § 1), was called by the ordinary name of Tumboctoo, and thence eastward through the centre of Africa (in effect, the river commonly known by the name of Niger). What is called the inhabited country in this narrative, he makes the same with the modern Fezzan, in which also he finds the sandy and desert region traversed by the Nasamones. It appears certain to him, as well as to Larcher, that the city in question was the modern Tombuctoo. M. Brune however thinks it was Timbuctoo, of which the name is a corruption of Hercules. It is impossible that Tombuctoo can be the place alluded to, since it is separated from the country of the Nasamones by so many deserts, rivers, and mountains. —In the days of Strabo, the knowledge possessed by the ancients of Africa was little, if at all, improved. The Mediterranean coast and the banks of the Nile were the only parts frequented by the Greeks. Their opinion respecting the continent itself was that it formed a true oblong. The name of Hercules to Pelusium might be considered as the basis of a right-angled triangle (Strabo, 17, p. 825, ed. Casaub.), of which the Nile formed the perpendicular side, extending to Ethiopia and the ocean, while the hypothesis was the coast comprehended between the extremity of this line and the straits. The apex of the triangle reached beyond the limits of the habitable world, and was consequently regarded as inaccessible; hence Strabo denies his inability to assign any precise length to the continent in question. His knowledge of the western coast is far from extensive or accurate. In passing the straits, we find, according to him, a true circle of islands round the Mount Atlas, that is, the Barbary coast. In consequence of this, the Phoenicians used to have establishments. After this the coast bends in, and proceeds to meet the extremity of the perpendicular line on the opposite side. We may pardon Strabo for too lightly rejecting the discoveries of the Carthaginians, and the extent of the western coast, as nothing proves him to have read the peripics of Hanno. An error, however, which cannot be excused, is that of placing Mount Atlas directly on the straits, since he might have learned from the account of Polybius, that this mountain was situate far beyond, on the western coast, and giving name to the adjacent ocean. With regard to the eastern shores of Africa, Strabo cites a peripics of Artemidorus, from the Straits of Dire (Bab-el-Mandab) to the Southern Horn, which, from a comparison of distances as given by Ptolemy and Marinus of Tyre, answers to Cape Bandellans, to the south of Cape Gardafui. (Gosselin, Recherches, vol. 1, p. 177, seqq.) Here a desert coast for a long time arrested the progress of maritime discovery on the part of the Greeks. —The knowledge of the day then, respecting the eastern and western coasts of Africa, appears to have extended no farther than 15° north latitude, or perhaps 15° 30'. The two sides were supposed to approximate, and between the Hesperii Æthiopes to the west, and the Cinnamonomifera regio, to the east, the distance was supposed to be comparatively small. (Strabo, 119.) This intervening space was exposed to excessive heats, according to the common belief, and which forbade the traveller's penetrating within its precincts; while, at a little distance beyond, the Atlantic and Indian Oceans were thought to unite. The hypothesis of the Pyramids was not made Africa terminate at about one half of its true length, and represented this continent as much smaller than Europe. (Plin., 2, 108. —Id., 6, 33.—Pomp. Mela, 1, 4.) Still it was the one generally adopted by the Alexandrian school. (Eratosthenes, ap. Strab., passim.—Crates, ap. Gemin., Elem. Astron., c. 13. —Aratus, Phaenon., v. 587.—Cleaneus, ap. Gemin., l. c.—Cleomedes, Meteor., 1, 6, &c.) On the contrary to the hypothesis of the Pyramids, the ancient eastern Africa to India (Hipp., ap. Strab., 6), remained for a long period esteemed, until Marinus of Tyre and Ptolemy had adopted it. This adoption, however, did not prevent the previous hypothesis from keeping its ground, in some measure, in the west of Europe (Macrobi., Somni. Scip., 2, 9.—Isidor., Orig., 14, 5), where it contributed to the discovery of the route by the Cape of Good Hope. (Marte-Brun, 1, 67, &c., seqq., ap. Gemin.) This hypothesis happens to be approximated, according to Ptolemy, to two sides made Africa terminate at about one half of its true length, and represented this continent as much smaller than Europe. (Plin., 2, 108. —Id., 6, 33.) It is supposed by some, that the true circumference of the earth is between two hundred and fifty-two thousand miles, and that the circumference of Europe, Asia, and Africa is between two hundred and forty thousand miles, or between five and a half times greater than that of Africa. (Plin., l. c.) To this part of the world nine hundred and ten miles of extent. This measure, which we owe, without doubt, to the expedition against the Garamantes, conducts us beyond the Agades and Bornou, but does not reach the Niger. Whatever may be the discussions to which the very corrupt state of the Roman numerals in the pages of Pliny are calculated
to give rise, one thing is sufficiently evident, that the Romans knew only a third part of Africa. Pliny, moreover, gives us an account of two Roman expeditions into the interior of Africa. The first is that of Sulpicius Galba, 53 A.C., who, having set out from the river Lixus with some Roman troops, arrived in ten days at Mount Atlas, passed over some miles of the chain, and met, in a desert of black sand, with a river called Ger. This appears to have been the Gyr of Segelmesa. The second expedition was that of Cornelius Balbus. "We have subdued," says Pliny (5, 6), "the nation of the Phazani, together with their cities Alce and Cillaeba: and likewise Cydaminus. From these a chain of mountains, called the Black by reason of their colour, extends in a direction from east to west. Then come deserts, and afterward Matelge, a town of the Garamantes, the celebrated fountain of Debris, whose waters are hot from midnight to midnight, and cold from midnight to midday; and also Gara, the capital of the nation. All these countries have been subjugated by the Roman arms, and over them did Cornelius Balbus triumph." Pliny then proceeds to create longitude and latitude, and whose names were said to have adorned the triumph. Malte-Brun, after a fair discussion of this subject, is of opinion that Balbus must have penetrated as far as Bornou and Dongola, which appear to coincide with the Boin and Daunagi of Pliny. The black mountains were probably those of Tifebiti. (Malte-Brun, 1, p. 85, Brussels ed.):—Marinus of Tyre, who came before Ptolemy, pretended to have read the itinera ry of a Roman expedition under Septimius Pacenus and Julius Maternus. (Ptol., I, 8, seqg.) These officers set out from Leptis Magna for Garama, the capital of the Garamantes, which they found to be 5400 stadia from the former city. Septimius, after this, marched directly south for the space of three months, and came to a country called Agyzimba, inhabited by negroes. Marinus, after some reasoning, fixes the position of this country at 24° south of the equator. A strict application of the laws of historical criticism will convincingly intimate to the regions of fable this Roman expedition, unknown even to the Romans themselves. How can we possibly admit, that a general executed a march more astonishing than even that of Alexander, and that no contemporary writer has preserved the least mention of it! At what epoch, or under what reign, are we to place this event? How, moreover, could an army, in three months, traverse a space equal to eleven hundred French leagues! (Malte-Brun, 1, p. 128, Brussels ed.)—The form of Africa was totally changed by Ptolemy. We have seen that Strabo and Pliny regarded this part of the world as an island, terminating within the equinoctial line. The Atlantic Ocean was thought to join the Indian Sea under the torrid zone, the heats of which were regarded as the most powerful barrier to the circumnavigation of Africa. Ptolemy, who had to circumnavigate the continent, thought, on the contrary, that the western coast of Africa, after having formed a gulf of moderate depth, which he calls Heracteria (Eperieris), extended indefinitely between south and west, while he believed that the eastern coast, after Cape Prasum, proceeded to join the coast of Asia below Catigara. (Ptol., 7, 3.) This opinion, which made the Atlantic and Indian Oceans only large basins, seemed to have been supported by Hipparchus. The interior of Africa presents, in the pages of Ptolemy, a mass of confused notions. And yet he is the first ancient writer that announces with certainty the existence of the Niger, obscurely indicated by Pliny. The most difficult point to explain in the Central Africa of Ptolemy, is to know what river he means by the Gyr. (Ptol., 4, 6.) Some are in favour of the river of Bornou, or the Bahr-al-Gezel. (D'Anville, Mem. sur les fleuves de l'intérieur de l'Afrique, Acad. des Inscri., vol. 26, p. 64.) Others declare for the Bahr-el-Misselad. (Rennell, Geogr. of Herod., p. 418.) Neither, however, of these rivers suits the description of Claudian (Laud. Stilich., I, p. 298), reproducing the image of the Nile by the abounding waterfalls: "Nile...firmus...-feed...Nilum." In the midst of so many contradictions, and in a region still almost unknown, the boldness of ignorance may hazard any assertion, and pretend to decide any point, while the modesty of true science resigns itself to doubt.

AFRICA. I. Sextus Julius, a native of Palestine, belonging to a family that had come originally from Africa. He lived under the "Emperor Heligolamus," and fixed his residence at Emmaus. This city having been ruined, he was deputed to wait on the emperor and obtain an order for rebuilding it, in which mission he succeeded, and the new city took the name of Nicopolis. (Chron. Paschale, ann. 223.) About A.D. 231, Julius Africanus visited Alexandria to hear the public discussions of Heraclius. He had been brought up in paganism, but he subsequently embraced the Christian religion. "It was with this, probably, at an advanced age. He was acquainted with the Hebrew tongue, applied himself to various branches of scientific study, but devoted himself particularly to the perusal and investigation of the sacred writings, on which he published a commentary. The work, however, that most contributed to his reputation, was a Chronography in five books (Πεζοτικιν χρονολογικηρ), commencing with the Creation, which he fixes at 5499 B.C., and concluding with the death of Babel. This calculation forms the basis of a particular era, of which use is made in the Eastern Church, and which is styled the Historical Era, or that of the Historians of Alexandria. Fragments of this work are preserved by Eusebius, Syncellus, Joannes Malalas, Theophanes, Cedrenus, and in the Chronicon Paschale. Photius says of this production, that, though concise, it omits nothing important. (Biblioth., vol. I, p. 7, ed. Bekker.) Eusebius has most profited by, and, in his Chronography, often copies him. He has preserved for us also a letter of Africanus, addressed to Aristides, the object of which is to reconcile the discrepancy between St. Matthew and St. Luke on the question of our Saviour's genealogy. We have also another letter of his, addressed to Origen, in which he contests the authenticity of the story of Susanna. Africanus likewise composed a large work in nine, or, according to others, fourteen, or even twenty-four books, entitled De Cestuse. This name was given it by the author, because, like the Cestus of Venus, his collection contained a mingled variety of pleasing things selected from numerous works. In it were discussed questions of natural history, medicine, agriculture, chemistry, &c. In the part that principally remains to us, and which appears to have been extracted from the main body of the work in the turn of our author, it is a topic of consideration. It is printed in the Mathematici veteres, Paris, 1693, fol., and also in the seventh volume of the works of Meursius, Florence, 1746. It has also been translated by Guisehard in his Mémoires Militaires des Grecs et des Romains, 1758, 4to. From some scattered fragments of other portions of the same work, it would appear to have been, in general, of no very valuable character. For example, in order to increase the interest of it, as it turned, we are directed to write on the bottom of the vessel the words of the psalmist, "Taste and see how sweet is the Lord!" Again, in order to drink a good deal of wine with impunity, we must repeat, on taking the first glass, the 170th verse of the 8th book of the Iliad, "Jove thundered thriceth from the summits of Olympus." He gives us also other precepts for things less useful than curious in their natures, and which may serve to amuse an agriculturalist; as, for example, how to ac-
AGAMEMNON.  

the murder of Atreus, (vid. Atreus, Ατρέως) and the accession of his son Thyestes, to the vacant throne. Agamemnon fled to Sparta, accompanied by his brother Menelaus, after having previously found an asylum first with Polyphides, king of Sicyon, and then with Oeneus, king of Calydon. Tydarus was reigning at Sparta, and had married his daughter Clytemnestra to a son of Thyestes; but, being dissatisfied with the alliance, he stipulated with Agamemnon to aid him in recovering the kingdom of Atreus, provided he would carry off Clytemnestra and make her his queen. This stipulation was agreed to; and the plan having succeeded, Agamemnon married the daughter of Tydarus, and became the father of Orestes, Iphigenia (or Iphianassa), Laodice (or Electra), and Chryssothemis. Agamemnon was one of the most powerful princes of his time, and on this account was chosen commander-in-chief of the Greeks in their expedition against Troy. The Grecian fleet being detained by contrary winds at Aulis, owing to the wrath of Diana, whom Agamemnon had offended by killing one of her favourite deer, Calchas, the soothsayer, was consulted, and he declared, that to appease the goddess, Iphigenia, the monarch's eldest daughter, must be sacrificed. She was accordingly led to the altar, and was about to be offered as a victim, when (contrary to the statement of Virgil that she was actually immolated) she is generally said to have suddenly disappeared, and a stag was said to have been substituted by the goddess herself. (Vid. Iphigenia.) The dispute at Aulis, before the walls of Troy, respecting the captive Chryseis; the consequent loss to the Greeks of the services of Achilles; his return to the war, in order to avenge the death of Patroclus; and his victory over Hector, form the principal subject of the Iliad. In the division of the captives after the taking of Troy, Cassandra, one of the daughters of Priam, fell to the lot of Agamemnon. The dispute at Aulis, was concluded with the gift of a prophetess, and warned Agamemnon with his future suffering in Mycenae; but from the disregard with which her predictions were generally treated (vid. Cassandra), he was deaf to her admonitory voice, and was consequently, upon his arrival in the city, assassinated, with her and their two children, by his queen Clytemnestra and her paramour Εγέθισσα. (Vid. Clytemnestra, Εγέθισσα.) The manner of Agamemnon's death is variously given. According to the Homeric account, he was dead or dying in theerring house of the shepherds, and was immediately smitten with a storm to that part of the coast of Argolis where Εγέθισσα, the son of Thyestes, resided. During his absence, Εγέθισσα had carried on an adulterous intercourse with Clytemnestra, and he had set a watchman, with a promise of a large reward, to give him the earliest tidings of the return of the king. As soon as he learned that he was on the coast, he went out to welcome him, and invited him to his mansion. At the banquet in the evening, however, he placed, without his knowledge, twenty men in concealment, who fell on and slaughtered him, together with Cassandra and all his companions. They died not, however, unavenged, for Εγέθισσα alone was left alive. (Οδ., 4, 512, seqq.—Οδ., 11, 405, seqq.) The post-homeric account, followed by the Tragic writers, makes Agamemnon to have fallen by the hands of his wife, after he had just come forth from the bath, and carrying the gorgeous robe wearing the gold clasps of which he had been sewed together, as the opening for the head, and by which, of course, all his movements were obstructed, and, as it were, fetterd. (Schol. ad Eurip., Hec., 1277.—Compare Eurip., Orest., 25.—Esch., Agam., 1053.—Id., Eumen., 631.) His death was avenged by his son Orestes. (Vid. Orestes.) Before concluding this article, it may not be amiss to remark, that Homer knows nothing of Plisithenes as the father of Agamemnon and Menelaus: he calls them simply the offspring of Atreus. Accord-
ing to this view of the case, Atreus, who, as eldest
son, had succeeded Pelops, left on his deathbed Aga-
memnon and Menelaus, still under age, to the guar-
dianship of his brother Thyestes, who resigned the king-
dom to his nephews when they had reached maturity.

The variations introduced into this story, therefore,
would seem to be the work of later poets, especially of
the Tragic writers, from whom the grammarians and
scholiasts borrowed. (Hepha. ed ii. 2, v. 106. — Suppl.
et Emden, v. p. 685.) With respect to the extent of Agamemnon's sway, we are informed by Homer (II., 2, 108) that he ruled over many is-
lands and over all Argos (πολλάκις νήσοις καὶ Ἀργηντὶ
πατρὶ)

By Argos appears to be here meant, not the
city of that name, for this was under the sway of Dio-
mode, but a large portion of the Peloponnesus, in-
cluding particularly the cities of Mycene and Tityns
(Hepha. Excurs. 1, ad ii., 2.)

The islands to which the poet alludes can hardly be those of the Sinus Ar-
golicus, which are few in number and small. Homer
himself says, that Agamemnon possessed the most
powerful fleet, and from this it would appear that he
held many islands under his sway, though we are un-
acquainted with their names. (Hepha. i. c. — Thucyd.,
1, 9.) Thus much for Agamemnon, on the supposition
that such an individual once actually existed. If
we follow, however, the theory advocated by Herma
us and Scholasticus, he may not only the Trojan war itself
to have been originally a mere allegory, but the names of
the leading personages to be also allegorical, and
indicative of their respective stations or characters,
Agamemnon becomes the "permanency," or "general
leader of the host" (Σωκρ. μεταφράσεως, the termination
ων strengthening the idea implied by the two com-
ponent words from which the appellation is derived, and
denoting collection or aggregation. The name Aga-
memon, in Latin, means "King of the Ganges," for
Greece, we find mention made of a Ζηγεῖα Ἀγαμε-
μονος. (Meurs. Miscell. Laco., 1, 4. — Eustath., ad ii.,
2, p. 108. — Consult Hermann und Creuzer, Briefe über
Hom. und Hes., p. 20, and Creuzer, Symbolik,
vol. 2, p. 450.)

Agamemnon, an epitaph applied to Orestes, a
son of Agamemnon. (Virg., Æn., 4, v. 471.)

Aganippe, a celebrated fountain of Beozia, on
Mount Helicon, from which the Twelve Muses stood on
the summit of the mountain, and a little below was
Aganippe. The source Hippocrene was some dis-
tance above. These two springs supplied the small
rivers Olmius and Permeamus, which, after uniting their
waters, flowed into the Copaic lake near Haliartus.
(Strabo, 407 and 411.) Pausanias (9, 31) calls the
former Lennus. Aganippe was sacred to the Muses, who
from it were called Aganippae. Ovid (Fast. 5,
7) has the expression "fontes Aganippae Hippo-
crenae," whence some are inclined to imagine that he makes
Aganippe and Hippocrene the same. This, however,
is incorrect: the epithet Aganippae, as used by the
poet, being equivalent here merely to "Mnais sacra."

—II. A nymph of the fountain.

Agapenor, the son of Ancus, and grandson of Ly-
curgus, who led the Arcadian forces in the expedition
against Troy, and, after the fall of that city, was
raised by a storm, on his return home, to the island of
Cyprus, where he founded the city of Paphos.

Agar, a town of Africa Propria, in the district
of Byzacium, and probably not far from Zella.

Agarius. Vid. Supplement.

Agara, a city of India intra Gangem, on the southern
bank of the Iomones (Dacchumna), and northwest of
Agarica. It is now Dacchara. (Bisch. and Müller,
Wörterb. der Geogr., s. v.)

Agarī (Ἀγαρίς πόλις, or Ἀγαρίου πόλις, Plol. —
Argari Urbis, Tab. Peut.) a city of India intra Gangem,
on the Sinus Aragicus. It is thought to correspond to

the modern Aractingi. (Bisch. and Müller, Wör-
terb. der Geogr., s. v.)

Agarista, I., a daughter of Hippocrates, who married
Xanthippus. She dreamed that she had brought forth
a lion, and a few days after was delivered of Pericles.

—II. (Vid. Supplement.)

Agasias, or Hegesias, I., a sculptor of Ephesus, to
whose chisel we owe the celebrated work of art called
the Bignon statue of Zeus. This was indicated by an
inscription on the pedestal of the statue. The statue
was found, together with the Apollo Belvidere, on the
site of ancient Antium, the birthplace of Nero, and
where that emperor had collected a large number of
chefs-d'œuvre, which had been carried off from Greece
by his freedman Acratus. It is maintained by more
recent antiquarians, that the statue in question does
not represent a gladiator; it appears to have belonged
to a group, and the attention and action of the figure
are directed towards some object more elevated than
itself, such, for example, as a horseman whose attack
it is sustaining. With regard to the form of the name,
it may be remarked, that the Æolic and vulgar form
was Agæias; the Doric, Agasis; and the Ionic, Hegesias.
This Ionic form was adopted by the Attic writers.—II.
Another Ephesian sculptor, who exercised his art in the island of Delos, while it was under the
Roman sway. (Silt. Dict. Art., s. v.)

Agastor, the name of a famous Greek sculptor, supposely by Mannert (7, 470) to be the same with the Ἁγεας of Philomonte, which he places to the south of Borea. (Ptol. p. 84.)

It was given up to plunder by Paulus Aemilius, for having revolted to Perseus after its surrender. (Liv., 45, 27.)

There are ruins near the modern Co-
mani, which, in all probability, mark the site of the an-
cient place.

Agax the harbour of Apulia, near the Promontorium
Garganum. (Pvin. 3, 11.) It is supposed to answer to
the modern Porto Greco. (Cluver, Ital. Ant., vol.
2, p. 1212.)

Agatharchides, I. or Agatharchus, a native of Cin-
dus, in the time of Ptolemy VI. (Philipot) and his
successor. Photius states (Biblioth., vol. 1, p. 171,
ed. Bekker), that he had read or was acquainted with
the following geographical productions of this writer.
1. A work on Asia (Τὰ κατὰ τὴν Ἀσίαν), in ten books :
A. A work on Europe (Τὰ τῆς Εὐρώπης), in forty books :
B. A work on the Erythrean Sea
2. Another abridged
3. A work on the Erythrean Sea

An abridged description of the Erythrean Sea (Ἐπιτομὴ τῶν περὶ τῆς Ἑλλάδος), in one book :

2. An account of the Troad (Περὶ Τρῳ-

3. A work on the extraordinary winds (Ἐπιτομὴ τῶν περὶ συνάν
to ἔνθριας αἰώνων): 5. An abridged history (Ἐξολ-

6. A treatise on the art of living

Photius passes a high eulogium on this writer, and makes him to have imitated the manner of Thucydes. The patriarch has also preserved for us some extracts from the first and fifth books of the work of Agatharchides on the Erythrean Sea, in which some curious particulars are found respecting the Sabæans and other nations dwelling along the coasts. Here also we have an account of the mode of hunting elephants, of the method employed by the Egyptians in extracting gold from marble, where nature had concealed it; while the whole is intermingled with details appertaining to natural history. The valuable information furnished by Aga-

tharchides is of the highest importance to the people of Ethiopia, has already been alluded to under that article. The fragments of Agatharchides were published, along with those of Cte-
sias and Memnon, by H. Stephens, Paris, 1557, 8vo.

They are given, however, in a more complete form by
Hudson, in his edition of the minor Greek geographers. (Schöll, Hist. Lit. Gr., vol. 3, p. 391.)—II. A native of Samos, whose Ἱππαίδης is cited by Plistarch in his Parallels. He is otherwise called unknown, and hence some have supposed him to be identical with Agatharchides of Cnidus, and the Ἱππαίδης to be merely a section of the work on Asia by this writer. (Schöll, Hist. Lit. Gr., l. c.)

Agatharchus, I., an Athenian artist, mentioned by Vitruvius (lib. 7, praf.), and said by him to have invented scene-painting. He was contemporary with Ἀσκλεύς, and prepared the scenery and decorations for his theatre. Sillig (Dict. Art., s. v.), maintains that the words of Vitruvius, in which the artist is just referred to, namely, "scenam fecit," merely mean, that Agatharchus constructed a stage for Ἀσκλεύς, since, according to Aristotle (Poét., 4), Sophocles first brought in the decorations of scenery (κατασκηνωτικα). But the language of Vitruvius, taken in connexion with what follows, evidently refers to perspective and scene-painting, and Bentley also understands them in this sense. (Diaz Phil., p. 206.) Nor do the words of Aristotle support this opinion, since Sophocles may have completed what Agatharchus began.—II. A painter, a native of Samos, and contemporary with Ζεύξις. We have no certain statement respecting the degree of talent which he possessed. Sillig (Dict. Art., s. v.) thinks it was small, and cites in support of his opinion the language of Andocides (Orat., c. Alcib., § 17). Plutarch, however, informs us, that Alcibiades confided Agatharchus in his works, until he had decorated it with paintings, and then sent him home with a handsome present. (Vit. Alcib., 16.)

Andocides charges Alcibiades with detaining Agatharchus three whole months, and compelling him during that period to adorn his mansion with the pencil. And he states that the painter escaped to his house only in the fourth month of his residence. Sillig thinks that this was done in order to cast ridicule on the artist, in inferior works; but, though it would seem to derive some support from the remark of the scholiast on Demosthenes (c. Mids., p. 360), as to the nature of the provocation which Agatharchus had given to Alcibiades, Bentley makes only one artist of the name of Agatharchus, but is silent as to the difficulty which would then arise in relation to this artist's being contemporaneous with both Ἀσκλεύς and Ζεύξις. Agatharchus prided himself upon his situation, and to return the famous speech of Ζεύξις, that if the former executed his works in a short time, he, Ζεύξις, painted "for a long time," i. e., for posterity.

Agathemérus, the Greek geographer. The period when he flourished is not known; it is certain, however, that he came after Ptolemy; and very probably he lived during the third century of our era. The only work by which he is known is an abridgment of geography entitled Περὶ τῆς ἑλληνικῆς γεωγραφίας, Εἰσαγώγαι, in two books. This little production appears to have reached us in a very imperfect state. It is a series of lessons dictated to a disciple named Philo, to serve him as an outline for a course of mathematical and physical geography. In the first chapter he gives a sketch of history and geography, and names the most useful writers in these departments. He gives us here some particulars worthy of notice that we might search for in vain for them in Ptolemy. In his low, Agathemérus treats of the divisions of the earth, of winds, seas, islands, &c. After the sixteenth chapter comes an extract from Ptolemy. The second book is only a confused repetition of the first, and is the work, probably, of some ignorant disciple. The first edition of Agathemérus is that of Taulmey, in Greek and Latin, Amst., 1671, 8vo. It is to be found also in the collection of ancient geographical writers by Gregorius, Lugd. Bat., 1679 and 1700, 4to, and in Huds-
AGATHOCLES.

AGATHOCLES, I. one of the boldest adventurers of antiquity. His history is principally drawn from Diodorus Siculus (books nineteen and twenty, and fragments of book twenty-one), and from Justin (books twenty-two and twenty-three). They derived their accounts from different sources, and differ, therefore, especially in the history of his youth. Agathocles was the son of Carcinus, who, having been expelled from Rhegium, resided at TarJun. In Sicily. On account of a tyrannical outrage, he was exposed in his infancy, but was secretly brought up as his mother's son.

At the age of seven years the boy was again received by his repentant father, and sent to Syracuse to learn the trade of a potter, where he continued to reside, being admitted by Timoleon into the number of the citizens. He was drawn from obscurity by Dama, a noble Syracusan, to whom his beauty recommended him, and was soon placed at the head of an army sent against Agrigentum. By a marriage with the widow of Dama he became one of the most wealthy men of Syracuse. Under the dominion of Sosistratus, he was obliged to fly to Tarentum, but returned after the death of the latter, usurped the sovereignty, in which he established himself by the murder of several thousand of the principal inhabitants, and conquered the greater part of Sicily (317 B.C.). He maintained his power twenty-eight years, till 289 B.C. To strengthen his authority, he erected a statue of himself, forty feet high, and dedicated it to the people, he endeavoured, like Dionysius, to drive the Carthaginians from Sicily. Having been defeated by them, and besieged in Syracuse, he boldly resolved to pass over into Africa with a portion of his army. Here he fought for four years, till 307, generally with success. Disturbances in Sicily compelled him to leave his army twice, and at his second return into Africa he found it in rebellion against his son Archagathus. At the last engagement before Thurmuthus, the troops demanded better pay; but, being defeated, he did not hesitate to give up his own sons to the vengeance of his exasperated soldiers, and expose these latter, without a leader, to the enemy. His sons were murdered; the army surrendered to the Carthaginians. He himself restored quiet to Sicily, and concluded a peace 306 B.C., which secured to both parties their former possessions. He then engaged in several hostile expeditions in Sicily, and subsequently subdued Bruttii and sacked Crotona. His latter days were saddened by domestic strife. His intention was, that his youngest son, Agathocles, should inherit the throne. This stimulated his grandson Archagathus to rebellion. He murdered the intended heir, and persuaded Menon, a favourite of the king's, to poison him. This was done by means of a feeder, with which the king cleaned his teeth after a meal. His mouth, and soon his whole body, became a mass of corruption. Before he was entirely dead he was thrown upon a funeral pile. According to some authors, he died at the age of seventy-two years; according to others, at that of ninety-five. Before his death, his wife Texena and two sons were sent to Egypt. His son-in-law, Pyrrhus, king of Epi- rus, inherited his influence in Sicily and Southern Italy. Agathocles possessed the talents of a general and a politician. He was a man of strong will, and of no mean and obstinate ambition. He was fond of luxury, and insatiable ambition, however, accelerated his ruin. (Justin, 22, 1, seqq.—Id. 23, 1, seqq.—Polyb., 12, 15.—Id., 15, 35.—Id., 9, 23, &c.—II. A son of Lysimachus, taken prisoner by the Getæ. He was ransomed, and married Lysondra, daughter of Ptolemy Lagus. His father, in his old age, married Arsinoé, the eldest sister of Lysondra, who, fearful lest her offspring by Lysimachus might, on the inheritance of the latter, come under the power of Agathocles and be destroyed, planned, and succeeded in bringing about the death of this prince. After the destruction of Agathocles she fled to Seleucus. Another account makes Agathocles to have lost his life through the resentment of Arsinoé, in consequence of his refusal to listen to certain dishonourable proposals made by her. (Pausan. vol. i, p. 505, ed. I. B.C.) III. A brother of Agathocles, and minister of Ptolemy Philopator. (Vid. Agathocles.)—IV. A Greek historian, a native of Samos, who wrote a work on the government of Pessinus. (Vossius, de Hist. Græc. 3, p. 158—Ernami, Clar. Cic. Ind. Hist., s. v.—V. An archon at Athens, Ol. 105, at the period when the Pho- cians undertook to plunder Delphi.—VI. An historian. (Vid. Strabo.)

AGATHODEMON, or the Good Genius. I. a name applied by the Greeks to the Egyptian Cnephe, as indic- ative of the qualities and attributes assigned to him in the mythology of that nation. (Compare Eusebius, Præp. Ec., 1, 10, p. 41.—Jubilonski, Panth. Egypt., i, p. 86.) It is the same with the Noé, or Pannan- der, of the Alexandrian school; and the hieroglyph which represents this deity is the circle, or disk, having in the centre a serpent with a hawk's head, or else a globe encircled by a serpent, the symbol of the spiri- it, or eternal principle, male and female, that animates and controls the world, as well as of the light, which illuminates all things. (Cruiver's Symbolik, par Gign- niart, vol. i, p. 824.—II. A name applied by the Greeks to the serpent, as an image of Cnephe, the good genius. (Plut., de Is. et Os., p. 418.) The serpent here meant was, it is supposed, the Opi, or the Agathyrsi, or the royal serpents (Zoega, Num. Egypt., p. 400.—Id., de Obelisc., p. 431, n. 41), and hence it is also the symbol of royalty, and appears on the heads of kings as well as of gods. (Compare re- marks under the article Cleopatra.) The term Agathode- mon is said to be nothing more than a translation of the Egyptian term Cnephe. (Jubilonski, Voss., p. 112.)—Ouawruf, Esaui sur les Moái. d'Éléusa, p. 106, seqq.—Cruizer's Symbolik, vol. ii, p. 573;—id., Gen- eral work.—Champlinon, Precis, &c., p. 91.—III. A name given by the Greek residents in Egypt to the Canopic arm of the Nile. (Irod., 4, 5.) The native appellation was Scethenophii, i. e., "the good arm of the river;" from Sceth, "the arm of a river," and noophi, "good," and was used in opposition to the Phaeatic, or evil arm of the Nile. (Champlinon, l'Egypte sous les Pharaons, vol. ii, p. 23.) The words applied to Agathocles were originally applied to the fact, the same; and we have in the following, also, merely different forms of the same appellation; Chroni- phi, Ambis, Menvis, &c., &c.—III. (Vid. Supplement.)

AGATHOTYRUS. Vid. Supplement.

AGATHON. I. (Vid. Agathoc.)—II., III. (Vid. Supplement.)

AGATHYRUS, or Agathyrus, a city of Sicily, on the northern coast, between Tyndar and Casalea. It appears to have been originally a settlement of the Siculi, and, owing to this circumstance probably, as well as to its remote position, would seem to have escaped the notice of the Greek geographers. Its name appears, for the first time, in the history of the second Punic war, where Livy (26, 40) states, that the Roman consul Lavinus carried away from the place a motley rabble, four thousand in number, consisting of slaves, free-men, and exiles, whom he brought to the coast of Italy near Rhegium, the people of which place want- ed a band trained to robberies, for the purpose of rav- aging Bruttium. Livy writes the name Agathyrus, of the first declension: the more common form is Agath- yrus (Ayáthyrus). The modern St. Agatha stands near the site of the ancient city. (Manieri, Geogr., vol. 9, pt. 2, p. 411.)

AGATHE, a nation respecting whom the accounts of ancient writers are greatly at variance. (Compare Vossius, Annal. in Hudson, Geogr. Min., vol. i, p. 79.) Herodotus (4, 49) places them in the vicinity of the Mars, the modern Marosch, in what is now Transylvania, and most writers agree in placing them
in this country and in upper Hungary. (Compare Rennell, Geogr. of Herod., p. 83, seqq.—Mannert, 4, p. 102.—Niebuhr, Verm. Schrift., 1, p. 377, &c.) Scymnus of Chios, however, makes them to have dwelt on the Palus Mætis. The name perhaps, after all, is a mere appellative, and may have been applied by different authors to different 'tribes. What serves to strengthen this opinion is the fact, that the latter half of the term Agathyrsi frequently occurs in other national designations, such as Idanthyrsi, Thyrasgeta, Thyssagetis, Thyrsi, &c. The reference probably is to the god Tyr, another name for the sun. What Herodotus (4, 104) states respecting this race, that they were accustomed to array themselves in very handsome attire, to wear a great number of golden ornaments, to have their women in common, and to live, in consequence of this last-mentioned arrangement, like brethren and members of one family, is received with great incredulity by many. (Compare Valckenaer, Herod., ed. Wessell, p. 328, n. 31.) All this, however, clearly shows their Asiatic origin, and connects them with the nations of the interior of the eastern continent. The community of wives seems to have been a remnant, in some degree, of an early Buddhistic system. The civilized habits of the Agathyrsi are, at all events, worthy of notice, and favour the theory of those who see in them a fragment or early civilization, emanating from some highly cultivated race, and subsequently shattered by the inroads of the Scythians and other barbarous tribes. (Ritter, Vorhal., 386, seqq.)

Agas ('Ayav^), or, with the Reuchlinian pronunciation, Agave, I. daughter of Cadmus, and wife of Echion, by whom she had Pentheus. Her son succeeded his grandfather in the government of Thebes. While he was reigning, Bacchus came from the east, and took his native city, which had been forsaken by one of the finest dramas of Euripides, his Bacchae. (Apollod., 3, 4, 4.—Id., 3, 5, 1.—Orisid., Met., 3, 514, seqq.—Hyrig., f. 184.—Keightley's Mythology, p. 295.—II. A tragedy of Statius, now lost. (Juv., 7, 87.)—III. A daughter of Danaus. She slew her husband Lycurgus, in obedience to her father's orders. (Apollod., 2, 1, 5.)—IV. A niece of the. (Apollod., 1, 2, 7.)

Agde, G A, a genius or deity mentioned in the legends of Phrygia, and connected with the myths of Cybele and Atys. An account of his origin, as well as other particulars respecting him, may be obtained from Pausanias (7, 17). He was an androgynous deity, and appears to be the same with the Adagios of the ancient writers. (Cruzer, Symbolik, vol. 2, p. 48.—Compare the note of Guigniaut.)—II. One of the summits of Mount Dindymus in Phrygia, on which Atys was said to have been harried. (Pausan., 1, 4.)

Aglaostis, A. an excellent statistician, and illustrious also as having been the instructor of Phidias, Polyclus, and Myron. His parents were inhabitants of Argos, according to Pausanias (34, 8), and he himself was born there, probably about B.C. 540. The particular time, however, when he lived, has given rise to much discussion. Silig, after a long and able argument, comes to the conclusion that Agaladas, the inventor of his system, was the author of his renowned work about Olymp. 70, or 500 B.C. (Dict. Art., s. v.)—II. Another artist, probably a nephew of the former, assigned by Pliny to Olymp. 87, or 432 B.C., which can hardly be correct. He was thinking, perhaps, of the elder Agelaides. (Silig, Dict. Art., s. v.)

Aglaostis ('AgA\ls\to\st\s'), an appellation given to M. Crassus, father of the celebrated orator, and grandfather of Crassus the rich, from his extraordinary gravity. Lucilius said of him, that he laughed only once in the course of his life, while Pliny informs us that he was reported never to have laughed at all. Hence the name 'AgA\ls\to\st\s'; "one that does not laugh," or "that never laughs." (Cic., de Fin., 5, 30.—Douza, de Lucil., fragm. 30.—Plin., 7, 19.)

Agrias, I. a king of Corinth, son of Ixion.—II. A son of Hercules and Omphale, from whom Crassus was descended. (Apollod., 2, 7, 8.) Diocodorus Siculus (4, 31) gives the name of this son as Lamus. Herodotus, on the other hand, deduces the royal line of Lydia from a son of Hercules and a female slave belonging to Jardanus, the father of Omphale. (Herod., 1, 7.) This last is generally considered to be the more correct opinion. (Conant Bahr, ad Herod., I., p. 1 —Creuzer, Hist. Grac. antiquus, &c., p. 186.)—III. A servant of Priam, who preserved Paris when exposed on Mount Ida. (Vid. Paris.—Apollod., 3, 12, 5, and Heyne, ad loc., not. cr.)

Agroednicum, Agodicinum, or Ageodicinum ('\Ac\yA\dc\xov\s, 'Pto\l'), a city of Gaul, the metropolis of Senonia, or Lugundensis Quarta. Its latter name was Senones, now Senois. (Cass., B. G., 6, extr. —Extr., 10, 7.)

Agænör, I. a son of Neptune and Lybia, king of Phœnicia, and twin-brother of Delus (Apollod., 2, 1, 4); he married Telephassa, by whom he became the father of Cadmus, Phœnix, Clythus, Tharsus, Phœnecus, and, according to some, of Europa also. (Schol. ad Eurip., Phan., 5.—Hyrig., Fab., 178.—Paus., 5, 25, 7.—Schol. ad Apoll. Rhod., 2, 178; 3, 1185.) After his daughter Europa had been carried off by Jupiter, Agænör sent his son in search of her, and emjoined on them not to return without their sister. As Europa was not to be found, none of them returned, and all settled in foreign countries. (Apollod., 3, 1, 1.—Hyrig., Fab., 178.) Virgil (Aen., 3, 338) calls Carthage the city of Agœnor, by which he alludes to the descent of Dido from Agænor. Buttmann (Mytholog., 1, p. 232, seqq.) points out that the genuine Phœnician name of Agœnor was Cnas, which is the same as Cæ- dmon, who, on account of his supposed isolation, is called the first poet. Hence, that Agœnor or Cnas is the same as the Canaan in the Books of Moses.—II. A son of Iassus, and father of Argus Panoptes, king of Argos. (Apollod., 2, 1, 2.)

Hellenicus ('Fragn., p. 47, ed. Sturz.) states that Agœnor was a son of Phœnocus, and brother of Iassus and Pelasgus, and that, after their father's death, the two elder brothers divided his dominions between themselves in such a manner, that Pelasgus received the country about the river Erasinus, and built Larissa, and Iassus the country about Elia. After the death of these two, Agœnor, the youngest, invaded their dominions, and thus became King of Argos—III. The son and successor of Triopas in the kingdom of Argos. He belonged to the house of Phœnocus, and was father of Crotopus. (Paus., 2, 16, 1.—Hyrig., Fab., 145.)—IV. A son of Pleuront and Xanthippus, and grandson of necklace set, of peplum of Harmonia, the second wife by him the mother of Ptolema and Demone. (Apollod., 1, 7, 7.) According to Pausanias (3, 13, 5), Thestius, the father of Ledia, is likewise a son of this Agœnor.—V. A son of Phœgus, king of Phœopia, in Arcadia. He was brother of Pronous and Arsinöe, who was married to Alcmena, but was abandoned by him. When Alcmena wanted to give the celebrated necklace set, of peplum of Harmonia, the second wife of Callirhoe, the daughter of Acheclus, he was slain by Agœnor and Phœgus at the instigation of Phœgus. But when the two brothers came to Delphi, where they intended to dedicate the necklace and peplum, they were killed by Amphoterus and Acarnan, the sons of Alc- menon and Callirhoe. (Apollod., 3, 7, 5.)

Pausanias
Locean, who conquered, when a boy, in boxing in the Olympic games. His victory is celebrated by Pindar in the 10th and 11th Olympic Odes. The scholar places his victory in the 74th Olympiad. He should not be confounded with Agesiphanes the father of Chromus, who is mentioned in the Nemean Odes (1, 42; 9, 98).

Agesilus, I. son of Dryssus, sixth king of the Aegide of Sparta, excluding Aristodemos, according to Apollodorus, reigned 44 years, and died 886 B.C. Pausanias makes his reign a short one, but contemporary with the legislation of Lycurgus. (Pausan., 3, 2, 3.—Clint., Fast. Hell., 1, p. 835.) II. Son by his second wife, Eupolus, of Archidamus II., succeeded his half-brother, Ages II., as nineteenth king of the Eurypontid line; excluding, on the ground of spurious birth, the reigns of Acritas and Archilochus between. In 387, the Corinthian or first Theban war, one of supremacy assaulted: in 387 that supremacy was restored over Greece, in the peace of Antalcidas, by the sacrifice of Asiatic prospects; and thus, more confined and more secure, it became also more wanted. After 378, when Thebes regained her freedom, we find it again assailed, and again for one moment restored, though on a lower level, in 371; then overthrown forever at Leuctra, the next nine years being a struggle for existence amid dangers within and without.

Of the youth of Agesilus we have no detail, beyond the mention of his intimacy with Lyssander. On the throne, which he ascended about the age of forty, we first hear of him in the suppression of Cinadon's conspiracy. In his third year (396), he crossed into Asia, and after a short campaign, and a winter of preparation, he in the next overpowered the two satraps, Tissaphernes and Craterus, and in the spring of 394 was encamped in the plain of Thebe, preparing to advance into the heart of the empire, when a message arrived to summon him to the war at home. He calmly and promptly obeyed, expressing, however, to the Asiatic Greeks, and 'though himself indulging, hopes of a speedy return. Marching rapidly by Xerxes' route, he met and defeated at Coroneia in Boeotia the allied forces. In the midst of engagement at Leuctra, on the 14th of September of the year 371, he won a decisive victory by a rapid and vigorous charge, which was followed up by a defeat of the king of Argolis; in 372 he was in one of the Corinthian territory; in 369 he reduced the Acarnanians to submission; but in the remaining years of the war he is not mentioned. In the interval of peace, we find him declining the command in Sparta's aggression on Mantinea; but heading, from motives, it is said, of private friendship, that on Phlius, and openly justifying Phobidas's seizure of the Cadmeia. Of the next war, the first two years he commanded in Boeotia, more, however, to the young prince's gain in point of experience than less in any other; from the five remaining he was withdrawn by severe illness. In the congress of 371 an altercation is recorded between him and Epaminondas; and by his advice Thebes was peremptorily excluded from the peace, and orders given for the fatal campaign of Leuctra. In 370 we find him engaged in an embassy to Mantinea, and reassuming the Spartans by an invasion of Arcadia; and in 369 to his skill, courage, and presence of mind, is to be ascribed the maintenance of the unwalled Sparta, amid the attacks of four armies, and revolts and conspiracies of Helots, Periegeti, and even Spartans. Finally, in 362, he led his countrymen into Arcadia; by fortunate information was enabled to return in time to prevent the surprise of Sparta, and was, it seems,
AGESILAUS.

AGESIPOLIS.

joult, if not sole commander at the battle of Mantinea.

To the ensuing winter must probably be referred his

embassy to the coast of Asia, and negotiations for mon-

ey with the revolted satraps, alluded to in an obscure

passage of Xenophon (Agesilaus, 2, 26, 57); and, in

performing, perhaps, of some stipulation then made, he

crossed, in the spring of 361, with a body of Lacedae-

monian mercenaries, into Egypt. Here, after display-

ing much of his ancient skill, he died, while preparing

for his voyage home, in the winter of 361-60, after a

life of above eighty years, and a reign of thirty-eight.

His body was embalmed in wax, and splendidly buried

at Sparta.

Returning to our sketch of Spartan history, we find

Agesilaus shining most in its first and last period, as

commencing and surrendering a glorious career in

Asia, and as, in extreme age, maintaining his prostrate

country. From Coroneia to Leuctra we see him part-

tly unemployed, at times yielding to weak motives, at

times joining in wanton acts of public injustice. No

one of Sparta's great defeats, but some of her bad pol-

cy belongs to him. In what others do, we miss him; in

what he does, he raises the groundwork of the public

unity belonging to unity of purpose and sole command.

No doubt he was hampered at home; perhaps, too,

from a man withdrawn, when now near fifty, from his

chosen career, great action in a new one of any kind

could not be looked for. Plutarch gives, among nu-

merous apophthegmata, his letter to the ephors on his

recall: "We have reduced most of Asia, driven back

the barbarians, made arms abundant in Ionia. But

since you bid me, according to the decree, come home,

I shall follow your letter, may perhaps be even before it.

For my command is not mine, but my country's and

her allies'. And a commander then commands truly

correctly according to right when he sees his own commander

in the laws and ephors, or others holding office in the

state." Also, an explanation on hearing of the battle

of Corinth: "Alas for Greece! she has killed enough

of her sons to have conquered all the barbarians." Of

his courage, temperance, and hardihood, many instan-

ces are given: to these he added, even in excess, the

less Spartan qualities of kindness and tenderness as

a father and a friend. Thus we have the story of his

riding across a stick with his children; and, to gratify

his son's affection for Cleonymus, son of the culprit,

he saved Sphodrias from the punishment due, in right

and policy, for his incursion into Attica in 379. So,

too, the appointment of Pisander. (Vid. Pisander.) A

letter of his must, if Nicias is innocent, lay before him

for that; if guilty, for my sake; any how, acquit him." From

Spartan simplicity and dishonesty, and mostly,

even in public life, from ill faith, his character is clear.

In person he was small, mean-looking, and lame, on

which last ground objection had been made to his ac-

cession, an oracle, curiously fulfilled, having warned

Sparta of evils awaiting her under a "lame sovereign-

ity." In his reign, indeed, her fall took place, but not

through his faults. He was the man's most perfect citizen and most consummate general; in many ways, perhaps, her greatest man. (Xen., Hel., 3, 3, to the end; Agesilaus.—Diod., 14, 15.—Paus., 3, 9, 10. Plut. and C. Nepos, in Vita.—Plut., Apophthegm.)—II. A Greek historian, who wrote on the early history of Italy (I'tralcida), fragments of which are preserved in Plutarch (Parallelia, p. 312) and Sto-

bus. (Florileg., 9, 37, 54, 93, 95, 10, ed. Gaisf.)— IV. A body of Argives, and some of his mer-

mendes, who vanished with the Pers-

ian camp, and stabbed one of the bodyguards instead of

Xerxes, whom he intended to assassinate, but knew.

not. Upon being arraigned before Xerxes, he thrust

his hand into the fire, and informed the monarch that

all his countrymen were prepared to do the same.

Plutarch cites this incident on the authority of Agathar-

chides, in his Parallels. (Op., ed. Reiske, vol. 7, p. 217.) If the story be true, it shows the source whence

the Roman fable of Mucius Scaevola was borrowed. (Vid. Agatharchides, II.)

Agesirios, I, king of Sparta, the twenty-first of the Agis beginning with Eurythennes, succeeded his fa-

ther, but was too young, and in B.C. 391, and reigned fourteen years. He was of a splendid family of king-

guardians of Aristodemus, his nearest of kin. He
came to the crown just about the time that the confed-

eracy (partly brought about by the intrigues of the Per-

sian satrap Tissrautes), which was formed by Thebes,

Athen, Corinth, and Argos, against Sparta, rendered

it necessary to recall his colleague, Agesilaus II., from

Asia; and the first military operation of his reign was

the expedition to Corinon, which his forces of three

confederates were then assembled. The Spartan army

was led by Aristodemus, and gained a signal victory

over the allies. (Xen., Hell., 4, 2, § 9.) In the year

B.C. 390, Agesipolis, who had now reached his major-

ity, was intrusted with the command of an army for

the invasion of Argolis. Having procured the sanction

of the Olympic and Delphi gods for disregarding any at-

tempt which the Argives might make to stop his march,

on an expedition, which was a success, as he carried his rava-

ges still farther than Agesilaus had done in B.C. 393;

but, as he suffered the aspect of the victims to deter

him from occupying a permanent post, the expedi-

tion yielded no fruit but the plunder. (Xen., Hell.,

4, 7, § 2–6.—Paus., 3, § 5.) In B.C. 385 the Sparta-
ns, seizing upon some frivolous pretexts, sent an ex-

pedition against Mantinea, in which Agesipolis under-

took the command, after it had been declined by A-

gesilaus. In this expedition the Spartans, the population

of which was dispersed among the four hamlets, out

of which it had been collected to form the capital. The

democratical leaders were permitted to go into exile.

(Xen., Hel., 5, 2, § 1–7.—Paus., 8, 8, § 5.—Diod.,

16, 5, &c.—Plut., Pelop., 4.—Isocr., Paneg., p. 67, a, De Pace, p. 179, c.)

Early in B.C. 382, an embassy came to Sparta from

the cities of Acanthus and Apollonia, requesting as-

sistance against the Clybynthians, who were not will-

ing to compel them to join their confedcracy. The

Spartans granted it, but were not at first very suc-

cessful. After the defeat and death of Teleutias in

the second campaign (B.C. 381), Agesipolis took the

command. He set out in 381, but did not begin opera-

tions till the spring of 380. He then acted with great

tagour, and took Taurone by storm; but in the midst

of his successes he was seized with a fever, which car-

ried off his life, at an age very tender. In the last days

of the autumn, he fell into the Agid line. He

ascended the throne B.C. 371, and reigned one year.

(Paus., 3, 6, § 1.—Diod., 15, 60.)—III. The 31st of

the Agid line, was the son of Agesipolis, and grandson

of Cleombrotus II. After the death of Cleomenes he

was elected king while still a minor, and placed under

the guardianship of his uncle Cleomenes. (Polyb., 4, 35.) He was, however, soon depose by his colleague

Lycurges, after the death of Cleomenes. (We hear

of 89.
him next in B.C. 195, when he was at the head of the Lacedaemonian exiles, who joined Flamininus in his attack upon Nabis, the tyrant of Lacedaemon. (Liv., 34, 26.) He formed one of an embassy sent about B.C. 183 to Rome by the Lacedaemonian exiles, and, with his companions, was intercepted by pirates and killed. (Polya., 24, 11.)

Agricola. Vide Agis, IV.

Ageria (Αγερία), a surname given to several gods: for instance, to Jupiter at Lacedaemon (Stob., Serm., 42): the name seems to describe Zeus as the leader and ruler of men; but others think that it is synonymous with Argamemnon (Vid. Argamemon): to Apollo (Eurip., Med., 426), where, however, Emsley and others prefer άγερια: to Mercury, who conducts the souls of men to the lower world. Under this name Mercury had a statue at Megalopolis. (Paus., 8, 31, § 4.)

Agennus Urbicus, a writer on the science of the Agrimensores. (Dict. of Ant., p. 38.) It is uncertain when he lived; but he appears to have been a Christian, and it is not improbable, from some expressions which he used, that he lived at the latter part of the fourth century of our era. The extant works ascribed to him are: “Agenni Urbici in Julium Frontinum Com- mivial, that a commentator upon his work De Agro- rum Qualitate,” which is ascribed to Frontinus: “In Julium Frontinum Commentarium Liber secundus qui Dazographus dictur:” and “Commentarium de Controversiis Agrorum Pars prior et altera.” The last-named work Nieuhr supposed to have been written by Frontinus, and in the time of Domitian, since the author speaks of praestantissimus Domitianus: a description which we never before has been applied to this tyrant after his death. (Hist. of Rome, vol. 2, p. 621.)

Aggarames, called Xandrames (Ξανδράμης) by Di- odorus, the ruler of the Gangaridas and Prasii in India, was said to be the son of a barber, whom the queen had married. Alexander was preparing to march against him, when he was compelled by his soldiers, who had become tired of the war, to give up further conquests in India. (Curt., 5, 5, § 7; Irod., 17, 35, 94. – Curt., 6, § 81; Strabo, v, 6, § 61, Ptol. Alc., 46.)

Agias (Αγίας), I. a Greek poet, whose name was formerly written Augias, through a mistake of the first editor of the Excerpta of Proclus. It has been corrected by Thierry in the Acta Philol. Monac., 2, p. 584, from the Codex Monacensis, which in one passage has Agias, and in another Hagias. The name itself does not occur in early Greek writers, unless it be supposed that Egaia or Hegias (Hygin) in Clemens Alexandrinus (Strom., 6, p. 622) and Pausanias (1, 2, § 1) are only different forms of the same name. He was a native of Troizen, and the time at which he wrote appears to have been about the year B.C. 740. His poem was celebrated in antiquity, under the name of Νέοτος, i.e., the history of the return of the Achaean heroes from Troy, and consisted of five books. The poem began with the cause of the misfortunes which befell the Achaeans, and their return home, and then, at a certain point, is, with the outrage committed upon Casandra and the Palladium; and the whole poem filled up the space which was left between the work of the poet Arctinus and the Odyssey. The ancientse themselves appear to have been uncertain about the author of this poem, for they refer to it simply by the name of Νέοτος, and when they mention the author, they only call him ὁ τῶν Νέοτος γράφων. (Athen., 7, p. 281. – Paus., 10, 29, 32; – 30, 2; – Apollon., 2, 1, § 5 – Schol., ad Odyssey, 4, 12. – Schol., ad Aristoph., Equit., 1332. – Lucian, De Saltat., 46.) Hence some writers attributed the Νέοτος to Homer (Suid., s. v. νέοτος. – Anthol. Planud., 4, 30), while others call it a fellow of a Colophonian. (Eustach., ad Odyssey, 16, 118.) Similar poems, and with the same

— 90 —

title, were written by other poets also, such as Eune- lus of Corinith (Schol., ad Pind., Ol., 13, 31), Anticlei- des of Athens (Athen., 4, p. 157; – 9, p. 466), Cleide- mus (Athen., 13, p. 609), and Lysimachus. (Athen., 4, p. 158. – Schol., ad Apollon. Rhod., 1, 558.) Where the Νέοτος is mentioned without a name, we have generally to understand the work of Agias. – II. A comic writer. (Pollux, 3, 36. – Mencke, Hist. Com. Gr. vol. 4, p. 404, 416.) He is by some considered as the same person with the writer of the Αγιοβικά, mentioned be- low. Casaubon, however, in his remarks on Athen- nes, thinks that this is an error. (Ad Athen., 3, 10, p. 169.) – III. The author of a work on Argolis (Αγιοβι- κά, Athen., 3, p. 86, f), mentioned in connexion with Dercylus. Clemens of Alexander quotes him under the name of Aigias (Strom., 1, p. 236), which is written Agias in the Itinerarium Antonini, for an error which was incorrectly for Dercylus. (Casaub., ad Athen., lib. 3, c. 10, p. 169.) He is called οἱ ποταμοί in another passage of Athenæus (14, p. 826, f), but the musician may be another person. – IV. Brother of Tissamenus, the renowned seer of the Spartans, who took part in the battle of Platea. Both of these were of the race of the Iamides, and received the right of citizenship at Sparta. Another Agias, son of Agelochus, grandson of Tissamenus, was that Tissamenus, who is supposed to have described the victory of that conqueror over the Athenians at Αgospotami. (Paus., 3, 11, § 5, 6.) – V. The Arcadian, one of the Grecian commanders in the army of Cyrus the Younger, when he marched against his brother Artaxerxes. He was entrapped, along with the other Grecian leaders, by Tissaphernes, and put to death by that treacherous satrap, together with his fellow-offi- ciers. Xenophon praises his courage and fidelity. (Anab., 2, 31, 2, 6, 30.)

Agilas. Vide Agis, IV.

Agidē, or Eurythestides, descendants of Agis, king of Sparta and son of Eurythestes. This family shared the throne of Lacedaemon along with the Procodile, or, as they were more commonly called, the Eurypontides. According to Pausanias, the line of the Agidae became extinct in the person of Leonidas, son of Cleom- enes (Paus., 2, 5, 31; – 3, 6, – 4, 3, 7.)

Agninna or Aginum, also written Aginna. (Hier, De Script. Eccles. in Sababio, al. Phabadoi), a city of the Niobidres, who were the same as the Agin- nenses, in Gallia Aquitania. It lay on the river Garonne, between Fines and Excissum. (Ptol., Itin., p. 461. – Tab., Ptolemaeg., 1 – Auson., Ep., 24, 79.) There was a road leading from this city to Lactaura, which was situated at the distance of 15 miles, mention ed by Cassius (Cass., 1, 18, 33.) It will be well to consult the remarks of Chaudriue de Crauzannes, i. l., p. 392. Numerous remains of ancient works of art, inscriptions, &c., have been found at this place, which are described in a dissertation published in the Mémoires de la Société Royale des Antiq. de France, tom. 2, p. 368. It was the birthplace of Jos. Scaliger, who has written about it in his Lect. Auson., 1, 2, c. 10.

Agis (Αγίς), I. king of Sparta, son of Eurythestes, who began to reign, it is said, about B.C. 1032. (Musili, Dor., vol. 2, p. 511, transl.) According to Eusebius (Chron., 1, p. 156), he reigned only one year; according to Apollodorus, as it appears, about 31 years. During the reign of Eurythestes, the conquered people were admitted to an equality of political rights with the Dorians. Agis deprived them of these, and reduced them to the condition of subjects to the Spartans. The inhabitants of the town of Helos attempted to shake off the yoke, but they were subdued, and gave rise and name to the class Helota. (Ephor., ap. Strab., 8, 364.) To his reign was referred the colony which went to Crete under Pollis and Delphus. (Co- non., Narr., 36.) From him the kings of that line were called άγιοι. His colleague was Sou. (Paus., 3, 2, § 1.) – II. The 17th of the Euryptoid line (be-
gaining with Procles), succeeded his father Archidamus B.C. 437, and reigned a little more than 28 years. In the summer of B.C. 426, he led an army of Peloponnesians and their allies as far as the isthmus, with the intention of invading Attica; but they were deterred from advancing farther by a succession of earthquakes which happened when they had got so far. (Thucyd., 3, 89.) In the spring of the following year he led an army into Attics, but quitted it fifteen days after he had entered it. (Thucyd., 4, 2, 6.) In B.C. 419, the Argives, at the instigation of Alcibiades, attacked Epidauros; and Agis, with the Spartan forces of Lacedaemon, which were in the same place, also marched to the frontier city, Leuctra. No one, Thucydides tells us, knew the purpose of this expedition. It was probably to make a diversion in favour of Epidauros. (Third., vol. 3, p. 342.) At Leuctra the aspect of the sacrifices deterred him from proceeding. He therefore led his troops back, and sent round notice to the allies to be ready for an expedition at the end of the sacred month of the Carnean festival; and when the Argives repeated their attack on Epidauros, the Spartans again marched to the frontier town, Carya, and again turned back, professedly on account of the aspect of the victims. In the middle of the following summer (B.C. 418), the Epidaureans being still hard pressed by the Argives, the Lacedaemonians, with their whole force and some allies, under the command of Agis, invaded Argolis. By a skilful manoeuvre, he succeeded in intercepting his enemy and robbing him of his supplies, which were conveyed to them by an underground tunnel, and in bringing about a junction of the two forces. But just as the battle was about to begin, Thrasyllus, one of the Argive generals, and Alcibiades came to Agis, and prevailed on him to conclude a truce for four months. Agis, without disclosing his motives, drew off his army. On his return he was severely censured for having thus thrown away the opportunity of reducing Argos, especially as the Argives had no means of support excepted by his return, and taken Orchomenus. It was proposed to pull down his house, and inflict on him a fine of 100,000 drachmae. But, on his earnest entreaty, they consented themselves with appointing a council of war, consisting of 10 Spartans, without whom he was not to lead an army out of the city. (Thucyd., 5, 54, 57, &c.) Shortly afterward they received intelligence from Tegea, that, if not promptly succoured, the Tegeans and the Spartans would be compelled to give way. The Spartans immediately sent their whole force under the command of Agis. He restored tranquillity at Tegea, and then marched to Mantinea. By turning the waters so as to flood the lands of Mantinea, he succeeded in drawing the army of the Mantinians and Athenians down to the level ground. A battle ensued, in which the Spartans were victorious. This was one of the most important battles ever fought between Grecian states. (Thucyd., 5, 71-73.) In B.C. 417, when news reached Sparta of the counter-revolution at Argos, in which the oligarchical and Spartan faction was overthrown, an army was sent there under Agis. He was unable to restore the defeated party, but he destroyed the long walls which the Argives had begun to carry down to the sea, and took Thyreus. (Thucyd., 5, 83.) In the spring of B.C. 413, he entered Athens with a Phoceanian army, and fortified Decelea, a steep eminence about 15 miles northeast of Athens (Thucyd., 7, 19, 27) and in the winter of the same year, after the news of the disastrous fate of the Sicilian expedition had reached Greece, he marched northward to levy contributions on the allies of Sparta, for the purpose of constructing a fleet. While at Decelea he acted in a great measure independently of the Spartan government, and received embassies as well from the disaffected allies of the Athenians as from the Boiotians and other allies of Sparta. (Thucyd., 8, 3, 5.) He seems to have remained at Decelea till the end of the Peloponnesian war. In 411, during the administration of the Four Hundred, he made an unsuccessful attempt on Athens itself. (Thucyd., 8, 71.) In B.C. 401, the command of the war against Plataia was intrusted to Agis, who in the third year compelled the Eleans to sue for peace. As he was returning from Delphi, whither he had gone to consecrate a tenth of the spoil, he fell sick at Heraea in Arcadia, and died in the course of a few days after he reached Sparta. (Xen., Hell., 3, 2, § 21, &c.; 3, 3, § 1-4.) He left a son, Leoctyphides, who, however, was excluded from the throne, as there had been no succession of right regarded to his ancestry. While Alcibiades was at Sparta he made Agis his implacable enemy. Later writers (Justin, 5, 2.—Plutt., Alcib., 29) assign as a reason, that the latter suspected of having dishonoured his queen Timæa. It was probably at the suggestion of Agis that orders were sent out to Astyochus to put him to death. Alcibiades, however, received timely notice (according to some accounts, from Timæa herself), and kept out of the reach of the Spartans. (Thucyd., 8, 12, 45.—Plutt., Lyndas, 22.—Agesil., 3, 1—III. The eldest son of Archidamus III., was the 20th king of the Euryptontid line. His reign was short, but eventful. He succeeded his father in B.C. 338. In B.C. 333, we find him going with a single trireme to the Persian commanders in the Ægean, Pharmabazus and Aphioparades, to request money and an armament for carrying on a war against Alexander in Greece. They gave him 30 talents of silver. The news of the battle of Issus, however, put a check upon their plans. He sent the galleys to his brother Agesilus, with instructions to sail with them to Crete, that he might secure that island for the Spartan interest. In this he seems in a great measure to have succeeded. Two years afterward (B.C. 331), the Greek states which were leagued together against Alexander seized the opportunity of the disaster of Zophrion and revolt of the Thracians, to declare war against Macedonia. Agis was invested with the command, and with the Lacedaemonian troops, and a body of 8000 Greek mercenaries, who had been present at the battle of Issus, gained a decisive victory over a Macedonian army under Corragus. Having been joined by the other forces of the league, he laid siege to Megalopolis. The city held out till Antipater came to its relief, when a battle ensued, in which Agis was killed. It happened about the time of the battle of Arbela. (Arrrian, 2, 13.—Diod., 16, 63, 68; 17, 62.—Xen., c. Ctesiph., p. 77.— Curt., 6, 1.—Justin, 12, 1.)—IV. The elder son of Eudamidas II., was the 24th king of the Euryptontid line. He succeeded his father in B.C. 244, and reigned four years. In B.C. 243, after the liberation of Corinth by Aratus, the general of the Achæan league, Agis led an army against him, but was defeated. (Paus., 2, 8, § 4.) The interest of his reign, however, is derived from events of a different kind. Through the influx of wealth and luxury, with their concomitant vices, the Spartans had greatly degenerated from the ancient simplicity and severity of manners. Not above 700 families of the genuine Spartan stock remained, and, in consequence of the innovation introduced by Epitæus, who procured a report that some of the Lycopolis, or Ionian, had added to a family an equal portion of land, the landed property had passed into the hands of a few individuals, of whom a great number were females, so that not above 100 Spartan families possessed estates, while the poor were burdened with debt. Agis, who from his earliest youth had shown his attachment to the ancient discipline, undertook to reform these abuses, and re-establish the institutions of the old Lycurgus. The Spartans determined to lay before the Spartan senate a proposition for the abolition of all debts and a new partition of the lands. Another part of his plan was to give landed estates to the Perieeci. His schemes were warmly
AGIS.

seconded by the poorer classes and the young men, and as strenuously opposed by the wealthy. He suc-
cceeded, however, in gaining over three very influen-
tial persons—his uncle Agesilaus (a man of large prop-
erty, but who, being deeply involved in debt, hoped to
profit by the innovations of Agis), Lysander, and Man-
drocleides. Having procured Lysander to be elected
one of the ephors, he laid his plans before the senate.
He proposed that the Spartan territory should be divi-
ded into two portions, one to consist of 4500 equal
lots, to be divided among the Spartans, whose ranks
were to be filled up by the admission of the majority of
the Perioci and strangers; the other to contain 15,000
equal lots, to be divided among the Perioci. The
senate could not, at first, come to a deci-
sion on the matter. Lysander, therefore, convened
the assembly of the people, to whom Agis submitted
his measure, and offered to make the first sacrifice, by
giving up his lands and money, telling them that his
mother and grandmother, who were possessed of great
wealth, with all his relations and friends, would follow
his example. His generosity drew down the applause of
his countrymen. He was, however, persuaded, by a
speech delivered by Leonidas, the other king, who had formed his
habits at the luxurious court of Seleucus, king of Syria,
got the senate to reject the measure, though only by
one vote. Agis now determined to rid himself of
Leonidas. Lysander, accordingly, accused him of hav-
ing violated the laws by marrying a stranger and living in
a foreign land. Leonidas was deposed, and was suc-
cceeded by his son-in-law, Cleombrotus, who co-oper-
ated with Agis. So great was the popularity of Leonidas's
term of office expired, and the ephors of the following year were opposed to Agis, and designed to restore
Leonidas. They brought an accusation against Ly-
sander and Mandrocles, of attempting to violate the
laws. Alarmed at the turn events were taking, the
two latter prevailed on the kings to depose the ephors
by force, and appoint others in their room. Leonidas,
who had been married to Agis's sister, fled to Teges, and his
flight was protected by Agis from the violence meditated
against him by Agesilaus. The selfish avarice of the
latter frustrated the plans of Agis, when there
now seemed nothing to oppose the execution of them.
He persuaded his nephew and Lysander that the most
effectual way to secure the consent of the wealthy to the
distribution of their lands, would be to begin by
cancelling the debts. Accordingly, all bonds, registers,
and properties were wiped out of existence in the
pace of a year. Agesilaus, having secured his own ends,
contrived various pretexts for delaying the division of
the lands. Meanwhile, the Achaeans applied to Sparta
for assistance against the Aetolians. Agis was accord-
ingly sent at the head of an army. The cautious move-
ments of Aratus gave Agis no opportunity of distin-
guishing himself in action, but he gained great credit
by the excellent discipline he preserved among his
troops. Hence Agesilaus so incensed younger
poorer classes by his insolent conduct and the con-
cluded postponement of the division of the lands, that they
made no opposition when the enemies of Agis openly
brought back Leonidas and set him on the throne.
Agis and Cleombrotus fled for sanctuary, the former
to the temple of Athenæ Chalciceus, the latter to
the temple of Poseidon. Cleombrotus was suffered
to go in and extricate his threatened friends and thrown into prison. Leonidas immediately
came with a band of mercenaries, and secured the
prison without, while the ephors entered it, and went
through the mockery of a trial. When asked if he did
not repent of what he had attempted, Agis replied that
he should never repent of so glorious a design, even in
the face of death. He was condemned, and precipi-
tately executed, the ephors fearing a rescue, as a great
concours of people had assembled round the prison
gates. Agis, observing that one of his executioners was
moved to tears, said, "Weep not for me: suffering,
as I do, unjustly, I am in a happier case than my
murderers." His mother, Ageistrate, and his grandmo-
thet of Sparta who had been put to death by the
ephors. Pausanias, who, however, is undoubtedly
wrong, says (8, 10, § 4; 27, § 9) that he fell in battle.
His widow, Agiatis, was forcibly married by Leonidas
to his son, Cleomenes, but, nevertheless, they enter-
tained for each other a mutual affection and esteem.
(Iturarch, Agis, Cleomenes, Aratus. —Paus., 7, 7, § 2.)—V. A Greek poet, a native of Argos, and a con-
temporary of Alexander the Great, whom he accompa-
nied to Asia, as indistinctly, by its signature,
Arian (Anab., 4, 9) and Plutarch (De aktulat. et
amic. discrtrim, p. 60), describe him as one of the basest
flatterers of the king. Curtius calls him "pessimoso-
rum carminum post Choricum conditor," which
probably refers rather to their flattering character than
to their worth as poetry. The Greek Anthology (6, 152)
contains an epitaph, which is probably the work of this
flatterer.

(Plato, Apollod., 2, 7, § 8. — Zimmermann, Zeitschr., 2, 1841, p. 154.)

Atheneus (12, p. 516) mentions one Agis as the
author of a work on the art of cooking (βοσιρτυκα).

AGISMA, a district of Ethiopia, the most southern
with which the ancients were acquainted. It is sup-
posed to correspond to Asen in Negritia. (Bischof und Moller, der Geogr., s. v.) It is some-
times written Agisymba.

AGLAIA, I. one of the Graces, called sometimes Pas-
phe, or Paphia; whom Polygnotus, as indicating,
by its signature, the palace of Perseus and afterwards
of the king, painted in his furthest division of the
'altar.' (Horat. Epigr. 3, 9, 55. — Vid. Charites.)—II. Daughter
of Thestius, and mother, by Hercules, of Antaiides.

(Apollod., Bibloth., 2, 7, § 8. — Ill. The wife of King
Charopus, and mother of Nireus, who came with three
vessels and a small band of followers from the island
of Syne against Troy. (Hom., II, 2, 671. — Dial. Sic., 5, 53.) Homer says nothing farther about him than that he was the most beautiful man in the Gre-
can army. Xenophon, however, says (Anab. 4, 8, 23),
that the king of Thasos, seeing him at the river
Peneus, gave him the hand of his daughter, and,
however, was related at length in the cyclic bards.
(Vid. Heynii Ann. ad Hom., II, 2, 671.) Lucian has
rather than himself as contesting the palm of
personal beauty with Thersites in the lower world.
(Dial. Mort., 25.)

AGLACHEME (Ἀγλαχήμη), one of the Sirens. (Vid.
Sirens.)

AGLAVONIC, a Thessalian woman, who prided herself
on her skill in predicting eclipses, &c. She boasted
even of her power to draw down the moon to earth.
Hence the Greek adage, τὴν σελήνην κατατεύον.
"She draws down the moon," applied to a boastful person.
(Erasm. Chil. col. 583.)

AGLOPHON, I. a painter of the isle of Thasos, who
flourished in the 70th Olympiad, 500 B.C. He was the
father and master of Polygnotus and Aristophon.
Quinianus (12, 10) speaks of his style in common
with that of Polygnotus in this particular, that he
laid no stress on the scheme or effect of the
colouring, the early stages of the art, and yet being pre-
ferrable, by its air of nature and truth, to the efforts
of the great masters that succeeded. —II. A son of Aris-
tophon, and grandson of the preceding, also distinguis-
hed as a painter. He celebrated, by his productions,
the victories of Alcibiades. (Siliug. Dict. Art., s. v.)

AGLAUROS. Vid. Agraulos.

AGLAUS, a national of Peopis, and the poorest man
in all Megara, but still prominent, by the Delphic or-
acle, a happier man than Gyges, monarch of Lydia.
(Vul. Max., 7, 1.)

AGNA, or Hagna, a female in the time of Horace,
who, though troubled with a polypos in the nose, and
having her visage, in consequence, greatly deformed,
yet found, on this very account, an admirer in one Bal-
binus. The commentators make her to have been a
fancied-woman and a native of Greece. (Horat., Serm.,
1, 3, 40.)
Agnonides, an Athenian virgin, who disguised herself as a boy in order to learn medicine, it being ordained by the Athenian laws, that no slave or female should learn the healing art. She was taught by Hierophilus the art of midwifery; and when employed, always discovered her sex to her patients. This brought her into so much practice, that the males of her profession, who were now out of employment, accused her before the Areopagus of corrupt conduct, "quod discrent eum clamabrum esse, et corruptorem esurit " (Thucyd., i. 117—Id., 2, 58.)—II. Vid. Supplement.

Agnonides, an orator, and popular leader at Athens, who accused Phocion of treason for not having opposed with more activity the movements of Nicoanor. After the death of Phocion, and when the people, repenting of their conduct toward him, were doing everything to honour his memory, Agnonides suffered capital punishment, by a decree passed for that special purpose. (Plut., V. Phe., c. 38, 39.)

Agronia and Agonia, a festival at Rome in honour of Janus, celebrated on the ninth of January, the 20th of May, and the 10th of December. (Vid. Dictionary of Antiquities.)

Agronius (Agyovos), a surname or epithet of several gods. Euchylus (Agam., 513) and Sophocles (Trach., 26) use it of Apollo and Jupiter, and apparently in the sense of helpers in struggles and contests. But it is more generally used as a surname of Mercury, who presides over all kinds of solemn contests.

Agroniri Capitoline, contests instituted by Domitian in honour of Jupiter Capitolinus, and celebrated every fifth year on the Capitoline Hill. According to Suetonius (Domit., 4), they were of a threefold character: musical, which included poetic contests, equestrian, and gymnastic. Prizes were awarded also for the best specimens of Greek and Latin prose compositions. Agronius informs us that they were instituted in the seventh consulship of Domitian and Dolabella (A. U. C. 839). It was at these contests that the poet Statius was defeated. (Cels., c. 18.—Crassius, ad Suet., i. c.)

Games similar to these had been previously instituted by Nero. (Suet., Ner., 12.)

Agoracrurus, a statute of Paros, and the favourite pupil of Phidias, who, according to Pliny (26, 5), carried his statue to the inhabitants of Phocis, and proved it to have been his own work by the name of his young disciple.

The same writer informs us, that Agoracritus contended with Alcamenes, another pupil of Phidias, and a native of Athens, in making a statue of Venus, and had the mortification to see his rival crowned as victor, in consequence of the prejudice of the Athenians in favour of their countryman. Full of resentment, he sold his statue to the inhabitants of Rhhmissus, a borough of Attica, on condition that it should never re-enter within the walls of Athens. Pliny adds, that Agorasritus named this statue Nemesis, and that Varro regarded it as the finest specimen of sculpture that he had ever seen. Pausanias (1, 33) gives an entirely different account; for, without mentioning the name of Agora-

ritus, he says that the statue of the Rhamnian Nemesis was the work of Phidias. Strabo, again, differs from both Pliny and Pausanias, for he asserts that the celebrated statue in question was ascribed to both Agoracritus and Diodotus (the latter of whom is not mentioned in any other passage), and that it was not at all inferior to the works of Phidias. (Strab., 396.) It is difficult to reconcile these conflicting statements. Perhaps the statue was by Phidias, and the name of his favourite pupil was inscribed upon it by the sculptor. Equally difficult is it to conceive how a statue of Venus could be so modified as to be transformed into one of the goddess of Vengeance, for such was Nemesis. Sillig endeavours to explain this, but with little success. (Dict. Art., s. v.)

Agraidanes, or Agraidas, I., a small river of Sicily, running north of Agrigentum. It is now the San Biàrio. (Mantert, 9, pt. 2, p. 354.)—II. The Greek name of Agrigentum. (Vid. Agrigentum.)

Agrigantiae, or Agrigantae, Portae, gates of Syracuse. There were in this quarter a great number of sepulchres, and here Cicero discovered the tomb of Archimedes. (Tusc. Quest., 5, 23.) The name of these gates has given great trouble to the commentators. Dorville (ad Chorit., p. 193) reads Agramantiae; but Cicero flatly referred to, because the gates in question looked towards Agrigentum and the south, according to the Antonin. Itin., p. 95. Schütz gives Acharadinas in his edition of Cicero, which is superior to Acradinias, the reading of H. Stephens and Davis, though the last is adopted by Gyller. (Syrac., p. 64.) The argument in its favour turns upon the circumstance of a porta Acharadina being mentioned among the gates of Syracuse, but not a porta Agrigantiae, which Cicero certainly alludes to. But the passage is corrupt, as it stands in the Roman copy (13, 75); τὸ κατὰ τὴν Ἀχραδνίαν πύλην, and (13, 113), πρὸς τὴν πύλην τῆς Ἀχραδνίας. The preferable reading, therefore, in Cicero (1. c.) is portas Acharadinas, as indicating gates in that quarter of Syracuse termed Acharadina. (Vid. Acharadina.)

Agrabcile leges, laws enacted in Rome for the division of public lands. In the valuable work on Roman history, by Niebuhr, (vol. 2, p. 129, seqq., Cambr. transl.), it is satisfactorily shown, that these laws, which have so long been considered as unjust attacks upon private property, had for their object only the distribution of lands which were the property of the state, and that the troubles to which they gave rise were occasioned by the opposition of persons who had settled on these lands without having acquired any title to them. These laws of the Romans were so intimately connected with their system of established colonies in the different parts of their territories, that, to attain a proper understanding of them, it is necessary to bestow a moment's consideration on that system. According to Dionysius of Halicarnassus, their plan of sending out colonies or settlers began as early as the time of Romulus, who generally placed colonists from the city of Rome on the lands taken in war. The same policy was pursued by the kings who succeeded him, and when the kingly office was expunged, it was adopted by the senate and the people, and then by the dictators. There were several reasons inducing the Roman government to pursue this policy, which was continued for a long period without any intermission; first, to have a check on the conquered people; secondly, to have
a protection against the incursions of an enemy; thirdly, to augment their population; fourthly, to free the city of Rome from an excess of inhabitants; fifthly, to quiet seditions; and, sixthly, to reward their veteran soldiers. These reasons aboundantly appear in all the best ancient authorities. In the later periods of the republic, a principal motive for establishing colonies was to have the means of disposing of soldiers, and re-
warding them with donations of lands; and such col-
onies were, on this account, denominated military col-
onies. Now, for whichever of these causes a colony was to be established, it was necessary that some law respecting it should be passed either by the senate or people. This law in either case was called lex agraria, an agrarian law, which will now be explained.—

An agrarian law contained various provisions; it de-
scribed the land which was to be divided, and the class-
eses of the public lands; the manner, by whom, and in what manner, and by what bounds, the territory was to be parcelled out. The mode of divi-
ding the lands, as far as we now understand it, was two-
fold; either a Roman population was distributed over the particular territory, without any formal erection of a colony, or general grants of land were made to such citizens as were willing to form a colony there. The lands which were thus distributed were of different de-
scription, and kept distinct from each other; but there was a just conception of the operation of the agrarian laws. They were either lands taken from an enemy, and not actually treated by the government as public property; or public lands which had been artfully and clandestine-
ly taken possession of by rich and powerful individuals; or, lastly, lands which were bought with money from the public treasury, for the purpose of being distributed. Now all such agrarian laws as comprehended either lands of which no permanent appropriation had been made, or kept separate from other lands which had been occu-
 pied as public property, or those which had been bought with the public money, were carried into effect with-
out any public commotions; but those which operated to disturb the rich and powerful citizens in the posses-
sion of the lands which they unjustly occupied, and to place colonists (or settlers) on them, were never pro-
mulgated without creating great disturbances. The first law of this class was passed by Spurius Cassi-
sius; and the same measure was afterwards attempted by the tribunes of the commons almost every year, but was as constantly defeated by various artifices of the nobles; it was, however, at length passed. It ap-
pears, both from Dionysius and Varro, that, at first, Romulus allotted two jugera (about 11 acres) of the public lands to each man; then Numa divided the lands which Romulus had taken in war, and also a portion of the other public lands; after which, ti, the number of acres, and the extent of the property, as much as was just for the common people from their possessions. This abuse stimulated Tiberius Gracchus to revive the Lex Aemilia, which prohibited any individual from holding more than 500 jugera, or about 350 acres of land; and would, consequently, compel the owners to relin-
quish all the surplus to the use of the public; but Gracchus proposed that the owners should be paid the value of the lands relinquished. The law, however, did not operate to any great extent, and, after having cost the Gracchi their lives, was by degrees rendered wholly inoperative. After this period, various other Agrarian laws were attempted, and with various suc-
cess, according to the nature of their provisions and the temperament of the times in which they were proposed. One of the most remarkable was that of Rutilus, which gave occasion to the celebrated oration against him by Cicero. If we refer to the period of which we are treat-
ing this law,—From a careful consideration of these laws, and the others of the same kind, on which we have not commented, it is apparent that the whole object of the Roman agrarian laws was the lands belonging to the state, the public lands or national domains, which, as already observed, were acquired by conquest or treaty, and, we may add also, by confiscations or direct sei-
 zures of private estates by different factions, either for lawful, or unlawful reasons. The sale and pur-
 chases of lands by virtue of the agrarian laws of Rome, under the various complicated circumstances which must ever exist in such cases, and the attempts by the government to resume or grant such as had been sold, whether by right or by wrong, especially after a purchaser had been long in possession, under a title

membrane, without very great public commotions Dionysius informs us, farther, that this public land, by the negligence of the magistrates, had been suffered to fall into the possession of rich men; but that, notwithstanding this, a division of the lands would have taken place under this law, if Cassius had not included among the receivers of the bounty the Latins and the Hernici, whom he had but a little while before made citizens. After much debate in the senate on this subject, a bill for the division of the lands was proposed, and a law comprehended certain lands which he accused pri-
vate persons of having taken from the public, and as the senate also opposed him, he could not accomplish the passage of it. This, according to Livy, was the first proposal of an agrarian law, of which he adds, not one was ever proposed, down to the period of his re-
Agraulus, I., the daughter of Actaeus, king of Atica, and the wife of Cecrops. She became by him the mother of Erysichthon, Agraulus, Herse, and Pandrocles. (6th vol. of Cimneos and Agraulos, and mother of Alcipe by Mora. (Vid. Supplement. Noted.)

Agraphe, a Greek grammatician mentioned by Suidas (n. v. Ἄγραϕή). He wrote a work, Περὶ Οὐκομήνων (concerning persons of the same name). He cannot have lived earlier than the reign of Hadrian, as in his work he spoke of an Apollonius who lived in the time of that emperor.

Agræus, the hunter, an epiteth of Pan.

Agricola, the all river of Thrace, running into the Hebrus. It is now the Ergene.—II. A Thracian tribe dwelling in the vicinity of the river Agrianes. (Herod., 5, 16.)—III. A people of Illyria, on the frontiers of lower Moesia. They were originally from Thrace, and very probably a branch of the Thracian Agrianes.

Ariaspa, a nation of Asia, mentioned by Quintus Curtius (7, 5). Some difference of opinion, however, exists with regard to the truth of this statement. Most editors prefer Arimaspae, while others, and evidently with more correctness, consider Ariaspae the proper reading. (Compare Schmieder, ad Quint. Curt., l. c., and vid. Ariaspae.)

Agricola, Cneus Julius, an eminent Roman commander, born A.D. 40, in the reign of Caligula, by whom his father Julius Grecinus was put to death for nobly refusing to plead against Marcus Silanus. His mother, to whom he owed excellent education, was Julia Procilla, unhappily married on her estate in Liguria by a descent of freebooters from the piratical fleet of Otho. The first military service of Agricola was under Suetonius Paulinus in Britain; and, on his return to Rome, he married a lady of rank, and was made questor in Asia, where, in a rich province, peculiarly open to official exactions, he maintained the strictest integrity. He was chosen tribune of the people, under praetor, under Nero, and, probably, in the commotion which followed the accession of Galba, lost his mother as above mentioned. By Vespasian, whose cause he espoused, he was made a patrician, and governor of Aquitania, which post he held for three years. The dignity of consul followed, and in the same year he married his daughter to the historian Tacitus. He was soon afterward made governor of Britain, and subjugated the Ordovices, in North Wales, and reduced the island of Mona, or Anglesea.

His wise and generous plans for civilizing the Britons, by inducing the nobles to assume the Roman habit, and have their children instructed in the Latin language. He also gradually adorned the country with magnificent temples, porticoes, baths, and public edifices, of a nature to excite the admiration and emulation of the rude people whom he governed.

With these cares, however, he indulged in the usual ambition of a Roman commander, to add to the limits of the Roman territory, by extending his arms northward; and in the succeeding three years he passed the river Tuseis, or Tweed, subdued the country as far as the Frith of Tav, and erected a chain of protective fortresses from the Clota, or Clyde, to the Boderia Austarium, or Frith of Forth. He also stationed troops on the coast of Scotland opposite to Ire-land, on which island he entertained views of conquest; and, in an expedition to the eastern part of Scotland, beyond the Frith of Forth, was accompanied by his fleet, which explored the inlets and harbours, and hemmed in the natives on every side. His seventh summer was passed in the same parts of Scotland, and the Grampian Hills became the scene of a decisive en-
gagement with the Caledonians under their most able leader Galgacus. The latter made a noble stand, but was at last obliged to yield to Roman valour and discipline; and, having taken hostages, Agricola gradually withdrew his forces into the Roman limits. In the mean time, Domitian had succeeded to the empire, to whose mean and jealous nature the brilliant character and successes of Agricola gave secret uneasiness. Artfully spreading a rumour that he intended to make the latter governor of Syria, he recalled him, received him coldly, and allowed him to ascend his private life. The jealousy of the tyrant still pursued him; and as, after he had been induced to resign his pretension to the proconsulship of Asia or Africa, he was soon seized with an illness of which he died, Domitian, possibly without reason, has been suspected of a recourse to poison. Agricola died A.D. 93, in his fifty-fourth year, leaving a widow, and one daughter, the wife of Tacitus. It is this historian who has so admirably written his life, and preserved his high character for the respect of posterity. (Tac., Vit. Agric.)

Agrigentum, a celebrated city of Sicily, about three miles from the southern coast, in what is now called the valley of Mazara. The Greek form of the name was Acragias (Ἀκραγαῖος), derived from that of a small stream in the neighbourhood. The primitive name was Camicus, or, to speak more correctly, this was the appellation of an old city of the Sicani, situated on the summit of the hill which afterwards was regarded merely as the citadel of Agrigentum. The foundress of Camicus is ascribed to Daedalus, who is said to have built it, after his flight from Crete, for the Sicanian prince, Cocalus. In the first year of the 56th Olympiad, 556 B.C., a colony was sent from Gela to this quarter, which founded Agrigentum, on a neighbouring height, to the southeast. Its situation was, indeed, peculiarly strong and imposing, standing as it did on a bare and precipitous rock, 1100 feet above the level of the sea. To this advantage the city added others of a commercial nature, being near to the sea, which afforded the means of an easy intercourse with the ports of Africa and the south of Europe. The adjacent country, moreover, was very fertile. From the combined operation of all these causes, Agrigentum soon became a wealthy and powerful city, and was considered inferior to Syracuse alone. According to Diodorus Siculus (19, 81, seqq.), it drew on itself the enmity of the Carthaginian Carbo (Q. Fabr. vol. i.), by refusing alliance, or even to remain neutral. It was accordingly besieged by their generals Hannibal and Hamilcar. The former, with many of his troops, died of a pestilential disease, derived from the putrid effluvia of the town, which were opened and destroyed for the sake of the stone. But, from want of timely assistance and scarcity of provisions, the Agrigentines were obliged to abandon their city, and fly for protection to Gela, where they were transferred to the city of the Leon- titans, which was allotted to them by the republic of Syracuse. The conqueror Hamilcar despoiled Agrigentum of all its riches, valuable pictures, and statues. Among the trophies sent to Carthage was the celebrated bull of Phalaris, which, two hundred and sixty years afterward, on the destruction of Carthage, was restored to the Agrigentines by Scipio. At a subsequent period, when a general peace had taken place Ol. 96, 1. (Diod. Sic., 14, 78), when Agrigentum was no longer considered of importance; though, from a passage in Diodorus (13, 113), it would seem that the place had not been entirely destroyed by fire, and that many of its previous inhabitants might have come back at an earlier date. (Ol. 93, 4.) Agrigentum soon recovered its importance, but its tyranny of Phintias having induced the inhabitants to call in the aid of Carthage, the city once more fell under that power. Not long after, it revolted to Pyrrhus (Diod. Sic., 25, ecc., 14), but, on his rupture with the island, was compelled to return to its former masters. On the commencement of the Punic wars, Agrigentum was one of the most important strongholds which the Carthaginians possessed in the island. It suffered severely during these conflicts, being alternately in the hands of either party (Diod. Sic., 23, 7.—Polyb., 1, 17, seqq.—Diod. Sic., 23, 9.—Id., 23, 14), but it eventually fell under the Roman power, and, notwithstanding its losses, continued for a long period a flourishing place, though it is supposed to have been confined, after it came permanently under the Romans, to the limits of the ancient Camicus, with which the modern Grgenti nearly corresponds. Diodorus states the population, in its best days, to have been not less than 120,000 persons. (Mannert, 9, pt. 2, p. 353, seqq.—Hoare's Classical Tour, vol. 2, p. 90, seqq.)

Agrionia, annual festivals in honour of Bacchus, generally celebrated in the night. They were instituted, as some suppose, because the god was attended with wild beasts. The appellation, however, should rather be viewed as referring back to an early period, when human sacrifices were offered to Bacchus. Hence the terms Ημηρία and Αγριώνια applied to this deity. (Creuzer's Symbolik, vol. 3, p. 334.) Plutarch even speaks of a human sacrifice to this god as late as the days of Themistocles (Vit., 13), when three Persian prisoners were offered up by him to Bacchus, at the instigation of the diviner Eurytanides. The same writer elsewhere (Vit. Ant., 24) uses both Ημηρία and Αγριώνια as terms of abuse. The latter, according to Reiske, without any necessity, propose Αγριώλος (from άγιας) as an emendation. In celebrating this festival, the Grecian women, being assembled, sought eagerly for Bacchus, who, they pretended, had fled from them; but, finding their labour ineffectual, they said that he had retired to the Muse and concealed himself among them. The ceremony being thus ended, they regaled themselves with an entertainment. (Plut., Symposium, 8, i.) Has this a figurative reference to the suspension of human sacrifices, and the consequent introduction of a milder form of worship? Castellanus, however, (Syntagm. de Festis Graecor., s. v. Agrionia), makes the festival in question to have been a general symbol of the progress of civilization and refinement. (Compare Rolle, Recherches sur le Cuite de Bacchus, vol. 3, p. 281.)

Agrippa (Ἀγρίππας). 1. A skeptical philosopher, only known to us through a passage more than twenty times ascribed to Cicero, from whom he is said to have been the fifth in descent. He is quoted by Diogenes Laertius, who probably wrote about the time of M. Antoninus. The "five grounds of doubt" (οἱ πέντε τρόποι), which are given by Sextus Empiricus as a summary of the later skepticism, are ascribed by Diogenes Laertius (9, 88) to Agrippa.

1. The first of these argues from the uncertainty of the rules of common life, and of the opinions of philosophers. 2. The second from the "rejection ad infinitum": all proof requires some farther proof, and so on to infinity. 3. All things are changed as their relations become changed, or as we look upon them in different points of view. 4. The truth asserted is merely an hypothesis; or, 5. Involves a vicious circle. (Sextus Empiricus, Pyrrhon. Hypot., 1, 13.)

Wherever τρόποι is used, it need only be remarked, that the first and third are a short summary of the ten original grounds of doubt which were the basis of the earlier skepticism. The three additional ones show a progress in the skeptical system, and a transition from the common objections derived from the fallibility of sense and opinion, to more abstract and metaphysical grounds of doubt. They seem to mark a new attempt to systematize the skeptical philosophy, and adapt it to the spirit of a later age. (Kutter, Geschichte der Philosophie, 15, 4.)—II. M. Asinius, consul A.D. 25; died A.D. 26, was descended from a family more...
illustrious than ancient, and did not disgrace it by his mode of life. (Tac. Ann., 4, 64, 61.)—II. Agrippa Caesar, born A.D. 135, praised as an historian by Eusebius, and for his learning by St. Jerome (de Viris Illust., c. 21), lived in the reign of Hadrian. He wrote against the twenty-four books of the Alexandrian Gnostics, Basilides, on the Gospel. Quotations are made from his work by Eusebius. (Hist. Eccles., 4, 7. — See Gallandi's Bibliotheca Patrum, vol. 1, p. 330.)—IV. Fonteius, one of the accusers of Libo, A.D. 16, is again mentioned in A.D. 19, as having his demands against Cæsar, tin., (Tac., Ann., 2, 30, 86.)—V. Probably the son of the preceding, commanded the province of Asia with proconsular power, A.D. 69, and was rescued from thence by Vespasian, and placed over Mesia in A.D. 70. He was shortly afterward killed in battle by the Sarmatians. (Tac., Hist., 3, 46.—Joseph., B. Jud., 7, 4, § 3.)—VI. Herodes I. (Πέτρος Ἅρππιας), called by Josephus (Ant. Jud., 17, 2, § 2) "Agrippa the Great," was the son of Aristo tus and Berenice, and grandson of Herod the Great. Shortly before the death of his grandfather he came to Rome, where he was educated with the future emperor Claudius, and Drusus, the son of Tiberius. He squandered his property in giving sumptuous entertainments to gratify his princely friends, and in bestowing largesses on the freedmen of the emperor, and became so deeply involved in debt that he was compelled to sell his estates, and betook himself to Malatha in Idumea. Through the mediation of his wife Cypros, with his sister Herodias, the wife of Herodes Antipas, he was allowed to take up his abode at Tiberias, and received the rank of adile in that city, with a small yearly income. But, having quarreled with his brother-in-law, he fled to Flaccus, the proconsul of Syria. Soon afterward he was convicted, through the treachery of his freedman Mariamne, of having received a bribe from the Damascusers, who wished to purchase his influence with the proconsul, and was again compelled to fly. He was arrested, as he was about to sail for Italy, for a sum of money which he owed to the treasury of Cæsar, but made his escape, and reached Alexandria, where his wife succeeded in procuring a supply of money from Alexander the Alabarch. He then set sail, and landed at Puteoli, where he probably reconquered him with the education of his grandson, Tiberius. He also formed an intimacy with Caius Caligula. Having one day incasually expressed a wish that the latter might soon succeed to the throne, his words were reported by his freedman Eutychus to Tiberius, who forthwith threw him into prison. Caligula, on his accession (A.D. 37), set him at liberty, and gave him the tetrarchies of Lysanias (Abilene) and Philipps (Battana, Trachonitis, and Auranitis). He also presented him with a golden chain of equal weight with the iron one which he had worn in prison. In the following year Agrippa took possession of his kingdom, and, after the banishment of Herodes Antipas, the tetrarchy of the latter was added to his dominions.

On the death of Caligula, Agrippa, who was at the time in Rome, materially assisted Claudius in gaining possession of the empire for his adopted son, and was himself appointed to the province of Judæa and Samaria, which was now even more extensive than those of Herod the Great. He was also invested with the consular dignity, and a league was publicly made with him by Claudius in the forum. At his request, the kingdom of Chalcis was given to his brother Herodes (A.D. 41). He then went to Jerusalem, where he offered sacrifices, and suspended in the temple the golden chain which Caligula had given him. His government was mild and gentle, and he was exceedingly popular among the Jews. In the city of Berytus he built a theatre and amphitheatre, baths and porticoes. The suspicions of Claudius prevented him from finishing the impregnable fortifications with which he had begun to surround Jerusalem. His friendship was enlarged by many of the neighbouring kings and rulers. It was probably to increase his popularity with the Jews that he caused the apostle James, the brother of John, to be beheaded, and Peter to be cast into prison (A.D. 44.—Acts, 12.) It was not, however, merely by such acts that he strove to win their favour, as we see from the way in which, at the risk of his own life, or, at least, of his liberty, he invited the emperor to bring down the dominating power of that emperor was attempting to set up his statue in the Temple at Jerusalem. The manner of his death, which took place at Caesarea in the same year, as he was exhibiting games in honour of the emperor, is related in Acts, 12, and is confirmed in all essential points by Josephus, who repeats Agrippa's words, in which he acknowledged the justice of the punishment thus inflicted on him. After lingering five days, he expired, in the fifty-fourth year of his age.

By his wife Cypros he had a son named Agrippa, and three daughters, Berenice, who first married her uncle Herodes, king of Chalcis, afterward lived with her brother Agrippa, and subsequently married Polamo, king of Cilicia; she is alluded to by Juvanat (S. 6, 156); Marianne and Drusilla, who married Felix, the procurator of Judæa. (Joseph., Ant. Jud., 17, 1, § 21, 18-23; 19, 4-8.—Bell. Jud., 1, 28, £ 2; 2, 11, § 16, 3; Hist. Eccles., vol. 3, p. 30.)—VII. Herodes II., the son of Agrippa I., was educated at the court of the Emperor Claudius, and at the time of his father's death was only seventeen years old. Claudius, therefore, kept him at Rome, and sent Cuspius Fadus as procurator of the kingdom, which thus again became a Roman province. On the death of Herodes, king of Chalcis (A.D. 49), his little principalities, with certain tracts of coast and appointing the high-priest, was given to Agrippa who four years afterward received in its stead the tetrarchies formerly held by Philip and Lysanias, with the title of king. In A.D. 55, Nero added the cities of Tiberias and Taricheæ in Galilee, and Julias, with fourteen villages near it, in Peraea. Agrippa expended large sums in beautifying Jerusalem and other cities, especially Berytus. His partiality for the latter place is shown by the capricious manner in which he appointed and disposed the high-priests, with some other acts which were distasteful, made him an object of dislike to the Jews. Before the outbreak of the war with the Romans, Agrippa attempted in vain to dissuade the people from rebelling. When the war was begun he sided with the Romans, and was wounded at the siege of Gamala. After the capture of Jerusalem, he went with his sister Berenice to Rome, where he was invested with the dignity of praetor. He died in the seventieth year of his age, in the third year of the reign of Trajan. He was the last prince of the house of Herod. It was before this Agrippa that the apostle Paul made his defence (A.D. 60.—Acts, 25, 26.) He lived on terms of intimacy with the historian Josephus, who has preserved two of the letters he received from him (Jewish Antiquities, vol. 9, p. 4, § 2, 29, 1, § 3, 5; § 2, 7; § 1, 8; § 4, 9, and § 11, 5.—Bell. Jud., 2, 11, § 6, 12; § 1, 16, 17; § 1, 4, 1; § 3.—Vit., p. 54.—Phot., Cod., 33.)—VIII. Menenius. (Vid. Menenius.)—IX. Posthumus, a posthumous son of M. Vipsanius Agrippa, by Julia, the daughter of Augustus, was born in B.C. 12. He was adopted by Augustus, together with Tiberius, in A.D. 4, and he assumed the toga of age in the following year. A.D. 59, § 2, 29, 1, § 3, 5; § 2, 7; § 1, 8; § 4, 9, and § 11, 5.—Bell. Jud., 2, 11, § 6, 12; § 1, 16, 17; § 1, 4, 1; § 3.—Vit., p. 54.—Phot., Cod., 33.)—VIII. Menenius. (Vid. Menenius.)
of any crime. There he was under the surveillance of soldiers, and Augustus obtained a senatus consultum, by which the banishment was legally confirmed for the time of his life. The property of Agrippa was assign-

ed by Augustus to the treasury of the army. It is said that during his captivity he received the visit of Augustus, who secretly went to Planasia, accompanied by Fabius Maximus. Augustus and Agrippa, both deeply affected, shed tears when they met, and it was believed that Agrippa would be restored to liberty. But the news of this visit reached Livia, the mother of Ti-

berius, who in turn induced the murder of Agrippa in 14 B.C. Augustus, the emperor, was enraged at the ac-
cession of Tiberius, in A.D. 14, Agrippa was murdered by a centurion, who entered his prison and killed him after a long struggle, for Agrippa was a man of great bodily strength. When the centurion afterward went to Tiberius to give him an account of the execution, the emperor denied having given any order for it, and it is very probable that Livia was the secret author of the crime. There was a rumour that Augustus had left an order for the execution of Agrippa, but this is positively contradicted by Tacitus. (Tac, Ann., 1, 3–6.—Dion Cass., 55, 32; 57, 3.—Suet., L. c., Tib., 22.—Vellei., 2, 104, 112.)

After the death of Agrippa, a slave of the name of Clemens, who was not informed of the murder, landed on Planasia with the intention of restoring Agrippa to liberty and carrying him off to the army in Germany. When he reached the town, a centurion placed himself in front of him in order to prevent his escape. Agrippa, honorably wearing a centurion's toga, a place of honor to the murderers, and he gave himself out as Agrippa. He landed at Ostia, and found many who believed him, or affect-
ed to believe him, but he was seized and put to death by order of Tiberius. (Tac, Ann., 2, 39, 40.)

The name of Agrippa Caesar is found on a medal of Corinth.—IX. M. Vipsanius, was born in B.C. 63. He was the son of Lucius, and was descended from a very obscure family. At the age of twenty he studied at Apollonia in Illyria, together with young Octavius, afterward Octavianus and Augustus. After the mur-

der of J. Caesar in B.C. 44, Agrippa was one of those intimate friends of Octavius who advised him to pro-
cceed immediately to Rome. Octavius took Agrippa with him, and charged him to receive the oath of fidelity

from several legions which had declared in his fa-

vour. Having been chosen consul in B.C. 43, Octa-

vius sent him to Egypt, to procure the abdica-

tion of C. Cassius, one of the murderers of J. Caesar. At the outbreak of the Perusinian war between Octavius, now Octavianus, and L. Antonius, in B.C. 41, Agrippa, who was then praetor, command-
ed part of the forces of Octavianus, and, after distin-
guishing himself by skilful manoeuvres, besieged L. An-

tonius in Perusia. He took the town in B.C. 40, and towards the end of the same year retook Sipontum, which had fallen into the hands of M. Antonius. In B.C. 38, Agrippa obtained fresh success in Gaul, where he quelled a revolt of the native chiefs; he also pene-

trated into Germany as far as the country of the Catti, and transplanted the Ubii to the left bank of the Rhine; whereupon he turned his arms against the revolted Aquitanians, which had pursued him to undertake the command of the war against Sextus Pompeius, which was on the point of breaking out, B.C. 37. Octavianus offered him a triumph, which Agrippa declined, but accepted the consulship, to which he was promoted by Octavianus in B.C. 37. Dion Cassius (48, 49) seems to say that he was consul when he went to Gaul, but the words (47, 5) seem to say that he was to be made consul, unless they are to be inserted a little higher, after the passage το δ' Αγριππα του τω ναυτικου παρ-

ασκείν την χαρίτως, which refer to an event that took place during the consulship of Agrippa. For, imme-
diately after his promotion to this dignity, he was charg-
ed by Octavianus with the construction of a fleet, which was the more necessary, as Sextus Pompey was master of the sea.

Agrippa, in whom thoughts and deeds were never separated (Vellei., 2, 79), executed this order with prompt energy. The Lucrine Lake, near Baie, was transformed by him into a safe harbour, which he call-
ed the Julian port in honour of Octavianus, and where he exercised his sailors and mariners till they were able to encounter the experienced sailors of Pompey. In B.C. 36, Agrippa sent a fleet under Centurion Myle, and afterward at Naulochus on the coast of Sic-
icy, and the latter of these victories broke the naval supremacy of Pompey. He received, in consequence, the honour of a naval crown, which was first conferred upon him; though, according to other authorities, M. Varro was the first who obtained it from Pompey the Great. (Vellei., 2, 81.—Lit., Epit., 129.—Dion Cass., 49, 14.—Plin., H. N., 16, 3, 4.—Virg., Aen., 8, 684.)

In B.C. 35, Agrippa had the command of the war in Illyria, and afterward served under Octavianus, when the latter had proceeded to that country. On his re-

turn, he voluntarily accepted the adileship in B.C. 33, although he had been consul, and expended immense sums of money upon great public works. He restored the Appian, Marician, and Anienian aqueducts, con-

structed a new one, and added a canal, one thousand miles, from the Tepula to Rome, to which he gave the name of the Julian, in honour of Octavianus, and had an immense number of smaller water-works made, to distribute the water within the town. He also had the large cloaca of Tarquinius Priscus entirely cleansed. His various

works were adorned with statues by the first artists of Rome. These splendid buildings he augmented in B.C. 27, during his third consulship, by several others; and among these was the Pantheon, on which we still read the inscription, "M. Agrippa L. F. Cos. Terti-

um fecit." (Dion Cass., 49, 43; 53, 27.—Plin., H. N., 36, 15, s. 24, § 3.—Strab., 5, p. 235.—Frontin., De Aquad., 9.)

When the war broke out between Octavianus and M. Antonius, Agrippa was appointed commander-in-

chief of the fleet, B.C. 32. He took Methone in the Peloponnesus, Leucea, Patre, and Corinth; and in the battle of Naulochus, B.C. 31, which was the decisive victory, Agrippa seems to have been much less skilful in the sea than on land, or in the other instances cited, and the victory was mainly owing to his skill. On his return to Rome in B.C. 30, Octavianus, now Augustus, reward-
ed him with a " vexillum caruleum," or sea-green flag.

In B.C. 28, Agrippa became consul for the second time with Augustus, and about this time married Mar-
cella, the niece of Augustus, and the daughter of his sister Octavia. His former wife, Pomponia, the daugh-
ter of T. Pomponius Atticus, was either dead or di-

verced. In the following year, B.C. 27, he was again consul the third time with Augustus.

In B.C. 25, Agrippa accompanied Augustus to the war against the Cantabrians. About this time jeal-
ousy arose between him and his brother-in-law, Mar-
cella, the nephew of Augustus, and who seemed to be destined as his successor. Augustus, anxious to pre-

vent differences that might have had serious conse-

quences, induced him to proceed to Syria. Agrippa, of course, left Rome, but he stopped at Myt-

ilene in the island of Lesbos, leaving the government of Syria to his legate. The apprehensions of Augus-
tus were removed by the death of Marcellus in B.C. 23, and Agrippa immediately returned to Rome, where he was the more anxiously expected, as troubles had broken out during the election of the consuls in B.C. 21. After the establishment of the family, which had come into his own family, and, accordingly, induced him to divorce his wife Marcella, and marry Julia, the widow of Marcellus and the daughter of Augustus by his third wife, Scribonia (B.C. 21).
In B.C. 19, Agrippa went into Gaul. He pacified the turbulent natives, and constructed four great public roads and a splendid aqueduct at Nemausus (Nîmes). From thence he proceeded to Spain, and subdued the Cantabrians after a short but bloody and obstinate struggle; but in accordance with his usual prudence, he neither announced his victories in pompous letters to the senate, nor did he accept a triumph which Augustus offered him. In B.C. 18, he was invested with the tribunician power for five years together with Augustus; and in the following year (B.C. 17), his two sons, Caius and Lucius, were adopted by Augustus. At the close of the year, he accepted an invitation from Augustus to the Great, and went to Jerusalem. He founded the military colony of Berytus (Beirut); thence he proceeded, in B.C. 16, to the Pontus Euxinus, and compelled the Bosporan to accept Ptolemaeus for their king, and to restore the Roman eagles which had been taken by Mithradates. On his return he stayed some time in Ionia, where he granted privileges to the Jews, whose cause was pleaded by Herod (Joseph., Antiq. Jud., 15, 2), and then proceeded to Rome, where he met his father in C. 13. By this time the power had been prolonged for five years, he went to Pannonia to restore tranquillity to that province. He returned in B.C. 12, after having been successful as usual, and retired to Campania. There he died unexpectedly, in the month of March, B.C. 12, in his 51st year. His body was carried to Rome, and was buried in the mausoleum of Augustus, who himself pronounced a funeral oration over it.

Dion Cassius tells us (59, 1, &c.), that in the year B.C. 29 Augustus assembled his friends and counsellors, Agrippa and Maccenas, demanding their opinion as to whether it would be advisable for him to usurp monarchical power, or to restore to the nation its former republican government. This is corroborated by Suetonius (Octavi., 35), who says that Augustus twice deliberated upon that subject. The speeches which Agrippa and Maccenas delivered on this occasion are given by Dion Cassius; but the artificial character of them makes them suspicious. However, it does not seem likely, from the general character of Dion Cassius as an historian, that these speeches are invented by him; and it is not improbable, and such a supposition suits entirely the character of Augustus, that those speeches were really pronounced, though preconceived beforehand, and his counsellors to make the Roman nation believe that the fate was predetermined. Whatever was then a matter of discussion, and that Augustus would not assume monarchical power till he had been convinced that it was necessary for the welfare of the nation. Besides, Agrippa, who, according to Dion Cassius, advised Augustus to restore the Republic, was a man whose political opinions had evidently a monarchical tendency.

Agrippa was one of the most distinguished and important men of the age of Augustus. He must be considered as a chief support of the rising monarchical constitution, and without Agrippa Augustus could scarcely have succeeded in making himself the absolute master of the Roman Empire. Dion Cassius (54, 29, &c.), Velleius Paterculus (3, 79), Seneca (Ep., 94), and Horace (Od., 1, 6) speak with equal admiration of his merits.

Flinius constantly refers to the "Commentarii" of Agrippa as an authority (Elenchus, 3, 4, 5, 6, comp. 3, 2), which may indicate certain official lists drawn up by him in the measurement of the Roman world under Augustus (vid. Ætiusicus), in which he may have taken part.

Agrippa left several children. By his first wife, Pomponia, he had Vipsania, who was married to Tiberius Caesar, the successor of Augustus. By his second wife, Marcella, he had several children, who are not mentioned; and by his third wife, Julia, he had two daughters, Julia, married to L. Emilinus Paullus, and Agrippina, married to Germanicus, and three sons, Calus (vid. Cæsar, C.), Lucius (vid. Cæsar, I.), and Agrippa Posthumus. (Dion Cass., lib. 45—54.—Liv., Eplt., 117, 386.—Antiq., Bell. Civ., lib. 5.—Suet., Octavius, 17.—Flacianus, M. Vipsania Agrippa, eine historische Untersuchung über dessen Leben und Wirken, Altona, 1836.) There are several medals of Agrippa, on one of which he is represented with a naval crown; on the reverse is Neptune indicating his success by seas.

AGrippina, I. the youngest daughter of M. Vipsania Agrippa and of Julia, the daughter of Augustus, who was married to Lucius Cæsar Germanicus, the son of Drusus Nero Germanicus, by whom she had nine children. Agrippina was gifted with great powers of mind, a noble character, and all the moral and physical qualities that constituted the model of a Roman matron: her love for her husband was sincere and lasting, her chastity was spotless, her fertility was a virtue in the eyes of the Romans, and her attachment to her children was an eminently characteristic feature of her nature. She was suffused with a fervent and dangerous passion, Augustus showed her particular attention and attachment. (Sueton., Calig., 8.)

At the death of Augustus in A.D. 14, she was on the Lower Rhine with Germanicus, who commanded the legions there. Her husband was the idol of the army, and the legions on the Rhine, dissatisfied with the accession of Tiberius, manifested their intention of proclaiming Agrippa and Germanicus the new masters of the state. Tiberius hated and dreaded Germanicus, and he showed as much antipathy to Agrippina as he had loved to her elder sister, his first wife. In this perilous situation, Germanicus and Agrippina saved themselves by their prompt energy; he quelled the outbreak, and pursued the war against the Germans. In the ensuing year his lieutenant, Cecina, after having made an invasion into Germany, returned to the Rhine. The campaign was not inglorious for the Romans, but they were worn out by hardships, and, perhaps, harassed on their march by some bands of Germans. Thus the rumour was spread that the main body of the Germans was approaching to invade Gaul. Germanicus was absent, and it was proposed to destroy the bridge over the Rhine. (Compare Strab., 4, p. 194.) If this had been done, the retreat of Cecina's army would have been cut off, but it was saved by the firm opposition of Germanicus. When the Roman troops approached, she went to the bridge, acting as a general, and receiving the soldiers as they crossed it; the wounded among them were presented by her with clothes, and they received from her own hands everything necessary for the cure of their wounds. (Tac., Ann., 1, 69.) Germanicus having been recalled by Tiberius, she accompanied her husband to Asia (A.D. 17), and after his death, or, rather, murder (vid. Ger- manicus), she returned to Italy. She stayed some days at the island of Corcyra to recover from her grief, and then landed at Brundisium, accompanied by two of her children, and holding in her arms the urn with the ashes of her husband. At the news of her arrival, the port, the walls, and even the roofs of the houses were occupied by crowds of people who were anxious to see and salute her. She was solemnly received by the consuls, and the magistrates of Calabria, Apulia, and Campania; by Drusus, the son of Tiberius; Claudius, the brother of Germanicus; by the other children of Germanicus; by the consuls, the senate, and crowds of the Roman people. (Tac., Ann., 3, 1, &c.)
During some years Tiberius disguised his hatred of Agrippina, but she soon became exposed to secret accusations and intrigues. She asked the emperor's permission to choose another husband, but Tiberius neither refused nor consented to the proposition. Sejanus, who exercised an unbounded influence over Tiberius, then a prey to mental disorders, persuaded Agrippina that the emperor intended to poison her. Assured of such a report, she refused to eat an apple which the emperor offered her from his table, and Tiberius, in his turn, complained of Agrippina regarding him as a poisoner. According to Suetonius, all this was an intrigue preconceived between the emperor and Sejanus, who, as it seems, had formed the plan of leading Agrippina into false steps. Tiberius was extremely suspicious of Agrippina, and showed his hostile feelings by allusive words or neglectful silence. There were no evidences of ambitious plans formed by Agrippina, but the rumour having been spread that she would fly to the army, he banished her to the island of Pandataria (A.D. 30), where her mother, Julia, had died in exile. Her sons, Nero and Drusus, were likewise banished, and both died an unnatural death. She lived three years on that barren island; at last she refused to take any food, and died, most probably, by voluntary starvation. Her death took place precisely two years before, as Pliny said, the birth of her son, Junius, that is, in A.D. 33. Tacitus and Suetonius tell us that Tiberius boasted that he had not strangled her. (Sueton., Tib., 53.—Tac., Ann., 6, 25.) The ashes of Agrippina, and those of her son Nero, were afterward brought to Rome by order of her son, the Emperor Caligula, who struck various medals in honour of his mother. In one of these the head of Caligula is on one side, and that of his mother on the other. The words on each side are (above the empress): AVG. GER. P. M. TR. POT., and (below, in the empress's hand): AGRIPPINA. MAT. C. CEB. AVG. GERM. (Tac., Ann., 1, 6.—Sueton., Octav., 64; Tib., l. c.; Calig., l. c.—Dion Cassius, 57, 5, 6; 58, 22.)—II. The daughter of Germanicus and Agrippina the elder, daughter of M. Vipsanius Agrippa. She was born between A.D. 13 and 17, at the Oppidum Ubi- rium, afterward called, in honour of her, Colonia Agrippina, now Cologne, and then the headquarters of the legions of the Rhine. She was educated by Junius Silanus, and married Cn. Domitius Ahenobarbus, a man not unlike her, and whom she lost in A.D. 40. After his death she married Crispus Passionius, who died some years afterward; and she was accused of having poisoned him, either for the purpose of obtaining his great fortune, or for some secret motive of much higher importance. She was already known for her scandalous conduct, for her most pernicious intrigues, and for an unblooded ambition. She was accused of having committed incest with her own brother, the Emperor Cal- ius Caligula, who, under the pretext of having discovered that she had lived in an adulterous intercourse with M. Æmulius Lepidus, the husband of her sister Drusilla, banished her to the island of Pontia, which was situated in the Sinus Syrticus Major, on the coast of Libya. Her sister Drusilla was likewise banished to Pontia, and it seems that their exile was connected with the punishment of Lepidus, who was put to death for having conspired against the emperor. Previously to her exile, Agrippina was compelled by her brother to carry to Rome the ashes of Lepidus. This happened in A.D. 39. Agrippina and her sister were released in A.D. 41, by their uncle, Claudius, immediately after his accession, although his wife, Messalina, was the mortal enemy of Agrippina. Messalina was put to death by order of Claudius, and Agrippina was left alone. In A.D. 49, Agrippina succeeded in marrying the emperor. Claudius was her uncle, but her marriage was legalized by a senatorial consultum, by which the marriage of a man with his brother's daughter was declared valid; this senatorial consultum was afterward abrogated by the Emperors Constantine and Constantius.

In this intrigue Agrippina displayed the qualities of an accomplished courtesan, and such was the influence of her charms and supérior talents over the old emperor, that, in prejudice of his own son, Britannicus, he adopted Domitius, the son of Agrippina by her first husband, Cn. Domitius Ahenobarbus (A.D. 51). Agrippina was assisted in her secret plans by Pallus, the perfidious confidant of Claudius. By her intrigues, L. Junius Silanus, the husband of Octavia, the daughter of Claudius, was put to death, and in A.D. 53 Octavia was married to young Nero. Lollia Paulina, once the rival of Agrippina for the hand of the emperor, was accused of high treason and condemned to death, but she put an end to her own life. Domitia Lepida, the sister of Cn. Domitius Ahenobarbus, met with a similar fate. After having thus removed those whose rival she dreaded, or whose virtues she envied, Agrippina resolved to get rid of her husband, and to govern the empire through her ascendency over her son Nero, his successor. A vague rumour of this reached the emperor; in a state of drunkenness, he forgot prudence, and talked about punishing his ambitious wife. Having no time to lose, Agrippina, assisted by Locusta and Xenophon, a Greek physician, poisoned the old emperor, in A.D. 54, at Sinuessa, a watering-place to which he had retired with his family. Nero was proclaimed emperor, and presented to the troops by Burrus, whom Agrippina had appointed prefectus praetorio. Narcissus, the rich freedman of Claudius, M. Junius Silanus, procusol of Asia, the brother of Lucius Junius Silanus, and a great-grandson of Augustus, lost their lives at the instigation of Agrippina, who would have augmented the number of her victims but for the opposition of Burrus and Seneca, recalled by Agrippina. Burrus was always jealous of Agrippina, who had been a confidant of Nero. Meanwhile the young emperor took some steps to shake off the insupportable ascendency of his mother. The jealousy of Agrippina rose from her son's passion for Acte, and, after her, for Poppea Sabina, the wife of M. Salvinus Otho. To reconquer his affection, Agrippina employed, but in vain, most daring and most revolting means. She threatened to oppose Britannicus as a rival to the emperor; but Britannicus was poi- soned by her confidants, and Agrippina, now the object of her incestuous intercourse. At last her death was resolved upon by Nero, who wished to repudiate Octavia and marry Poppea, but whose plan was thwarted by his mother. Thus petty feminine intrigues became the cause of Agrippina's ruin. Nero invited her, under the pretext of a reconciliation, to visit him at Baiae, on the coast of Campania. She went thither by sea. In their conversation hypocrisy was displayed on both sides. She left Baiae by the same way; but the ves- sel was so contrived that it was to break to pieces when out at sea. It only partly broke, and Agrippina saved herself by swimming to the shore; her attendant, Acerronia, was killed. Agrippina fled to her villa near the Lucrine Lake, and informed her son of her happy escape. Now Nero charged Burrus to murder his mother; but Burrus declining it, Anicetus, the commander of the fleet, who was instructed in the business, was sent to the emperor. Nero was to undertake the task. Anicetus went to her villa with a chosen band, and his men surprised her in her bedroom. “Vestrum feri,” she cried out, after she was but slightly wounded, and immediately afterward expired under the blows of a centurion (A.D. 60). (Tac., Ann., 14, 8.) It was told that Nero went to the villa, and that he admired the beauty of the dead body of his mother. It is a belief somewhat disbelieved by others (14, 9). Agrippina left commentaries concerning her history and that of her family, which Tacitus consults, according to his own statement. (Jb., 4, 54.—Compare Plin. Hist. Nat., 7, 6, 8; Elichenus, 7, &c.)
There are several medals of Agrippina, which are distinguishable from those of her mother by the title of Augusta, which those of her mother never have. On some of her medals she is represented with her husband Claudius, in others with her son Nero. (Tac., Ann., lib. 12, 13, 14.—Dion Cass., lib. 59, 61.—Suet., Claud., N. 5, 6.) Agrippina was the daughter of M. Vipsanius Agrippa and Pomponia, the daughter of T. Pomponius Atticus, her first wife. She was married to Tiberius, afterward emperor, by whom she had Drusus. Tiberius was much attached to her, and with great reluctance divorced her when commanded by Augustus, that he might marry Julia, the daughter of the emperor. She now married Asinius Gallus, the son of the celebrated Asinius Pollio, and before him several husbands. This gave rise to a fear of hatred in the breast of Tiberius against Asinius, which ultimately proved his ruin. (Vid. Asinius, II.)

The children of Agrippina by Asinius were, C. Asinius Saloninus, Asinius Gallus, Asinius Pollio, consul A. U. C. 776, Asinius Agrippa, consul A. U. C. 778, and Asinius Celcr. Agrippina died A. U. C. 778, and, according to Tacitus (Ann., 3, 19), she was the only one of her family who was alive (Tac., Ann., 1, 12; 3, 19; 3, 75; 4, 1, 24.—Suet., Tib., ch. 7.—Id., Claud., ch. 13.)—IV. Colonia, also called Colonia Agrippinensis (Tac., Hist., 1, 57; 4, 55), and on inscriptions Colonia Claudia Augusta Agrippinensium, or simply Agrippina (Ann., Marc., 15, 8, 11), originally the chief town of the Ubii, and called Oppidum Ubiorum. These are mentioned by Cæsar as a German nation, dwelling on the right bank of the Tīne, who were afterward transferred to the left, or Gallic side, by Agrippa. At this town Agrippina, daughter of Germanicus, was born; and, when she had attained to the dignity of empress by marriage with Claudius, she sent thither a military colony, A. C. 50, and caused the place to be named after herself. It soon became large and wealthy, and was adorned with a temple of Mars. The inhabitants received the jus Italicum. It answers to the modern Köln or Cologne. (Tac., Ann., 1, 35; 12, 27.—Id., Hist., 4, 28; 1, 57; 4, 55.—Dion Cassius, 48, 49.)

Agrippinus, bishop of Carthage, of venerable memory, but known for being the first to maintain the necessity of re baptizing all heretics. (Vincent. Lirin, Commen., 1, 9.) St. Cyprian regarded this opinion as the correction of an error (St. Augustin, De Baptismo, 2, 7, vol. 9, p. 102, ed. Bened.), and St. Augustin seems to imply he defended his error in writing. (Epist., 93, c. 16.) St. Augustine, bishop of Carthage, about A. D. 200 (Vulg. A. D. 215, Mans A. D. 217), on the subject of Baptism. Though he erred in a matter yet undefined by the Church, St. Augustin notices that neither he nor St. Cyprian thought of separating from the Church. (De Baptismo, 3, 2, p. 109.)—II. Pacónius, whose father was put to death by Tiberius on a charge of treason. (Suet., Tib., 61.) Agrippa by name was accused at the same time as Thrasaæus, A. D. 67, and was put to death. From Italy, p. 16, 28, 29, 33.) He was a Stoic philosopher, and is spoken of with praise by Epictetus (ap. Stob., Serm., 7), and Arrian (1, 1).

Agrius (Ἀγρίος), 1) a son of Porthaon and Eurycle, and brother of Ceneus, king of Cadynon, in Aetolia, Alacathus, Melas, Leucopus, and Sterope. He was father of six sons, of whom Therates was one. These sons were called Agriists, or Ceneus of his kingdom, and gave it to their father; for the exception of Therates, were slain by Diomedes, the grandson of Ceneus. (Apollod., 1, 7, § 10, 8; § 5, c.) Apollodorus places these events before the expedition of the Greeks against Troy, while Hyginus (Fab. 175: compare 242, and Antoniun Lib., 37) states that Diome des, when he heard, after the fall of Troy, of the misfortunes of his father Ceneus, hastened back and expelled Agrius, who then put an end to his own life; according to others, Agrius and his sons were slain by Diomedes. (Compare Pausan., 2, 25, 2.—Or., Heroid., 9, 153.) In the mythic history of the Greeks we find several Agri, and in almost all the allusion appears to be a synonym. Thus, for example, in the case of the one first mentioned, Agrius is the "Wild man," the "Man of the fields," while Ceneus, on the other hand, is the "Wine-man," the "cultivator of the vine." (Compare Creuzer, Symbolik, vol. 4, p. 372.—Apol lod., 1, 8, 6.—Anton. Lib., 37.—Verhey, ad. Anton. Lib., Fab, 21, p. 136.) In the case of the father of Therates, the name Agrius may be intended as a figurative allusion to the rude and lawless manners of the sons of Agrius. There was an Agrius in the thirteenth book of the Iliad, a son of Ulysses and Circe, and brother of Laertes and Telegonos, "who, afar in the recess of the Holy Isles, ruled over all the renowned Tyrrenians." He is the same, in all probability, with the god or hero called Agrius by the Arcadians (a term to be derived from ἀγρός, a wedge), and whose most solemn festival the Parnassii introduced into the island of Ceos, one of the Cyclades. There was a deity of the same name in Thessalia, in Phthia, where Agrius is said to have died. There was an Agrius also in Bæotis, whose name appears in the Cadmean genealogy. The mythology connected with this son of Ulysses and Circe appears in Italy under a new form, and he is there to be identified with the Arcadian Exander of the Latinos, while his mother, Circe, seems to be the same with Carenta, a name equivalent to the Latin Magna. (Compare Levy, 1, 7.) This Agrius is mentioned also by the scholiast on Apollonius (3, 200), and by Eustathius (ad Hom., II, p. 1796); nor should it be omitted here that there was among the Romans a gens Agria. (Varro, De Rer. Rust., 1, 2.—Cic., Flacc., 13.) Göttling, a recent editor of Hesiod, has a very learned note on the subject of Agrius, in which he appears to favour the reading of τέθηκεν τὸ ἀρτιόν in place of ἀρτιόν ἀρτιόν as occurring in Hesiod (Theog., 1012).

Agræus or Agrætus, a Roman grammarian, the author of an extant work, De Orthographia et Differentiis Sermonum, intended as a supplement to a work on the same subject, by Flavius Capier, and dedicated to a bishop, Eucherius. He is supposed to have lived in the middle of the 5th century of our era. His work is printed in Putschius's "Grammatica Latina Auctores Antiqui," p. 2266-2275.

Agræus (Ἄγρεύς), a Greek historian, who wrote a work on Socrates, (Cyclopaedia,) from the thirteenth book of which the scholiast on Apollonius (2, 1248) quotes, and one on Libya (Δαφνᾶδ), the fourth book of which is quoted by the same scholiast (4, 1396). He is also mentioned by Stephanus Byz. (s. v. ἄμπελος).

Agora, the early name of Attalea, a city of Lyd ia, on the Hermus, northeast of Sardis. Major Kep pel (Travels, vol. 2, p. 335) remarks, "It is on the right bank of the Hermus, which flows at the base of Mount Ida in Asia Minor, a ruin of which is pointed out by the road. The passage here is rather dangerous. The direct road from Cezarea to Adala (Agoria) is twelve hours. No vestiges of antiquity were observed here; there are coins, however, of Attalea." (Sestini, p. 106.—Graymer's Asia Minor, v. 1, p. 435.)

Agora (Ἄγρω), II. the son of Ninus, the first of the Lydian dynasty of the Heraeidae. The tradition was, that this dynasty supplanted a native of the Lamia, King Ceeneus, who was but a second-rate prince, with the government, which was dotted over with deputes. The names Ninus and Belus, in their genealogy, render it probable that they were either Assyrian governors, or princes of Assyrian origin, and that their accession marks the period of an Assyrian conquest. (Herod., 1, 7.) II. The son of Pleuratus, a king of Illyria. In the strength of his land and naval forces he surpassed all the preceding kings, but the coun-
Agron, overjoyed at the news of this success, gave himself up to feasting, and, in consequence of his excess, contracted a pleurisy, of which he died (B.C. 231). He was succeeded in the government by his wife Teuta. Just after his death, an embassy arrived from the Romans, who had sent to mediate in behalf of the inhabitants of the island of Icna, who had revolted from Agron, and placed themselves under the protection of the Romans. By his first wife, Triteuta, whom he divorced, he had a son named Pinnes, or Pinneus, who survived him, and was placed under the guardianship of Demetrius Pharnaces, who married his mother after the death of Teuta. (Dion Cassis., 34, 46, 151. — Polyb., 2, 2-4. — Appian, Ill., 7. — Flor., 2, 5. — Pline. H. N., 34, 6.)-III. Son of Eumelus, grandson of Merops, lived with his sisters, Byssa and Merops, in the island of Cos. They worshipped the earth, as the giver of the fruits of harvest, without paying regard to any other deity. When they were invited to the festival of Minerva, the brother replied that the black eyes of her sisters would not please the blue-eyed goddess, and that, for himself, the owl was an object of aversion. If desired to offer sacrifice to Mercury, he declared that he would show no honour to a thief. At the sacrifices of Diana he did not appear, because that goddess roamed abroad the whole night long. Provoked at this conduct, Minerva, Diana, and Mercury came to their dwelling, the latter as a father, the two goddesses as maidens, to invite Eumelus and Agron to a sacrifice to Mercury, and the sisters to the grove of Minerva and Diana. When, however, Merops reviled Minerva, she and her sisters were changed into birds, together with Agron, who attempted to serve upon the divinities, and Eumelus, who heaped reproaches upon Mercury for the metamorphosis of his son. The legend makes Merops to have been changed into a small bird of the owl kind: Byssa retained her name, and became, as a species of sea-fowl, the bird of Leucotho: Agron became the bird Chardrius. (Anton. Lib., 15.)

Agrilas, surrounded the citadel of Athens with walls, except that part which was afterward repaired by Citon. (Pausan., 1, 28.) We have here one of the old houses among the Parthenon. Agrilas was aided in the work by his brother Hyperbius, both of them Pelasgi. According to Pausanias (1. c.), they came originally from Sicyo. It is more than probable, however, that the names in question are those of two leaders or two tribes, and that the work was executed under their orders. The wall erected on this occasion was styled Pelargion, and the builders of it would seems have erected also, for their small settlement, for themselves, which afterward became part of the Acropolis. (Compare Siebel, ad Pausan., 1, 28.— Muller, Gesch. Hellen. Stimm., &c., vol. 1, p. 440.)

Agroréa, I. an annual festival, celebrated at Athens to Diana Agrotera (Ἄγρουτα Ἄγρωτρα). It was instituted by Callimachus the polemarch, in consequence of a vow made by him before the battle of Marathon, that, should he be sacrifices to the goddess as many yearling she-goats (χυμαρα) as there might be enemies slain in the approaching conflict. (Schol., ad Aristoph., Equit., 657 — Xen., Anab., 3, 2, 11.) The number of the Persians who fell was so great, that a sufficient amount of victims could not be obtained. Every year, therefore, 500 goats were slain, in order to make up the requisite number, until, at last, the whole thing grew into a regular custom. (Elian. V. H., 2, 25) makes the vow in question to have been offered up by Miltiades, and the number of annual victims 300. — II. The name Agrotera (Ἄγρουτα) is also sometimes applied to Diana herself. In this usage it is equivalent to ἀνωτέρικος, ὑπερτερός, "the higher," the goddess and her worship being higher than all others. In other places it is the same as ὄρατα, "she that frequents the mountains." (Compare Heyne, ad Hom., Il., 21, 471.)

Agvyues, an appellation given to Apollo. The term is of Greek origin (Ἀγγεύς), and, if the common derivation be correct, denotes "the guardian deity of streets" (from ἀγγεῖον, "a street"), it being the custom at Athens to erect small conical cippi, in honour of Apollo, in the westbords and before the doors of their houses. Here he was invoked as the Averter of evil (θεὸς ἀπόρροιας, "Deus averruncus") and the worship here offered him consisted in burning perfumes before these pillars, in adorning them with myrtle garlands, hanging fillets upon them, &c. We must not suppose, however, that this custom originated in Athens. It appears to have been borrowed from the Dorians, and introduced into this city in obedience to an oracle. (Schol. in Aristoph. Necrop., 279. — Pausan. 8, 53 — Muller, Gesch. Hellen. Stimm., &c., vol. 2, p. 299, seqq.) As respects the pillars erected at Athens, the ancients seem to have been at a loss whether to regard them as altars, or as a species of statues. (Compare, on this point, the scholiast on Aristophanes, Vesp., 870, and Thesm., 496. — Harpocrate, s. v. — Suidas, s. v. — Heliandus, ap. Phot., cod., 279, vol. 2, p. 389, ed. Bekker.— Platonic, Merc., 4, 1, 9.— Zros, de hon. deorum, p. 510.) Muller, observing that this emblem of Apollo appears on coins of Apollonia in Epirus, Aptera in Crete, Megara, Byzantium, Oricum, Ambraicia, &c. (Muller, Gesch. Hellen. Stimm., l. c.)

Agvllla. Vid. Care.

Agvrum, a city of Sicily, northeast of Enna, and in the vicinity of the river Symathus. It would seem to have been one of the oldest settlements of the Siculi, and was remarkable for the worship of a hero, whom a later age confounded with the Grecian Hercules. (Diod. Sic., 4, 25.) The place is noted as having given birth to Diodorus Siculus. The modern town of San Filippo d'Argiro is supposed to correspond to the ancient city; the site of the latter, however, would appear to have been two miles farther east. (Manieri, vol. 9, pt 2, p. 419.)

Ajax (Ajax). I. son of Telamon by Periboea, daughter of Alcathous, was, next to Achilles, the bravest of all the Greeks in the Trojan war, but, like him, of an imperious and ungovernable spirit. In other peculiarities of their history, there was also a striking resemblance. At the birth of Ajax, Hercules is said to have wrapped him in the skin of the Nemean lion, and to have thus rendered him invulnerable. At his death, part of his body was left exposed by the aperture in the skin, caused by the wound which the animal had received from Hercules. This vulnerable part was in his breast, or, as others say, behind the neck. (Lysophor., 454. — Tzetz., ad loc.— SchoL., ad II., 23, 821.) To Ajax fell the lot of opposing Hector, when that hero, at the instigation of Apollo and Minerva, had challenged the bravest of the Greeks to the test of arms. The glory of the antagonists was made equal in the engagement; and, at parting, they exchanged arms, the baldric of Ajax serving, most singularly, as the instrument by which Hector was, after his fall, attached to the car of Achilles. In the games celebrated by Achilles in honour of Patroclus, Ajax (as commentators have remarked) was unsuccessful, although he was a competitor on not less than three occasions: in hurling the quoit; in wrestling; and in single combat with arms. After the death of Achilles,
Ajax and Ulysses disputed their claim to the arms of the hero. When they were given to the latter, Ajax became so infuriated, that, in a fit of delirium, he slaughtered all the sheep in the camp, under the delusion that his rival and the Atroide, who had favoured the cause of the former, were the objects of his attack. When reason returned, Ajax, from mortification and despondency, fell from a height, cutting himself to the heart. The sword which he used as the instrument of his death had been received by him from Hector in exchange for the baldrick, and thus, by a singular fatality, the present mutually conferred contributed to their mutual destruction. The blood which ran to the ground from the wound produced the flower hyacinthus, of a red colour, and on the petal of which may be traced lines, imitating the form of the letters of Ajax (Ajaz). The flower here meant appears to be identical with the Lilium Martagon ("Imperial Martagon"), and not the ordinary hyacinth. (Fée, Flore de Virgile, p. lviii.)—Some authorities give a different account of the cause of his death, and make the Palladion to have been the subject of dispute between Ajax and Ulysses, and state also that Ulysses, in concert with Agamemnon, caused the palace to be burnt, that the Greeks might have the tomb over his remains on the promontory of Rhoeotus, which was visited in a later age by Alexander the Great. Sophocles has made the death of Ajax the subject of one of his tragedies. According to the plot of this piece, the rites of sepulture are at first refused to the corpse of Ajax, but afterward allowed through the intercession of Ulysses. Ajax is the Homerick type of great valour, unaccompanied by any corresponding powers of intellect. Ulysses, on the other hand, typifies great intellect, unaccompanied by an equal degree of heroic valour, although he is far, at the same time, from being a coward. (Hom., II, passim.—Apollod. 3, 12, 7.—Ovid, Met., 13, 1, seqq.)—II. The son of Olieus, king of Locris, was surnamed Locrian, in contradistinction to the son of Telamon. The term Narycian was also applied to him from his birthplace, the Locrian town Narycium, or Naryx. He went with 40 ships to the Trojan war, as being one of Helen’s suitors. Homer describes him as small of size, particularly dexterous in the use of the lance, but as remarkable for brutality and cruelty. The night that Troy was taken, he offered violence to Cassandra, who had fled into Minerva’s temple; and for this offence, as he returned home, the goddess, who had obtained the thunders of Jupiter, and the power of tempests from Neptune, destroyed his ship in a storm. Ajax swam to a rock, and said that he was safe in spite of all the gods. Such impiety offended Neptune, who struck the rock with his trident, and Ajax tumbled into the sea with part of the rock, and was drowned. His body was afterward found by the Greeks, and black sheep offered on his tomb. According to Virgil’s account, Minerva seized him in a whirlwind, and dashed him against a rock, where he expired consumed by the flame of the lightning. (Hom., II, 2, 227, 287, 322.—Virg., En., I, 49, seqq.—Hygin., fab. 116, &c.)

Albucus (Albóvo), I. a surname of Pluto. It is only another form for 'Aleo, "the invisible one." —II. A king of the Thespriots in Epirus, who defe¬eted the forces of Theseus and Pirithous, when the two latter had marched against him for the purpose of carrying off his wife Proserpina. Pirithous was torn to pieces by Cerberus, the monarch’s dog, while Theseus was wounded. Hence, according to Pausanias (1, 17), who relates this story, arose the fable of the descent of Theseus and Pirithous to the lower world. This explanation has met with the approbation of many of the learned, and, among the rest, of Wesseling and Perizonius. But it is quite untenable. (Consult Creuzer, Sym-

Albus Locutus, a deity to whom the Romans erected an altar from the following circumstance: one of the common people, called Ceditius, informed the trib¬unes, that, as he passed one night through one of the streets of the city, a voice more than human, issuing from a temple of Minerva, told him that Rome would soon be attacked by the Gauls. His information was neglected, but, as its truth was subsequently confirmed by the event itself, Camillus, after the departure of the Gauls, built a temple to that supernatural voice which had given Rome warning of the approaching calamity, under the name of Alius Locutus. (Liv., 5, 50.—Plut., Vit. Cam. 30.) Thus much for the story itself. We have here an instance of the imposition practised by the patriots of Greece, to distinguish, among the order, upon the lower orders of the state. The commonly received narrative respecting the Gallic invasion and the taking of Rome, is abundantly supplied with the decorations of fable, the work of the higher classes. The object of the patricians, in the various legends which they invented on this point, seems to have been a wish to impress on the minds of the people the conviction, that divine vengeance had herself attacked them. It was thus that they, in a manner, imposed on them an infernal rank. It was to avenge the banishment of Ca¬millus that the gods had brought the Gauls to Rome, and to Camillus alone did they assign the honour of removing these formidable visitations. (Compare Levesque, Hist. Crit. de la Rep. Romains, vol. 1, p. 257.)

Alabanda, a city of Caria, one of the most impor¬tant of those in the interior of the country. It was situated a short distance to the south of the Meander. Strabo (14, p. 660, ed. Canab.) describes its position between two hills, and compares the appearance thus presented to that of a loaded ass. He speaks of the inhabitants as addicted to the pleasures of the table and a luxurious life. From Pliny (6, 29) we learn that it was a free city, and the seat also of a Conven¬tus Juridicus. Hieroeces incorrectly names the place Alabenda. This city was said to have obtained its appellation from the hero Alabandus, its founder, who was deified after death, and worshipped within its walls. (Cic., N. D., 3, 19.) Stephanus Byzantinus, however, speaks of another Alabanda, commonly called Antiochia ad Meandrum, and makes this one to have been founded by Alabandus, son of Enippus; while he assigns as a founder to the other city, Car, a son of whose received the name of Hippiconius, from his having conquered in an equiniest conflict; which, according to advance, [Stephanus] of the city, was the same with Alabandus in the Carian tongue, Alabanda denoting a "horse," and Banda a "victory." From this son, Alabanda, as he states, took its name. (Compare the remarks of Berkel, ad loc., p. 86, and Aedeling, Gloss. Man., vol. 1, p. 555.) The remains of Alabanda were discovered by Pococke (vol. 3, book 2, c. 5) and, after him, by Chandler (c. 59), in the neighbourhood of the village of Karpassier or Karpassi. The inhabi¬tants of this place were called Alabandenses, and by the Roman writers Alabandenses. The name of the city is given by the latter as neuter, but by Strabo and Stephanus as feminine. (Mannert, Geogr., vol. 6, pt. 3, p. 278, seqq.)

Alabandus I. a son of Enippus, and the founder of Antiochia ad Meandrum. (Vit. Alabanda.)—II. A son of Car, who was otherwise called Hippiconius, and who gave name to Alabanda. (Vit. Alabanda.)

Ala (Albá), a surname of Minerva, by which she was worshipped at Tegea in Arcadia. There was also a festival celebrated here in honour of the goddess, and called by the same name. (Pausan., 8, 46.) Creuzer traces a connexion between the festival termed Alabas and the solar worship. (Symboitik, vol. 3, p. 779.)
ALBAGÓNIA, a town of Messenia, distant about thirty stadia from Gerena. Pausanias (3, 26) notices its temples of Bacchus and Diana.

ALARA, an appellation given to Bellona, the goddess of war and sister of Mars. It appears to be nothing more than the battle-cry personified, and occurs in what appears to be a fragment of an old war-song. (Plut., de Hebr.).

ALACONOMÉN, I, a city of Boeotia, near the Lake Copais, and to the southeast of Charonea. It was celebrated for the worship of Minerva, thence surnamed Alaconomen. (Strab., 410 and 413.—Compare Heyne, ad Hom., I., 4, 8, and Müller, Gesch. Hellen. Stämme, &c., vol. I., p. 70.) The temple of the goddess was plundered and stripped of its statues by Sulla. (Pausan., 9, 33.) It is said, that when Thesbes was taken by Epaminondas, associated to Alaconomen, as being held sacred and inviolable. (Strab., 413.—Steph. Byz., s. v. 'Αλακονομένου.) The ruins of this place, according to Sir W. Gell (Itin., p. 162), are observable near the village of Sulinara, on a projecting knoll, on which there is some little appearance of a small ancient establishment or town; and higher up may be discovered a wall or peribolos, of ancient form and structure, forming one of the sacred rocks. This is probably the site of the temple of the Alaconomian Minerva. (Cramer's Anc. Greece, vol. 2, p. 236).—II. A town, situate on a small island off the coast of Acarnania, between Ithaca and Cephalenla. The name of the island was Asters, and it is the place where Homer describes the suitors as lying in wait for Telemachus on his return from Sparta and Pylos. (Hom., Od, 4, 844.—Compare Strabo, 458.) Plutarch, however, speaks of Alaconomon as being in Ithaca. (Intr. Alex., ap. Plut., Quest. Græc.) Stephanaus Byz., Zantius writes it Alacomen.

ALACONOMÉN. Vid. Supplement.

ALALIA, a city of Corsica. Vid. Aleria.

ALAMANNI. Vid. Alemani.

ALÁN, a Scythian race, occupying the regions between the Rha and the Tanais. Their name and manners, however, would appear to have been also diffused over the wide extent of their conquests. (Compare Balba, Introduction à l'Atlas Ethnographique, vol. I., p. 116.) The Agathysii and Gelonii were numbered among their vassals. Towards the north their power extended into the regions of Siberia, and their southern inroads were pushed as far as the confines of Persia and India. They were conquered eventually by the Huns. A part of the vanquished nation thereupon took refuge in the mountains of Caucasus. Another band advanced towards the shores of the Baltic, and occupied themselves with the northern tribes of Germany, and shared the spoil of the Roman provinces of Gaul and Spain. But the greatest part of the Alani united with their conquerors, the Huns, and proceeded along with them to invade the limits of the Gothic empire. (Ann. Marcell., 21, 19.—Id., 23, 4.—Piot., 6, 14.)

ALÁRICUS, in German Alric, i. e., all rich, king of the Visigoths, having as being the first of the barbarian leaders who entered and sacked the city of Rome, and the first enemy who had appeared before its walls since the time of Hannibal. His first appearance in history is in A.D. 394, when he was invested by Theodosius with the command of the Gothic auxiliaries in his war with Eugenius. In 396, partly from anger at being refused the command of the armies of the Eastern Empire, partly at the instigation of Rufinus, his insatiable ambition, till by the arrival of Stilicho, in 397, he was compelled to escape to Epirus. He was elected king by his countrymen in 398, having been previously, by the weakness of Arcadius, appointed prefect of Eastern Illyricum. The rest of his life was spent in the two invasions of Italy. The first (400-403), apparently unprovoked, brought him only to Ravenna, and, after a bloody defeat at Pollentia, in which his wife and treasures were taken, and a masterly retreat to Verona, was ended by the treaty with Stilicho, which transferred his services from Arcadius to Honorius, and made him prefect of the Western instead of the Eastern Illyricum. The second invasion (408-10) was occasioned by delay in fulfilling his demands for pay, and for a western province as the future capital, which was refused, as also, by the massacre of the Gothic families in Italy on Stilicho's death. It is marked by the three sieges of Rome, in 408, 409, and 410. The first of these was raised by a ransom; the second ended in the unconditional surrender of the city, and in the disposal of the empire by Alaric to Attalus, till, on discovery of his incapacity, he restored it to Honorius. The third was ended by the treacherous opening of the Salarian Gate, on August 24th, and the flight of the Gothic king. The sack of Rome, which was immediately followed by the occupation of the south of Italy, and the design of invading Sicily and Africa. This intention, however, was frustrated by his death, after a short illness, at Consentia, where he was buried in the bed of the adjacent river Busetinum, and the place of his interment was concealed by the massacres of all the workmen employed on the occasion. The few personal traits that are recorded of him are in the true savage manner. His origin is obscure; he was called a Christian, or a barbarian Chaldaean, or a Magian. His name, however, is left upon us by his general character is of a higher order. The real military skill shown in his escape from Greece, and in his retreat to Verona; the wish at Athens to show that he adopted the use of the bath, and the other external forms of civilized life; the moderation and justice which he observed towards the Romans in time of peace; the humanity which distinguished him during the sack of Rome, indicate something superior to the mere craft and lawless ambition which he seems to have possessed in common with other barbarian chiefs. So, also, his scruples against fighting on Easter-day when attacked at Pollentia, and his reverence for the churches during the sack of the city, imply that the Christian faith had laid some hold at least on his imagination.

ALÁZON, a river of Albania, rising in Mount Caucusan, and flowing into the Cypress. See the Alban or Alasion. (Plin., 6, 10.)

ALBA, I, Sylvia, one of the pretended kings of Alba, said to have succeeded his father Latinus, and to have reigned 36 years.—II. LONGA, one of the most ancient cities of Latium, the origin of which is lost in conjecture. According to the common account, the place was built by Ascanius, B.C. 1152, on the spot where Eneas found, in the vicinity, the river of Alba Longa. (Crambo, ex, 3, 390, seq.) and of the god of the river (En., 8, 43), a white sow with thirty young ones. Many, however, have been led to conjecture, that Alba was founded by the Siciuli, and, after the migration of that people, was occupied by the Aborigines and Pelasgi. (Compare Dion. Hal., 2, 2.) The word Alba appears to be of Celtic origin, for we find several places of this name in Liguria and ancient Spain; and it is observed, that the names were situated from which circumstance it is inferred that Alba is derived from Alp. (Bardetii dell. Läng. des Prum. Abit. &c., p. 109.) As Alba was entirely destroyed by Tullus Hostilius (Livy., 1, 59), and no vestiges of it are now remaining, its exact position has been much discussed by modern topographers. If we take Strabo for our guide, we shall look for Alba on the slope of the Mount Albanus, and at a distance of twenty miles from Rome. (Strab., 3, 7, 20.) It is situated on a hill, and cannot evidently agree with the modern town of Albano, which is at the foot of the mountain, and only twelve miles from Rome. Dionysius also informs us (1, 66), that it was situated on the declivity of the Alban Mount, midway between the summit and the lake of the same name, which protected it as a wall. This description and that of Strabo agree sufficiently well with the position of
Palazzola, a village belonging to the Colonna family, on the eastern side of the lake, and some distance above its margin. (Cramer's Anc. Italy, vol. 2, p. 37, seqq.) "The site," observes Niebuhr, "where Alba stretched, in a long street, between the upper part of the mountain and the lake, was distinctly marked out, and the even parts of the rock are cut away under it down to the lake. These traces of man's ordering hand are more ancient than Rome. The surface of the lake, as it has been determined by the tunnel, now lies far beyond the ancient city. When Alba was standing, and before the lake swelled to a ruinous height in consequence of obstructions in clefts of the rock, it must have lain yet lower. For in the age of B de dorus and Dionysius, down to the destruction, the mounds of spacious buildings might be seen at the bottom, taken by the common people for the palace of an impious king which had been swallowed up." (Niebuhr's Rom. Hist., vol. 1, p. 168, seqq., Cambridge transl.)—The line of the Alban kings is given as follows: 1. Ascanius, reigned 8 years; 2. Sylvius Posthumus, 29 years; 3. Ancus Sylvius, 31 years; 4. Latinus, 5 years; 5. Alba Sylvius, 36 years; 6. Arys, 31 years; 7. Servius Tullius, 13 years; 8. Tiberinus, 8 years; 9. Agrippa, 33 years; 10. Remulus, 19 years; 11. Aventinus, 37 years; 12. Procas, 13 years; 13. Numitor and Almus. The destruction of Alba took place, according to the common account, 665 B.C., when the inhabitants were carried to Rome. "The list of the Alban kings," remarks Niebuhr, "is a very late and extremely clumsy fabrication; a medley of names, in part quite uncritical, and some of them repeated from earlier or later times, others framed out of geographical names; and having scarcely anything of a story connected with them. We are told that Livy took this list from J. Cornelius Alexander the Polyhistor (Serv., ad Virg., B. n., 8, 330); hence it is probable that this client of the dictator Sylla introduced the imposture into history. Even the variations in the lists are very important, and do not at all prove that there are several ancient sources. Some names may have occurred in older traditions: kings of the Aborigines were also mentioned by name (Sertecanus, for instance, unless it be a false reading.—Serv., ad Virg., B. n., 11, 850), entirely different from those of Alba. In the case of the latter, even the years of each reign are numbered; and the number so exactly fills up the interval between the fall of Troy and the founding of Rome, according with the canons of Extraordinary, as well as to improve the lateness of the imposture." (Niebuhr's Rom. Hist., vol. 1, p. 170, Cambridge transl.)—III. Docilia, a city of Liguria, now Alibiza.-IV. Fucinia or Fucinna, a city of the Marsi, near the northern shore of the Lake Pucinus, whence its name. It was a strong and secluded place, and appears to have been selected by the Roman senate, after it became a colony of Rome, A.U.C. 450, as a fit place of residence for conquered nations of extraordinary character, or for numerous offenders. (Strab., 241.—Compare Liv., 10, 1, and Vell. Paterc., 1, 14.) Syphax was long detained here, though finally he was removed to Tibur (Liv., 30, 45); and as were Peranis, king of Macedon, and his son Alexander. (Liv., 45, 52.—Vell. Paterc., 1, 11.—Vol. Max., 5, 1.) At the time of Caesar's invasion of his country, we find Alba adhering to the conqueror, Pompey (Cass., Bell. Civ., 1, 15), and consequently rendered tributary of that province which occasion it obtained a warm and eloquent eulogium from Cicero. (Phil., 3, 3.—Appian, Bell. Civ., 3, 45.) The ruins of this city, which are said to be considerable (Romanelli, vol. 3, p. 211), stand about a mile from the modern Alba (Cramer's Anc. Italy, vol. 1, p. 330).—V. Pompeis, a city of Liguria, on the river Tanarus, now Alba. It probably owed its surname to Pompeius Strabo, who colonized several towns in the north of Italy. It was the birthplace of the Emperor Pertinax. (Dio Cass., 93.—Zon. Ann., 2.)—VI. A city of Spain, in the territory of the Varduli, eight geographical miles to the west of Pamplona, and as many to the east of the Pyrenees. It was about two geographical miles, though, to the west of the modern toler- la. (Mannert, vol. 1, p. 375.)—VII. Augusta, a city of the Helvii, in Gaul, near the Rhone, and answering to the modern Apa. Pliny (14, 3) names the place Alba Helvorum, and praises the skill of the inhabitants in the cultivation of the vine.—VIII. Gerica, a city of Dacia Ripensis, at the confluence of the Danube and the Saavus, or Savae. It is now Belgrade.

Alaba Porta. Vide Pylae, I.

Albino, I. Mons, a mountain of Latium, about twelve miles from Rome, on the slow track which stretched from Alba Longa. It is now called Monte Cassino. This mountain is celebrated in history, from the circumstance of its being peculiarly dedicated to Jove, under the title of Latalia. (Lucan, 1, 198.—Cic. pro Mil., 31.) It was on the Alban Mount that the Feriae Latini, or holydays kept by all the cities of the Latin name, were celebrated. The Roman generals also occasionally performed sacrifices on this mountain, and consecrated the trophy of a triumph when refused one at home. This appears, however, to have occurred only five times, if we may credit the Fasti Capitolini, in which the names of the generals are recorded. (Vulp. Vet. Lat., 12, 4.) Some vestiges of the road which led to the summit of the mountain are still to be traced a little beyond Albano.—II. Lacus, a lake at the foot of the Alban Mount. (Compare remarks under the article Alba.) This lake, which is doubtless the crater of an extinct volcano, is well known in history from the prodigious rise of its waters, to such an extent, indeed, as to threaten the whole surrounding country, and Rome itself, with an overwhelming inundation. The oracle of Delphi, being consulted on that occasion, declared, that unless the Romans continued to carry off the waters of the lake, they would never take Veii, the siege of which had already lasted for nearly ten years. This led to the construction of the

N

57
that wonderful subterraneous canal, or emissarius, as the Italians call it, which is to be seen at this very day, in remarkable preservation, below the town of Caesal Gandolfo. This channel is said to be carried through the rock for the space of a mile and a half, and the water enters the fountain through a conduit about five miles below Rome. (Cic. de Div. 1, 44.—Livy, 5, 15.—Val. Max., 1, 6.—Plut., Vit. Camill.) Near this opening are to be seen considerable ruins and various foundations of buildings, supposed by some to have belonged to the palace of Domitian, to which Martial and Statius frequently allude. (Cramer's Anc. Italy, vol. 2, p. 40.)—III. A river of Albania, falling into the Caspian, in the north of the mouth of the Cyrus, or Kura, is supposed by some to have the same name as the Samare. Mannert, however, is in favour of the Bithana.

At last, a people of Gaul, of warlike character, occupying the mountains above Massilia, or Marseille., Strabo places them to the north of the Salyes, and there Ptolemy also makes them to have resided, on the southeast side of the Druentia, or Duranc. This latter writer is blamed, without any reason, by those who compare the picturesque scenes of that region, and consequently, places them too far to east. Strabo calls the Albici, 'Albitis et 'Albicio, Ptolemy Ελλήκοι, and Pliny Altebic. Their capital, according to Pliny, was named Alebece, now Riez. (Cas. Bell. Cirt. 1, 57 and 34.—Strabo, 203.—Plin. 3, 4.—Compare Mannert, vol. 2, p. 105.)

ALBIOVUM. Vid. Albium Inguamum.

ALBIVNOVUS, 1. Celsius, a young Roman, and acquaintance of Horace. He formed one of the retinue of Tiberius Claudius Nero, when the latter was marching to Armenia, under the orders of Augustus, in order to replace Tigranes on the throne. Horace alludes to him in Epist. 1, 3, 15, and addresses to him Epist. 1, 8. He appears to have been of a literary turn, but addicted to habits of plagiarism.—II. Pedo, a Roman poet, the friend of Ovid, who has inscribed to him one of the Epistles from Pontus (10th of 4th book). He distinguished himself by heroic versification, but a few fragments of his labours in this department of poetry have reached our times. In epigram also he would appear to have done something. (Martial, 5, 5.) As an elegiac poet, he composed, according to Joseph Scaliger and many others, the three following pieces which have descended to us: 1. "Consolatio ad Liviam Augustam de morte Drusi." (Fabric. Bibl. Lat., 1, 12, § 11, 8, p. 376, seqq.) 2. "Epistola ad Antoninum c. c. l. c. 1, 13, § 11, 7, p. 376.—Burmann, Anthol. Lat., 2, ep. 119.—Lion, Mecenateana, Götting., 1824, c. 1.)—3. "De Mecenate moribundo." (Burmann, l. c. 2, ep. 120.)

Of these elegies, the first has been ascribed by many to Ovid, even on MS. authority, and printed in the works of that poet. (Compare Fabric. l. c.—Passerat. in Prafat., vol. 4, p. 220, ed. Burm.—Amar. ad Ge. Carm., ed. Lemaire, vol. 1, p. 389, seqq., and on the work Mes. Tac. Saturn., (Fabric. l. c., vol. 1, p. 796.) The grounds on which the claim of Ptolemy is not by any means satisfactory: the piece in question, however, would seem to have been the production of the Augustan age. Still weaker are the arguments which seek to establish the claim of Ptolemy to the other two elegies which, according to Wernsdorff (Poet. Lat. Min., vol. 3, p. 112, seqq.), are unworthy of him, and must be regarded as the productions of some late scholastic poet.—III. P. Tullius. (Vid. Supplement.)

ALBITREMILV. Vid. Albium Intemelium.

ALBIUS, I. Decimus Claudius, a Roman general, born at Adrumetum in Africa, and surnamed Albinus from the extreme whiteness of his skin when brought into the world. He made at first some progress in literary pursuits, and wrote a Treatise on Agriculture, together with some Tales after the manner of those denominated Miletian. An invincible attachment to arms, however, caused him to embrace, at an early period, the military profession, in which he soon attained distinction. In the year 176 of the present era, and in the 14th year of the emperor Marcus, he prevented the army, which he commanded in Brithonis, from joining the rebel Avidius Cassius. For this, according to some, he was rewarded with the consulship; though his name does not appear at this epoch in the Fasti Consulares. Governor of Gaul under Commodus, he defeated the Frisii, and afterward had intrusted to him the command of Britain. The death of Commodus brought forward Severus, Julian, and Pescennius Niger, and the latter was supported by some of the same party. The Senate, however, offered the title of Caesar, which the latter accepted, and declared for his cause. But Severus had only contributed to the elevation of Albinus in order to diminish the number of his own opponents. When he had conquered his other rivals, he resolved to rid himself of Albinus by the aid of assassins. The latter, however, suspected his odious projects, and his suspicion was confirmed by Albinus' own letters. The result of these was that Severus' emissaries. Albinus immediately took up arms to dispute the imperial power with his enemy. He gained several successes in Gaul, but was at last defeated in a decisive battle in the same country, near Lugdunum (Lyons), A. D. 198. Finding himself on the point of falling into the hands of the foe, he put an end to his own existence. His head was brought to Severus, who ordered it to be cast into the Rhone. The details of this last-mentioned conflict are variously given. The armies are said to have consisted each of 150,000 men; and the victory is reported to have been for a long time doubtful: at last the left wing of Albinus was totally defeated and his camp pillaged; while his right wing, on the other hand, proved so decidedly superior to the foe, that Severus, according to Herodian (3, 7, 7), was compelled to fly, after having thrown aside the badges of his rank. Spartianus (c. 11) adds, that Severus was wounded, and that his army, believing him to have been slain, were on the point of proclaiming a new emperor. Dio Cassius (75, 21) states, that he had his horse killed under him, and that, having thrown himself, sword in hand, into the midst of his flying soldiers, he succeeded in bringing them back to the fight and gaining the day. Some writers inform us that Albinus was slain by his own troops; others relate that he was dragged, mortally wounded, and sacrificed by his own soldiers, that the Catholics may have him expire. The account of his death, which we have given above, is from Dio Cassius, and seems entitled to the most credit. According to Capitolinus (c. 10, seqq.), Albinus was severe, gloomy, and unsocial, inconstant in wine, and remarkable for his voracious gluttony. This account, however, must be received with caution. If we form an idea of Albinus from his life and actions, we must pronounce him a brave warrior, a talented man, but deficient in statesmanship. The state and address. (Biographie Universelle, vol. 1, p. 431, seqq.—Com. Cretier, Hist. des Emp. Rom., 5, p. 153, seqq.)—II. A Platonic philosopher, who resided at Smyrna, in the reign of Antoninus Pius, and was the preceptor of Galen. He is the author of an Introduction to the Dialogues of Plato, which Fabricius has inserted in the second volume of his Bibliotheca Graeca, to which may be added, in conclusion, the study of the dialogues of Plato, Oxon., 1771, 8vo.—III. The name of Albinus was common to a great number of individuals belonging to the Gene Posthumia, for an account of whom vid. Suppiment.

ALBION, I, a giant, the son of Neptune, who, together with his brother Bergion, endeavoured to prevent Hercules from passing the Rhone. When the weapons of the latter failed him in this conflict, he prayed
to Jove for aid, and that deity destroyed the two brothers by a shower of stones. The battle-ground was called, from the appearance which it presented, the Campus Lapidus, or "Stony plain" (Mela, 2, 5), and lay between Massilia and the Rhone. Apollodorus (2, 5, 10) calls the brothers Albion and Dercynus ("Albionius, quae nomen"), and lays the scene in Liguria (Aethia). This, however, as Vossius (ad Mel., l. c.) remarks, should not have missed Salmacius (Sau- maize), since Liguria and the Lignes once extended even to the Rhone. (Compare Heyne, ad Apollod., l. c.) To Albion is ascribed by some, if indeed so ridiculous an etymology he worth mentioning, one of the names of Britain.—II. The earlier name of the island of Great Britain, called by the Romans Britannia Major, from which they distinguished Britannia Minor, the modern French province of Bretagne. Agathene- rus (11, 4), speaking of the British islands, were the names Hibernia and Albion for the two largest; Poly- emy (2, 3) calls Albion a British island; and Pliny (4, 16) says, that the island of Britain was formerly called Albion, the name of Britain being common to all the islands around it. ("Britannia insula . . . Albion ipse nomen fuit, cum Britannica vocarent omnes.") The etymology of the name is uncertain. Some writers derive it from the Greek ἄλπη (the name of a mountain), "in reference to the cliffs on the coast; others have recourse to the Hebrew 알ben, "white!" and others again to the Phenici- an ἄλπος or ἄλπιν, "high," and "high mountain;" from the height of the coast. Sprengel thinks it of Gallic origin, the same with Albin, the name of the Scotch highlanders. It appears to him the plural of ἄλπος or ἄλπιν, which signifies "Rocky Mountains," and to have been given to the island, because the shore, which looks towards France, appears like a long row of rocks. The term evidently comes from the same source with the word Alpes, and conveys the associate ideas of a high and chalky, or whitish, coast. (Vid. Alpes, and compare Adelung, Mithradates, vol. 2, p. 42, seqq.) The ancient British poets call Britain Inis Wen, "the white island" (Mannert, Geogr., vol. 2, p. 32, seqq.).

*ALBIS,* a river of Germany, now the Elbe. It is called Albios by Dio Cassius (55, 1). This was the easternual name of Germany in which their ex- ploits became acquainted in the course of their expeditions: and they knew it, moreover, only in the northern part of its course. Tacitus learned that the Her- munduri dwelt near its sources. (Germ., 41.) Poly- emy also was acquainted with the quarter where it rose, on the east side of his Sudetes, near the confines of the modern Moravia. The only Roman who passed this stream in his army was L. Domitius Ahenobar- bus, A.U.C. 744; and though he made no further progress, the passage of the Albis was deemed worthy of a triumph. (Plin., 4, 14.—Vell. Paterc., 2, 106. —Tacit., Ann., 1, 59.—Id. ib., 13, sub fin.—Plut. Vopisc. Prob., 13.)

*ALBIV.,* I. Insanaum, a city of Liguria, on the coast, some distance to the southwest of Genoa. It was the capital of the Insanaui, and answers to the modern Albenga. (Strabo, 205—Plin., 3, 5.)—II. Intemelium, a city of Liguria, on the coast, to the southwest of the preceding. It was the capital of the Intemelii, and corresponds to the modern Vintimiglia. (Strabo, 205.—Plin., 3, 5.)—From Tacitus (Hist., 2, 13), we learn that it was a municipium.

*ALBULAE AQUAE,* a name given to some cold medicinal springs, about sixteen miles from Rome, which issued from a small but deep lake, and flowed into the neigh- bouring river Anio. They were highly esteemed by the Romans for their medicinal properties, and were used both for drinking and bathing. (Vitruv., 8, 3.— Plin., 31, 11.)

*ALBUNA,* the largest of the springs or fountains which formed the Albula Aque. It proceeded, like the rest, from a small but deep lake, and flowed with them into the Anio. In the immediate vicinity of the fountain was a thick grove, in which were a temple and oracle of Faunus. (Virg., axe, 7, 58, 6.) Heyne, ad Virg., l. c.) Both the grove and fountain were sacred to the nymph or sibyl Albunea, who was worshipped at Tibur, and whose temple still remains on the summit of the cliff, and overhanging the cas- cade. "This beautiful temple," observes a recent traveller, "which stands on the very spot where the eye of taste would have placed it, and on which it ever reposes with delight, is one of the most attractive fea- tures of the scene, and perhaps gives to Tivoli its greatest charm." (Rome in the Nineteenth Century, vol. 2, p. 393. Am. ed.) Varro, as cited by Lactan- tius (de Falsa Rel., 1, 6), gives a list of the ancient sibyls, and among them enumerates the one at Tibur, surnamed Albunea, as the tenth and last. Suidas also says, Ὑενεύα τί Τούσκριρα, ὁνομάζεται Αλβουνία. (Compare Hor., Od., 1, 7, 12, and Mitteichrich and Feat, ad loc.—Consult also Creuzer, Symbolik, vol. 2, p. 297.---Lactantius, de Dies Spectac., 7, 25.)

*ALBURNUS,* a ridge of mountains in Luncaia, near the junction of the Silurus and Tanager, and between the latter river and the Color. It is now called Monte di Postiglione, and sometimes Alburno. Near a part of the ridge, and on the shores of the Sinus Pustanus, was a harbour of the same name (Albunus Portus), where the Silurus emptied into the sea. (Virg., Georg., 3, 146.---Cramer's Anc. Italy, vol. 2, p. 376.)

*ALBURNUS,* a ridge of mountains in the south of Syria, supposed by Gail to be the harbour of Laodicea to which Appius alludes (καὶ το τῆς πτελαγας έχουσα ὑμοί. Bell. Civ., 4, 60), and placed by him to the west of the promontory of Zizaret. (Gail, ad Anon. Stadiasmus. Mari Mag. Geogr. Gr. Min., vol. 2, p. 538.)—II. Vicus (ὁ Λαυκτικήν Κάμν), a harbour in Arabia, from which Gallas set out on his expedition into the interior. (Strab., 791.) It is supposed by Mannert to be the same as a modern harbour of Iambu. (Geogr., vol. 6, pt. 1, p. 50.—Compare Peripl. Mar. Eryth., p. 11.—Geogr. Gr. Min., ed. Hudson, vol. 1.)

*ALBUTIUS,* I. a wealthy Roman, remarkable for his severity towards his slaves. According to an ancient scholiast, he even punished them sometimes before they had committed any offence, "lest," said he, "I should have no time to punish them when they do of- fend me of their own free will. (Horat., Serm., 2, 2, 67.—Schol. ad Horat., l. c.) Porphyrian (ad Hor., l. c.) styles him, "εἰς αὐτός, et elegans connovirorum apparatur." The epithet awus, however, must evidently be thrown out, as contradicting what follows.---II. T, a Roman of the Epi- curean school. He was educated at Athens, and ren- dered himself ridiculous, on his return home, by his excessive attachment to the language and manners of Greece. About A.U.C. 648, he was sent as prator to Sardinia. For some unimportant matter, he was ren- dered here, and believed himself entitled to a triumph. The senate, however, rejected his application, and he was accused, on his return, by the augur Mucius Scaviola, of extortion in his government. Being con- demned, he went into exile at Athens, where he con- soled himself, amid his disgrace, by philosophical in- vestigations, and by composing satires in the style of Lucilius. (Cic. Brut., 35.—Id., 35; id., de Orat., 4, 11, 1; id., Brut., 1, 5—Id., 4, 1, Pater. Hist. 39, 146, 39, 1, 46, 3.—Id., 32, 3.—Id., 4, 1.)
decision, and being dragged by the feet from his tribunal, he left his native city and came to Rome, where he soon attained to distinction as a pleader. A singular adventure induced him to leave the bar. Intending, on one occasion, merely to employ a rhetorical figure, he said to the opposite party, who was accused of murder by his parents, “Swear by the ashes of thy father and mother” (and gain the cause). The defendant immediately accepted the condition, and, though Alcatus protested that he merely employed a figure of rhetoric, the judges admitted the oath, and the defendant was acquitted. In his old age Alcatus returned to Novaria, where he assembled his fellow-citizens, and represented to them that his age and the maladies under which he was labouring rendered his residence in Rome useless. When he had finished his harangue he retired to his dwelling, and starved himself.

—IV. Vid. Supplement.

ALCÆUS, I., a celebrated poet of Mytilene, in Lesb., and the contemporary of Sappho, Pittacus, and Stesichorus. (Clinton's Fasti, Hell., vol. 1, p. 5, ed. 2d.) He was famed as well for his resistance to tyranny and his unsettled life, as for his lyric productions. Having aided Pittacus to deliver his country from the tyrants which were threatening to quarrelled with this friend, when the people of Mytilene had obtained power in the hands of the latter, and some injurious verses, which he composed against Pittacus, caused himself and his adherents to be driven into exile. An endeavour to return by force of arms proved unsuccessful, and Alcaeus fell into the power of his former friend, who, forgetting all that had passed, generously granted him both life and freedom. In his odes Alcæus treated of various topics. At one time he inveighed against tyrants; at another, he lamented his misfortunes which had attended him, and the pains of exile: while, on other occasions, he celebrated the praises of Bacchus and the goddess of love. He wrote in the Æolic dialect. Dionysius of Halicarnassus speaks in high commendation of the lofty character of his compositions, the conciseness of his style, and the clearness of his images. His productions, indeed, breathed the same spirit with his life. A strong, manly enthusiasm for freedom and the good of the country pervaded even those in which he sang the pleasures of love and wine. But the subtlety of his nature shone brightest when he praised valour, chastised tyrants, described the blessings of liberty, and the misery and hardships of exile. His lyric muse was versed in all the forms and subjects of poetry, and antiquity attributes to him hymns, odes, and songs. A few fragments only are left of all of them, and a distant echo of his poetry reaches us in some of the odes of Horace. Alcaeus was the inventor of the metre that bears his name, one of the most beautiful and melodious of all the lyric measures. Horace has employed it in many of his odes. As regards the personal character of the poet, it may be remarked, that the charge of cowardice which some have endeavoured to fasten upon him, for his misconduct in having lost his shield during a conflict between the Mytileneans and Athenians for the possession of Sigaum, would seem to be anything but just. Equally unjust is the same charge, as brought against Horace for his conduct at Philippi. (Consult the work of Van Ommeren, Horaz als Mensch und Bürger von Rom, &c., Aus dem Holland., von L. Walch.)—The fragments that remain to us of the poetry of Alcaeus, are to be found in the collections of H. G. Zimmern and Fulvius Ursinus. Jani, one of the editors of Horace, published, from 1730 to 1732, three Prosessiones, containing those fragments which Alcaeus, to which the Latin poet had imitated. In 1812, Stange united these opuscula in a volume which appeared at Halle, under the title of "Alciæi poetae lyrici fragmenta." The most complete and accurate collection, however, is that by Matthias, Lips., 1827. A collection was also made by Blomfield in the Museum Criticum, 1, p. 421, &c., Camb., 1826, reprinted in Gaisford's Poëtae Graeci Minores. Additional fragments have been printed in the Rhenish Museum for 1829, 1833, and 1835; in John's Jahrbuch. for Philolog. for 1830; and in Cranmer's Anecdota Graeca, Oxon., 1835. (Schill, Hist. Gr. Poet., vol. 1, p. 204.—Boi., Gesch. der Lyrischen Dichtkunst der Hellenen, 2, 1578, &c.)—II. An epigrammatic poet. (Vid. Supplement.)—III. A comic poet of Athens, contemporary with Aristophanes. Some of his contemporaries are cited by Athenæus (3, p. 107.—Vol. 1, p. 418, ed. Scheuch), and others. (Compare Casaubon, ad Athen., i. c.—Clinton's Fasti Hellenici, vol. 1, p. 101.)—IV. An Athenian poet, whom some, according to Suidas, made to have been the author of the tragedy. (Compare Casaubon, ad Athen., 3, p. 107, and remarks of Schiechehauser, vol. 9, p. 14.)—V. A son of Persicus, and father of Amphytriôn, from whom Hercules has been called Alcides. (Apollod., 2, 4, 13.—Compare Heyne, ad loc.)

ALCAEMES, I. ninth king of Sparta, and one of the Argive (vid. Aigidae), succeeded his father A. M. 3235 C. B.C., and reigned thirty-seven years, in which time there was a collision of his kingdom with that of Pericletus, which occasioned some of his apotthegms. (Plut., Apoph. Loc., 32.—Pausan., 3, 2.—Meursius, de Reg. Laco., 9.)—II. A statuary and sculptor of Athens, who flourished about 448 B.C. He was the pupil of Phidias, and adorned his country with numerous specimens of his superior skill, a skill which almost equalled that of his master. (Quintil., 12, 10.—Dionys. Hal., de Dek. Math. Acum., pt. 6, p. 1108, ed. Réside.) The most celebrated of his productions was his statue of Venus, commonly styled ᾿Αφροδίτη ἐν τοῖς κέρασι, and sometimes simply κέρας. It is said to have received its last polish from the hand of Phidias himself, and is spoken of in high terms by Lucian and others. (Luc. Imag. 4 et 6.) Whether this was the statue of Venus, by which Alcæmenes obtained his victory over Agora-crius (vid. Argoricrus), cannot be determined with certainty from the words of Pliny. If we suppose it to have been the same, we have this difficulty, that all ancient writers pronounce the Venus ἐν κέρασι of Alcaemenes, one of the highest productions of the art, while Pliny asserts, that the artist was indeltest for his success, in the contest just mentioned, not to the superiority of his performance, but to the spirit of party which influenced the umpires. Another highly celebrated work of his was the rear pedestal of the temple of Jupiter at Olympia, of which Pausanias has left us a description (5, 10). On it was represented the contest between the Centaurs and Lapithæe. Cicero (N. D., 1, 50) speaks of a statue of Vulcan by this artist, and Valerius Maximus (8, 11, 3) informs us, that although the god was exhibited as lame, yet the lameness was in a great measure concealed by the drapery and position. The distinguished merit of Alcæmenes obtained for him the honour of being placed in a bas-relief on the temple at Eleusis. (Plin., 34, 8.—Id. ibid., 9, 3.—Plut., 1, 19.)—III. An artist whose name occurs on some Roman embossed work, described by Zoega. (Bass. Ant., &c., tav. 23.—Consult Sillig, Dict. Art., &c.) He is called a duvumir, and it has been conjectured that, besides being raised to civil honours in the municipal state to which he belonged, he also obtained his livelihood by exercising the art of modelling. (Sillig, ubi supra.)

Alcman, a Lacedæmonian youth, of hasty temper, but not otherwise ill-disposed, who, during a popular tumult, struck out one of the eyes of Lycurgus. The people were so moved with shame and sorrow at the outrage, that they surrendered Alcander into his hands, to do with him as he pleased. Lycurgus took him to his own home, and so won upon him by mild treatment, that Alcander became one of his warmest friends and an excellent citizen. (Plut., Vit. Lyc., 11.)
Alcibiadec, I. a son of Pelops, who, being suspect-
ed of murdering his brother Chrysippus, came to Me-
gara, where he killed a lion, which had destroyed
the king's son. The monarch had promised the hand
of his daughter, and the succession to the throne, unto
him who should succeed in destroying the wild beast.
Alcathous, therefore, gained both of these prizes, and
succeeded in the course of time to the kingdom of Me-
gara. In commemoration of him, festivals, called Alc-
athoia, were instituted at Megara. (Pausan., I, 41, 4.
Alc, one of the two citadels of Megara, so called
from its founder Alcathous. (Pausan., I, 40 and 42.)
Alc, a town of the Celtiberi, in Hispania Tarra-
conensis, also called Alcaraz. It answers to the modern
Alcaraz, in New Castile, on the river Guarda-
mena. (Liv., 40, 47, seqq.)
Alcione, an Argive, who, along with Chronius,
survived on his side, the battle between 300 of his
countrymen and 300 Lacedaemonians. (Vid. Othrya-
des, Herod., I, 82.)
Alcestis, daughter of Pelias and wife of Admetus.
Her father had offered to give her in marriage to this
prince, on condition of his previously yoking lions and
boars to a chariot, and Admetus successfully accom-
plished this through the aid of Apollo. This same deity,
who was then serving with Admetus, in accordance
with the sentence that had been passed against him
(Alcestis, Amphryus, and Cyclopes), obtained from
him the fate of Alcestis one of his most beautiful
tragedies. (Apollod., I, 9, 14.) This same legend is also
given in a different and more historical form, as follows:
when Medea had prevailed upon the daughters of Pelias
to cut their father in pieces, in ex-
pectation of seeing him restored to youth, and they
were pursued by their brother Acastus, Alcestis fled
for protection to her cousin Admetus. This prince
refusing to deliver her up, Acastus marched against
him, and, after a long and terrible battle, at his
death, when Alcestis heroically surrendered herself
into her brother's hands, and saved the life of Adme-
tus. It happened, however, that, just at this time, Her-
cules came that way with the horses of Diomedes, and
was hospitably entertained by Admetus. On learning
from him what had taken place, the hero was fired
with indignation, attacked Acastus, destroyed his army,
and rescued Alcestis, whom he restored in safety to his
royal host. (Eudocia, Ion. ap. Villeinon, Anec. Graec.,
vol. I, 21, seqq.)
Alcetas, I. a king of Epirus, descended from Py-
rrhus, the son of Achilles, and an ancestor of Pyrrhus,
king of Epirus. He was driven by his subjects from
the throne, but regained his power by the aid of Dio-
nyus the elder, of Syracuse.-II. King of Epirus,
son of Amyntas, and grandson of the preceding.
His subjects, driven by hunger, met him together with his two sons,
B.C. 312.-III. The eighth king of Macedonia, son
of Aëropus, and father of Amyntas I. He reigned 29
years, from 576 to 547 B.C.-IV. A general of Al-
exander the Great, and brother of Perdiccas. He slew
himself after a defeat by Antigonus, during the contests
that ensued after Alexander's decease.-V. An his-
torian who wrote an account of the offerings at Delphi,
πηρ τω αγναημηων. (Atheneus, 13, p. 56 C.)
Alcibiades, a celebrated Athenian commander, son
of Clinias, nephew to Pericles, and lineally descended,
as was said, from the Telamonian Ajax. He was
born B.C. 450. Conspicuous for beauty, and for an
insinuating and graceful demeanour, he made himself
still more conspicuous for his extravagant expenditure,
his contempt of order, and his dissolute mode of life.
The lessons and the example of Socrates, who num-
bered him for some time among his disciples, operated
but feebly in checking the vicious propensities of the
young Athenian, or in restraining his bold and ambi-
tious designs. He took Pericles as his model in pub-
lc life, and resolved to tread in the footsteps of that
illustrious statesman, and succeed, if possible, to the
authority which he had enjoyed. The Athenians, in
the time of Pericles, had entertained a strong desire of
becoming masters of Sicily, and Alcibiades, after the
death of his uncle, succeeded in prevailing upon them
to send an armament for that purpose. This was du-
ing the Peloponnesian war. The expedition was di-
rected against Syracuse, and Alcibiades, with Nicias
and Lamachus, received the command. A short time,
however, before the departure of the fleet, the Herms
or images of Mercury, placed throughout Athens, were
all mutilated in the course of one night, and suspicion
fell upon Alcibiades, who was supposed to have been
guilty of this act of profanation during a drunken ca-
raisal with some of his young friends. After having
been allowed to sail with the expedition, he was soon
sent for, and summoned to stand trial for this and other
alleged acts of impiety. Avoiding, however, a return
to Athens, he took refuge, first in Argos, and secondly,
when apprehended, on the continent of Italy, with very
friendly feelings towards himself by the important ad-
vice he gave respecting the future movements of the
war, and became an object of wonder by the ease with
which he adopted the plain and austere manners of the
Spartans, so directly at variance with his previous
mode of life. Distrusting, however, at last, the sin-
cerity of the Lacedaemonians, he betook himself to Tis-
agnes, satrap of the King of Persia, and, soon at-
terred to great favour. Not long after this, he was
restored, by a strange turn of fortune, to the good-will
of his countrymen; the sentence of banishment that
had been passed against him was revoked, he was
appointed to a command, and, after a career of brilli-
ant success, returned in triumph to Athens. His pop-
hularity, however, was of short continuance. Lysander,
the Spartan admiral, defeated the Athenian fleet, and,
taking Antigonus' war, Alcibiades was put to death
by the Persian court, in order to raise money for the
war; and Alcibiades soon found himself compelled to
solicit once more the protection of the Persians.
Pharnabazus, the satrap, allowed him for a
while a safe residence in Phrygia, but finally, through
the solicitations of Lysander, he caused Alcibiades
Alcibiadès, a Greek rhetorician. (Vid. Supple-
ment.)
Alcidas, a naval commander of Sparta in the time
of the Peloponnesian war, B.C. 428. He, on one oc-
casion, lost, in consequence of his preposterous ca-
ceration of actions, and his traitorous conduct, on more
than one occasion, to the best interests of his country.
Alcidamas, a Greek rhetorician. (Vid. Supple-
ment.)
Alcidas, a naval commander of Sparta in the time
of the Peloponnesian war, B.C. 428. He, on one oc-
casion, lost, in consequence of his preposterous ca-
nceration of actions, and his traitorous conduct, on more
than one occasion, to the best interests of his country.
For Alcidean in the passage of Livy here quoted, we should no doubt read, according to Turenneus (Advers., 30, 57), Alcideumum, "the people's strength."

Alcimechus, a painter. (Vid. Supplement.)

Alcimone, I. an Arcadian hero. (Vid. Supplement.)—II. An embosser or chaser spoken of by Virgil (Ecl., 4, 37, 44), who mention some goblets of his work. Sillig thinks he was a contemporary of the poet's.

Alcinos, I. a son of Nausithous, king of Phaeacia, praised for his love of agriculture. He kindly entertained Ulysses, who had been shipwrecked on his coast. The gardens of Alcinoe are beautifully described by Homer, and have afforded, also, a favourite theme for succeeding poets. The island of the Phaeacians is called by Homer Scheria. Its more ancient name was Drepane. After the days of Homer it was called Corycya. Now Corypia. (Vid. Corycya.—Homer, Od., 7.—Orph., in Argon.—Virg., G., 2, 87.—Stat., 1.—Syrie, 3, 81.)—II. A Platonic philosopher. (Vid. Supplement.)—III. A son of Hippothoon, who, in conjunction with his father and eleven brothers, expelled Icarion and Tyndareus from Lacedaemon, but was afterwards killed with his father and brothers, by Heracles. (Apollod., 3, 10, 5.)

Alciphron, the most distinguished of the Greek epistolary writers. Nothing is known of his life, and even his era is uncertain. Some critics place him between Lucian, whom he has imitated, and Aristtenes, to whom he served as a model; in other words, between the years 170 and 350 of the present era. Others, however, are inclined to transfer him to the fifth century. Neither side have attended to the circumstance of there being among the letters of Aristtenes a kind of correspondence between Lucian and Alciphron. This correspondence, it is true, is fictitious; yet it indicates, at the same time, that Aristtenes regarded these two writers as contemporaries, and we have no good reason to accuse him of any error in this respect. Though a contemporary, Alciphron might still have imitated Lucian: it is much more probable, however, that the passages which appear to us to be imitations are borrowed by these two writers from some ancient comic poets. The letters of Alciphron are 116 in number, forming three books. They are distinguished for purity, clearness, and simplicity, and are important as giving us a representation of Athenian manners, drawn from dramatic poets whose writings are now lost. The best portion of the work is the 2d book, containing the letters of the hetare, or courtesans; and, among these, that of Menander to Glycieron, and that of Glycieron to Manander. The principal editions are, that of Bergler, Lips., 1715, 8vo, with an excellent commentary; that of Wagner, Lips., 1778, 2 vols. 8vo, containing a corrected text, a Latin version, the commentary of Berger, and the editor's own notes; and that of Boissonade, Paris, 1825, 8vo. Wagner had been furnished with text by the readings of two Vienna MSS., but, according to the Critical Epistle of the last-mentioned scholar, did not make any use of the use of these collated readings which he might have done. Among the papers of Bergler, after his decease, were found various readings of the Letters of Alciphron, derived from four Paris MSS., two of the Vatican, and one of Heidelberg. Many of these were preferable to the received readings. Along with them were found various unedited fragments, and even entire letters, which had never yet been printed. The present edition is the first attempt of Boissonade in his edition. (Schill. Hist. Lit. Gr., vol. 4, p. 313, seqq.—Wechter, Handbuch der Gesch. der Lit., vol. 1, p. 241.)

Alcippe, I. a daughter of the god Mars, by Agraulos.—II. The daughter of Oenomaus.

Alicia, a surname of Minerva, and the name of a deity among the Naharvali. (Vid. Supplement.)

Alclithoe, a Theban female, who, together with her sisters, conseeded and ridiculed the orgies of Bacchus, and, while these rites were being celebrated without, employed themselves at home with the distaff, and quitted the time by recounting poetical legends. They were afterwards translated into baths and a wine-yarn, with which they worked, into vines and ivy. (Or., Met., 4, 1, seqq.—Id. ib., 389, seqq.) As regards the terms Minucius and Minucia prolès, which Ovid applies to the sisters, consult Gieryg, ad loc.

Alcyone, I. a son of Amphiaras and Erphyle, and a native of Argo. When his father went to the Theban war, where he knew he was to perish, Alcmon was directed by him, when he should hear of his death, to kill Erphyle who had betrayed him. (Vid. Erphyle.) The son obeyed the father's injunctions, and was pursued, in consequence, by the furies, the avergers of parricide. According to another account, being chosen chief of the seven Epigoni, he took and destroyed Thebes, and, after this event, put his mother to death, in obedience to an oracle of Apollo. (Apollod., 3, 7, 9.) While in the state of phrenzy which ensued after his guilt upon him as a punishment for this deed, he came into contact with his father, and, to Olympos, was restored. The renoucement of this his paternal grandfather, went subsequently to the city of Psophis, to Phegeus, its king. Being purified of the murder by Phegeus, he married Arsinoe, the daughter of the latter, and gave to her, as a bridal present, the fatal collar and robe (τὸν τε δόρον καὶ τὸν πεπλόν) which his mother Erphyle had received to ber father. The country, however, becoming baron, in consequence of his residing in it (στὰ ἀντιόρ), he was directed by an oracle, as the only means of escaping the vengeance of the furies, to find, and dwell in, a land which was not in existence when he slew his parent. (Pausan., 8, 24.—Compare Heyne, ad Apollod., l. c.) He at last found rest, for a short time, on an island at the mouth of the Achelous, formed by the alluvial deposits of that stream. (Vid. Echinades.) Here he married Callirhoë, the daughter of the river god, after repudiating his former wife Arsinoe. But he did not take an oracle, as the only means of freeing himself from the furies, to con secure the articles in question to Apollo at Delphi. Phegeus gave them up, but the imposition being made known to him by an attendant, he ordered his sons to waylay and destroy Alcmon, which was accordingly done. Alcmon's death was avenged by the two sons whom he had by Callirhoë. Their mother entreated of Jupiter that they might speedily attend to manhood, and retaliate on their father's murderers. The prayer was heard; they became upon a sudden men in the prime of life, and slew not only the two sons of Phegeus, but the monarch himself and his wife. The sons of Alcmon by Callirhoë were Amphoterus and Acaean, and are said to have been styled, consequently in Acrania, the latter giving name to the country. (Apollod., l. c.) Pausanias calls Arsinoe by the name of Alpesisca (vid. Alphesiboea), and, in other parts of his narrative also, differs from Apollo. On these and other variations, consult Heyne, ad Apollod., l. c.—II. The founder of an illustrious family at Athens, called after him Alcmonidae. He was the son of Sillus, and great-grandson of Nestor, and, being in Acrania, Messenia, with the rest of Nestor's family, by the Heracleidae, settled at Athens. (Pausan., 2, 18.)—Compare the note of Clinton, Fast. Hell., vol. 1, p. 299, 2d ed., where he disproves the assertion of Larcher, ad Herod., 6, 125, who makes the Alcmonidae to have been descended from Melanthius.—III. A son of Megacles.
Having shown much kindness and attention to the persons whom Crousus had sent to Delphi for the purpose of consulting the oracle, that monarch invited him to Sardis, and gave him permission to carry from the royal treasury as much gold as he could bear off with him at one visit. Herodotus (6, 125) gives an account of the mode in which he availed himself of the royal offer, filling with gold his arms, the folds of his habit, his large shoes worn expressly for the occasion, and having not only his hair powdered with gold-dust, but his mouth full of it. To these Crousus even added other valuable presents; and to this source Herodotus traces the wealth of the family. We must not, however, regard this Alcmeon as the founder of the line. (Compare ALCMEN I. IV. 1.) The last of the perpetual archons at Athens, was succeeded by Charops, the son of Eacles, as decennial archon. Bocch (Expi. ad Pind., Pyth., 7, p. 301) makes him not to have belonged to the family of the Alcmeonides proper, but to have been reckoned among the Alcmeonides merely because his mother belonged to that house.

—V. A natural philosopher. (Vid. Supplement.)

ALCMENIDE, a noble family of Athens, descended from ALCMEON. (Vid. ALCMEON, II.) When driven from Athens by the tyranny of the Pisistratids, they first endeavoured to return by force of arms; but having met with a serious check at Lipsydion, in the Paonian borough of Attica, they turned their attention to the more peaceful mode of operation. The temple at Delphi having been burned, and having remained in ruins for some considerable time, the Alcmeonides, after their defeat, engaged with the Amphiycantic council to rebuild the structure for the sum of 300 talents. They finished the work, however, in a much more splendid manner than the terms of their contract required, and attained, in consequence, to great popularity. By dint of the favour with which they were now regarded, and with a large sum of money, they prevailed upon the Pythoress, whenever application of a public or private nature was made from Lacedaemon to the god at Delphi, to conclude the answer of the oracle, whatever it might be, with an admonition to the Lacedaemonians to give liberty to Athens. This artifice had the desired effect; and, though Sparta was in friendly relations with the Pisistratids, it was determined to invade Attica, which was now re-peopled, and the Spartans expelled Hippos, and restored the Alcmeonides (B.C. 510). The restored family found themselves in an isolated position, between the nobles, who appeared to have been oj posed to them, and the popular party, which had been hitherto attached to the Pisistratids Clinthes, now the head of the Alcmeonides, joined the latter party, and gave a new constitution to Athens. He also undertook the foe ancient tribes, and made a fresh geographical division of Attica into ten new tribes, each of which bore a name derived from some Attic hero. The ten tribes were subdivided into districts of various extent called demes or boroughs, each containing a town or village as its chief place. The constitution of Clinthes had the effect of transforming the communally into a new body. The whole state was reorganized to correspond with the new division of the country. To Clinthes, also, is ascribed the formal institution of the ostracism.

ALCIM. Vid. Supplement.

ALCMAEON, was daughter of Electryon, king of Mycenae, and Anaxo, whom Plutarch calls Lysidice, and Diodorus Siculus Eurymede. She was engaged in marriage to her cousin Amphitrion, son of Alcmenes, who, on account of their great affection, the mistals eventually caused to be deferred. Electryon had undertaken an expedition against the Teleboans, or subjects of Taphius, in order to avenge the death of his sons, whom the sons of Taphius had slain in a combat. Returning victorious, he was met by Amphitrion, and was killed by an accidental blow. This deed, though involuntary, lost Amphitrion the kingdom, which he would otherwise have enjoyed in right of his wife. Stenecus, the brother of Alcmenes, availing himself of the public odium against Amphitrion, drove him from Argolis, and seized upon the vacant throne, the possession of which devolved, at his death, upon his son Eurytheus. Amphitrion fled to Thebes, where he was purified by Creon; but when he expected that Alcmenes, who had accompanied him hither, would have given him her hand, she declined, on the ground that she was not satisfied with the punishment inflicted by her father on the Teleboans, and intended to give her hand to him who should make war upon them. Amphitrion, in consequence of this, made an alliance with Creon and other neighbouring princes, and ravaged the isles of the Teleboans. While Amphitrion was absent on this expedition, Jupiter, who had become enamoured of Alcmena, assumed the form of Amphitrion, related to her all the events of the war, his success over the foe, and finally persuaded her to a union. Amphitrion, on his return, was surprised at the indifference with which he was regarded by Alcmena; but, on coming to an explanation with her, and consulting Tiresias, the famous diviner of Thebes, he discovered that it was no less a personage than Jove himself, whom he had assumed his form. Alcmena brought forth twins, Hercules and Hyacinthus, and when they grew up, they set an oath that what he had said should be accomplishing. Jupiter, unsuspicous of guile, gave it, and Juno hastened down to Argos, where the wife of Sthenelus, the son of Perseus, was seven months gone of a son. The goddess brought on a premature labour, and Eurytheus came to light that day, while she checked the parturition of Alcmena, and kept back Lucina. (Vid. Galilius.) The oath of Jove was not to be broken, and the child was called Hercules. (Hom., I., 19, 101, seq—Od. Met., 9, 255, seqq—Anton. Lib., c. 29.—Keightley's Mythology, p. 310, seqq.) According to Pherecydes (ap. Anton. Lib., c. 33), when Alcmena, who long survived her son, died, and the Heracleidae were about to bury her at Thebes, Jove directed Mercury to steal her away, and convey her to the islands of the blessed, where she should es- pousc Rhadamantus. Mercury obeyed, and placed a steed instead of her in the coffin. When the Heracleidae went to carry her forth to be buried, they were surprised at the weight, and, on opening the coffin, found the stone, which they took out, and set it up in the grove where her Herma stood at Thebes: διέτησεν των τηρήσας της Αλκμήνης το Ἐθάνως. ALCON, I a statuary, who made an iron statue of Hercules, kept at Athens. Pliny assigns the reason for the choice of this metal, when he says, "L laborum magnam instar pedem metum A. " (35, 14) under Claudias. (Vid. Supplement.)—II. A son of Erechtheus, king of Athens, and father of Phileus.

ALCYONE, or HALCYOUN. I. daughter of Eolus, married Ceyx, who was drowned as he was going to consult the oracle. The gods apprized Alcyone in a dream of her husband's fate; and when she found, on the morrow, his body washed up on the shore, she threw herself into the sea. To reward their mutual affection, the gods metamorphosed them into halcyons, and, according to the poets, decreed that the sea should remain calm while these birds built their nests.
A L E

ALEXius Campus (Ἀλέξιος πέτρως), a tract in Cilicia Campestris, to the east of the river Sarus, between Adana and the sea. The poets failed that Bellero
don wandered and perished here, after having been thrown from the horse Pegasus. The name comes from αλέξιος, "to wander." (Homcr, III, 6, 101.—Dionys. Persic, 872.—Ovid, Ibis, 259.)

ALEmanni, or ALAMANNI, a name assumed by a confederacy of German tribes situated between the Neckar and the Upper Rhine, who united to resist the encroachments of Roman power. According to Mannert (Geogr., vol. 3, p. 235, seqq.), the shattered remains of the army of Ariovistus retired, after the defeat and death of their leader, to the montainous country of the Upper Rhine. (Compare, however, Pfister, Gesch. der Teutschen, vol. i, p. 179, seqq., where a different account is given of the origin of the Alemanni.) Their descendants in after days, in order to oppose a barrier to the continued advance of the Roman arms, united in a common league with the German tribes which had originally settled on the left bank of the Rhine, but had been driven across by their more powerful opponents. The members of this union styled themselves Alemanni or all-men, i.e., men of all tribes, to denote at once their various lineage and their common bravery. They first appeared in a hos
tile attitude on the banks of the Mayn, but were de
eriorated, suffering the utmost extremities of Roman power, until they were for a time united with the surname of Alamannici. In the succeeding years we find them at one time ravaging the Roman territo
tories, at another, defeated and driven back to their na
tive forests. At last, after their overthrow by Clovis, king of the Salian Franks, they ceased to exist as one nation, and were dispersed over Gaul, Switzerland, and northern Italy.

ALEnix, a city of Corissa, on the eastern coast. It was formerly a Phoccean, under the name of Ala
ia (Ἀλανία), and about twenty years after its settle
tment, was much enlarged by the addition of those of the inhabitants of Phocaea, who fled from the sway of Cyrus. (Vid. Phocaea.) Its rapid advance in mar
itime power, subsequent to this increase of numbers, excited the jealousy of the Eturians and Carthaginians. A naval contest ensued, in which the people of Alalia, though victorious, suffered so severely, as to be convinced of the impossibility of maintaining the united strength of their forces. They migrated, there
to, once more, and settled on the southwestern coast of Italy (Herod., 1, 165), where they founded the city of Hyela, or Velia. A portion of them, however, went to the Phoccean colony of Massilia. (Senec, de Consol., ad Heles. matr., 8.) The history of Alalia, after this event, remains for a long period enveloped in obscuri
ty. The Carthaginians, probably, took possession of the place. In the second Punic war, it fell, together with the whole island, under the Roman sway; at least Zonaras (8, 11) speaks of a place called Valeria as the most important city in the island, and as having been taken by Lucius Seipio. Alalia remained in obscurity under its new masters also, until Sylla sent thatirher a Roman colony, as Marius had done a short time previous to the same island, founding in it the colony of Mariana. From this period Alalia was known under the name of Alaria, and the island was not made titter its falling. When, and under what circumstances, this city was finally destroyed, is not ascertained. Its ruins are to be found a short distance below the mouth of the river Tarignano. (Mannert, 9, pt. 2, p. 516, seqq.)

ALEs, a small river of Ionia in Asia Minor, which empties into the Egean near Colophon. (Pausan., 8, 28.)

ALeS, ALAsE, or HAsE, a very ancient city of Sicily, built by Archimedes, B.C. 403. It stood near the modern city of Corioia, on the river Alaus, or Fiume di Corioia. The inhabitants were exempted by the Romans from taxes. (Diod. Sic., 14, 16.)
ALEXANDER.

Alexia, a famous and strongly fortified city of the Mandubii, in Gallia Celtica. It was an ancient city, that Diodorus Siculus (4, 19) ascribes the building of it to Hercules. (Compare the learned and ingenious remarks of Ritter, in his Vorhalle, p. 378, on the subject of the Celtic Hercules.) It was situated on a high hill, supposed to be Mount Auxois, near the sources of the Sequana or Seine, and washed on two sides by the small rivers Lutoss and Ozena, now Lozé and Ozerais. Alexia was taken and destroyed by Caesar after a famous siege, but was rebuilt, and became a place of considerable consequence under the Roman emperors. It was laid in ruins in the 9th century by the Normans. At the foot of Mount Auxois is a village called Alise (Depart. Côte d’Or), with several hundred inhabitants. (Flor., 3, 10. — Cass., B. G., 7, 69.)

Alexium, a mountain in the vicinity of Mantinea, on which was a grove dedicated to Ceres; also the temple of the equestrian Neptune, an edifice of great antiquity, which had been originally built, according to tradition, by the Trojans. The temple of Neptune was afterward enclosed within a new structure by order of Hadrian. The mountain was said to have taken its name from the wanderings of Rhea (τὸ δρόο τῆς Αλέξιας, οὐ τῶν ἄλλων, ὡς φασί, καλοκύνων τὴν Ρέας. Pausan. 5, 10.)

Alexis (Ἀλέξις), a son of Hippotes, and descendant of Hercules in the fifth degree. He is said to have taken possession of Corinth, and to have expelled the Sisyphoi. He is said to have established Corinth down to the time of Bacchis. (Paus., 2, 4, 3; 5, 18, 2.—Strab., 8, p. 389.—Callim., Frag., 103.—Pind., Olym., 13, 17.) Velleius Paterculus (1, 3) calls him a descendant of Hercules in the sixth degree. He received an oracle promising him the sovereignty of Greece during the war which was then going on its kings should remain unvanquished. This oracle became known at Athens, and Codrus sacrificed himself for his country. (Vid. Codrus.—Conon, Narrat., 26.) Other persons of this name are mentioned in Apollod., 3, 10, 6; Hygin., Fab., 122; and Virgil, Æn., 1, 121; 9, 462.

ALÈZE. Vid. Supplement.

Alæus. Vid. Supplement.

Alek, a native of Teos. (Vid. Supplement.—II. A general of the Ætolians, who, with a body of his countrymen, slew Nabis, tyrant of Sparta. He had been sent at the head of a band of auxiliaries, by the Ætolians, ostensibly to aid Nabis, but in reality to get possession of Lacedaemon. The inhabitants, however, rallied after the fall of the tyrant, defeated the Ætolians, who were scattered throughout the city and plundering it, and slew Alexenus. (L. c., 36, 94, seqq.)

Alexander, a name of very common occurrence, as designating not only kings, but private individuals. We will classify the monarchs by countries, and then come to private or less conspicuous personages.

1. Kings of Macedonia.

Alexander I., son of Amynatas, and tenth king of Macedon. He ascended the throne 97 B.C., and reigned 43 years. He was he who, while still a youth, slew in company with a party of his young friends, habited in female attire, the Persian ambassadors at his father’s court, having been provoked to the act by their immodest behaviour towards the females present at a banquet. With this prince the glory of Macedon may be said to have commenced. He enlarged his territories partly by conquest, and partly by the gift which Xerxes bestowed upon him, of all the country from Mount Olympus to the range of Haemos. (Herod., 5, 18, seqq.—Justin, 7, 3.)

Alexander II., son of Amynatas II. He was treacherously slain by Poltemy Alorites, after having reigned from B.C. 369 to B.C. 367, and not, according to the common account, for one year merely. Poltemy Alorites, however, who slew him, was neither king nor the son of Amynatas, although called so by Diodorus (15, 71). It seems probable, from a comparison of Aschines (de Fals Leg., p. 32) with a fragment in Syncellus (Zeuxipps, ap. Syncell., p. 263, B.), that Poltemy was appointed regent in a regular way, during the minority of Perdiccas; that he afterward abused his trust, and was, in consequence, cut off by Perdiccas. The duration of his reign might, three years, in a minority of Diodorus (15, 77).

Alexander III. or Alexander the Great, son of Philip of Macedon, was born in the city of Pella, B.C. 356. His mother was Olympias, the daughter of Neoptolemus, king of Epirus. Leonnatus, a relation of his mother’s, an austere man, and of great severity of manners, was his early governor, and at the age of eight years, Lysimachus, an Acarnanian, became his instructor. Plutarch gives this individual an unfavourable character, and minutizes that he was more desirous of ingratiating himself with the royal family, than of effectually discharging the duties of his office. It was his delight to call Philip, Peleus; Alexander, Achilles; and to claim for himself the honorary name of Phœnix. Early impressions are the strongest, and even the pedantic allusions of the Acarnanian might render the young prince more eager in after life to imitate the Hellenic heroes. Alexander was placed under the immediate tuition of the celebrated Aristotle. The philosopher joined his royal pupil B.C. 342, and did not finally quit him until he came to the throne. The master was worthy of the scholar, and the scholar of his master. The mental stores of Aristotle were vast, and all arranged with admirable accuracy and judgment; while, on the other hand, Alexander was gifted with great quickness of understanding, an insatiable desire of knowledge, and an ambition not to be satisfied with the second place in any pursuit. At a distance from the court, this great philosopher instructed him in all the branches of human knowledge, especially those necessary for a ruler, and wrote, for his benefit, a work on the art of government, which is unfortunately lost. As Macedonia was surrounded by dangerous neighbours, Aristotle sought to cultivate in his pupil the talents and disposition required for the exercise of command. He recommended him to the reading of the Iliad, and revised this poem himself. The poet, as Aristotle emphatically names Homer, was the philosopher’s inseparable companion; from him he drew his precepts and maxims; from him he borrowed his models. The preceptor imparted his enthusiasm to his pupil, and the most accurate copy of the great poem was prepared by Aristotle, and placed by Alexander in a precious casset which he carried about with him. The frame of the young prince was, at the same time, formed by gymnastic exercises. He gave several proofs of manly skill and courage while very young; one of which, the breaking in of his fiery courser Bucephalus, which had mastered every other rider, is mentioned by all his historians as an incident that convinced his father Philip of his future unconquerable spirit. It is at last, when he was six and about to be sent out on an expedition against Byzantium, delegated the government to him during his absence. Two years later (B.C. 338), he performed prodigies of valour in the battle at Charonea, where he obtained great reputation by conquering the sacred band of the Thebans. "My son," said Philip, after the battle, embracing him, "seek another empire, for that which I shall leave you is not worthy of you." The father, however, quarrelled when Philip repudiated Olympias. Alexander, who took the part of his mother, was obliged to flee to Epirus to escape the ven-
geance of his father, but he soon obtained pardon and returned. He afterward accompanied Philip on an expedition against the Triballi, of whom he sustained a battle. Philip, having been elected chief commander of the Greeks, was preparing for a war against Persia, when he was assassinated, B.C. 336. This occurrence, at an eventful crisis, excited some suspicion against Alexander and Olympias; but as it was one of his first acts to execute justice on those of his father's assassins who fell into his hands, several of the nobility being implicated in the plot, this imputation rests on little beyond surmise. It is more than probable that the conspirators were in correspondence with the Persian court, and that ample promises of protection and support were given to men undertaking to deliver the empire from the impending invasion of the captain-general of Greece. Alexander, who succeeded without opposition, was at this time in his twentieth year; and his youth, in the first instance, excited several of the states of Greece to endeavour to set aside the Macedonian ascendency. By a sudden march into Thessaly he, however, soon overawed the most active; and when, on a report of his death, chiefly at the instigation of Demostenes and his party, the various states were excited to great commotion, he punished the open revolt of Thebes with a severity which effectually prevented any imitation of its example. Induced to stand a siege, that unhappy city, after being mastered with dreadful slaughter, was razed to the ground, with the ostentatious exception of the house of the poet Pindar alone; while the unfortunate surviving inhabitants were stripped of all their possessions and sold indiscriminately into slavery. Intimating by this cruel policy, the Macedonian party gained the ascendency in every state throughout Greece, and Athens particularly disgraced itself by the meanness of its submission. Alexander then proceeded to Corinth, where, in a general assembly of the Greeks, the Macedonian empire was recognised and defined; and in the twenty-second year of his age, leaving Antipater, his viceroy, in Macedon, he passed the Hellespont, to overturn the Persian empire, with an army not exceeding four thousand five hundred horse and thirty thousand foot. To secure the protection of Minerva, he sacrificed to her on the plain of Ilium, crowned the tomb of Achilles, and congratulated this hero, from whom he was descended through a female, as regent in the government, having had such a friend as Patroclus, and such a poet as Homer to celebrate his fame. The rapid movements of Alexander had evidently taken the Persian satraps by surprise. They had, without making a single attempt to molest his passage, allowed him, with a far inferior fleet, to convey his troops into Asia. They now resolved to advance and contest the passage of the river Granicus. A force of twenty thousand cavalry was drawn up on the right bank of the stream, while an equal number of Greek mercenaries crowned the hills in the rear. Unintimidated, however, by this array, Alexander led his army across, and, after a severe conflict, gained a decisive victory. The loss on the Persian side was heavy, on that of their conquerors so extremely slight (only eighty-five horsemen and thirty foot-soldiers) as to lead at once to the belief, that the general, when he河水, accounted for his commander's campaign by ascribing the loss of only the native body of Macedonians. Splendid funeral obsequies were performed in honour of those of his army who had fallen; various privileges were granted to their fathers and children; and as twenty-five of the cavalry that had been slain on the Macedonian side belonged to the royal troop of the "Companions," these were honoured with monumental statues of bronze, the workmanship of the celebrated Lygippus. The immediate consequence of this victory was the freedom and restoration of all the Greek cities in Asia Minor; and its subsequent results were shown in the reduction of almost the whole of that country. A dangerous sickness, however, brought him nothing but temporary respite for a time in his career. He received a letter from Parmenio, saying that Philip, his physician, had been bribed by Darius to poison him. Alexander gave the letter to the physician, and at the same time drank the potion which the latter had prepared for him. Scarcely was he restored to health when he advanced towards the defiles of Cilicia, whither Darius had imprudently taken himself with an immense army, instead of awaiting his adversary on the plains of Assyrria. The second battle took place near Issus, between the sea and the mountains, and victory again declared for the Macedonian monarch. The Macedonians conquered on this day, not the Persians alone, but the united efforts of southern Greece and Persia; for the army of Darius, besides its eastern troops, contained thirty thousand Greek mercenaries, the largest Greek force of that denomination mentioned in history. It was this gallant truth, that, among other causes, rendered the republican Greeks so hostile to Alexander. All the active partisans of that faction were at Issus, nor were the survivors dispirited by their defeat. Agis, king of Sparta, gathered eight thousand who had returned to Greece by various ways, and fought with them a bloody battle against Antipater, who with difficulty defeated the Spartans and their allies. Without taking these facts into consideration, it is impossible duly to estimate the difficulties surmounting in the way of Alexander. After the defeat at Issus, the treasures and family of Darius fell into the hands of the conqueror. The latter were treated most magnanimously. Alexander did not pursue the Persian monarch, who fled towards the Ephorpes, but, in order to cut him off from the sea, turned towards Carle-Syria and Phœcnicia. Here he received a letter from Darius, proposing peace. Alexander answered, that if he would wish to escape, he beheld his mother, wife, and children, without ransom, but also his empire. This reply produced no effect. The victory at Issus had opened the whole country to the Macedonians. Alexander took possession of Damascus, which contained a large portion of the royal treasures, and secured all the towns along the Mediterranean Sea. Tyre, imboidened by the strength of its insular situation, resisted, but was taken, after seven months' siege. The capture of Tyre was perhaps the greatest military achievement of the Macedonian monarch; but it was tarnished by his cruel severity towards the conquered, thirty thousand of the inhabitants having been sold by him as slaves. Some excuse, however, may be found in the excited feelings of the Macedonian army, occasioned by numerous insults on the part of the Tyrians; by acts of cruelty towards some of their Macedonian captives, the slaying of length and obstinacy of the siege; for more men were slain in winning Tyre, than in achieving the three great victories over Darius. Alexander continued his victorious march through Palestine, where all the towns surrendered except Gaza, which shared the fate of Tyre. Egypt, wearied of the Persian yoke, received him as a deliverer. In order to confirm his power, he restored the former customs; he appointed archons and strategi, which became one of the first cities of ancient times. Hence he went through the desert of Libya, to consult the oracle of Jupiter Ammon, an adventure resembling more the wildness of romance than the soberness of history, and which has on this very account been regarded by some with an eye of incredulity. It rests, however, on too firm a basis to be invalidated. After having been acknowledged, the ancient writers, as the son of the god (ved Ammon), Alexander, at the return of spring, marched against Darius, who in the mean time had collected an army in Assyría.
ALEXANDER.

and rejected the proposals of Alexander for peace. A battle was fought at Gaugamela, not far from Arba-

la, B.C. 331. Arrian estimates the army of Darius at 170,000 infantry and 40,000 cavalry; while that of Alexander consisted of only 40,000 infantry and 7000 horse. On the Persian side, moreover, were some of the bravest and hardest tribes of upper Asia. Notwithstanding the immense numerical superiority of his enemy, Alexander was not a moment doubtful of victory. At the head of his cavalry he attacked the Persians, and routed them after a short conflict. One great object of his ambition was to capture the Per-
sian king, the monarch of one of the greatest nations, and the object was at one time apparently within his grasp, when he received, at the instant, a message from Parmenio that the left wing, which that general commanded, was hard pressed by the Saces, Albanians, and Parthians, and he was compelled, of course, to hasten to its relief. Dar-

ius fled from the field of battle, leaving his army, bag-
gage, and immense treasures to the victor. Babylon and Susa, where the riches of the East lay accumula-
ted, were given to Alexander, and he directed his march to Persepolis, the capital of Persia. The only passage thither was defended by 40,000 men under Ariobarzanes. Alexander attacked them in the rear, routed them, and entered Persepolis triumphant.

From this time the glory of Alexander began to decline. Master of the greatest empire in the world, he became a slave to his own passions; gave himself up to arrogance and dissipation; showed himself ungrateful and cruel to the old faithful, and as bloody as could be his bravest generals. Hitherto sober and moderate, this hero, who strove to equal the gods, and called himself a god, sunk to the level of vulgar men. Per-

sepolis, the wonder of the world, he burned in a fit of intoxication. Ashamed of this act, he set out with his cavalry to pursue Darius. Learning that Bessus, sat-
trap of Bactriana, kept the king prisoner, he hastened his march. In the course of war, when he saw himself closely pursued, caused Darius to be assassinated (B.C. 330), because he was an impediment to his flight. Alexander beheld on the frontiers of Bactriana a dying man, covered with wounds, lying on a chariot. It was Darius. The Macedonian hero could not restrain his tears. After interring him with all the honours usual among the Persians, he took possession of Hyrcania and Bactriana, and caused himself to be proclaimed King of Asia. He was not content with still more gigantic plans, when a conspiracy broke out in his own camp. Philotas, the son of Parmenio, was implicated. Alexander, not satisfied with the blood of the son, caused the father also to be put to death. This act of injustice excited general disapp

 hearty. At the same time, his power in Greece was threatened; and it required all the energy of Antipater to dissolve, by force of arms, the league formed by the Greeks against the Macedonian authority. Meanwhile, in the mean time, Alexander marched in the winter through the north of Asia as far as it was then known, check-
ed neither by Mount Caucasus nor the Oxus, and reached the Caspian Sea, hitherto unknown to the Greeks. In his flight, he spared not even the hordes of the Scythians. Re-

turning to Bactriana, he hoped to gain the affections of the enemy, to promote the welfare of the whole Bactriana, and to unite it with the king; but this hope was not realized. The discontent of war among the army gave occasion to the scene which ended in the death of Clitus. Alexander, whose pride he had offend-
ed, killed him with his own hand at a banquet. Clitus had been one of his most faithful friends and brave of-

ficers, and Alexander was afterward a prey to the keenest remorse. In the following year he subdued the whole of Scogdiana. Oxytanes, one of the leaders of the enemy, had secured his family in a castle built on a lofty rock. The Macedonians stormed it. Rox-

ana, the daughter of Oxytanes, one of the most beau-
tiful virgins of Asia, was among the prisoners. Al-

exander fell in love with and married her. Upon the news of this, Oxytanes thought it best to submit, and came to Bactriana, where Alexander received him with distinction. Here a new conspiracy was discovered, at the head of which was Hermolaus, and among the accomplices Callisthenes. All the conspirators were condemned to death except Callisthenes, who was mutilated and carried about with the army in an iron cage, until he terminated his torments by poison. Al-

exander now formed the idea of conquering India, the ancient world which was scarcely known. He passed the Indus, and formed an alliance with Taxiles, the ruler of the region beyond this river, who assisted him with troops and 130 elephants. Conducted by Taxiles, he marched towards the river Hydaspes, the passage of which, Porus, another king, defended at the head of his army. Alexander conquered him in a bloody bat-
tle, took him prisoner, but restored him to his king-

dom. He then marched victoriously on, established Greek colonies, and built, according to Plutarch, seventy towns, one of which he called Bucephalaeum, after his horse, which had been killed on the Hydaspes. Intoxicated by success, he intended to advance as far as the Ganges, and was preparing to pass the Hypha-

sias, when the discontent of his army obliged him to terminate his progress and return. Previous to turn-

ning back, however, he erected on the banks of the Hyphasis twelve towers, in the shape of altars; monu-

ments of the extent of his empire. He distributed some of his gold among the gods. On these gigantic altars he offered sacrifices with all due solemnity, and horse-races and gymnastic contests closed the festiv-

ities. When he had reached the Hydaspes, he built a fleet, in which he sent a part of his troops down the river, while the rest of the army proceeded along the banks. On his march he encountered several Indian princes, and, during the siege of a town, belonging to the Macedonians, which had revolted, two Macedonian women were present. Having recovered, he continued his course down the Indus, and thus reached the sea. Having entered the Indian Ocean and performed some rites in honour of Neptune, he left his fleet; and, after ordering Nearchus, as soon as the season would permit, to sail to the Persian Gulf, and thence up the Tigris, he himself prepared to march to Babylon. He had to wander through immense deserts, in which the greater part of his army, desolate of wa-

ter, starved to death. In his flight, he was forced to leave part of the troops with which he had set out returned to Persia. On his route he quelled several mutinies, and placed governors over various provinces. In Susa he married two Persian princesses, and rewarded those of his Macedonians who had married Persian women; because it was his intention to unite the two nations as closely as possible. He distributed rich rewards among his troops. At Opis, on the Tigris, he declared his intention of sending tin and copper, etc., to his own na-

tions. The rest of the army mutinied; but he perse-

vered, and effected his purpose. Soon after, his favourite, Hephaestion, died. His grief was unbounded, and he buried his body with royal splendour. On his return from Ecbatana to Babylon, the magicians are said to have predicted that this city would be fatal to him. The representations of his friends induced him to de-

spise these warnings. He went as far as Babylon, and many of his friends were kindled against him, and was engaged in extensive plans for the future, when he became suddenly sick after a banquet, and died in a few days, B.C. 323. Such was the end of this con-

queror, in his 32d year, after a reign of 12 years and 8 months. He left behind him an immense empire, which became the scene of continual wars. He had designated no heir, and being asked by his friends to whom he left the empire, answered, "To the worthi-
est." After many disturbances, the generals acknowl-
edged Ariobarzus, a man of a very weak mind, the son

107
of Philip and the ducal Philippa, and Alexander, the posthumous son of Alexander and Roxana, as kings, and divided the provinces among themselves, under the name of the Great. They all died after Alexander, whom Alexander, on his deathbed, had given his ring, prime minister of the two kings. The body of
Alexander was interred by Ptolemy in Alexandria, in a
golden coffin, and divine honours were paid to him, not
only in Egypt, but also in other countries. The
sarcophagus in which the coffin was enclosed has been
in the British Museum since 1802. The English
nation owe the acquisition of this relic to the exertions of
Dr. Clarke, the celebrated traveler, who found it in
the possession of the French troops in Egypt, and was
the means of its being surrendered to the English
army. In 1805, the same individual published a dis-
sertation on this sarcophagus, fully establishing its iden-
tity.—No character in history has afforded matter for
more discussion than that of Alexander; and the ex-
act quality of his ambition is to this day a subject of
dispute. By some he is regarded as little more than a
heroic monad, actuated by the mere desire of per-
sonal glory; others give him the honour of vast and
enlightened views of policy, embracing the consolidat-
ion and establishment of an empire, in which com-
merce, learning, and the arts should flourish in com-
mon with energy and enterprise of every description.
Each class of reasoners find facts to countenance their
opinion of the mixed character and actions of Alex-
ander. The former quote the wildness of his personal
daring, the barren nature of much of his transient ma-
ter, and his remorseless and unnecessary cruelty to
the vanquished on some occasions, and capricious
magnanimity and lenity on others. The latter adver
to facts like the foundation of Alexander, and other
acts indicative of large and prospective views of true
policy; and regard his expeditions rather as schemes of
discovery and exploration than mere enterprises for
fruitless conquest. The truth appears to embrace a
point of view between the two. He was a political
man, much smitten with military glory, and the common self
engrossment of the mere conqueror, to be a great and
consistent politician; while such was the strength of
his intellect, and the light opened to him by success,
that a glimpse of the genuine sources of lasting great-
ness could not but break in upon him. The fate of a
not very dissimilar character in our days shows the
nature of this mixture of lofty intellect and personal
ambition. Not all those effects of his personal pen-
guine which are good for mankind in any age. The fine qualities and
defects of the man were, in Alexander, very similar to
those of the ruler. His treatment of Parmenio and of
Clitus, and various acts of capricious cruelty and in-
gratitude, are contrasted by many instances of extra-
ordinary greatness of mind. He was also a lover and
favourer of the arts and literature, and carried with him a train of poets, orators, and philosophers, although
hostile to many of his attendants of this class. He
always do honour to his judgment. He, however,
occouraged and patronised the artists Praxiteles, Lysip-
pus, and Apelles; and his munificent presents to Ar-
istotle, to enable him to pursue his inquiries in natural
history, were very serviceable to science. Alexander
also exhibited that unequivocal test of strong intellect,
disposition to employ and reward men of talents in
equitable and proportioned efforts; and the extrava-
caneous individual was of the middle size, with a neck
somewhat awry, but possessed of a fierce and majestic
countenance.—It may not be amiss, before concluding
this sketch, to consider for a moment the circumstanc-
es connected with the death of this celebrated ruler.
His decease has usually been ascribed either to excess in
drinking or to poison. Neither of these suppositions
appears to be correct. The fever to which he fell a
victim (for the Royal Diary wherein Arrian has copied
his account of the last illness of Alexander, speaks ex-
pressly of a violent fever having been the cause of
his decease) was contracted very probably in his visit
to the marshes of Assyria. The thirst which subse-
quently afflicted him, was undoubtedly produced by his
military duties, proves that this fever was raging in his
veins before it absolutely overcame him. The carous-
sals in which he afterward indulged must have seri-
ously increased the disease. Strong men like Alex-
ander have often warded off attacks of illness by in-
creased excitement; but, if this fail to produce the de-
sired effect, the reaction is terrible. It is curious to
observe, in Arrian's account of Alexander's last illness,
that no physician is mentioned. The king seems to
have trusted to two simple remedies, abstinence and
bathing. His removal to a summer-house, close to the
large cold bath, shows how much he confided in the
latter remedy. But the extraordinary fatigue which he
had undergone, the exposure within the last three
years to the rains of the Pendjab, the marshes of the
Indus, the burning sands of Gedrosia, the hot vapours
of Susiana, and the marsh mismania of the Babylonian
Lakes, proved too much even for his superhuman
strength. The numerous wounds by which his body had
been perforated, and especially the serious injury done to
his lungs by an arrow among the Malli, must in some de-
gree have impaired the vital functions, and enfeebled
the powers of healthy reaction. (Plut., Vit. Alex. —
Arrian, Exp. Alex.—Quintus Curtius.—Diod. Sic.,
17 et 18.—Encyclop. Americ., vol. 1, p. 151, seqq. —
Böger, Univ., vol. 1, p. 195.—Williams Life of Alex-
ander the Great, 3rd ed., &c., Am. ed.)—After many
dissections and bloody wars among themselves, the
generals of Alexander laid the foundations of several
great empires in the three quarters of the globe Pto-
lemey seized Egypt, where he firmly established him-
self, and where his successors were called Ptolemeys,
in honour of the founder of their empire, which sub-
sisted till the time of Augustus. Seleucus and his
posterity reigned in Babylon and Syria. Antigonus
first established his influence in Asia Minor, and Anti-
tiper in Macedonia. The descendants of Antipater
were conquered by the successors of Antigonus, who reign-
ed in Macedonia till it was reduced by the Romans in
the time of King Perseus. Lysimachus made himself
master of Thrace; and Leonatus, who had taken pos-
session of Phrygia, meditated for a while to drive Anti-
tiper from Macedonia. Eumenes established him-
self in Cappadocia, but was succeeded by powerful
rival Antigonids. Philetairos proved unable to de-
termine. During his lifetime, Eumenes appeared so formidable to the suc-
cessors of Alexander, that none of them dared to as-
sume the title of king.
Alexander IV., son of Alexander the Great and
Roxana. He was born after his father's death, and
was proclaimed king while yet an infant, along with
Philip Arridæus, an illegitimate brother of Alexander
the Great. Soon after, however, he was put to death,
together with his brother, and on the death of Alexander, who thereupon
assumed the sovereign power. (Justin, 15, 2.)
Alexander V., son of Cassander. He ascended
the throne of Macedonia along with his brother An-
tipater, B.C. 298. Antipater, however, having put to
death Thessalonica, their mother, Alexander, in order
to avenge his parent, called in the aid of Demetrius,
son of Antigonus. A reconciliation, however, having
taken place between them, Alexander, who had least this might thwart his own views on
the crown of Macedon, slew Alexander and seized upon
the royal authority. (Justin, 16, 1.)
2. Kings of Epirus.
Alexander I., surnamed Molossus, was brother of
Olympias, and successor to Arbyas. He came into
Italy to aid the Tarentines against the Romans, and
used to say, that while his nephew, Alexander the
Great, was warring against women (meaning the ef-

Alexander I., surnamed Bala or Balas, a man of low origin, but of great talents and still greater audacity, who claimed to be the son of Antiochus Epiphanes, assumed the name of Alexander, and being acknowledged by Ptolemy Philometor, Ariarathes, and Attalus, seized upon the throne of Syria. He was afterward defeated and driven out by Demetrius Nicator, the lawful heir; and, having taken refuge with an Arab king, was put to death by the latter. (Justin, 35, 1, seq.)

Alexander II., surnamed Zabina the Slave, a usurper of the throne of Syria. He was the son of a petty trader in Alexanderia, but claimed, as the instigation of Ptolemy VII., to have been adopted by Antiochus VIII. Ptolemy aided him with troops, and Demetrius Nicator was defeated at Damascus, and driven out of his kingdom. A few years after, however, Alexander himself was defeated by Antiochus Grypus, sided in his turn by the same Ptolemy, and put to death. Grypus was son of Demetrius Nicator. (Justin, 39, 1, seq.)

4. Princes of Judea.

Alexander I., Janneus, monarch of Judea, son of Hyrcanus, and brother of Aristobulus, who succeeded, B.C. 106. He was a warlike prince, and displayed great ability in the different wars in which he was engaged during his reign. Driven from his kingdom by his subjects, who detested him, he took up arms against them, and waged a cruel warfare for the space of six years, slaying upward of 50,000 of his foes. Having at last re-entered Jerusalem, he crucified, for the amusement of his concubines, 800 of his revolting subjects; and, at the same time, caused their wives and children to be massacred before their eyes. Being re-established on the throne, he made various conquests in Syria, Arabia, and Idumea, and finally died of intemperance at Jerusalem, B.C. 76, after a reign of 27 years. (Josephus, Ant. Jud., 17, 22, ccc.)

Alexander II., son of Aristobulus II., was made prisoner, along with his father, by Pompey, but managed to escape while being conducted to Rome, raised an army, and made war on the Julian army. Hyrcanus, son of Alexander Janneus, being then on the throne, solicited the aid of the Romans, and Marc Antony being sent by Gabinius, defeated Alexander near Jerusalem. After standing a siege for some time in the fortress Alexanderrein, he obtained terms of peace; but not long after, having taken up arms for Caesar, who had released his father, he fell into the hands of Metellus Scipio, and was beheaded at Antioch. (Josephus, Antiq. Jud., 14, 13.)

Alexander III., son of Herod the Great, put to death by his father, along with Aristobulus his brother, on false charges brought against them by Pheroras their uncle, and Salome their aunt. (Josephus, Antiq. Jud., 16, 17.)

5. Kings of Egypt.

Alexander I., II., III., vid. Ptolemaeus X. X. XI.

6. Individuals.

Alexander, I. tyrant of Pharce in Thessaly, who seized upon the sovereign power, B.C. 368. He was of a warlike spirit, but, at the same time, cruel and vindictive, and his oppressed subjects were induced to supplicate the aid of the Thebans, who sent Pelopidas and the (vid. supra) to his camp to compel him to yield; but, having subsequently escaped from the power of the Theban commander, he reassembled an army, and Pelopidas having been imprudent enough to come to him without an escort, the tyrant seized and threw him into prison, whence he was only released on the appearance of Epaminondas at the head of an armed force. By dint of negotiation, he now obtained a truce, but renewed his acts of violence and cruelty as soon as the Thebans had departed. Pelopidas made up against and defeated him, but lost his own life in the action. Stripped upon this of all his conquests, and restricted to the city of Pherce, he no longer dared to carry on war by land, but turned his attention to piracy, and had even the audacity to pillage the Piraeus or main harbour of Athens. He was assassinated at last by his wife Thebe. (Vid. Max., 9, 13.—Corn. Nep., Vit. Ptol., Pausan., 6, 5.)—II. Lynceutes, was accused by both one of the parties against Philip of Macedon, which resulted in the death of that monarch. He was pardoned on account of his having been the first to salute Alexander, Philip's son, as king. Not long after, however, he was detected in a treasonous correspondence with Darius, and put to death. (Justin, 11, 2.)—III. Son of Pylasperchon, at first a general on the side of Antigonus, after the death of Alexander, the Great, and very active in driving out him, from the Peloponnesus, the garrisons of Cassander. He afterward went over to Cassander, but was assassinated by some Sicilians, after no long interval of time, at the siege of Dyme.—IV. A famous impostor of Paphlagonia, who lived in the time of Lucian, under the Emperor Marcus Aurelius. By his arts he succeeded in passing himself for a person sent by Euculapius, and prevailed upon the Paphlagonians to erect a temple to this deity. As the priest and prophet of the god, he ran a long career of deception, a full account of which is given in the Supplement.—V. Severus, a Roman emperor. (Vid. Severus.)—VI. An Athenian painter, whose portrait appears on a marble tablet found at Restina in 1746, and stating the name and country of the artist. The age in which he lived is not known.—VII. A native of Acrania. Alexander, the Great, thrust him out of her, and very active in driving out him, from the Peloponnesus, the garrisons of Cassander. He afterward went over to Cassander, but was assassinated by some Sicilians, after no long interval of time, at the siege of Dyme.—IV. A famous impostor of Paphlagonia, who lived in the time of Lucian, under the Emperor Marcus Aurelius. By his arts he succeeded in passing himself for a person sent by Euculapius, and prevailed upon the Paphlagonians to erect a temple to this deity. As the priest and prophet of the god, he ran a long career of deception, a full account of which is given in the Supplement.—IX. A commander of horse in the army of Antigonus Doson. (Vid. Supplement.)—X. A son of Marc Antony and Cleopatra. (Vid. Supplement.)—XI. Brother of Molo. (Vid. Supplement.)—XII. A native of Cotysum, in Phrygia, or, according to Suidas, of Miletus, who flourished in the second century of our era. He took the name of Cornelius Alexander, from his having been a slave of Cornelius Longinus, and having given him his education, was himself instructed in the art of rhetoric by the same person, and thus got the name of Polystichus, from the variety and multiplicity of his knowledge. The ancient writers cite one of his works in forty books, each one of which appears to have contained the description of some particular country, and to have had a separate title, such as Aegyptiaca, Arabiaca, &c. Pline often refers to him. It is probable that he was the Alexander who entitled his work "A collection of wonderful things," of which Phoebus speaks as the production of an individual named Alexander, without designating him any farther. This work contained accounts of animals, plants, rivers, &c. (Scholl, Hist. Lect. Gr., vol. 5, p. 276, seq.)—XIII. A native of Egea in Achaea, the disciple of Xenocrates, and, as is thought, of Sosigenes. He was one of the instructors of the Emperor. Some critics regard him as the author of the
commentary on Aristotle, which commonly passes under the name of Alexander of Aphrodisia. (Scholl, Hist. Litt. Gr., vol. 5, p. 156.)—XIV. A native of Aphrodisia in Caria, who flourished in the beginning of the third century. He is regarded as the restorer of the true doctrine of Aristotle, and he is the principal source whence many schools and disciples, who adopted the system of the latter in all its purity, without intermingling along with it, as Alexander of Aegina and his disciples did, the precepts of other schools. He was surnamed, by way of compliment, Ἐξεγιατὴς, Ἑξεγετὴς ("the interpreter," or "exposer"), and became the head of a particular class of Aristotelian commentators, styled "Alexandrians." He wrote, 1. A treatise on Destiny and Free Agency (Ἡπὶ Ἐλευθηρίας καὶ Μυστηρίων), a work in seven sections, and a commentary, in which the author addressed to the emperors Septimius Severus and Antoninus Caracalla. In it he combat the Stoic dogmas, as hostile to free agency, and destructive, in consequence, of all morality. The best edition of this work is that printed at London, in 1658, 12mo. It is inserted also, with new corrections, in the 3d vol. of Grotius's Theological Works, Amst., 1679, fol. 2. A commentary on the first book of the Porphyrian Canon, Gr., fol., 1489, 4to, Florent., 1591. Translated into Latin by Ficinus, fol., Venet., 1542, 1546, and 1560. 3. A commentary on the eight books of the Topica, fol., Venet., 1513 and 1526. A Latin translation by Dorotheus, which appeared for the first time in 1524, fol., Venet., has been often reprinted. In 1563, a translation by Rasarius appeared, fol., Venet., which is preferable to the other. 4. Commentaries on the Elenchi sophistici of Aristotle, Gr., fol., Venet., 1520, and 4to, Florent., 1552. Translated into Latin by Rasarius, Venet., 1557. 5. A commentary on the twelve books of the metaphysics of Aristotle. The Greek text has never been printed, although there are many MS. copies in the Royal Library at Paris, and other libraries. A Latin translation, however, by Sepulveda, appeared at Rome, 1527, in fol., and has been often reprinted. 6. A commentary on Aristotle's work De Sensu, &c., Gr., at the end of Simplicius's commentary on the work of Aristotle respecting the Soul, fol., Venet., 1597. 7. A commentary on the Meteorologica of Aristotle, Gr., fol., Venet., 1527, and in the Latin of Alex. Polonius, fol., 1540, 1548, 1575. 8. A treatise on the Soul, in two books, or, more correctly speaking, two treatises on this subject, since there is little if any connexion between these books. Gr., at the end of Theophrastus; and in Latin by Donati, Venet., 1602, fol. 10. Physica Scholias, &c. (Ὕφιστων σχολιῶν, ἀποριῶν, καὶ λεκίσμων, βιβλία δ'), Gr., fol., Venet., 1536, and in Latin by Bagolinus, Venet., 1541, 1549, 1555, 1559. 11. Problematika Medica, &c., the best Greek edition of which is in Sylvestro's work of Aristotle; this is attributed by some to Alexander Trallianus. 12. A treatise on Fevers; never published in Greek, but translated by Valla, and inserted in a collection of various works, Venet., 1488. For medical works Vid. Supplement. — XV. A native of Myndus, quoted by Athenaeus. (Compare Meurs, Bibl., in Theol. Gr., vol. 10, p. 1208, seqq.) He is supposed by some to have been the author of the commentary on Aristotle, under the name of Alexander. (Schoeegl., Index Auct. ad Athen.—Op., vol. 9, p. 24, seqq.—XVI. A native of Tralles, who lived in the sixth century, and distinguished himself as a physician. He wrote several treatises on medicine, some of which are extant, and have been published at different times; namely, a Greek edition, fol., Paris, 1548; a Latin edition among the "Medicin aris Principes," fol., Paris, 1567, &c. Alexander Trallianus is a most judicious, elegant, and original author. No medical writer, whether of ancient or modern times, has treated of diseases more methodically than he has done; for, after all the Nosological systems which have been proposed and tried, we can name none more accurate as to the symptoms and treatment adopted by him, of treating of diseases according to the part of the body which they affect, beginning with the head and proceeding downward. The same plan is pursued in the third book of Paulus Aegineta, who has copied freely from Alexander. Of the ancient medical writers subsequent to Galen, Alexander shows the least of that blind deference to his authority for which Galen is notorious. Alexander, in many instances, ventures to differ from him; and not, however, apparently from a spirit of rivalship, but from a commendable love of truth. In his eleventh book, he has given the fullest account of the causes, symptoms, and treatment of gout which is to be met with in any ancient writer; and as it contains many things not to be met with elsewhere, it deserves to be carefully studied. He judiciously suits the treatment to the circumstances of each individual case; and when he has proposed advice, it has consisted in the administration of purgative medicines, either cathartic salts or drastic purgatives, such as scammony, aloes, and hermoclysium. The last-mentioned medicine was most probably a species of Colchicum Autumnale, which forms the active ingredient of a French patent medicine called L'Eau Medicinale d'Hypasq, much celebrated some years ago for the cure of gout and rheumatism. Dr. Haden lately published a small pamphlet, wherein Colchicum was strongly recommended as an antiphlogistic remedy of great powers. The writers, both Greek and Arabic, subsequent to Alexander Trallianus, repeat the praises bestowed by him upon the virtues of hermoclysium. Demetrius Papagomonos has written a professed treatise to recommend this medicine in gout. — The style of Alexander, although less pointed than that of Celsus, and less brilliant than that of Aretaeus, is remarkable for perspicacity and elegance. It must be mentioned with regret, however, as a lamentable instance of a sound judgment being blinded by superstition, that our author had great confidence in charms and amulets. Such weakness is to be bewailed, but need not be wondered at, when we recollect that Celsus, one of the best English authorities on surgery, had great confidence in the royal touch for the cure of Scorfula. — XVII. Bs. (Vid. Supplement.)— XVIII. Lynchnus. (Vid. Supplement.)— XIX. Phellinus. (Vid. Supplement.)— XX. Noviemus. (Vid. Supplement.)— XXI. Greek rhetorician. (Vid. Supplement.)— XXII. Philalethes. (Vid. Supplement.)— XXIII. A Roman usurer. (Vid. Supplement.)— XXIV. Tiberius. (Vid. Supplement.)

ALEXANDRIA (less correctly Alexandria, Burmann, ad Prop., 3, 9, 33. —Ursin, ad Cic. Ep. ad Fam., 4, 2, 10.—Feu, ad Horat., Od., 4, 14, 39), the name of eighteen cities, founded by Alexander during his conquests in Asia, among which the most deserving of mention are the following: I. The capital of Egypt, under the Ptolemyces, built B.C. 332. It was situated about 12 miles to the west of the Caponic mouth of the Nile, between the lake Mareotis and the beautiful harbour formed by the Isle of Pharos. It was the intention of its founder to make Alexandria at once the seat of commerce and the first port of emigration throughout the world. The latter of these plans completely succeeded; and for a long period of years, from the time of the Ptolemyces to the discovery of the Cape of Good Hope, the capital of Egypt was the link of connexion between the commerce of the east and west. The goods and articles of traffic were brought up the Red Sea, and landed at one of three different points.
Of these, the first was at the head of the western gulf of the Red Sea, where the canal of Neco commenced, and where stood the city of Arsinœ or Cleopatras. This route, however, was not much used, on account of the dangerous navigation of the higher parts of the Red Sea. The second point was the harbour of Myos Hormus, in latitude 27°. The third was Berenice, south of Myos Hormus, and at 23° 30'. With the eight points disposed at either of the two last places, the caravans brought to Coptos on the Nile, whence they were conveyed to Alexandria by a canal connecting this capital with the Canopic branch. Between Coptos and Berenice a road was constructed by Ptolemy Philadelphia, 268 miles in length. Ptolemy, the son of Lagos, who received Egypt in the general division, improved what Alexander had begun. On the long, narrow neck of land between the sea and the new canal, and formed a port with a double entrance, a magnificent tower of white marble was erected, to serve as a beacon and guide for navigators. The architect was Sosratus of Chiusis.—The first inhabitants of Alexandria were a mixture of Egyptians and Greeks, to whom must be added numerous colonies of Jews, transplanted thicker in 336, 329, and 312 B.C., to increase the population of the city. It was during the time of Ptolemy Gymnosophists, the Old Testament, under the name of Septuaginta, or the Septuagint.—The most beautiful part of the city, near the great harbour, where stood the royal palaces, magnificently built, was called Bruchion. There was the large and splendid edifice, belonging to the academy and Museum, where the greater portion of the royal library (400,000 volumes) was placed; the rest, amounting to 900,000, were in the Serapion, or temple of Jupiter Serapis. This temple was burned during the siege of Alexandria by Julius Caesar, but was afterward in part replaced by the library of Pergamus, which Antony presented to Cleopatra. The Museum, where many scholars lived and were supported, was together, studied, and instructed others, remained unhurt until the reign of Aurelian, when it was destroyed in a period of civil commotion. The library in the Serapion was preserved to the time of Theodosius the Great. He caused all the heathen-temples throughout the Roman empire to be destroyed; and even the splendid temple of Jupiter Serapis was not spared. A crowd of fanatic Christians, headed by their archbishop, Theodosius, stormed and destroyed it. At that time, the library, it is said, was partly burned, partly dispersed; and the historian Orosius, towards the close of the fourth century, saw only the empty shelves. The common account, therefore, is an erroneous one, which makes the library in question to have been destroyed by the Saracens, at the command of the Calif Omar, A.D. 642, and to have furnished fuel during six months to the 4000 baths of Alexandria. This narrative rests merely on the authority of the historian Abulpharagius, and has no other proof at all to support it. But, whatever may have been the cause of this disadvantageous event, the loss resulting to science was irreparable. The Alexandrian library, called by Livy "Elegantia regum eurapae egregium opus," embraced the whole Greek and Latin literature, of which we possess but single fragments.—In the division of the Roman dominions, Alexandria, with the rest of Egypt, was comprehended in the Eastern empire. The Arabs possessed themselves of it in 640; the Calif Motawakel, in 845, restored the library and academy; but the Turks took the city in 898, and it declined more and more, retaining, however, a flourishing commerce, until, as has already been remarked, the Portuguese, at the end of the 15th century, discovered a way to the East Indies by sea. —The modern city, called in Turkish Scanderia, does not occupy the site of the old town, of which nothing remains except a portico in the vicinity of the gate leading to Rosetta, the southwestern amphitheatre, the obelisk, or needle of Cleopatra, and Pompey's pillar. 88 feet 6 inches high, which, according to an English writer (Walpole's Collection, vol. 1, p. 380), was erected by Pompeius, governor of part of Lower Egypt, in honour of the Emperor Diocletian. The equestrian statue of this monarch is no longer standing. (Athen. Hist., 10, pt. 1, p. 611, seqq.—Encyclopædia, vol. 1, p. 165, seqq.)—II. A city of Sogdiana, on the river Iaxartes, to the east of Cyropolis. It was founded by Alexander on the farthest limits of his Persian expedition, and hence it was also called Alexandreschat (Ἀλεξανδρεσάτα, i. e., Александровская: Αλεκσανθρεσάτα: Александра ульма).—III. A city of Arachosia, near the confines of India; now Scinderie of Arkhokh, or Vahkhend. A city of India, at the foundation of the Indus and Acesius; now acceptable to some, Lahor, but, according to others, Veh.—V. A city in the vicinity of the range of Paropamisus, on the east side of the Casp. —VI. A city of Aria, at the mouth of the river Arius; now Corra.—VII. A city of Carmania, near Sabsis.—VIII. A city of Gedrosia; now Hormoz, or Honuz.—There were several other cities of the same name, called after Alexander, though not founded by him. These were the city of Antigonus, now known as Hormuz; the city of Tarsus (Ἀλεξάνδρων ἤ Τρασος), a city on the western coast of Asia, above the promontory of Lictum. It was more commonly called Alexandria; sometimes, however, Tros. (Aet. p. 334.) The place owed its origin to Antigonus, who gave it the name of Antigonia Tros. After the fall of Antigonus, the appellation was changed to Alexandria Tros by Lysimachus, in honour of Alexander. Antigonus had already increased its population by sending thither the inhabitants of Cebrene, Neandria, and other towns; and it received a further increase under Lysimachus. Under the Romans it acquired still greater prosperity, and became one of the most flourishing of their Asiatic colonies. (Strab. p. 593.—Pliny, 5, 30.) In the Acts of the Apostles it is simply called Tros, and it was from its port that St. Paul and St. Luke set sail for Macedonia (16, 11). We are informed by Suetonius (Hist. 70), that Julius Caesar once had it in contemplation to transfer the seat of empire to this quarter; a plan far from happy, since the port was not large, and the fertility of the surrounding country not at all such as to warrant the attempt. The same idea, however, is said to have been entertained by Augustus. (Faber, Epit. 1, 43.—Compare the commentators on Hose, 1, 3, 3.) In a later age, Constantine actually commenced building a new capital here, but the imperial situation of Byzantium soon induced him to abandon the undertaking. (Zosimus, 2, 30, p. 151, seqq., ed. Reitnereich.—Compare Zonaras, 13, 3.) Augustus, when he gave over the design just alluded to, still sent a Roman colony to this place, and hence the language used by Strabo (13, p. 594, ed. Casaub.), πάντες καὶ Ρωμαίου υπάκιαν ἐδέσθησαν. (Compare Plin., 5, 30.—Cath., lef. 7, dig. 12, for Gen.)—X. Ad Issum (καθ' Ισσοα), a city of Syria, on the coast of the Sinus Issicus, about sixteen miles from Issus in Cilicia. The founder is unknown. The Itin. Hieros. (p. 580) gives it the name of Alexandria Scabiosa. (Compare Chron. Alex., p. 170, where the appellation is given as Gabinosa.) The modern Scanderon, or Alexandreia, occupies the site of the ancient city; now Scanderia, or Alexandreia ultima. Vid. Alexandria, II. Alexander: according to some, the limits of Alexander's victories near the Tanais. This, however, is all a mere fable of the ancients, who made Alexander to have crossed the Tanais, and approached what they considered the limits of the world in that quarter.
ALEXANDRINA SCHOLA.

(Mannert, 4, p. 159 and 256.) For the true Alexandri Arv, vid. Hypheysis.

ALEXANDRI AESTRA ("," idivertv1 parechol), a place in Marmainia, at the Oasis of Ammon, where there was an Alexandrian foundation called. While Alexan-
der was consulting the oracle. (Ptol.)

ALEXANDRI INSULA, an island in the Sinus Persi-
cus, on the Persian coast. (Ptol.—Plin., 6, 25.)

ALEXANDRI PORTUS, a harbour of Gedrosia, where the fleet of Nearchus was detained four weeks by ad-
verse winds. (Arrian, Indic., 22.) It was in the immediate vicinity of Erus Pontomontium, or Cape Monze. (Compare Vincent's Commerce of the An-
cients, vol. 1, p. 197.)

ALEXANDRINE AQUE, baths in Rome, built by the Emperor Alexander Severus.

ALEXANDRINA SCHOLA. When the flourishing pe-
riod of Greek poetry was past, study was called in to sup-
ply what nature no longer furnished. Alexandreia in Egypt was made the seat of learning by the Po-
tolmies, admirers of the arts, whence this age of liter-
ture took the name of the Alexandrians. Ptolemy Philadelphus founded the famous library of Alexan-
drea, the largest and most valuable one of antiquity, wh
which attracted many scholars from all countries; and
also the Museum, which may justly be considered the
first academy of sciences and arts. (Vid. Alexandria.)

The grammarians and poets are the most important
among the scholars of Alexandreia. These grammari-
ans were philologists and literati, who explained
things as well as words, and may be considered a kind
of encyclopedists. Such were Zenodorus, the Ephe-
sian, who established the first grammar-school in Alex-
drea, Eratothenes of Cyrene, Aristophanes of By-
zantium, Aristarchus of Samothrace, Crates of Mallus,
Dionysius the Thracian, Apollonius the Sophist, and
Zoilus. Their merit is to have collected, examined,
reviewed, and preserved the existing monuments of
intellectual culture. To them we are indebted for
what is called the Alexandrian Canon, a list of the
authors whose works were to be regarded as models
in the respective departments of Grecian literature.
The names composing this Canon, with some remarks
upon its claims to attention, will be given at the close
of the present article.—To the poets of the Alexan-
drean age belong Apollonius the Rhodian, Lyco-
phon, Aratus, Nicander, Euiphorion, Callimachus,
Theocritus, Philocles, Phanoeus, Tionus the Philisian,
Scymnus, Dionysius, and seven tragic poets, who were
called Argonautae from Pindar. The Alexandrian
age of literature differed entirely, in spirit and charac-
ter, from the one that preceded. Great attention was
paid to the study of language; correctness, purity,
and elegance were cultivated; and several authors of
this period excel in these respects. But that which
no study can give, the spirit which filled the earlier
poetry of the Greeks, is not to be found in most of
their works. Greater art in composition took its
place; criticism was now to prevent what had been
accomplished before. But this was impossible. Ge-
nius was the gift of only a few, and they soared far
above their contemporaries. The rest did what may
be done by criticism and study; but their works are
tame, without soul and life, and those of their dis-
ciples, of course, still more so. Perceiving the want of
originality, but appreciating its value, and striving af-
ter it, they arrived at a manner where art was no
longer a virtue, and where that spirit of naturalism degenerated into a dispo-
sition to find fault, and their art into subtlety. They
seized on what was strange and new, and endeavoured
to adorn it with learning. The larger part of the Al-
exandrians, commonly grammarians and poets at the
same time, are stiff and laborious versifiers, without
genuin.—Besides the Alexandrian school of poetry,
one of philosophy is also spoken of; but the expres-
sion is not to be understood too literally. Their dis-
tinguishing character arises from this circumstance,
that, in Alexandreia, the eastern and western philoso-
phy met, and an effort took place to unite the two
systems; for which reason the Alexandrian philoso-
phers, when called Philo-Alexandrians or Alexandri-
hen, is not applicable to all. The New Platons-
ists form a distinguished series of philosophers, who,
renouncing the skepticism of the New Academy, en-
deavoured to reconcile the philosophy of Plato with
that of the East. The Jew Philo, of Alexandreia, be-
longs to the earlier New Platonists. Plato and Ari-
totle were diligently interpreted and compared in the
1st and 2d centuries after Christ. Ammonius the
Peripatetic belongs here, too. But the real New Platonist
school of Alexandreia was established at the close of the 2d century after Christ by Ammonius of Alexandreia (about 193 A.D.), whose disciples were Plotinus and Origen. Being for the most part Orientals, formed by the study of Greek learn-
ing, their writings are strikingly characterized, e. g.,
those of Ammonius Saccas, Plotinus, Isamblichus, Por-
phyry, by a strange mixture of Asiatic and European
elements, which had become amalgamated in Alexandreia,
owing to the mingling of the eastern and western
race in its population, as well as to its situation
and commercial intercourse. Their philosophy had a
great influence on the manner in which Christianity
was received and taught in Egypt. The principal
Gnostic systems had their origin in Alexandreia. The
leading teachers of the Christian catechetical schools,
which had risen and flourished together with the ec-
clectic philosophy, had imbibed the spirit of this phi-
losophy. The most violent religious controversies
disturbed the Alexandreian church, until the orthodox
tenets were established in it by Athanasius in the con-
troversy with the Arians.—Among the scholars of
Alexandreia are to be found great mathematicians, as
Eudox, the father of scientific geometry; Apollonius
of Perga in Pamphylia, whose work on Conic Sections
still exists; Nicomachus, the first scientific arithmeti-
ian; astronomers, who employed the Egyptian hier-
oglyphics for marking the northern hemisphere, and
fixed the images and names (still in use) of the con-
stellations; who left astronomical writings (e. g., the
Phaenomena of Aratus, a didactic poem, the Sphaerica
Menelaus, the astronomical works of Eratosthenes, and
especially the Magna Syntaxis of the geographer
Ptolomy), and made improvements in the theory of the
calendar, which were afterward adopted into the Ju-
lian calendar; or who attempted to reconcile the ar-
chaisms of the father of philosophy, with the reason
of the moderns, and favoured by the Roman emperors,
who rendered Alexandreia one of the most renowned and
influential seats of science in antiquity.—The best
work on the learning of Alexandreia is the prize-essay
of Jacob Matter; État d Historique sur l'École d'Al-
vol. 1, p. 184, seqq.)—We alluded, near the com-
 mencement of the present article, to the literary con-
sciousness of the inhabitants of Alexandreia. We
will now proceed to give its details, after some prefatory
remarks respecting its merits. The canon of classical
authors, as it has been called, was arranged by Aris-
tophanes of Byzantium, curator of the Alexandrian
library, in the reign of Ptolemy Euergetes; and his
celebrated disciple Aristarchus. The daily increasing
multitude of books of every kind had now become so
large, that there was no expression, however faulty,
for which precedent might not be found; and as there were far more bad than good writers, the authority and weight of numbers was likely to prevail; and the language, consequently, to grow more and more corrupt. It was thought necessary, therefore, to draw a line between those classic writers, to whose authority an appeal in matter of language might be made, and the common herd of inferior authors. In the most cultivated modern tongues, it seems to have been found expedient to erect some such barrier against the inroads of corruption; and to this preservative caution we are indebted for the vocabulary of the Academicians della Crusca, and the list of authors therein cited as affording "testi di lingua." To this we owe the Dictionaries of the Royal Academies of France and Spain, of their respective languages; and Johnson's Dictionary of our own. But, as for the example first set in this matter by the Alexandrian critics, its effects upon writers have been as trifling as might have been expected. In so far as the canon has contributed to preserve some of the best authors included in it, we cannot but rejoice. On the other hand, there is reason to believe, that the comparative neglect into which those not received into it were sure to fall, has been the occasion of the loss of a vast number of writers, who would have been, if not for their language, yet for their matter, very precious; and who, perhaps, in cases at least, would appear very much to be disproportioned in the score of style, from those that were preferred. (Moore's Lectures, p. 55, seqq.) The details of the canon are as follows: 1. Epic Poets. Homer, Hesiod, Psander, Panyassis, Antimachus. 2. Iambic Poets. Archilochus, Simonides, Hipponax. 3. Lyric Poets. Alcamen, Alcmeus, Sappho, Stesichorus, Pindar, Bacchylides, Ibycus, Anacreon, Simonides. 4. Elegiac Poets. Callimachus, Moschus, Carpus, Alcman, Isaeus, Philiscus. 5. Tragic Poets. (First Class): Eschylus, Sophocles, Euripides, Ion, Acharnae, Agathon. (Second Class, or Tragic Pleiades): Alexander the Ætolian, Philiscus of Corcyra, Sositheus, Homer the younger, Æntides, Sosiphanes or Sosicles, Lycophron. 6. Comic Poets. (Old Comedy): Epicharmus, Cratinus, Eupolis, Aristophanes, Pherecrates, Plato. (Middle Comedy): Antiphanes, Alexis. (New Comedy): Meander, Ephigenius, Philemon. 7. Historians. Herodotus, Thucydides, Xenophon, Theopompus, Ephorus, Philistus, Anaximenes, Callisthenes. 8. Orators. (The ten Attic Orators) Antiphon, Andocides, Lysias, Isocrates, Icrisus, Æschines, Lycurgus, Demosthenes, Hyperides, Dinarchus. 9. Philosophers. Plato, Xenophon, Æschines, Aristotle, Theophrastus. 10. Poetic Pleiades. (Seven poets of the same epoch with one another) Apollonius the Rhodian, Aratus, Philiscus, Aratos, the younger, Lycophron, Nicander, Theocritus. (Schöll. Hist. Lit. Gr., vol. 3, p. 186, seqq.) ALEXANDROPLIS, a city of Tharsis, probably east of Nisaea, built by Alexander the Great. (Plin., 6, 55.) ALEXARCHUS, a Greek historian, ed. Supplement. ALEXICUSCS, an epithet applied to various deities, particularly to Jupiter, Apollo, Hercules, &c. It means "an averter of evil," and is derived from Ælecs, "to avoid," or "ward off," and kakos, "evil." Another Greek term of the same import is ἀπότροπας, and analogous to both is Latin avertentus. (Consall Fischer, ad Aristoph., Plut., 359.) ALEXIAS, a Greek physician, Vid. Supplement. ALEXINUS, a native of Elts, the disciple of Eubuleides, and a member of the Megaric sect. He set himself in array against almost all of his contemporaries that were in any way distinguished for talent, such as Aristoteles, Zeno, Menedemus, Stilpo, and the historian Ephorus, and from his habit of finding fault with others was nicknamed Eelmezus (Ελεμεζος), or "the fault-finder." In particular, he vented the most calumnious imputations against Aristoteles, and wrote a work containing pretended conversations between Philip and Alexander of Macedon, in which the character of the Stagirite was very rudely assailed. Full of vanity and self-conceit, he retired to Olympia for the purpose, as he gave out, of establishing a sect to which he wished to give the appellation of Olympiae; the unhealthy state of the neighbourhood, and its deserted condition, except at the period of the games, caused his disciples to abandon him. He died in consequence of being wounded in the foot by the point of a reed, as he was bathing in the Alpheus. (Diog. Laert. Alexius, and his preceptor Eubulides are only known as the authors of certain captious questions (άλοξα) which they levelled at their antagonists. (Diog. Laert., 2, 108, seqq.—Cic. Acad., 4, 59.) ALEXIUS, a physician, intimate with Cicero. (Cic., ad Att., 13, ep. 25.) ALEXIS, I, a comic poet of Thurium, uncle on the father's side to Menander, and his instructor in the drama. (Proleg. Aristoph., p. xxx.) He flourished in the time of Alexander the Great, and, according to Suidas, wrote 245 pieces for the stage (τίθεντο θρησκευά) which Atheneus calls οἱ χαρίτες, "the gracefully sportive," and the extracts which he as well as Stoaeus give from the productions of the poet appear to justify the appellation. If he did not invent the character of the comic poet of citizens, at least, he introduced it more frequently into his comedies, or portrayed it more successfully than any of his predecessors. The titles of several of his pieces have been preserved, besides the extracts which are given by Atheneus and Stoaeus. (Athen., 2, 59, f.—Schweiger, ad Athen., i. c.) The remains of this poet are also to be found in the Excerpta ex Trag. et Comed. Gr. of Grotius, Paris, 1626, 4to.—II. An artist mentioned by Pliny as one of the authors of the Poetica Metales, but without any statement of his country or the works which he executed. (Plin., 34, 8.) ALEFENUS, OF PUBLIUS ALEFENUS VARUS, a barber of Cremona, who, growing out of conceit with his line of business, quitted it and came to Rome. Here he attended the lectures of Servius Sulpicius, a celebrated lawyer of the day, and made so great proficiency in his studies as to become eventually the ablest lawyer of his time. He was also a proficient in the Pandects. He was advanced to some of the highest offices in the empire, and was at last made consul, A.U.C. 755. (Compare the commentators on Horace, Serm., 1, 3, 130.) In some editions of Horace, Alfenus is styled Sutor, "a shoemaker." Bentley, however, on the authority of two MSS., one of them a MS. copy of Acron, changes the lection to têxor, "a barber." His emendation has been very generally adopted. ALGIUM, a town of Latium, on the Via Latina, situate in a hollow about twelve miles from Rome. Antiquaries seem to agree in fixing its position at 'Osterria dell' Aglio. (Holstein, Annot. p. 158.—Vulp. Lat. Vet., 15, 1, p. 248.—Nibby, Viag. Antiq., vol. 2, p. 62.) ALGIDUS, a chain of mountains in Latium, stretching from the rear of the Alban Mount, and running parallel to the Tuscan Hills, being separated from them by the valley along which ran the Via Latina. The neighbourhood is remarkable for the numberless conflicts between the Roman armies and their unwearied antagonists the Equi and Volsci. Mount Algidus, in fact, was advantageously placed for making inroads on the Roman territory, either by the Via Latina or the Via Laviniana. The woods of the bleak Algidares are a favourite theme with Horace. (Carm., 1, 21, 45, 48—Cramer's Hist. Italy, vol. 2, p. 48.) This mountainous range was sacred to Diana (Hor. Carm. Sac., 69) and to Fortuna. (Liv., 21, 62.) ALIAMON, Vid. Halicarnass. ALIARTUS, Vid. Haliartus. ALIEUS CECINA, Vid. Cecina.
ALIMENTUS, C., a Roman historian, who flourished during the period of the second Punic war, of which he made a personal acquaintance, wrote in Greek, the author of a biographical sketch, in Latin, of the Sicilian rhetorician Gorgia of Leontini, and of a work De Re Militari. This last-mentioned production is cited by Aulus Gellius, and is acknowledged by Vegetius as the foundation of his more elaborate commentaries on the same subject. (Danulph's Roman Lit., vol. 2, p. 25, in notes.)

ALINDA, a city of Caria, southeast of Strattonica. It was a favorite of some note and strength, and was held by Ada, queen of Caria, at the time that Alexander undertook the siege of Halicarnassus. (Arrian, Exp. Al., 1. 23. — Strab., 657.) The site has been identified by many antiquaries with the modern Moglia, the principal town of modern Caria, but on what authority is not apparent. Another traveller, from the similarity of names, places it at Alata, between Moglia and Tshina. (Rennell's Geogr. of Western Asia, vol. 2, p. 53.—Cramer's Asia Minor, vol. 2, p. 208.)

ALIPIUS. Vid. Alypius.

ALIRHOTRHOUS. Vid. Halirhotrhus.

ALLECTUS, a preistorian prefect, who slew Carausius in Britain, and took possession of his throne, holding it for three years, from 294 to 297 A.D. He was at last defeated and slain by Aeclepidotus, a general of Constantius Chlorus, who ascended the island with an army. (Aurel. Vict., 39.)

ALLIA, a river of Italy, running down, according to Livy, from the mountains of Crustumium, at the eleventh milestone, and flowing into the Tiber. It was crossed by the Via Salaria, about four miles beyond the modern Marcigliano, and is now the Aia. Cluverius (Ibid. Ant., vol. 1, p. 707) is mistaken when he identifies the Allia with the Rio di Mosco, as that rivulet is much beyond the given distance from Rome. (Nikby, delle Vie degli Antichi, p. 87.) On its banks the Romans were defeated by the Gauls under Brennus, July 17th, B.C. 387. Forty thousand Romans were either killed or put to flight. Hence in the Roman calendar, "Allienis dies" was marked as a most unlucky day. (Liv., 5, 37.—Flor., 1, 13.—Plut., Vit. Cam.) The true name of the river is Alia, with the first vowel short. Our mode of pronouncing and writing the name is derived from the poets, who lengthened the second vowel by the duplication of the consonant. (Nichols, Antiq. Hist., vol. 2, p. 291, Walton's travel, in notes.)

ALIENIUS FORUM. Vid. Forum, II.

ALILEP, a town of Sanninum, northwest of the Volturnus, the name of which often occurs in Livy. It was taken, according to that historian, by the consul Petilius, A.U.C. 429; and again by Rutilius. (Liv., 6, 25.—Id., 9, 38.) This place was famous for the large-sized drinking-cups made there. (Horat., Serm., 2, 8, 39.) The name of the site is occupier by the modern Greek, Alilef. For a description of the numerous antiquities existing at Allie, consult Trutta, Diss. sopra le Antich. Alisf. (Cramer's Anc. Italy, vol. 2, p. 233.)

ALLOBROGES, a people of Gallia, between the Isara or Issere, and the Rhodanus or Rhone, in the country answering to Dauphiné, Piedmont, and Savoy. Their chief city was Vienna, now Vienne, on the left bank of the Rhodanus. They were subject to the Gauls; but the name still remains. They were finally reduced beneath the Roman power by Fabius Maximus, who hence was honored with the surname of Allobrogicus. (For the particulars of this war, consult Thierry, Histoire des Gaulois, vol. 2, p. 168, seqq., and the authorities there cited.) At a later day we find the ambassadors of this nation at Rome, tarmed with by Catulline, but eventually remaining firm in their allegiance. (Sallust, Cat., 40, seqq.—Cic., in Cat., 3, 3, seqq.) The name Allobroges means "highlanders," and is formed from Al, "high," and Broga, "land." (Addison's Mithridates, vol. 2, p. 82.)

ALÖCÜS, a prince of the Celtiberi in Spain, whose affianced bride having fallen into the hands of Scipio Africanus, was restored to him unjured by the Roman commander; an act of self-control rendered still more illustrious by reason of the surpassing beauty of the maiden. (Liv., 26, 50.)

ALMO, a small river near Rome, falling into the Tiber. It is now the Dachia, a corruption of Aqua d'Aecio. At the junction of this stream with the Tiber, the priests of Cybele, every year, on the 26th March, washed the statue and sacred things of the goddess. (Vid. Lara. (Ovid, Fast., 4, 337.—Lucan, 1, 600 Compare Vales. et Lindcnbr., ad Annum. Marcell., 23, 3.—Lucan, ed. Cort. et Weher, vol. 1, p. 157., seqq.)

ALÖÉUS, I. son of Apollo and Cirec. From him, through his son Epopeus, was descended the Marathon, after whom the famous plain in Attica was named. (Suid., s. v. Μαραθών.) Callimachus applied to this same Marathon, son of Apollo, the epithets of πύργος, "all humid," and ἐνδορρος, "dwelling in the waster" (Suid., l. c.), a remark that will serve as an introduction to the explanation given by Creuzer to the fable of the nine maidens of Alöéus. earth. Creuzer, and Canace. He married Iphimedia, the daughter of his brother Triops; but Iphimedia having a stronger attachment for Neptune than for her own husband, became by the former the mother of two sons, Otus and Ephialtes, whom Alöeus, however, brought up as his own (Homer makes them to have been nurtured by Earth), and who were hence called Alööes. Vid. Alööes. (Hom., Od., 11, 304., seqq.)

ALÖÖES (ALÖÖEÜS), son of Alöeus in name, but in reality the son of Neptune and Canace. (Vid. Alööes, II.) They were two in number, Otus and Ephialtes, and, according to Homer (Od., 11, 310, seqq.), were, in their ninth year, nine cubits in width and nine fathoms in height. At this early age, they undertook to make war upon heaven, with the intention of dethroning Jupiter; and, in order to reach the heavens, they strove to place Mount Ossa upon Olympus, and were at last compelled to ask the aid of Neptune, Apollo before, to use the graphic language of Homer, "the down had bloomed beneath their temples, and had thickly covered their chin with a well-flowing beard." According to the animated narrative of the same bard, they would have accomplished their object had they made the attempt, not in childhood, but after having "reached the measure of youth." (Od., l. c.) Such is the Homeric legend respecting the Alööes, as given in the Odyssey. In the Iliad (6, 385) they are said to have bound Mars, and kept him captive for the
space of thirteen months, until Mercury "stole him away" (ἐξήληθεν). Later writers add, of course, many other particulars. Apollodorus makes Epiphates to have aspired to a union with Juno, and Otus with Diana. (Compare Pind. Pyth., 4, 402; Hyg., fab. 23.) He farther states, that Diana effected their destruction in the island of Naxos. She changed herself, it seems, into a hind, and bounded between the two brothers, who, in their eagerness each to slay the animal, pierced one another with their weapons (τοις θαυμοῖς ἠκόντισαν). Diodorus Siculus (5, 51) gives an historical air to the narrative, making the two brothers to have held sway in Naxos, and to have fallen in love with their own other's hand. (Compare Pind. Pyth., 4, 88, ed. Böckh, and the scholiast, ad loc.) Virgil assigns the Alóide a place of punishment in Tartaros (Eum., 6, 582), and some of the ancient fabulists make them to have been hurled thither by Jupiter, others by Apollo. So in the Odyssey (τ. c.) they are spoken of as inhabiting the lower world, though no reason is assigned by the poet for their being there, except what we may infer from the legend itself, that they were cut off by Jupiter, because they had attempted to attain their full growth, they might have obtained the empire of the skies. (Hesey, ad Apollod., t. c.) Pausanius makes the Alóidei to have founded Asca in Boeotia, and to have been the first that sacrificed to the Muse on Mount Helicon (9, 29). Müller regards the Alóide as the mythic leaders of the old Thracian colonies, heroes by land and sea. They appear in P eria (at Alóida), and later advance to Mount Helicon, and in both quarters have reference to the digging of canals and the draining of mountain-dales. (Orchomenus, p. 387.) Creuzer, on the other hand, sees in the fable of the Alóide a figurative allusion to a contest, as it were, between the water and the land. Aloons is "the man of the shrivelling-floor" (ἀλώνος), whose efforts are all useless on account of the indifference of his spouse (the Earth, "the very wise one," ητής καὶ σοφή). She unites against him with Neptune, and the sea thus appeased,upon besets the mighty energies of the peasants (Otus and Epiphates), which darken the day (Δρόμος, from ἄργος, "the horded out," the bird of night), which brood heavily over the earth, and cause the waves of ocean to leap and dash upon the cultivated regions along the shore (Εὔδαλφης, from ἐθύς, from ἀλώνος, "to leap," as indicating the "one that attacks" or "leaps upon," the spirit that oppresses and torments, "the nightmusic of death," the waves found, and the storm ceases, first along the mountain-tops, and at last even on the shore. (Creuzer, SymboIik, vol. 2, p. 386.) If we adopt the other version of the fable, that the Alóidei were destroyed by Diana, the storm will then be hushed by the influence and changing of the moon.

**ALO**

A town of Thessaly, near Tempe. (Steph. Byz., s. v. Ἀλόης.)

**ALÓE**

I, daughter of Cercyon, king of Eueus, and mother of Hippothoon by Neptune. She was put to death by her father, and her tomb is spoken of by Pausanias (1, 39). Hyginus says that Neptune, not being able to save her life, changed her corpse into a fountain (fab. 187). The son, on having been exposed by order of its mother, was at first suckled by a mare (ἵππος), whence his name Hippothoon; and was afterward taken care of by a herd of sheep. When he was of age, he was told how his name was derived from his great father's throne by Thesius, who had slain Cercyon. (Pausan., 1, 5, et 39.—Hygin., t. c.—II. A town of Thessaly, subject to, according to Steph. Byz. (s. v. Αὐλόης), between Larissa Cremaste and Echinus. (Compare Strabo, 435. —Pomp. Med., 2, 3.) It is probably the same with the Altiteorp noticed by Seylax (p. 24), and retains its name on the shore of the Melian Gulf, below Makalla. —III. A town of the Locris Oeace, according to Strabo (427). It is, perhaps, no other than the Olpa of Thucydides (3, 101). —IV. A town of the Locris Opuntii, above Daphnus. It was here that, according to Thucydides, the Athenians obtained some advantages over the Locrans in a descent they made on this coast during the Peloponnesian war. (Thucyd., 2, 26.)

**ALÓEPÉA**

I, an island in the Palus Mnaois, near the mouth of the Tanais. Strabo and Ptolemy call it Alóepia (Ἀλόηπεια), but Pliny (4, 26) names it Alópece. —II. An island in the Cimmerian Bosporus, near Pantikapeum. Constantine Porphyrogenitus (de adm. imp., c. 42) calls it Atech (Ἀτέχ). —III. A borough of Attica, north of Hyemus, and near the Cynogasres, consequently close to Athens. According to Herodotus (5, 63), it contained the tomb of Anchimolius, a Spartan chief, who fell in the first expedition undertaken by the Spartans to expel the Pisistratides. According to Æschines (in Timarch. p. 119), it was not more than eleven or twelve stadia from the walls of the city. This was the borough or demus of Socrates and Aristides. It was enrolled in the tribe Antiochis. (Steph. Byz., s. v. Ἀλόηπεια.) Chandler thought that this was the island from which the Athenians stole the tomb of Anchimolius from Athens to Hyemus. (Str. p. 2, 30.)

**ALÓE-CONNEAΣÉS**

A town on the northern coast of the Thracian Chersonesus. It was an Æolian colony, according to Scymnus (p. 705), and it is mentioned as one of the chief towns of the Chersonesoi by Demosthenes (de Cor., p. 256). It was taken by Philip, king of Macedon, towards the commencement of his wars with the Romans (L. c., p. 256). According to the Panticapeum (2, 60), traffic is of excellent quality near it. The site of the ancient town still retains the name of Alézi. (Manmert, 7, p. 197.)

**ALÓS**

Or Halos, I, a city in Thessaly, situate near the sea, on the river Amynthus. It was founded by Athismas, whose memory was here held in the highest veneration. (Strab. 432. —Herodot., 7, 197.) This place was called the "Phithiotic" or "Æcean" Alós, which is in reference to the situation from another city of the same name among the Locris.—II. A city of the Locris Opuntii.

**ALÓPENUS**

A town of the Locris Epicenemidii, south of Thermopylae, whence, as Herodotus (7, 229) informs us, Leonidas and his little band drew their supplies. It is also called Alpeni (Ἀλπενοί). This is probably the same town which Æschines names Alphon, since he describes it as being close to Thermopylae. (Æsch., de Pala. Leg., p. 46.)

**ALÓPEPE**

A range of mountainous, separating Italy from Gallia, Helvetia, and Germany. Their name is derived from their height, Alp being the old Celtic appellation for a lofty mountain. (Aelius, Mithridates, vol. 2, p. 42.—Compare remarks under the article Alion, II.) They extend from the Sinus Planiticos, or Gulf of Carnero, at the top of the Gulf of Venice, and the sources of the river Colapis, or Kulpe, to Vada Sabatia, or Savena, on the Gulf of Genoa. The whole extent of the mountains is 1160 miles, and the length of the range 250 miles, Phiny 700 miles. The true amount is nearly 600 British miles. They have been divided by both ancient and modern geographers into various portions, of which the principal are, 1. The Maritime Alps (Alpes Maritima), beginning from the environs of Nice (Niciana), and extending to Mono Vesuus, Monte Viso. 2. The Cottian Alps (Alpes Cottia), reaching from the last-mentioned point to Monte Cotta (Alpes Cottiae). 3. The Abruzzi Alps (Alpes Abruzzi), lying between Monte Iseran and the Little St. Bernard inclusively. The name Grazia is said to refer to the tradition of Hercules having crossed over them on his return from Spain into Italy and Greece. 4. The Pennine Alps (Alpes Pennina), extending from the Great St. Bernard to the sources of the Rhone and Rhine. The name is derived from the Celtic Pena, "a summit," and not, as Livy and other ancient writers, together with some modern ones, pretend, from Hannibal having crossed
into Italy by this path, and who, therefore, make the orthography Poesina, from Poëmis. 5. The Rhetic or Alp Alps (Alpes Rhetice sive Tridentina) from the St. Gothard, whose numerous peaks bore the name of Adula, to Mont Brenner in the Tyrol. 6. The Noric Alps (Alpes Norice), from the latter point to the head of the river Plavis, or la Piave. 7. The Carnic or Julian Alps (Alpes Carnicæ sive Juliei), terminating in the Mons Albani on the confines of Illyricum.—It was not till the reign of Augustus that the Alps became well known. That emperor finally subdued the numerous and savage clans which inhabited the Alpine valleys, and cleared the passes of the banditti that infested them. He improved the old roads and constructed new ones; and finally succeeded in establishing a free and easy communication through these mountains. (Strab., 204.) It was then that the whole of this great chain was divided into the seven portions which have just been mentioned. Among the Pennine Alps is Mont Blanc, 14,676 feet high. The principal passes at the present day are, that over the Great St. Bernard, that over Mont Simplon, and that over Mont St. Gothard. The manner in which Hannibal is said to have effected his passage over these mountains is now generally regarded as a fiction. (Vid. Hannibal, under which article some remarks will also be offered upon the route of the Carthaginian commander in crossing the Alps.) Besides the divisions of the Alps already mentioned, we sometimes meet with others, such as the Lepontine Alps (Alpes Lepontias), between the sources of the Rhine and the Lacus Verbanus (Lago Maggiore); the Alpes Summanæ (Cass., B. G., 3, 3. and 4, 10), running off from the Pennine Alps, and reaching as far as the Lake Verbana, &c.

Alpheebea, daughter of Pyggeus, or Phegeus, king of Phoecis in Arcadia, married Alcmeon, son of Ampharius, who had fled to her father's court after the death of his wife. She, therefore, present, the fatal collar and robe which had been given to Eriphyle, to induce her to betray her husband Ampharius. The ground, however, becoming barren on his account, Alcmeon left Arcadia and his newly-married wife, in obedience to an oracle, and came, first to Calydon unto king Æneas, then to the Thesprotii, and finally to the Acheuloi. Here he was purified by the river-god from the stain of his mother's blood, and married the daughter of a rich priest named Thoii. His first-born had two sons by him, and begged of him, as a present, the collar and robe, which were then in the hands of Alpheebea. He endeavoured to obtain them, under the pretence that he wished to consecrate them at Delphi; but the deception being discovered, he was slain by the two brothers of Alpheebea, who had lain in wait for him. Alpheebea, showing too much sorrow for the loss of her former husband, was conveyed by his brothers to Tegea, and given into the hands of Agapenor. The more usual name by which Alpheebea is known among the ancient fabulists, is Arainoë. (Apollod., 3, 7.—Heyne, ad loc.)

Alpheus and Alpheus (Ἀλφεύς and Ἀλφεὺς, the short penult marking the earliest, the long one the later and more usual pronunciation), i. a river of Peloponnesus, flowing through Arcadia and Elis. It rose in the Laconian border of Arcadia, and from two stadia from Asea, it flowed to the city, at its source, waters, at its mouth, into the Eurotas. The united streams continued their course for the space of twenty stadia, when they disappeared in a chasm. The Alpheus was seen to rise again at a place called Pégée (πηγαῖς) or "the sources," in the territory of Megalopolis, and the Eurotas in that of Belmina, in Laconia. Flowing onward from this quarter, the Alpheus passes through the intervening part of Arcadia, enters Elis, passes through the plain of Olympia, and discharges its waters, now swelled by numerous tributary streams, into the Sicilian Sea.

The modern name of the river is the Rouphia.—There are few streams so celebrated in antiquity as the Alpheus. But the Olympic contests connects its name continually with the mention of those memorable games, on the part of the ancient poets, and gives it, in particular, a conspicuous place in the verses of Pindar. There is also a pleasing legend connected with the stream. According to the poets, the god of the Alpheus became enamoured of and pursued the nymph Arethusa, who was only saved from him by the intervention of Diana, and changed for that purpose into a fountain. This fountain she placed in the island of Ortygia, near the coast of Sicily, and forming in a later age one of the quarters of the city of Syracuse. The ardent river-god, however, did not even then desist, but worked a passage for his stream amid the intervening ocean, and, rising up again in the Ortygian island, commingled its waters with those of the fountain of Arethusa. Hence, according to popular belief, if anything were thrown upon the Alpheus in Elis, it was sure to reappear, after a certain lapse of time, upon the bosom of the Ortygian fountain. (Pausan., 5, 7.—Id., 8, 54.—Strab., 269. et 343.—Pind., Nem., 1, 1, seq.—Moschus, Id., 8.—Virgil., Aen., 3, 692, seq.—Id., Georg., 3, 180.—Nemus, in Oruc., Melet., 1, p. 78.) According to another version, however, of the same legend, it was Diana herself, and not the nymph Arethusa, whom the river-god of the Alpheus pursued, and, when this pursuit had ended in the island of Ortygia, the fountain of Arethus'a arose there. (Schol. ad Pind., Nem., 1, 3.—vol. 2, p. 428, ed. Böckh.) The account last given will afford us a clue to the true meaning of the entire fable. The goddess Diana had, it seems, a common altar at Olympia with the god of the Alpheus. (Herodotus, in Schol. ad Pind., Olymp., 5, 10.—Pausan., 5, 14.) To the same Diana water was held sacred. (Böckh, ad Pind., Nem., 1.—Creuzer's Symm., 3, 1, p. 161.) The river-god of the Alpheus being, according to the ancient writers, a native of Arcadia, and that part of Arcadia having passed from the Peloponnesus into Sicily, the worship of the Alpheus accompanied it; or, in other words, a common altar for the two divinities was erected by the Syracuseans in Ortygia, similar in its attendant rites and ceremonies to the altar at Olympia. For in the island of Ortygia all water was held sacred, (Schol. ad Pind., Nem., 1, 1.—p. 428, ed. Böckh), and Diana, besides, was worshipped at the fountain of Arethusa. The Alpheus and the Arethusa are, therefore, two rivers, and the poet, that the Alpheus had passed through the ocean to Ortygia, and blended its waters with those of Arethusa, or, in other words, its rites with those of Diana. (Böckh, ad Pind., Nem., l. c.—) II. An engraver on gems, who executed many works in connexion with Arethusa, one of his contemporaries. A head of Caligula, engraved by him when a young man, is still extant. (Brockh., 1, 165.)

Alphius Arvitus, a Roman poet, who wrote an account of illustrious men, in two volumes. Terentianus Murus has cited some verses of the work, having reference to the story of Camillus and the schoolmaster of Falisci. (Compare Burmann, Anthol. Lat., vol. 1, p. 452.)

Alphoins (Corinicius), a wretched poet, ridiculed by Horace (Serm., 1, 10, 36, seqq.). In describing Memnon he personifies the river Augeius, with the object of deriding Horace, by the miserable character of his own description. So also the same poet is represented by the Venusian bard as giving the Rhine a head of mud. Who this Alpinus actually was cannot be exactly ascertained, and no wonder, since it would have been strange if any particulars of so contemptible a poet had escaped oblivion. Cruquius, without any authority, discovers in Alpinus the poet Cornelius Gallus, the friend of Virgil. Nor is Bentley's supposition of any great value. According to this latter critic, Horace
...and under the name of Alpinus, to Furius Bibaculus; and Bentley thinks that the appellation was given him by Horace, either on account of his being a native of Gaul, or because he described in verse the Gallic war, or else, and what Bentley considers most probable, in allusion to a foolish line of his composition, "Jupiter hibernas cana noncepe Alpes." (Bentl. ad Horat., I. 10, 36.)

Aulis, a river falling into the Danube. Mannert (Geogr. vol. 3, p. 510) supposes this to have been the same with the Æius, or Inn. It is mentioned by Herodotus (4, 29).

Alsius, a maritime town of Etruria, southeast from Cere, now Pale. (Sil. Ital., 8, 475.)

Altia, daughter of Thestius and Eurythymis, married Æneas, king of Calydon, by whom she had many children, among whom was Meleager, considered by some to be the son of Mars. Seven days after the birth of Meleager, the Destinies came unto Altia, and announced, that the life of Meleager depended upon a brand then burning on the hearth, and that he would die when it was consumed. The mother saved the brand from the flames, and kept it very carefully; but when Meleager killed his two uncles, Altia's brothers, Altia, to revenge their death, threw the piece of wood into the fire, and, as soon as it was burned, Meleager expired. She was afterwards greatly grieved for the loss of her son, that she made away with her own existence. (Apollod., I. 8, 1, —Ovid, Met., 8, 446, seqq.) Another version of the story is also given (Apollod., l. c.), which appears to have been derived from Homer (II. 9, 551.—Compare with this Anton. Lib. c. 2, and Heyne, ad Apollod., l. c.)

Althemenes (Ἀλθημένης: more correct than Althmenes, 'Ἀλθημένης, the common form. Heyne, ad Apollod., 3 § 1, 3. ed., and Soc. Godefroy, a son of Cato parthenogenetically born Crete. Hearing that either he or his brothers were to be their father's murderer, he fled to Rhodes, where he made a settlement, to avoid becoming a particide, and built, on Mount Atabyrus, the famous temple of Jupiter Atabyrus. After the death of all his other sons, Catreus went after his son Althemenes: when he landed in Rhodes, the inhabitants attacked him, supposing him to be an enemy, and he was killed by the hand of his wife. When Althemenes knew that he had killed his father, he entreated the gods to remove him; and the earth immediately opened, and swallowed him up. (Apollod., 3, 2.) According to Diodorus Siculus, however, he shunned the society of men after the fatal deed, and died eventually of grief. (Diod. Sic., 5, 50.)

Altvium, a flourishing city near Aulaeia. According to Strabo (2, 760) it was the site of the ancient city of Altvium; but the situation of Altvium seems uncertain. D'Anville, however, asserts (Anal. Geogr. de l'Ital., p. 84) that its place is yet marked by the name of Altvium, on the right bank of the river Sila (Silc), and near its mouth. According to Strabo (2, 761), the situation of Altvium bore much resemblance to that of Ravenna. The earliest mention of it is in Velleius Paterculus (2, 76). At a later period of the Roman empire it must have become a place of considerable note, since Martialis compares the appearance of its shore, lined with villas, to that of Baiae. (Ep., 4, 25.) It was also celebrated for its wool. (Martial, Ep., 14, 153.)

Altis, the sacred grove of Olympia, on the banks of the Alpheus, in the centre of which stood the temple of Jupiter. It was composed of olive and plane-trees, and was surrounded by an enclosure. Besides the temple just named, the grove contained those of Jupiter and Lucina, the latter a temple on the plain of Marathon. In front of it, or, if we follow Strabo, within its precincts, was the stadium, together with the race-ground or hippodromum. The whole grove was filled with monuments and statues, erected in honour of gods, heroes, and conquerors. Pausanias mentions more than two hundred and thirty statues; of Jupiter alone he describes twenty-three, and these were, for the most part, works of the first artists. (Pausan., 5, 13.) Pliny (34, 17) estimates these to be the whole number of these statues, in his time, at three thousand. The Altis contained also numerous treasures, belonging to different Grecian cities, similar to those at Delphi. These were situated on a basement of Torine stone, to the north of the temple of Juno. (Vid. Olympia.)

Alvintium, a town of Sicily, on the northern coast, not far from Calacta. Now Alontio. Cicero (in Verri, 4, 29) calls the place Haluntium.

Alvattes, a king of Lydia, father of Cranesus, succeeded Sadyattes. He drove the Cimmerians from Asia, and made war against Cyaxares, king of the Medes, the grandson of Deioces. He died after a reign of 57 years, and after having brought to a close a war against the Milesians. An immense harrow or mound was raised upon his grave, composed of stones and earth. This is still visible within about five miles of Sardis or Sart. For some curious remarks on the resemblance between this tomb, as described by Herodotus, and that said to have been erected in memory of Porsenna (Varro, ap. Plin., 36, 13), and which affords a new argument in favour of the Lydian origin of Etrurian civilization, consult the Ezzarues of Cresser, ad Herod., 1, 294.)—It is also related that an eclipse of the sun terminated a battle between this monarch and Cyaxares, and that this eclipse had been predicted by Thales. (Herod., 1, 7, 4—Bahr, ad loc.) Modern investigations make it to have been a total one. (Oltmann, Act. Soc. Be- rolin. Mathemat., 1812.) It is worthy of notice, too, that this same eclipse is mentioned in the Persian poem Schæmanœm, as having taken place under king Kei- kouras, father of Artaxerxes II. He is certainly the Greek writer. (Von Hammer, Wiener Jahrbuch, 9, p. 13.) For remarks on the chronology of this reign, consult Clinton's Fasti Hellenici, vol. 1, 2ed., p. 296 et 298, and also Larcher, Historie d'Herodote, vol. 7, p. 537. (Table Chronol.)

Alvips, I. a philosopher of Alexandria in Egypt, contemporary with Jamblichus. He was remarkably small of size, but possessed, according to Eunapius, a very sound and retentive memory. He was a friend to the mathematicians, and to the lexicographers. Alvips wrote nothing; all his instruction was given orally. Jamblichus composed a life of this philosopher. (Biogr. Univ., vol. 1, p. 657.)—II. A native of Alexandria, who wrote a work on music, entitled, Εισαγωγὴ μουσικῆ, or 'Introduction to Music.' He divides the whole musical art into seven portions: 1. Sounds. 2. Intervals. 3. Systems. 4. Kinds. 5. Tones. 6. Changes. 7. Compositions. He treats, however, of only one of these, the fifth; whence Mei- bonius concludes, that only a fragment of his work has reached us. There is some difference of opinion as to the period when Alvips flourished. Cassiodorus (De Musica, sub fin.) believes, that he was anterior to Ptolemy, and even to Euclid. De la Borde (Essai sur la Musique, vol. 3, p. 333) places him in the latter half of the fourth century after Christ. Of all the an- cients, Herod. 2, 9 § 4 (to Bähr, vol. 1, p. 924) is the only one through whom we are made acquainted with the notes employed by the Greeks; so that, without our knowledge of the ancient music would be greatly circumscribed. (Schöll, Hist. Lit. Gr., vol. 8, p. 570.)—III. A native of Antioch, an architect and engineer, who lived in the reign of Julian the apostate, to whom he dedicated a geographical description of the ancient world. This production is considered by some to be the work of the short abridgment first published by Godefroy (Gothofredus), in Greek and Latin, at Geneva, 1623, in 4to. There is, however, no good reason whatever to suppose this work to have been published by Alvips. The Greek text published by Godefroy appears rather to have been forged after the
Latin version, which is very old and very badly done. We perceive, from the letters of Julian that have come down to us, that Alypius was also a poet; and that he had commanded, moreover, in Britain, where his mildness and firmness combined had gained him great praise. It is from Alypius whom Julian charged with this execution of his order for rebuilding the temple of Jerusalem: a work that was broken off, in so remarkable a manner, by globes of fire bursting forth from the ground, and wounding and putting to flight the workmen. (Bugg. Univ., vol. I., p. 657.—Consult Salvete, des Sciences Occultes, vol. 2, p. 224.)

Alypius, a statutory of Sicily, pupil of Naucydes, the Argive. He cast in brass the statues of certain Lacedaemonians, as it is written. This metal was named as insuperable for mariners and dangerous for ships. (Arat. Pharm., 156, seqq.—Schol. ad Arat., p. 46, ed. Buchle.—Voss., ad Verg., Georg., 1, 205.) Hence probably the name aec was applied to the constellation of the She-Goat, in its primitive meaning of a tempest, a primitive meaning which afterward disappeared from use, while the secondary one of a she-goat usurped its place. (Buttmann, ad Ideler, Sternnamen, p. 309.) With this earlier meaning, a tempest, the constellation of the She-Goat, or *neb-yest*—subsequently indicative of the *Egyp* of Jupiter, which he was believed to wield amid the warfare of the elements. From all this arose the early legend. The bright stars in the constellation of Capella become the fair, white she-goat Amalthea. The storms and clouds which the constellation brings with it, become the fear-inspiring look on the part of the animal, and, by the rude simplicity of early times, the she-goat is made the foster-parent of Jove. (Compare Hick, Create, vol. 1, p. 177, seqq.—Creyer, Symbolik, vol. 2, p. 424, seqq.)—II. A daughter of Melissius, king of Crete. She and her sister Melissa had charge of the infant Jupiter, and fed him with goat's milk and honey. This is merely a later version of the early fable mentioned under Amalthea I. The she-goat and bees are now two females. (Diod. Sic., 5, 70.—Compare Buttigier, Amalthea, vol. 1, p. 24.)—III. A stybl of Cuma, called also Hierophile and Persophila. She is supposed to be the same who brought nine books of prophecies to Tarquin, king of Rome. (Vid. Sibylla.)

Amaltheum, a gymnasiun, or, rather, gymnasium and study combined, which Atticus had arranged in his villa in Epirus. It was replete with all that could amuse or instruct, and here, too, were placed the statues of all the illustrious men by whom the glory of the Roman state had been advanced to its proud elevation, just as Jupiter had been made the god of the Amaltheum. Hence its name Amaltheum (*Amaküdeyer*). (Cic., Ep. ad Att., 1, 16.—Compare Erneasti, Clav. Cic., Ind. Graco-Lat.)—Cicero appears to have had something of the kind in his villa at Arpinum, and which he calls his Amalthea, in the singular (fem.). (Ep. ad Att., 2, 1.)

Amanus, I. a continuation of the chain of Mount Taurus, stretching to the north as far as Melitene and the Euphrates. II. A daughter of Minerva, the sacred river of the Medes, near the Gulf of Issus, and separates Cilicia from Syria. The defile or pass in these mountains was called Portus Amanicus, or Pyle Syrie. Its valleys and recesses were inhabited by wild and fierce tribes, who lived chiefly by plundering their neighbours, though they boasted of their freedom under the sonorous name of Eleuthero-Cilices, or Free Cilicians. The modern name of the chain is, according to von Hammer, called Al讚。 Likewise in the Bihalk, Al-Lukan. (Strab., 521.—Lucan, 8, 344.—Cic., Ep. ad Att., 5, 20.—Plin., 5, 27.)—II. A deity worshipped in Punthos and Cappadocia, and also called omnium and Anadustas. (Compare Tschucke, ad Strab., 11, p. 512, ed. Cassaub.—vol. 4, p. 478.) Bochart identifies him with the sun (Geogr. Sacr., p. 277), and others with the Persian Horm, a type of the...
same luminary. (Creuzer, Symbolik, vol. 2, p. 164.)
Mount Amaru then becomes the mountain of the sun, even as Lebanon appears in the Phoenician Cosmogony of Sanchoniathon.

Amaricus, a son of Cynaras, king of Cyprus, who, having fallen and broken a vase of perfumes which he was carrying in safety, being either overthrown by the strong fragrance, or struck with grief at the loss he had sustained. The gods, out of compassion, changed him into the amaracus, or sweet-marjoram. Ser- vius (ad Virg., Æn., 1, 693), gives a somewhat different account, and makes Amaracus, not a son, but an attendant, of the king's. As regards the plant amaracus itself, and its identity with the odoftpvxov of the Greeks, consult Plé, Floré de Virgile, p. clxxx.

Amaroi, a native of Asia. Polybian (5, 13) places them in the greater Armenia, on the borders of Media: Nearchus, Plyn (6, 17), and Strabo, in the mountains of Elaynias, in Persia. Others assign Margiana as the country in which they lived. It is possible that there were several tribes of this same name spread over different countries, or perhaps several colonies of this people. Vossius thinks that all robbers and fugitives, the dbiathra, were called Amari by the Persians. (Voss., ad Pomp. Mel. B., 5.—Compare Pomp. Mel., French transl., vol. 1, p. 202.)

Amaryllis, the name of a female in Virgil's eclogues. Some commentators have supposed that the poet spoke of Rome under this fictitious appellation, but this supposition is a very improbable one. (Consult Heyne, ad Virg., Êlog., 1, 29, towards the conclusion of the note.)

Amarynthus, a town of Eubea, seven stadia from Eretria, celebrated for the temple and worship of Diana Amarynthia. (Strab., 448.—Liv., 35, 38.—Pausan., 1, 31.)

Amaseus, a small river of Latium, crossing the Pontine Marshes, and falling into the Tyrrenhian Sea, now La Toppia. (Virg., Æn., 7, 685.)

Amasia, or Amasea (Amaia, by the later Greeks Amaia, a city of Pontus, on the river Iris, the origin of which is not ascertained. It was the birthplace of Mithradates the Great and of Strabo the geographer. At a later period, when under the Roman sway, it became the capital of Pontus Galaticus (Hierocles, p. 701), and bore upon its coins the title of Metropolis. Strabo (560) gives us a particular description of his native city. The modern Amaryah or Amassia is supposed to occupy the site of the ancient Amasea. (Amaseus, p. 6, n. 161, seqq.)

Amasis. 1. a king of Egypt, of one of the earlier dynasties. He rendered himself odious to his subjects by his violent and tyrannical conduct, and, on the invasion of Egypt by Actisanes, king of Æthiopia, the greater part of the inhabitants went over to the latter. Such is the account given by Diodorus Siculus (1, 60), where many think we should read Amosis for Amasis. (Consult Stas, and Weisberg, ad Diod., b. c.) Jus- te, Mag. Grec. (461, 10) makes him to have been the first Pharaoh of the 18th dynasty. Eusebius (Chron.) asserts that he was the same king during whose reign Jacob died. Olearius (ad Philostr., Vit. Apoll., 42) maintains that he was monarch of Egypt in the time of the Exodus. All is uncertainty respecting him.—II. An Egyptian, who, from having been a common soldier, became king of Egypt. He succeeded in gaining the favour of King Apries, and was de- spatched by that monarch to quell a sedition which had broken out. As he was endeavouring to dissuade those who had revolted from the step they had taken, one of them came behind him and put a helmet on his head, saying that he put it on to make him a king. Amasis was thereupon proclaimed king by the insurgents, and immediately marched against and defeated his former master, B.C. 569. He governed with pru-
chus for the unnatural deed.—II. A city on the coast of Paphlagonia, near the mouth of the Parthenius. It was founded by Amastris, the niece of Darius Codomannus, and wife of Dionysius, tyrant of Heraclea, who gave her name to the new settlement. The earlier town of Sesamum, mentioned by Homer (II, 2, 853), served for its citadel. It is praised as a beautiful city by both the younger Pliny (Ep., 10, 99) and the later ecclesiastical writers. (Compare Nicolaus Paph. Or., in S. Hygin. 17.) Amastris, near Sinope, was built on a small peninsula, and had, in consequence, a double harbour. (Strabo, 544.) The modern name is Amastra. (Mannert, 6, pt. 3, p. 25.)

Amata, the wife of King Latinus, and mother of Lavinia. She hung herself in despair, on finding that she could not prevent the marriage of her daughter with Æneas. (Virg., Æn., 12, 603.)

Amathus (gen. unitis), a city on the southern side of the island of Cyprus, and of great antiquity. Adonis was worshipped here as well as Venus. Sclavas affirms that the Amathusians were autochthonous (Perip., p. 41); and it appears from Hesychius that they had a peculiar dialect (s. v. ἔρσαι, Κυβάδα, Μάλακα). Amathus was celebrated as a favourite residence of Venus. (Æn., 10, 51.—Catull., Ep. 38.) The goddess, as an author, who wrote a history of Amathusian and its vicissitudes, by her name (Ἀμαθυτις Αμαθυτιδος ἀναφέρεται), was reported, was represented with a beard. Amathus was the see of a Christian bishop under the Byzantine emperors. (Hieroc., p. 706.) Its ruins are to be seen near the little town of Limmeson or Limnesol, somewhat to the north of Cape Gatto. (Cramer's Asia Minor, vol. 2, p. 377, seq.)

Amazônes, a name given by the ancient writers to certain female warriors, and derived, according to the popular opinion, from αμαζονέται, οἱ ἀμαζόνες, "a female breast," because it was believed, that they burned off the right breast in order to handle the bow more conveniently. The men among them were held in an inferior, and, as it were, servile condition, attending to all the employments which occupy the time and care of females in other nations, while the Amazons themselves took charge of all things relating to government and warfare. (Diod. Sic., 2, 45.—Id., 5, 62.) The Greeks, therefore, describe them (Diod. Sic., l. c.) as females of Asia, who were more ancient, and were also the more remarkable for the number and splendour of their warlike achievements. They dwelt in the western regions of Africa, occupying an island in a lake called Tritonis, and which was near the main ocean. Diodorus describes this island as beautiful and productive, and names it Hesperia. Under the guidance of a warlike queen, whom he calls Myrina, they conquered the people of Atlantis, their neighbours, traversed a large portion of Africa, established friendly relations with Horus, son of Isis, then on the throne of Egypt, subdued Arabia, Syria, various parts of Asia Minor, and penetrated even into Thrace. After this long career of conquest they returned to Africa, and were annihilated by Heracles. At this same time, too, the Lake Tritonis disappeared from view, and became level with the sea. The country was taken by the Greeks against these warlike females, in which the latter were defeated near the Thermodon and led away captive. A part of them, however, escaped to Scythia, and became the mothers of the Sauromatai (4, 110). The same historian adds, that the Scythian term, which answered to the Greek word Αμαζόνας, was Oiropart, or "mas- slayer." We have here what are sometimes called the Scythian Amazons, making, in fact, a third class.—Diodorus gives an account of the victories of the Asiatic Amazons, as he had done in the case of the African. He makes them to have conquered a large portion of Asia, extending their victorious arms from the regions beyond the Tanais (or Don) as far as Syria (2, 46). Other accounts tell of their invasion of Attica, in order to recover their queen Antiope, who had been carried off by Theseus (Plut., Vit. These., c. 26, seqq); of their previous wars with Hercules; and still more anciently of their contest with Bacchus. (Pausan., 1, 15.—Id., 7, 2.—Plut., Quaest. Gr., p. 541. Justin, 2, 4.) They are also mentioned by Homer, who speaks of their wars with the kings of Phrygia (II, 3, 184), and of their defeat by Bellerophon (II., 6, 186). They are said to have been among the allies of the Trojans in the war with the Greeks, and their queen Penthesilea was slain by Achilles. (Hygin., fab., 112.—Dict. Crit., 4, 2, 3.—Tzetze, ad Lycoth., 999.—Diod. Sic., 2, 46.) They make their appearance again, in a later age, in the history of Alexander's expedition into Asia, and their queen Thalereis is said to have paid a visit to the victorious monarch, having come for that purpose from the vicinity of Hyrcania; but contrary to the custom of the Greeks, she paid the visit with a large train of women in uniform, as usual, in the marvellous, and with his wonted ignorance of geography, places the plains of Themiscyra, and the river Thermodon which waters them; contiguous to the country of the Hyrcanians. (Q. Curt., 6, 5, 25.—Compare Pireneum, ad loc.)—The Amazons are described as armed with bow and arrows, and as having also battle-axes and crescent shields ("pelta inmatata," Virg., Æn., 1, 490). Some writers, differing from Diodorus, as cited above, make the Amazons to have had no males among them, but to have merely visited, at stated times, the neighbouring communities, for the purpose of a temporary union and the obtaining of offspring. They farther state, that the female children thus born to them were carefully reared, after having the right breast seared with a red-hot iron, but that all the male ones were destroyed immediately after birth. Diodorus, however, informs us, in speaking of the Amazon queen, that her name was said to mean (Ἀμαζόνας, ἀμαζών) the legs and arms of the male children, in order to render them unfit for war. About the treatment of the male offspring among the African Amazons he is altogether silent. Thus much for the Amazons, as they have been described or referred to by the ancient writers. Various explanations, as may well be supposed, have been given of this curious legend. Some say it is to have been found, in a measure, on historical truth, of a community of women, who actually formed themselves into a regular state, after getting rid of, or subjugating their husbands. This is too improbable to need any serious refutation. R. P. Knight thinks that "the fable" of the Amazons (for so he terms it) "arose from some symbolical composition of an androgynous character, and which sought to express the blending of the two sexes into one shape; the full, prominent form of the female powers of nature, and on whom, as a part of that worship, either a periodical or perpetual continence was enjoined. The change of vestments and of characters, so common in this same class of Asiatic religions, was indicated, according to this same writer, by the removal of one of the breasts. The Amazons, therefore, according
to this explanation, will be a band of warlike priestesses or Herodules, who, in renouncing maternity, and in giving themselves up to martial exercises, sought to imitate the periodical sterility of the great powers of light, the sun and moon, and the combats in which these were from time to time engaged, against the gloomy energies of night and winter. (Creuzer, Symbo- lithik, par Guigniault, vol. 4, p. 43.)—That the legend of the race rests on a religious basis, we readily admit, but that any Amazons ever existed, even as warlike priestesses, we do not at all believe.

The first source of error respecting them is the etym- ology commonly assigned to the name. To derive this from the negative α and μακός, and to make it to indicate the loss of one of the breasts, is, we think, altogether erroneous. If a Greek derivation is to be assigned to the term Amazon, it is far more correct to deduce the word from the intensive α. and μακός, and to regard it as denoting, not the absence of one breast, but the presence of many. The name Αμάκον (Amazon) then becomes equivalent to the Greek Πολυμάκος (Polymaskus) and the Latin Multimam- mia, both of which epithets are applied by the ancient mythologists to the Ephesian Diana, with her numerous breasts, as typifying the greatness and importance of her power. It is curious to connect with this the well-known tradition, that the Amazons founded the city of Ephesus, and at a remote period sacrificed to the goddess there. (Callim., H. in Dian., 238.—Dionys. Perig., 828.) But how does the view which we have just taken of the erroneous nature of the common etymology, in the case of the name Amazon, harmonize with the remains of ancient sculpture? In the most satisfactory manner. No monu- ment of antiquity represents the Amazons with a mutilated bosom, but, wherever their figures are given, they have both breasts fully and plainly developed. Thus, for example, the Amazons on the Phigaleian frieze have both breasts entire, one being generally ex- posed, while the other is concealed by drapery, but still in the latter the roundness of form is very percept- ible. Both breasts appear also in the fine figure of the Amazon belonging to the Lansdowne collection; and so again in the basso-relievo described by Winkelman in his Monumenti Inediti. The authorities, in- deed, on this head are altogether incontrovertible. (Winckelmann, Geschichte der Kunst des Alterthums, vol. 3, p. 151.—Id. Mon. Incid., pt. 2, c. 18, p. 154.—Müller, Archäologie der Kunst, p. 530.—Elgin and Phigaleian Marbles, vol. 2, p. 179.—Heyne, ad Apol- lon., 1, 9.3.)—The Greek word sometimes means the mention of females who removed their right breast was Hippocrates (Πηρί αθηνως, κ. τ. λ., § 43). Its remarks, however, were meant to apply merely to the females of the Sauromatæ, a Scythian tribe; but subsequent writers made them extend to the fabled race of the Amazons. It appears to us, then, from a careful ex- amination of the subject, that the term Amazon original- ily indicated, neither a warlike female, nor a race of such females, nor indeed any of their raving epithet ascribed to an ancient Ephesian Diana, the great parent and source of nur- ture, and was intended to express the most striking of her attributes. The victories and conquests of the Amazonian race are nothing more, then, than a figu- rative allusion to the spread of her worship over a large portion of the globe, and the contests with Bacchus, Hercules, and Theseus refer in reality to the struggles of this worship with other rival systems of faith, for Bacchus, Hercules, and Theseus are nothing more than mythic types of three different forms of belief. Hence we see why the conflict of the Amazons with Theseus, who was nothing more than the symbol of the establishment of the Tionic worship, became a most appropriate ornament for the frieze of the Parthenon, the temple of the great national goddess Minerva. It was, in fact, a delineation of the downfall of a rival sys- tem of belief. Before we conclude, it may not be amiss to examine more closely into the etymology of the term Amazon. We have thus far regarded the word as of Grecian origin. What if, after all, it be of Oriental birth, and have reference to the far-famed Asi of Oriental and Scandinavian mythology! Sal- verte sees in them a class of female divinities, the goddesses of fertility, and attributes the first part of the name to the Pelvum α., denoting "a mother," or "a female" generally. (Essai sur les Noms, &c., vol. 2, p. 178.) Ritter also detects in the name an allusion to the Asi (Vorhalle, p. 465, seqq.) ; and, in connexion with this view of the subject, we may state that the name of Asia (the land of the Asi) was first given to a small district near the Cayster, and in the very vicinity of Ephesus, the city which the Amazons had founded. Ephesus, moreover, first bore, it is said, the name of Smyrna, an appellation afterward bestowed on the city of Smyrna, which was founded by an Ephes- ian colony. This term Smyrna is said to have been originally the name of an Amazonian leader. Would it be too fanciful to deduce it from Asa-Myrina, and thus blend together the name of the African Amazon Myrina with the sacred appellation of the Asi? According to a tradition, which even Creuzer, in his Monumenti Inediti, has endeavored to dismiss, Ephesus was, according to a tradition, which even Creuzer, in his Monumenti Inediti, has endeavored to dismiss, Ephesus was, moreover, founded by women from the island of Lesbos, from the protection he is said to have afforded to the inhabitants when attacked by the Amazons. (Pausan., 3, 25.)

AMBARI, a people of Gallia Celta, situate between the Ædui and Allobroges, along either bank of the Ast or Sabine. Following D'Anvill's authority, we would place them in the present Department de l'Ain. Livy enumerates them among the Gallic tribes that crossed the Alps in the time of Tarquinius Pris- cus. (Livy, 5, 34.—Cass., B. G., 1, 11, et 14.)

AMBARVALIA, sacred rites in honour of Ceres, pre- vious to the commencement of reaping, which were called sacra ambarvalia, because the victim was carried around the fields (area ambiebat.—Vid. Ar- vales).

AMBANS, a people of Gallia Belgica, whose capital was Samarobriva, afterward called Ambiani or Ambi- anus, now Amiens. Their territory corresponds to what is now the Department de la Somme. (Cass., B. G., 4, 4.—Id. ib. 7, 75.)

AMBIAVINUS, a village of Germany, where the Emperor Caligula was born. It was situate between Confluentes and Bandobriga, and is supposed by some to be now Capelle, on the Rhine, by others Königsbach. Mannert, without fixing the modern site, thinks it near the town of Mainz. (Geogr., 2, p. 210.—Staude, Vit. Calig., 8.)

AMBIGATUS, a king of the Celts, in the time of Tarquinius Priscus. According to the account given by Livy (5, 34), he sent his two nephews, Sigovesus and Bellovesus, in quest of new settlements, with the view of diminishing the overflowing numbers at home. The two chiefains drew lots respecting their course, and Sigovesus obtained the route that led towards the Hercynian forest. The others, ignorant who was the first stated, however, appears to be a mere fable, owing its origin to the simultaneous emigrations of two hordes of Gallic warriors. (Compare Thury, Histoire des Gaulois, vol. 1, p. 39.)

AMBIX, a king of one half of the Eburones in Gaul, Caiuslovus being king of the other half. He was an inveterate foe to the Romans, and after in- flicting several serious and mortal losses upon the publication of Caesar's men, on being defeated by that commander. (Cass., B. G., 5, 24, et 25.—Id. ib. 6, 30.)

AMBIVARIETI and AMBIVARISI (for we have, in the Greek Paraphrase of Cæsar, b. 7, c. 75, Ἀμβιβαρίτης, and at c. 90, Ἀμβιβαρίον, a Gallic tribe, ranked among the clients of the Ædui, whence Glanerus and Glaciosum conspire with them to be the same with the Ambari. Almost all the MSS. of Cæsar call them
AMBROSIUS.

Amboniti, a tribe of Gallia Belgica, a short distance beyond the Moesia or Maeotis. (Cass., B. G., 4, 9.)

Ambra, the resort of the state of the country, and the royal residence of Pyrrhus and his descendants. It was situated on the banks of the Arachus or Arethous, a short distance from the waters of the Ambraican Gulf. The founders of the place were said to have been a colony of Corinthians, headed by Tolgos or Torgus, 650 B.C., who was either the brother or the son of Cypselus, chief of Corinth. (Strabo. 235.—Sevign., Ch., v. 452.) It early acquired some maritime celebrity, by reason of its advantageous position, and was a powerful and independent city towards the commencement of the Peloponnesian war, in which it espoused the cause of Corinth and Sparta. At a later period we find its independence threatened by Philip, who seems to have entertained the project of annexing it to the dominions of his brother-in-law, Alexander, king of the Molossians. (Demosth., Phil., 3, 88.) Whether it actually fell into the possession of that prince as his usual place of residence. (Strabo, 235.—Lio., 38, 9.) Ovid (Ibis, v. 306) seems to imply that he was interred there. Many years after, being under the dominion of the Aetolians, who were at that time involved in hostilities with the Romans, this city sustained a siege against the latter, almost unequalled in the annals of ancient warfare for the gallantry and perseverance displayed in defence of the place. (Polbg., frag., 22, 13.) Ambraecia, at last, opened its gates to the foe, on a truce being concluded, and was stripped by the Roman consul, M. Fulvius Nobilior, of all the statues and pictures with which it had been so richly adorned by Pyrrhus. From this time Ambraecia began to sink into a state of insignificance, and Augustus, by transferring its inhabitants to Nicopolis, completed its desolation. (Strabo, 325.—Paus., v. 23.) In regard to the topography of this ancient city, most travellers and antiquaries are of opinion, that it must have been the town of Artemisium, which now gives its name to the gulf. (Cramer's Ancient Greece, vol. 1, p. 145, sqq.)

Ambraecia Sinus, a gulf of the Ionian Sea, between Epirus and Acarnania. Scyllax (Peripl., p. 13) calls it the Bay of Anactorium, and observes, that the distance from its mouth to the farthest extremity was one hundred and twenty stadia, while the entrance was scarcely shorn of ships. (Strabo. 325.) makes the width of the gulf three hundred stadia. (Cramer's Ancient Greece, vol. 1, p. 153.)

Ambroes, a Gallic horse, which invaded the Roman territories along with the Teutones and Cimbris, and were defeated with great slaughter by Marius. The name is thought to mean, "dwellers on the Rhone" (Amb-rokes). So Ambidravi, "dwellers on the Drave," Sigambri, "dwellers on the Sieg." (Compare Pfister, Gesch. der Teutschen, vol. 1, p. 35.)

Ambrota, the celestial food on which the gods were supposed to subsist, and which, together with nectar, they were believed to owe their immortality. The name is derived from ἀμβροτός, "immortal." (Compare Heyne, Excurs. 9, ad ll., 1.—Id., Obs. ad Hom., ii., 1, 190.) There is a striking resemblance between the Grecian and Hindoo mythology in this respect. The Ambrita, or water of life, recalls immutably to mind the Ambrosia of Olympus. (Compare Hom., Od., 1, 359, where ambrosia and nectar appear to be used as synonymous terms.—Heyne, Excurs. 9, ad ll., 1, and consult the remarks of Buttman in his Lexicon, s. v.)

Ambrosius, bishop of Milan in the fourth century, and one of the latest and most distinguished of what are denominated the Fathers of the Christian Church. He was born at Arelate (Aries), then the metropolis of Gallia Narbonensis, according to some authorities A.D. 333, according to others, 340. His father was the emperor's lieutenant in that district, and, after his death, Ambrose, who was the youngest of three children, returned with the widow and family to Rome. Here, under the instructions of his mother and his sister Marcellina, who had vowed virginity, he received a highly religious education, and that bias in favour of Catholic orthodoxy by which he was subsequently so much distinguished. Having studied law, he pleaded causes in the court of the praetorian prefect, and was in due time appointed proconsul of Liguria. He thenceforth took up his residence at Milan, where a circumstance occurred which produced a sudden change in his fortunes, and transformed him from a civil governor into a bishop. Auxentius, bishop of Milan, the Arian leader in the west, died, and left that see vacant, when a warm contest for the succession ensued between the Arians and Catholics. In the midst of a tumultuous dispute, Ambrose appeared in the midst of the assembly, and exhorted them to conduct the election peaceably. At the conclusion of his address, he charged each party with having failed. Claymore, he said, and whether accidentally or by management, the result throws a curious light upon the nature of the times; for the superstition multitude, regarding the exclamation as a providential and miraculous suggestion, by general acclamation declared Ambrose to be elected. After various attempts to decline the episcopal office, Ambrose at length entered upon the discharge of its duties, and rendered himself conspicuous by his decided and unremitting opposition to the tenets of Arianism. To his zealous endeavours also was owing the failure of the attempt made by the remains of a pagan party to re-establish the worship of paganism. The strength and ability of Ambrose were such, that, although opposed to him on ecclesiastical points, Valentinian and his mother respected his talents, and in moments of political exigency required his assistance. The most conspicuous act on the part of Ambrose was his and the Emperor Theodosius' opposition to the sacrifice at Thessalonica. The emperor was consigned to a retirement of eight months, and not absolved ever until he had signed an edict, which ordained that an interval of thirty days should pass before any sentence of death, or even of confiscation, should be executed. After having paid the funeral honours to Theodosius, who died soon after obtaining peaceable possession of the throne, the good bishop had Rome departed from this world with a composure worthy of his firm character, in the year 397. It is evident, that Ambrose was one of those men of great energy of mind and temperament, who, in the adoption of a theory or a party, hold no middle course, but act with determination towards the fulfilment of their purposes. Regarded within their own circles, there is generally something in such characters to admire; and, beyond that, such men, if found to combine energy and wisdom, are useful, however, that men resembling Ambrose effected much to advance the Roman Catholic Church to the power to which it afterward attained, and, by necessary sequence, to the abuse of it which produced the Reformation. The writings of this father are numerous, and the great object of almost all of them was to maintain the faith and discipline of the Catholic Church, while some of them are written to commend celibacy as the summit of Christian perfection. His
pest work is "De Officiis," intended to explain the duties of Christian ministers. The most accurate edition of his works is that of the Benedictines, Paris, 2 vols. fol., 1682-90. (Gorton's Biogr. Dict., vol. 1, p. 67.)

AMMIUS, a city of Phocis, said to have been founded by the hero Ammius, situate between two chains of mountains, west of Lebeda, and north-west of Anticyra. It was destroyed by the Amphilc- tyons, but rebuilt and fortified by the Thebains before the battle of Cheronea. (Pausan., 10, 3, and 36.) Its ruins were first discovered by Chandler, near the village of Dysatome. (Cramer's Ancient Greece, vol. 2, p. 159.)

AMBULAEIA, female ministrels, of Syrian origin, who travelled from their motion at Rome, and were also of dissolute lives. (Aen. ad Horat., Serm., 1, 2, 1. — Nork, Etym. Handwörterbuch, vol. 1, p. 45, seq.) The name is supposed to be derived from the Syriac abd or ambh, "a flute."

AMULI, a surname of Castor and Pollux, in Sparta, and also of Jupiter and Minerva. They were so named, it is said, from ἀμοίβη, delay, because it was thought that they could delay the approach of death. Scholars, on the other hand, consider the term question to be of Latin origin, and derived from ambulare. (Compare the remarks of Vollmer, Wörterbuch der Mythol., s. v.)

AMYLLUS, a river of the lower world, according to Plato, whose waters no vessel could contain: τὸν ἀμιλλοῦ ποταμὸν, οὗ τὸ θάλα αὖχον οἶδεν αὐτήν. (De Rep., 10, vol. 7, p. 229, ed. Bekk.)

AMENIUS, a river of Sicily, near Catania. It is now the Judicello. (Strabo, 360. — Ovid, Met., 15, 279.)

AMERIA, one of the most considerable and ancient cities of Umbria. It lay south of Tuder, and in the vicinity of the Tiber. According to Cato, who is quoted by Piny (3, 14), Ameria could boast of an origin greatly anterior to that of Rome, having been founded, it is said, 964 years before the war with Perseus, or 1045 years before the Christian era. Cicero, in his defence of the celebrated Roscius, who was a native of Ameria, has frequent occasion to speak of this town. From him we learn its municipal rank, and from Frontius, that it became a colony under Augustus. (Compare Strabo, 223. — Festus, s. v. Ameria.) The small episcopal town of Ameria now represents this ancient city. (Cramer's Anc. Italy, vol. 1, p. 273.)

AMES, a town of a city of Sicily, near the Halesus. The Romans besieged it for seven months when in the hands of the Carthaginians, but without success. It was taken, however, after a third siege, and razed to the ground, the surviving inhabitants being sold as slaves. Steph. Byz. calls the place Amestratos; Diodorus Siculus, Mystratoum; and Polybius, Mysstratoum. (Diol. Sic., 23, col. 9. — Polyb., 1, 24.) It is now Mistretta, in the Val de Demone, near Persia, and wife to Xeres. Having discovered an intrigue between her husband and Artaytis, and imputing all the blame solely to the mother of the latter, she requested her from the king at a royal festival; and, when she had her in her power, cut off her breasts, nose, ears, lips, and tongue, and sent her home in this shocking condition. She also, on another occasion, sacrificed fourteen Persian children of noble birth, "to propitiate the gods."

HERODOTUS, "the deity who is said to dwell beneath the earth." (Herodot., 119, 10, seqq. — Id., 7; 1:14.)

AMID, a city of Mesopotamia, taken and destroyed by Sapor, king of Persia. It was repeopled by the inhabitants of Nisibis, after Ovian's treaty with the Persians, and by a new colony which was sent to it. It was called also Constantinia, from the Emperor Constantius. Its ancient walls, constructed with black stones, have caused it to be termed by the Turks Kara-Amid, "black Amid"; although it is more commonly denominated Dirar-Behr, from the name of its district. (Ammian. Marcell., 18, 22. —Procop., de Bell. Pers., 1, 8. —Solinus, Exercit. Pint., p. 483.)

AMICAR. Vid. Hamilcar.

AMIANUS MARCELLUS, a Latin poet, of Campania, mentioned by Macrobius (Sat., 2, 16) as having occupied the spot, where was afterward the Falernus Ager. The Amin- ean wine is thought to have derived its name from them. (Consult, however, the remarks of Heyne, ad Virg., Georg. 2, 97, Var. Lect.) The more correct opinion appears to be, that the Aminian wine was so called, because made from a grape transplanted into Italy from Aminaeum, a place in Thessaly. Macrobius, however, states, that the Falernian wine was more ancienly called Aminianus. (Compare Heyne, ad Virg., Georg. 2, 97.)

AMINUS SVNUS, a gulf of the Euxine, east of the mouth of the Halya, on the coast of Pontus, so called from the town of Amisus.

AMISIA, now the Ema, a river of Germany, falling into the German Ocean. Strabo (201) calls it Ama- sia (Ἀμασία), and Pliny (4, 14) Amassa.

AMNIA, a city of Cilicia, on the river Tiber. According to the Euxine, northwest from the mouth of the Iris. It was founded by a colony of Milesians, was the largest city in Pontus next to Sinope, and was made by Pharnaces the metropolis of his kingdom. It is now called Sam- soum. (Strabo, 547. — Polyb., Ezc. de legat., 55. — Mannert, 6, pt. 2, p. 448, seqq.)

AMITERNUM, a city in the territory of the Sabines, the birthplace of Sallust the historian. It was situate a short distance below the southern boundary of the Praetutii, and its ruins are to be seen near S. Vittorino, a few miles to the north of Aquila. From Livy (10, 39) we learn, that this town, having fallen into the hands of the Sammites, was recovered by the consul Sp. Carvilius (A. U. C. 459). Under the Romans it became successively a prefectora and a colony, as we are informed by Frontinus and several inscriptions. (Monc., vol. 3, p. 330.) In Ptolomy's time, Amiternum seems to have been included among the cities of the Vestini. (Cramer's Ancient Italy, vol. 1, p. 319.)

AMMION, Vid. Marcellinus.

AMMOCOUSTUS, a promontory of Cyprus, whence by corruption comes the modern name Fornagostes, or, more properly, Amgoestes: now the principal place in the island. (Ptol. — Cramer's Asia Minor, vol. 2, p. 381.)

AMMEDUS, a town of Persia, on which, according to Herodotus, a name given to a ship which was worshipped in Libya. When Bacchus was conquering Africa, he is said to have come with his army to a spot called, from the vast quantity of sand lying around, by the name of Hammodes ('Ἀμμόδος, i. e., sand, from ὄμος, "sand," and ἐδος, "aspect" or "appearance"). Here his forces were in great danger of perishing from want of water; when a ram on a sudden appeared, and guided them to a verdant spot, or oasis, in the midst of the desert. When they reached this place, the ram dis- appeared, and they found an abundant supply of water. Bacchus, therefore, out of gratitude, erect- ed on the spot a temple to Jupiter, giving him, at the same time, the surname of Ammon or Hommon, from the Greek ὄμος or ὀμος, "sand," in allusion to the circumstances connected with his appearance; and the statue of the deity had the head and horns of a ram. (Hygin., Poet. Astr., 2, 90.) According to another legend, Bacchus, in his extremity, prayed to Jupiter for aid, and the god, appearing under the form of a ram, indicated the place of the fountain with his foot, the water, before unseen, immediately bubbling up through the sand. — The spot to which the fable points is the Oasis of Ammon (end. Oasis), and the fountain is the famous Fons Oliis, or fountain of the Sun, which, according to Herodotus (4, 181), was
tepud at dawn, cool as the day advanced, very cool at noon, diminishing in coolness as the day declined, warm at sunset, and boiling hot at midnight. Here also was the celebrated oracle of Ammon, which Alexander the Great visited, in order to obtain an answer respecting the people of Memphis. And, indeed, the explanation is given by Plutarch (Vit. Alex., c. 26), and, as may well be expected, the answer of the oracle was altogether acceptable to the royal visitor, though the credit previously attached to its answers was seriously impaired by the gross mixture which it had on this occasion displayed. The temple of Ammon, like that of Delphi, was famed for its treasures, the varied offerings of the pious; and these, in the time of the Persian empire, were esteemed as far the more precious by the Cyambyes as to induce him to send a large body of forces across the desert to seize upon the place. The expedition, however, proved a signal failure; no accounts of it were ever received, and it is probable, therefore, that the Persian troops were purposely misled on their route by the Egyptian guides, and that all perished in the desert. (Vid. Cambyses.—Herodotus (2, 54, seqq.) gives us two accounts respecting the origin of this temple to Ammon. From the heathen in the midst of them from the priests of Jupiter in Thebes, stated, that two priestesses had been carried off by some Phoenicians from Thebes, and that one of them had been conveyed to Libya and there sold as a slave, and the other to Greece. These two females, according to them, had founded oracles in each of these countries. According to the other story, which he heard from the priestesses at Dodona, two black pigeons had flown from Thebes in Egypt; one of these had passed into Libya, the other had come to Dodona in Greece, and both had spoken with a human voice, and directed the establishment of oracles in each of these places. —Thus much for the ordinary narrative. Ammon, says Plutarch (de Is. et Os., p. 554), is the Egyptian name for Jupiter. This god was particularly worshiped at Thebes, called in the sacred books Hammomeno, "the possession of Hammon," and in the Septuagint version (Ezek. c. 20) the city of Ammon. Jablon ski derives the word Ammon from Am-\textit{a}zin, "shining." According, however, to Champollion the younger, the term in question (\textit{Amon} or \textit{Amen}) denoted, in the Egyptian language, "secret," "concealed," or "he who reveals his secret powers." It is sometimes also, as the same writer informs us, united with the word \textit{Kap}, another appellation of the Supreme Being, and from this results the compound \textit{Amenbdes} (Amen-Neb) which is found on a Greek inscription in the greater Oasis. (Letronne, Rech. sur l'Egypte, p. 237, seqq.) The Greek etymology of the name Amnon, from \textit{\textalpha}\textit{m}\textalpha\textit{m} or \textit{\textphi}m\textalpha\textit{m}, "saint," is fanciful and visionary, and only affords another proof of the constant habit in which that nation indulged, of referring so many things to themselves, with which they had not, in truth, the slightest connexion. From all that has been said by the ancient writers, it would appear very clearly, that the allusion in the legend of the golden ram, is to the same phenomenon. This is very apparent from the story told by Herodotus (2, 42), and which he received from the priests of Thebes. According to this narrative, Hercules was very desirous of seeing Jupiter, whereas the god was unwilling to be seen; until, at last, Jupiter, yielding to his importunity, contrived the following artifice. Having separated the head from the body of a ram, and flayed the whole carcass, he put on the skin with the head on his own head. Now, if Hercules denote the sun, and \textit{arion} the first sign of the zodiac, the whole may be an allegory illustrative of the opening of the year. —As regards the establishment of the oracle of Ammon, it may be observed, that the account respecting the two doves or pigeons, which is given by Herodotus, and has already been alluded to, came, as that historian informs us, from the priestess-
which at that time subsisted among philosophers. Porphyry (ap. Euseb., Hist. Ecc., 6, 19) relates, that Ammonius passed over to the legal establishment, that is, apostatized to the pagan religion. Eusebius (l. c., p. 221) and Jerome (De S. E. c. 55, p. 132), on the contrary, assert, that Ammonius continued in the Christian faith until the end of his life. That is proved by his followers, who refer to another Ammonius, who, in the third century, wrote a Harmony of the Gospels, or to some other person of this name; for they refer to the sacred books of Ammonius: whereas Ammonius Saccas, as his pupil Longinus attests, wrote nothing. (Compare Fabricius, Bibl. Gr., vol. 4, p. 160, 172.) It is not easy, indeed, to account for the particulars related of this philosopher, but upon the supposition of his having been a Christian, Porphyry, De Fato, ap. Phot., Bibl. vol. 2, p. 461, ed. Bekker), Ammonius was induced to adopt the plan of a distinct eclectic school, by a desire of putting an end to those contentions which had so long distracted the philosophical world. Ammonius had many eminent followers and hearers, both pagan and Christian, who all, doubtless, promised themselves much illumination from a preceptor that undertook to conduct them into the rays of that wisdom. He taught his select disciples certain sublime doctrines and mystical practices, and was called θεοδιδάκτης, "the heaven-taught philosopher." These mysteries were communicated to them under a solemn injunction of secrecy. Porphyry relates, that Plotinus, with the rest of the disciples of Ammonius, promised not to divulge certain dogmas which they learned in his school, but to lodge them safely in their purified minds. This circumstance accounts for the fact mentioned on the authority of Longinus, that he left nothing in writing. Ammonius probably died about the year 243. (Enfeld's History of Philosophy, vol. 2, p. 58, seqq. — Compare Schöll, Hist. Lit. Gr., vol. 5, p. 119, seqq.) — III. A Christian writer, a native of Alexandria, who lived about 250 A.D. He wrote a Harmony of the Gospels, which Jerome cites with commendation. — IV. The son of Hermias, so called for distinction sake from other individuals of the same name, was a native of Alexandria, and a disciple of Proclus. He taught philosophy at Alexandria about the beginning of the sixth century. His system was an eclectic one, embracing principles derived both from Aristotle and Plato. He cannot be regarded as an original thinker: he was very strong, however, in mathematics, and in the study of the exact sciences, which rectified his judgment, and preserved him, no doubt, from the extravagances of the New Platonism. Ammonius has left commentaries on the Introduction of Porphyry; on the Categories of Aristotle, together with a life of that philosopher; on his treatise of Interpretation; and scholia on the first seven books of the Metaphysics. Of the commentaries on the Introduction of Porphyry we have the following editions: Venice, 1509, fol.; Gr.; Venice, 1546, 8vo, ap. Ald., Gr.; Venice, 1569, fol.; Lat. transl. — Of the commentary on the Categories, and of that on the treatise of Interpretation, Venice, 1509, fol.; Venice, 1546, ap. Ald., 8vo. Of the commentary on the treatise of Interpretation alone, Venice, 1549, 8vo, Gr. et Lat. The scholia on the Metaphysics have never been edited. (Schöll, Hist. Lit. Gr., vol. 7, p. 123, seqq.) — V. A priest of one of the Egyptian temples. He was one of the literary men who fled from Alexandria to Constantinople after the destruction of the pagan temples. There he became, together with Helianus and others, the masters of the ecclesiastical writer: this is a fact which appears firmly established, and the reasons alleged by Valkenear for placing him in the first or second century have been generally considered insufficient. Ammonius has left us a work on Greek synonyms, &c., under the title Περὶ διώτων καὶ διάφορων λέξεων. It is a production of very inferior merit. The best edition is that of Valerieaer, Lugd. Bat., 1739, 4to. An abridgment of this edition was published at Erlang, in 1787, 8vo, under the care of Ammon. Valkenear's edition has also been reprinted entire, but in a more portable form, at Leipzig, 1822, 8vo, under the care of Scheffer, who has added the index and notes of Kuhn, and the critical letter of Segar, addressed to Valkenear and published at Utrecht in 1776, 8vo. We have also a treatise of Ammonius, Περὶ ἀκρούγοριας, "On the improper use of words," which has never been printed. — VI. A physician of Alexandria, surnamed the Iliotomast, from his skill in cutting for the stone; an operation which, according to some, he first introduced. He invented an instrument for crushing the larger calculi, which was admitted in the bladder. He also made use of caustic applications, especially red arsenic, in hemorrhages. (Sprengel, Hist. Med., vol. 1, p. 465.)

Amnibus, a port of Gnossus in Crete, southeast from Gnossus, with a small river of the same name in its vicinity. (Hom., Od., 19, 188.—Apoll. Rhod., 3, 877.) Amor, the son of Venus, was the god of love. (Vid. Cupido.)

Ampelus, now Amorgos, one of the Cyclades, and situate to the east of Nicias. According to Scylax (Peripl., p. 22) and Stephanus Byzantinus (s. v. Αμοργός), it contained three towns, Arcesine, Αμηλίας, and Minoa. The former yet preserves its name, and stands on the northern extremity of the island. Αμηλίας is perhaps Porta S. Anna. Minoa was the birth place of Simonides, an iambic poet, mentioned by Strabo (487) and others. Ampelus gave its name to a peculiar linen dress manufactured in the island. (Steph. Byz., s. v. Αμοργός.—Cramer's Anc. Greece, vol. 3, p. 416.)

Ampelius, Lucius, the author of a work that has reached us, entitled Libri Memorialis. The particular period when he lived is unknown. Bahr makes him to have flourished after Trajan, and before Theodosius. His work is divided into fifty small chapters, and is addressed to a certain Macrinus. It contains a brief account of the world, the elements, the earth, history, &c., and appears to be compiled from previous writers. Marks of declining Latinity are visible in it. The best editions are that of Tschucke, Lips., 1793, 8vo, and that of Beck, Lips., 1826, 8vo. (Bähr, Gesch. Rom. Lit., vol. 1, p. 454, seqq.)

Ampelius, I. a promontory of Crete, on the eastern coast, south of the promontory of Sammonium. It is now Cape Sacro. (Ptol., p. 91.) Pliny (4, 12) as regards to Crete a town of the same name; and there are, in fact, some ruins between the mouth of the river Sacro and the promontory. (Cramer's Ancient Greece, vol. 3, p. 372.) II. A promontory of Macedonia, at the eastern extremity of the peninsula of Sithonia, and forming the lower termination of the Sinus Singiticus. Livy calls it the Toronean promontory (31, 45.)

Ampelusia, called also Cote and Soloe, a promontory of Africa, on the coast of Mauritania, and forming the point of separation between the Fretum Herculeum (Strait of Gibraltar) and the shore of the Western Ocean. It is now Cape Spartel. The ancient name Ampelusia refers to its abounding in vines, a signification which Cote is said to have had in the Punic or Phoenician tongue. (Compare the remarks of Hamaker, Miscell. Phanit., p. 247, Lugd. Bat., 1824, 4to.)

Amphialides, a patronymic of Alcmeon, as being son Amphiaras. (Oid. Fast., 2, 43.)

Amphiarius, a famous soothsayer and warrior, according to some a son of Oicles, according to others of Apollo. So, also, one account makes his mother to have been named Clytamenstra; another, Hypermenestra, daughter of the Aetolian king Thestius. He appears
to have been a descendant of a distinguished Nugur family, his grandfather having been Antiphus, and his great-grandfather Melampus. From various scattered accounts respecting him in the ancient writers, the following particulars may be gleaned. He was, in his youth, at the famous hunt of the Calydonian boar; he afterward returned to Argos, his native city, and, with the aid of his brother, drove Adrastus from the throne of Argos, and, having taken his place, the monarch was restored to his kingdom, and gave Amphiaraus his sister Eriphyle in marriage. The offspring of this union were two sons, Alcmeon and Amphiochus. When Adrastus, at the request of Polynices, resolved to march against Thebes, Amphiaraus was unwilling to accompany him, for he knew that the expedition would prove fatal to himself, and he endeavored also to dissuade the other chiefs from going. Polynices thereupon presented Eriphyle with the famous necklace of Harmonia, to induce her to overcome her husband's scruples, and she not only, in consequence, made known his place of concealment, but prevailed upon him to accompany the army. Amphiaraus thereupon, previous to his departure, knowing what was about to befall him, charged his son Alcmeon to kill his mother the moment he should hear of his father's death. The Theban war proved fatal to the Amphiackians, and Alcmeon, while engaged in dangerous Amphi- acation with Periclymenes, was swallowed up by the earth, Jupiter having caused the ground to open for the purpose of receiving his favourite prophet, and saving him from the dishonour of being overcome by his antagonist. The news of his death was brought to Alcmeon, who immediately executed his father's command, and murdered Eriphyle. Amphiaraus received divine honours after death, and had a celebrated temple and sanctuary. His body was placed in a case of white marble, and near his tomb was a fountain, whose waters were held sacred. Those only who had consulted his oracle, or had been delivered from a disease, were permitted to bathe in it, after which they threw pieces of gold and silver into the stream. Those who consulted the oracle of Amphiaraus, sacrificed a ram to the prophet, and spread the skin upon the ground, upon which they slept, in expectation of receiving in a dream an answer to the question of which they were in quest. (Apollod. 3, 6, 2. — Hom. Od., 15, 248, &c.— Rauh. Sept. c. Thcb.— Hygin. fab., 70, 75, &c. — Pausan. 1, 34.)

AmphiCRATES, I. a biographer, who, according to Diogenes Laertius (Vit. Aristip.), was condemned to die by poison. (Compare Atheneus, 13, 5.) II. An Athenian orator, who, being banished from his country, retired to Seleucia on the Tigris, and took up his residence there under the protection of Cleopatra, daughter of Mithradates. He starved himself to death, because suspecting by this princess of treason. Jonsius (de Script. Hist. Phil., 3, 15) thinks that this is the same with the preceding. — III. An artist, mentioned by Pliny (34, 8), according to a new reading proposed by Sillig (Dict. Art., s. v.).

Amphictyon, a mythic personage, son of Deucalion, who is said to have reigned in Attica after driving out Cranaus, his father-in-law, and to have been himself expelled by Erechthiumos. (Apollod., 3, 14, 6.) The establishment of the Amphictyonic council is ascribed to him by some. (Compare Heyne, ad loc.)

AmphictyOnes, the deputies of the cities and people of Greece, who represented their respective nations in a general assembly called the Amphictyonic Council. The most authentic list of the communities thus represented is as follows: Thessalians, Beocitians, Dorians, Ionians, Peribabians, Magnesites, Iocrians, Oeetans or Eneasians, Pithoites or Achaeans of Phthia, Melians or Malians, and Phocians. The orator Eschine, who furnishes this list, shows, by mentioning the number twelve, that one name is wanting. The other lists

supply two names to fill up the vacant place; the Dolopes and the Delphians. It seems not improbable, that the former were finally supplanted by the Delphi, who appear to have been a distinct race from the Phocians. After the return of the Heraclids, the number of the Amphictyonic tribes, then perhaps already hallowed by time, continued the same; but the geographical compass of the league was increased by the admission of the Thessalians, which was occasioned by the new Doric states. It would be wrong to regard this council as a kind of national confederation. The causes which prevented it from acquiring this character will be evident, when we consider the mode in which the council was constituted, and the nature of its ordinary functions. The constitution of the Amphictyonic Council rested on the supposition, once, perhaps, not very inconsistent with the fact, of a perfect equality among the tribes represented by it. Each tribe, however feeble, had two votes in the deliberation of the congress: none, however powerful, had more. The order in which the right of sending representatives to the council was exercised by the various states included in one Amphictyonic tribe was, perhaps, regulated by private agreement; but, unless one state usurped the whole right of its tribe, it is manifest that a petty tribe, which formed but one community, had greatly the advantage, in having the members of its two tribes be represented in their turn, the more rarely in proportion to the magnitude of the tribe to which they belonged. — With regard to other details less affecting the general character of the institution, it will be sufficient here to observe, that the council was composed of two classes of representatives, called Pythagoras and Hierommenes, whose functions are not accurately distinguished. It seems, however, that the former were the councilors, the latter the officers. The office of the latter consisted in preparing and directing their deliberations, and carrying their decrees into effect. At Athens, three Pythagora were annually elected, while one Hierommen was appointed by lot: we do not know the practice in other states. One peculiar feature of the Amphictyonic Council was, that its meetings were held at two different places. There were two regularly convened every year; one in the spring, at Delphi, the temple of which was situated at the foot of the town, not far removed, within the pass of Thermopylae, at a temple of Ceres. It has been supposed, in attempting to account for this, that there were originally two distinct confederations; one formed of inland, the other of maritime tribes; and that when these were united by the growing influence of Delphi, the ancient places of meeting were retained, as a necessary concession to the dignity of each sanctuary. A constitution such as the Amphictyonic Council appears to have possessed, could not have been suffered to last if any important political interests had depended on the decision of this assembly. The truth is, the ordinary functions of the Amphictyonic Congress were chiefly, if not altogether, connected with religion, and it was only by accident that it was ever made subservient to political ends. The original objects, or, at least, the essential character, of the institution, seem to be faithfully expressed in the terms of oath preserved by Eschines, which bound the members of the league to refrain from utterly destroying any Amphictyonic city, and from cutting off its supply of water, even in war, and to defend the sanctuary and the treasures of the Delphic god from sacriilege. In this ancient and half-symbolical form we perceive two main functions assigned to the council; to guard the temple, and to restrain the violence of hostility among Amphictyonic states. There is no intimation of a positive confederation against foreign enemies, except that the protection of the temple; nor of any right of interposing between members of the league, unless where one threatens the existence of another. A review, then, of the history
of this council shows that it was almost powerless for good, except, perhaps, as a passive instrument, and that it was only active for purposes that were either unimportant or pernicious. Its most legitimate sphere of action lay in cases where the honour and safety of the Delphic sanctuary were concerned, and in these it might safely reckon on general co-operation from all the Greeks. A remarkable instance is afforded by the Sacred or Corinian war. (Vid. Criass and Philipp.)

The origin of the Amphiethonic Council is altogether uncertain. Acrisius is said to have founded the one at Delphi, Amphiethon the other at Thermopyla, a tradition in favour of the opinion above advanced, that the great council was a union of two. Independently, however, of these two, it is probable that many Amphiethones (so to call them) once existed in Greece, all trace of which has been lost. (Thirwells's History of Greece, vi. 192.)

Under the influence of the Delphic oracle, at least five confederations (of the Amphiethones) were formed, and referred to its being composed of the tribes that dwelt round about. An alteration took place when Amphiethon, the son of Deucalion, founded a temple of Ceres at Thermopyla, one of the places of assembling. From this time, we are informed, the confederation took the name of Amphiethones (Amphiethoses).

Amphiethon, IV, a festival observed by private families at Athens, the fifth day after the birth of every child. It was customary to run round the fire with a child in their arms; thereby, as it were, making it a member of the family, and putting it under the protection of the household deities, to whom the hearth served as an altar. Hence the name of the festival, from ἀμφιπηθέος, "to run around." (Parker, Gr. Ant., 4. 14.)

Alcman, of the town of Mopsuestia, in Phrygia, also celebrated this festival. According to Homer (Il., 2, 593), it belonged to Nestor. Some critics assigned it to Triphylia. (Strabo, 349.)

Amphiëchus, I., son of Amphirhous and Eriphone. After the Trojan war he left Argos, his native country, retired to Acarnania, and built there Argos Amphiëchous. This is the account of Thucydides (2, 68); butvid. Argos, IV, 2. II. An Athenian philosopher who was a contemporary of Socrates. (Varr. de R., II, 1.)

Amphiëmnius and Anthylus, two brothers, who, when Catana and the neighbouring cities were in flames by an eruption from Mount Vesuvius, saved their parents upon their shoulders. The fire, as it is said, spared them while it consumed others by their side; and Pluto, to reward their uncommon piety, placed them after death in the island of Leuce. They received divine honours in Sicily, as likewise at Cosa, and in Italy. (Cf. Sicil., 5, 4.—Sil. Itall., 14, 197.—Cland., Inylt., 7, 41.)

Amphiion, I, a Theban prince, son of Antiope and Jupiter, or, rather, of Epeopos, king of Sicyon. Antiope, the niece of Lycus, king of Thebes, having become the mother of twins, Amphiion and Zethus, exposed them on Mount Citharon, where they were found and brought up by shepherds. Having learned, on reaching manhood, the cruelties inflicted upon their mother by Lycus and Dirce (vid. Antiope), the twin brothers avenged her wrongs by the death of both the offending parties (vid. Lycus and Dirce), and made themselves masters of Thebes, where they reigned conjointly. Under their rule the kingdom of Thebes acquired new splendour, and the arts of peace flourished. Amphiion cultivated music with the greatest success, having received lessons in this art from Mercury himself, who gave him a lyre of gold, with which, it is said, he put the whole of Greece into a dance, thus taking their respective places in obedience to the tones of his instrument. The meaning of this legend is supposed to be, that Amphiion, by his mild and persuasive manners, prevailed upon his rude subjects to build walls around Thebes. Muller, however, sees in it an allusion to the old Dorian and Æolian custom of erecting the walls of cities to the sound of musical instruments.

—Amphiion, after this, married Niobe, daughter of Tan- talus, and became by her the father of seven sons and seven daughters, who were all slain by Apollo and Di- ana. (Vid. Niobe.) According to one account, he destroyed himself after this cruel loss, while another version of the story makes him to have fallen in a sedition. (Horn. Od., 11, 268 seqq.—Apollod., iii. 8, 1 seqq.— Müller, Gesch. Hellen. Stämme, &c., vol. 1, p. 267.)—II. A painter, contemporary with Apelles, by whom he was highly respected as an artist, and who yielded to him in the grouping of his pictures. (Pint., 35, 10. III. A statuary of Cossus, and pupil of Potilichus. (Pausan., 10, 15.) He flourished about Olymp. 88.

Amphiouris, a city of Thrace, near the mouth of the Strymon. It was founded by the Athenians in the immediate vicinity of what was termed 'Ereka 'Oaioi, or "the Nine Ways," a spot so called from the number of roads which met here from different parts of Thrace and Macedon. The occupation of the Nine Ways seems to have excited the jealousy of the Thra- cians, who, to frequent encounters between them and the Athenian colonists, in one of which the latter sustained a severe defeat. (Thucyd., 1, 100.) After a lapse of some years, the city was burned out under the command of Agnon, son of Nicias, who succeeded in subduing the Êdomi. Agnon gave the name of Amphiopolis to the new city, from its being surrounded by the waters of the Strymon. (Thucyd., 4, 102.—Seldz., p. 27.) Amphiopolis soon became one of the most flourishing cities of Thrace; and at the time of the expedition of Brasidas into that country, it was already a large and populous place. Its surrender to the Persians brought the river Hypooesus, and good fortune of the Athenians; and we may estimate the importance they attached to its possession, from their displeasure against Thucydides, who arrived too late to prevent its falling into the hands of the enemy (Thucyd., 4, 106); and also from the exertions they afterward made, under Cleon, to repair the loss. The attempt proved unsuccessful, through the ignorance and rashness of the Athenian general, who was slain in an engagement at the river Lestrygones. (Seldz., supra.) Amphiopolis paid the highest honours to his memory, resolving thenceforth to revere him as the true founder of their city; and with this view they threw down the statues of Agnon, and erected those of Brasidas in their stead. Athens never regained possession of this important city; for though it was agreed, by the terms of the peace soon after concluded with Sparta, that this colony should be restored, that stipulation was never fulfilled, the Amphiopolitans themselves refusing to accede to it, and the Spartans expressing their inability to compel them. The Athenians, in the twelfth year of the war, sent an expedition under Eutoc to attempt the reconquest of the place, but without success. (Thucyd., 7. 9.) Mitford, in his history of Greece, affirms, that Amphiopolis was restored to the Athenians; but there is no proof of this fact. Amphiopolis, at a later period, fell into the hands of Bithynia, and was made a Roman colony. (Gesch. d. Gesch. der Rumn., vol. 4, p. 42.)

The spot on which the ruins of Amphiopolis are still to be traced, bears the name of Jenikei. The position of Amphi- polis, observes Col. Leake (Walpole's Collection, p. 510), is one of the most important in Greece. It stands in a pass which traverses the mountains border-
ing the Strymonic Gulf; and it commanded the only easy communication from the coast of that gulf into the great Macedonian plains, which extend for sixty miles from beyond Meneleto to Philippus. (Cramer’s Ancient Greece, vol. 1, p. 392, seq.)

Amphi, a Greek comic poet of Athens, contemporary with Plato. His works are lost, though some of them are mentioned by ancient historians. (Cassell Schweigh., ad Athen., vol. 9, Index Auct., p. 3.)

Amphissa, I., a daughter of Macareus, failed to have given her name to the city of Amphissa.—II. The chief city of the Locri Ozolii. We find, from Strabo, that it stood at the head of the Crissowan Gulf, and Aschin in (Ctes., p. 71) informs us, that its distance from Delphi was sixty stadia; Pausanias reckons one hundred and twenty. Amphissa was said to have derived its name from the circumstance of its being surrounded on every side by mountains. ( Aristot., ap. Harpocrat. Lex.—Steph. Byz., s. v. Ἀμφίσσα.) Amphissa was destroyed by order of the Amphicytons, for having dared to restore the walls of Crissa, and to cultivate the ground, which was held to be sacred; and lastly, on account of the manner in which they molested travellers who had occasion to pass through their territory. (Strabo, 419.—Aschin. in Ctes., p. 71, seq.) At a later period, however, it appears to have somewhat recovered from this ruined state when under the dominion of the Étoliains. In the war carried on by the Romans against this people, they besieged Amphissa, when the inhabitants abandoned the town and retired into the citadel, which was deemed impregnable. (Liv., 37, 5.) It is generally agreed, that the modern town of Salôna represents the ancient Amphissa. Sir William Gell (Itinerary, p. 196) observes, that the real distance between Delphi and Amphissa is nearly fifteen Roman miles. (Cramer, vol. 1, p. 111.)

Amphitheatrum, an edifice of an elliptical form, used for exhibiting combats of gladiators, wild beasts, and other spectacles. The word is derived from ὁ ἀμφί and ἄθλος, from the spectators being so ranged as to see equally well from every side. The first durable amphitheatre of stone was built by Statilius Taurus, at the desire of Augustus. The largest one was begun by Vespasian, and completed by Titus, now called Colosseum. Others, or parts of them, which Vespasian transported to the square in front of it. It is said to have contained 87,000 spectators, to have been 5 years in building, and to have cost a sum equal to 10 millions of crowns. 12,000 Jews were employed upon it, who were made slaves at the conquest of Jerusalem. Its magnificent ruins still remain. There are amphitheatres still standing, in various degrees of perfection, at several other places besides Rome. At Pola in Istria, at Nisaea, at Arica, Bourdeaux, and particularly at Verona. The place where the gladiators fought was called the arena, because it was covered with sand or sawdust, to prevent the gladiators from sliding, and to absorb the blood.

Amphitrite, a daughter of Nereus and Doris, and the spouse of Neptune. She for a long time shunned the addresses of this deity; but her place of concealment was discovered to Neptune by a dolphin, and the god, out of gratitude, placed this fish among the stars. Amphitrite had, by Neptune, Triton, one of the sea-deities. (Ovid, Metamorph., 1, 14.—Hesiod, Theog.)

Amphitryon, a Théban prince, son of Alcaeus and Hipponome. His sister Anaxo had married Electryon, king of Mycenae, whose sons were killed in a battle by the Teleboans. (Vid. Alcmena.)

Amphitryontidae, a surname of Hercules, as the supposed son of Amphitryon. (Verg., Aen., 8, 16.)

Amphrysus, a river of Tessaly, flowing into the Smus Pagasus, above Phthiotic Thebes. Near this stream, Apollo, when banished from heaven, fed the flocks of King Admetus. Hence, among the Latin poets, the epithet Amphrysus becomes equivalent to Apollinus. (Lucan., 6, 367.—Verg., Aen., 6, 398.)

Amphiglossa, a river of Africa, forming the boundary between Mauritania Cæsariensis and Numidia, and falling into the sea to the east of Igliglis, or Jigel. On a branch of it stood Cirta, the capital of Numidia. The modern name is Wad-El-Kibir, i. e., the Great River. [Habicht, in “Tunesie,” vol. 6, Pl. 5, 3.]

Amphanthus, or Amphanctyon Velanius, a celebrated valley and lake of Italy, in Samnium, to the southwest of Trivicum. Virgil (Aen., 7, 563) has left us a fine description of the place. The waters of the lake were remarkable for their sulphureous properties and exhalations. Some antiquaries have confounded this spot with the Lake of Cutilin, near Reate; but Servius, in his commentary on the passage of Virgil just referred to, distinctly tells us that it was situated in the country of the Hirpinii, which also confounded Cicero (De Div., 1) and Pliny (H. N., 2, 99). The latter writer mentions a temple consecrated to the goddess Mephitis, on the banks of this sulphureous lake, of which a good description is given by Romanelli, taken from a work of Leonardo di Capo. (Romanelli, vol. 2, p. 351.) The lake is now called Mufiti, and is close to the little town of Fricento. (Cramer’s Ancient Italy, vol. 5, p. 251.)

Amphilochus, son of Procas, king of Alba, and younger brother of Numitor. The crown belonged of right to the latter, but Amphilochus, dispossessed him of it, put to death his son Lausus, and fearing lest he might be dethroned by a nephew, compelled Rhea Sylvia, the daughter of Numitor, to become a vestal, which priestess bound her to perpetual virginity. Notwithstanding, however, all these precautions, Rhea became the mother of Romulus and Remus by the god Mars. (Cicero, N. D., 5, 24; Suetonius, De Caesaribus, 6, 14; Dion Cass., vol. 25, p. 111.)

Amphipolis, a town of Greece, in the district of Mysia, and a large town of Ancient Greece, in the district of Nysa, supposed to have been the place of landing of the invaders from Thrace. (Cramer, vol. 5, p. 37.) It was so called because it stood on the bank of the river Thracian Borporus, north of Nicopolis, and south of the temple of Jupiter Urus. Here Amycus, an ancient king of the Bebyraceans, was slain in combat with Pollux. His tomb was covered, according to some, with a laurel, and hence they maintain that the harbour was called Daphne Portus. Arrian, however, speaks of a harbour of the insane Daphne near this, which no doubt has given rise to the mistake. (Arrian, Perip. Eux., p. 25. —Plut., Vit. Rom., &c.)

Amphiclea, a city of Italy, in Latium, in the vicinity of Fundi and the Cæcubus Agger. It was said to have been of Greek origin, being colonized from the town of Amycle in Lacoenia. Concerning the destruction of Amycle, in Italy, strange tales were related. According to some accounts, it was infested and finally rendered desolate by serpents. (Plin., 3, 5, who also quotes Varro to the same effect.—Isig., ap. Sot., ’de Mir. Pont., &c.) Another tradition represented the fall of Amycle as having been the result of the silence enjoined by law on its inhabitants, in order to put a stop to the false rumours of hostile attacks which had been so frequently circulated. The enemy at last, however, really appeared; and, finding the town in a defenceless state, it was destroyed. This account is in general acceptation with the poets. (Verg., Aen., 10, 563.—Sil. Ital., 8, 528.—Cramer’s Asia, vol. 2, p. 128.)—II. One of the most ancient cities of Lacoenia, a short distance to the southeast of Sparta. It was founded long before the arrival of the Dorians and Heraclides, who conquered and reduced it to the condition of a small town. It
was, however, conspicuous, even in Pausanias's time, for the number of its temples and other edifices, many of which were richly adorned with sculptures and other works of art. Its most celebrated structure was the temple of the Amunean Apollo. (Polyb., 4, 9, 3.) Amynas is mentioned by Homer (Il., 2, 584) and Pindar (Pyth., 1, 122.—Isthm., 7, 19). Polybius states that Amynas was one of the twelve cities free from Sparta (Polyb., 3, 18); but Dodwell observes, that Slarcia-Chora, which occupies its ancient site, is nearly double that distance. (Classical Tour, vol. 2, p. 418.—Cramer's Ancient Greece, vol. 3, p. 213.) Polybius describes the country around Amynas as most beautifully wooded and of great fertility; which account is corroborated by Dodwell, who says, "it luxuriates in fertility, and abounds in mulberries, olives, and all the fruit-trees which grow in Greece." Amynas, which had been covered with fruit-trees by Alexander the Great, was, in his first year, given to Antigonus the Gonatas, and not to Philip, having in his favour the wish of the natives, ascended the throne in preference to him. He afterward served in the armies of both Philip and Alexander. Having conspired against the latter, he was put to death. (Justin, 7, 4, seqq.—Id., 12, 7.) V. One of the deputies sent by Philip of Macedon to the Thebans, B.C. 339, to induce them to remain faithful to his interests. VI. A general of Alexander's, B.C. 331, sent back to Macedonia to make new levies. (Quint. Curt., 6.—Id., 5, 1.—VII. Another officer of Alexander's, who went over to Darius, and was slain in attempting to seize upon Egypt. (Quint. Curt., 3, 9.) VIII. Son of Arrhabeus, commanded a squadron of cavalry in Alexander's army. He was implicated in the conspiracy of Philotas, but acquitted. (Quint. Curt., 4, 16, &c.)—IX. A king of Galatia, who succeeded Deiotaros. He was the last ruler of this country, which was added to the Roman empire, after his death, by Augustus. X. A geographical writer, author of a work entitled Στατισια, or the Encampments of Alexander in his conquest of Asia. (Athen., 10, 422, b., &c.) It has not come down to us. AMYNTOR, king of Ormenium, a city of the Dolo- pians. He put out the eyes of his son Phrenix on a false charge of having corrupted one of the royal con- cubines. He was slain by Hercules on attempting to oppose the passage of that hero through his territories. (Apollod., 2, 7.—Id., 3, 13.—Compare Homer, II., 9, 448.) AMYRUS CAMPUS, a plain of Thessaly, in the district of Magnesia, near the town and river of Amyrus. It was famed for its wines. (Polyb., 5, 99.) AMYREUS, an Egyptian leader during the revolution under Inaros. He succeeded the latter. (Herod., 2, 140, and 3, 15.—Thucyd., 1, 110.—Diod. Sic., 11, 74.) Cisias, however, makes him to have been a son of Amyrus in the time of Cambyses, whereas the other account places him in the reign of Artaxerxes Longinamus. As regards this discrepancy, consult Bähr, ad Ctes., p. 121. AMYRUS, I. a river of Thessaly, in the upper part of the district of Magnesia, and near the town of Melbea. (Apoll. Rhod., 1, 596.)—II. A city of Thes- saly, near the river of the same name. (Schol. in Apoll. Rhod., 1, 6.) AMYRTES, a river of India falling into the Ganges. Mannert makes it to be the same with the Pattana, near the modern city of Haridwar. (Geogr., vol. 5, p. 93.) AMYTHIÁN, a son of Cretheus, king of Iolchos, by Tyro. He married Idomene, by whom he had Bias and Melampus. After his father's death, he estab- lished himself in Messenia. He is said to have given his name to a small town for more than four artificers. (Apoll., 1, 9.—Heges., ad loc.) Melampus is called Amy- thianus, from his father Amythias. (Virg., G. 5, 500.) AMYTIE, I. a daughter of Astyages, whom Cyrus married. (Ctesias, p. 91.—Consult Bähr, ad loc.)—II. A daughter of Xerxes, who married Megenus, and disgraced herself by her licentious conduct. ANACES OF ANACTES, a name given to Castor and Pollux. Their festivals were called Anacea (Ἀνα- κεα) in a general sense to all those deities who were believed to watch over the interests, as well pub- lic as private, of the city of Athens: in a special sense, however, the appellation was given to the Dioscuri, on account of the peculiar advantages which the capital
of Attica had derived from them. (Compare Tzetza, ad Hl., p. 69.) Spanheim (ad Callim., Hymn. in Jov., 79) and Schelling (Samothr. Gotheit., p. 95) derive the form Ανακής from the Hebrew E納κ. (Deuter. 1, 28.) The Greek grammarians, on the other hand, have sought for an etymology in their own language, and make the term in question come from άνω, "above," as expressive of the idea of superiority and dominion. They attach to this name the triple sense of δικαιος, δικης, and δικηνος. Hence also the adverb άνωκας (Herodot., 1, 24.—Thucyd., 8, 109), which the scholiasts explain by προνοητός καὶ φυλακτικός. (Compare Eustath., ad Od., 1, 397.—Creuzer's Symbolik, par Guigniault, vol. 2, p. 305, in notis.)

Anacharsis, a Scythian philosopher, who flourished nearly six centuries before the Christian era. He was the son of a Scythian prince, who had married a native of Greece. Early in life, by his mother in the Greek language, he became desirous of acquiring a portion of Greek wisdom, and obtained from the king of Scythia an embassy to Athens, where he arrived in the year 592 B.C., and was introduced to Solon by his countryman Toxaris. On sending in word that a Scythian was at the door, and requested his friendship, Solon replied that friends were best made at home. Then let Solon, who is at home, make me his friend," was the smart retort of Anacharsis; and strong and low, Solon, now, Solon, but, finding him worthy of his confidence, favoured him with his advice and friendship. He accordingly resided some years at Athens, and was the first stranger whom the Athenians admitted to the honours of citizenship. He then travelled into other countries, and finally returned to Scythia, with a view to communicate to his countrymen the information he had received, and to introduce among them the laws and religion of Greece. The attempt was, however, unsuccessful; for the Scythians were not only indisposed to receive them, but it is said that Anacharsis was killed by an arrow, from the king, his brother's, own hand, who detected him performing certain rites in a wood, before an image of Cybele. Great respect, however, was paid to him after death, which is not unusual. Anacharsis was famous for a manly and nervous kind of language, which was called, from his country, Scythic. The apophthegms attributed to him are shrewd, and better worth quoting than many of the ancient saws, which are often indebted for their celebrity much more to their antiquity than to their wisdom. His repartee to an Athenian, who reproached him with the barbarism of his country, is well known: "My country is a disgrace to me, but you are a disgrace to your country." Strabo tells us, from an old historian, that Anacharsis invented the bellows, the anchor, and the potter's wheel; but this account is very doubtful, as Pliny, Seneca (Epist., 90), Diogenes Laertius, and Suidas, who likewise speak of the inventions ascribed to that philosopher, mention only the last two: while Strabo, moreover, remarks that the potter's wheel is noticed in Homer. (Beckman's History of Inventions, vol. 1, p. 104.—Compare Ritter's Vorhalle, p. 237 and 262.) The epistles which bear the name of Anacharsis, and which were published in Greek and Latin, at Paris, 1552, are unequivocally spurious. They are supposed to have been produced by a student of the school of the sophists. (Gorton's Biogr. Dict., vol. 1, p. 72.—Ensfeld's History of Philosophy, vol. 1, p. 116, seqq.)

Anacium (Ανακής), a temple at Athens, sacred to Castor and Pollux, and standing at the foot of the Acropolis. It was a building of great antiquity, and contained paintings of Polygnotus and Micon. (Pausan., 1, 18.—Harpoor., s. e. Anakon.)

Anakarsis, a celebrated Greek poet, of whose life little is actually known. It is, however, generally ad-

mitted that he was born at Teos, a city of Ionia, in the early part of the sixth century before the Christian era, and that he flourished in the sixtieth Olympiad. From Abdera, to which city his parents had fled from the dominion of Cressus, the young Anacreon betook himself to the court of Polycrates, tyrant of Samos. Here he was received with great distinction, but subsequently retired to Athens, where he remained in great favour with Hipparchus, who then possessed the power, and was afterwards to be usurped. The death of his patron caused him to return to his native city, whence he retired to Abdera on the breaking out of the disturbances under Histiaeus. He attained the age of eighty-five years. The time and manner of his death are uncertain, and variously reported: the most popular opinion is, that he died from suffocation, in consequence of swallowing a grape-stone while in the act of drinking. The bacchanalian turn of his poetry is, however, and not without some appearance of reason, supposed by many to be the sole foundation for this tradition. In the poetry generally attributed to him, a great difference, as to quality, is easily discernible, a circumstance which has contributed not a little to strengthen the supposition that the whole is not genuine. Indeed, some critics have not hesitated to affirm, that very few of the compositions which go under his name are to be ascribed to Anacreon. The fragments collected by Ussher, with a few others, are now considered as having no claim to admission of his productions. To decide from the internal evidence contained in his writings, as well as from the general tenour of the meager accounts handed down to us, he was himself an amusing voluputary and an elegant profligate. Few Grecian poets have obtained greater popularity in modern times, for which in England he is indebted to some excellent translations, in part by Cowley, and altogether by Fawkes, not to mention the praise and elegance of the more paraphrastic verse of Moore.—Of the editions in the original Greek, the most celebrated is the quarto, printed at Rome in 1781, by Spalleti: the most learned and useful is that of Fischer, Lips., 1754 (reprinted in 1776 and 1793 with additions), in 8vo. Other editions worthy of notice are, that of Brunck, Argent., 1778, 16mo (reprinted in 1786, in 32mo and 16mo); that of Gall, Paris, 1799, 4to, with a French version, dissertations, music, &c.; that of Mehlhorn, Halle, 1810, 8vo, and that of Mehlborn, Giessen, 1825, 8vo.

Anactorium, the first town on the northern coast of Acaarnia, situate on a low neck of land opposite Nicopolis, of which it was the emporium. (Strabo, 450.) The site is now called Punta, which many antiquaries, however, have identified with Actium: but this is evidently an error. Thucydides reports (1, 55), that Anactorium had been colonized jointly by the Corinthians and Corcyraeans. These were subsequently ejected by the Acaarnians, who occupied the place in conjunction with the Athenians. (Thucyd., 4, 49, and 7, 31.—Compare Scymnus, Ch., v. 459.) Anactorium ceased to exist as a town when Augustus transferred its inhabitants to Nicopolis. (Pausan., 7, 23.)

Anadyomene (Ἀναδύομενη scil. Αὐτόδύομεν), a celebrated picture of Venus, painted by Apelles, which originally adorned the temple of Ζεύς at Cos. It represented our lady "rising" (Ἀναδύομενη) and waving her veil. Augustus transferred it to the temple of Julius Caesar, and remitted to the inhabitants of Cos a tribute of one hundred talents in return. The lower part of the figure having been injured, no Roman painter could be found to supply it. (Plin., 35, 10.)

Anagnia, the principal town of the Hernici, situated about thirty-six miles to the east of Rome. It is now Anagni. The fertility of the surrounding country is much commended by Silius Italicus (8, 392)
Anaxagoras was a philosopher. (Front. de Col.) From Tacitus (Hist. 3, 62) we learn, that it was the birthplace of Valens, a general of Vitellius, and the chief supporter of Nerva. The Latin way was joined near this city by the Via Praenestina, which from that circumstance was called Compitum Anagninum. (Cramer's Ancient Italy, vol. 2, p. 79, seqq.)

Anaitis, a goddess of Armenia, who appears to be the same with the Venus of the western nations. She is identical also with the goddess of Nature, worshipped among the Persians. (Creuzer, Symbolik, vol. 2, p. 27.) The temple of Anaitis, in Armenia, stood in the district of Acicia, which lies in the angle between the northern and southern branches of the Euphrates. She was worshipped also in Zela, a city of Pontus, and in Comana. (Creuzer, l. c.) As regards the origin of the name itself, much difference of opinion exists. Von Hammer (Fundgr. des Or., vol. 3, p. 275) derives it from the Persian Anahid, the name of the morning star, and of the female genius that directs with her lyre the harmony of the spheres. Ackerman, in his account of Zela, claims that the name is a corruption of the proper name. But the name Anaitis, as appearing in Plutarch, Vit. Artaxerex, c. 27.) Silvestre de Sacy, however (Journal. d. Sav. Juillet, 1817, p. 439), in opposition to Ackerman, regards, that the Persians, most indubitably, call the planet Venus Anahid or Nahid, and that the name Anaitis is evidently borrowed from this source; moreover, that Tavareis is itself a false reading. — The temple of the goddess Anaitis had a large tract of land set apart for its use, and a great number of male and female slaves to cultivate it (λειψούναν). It was famed for its riches, and it was from this sacred edifice that An'tony, in his Parthian expedition, carried off a statue of the goddess of solid gold. (Plin., 39, 4.)

The commercial relations between the subject nations between the Armenians and other countries, caused the worship of Anaitis to be spread over other lands, and hence we read of its having been introduced into Persia, Media, Bactria, &c. (Compare Strabo, 525, and Heyne, de Sacerdotio Commani, in Nov. Comment. Soc. Scient. Gotting., 16, p. 117, seqq.) Artaxerxes Mmnon is said to have been the first that introduced the worship of Anaitis into Susa, Babylon, and Ecbatana. (Clemens Alex. Protrept. 57, ed. Tott.) — Creuzer's Symbolik, vol. 2, p. 26, seqq.)

Anamakres, a Gallic tribe, in Gallia Cispadana, to the south of the Po, and of the foot of the Apennines. They occupied what is now a part of the modern Duchy of Parma. (Polyb., 2, 32.)

Anaph, one of the Sporades, northeast of Thera. It was said to have been made to rise by thunder from the bottom of the sea, in order to receive the Argonauts, as told by Ogilvie, in the 'Along the Sea.' The meaning of the fable evidently is, that the island was of volcanic origin. Apollonius Rhodius, however (4, 1717), gives a different account, according to which the island received its name from Apollo's having appeared there to the Argonauts in a storm. A temple was in consequence erected to him, under the name of Egleis (Ἀγλείς), in the island. (Strabo, 484.)

The modern name of the island is Amphikta. (Anaxandrides, a river of Eupirus, near the town of Stratos, mentioned by Thucydides (2, 82). — II. A river of Sicily, near Syracuse, now Alfeo. It was a small stream, but is frequently mentioned by the poets. They fabled that the deity of the stream fell in love with the nymph Cyno, who was changed into a fount.

(Ovid, Pont., 10, 26.—Met., 5, fable, 5, &c.)

Anas, a river of Spain, now the Guadiana. The modern name is a corruption from the Arabic, Wadi-Ana, i. e., the river Ana. (Plin., 3, 1.)

Anaxandros, I. a monarch of Argos, son of Argus, and grandson of Megapenthes. He shared the sovereign power with Bias and Melampus, who had cured the women of Argos of madness. (Pausan., 2, 18.) — II. A Grecian philosopher, born at Clazomenae, Olymp. 70, according to Apollodorus (Dogm. Uebr., 2, 7), a date, however, that is inconsistent with his reputed friendship with Pericles. The statement commonly received makes him a scholar of Anaximenes, the latter an address to the Ionian Diogenes, also an address to the latter render impossible to refute on chronological grounds: however, the philosophical directions they respectively followed were so opposite, that they cannot consistently be referred to the same school. From Clazomenae he removed to Athens, and here we find him living in the strictest intimacy with Pericles, to the formation of whose eloquence his precepts are said to have greatly contributed. As a philosopher, Anaxandros made no not even safe from the persecution which assailed the friends of Pericles on the decline of his ascendancy. He was accused of impiety towards the gods, thrown into prison, and eventually forced to fly to Lampsacus. Some foundation for the charge of impiety was probably found in his general views, which undoubtedly were far from according with the popular notions of religion, since he regarded the sun and moon as consisting of earth and water, and proposed them as sacrifices as ordinary appearances of nature. He also gave a moral exposition of the myths of Homer, and an allegorical explanation of the names of the gods. Anaxagoras was an old man when he arrived at Lampsacus, and died there soon after his arrival, in the eighty-eighth Olympiad, or thereabout. His memory was honoured by the people of Lampsacus with a yearly festival. In addition to his philosophical labours, Anaxagoras is said to have been well acquainted with several other branches of knowledge. He occupied himself much with mathematics and the kindred sciences, especially astronomy, as the character of the discoveries attributed to him sufficiently shows. He is represented as having conjectured the right explanation of the moon's light, and of the solar and lunar eclipses. His work on nature, of several fragments have been preserved, especially by Simplicius, who has narrated and celebrated the full analysis of his doctrines, as far as they have reached us, is given by Ritter, in his 'History of Ancient Philosophy, vol. 1, p. 231, seqq., Oxford transl.'
take a second wife, retaining also the first. By his second spouse he became the father of Cleomenes, while the first one, hitherto sterile, bore to him, after this, Dorieus, Leonidas, and Cleombrotus. (Pausan., 3, 3.)—II. A comic writer, born at Camirus in Rhodes. He was the author of sixty-five comedies. Endowed by nature with a handsome person and fine talents, Anaxandrides, though studiously elegant and effeminate in dress and manners, was yet the slave of passion. It is said (Aelian, p. 10) that he used to bear his successes into pieces, or send them as waste paper to the performers' shops. He introduced upon the stage scenes of gross intrigue and debauchery; and not only ridiculed Plato and the Academy, but proceeded to lampoon the magnificence of Athens. For this attack he is reported by some to have been tried and condemned to die by starvation. (Theatre of the Greeks, 2d ed., p. 183.)

Anaxarchus, a philosopher of Abdera, from the school of Democritus, who flourished about the 110th Olympiad. He is chiefly celebrated for having lived with Alexander and enjoyed his confidence. (Elian, Var. Hist., 9, 3—Arrian, Exp. Alex., 4, p. 84.—Plut., ad Princ. indoct.) It reflects no credit, however, upon his philosophy, that, when the mind of the monarch was torn with regret for having killed his faithful Clitus, he administered the balm of futility, saying, "the gods, like the gods, could do no wrong of Thees!" This philosopher addicted himself to pleasure; and it was on this account, and not, as some supposed, on account of the apathy and tranquillity of his life, that he obtained the surname of Ἐποδαύνουξ, "the Fortunate." A marvellous story is related of his having been pounded in an iron mortar by Nicocreon, king of Cyprus, in revenge for the advice which he had given to Alexander, to serve up the head of that prince at his first appearance on the field of battle. This treatment was followed by invincible hardiness. But the tale, for which there is no authority prior to the time of Cicero, is wholly inconsistent with the character of a man who had through his life been softened by effeminate pleasures. The same story is also related of Zeno the Eleatic. (Enfield's History of Philosophy, vol. 1, p. 435.)

Anaxibarque, a young female of Salamis, beloved by Iphis, a young and humble birth. She slighted in his directress, and he hung himself in despair. Gazing on the funeral procession as it passed near her dwelling, and evincing little emotion at the sight, she was changed into a stone. (Ovid, Met., 14, 698, seq.)

Anaxibēa, a daughter of Bias, brother to the physician Melampus. She married Pelias, king of Ioleos, by whom she had Acastus, and four daughters, Pisdice, Pelopea, Hippothoe, and Alecissis. (Apollod., 1, 9.)

Anaxidimus, succeeded his father Zeuxidamus on the throne of Sparta. (Pausan., 3, 7.)

Anaxilas, a Messenian, tyrant of Rhegium. He was so mild and popular during his reign, that when he died, 476 B.C., he left his infant sons to the care of one of his slaves, named Micythus, of tried integrity, and the citizens chose rather to obey a slave than revolt from their benevolent sovereign's children. Micythus, after completing his guardianship, retired to Teges in Arcadia, loaded with presents and encomiums from the inhabitants of Rhegium. (Justin, 4, 2—Diod. Sic., 11, 66.—Herod., 7, 170.—Justin, 3, 2.—Pausan., 4, 23.—Thucyd., 6, 5.—Herod., 6, 23.)

Anaximander, a native of Miletus, who first taught philosophy in a public school, and is therefore often spoken of as the founder of the Ionic sect. He was born in the third year of the 424 Olympiad (B.C. 610), and was the first who laid aside the defective method of oral tradition, and committed the principles of natural science to writing. It is related of him that he predicted an earthquake: but that he should have been able, in the infancy of knowledge, to do what is at this day beyond the reach of philosophy, is incredible. He lived 64 years. (Dig. Laert., 2, 1.—Cic., Acad. Quast., 4, 57.) The general doctrine of Anaximander concerning nature and the origin of things, was, that infinity, τὸ ἄρεστον, is the first principle of all things; that the universe, though variable in its parts, as one whole is immutable; and that all things are produced from infinity and terminate in it. What this philosopher meant by "infinity" has been a subject of much controversy. If we follow the testimony of Aristotle and Theophrastus, it will appear that he understood by the term in question a mixture of multifarious elementary parts, out of which individual things issued by separation. Mathematics and astronomy were greatly indebted to him. He framed connected series of geometrical truths, and wrote a summary of his doctrine.

He was the first who undertook to delineate the surface of the earth, and mark the divisions of land and water upon an artificial globe. The invention of the sundial is also ascribed to him. This, however, has been controverted; but even if the invention has been wrongly ascribed to him, he nevertheless seems to have been the first among the Greeks who pointed out the use of the dial. He is said also to have been the first that made calculations upon the size and distance of the heavenly bodies. He believed that the stars, planets, and sun, are globular clusters, each in its respective sphere, and animated by portions of the divinity; that the earth is a globe in the midst of the universe, and stationary, and that the sun is 28 times larger than the earth. (Enfield's History of Philosophy, vol. 1, p. 154, seq.—Ritter, Hist. Anc. Phil., vol. 1, p. 265, seqq., Oxford trans.)

Anaximenes, I a native of Miletus, born about the 66th Olympiad (B.C. 556). He is usually regarded as the founder of the Ionia philosophy, which is explained by Ritter, who sees a striking resemblance between his doctrines and those of Thales. This same writer rejects the birth-date commonly assigned to Anaximenes, and receives that given by Apollodorus, namely, Olymp. 63. Anaximenes taught that the first principle of all things is air, which he held to be infinite or immense. "Anaximenes," says Simplicius (ad Physic., 1, 39), "taught the unity and immensity of matter, but also the indestructible term that anaximander, calling it air. He held air to be God, because all air is diffused through all nature, and is perpetually active." The air of Anaximenes is, then, a subtle ether, animated with a divine principle, whence it becomes the origin of all beings. In this sense Lactantius (1, 5) understood his doctrine; for, speaking of Cleanthes as adopting the doctrine of Anaximenes, he adds, "the poet assents to it when he sings, 'Tum pater omnipotens fecerit imbibis aether,'" &c. (Virg., Georg., 2, 325.) Anaximenes is said to have taught, that all is debtéd to air: that fire, water, and earth, proceed from it, by rarefaction or condensation; that the sun and moon are fiery bodies, whose form is that of a circular plate; that the stars, which also are fiery substances, are fixed in the heavens, as nails in a crystalline plane; and that the earth is a plane tablet resting upon the air. (Plut. Place. Phil., 1, 17, and 2, 11.—Enfield's History of Philosophy, vol. 1, p. 156, seqq.—Oxford trans.)—II. A native of Lampscus, and son of Aristocles. He was celebrated for his skill in rhetoric, and was the disciple both of Zolus, notorious for his hypercricismus on Homer, and of Diogenes the Cynic. Anaximenes was one of the preceptors of Alexander the Great. He accompanied his illustrious pupil through most of his campaigns, and afterward wrote the history of his reign and that of his father Philip. It is well recorded that, during the Persian war, his native city having espoused the cause of Darius, Alexander expressed his determination of punishing the inhabitants.
by lying it in ashes. Anaximenes was deputed by his countrymen as a mediator; but the conqueror, guessing his intention, which he saw him entering the royal tent as a suppliant, cut short his anticipated petition by declaring that he was determined to refuse his request, whatever it might be. Of this hasty expression the philosopher availed himself, and immediately implored that Lampsacus might be utterly destroyed, and a pardon refused to its citizens. The stratagem was successful; Alexander was unwilling to break his promise; and the presence of mind exhibited by its advocate saved the town. Anaximenes was also the author of a history of Greece. (Pausan., 6, 18.—Val. Max., 7, 3, 4.)

Anazarbus, a city of Cilicia Campestrim, situate on the river Pyramus, at some distance from the sea, and taking its name apparently from a mountain called Anazarbus, at the foot of which it was situate. The adjacent territory was famed for its fertility. It afterward took the appellation of Cessarea ad Anazarbun, but from what Roman emperor is not known, though prior to the time of Pliny (5, 57). The original appellation, however, finally prevailed, as we find it so designated in Hierocles and the imperial Notitia, at which period it had become the chief town of Cilicia Secunda. It was nearly destroyed by a terrible earthquake under Justinian. Anazarbus was the birthplace of Dioscorides and Oppian. The Turks call it, at the present day, Aniz-Zeberk. (Cramer’s Asia Minor, vol. 2, p. 354.)

Anchor at, a daughter of the Musander, by whom he had four sons, Perilas, Enudus, Samus, Alitherus, and one daughter called Parthenope. He paid particular attention to the culture of the vineyard, and on one occasion was told by a slave, whom he was pressing with hard labour in his vineyard, that he would never taste of its produce. After the vintage had been gathered in and the wine made, Anchises, in order to falsify the prediction, was about to raise a cup of the liquor to his lips; but he paused at the sound of the prophet (who, however, merely told him, in reply, that there were many things between the cup and the lip), when tidings came that a boar had broken into his vineyard. Throwing down the cup, with the unainted liquid, Anchises rushed forth to meet the animal, and lost his life in the encounter. Hence arose the Greek proverb.

Πολλὰ μετὰ τῆς πέλας κύλινος καὶ χέρκες ἄμωρον.

Multa cadunt inter calicem supremaque labra.

The Latin translation is by Erasmus, who, as Dacier thinks, read pætes for pælæ; a supposition not at all probable, since “cadunt” gives the spirit, though not the literal meaning, of pælæ.—The story just given is related somewhat differently by other writers, but the point in all is the same. (Estath., ad II., p. 77, ed. Rom.—Festus, c. 169.—Ann. Vulg., 19, 17.—Dacier, ad Fest., 1, c.)

Anacalipit, a people of Britain, near the Atrebati, and probably a clan of that nation. Baxter supposes them to have been the herdsmen and shepherds of the Atrebati, and to have possessed those parts of Oxfordshire and Buckinghamshire most proper for pasturage. Howesey, on the other hand, makes their country corresponding to Berkshire. But it is all uncertainty. (Cas., Bell. G., 5, 21.)

Anchimolus, son of Rhetus, king of the Marrubii in Italy, was expelled by his father for criminal conduct towards his stepmother. He fled to Tarsus, and was killed by Pallas, son of Evander, in the wars of Æneas against the Latins. (Virg., Æn., 10, 389.)

Anchesmus, a mountain near Attica, where Jupiter Anchemusius had a statue. It is now Agios Georgios, taking its modern name from a church of St. George, which has displaced the statue. (Leake’s Topogr. of Athens, p. 69.)

Anchialle, a city of Cilicia, west of the mouth of the Cydnus, and a short distance from the coast. It was a place of great antiquity, and the Greek writers assign its origin to Sardanapalus, king of Assyria. The authority, however, from which they derive their information, is Aristobulus, who is entitled to but little credit in general. The founder was said by them to have been buried here, and they speak of his tomb’s still existing in the time of Alexander the Great. On the tomb was the statue of a man in the act of clapping his hands, with an Assyrian inscription to this effect, “Sardanapalus, the son of Anacyndaraxes, built Anchiale and Tarsus in one day; but do thou, oh stranger, eat, drink, and sport, since the rest of human things are not worth this!” i.e., a clap of the hands. (Arrian, Exp. Alex., 2, 5.) It is more than probable, supposing that a Sardanapalus did found the place, that we are to regard him, not as the last king of that name, but some earlier monarch of Assyria, who had pushed his conquests into the western part of Asia. The situation of Anchialle was bad; it had no harbour, no river, no vine, noومة. When, therefore, a port was appeared, therefore, at last from history, while Tarsus, more favourably placed, continued to flourish. Pliny calls the name Anchiasile, and Arrian, Anchialos. (Mannert, 6, pt. 2, p. 66.)

Anchialus, a term occurring in one of Marial’s epigrams (11, 34), about which the learned are greatly divided in opinion. Sealiger thinks that it comes from the Hebrew Ohai and Alah, and is equivalent to Vis- enus Deus.

Anchises, Portus, according to Dionyssius of Halicarnassus (Ant. Rom., 1, 32), the real name of Oenchesmus in Epirus.

Anchises, son of Capys, by Themis, daughter of Ilos, and the father of Æneas. Venus was so struck with his beauty, that she introduced herself to his notice in the form of a nymph, on Mount Ida, and urged him to a union. Anchises no sooner discovered that he was to have a wife as many of a celestial being than he dreaded the vengeance of the gods. Venus quieted his apprehensions; but, for his imprudence subsequently in boasting of the partiality of the goddess, Jupiter struck him with blindness, or, according to some, enfeebled and maimed him by a stroke of thunder. The offspring of his union with Venus was the celebrated Æneas. When Troy was in flames, he was saved from the burning city, by his son, born to him, and he fled away, to his mother in their native city. He afterward accompanied Æneas in his voyage to Italy, but died before that land was reached, in the island of Sicily, at the harbour of Drepanum, and was buried on Mount Eryx. (Virg., Æn., 2, 647.—Id. ib., 3, 707.;—Hygin, Exp. deorum, 17, ad Virg., Æn., 2, &c.)

Anchisia, a mountain of Arcadia, on which, according to Pausanias, was the tomb of Anchises. This, of course, as different from the common account, was followed by Virgil, which makes Anchises to have been buried on Mount Eryx in Sicily. At the foot of Mount Anchisia there was a road leading to Orchomenus, which city lay to the northwest. (Pausan., 8, 12.)

Anchisides, a patronymic of Æneas, as being son of Anchises. (Virg., Æn., 6, 348, &c.)

Anchó̄dos, a place in Boeotia, near the Cephissus, or rather the Lake Copais, issued from underground. It was near Larymna, and on the coast. (Strabo, 404.)

Anchó̄sia, V. Nicna, Il.}

Anchó̄s, a son of Midas, king of Phrygia, who...
sacrificed himself for the good of his country, when the earth had opened and swallowed up many buildings. This was a memorable event, and upon it there is no question that the gulf would never close if Midas did not throw into it whatever he had most precious. Though the king cast in much gold and silver, yet the gulf continued open, till Anchurus, thinking nothing more precious than life, and regarding himself, therefore, as the most valuable of his father's possessions, took a tender leave of his wife and family, and leaped into the earth, which closed immediately over his head. Midas erected there an altar of stone to Jupiter, and that altar was the first object which he turned into gold when he had received his fatal gift from the gods. Every year, when the day came round on which the chasm had been first formed, the altar became one of stone again; but, when this day had passed by, it once more changed to gold. (Plut., Parall., p. 306.)

Ancile, a sacred shield, which fell from heaven in the reign of Numa, when the Roman people laboured under a pestilence. Upon the preservation of this shield depended the fate of the Roman empire, according to the admonition given to Numa by the nymph Egeria, and the monarch therefore ordered eleven of the same size and form to be made, that if ever any attempt was made to carry them away, the plunderer might find it difficult to distinguish the true one. They were made with such exactness, that the king promised Veturius Mamurris, the artist, whatever reward he desired. (Vid. Mamurris.) They were kept in the temple of Vesta, and an order of priests was chosen to watch over their safety. These priests were called Salii, and were twelve in number; they carried every year, on the first of March, the shields in a solemn procession through the streets of Rome, dancing and singing praises to the god Mars. (Vid. Salii.) This sacred festival continued three days, during which every important business was stopped. It was deemed unfortunate to be married on those days, or to undertake any expedition. Hence Suetonius (Oth., 8) states, that Otho marched from Rome, on his unsuccessful expedition against Vitellius, during the festival of the Ancilia, "nulla religio num cura," without any regard for sacred ceremonies, and Tacitus (Hist., 1, 89) remarks, that many ascribed to this circumstance the unfortunate issue of the campaign. The form of the ancile occurs in ancient coins. Representation of it are also given by modern writers on Roman Antiquities; Consulins, Legnus, Mil. Rom. Anal., lib. 3, dial. 1.) Plutarch, in explaining their shape, remarks, "they are neither circular, nor yet, like the pelta, semicircular, but fashioned in two crooked indented lines, the extremities of which, meeting close, form a curwe (Δύσκειον)." According to this etymology, the name should be written in Latin Ancile. Ovid says the shield was called ancile, "quod ab omnino parce recenscat," a denomination much more wiser than Plutarch's. The name is very probably of Etrurian origin, and the whole legend would appear to be a myth, turning on the division of the Roman year into twelve months by the fabulous Numa. (Plut., Vit. Num., c. 13.—Ovid, Fast., 3, 377.)

Ancona, a city of Italy, on the coast of Picenum, which still retains its name. The appellation is supposed to be of Greek origin, and to express the angular or crooked shape of the bay in which it is placed. (Mela, 2, 4.—Procop., Rer. Got., 2.) This bold headland was called Cumera Promontorium; its modern name is Monte Comero, and sometimes Monte Guasco. The foundation of Ancona is ascribed by Strabo (241) to some Syracusans, who were fleeing from the tyranny of Dionysius. These Syracusans of Strabo are by many critics supposed to be same with the Siculi of Pliny, to whom that writer attributes the origin of this city. (Plin., 3, 13.—Compare Solin., 8.) But, on the other hand, it is contended, that the foundation of Ancona must be anterior to the reign of Dionysius, since it is noticed in the Periplus of Scylax (p. 12) as having been visited by a Greek trader, and that the Siculi of Pliny must be that ancient race who settled in Italy at a very remote period, and afterward passed over into Sicily. (Bardetti, pt. 2, c. 10.—Olivieri, della fond. di Pesar, dissert., p. 13.—Gnus, Colucci, Delle Antichità Picene, vol. 1, diss. 1.) Ancona is spoken of by Livy (41, 1) as a naval station of great importance in the wars of Rome with the Ilyrians. (Compare Tacit., Ann., 3, 9.) It was occupied by Caesar soon after his passage of the Rubicon. (Bell. Civ., 11.—Cic., Ep. ad Fam., 16, 12.) It continued to be a port of consequence in Trajan's time, if we may judge from the works erected by that emperor, which are still extant there. (Cramer's Ancient Italy, vol. 1, p. 280, seq.)

Ancus Marcius, the fourth king of Rome, was grandson to Numa by his daughter. His name Ancus was said to be derived from the Greek ἀνκώς, because he had a crooked arm, which he could not stretch out to its full length; an etymology of no value whatever, the term in question being very probably Etrurian. Like his ancestors, he first turned his attention to the re-establishment of religion, and had the ritual law transcribed on tables, that all might read it. He then directed his arms against the Latins with success, and carried away several thousand of this nation to Rome, whom he settled on the Aventine. He extended his conquests into Etruria, and along both banks of the Tiber to the seacoast, where he founded Ostia. He erected this city, as the oldest of the Roman colonies, as the harbour of Rome. He built the first bridge over the Tiber, and annexed additional defences to the city. The oldest remaining monument in Rome, the prison formed out of a stone quarry in the Capitoline Hill, is called the work of Ancus. It was on the side of the hill above the forum (the place of meeting for the plebeians); and until an equality of laws was introduced, it served only to keep the plebeians from entering the forum at all. Plutarch, looking viewed as a parcelling out of public territories, was probably the cause which led the plebeians to bestow the epithet of "good" upon him in the old poems. The new subjects could not be admitted into a new tribe, as the Luceres had been, since the number of tribes was completed. They constituted a community, which stood side by side with the people formed by the members of the thirty curiae, as the body of the Latins. This council of Ancus, which was the beginning of the plebs, was which the strength and the life of Rome, the people of Ancus as distinguished from that of Romulus; and this is a fresh reason for Ancus being placed in the middle of the Roman kings. (Nebhur, Rom. Hist., p. 86, Twiss's abridgment.) Ancus reigned, according to the fabulous Roman chronology, twenty-four years. (Liv., 1, 22, seq.—Florus, 1, 4.—Dion. Hal., 3, 8, &c.)

Antonius, a Roman general. According to Pausanias (2, 4), it was founded by Midas, and the name was derived from an anchor (ἀγχων) which was found here and preserved in the temple of Jupiter. This city was greatly enlarged by Augustus, whence the grammarians Tzetzes is led to style him the founder of the city, and under Nero it was styled the metropolis of Galatia. Its situation was extremely well adapted for inland trade, and Anycra became a kind of staple-place for the commodities of the East. It is famous also as having been the spot where the Monumentum
Ancyranum was found in modern times, a spurious inscription on a temple erected in honour of Augustus, which gives a history of the several actions and public merits of Augustus, and which shows also that he had been a great patron of the Ancyran. Ancyra is now called by the Turks Angourni, and by the Europeans Angora, and is the place whence the celebrated shawls and housethreads of Angora (originally brought). Next to this place, Bajazet was conquered and made prisoner by Timur, or, as the name is commonly, though incorrectly, written, Tamerlane. (Mannert, vol. 6, pt. 3, p. 46, seqq.—II. A town of Phrygia, on the confines of Myasia. Strabo (576) places it in the district of Abasitis, near the sources of the river Makestus, which flows into the Rhynacus. (Mannert, vol. 6, pt. 3, p. 111.)

Andarabe, gladiators who fought blindfolded, who, in this Bard Andabalarum more pugnare, to denote rash and inconsiderate measures. The name comes from the Greek avbavbavra, because they fought in chariots or on horseback. (Consult Ærasmus, Chil., p. 461.)

Andania, a city of Messenia, situates, according to Pausanias (4, 33), at the distance of eight stadia from Carnium. It had been the capital of Messenia before the coming of the Heraclids. (Pausan. 4, 4, 3.) Strabo (360) places it on the road from Messene to Megalopolis. It is also mentioned by Livy (36, 31) as situated between these two cities. Sir W. Gell (I. ium, p. 69) observed its ruins between Sabona and Krane, on a hill formed by the foot of Mount Tetryge. (Cramer's Ancient Greece, vol. 3, p. 147.)

Andecavi or Andes, a people of Gaul, east of the Nannetes, and lying along the northern bank of the Liger or Loire. Their capital was Juliomagus, now Angera, and their territory corresponded in part to what is now the department de la Mayenne. (Caes., B. G., 2, 35.)

Andes, I. a people of Gaul. Vid. Andecavi.—II. A village near Mantua, where Virgil was born. (Compare Hieron, Chron. Euseb., 2, and Sil. Ital., 8, 594.)

Tradition has long assigned to a small place, now called Piteola, the honour of representing this birthplace of Virgil, but as this opinion appears to derive no support from the passages in which the poet is supposed to speak of his own farm, the prevailing notion among the learned seems to contradict the popular report which identifies Andes with Piteola. (Maffei, Verona Illustr., vol. 2, p. 1—Viso, Memorie Istoriche, vol. 1, p. 31.—Bonelli, Mem. Manlor., vol. 1, p. 120.) It may be observed, however, that Virgil's birthplace and his farm may not necessarily have been one and the same: in this case it would seem that no argument could be objected to a local but very ancient and well-established tradition. (Cramer's Ancient Italy, vol. 1, p. 69, seqq.)

Andocides, an Athenian orator, son of Leogoras, and born in the first year of the 78th Olympiad, B.C. 468. He commanded the Athenian fleet in the war between the Corinthians and Corcyreans, and was afterward accused of having been in battle under Hermocrates, or in the service of Mercury, a crime of which Alcibiades was regarded as one of the authors. Andocides, having been arrested for this sacrilegious escape punished by denouncing his real or pretended accomplices. Photius informs us, that among these was Leogoras, but that Andocides found the means of obtaining his father's pardon. (Phot., Bibli., vol. 2, p. 488, ed. Bekker.) The same author mentions various other incidents in the life of this orator, which con- 

Andocides employed his abilities as an orator merely in his own affairs. The four discourses of which he has come down to us are important for the history of Greece. The first has reference to the Mysteries of Eleusis, which he had been accused of violating (Πείρη Μυστηρίων). The second (Πείρη Μυστηρίων) returns to Athens. The third (Πείρη Ειρήνης), "Concerning Peace," was pronounced in the fourth year of the 95th Olympiad, on occasion of the peace with Sparta; the fourth is directed against Alcibiades (Κατὰ Ἀλκιβιάδαν). Taylor, led into an error by a passage of Plutarch (Vit. Alcib., 13.—Ed. Reiske, vol. 2, p. 21), thinks that this discourse was delivered by Theax, one of the antagonists of Alcibiades; but Ruhnken has shown this opinion to be incorrect. (Hist. Crit. Ort. Cramer, p. 54, of the edition of Rutulius Lupus.—Schöll, Hist. Lit. Gr., vol. 2, p. 205, seqq.) The discourses of Andocides are given in Reiske's edition of the Greek orators; in that of Bekker, and in the edition of Dob- son, Lond., 1828, 16 vols. 8vo.

Andomatês, a river of India, falling into the Ganges. According to ĐAnville, the modern Som-sou. (Vid. Sonas.)

Andronicus, a mountain of Cilicia Trachea, north of the promontory Anemurium. (Strab., 670.)

Andruscius, an obscure individual, a native of Adria- mytum in Asia Minor, who, from his strong resemblance to Philip, son of Perseus, the last king of Macedon, was induced to pass himself off for that prince, and hence received the name of Pseudophilippus, or "the false Philip." Having deceived the Macedonians, he induced them to revolt against the Roman power, and gained at first some advantages, but was at length defeated by Caesar. Metellus, and led in triumph B.C. 148. (Flor., 2, 14.—Vell. Patert., 1, 11.)

Androcidês, I. a painter of Cyzicus, contemporary with Pelopidas and Zeuxis, the latter of whom he attempted to rival. Two of his productions are mentioned by the ancient writers, a painting of a battle and a portrait of Scylis, the latter being celebrated for the accuracy with which the fish accompanying the monster were represented. (Strab., 3, 1, 15, 16—Suid., Dict. Art., s. v.)—II. A physician in the time of Alexander the Great, who, in writing to the king, in condemnation of the use of wine, observed, to quote the Latin version of Pliny, "Vinum potius rex, memento te bibere saxuinera terra: cicuta homi- num venenum est, cicuta vinum." (Plin., 14, 5.)

Androgóes, son of Minos and Pasiphaë. He was famous for his skill in wrestling, and overcame every antagonist at Athens during the contest at the Pan- atheniac festival, and Εγεύς, through envy, sent him to the Marathonian bull, by which animal he was destroyed. According to another account, he was waylaid and assassinated while proceeding to Thbes to attend the games of Laius, and his mur- derers were the combatants whom he had conquered at Athens, and who were led by envy to perpetrate the deed. Minos declared war against Athens, and re- 

ve-
Minos, and a new name is given him: Eurygyes (Εὐρυγύης), "the far-plougher," or "the possessor of wide-extended acres" (εὐρύς καὶ γέφυρα), and it is worth noticing, that, after having been slain, and previous to his new appellation, he was reawakened to life by Ἀθήναιος, and the sun. (Compare Ἰσαχθίας, vol. 1, p. 155—157. H. de Alberti, and Creuzer's Symbolik, vol. 4, p. 107.)

Andromachus, a daughter of Eeties, king of Hy- poclassic Shebe, in Mysia, married Hector, son of Priam, and became the mother of Astyanax. She was equally remarkable for her domestic virtues, and for attachment to her husband. In the division of the prisoners by the Greeks, after the taking of Troy, Andromache fell to the share of Pyrrhus, who carried her to Epirus, where she became the mother of three sons, Molossus, Pileus, and Pegamus. Pyrrhus subse- quently conceded her to Helenus, the brother of Hector, who had also been among the captives of the prince. She reigned with Helenus over part of Epirus, and became by him the mother of Cestrinus. (Homer, II., 6, 22 et 24.—Virg., Aen., 3, 485.—Hygin., fab., 123.)

Andromachus, I. an opulent Sicilian, father of the historian Timotheus. He collected together the inhabit- ants of the city of Naxos, which Dionysius the tyrant had destroyed, and founded with them Tauromenium. Andromachus, as prefect of the new city, subsequent- ly aided Timoleon in restoring liberty to Syracuse. (Diod. Sic., 16, 7 et 68.)—II. A general of Alex- ander, to whom Parmeno gave the government of Syria. He was burned alive by the Samaritans, but his death was avenged by Alexander. (Quint. Curt., 4, 5.)—III. A brother-in-law of Seleucus Callinicus.

—IV. A traitor, who discovered to the Parthians all the measures of Crassus, and, on being chosen guide, led the Roman army into a situation whence there was no mode of escape.—V. A physician of Crete in the age of Nero: he was physician to the emperor, and inventor of the famous medicine, called after him, Theriac., Andromachi. It was intended at first as an antidote against poisons, but became afterward a kind of panacea. This medicine enjoyed so high a reputa- tion among the Romans, that the Emperor Antoni- nus, at a later period, took some of it every day, and had it prepared every year in his palace. It consisted of 61 ingredients, the principal of which were squills, opium, pepper, and dried vipers.1 This absurd com- pound was in vogue even in modern times, as late as 1787, in Paris. (Galen, de Theriac., p. 470.—Id. de antidot., lib. 1, p. 4333.—Sprengel, Hist. Med., vol. 2, p. 56.)

Andromeda, a daughter of Cepheus, King of Ethiopia, by Cassiopea. She was promised in marriage to Phineus, her uncle, when Neptune inundated the coasts of the country, and sent a sea-monster to ravage the land, because Cassiopea had boasted herself fairer than Juno and the Nereids. The oracle of Jupiter An- mon being consulted, returned for answer that the calamity could only be removed by exposing Andromeda to the monster. She was accordingly secured to a rock, and expected every moment to be destroy- ed, when Perseus, who was returning through the air from the conquest of the Gorgons, saw her, and was captivated with her beauty. He promised to de- liver her and destroy the monster if he received her in marriage as a reward. Cepheus consented, and Perseus changed the sea-monster into a rock, by showing him Medusa's head, and vanquished Andromeda. The monster, an ugly and fearsome one, which had been appointed by Phineus, but, in the contest that ensued, he and his followers were changed to stone by the head of the Gorgon. Andromeda was made a constellation in the heavens after her death. Consult remarks un- der the article Perseus (Apollo, 2, 4.—Hygin., fab. 64.—Manil., 5, 533.)

Andronicus Livius. Vid. Livius.

Andronicus, I. a peripatetic philosopher, a native of Rhodes, who flourished about 80 B.C. He arran- geed and published the writings of Aristotle, which had been brought to Rome with the library of Apollon. He commented on many parts of these writings; but his annotations as to particular passages has remained, the treatise περὶ παθῶν, and the Paraphrase of the Nicomachean ethics, which have been published under his name, are the productions of another. The treatise περὶ παθῶν was published by Hoesschel in 1593, in 8vo, and was afterward printed conjointly with the Par- phrase, in 1617, 1679, and 1699. The Paraphrase was published by Heinseus in 1607, 4to, at Leyden, as an anonymous work (Incerti Auctoris Paraphrasis, &c., &c.). Andronicus, II. was a mathematician of Rhodes, by the same scholar, in 1617, 8vo, with the treatise περὶ παθῶν added to it. The two works were reprinted in this form at Cambridge, in 1679, 8vo, and at Oxford, 1809, 8vo.—II. Cyrrhestes, an astrono- mer of Athens, who erected, B.C. 159, an octag- onal marble tower in that city to the eight winds. On every side of the octagon he caused to be wrought a figure in relief, representing the wind which blew from that direction. The top of this tower was covered with a conical marble, on which he placed a brazen Triton, holding a wand in his right hand. This Triton was so contrived that he turned round with the wind, and always stopped when he directly faced it, pointing with his wand over the figure of the wind at that time blowing. Within the structure was a water-clock, supplied from the fountain of Clepsydra. Beneath the eight figures of the winds lines were traced on the walls of the tower, which, by the shadows cast upon them by styles fixed above, indicated the hour of the day, as the Triton's wand did the quarter of the wind. When the sun did not shine, recourse was had to the water-clock within the tower, which building thus supplied both a vane and a chronometer. The struc- ture still stands, though in a damaged state. To the correctness of the sundials, the celebrated Delambre bears testimony, and he describes the series as the most curious existing monument of the practical gnomonics of antiquity.2 There are two entrances, fac- ing respectively to the northeast and northwest: each of these openings has a portico supported by two col- umns. When Stuart explored this building, the lower part of the interior was covered to a considerable depth by rubbish; and the dervishes who had taken possession of the building performed their religious rites on a wooden platform which had been thrown over the fragments. All this, however, he was per- mitted to remove, and he found manifest traces of a clepsydra or water-clock carefully channelled in the original floor. (Stuart and Revett's Athens Abridged, p. 8, seqq.—Wordsworth's Greece, p. 146.)

Andros, an island in the Ægean Sea, one of the Cyclades, lying to the southeast of the lower extremi- ty of Euboea. It bore also several other appellations, enumerated by Pliny (4, 12). According to this wri- ter, it is ten miles from the promontory of Cerchi, and thirty-nine from Croe. The Andrians, as we learn from Herodotus (8, 111 and 121), were com- pelled to join the armament of Xerxes; and, after the battle of Salamis, they were called upon by Themis- tocles, at the head of an Athenian squadron, to pay a large sum of money as a contribution: with this de- mand they declared themselves unable to comply, ob- serving that they were close beside the Ionian Sea, and that two deserts had cut off the island, and Themistocles, after a fruitless attempt to reduce them by force, withdrew to Euboea. We learn, however, from Thucydides (2, 55, and 4, 49), that the island was subsequently reduced and rendered tributary to the Athenians. In the Macedonian war, Livy relates (31, 45), that the town of Andros was taken by Atta-
us and the Romans. The modern name of the island is the same with the ancient, or else varies from it only in dropping the final letter. (Cramer's Anc. Greece, vol. 3, p. 410.)

Anemonea, a town of Phocis, mentioned by Homer (Il. II, 2, 521) in conjunction with Hyampolis, and doubtless in the immediate vicinity of that city, with which it was even sometimes confounded. (Compare the French Strabo, Exclam. Sc. No. 54, vol. 3, Appendix, p. 154.) Strabo affirms, that it obtained its name from the violent gusts of wind which blew from Mount Catopteris, a peak belonging to the chain of Parnassus. He adds that it was named by some authors Anemonea. (Strabo, 423.—Cramer's Ancient Greece, vol. 2, p. 186.)

Angelion, an artist, invariably named in connexion with Tectapus, as his constant associate. It is uncertain whether they excelled chiefly in casting brass or in carving marble. Tectapus are supposed by Sillicy to have flourished about 548 B.C. Mention is made in particular, by the ancient writers, of a statue of Apollo by these artists. According to Müller, they initiated a very ancient statue of the Delian Apollo, made, as Plutarch states, in the time of Hercules. (Sillicy, Dict. Art., s. v.)

Anolis, a people of Germany at the base of the Chersonesus Cimbrica, in the country answering now to the northeastern part of the Duchy of Holstein. From them the English have derived their name. There is still, at the present day, in that quarter, a district called Angelin. (Tacit., Germ., 40.— Vid. Saxones.)

Angrus, a river of Illyricum, pursuing a northern course, according to Herodotus, and joining the Brongus, which flows into the Danube. (Herodot., 4, 49.)

Angrilia, or Anagilia, a grove in the country of the Marcomanni, to the left bank of the river Angrus. The name is derived, according to Solinus, from a sister of Circe, who dwelt in the vicinity. It is now Silva d'Albi. (Solinus, 8.—Serv., ad Virg., An., 7, 759.)

Anicetus, I. a son of Hercules by Hebe, the goddess of youth. (Apollod., 2, 7) II. A freedman who directed the education of Nero, and became the instrument of his crimes. It was he who encouraged the emperor to desert his mother Agrippina, and who gave him the first idea of the galaxy, which, by falling on a sudden to pieces, through secret mechanism, was to have accomplished this horrid purpose. (Suet., Vit. Ner.)

Anicia, Genes, a family at Rome, which, in the flourishing times of the republic, produced many brave and illustrious citizens.

Anicius Gallus, I. triumphed over the Illyrians and Numidians, and obtained the honours of a triumph A.U.C. 585. He obtained the consulship A.U.C. 594, B.C. 150.—II. Probus, a Roman consul, A.D. 371, celebrated for his humanity.

Angrus, a river of Elis, in the district of Tripilia, to the north of Lepreum. This stream formed into marshes at its mouth, from the want of a fall to carry off the water. The stagnant pool thus created exhaled an odour so fetid as to be perceptible at the distance of twenty stadia, and the fish caught there were so tainted with the infection that they could not be eaten. (Strabo, 436.) Pausanias, however, affirms (5, 5) that this miasma was not confined to the marshes, but could be traced to the very source of the river. It was ascribed to the centaur's having washed the wounds inflicted by Hercules' envenomed shafts in the stream. The Angrus received the water of a fountain said to possess the property of curing cutaneous disorders. This spring issued from a cavern sacred to the Nymphs, called Anigrades. (Cramer's Anc. Greece, vol. 3, p. 114.)

Anio, a river of Italy, the earlier name of which was Amen, whence comes the genitive Aninis, which is joined in inflection with the later nominative Anio.—It rose in the Apennines, near the Sabine town of Treba, and pursued its course at first to the northwest; it then turned to the southeast, and joined the Tiber three miles north of Rome. It is not so full a stream as the Nar, but was considered, however, by the Romans as the most important among the tributaries of the Tiber, and hence received also the appellation of Tiberinus, whence comes by corruption the modern name Teverone. The Anio was regarded as the boundary between Latium and the country of the Sabines; but, however, in a very strict sense, for on the left bank lay Antemnes and Collatia, two Sabine towns, while the Alban and other Latins had founded Fidenae, on the right bank of the Anio, in the Sabine territory. (Manuet., vol. 9, p. 517.) The Anio, in its course, passed by the town of Tibur, the modern Tivoli, where it formed some beautiful cascades, the admiration of the present as well as of former times. Oblate, however, the scenery has been marred by an earthquake. It has been doubted by some writers whether there was always a fall of the Anio at Tibur. But, without pretending to examine what change the bed of the river may have undergone in remote ages, we may affirm that, since the days of Strabo, no alteration of consequence has taken place; for that geographer (238) talks of the cataract which the Anio, then navigable, formed there: so also Dionysius (of Halicarnassus), 1, 49, 50, and the poets. (Cramer's Ancient Italy, vol. 2, p. 64.)

Anistorgis, a city of Spain, in the southern part of Lusitania, near Pax Julia, called also Constigoris. (Manuet., vol. 1, p. 343.) Some have doubted, however, whether these two cities were the same. (Celarius, Geogr. Ant., vol. 1, p. 77.—Uberti, Geogr., vol 2, p. 389.)

Anius, son of Apollo and Rheo or Rhoio. He was high priest of Apollo, and gave Eneas a hospitable reception when the Trojan prince touched at his island. He had by Dorippe three daughters, Oene, Spermo, and Elapia, to whom Bacchus had given the power of changing whatever they pleased into wine, corn, and oil. When Agamemnon went to the Trojan war, he wished to carry them with him to supply his army with provisions; but they complained to Bacchus, who changed them into doves. There we have given the name (Meis, 1, 13, 42; Lact., 6, 4, 13; Manuet., 3, 80.) Tzetzes, however, states, that Anius endeavoured to prevail upon the forces of Agamemnon to remain with him nine years, and told them that, in the tenth year, they would take Troy. He promised to nurture them also by the aid of his daughters. Tzetzes cites as his authority the author of the Cyprian epic (ad Lycoph., 570). Creuzer sees in all this an agricultural myth, Rhoeo being the pomegranate, or, in other words, a new Proserpina, and her three children the daughters of the seed. (Symeolus, vol. 4, p. 379.)

Anna, a goddess, in whose honour the Romans instituted a festival. She was, according to the common account, Anna, the daughter of Belus, and sister of Dido, who, after her sister's death, gave up Carthage to Labras, king of Carthia, who had besieged the place, and fled to Melita, now Malta. From Melita she proceeded to Italy, and was there kindly received by Eneas. Lavinia, however, conceived so violent a jealousy against her, that Anna, warned in a dream, by Dido, of her danger, took flight during the night, and threw herself into the Numiculus, where she was transformed into a Naiad. The Romans instituted a festival, which was always celebrated on the 15th of March, in her honour, and generally intended her aid to obtain a long and happy life; thence, according to some, the explanation of the epitaph Anna Perenna assigned to her after deification. (Ovid., Fast., 3, 653.—Sil. Ital., 8, 79, &c.) The key to the different legends relative to Anna Perenna is to be found in the rites and cere-
ANNA COMNENA.

monies attending her festival. It was a feast commemo- 

rative of the year and the spring, and the hymns sung on this occasion bore the free and joyous charac-

ter of orgiastic strains. In them Anna Perenna was 

entreated to make the entire year roll away in health 

and joy. The annual cycle of hymns was entitled "præsens 

licita."—Macrob., Sat., 1, 12.) Now, this year, 

new year, this year full of freshness and of benefits invoked, 

is no other than Anna herself, a personification of the old 

lunar year. (Compare Herrmann und Creuzer, Briefe, 

c., p. 135.) Anna is the same word, in fact, as an-

num, or anna according to the primitive Roman orthog- 

raphy; in Greek ἄνων or ἄνων, whence the expression 

ἔνων κα' νεία, proving that the word carries with it the 

accessory idea of antiquity, just as ἄρεω appears ano-

gous to vetus. (Compare Lennep, Etymol. Gr., p. 

210, seqq.—Valckenaer, ad Ammon., p. 196, 197.) 

Anna Perenna is called the moon, κατ' ἐξωθόνν, and it 

is she that conducts the moons her sisters, and who 

at the same time directs and governs the humid sphere: 

thus she reposes for ever in the river Numicus, and 

runs on for ever with it. She is the course of the moons, 

of the years, of time in general. It is she that gives 

the annual cycle of hymns, the seasons, of the annual 

produce. She is offered up to the gods in the annual 

production of the seasons (annonas) is placed 

under her protecting care.—The Anna Perenna of 

the Romans has been compared with the Anna Povna 

Devri, or Annade, of the Hindu mythology; the 

goddess of abundance and nourishment, a beneficent 

form of Bhavani. The characteristic traits appear to be 

the same. (Compare the remarks of Paterson and 

Cokebrooke, in the Asiatic Researches, vol. 8, p. 69, 

seqq., and p. 85.—Creuzer's Symbolik, par Guignaut, 

vol. 2, p. 501, seqq.) 

ANNA COMNENA, a Greek princess, daughter of 

Alexius Comnenus I., emperor of the East. She was 

born A.D. 1083, and was originally betrothed to 

Constantine Ducas; but his death preventing the engage- 

ment from being ratified, she subsequently married Ni-

cephorus Bryennius. On the decease of her father, 

she conspired against her brother John (Celo-Johannes), 

who had succeeded him in the empire, and when the 

design was prevented by the fears or scruples of her 

husband, she passionately exclaimed that nature had 

mistaken the two sexes, and had endowed Bryennius 

with the soul of a woman. After the discovery of 

her treason, the life and fortune of Anna were forfeited 

to the laws; the former, however, was spared by the 

elemoncy of the emperor. After the death of her hus-

band she retired to a convent, where, at the age of sixty 

years she sought to relieve the disappointment of 

her ambitious feelings by writing a life of her father. 

The character of this history does not stand very high, 

either for authenticity or beauty of composition: the 

historian is lost in the daughter; and instead of that 

simplicity of style and narrative which wins our belief, 

an elaborate affectation of rhetoric and scene betrayes 

every page the vanity of a female author. (Gibbon's 

Decline and Fall, vol. 3, p. 157.) Anna, however, may 

be read for the sake of her curious researches into the 

history of Constantinople, which she has preserved, 

in a very authentic manner. Anna Comnena was 

entirely dropped till the Pontificate of Mucius, in the 

year 629. It is to this second series of Annals, or to 

some other late and ineffectual attempt to revive the 

ancient Roman history, that Cicero must allude when 

he talks of the Great Annals in his work De Legibus 

(1, 2), since it is undoubtedly, that the pontifical records 
of events previous to the capture of Rome by the Gauls 

were, for the most part, composed in the conflagration 
of the city. (Livy, 6, 1.) Accurate and trustworthy 

records, and there is no appearance that he had any 

opportunity of consulting them; nor are they men- 
tioned by Dionysius of Halicarnassus in the long cat-

alogue of records and memorials which he had employ-

ed in the composition of his Historical Antiquities. 

The books of the pontiffs, some of which were re-

covered in the search after what the flames had spared, 

are, indeed, occasionally mentioned. But these were
works explaining the mysteries of religion, with instructions as to the ceremonies to be observed in its practical exercise, and could have been of no more service to Roman, than a collection of brevities or missiles to modern history. (Dunlop's Rom. Lit., vol. 2, pp. 97, seqq., Lond. ed.—Le Clerc, des Journaux chez les Romains, Introd.)

ANNALES, a Latin text, settled the age at which, among the Romans, a citizen could be admitted to exercise the offices of the state. Originally there was no certain age fixed for enjoying the different offices. A law was first made for this purpose (Lex Annaia) by L. Vitlius or L. Julius, a tribune of the commons, A.U.C. 573, whence his family got the surname of Annales. (Juv. 16, 43.) What was the year fixed for enjoying each office is not ascertained. It is certain that the praetorship used to be enjoyed two years after the aedileship (Cic., Ep. ad Fam., 10, 25), and that the forty-third was the year fixed for the consulship. (Cic., Phil., 5, 17.) If we are to judge from Cicero, who frequently boasts that he had enjoyed every office in its proper year, the years appointed for the different offices by the Lex Villia were, for the quasitribunes, forty; for the aediles, thirty-seven; for the praetorship forty, and for the consulship forty-three. But even under the republican popular citizens were freed from these restrictions, and the emperors, too, granted that indulgence to whomsoever they pleased.

ANIBAL. Vid. Hannibal.

ANICKRIUS, a philosopher of the Cyrenaic sect, and a follower of Aristippus. He so far receded from the determinist as to acknowledge the merit of filial piety, friendship, patriotism, and to deny, as Platonists did, that a wise man might retain the possession of himself in the midst of external troubles; but he inherited so much of his frivolous taste as to value himself upon the most trivial accomplishments, particularly upon his dexterity in being able to drive a chariot twice round a course in the same ring. (Dio, LXXII. 29. 37—Staud's, s. v.—Enfield's History of Philosophy, vol. 1, p. 196.)

ANNO. Vid. Hanno.

ANOPHELUS, a mountain of Greece, part of the chain of Ætna. A small pass in this mountain, called by the same name, formed a communication between Theasaly and the country of the epicnimenic Locri. (Herodot., 7, 216.)

ANER, a Roman poet, intimate with the triumvir Antony, and one of the detractors of Virgil. (Comp. Appian's Massalia, ad Verg., 1. c.) Ovid (Trist., 2. 435) calls him "procax."

ANISBAR, a people of Germany, mentioned by Tacitus (Ann., 13, 55) as having made an irruption, during the reign of Nero, into the Roman territories along the Rhine. Mannert makes them to have been a branch of the Cherusci. The same writer alludes to the hypothesis which would consider their name as denoting "dwellers along the Enns," and as marking this for their original place of settlement. He views it, however, as untenable. (Geogr. vol. 6, p. 156, seqq.)

ANTÆPOLIS, a city of Egypt on the eastern bank of the Nile, and the capital of the nome Antæpolitans. It derived its name from Antæus, whom Osiris, according to Diodorus Siculus (1, 17), left as governor of his Libyan and Æthiopian possessions, and whom Herodotus states to have been of a great importance. The modern village of Kau (Kauas) stands near the ruins of the ancient city. (Mannert, vol. 10, pt. 2, p. 388, seqq.—Compare Description de l'Egypte, vol. 4, p. 111.)

ANTÆUS, 1, a monarch of Libya, of gigantic dimensions, son of Neptune and Terra. He was famed for his strength and his skill in wrestling, and engaged in a contest with Hercules. As he received new strength from his mother as often as he touched the ground, the hero lifted him up in the air, and squeezed him to death in his arms. (Apollod., 2., 5, 5.—II. A governor of Libya and Æthiopia under Osiris. (Diod. Sic., 1, 17.)—Both these accounts are, in fact, fabulous, and refer to one and the same thing. The legend of Hercules and Antæus is nothing more than the representation of that art and labour over the encroaching sands of the desert. Hercules, stifling his adversary, is, in fact, the Nile divided into a thousand canals, and preventing the arid sand from returning to its native deserts, whence again to come forth with the winds and cover with its waves the fertile valley. (Constant, de la Religion, vol. 2, p. 416.) The very position of Antæopolis, indeed, has reference to the identity of the lake with the lake of Antæus. (Cass. XI. 21.) What was the year fixed for enjoying the privileges of each office is not ascertained. It is certain that the praetorship used to be enjoyed two years after the aedileship (Cic., Ep. ad Fam., 10, 25), and that the forty-third was the year fixed for the consulship. (Cic., Phil., 5, 17.) If we are to judge from Cicero, who frequently boasts that he had enjoyed every office in its proper year, the years appointed for the different offices by the Lex Villia were, for the quasitribunes, forty; for the aediles, thirty-seven; for the praetorship forty, and for the consulship forty-three. But even under the Republican popular citizens were freed from these restrictions, and the emperors, too, granted that indulgence to whomsoever they pleased.

ANTÆGÖRAS, a Rhodian poet, who lived at the court of Antigonus Gonatas, where he acquired the reputation of a gourmet. He composed a poem entitled Thébais; and the Boeotians, to whom he read it, begged him to give them names which, in Proverbs, Cent., 5, 82.) We have one of his epigrams remaining. (Schill'l, Hist. Lit. Gr., vol. 3, p. 128.)

ANTALCIDAE, of Sparta, son of Leon, was sent into Persia, where he made the well-known peace with Artaxerxes Menean. The terms of this peace were as follows: that all the Greek cities of Asia should belong to the Persian king, together with the island of Clazomena (as it was called); and that of Cyprus; that all other Greek cities, small and great, should be independent, except the islands of Lemnos, Imброс, and Scyros, which were to remain subject to the Athenians. (Xen., Hist. Gr., 5, 1.—Consult Schneider, ad loc.) Polybius (1, 6) fixes the year of this celebrated peace, and Aristides (vol. 2, p. 256) the name of the archon (Ωσίδορος ἰδή τε ἡ ἔργη ἡ ἕξερα). The treaty seems to have been concluded in the beginning of the year of Theodotus, about autumn; because the Mantinean war, which was carried on in the archonship of Mystichides, was in the second year after the peace; and because the restoration of Plataea, accomplished after the treaty, took place nevertheless in the year of the treaty, as Pausanias implies. (Clement's Fasti Helleniæ, 2d ed., p. 102.)

ANTANDRUS, a city of Troas, on the northern side of the Gulf of Ardymyttium. According to Strabo, founded by the Trojan colonists, which had probably dispossessed a body of the Pelasgi in this quarter, since Herodotus (7, 42) names the place the Pelasgic Antandrus. If we follow the ancient mythology, however, we will find different accounts of its origin. These are given by Mela (1, 19), who states that the city was called Antandrus according to some, because Ascanius, the son of Aeneas, having fallen into the hands of the Pelasgi, gave them the name of Antandrus, i.e., τὰν ἄνδρον ("in the stead," or "place of a man")—while others maintain that it was founded by certain inhabitants of Andros, who had been driven from home by civil dissensions, and that hence the city was called Antandrus, i.e., "instead of Andros," implying that it was to them a second country. Fliny (5, 30), on the other hand, believes that its first name was Edossa, and points out that it was subsequently so called by Cnemis. During the Wars of Demetrius and Philip, Antandrus, like many other parts of this coast, was subject to Mytilene, in the island of Lesbos. The Persians, however, held the citadel, which would seem to have stood on a mountain near the city. This mountain is probably the same with the one called Alexander, and on which, according to Strabo (606), the controversy between Juno Minerva, and Venus was decided by Paris. (Mannert, vol. 6, p. 415.)
Antennae, a city of Italy, in the territory of the Sabines, at the confluence of the Anio and Tiber. It is said to have been more ancient than Rome itself. We are told by Dionysius of Halicarnassus (2, 36), that Antemnes belonged at first to the Siuli, but that afterward it was conquered by the Aborines, to whom, probably, it owes its Latin name. (Varro, de Ling. Lat., 4, 14.) The best known writer of the city is Antemnus, (Comp. Münzer, Nachricht ten uranischen Stadten, p. 293.—Plin., vol. v., p. 226.—Strabo, 226.—Cramer’s Ancient Italy, vol. i., p. 301.)

Antenor, I. a Trojan prince related to Priam. He was the husband of Theano, daughter of Cisseus, king of Thrace, and father of nineteen sons, of whom the most famous was Polybus (II., 11, 59), Acamas (II., 2, 823), Agenor (II., 4, 533), Polydamas, Hellaco, Archilochus (II., 2, 823), and Laodocus (II., 4, 87). He is accused by some of having betrayed his country, not only because he gave a favourable reception to Diomedes, Ulysses, and Menelaus, when they came to Troy, as ambassadors from the Greeks, to demand the restitution of Helen, but also because he withheld the fact of his recognising Ulysses, at the time that he heroically attached the city, against the request of the council (Od., 4, 335.). After the conclusion of the war, Antenor, according to some, migrated with a party of followers into Italy, and built Patavium. According to others, he went with a colony of the Heneti from Phlegonia to the shores of the Adriatic, where the new settlers established themselves in the district called by them Phoenicia. Both accounts are fabulous. (Liv., 1, 1.—Plin., 3, 13.—Virg., Ec., 1, 242.—Tac., hist. Rom., 16, 21.) I. A statue, known only as the maker of the original statues of Haremodius and Arsitogiton, which were carried off by Xerxes, and restored by Alexander. (Pausan., 1, 8.—Arrrian, Exp. At., 3, 16.—Plin., 34, 8.)

Antenorides, a patronymic given to the sons of Antenor.

Anteros. The original meaning of the name Anteros is the deity who avenges slighted love. By later writers it is applied to a brother of Cupid, but in constant opposition to him; and in the palaestra at Elia he was represented contending with him. The signification of mutual love is given to the word only by later writers, according to Böttiger. (Schneider, Wörterb., s. v.—Pausan., 1, 30.—Id., 6, 23.—Plut. tarch., Eroth., 20.)

Anthea, one of the three towns on the site of which the city of Patra, in Phocis, is said to have been built. The other two were Aroé and Messalia. These three were founded by the Ionians when they held possession of the country. (Cramer’s Ancient Greece, vol. 3, p. 66.)

Anthedon, I. a city of Boetia, on the shore of the Euripus, and, according to Dicarchus, about seventy stadia to the north of Salamis. (Stat. Græ., p. 19.) The same writer informs us, that from Thermopylia to a point near Athens were 160 stades by a cross-road open to carriages. The inhabitants were, for the most part, mariners and shipwrights; at least, so says Dicarchus; and the fisheries of the place were very important. The wine of Antedon was celebrated. (Athenæus, 1, 56.) Pausanias states (9, 22) that the Cabiri were worshipped here; there was also a temple of Proserpina in the town, and one of Bacchus without the walls. Near the sea was a spot called the Leuc of Antedon, about one mile long. (Strabo, 3, 15.)—Antiphanes.—Pliny, Nat., 4, 7.) Sir W. Gell reports, that the ruins of this city are under Mount Kypros, about seven miles from Portusmadi, and six from Egripos. (Itin., p. 147.—Cramer’s Ancient Greece, vol. 2, p. 254.)—II. A town of Palestine, called also Agrippias, on the seacoast, to the south-west of Gaza. Herod gave it the second name in honour of Agrippa. It is now Daron. (Plin., 4, 7.)

Antitheta, a small town of Thessaly, in the interval between the river Phenix and the Straits of Thermopylae, and near the spot where the Asopus flows into the sea. In the immediate vicinity were the temples of Ceres Amphyctyon, that of Amphictyon, and the Asophus. (Strabo, 3, 14, 4.) Thessaly had many places where the Amphictyonic council used to meet, the other being Delphi. The place for holding the assembly here was the temple of Ceres. (Vid. Amphyctyones.—Herodot., 7, 200.—Strabo, 428.)

Antimenes. A town of Macedonia, to the northeast of Thessalonica, and which Thucydides seems to comprise within Mygdonia. (Thucyd., 2, 99.)

Antimnius, I. a district in the northern part of Messenia, to the south of the river Euripus, and afterward converted into Ozorene. (Amm. Marcell., 14, 9—Eutrop., 8, 2.)—II. The capital of the district just mentioned, lying east of the Euphrates and west of the city of Edessa. It is also called Anthemus. The name was derived from the Macedonian city of Anthemus. (Plin., 6, 26.—Strab., 514.)

Antipaters, A Chian sculptor, son of Miciades, and grandson to Malas. He flourished about 430 B.C., and was the father of the two artists Bupalus and Athenis. (Vid. Bupalus.) As the name Anthemus is not Greek, Boler reads Archenus, which Sillig follows. (Plin., 36, 5.—Sillig, Dict. Art., v.)

Antithesphoria, a festival celebrated by the people of Syracuse in honour of the Ceres, who was carried away by Pluto as she was gathering flowers. The word is derived from ἀντίθεσις, ἀντίθεσε, ἀντίθετος, i.e., from carrying flowers. The Syracusians showed, near their city, the spot where Proserpina was carried off, and from which a lake had immediately proceeded. Around this the festival was celebrated. The lake in question is formed by the sources of the Cyane, whose waters join the Anapus. (Compare Münzer, Nachricht ten uranischen Stadten, p. 293.—Strabo, 3, 374.)—Festivals of the same name were also observed at Argos in honour of June, who was called Anthaea. (Pollux, Onom., 1, 1.)

Antikteri, festivals in honour of Bacchus among the Greeks. They were celebrated in the month of February, called Anthesterion, whence the name is derived, and continued three days. The first day was called Πιθυγας, ἀπὸ τοῦ πιθύ γιας οὖς, because they tipped their barley wickets on the ground. They were called Χειμων, from the measure χειμών, because every individual drank of his own vessel. In commemoration of the arrival of Orestes, who, after the murder of his mother, came, without being purified, to Demophion, or Pandion, King of Athens, and was obliged, with all the Athenians, to drink by himself for fear of polluting the people by drinking with them before he was purified of the parricide. It was usual on that day to ride out in chariots, and ridicule those that passed by. The second day was called Χειμών, from χειμών, a vessel brought out full of all sorts of seed and herbs, deemed sacred to Mercury, and therefore not touched. The slaves had the permission of being merry and free during these festivals; and at the end of the solemnity a herald proclaimed, Οὐρῖς, Κήπῳ, σῶτις δ’ Ἀθηναῖοι, i.e., Depart, my dear Athenians, the festivals are at an end. (Kitian, V., H. 2, 41.—Potter, Gr. Antiq., vol. i., p. 422, seqq.) Ruhnken (Auct. Emend., ad Heusch., vol. 2, s. v. Διονύς) makes the Athenians to have celebrated three festivals in honour of Bacchus: 1. Those of the country, in the month Posideon: 2. Those of the city, or the greater festivals, in the month Elaion.
plebhol; and, 3. The Anthestheria or Lenaia, in the month Anthesterion. These last were celebrated within a large enclosure called Lenaia, and in a quarter of the city termed Liminus, or "the pools." Meursius had before distinguished the Lenaia from the Anthestheria. (Plut., Vit. Ages. c. 35.) There were, however, other claimants for this honour. The Mantinians asserted that one of their citizens, by name Macherion, gave the fatal blow. The Athenians, on the other hand, make Epaminondas to have fallen by the hand of Gryllus, son of Xenophon. (Compare Pausan., 8, 11.—Id., 9, 15, and Wasselius, ad Died. Sic., 15, 87.)

ANTICYRA. I. a town of Thessaly, at the mouth of the Sperchius. (Herodot., 7, 198.—Strabo, 428.) It was said to produce the genuine hellebore, so much recommended by ancient physicians as a cure for insanity. (Steph. Byz., s. v. Aristippus.—II. A town of Phocis, in the isthmus of a small peninsula in the Gulf of B'dhr. This Sinus was celebrated, in common with the one already mentioned above (Scylax, p. 14.—Theophr., 9, 10.—Strabo, 418.) Pausanias affirms (10, 36) that the inhabitants of Anticyra were driven from their town by Philip, the son of Amyntas, on the termination of the Sacred War. At a later period it was besieged and taken by Lavi-nus, the Roman pretor, who delivered it up to the Etolians. (Liv., 26, 26.) And subsequently, in the great war which the Macedonians, under the command of Titus Q. Flamininus, on account of the facilities which its harbour presented for the operations of the Roman fleet in the Corinthian Gulf. (Liv., 32, 18.—Pausan., 10, 36.—Polyb., 18, 28.—Id., 27, 14.) The site of Anticyra corresponds, as is generally believed, with that of Aspropit, in a bay of some extent, parallel to that of Satala. "Here is a good port," says Sir W. Gell (Itin., p. 174), "and some remains of antiquity." Chamberl remarks, that "the site is now called Aspropitza, or the white houses; and some traces of the buildings, from which it was so named, remain. The port is land-locked, and frequented by vessels for corn." (Travels, vol. 2, p. 301.)—The ancients had a proverb, Navigat Anticyram, applied to a person that was regarded as insane, and alluding to the hellebore produced at either Anticyra. (Compare Erasmus, Chil., 1, cent. 8, 55.—Navigat Anticyram, Ut eovest eiic ino-antiqua.) Horace has been supposed by some to allude to three places of this name, but this is a mistake; the poet merely speaks of a head so insane as not to be cured by the produce of three Anticyras, if there even were three, and not merely two. (Ep., ad Pis., 300.)

ANTIDOTUS, a Greek painter, a pupil of Euphranor. He flourished about 364 B.C. His colouring was severe, and his productions were remarkable for their careful execution rather than their number. His principal pieces were a Wrestler and a Flute-player. He was the instructor of Nicias of Athens. (Plin., H. N., 35, 11.—Biogr. Univ., vol. 2, p. 249.)

ANTIGENNÉS, one of Alexander's generals, publicly rewarded for his valour. (Quint. Curt., 5, 14.)

ANTIGENIDAS, a famous musician of Thebes, disciple to Philoxenus. He introduced certain innovations in the construction of the flute, and in the art of playing upon it. (Cic., Brut.)

ANTINÉ, a daughter of Cédipus, king of Thebes, by his mother Jocasta. After the death of Cédipus and his sons Eteocles and Polynices, Antigné repaired to Thebes, in order to effect the sequestration of her brother Polynices. Creon, monarch of Thebes, her maternal uncle, had forbidden the interment of the young prince under the penalty of death, on account of the war which the latter had waged against his own country. Antigné, however, succeeded in procuring a patent to allow persons to be interred, succeeded in sprinkling dust three times on her brother's remains, which was equivalent to sequestration, but was subsequently seized by the guards who had been placed to watch the corpse and prevent its interment. For this she was immured alive in a tomb, where she hung herself. Hermon, the son of Creon, to whom she had been betrothed
elected an entrance and killed himself by her corpse, and his mother Eurydice likewise put an end to her existence. This sad story forms the basis of one of the tragedies of Sophocles. (Vid. Sophocles.)

ANTIGONE. I. a city of Euphris, southwest of Apollonia. (Plut., 4, 1—II. On the borders of Macedonia, in the district of Mysia, founded by Antigonus, son of Alexander. 

Gonatas. (Id., 4, 10.)—III. One in Syria, on the borders of the Orontes, built by Antigonus, and intended as the residence of the governors of Egypt and Syria, but destroyed by him when Seleucus was built, and the inhabitants removed to the latter city. — IV. Another in Asia Minor. (Vid. Alexandra, IX.)

ANTIVONII, a general of Alexander's, and one of those who went into Egypt after the death of that monarch. In the division of the provinces after the king's death, he received Pamphylia, Ly- cia, and Phrygia. Two years after the decease of Alexander, he united with Antipater and Ptolemy against Perdiccas, who aimed at the supremacy. Perdiccas having died this same year (B.C. 322), and Antipater being placed at the head of the government, Antigonus was named commander of all the forces of the empire, and marched against Eumenes. After various conflicts, during the winter, he succeeded in getting Eumenes into his power by treachery, and starved him to death. Become now all powerful by the death of this formidable rival, he ruled as king, but without assuming the title, over all Asia Minor and Syria; but his conduct eventually excited against him a formidable league, in which Seleucus, Ptolemy, Lysimachus, and Cassander arrayed themselves against Antigonus, and the celebrated Demetrius, his son.

After varied successes, the confederates made a treaty with him, and surrendered to him the possession of the whole of Asia, upon condition that the Grecian cities should remain free. This treaty was soon broken, and Ptolemy made a descent into Lesser Asia and on some of the Greek isles, which was at first successful, but he was defeated in a sea-fight by Demetrius, the son of Antigonus, who took the island of Cy- press, made 16,000 prisoners, and sunk 200 of his ships. After this famous naval battle, which happened 30 years after Alexander's death, Antigonus and his son assumed the title of kings, and their example was fol- lowed by all the rest of Alexander's generals. — From this period, B.C. 306, his own reign in Asia, that of Ptolemy in Egypt, and those of the other captains of Alexander in their respective territories, properly commence. Antigonus now formed the design of driving Ptolemy from Egypt, but failed. His power soon be- came so formidable that a new confederacy was formed against him by Cassander, Lysimachus, Seleucus, and Ptolemy. The contending parties met in the plain of Ipsus in Phrygia, B.C. 301. Antigonus was defeated, and died of his wounds; and his son Demetrius fled from the field. Antigonus was 84 years old when he died. (Vid. Demetrius. — Pausan., 1, 6, &c. — Justin, 13, 14, 15—C. Nep., Vit. Eumen.—Plut., Vit. Demetr.—Eumen. et Atal.)—II. Gonatas, so called from Gomias, the son of his brother, and grandson of Antigonus. He made himself master of Macedonia B.C. 277, and assumed the title of king. In the course of his reign, he defeated, with great slaughter, the Gauls, who had made an irruption into his kingdom. Having refused succours to Pyrrhus of Epirus, he was driven from his throne by that warlike monarch. He afterward recovered a great part of Macedonia, and followed Pyrrhus to the south of it. In a conflict with those that pursued him, Pyrrhus was slain. After the death of Pyrrhus, he recovered the remainder of Macedonia, and died after a reign of 34 years, leaving his son, De- metrius the Second, to succeed, B.C. 243. (Justin, 21 et 25.)—III. The guardian of his nephew, Philip, the son of Demetrius, who married the widow of De- 

metrius, and usurped the kingdom. He was called Doxon (Δόξων, “about to give,” i.e., always promising), from his promising much and giving nothing. He conquered Cleomenes, king of Sparta, and obli- ged him to retire into Egypt, because he favoured the Athenians against the Greeks. He died B.C. 222. In the year after his death, he was succeeded by a lawful possessor, Philip, who became conspicuous by his cruelties and the war he made against the Romans. (Justin, 23 et 29.—Plut., Vit. Cleomen.)—IV. Son of Echecrates, and nephew of Philip, the father of Per- seus. He was the only one of the Macedonian no- bles who remained faithful when Perseus conspired against his parents; and to him, moreover, Philip revealed his plans. Charmed with his virtuous and upright character, the king intended to make him his successor, but the death of Philip pre- vented this being done. Perseus succeeded his father, and, a few days after, put Antigonus to death, B.C. 179. (Liv., 40, 54, &c.)—V. Son of Aristobulus II., king of Judea, was conducted to Rome along with his father, after the capture of Jerusalem by Pompey. When Caesar became dictator, Antigonus endeavoured, but in vain, to get himself re-established in his heredi- tary dominions by compellsing his nephew to apply to Ptolemy, king of the Ptolemies. Ptolemy (Antigonus) on the promise of 1000 talents, marched into Judaea at the head of a large army, and replaced Antigonus on the throne; but Marc Antony, at the solicitation of Herod, sent Gabinius against him, who took Jerusalem, and put Antigonus to an ignominious death. He reigned 3 years and 3 months. (Justin, 20, 29, &c.)—VI. Carytius, an historian in the age of Ptolemy Phila- delphus, who wrote the lives of some of the ancient philosophers: also a heroic poem, entitled “Anti- pater,” mentioned by Athenæus; and other works. The only remains we have of them are his “Collections of wonderful Stories” concerning animals and other natural bodies. This work was first published at Basle, 1568, and was afterward reprinted at Ley- den by Meuricus, 1619, in 4to. It forms a part also of the volume entitled Historiarum Mirabilitum Auctores Graeci, printed at Leyden in 1622, in 4to.

ANTILIBUS, a ridge of mountains in Syria, east of, and running parallel with, the ridge of Libanus. (Vid. Libanus. — Plin., 5, 20.)

ANTILCHUS, I. the eldest son of Nestor by Euryd- ice. He went to the Trojan war with his father, and was killed by Memnon, the son of Aurora, according to Homer (Od., 4, 187), who is followed by Pindar (Pith., 6, 28), and by Hyginus (fab., 113). Ovid, on the contrary, makes him to have been slain by a son of Hector (Her., 1, 15). We must therefore alter the text of the latter, and for Antilochum read either Anchia- lum with Muncker (from Hom., II., 18, 185), or Amphimachum with Scoppa (from Dares Phrygius, c. 20).—II. A poet, who wrote some verses in praise of Lysander, and received a cap full of silver in return. (Plut., Vit. Lysand., c. 18.)

ANTIMICHUS, I. a poet of Colophon, and pupil of Panyas. He was the contemporary of Chersilus, and flourished between 460 and 431 B.C. With Antimichus would have commenced a new era in the history of epic verse, if that department of poetry had been capable of resuming its former lustre. In com- mon with Chersilus, he perceived that the period of the Homeric epic had irrevocably passed; but in place of substituting the historic epic, as the former did, he returned to mythological subjects; merely treating them, however, in a manner that preserved the taste of the day. The success which he obtained, and the admiration which was subsequently testified for his productions by the Alexandrian school, prove that he was not mistaken in the judgment he had formed of the spirit of the age, and that he augured well respecting the opinion of posterity. The Alexandrian
critics (according to Quintilian, 10, 1) cited his The-bais as a work worthy of being compared with the poems of Homer, and of terminating the list of epic poems of the first class. They extolled the grandeur of his ideas and the energy of his style, but they confessed, at the same time, that he was deficient in elegance and grace. Antimachus was also the author of an elegy entitled  " The Rival", which the ancients regarded as his chief work. It is now entirely lost. The Anthology has preserved for us one of his epigrams.

The fragments of Antimachus have been collected and published by Schollenberg, under the title " Antimachii Colophonii fragmenta, nunc primum conquisita," &c., Hal. 1786, 8vo. (Scholl, Hist. Lit. Gr., vol. 1, p. 245, and 2, p. 126.)—II. A Trojan, whom Paris bribed to oppose the restoring of Helen to Menelaus and Ulysses, was killed by Paris in his palace of the Celaenae. He recommended to them to death. His sons, Hippolochus and Pisander, were killed by Agamemnon. (II., 11, 122, seqq.)

Antinoeia, annual sacrifices and quinquennial games in honour of Antinous, instituted by the Emperor Hadrian at Mantinea, where Antinous was worshipped as a divinity. They were celebrated also at Argos. (Pottcr, Gr. Antiq., vol. 1, p. 424.)

Antinoopolis, a town of Egypt, built in honour of Antinous, opposite Hermopolis Magna, on the eastern bank of the Nile. It was previously an obscure place called Besa, but became a magnificent city. (Vid. Antinoeia.) It is now called Ensenec, and a revered sepulchre has also caused it to receive the name of Shek-Abadé. (Ammian: Marcellin., 19, 12.— Dio Cass., 69. 11.— Spartian., Vit. Hadr., 14. —Description de l’Egypte., vol. 4, p. 197, seqq.)

Antioch, I. a city of Syria, once the third city of the world for beauty, greatness, and population. It was built by Seleucus Nicator, in memory of his father Antiochus, on the river Orontes, about 20 miles from its mouth, and was equidistant from Constanti-nople and Alexandria, being about 700 miles from each. Here the disciples of our Saviour were first called Christians, and the chief patriarch of Asia resided. It was afterward known by the name of Tetrapolis, being divided, as it were, into four cities, each having its separate wall, besides a common one enclosing all. The first was built by Seleucus Nicator, the second by those who repaired thither on its being made the capital of the Syro-Macedonian empire, the third by Seleucus Callinicus, and the fourth by Antiochus Epiphanes. (Strabo, 769. — Compare Man- ner, vol. 6, part 1, p. 408, seqq.) It is now called Antiochia, and has suffered severely by a late earthquake. At the distance of four or five miles below was a celebrated grove, called Daphne; whence, for the sake of distinction, it has been called Antiochia near Daphne, or Antiochia Epidapnoï (Antioxēs ἵ προς Δαρψων). Hieroc. Synodem., p. 711. — Poin., 5, 21. — Antiochia Epidapnoï, vol. Daphne. — II. A city of Lydia opposite the island of Naxos, which is sometimes called Antiochia of Pisidiar (Antioxēs Πισιδίας). According to Strabo, it was founded by a colony from Magnesia on the Meander. This probably took place under the auspices of Antiochus, from whom the place derived its name. It became, under the Romans, the chief city of their province of Pisidia, which extended farther to the north than Pisidia proper. (Hieroc., p. 672.)—III. A city of Cilicia Trachea, or, as some, Cleita. (Cramer, p. Ciliciarum.)

The Byzantine writers call it the Isaurian Antiochia. Hierocles makes mention of it (Synodem., p. 708), as also the writers on the Crusades, under the name of Antiochiwm. (Samuel, secreta seditium, i. 2, p. 4, c. 26. — Manneri, vol. 6, pt. 2, p. 84.)—IV. A city at the foot of Mount Taurus, in Commagene, a province of Syria. (Müller, Gesch. d. Christ., 6, pt. 1.) It was called by the Romans of Caia, on the river Meander, where that stream was joined by the Orsinus or Massinus. (Plin., 5, 29.)

Steph. Byz. states, that it was founded by Antiochus, son of Seleucus, in honour of his mother. It had been previously called Pythopolis. The environs abounded in fruit of every kind, but especially in the fig called "triphylla." The ancient site corresponds with Jeni-th. (Cramer’s Asia Minor, vol. 2, p. 203.)—VI. A city of Cilicia Trachea, in the district of Lamotis (Ptol., p. 129.)

Antiochus, I. the name of the mother of Antiochus, the son of Seleucus.—II. A tribe of Athens.

Antiochus, I. surnamed Soter, was the eldest son of Seleucus, the first king of Syria and Babylonia. He succeeded his father B.C. 280. When still young, he fell into a lingering disease, which none of his father’s physicians could cure for some time, till it was discovered that his pulse was more irregular than usual when Stratonic, his stepmother, entered his room, and that love for her was the cause of his illness. This was told to the father, who willingly gave Stratonic to save a son on whom he found all his hopes. When Antiochus came to the throne, he displayed, at the head of his forces, talents worthy of his sire, and gained many battles over the Bithynians, Macedonians, and Galatians. He attacked also Phœnicians and the king of Egypt, at the instigation of Magas, who had revolted against this prince, but without success. He failed also in an expedition which he undertook after the death of Philetus, king of Pergamus, with a view of seizing on his kingdom, and he was vanquished near Sardis by Eumenes, the successor of that prince. He returned after this to Antioch, and died not long subsequently, having occupied the throne for nineteen years. He was called Soter (Savior) or "Preserver," for having preserved his subjects from an irruption of the Galatians or Gauls, whom he defeated in battle. His successor was Antiochus Theos. (Justin, 17, 2, &c.)—II. Son of Antiochus Soter, and surnamed Theos (Ωες), "God," by the Milesians, because he put to death their tyrant Timarchus. He succeeded his father B.C. 261, and at the instigation of his sister Apamea, the widow of Magas, removed the king of Egypt. He was as unsuccessful, however, as his father had been; and, being compelled to sue for peace, only obtained it on condition of repudiating his wife Laodice, and espousing Berenice the sister of Polylene. The male issue, moreover, of this latter marriage were to inherit the crown. It was during this war that he lost all his
provinces beyond the Euphrates by a revolt of the Parthians and Bactrians. Ptolemy dying two years after his brother, Seleucus restored Berenice and restored Laodice. The latter, resolving to secure the succession to her son, poisoned Antiochus and subdued Ar- temon, whose features were similar to his, to represent him as king. Artemon, subservient to her will, pre- tends to be disposed, and, as king, recommended to them Seleucus, surnamed Callinicus, son of Laodice, as his successor. After this ridiculous imposture, it was made public that the king had died a natural death, and Laodice placed on the throne his son, to whom she had spatched Berenice and her son, B.C. 246. (Justin, 27, 1.—Appian.—III. Surnamed Hierax (Hippo), "bird of prey," son of Antiochus Theos and Laodice, was the brother of Seleucus Callinicus. From his early years this prince was devoured by ambition. In order to attain to power, no crime or evil act deterred him; his thirst for rule, as well as his wicked and turbulent spirit, obtained for him the appellation, so characteristic of his movements, which we have mentioned above. Under pretext of aiding his brother against Ptolemy Euergetes, he attempted to dethrone him. Seleucus having marched against him for the purpose of counteracting his ambitious designs, Hierax defeated him near Ancyra. He could not, however, derive any ad- vantage from this victory, since the Gauls, who formed the principal part of his army, revolted and declared themselves independent; and it was only by paying a large sum of money that Hierax could save his life. Eumenes, king of Pergamus, took advantage of this circumstance to rid himself of an unquiet and trouble- some neighbour. He attacked Hierax, defeated him, and compelled him to take refuge with his brother-in- law Ariarathes, king of Cappadocia. Ariarathes soon became tired of him, and formed the design of putting him to death; but Hierax, informed of his design, fled into Egypt. He was thrown into prison by Ptolemy, and perished a few years after in attempting to make his escape.—IV. The Great, as he was surnamed, was the third of the name that actually reigned, and the son of Seleucus Ceraunus, and succeeded his father 223 B.C. He passed the first years of his reign in regu- lating the affairs of his kingdom, and in bringing back to their duty several of his officers who had made them- selves independent. Desirous after this of regaining Syria, which had been wrested from Seleucus Callinicus by Ptolemy Euergetes of Egypt, he was met at KHEREB by the Egyptians, and after a hard fight of 36 hours, and was compelled to surrender the whole of his con- quests in Syria which he had thus far made. He was more successful, however, in Upper Asia, where he re- covered possession of Media, and made treaties with the kings of Parthia and Bactria, who agreed to aid him in regaining other of his former provinces, if their respect- ive kingdoms were secured to them. He crossed over also into India, and renewed his alliance with the king of that country. After the death of Philopater, he re- sumed his plans of conquest, and Ptolemy Euergetes was being yet quite young, he seized upon the whole of Syria. He granted, however, peace to Ptolemy, and even gave him his daughter Cleopatra in marriage, with Syria for her dowry. Antiochus then turned his arms against the cities of Asia Minor and Greece; but these cities having implored the aid of Rome, the sena- to sent to Antiochus to summon him to surrender his arms. Antiochus was ready to receive the summons; whom he had given an asylum, he took no notice of this order, and a war ensued. The plan, however, which Hannibal traced out for him, was not followed. Defeated at Thermopyle by Glabrio, he fled into Asia, where a second and more complete defeat, by Scipio Asiacitus, at Magnesia, compelled him to sue for peace, which he obtained only on the hardest condi- tions. He was obliged to retire beyond Mount Taurus. All his territories on this side of Taurus became Roman provinces, and he had also to pay a yearly tribute of 2000 talents. His revenues being insufficient for this heavy duty, he was compelled to extend the temple of Belus in Susiana; but the inhabitants of the country were so irritated at this sacrifice, that they slew him, together with his escort, B.C. 187. He had reigned thirty-six years. In his character of king, Antiochus was humane and liberal, the patron of learning, and the friend of merit. He had three sons, Seleucus Philopater, Antiochus Epiphanes, and Demetrius. The first succeeded him, and the two others were killed by order of his son, on his own suggestion. (Justin, 31 et 32.—Lit., 34, 59.—Flor., 2, 1—Appian, Bell. Syr.)—V. Surnamed Epiphanes, or Illustrious, was king of Syria after the death of his brother Seleucus Philopat- er, having ascended the throne 175 B.C. He was the fourth of the name, and was surnamed Epiphanes (Ἐπιφάνης), "the Illustrious," and reigned eleven years. Taking advantage of the infancy of Ptolemy Philometor, he seized upon Coelosyria, and even penetrated into Egypt, where he took Memphis, and ob- tained possession of the person of the young king, whom he kept prisoner for many years. The guardi- ans of the young Ptolemy, however, having applied for aid to the Romans, the senate sent Popilius Lenas unto Epiphanes, who compelled him to renounce his conquests and set the Egyptian monarch at liberty. The Jews having revolted during the reign of Epiphanes, he marched against Jerusalem, deposed the high- priest Onias, profaned the temple by sacrifices to Ju- piter Olympus, plundered all the sacred vessels, and slaughtered, it is said, 80,000 inhabitants of this illi- fated city. After this he proceeded into Persia, and, while traversing Elymais, wished to plunder the temples that were there; but the inhabitants having re- volted, he was compelled to retreat to Babylon. There he learned that the Jews, commanded by Mattathias and Judas Maccabaeus, had gained several victories over the generals whom he had left in Judaea. Trans- ported with fury at the intelligence, he assembled a new army, and swore to destroy Jerusalem; but, at the moment of his departure, he fell from his chariot, was subsequently seized with a disgusting malady, and died in the most agonizing sufferings. The Persians attributed the manner of his death to his impious en- terprise against the temple of Elymais; the Jews saw in it the anger of Heaven, for his having profaned the temple of Jerusalem. He died B.C. 164. Epiphanes of Syria was noted for his studies. He was irre- gorous, loved the arts, and displayed considerable abil- ity in the wars in which he was engaged; but his vices and follies tarnished his character. (Justin, 34, 5.—Macchab., 1, 1, &c.)—VI. Eupator, son of the preceding (from ευ and πατρις, "born of an illustrious sire"), succeeded to the throne at the age of nine years. The generals of this prince continued the war against the Jews, and Jerusalem was on the point of becoming, for the second time, the prey of a foreign conqueror. The citizens of Eupator, by a sudden invasion, seized upon the capital of Syria. The generals of Eupator made peace with the Jews, and marched against Demetrius; but the soldiers, ashamed of serving a mere child, went over to the in- vader, who put Eupator to death after a reign of about eighteen months.—VII. (the sixth of the name) Son of Alexander Balas, took the surname of Thess ("God"), which is the name of his father. He had been already mentioned. To this surname he afterward added that of Epiphanes ("the illustrious"). Demetrius Nicator having disbanded his army, and being entirely without apprehension of any foe, Tryphon took advantage of this, and having brought Antiochus from Arabia, still young in years, caused him to be proclaimed king; about 144 B.C. The attempt succeed- ed. Demetrius was defeated, and Antiochus ascend- ed the throne. He reigned, however, only in name.
The actual monarch was Tryphon, who had him put to death at the end of about two years, and caused himself to be proclaimed in his stead. (Justin, 36, 1.)—VIII. Surnamed Sidetes (Σιδητης), "the hunter," son of Demetrius Soter, ascended the throne 139 B.C. He drove from Syria the usurper Tryphon, made war on the Jews, besieged Jerusalem, and compelled the Hasmoneans to sue for peace in matters between them and Phraates, king of Parthia, who menaced his kingdom, gained three victories over him, and obtained possession of Babylon. The following year he was vanquished in turn by the Parthian king, and lost his life in the conflict. He was a prince of many virtues, but he tarnished all by his habits of intemperance.—IX. The eighth of the name, surnamed Grypus (Γρυπὸς) from his eagle nose, was son of Demetrius Nicator and Cleopatra. He was raised to the throne B.C. 123, to the prejudice of his brothers, by the intrigues of his mother, who hoped to reign in his name. When he was declared king, the throne of Syria was occupied by Alexander Zebinas. He marched against this impostor, defeated, and put him to death. He then married Tryphena, daughter of Polymy Erugentes II., which ensured peaceable relations between them. He was placed on the throne by his brothers, for some time, yielded to the authority of his mother, he resolved at last to reign in his own name, a step which nearly cost him his life. His mother prepared a poisoned draught for her son, but, being suspected by him, was compelled to drink it herself. A bloody war soon after broke out between this prince and Antiochus the Cyzicenian, his brother, in which the latter compelled Grypus to cede to him Cilicia. They then reigned conjointly for some time. Grypus was at last assassinated by one of his subjects, B.C. 96. (Justin, 39, 1.—Joseph, Ant. Jud.)—X. Surnamed Cyzicenus, from his having been brought up in the city of Cyzicus, was the ninth of the name. He was son of Antiochus Sidetes, and succeeded his brother Grypus, after having regained over Cilicia, which he had previously compelled his brother to yield to him. He was a distinguished and indolent prince, and possessed of considerable mechanical talent. His nephew Seleucus, son of Grypus, deposed him, B.C. 95.—XI. The tenth of the name, ironically surnamed Pius, because he married Selena, the wife of his father and of his uncle. He was the son of Antiochus IX., and he expelled Seleucus, the son of Grypus, from Syria; but he could not prevent two other sons of Grypus, namely, Philip and Demetrius, from assuming a part of the kingdom very soon after by their hands. [Appian.—Joseph., Ant. Jud., 13, 21.—] After his death, the kingdom of Syria was torn to pieces by the factions of the royal family or usurpers, who, under a good or false title, under the name of Antiochus or his relations, established themselves for a little time either as sovereigns of Syria, or Damascus, or other dependant provinces. At last Antiochus, surnamed Anticus, the son of Antiochus the ninth, reassembled his paternal throne by the influence of Lucullus, the Roman general, on the expulsion of Tigranes, king of Armenia, from the Syrian dominions; but four years after, Pompey deposed him, and observed that he who hid himself while a usurper sat upon his throne, ought not to be a king. From that time, B.C. 65, Syria became a Roman province, and the race of Antiochus was extinguished.—There were many anecdotes of this Antiochus, whom the most deserving of mention are the following: 1. A native of Syracuse, descended from an ancient monarch of the Sicani. He wrote a history of Sicily, which was brought down to the 98th Olympiad, and which Diodorus Siculus cites among the sources whence he derived aid for his compilation. He composed also what appears to have been a very curious history of Italy, some fragments of which are preserved by Dionysius of Halicarnassus. (Compare Heyne, de Fontibus Hist. Diod.—vol. 1, p. xxxv., ed. Bip.)—II. A rhetorician and sophist of Eretria, the pupil of Dionysius of Miletus. Dio Cassius (77, p. 878) relates, that, in order to rouse the spirits of the Roman army, who were worn out with fatiguing marches, he assumed the character of a cynic, and rolled out of a draught of salt and water in the snow. This conduct gained him the favour of Septimius Severus and Caracalla. He afterward went over to Tiridates, king of the Parthians, whence Suidas styles him Ἀντόμπαλος, or "the desertor."—III. A native of Ascalon, the last preceptor of the Platonic school in Greece. He was the disciple of Philo, and one of the philosophers whose lectures Varro, Cicero, and Brutus attended, for he taught, at different times, at Athens, Assisa, and Rome. He attempted to reconcile the tenets of the different sects, and maintained that the doctrines of the Stoics were to be found in the writings of Plato. Cicero greatly admired his eloquence and the politeness of his manners, and Lucullus took him as his companion into Asia. He resigned the academic chair in the 175th Olympiad. After his time the professors of the Academic philosophy were dispersed by the tumults of the civil wars, (Schill, Hist. Lat. Gr., vol. 5, p. 199, seq.—Enfield's History of Philosophy, vol. 1, p. 258, seq.) Antippe, I. daughter of Nycteus, who was a son of Neptune and king of Thebes, received the addresses of Jupiter, the god having appeared to her under the form of a satyr. Terrified at the threats of her father, on the consequences of her faint becoming apparent, Antiope fled to Sicyon, where she married Epeoupes. Nycteus, out of grief, put an end to himself, having previously charged his brother Lycus to punish Epeoupes and Antiope. Lycus accordingly marshalled an army against Sicyon, took it, slew Epeoupes, and led away Antiope captive. On the way to Thebes, she brought forth twins at Eleutherae. The unhappy babies were exposed on a mountain; but a shepherd having found them, reared them both, calling the one Zethus, the other Amphion. The former devoted himself to the care of cattle, while Amphion passed his time in the cultivation of music, having been presented with a lyre by Mercury. Meanwhile, Lycus had put Antiope in bonds, and she was treated with the utmost cruelty by him and his wife Dirce. But her chains became loosened of themselves, and she fled to the dwelling of her sons in search of shelter and protection. Having recognised her, they resolved to avenge her wrongs. According to one account, the Dioscuri, having haying Dirce by the hair to a wild bull, let the animal drag her until she was dead. (Vid. Dirce, Amphin. Zethus.—Apollod., 3, 5.—Keightley's Mythology, p. 299.)—II. A queen of the Amazons. According to one account, Hercules, having taken her prisoner, gave her to Theseus as a reward of his valor. The more common tradition, however, made her to have been taken captive and carried off by Theseus himself, being in the expedition with his own fleet against the Amazonian race. She is also called Hippolyta. Justin says that Hercules gave Hippolyta to Theseus, and kept Antiope for himself. (Plut., Vis. Thez., 27—Justin, 2, 4.) Antipheus, a small island in the Αἰγαί, ranked by Artemidorus among the Cyclades, but excluded by Strabo (10, p. 420, C. 1.) It lay off the coast of Caria, and was separated from this latter island, according to Heracleides of Pontus (Steph. Byz., s. v. Ὅλλορος), by a strait eighteen stadia wide. The same writer affirms (Plin., H. N., 4, 12), that it had been colonized by Sidonians. Its more ancient name was Oliurus. It is now Antiparos. This island is famed for its grotto, which according to Pliny deep, was believed by the ancient Greeks to communicate, beneath the waters, with the neighbouring islands.

ANTIOCHUS.
ANTIPATER.

ANTIPATER, I son of Iolaus, a Macedonian, was first an officer under Philip, and was afterward raised to the rank of a general under Alexander the Great. When the latter invaded Asia, Antipater was appointed governor of Macedonia; and in this station he served his prince with the greatest fidelity. He reduced the Spartans, who had formed a confederacy against the Macedonians; and, having thus secured the tranquility of Greece, he marched with high and powerful reinforcement for Alexander. After that monarch's death, the government of Macedonia and of the other European provinces was allotted to Antipater. He was soon involved in a severe contest with the Grecian states; was defeated by the Athenians, who came against him with an army of 30,000 men and a fleet of 200 ships, and was closely besieged in Lamia, a town of Thessaly. But Leosthenes, the Athenian commander, having been bribed to desert, Antipater had received assistance from Craterus, his son-in-law, the fortune of the war was completely changed. The Athenians were routed at Crannon, and compelled to submit at discretion. They were allowed to retain their rights and privileges, but were obliged to deliver up the orators Demostenes and Hyperides, who had instigated the war, and to receive a Macedonian garrison into the Munychia. Antipater was equally successful in reducing the state of Carnon, who were making a noble struggle for their freedom; but he settled the respective governments with much moderation. In conjunction with Craterus, he was the first who attempted to control the growing power of Perdiccas; and after the death of that commander he was invested with all his authority. He exercised this jurisdiction over the other governments with unusual fidelity, integrity, and impartiality, and died in the 80th year of his age, B.C. 319. At his death, he left his son Cassander, who succeeded Perdiccas, him his own immediate successor; and recommended him to the other generals as the fittest person to preside in their councils. Antipater received a learned education, and was the friend and disciple of Aristode. He appears to have possessed very eminent abilities, and was peculiarly distinguished for his vigilance and fidelity in every trust. It was a saying of Philip, father of Alexander, "I have slept soundly, for Antipater is my son." (Justin, 11, 12, &c.; Thucyd., 17, 18, &c.)—II. The Idumaean Antipater was the father of Herod the Great, and was the second son of Antipas, governor of Idumea. He embraced the party of Hyrcanus against Aristobulus, and took a very active part in the contest between the two brothers respecting the office of high-priest in Judaea. Aristobulus at first, however, succeeded; but when Pompey had deposed him and restored Hyrcanus to the pontifical dignity, Antipater soon became the chief director of affairs in Judaea, ingratiated himself with the Romans, and used every effort to aggrandize his own family. He gave very effectual aid to Caesar in the Alexandrian war, and the latter, in return, made him a Roman citizen and procurator of Judaea. In this latter capacity he exerted himself to restore the ancient Jewish form of government, but was cut off by a conspiracy, the brother of the high-priest having been bribed to get possession of the temple. (Joseph, Ant. Jud., 14, 3.)—III. A son of Cassander, ascended the throne of Macedonia B.C. 298. He disputed the crown with his brother Philip IV., and caused his mother Thesalonica to be put to death for favouring Philip's side. The two brothers, however, resigned conjointly, notwithstanding this, for three years, when they were defeated at Lamia, a town of Thessaly, where he ended his days. (Justin, 26, 1.)—IV. A native of Tarsus, the disciple and successor of Diogenes the Babylonian, in the Stoic school. He flourished about 80 B.C., and is applauded by both Cicero and Seneca as an able supporter of that sect. His chief opponent was Carneades. (Cic., de Off., 3, 12.—Sen., Ep., 92.)—V. A native of Cyrene, and one of the Cyreniac sect. He was a disciple of the first Aristippus, and the preceptor of Epitomides.—VI. A philosopher of Tyre, who wrote a work on Duty. He is supposed to have been the Cyreniote sect. Cicero (de Orat., 3, 50) speaks of him as an improvisor. Cassius, into whose mouth the Roman orator puts this remark, might have known the poet when he was questor in Macedonia, the same year in which Cicero was born (106 B.C.). Pliny relates (7, 51) that he had every year a fever on the day of his birth, and that, without ever experiencing any other complaint, he attained to a very advanced age. Some of his epigrams remain, the greater part of which fall under the class of epitaphia (ttric^ioipta). Boivin (Mem. de l'Acad. des Insér., &c., vol. 3) states, that the epigrams of this poet are written in the Doric dialect; the remark, however, is an incorrect one, since some are in Ionic. (Schölz, Hist. Lit. Gr., vol. 4, p. 45.)—VII. A poet of Thessalonica, who flourished towards the end of the last century preceding the Christian era. We have thirty-six of his epigrams remaining. He was a native of Hiera-polis. He was the secretary of Sulpicius Severus, and the son of Apollonius. He was the preceptor also of Caracalla and Geta, and reproached the former with the murder of his brothers.

ANTIPATRA, a town of Illyricum, on the borders of Macedonia. It was taken and sacked by L. Apistus, a Roman officer detached by the consul Sublicius to ravage the territory of Philip, in the breaking out of the war against that prince. (Liv., 31, 27.)

ANTIPATRIS, or Caphareasa, a town of Palestine, situated in Samaria, near the borders of Apollonia. It was rebuilt by Herod the Great, and called Antipatris, in honour of his father Antipater. (Joseph, B. J., 16, 1, 4.—Id. Ant., 16, 5, and 3, 15.) The city still existed, though in a dilapidated state, in the time of Theophanes (8th century). Its site is at present unknown: the modern Aris does not coincide with this place, but rather with Apollonia. (Manevi, vol. 6, pt. 1, p. 271, seq.)

ANTIPHNES, I. a comic poet of Rhodes, Smyrna, or Carthage B.C. 408, of parents in the low condition of slaves. This most prolific writer (he is said to have composed upward of three hundred dramas), notwithstanding the meanness of his origin, was so popular in Athens, that on his decease a decree was passed to remove his remains from Chios to that city, where they were interred with public honours. (Suidas, s. v.—Theatre of the Greeks, 2d ed., p. 183.)—II. A satyractor of Argos, the pupil of Petruleus, one of those who had studied under Polycletus. He flourished about 400 B.C. Several works of this artist are mentioned by Pausianus (10, 9). He formed the statues of the Dioscuri and other heroes; and he made also a brazen horse, in imitation of the horse said to have been constructed by the Greeks before Troy. The inhabitants of Argos sent it as a present to Delphi. Other imitations performed by this artist are mentioned by Eustathius, &c. (Eustath. ad Iliad. VI., 442, a, Silius, Dict. Art., s. v.)—III. A poet of Macedonia nine of whose epigrams are preserved in the Anthology. He flourished between 100 B.C. and the reign of Augustus. (Consult Jacobs, Catal. Poet. Epig., s. v.)

ANTIPATES, a king of the Laistrygonians, descended from Lamus. Ulysses, returning from Troy, came upon his coasts, and sent three men to examine the country. Antipates devoured one of them, and pursued the others, and sunk the fleet of Ulysses with stones, except the ship in which the hero himself was. (Od., 10, 81, seq.)
ANTIPHON.

Antiphon (Ophidion), a town and harbour, according to Ptolemy, on the Sinus Arabicus, in Egyptus inferior. Others, however, place it in Ethiopia, to the north of Saba. (Bisch. und Moll, Wörterb., &c.)

Antiphilus, I. A painter, born in Egypt, and mentioned by Quintilian (12, 10) as possessing the greatest readiness in his profession, and compared by many to the most eminent artists, Apelles, Protogenes, and Lyssippus. He is twice alluded to in Pliny, with an enumeration of his most remarkable productions (39, 10 and 11). One of his pictures represented a boy blowing the fire, with the effect of the light on the boy's countenance and the surrounding objects strikingly delineated. The subject of another and very famous piece was a satyr, arrayed in a panther's skin. He flourished during the ages of Alexander the Great and Ptolemy I. of Egypt. This makes him a contemporary of Apelles, whom, according to Lucian, he endeavoured to rival. (Sillig, Dict. Art. s. v.—) An architect, whose age and country are uncertain. In contrast to the more correct art of his age and country, he is said to have invented, at Olympia, for the Carthaginians, a repository for their presents. (Pausane, 6, 19.—Sillig, Dict. Art, s. v.)

Antiphon, I. A tragic poet, who lived at the court of Dionysius the elder, and was eventually put to death by the tyrant. Aristotle cites his Melager, Andromache, and Jason.—II. A native of Attica, born at Rhamus about 470 B.C. (Compare Sمحا, de Antiph., 17.) He was the first to know how to apply this art to judicatory eloquence, and to matters that were treated before the assemblies of the people. Thus, Herrnogenes (de Orm. 2, p. 498) says, that he was the inventor of the Orator. Antiphon exercised his art with great success, and gave instructions also in a school of rhetoric which he opened, and in which Thucydides formed himself. If reliance is to be placed on the statement of Photius (Bibliotheke, 219.), an Antiphon, during the Peloponnesian war, frequently commanded bodies of Athenian troops; he equipped, also, at his own expense, sixty triremes. He had, moreover, the principal share in the revolution which established at Athens the government of the four hundred, of which he was a member. During the short duration of this oligarchy, Antiphon was sent to Sparta for the purpose of negotiating a peace. The ill-success of this expedition deprived him of the government and Antiphon was accused of treason and condemned to death. According to another account, given by Photius (Bibliotheke, 2, p. 486, ed. Bekker), which, however, is wholly incorrect, Antiphon was put to death by Dionysius of Syracuse, either for having criticised the tragedies of the tyrant, or else for having hazarded an unlucky bonmot in his presence. Some one having asked Antiphon what was the best kind of brass, he replied, that of which the statues of Harmodius and Aristogiton were made.—The ancient writers cite a work of Antiphon's on the Rhetorical Art, Τεχνὴ μητροπίας, and they remark that it was the oldest work of the kind, which means merely that Antiphon, as has already been remarked, was the first who applied the art in question to the business of the bar.

They make mention also of thirty-five, and even sixty, of his discourses, that is, discourses held before the assembly of the people (λόγοι δημοσίως); judiciary discourses (δικαίωμα, &c). We have fifteen ha-

rangues of Antiphon remaining, which are all of the class termed by Herrnogenes λόγοι φόνον, that is, having reference to criminal proceedings. Twelve of them, however, are rather to be regarded as so many studies, than discourses actually completed and pronounced. Herrnogenes passes the following judgment upon Antiphon: "He is clear in his expositions, true in his delineation of sentiment, faithful to nature, and, consequently, persuasive; but he possesses not these qualities to the extent to which they were carried by the orators who came after him. His diction, though often swelling, is nevertheless polished: in general, his language is well constructed. The remaining discourses of Antiphon are given in Reiske's edition of the Greek Orators, in that of Bekker, Berol., 1823, 5 vols. 8vo, and in that of Dobson, Lond., 1828, 16 vols. 8vo.

Three of his discourses, 1. Κατηγορία φαρακίας, κατά της μητρίας; 2. Πέρι τοῦ Ηρώδου φόνον; 3. Πέρι τοῦ χρυσονησίου, deserve the attention of scholars, as giving an idea of the form of proceeding in Athens in criminal prosecutions. (Schill, Hist. Lit. Gr., vol. 2, p. 392.) He was a pupil of Socrates, Chalcides, and Photius, in speaking of the conversation which Socrates had with this individual, and of which Xenophon (Mem. Socr., 1, 6) has preserved an account, confound him with the orator of the same name. Herrnogenes ascribes to him a work on truth (τοπώ νοπολειας), of which Suidas cites a fragment (x. v. Αδέφρος), wherein the sophist speaks of the Deity. (Schill, Hist. Lit. Gr., vol. 2, p. 392.)

Antipater, brother of Cynegus, and son of Gany-
tor the Naupactian. He and Cynegus slew the poet Hesioid, for a supposed connivance in an outrage perpetrated upon their sister. (Vid. Hesiodus.)

Antipolis, a city of Gaul, on the coast of the Mediterranean, southeast of the river Varus, built and colonized by the Massilians. It is now Antibes. (Strabo, 180.—Id. ibid., p. 184.)

Antiphon, the poet, of whose putative put of Eotlia, so called from its being opposite to Rhium, another point of Achaia. It was sometimes surnamed Molycrium, from its vicinity to the town of Molycrium (Thucyd., 2, 86), and was also called Rhium Ατελιοκος (Polib., 5, 94). Here the Criscean, or, as Scylax terms it, the Delphic, Gulf properly commenced. (Perip., p. 14.) Thucydides states that the interval between the two capes was barely seven stadia; the geographer just quoted says ten stadia. The narrowness of the strait rendered this point of great importance for the passage of troops to and from Eotlia and the Peloponnesus. (Polib., 4, 10 and 19.) On Antirrhum was a temple sacred to Neptune. The Turkish fortress, which now occupies the site of Antirrhum, is known by the name of Rionemlia. (Gell's Itiner., p. 293.)

Antissa, a city of Lesbos, between the promontory of Sigeanus and Methyme. Having offended the Romans, it was depopulated by Labeo, and the inhabitants were removed to Methyme. It was afterward rebuilt, and is supposed to have been insulated by an arm of the sea from the rest of the island. Hence the name Antissa, it being opposite to Lesbos, whose more ancient name was Issa. (Plin., 5, 31.—Id., 2, 91.—Liv., 45, 31.—Lycostraten, s. v. 219.—Eustath., ad Hom., II., 2, 129.)

Antisthenes, an Athenian philosopher, founder of the Cynic sect, born about 490 B.C., of a Phrygian or
ANTISTHENES.

Thracian mother. In his youth he was engaged in military exploits, and acquired fame by the valour which he displayed in the battle of Tanagra. His first studies were under the direction of the sophist Gorgias, who instructed him in the art of oratory. Being dissatisfied with the fruitless labours of this school, he sought for more substantial wisdom from Socrates. Captivated by the doctrine and the manner of his new master, he prevailed upon many young men, who had been his fellow-students under Gorgias, to accompany him. So great was his ardour for moral wisdom, that, though he lived at the Piraeus, he came daily to Athens to attend upon Socrates. Despising the pursuits of a worldly existence, Socrates sought the reward of virtue in virtue itself, and declined no labour or suffering which virtue required. This noble consistency of mind was the part of the character of Socrates which Antisthenes chiefly admired; and he resolved to make it the object of his diligent imitation. While he was a disciple of Socrates, he discovered his propensity towards severity of manners by the meanness of his dress. He frequently appeared in a thorny cloak. Socrates, when he saw that Antisthenes had got penetration in discovering the characters of men, remarking that Antisthenes took pains to expose, rather than to conceal, the tattered state of his dress, said to him, "Why so ostentatious! Through your rags I see your vanity." While Plato and other disciples of Socrates were, after his death, forming schools in Athens, Antisthenes chose for his school a public place of exercise with the walls of the city, called the Cynosarges, whence some writers derive the name of the sect of which he was the founder. Others suppose that his followers were called Cynics from the habits of the school, which, to the more refined Athenians, appeared those of dogs rather than of men. Here he inculcated, both by precept and example, a rigorous discipline. In order to accommodate his own manners to his doctrine, he wore no other garment than a coarse cloak, suffered his beard to grow, and carried a wallet and staff like a wandering beggar. Undoubtedly this was nothing more than an expression of opposition to the gradually increasing luxury of the age; his wish and object being to bring men back to their original simplicity in life and manners. Thus he set himself directly against the tendency and civilization of his age, as is clear from many of his sayings, which are tinted at once with bitterness and wit. And although this was scarcely more than a negative resistance, yet, as such, it was successfully placed to the circumstances in which he lived, and to the advancing progress of science, his position must naturally have reacted upon the feelings of his contemporaries towards himself. We consequently find that his school met with little encouragement, and this so annoyed him that he drove away the few scholars he had.

Diogenes of Sinope, who resembled him in character, is said to have been the only one that remained with him. The doctrine of Antisthenes was mainly confined to morals; but, even in this portion of philosophy, it is exceedingly meager and deficient, scarcely furnishing anything beyond a general defence of the olden simplicity and moral energy, against the luxurious indulgence and effeminacy of later times. Instead, however, of being duly tempered by the Socratic moderation, Antisthenes appears to have been carried to excess in his virtuous zeal against the luxury of the age. He supposed the greatness of the human soul to be so thoroughly displayed in the names which have come down to us respecting him, his doctrine is painted in somewhat exaggerated colours. With regard to his religious tenets, it may be observed that Antisthenes, in accordance with the Socratic doctrine, maintained that, in the universe, all is regulated by a divine intelligence, from design, so as to benefit the good man, who is the friend of God. For the sake shall possess all things. This doctrine of God, therefore, was con- nected with his ethical opinions, by indicating the physical conditions of a happy life. It led him, how- ever, to devote from Socrates, and to declare that, in opposition to the vulgar polytheism, there was but one natural God, but many popular deities; that God cannot be known or recognised in any form or figure, since he is like to nothing on earth. Hence undoubtedly arose his allegorical explanation of mythology, and his doubts respecting the demonic intimations of Socrates. Towards the close of his life, the gloomy cast of his mind and the moroseness of his temper increased to such a degree, as to render him troublesome to his followers. Antisthenes wrote many books, of which none are extant except two declamations under the names of Ajax and Ulysses. These were published in the collection of ancient orators by Aulus, in 1513; by H. Stephens, in 1573; and by Canter, as an appendix to his edition of Aristides, printed at Basle in 1566.—For some remarks on the Cynic sect, see the article Diogenes. (Engel's History of Philosophy, vol. 1, p. 239; Litt. Anc. Phil., vol. 2, p. 108, seqq.; Oxford trans.)

ANTISTIUS LABEÖ, a distinguished lawyer in the reign of Augustus, who, in the spirit of liberty, frequently spoke and acted with great freedom against the emperor. According to some commentators, Horace (Serm., 1, 3, 82), in order to pay his court to the monarch, salutes Labeo with the appellation of mad (Labœne insanior, &c.). But it has been well observed, in op. 8, lib. 4, and 8, lib. 9, that whatever respect the poet had for his emperor, we never find that he treats the patrons of liberty with outrage. Nor can we well imagine that he would dare thus cruelly to brand a man of Labeo's abilities, riches, power, and employ- ments in the state, and to whom Augustus himself had offered the consulsiphip. Bentley, Wieland, Wetzel, and other critics are of opinion, therefore, that this individual cannot be the one to whom Horace alludes, but that he refers to some other personage of the day, whose history has not come down to us. Bentley even goes so far as to suggest Labieno for Labœne in the text of Horace, and cites Seneca in support of his conjecture (Pref., ad lib., 5, Contron), according to whom, Labienus was a public speaker of the day, so noted for the freedom of his tongue as to have received the name of Rabienus in derision. Heindorf, how- ever, thinks that Horace may here actually refer to Antistius Laboe, not for the reason given by some of the commentators, but in allusion to his earlier period, and to a violent and impetuous temperament which he may have at that time possessed (ad Horat., l. c.).

ANTITAUROS, a chain of mountains, running from Armenia through Cappadocia to the west and southwest. It connects itself with the chain of Mount Taurus, between Catoonia and Lycaonia. (Vid. Taurus and Parvades.—Mannert, vol. 6, pt. 2, p. 5.)

ANTIOCH, a city of Italy, on the coast of the Taurus, about 32 miles below Ostia. According to Xenagoras, a Greek writer quoted by Dionysius of Halicarnassus (1, 73), the foundation of Antium is to be ascribed to Antikias, a son of Circe. Solinus (c. 8) attributes it to Ascanius. But, whatever may have been its origin, there can be no doubt that Antium was, at an early period, a maritime place of considerable note, since we find it comprised in the first treaty made by Romans with Carthage (Polyb., 3, 228); and its inhabitants are mentioned in the Ennius, (251) and Mark Antony, Syrus, Lycius, Heliodorus, and others. We find some marks (251) and标注s the letters of the Romans by Alexander and Demetrius, of the pirates exercised by the Antites, in conjunction with the Tyrrhenians, on their subjects; intimating that it was done with the connivance of Rome. Antium appears also to have been the most considerable city of the Volsci; it was to this place, according to Plutarch, that Coriolanus retired after he had been banished from his coun-
try, and was here enabled to form his plans of vengeance in conjunction with the Volscian chief Tullus Aufidius. It was here, too, that, after his failure, he met his death from the hands of his discontented allies. Antium was taken for the first time by the consul T. Quintius Capitolinus, A.U.C. 258, and the year following it received a Roman colony. This circumstance, however, did not prevent the Antitians from revolting frequently, and joining in the Volscian and Latin wars (Liv. 6, 6.—Dion. Hal., 10, 21), till they were finally conquered in a battle near the river Astura, with many Latin confederates. In consequence of this defeat, Antium fell into the hands of the victors, when most of its ships were destroyed, and the rest removed. The town was not destroyed by the conquerors. But it rose again from its ruins during the empire, and attained to a high degree of prosperity and splendour; since Strabo reports, that in his time it was the favourite resort of the emperors and their court (Strab., 232), and we know it was here that Augustus received from the senate the title of Father of his Country. (Suet., Aug. 50.) Antium became successively the residence of Tiberius and Caligula; it was also the birthplace of Nero (Suet., Ner., 6), who, when he reconquered it, built a port there, and bestowed upon it various other marks of his favour. Hadrian is also said to have been particularly fond of this town. (Philostрат., Vit. Apoll. Tyas., 8, 8.) There were two temples of celebrity at Antium: one sacred to Fortune, the other to Ascanius. (Horat., Od., 1, 38, 1.—Martial, Ep., 5, 1.—Val. Max., 1, 8.) The famous Apollo Belvedere, the fighting goddess, as it is said, was discovered, and many other statues discovered at Antium, attest also its former magnificence. The site of the ancient city is sufficiently marked by the name of Porto d'Anzo, which was attached to its ruins. But the city must have reached as far as the modern town of Nettuno, which derives its name probably from some ancient temple dedicated to Neptune. (Cramer's Ancient Italy, vol. 2, p. 66, seq.)

ANTONIA LEX. I. was enacted by Marc Antony, when consul, A.U.C. 708. It abrogated the lex Aes. and renewed the lex Cornelia, by taking away from the people the privilege of choosing priests, and restoring it to the college of priests, to which it originally belonged. (Cic., Phil., 1, 9.)—II. Another by the same, A.U.C. 703. It ordained that a new decuria of judges should be added to the two former, and that they should be chosen from the centurions.—III. Another by the same, A.U.C. 671. It ordained that ten pugnali should be given to the twelve leading citizens of the city, and that those who were condemned de majestate, or of pernicious measures against the state. Cicero calls this the destruction of all laws. —IV. Another by the same, during his triumvirate. It made it a capital offence to propose, ever after, the election of a dictator, and for any person to accept of the office. (Appian, de Bell. Civ., 3.)

ANTONIA, I. the name of two celebrated Roman families, the one patrician, the other plebeian. They both pretended to be descendants of Hercules. —II. A daughter of Marc Antony, by Octavia. She married Domitius Aenobarbus, and was mother of Nero and two daughters. (Tacit., Ann., 4, 44.)—III. A daughter of Claudius and Eelia Petina. She was the wife of the Tuberus, and was repudiated for her lewity. Nero wished after this to marry her, but, on her refusal, caused her to be put to death. (Cic., Ner., 35.) —IV. A daughter of Marc Antony, and the wife of Drusus, who was the son of Livia and brother of Tiberius. She became mother of three children, Germanicus, Caligula's father; Claudius the emperor; and Livia Drusilla. Her husband died very early, and she never would marry again, but spent her time in the education of her children. Caligula conferred on her the same honours that Tiberius had bestowed upon Livia, but is thought to have cut her off subsequently by poison. (Suet., Cal., 15 et 23.)—V. (Turris) a fortress of Jerusalem, founded by Hyrcanus, and enlarged and strengthened by Herod, who called it Antonius, in honour of Marc Antony. It stood alone on a high and precipitous rock, at the northwest angle of the town. The temple of the former was covered with smooth stone for ornament, and to make the ascent so slippery as to be impracticable. Round the top of the rock there was first a low wall, rather more than five feet high. The fortress itself was 70 feet in height; the rock on which it stood, 90 feet. It had every luxury and convenience of a sumptuous palace, or even of a city; spacious halls, courts, and baths. It appeared like a vast square tower, with four other towers on the points of the three remaining corners of the rock, 90 feet high; that at the corner next to the temple, above 120. This famous structure was taken by Titus, and its fall was the prelude to the capture of the city and temple. (Joseph., Bell. Jud., 5, 15.—Milman's History of the Jews, vol. 3, p. 21.)

ANTONINUS, I. PIUS (of Titus Aurelius Fulvius Boionius Antoninus), was born at Lanuvium in Italy, A.D. 66, of a highly respectable family. He was first made a defendant to the emperor Tiberius, the emperor of Italy, and in A.D. 120, consul; in all which employments he displayed the same virtue and moderation that afterward distinguished him on the imperial throne. When Hadrian, after the death of Verus, determined upon the adoption of Antoninus, he found some difficulty in persuading him to accept of so great a charge as the administration of the Roman empire. This reluctance being overcome, his adoption was declared in a council of senators; and in a few months afterward he succeeded by the death of his benefactor, who had caused him, in his turn, to adopt the son of Verus, then seven years of age, and Marcus Annius, afterward Aurelius, a kinsman to Hadrian, at that time of the age of seventeen. The tranquillity enjoyed by the Roman empire under the sway of Antoninus affords few topics for history: and, in respect to the emperor himself, his whole reign is a picture of the display of the national abilities, talents, and virtues. The few disturbances which arose in different parts of the empire were easily subdued by his lieutenants; and in Britain, the boundaries of the Roman province were extended by building a new wall to the north of that of Hadrian, from the mouth of the Eusk to that of the Tweed. On the whole, the reign of Antoninus was uncommonly pacific; and he was left at leisure fully to protect the Roman people and increase the population of his empire; and the number of informers was altogether abolished, and, in consequence, condemnation and confiscation were proportionately rare. Though distinguished for economy in the distribution of the public revenues, he was conscious, at the same time, of the necessity of adequately promoting public works of magnificence and utility; and it is thought that Nimes, whence his family originally came, was designed to be the terminus of the remains of which so amply testify their original grandeur. His new decrees were all distinguished for their morality and equity; and if his rescript in favour of the Christians, addressed to the people of Asia Minor, be authentic (and there is much argument in its favour), no better proof of his philosophy and justice, on the great point of religious toleration, can be well afforded. The high reputation acquired by Antoninus for virtue and wisdom gave
him great influence, even beyond the bounds of the Roman empire; and neighbouring monarchs spontaneously made him the arbiter of their differences. His private life was frugal and modest, and in his mode of living and conversing he adopted that air of equality and of popular manners which, in men of high station, is at once so rare and attractive. Too much indulgence to an unworthy wife (Faustina) is the only weakness attributed to him, unless we include a small share of ridicule thrown upon his minute exactness by those who are ignorant of its value in complicated business. He died A.D. 161, aged seventy-three, having previously married Marcus Aurelius to his daughter Faustina, and associated him with himself in the cares of government. His ashes were deposited in the tomb of Hadrian, and his death was lamented throughout the empire as a public calamity. The sculptured pillar erected by Marcus Aurelius and the senate to his memory, under the name of the Antonine column, is still one of the principal ornaments of Rome. (Garton's Biogr. Dict., vol. 4, p. 87, seq.)

—II. Marcus Annus Aurelius, was born at Rome A.D. 121. Upon the death of Caeius Commodus, the Emperor Hadrian turned his attention towards Marcus Aurelius; but he being then too young for an early assumption of the cares of empire, Hadrian adandoned the intention. But it is by no means surmised that in the future this prince should adopt Marcus Aurelius. His father dying early, the care of his education devolved on his paternal grandfather, Annius Verus, who caused him to receive a general education; but philosophy so early became the object of his ambition, that he assumed the philosophic mantle when only twelve years old. The species of philosophy to which he attached himself was the stoic, as being most connected with morals and the conduct of life; and such was a natural sweetness of his temper, that he exhibited none of the pride which sometimes attended the artificial elevation of the stoic character. This was the more remarkable, as all the honour and power that Antoninus could bestow upon him became his own at an early period, since he was practically associated with him in the administration of the empire for many years. On his formal accession to the sovereignty, his first act was that of abdicating part of that interest which, for he immediately took Lucius Verus as his colleague, who had indeed been associated with him by adoption, but who, owing to his defects and vices, had been excluded by Antoninus from the succession, which, at his instigation, the senate had confined to Marcus Aurelius alone. Notwithstanding their dissimilarity of character, the two emperors reigned conjointly without any disagreement. Verus took the nominal guidance of the war against the Parthians, which was successfully carried on by the lieutenants under him, and, during the campaign, married Lucilla, the daughter of his colleague. The reign of Marcus Aurelius was more eventful than that of Antoninus. Before the termination of the Parthian war, the Marcomanni and other German tribes began those disturbances which more or less annoyed him for the rest of his life. Against these foes, after the termination of hostilities with Parthia, the two emperors marched; but what was effected during three years' war and negotiation, until the death of Verus, is little known. The sudden decease of that unsuitable colleague, by an apoplexy, restored to Marcus Aurelius the sole dominion; and for the next five years he carried on the Panonian war in person, without ever returning to Rome. During these fatiguing campaigns he endured all the hardships incident to a rigorous life, and military severity which did the highest honour to his philosophy. Few of the particular actions of this tedious warfare have been fully described; although, owing to conflicting religious zeal, one of them has been exceedingly celebrated. This was the deliverance of the emperor and his army from imminent danger, by a victory over the Quadri, in consequence of an extraordinary storm of rain, hail, and lightning, which disconcerted the barbarians, and was, by the conquerors, regarded as miraculous. The emperor and the Romans attributed the timely event to Jupiter Tonans; but the Christians affirmed that God granted this favour on the supplications of the Christian soldiers in the Roman army, who are said to have composed the twelfth or Meletine legion; and, as a mark of distinction, we are informed by Eusebius that they received from an emperor who persecuted Christianity the title of the "Thundering Legion." Yet this account, not of, but of the cause of one, and that of such a nature as no human testimony can ever determine, was made the subject of a controversy, in the early part of the last century, between Moylie and the eccentric Whiston, the latter of whom elaborately supported the genuineness of the miracle. The date of this event is fixed by Tillemont in A.D. 174. The general issue of the war was, that the barbarians were repressed, but admitted to settle in the territories of the empire as colonists; and a complete subjugation of the Marcomanni might have followed, had not the emperor been called off by the conspiracy of Avidius Cassius, who assumed the purple in Syria. This usurper was defeated and killed by Marcus Aurelius, his own officers; and the clemency shown by the emperor to his family was most exemplary. After the suppression of this revolt, he made a progress through the East, in which journey he lost his wife Faustina, daughter of Antoninus Pius, a woman as dissolute as she was beautiful, but whose irregularities he never seemed to have noticed; a blindness or insensibility that has made him the theme of frequent ridicule. While on this tour he visited Athens, and inaugurated the privileges, and, like Hadrian, was initiated in the Eleusinian Mysteries. His return to Rome did not take place until after an absence of eight years, and his reception was in the highest degree popular and splendid. After remaining in the capital for nearly two years, and effecting several popular reforms, he was once more called away by the necessity of checking the Marcomanni, and was again successful, but in the winter season of 161. His wife, Faustina, was now Vienna. His illness arose from a pestilential disease which prevailed in the army; and it cut him off in the 59th year of his age, and 19th of his reign. His death occasioned universal mourning throughout the empire. Without waiting for the usual decree on the occasion, the Roman senate and people voted him a god by acclamation; and his image was long afterward regarded with peculiar veneration. Marcus Aurelius, however, was no friend to the Christians, who were persecuted during the greater part of his reign; an anomaly in a character so universally merciful and clement, that may be attributed to an excess of pagan devotion on his part, and still more to the influence of the sophists by whom he was surrounded. In all other points of policy and conduct he was one of the most excellent princes on record, both in respect to the salutary regulations he adopted and the temper with which he carried them into practice. Compared with Trajan or Antoninus Pius, he possibly fell short of the many sense of the one, and the simple and unostentatious virtue of the other; philosophy or scholarship on a throne always more or less assuming the appearance of pedantry. The emperor was also himself a writer, and his "Meditations," composed in the Greek language, have descended to posterity. They are a collection of maxims, more or less scattered through the spirit of Stoicism, which, without much connexion or skill in composition, breathe the purest sentiments of piety and benevolence. Marcus Aurelius left one son, the brutal Commodus, and three daughters. Among the weaknesses of this good emperor,
his too great consideration for his son is deemed one of the most striking; for although he was unmitting in his endeavours to reclaim him, they were accompanied by much erroneous indulgence, and especially by an early and ill-judged elevation to titles and honours, which uniformly operated injuriously both on his character and the character of the city. The first edition of the Meditations of Antoninus is that of Gataker, Cantab., 1552, 4to. (Gorton’s Biogr. Dict., vol. 1, p. 88.)—III. Bassianus Caracalla. Vd. Caracalla.—IV. Two works have come down to us, styled Itineraria Antoni- ning, which may be compared to our modern books of routes. They give merely the distances between places, unaccompanied by any geographical remarks. One was on the land, and the other by sea. They have been supposed by some to be the productions of the Emperor Marcus Aurelius, while others assign them to a geographical writer named Antoninus, whose age is unknown. Both these opinions are evidently incorrect. It is more than probable, that the works in question were originally compiled in the cabinet of some one of the Roman emperors, perhaps that of Augustus, and were enlarged by various additions made by his successors. This would account as well for the routes or stations were established. Some critics, however, dissatisfied with this mode of solving the question, have sought for an ancient writer, occupied with pursuits of an analogous nature, to whom the authorship of these works might be assigned. They find two; and their suffrages, consequently, are divided between them. The first of these is Julius Honorius, a contemporary of Julius Caesar’s, of whose productions we have a few leaves remaining, entitled, “Ex- cerpta, qua ad Cosmographiam pertinent.” The other writer is a certain Ethicus, surnamed Ister, a Christian of the fourth century, to whom is attributed a work called “Cosmographia,” which still exists. Mannert declares himself unconditionally in favour of Ethicus. (Intro. ad Tab. Peut., p. 8 seqq.) Wessel- ing is undecided. The best edition of the Itineraries is that of Wesseling, Amst., 1735, 4to. (Schiöfl, Hist. Lit. Rom., vol. 3, p. 258, seqq.)—V. Librarian, a mythological writer, supposed to have lived in the age of the Antonines, and to have been a freedman of one of them. He has left us a work entitled Meta- morphosision Συναγωγή, “A Collection of Metamorphoses,” in forty-one chapters; a production of considerable interest, from the fragments of ancient poets contained in it. An idea of the nature of the work may perhaps be formed from the following titles of some of the characters: Citellus, the Metagolhus; Cragalus, Lamius, the Emathides; and many others drawn from the Heteraumenae of Nicander; Hierax, Aegypius, Anthus, Aelon, &c., from the Ornithogno- mia of Bonus; Cinos from Simmias; Battius from the Eoce of Hesiód; Metiocha and Menippe from Corin- nus, &c. There exists but a single MS. of Antoninus Librarian, which, after various migrations, has returned to the library of Heidelberg. It has been deemed by Boers of the character Citellus, the Metagolhus, the writer is that of Verheky, Lugd. Bat., 1774, 8vo. It does not, however, supply all the wants of the scholar; and some future editor, by ascending to the sources whence Antoninus drew his materials, and taking for his model the labour bestowed by Heyne and Clavier on Apollodorus, may have it in his power to supply us with an editio optima. (Schöll, Hist. Lit. Gr., vol. 6, p. 58.)—ANTONINOPOLIS, a city of Mesopotamia, placed by D’Anville on the northern confines of the country, but more correctly, by Mannert, in the vicinity, and to the northeast, of Charra and Edessa. (Mannert, Geogr., vol. 5, p. 304.) It is supposed to have been founded by Severus or Caracalla, and named after the emperor Antoninus. It was subsequently called Constantia, from Constantine, who enlarged and strengthened it. Mannert supposes it to be the same with the ruined city of Uran Schar, mentioned by Niebuhr (vol. 2, p 390.).

Antonius. I. M. Antonius Gnipo, a native of Gaul, instructed in Greek literature at Alexandria, where he assisted in the edition of the Iliad, after the death of L. Accipio, the first gave instruction in grammar at this latter city, in the paternal mansion of Julius Caesar, who was then very young. Afterward he opened a school at his own residence, where he also professed rhetoric. Cicero attended his lectures when prætor. Gnipo left a work on the Latin tongue, in two volumes. According to Suetonius (de Illustr. Gramm., 7), he never stipulated with his pupils for any fixed compensation, and benevolent disposition, and hence obtained the more from their liberality. The same writer informs us that he did not live beyond his 50th year.—II. Marcus Antonius, a Roman orator, and the most truly illustrious of the Antonian family, flourished about the middle of the seventh cen- tury of Rome. After rising successively through the various offices of the commonwealth, he was made consul in the year of the city 650, and then governor of Cilicia, in quality of proconsul, where he performed so many valorous exploits that a public triumph was decreed to him. In order to improve his talent for eloquence, he became a scholar to the most able men in Rhodes and Athens. He was one of the greatest orators among the Romans; and, according to Cicero, who in the early part of his life was a contemporary, it was owing to him that Rome became a rival in elo- quence to Greece. The same great authority has given us the character of his oratory, from which it appears that earnestness, acuteness, copiousness, and variety formed his distinguishing qualities; and that he excelled as much in action as in language. By his worth and abilities he had rendered himself dear to the most illustrious characters of Rome, when he fell a sacrifice in the midst of the bloody confusion excited by Marius and Cinna. Taking refuge at the house of a friend from their relentless proscription, he was ac- cidentally discovered and betrayed to Marcus, who im- mediately sent an officer, with a band of soldiers, to bring him the orator’s head. It was brought accord- ingly; and that sanguinary leader, after making it the subject of his brutal ridicule, ordered it to be stuck upon a pole before the rostra, and, on the whole, treat- ed it as Marc Antony, the worthless grandson of An- tonius, treated the head of Cicero. This event oc- curred B.C. 87. He left two sons, Marcus, surnamed Creticus, and Caius, both of whom discredited their parentage. (Cic. Ad Att., 24.—Id. Th. 9.)—III. Marcus, surnamed Creti- cus, elder son of the orator. He was guilty, while praetor, of great extortions in Sicily and other quarters, having received the same commission which Pompey afterward obtained, for importing corn and exterminat- ing the pirates. He afterward invaded Crete, without any declaration of war, but was undeservedly and shame- fully routed by his own forces, with the loss of his whole surname of Creticus.—IV. Caius, brother of the pre- ceding, and son of the orator. He bore arms under Sylla, in the war against Mithradates, and raised such disturbances in Greece, that for this and other mal- practices he was afterward expelled from the senate by the certans. Obtaining, however, the consulship with Cicero, at a subsequent period, through the aid of Crassus and Cassius, he was afterward sent to head the forces in the prosecution of Catiline. A pretended attack of the gout, however, caused him to confide the army of the republic, on the day of battle, to his lieutenant Petreius. He was afraid, it seems, of meeting Catil- line, with whom he had at first been concerned in the conspiracy, lest the latter might taunt him with unpleasing reminiscences. He received, as proconsul, the province of Macedonia, by yielding which unto
him, Cicero had induced him to prove faithful to the state; but he governed it with such extortion and violence, that he was tried, convicted, and sent into banishment.—V. Marcus, son of Antonius Creticus, grandson of the orator, and well known by the historical title of the Triumvir. Losing his father when young, he went to the East, where he lived with his uncle, spent his fortune, and wasted his whole patrimony before he had assumed the manly gown. He afterward went abroad to learn the art of war under Gabinius, who gave him the command of his cavalry in Syria, where he signalized his courage and ability in the restoration of Ptolemy, king of Egypt. He also distinguished himself on other occasions, and obtained high reputation as a commander. From Egypt he proceeded to Gaul, where he remained some time with Caesar, and the latter, having furnished him with money and credit, he returned upon this to Rome, and succeeded in obtaining first the quaestorship, and afterward the office of tribune.

In this latter office he was very active for Caesar, but finding the senate exasperated against this commander, he pretended to be alarmed for his own safety, and fled in disguise to Caesar’s camp. Caesar, upon this, marched immediately into Italy, the flight of the tribune alarming the whole people. A subsequent reconciliation. Caesar, having made himself master of Rome, gave Antony the government of Italy. During the civil contest, the latter proved himself on several occasions a most valuable auxiliary, and, after the battle of Pharsalia, was appointed by Caesar his master of the horse. After the death of Caesar Antony delivered a very powerful address over his corpse in the forum, and inflamed to such a degree the soldiers and populace, that Brutus and Cassius were compelled to retire a day’s march from the city. Antony now soon became powerful, and began to tread in Caesar’s footsteps, and govern with absolute sway. The arrival of Octavius at Rome thwarted, however, his ambitious views. The latter soon raised a formidable party in the senate, and was strengthened by the accession of Cicero to his cause. Violent quarrels then ensued between Octavius and Antony. Endeavours were made to reconcile them, but in vain. Antony, in order to have a pretence of sending for the legions from Macedonia, prevailed on the people to grant him the government of Cisalpine Gaul, which the senate had before conferred on Decimus Brutus, one of the conspirators against Caesar. Matters soon came to an open rupture. Octavius offered his aid to the senate, who accepted it, and passed a decree, approving of his conduct and that of Brutus, who, at the head of three legions, was preparing to oppose Antony, then on his march to seize Cisalpine Gaul. Brutus, not being strong enough to keep the field against Antony, shut himself up in Mutina, where his opponent besieged him. The senate declared Antony an enemy to his country. The consuls Hirinia and Pansa took the field against him along with Octavius, and advanced to Mutina in order to raise the siege. In the first engagement, Antony had the advantage, and Pansa was mortally wounded, but he was soon killed in the same day by Antony, who was returning to his camp. This subsequent engagement, Antony was again vanquished, his lines were forced, and Octavius had an opportunity of distinguishing himself, Hirinia being slain in the action, and the whole command devolving on the former. Antony, after this check, abandoned the siege of Mutina, and crossed the Alps, in hopes of receiving succours from his friends. This was all that Octavius wanted; his intent was to humble Antony, put to death his strongest supporter, and proving plainly that the republican party would be uppermost, and his own ruin must soon ensue. A reconciliation was soon effected between him and Antony, who had already gained an accession of strength by the junction of Lepidus. These three leaders had an interview near Bononia, in a small island of the river Rhenus, where they came to an agreement to divide all the provinces of the empire, and the supreme authority, among themselves for five years, under the name of triumvirs, and as reformers of the republic with consular power. Thus was formed the second triumvirate. The most horrid part of these transactions was committed by some of their friends and relatives, and Cicero’s house was given in exchange by Octavius for Antony’s uncle and for the uncle of Lepidus. Octavius and Antony then passed into Macedonia, and defeated Brutus and Cassius at Philippi. After this, the latter passed over to the eastern provinces, where he lived for a time in great dissipation and luxury with the famous Cleopatra, at Alexandria. Upon the death of his wife Fulvia, he began to recollect himself, against whom Fulvia had raised an army in Italy, for the purpose, it is supposed, of drawing her husband away from Cleopatra, and inducing him to come to the latter country. Octavius gave Antony his sister Octavia in marriage, and a new division was made of the empire. Octavius had Dalmatia, Italy, the two Gauls, Spain, and Sardinia; Antony all the provinces east of Codropolis in Illyricum, as far as the Euphrates; and Lepidus the province of Sicily. In the latter part, Antony once more became enslaved by the charms of Cleopatra. An unsuccessful expedition against the Parthians ensued, and at last the repudiation of Octavia involved him in a new war with Octavius. The battle of Actium put an end to this contest and to all the hopes of Antony. It was fought at sea, contrary to the advice of Antony’s best officers, and chiefly through the persuasion of Cleopatra, who was proud of her naval force. She abandoned him in the midst of the fight with her fifty galleys, and took to flight. This drew Antony from the battle and ruined his cause. Beseiged, after this, in Alexandria, by the conqueror, abandoned by all his followers, and betrayed, as he thought, even by Cleopatra herself, he fell by his own hand, in the 56th year of his age, B.C. 30. The peculiar events connected with the life of Marc Antony have given him a celebrity which one would never have expected from his character. Gifted with some brilliant qualities, he possessed neither sufficient genius nor sufficient strength of soul to entitle him to be ranked among great men. Neither can he be ranked among men of worth, since he was always without principle, immoderately attached to pleasure, and often cruel. And yet few men had more devoted friends and partisans, for many of his actions announced a generosity of disposition far preferable to the cautious prudence and cold policy of his rival Octavius. (Plut., Vit. Ant.—Vit. Fulv. a son of Marc Antony and Fulvia. He stood high in the favour of Augustus, and received from him his sister’s daughter in marriage. After having failed, however, some of the most important offices in the state, he engaged in an intrigue with Julia, the daughter of the emperor, and was put to death by order of the latter. According to Velleius Paterculus (2, 100), he fell by his own hand. It would appear that he had formed a plot, along with the notorious female minister of the Emperor of the age of Augustus. (Compare Lips., ad Tacit., Ann., 1, 10.) Acron informs us, in his scholia to Horace (Od., 4, 2, 33), that Antonius had distinguished himself by an epic poem, in twelve books, entitled Diomedés.——VII. Caius, a brother of Marc Antony. Having fallen into the hands of Brutus, his life was spared until that commander heard of Cicero’s end, when he was put to death on the principle of his being unworthy of the name of Roman. Cæs. Cic., 1, 31. In the province, another brother of Marc Antony, who was consul A.U.C. 713. Having quarrelled with Octavius during his continuance in this office, he was besieged in Perusia, and compelled to surrender. The conqueror spared his life, and he passed the rest of his days in obscurity. (Vell. Paterc., 2.
Aelia, an epithet applied to the Muses, from Mount Helicon in Boeotia, the earlier name of this country having been Aonia.

Aon, a son of Neptune, who first collected together into cities, as is said, the scattered inhabitants of Euboea and Boeotia. Hence the name Aonians given to those who preferred the site of Boeotia. After his husband's death, she prevailed upon Antiochus to make war against Pyteley Philadelphiaus—III. Wife of Prusias, king of Bithynia, and mother of Nicomedes. (Strab., 563.)

Apanema, L. a city of Phrygia, built by Antiochus Soter on the site of the ancient Cibotus, and called, after his mother, Apamea. The name of the earlier place, Cibotus, is thought to have been derived from Sigirous, an ark or coffer, because it was the mint or common treasury of those who traded from Italy and Greece to Asia Minor. This name was afterward added, for a similar reason, to Apamea. It was situated above the junction of the Orgas and Meander, and, according to Mannert, is now called Aphiam Karahisar, or the black castle of opium, which drug is collected in its environs. (Mannert, vol. 6, pt. 3, p. 120, seqq.) The more correct opinion, however, would seem to be in favour of Dinglace or Decnare. (Poole's Trans., vol. 3, p. 2, c. 15.—Arundell, Visit, &c., p. 107, seqq.—Cramer's Asia Minor, vol. 2, p. 51, seqq.)—II. Another in Bithynia, near the coast of the Sinus Cianus. It was originally called Myrela, and flourished under this name, as an independent city, for several years, until it was taken and destroyed by Philip, father of Perses, who ceded the territory to Prusias, sovereign of Bithynia, his ally. This prince rebuilt the town, and called it Apamea, after his queen. (Strab., 563.) The ruins of Apamea are near the site now called Modania, about six hours north of Broussa. (Wheeler, vol. 1, p. 209.—Poole's Trans., vol. 3, b. 2, c. 25.)—III. Another in Syria, at the confluence of the Orontes and Marayas, which form a small lake. It was founded by Seleucus Nicator, and called after his wife. It is now Famieh. Seleucus is said to have been cured of the gout by a philosopher named Aegon, who gave him a species of plants. (Mannert, vol. 6, pt. 1, p. 463.)—IV. Another in Mesopotamia, on the Tigris, in a district which lay between the canal and the river, whence the epithet Messene applied to this city, because it was in the midst of that small territory which is now called Digel. (Mannert, vol. 5, pt. 2, p. 271.)—V. Another on the confines of Media and Parthia, not far from Ragus. It was surrounded Raphe. (Mannert, vol. 5, pt. 2, p. 178.)—Another at the confluence of the Tigres and Euphrates, now Koma. (Mannert, vol. 5, pt. 2, p. 361.)

Apatypta, a festival at Athens, which received its name, according to the common, but erroneous account, from amary, deest, because it was instituted (say the etymologists who favour this derivation) in memory of a stratagem by which Xanthus, king of Boeotia, was
APELLES.

APELLES. killed by Melanthus, king of Athens, upon the following occasion: when a war arose between the Boiotians and Athenians about a piece of ground which divided their territories, Xanthus made a proposal to the Athenian king to decide the point by single combat. This was accepted, and the victor was to be the one who should be first to strike the ground in his foe's face. The combatant was confused, and his successor Melanthus accepted the challenge. When they began the engagement, Melanthus exclaimed that his antagonist had some person behind him to support him; upon which Xanthus looked behind, and was killed by Melanthus. From this success, Jupiter was called άπατηρος, deceitful; and Bacchus, who was supposed to be behind Xanthus, was called Μελανιαρης, clothed in the skin of a black goat. In the sequel it is said that a natural transition appears to be πατρα (in composition πατωρ), πατρος (whence πατογος, πατορια), πατρα; and, accordingly, the Απατορια means a festival of the paternal unions, of the πατορια, of the πατρα. (Müller, Doriens, vol. 1, p. 95.)—

The Apatura was peculiar to the great Ionic race. The festival lasted three days; the first day was called δοσπεια, because ουπερες (δοσας) were prepared for all those who belonged to the same Phratria. The second day was called αυκαρας (αυκαρωνον αυκαρων), because sacrifices were offered to Jupiter and Minerva, and the head of the victim was generally turned up towards the heavens. The third was called Κονακες, from κονας, a youth, because on that day it was usual to enrol the names of young persons of both sexes on the registers of their respective phratrie: the enrolment of δοσποντευτευτευτευν proceeded no farther than that of assignment to a tribe and a borough, and, consequently, precluded them from holding certain offices both in the state and priesthood. (Consult Wachsmuth, Gr. Aut., vol. 1, §44.)—The Ionians in Asia had also their Apatura, from which, however, Colophon and Ephesus were excluded; but exclusions of this nature rested no more on strictly political grounds, than did the right to partake in them, and the celebration of festivals in general. A religious stigma was, for the Ionians, a bond which the exclusion of which a great difference of opinion has existed. Scaliger undoubtedly made a mere proper name of some well-known and superstitious Jew of the day. Wieland adopts the same idea in his German version of Horace's satire: "Das glaub' Apella der Jud, ich nicht!" Bentley's explanation appears rather forced. It is as follows: "Judaei habitatione trans Thiberim, et multo maximam partem erant libertini, ut eorum nuum fuerint (sicut et Cicer.I. libitornorum est nonem satis frequentes in inscriptionibus vetustis. Inique credat Judaesus Apella, quasi tu dies, credat superstitionis aliquid Judaesus Transiti- erinus." (Ep. ad Mill., p. 520, ed. Lips.) As regards the opinion of those who make Apella a contemptuous allusion to the rite of circumcision, it is sufficient to observe, that such a mode of forming com-

rounds (i.e., half Greek and half Latin—<a href="javascript:void(0)" class="tooltip">a priv. or<ref>pollia</ref>) is at variance with every principle of analogy, and cannot for a moment be admitted. Apelles, a painter in the age of Alexander the Great, exalted by the united testimony of all antiquity as the greatest and most accomplished man in the whole art of painting, was sometimes termed "ara Apellis," as by Martial (11, 9) and Statius (Silv., 1, 1, 100). Ancient writers differ as to the country of Apelles. Pliny (35, 10) and Ovid (A. A., 3, 401) mention the island of Cos; Suidas contends for Colophon; while Strabo (642) and Lucian (Calum. non tem cred., 2) notice him as an Ephesian. The origin of this last opinion, however, is sufficiently accounted for in the remark of Scaliger, that the Ephesians, as a nation, were said to be of Ephesian by adoption merely. Another reason for his being called by some an Ephesian, may be found in the circumstance of his having been instructed at Ephesus. (Tulen, ap. Bötig. Amal. 3, 123.) And so, in modern times, Titian is sometimes styled a Venetian, though born at Cadore in Friuli; and Raphael a Roman, though his native place was Urbino. There can be no question, however, as to the period of Apelles' activity. The common remark is universally admitted that Alexander the Great would not suffer his portrait to be taken by any other artist. Apelles must have been engaged in his profession, according to the most exact calculation, from about Olymp. 107 to Olymp 118. His instructors were Ephorus the Ephesian, Pamphilus of Amphipolis, and Melanthus; and when he became the pupil of these artists, he had himself acquired some distinction by his paintings. (Plut., Vit. Arat. 11.) After this he was assigned to a fourth instructor, named Arcellus (10, p. 420). The most important passage respecting Apelles occurs in Pliny (35, 10), and this passage contains an enumeration of nearly all his productions. One of the most celebrated of these was the Venus Anadyomene, or Venus rising from the waves, i.e., the sea-born. This famous painting was subsequently placed by Augustus in the temple of Julius Caesar. The lower part of the picture becoming injured by time, no artist was found who would venture to retouch it. When it was at last quite destroyed by age, the Emperor Nero substituted for it another Venus from the pencil of Dorotheus. The Venus Anadyomene was universally regarded as the masterpiece of Apelles. (Propert., Ep., 3, 7, 11.) A description of it is given in several Greek epigrams (Antip. Sidon., in Anthol. Plin.). The picture was purchased for twenty talents of gold, about $211,000, and hung up in the temple of Diana at Ephesus. He painted also a horse; and, finding that his rivals in the art, who contested the palm with him on this occasion, were about to prevail through unfair means, he caused his own piece and those of the rest to be shown to some horses, and these animals, fairer critics in this respect, pronounced Apelles' picture the best that they had ever seen.
APELLES. APELLES.

and best-balanced composition, nor the deepest pathos
expression; his great prepossessing consisted more in
the union than in the extent of his powers; he knew
better what he could do, what ought to be done, at
what point he could arrive, and what lay beyond his
reach, than any other artist. Grace of conception and
refinement of taste were his elements, and went hand
in hand with grace in execution. At his first efforts
power and means combined singly, irresistible when
united: that he built both on the firm basis of the for-
mer system, not on its subversion, his well-known
countenance of styles with Protagenes irrefragably
proves. (Vid. Protagenes.) What those lines were,
drawn with nearly miraculous subtlety in different colours,
one upon the other, or, rather, within each other, it
would be equally unavailing and useless to inquire;
but the corollaries we may deduce from the context are
obviously these, that the schools of Greece recog-
A PH

670 miles. They are divided by modern geographers into three parts; the Northern Apennines extend from the neighbourhood of Urbino to the Adriatic; the Central Apennines terminate near the banks of the Sangro; the Southern Apennines, situated at an equal distance from the two seas, form two branches near Muro; the least important separates the territory of Barri from that of Otranto; the other, composed of lofty mountains, traverses both Calabrias, and terminates near Aspromonte.—The etymology of the name given to these mountains must be traced to the Celtic, and appears to combine two terms of that language nearly synonymous, Alp or Ap, "a high mountain," and _fier_, "visible." Some write the name Apennus (i.e., Apennina), as if derived from the circumstance of Hannibal's having led his army over them, _Ponum_ meaning "Carthaginian." This etymology, however, is altogether erroneous; nor is it all at more tenable when applied to the Pennine Alps.

Aper, I. Marcus, a Roman orator, who flourished during the latter half of the first century of our era. He was a native of Gaul, but distinguished himself at Rome by his Taciturn and general ability. Aper is one of the interlocutors in the dialogue on the causes of the decline of oratory, which some ascribe to Tacticus, others to Quintilian, and others again to Aper himself. He died A.D. 85. (Schulze, Prolegg., c. 2, p. xxi, seqq.)—II. Flavius, supposed by some to have been the son of the preceding. He was consul A.D. 139, under Hadrian. (Oberlin., _Ad Dial. de quaest. conv. eloq._, c. 2.)—III. Arrius, a prefect of the Praetorian guards under Carus, and afterward under his successor Numerianus. Aspiring to the purple, he took advantage of a violent thunder-storm that arose, assassinated Carus, who was lying sick at the time, set fire to the royal tent, and ascribed the death of the prince and the consecration to lightning. The corpse was so much burnt that no traces of the murder were perceptible. Numerianus, son of Carus, and son-in-law of Aper, having succeeded to the empire, continued the latter in the office of prefect; but the only return that Aper made was to poison the young monarch, after he had reigned about eight or nine months. Suspicion immediately fell upon Aper, and he was slain by Dioclesian, whom the army had elected emperor. (_Aurel. Vict._, c. 38.—_Vopiscus, Car._, c. 8.—_Id., Numer._, c. 12, seqq.—Compare the remarks of Creveier, _Hist. Emp. Rom._, vol. 6, p. 140.)

Apsines, a mountain of Argolis, near Nemea, on which the Persians, according to Ptolemy (2, 16), first sacrificed to Jupiter Apessanus. It is an ancient mountain, with a flat summit, which can be seen, as we are assured by modern travellers, from Argos and Corinth. (_Chandler_, vol. 2, ch. 56.—_Dodwell_, _Class. Tour_, vol. 2, p. 210)

Aphaca, a town of Syria, between Heliopolis and Byblos, where Venus was worshipped. The temple is said to have been a school of wickededness, and was razed by Dioclesian. _Concinne the Great._ (_Euseb., Vit. Const. Mag._, 3, 55.)

Aphaea, a name of Diana, who had a temple in Eginia. (_Pausan._, 2, 30.—Consult Heyne, _Excurs._, ad _Virgil_, _Cir._, 220.—_Müller_, _Æginetica_, p. 163, seqq.)

Aphar, a city of Arabia, situate on the coast of the Red Sea, not far north from the Promontorium Armatum. It was the capital of the Homerite, and is supposed to correspond to Al-Fath, between Mecca and Medina. The ancient name is more commonly given as Suphar. (_Plin._, 6, 23.—Ptol._, _Arrian_, _Perip. Mar._, _Erythr._, p. 154, ed. Blanbard)

Aphræus, I. a king of Messenia, who married Arene, daughter of _Cebalus_, by whom he had three sons. (_Pausan._, 3, 1,—II. A step-son of Isocrates, who produced thirty-five or thirty-seven tragedies, and was four times victor. He began to exhibit B.C. 341. (_Theatre of the Greeks_, 2d ed., P. 150, seqq.)

Aphras, a river of Greece, which falls into the bay of Ambracia. D'Anville calls it the Avas. It is now the Vuso. (_Plin._, 4, 1.)

Aphrēas, a mountain on _Argolis_, near Nemea, said to have been the scene of the festival to which Persens first sacrificed to Jupiter Apessanus. The more correct form of the name is Apees. (_Vid._, _Apeas._

Aphicæa, a city of Thessaly at the entrance of the Sinus Pelaggicus, or Gulf of Volo, from which the ship Argo is said to have taken her departure for Colchis. (_Apol._, _Rhod._, 1, 591.) Herodotus informs us (7, 193 and 196) that the fleet of Xerxes was stationed here previous to the engagement off Artemision. The same writer makes the distance between Aphege and Artemision about eighty stadia. Apehe is supposed to correspond to the modern Peito. (_Cramer's Anc. Greece_, vol. 1, p. 411.)

Aphidna, a borough of Attica, belonging to the tribe _Leontis_, where Theseus is said to have secreted Helen. (_Herodot., 9, 73._—_Plut., Vit. _Thees._) Demostenes reports that Aphidna was more than 120 stadia from Athens. (_De Cov._, p. 296.)

Aphrodisia (from the name of Venus, celebrated in different parts of Greece, but chiefly in Cyprus.

Aphrodisia, I. a city of Laconia, to the west of Nymbeum, the same as _Bea._ (_Strabo_, 251.—_Pliny_, 4, 5.—_Polybius_, 5, 19.)—II. A city in the Thracian Chersonese, between Heraclae to the east and Cardia to the west. (_Procopius_, _Edific._, 4, 10.)—III. A city of _Caraia_, lying south of the Maeander and west of Cibyra. In the time of Herodotus it was the capital of the country (p. 688). Stephanus informs us, that it was founded by the Pelasgi _Lelege_, and was successively called, city of the _Leleges_, Megalopolis, _Ninoa_, and Aphrodisias. In _Strabo_'s time it appears to have belonged to Phrygia; Pliny, however, assigns it to Caria, and styles it a free city (5, 29.—Compare _Tacit._, _Ann._, 3, 62, and _Brother_, _Ad loc._.) The site of the ancient city at Gerya, about two hours from Antiochia on the Maeander, was discovered by _Pococke_. (_Vul._, 5, p. 12, c. 12.—_Cramer's Asia Minor_, vol. 2, p. 210.)—IV. A city and promontory of _Cilicia_ _Trachea_, east of _Celenderis_. According to _Livy_, it was a place of some consequence in the reign of _Antiochus_ the Great. (_Livy_, 33, 20.—Compare _Diod._, _Sic._, 19, 61.) The ruins found by Capt. _Beaupre_, at the northeast corner of a bay west of _Canaveiere_, appear to mark the site of the ancient city. (_Cramer's Asia Minor_, vol. 2, p. 299.)—V. _Isle of Erythraea_.—VI. An island sacred to Venus and Mercury, on the coast of Carmania. It is thought by some to have been identical with the _Caten of Arrian._ (_Plin._, 6, 25.)—VII. An island on the coast of Cyrenaica, in the vicinity of _Apollonia_. (_Herodot._, 4, 168.)

Aphrodisium, I. a city on the eastern parts of _Cyprus_, and in the narrowest part of the island, being only nine miles from _Salamis_. (_Apol._, 689.)—II. One of the many harbours into which the Pirus was subdivided. It seems to have been the middle one of the three. (_Cramer's Anc. Gr._, vol. 2, p. 350.)

Aphrodisite, the _Grecian_ name of Venus, from _aphoin_ "foam," because Venus is said to have been born from the froth of the ocean. This is the account given by _Hesiod_ (_Theog._, 196). Homer, however, as well as the _Cretan_ system (_Apol._, 1, 3, 1, and _Heyne_, _At loc._), made her daughter of _Dione_. An other version of the myth will be offered on the origin of the Greek name.

Aphrotopolia, I. a city of Egypt, the capital of the 36th nome, now _Aljeh_.—II. Another in the same country, the capital of the 42d nome, now _Iju._—III. Another in the same country, belonging to the nome _Hermonthis_, now _Asf-an._ (_Strab._, 566.—_Steph. Byz._, s. e.)

Aphthonius, a rhetorician of _Antioch_, who lived

APH
in the third or fourth century of our era. We have from him a work entitled *Programmata*, consisting of Rhetorical Exercises, adapted to the precepts of Hermogenes; and also forty fables. Aphthonius, according to Suidas, labours under the defect of having neglected to treat of the first elements of rhetoric, and of having nowhere attempted to form the style of those whom he wished to instruct. We find in his treatise nothing more than oratorical rules, and the application of these rules to different subjects. The *Programmata*, having been long used in the schools, has gone through numerous editions, the best of which are those of Scobarius (Escobar), 1597, 8vo, with the fables added; and that of D. Heinsius, Lugd. Bat., 1626, 8vo. The treatise has been translated into Latin with most ability by Escobar, and the version has been also separately printed. Another Latin translation was also made by Rodolph Agricola. The version of Escobar was first published at Barcelona, 1611, in 8vo, and that of Agricola was given from the Elzevir press, at Amsterdam, 1645-1665, in 12mo, with notes by Lorichius. (Boug. Univ., vol. 2, p. 305, seqq.)

**Aphýrse, or Aphýtes**, a city of Thrace, in the peninsula of Pallene, on the Sinus Thermicus. Here was a celebrated temple of Bacchus, to which Agesipolis, king of Sparta, who commanded the troops before Olynthus, desired to be removed shortly before his death, and near which he breathed his last. (Xen., H. Alc., v. 3, 2, 5.) According to Strabo, the life of Lysander, there was here an oracle of Jupiter Ammon; and it appears that Lysander, when besieging Aphýysis, was warned by the god to desist from the attempt. Theophrastus (3, 20) speaks of the wine of Aphýysis. (Cramer's Anc. Gr., vol. 1, p. 246.)

**Aphíla**, an ancient name of Peloponnesus, which it is said to have received from King Aphis. The origin of the name Aphis (Ἀ phiς), as applied to the Peloponnesus, is a subject of controversy among the ancient writers. (Compare Wassenberg, ap Paraphr., p. 42.) According to Heyne (ad Hom., II., 1, 270), it does not appear to have been a geographical, but a poetical, appellation; and the meaning would seem to be merely, "a far-distant land" (Ἀ phiς from ἀπός), as used by the Greeks at Troy in speaking of their native land, far away over the waters. In this, however, he is successfully combated by Buttmann (C. C. Rhet., 1, 4, 87). Aphis, we show to contribute to the expressive testimony of the geographers and grammarians, and even of Ἐ σχύλus himself. Poetical names, particularly all the oldest ones, are purely and really most ancient names, which poetry has preserved to us. If any opinion may be formed on this subject, it would be, that there were two forms of the same name in use among the Greeks: one the appellative ἄ φιλος, derived from ἁπλος, and meaning merely "distant," the other a geographical name, derived from that of the mythic Aphis. It is worth of notice, that the appellative ἄ φιλος, in Homer, has the initial vowel shrunk, whereas, in the geographical name, it is always long. (Compare Soph., *Ed. Col.*, 1303.—*E sch., Suppl.*, 275 &c.)

The former, then, of these will be a Homeric word, the latter a term found first in the Tragic writers, and based on an old legend alluded to by Ἐ schylus in his *supplicies* (v. 276). Those grammarians, therefore, who expound the second form and name of the Peloponnesus, are in error, for the two passages of the Odyssey (7, 25.—16, 18), where the term alone occurs, and where nothing is said of the Peloponnesus, plainly show, that ἄφιλος is, as above stated, an old adjective, from ἁπλος, like ἀπολλος, ἀπραυν. There are many traces to prove, that in the words *Aphíla* and *Aphína* lie the original name of a most ancient people, who inhabited the European coasts of the Mediterranean. Vid. remarks under the article *Opii*; (Buttmann, *Lexil.*, l. c.— 154, *Pischkæ's trans.*)

**Aphína**, wife of Sejanus, by whom she had three children. She was repudiated by him. Vid. *Sejanus*. (Thuc. Ann., 23.)

**Aphírus**. There were three patricians of this name at Rome, in different eras, all noted for their gluttony, to which the second of the three added almost every other vice.—I. The first lived in the time of the dictator Sylla. According to Athenaeus (4, p. 168, d.), he was the cause of Rutlius Rufus being driven into exile. (Compare Casaubon, ad loc.—Ereritci, *Clav. Cit. Ind. Hist.*, s. a. Rutlius.)—II. The second lived during the reigns of Augustus and Tiberius. Athenæus (1, p. 7, a.) speaks of his having spent immense sums on the luxuries of the table, and also of various kinds of cake that were called after his name (*Aphi r us*). He passed most of his time, according to the same writer, at Minturnæ, on account of the excellent shellfish found there. He even went on a voyage to Africa, having learned that the shellfish obtained along that coast were superior to all others; but when, as he approached the land, numerous fishermen came off to the vessel with what they declared to be their finest fish, perceiving these to be inferior to the Italian, he ordered the pilot to put about immediately and return home, without having so much as landed on the shores of Africa. *Seneca* (*Ep.*, 95.—De Vit. Beat., c. 11), Juvenal (4, 23), Martial (*Ep.*, 2, 69, and 10, 63), as well as other ancient writers, frequently allude to his epicurism, of which he formed a kind of school. Falling, at length, into extreme poverty, he is reported to have put an end to his life by poison, through fear of ultimate starvation.—III. The third lived under Trajan, and was in possession of a secret for preserving oysters; he sent some of them perfectly fresh to the Emperor Trajan as far as Parthia. (Athen., 1, p. 7, d.)—To which of these three we are to ascribe the work which has come down to us, on the culinary art (*De Re Culinaria*), is undetermined. Most assign it to the second of the three, M. Gavius Aphírus, but without any satisfactory reason for so doing. It is more than probable that the work in question was written by none of the three.

The compiler of this collection of receipts, wishing to give his labours an imposing name, would seem to have entitled his book as follows: "*Aphíras, sive de Re Culinaria, a Calio, *" and not "*Calios Aphíras, sive de Re Culinaria. *" This Calio, of course, is not the Calio of Thrasea. Three books, each of which has a Greek title that indicates, in a symbolical manner, the subjects treated of in that particular division. These are as follows: **Ἐ πιμελητηρία, the careful one.** Σαρκοπτις, the carver. Κηποναρικα, "things appertaining to gardening." Παρθενικα, "the all-receiptent." Ορυσπις, "appertaining to pulse." Λεγοναις, "of flying things." Πολευτηρία, "the sumptuous." Τετράποδα, "the quadrupeds." Σοφιοτρισ, "the sea." Αλεξις, "the fisherman." Our modern gourmands would form no very high idea of the state of gastronomic science among the Romans from the perusal of this work. The style, moreover, is very incorrect, and replete with barbarisms. The best edition is that of Almeoloven, *Amst.*, 1709, 12mo. We have also, among others, the edition of *Bernhold, Anacab.*, 1787 (1800), and that of *Lister, 1765, Lond.*, 8vo. (Schuckert, *Lit.* de R. C. del. vet., vol. 1, p. 331; *Böhm Lit.*, 522.—*Vonck. de imm.*, l. L. senect., 10, 29, seqq.)

**Apidius**, one of the chief rivers of Thessaly, rising in Mount Othrys, and, after receiving the Æneus near Pharsalus, falling into the Penus a little to the west of Larissa. It is now the *Salamopoe* (*Plin.*, 4, 8.—*Strab.*, 297.)

**Apidia**, a city of Apulia, destroyed with Trica, in its neighbourhood, by Diomed on his arrival in this part of Italy, after the Trojan war. (*Plin.*, 3, 11.) Fretet supposes that the towns here mentioned were, together with the tribes that occupied them (the Monades and
Dardilo, of Illyrian origin. (Mem. de l'Acad. des Inscr.,
5e, vol. 18, p. 75.)

Apion, I. a surname of Ptolemy, one of the descend-
ants of Ptolemy Lagus. (Vid. Ptolemeus, XIV.)

—II. A grammatical and historical writer, born at
Oasis Magna in Egypt, during the first century of the
Christian era. He was surnamed Platonices (Πλατο-
νεικός), from his frequent successes over his literary
opponents, but called himself the Apoliteus, from his
having passed a part of his life in the ancient capital
of the Ptolemies. Apion subsequently travelled into
Greece, and finally established himself at Rome, where
he taught grammar, or philological science, during the
reigns of Tiberius and Claudius. He attained to great
celebrity. Although unquestionably a man of learning and
research, he was in many respects an arrogant
boaster, and in others a mere pretender; and it was
in allusion to both, to his vanity and noisy assumption
of merit, that the Emperor Tiberius gave him in
herder the name of Cymbalum mundi. He is re-
nowned for much trifling on the subject of Homer, in
order to trace whose family and country he had recourse
even to magic, ascertaining that he had successfully in-
voked the appearance of shades to satisfy his curiosity,
whose answers he was not allowed to make public.
(Plin., 39, 2.—Compare Aulus Gellius, Noct. Att.,
5, 14.) These visions, similar to those, were made to
him by several Greeks, although Pliny was of opinion
might be owing to his commentaries on the same great poet,
which are mentioned by Eustathius and Hesychius.
Pliny makes particular mention of the ostentatious
character of this critic, who used to boast that he be-
stowed immortality on those to whom he dedicated his
works; whereas it is only by the mention of others that
these works are now known to have actually existed.
One of the chief of them was, "On the Antiquity of the
Apollo," from which it appears that he endeavoured to
establish the hereditary descent of an Egyptian. The reply
of Josephus, "Against Apion," has survived the at-
tack, the author of which attack showed his enmity to
the Jewish people by other means besides writing
against them; for he was employed by his fellow-citi-
zans of Alexandria to head a deputation to the Emperor
Caligula, complaining of the Jews that inhabited that
city. Apion also wrote an account of the antiquities of
Egypt, in which he endeavoured to show that the so-called
largest of the Pyramids, Pliny quoting him as the principal
authority on the subject. After having ridiculed
the rite of circumcision, he was compelled by a malady
to submit to it, and, by a divine punishment, says Jo-
sephus, died soon after from the consequences of the
operation. It is in allusion to Apion that Bayle ob-
serves, "how easily the generality of people may be
deceived by a man of some learning, with a great share
of vanity and impudence." Extracts from Apion's
commentary on Homer are given in the Eymolgogicum
Scholl, Hist. Lit. Gr., vol. 5, p. 16, seqq.)

Apis, I. one of the earliest kings of the Pelopon-
sus, son of Phoroneus and Laodice, and grandson of
Inachus. He is said to have reigned in Argos, after the
death of his father, about 1800 B.C. Others make
him to have been the son of Apollo, and king of Sicyon.
He chased the Telemones from the Peloponnesus, ac-
cording to the state ment, governed tyrannically,
and lost his life in consequence. From him some have
derived the old name, supposed to have been given at
one time to the Peloponnesus, namely "Apian land." (Vid. Apia.)

Apis, in fact, is one of those mythologi-
cal personages, to whose legendary each succeed-
ing age adds its quota of the marvellous, until the whole
becomes one mass of hopeless absurdity. Hence we
find Varro and St. Augustine gravely maintaining, that
the Greek and Roman temples had been erected
upon a real Apis, who was supposed to have existed
identical with the Apis of Egyptian worship. (Pau-
ser, 2, 5.—Apollod., 2, 1.—Augustin. Civ. D., 18,
5.) And yet there is reason to believe, that the name
Apis is connected with that of a very early people,
who dwelt along the European shores of the Medi-
terranean, and of whom the Italian Opii formed a part.
(Vid. Apia.)—II. The same with Ephesus, the fa-
bled son of Jupiter and Io. Such at least is the state-
ment of Herodotus, who makes the name, Apis, a
Greekizing form of the Egyptian name, Apis, (εἶχαίν
εἰςτὶ Εἴπραυς (2, 158).) Wesseling is in-
clined to regard the passage as spurious, but consult
Elian (Hist. Am., 11, 10), where the same thing is
stated. Jablonski makes Ephesus mean "giants" (Voc.
Egypt., p. 65). Zeega, on the other hand, gives it
the force of "bos pater" (Num. Egypt., p. 81), and
De Rossi, that of "taurus praecipus." (Ezymol.
Egypt., p. 15.) It is more than probable, however,
that the name Apis was confounded by the Greeks
with Apis, one of the Egyptian appellations for Ty-
phon, the evil genius, and hence may have arisen the
legend which made the Grecian Apis a cruel tyrant.
(Vid. Apaphus.)—III. A sacred bull, worshipped by
the Egyptians. Its abode was at Memphis, near the
temple of Putha, or Vulcan, and it was in this city
that peculiar honours were rendered it, an account of
which is given by Herodotus, Strabo, Pliny, Diodorus Sicu-
rus, Putharch, and other ancient writers. The Apis
was distinguished by a peculiar kind of starting,
and by the following characteristics. He was supposed
to be generated, not in the ordinary course of nature,
but by a flashing from on high (οσιος εκ του ουρανον.
Herod., 3, 27), on, according to others, by the contact
of the moon (ισακκ ης θελησ—Plut., Sympos., 8,
718). As, however, this evidence of his divinity was
rather dubious, several external marks were super-
added, to satisfy his votaries of his claims to adora-
tion. His eye was of a purple colour. His sacred
marks might the more clearly appear: these were a
square white spot on the forehead, the figure of an eag-
le on the back, a white crescent on the right side,
the mark of a beetle on the tongue, and double hair
on the tail. (Herod., 3, 28.—Strab., 806.—Plin.,
8, 46.—Cruzer, Comment. Herod., p. 132, seqq.)
The marks in question, which thus stamped his claims to
divinity, were of course the contrivance of the priests,
though how they were known by the ancients or
ancients.
A general animal was regarded with the highest ven-
cration, and more than regal honours were rendered
him. He was waited upon, also, by numerous attend-
ants, a particular priesthood were set apart for him,
stalls were provided, furnished with every convenience,
and his food was presented to him in vessels of gold.
He was frequently displayed to the view of the people,
while strangers could also behold him in a species of
enclosed court, or through a kind of window. (Strab.,
2, 3.) He also gave oracles, and the mode of giving
them was as follows. The priests, having led him forth
from his abode, caused food to be offered him by the
person who had come for a response. If he received
what was thus offered, it was a favourable omen; if
otherwise, an unfavourable one. So also, after the
food had been offered him, he was allowed to go into
one or the other of two stalls, according as he might
feel inclined. His going into one of these was looked
upon as an auspicious, that into the other the reverse.

Germanicus, when in Egypt, consulted in this way the
sacred Apis; and as the animal refused the food which
was offered him by the Roman prince, this circumstance
was regarded as an omen of evil, that was subsequen-
tly verified by the death of the latter. (Plin., 8, 46.
—Amm. Marcell., 22, 14.) The annual festival of
Apis was celebrated with the utmost splendour. It
always began with the raising of the Nile, and preceded,
for seven successive days, a scene of uninterrupted
rejoicing and festivity. The Greeks called this cele-
bration Theophania, because during its continuance

158
the god Apis was displayed to the view of the people arrayed in festal attire, his head surmounted with a kind of tiara, and his body adorned with embroidered coverings, while a troop of boys accompanied him singing hymns in his praise. These boys, becoming on a sudden inspired, predicted future events. During the continuance of this festival, the crocodiles in the Nile were harmless, but regained their ferocity at its close! (Plin., l. c.) Sacrifices were seldom Meritk into Apis: whenever this had been done, red cattle were always selected, red being the colour of Typhon, the enemy of Osiris. So also, when Apis died, a red steer, and two or three other animals that were deemed sacred to Typhon, were buried along with him, in order to thwart the joy which the evil spirits would otherwise have felt at the death of the sacred Apis. When Apis died a natural death, the whole of Egypt was plunged in mourning; from the king to the peasant; and this image of mournings until a new Apis was found. The deceased animal was embalmed in the most costly manner, and the priests after this traversed the whole land in quest of his successor. When a calf was found with the requisite marks, all sorrow instantly ceased, and the most unbounded joy prevailed. Herodotus alludes to one of these scenes in his account of the Persian Cambyses (3, 27). When that monarch returned to Memphis, from his successful war against the Egyptians, he found the Egyptians giving loose to their joy on account of the reappearance of Apis. Irritated at this, and fancying that they were rejoicing at his ill success, he ordered the sacred animal to be brought before him, wounded it in the thigh with his dagger (of which wound it afterward died), caused the priests to be scourged, and commanded the proper officers to kill all the Egyptians they should find making public observances in his manner; whenever a new Apis was obtained, the priests conducted him first to Nilo-polis, where they fed him forty days. He was then transported in a magnificent vessel to Memphis. During the forty days spent at Nilopolis, women only were allowed to see him; but after this the sight of the god was forbidden them. (Diod. Sic., I, 85.)—It is worthy of remark, that although so much joy prevailed on the finding of a new Apis, and so much sorrow when he died, the Egyptians, when these animals reached the age of twenty-five years, the period prescribed by the sacred books, the priests drowmed him as a matter of course, in a sacred fountain, and there was no mourning whatever for his loss. According to an Egyptian legend, the soul of Osiris passed on his death into the body of Apis, and as often as the sacred animal died, it passed into the body of its successor. So that, according to the dogma, Apis was the perfect image of the soul of Osiris. (Plut., de Is. et Os., p. 472, ed. Wettenh.)—It is very easy, however, to see in the worship of the sacred Apis the connexion of Egyptian mythology with astronomy and the great movements of nature. The Egyptians believed that the moon, making her total revolution in 309 lunations, and in 9155 days, returned consequently, at the end of 25 years, to the same point of Sothis or Sirius. Hence, if the life of Apis was limited to 25 years, and hence the cycle known as the period of Apis, with reference, no doubt, to the passage of the moon into the celestial bull, which it would have to traverse in order to arrive at Sothis. In worshipping Apis, therefore, the Egyptian priesthood worshipped, in fact, the great fertilizing principle in nature, and hence we see why females alone were allowed to view the Apis at Nilopolis, that the sight of the sacred animal might bless them with a fruitful proye. (Compare Guigniaut, 1, 905.—Vollmer, Wüetrer der gr. u. röm. Geschichte, p. 279.)

in solemn procession, and which was adorned with flowers and branches of olive. To an olive-tree, deco-
rated in its turn with branches of bay and flowers interwined, and covered with a veil of purple, were sus-
pended globes of different sizes, types of the sun and planets, and ornamented with garlands, the num-
ber of which corresponded with the letters of the al-
tabulae, upon which, besides the hieroglyphs of the altar,
too, burned a flame, the agitation, colour, and crack-
ling of which served to reveal the future, a species of
divination peculiar to the sacr dialog and order, which
prevailed also at Olympia in Elis, the centre of most
of the sacr dialogical usages of the day.—The god of
the sun became also the god of music, by a natural allu-
sion to the movements of the planets and the mysterious
harmony of the spheres; and the hawk, the universal
type of the sun, was solemnly depicted in the ivory
with the Greeks, the sacred bird of Apollo. (Elian,
Hist. An., 10, 14.)—As soon, however, as this Apollo,
whether his origin is to be traced to the banks of the Nile
or to the plains of India, assumes a marked sta-
tion in the Grecian mythology, the national spirit la-
bours to disengage him of his astronomical attributes.
Henceforward every mysterious or scientific idea disap-
ppears from the Daphnephoria, and they now become only
connected with the simple expression of a love and
fancy of Apollopans, in short, with the Greeks, the sacred
bird of Apollo. (Elian, Hist. An., 10, 14.)—As soon, however, as this Apollo,

bird of Apollo. (Elian, Hist. An., 10, 14.)—As soon, however, as this Apollo,
ed by a colony from Corinth and Corecyra, and, according to Strabo, was renowned for the wisdom of its laws, which appear to have been framed, however, rather on the Spartan than the Corinthian model. The Eelian states, that decrees to the exclusion of foreigners were enforced here as at Lacedaemon; and Aris-
vale, although the latter was among the great republics but the principal families, and those descended from the first colonists. (Eel., V. H., 13, 6. — Arist. Pol., 4, 4.) Apollonia was exposed to frequent attacks from the Illyrians, and it was probably the dread of these neighbours, and also of the Mace-
donians, that induced the city to place itself under the protection of the Romans on the first appearance of that people on their coast. (Polyb., 5, 11.) Throughout the war with Macedon they remained faithful to the interest of their new allies. From its proximity to Brundisium and Hydruntum in Italy, Apollonia was always deemed an important station by the Romans; and among the extravagant projects of Pyrrhus, it is said he had contemplated the idea of throwing over a bridge to connect it with the last-mentioned place; a distance not less than fifty miles! (Plin., 3, 11.) Augustus spent many years of his early life in Apollonia, which was famous for its libraries, and for the science of architecture. (Suet., Aug., 10.—Crater's Anc. Gr. vol. I., p. 56, seqq.—III.) A town in the interior of Chalcidice, on the Egnatian way. (Sculay, p. 27.— Xen., Hist. Gr., 5, 2.) Mention is made of it in the Acts of the Apostles (17, 1), St. Paul having passed through it on his way from Philippi to Thessalonica. The ruins are called Polianna. (Crater's Anc. Gr., vol. I., p. 264.)—IV. A city of Thrace, at the mouth of the river Nestus. (Mela, 3, 2.—Lit., 38, 41.) It was called in a later age Sozopolis, and is now Soz-
boi.—V. A city of Assyria, to the northwest of Ctesi-
phon. (Amm. Marcell., 23, 20.) Hardouin and others make it the same with Antiochia Assyria, mentioned by Pliny (6, 27).—VI. A city of Palestine, in Samaria, on the Mediterranean coast. It lay northwest of Scichem. (Plin., 5, 13.—Joseph., Antiq. Jud., 13, 23.—Id., Beli, 1, 6.)—VII. A city of Phrygia, to the southeast of Apamea, on the road to Antioch in Pisidia. It is mentioned in connection with its place 576.—Steph. Byz.) Colonel Leake is inclined to place it at Ktesi Bourlou, not far from the Lake Bou-
dou.—VIII. A city of Lydia, called also Apollonia, about 300 stadia from Pergamus, and the same distance from Sardis. It was named after the wife of Attalus. Cicero often alludes to it. (Cic., Orat. pro Flacco, c. 21 et seq.—Ep. ad Quint., 1, 2, &c.) Some ruins are visible near a small hamlet called Builtin.—IX. A city of Mysia, at the northern extremity of the Lake Apollonias, and near the point where the Rhyndacus issues from it. Its site is now occupied by the Turk-
ish town of Abullion. (Strab., 575.)—X. A city of Cynara, regarded as the harbour of Cyrene. It was the birthplace of the geographer Eratothenes. Under the lower empire this place took the name of Sozua, and it is now called Marsa Soua, or Souah. (Mela, 1, 8.—Pit.) APOLLONIA, wife of Attalus of Pergamus. She was a native of Cicusus, and of obscure family. Apollonia became the mother of Eumones, Attalus, Philetarius, and Athenaus, who were remarkable for fraternal attachment as well as for filial piety. After the death of their mother they erected a temple to her at Cicusus, on the columns of which were placed nineteen tablets, sculptured in relief, and displaying the most touching incidents in history and mythology relative to filial attachment. Some of these tablets were placed in verse, which have been preserved for us in the Vatican manuscript of the Greek Anthology. These are given by Jacobs, at the end of his edition of the Anthology (Paralipomena ex codic. Vaticano), and were previously published by
APOLLONIUS.

him in the 2d vol. of a work entitled Excercitationes Criticae in Scriptores Veteres, Lips., 1797, 8vo.

APOLLONIUS, I. a native of Perga in Pamphylia, who flourished principally under Eusebius, Philostratus the second century before the Christian era. He is one of the four writers whom we ought to regard as the fathers of mathematical science, since it was from their works that the moderns first derived an accurate acquaintance with this department of knowledge. These authors are, to give them in chronological order, Eusebius, Archimedes, Apollonius, and Diophantus. We learn from Pappus, that Apollonius studied at Alexandria under the successors of Euclid, and that it was here he acquired the superior skill in geometrical science which rendered his name so famous. The same author gives no very favourable account of his other qualities. He represents him (Coll. Math., b 7, prof.) as a vain man, jealous of the merit of others, and eager seizing every occasion to depreciate them. Apollonius was one of the most prolific and profound writers in mathematical science. His works alone formed a considerable part of the subject of the question that was regarded by Diocles as the source of the true geometrical spirit. His treatise on Conics, however, is, the most remarkable, and the one that contributed most to his celebrity. It had many commentators among the ancients, such as Pappus of Alexandria, Hypatia daughter of Theon, Eutocius of Ascalon, &c. The West was acquainted, for a long period, in modern times, with only the first four books of the Conics of Apollonius; and it was not till about the middle of the 17th century that the fifth, sixth, and seventh books were recovered from Arabic versions. A magnificent edition of the whole eight books was published by Dr. Halley, at Oxford, in 1710, the eighth book being in a measure restored by him from the indications given by Pappus. (Montucla, Hist. des Math., vol. 1, p. 245, seqq.—Lacroix, in Biogr. Univ., vol. 2, p. 316, seqg.—II. A poet of Alexandria, generally called Apollonius of Rhodes, from his having lived for some time there. He was a pupil of Callimachus, but renouncing the erudite style of his master, he endeavoured to follow the track of Homer. It appears that Callimachus was offended with this act of rebellion against his authority, and that it was the cause of the enmity which subsisted between the two poets until the death of the former. Apollonius, having read at Alexandria his Homeric poem on the subject of Zeus and Aphrodite, was accused of impiety, which had been formed against him by the cabals of his master. Mortified at this treatment, he retired to Rhodes, where he taught rhetoric, and obtained the rights of citizenship. At a subsequent period, under Ptolemy V. (Epiphanes), he succeeded as librarian at Alexandria in the place of Eratosthenes, who had become enfeebled by age. His principal production, the poem on the Argonautic expedition, is the only one of his works that has come down to us. It was divided into four books. The subject of the poem is the departure of Jason and his companions in quest of the golden fleece, and the return of these adventurers to their native shores after long and perilous wanderings. The plan is very simple: it is that of an historian, and is not adapted to poetic composition. There is no unity of interest in the poem; for Jason is not the only hero of the piece, and even if he were, his character through the various incidents given, bears no exact parallelism. The poet places him in scenes where he acts without probity and without honour. The characters of Orpheus and Hercules are better drawn. That of Medea is a complete failure; the passion that sways her breast is at variance with both modesty and filial piety. In other respects, the poem contains many pleasing descriptions. Apollonius also deserves praise for not yielding to the spirit of the age, and indulging in those learned digressions that were then popular; and for which the nature of his subject allowed him so many opportunities. The Argonautica of Apollonius are remarkable for the purity of the diction, and, with some few exceptions, for their accuracy of fact; they are, in this respect, a happy imitation of the Iliad and Odyssey. Longinus (de Subl., 33) calls Apollonius ἄρτυτος, an expression that is well elucidated by the remarks of Quintilian (10, 1, 54) on the same writer: "Non contemndonem edidit opus, aequali quadam mediocritate." He never rises to the sublime, but, at the same time, never descends to the vulgar and lowly. The Romans appear to have entertained a high opinion of the Argonautica of Apollonius. The poem was freely translated by Varro Atacius, and again, by Virgil in the fourth book of the Aeneid. It has been still more followed by Valerius Flaccus, who borrowed from it the fable of his own poem; but it must be confessed that the Roman poet has surpassed his model. The best edition of Apollonius is that of Wellouer, Lips., 1828, 2 vols. 8vo. Previous to the appearance of this, the best edition was that of Brunck, Lips., 1790, 2 vols. 8vo, with the additional Greek scholia, by G. H. Schaeffer. Brunck's first edition appeared in 1780; 2 vols. 8vo, from the Strasburg press.—III. A sophist, son of the grammarian Archi-"lives, flourished at Alexandria in the time of Augustus, according to the common opinion, and had Apion in the number of his disciples. Ruhnken, however (Praf. ad Hesych., vol. 2, p. 5), believes him to have been much later, and that Apion lived long before him. He is known by his Homerica, of which are eight books, containing a list of the principal works used by Homer, with their explanations. It is a very useful work, though much interpolated. Willoison published the first edition of this Lexicon in 1773, Paris, 2 vols. 4to, from a MS., which he supposed to be of the tenth century. The commentary and prolegomena of Vil- loison are full of erudition, and yet he was but twenty-one years of age when he appeared as the editor of Apollonius. Tullius produced a reprint of Willoison's edition, at Leyden, in 1798, 8vo. This re-impresion is considered superior to the original, as far as the excellent notes added by Tullius are concerned. It is injured, however, by the retrenchment of Willoison's prolegomena.—IV. A grammarian of Alexandria, sur- named Dyscolus (Δυσκόλος), "Ill-humoured," or "Morose," on account of his unhappy disposition; or else, as some suppose, from the difficult questions he was accustomed to raise. He wrote many works on the grammar of the Greek language. He flourished about the middle of the second century of the Christian era, and passed his days in the Bruchium, a quarter of the city where many learned men were supported at the royal expense. (Vid. Alexandria.) He is the first that reduced the subject of grammar to a systematic form. Of his numerous writings in this department, we have only four treatises remaining. Περὶ Συνάδεας τῶν ἐπὶ λόγων μερημένων; "Of the Syllables of Sentences"—... Περὶ Ἔρματον; "Of the Pronoun;"... Περὶ Συνόνων; "Of Conjunctions;"... Περὶ Εὐθυρρο- μάτων; "Of Adverbs." To him is also ascribed a compilation, entitled Ἱστοριῶν Θαυμασιῶν βιβλίων, "A collection of Wonderful Histories," which has only the accidental merit of containing some fragments of lost writers. This last-mentioned work is found in the editions of Philogon given by Brucker, and in the additional edition of it in 1792, 8vo, from the Leipsic press. The treatise on Syntax was first printed by the elder Aldus, in his Thesaurus Cornucopiae, Venet., 1495, fol.; and was reprinted by Junta, in 1518, 8vo, Florent. Both these editions are inaccurate. Syburg published a new edition in 1690, 4to, Francof., with the text corrected from MSS. The best, however, is that of Bekker, Brux., 1817, 8vo. To Bekker we also owe editions of three other works of Apol-163
APOLLONIUS. He was an ancient Greek philosopher and mathematician, known for his association with the Pythagorean school. He was born into a wealthy family in Cyzicus, and his mother was the sister of Damis, a famous orator. His education was likely to have been influenced by his family's wealth and his mother's connections.

APOLLONIUS. He was an ancient Greek philosopher and mathematician, known for his association with the Pythagorean school. He was born into a wealthy family in Cyzicus, and his mother was the sister of Damis, a famous orator. His education was likely to have been influenced by his family's wealth and his mother's connections.

He was known for his knowledge of mathematics and physics, and he wrote extensively on these subjects. His work on geometry and number theory was particularly influential, and his ideas on the nature of the world and the universe were widely discussed.

APOLLONIUS.

memorandum by Maxentius of Ægeus, now lost. All sorts of fables and traditionary tales are mixed up with the account of Philostratus. The only merit in the work resides in the disentanglement of the facts upon which he must necessarily have formed his marvellous superstructure. The claim of the whole to notice rests chiefly on the disposition of the pagans, when Christianity began to gain ground, to assimilate the character and merits of Apollonius with those of the Divine Founder of the rising religion. Something is also due to a life so singular as that of Apollonius, who certainly composed the works for a divinely-favoured person, not only in his own days, but as long as paganism prevailed. The inhabitants of Tyana dedicated a temple to his name; the Ephesians erected a statue to him under the name of Hercules Alexicus, for delivering them from the plague; Hasdrubal collected his letters; the Emperor Severus honoured him as already described; Caracallas erected a temple to him; Aurelian, out of regard to his memory, restrained from sacking Tyana; lastly, Ammianus Marcellinus ranks him among the eminent men, who, like Socrates and Numa, were visited by a demon. All these prove nothing of the supernatural attributes of Apollonius, but they are decisive of the opinion entertained of him. At the same time, Dr. Lardner clearly shows that the life of Philostratus was composed with a reference to the history of Pythagoras rather than to that of our Saviour. (Compare the remarks of Mitchell, in the Introduction to the Clouds of Plato, p. 30 seqq., Lond., 1838.) On the whole, as his correct doctrines appear to have been extremely moral and pure, it may be the fairest way to rank him among those less obnoxious class of impostors, who pretend to be divinely gifted, with a view to secure attention and obedience to precepts, which, delivered in the usual way, would be generally neglected. Of the writings of Apollonius, there remain only his Apologia, and eighty-four epistles, the brevity of which is in favour of their authenticity. They were edited by Comelin in 1691, 8vo, and by Stephens, in his Epitola, 1577. His life by Philostratus is found in the writings of that sophist, the best edition of which is that of Olearius, Lips., 1709, fol. (Engelfield's History of Philosophy, vol. 2, p. 39, seqq.—Michaelis, Biogr. Univ., vol. 2, p. 920, seqq.) VIII. A stoic philosopher, born at Tyana, or, according to some, at Chaleondrus in Bithynia. His high reputation induced the Emperor Antoninus Pius to send for him to come to Rome in order to take charge of the education of Marcus Aurelius. On his arrival at the capital, the emperor sent him an eager invitation to repair to the palace; but the philosopher declined to come, observing that the pupil ought to come to the master, not the master to the pupil. The emperor, on receiving this answer, observed, with a smile, "It was then easier, it seems, for Apollonius to come from Chalceis to Rome, than from his residence in Rome to the palace in the same city!" Antoninus, however, hastened to send his royal pupil to him, and Aurelius profited in no small degree by the lessons of his instructor. The Meditations of Aurelius contain a eulogium on his stoic preceptor. (Biogr. Univ., vol. 2, p. 323.) VIII. A sculptor, distinguished by a statue of Hercules in the Chalceid, which is deposited in the Vatican Museum at Rome, and is known by the name of the Belvidere torso. He was a native of Athens, and, according to Winckelmann, flourished a short time subsequent to Alexander the Great. This opinion is founded principally upon the form of the letters composing the Greek inscription sculptured on the marble. A conjecture of this kind, however, can at best be only approximate. The famous torso of the Belvidere Hercules has been the admiration of all artists. Michael Angelo sketched it from every possible point of view; and when, in his old age, he was deprived of sight, the enthusiastic painter caused himself to be conducted to this chef-d'œuvre of art, and, by passing his hands over it, sought in this way to form those feelings of delight which his loss of vision seemed to deny him. (La Salle, in Biogr. Univ., vol. 2, p. 325.) IX. A sculptor, who made the head of a young satyr, now preserved at Egremont House, Petworth. (Consult O. Müller, Amathl., 3, 252.)—X. A sculptor, who, in connection with his brother Tauriscus, constructed a celebrated image of a bull, formerly the property of Asinius Pollio. This image is generally supposed to be that now known as the Parthenon Bull, though artists have observed several things in the latter performance which argue it to be of a later date. (Plin., 36, 5.—Sillig. Dict. Art., s. v.) APONINA, an island near Lilibeamus. (Hirt., B. Afric., 2.) Cluverius thinks that one of the Ægusae or Ægades is here meant. Others suppose it to be the same with Paeonia of Ptolemy. In one MS. the name is given as Apononia. (Cluse., Sicil., 2, 15.) APONOSA, a fountain, or, more correctly, warm mineral springs about six miles to the south of Patavium. They were celebrated for their healing properties, and hence their name, from a, not, and πόσας, the anguish or pain of a malady, as indicating their property of mollifying or removing the pains of sickness. There was also a species of divination connected with them, by throwing articles into the fountain. (Lacun., Phars., 7, 2, Bxogr., vol. 1, c. 14, and Orsa., 3.)—The Aponus Fons was the name of a piece of land or of what were denominated the Aqua Patavinae. The name of Bagi d'Alano, by which these waters are at present known, has evidently been formed by corruption from Aponus (Plin., 2, 103.—Id., 31, 6.) APOTHEOSIS, a ceremony observed by some ancient nations, by which they raised their kings, heroes, and great men to the rank of deities. Neither the Egyptians, nor the Persians, nor the Dominicans and Greeks worshipped their kings in this manner. The Romans borrowed it from them. Herodotus (4, 2) has left us an account of the apotheosis of a Roman emperor. After the body of the deceased was burned, a waxen image of it was placed upon a tall ivory couch in the vestibule of the palace. the couch being decked with the most sumptuous coverings. The image represented the emperor as pale and suffering under sickness, and was surrounded by some attendants, who were in sorrow. For the greater part of each day the senate sat ranged on the left side of the bed, dressed in robes of mourning, the ladies of the first rank sitting on the right side in white robes, without any ornaments. During the seven days the physicians paid regular visits to the sick person, and always reported that he grew worse, until at length they gave out that he was dead. When the death was announced, a band consisting of the noblest members of the equestrian order, and the most distinguished youths of senatorian rank, carried the couch and image, first to the Forum, where hymns and dirges were sung, and then to the Campus Martius. In this latter place a large pyramidal edifice of wood had been previously constructed, the interior being filled with combustibles of all kinds. The couch was placed on this, with abundance of aromatics and spices The equestrian order, and all the senators, remounted the pile, imitating by their evolutions the pyrrhic dance; and chariots were also driven around, having the persons standing in them arrayed in their praetextas, and wearing masks which recalled the features of the most celebrated Romans of former days. The new emperor then applied a torch to the pile, and fire was also communicated to it by the rest. Meanwhile, an eagle as let fly from the summit of the structure, which was to ascend with the flames to the heavens, and was supposed to bear with it from earth the soul of the deceased emperor. If the defined person was a female, a peacock, not an eagle, was
sent from the funeral pile. (Lydus, de Re Mil., p. 93.—Irmisch, ad Herod., l. c.)—Some writers, misled by the language of Diodorus Siculus, have ascribed the introduction of the alphabet into Greece to Egyptian colonies. Diodorus, however, a partisan of the theory of Ethanemus, only saw in the gods of every religion mere deified mortals. Leibnitz, with respect to this question, appears to have been on the right track, when he regards Diodorus, when he sees in the myth of Arimanes nothing more than the apostleship of the chief of a Ne- madic tribe. Mosheim also (Annot. ad. Cudworth, p. 239) pretends that Mithras was only a deified hunter, because, upon the monuments that have reached us, he is represented as killing a bull, and being followed by a dog! (Consult Constant, de la Religion, vol. 3, p. 446, in not.)

APP VIA, the most celebrated of the Roman roads, both on account of its length, and the difficulties which it was necessary to overcome in its construction, hence called the "Queen of the Roman Ways," Regina Viarum. (Stat. Syr., 2, 2.) It was made, as Livy informs us (9, 29), by the censor Appius Cæcuses, A.U.C. 442, and in the first instance was only laid down as far as Capua, a distance of about a thousand stadia, or a hundred and twenty-five miles; but even this portion was subsequent to the death of Cæcuses. Siculo, was executed in so expensive a manner, that it exhausted the public treasury (20, 36). From Capua it was subsequently carried on to Beneventum, and finally to Brundisium, when this port became the great place of resort for those who were desirous of crossing over into Greece and Asia Minor. (Strabo, 283.) This latter part of the Appian Way is supposed to have been constructed by the consul Appius Claudius Pulcher, grandson of Cæcuses, A.U.C. 504, and to have been completed by another consul of the same family thirty-six years after. We find frequent men- tion made of repairs done to this road by the Roman emperors, and more particularly by Trajan, both in the histories of the time, and also in ancient inscriptions. This road seems to have been still in excellent order in the time of Procopius, who gives a very good account of the manner in which it was constructed. He says, "It is a road of which the earth was brought by water from the Tiber, and the stones from the Tiber were hewn, and the earth was thrown into boats, and taken to the place where the road was to be laid down." The road was made by the workmen, who were called "quaestores," and who were stationed at each of the cities on the way. These workmen were paid only a small sum for their work, and were not allowed to use any machinery in their work. They were also required to clean the road every day.

Above all others, this way is worthy of notice: for the stones which were employed on it are of an exceedingly hard nature, and were doubtless conveyed by Appius from some distant quarry, as the adjoining country furnishes none of that kind. These, when they had been cut smooth and squared, he fitted together closely, without using iron or any other substance; and they adhere so firmly to each other, that they appear to have been thus formed by nature, and not cemented by art. And though they have been travelled over by so many hosts of burden and carriages for ages, yet they do not seem to have been any wise moved from their place, or broken, nor to have lost any part of their original smoothness. (Procop., Bell. Got., 3.) According to Ennachus, such parts of the Appian Way as have escaped destruction, as near Fondo and Mola, show few traces of wear and decay after a duration of two thousand years. (Classical Tour, vol. 3, p. 177.) The same writer states the average breadth of the Appian Way at from eighteen to twenty-two feet.

APPiæs, a name given to the five deities, Venus, Pallas, Vesta, Concord, and Peace. A temple was erected to them near the Appian Way, in the vicinity of the Capuan city, Capua. Such at least is the etymology of the name commonly given to the expression Appiæs Deæ, as occurring in Ovid (A. A., 3, 452). Burmann, however, thinks that the poet refers merely to the nymphs of the adjacent fountain, while Heinsius, altering the common lection of Deæ to suas, under-
was never written by Appian. (Consult Schweigh., ad Hist. Paffv. Appiano tem. trib., p. 921, vol. 3.) The twelfth book, Μιθραδάτης, contains the history of the wars with Mithradates. In the nine succeeding books (from the 13th to the 21st inclusive), Appian gave the history of the civil wars, from the time of Marius and Sylla to the battle of Actium and the conquest of Egypt. Of the thirty-five books that contain the history of all the troubles that disturbed the Roman republic from the secession to the Mons Sacer down to the defeat of Sextus Pompeius. The twenty-second book, entitled Εξαρωσσαρία, contained the history of the first hundred years of the dominion of the Caesars. From the account given of its contents, however, by Appian himself (Pref., 15), as well as from other sources (Phot., Cod., 57), it appears to have contained what we should call at the present day a statistical account of the Roman empire; the loss of this is much to be regretted. The twenty-third book, Ἀπίους, or, as Photius calls it, Δαγκεής, contains the wars of Illyria: the twenty-fourth book, Αρακεία, treating of the wars of Arabia, is lost. From this list it results, that, regarding the eleventh as complete, we have ten books remaining of the History of Appian.— The best edition of Appian is that of Schweighaeuser, Leipzig, 1843, 8vo. A special work on Appian by W. H. Stoddart, vol. 2, p. 329, seqq.— Schweigh., ad App.— Scholl, Hist. Lat. Gr., vol. 4, p. 173, seqq.) Appius, a small place on the Appian Way, about sixteen miles from the Tres Tabernae. It is mentioned by St. Paul (Acts, 28, 15), and is also well known as Hora's second resting-place in his journey to Brandusium. Holstenius (Adnot., p. 210) and Corradini (Vet. Lat., 11, p. 94) agree in placing the position of Appius, as it is called by Strabo. But D'Anville, from an exact computation of distances and relative positions, inclines to place it at Borgo Lungo, near Treponti, on the present road. (Anal. Geogr. de l'Italie, p. 186.) It would appear, that this opinion of D'Anville's is the more correct one, especially as it is clear from Hora (Serm., 1, 5), that from hence it was usual to embark on a canal, which ran parallel to the Appian Way, which was called Dextrum, which was one of the nineteen miles. (Proc. Rer. Gat., 1, 2.) Vestiges of this canal may still be traced a little beyond Borgo Lungo. (Cramer's Anc. Italy, vol. 2, p. 93.) As regards the ancient name, it may be remarked, that the term Forum was applied to places in the country where markets were held and courts of justice convened. Aenicia, a city of Latium, in the territory of Sesta (Corr. Lat., 2, 2), and taken by Tarquinius Priscus. It is said have furnished from its spoils the sums necessary for the construction of the Circus Maximus. (Dion. Hal., 3, 49.—Liv., 1, 35.—Strabo, 231.) According to Corradini (l. c.), the name of Valle Apiole is given in old writings to a tract of country situated between Sezza and Piperno. (Cramer's Anc. Italy, vol. 2, p. 108.) Appius Claudius, I, the founder of the Appian family at Rome. He was a Sabin by birth, a native of Regnullum, and his original name is said to have been Attus Claudius. In the year of the city 260, the last portion of what Niebuhr considers the mythical age of Roman History, Attus is said to have migrated to Rome, with the members and clients of his house to the number of 5000. This powerful accession of strength ensured him, of course, a favourable reception; he was classed among the patricians, enrolled in the Senate, and Appius is given as the Roman name of Appius Claudius. His motive for leaving his native country is said to have been a wish to live on friendly terms with the Romans, with whom his fellow-citizens, notwithstanding his advice, were bent on making war. Lands were assigned to him, and his followers across the Anio, and the nucleus was thus formed of what afterward became the Claudian tribe. Appius was a man of harsh and stern character, and frequently brought, on this account, into collision with the lower orders, especially in the controversies between creditors and debtors. His zeal for the cause of the patriots knew no bounds; and so much, in fact, was he so impressed by this matter, that he had refused on one occasion to enrol themselves for war against the Veientes, the mere rumour, spread by the nobility, that Appius was about to be appointed dictator, induced the multitude immediately to yield. (Liv. 2, 16, seqq.)—II Sabinus. Sabinus, of the preceding, rendered himself still more odious to the people than even his father had been, by his inextricable and despotick character. Being elected consul A. U. C. 283, he opposed with this utmost violence the passage of the Publilian law, which ordained that the plebeian magistrates should be chosen at the Comitia Tributa, and the prudence of his colleague Quintius alone prevented bloodshed. Some time after this he was sent against the Volsci; but his soldiers, indignant at his haughtiness and severity, refused to fight, when drawn up for action, and fled to their camp. The next day, on his marching back to the Roman territory, his army was attacked by the foe, and disgracefully put to flight. Liv. 3, 49, 30. Appius Turbo, A. D. 149. (Michaud, Hist. Lat., Gr., vol. 4, p. 173, seqq.) Appii forum, a small place on the Appian Way, about sixteen miles from the Tres Tabernae. It is mentioned by St. Paul (Acts, 28, 15), and is also well known as Hora's second resting-place in his journey to Brandusium. Holstenius (Adnot., p. 210) and Corradini (Vet. Lat., 11, p. 94) agree in placing the position of Appius, as it is called by Strabo. But D'Anville, from an exact computation of distances and relative positions, inclines to place it at Borgo Lungo, near Treponti, on the present road. (Anal. Geogr. de l'Italie, p. 186.) It would appear, that this opinion of D'Anville's is the more correct one, especially as it is clear from Hora (Serm., 1, 5), that from hence it was usual to embark on a canal, which ran parallel to the Appian Way, which was called Dextrum, which was one of the nineteen miles. (Proc. Rer. Gat., 1, 2.) Vestiges of this canal may still be traced a little beyond Borgo Lungo. (Cramer's Anc. Italy, vol. 2, p. 93.) As regards the ancient name, it may be remarked, that the term Forum was applied to places in the country where markets were held and courts of justice convened. Aenicia, a city of Latium, in the territory of Sesta (Corr. Lat., 2, 2), and taken by Tarquinius Priscus. It is said have furnished from its spoils the sums necessary for the construction of the Circus Maximus. (Dion. Hal., 3, 49.—Liv., 1, 35.—Strabo, 231.) According to Corradini (l. c.), the name of Valle Apiole is given in old writings to a tract of country situated between Sezza and Piperno. (Cramer's Anc. Italy, vol. 2, p. 108.) Appius Claudius, I, the founder of the Appian family at Rome. He was a Sabin by birth, a native of Regnullum, and his original name is said to have been Attus Claudius. In the year of the city 260, the last portion of what Niebuhr considers the mythical age of Roman History, Attus is said to have migrated to Rome, with the members and clients of his house to the number of 5000. This powerful accession of strength ensured him, of course, a favourable reception; he was classed among the patricians, enrolled in the Senate, and Appius is given as the Roman name of Appius Claudius. His motive for leaving his native country is said to have been a wish to live on friendly terms with the Romans, with whom his fellow-citizens, notwithstanding his advice, were bent on making war. Lands were assigned to him, and his followers across the Anio, and the nucleus was thus formed of what afterward became the Claudian tribe. Appius was a man of harsh and stern character, and frequently brought, on this account, into collision with the lower orders, especially in the controversies between creditors and debtors. His zeal for the cause of the patriots knew no bounds; and so much, in fact, was he so impressed by this matter, that he had refused on one occasion to enrol themselves for war against the Veientes, the mere rumour, spread by the nobility, that Appius was about to be appointed dictator, induced the multitude immediately to yield. (Liv. 2, 16, seqq.)—II Sabinus. Sabinus, of the preceding, rendered himself still more odious to the people than even his father had been, by his inextricable and despotick character. Being elected consul A. U. C. 283, he opposed with this utmost violence the passage of the Publilian law, which ordained that the plebeian magistrates should be chosen at the Comitia Tributa, and the prudence of his colleague Quintius alone prevented bloodshed. Some time after this he was sent against the Volsci; but his soldiers, indignant at his haughtiness and severity, refused to fight, when drawn up for action, and fled to their camp. The next day, on his marching back to the Roman territory, his army was attacked by the foe, and disgracefully put to flight. Liv. 3, 49, 30. Appius Turbo, A. D. 149. (Michaud, Hist. Lat., Gr., vol. 4, p. 173, seqq.)
APULEIUS.

Saves and exiles, A.U.C. 292, and was soon after overthrown. (Lin., 3, 15.—Flor., 3, 19.)—The name of Appius was common in Rome, particularly to many consuls whose history is not marked by any uncommon event.

Appius, a king of Egypt, of the 26th dynasty, and called, in Jeremiah and Ezekiel, Pharaoh Hophra. He ascended the throne after his father Psammis, B.C. 594. Appius distinguished himself by foreign conquest; he took Sidon, conquered the island of Cyprus, and enjoyed for a long period great prosperity. After a reign, however, of twenty-six years, his subjects revolted in favour of Amares, by whom he was overthrown and put to death. The immediate cause of the revolt was an unsuccessful expedition against the people of Cyrene, in which many lives were lost; and from this circumstance we may readily infer, that the extravagant projects of their kings were but little in unison with the feelings and wishes of the Egyptian people. (Herod., 2, 161 seq.—Compare Herren, Ideen, vol. 2, pt. 2, p. 404.)

Apianus, a Greek rhetorician of Gadara, in Phocis, who flourished during the reign of Maximin, about 236 B.C. We have from him a treatise on Rhetoric, and also a work on the questions discussed in the schools of the rhetoricians. They are contained in the Rhetores Graeci of Aldus, Venice, 1503, fol.

Apynthius, or Abythuth, a people of Thrace, named by Herodotus (6, 34, and 9, 119) as bordering on the Thracian Chersonese, and having overpowered the Dolonci. (Vid. Mithradates.) Dionysius Periegetes (577) speaks of the river Apynthus.

Apinus, a river of Macedonia, falling into the Ionian Sea between Dyr rhachium and Apollonia, and dividing their respective territories. It has been rendered memorable from the military operations of Caesar and Pompey on its banks. The present name of the stream is Ergent or Beratino (Cass, B. Civ., 4, 13.—Lucan, 5, 461.)

At'tera, a Cretan city, to the east of Polyrrhenia, and eighty stadia from Cydonia. (Strabo. 479.) Its name was supposed to be derived from a contest waged by the Sireus and Muses in its vicinity, when the former, being vanquished in the trial of musical excellence, were so overcome with grief that their wings dropped from their shoulders. (Steph. Byz., s. v. 'Aππηνθος.) Strabo informs us that Kisamus was the travel station of Apollonius of Tyana. The passages of Apura were observed by Pococke to the south of Kisamos, and they are laid down in Lapi's map between that place and Jerami or Cydonia. (Cramer's Ancient Greece, vol. 3, p. 378.)

Apuleius Leges, proposed by L. Apuleius Saturninus, A.U.C. 653, tribune of the commons; about dividing the public lands among the veteran soldiers, settling colonies, punishing crimes against the state, and the like. It was in corn to the poor at 10-15ths of an as a modulus. (Cic., pro Balb., 21.—Id., de leg., 2, 6.—Flor., 3, 16.)

Apuleius, a Platonic philosopher of the second century, was a native of Madaura, an African city on the borders of Numidia and Getaulia. His family was respectable, both in station and property, his father being chief magistrate of Madaura. He received the early part of his education at Carthage, where he imbibed the principles of Platonism, and thence removed in succession to Athens and Rome. Apuleius, who inherited a handsome fortune, began life with that contempt for riches which in the ancient world in particular so frequently distinguished aspirants after learning and philosophy. He liberally rewarded all those who had any share in his instruction, and was otherwise so generous and profuse, that, on his return home after his travels, he found his patrimony exhausted; and, being exceedingly destitute of entering into the fraternity of Oasiris, was obliged to part with his clothes to pay the necessary expenses of the inaugural ceremonies. He now began to acquire a more prudent estimate of the value of property, and undertook the profession of a pleader, in which he obtained considerable fame and emolument. Not only so, he embraced also an opportunity which offered of improving his condition by marrying Pudentilla, an elderly widow of considerable property, to whom his youth and agreeable qualities had strongly recommended him. This marriage, of course, excited the relations of the lady; and Æmilianus, the brother of her former husband, instituted a suit against Apuleius, before the proconsul of Africa, for employing magical arts to obtain her love. The apology which he delivered on this occasion is still extant, and it is regarded as a performance of considerable merit. It was, of course, successful; for it was not very difficult to convince a sensible magistrate, that a widow of thirteen years' standing may be induced to marry a handsome, eloquent, and accomplished young man, without being moved thereto by flattery or magic. Of the remainder of the life of Apuleius nothing is known, except that several cities honoured him with statues for his eloquence, and that he wrote much both in prose and verse. Like Apollonius of Tyana, miracles have been ascribed to him, which have been placed in comparison with those of the gospel. The origin of these reports, which did not circulate until after his death, is by no means ascertained; as, with the exception of the foregoing foolish accusation, he does not appear to have been charged with the practice of magic in his lifetime; although it is not improbable that his anxiety, while on his travels, to get initiated in the secret mysteries and religious ceremonies of the different places which he visited, might have laid a foundation for the opinion entertained after his death of his supernatural acquirements. Be this as it may, Marcellinus, in the fifth century, requested of St. Augustin to exert his utmost efforts to refute the assertions of those who falsely declared "that Christ did nothing more than what was done by other men, and who produced their Apollonius, Apuleius, and other masters of the magical art, whose miracles they assert to have been greater than his." Perhaps this notion has been grounded on a misapprehension of his story of "The Golden Ass," in which a Milesian fable, invented by Lucius of Patra, and abridged from him by Lucian, is enlarged and embellished. This fable is a comment on Apuleius by Commodian, and is a part of the history, and among the rest St. Augustin entertained his doubts, while Bishop Warburton deems it a work written in opposition to Christianity, and with a view to recommend the Pagan religion "as a cure for all vices." The same learned author also explains the beautiful allegory of Cupid and Psyche, which makes a long episode in the "Golden Ass," upon the same principles. Dr. Lardner is of a different opinion; and, probably, reverses them, not only towards this eccentric production as a mere satire on the frauds of the dealers in magical delusion, and on the tricks of priests, and other crimes, both of a violent and deceptive character, which are so frequently committed with impunity. Apuleius, indeed, appears, from the greater part of his writings, to have been more of a wit than a philosopher, in the ancient acceptance of the character; his productions, with the exception of the "Golden Ass," are too florid, oratordal, sportive, and sometimes even wanton, for the gravity of philosophy. His style is very a peculiar one, abounding in far-fetched, tumid, and unusual forms of expression, and by no means remarkable for purity. We must not, however, suppose, as some have done, that the terms thus employed by him are of his own coinage, since the greater part of them are found in the old grammarians, and he does not seem,' therefore, to have employed any of them.
without sufficient authority. (Ruhnken, Prof. ad edit. Oudendorp, p. 111, seq.) In his apology, however, he is free from much of this affectation of manner, and what Ruhnken calls his "tumor Africanus," and expresses himself, for the most part, with clearness and precision. His printed works have gone through upward of forty-three editions. The first, which was published by the Inquisition, is very rare; it was printed at Rome, by order of Cardinal Bessarion, 1647. Among those which succeeded may be mentioned the editions at Bologna, Svo, 1585; of Elizabethorst, Svo, 1651; of Servierius, 12mo, 1624; that in Usun Delphini, 2 vols. 4to, 1688. The best edition, however, is that of Oudenorp, Lugd. Bat., 1786-1823, 2 vols. 4to, with prefaces by Ruhnken and Boscha. The "Golden Ass," or, to give its Latin title, Meta morphoseon, sive de Asino Aureo, liber xi., has been translated into almost all the modern European languages; and of the episode of Psycho there have been many separate editions and translations. Möller published a dissertation on the life and works of Apuleius, Aldorff, Svo, 1681. A list of all his productions is given in the Biogr. Univ., vol. 2, p. 343, seqq.—Compare Bühr, Gesch. Röm. Lit., vol. 1, p. 582.

Apulia, a country of Magna Graecia, lying along the coast of the Adriatic. We are led to infer, from Strabo's account of the ancient coast of Italy, that the name Apulia applied to what is now called the southern part of Italy, was brought into general use. It may be remarked, indeed, as a singular circumstance, that whereas, under the Romans, all former appellations peculiar to the different people who inhabit this part of the peninsula were lost in that of Apulia, the Greeks, to whom this name was unknown, should have given the same extension to that of Iapygia, with which the Romans, on the other hand, were entirely unacquainted. The term Iapygia appears to have been used at least as early as Augustus, against the Parthians, which closes the Gulf of Tarentum to the southeast, and to the name of Messapia was likewise sometimes applied; but we find, at a later period, that Polybius gives to Iapygia the same extensions which the Roman historians and geographers assign to Apulia. The boundaries under which Apulia, in its greatest extent, seems to have been comprehended, were as follows:—to the north this province was separated from the Ager Lentulus by the river Tifernus; to the west it may be conceived as divided from Samnium by a line drawn from that river to the Aufidus, and the chain of Mount Vultur; to the south, and on the side of Lucania, it was bordered by the river Bradanus. (Cluver, It. Ant., 2, p. 1219.) Within these limits then we must place, with Polybius, Strabo, and the Latin geographers, the several portions of country occupied by the Dauntii, Messapii, and Lucani. While following the boundaries of Apulia proper, we must follow the authority of Strabo, as he is the only writer who has noticed the existence of a district under this specific name. He evidently conceives it to have been contiguous to the Ager Lentulus on the one side, and to Daunia on the other. (Strabo, 283.) Pliny likewise seems to confirm this arrangement, when he tells us (3, 11) that the Apulian Dauni extended from the river Tifernus to the Cermalus; though it must be observed, that Strabo appears to limit these Apuli to the south by the Lacus Urianus, now Lago Varano. At this point, therefore, we may fix the confines of the Apuli and Dauni, and trace those of the latter to the Peucetian, by a line drawn from the mouth of the Aufidus to Silvium, now Garagnone, in the Apennines, so as to include Camna and Caunus within the Daunian territory.—Apulia was famous for the excellence of its wool, and particularly the district of Luceria. (Strabo, 284.—Hor., Od., 3, 15.—Plin., 3, 11.—Ptol., p. 6.)—The old Latin traditions speak of Daunus, a king of the Apulians, who was expelled from Hylria, and retired to this part of Italy. According to the tradition which conducts the wandering heroes of the Trojan war to Italy, Diomed settled in Apulia, was supported by Daunus in a war with the Messapians, whom he subdued, and was afterward treacherously killed by his ally, who desired to monopolize the fruits of the victory. Roman history informs us of no other Apulian kings, but mentions Arpi, Luceria, and Arpinum, as important cities. The Aedus, a river of Apulia, has been celebrated by Horace, who was born at Venusia, a city in this territory. The second Punic war was continued for a considerable period in Apulia. Puglia, the modern name, is only a melancholy relic of the ancient splendour which poets and historians have celebrated. It now supports more sheep than men. As regards the early settlement of Apulia, compare Niebuhr, Rom. Hist., vol. 1, p. 122, seqq., Cambridge transl.—Wachsmuth's Rom. Hist., § 61.—Micali, Storia degli Antichi Popoli Italiani, vol. 1, p. 389.—Cramer's Ancient Italy, 2, p. 284.—

Aqua, a term joined to a large number of proper names, and serving to indicate the sources of rivers, small streams, water-courses, aquedocts, &c. The following are most worthy of mention:—I. Antiqua, near the modern village of Altusasser in Silresia. It was famed for its chalybeate properties.—II. Belletta, now Aiguebellette, or Aignebelette, in Savoy, on the Arco.—III. Aquae Taurinorum, a name which was applied by the Emperor Claudius, A.U.C, 880, and conveying water from the Anio to Rome.—IV. Crabra, a small river running from Tusculum to Rome, and emptying into the Tiber, to the east of the Palatine Hill.—V. Marcia, an aquedoct commenced by the praetor Marcus Titius, about 608 A.U.C., and finished by Marcus Rex in 610. It passed near Tibur, and through the country of the Peligni and Marsi, and supplied Rome with its best water. (Compare, Plin., vii.—P. T. Plin. v.)—VI. Tempe, springs near Tusculum, ten miles southeast of Rome. This water was conveyed by an aqueduct to the Capitoline Hill, about 627 A.U.C., and in 719 was united with the Aqua Julia, a small river near the modern Marino, by Agrippa.—The plural form Aqua is also frequently joined to proper names, to indicate places in the neighbourhood of warm springs, &c. Thus we have, I. Aqua Bade nos, a city in Germany, now Baden, on the Rhine.—II. Pannonicum, a city in Pannonia Superior, now Baden in Austria, on the river Schoëchat, three miles southeast of Vienna.—III. Allobrogum, a city of the Allobroges in Gallia Narbonensis, now Aix, in the department of Mont Blanc, two miles and a half to the north of Chambery.—IV. Biblitanorum, a city of Hispania Tarraconensis, to the west of Bilbilis. It is now Alhama, on the Xalön, in Aragon.—V. Calentes, a town of the Arverni in Gaul, now Chalon-sur-Saône.—VI. Canum, a city in Britain, now Bath in Somersetshire.—VII. Flavian, a town in Hispamia Tarraconensis, supposed to have been situate among the Callaeci Bracari. It is now the Portuguese Villa Chiaves, twelve miles from Braganza.—VIII Matiaca, a town of the Mattiaci in Germany, now Wiesbaden, the chief city of the Duchy of Nassau.—IX. Sextium, a city of the Salvens, in Gallia Narbonensis, to the north of Massalia, founded by the consul Sextius Calvininus, about a U.C. 630. It was also called Colonia Julia, after Julius Caesar, and Colonia Julia Au-
AQUAΣAΣIA, after Augustus. It is now Aix, eight miles southeast of Avignon. In its vicinity Marius defeated the Ambrones and the Teutones.

AQUÆDUCIΣUS, an aqueduct. Mention of these is frequently made in the Roman writers. Some of them brought water to the capital from more than the distance of sixty miles, through rocks and mountains, and over valleys, supported on arches, in some places above 109 feet high, one row being placed above another. The foundations of the aqueducts were sometimes so extensive and solid as to require afterwards certain officers appointed for that purpose by the emperors, called curatores aquarum, with 720 men paid by the public, to keep them in repair. These persons were divided into two bodies; the one called Familia Publica, first instituted by Agrippa, under Augustus, consisting of 260 men; the other Familia Cœsaris, of 460, instituted by the Emperor Claudius. The slaves employed in taking care of the waters were called Aquarrii. The construction of aqueducts is treated of by Vitruvius and Pliny, and their description is curious, not only as giving the methods used by the ancients in those stupendous works, but as indicating a knowledge of some hydrodynamical laws, the discovery of which is usually assigned to a much later period. Frontinian, also, a Roman author, who had the superintendence of the aqueducts in the reign of Nerva, has left a treatise on these erections. From his enumeration, there were nine aqueducts which brought water into the city. The waters of these varied in their qualities, that of some being preferred for drinking, of others for bathing, for irrigating the gardens, or cleansing the sewers. The best drinking-water they brought into Rome was the Aqua Marcia, being most highly prized, according to Pliny, for its coldness and salubrity. The aqueduct at Nemausus, the modern Nîmes, is probably one of the earliest constructed by the Romans out of Italy. Its origin is attributed to Agrippa. Aqueducts, however, became eventually common throughout the whole Roman empire, and many stupendous remains still exist to attest their former magnificence. (Consult Stuart's Dictionary of Architecture, vol. 1, s. v.)

AQUILÌA, a native of Sinope in Asia Minor. He first applied himself to the study of mathematics and architecture, and the Emperor Hadrian, according to Saint Epiphanius, made him a superintendent of public buildings, and gave him in charge the restoration and embellishment of Jerusalem, now called Athalia Capitoline. This commission afforded him an opportunity of becoming acquainted with Christianity, which he accordingly embraced, and received the rite of baptism. Becoming subsequently addicted, however, to judicial astrology, he was excommunicated, and then attached himself to Judaism. Aquila is rendered famous by his Greek version of the Old Testament, which he published A.D. 185. It is the first that was made after the Septuagint translation, and appears to have been executed with great care, not notwithstanding what Buxtorf urges against it, who deems to its author, on very feeble grounds, a thorough acquaintance with the Hebrew tongue. Aquila's method was to translate word for word, and to express, as far as this could conveniently be done, even the etymological meaning of terms. Although his version was undertaken with the view of opposing and superseding the Septuagint, of which it was said in the church had been made use after the example of the apostles, still the ancient fathers found it in general so exact, that they often, in preference, drew their texts from it. St. Jerome, who had at first censured it, afterward praised its exactness. The Hellenistic Jews preferred it also for the use of their synagogues. Some fragments of it are preserved in the Hexapla of Origen. Aquila joined to a second edition of his version some Jewish traditions which he had obtained from the Rabbi Akiba, his predecessor. The edition was still more favorably received by the Hellenistic Jews than the previous one had been. The Emperor Justinian, however, interdicted the reading of it, because it only made the Jews more stubborn in their error. (Boyar. Univ., vol. 2, p. 345, seq.)

AQUIEΛIA, I. A celebrated city of Italy, in the territory of Venetia, between the Alsa and Natiso, and about seven miles from the sea. It appears to have been first founded by some Transalpine Gauls about 157 B.C. but being soon after taken possession of by the Romans, it was made a Latin colony after its establishment. (Liv., 39, 22; 45, 54.—Id., 40, 54.) The earliest author that mentions Aquileia is Polybius, who, in a fragment preserved by Strabo (208), speaks of it as having some valuable gold-mines in its neighbourhood. Eustathius, in his commentary on Dionys. Perieg., asserts that its name was derived from the Latin word Aquila, as denoting the legionary standard of the Romans, who had been encamped here. Aquileia soon became theopolis of Italy on its north-eastern frontier. It was already an important military post in the time of Cæsar (B. Civ., 1, 2), and continued to increase in prosperity and consequence till the fall of the Roman empire. In Strabo's time it had become the great emporium of all the trade of Italy with the nations of Illyria and Pannonia; these were furnished with wine, oil, and salt provisions, in exchange for slaves, cattle, and hides. The passage of Mount Auria, which the ancients called by the name of aquila, was easy for land-carriage; and at Naupactor on the other side, a navigable stream conveyed vessels to the Saecus, and from that river into the Danubius. (Strabo, 214.—Id., 207.—Mela, 2, 4.—Sueton., Aug., 20.—Id., Tib., 7.—Id., Vesp., 6.—Tac., Hist., 2, 46, and 85, &c.) Ausonian assigns to Aquileia the ninth place among the great cities of the empire. It withstood successfully a severe siege against Maximinus, who, being unable to take the place, was slain by his own soldiers. (Herodian, 8.) But it could not bold out against the fury of Attila: its resistance served only to increase the savage ferocity of the conqueror, who caused it to be sacked and razed to the ground. (Casiodor., Chron.—Procop., Vand. Rer., 1.—Procop., Chron.) The port of Aquileia was situate at the mouth of the Natiso (Pln., 3, 18), and is now called Porto di Grado. The modern Aquileia stands near the ruins of the ancient city. (Cramer's Ancient Italy, vol. 1, p. 112; II., 185, 191; town of Etruria, mentiond to the ancient Itineraries as the first stage from Florentia or Florence. It is supposed to have been in the immediate vicinity of Inacia. (Clow., Ital. Ant., 1, 570.—Cramer's Ancient Italy, vol. 1, p. 214.)

AQUILIUS, I. NERÖS, Manius, a Roman consul, and colleague of Marius, who was intrusted with the war against the slaves in Sicily. This war was continued during the succeeding year, when Aquilius, as proconsul, still held the command. In a conflict with the foe, the two commanders, it is said, agreed to decide the affair by single combat. Aquilius, being a man of great strength, laid his antagonist dead at his feet by a single blow; and the Romans thereupon rushing in, gained the victory after a severe conflict. Aquilius was honoured with an ovation. After this he was accused of extortion, but acquitted on account of his successful operations in Sicily. Being subsequently sent into Asia against the Parthians, he was made governor of Bithynia, and, having been afterward treacherously delivered into his hands, was put to death with every circumstance of ignominy. Mithridates is said to have even poured melted gold down his throat in token of, and as a punishment for, his culpity. (Liv., Epit., 77.—Appian, Bell. Mithr., 21.—Cic., Agrar., 2, 30.)—II. Gallus, a Roman lawyer, who flourished about 66 B.C. He was a pupil of Scaulosa's, and was intimate with Cicero, having been a colleague of his in the censorship. Cicero represents him as a man of
ACQUILIA, a town of Cisalpine Gaul, south of Mutina, or Modena. It was placed by Cluverius at the modern Acquario.—II. A city of Latium, on the Latin Way, a little beyond the place where the road crosses the Liris and Melis. It is now Aquino. Both Pliny and Silius Italicus (8. 184) describe it as a large city. Aquinum was the birthplace of Juvenal, as that poet himself informs us. (Sat. 3, 318.) Here also was born the Emperor Pescennius Niger, and in modern times the celebrated Thomas Aquinas. The place was famous for its purple dye. (Horat. Ep. ro, 26.)

ACQUITANIA, a country of Gaul between the Garumna or Garonne, and the Pyrenees. As it was the eastern boundary of the two divisions of Gaul, Augustus added it to the Ligeris or Loire (Vid Gallia.) The Aquitanians, according to Strabo (190), differed from the Gallic race both in physical constitution and in language. They resembled, he tells us, the Iberians rather than the Gauls. According to Caesar, the Aquitani, besides a peculiar idiom of their own, had also peculiar institutions. Now, historical facts inform us that the most ancient people of the Iberian character; that the national attire was Iberian; that there were the strongest ties of affinity and alliance between the Aquitanic and Iberian tribes. We find, then, an acquaintance between historical proofs and those deduced from an examination of languages, to warrant the belief that the Aquitani were of Iberian extraction. (Consult Thierry, Hist. des Gaul., vol. 1, p. xxiii., Introd.—II., vol. 2, p. 11, sqq.)

A R A B I A, an altar erected to Augustus, at the confluence of the Arar and Rhone, near the city of Lugdunum or Lyons, by sixty Gallic communities. It was reared after the tumult excited in Gaul by the proclaiming of the census had been quelled by Drusus (Liv. Epit., 137. Strab., 192.) The spot became famous under Caligula for the literary contests which took place there. A crowd of orators and poets flocked to the scene from the remotest quarters of the empire, to compete and reward the severities of the regulations which are said to have prevailed there. The vanquished were compelled to bestow rewards upon the victors, and compose pieces in their praise; while those whose productions showed least talent were obliged to efface their own writings with a sponge or with the tongue, or else, as an alternative, to submit to be scourged, and then cast into the neighbouring stream. (Sueton. Calig., 29.) The altar (Sat. 1, 44.) The spot was called by the writers of the middle ages Antianaum, and is now the point of Annae. (Lemaire, ad Jun., i. c.)

ARABIA, a large country of Asia, forming a peninsula between the Arabian and Persian Gulfs. Its length, from the Cape of Babellomandeb to the extreme angle on the Euphrates, is about 800 British miles, and its mean breadth 800. The Arabsians recognise for their inhabitants Joktan, or Khatan, the son of Eber, and Ishmael, the son of Abraham. Arabia was called by its inhabitants of Palestine, the Eastern, and by the Babylonians, the Western country. Hence the Arabsians were sometimes denominated Orientals, and sometimes the people of the West. (2 Chron, 9, 14.—Jer, 3, 2.) The derivative of a city, commonly ascribed to the term Arab is in accordance with this latter idea, making it signify an inhabitant of the West, as Arabia lay to the west of Upper Asia. (Consult, however, Wahl, Vorder und Mittel Asien, vol. 1, p. 327, in not., where other explanations are given.) The Arabs anciently denominated themselves, and do to this day, by either of these names. Megasthenes and Ptolemy divided the country into the Happy, Petrae, and the Deserted; an arrangement unfounded, however, to the inhabitants of the east. Arabia Felix, or the Happy, derived this appellation from its rich produce. This tract is a peninsula, which is so bounded by the Red Sea (more properly called the Arabian Gulf), by the Mare Erythraeum, and by the Persian Gulf, that it would be perfectly surrounded, were a line drawn from the inland extremity of the Persian Gulf to port Aisan or Ailan, situate near the eastern extremity of the Red Sea. . . . . . (Curt. 9, 37. 14.) The rivers divide it into the three stony characteristics of an ancient fortified empire, called Petra. It was bounded on the east by Arabia Deserta, on the west by Egypt and the Mediterranean, on the south by the Red Sea, which here divides and runs north in two branches, and on the north by Palestine. Idumea, otherwise called Seir, is the northeastern part of Arabia Felix, which was formerly called Arabia Deserta, on the south, Babylonia and the Euphrates on the east, the Euphrates and Syria on the north, and Gilead on the west. Instead, however, of the division just given, the more natural one is that which distinguishes the coast covered with aloes, manna, myrrh, frankincense, indigo, nutmegs, and especially coffee, from the interior, consisting of a desert of moving sand, with thorns and saline herbs. The waves of the seasons were the cause of a variety of new varieties which the year alternate with others where dew supplies the place of rain for the whole season. The greatest cold prevails on high places, and the most oppressive heat in the plains. Damp winds succeed to the dry simoom, which is as dangerous to life as the harramit and khamseem in Africa. The soil consists of sandy deserts and the most fruitful fields. Wheat, millet, rice, kitchen-vegetables, coffee (which grows and flowers in Arabia, in one, and even the sandy regions in America, the plants being kept low for the sake of gathering their fruit more easily), manna, sugar-cane, cotton, tropical fruits, sesa-leaves, gums, aloes, myrrh, tobacco, indigo, odorous woods, balsam, &c., are the rich products of Arabia. There are also precious stones, iron, and other metals (gold excepted, which the ancients, however, seem to have found pure in rivers and in the earth). The animals are monkeys, asses, camels, buffaloes, horned cattle, goats, nobles, and antelopes, foxes, apes, jerboas; birds of all sorts, pelicans, ostriches. &c.; scelent locusts, scorpions, &c.—The Arabsians are still, as in the most ancient times, Nomades, of patriarchal simplicity. The older Arabian historians understand by Arabia only Yemen (Araba Felix). Hedjazans (the rocky) they regard as belonging partly to Egypt, partly to Syria; and the rest of Arabia they call the Syriac Desert. The princes (tabans) of this land were ancienly entirely of the race of Khatan, to which belonged the family of the Homyretians, who ruled over Yemen two thousand years. The Arabsians of...
Yemen and a part of the desert of Arabia lived in cities, and practised agriculture; they had commerce also with the East Indies, Persia, Syria, and Abyssinia. The rest of the population then, as now, led a wandering life in the deserts. —The religion of the Arabs, in the time of their ignorance (as they call the period before Mohammed), was, in general, adoration of the heavenly bodies, or Sabaism; varying much, however, in the different tribes, each of whom selected a different constellation as the highest object of worship. —For a thousand years the Arabs unfailingly defended the freedom, faith, and manners of their fathers against all the attacks of the Eastern conquerors, protected by deserts and seas, as well as by their own arms. Neither the Babylonian and Assyrian, nor the Egyptian and Persian kings, could bring them under their yoke. At last they were overcome by Alexander the Great; but immediately after his death, they took advantage of the disunion of his generals and successors to recover their independence. At this period the northern provinces of the country were bold enough to extend their dominion beyond the limits of Arabia. The Arabian Nomades, especially in winter, made deep inroads into the fertile Irak or Chaldea. They finally conquered a portion of it, which is hence still called Irak Araby. Thence the tribe of Hareth advanced into Syria, and settled in the country of Gassan, whence they received the appellation of Gassanides. Three centuries after Alexander, the Romans approached these limits. The divided Arabians could not resist the Roman arms everywhere successfully; their country, however, was not completely reduced to a province; the northern princes, at least, maintaining a virtual independence of the emperors. The old Homeyrites in Yemen, against whom an unsuccessful war was carried on in the time of Augustus, preserved their liberty. Their chief city, Saba, was destroyed by a flood. With the weakness of the Roman government, the struggle for absolute independence increased, which a union of all the Arabian tribes would have easily gained; but, weakened and scattered as they were, they spent several centuries in this contest, during which the mountainous country of the interior (Nedschid) became the theatre of those chivalrous deeds so often sung by Arabian poets, till a man of extraordinary energy united them by communicating to them his own ardour, and union was followed by augmented force. Christianity early found many adherents here; but the Jews were everywhere acknowledged as their metropolis Boire in Palestine, on the borders of Arabia. Yet the original worship of the stars could not be entirely abolished. The former opposition of the Arabians to the despotism of Rome drew to them a multitude of heretics, who had been persecuted in the orthodox empire of the East, especially the Monophysites and the Nestorians, who were scattered through all the East; and the religious enthusiasm of the new religion recalled the flame of opposition. The Jews also, after the destruction of Jerusalem, became very numerous in this country, and made many proselytes, particularly in Yemen. The last king of the Homeyrites (Hamjirates) was of the Jewish faith, and his persecutions of the Christians, A.D. 503, involved him in a war with the King of Ethiopia, which cost him his life and his throne. To the indifference excited by so great a variety of sects is to be attributed the success Arabia had in establishing a new religion. He raised the Arabians to importance in the history of the world, and with him begins a new epoch in the history of this people. (Iahn's Bibl. Archool., p. 8, Upham's transl.—Encyclop. Amer., vol. 1, p. 316, seqq.)

ARA BUNUS, that part or branch of the Mare Erythreum which interposes itself between Egypt and Arabia. It is now called the Red Sea. The meaning of this modern appellation must be looked for, not in any colour of its waters or sands, but in the name of Idumea (or the land of Edom), whose coasts this sea touches on the north. Edom, in the Hebrew tongue, signifies red, and was the name given to Esau for selling his birthright for a mess of red pottage. This country, which his posterity possessed, was called after his name, and so was the sea which adjoined it. The Greeks, however, not understanding the reason of the appellation, translated what is in Hebrew the Sra of Edom, by ἤπειρον Ήδονα. Thence comes the Latin form Mare Erythreum, or the modern name Red Sea. It is otherwise called Golfo di Mecca. (Compare Well's Sacred Geogr., No. 160.—Calmet's Dict., vol. 5, p. 63, Eng. transl.—Bähr, ad Cle., p. 359.) The shores of this gulf consist principally of limestone rocks. The bottom is covered with a carpet of greenish coral, and, in calm weather, when it comes into view, is not unlike a series of verdant submarine forsts and meadows. The coral, however, is inferior in quality to that of the Red Sea. (Plin., 32, 2.) The beautiful faci ættraced the admiration of antiquity (Artemid., ap. Strab., 766), and procured for the Arabi-an Gulf in the Hebrew the name of Bahir Sooph., i. e., "the sea of alga." (Matte-Brun, 2, 84, Brussels ed.)

ARA BUNUS, Arap, or Arab, a river of Gedrosia, near its eastern boundary, running into the Indian Ocean, now the Araba or Il-Mend. (Arrian, 6, 21.)

Aracca and Arecca, a city of Susiana, east of the Tigris, now Wasit. It has attracted the attention of the learned by reason of the affinity of its name to that of Erech, mentioned in the Old Testament among the cities constructed by Nimrod. (Ammian. Marcell., 23, 21.—Bochart, Geogr. Sacr., col. 236.—Michaelis, Spicileg., vol. 1, p. 220, seqq.)

ARACHNEUS MONS, a chain of mountains in Argolis, running along the upper coast in a southeastern direction. In the time of Inachus it was called Sappylasaton. (Pausan., 2, 25.—Compare Sicelbis, ad loc.) Heay-chius reports that it also bore the name of Hyssellus (v. s. Yenchis.—Compare Steph. Byz., s. v. Λυχναίας). Mount Arachneh is mentioned by Aeschylus (Agam., 299) as the last station of the telegraphic fire by which the news of the capture of Troy was transmitted to Myccena. The modern name is Sophie, according to the latest maps. Part of this chain, communicating with the mountains of Nemea and Phlius, bore the name of Celosia. (Strabo, 382.—Cramer's Ancient Greece, vol. 3, p. 292.)

Aραβιτζα is a bishopric, who was so proud of her skill in weaving and embroidering, in which arts Minerva had instructed her, that she ventured to deny her obligations to the goddess, and even challenged her to a trial of skill. Minerva, assuming the form of an old woman, warned her to desist from her boastings; but, when she found that her admonitions were vain, she resumed her proper form, and accepted the challenge. The skill of Arachne was such, and the subjects of her embroidery so offensive to Minerva, that she struck her several times in the forehead with the shuttle. The high-spirited maiden, unable to endure this affront, flung herself, and the goddess, relenting, changed her into a spider (υφώπη). —The name of this insect, most probably, gave rise to the fable, though the story itself would seem to be of Oriental origin, the art of embroidering having come into Western Asia from Babylon and the cities adjacent. (Dio Cond., 17, col. 1, seqq.—Stally's Mythology, p. 122.—Creuzer, Symbolik, vol. 2, p. 749.)

ARACHOSIA, a province of the Persian empire, lying to the west of the river Indus, and north of Gedrosia. The Greek writers usually call the inhabitants Arachi-ti (Ἀραχωτι), sometimes Aραχωταί (Ἀραχωταί). Dion. Perieg., 986). Arachosia was of considerable importance as a frontier province, and had always, therefore, a satrap or governor of its own, both.
ARATUS.

before and after the time of Alexander. Through this country, moreover, lay the nearest and safest route to India. Sybaritus, the Greek governor after Alexander's death, cultivated friendly relations with the Indian monarch Sandroctoccus, and Megasthenes was often sent by him to the court of the latter. (Arrian, 5, 6.) The ancient Arachosia answers to the modern Aro-
hage. (Mannert, 5, pt. 2, p. 76.)

Aratus, and Artheus, the inhabitants of Ara-
chosia. (Vid. Arachosia.) They are styled Δυμή
λαος, from their linen attire. (Dionys. Perieg.,
1096.—Compare Eustath., ad loc.—Arrian, 3, 23.)

ARACHTHOS, I. or Arachosia, the chief city of Ara-
chosia, called also Coppe (Κώπη), and said to have been built by Semiramis. It did not lie, as some re-
mark, on the river Arachthus, but a considerable dis-
tance east of it, on a road leading in a northern direction towards the modern Candahar. (Mannert, 5, pt. 2, p. 80.)—II. A river of Arachosia, rising in the hills northeast of the modern Gazni, and losing itself in a marsh about four miles to the south of Candahar. Its modern name, according to Wahl, is Naodafi. (Isid., Charac. ap. Geogr. Gr. Min., vol. 2, p. 8.—Plin., 6, 23.)

ARACHTHUS, ARATHERS, OR ARETHON, a river of Epi-
rus, flowing from that part of the chain of Findus which belonged to the ancient Tymphas, and running by Arachthus, the modern Arachin Great Lake. Lycochon (v. 469), who calls it Areuthos (Ἀραθέος), speaks of it as the boundary of Greece on this side. Ambracia, therefore, being always accounted a city of Greece Proper, must have stood on its left bank. We cannot, therefore, admit, with Pouqueville, that this city occupied the site of Regous, since that ruined fortress is situated on the right bank of the Luo river, which that writer considers to be the Arachthus. That the Arethos, according to Pliny, is the same as the modern Arachia, is proved by Livy, who relates (43, 21) that Perseus, king of Macedonia, was detained on its banks by high floods, on his way to Acarnania. (Cramer's Ancient Greece, vol. 1, p. 151, seqq.)

ARACYNTHUS, I. a chain of mountains in Ætolia, running in a southeasterly direction from the Achelous to the Eueous. Its present name is Mount Zigos. Pliny (4, 1) and other writers, with less propriety, as-
cricle Areocynthus to Ætolia, the name of a mountain of Beotia, sacred to Minerva, whence this goddess received the appellation of Aracynthia. (Rhian., ap. Steph. Byz., s. v. Ἀράκνυθος.) It was situate not far from Thebes.

ARADIUS, I. a city on an island of the same name, on the coast of Phocis. According to Strabo, it was founded by a band of exiles from Sidon. The island on which it stood was a mere rock, not quite seven stadia in circumference; and hence, as the pop-
ulation of the city increased, they were compelled to erect edifices many stories in height, to make amends for the limited area of the place. The position of Aradius was well adapted for commerce. The modern name of the island is Ruad, according to Pococke (vol. 2, p. 294), and traces still remain of the cisterns anciently cut in the rock to hold the rain-water for the use of the inhabitants. (Mannert, Geogr., vol. 6, pt. 1, p. 308, seqq.—) II. An island, according to some, on the coast of Arabia, in the Persian Gulf. It is supposed to mark, in part, the original settlements of the Pho-
icians previous to their establishing themselves on the coast of the Mediterranean. Much doubt exists, however, with regard to the accuracy of this statement; and Mannert, among others, thinks that the name Ara-
dus, as designating an island in this quarter, is indeb-
eted to the Mela more than the Areocynthus alone. (Mannert, Geogr., vol. 6, pt. 1, p. 154.—Compare, however, Michaelis, Speicleg., vol. 1, p. 166, seqq., and vid. Phocis.)

ARAT. Vid. Æginemus.

ARAT. ARATUS. ARAE PHILENORUM. Vid. Philenis.

ARAR, a very slow, smooth-running river of Gaul. It rises near Mons Vouges, and, after a southern course, falls into the Rhodanus at Lugdunum. (Cas., B. G., 1, 12.—Plin., 3, 4.) Ammianus Marcellinus, who flourished towards the close of the fourth century of our era, first calls the Arar by the name of Saucum, speaking of this latter as a common appellation on the part of the Gauls in that quarter, "Ararum, quem Sauconam appellant" (15, 11). Greek and Roman authors, at a later period, styles it Saucona; and from this comes the modern French appellation Saône. (Compare Le Maire, Index Geogr., ad Cas. Comm., p. 190.)

ARATEA, a festival celebrated at Sicyon, upon the birthday of Aratus, and in memory of that distinguished patriot. (Plut., Vit. Arat., 53.)

ARATUS, I. a Greek poet, born at Soi (Pompeii-
opolis) in Cilicia. He flourished about 270 B.C., was a favourite of Ptolemy Philadelphus, and a firm friend to Antigonus Gonatas, son of Demetrius Poliorcetes. He was also a contemporary of Theocritus, who makes mention of him in the sixth and seventh Idyls, and was on very friendly terms with him. At the instance of Antigonus, Aratus composed an astronomical poem, entitled Φαίνοντα, "Appearances," and treating of the heavenly bodies, their names, movements, &c. The materials for this production he is said to have obtained from the works of the Ionian philosophers, and in particular from Diogenes, who wrote two treatises on the celestial bodies and phenomena, one entitled Ἐνδείξεως, or "the Mir-
or," and the other Φαίνοντα. (Bucl.e, de Arat. Script. Comment., p. 466.) What other writers he followed besides Eudoxus, cannot now be ascertained. Salmasius, indeed, insists that he did not follow Eu-
doxus at all, but Phainus or Meton (Salm., ad Salin., 922); this opinion, however, is refuted by Petavius. (Doct. Astr., 176; see also Arato, a poem, entitled Διομονικα, or "Signs from Jove," the materials for which he borrowed from Her-
iod, the meteorological writings of Aristotle, and The-
ophratus on the signs of the winds. Some of the an-
cients, and several of the moderns, too, have united the Φαίνοντα and Διομονικα into one poem, probably because, in the latter, he draws his signs indicative of changes in the atmosphere from the relative positions of the sun and moon. This controversy regards the earth. They are, however, distinct prod-
tions, and are regarded as such by the best ancient and modern authorities. (Schol. ad Diiseom. init.—
Schol. ad Aristoph. Pac., 1086.—Vitruv., 9, 7.
—Bucl.e, ibid., p. 462.) In the two poems just refer-
ted to, Aratus gives us, in correct and rather elegant verse, a general view of what was then known of the heavens, with their signs, appearances, &c., although it is evident, both from ancient authority as well as from the poem itself, that he was not a professed astronomer, or even very accurately acquainted with the prin-
ciples of the science. (Cic., de Orat., 1, 16.—Bucl.e, p. 467.) Ovid passes a high eulogium on Aratus, "cum sole et luna semper Aratus evit" (Amor, 1, 15); but this exaggerated compliment, and the admiration of Ovid, were very probably owing to the circumstance of no other poet's having taken the astronomer for his theme prior to Aratus. (Bucl.e, p. 471.) The truth is, the subject matter of both poems is far from being congenial to poetry, as is well remarked by Quin-
tilian, who adds of Aratus himself, "suiiicii tamem operi, cui se parem creditit (10, 1, 55). As one proof of the consideration which Aratus enjoyed, we may cite the monument which his compatriots erected to his memory, and which became famous by reason of its physical phenomena that were observed, to the Mela more than the Areocynthus alone. ("Justa in parvo tumulo Arati postea monumentum, ideo referen-
dum guia, ignotum quam ob causam, justa in id saeza dissiliant," 11, 13.) Aratus, moreover, is the writer to whom St. Paul refers in his speech before the Are-
opagus (Acts, 17, 28), a circumstance which entitled the poet to great favour among the fathers of the church, although it is evident that the Apostle makes no allusion to his poetic merit. M. Delambre remarks, in speaking of Aratus, that he "has transmitted to us almost all that Greece at that time knew of the heavens, or, at least, all that could be put into verse." The perusal of Autolycus or Euclid gives more information on the subject to him who wishes to become an astronomer. Their notions are more precise and more geometrical. The principal merit of Aratus is the description he has left us of the constellations; and yet, even with this description to aid us, one would be much puzzled to construct a celestial chart or globe." (Delambre, *Hist. de l'Astronomie Ancienn*, vol. 1, p. 74.)—The two poems of Aratus were thrice translated into Latin verse, first by Cicero, secondly by Germanicus, and in the time of the Emperor Tiberius, the third, and, indeed, Cicero's translation is lost, with the exception of some fragments. The translation, or, rather, imitation of the Phenomena by Germanicus, and his commencement of the Diopoea, as well as the version of Avienus, remain to us. Virgil, also, in his Georgics, is under many obligations to our poet. Although Aratus has been accused of possessing but a slight acquaintance with the subject on which he treats, still a number of mathematicians united themselves with the writers of the ancients in defending his work. Many of these commentaries are lost: we still have, however, four remaining; one by Hipparchus of Nicaea, another by Achilles Tatius; the other two are anonymous, for those are in error who attribute one of them to Eratosthenes. Aratus wrote many other works, which have not come down to us. They treated of physical, astronomical, grammatical, critical, and poetic themes, and a list of them is given by one of his friends (the Athen. II. 59). The first editions of this poet are, that of Bubale, Lips., 1793-1801, 2 vols. Svo, and that of Matthi, Franc., 1817-1818. We have also a German version by J. H. Voss, *Heidel.*, 1824. published with the Greek text and illustrations.—II. A celebrated Grecian patriot, born at Sicyon, B.C. 273. When he was seven years of age, his father Olimias, who held the government of Sicyon, was assassinated by Abantidas, who succeeded in making himself absolute. Aratus too was threatened by the same party, but was saved by the friends of the family, and where he devoted himself with great success to physical exercises, gaining the prize in the five exercises of the pentathlon. After some revolutions and changes of rulers at Sicyon, the government came into the hands of Nicocles, and when Aratus, then hardly twenty years of age, formed the project of freeing his country, and, having assembled some exiles, surprised the city of Sicyon. The tyrant having fled, Aratus gave liberty to his fellow-citizens, and induced them to join the Achcean league, still as yet feebly, and only in the twenty-fourth year of its existence. The return of the exiles, however, occasioned much trouble at Sicyon; those who had purchased their property refused to restore it, and Aratus was compelled to have recourse to Ptolemy Philadelphus, to whom he had rendered some services, and who gave him 150 talents, with which he indemnified the new proprietors, and restored their property to the former owners. Being chosen, at a subsequent time, Praetor of the Achaeans, 244 B.C., he seized by surprise on the citadel of Corinth, which Antigonus had guarded with great care as one of the keys of the Peloponnesus, and prevailed upon the Corinthians to join the confederacy. Similar success attended his efforts in other quarters, and many of the most important states and cities of southern Greece became through his means members of the league. Some time after, the Xenophon, jealous of the prosperity of the Achaeans, and reckoning on the aid of Antigonus, the guardian of Philip, formed an alliance with the Lacedaemonians, the natural enemies of the Achcean league. Aratus marched to the aid of those cities of Arcadia which belonged to the confederacy, and which were menaced by Cleomenes, king of Sparta; but he was defeated in three successive engagements, and found himself obliged to have recourse to Antigonus. In order to induce this prince to lend aid, he surrendered himself to his enemies, the Athenians; the Athenians, however, put him to death; and Antigonus, on having done with an army, was appointed generalissimo of the Achcean troops. Plutarch pretends that Cleomenes had offered peace to the Achaeans, on condition of being appointed commander of their forces, and that Aratus opposed him through jealousy; and he even reproaches him for preferring a barbarian to a descendant of Hercules. But the truth was, Aratus could not hesitate between Antigonus, a human prince, and a religious observer of the delusions of the daemonians, who had now become a tyrant over his own country, to which he wished to make all the Peloponnesus subject. The aid of Antigonus changed entirely the aspect of affairs; and this prince having eventually entered into Laconia, compelled Cleomenes, after a defeat at Sellasia, to flee from the country, took Sparta, and restored to it the laws which Cleomenes had abrogated. Antigonus always showed great consideration for Aratus, and governed Sparta, during a residence there of two years, in the 62d year of his age, B.C. 215. (Plut., *Vit. Arat.*.)—III. A son of the preceding, nearly of the same age with Philip, king of Macedonia. He was on intimate terms with this monarch, a circumstance, however, which did not prevent the latter from administering a potion, that threw him into a deplorable state of idiocy, so that his friends regarded his death, which occurred in the flower of his age, as a blessing rather than a misfortune. (Plut., *Vit. Arat.* ult.)

**ARATUS**

The chief city of the Cavares, in Gallia Narbonensis, to the north of Avenio. It is now Orange, in the department of Vaucluse.

**ARAXES**, I. a river of Armenia Major, issuing from Mons Abus, on the side opposite to that whence the southern arm of the Euphrates rises, and runs east into the sea, which separate Armenia from northern Media, when it turns to the north, and, after receiving the Cyrus, falls into the Caspian Sea. It is now the Arrax. (Plin., 6. 9.—Strab., 363.—*Ptol., 5. 13.*)—II. Another in Persia, running by Persopolis, and falling into the Medus, now Bend-Emir.—Xenophon calls the Chaboras by the name of Araxes (vid. Chaboras), and gives the name of Phasis to the Armenian Araxes (Xen., *Anab.*, 1, 4, 18.—Compare the Index Num. to the edition of Zeune, and the remarks of Krüger, *ad Xen.*, *Anab.*, 4, 6, 4.)—III. A
river of Upper Asia, mentioned by Herodotus (1, 202), and supposed by the most recent inquirers into this subject to be the same with the modern Volga. (Backer, ad Herod., l. c.—Compare the remarks of the same editor, in the note to the Index Rerum, vol. 4, p. 454, seqq.) The name Arcas appears to have been originally an appellative form of that word used in eastern language for the East, and hence we find it applied to several streams in ancient Oriental geography. (Compare Heeren, Ideen, vol. 1, p. 55.—Ritter, Erdkunde, vol. 2, p. 658.)

Arcadia, a Median officer, who conspired with Belesis, the most distinguished member of the Chaldaean sacerdotal college, against Sardanapalus, king of Assyria. After several reverses, he finally succeeded in his object, defeated Sardanapalus near Nineveh, took the city, and reigned in it for the space of twenty-eight years. With him commenced a dynasty of eight kings, of whom Aspadas or Astyages was the last. The empire which Arcatas founded was a федерative one, composed of several sovereignties which had arisen from the ruins of the Assyrian monarchy. The kingly power, though hereditary, was not absolute, the monarch not having the power to change any of the laws enacted by the confederate princes. Chronologically, it seems to have been the last of the great monarchies of Asia. Many place it under or about the archonship of Arpinon, the 9th perpetual archon of Athens; but they differ again about the precise period of this archonship, some assigning it to 917 B.C., others to 989 B.C. (Diod. Sic., 2, 24.—Vell. Patern., 1, 6.—Justin, 1, 1.—Petau, Doctr. Temp., l. 9.)

Arbela, a city of Assyria, in the province of Adiabene, east of Ninevah, near the Zabun, or Zab. On the opposite side of the river, near Isibl, was fought the decisive battle of Arbela, between Alexander and Darius, October 2, B.C. 331. The field of battle was the plain of Gaugamela. The latter, however, being an obscure place, this conflict was named after Arbela. (Strabo, 399.—Diod. Sic., 17, 53.—Arrian, 3, 6.)

Arbescula, an actress on the Roman stage, who, being hissed, on one occasion, by the lower orders of the people, observed, with great spirit, that she cared nothing for the hiss; and among Arcadians she pleased the most enlightened part of her audience among the equestrian ranks. (Horat., Serm., 1, 10, 77.)

Arcadia, a country in the centre of the Peloponnesus, and, next to Laconia, the largest of its six provinces. It was a mountainous region, and contained the sources of most of the considerable rivers which flow into the seas surrounding the Peloponnesus. From the inhabited part, as it may be said to be on the face of the country, intersected by small streams, it had a cold and foggy climate during some seasons; in the plain of Argos, only one day's journey from the centre of Arcadia, the sun shines and the violets bloom, while snow is on the hills of Arcadia, and in the plain of Mantinea and Tegea. The most fertile part was towards the south, where the country sloped off, and contained many fruitful vales and numerous streams. This account of the land may serve in some degree to explain the character which the Arcadians had among the ancient Greeks: some of those who now occupy this district seem to be as rude as many of the former possessors. Their country is better adapted to pasture than cultivation, and the Arcadians, who were scarcely a genuine Greek race, continued their pastoral habits and retained their rude manners amid their native mountains. To their pastoral mode of life may be ascribed their attachment for their women. In fact, also the worship of Pan as the tutelary deity of Arcadia, Nature, observes a modern writer, has destined this country for herdsmen. The pastures and meadows in summer are always green and unenclosed; for the shade and moisture preserve them. The country has a appearance similar to that of Switzerland, and the Arcadians, in some measure, resemble the inhabitants of the Alps. They possessed a love of freedom and a love of money; for wherever there was money, you might see Arcadian hirelings. But it is chiefly the western part of Arcadia (where Pan invented the shepherd's flute) which deserves the name of a pastoral kingdom. TheArcadians, who are among the most insignificant of the Greeks, and sometimes gently murmuring, pour themselves down the mountains. Vegetation is rich and magnificent; everywhere freshness and coolness are found. One flock of sheep here succeeds another, till the wild Tyetopus is approached, where numerous herds of goats are also seen. (Bartholdy, Bruchstücke zu nährnem Kenntniss Griechenlandes, p. 239, seqq.) The inhabitants of Arcadia, devoted to the pastoral life, preferred, therefore, for a long time, to dwell in the open country rather than in the cities; and when some of these, particularly Tegea and Mantinea, became considerable, the contests between them destroyed the peace and liberties of the people. The shepherd-life among the Greeks, though much ornamented by the poets, betrays its origin in this, that it arose among a people who did not wander like the Nomades, but were in possession of stationary dwellings. The most magnificent of these was Argos, in the Arcadian district, from which, a "tree." The Arcadians themselves carried their origin very far back, and gave their nation the name of Arcolengi (before the moon). They seem to have derived the first rudiments of civilization, if not their origin itself, from the Pelasgi; and hence the tradition that a king, named Pelagus, taught them the art of baking bread, and of weaving. From this second benefactor the people and their country were respectively called Arcades and Arcadia. A republican form of government arose subsequently, after the first Messenian war, Aristocrates II. having been stoned to death by the Arcadians for his treachery towards the Messenians. Arcadia eventually attached itself to the Achaean league, and fell under the Roman power. It is commonly believed that the Arcadians were a mixture of Pelasgi and Pelasgitæ, i.e., a race of light complexion, and of very early times. This, however, is a mere fable, and is contradicted by the inland nature of the country, and by the Arcadians never having been a maritime people. (Vid. Pelasgi and Italy, and also Evander—Polyb., 4, 20.—Diod. Sic., 4, 34.—Thucyd., 7, 57.—Plin., 4, 5.—Apollod., 2, 1.—Pausan., 8, 4.)

Arcadius, eldest son of Theodosius the Great, succeeded his father A.D. 395, who, at his death, divided the empire between his two sons, giving Arcadius the eastern, and Honorius the western division. Arcadius was only eighteen years of age when he ascended the throne, and he only occupied it to become the vile slave of the ambitions, who each in turn distracted the state by their perfidies, their quarrels, and their connivance with the Goths, Huns, and Vandals, to whom they surrendered the provinces and treasures of the empire. The history of Arcadius, in fact, is that of one, who, with all the weakness and vice of his son, was also a tamer, and excited the audacity of a Rufinus, who, charged by Theodosius with the guidance of the young monarch, wished to give him his daughter in marriage, and become his colleague in the empire, and who, disappointed in his ambitious schemes, invited the Huns and Goths into Asia and Greece: a Eutropius, a vile enmarch, who attained to the influence of a Rufinus, after the tragic death of the emperor, by the rapine of the Huns under his conduct in degrading and discouraging the people: Gaisius, a general who ravaged instead of defending the empire, but who contributed nevertheless to the ruin of Eutropius: and an Emperor Eudoxia, at one moment the enemy, at another the support of the ambitious, and who perse-
ARCESILAUS.

Arcesilaus was in succession the tool of all these designing individuals. He saw, with equal indifference, Alaric ravaging his home and his subjects grieving under oppression; the success brought him by Stilicho, general of Honorius, rendered of no avail by the perfidy of his own ministers, the best citizens falling by his proscriptions, and, finally, Ariasian de- oltating the religion which Chrysostom in vain attempted to defend. Such was the reign of this prince, which lasted for fourteen years. He died A.D. 408, at the age of thirty-one. Nature had given him an exterior corresponding to his character; a small, ill- made, disagreeable person, an air of imbecility, a lazy enunciation, everything, in fact, announcing the weak- est and most cowardly of emperors. He had by his wife Eudoxia a son named Theodotius, who succeed- ed him as the second of that name. (Socrat., Hist. Eccles., 5.—Cassiod., Chron., &c.)

Arcas, a son of Jupiter and Callisto. (Vid. Calli- stis.) The fabulous legend relates to him and his mother which is given by the ancient writers with great dif- ference in the circumstances. According to the most common account, Jupiter changed Callisto into a bear, to screen her from the jealousy of Juno, and Arcas her son was separated from her and reared among men. When grown up, he chanced to meet his moth- er in the woods, in her transformed state, and was on the point of slaying her, but Jupiter interfered, and translated both the parent and son to the skies. Arcas, previously to this, had succeeded Nyctimus in the government of Arcadia, the land receiving this name first from him. He was the friend of Triptole- mus, who taught him agriculture, which he introduced among his subjects. He also showed them how to manufac- ture wool, an art which he had learned from Ari- stasus. (Apollod., 3, 8.—Ov., Met., 2, 401, seqq.)

Arcesilaus, a city of Phocis, north of Tripolis, and south of Antaradus. It was the birthplace of Alex- ander Severus, the Roman emperor. (Lamprid., Vit. Afr., c. 5.—Plin., 5, 18.) The name is sometimes given as Arc. (Socrat., Hist. Eccles., 7, 36.)

Arcesilaus I, son of Battus, king of Cyrene, was driven from his kingdom in a sedition, and died B.C. 575. The second of that name died B.C. 550. (Polyaen., 8, 41.—Herodot., 4, 159.) II. A philosopher, born at Pitane, in Aiolis, and the founder of what was called the Middle Academy. The period of his birth is usually given as 318 B.C., while ac- cording to some accounts he died about 280 B.C. (4, 45), he flourished about B.C. 299. If these numbers are accurate, he must have had an early reputa- tion, as he would at the latter date have been only seventeen years of age. There is therefore some er- or here in the remark of Apollodorus. (Chlinon's FastiHellénici, vol. I, p. 179, and 367, not.) Arcesilaus at first applied himself to rhetoric, but subse- quently passed to the study of philosophy, in which he was taught by Theophrastus, the Theophrastus, the Academician, and probably also Polemo. (Diog. Laert., 4, 24, 29.—Cic., Acad., 1, 9.) The state- ment of Numenius (ap. Eus., Pr. Ev., 14, 5), that Arcesilaus was the disciple of Polemo at the same time with Zeno, appears to be ill-grounded, and to in- volve great chronological difficulties. It is very prob- ably a mere fiction, designed to suggest some outward motive for the controversial relations in which and the disputes of the Sceptics with the instruc- tors of the schools of philosophy. Arcesilaus was also said to have diligently attended the lectures of the Eri- trian Menodamus, the Megarian Diodorus, and the sceptic Pyrro. His love for the philosophemes of these individuals has been referred to as the source of his scepticism, and his skill in re- using philosophical principles. At the same time, it is on all hands admitted that, of philosophers, Plato was his favourite. It seems to have been sincerely of opinion, that his view of things did not differ from the true spirit of the Platonic doctrine; nay, more, that it was perfectly in agreement with those other philoso- phemes, from which, according to the opinion of many, Plato was the only original expositor of the teaching of Socrates, Parmenides, and Heraclitus.—Upon the death of Grantor, the school in the Academy was transferred by a certain Socrates to Arcesilaus, who here introduced the old Socratic method of teaching in dialogues, although it was rather a corruption than an imitation of the genuine Socratic mode. Arcesi- laus does not appear to have committed his opinions to writing; at least the ancients were not acquainted with any work which could confidently be ascribed to him. Now, as his disciple Lacydes also abstained from writing, the ancients themselves appear to have derived their knowledge of his opinions only from the works of his opponents, of whom Chrysippus was the most eminent. Such a source must naturally be both defective and uncertain, and accordingly we have little that we can confidently advance with respect to his doctrine. According to these statements, the results of his opinions would be a perfect scepticism, expressed in the formula that he knew nothing, not even that which Socrates had ever maintained that he knew, namely, his own ignorance. (Cic., Acad., 1, 12.)

This expression of his opinion implicitly ascribes to Arcesilaus a full consciousness that he differed in a most important point from the doctrine of Socrates and Plato. But, as the ancients do not appear to have described any such conviction to Arcesilaus, it seems to be a more probable opinion, which implies to him a desire to restore the genuine Platonic dogma, and to purify it from all those precise and positive determinations which his successors had appended to it. Indeed, one statement expressly declares, that the sub- ject of his lecture to his most accomplished scholars was the doctrine of Plato (Cic., l. c.); and he would therefore appear to have adopted this formula with a view to meet more easily the objections of the dog- matists. Now, if we thus attach Arcesilaus to Plato, we must suppose him to have been in the same case with many others, and unable to discover in the writings of Plato any fixed and determinate principles of science. The ambiguous manner in which almost every view is therein advanced, and the results of one investigation admitted only conditionally to other inquiries, may perhaps have led him to regard the speculations of Plato in the light of mere shrewd and intelligent conjectures, which may be more or less true, according to their influence on the other sciences. Arcesilaus denied the certainty, not only of intellec- tual, but also of sensuous knowledge. (Cic., de Orat., 3, 18.) For his attack upon the former, Plato would furnish him with weapons enough; and it is against it principally that his attacks were directed, for the Stoics were his chief opponents.—The true distinction be- tween the Sceptics and the members of the Middle Academy, at its first formation by Arcesilaus, appears to have been that the Sceptics aimed at the attain- ment of a perfect equanimity, and derived the difference between good and bad, as presented by the phenomena of life, from conversion, and not from nature. The Academicians, on the other hand, taught, as a general rule, that, in the pursuit of good and the avoidance of evil, men must be guided by probabilities. They admitted that the sage, without absolutely mor- ifying his sensual desires, will live like any other in obedience to the divine law, and its influence on the moral nature, with this simple difference, that he does not believe that he is regulating his life by any certain and stable principles of science. It is on this account that we do not meet with any statements concerning the strange- ness of their habits of life, like those about Pyrro; on the contrary, Arcesilaus is usually depicted as a man who, in the intercourse of life, observed all its decentities and proprieties, and was somewhat disposed.
to that splendour and luxury which the prevailing views of morality allowed and sanctioned. His doubts, therefore, as to the possibility of arriving at a knowledge of the truth, may probably have had no higher source than a high idea of science, derived perhaps from his study of Plato's works, and compared with which all human thought may have appeared at best but a probable conjecture. —Arcesilaus continued to flourish as late as the 134th Olympiad, B.C. 244. (Clinton's Fasti Hellenici, vol. 1, p. 179.—Ritter's History of Philosophy, vol. 3, p. 600, seq.)—III. A painter of Paros, acquainted, according to Pliny, with the art of enamelling, some time before Aristides, to whom the invention is commonly assigned. He appeared upon the authority of Apeltes of Tarsus, who was the contemporary of Xenophon. (Plin., 35, 11.—Silius, Dict. Art., s. v.)—IV. A painter, subsequent to the preceding, and who appears to have flourished about the 128th Olympiad, B.C. 268. (Plin., 35, 11.—Silius, Dict. Art., s. v.)—V. A sculptor of the first century before our era. His country is uncertain. (Plin., 35, 12.—Id., 36, 5.)

Arceliaus, I. a king of Sparta, of the line of the Agiads, who reigned conjointly with Charilas. During Sylla's occupation of Rome, he was the author of a Code of Law. (Pausan., 3, 2.)—II. A king of Macedonia, natural son of Perdiccas, who ascended the throne, after making away with all the lawful claimants to it, about 413 B.C. He proved a very able monarch. Under his sway Macedonia flourished, literature and the arts were patronized, and learned men and artists were invited to his court. Euripides and Agatho, the two tragic poets, spent the latter part of their days there, and the painter Zeuxis received a pension about the same time for adorning with his pencil the royal palace. The celebrated philosopher Socrates was also invited to come and reside with the monarch, but declined. Arcelaeus died after a reign of about 14 years. Diodorus Siculus makes him to have lost his life by an accidental wound received in hunting, but Aristote states that he fell by a conspiracy. (Diod. Sic., 13, 49.—Id., 14, 57.—Aristot., Pol., 5, 10.)—Coomaras' remarks of Wel- seling, ad Diod., 14, 37.)—III. Son of Amyntas, king of Macedonia. He was put to death by his half-brother Philip, the father of Alexander the Great. (Justin., 7, 4.)—IV. A native of Cappadocia, and one of the ablest generals of Mithrandates. He disputed with the Romans the possession of Greece, but was defeated by Sylla at Charonea, and again at Orchomenus. Arcelaeus, convinced of the superiority of the Romans, proposed to make peace with them, and arranged the terms of the treaty along with Sylla, whose esteem he acquired. Some years after he became an object of suspicion to Mithrandates, who thought that he had offended too much the interests of the Roman people. Well aware of the cruelty of the monarch, Arcelaeus fled to the Romans, who gave him a friendly reception. Plutarch thinks that he had been actually unfaithful to Mithrandates, and that the present which he received from Sylla was the reward of his service, which was a strong confirmation of this. He informs us, however, at the same time, that Sylla, in his commentaries, de- fended Arcelaeus from the censures which had been cast upon him. (Plut., Vit. Syll., c. 23.)—V. Son of the preceding, remained attached to the Romans after the death of his father, and was appointed by Pompey high-priest at Comana. At the temple at Comana, a district of the district of Cappadocia, territory attached to it, and a large number of slaves, the title of king in several kinds of king. This tranquil office, however, did not suit his ambitious spirit; and when Ptolemy Anuletus had been driven from Egypt, and Berenice his daughter had ascended the throne, he obtained her hand in marriage. Ptolemy, however, was restored by the Roman arms, and Arcelaeus fell in battle, bravely defending his new dignity. Marc Antony, who had been on friendly terms with him, gave him an honourable fune-
same nourishment, the slime in which they were born. At first they were of very brief duration, and subsequently only acquired the faculty of propagating their species. Men were distinct from the other kinds, and became the ruling race. Mind, however, was inborn in all animals alike, and all have a body for use, only some a more perishable, others a more durable one. The fundamental principle of Archelaus in ethics was as follows: "..." but by convention." (Diag. Laert., 2, 16. Orig. Phil., 2. Ritter's Hist. of Philosophy, 1, 319, seqq.)

ARCHÉMÉS. Vid. Ophielcès.

ARCHIAS, i. A Corinthian, leader of the colony that founded Syracuse. Vid. Syracuse.—II. A Greek poet, a native of Antioch, who came to Rome in the consul ship of Marius and Catulus (B.C. 102). He soon became intimate with the most distinguished men in that city, and accompanied Lucullus to Sicily, and, on returning with him to that province, received the rights of Roman citizenship at the municipal town of Heraclea, in southern Italy. A conflagration, however, having destroyed the records of this place, a certain Gratius contested judicially his title to the rights and privileges of a Roman citizen. Cicero, his friend and former pupil, defended Archias in a brilliant oration, which has come down to us, and which contains not only the praises of his old instructor, but a beautiful eulogy on the use of the daily gift of letters. The poet gained his cause. Archias before this had composed a poem on the war with the Cimbri, and had commenced another on the consulship of Cicero. There remain, however, of his productions, only some epigrams in the Anthology. It is difficult to reconcile the eulogiums which Cicero heaps on Archias, with the extreme mediocrity of the pieces that have reached us. A servile imitator of Leonidas the Tarentine, and of Archilochus, he has preserved only those lines which they had selected before him, and only produces, after the wretched faithless copies. Two or three pieces are somewhat superior to the rest, but still we must take it for granted that his poem on the Cimbrian war was a very different production from any of his epigrams, or else that Cicero's vanity got the better of his judgment, and that, in praising Archias, he felt he was praising himself. (Cic., pro Arch.)

ARCHILLOCÆUS, b. of Theopompus, king of Spartan, died c. 656 B.C. as father.—II. Another king of Sparta, son of Anaxidamus, succeeded by Argasileus. He ascended the throne about 620 B.C.—III. Son of Zeuxidamus, of the line of the Procloide. He ascended the Spartan throne B.C. 476, his father having died without becoming king. Laconia was desolated by an earthquake about the 12th year of his reign, and after this the Messenians revolted. Archilochus displayed great coolness and ability amid these events, and finally reduced the Messenians to submission, having taken the fortress of Ithome after a siege of ten years. He opposed the Peloponnesian war; but, his counsel not having been followed, he took the command of the confederate army, and made many invasions of Attica. He died B.C. 426.—IV. Son of Agesilaus, of the line of the Procloide. Before coming to the throne, he had the command of the troops which the Lacedaemonians sent to the aid of their countrymen after the battle of Leuctra, B.C. 371. In the war that followed, he gained some advantages over the Arcadians, although the Thbans had come to their aid. Having ascended the throne (B.C. 361), he prevailed upon the Lacedaemonians to aid the Phocians, and took an active part in their behalf, in the Sacred war. He afterward went to the aid of the Tarentines, who were at war with some of the neighbouring communities, and fell in battle there, B.C. 338. His body could not be found after the action, which some ascribed to the vengeance of Apollo, who thus deprived him of the rites of burial for the part he had acted in the Sacred war.—V. Son of Eudamidas, was king of Sparta when Demetrius Poliorcetes came to attack that city, B.C. 293. He was defeated by Demetrius, in the very view of Sparta itself, and the city would have been taken had not other events called the victor to a different quarter of Greece. The rest of his history is unknown. Larcher makes his reign to have been one of 46 years, but does not give the data on which he founded this opinion. (Plut., Vit. Agis et Cleomen. her, Hist. d'Hérat., 7, 509.)

ARCHILÖCHUS, a Greek poet, born at Sparta, and lived in Syria. He lived in the reign of Domitian, Nerva, and Trajan. Archilochus enjoyed a high reputation among his contemporaries, and for some generations after. He is regarded as the founder of the Eclectic school of Medicine, and was also one of the pneumatic sect, having received the principles of the latter from his preceptor Agathimus. He wrote on the pulse (a work on which Galen commented), on chronic affections, on pharmac. c. &c. Galen often cites him with eulogiums, and Juvenal, his contemporary, makes frequent mention of him in his satires. Only fragments of his writings remain. According to Suidas, he died at the age of 63; but Eudocia makes him to have reached 83 years. The latest edition of the fragments of Archilochus is that of Harles, Lips., 1816, 4to.—(Galen, de diff. puls., 2, p. 26.—II, de loc. affect., 2, p. 262. &c.—Suidas, s. v.—Eudocia, ap. Villoison, Anecd. Græc., vol. 1, p. 65. &c.—Larcher, Hist. d'Hérat., 7, 293.)

ARCHILÖCHUS, a Greek poet, a native of Paros, who flourished 688 B.C. His mother Enipe was a slave, but his father Telesicles one of the most distinguished citizens of the island. The particulars which the ancients have given us respecting the life of Archilochus appear to be in a great measure fabulous. It is certain, however, that, while still young, he accompanied his father, who, in obedience to a Delphic oracle, led a colony from Paros to Thasus, and that his subsequent career was one succession of misfortunes, which appear to have exasperated his character, and given to his poetry that severe cast which the ancients ascribed to it. Among the various tales related of Archilochus, the one most commonly mentioned is that concerning Neobule and her parent. (Vid. Lykæmb.) This story, however, appears to have been invented after the poet's time; and one of the scholiasts on Horace remarks, that Neobule did not exist; an accusation of the same nature with the part of Archilochus, but out of despair at the death of her father. (Horat., Epod., 6, 13.) Archilochus states, one fact relative to himself, in some verses that have come down to us, which is, that in a battle between the Thasians and people of Thrace, he saved himself by flight, throwing away at the same time his buckler. This act of weakness or cowardice was the occasion of a gallant affront which he afterward received: for, having visited Sparta, he was ordered by the magistrate to quit the city immediately. Dissatisfied eventually with the posture of affairs at Thasos, which the poet often represents as desperate, Archilochus must have quitted Thasos and returned to Paros, since we are informed, by credible writers, that he lost his life in a war between the Parians and the inhabitants of the neighbouring island of Naxos. The ancients ascribe to Archilochus the invention of a great number of poems, of a lyric and satyrastic nature, and which, from the want of copies, have been lost. (Schill, Hist. Lit. Gr., vol. 4, p. 2588, ed. Putsch; and, respecting the Epode, which is also said to have invented, compare the remarks of Vandenbourgh, in his edition of Horace, vol. 2.) With respect to iambic verse, of which he is, in like manner, named as the author (Hor., Ep. ad Pia., 79), some difference of opinion seems to exist; and it has been thought that the invention, in this case, relates less to the iambic rhythm, which appears so natural to the Greek language, than to a particular kind of versification. (Compare Schill, Hist. Lit. Gr., vol. 1, p. 199, seqq.) Archilochus was, in general, regard-
ed by the ancients as one of the greatest, poets that Greece had produced. Cicero classes him with Homer, Sophocles, and Pindar (Orat. 1); and in an epigram in the Anthology (vol. 2, p. 286), the Emperor Hadrian remarks, that the Muse, fearing for the glory of Homer, inspired Archimedes with the idea of composing in iambics. One production of this poet's, in particular, his Hymn in honour of Hercules, was the subject of high eulogium; this piece he himself sung at the Olympic games. The anniversary of his birth was celebrated, as in the case of Homer; and the rhapsodists recited his verses as they did those of the Iliad. Blame, however, attaches itself to the bitter and vindictive spirit that characterized his verses, as well to the indecency which pervaded them; and it is probably to this latter cause that we must ascribe the loss of his poems, of which we possess only a few fragments, preserved as citations in the writings of Athenæus, St. Clement of Alexandria, Stobæus, the scholiasts, &c. If the ancients speak of the Pædæa of Archimedes, it is not because he ever published any collections of dialogues, but because he was accustomed to give life and movement to his iambics by introducing into them occasionally this species of composition. The fragments of Archimedes were published by H. Stephens and Froben in their respective collections, and by Brunck in his Analecta. An edition of them by Liebel, with a critical commentary, appeared (Leipsic 8vo.) in 1812, and also in an enlarged form, in 1819, 4to.

ARCHIMEDES, the most celebrated mathematician among the ancients, a native of Syracuse in Sicily, and related to King Hiero. He flourished about 250 B.C. Under what masters he studied, or how much of his extraordinary knowledge he acquired from his predecessors, is not known. That he travelled into Egypt appears certain; but it is probable that, in his scientific acquirements, he was more indebted to his own sagacity than to the assistance of others. To quote a passage from the note of a modern commentator, "Few men have done more than he received, and that he owes the great name which he has transmitted to posterity to his own vigorous and inventive intellect. He was equally skilled in the science of astronomy, geometry, mechanics, hydrostatics, and optics, in all of which he excelled, and produced many extraordinary inventions. His ingenuity in solving problems had in Cicero's day almost the credit of a prophet; and his singular ingenuity in the invention and combination of warlike engines is much dwelt upon by Livy. His knowledge of the doctrine of specific gravities is proved by the well-known story of his discovery of the mixture of silver with gold in King Hiero's crown, which fraud he detected by comparing the quantity of water displaced by equal weights of gold and silver. The thought occurred to him while in the bath, on observing that he displaced a bulk of water equal to his own body; when, at once, perceiving a train of consequences, he ran naked out of the bath into the street, exclaiming, ἔφη ρε, "I have found it!" This part of the story, however, is regarded by some as a mere exaggeration. (Biogr. Univ., vol. 2, p. 379.) To show Hiero the wonderful effects of mechanical power, he is said, by the help of ropes and pulleys, to have drawn towards him, with perfect ease, a galley which lay on the shore manned and loaded. His intimate acquaintance with the powers of the lever is evinced by his similar declaration to the same monarch: Δός συν ἱεράς καὶ τόν κόσμον κυβίσω, "Give me where I may stand, and I will move the world." But his greatest efforts of mechanical skill were displayed during the siege of Syracuse, when he contrived engines of annoyance of the most stupendous nature. Among other applications of science, he is said to have fired the Roman fleet by means of reflecting mirrors, of which he had, long treated as a fable, Buffon has proved the crediblity. (Mem. de l'Acad. des Sciences, 1747.) There are not wanting persons, however, even at the present day, who, from the silence of Polybius, Livy, and Plutarch on this subject, still view the tale with an eye of unbelief. (Compare Biogr. Univ., vol. 2, p. 381.—Foreign Review, No. 1, p. 305.) Eminent as this great mathematician was for his knowledge of mechanics, he was still more so for the rare talent which he possessed of investigating abstract truths, and inventing conclusive demonstrations in the higher branches of geometry. According to Plutarch (Vit. Marcelli), intellectual speculations of this nature most delighted him; and he did not deem it worth his while to leave any account in writing of his mechanical inventions. We have, indeed, no precise indication of any works in which they are described, except it be with regard to a sphere representing the movements of the stars, of which Cicerio and Claudian make mention. Archimedes prided himself on the discovery of the ratio between the cylinder and the inscribed sphere, and requested his friends to place the figures of a sphere and cylinder on his tomb, with the inscription expressing the proportion between them; a desire that afterward led to its discovery by Cicero. The Roman orator, when he was questor in Sicily, discovered this monument in the shape of a small pillar, and showed it to the Syracusans, who did not know that it was in being. He says there were some iambic verses inscribed upon it, the latter halves of which were almost eaten out by time; and that there were likewise seen (now unserted) in a new figure of a cylinder and a sphere. From the death of this great mathematician, which happened A.U.C. 542, to the quinquagesimo of Cicero, A.U.C. 678, a hundred and thirty-six years had elapsed. This period, though it had not effaced the cylinder and the sphere, had put an end to the learning of Syracuse, once so respectable in the republic of letters. (Cic. Tusc. Quast., 5, 23.) Archimedes's sepulchre, which stood nearly on the city wall, was almost torn down with thorns and briers, and, but for the exertions of Cicero, would most probably have never been discovered. Various accounts are given by Plutarch of the manner of Archimedes's death. The period when it occurred was during the capture and storming of Syracuse. According to the narrative most commonly received, Archimedes was engaged in study when the city fell; and so intent was he upon a geometrical figure which he had invented in the sand, that he launched no observations of the confusions around him. A soldier suddenly entered his room, and ordered him to follow him to Marcellus, the Roman general having given particular orders to spare him. Archimedes refused to go until he had finished his demonstration, whereupon the soldier, in a passion, drew his sword and killed him. The Roman commander took upon himself the charge of his funeral, and protected and honoured his relations. Several valuable remains of this celebrated mathematician are preserved. In abstract geometry there are two books "On the Sphere and Cylinder;" a treatise "On the Dimensions of the Circle;" two books "On obtuse Conoids and Spheroids;" a book "On Spiral Lines;" and another "On the Quadrature of the Parabola." Besides these geometrical works, he wrote a treatise, entitled Αναρεναία (Arearnaria), in which he demonstrates that the sands of the earth might be numbered by a man in a year, and, in a similar manner, that of logarithms. In mechanics he has left a treatise "On Equiponderants, or Centres of Gravity;" and in hydrostatics, a treatise "On bodies floating in fluids." Other works of Archimedes are mentioned by ancient writers, which are now lost. Of those that remain various editions have appeared, the latest of which was issued in 1792 from the Clarendon press in Oxford, with a Latin translation, a preface, notes by Torrelli of Verona, purchased by his executor Albertini, and with various readings. The edition was published under the care of the Rev. A. Robertson, of Christ Church, Oxford, and may be
regarded as the first truly complete one of the works of Archimedes. Translations have also appeared in some of the modern languages. That of Peyrard, in French (1807, 4to, and 1808, 2 vols. 8vo) is most

deserving of mention. Delambre has appended to this version a memoir on the Arithmetic of the Greeks; a

subject left of great interest, as we have very scanty data left us on this point. A review of this translation is

given by L. Germain, Recueil Critique, 4th ser. ii. 1814. (Compare Hutton's Math. Dict.—Aikin's G. Dict.—

Sazii Onomast.—Biiogr. Univ., vol. 2, p. 375, seqq.)

Archips, a city of the Marsi, destroyed by an

earthquake, and lost in Lake Fucinus. It is thought by Holstenius, on the authority of some people of the
country who had seen vestiges of it, to have stood be-
tween the villages of Transaquia and Ortiuca, on the

spot which retains the name of Arciprete. (Holst.,

Adnot., p. 154.)

Archippus, I. a king of Italy, from whom perhaps

the town of Archippe received its name. He was one of the

allies of Turnus. (Verg., Aen., 7, 752.)—II. An Athenian

comic poet, who gained the prize but once (Olymp. 91),

according to Suidas. For some of the titles of his pieces consult Fabricius, Bibl. Gr., vol. 1, p. 747, and

Schweighaeuser's Index Auctorum to Athenaeus (Aniama, vol. 9, p. 47). A name of the name of the chief

magistrates of Athens. At first they were archons for life, and on their death the office descended to their

themselves. These archons were also to be without any personal defect, and must show that they had been

dutiful towards their parents, had done public service in their country, and were possessed of a competent

estate to support the office with dignity. They took a solemn oath that they would observe the laws, administer

justice with impartiality, and never suffer themselves to be corrupted. If they ever received bribes they were

compelled by the laws to dedicate to the god of Delphi a statue of gold, of equal weight with their body. (Plut.,

Vit. Solon, c. 19.—Polux, 8, 9, 86.) They possessed the entire power of punishing malefactors with death.
The chief among them was called Archon; the year took its denomination from him, and hence he was also

called χρυσοκκατ. He determined all causes between

man and wife, and took care of legacies and wills; he provided for orphans, protected the injured, and

punished drunkenness with uncommon severity. If he suffered himself to be intoxicated during the time of

his office, the misdemeanor was punished with death.

The second of the archons was called Basileus: it was his charge to keep order in his city, and to decide the

causes of quarrel in the families of those who were dedicated to the service of the gods. The profane and the

impious were brought before his tribunal; and he offered public sacrifices for the good of the state.

He assisted at the celebration of the Eleusinian festi-

vals and other religious ceremonies. His wife was to

be a citizen of the whole blood of Athens, and of a

pure and unsullied life. He had a vote among the

Areopagites, but was obliged to sit among them with-

out his crown. The Polemarch was another archon of

inferior dignity. He had the care of all foreigners,

and provided a sufficient maintenance, from the public

treasury, for the families of those who had lost their

lives in the defence of their country. But because

these three magistrates were often, by reason of their

youth, not so well skilled in the laws and customs of

their country as might have been wished, that they

might not be left wholly to themselves, they were

accustomed to make choice of two persons of age,

gravity, and reputation, to sit with them on the bench,

and assist them with their advice. These they called

Illegcpos, or assessors, and obliged them to undergo

the same probation as the other magistrates. The six

other archons were indifferently called Thesmophoroi,

and received complaints against persons accused of

impiety, bribery, and ill behaviour. Indictments be-

fore the Thesmophoroi were in writing; at the tribunal

of the Thesmophoroi, they were by word of mouth.

They settled all disputes between the citizens, redressed

the wrongs of strangers, and forbade any laws to be

enforced but such as were conducive to the safety of

the state. After some time, the qualifications which

were required to be an archon were not strictly ob-

served, and, when the glory of Athens was on the de-

cline, even foreigners, who had been admitted to the

rights of citizenship, were created archons. Thus

Hadian, before he was elected emperor of Rome,

was made an archon at Athens, though a foreigner; and

the same honours were conferred upon Plutarch.

Many lists of the Athenian archons have been published

in various works, but all of these were more or less

inaccurate till the time of Corsini, and on that account

of little use in illustrating ancient history. A cata-

logue of the archons is given in Stanley's "Lives of

the Philosophers," p. 938, seqq.; another by Du Fres-

noy (Tablettes, vol. 1, p. 66, seqq.), and a third by Dr.

Hailes (Analysis of Chronology, vol. 1, p. 290, seqq.).

One cause of the incorrectness of these lists has been,

the not advertising to a peculiarity of the Parian mar-

ble; that the compiler places the annual archons, who

preceded the Peloponnesian war, one year higher re-

spectively than the Julian year, with which they were

in reality commensurate. Hence two archons have been

often made out of one. Again, those who have used

this document did not always distinguish between what

was written on the marble and what was supplied

by conjecture where the marble was defaced. Hence

the marble is often quoted for that which was only

inferred by its editors. Various forms or corruptions

of the name of an archon have been sometimes ad-

mitted as the names of different archons. From these

causes, the catalogues of archons are not as correct

and accurate as they might have been rendered. (Cl
ton's Fasti Hellenici, vol. 1, p. x., Introduction.)

The most accurate tables, as far as they extend, are

those given by Clinton, in the work which has just

been quoted.

Archytas, a native of Tarentum, and one of the

Pythagoric preceptors of Plato. He is said to have

been the eighth in succession from Pythagoras; and

this account deserves more credit than the assertion

of Tamblichus, that he heard Pythagoras in person; for

the father of this sect flourished, as we shall see, about

the 60th Olympiad, B.C. 540; but Archytas con-

cluded his life before the 90th Olympiad, B.C. 396; and

that was in the 96th Olympiad, B.C. 396; whence it ap-

pears, that there was an interval of above a century

between the time of Pythagoras and that of Archytas.

Such was the celebrity of this philosopher, that many

illustrious names appear in the train of his disciples,

particularly Philolaus, Eudoxus, and Plato. To these

Suidas, and, after him, Erasmus (Chit., p. 550), add

Empedocles; but Empedocles certainly flourished

about the 641st Olympiad, near fifty years before Ar-
Archytas.—So high was his character for moral and political wisdom, and so deservedly did he enjoy the unlimited confidence of his fellow-citizens, that, contrary to the usual custom, he was appointed seven different times by lot to be the offerer for the city, and never experienced either check or defeat. (Diog. Laert., 8, 79.—Menage, ad loc.—Elian makes it six times. Var. Hist., 7, 14.) Archytas was eminently distinguished for his self-command and purity of conduct; and as uniting with a rare knowledge of mankind such a childlike feeling of universal love, and such simplicity of manners, that he lived with the inmates of his house a real father of a family. Amid all his public avocations, however, he still found leisure to devote to the most important discoveries in science, and to the composition of many works of a very diversified character. His discoveries were exclusively in the mathematical and kindred sciences. He was occupied not merely with theoretical, but also practical mechanics; and his inventions in this department of study imply a considerable advance in their cultivation. He also published a musical system, which was referred to his composition in the reading of Orestes by the orator Demosthenes. (Ptolem., Harm., 1, 13.—Boeth., de Mus.) He wrote, moreover, a treatise on agriculture. (Varro, de R. R., 1, 1.—Column., 1, 1.) Of his philosophical doctrines many accounts have come down to us; but whenever our information on this head is derived exclusively from writers of later date, we cannot be too much on our guard, lest we should adopt anything which rests merely on suppositions writing, since nearly all the fragments attributed to him are spurious. These fragments have been preserved by Stobaeus and others, and edited from him by Gale, in his Opuscula Mythologica (Canterbury, 1671, 12mo), among the Πθαγορείου ἀποσπασματικά. They are given, however, more fully and correctly by Orellius, in his Opuscula Graecorum, &c., vol. 2, p. 234, seq.—Aristotle, who was an industrious collector from the Pythagoreans, is said to have borrowed from Archytas the general arrangement which are usually called his "Ten Categories."—The sum of the moral doctrines of Archytas is, that virtue is to be pursued for its own sake in every condition of life; that all excess is inconsistent with virtue; that the mind is more improved by prosperity; and that there is no pestilence so destructive to human happiness as pleasure. It is probable that Aristotle was indebted to Archytas for many of his moral ideas; particularly for the notion which runs through his ethical pieces, that virtue consists in avoiding extremes. Archytas perished by shipwreck, and his death is made a subject of poetical description by Horace, who celebrates him as a geometer, mathematician, and astronomer. (Od., 1, 28.—Ritter, History of the Pythag. Philos., p. 67.—Id., Hist. Anc. Phil., vol. 1, p. 350, seq.)

Arcites, an epithet applied to Apollo, as bearing a bow (Arcis, Arcis). The mythical Greek poet Alcaeus calls it ἀργοσφόρον. (Verg. Aen., 2, 76.)

Arcitus, a cyclic bard, born at Miletus. He was confessedly a very ancient poet, nay, he is even termed a disciple of Homer. The chronological accounts place him immediately after the commencement of the Olympiad. Architus composed a poem consisting of 9100 verses. (Hieron, Bibliothek der Alten Lit, &c., pt. 4, p. 61.) It opened with the arrival of the Amazon women, which event followed immediately after the death of Hector at Troy, the action of Architus was connected with the following principal events. Achilles kills Penthesilea, and then, in a fit of anger, puts to death Thersites, who had ridiculed him for his love of her. Upon this, Memnon, the son of Aurora, appears with his Ethiopians, and is slain by the son of Thetis, after he himself has killed in battle Antilochus, the Patroclus of Architus. Achilles himself falls by the hand of Paris, while pursuing the Trojans into the town. Ajax and Ulysses contend for his arms, and the defeat of Ajax causes his suicide. (Schol. Pind., Isthm., 3, 58.) Architus farther related the story of the voyage of the Phases, and several other adventures of the Greeks, and the destruction of Laocooon, which induced Aeneas to fly for safety to Ida, before the impending destruction of the city. In this he is quite different from Virgil, who, in other respects, has, in the second book of the Aeneid chiefly followed Architus. The sack of Troy by the Greeks returning from Tenedos, and issuing from the Trojan horse, was described so far as to display in a conspicuous manner the arrogance and mercilessness of the Greeks, as also to occasion the resolution of Minerva, already known from the Odyssey, to punish them in various ways on their return home. This last part, when divided from the preceding, was called the Destruction of Troy (Τίτλον πέρονής), the former, comprising the events up to the death of Achilles, was termed the Εθνίων of Architus. (Procli, Chrestom.—Schol. Hist. Lit. Gr., vol. 1, p. 169.—Hist. Lit. Gr., p. 65, in Libr. Us. Knowl.)

Archytas, a constellation near the Great Bear, called also Bootes. The term is derived from ἀρκτος, "a bear," and φωλιας, "a keeper or guard," for the position of the constellation on the celestial sphere is such, that it appears to watch over the Greater and Smaller Bear. Hence Ovid calls it "Custos Urae" (Trist., 1, 10, 15), and Vitruvius simply "Custos" (9, 4.—Compare Ideler, Untersuch., &c., der Sternnamen, p. 47.—Cic., de Nat. D., 2, 42.)

Arcos, two celestial constellations near the north pole, commonly called Ursa Major and Minor, supposed to be Arcas and his mother, who were made constellations. Ovid calls them Fera conjointly: "magna minorque Fera" (Trist., 4, 3, 1). Originally, the Greater Bear alone had the name of Arcos, and Homer appears merely to have been acquainted with this constellation, not with that of the Smaller Bear. (Il., 18, 487.—Od., 6, 273.) The discoverer of the latter constellation is said to have been Thales, who lived at least two centuries after Homer. (Schol. ad Il., i. c.—Achill. Tat. Isag. in Arat., Phas., c. 1.—Hygin., Poet. Astron., 2, 2.) The truth is, however, that Thales merely brought the knowledge of the Smaller Bear from the East into Greece, for the Phocianers were acquainted with it at a much earlier period, and hence the name Phoinix, Phoecis, that was sometimes given to it. (Eratosth., Cat., 2.—Schol. ad German., p. 52.—Another name is Αρκτίος, or "the Wain," an appellation known already to Homer (Il., I. c.). Subsequently, a distinction was made between the Greater and Smaller Wain, as between the Greater and Smaller Bears. Hence we have, in Latin, the plural form Plaustra applied to both constellations of the Wain. (German., v. 25.—Aven., v. 163) The more common Latin expression, however, is Septem Triones, "the seven ploughing oxen," originally used of the Greater Bear, but afterwards to both. Hence the Latin Septemprio, as indicating the north. (Varro, L. L., 6, 4.—Aul. Gell., 2, 21.—Verg., Aen., 1, 748.) Two other names are also found among the ancients for the Bear, namely, Ελικια (Heliac), and Κυθώονα (Cygnoria). The first of these is derived from Ελις, "curled," and has reference to the curved or s-like position of the stars composing the Greater Bear. If, however, we regard the Squarc, or Qaudrangle, merely is commonly called so by the Greeks, and, with reference towards the north. (Bullmann, as cited by Ideler, Untersuch. über die Beobacht. der Alt. p. 376.) The term Κυθώονα, on the other hand, which signifies the "Dog's tail," was applied by the ancients to the constellation of the Smaller Bear; because this animal is represented on the celestial planisphere with its tail bent upward like that of a dog, or, as the scholiast on Homer remarks (Il., 18, 467), itad ὑπὸ τοῦ κυνοῦ ἕχειν ἀνακελλαιμένου φαίνεται. At
ARDÉA, a later period, however, the etymology of the two terms was forgotten or neglected, and Hierce and Cynosura appear in fable as two nymphs, the nurses of Jove. [Arat., Phaen., 30, seqq.—Hygin., Poet. Astron. 2, 2.) The name Cynosura is sometimes improperly applied by the moderns to the Pole-star. (Ideler, Sternnamen, p. 8.)—The ancient name of the Greater Bear in the north is Arctus, or Arcturus. [Arat., Phaen., 19, seqq.—Old Man’s Wain.” The Carle, Magnussen says, is Odin or Thor. Hence our “Charles’s Wain.” The Icelanders call the Bears “Stor’ (great) Vagn,” and “Litli Vagn.” (Edda Sigmundar, 3, 304.)

**Arcturus**, a star near the tail of the Great Bear, the rising and setting of which was generally supposed to portend tempestuous weather. It belongs to the constellation Boötes or Arcophylax and forms its brightest star. Originally, according to Eratosthenes (Epitomae vol. II.), the term Arcturus was synonymous with Arcophylax, being derived from ἀρκτός, a bear, and ὀποχόμ, a watch or guardian. Whether Hesiod, who twice makes mention of Arcturus (Op. et Dd, 566. —Ibid., 610), means the star or the constellation, is not very clear. Even some later writers, such as Martinaeus Capella, and the scholiast to Herodotus, employ the term as indicating the constellation itself. The common derivation of the name, from ἀρκτός, and ὀποχόμ, is altogether unlikely. In some cases, in pointing out the tail of the bear, is condemned by Bottmann. (Ideler, Sternnamen, p. 47, seqq.) Arcturus, observes Dr. Hailey, in the time of COLUMELLA AND Pliny rose with the sun at Athens, when the sun was in 12° of Virgo; but at Rome three days sooner, the sun being in 91 of Virgo, the autumnal equinox then falling on the 24th or 25th of September.

**Ardeia**, a son of Vulcan, said to have been the first invented by Carle. He erected a temple also at Trezene, in honour of the Muses, who were hence called, from him, Ardalides, or Ardalotides. (Pausan., 2, 31.—Steph. Bryz., s. v.)

**Ardea**, the capital of the Rutuli, a very ancient city of Italy, founded, as tradition reported, by Danae, the mother of Perseus. (Virg., Ec. 7, 403.) Hence the boast of Turnus, that he could number Inachus and Acritius among his ancestors. Pliny (3, 5) and Mela (3, 24) have given Ardea among the maritime cities of Latium; but Strabo (232) and Ptolomy (66) have placed it more correctly at some distance from the coast. The ruins which yet bear the name of Ardea are situated on a hill about three miles from the sea. Though the early accounts of this ancient city are lost in obscurity, we are led to infer that it must have attained to a considerable degree of power and prosperity at a remote period, if it be true, as Livy (31, 7) asserts, that a body of Ardeates formed part of the Zancynthian colony, which settled Saguntum in Spain. The first mention which occurs of the city in the history of Rome, is in the reign of Tarquinus Superbus. We are told that it was during the siege of Ardea, which the king was carrying on, that the memorable circumstance occurred which led to his expulsion from the throne, and the consequent change of government at Rome. (Liv., 1, 57.—Dion. Hal., 4, 64.) The Ardeates had the honour of affording an asylum to Camillus in his exile, and, under the conduct of that great man, were enabled to render a signal service to the Romans in their utmost distress (if indeed we are to give credit to Livy’s account of these transactions): first by defeating a large body of Gauls who had advanced towards their city in quest of booty (Liv., 5, 45), and afterward by contributing greatly to the decisive victory which freed Rome from her most dangerous enemies. (Lay. 4, 49.) In all probability, however, this story is merely to be regarded as one of the embellishments of the false legends of the Farian family. (Compare Arnold’s History of Rome, vol. 1, p. 393, seqq.) The Ardeates, however, did not always display the same zeal and constancy in the service of the republic. In the second Punic war, and at a time when the victories of Hannibal had exhausted the resources of the state, they refused to furnish any further supplies of men and provisions. Their city was therefore included in the vote of censure which the Roman senate afterward passed on several refractory colonies. (Liv., 27, 8.)

**Ardericca**, a small town of Assyria, north of Babylon, on the Euphrates. Herodotus informs us (1, 185) that Nitosor, queen of Babylon, in order to render her territories more secure against the Medes, altered the course of the Euphrates, and made it so fortuitous by a great inundation, in the year 31, that it crossed the city. (Ardericca, ad loc.)—Compare Larcher and Bähr, ad loc. It was here that the Etruscan captives were settled. (Vid. Etruria.)

**Ardeus**, a river of Thrace, falling into the Hebrus at Adrianopolis. Now the Arda.

**Ardena**, now Ardennée, a forest of Gaul, the longest in that country, reaching, according to Cæsar, from the Rhenus and the territories of the Treveri to the Nervii, upward of fifty miles in length. Others make the extent much greater. If it covered the whole of the intervening space between the countries of the Treveri and Nervii, it would greatly exceed fifty miles. The original Gallic name would seem to have been Ar-Dena, i. e. “the profound,” or “deep” (forest). Ar is the article, Den in the Kimric, Don in the Bas-Breton, and Domoinn in Gaelic, denote respectively “profound,” “thick,” &c. (Thierry, Hist. des Gaulois, vol. 2, p. 41, in notis.) The ground is now in many places cleared, and cities built upon it. It is divided into four districts. Its chief town is Mezières. (Taciit., Ann., 8, 42.—Cass., Bell. Gall., 6, 29.)

**Ardis**, a son of Gyges, king of Lydia, who reigned forty-nine years, took Priene, and made war against Miletus. (Herolot., 1, 16.—Compare Clinton’s Fasti Hellenici, vol. 2, p. 296.)

**Arkelutum** (Ἀρκελουτος; Plut.: Aρκελους; Strabo: Arelate, among the Latin writers; and sometimes Arles by the poets), a town of the Salyles on the east side of the Rhodamus, at the place where it divides into three branches, not far from its mouth. Strabo speaks of it as a commercial emporium, and, according to
Pomponius Mela, it was one of the richest cities in Gallia Narbonensis. It was also called Sextanorum Colonia, from having been colonized by the soldiers of the sixth legion, conducted thither by the father of Tiberius. It is now Arles. During the later periods of the Roman empire, Arelate was the residence of some of the emperors; and at a subsequent date, on account of the frequent inroads of the barbarians, the people of this city were transferred from Tremes (Treves) to this place. (Cas., Bell. Civ., i. 36.—Mela, 2. 5.—Suet., Vit. Tib., 4.)

Arkemorica, or Aemorica, a Celtic term, applied in strictness to all parts of Gaul which lay along the ocean. As the Romans, however, before Caesar's time, knew no other part of the coast except that between the Pyrenees and the mouth of the Garumna, the name with them became restricted to this portion of the country. (Mannert, George, vol. 2, p. 112.) The appellation is derived from the Gallic ar, "upon," and mor, "sea." (Compare Thierry, Hist. des Gaulois, vol. 1, Introd., p. xxxix., in notis.)

Arenicum, a fortified place on the Rhine, in the territories of the Batavi, not far from where the river separates to form the Vahalis. It is now, according to D'Anville, Acer or Aetich, but Mannert is in favour of Aenkaim. (Tacit. Hist., 5. 20.—Compare Mannert, Genealogia, 1. 5.)

Aretopagites, the judges of the Areopagus, a seat of justice on a small eminence at Athens. (Vid. Areopagus.) The time in which this celebrated seat of justice was instituted is unknown. Some suppose that Cecrops, the founder of Athens, first established it, while others give the credit of it to Cramus, and others to Solon. The constitution and form under which it appears in history, is certainly not more ancient than the time of Solon, though he undoubtedly appears to have availed himself of the sanctity already attached to the name and place, to ensure to it that influence and inviolability which were essential to the attainment of its chief object, the maintenance of the laws. Its original right of judging all cases of homicide continued, though evidently the least important part of its duties, since, when Ephialtes had deprived it of all but that, it was in Areopagiticas was thought to be more than sufficient. (Demosth. adv. Aristoc., p. 642.—Lex. Rhet., appended to Porson's Photius, p. 585, ed. Laps.—Hermaeus Polit. Antig., p. 215, not. 6.) It was not restored to its dignity of guardian of the laws till the fall of the thirty tyrants. Its office as such was, in principle, directly opposed to an absolute democracy, and must have appeared the more formidable to the partisans of that form, from the indefinite and arbitrary nature of the merely popular power on which its authority was founded, and which rendered it impracticable clearly to define the extent of its influence. In later times it was found particularly active as a censorship of morals, and in several respects may be viewed as a superior court of police, taking cognizance of luxury and morals, the superintendence of public buildings and public health, and, in particular, making it its business to direct public attention to individuals who might endanger the state, though its own power to inflict punishment in such cases was very limited. (Hermann, l. c.) The Areopagus, when originally constituted, was, as has already been remarked, merely a criminal tribunal. Solon, guided by motives which cannot now be easily explained, rendered it superior to the Ephets, another court instituted by Draco, and greatly enlarged its jurisdiction.—The number of judges composing this august tribunal is not clearly ascertainable. It was probably about ninety. (Tuttman, Griech. Statutarx, 252.) The court consisted entirely of ex-archons: and every archon, on laying down his archonship, became a member of it. (Tuttman, l. c.—Plut., Vit. Sol., c. 19.) It was expressly provided, however, that the members of this court should be altogether pure and blameless in their lives, and it was even required that their whole demeanour should be grave and serious beyond what was expected from other men. The dignity of a judge of the Areopagus was always for life, unless he was expelled for immoral or improper conduct. The Areopagites took cognizance of murders, immiely, and impudent, and particularly of all delicts and crimes, they claimed exclusive and entire vice. They watched over the laws, and they had the management of the public treasury; they had also the liberty of rewarding the virtuous, and inflicting severe punishment upon such as blasphemed against the gods, or slighted the celebration of the holy mysteries. Hence St. Paul was arraigned before this tribunal as "a setter forth of strange gods," because he preached the Apostles of Jesus and the resurrection. They always sat in the open air; because they took cognizance of murder, and, by their laws, it was not permitted for the murderer and his accuser to be both under the same roof. (Vid. Areopagus.) This custom also might originate from the persons of the judges being sacred, and their being afraid of contracting pollution by conversing in the same house with men who had been guilty of shedding innocent blood. They always heard causes and passed sentence in the night, that they might not be disturbed by the noise of the defendant by seeing them. Whatever causes were pleaded before them were to be divested of all oratory and fine speaking, last eloquence should charm their ears and corrupt their judgment. Hence arose the most just and most impartial decisions; and their sentence was deemed sacred and inviolable, and the plaintiff and defendant were equally convinced of its justice. The Areopagites generally sat on the 27th, 28th, and 29th day of every month. But if any business happened which required dispatch, they assembled in the royal portico, Basili Italy. This institution was preserved entire until the time of Pericles, who, as he had never filled the office of archon, could not be admitted a member of the Areopagus, and therefore employed all his power and influence in undermining an authority which was incompatible with his own. The earlier strictness too, as regarded the private characters of the judges, began to be relaxed, and eventually, when the grandeur of Athens was on the decline, men of vicious and profligate lives became members of the Areopagus.—As regards the form Areopagita and Ariopagita, consult the remarks of Bergman (Pro. ad Ios. Areopag. init.)

Areopagus (Areopagos, o. Areos p-high, i.e., "the hill of Mars"), a small eminence at Athens, a little distance to the northwest of the Acropolis. It was so called in consequence, as it was said, of Mars having been the first person tried there, for the murder of Hallirhotios, son of Neptune. (Vid. Areopagita.) This celebrated court consisted only of an open space, in which was an altar dedicated to Minerva Areia, and two rude seats of stone for the defendant and his accuser. From Vitruvius we learn (2, 1.—Compare Poll., 8, 10), that at a later period this space was enclosed, and roofed with tiles. According to Herodotus (8, 33), the Persians were defeated when they made their attack on the western side of the Acropolis. (Consult, as regards the form of the name, the remarks of Bergman, Pro. ad Ios. Areopag. init.)

Areostroides, a patronymic given to the hundred-eyed Argus, as son of Areost. (Ovid, Met. 1, 624.)

Areteus, a Greek physician of Cappadocia, who is supposed to have flourished A.D. 80. He wrote two works, one of his remaining: περὶ Λείτων καὶ Σχημάτων ούλων καὶ χρωμίων παθών, "On the causes and symptoms of acute and chronic maladies;" and, περὶ Παρασκευῶν ούλων καὶ χρωμίων παθών, "On the cure of acute and chronic maladies." The works of this most elegant writer, which have come down to us,
ARG

are so truly valuable as to make us deplore the loss we have sustained by the mutilations they have suffered. The few remaining fragments and restorations of this work are uncommonly graphic and accurate. For example, what picture could be truer to life than the one which he has drawn of a patient in the last stage of consumption? and what description was ever more poetically elegant than that which he gives us of the symptoms attending the collapse in ardent fever? —Considering that most probably he was prior to Galen, the correctness of his physical views cannot but excite our admiration. In his account of Paralysis, he alludes to the distinction between the Nerves of Sensation and those of Muscular motion, which doctrine is treated of at great length by Galen, in his work De Uru Partium (επερ Χρεια των εν ανδρωτη χονιωτω κωμων). He enumerates indigestion among the exciting causes of palsy, which seems to be an anticipation of a late pretended discovery, that paralysis of the limbs is sometimes to be referred to derangement of the stomach and bowels. —In speaking of epilepsy, he makes mention of the use of copper, which medicine has been tried of late years in this complaint with manifest advantage. —No other ancient writer that we are acquainted with gives us so correct an account of ulcers on the throat and tonsils. His description of the various phenomena of mania is very interesting, and contains the singular case of a joiner, who was in his right senses while employed at his profession at work, but no sooner left the seat of his employment than he became mad. He gives an interesting account of jaundice, which he attributes, probably with correctness, to a variety of causes, but more especially to obstruction of the ducts, which convey the bile to the intestinal canal. He makes no mention, indeed, of gall-stones, nor are they mentioned, as we know, by any ancient writer; only Nonnus recommends Lithotriptics for the cure of the disease, which might seem to imply that he was acquainted with the existence of these concretions. Aristotle also has mentioned the stone in the bladder, but has not proved very satisfactory in a critical point of view. (Pierer. Annal Aug., p. 1041. —Hoffmann, Lex. Bibl., vol. 1, p. 248).

Areté, a daughter of the philosopher Aristippus. Ælian, however, contrary to the common account, makes her his sister. (Hist. Anim., 3, 40.) Aristippus taught her the doctrines of his school, and she in her turn became the instructress of her own son, the younger Aristippus, who, on this account, received the surname of Metrodokas (Μετροδόκας). Her attainments in philosophy were highly celebrated. (Aristocles, ap. Euseb., Prep. Ev., 14, 18. —Diog. Laert., 2, 86. —Cassius, ad Diog., 1, c. 1.)

Aresthùsà, I. a nymph of Elis, daughter of Oceanus, and one of Diana’s attendants. As she returned one day from hunting, she came to the clear stream of the Alpheus, and, enticed by the coolness and refreshment in the heat and fatigue. She heard a murmur in the stream, and, terrified, sprang to land. The river-god rose and pursued her. The nymph sped all through Arcadia, till with the approach of evening she felt her strength failing, and saw that her pursuer was close upon her. She then prayed to Diana for relief, and was immediately dissolved into a fountain. Alpheus resumed his aqueous form, and sought to mingle his waters with hers. She fled on under the earth, however, and through the sea, till she rose in the island of Otrystia at Syracuse, still followed by the stream of the Alpheus. In proof of the truth of this tale, it was asserted that a current (τρωφής) which fell into the Alpheus rose in the fountain of Arreamble, whose pellicund waters also became turbid with the blood of the victims slain at the Olympic games. (Ovid, Met., 5, 572, seqq. —Moschus, Idyll., 7. —Keightley’s Mythology, 2d ed., p. 132.) An explanation of this legend will be found under the article Alpheus. —II. A lake in Armenia Major, through which the Tigris ran. It was near the sources of that river, and exhaled, according to Ctesias, miny, nitrogenous vapours. (Plin., 6, 27.) III. A city in the Macedonian district of Amphaxitis. (Plin., 4, 10.) IV. A city of Syria, on the eastern bank of the Orontes. It was either built or restored by Seleucus Nicator, and is supposed to have been destroyed by the Arabians. (Strab., 518. —Zosim., 1, 52. —Theod., Hist. Eccles., 3, 7. —V. A fountain in Euboea, near Chalcis. (Plin., 4, 12.) VI. A fountain in Boeotia, near Thebes. (Plin., 4, 7.) AREUS, I. (two syllables) a king of Sparta, preferred in the succession to Cleonynus, son of Cleomenes, who, on being defeated in his claim upon the throne, called in the aid of Pyrrhus. Areus was in Crete when the King of Epirus marched against Sparta; and instantly leaving that island, whether he had gone to aid the Gortynians, he returned home and repulsed Pyrrhus. He afterward went to aid the Athenians, when attacked by Antigonus Gonatas, and lost his life in attempting to enter into the eastern gate of Corinth, B.C. 268. (Pausan., 3, 6.) —II. Areus, a native of Alexandria, and member of the Pythagorean sect. According to the common account, he was one of the masters of Augustus, and enjoyed so high a degree of favour with this prince, that when, after the defeat of Antony and Cleopatra, Augustus appeared in the theatre of Alexandria, he had his old instructor on his right hand, and conversed familiarly with him, declaring that one of the causes of his sparing the inhabitants of Alexandria was that he thought Areus was a modern Homer. (De Cassiis, 51, 16. —Fabric., ad Dion., 1, c. —Plut., Vit. Anton., 80.) The eloquence and philosophy of Areus were so persuasive, that, according to Seneca, he powerfully contributed to console Livia for the loss of Augustus! (Sene., Consol. ad Mar., 4, 2.) It is thought by some that Dioclesides dedicated him to his work on the Materia Medica, but the point is not clearly ascertained. (Biogr. Univ., vol. 2, p. 24.) Aretia, a stream of the territory of Arethusa, in the territory of the Arevaci. It rose southeast of Salamantica, and flowed into the Durium. The modern name is, according to Harduin, the Arlanzio (ad Plin., 3, 4), but according to Florent more correctly, the Ucero. (Exp. Sacr., 5, 16, 39.) AREXACI, a people of Hispania Tarraconensis, deriving their name, according to Pliny (3, 3), from the river Arexà. They lay between the Vetus and the Castulana to the south, and formed part of the most powerful branches of the Celtiberi. According to some authorities, their chief city was Numantia. (Strabo, 162. —Mela, 3, 6. —Appian, B. Hisp., c. 91.) Pliny, however, assigns this place to the Pelendones (3, 4). Their later capital was Segobia or Segubia, now Segovia. (Itin. Ant., p. 435. —Ptol., 2, 6.) ARGEAD, a mountain of Cappadocia, covered with perpetual snows, and so lofty that from its summit, according to the ancient writers, both the Euxine and the Mediterranean Seas might be seen, although, according to Strabo (538), there were very few who could boast of such a feat. It is now called Arge- dag, and at its foot stood Mazaca, the capital of Cappadocia, called, in the time of Tiberius, Caesarea ad Argeum, and now Kasuarieh. Mr. Kinneir observes, that Mount Argead is unquestionably one of prodigious elevation; but he much questions whether any
human being ever reached its summit; and, indeed, he was positively informed that this was quite impossible. It was covered for some miles below the peak with snow, which was said to be eight or ten feet in depth in the month of October, when he was at Ciesz-
area. (Journey through Asia Minor, &c., p. 94, note.)

ARGONATUS, or Aragonatus, a king of Gauls, who acceded to the throne of Sicyonia (ep. 1, 126—Cic.,
de Sestect., 19), lived 120 years, and reigned 80 years of
this number. Pline (7, 48) gives 150 years as the
period of his existence; and Silius Italicus (3, 398),
by poetic license, 300 years.

ARGOS, a son of Cetus and Terra, who had only
one eye in his forehead. (Vid. Cyclopes.)

ARGE, a son of Perdiccas, king of Macedonia, who
obtained the kingdom when Amyntas, father of
Philip, was driven out for a season by the Illyrians
(293 B.C. to 390). On the death of Perdiccas, B.C. 360, he endeavoured, but in vain, to remount
the throne. (Justin, 7, 1.)

ARO (plur. masc.). Vid. Argos.

ARGIA, I. daughter of Adrastus, married Polyneices,
whom she loved with uncommon tenderness. When
he was killed in the Theban war, and Creon had for-
bidden anyone to perform his funeral obsequies, Argia,
in conjunction with Antigone, disobeyed the mandate,
and placed the corpse of Polyneices on the funeral pile.
Antigone was seized by the guards who had been sta-
tioned near the dead body, but Argia escaped. Vid.
Antigone. (Hygin., fab. 69 and 72.—II. A country of
Peloponnesus, called also Argolis, of which Argos was
the capital.—III. The wife of Inachus, and mother
of Io. (Hygin., fab., 145.)

ARGILEUM, a street at Rome, which led from the
Vicus Tuscius to the Forum Olitorio and Tiber.
The origin of the name is uncertain. Some accounts
derived it from Argus, a guest of Evander's (vid. Ar-
gus, V.), who was said to have been interred there;
others from the abundance of argilla, or clay, found in
the vicinity. (Varro, L. L., 4, 32.) This street ap-
ppears to have been chiefly tenanted by booksellers
(Martial, Ep., 1, 4.—Id., 1, 118), and also by tailors.
(Martial, Ep., 9, 17.) Cicero informs us (Ep. ad
Att., 9, 9) that Hieroichus had a house in this Ar-
 gulcum. (Cramer's Ancient Italy, vol. 1, p. 545.)

ARGILOTIS, the first town on the coast of Bisalitza in
Thrace, beyond Bromissius and the outlet of the Lake
Bolbe. It was founded by a colony from Andros, ac-
cording to Thucydides (4, 102). Herodotus (7, 115)
says it was the first town which Xerxes entered after
crossing the Strymon. The Argilians espoused the
cause of Brasidas on his arrival in Thrace, and were
very instrumental in securing his conquest of Amphi-
polis. (Thucyd., 4, 103.)

ARGOLIDAE, small islands below Lesbos, and lying
off the promontory of Cana or Colomi in Eolis. They
were rendered famous for the victory gained near them
by the Athenian fleet under Conon, over that of the
Lacedaemonians, in the 26th year of the Peloponnesian
war, B.C. 406. Of these three islands, the largest
had the patronymic Arginion. They are formed of a
white, argillaceous soil, and from that circumstance
took their names (ἀργυλίδαι, shining white, feminine ἀργυλίδα, contracted ἀργυλίς.—Compare the
remarks of Hesychius, ad Cic., de Off., 1, 24, 9).

ARGIOPHONTES, a surname given to Mercury, because
he killed the hundred-eyed Argus, by order of Jupiter.
Cowper, in his version of Homer, renders the term in
question by "Argicide." (Consult remarks under the
name of Helle.)

ARGIPPE, a nation among the Sarmatians, born
bald, with flat noses and long chins. They lived upon
the fruit of a tree called Ponticus, from which, when
ripe, they made a thick black liquor called Aschy,
which they drank clear, or mixed with milk. Of the
husks they prepared a kind of cake. No man offered
violence to this people, for they were accounted sacred,
and had no warlike weapon among them. They de-
termined the differences between their neighbours,
and whoever fled to them for refuge was permitted
to live unmolested. (Herodot., 4, 23.) Ritter thinks
that these Argippaei were one of the early ascendental
colonies from India, which had settled in the wilds of
Scythia. This sacred character had secured the regard of the neighbouring barbarians. Their bald heads he accounts for by the circumstance of the priests of Buddha being accustomed to shave the head. (Vorhalle, p. 286.) De Guignes, on
the other hand, refers the description of Herodotus to
the Sina. (Mem. de l'Acad. des Inscr., vol. 35, p. 551.)
The best opinion, however, is in favour of the Calmuc,
whose peculiar physiognomy coincides with that as-
cribed to the ancient Argippaei. (Macle-Brain, An-
des Voyage, vol. 1, p. 372.) The Calmuc priests,
moreover, called themselves, are said to shave the entire
head, and to do this also in the case of infants that
are destined for the priesthood. (Compare Bähr, ad
Herod., 1, c.—Rennell, Geogr. of Herodotus, vol. 1,
p. 172, seqq.)

ARGIVUS, a surname of Juno, as worshipped at Arg-
us. (Virg., Æn., 3, 347.)

ARGOS, the inhabitants of the city of Argos and the
neighbouring country. The word is also applied by
Homer, and, in imitation of him, by the later poets,
to all the inhabitants of Greece.

ARGO, the name of the famous ship which carried
Jason and his fifty companions to Colchis, when they
resolved to recover the golden fleece. Jason having
applied to Argos (vid. Argus, III.) to construct a ves-
sel for the expedition, Argos built for him a fifty-oared
galley, called from himself the Argo. Minerva sided
the architect in its construction, and set in the prow
a piece of timber cut from the speaking oak of Dodona,
and which had the power of giving oracles. On the
termination of the voyage, Jason consecrated the ves-
sel to Neptune at the Isthmus of Corinth. Accord-
ing to the more popular account, however, Minerva
translated the Argo to the skies, and made it a con-
stellation. (Apollod., 1, 9, 16.—Id., 9, 24.—Id.,
5, 32.—Mem. Sec., 4, 53.—Eratosth., 33.—Hy-
gin., fab., 24, &c.)

ARGOLICUS SINUS, a bay on the coast of Argolis,
between this country and Laconia. It is now the Gulf
of Naronia.

ARGOLIS, a country of Peloponnesus, to the east of
Arcadia. It is properly a neck of land, deriving its
name from its capital city Argos, and extending in a
southeasterly direction from Arcadia fifty-four miles
into the sea, where it terminates in the promontory of
Scyllaum. Many and important associations of the
heroic age are connected with this country. Here
was Tyrins, from which Hercules departed at the
commencement of his labours; here was Mycenae,
the royal city of Agamemnon, the most powerful and
the most unhappy of kings; here was Nemea, celebrated
for its games instituted in honour of Neptune. But
the glory of its early history does not seem to have
departed. Argo. No Thummiocles, no Aegeus was
ever counted among its citizens; and though it
possessed a territory of no considerable extent, it
never assumed a rank among the first of the Grecian
states, but was rather the passive object of foreign
policy. (Heerem's Polities of Greece, p. 19, Bancroft's
transl.)—For a sketch of the history of Argolis, vid.
Argus.

ARGOMAVO, a name given to those ancient heroes
who went with Jason on board the ship Argo to Col-
chis. The expedition arose from the following cir-
cumstance. Athamas, king of Orchomenus in Boeotia,
married Nephele, by whom he had two children, a son
and a daughter, named Phrixus and Helle. Having
subsequently divorced Nephele, he married Iola, daugh-

A84
ter of Cadmus, who bore him two sons, Leurchus and Melicert. Ino, feeling the usual jealousy of a step-
mother, resolved to destroy the children of Nephele. For this purpose she persuaded the women to parch
the seed-corn unknown to their husbands. They did as she said, and the lands could not be cropped.
Athenas sent to Delphi to consult the oracle, in
what way the threatening famine might be averted. Ino persuaded the messenger to say that Apollo
directed Phrixus to be sacrificed to Jupiter. Com-
pelled by his people, Athamases reluctantly placed his
son before the altar; but Nephele snatched away both
her son and her daughter, and gave them a gold-fleeced
ram she had obtained from Mercury, which carried
them safe through the air over sea and land. They pro-
ceeded safely till they came to the sea between Sicy-
um and the Chersonese, into which Helle fell, and it
was named from her Hellespontus (Helle's Sea).
Phrixus went on to Colchis to Æetes, the son of
Helios, who received him kindly, and gave him in mar-
rriage his daughter Chalciope. He there sacrificed
his ram to Jupiter Phyxus, and gave the golden fleece
to Æetes, who nailed it to an oak in the grove of Mars.
It is thus that we find this legend related by Apollodo-
rus, in I 9, 1, 5, and he gives no variations of the
tale. Thus it is said that Ino was Athamases's first
wife, and that he put her away by the direction of
Juno, and married Nephele, who left him after she
had borne two children, on finding that he still retained
an attachment for Ino. When the response of the
oracle came to Athamases, he sent for Phrixus out of the
country, desiring him to come, and to bring the finest
sheep in the flock for a sacrifice. The ram then spoke
with a human voice to Phrixus, warning him of his
danger, and offering to carry him and the sister to
the place of safety. The ram, it was added, died at Col-
chis. (Philosophusian, ap. Schol. ad II., 7, 86—
Compare, for another account, Hygin., Poet. Astron.,
2, 20.) Other statements again are given by the tragic
poets, it being well known that they allowed them-
selves great liberties in the treatment of the ancient
myths. (Compare Hygin., fab. 4.—Nonnus, 9, 247,
Egyp.) Some time after this event, when Jason, the son
of Aeson, visited his brother Pelias, and Pelias, who
had usurped (sic. Polias, Jason, Æson) Polias saw
that he would restore it to him, provided he brought
him the golden fleece from Colchis. Jason undertook
the expedition, and when the Argo was ready (vid. Argo),
consulted the oracle, which directed him to invite the
greatest heroes of the day to share in the dangers
and glories of the voyage. The call was immediately re-
sponded to, and numerous sons of gods hastened to
embark with him. From the Peloponnesus came Her-
cules, Castor and Pollux, sons of Jupiter; Peleus and
telamon, grandsons of that god, also came with the
seas; Erginos and Aenacus, sons of Neptune, Aegeas,
son of Helius, Zetes and Calaius, sons of Boreas. There
were likewise Lynceus and Idas, and Meleagrus, La-
ertes, Periclymenus, Nauplius, Iphicus, Iphitus, Ad-
metus, Acastus, Butes, Polyphemus, Atalanta, and
many others. Idmon, the seer, the son of Apollo,
came from Argos; Mopsus, also a prophet, from Thes-
aly, and Polypheus, the son of the muse Calliope.
The steersman was Tiphys, son of Agnius, from Siphon
in Boreia. The entire number was fifty. (Apollod., I, 9,
16.—Hymn, ad loc.—Burmann, Praef. ad Val. Flacc.,
11, vol. 1, p. clxxi.) When the heroes were all
assembled, Mopsus took auguries, and the omens
being favourable, they embarked. The joyful heroes
grasped each other's hand in the word of the sooth-
sayer; and, while Orpheus struck his lyre in concert with
his voice, they sung odes to Athamas. At the close
of the day they reached the mouth of the bay of
Pagasae. Here they remained for two days, and
then rowed along the coast of Magnesia; and, passing
the peninsula of Pallene, at length reached the Iole of
Lemnos, in which there were at that time no men,
Hypsipyle the daughter of Thoas governing it as queen.
For the Lemnian women had murdered their husbands,
being incensed at their neglect. (Vid. Hyg. p.)
The Argonauts, being invited to land, all disembarked
within the exception of Hercules, and gave themselves
to the labours of the island. One year, however, after,
until, on the arrival of the son of Alcmena, they tore
themselves away from the Lemnian fair ones, and once more handled their
oars. The offspring of this temporary union repealed,
say the poets, the Island of Lemnos. After leaving
Lemnos they came to Samothrace, and thence pur-
sued their voyage through the Hellespont into the Pro-
pointis, where they came to an island with a lofty hill
in it named the Bears' Hill, inhabited by giants with
six feet high. To the adjacent country was possessed
by the Dolonians, whose king was named Cyzicus. Having
been hospitably entertained by this prince, and having
slain the giants who opposed their departure, they set
sail, but were driven back by adverse winds. It was
in the night that they returned, and the Dolonians,
taking them to be their enemies the Pelasgians, attack-
ed them; and several of the Dolonians, and among
them Cyzicus, lost their lives. With daylight discern-
ing this error, the Argonauts shored their hair, and,
shedding the garments which had buried Cyzicus with
disgrace. They then sailed to Mysea, where they left
behind them Hercules and Polyphemus; for Hylas,
a youth beloved by the former, having gone for water,
was seized and kept by the nymphs of the spring in
which he dipped his urn. Polyphemus, hearing
him call, went with his drawn sword to aid him, sup-
posing him to have fallen into the hands of robbers.
Meeting Hercules, he told him what had happened,
and both proceeded on. The adjacent country was possessed
by the Argo put to sea, and left them behind. Poly-
phemus settled in Mysea; and built the city of Kios:
Hercules returned to Argo. (Vid. remarks under the
article Hylas.) The Argo next touched on the coast of
Bebrycia, otherwise called Bithynia, where Polypho
accepted the challenge of Amycus, king of the country,
in the combat of the cestus, and slew him. They were
driven from Bebrycia, by a storm, to Salmydesia, on
the coast of Thrace, in quest of the youth. Phineus,
king of the place, from the persecution of the harpies,
Phineus directed them how to pursue their course
through the Cyanean rocks, or the Symplegades (vid.
Cyanea), and they safely entered the Euxine Sea.
They visited the country of the Mariandynians, where
Lycurgus reigned. Here died Idmon, the seer, wounded
by the tasks of a wild boar. Tiphys also dying here,
Aenacus undertook the steerage of the vessel. They
now kept along the southern coast of the Euxine till
they came to the land of Arethais, which was haunt-
ed by birds that shot feathers sharp as arrows from
their wings. These they drove off by clattering on
their shields. While they remained in this isle, the
sons of Phrixus, who were on their way to Greece,
having been sent by Æetes to claim their father's king-
dom, were cast on the shores of Aretias by a storm.
These became the guides of the Argonauts to Colchis,
and conducted them to Æa the capital. Jason explai-
ned the causes of his voyage to Æetes; but the condi-
tions on which he was to recover the golden fleece
were so hard, that the Argonauts must have perished
in the attempt had not Medea, the king's daughter,
fallen in love with their leader. She had a conference
with Jason, and, after mutual oaths of fidelity, Medea
pledged herself to deliver the Argonauts from her fa-
ther's hard conditions, if Jason married her, and car-
rried her with him to Greece. He was to tame two
chimeras, to cut down a tree, which was ten feet
high, and bore an wood, whose branches were four
feet, and breathed flame from their throats. When
he had yoked these, he was to plough with them a piece
of ground, and sow the serpent's teeth which Æetes
possessed; for Minerva had given him one half of those
which Cadmus sowed at Thebes. All this was to be performed in one day. Medea, who was an enchantress, gave him a salve to rub his body, shield, and spear. The virtue of this salve would last an entire day, and protect alike against fire and steel. She farther told him that, when he had sown the teeth, a crop of armed men would spring up, and prepare to attack him. Among these she desired him to fling stones, and, while they were fighting with one another, to seize them, each imagining that the other had thrown these, to fall on and slay them. The hero followed the advice of the princess: he entered the sacred grove of Mars, yoked the bulls, ploughed the land, and slaughtered the armed crop which it produced. But Eetes refused to give the fleece, and meditated burning the Argo and slaying her crew. Medea, anticipating him, led Jason by night to the golden fleece: with her dagger she entered the sacred grove, snatched it, and, then, taking her little brother Aburytus out of his bed, she embarked with him in the Argo, and the vessel set sail while it was yet night. (Pherecydes, ap. Schol. ad Apoll. Rh. A, 4, 223.—Another account is given under the article Aburytus.) Eetes, on discovering the treachery and flight of his daughter, got on shipboard and pursued the fugitives. Medea, seeing him gain on them, cut her brother to pieces, and scattered his limbs on the sea. She then brought the fleece transferred to the north side of the Euxine, where the town of Tomi (trouã, cuttings) was said to have derived its name from it. (Apolod., 1, 9, 24.—Ovid, Trist., 3, 9.) While Eetes was engaged in collecting the limbs of his son, the Argo escaped. He then despatched a number of his subjects in pursuit of the Argo, threatening, if they did not bring back his daughter, to inflict on them the punishment designed for her. At length the Argo reached the western sea, and came to an island of Circe. The belief for a long time prevailed, that there was a communication between the Palus Mæotis and the Oceanus or earth-encompassing stream. This communication the old poets made to be a narrow passage or strait, but later writers the river Tanis. The writer of the Orphic Argonautica makes the Argo pass up the Phasis into the Palus Mæotis, thence into the main Oceanus, and thence directing their course to the island of the Red Heifers of Thetis and the Atlatic, and to reach at last the Columns of Hercules. Circe performed the usual rites of purification to remove the blood-guilt of the death of Aburytus, and the heroes then departed. Ere long they came to the Isle of the Sirens, charmed by whose enchanting strains they were about to land on that fatal shore, when Orpheus struck his lyre, and with its tones overcame their voices. Wind and wave urged on the Argo, and all escaped but Butes, who flung himself into the sea to swim to the Flociety Isle. Venus, to save him, took him and set him to dwell at Litybyum. The Argonauts now passed Scylla and Charybdis, and also the Wandering Rocks; over these they beheld flame and smoke ascending, but Thetis and her sister Nerieds guided them through by the command of Juno. Passing Thrinakia, the Isle of the Sun, they came to the island of the Phaeacians. Some of the Colchians who were in pursuit of the Argonauts, arriving here, found the Argo, and requested Alcinous to give Medea up to them. He assented, provided she had not been actually married to Jason. His wife Arcte, hearing this, lost no time in joining the lovers in wedlock; and the Colchians, then fearing to return, settled in the island. Sailing thence, the Argo was assaulted by a tremendous storm, which drove it to the Syrtic Sea off the coast of Libya. After being detained there for some time, they had an opportunity of taking their homeward voyage, and came to Crete, where the brazen man, Talus, prohibited their landing; but Medea, by her art, deprived him of life. On leaving Crete, the night came on so black and dark that they knew not where they were; but Apollo, taking his stand on the rocks called the Melanion Rocks, shot an arrow into the sea: the arrow flashed a vivid light, and they beheld an island, on which they landed. As this island had appeared (ἀπεκλήσθη) so unexpectedly, they named it Aniphe. Here they erected an altar to Apollo Aëgés (the Lightener), and offered sacrifices. They thence proceeded to Ægina, where they watered; and they finally reached Colchis after an absence of four months.

—This celebrated voyage formed a theme for several ancient poets, and is noticed more or less by many other writers. Jason and the Argo are mentioned by Homer (Il., 7, 469.—Ib., 21, 40.—Od., 12, 69). Hesiod briefly narrates the principal events (Theog., 992, seqq.); it is the subject of one of Pindar's finest odes (Pyth., 4), and of the epic poem of Apollonius, named from it. It is narrated in detail by Apollodorus and Diodorus Siculus. Ovid also relates a large part of it, and there is an unfinished poem on the subject by the Latin poet Valerius Flaccus, which displays genius and originality. We have also the Argonautica of the pseudo-Orpheus, a poem to which the ablest critics assign a date posterior to the commencement of the Christian era. To these are to be added the detached notices in other writers and in the various scholia. Of the dramas composed on this subject, not a single one is now extant. The modern writer, Sir William Thirlwall, in his poem (Keightley's Mythology, 2d ed., p. 468, seqq.)—The Argonautic expedition, observes Thirlwall, when viewed in the light in which it has usually been considered, is an event which a critical historian, if he feels himself compelled to believe it, may think it his duty to notice, but which he is glad to pass rapidly over, as a perplexing and unprofitable riddle. For even when the ancient legend has been pared down into an historical form, as far as can be done, it is sufficiently imperfect and effaced, so that nothing is left but what may appear to belong to its pith and substance, it becomes, indeed, dry and meager enough, but not much more intelligible than before. It still relates an adventure, incomprehensible in its design, astonishing in its execution, connected with no conceivable cause, and with no sensible effect. Though the account which we have given is evidently an artificial statement, framed to reconcile the story of the matter-of-fact voyage of the Phæacians and probability, it still contains many points which can scarcely be explained or believed. It carries us back to a period when navigation was in its infancy among the Greeks; yet their first essay at maritime discovery is supposed at once to have reached the extreme limit, which was long after attained by the adventurers who gradually explored the same formidable sea, and gained a footing on its coasts. The success of the undertaking, however, is not so surprising as the project itself; for this implies a previous knowledge of the country to be explored which it is very difficult to account for. But the end proposed is still more mysterious; and, indeed, can only be explained with the aid of a conjecture. Such an explanation was attempted by some of the later writers among the ancients, who perceived that the whole story turned on the golden fleece, the supposed motive of the voyage, and that this feature had not a sufficient historical appearance. But the mountain torrents of Colchis were said to sweep down particles of gold, which the natives used to detain by fleeces dipped in the streams. This report suggested a mode of translating the tale into historical language. It was conjectured that the Argonauts had been attracted by the metallic treasures of the country, and that the golden fleece was a poetical description of the process which they had observed, or perhaps had conjectured, in an interpretation certainly more ingenious, or, at least, less absurd than those by which Diodorus transforms the fire-breathing bulls which Jason was said to have yoked, at the bidding of Eetes, into a band of Taurians who guarded
the fleece, and the sleepless dragon which watched over it, into their commander Draco: but yet not more satisfactory; for it explains a casual, immaterial circumstance, while it leaves the essential point in the legend wholly untouched. The epithet *golden,* to which it relates, is merely poetical and ornamental, and signified nothing more, as to the nature of the fleece, than the epithet *white,* which was early applied to it by early poets. (Schol. ad Apoll. Rh., 4, 177.) According to the original and genuine tradition, the fleece was a sacred relic, and its importance arose out of its connexion with the traditional story of Phrixus, the main feature of which is the human sacrifice which the gods had required from the house of Athamas. This legend was not a mere poetical fiction, but was grounded on a peculiar form of religion, which prevailed in that part of Greece from which the Argonauts are said to have set out on their expedition, and which remained in vigour even down to the Persian wars. Herodotus informs us, that when Xerxes, on his march to Greece, had come to Alus, a town of the Thessalian Achaeia, situated near the Gulf of Pagasea, in a tract sometimes called the Athamanian plain, his guides described to him the rites belonging to the temple of the Laophytian Jupiter, an epithet equivalent to that under which Phrixus is described. The sacrifice fulfilled the rite at this same day, as the god who had favoured his escape. (Zervos Φιλότοσ.—Müller, Orchemus, p. 164.) The eldest among the descendants of Phrixus was forbidden to enter the council-house at Alus, though their ancestor Athamas was the founder of the city. If the head of the family was detected on the forbidden ground, he was led in solemn procession, covered with garlands, like an ordinary victim, and sacrificed. Many of the devoted race were said to have cut their throats, to avoid this danger, and to have fallen into the sea when they returned after a long absence. The origin assigned to this rite was, that, after the escape of Phrixus, the Achaeans had been on the point of sacrificing Athamas himself to appease the anger of the gods; but that he was rescued by the timely interference of Cytissorus, son of Phrixus, who had returned from the Colchian Εα, the land of his father's exile; hence the name given to the third month, which points to the posterity of Phrixus. This story, strange as it may sound, not only rests on unquestionable authority, but might be confirmed by parallel instances of Greek superstition; and it scarcely leaves room to doubt, that it was from this religious belief of the people, among whom the Argonautic legend sprang up, that it derived its peculiar character; and that the expedition, so far as it was the adventure of the golden fleece, was equally connected with piracy, commerce, and discovery. It closely resembled one of the romantic enterprises celebrated in the poetry of the middle ages, the object of which was imaginary, and the direction uncertain. And so Pindar represents it as undertaken for the purpose of bringing back, with the golden fleece, the soul of Phrixus, which could not rest in the foreign land to which it had been banished.—But the tradition must also have had an historical foundation in some real voyages and adventures, without which it would scarcely have arisen at all, or become so generally credited. The voyage of the Argonauts must no doubt be regarded, like the expedition of the Tyrian Hercules, as representing a succession of enterprises, which may have been the employment of several generations. And this is perfectly consistent with the manner in which the adventurers are most properly described. They are Minyans, a branch of the Greeks, distinctly traced by their situation, not perhaps without some influence from the example and intercourse of the Phoenicians, to maritime pursuits. The form which the legend assumed was probably determined by the course of their earliest naval expeditions. They were naturally attracted towards the northeast, first by the islands that lay before the Hellespont, and then by the shores of the Propontis and its two straits. Their successive colonies, or spots signalized either by holiness or peaceful transactions, would become the landing-places of the Argonauts,—If, however, it should be asked, in what light the hero and heroine of the legend are to be viewed on this hypothesis, it must be answered that both are most probably purely ideal personages, connected with the religion of the people to whose poetry they belong. Jason was perhaps no other than the Samothracian god or hero Jason, whose name was sometimes written in the same manner, the favourite of Ceres, as his namesake was of Juno, and the protector of mariners, as the Thessalian hero was the chief of the Argonauts. Medea seems to have been originally another form of Juno herself, and to have descended, by a common transition, from the rank of a goddess into that of a heroine, when an epithet had been mistaken for a distinct name. The Corinthian tradition claimed her as belonging properly to Corinth, one of the principal seats of the Minyan race. The traditional scenes, which rendered her story there so celebrated, were commemorated by religious rites, which continued to be observed until the city had fallen into decay. According to the local legend, she had not murdered her children; they had been killed by the Corinthians; and the public guilt was expiated by annual sacrifices offered to Juno, in whose temple fourteen boys, chosen every twelvemonth from noble families, were appointed to spend a year in all the ceremonies of solemn mourning. The historical side of the legend seems to exhibit an opening intercourse between the opposite shores of the Hellespont; after the Labors of Heracles, when, however, it began to be feared that, near the northern Greeks, it was probably not long confined to them, but was early shared by those of Peloponnese. It would be inconsistent with the piratical habits of the early navigators to suppose, that this intercourse was always of a friendly nature; and it may therefore not have been without a real ground that the Argonautic expedition was sometimes represented as the occasion of the first conflict between the Greeks and the Colchians. (Oxyrhyn. Frag. 1, p. 142, seqq.—Müller, Orchemus, p. 258, seqq. —Id. ibid., p. 302, 357. —For other, but far less satisfactory theories on the subject, consult Bryant's Mythology, vol. 3, p. 362, seqq.—Ritter, Vorhalle, p. 420, seqq.—Knight, Inquir. &c. § 220, Class. Journ., No. 53, p. 75.—Plass, Vor- und Urgeschichte der Hellenen, vol. 1, p. 414, seqq. ) Apollonius Rhodius gives another account, equally improbable. He says that they sailed at the Enixe up one of the mouths of the Danube, and that Absyrtus pursued them by entering another mouth of the river. After they had continued their voyage for some leagues, the waters decreased, and they were obliged to carry the ship Argo across the country to the Adriatic, upward of 150 miles. Here they met with Absyrtus, who had pursued the same measure, and conveyed his ship in like manner over the land. Absyrtus was immediately put to death; and soon after, the beam of Dogma (col. Argo) gave an oracle, that Jason should never return home if he was not previously purified of the murder. Upon this they sailed to the island of Εα, where Circe, who was the sister of Εettes, expiated him without knowing who he was. There is a third tradition, which maintains, that they returned to Colchis a second time, and visited many places of Asia. A. ARGONAUTS (sing. *naut., and Auct., masc. plur.) I. the capital of Argolis, situate on the river Inachus, and generally regarded as the most ancient city of Greece. (Diec. Sic., 1, 17.) Its early prosperity and commercial connexion with the Phoenicians are
ARGOS.

attested by Herodotus (1, 1). The walls of the city were constructed of massive blocks of stone, a mode of building which was generally attributed to the Cyclopes (Euripides, Troad., 1087. — Id., Herc. Furr., 15), but which evidently shows the Pelasgic origin of the place. It was also protected by two citadels, situated on towersing rocks, and surrounded by the sea on three sides. The main citadel, and the smaller one, were named Larissa. (Strabo, 370.—Livy, 34, 25.) In the time of Strabo, Argos was inferior only to Sparta in extent and population, and from the description of Pausanias, it is evident that, when he visited this celebrated town, it was adorned with many sumptuous buildings and noble works of art. Argos produced some of the first sculptors of Greece, among whom were Ageladas, the master of Phidias, and Psiax, the father of Phidias.

In the time of Strabo, Argos was inferior only to Sparta in extent and population, and from the description of Pausanias, it is evident that, when he visited this celebrated town, it was adorned with many sumptuous buildings and noble works of art. Argos produced some of the first sculptors of Greece, among whom were Ageladas, the master of Phidias, and Psiax, the father of Phidias. These sculptors worked at Argos, and their works were preserved in the city. (Strabo, 371.) At that time the whole of what was afterward called Argolis acknowledged the authority of one sovereign; but, after the lapse of two generations, a division took place, by which Argos and its territory were allotted to Acrisius, the lineal descendant of Danaus, while Tiryns and the maritime country became the inheritance of his brother Perseus. A third kingdom was subsequently established by Perseus, son of the former, who founded Mycenae; but these were all finally reunited in the person of Ateus, son of Pelops; who, having been left regent by his nephew Eurytheus, during his expedition against the Heraclidae, naturally assumed the sovereign power after his death. Ateus thus acquired, in right of the houses of Pelops and Perseus, which he represented, possession of nearly the whole of Peloponnesus, which ample territory he transmitted to his son Agamemnon, who is called by Homer sovereign of all Argolis and the islands. (Il., 2, 107.—Thucyd., 1, 9.—Strabo, 372.) After the death of Agamemnon the crown descended to Orestes, and subsequently to his son Tisamenos, who was forced to evacuate the throne by the invasion of the Dorians and Heraclidae eighty years after the siege of Troy. (Pausan., 2, 18.) Telemus, the lineal descendant of Hercules, now became the focus of a new dynasty; all the Argives, having acquired a taste for luxury, curtailed so much the power of their sovereigns as to leave them but the name and semblance of kings: at length, having disposed Melas, the last of the Temenid dynasty, they changed the constitution into a republican government. (Pausan., 2, 19.) As regards the inward organization of this government, we only know, that in Argos, a senate, a college of eighty men, and magistrates, stood at the head. In the time of the Achæan league the first officer of the state appears to have been elected by the people. (Liv., 32, 25.) The Argives, after the establishment of their republican form of government, were engaged in frequent hostilities with the Spartans, each people claiming the possession of the small district of Cynuria. In the reign of Cleomenes, king of Sparta, the Argives met with a total defeat, and Argos itself was only saved from the enemy by the daring courage of a female, Teleilla, who incited the rest of the inhabitants and her own sex, to take up arms in defence of their city. (Pausan., 2, 20.) Subsequently, however, the slaves of Argos, taking advantage of the enfeebled state of the country, openly rebelled, and, overturning the existing government, retained the sovereign power in their own hands, till the sons of their former masters, arriving at the age of manhood, expelled them from the city. It was partly owing to these internal commotions, and partly also to the jealousy which subsisted between the Argives and the Lacedæmonians, that the former took no part in the Persian war. Not long after the termination of this war, the Argives, after having routed the enemy by a body of horse chosen by lot, and sent by their leader, who had distinguished himself at Thermopylae, made war upon that people, and, after taking Mycele, finally destroyed that city, B.C. 468. (Diod. Sic., 11, 65.—Pausan., 2, 16.) At a subsequent period, we find the Argives uniting with the Athenians, Corinthians, and other powers against the Spartans. The judicious measures, however, pursued by King Agis and the Spartan allies, frustrated the operations of their Argive foes, and had the Lacedæmonian king pressed his advantage, the latter must have been totally routed. The following year, the hostile armies met in the plains of Mantinea, where a decisive battle was fought, which ended in the total defeat of the Argives and their allies. This event dissolved the confederacy against the Lacedæmonians; and the Argives not only made peace with that people, but were even persuaded by them to convert their lithero democracy into an aristocracy. (Pausan., 3, 4, 10; Strabo, 3, 6, 55.) Not long after, however, a counter-revolution took place, when the people revolted, and, after overpowering the oligarchical party, entered once more into an alliance with Athens. Having obtained the assistance of that power, they now erected long walls, extending from the city to the sea, which ensured to them a constant communication with their allies by means of that element. (Thucyd., 6, 52.) The Argives, induced by great desire for the interest which Alcibiades had taken in their affairs, joined the Sicilian expedition (Thucyd., 6, 29); and, even after the disastrous termination of that enterprise, they continued to support the Athenian cause, till the defeat they sustained near Miltiades obliged them to recall their forces. Argos, adhering to the principle of opposing the grandarmizement of Sparta, joined the league which was afterward set on foot against that power by the influence of some states, which had obtained the help of the Nemeans, Coronea, and the other engagements which took place during what is usually termed the Corinthian war, which was concluded by the peace of Antalcidas. On the renewal of hostilities between the Boetians and Lacedæmonians, the Argives again joined the former, and fought at the battle of Mantinea. (Xen., Hist. Gr., 7, 5.) After this period, no event of interest or importance occurred in the history of Argos until the unsuccessful attempt made to surprise and capture that city by Pyrrhus. This prince, being then at war with Antigonus Gonatas, whom he had driven from Macedonia, having failed in the enterprise he meditated against Sparta, marched rapidly on Argos, which he reached during the night, and had already penetrated into the town, when succors arrived from Antigonus. Pyrrhus being slain, his troops were all destroyed or made prisoners. (Pit., Vit. Pyrrh.—Pausan., 1, 13; Strabo, 3, 77.) Argos, like other Peloponnesian states, became afterward subject to the domination of a tyrant; but when, by the talents and energy of Aratus, Corinth and Sicyon had been emancipated, Aristocles, who then reigned in Argos, voluntarily abdicated his authority, and persuaded the Argives to join the Achæan league. (Polyb., 2, 44.) During the momentary success obtained by Cleomenes, Argos fell to the hands of the Achæans, and continued to form part of their confederacy till its final dissolution by the Romans. (Polyb., 2, 52, seqq.—Strabo, l. c.) The population of Argolis was divided into three classes, consisting of citizens, inhabitants of the country, or epalchoi, and
ARGOS.

ARGOS. slaves or vassals, called γυμνίτες. (Aristot., Rep., 5, 2, 8.—Pollux, 3, 83.) The number of the first class might amount to 16,000, nearly being equal to that of the Athenian citizens. (Lys., ap. Dion. Hal., p. 531.) The free part of the population may therefore be estimated at 65,000 souls, to which, if we add the _epatoi_ or slaves, we have the aggregate of nearly 110,000 persons. (Clinton's Fasti Hellenic, 2d ed. vol. 1, p. 426.—Cramer's Ancient Greece, vol. 9, p. 226, seq.)—II. Pelasgicum, a city of Thessaly, of Pelasgic origin, as its name indicates. It is generally supposed to have been identical with Larissa on the Peneus. Strabo (440) informs us that there was once a city named Argos close to Larissa. (Compare Heyne, ad L., 6, 457.)—III. Oresticum, a city of Macedonia, forming a district Orestis and territory of the Orestis. Its foundation is ascribed to Boreas. (Pherexy, ap. Orestes, son of Agamennon. (Strabo, 326.—Compare Theag. Maced., ap. Steph. Byz., s. v. Opéraei, et _Argos._)—IV. A city of Acarnania, situate at the southeastern extremity of the Ambracian Gulf, in the territory of the Amphiochi. It was founded, as Thucydidcs reports (2, 68), by Amphilocho, son of Amphiatous, on his return from Troy, who named it after his native city, the more celebrated Argos of Peloponnesus. It was, however, according to the genuine (326), gave a somewhat different account, affirming that Argos in Acarnania owed its origin to Alcmen, by whom it was named Amphilochoiun, after his brother Amphilocho. (Compare Apollod., 3, 7.—Dioecarch., Stat. Græc., v. 46.) Argos was originally by far the largest and most powerful town of the country; but its citizens, having experienced many calamities, admitted the Ambraciotes, their neighbours, into their society, from whom they acquired the knowledge of the Greek language, which was previously unknown to them. The Ambraciotes, however, at length gaining the ascendency, proceeded to expel the original inhabitants, who, too weak to avenge their wrongs, placed themselves under the protection of the Acarnanians. These, with the aid of the Athenians, commanded by Phormio, recovered Argos by force, and reduced to slavery all the Ambraciots who fell into their hands. The Ambraciots made several attempts to retrieve their loss by discovering the Argives as slaves. It is thereupon referred to this we find Argos, together with Ambracia, in the possession of the Ætolians; and, on the surrender of the latter town to the Romans, we are informed by Livy, that the consul M. Fulvius removed his army to Argos, where, being met by the Ætolian deputies, a treaty was concluded, subject to the approbation of the senate. (Liv., 38, 9.—Polyb., fragm., 22, 13.) Argos, at a later period, contributed to the formation of the colony of Nicopolis, and became itself deserted. The ruins of the city have been visited by several travellers, but Dr. Holland's account is perhaps the most circumstantial. He describes them as situated at the southeastern extremity of the Gulf of Arta, on one of the hills which form an insulated ridge running back in a southeast direction from the bay. The walls, forming the principal object in these ruins, skirt along nearly the whole extent of the ridge, including an oblong irregular area, about a mile in its greatest length, but of much smaller breadth. The structure of these walls is Cyclopian; they are of great thickness, and on the eastern side, where built with the most regularity, are still perfect to the height of more than twenty feet. (Holland's Travels, vol. 2, p. 224.—Cramer's Ancient Greece, vol. 3, p. 10, seq.)

Argus, 1. a son of Aeetor, according to one account (_Aeschin., ap. Apollod., 2, 1, 9_), and hence called by Ovid _Aretoridas._ (Met., 1, 624.) Others, however, make him a son of Tetrarchus. (Porph., ap. Eupor.) Acusilaus and Æschylus (Supp., 318.—Prom. V., 698) call him Earth-born. He was named All-seeing (πανοπτης), as having eyes all over his body (Apollod., l. c.). Ovid, however, gives him the poetical number of a hundred, of which only two were asleep at a time. (Met., 1, 625.) The strength of Argus was prodigious: and Arcadia being at the time infested with a wild bull, he attacked and slew the animal, and afterward wore its hide. He also killed a satyr, who carried off his herd of cattle with the greatest cunning, when he found the Echidna (the daughter of Tartarus and Earth) asleep, he deprived her of life. When Io had been changed into a cow, Juno gave the charge of watching her to Argus. He thereupon bound her to an olive-tree in the grove of Mycena, and kept guard over her. Jupiter, pitying her condition, sent Mercury to steal her away; but a vulture always gave Argus warning of his projects, and the god found it impossible to succeed. Nothing but a thunderbolt, which he risked, killed Argus with a stone, and hence obtained the name of _Argus-slayer_, or _Argicleides_ (Ἀργικλείδης). Thus far Apollodorus. Ovid, however, varies the fable in several particulars, and, among other things, makes Mercury to have slain Argus with a _harpè_, or short curved sword. According to the same poet also, Juno transferred the eyes of Argus, after death, to the tail of her favourite bird the peacock.—An explanation of the whole legend will be found in the _Ovid., Met._ and _Metamorph._—IV. A town near Larissa, founded by the Argives during their existence as a confederacy. (Heyne, ad loc.)—V. A town in Macedonia, founded by Philip of Macedon (IV.). Both he and this latter were in the number of the Argonauts. (Consult the remarks of Burman in the list of the Argonauts appended to his edition of Valerius Flaccus, s. v. Argus.)—IV. Son of Phrixus and Chalicleo daughter of _Eïetes_. He is often confounded with the preceding, for example by Apollodorus (1, 9, 16) and Pherexydes (ap. Schol. ad Apoll. Rh., 1, 4). He and his brothers were found by the Argonauts that they were the children of _Eïetes_ and _Amethystus_. When _Eïetes_ was slain on a storm when on their way to Greece to claim their father's kingdom; and he guided the Argonauts to Colchis. (Schol. ad Apoll. Rh., 2, 309, 384.) Valerius Flaccus, on the other hand, makes the Argonauts to have found Argus in Colchis, at the palace of _Eïetes_ (5, 461), and with this the account of the pseudo-Orpheus substantially agrees (v. 586, seqq.). Compare the remarks of Burman, as cited in the previous paragraph (III.).—V. A guest of Evander's, who conspired against that monarch, and was slain in consequence by the followers of the latter without his knowledge. The spot where he was interred was called, according to some, Argileum. (Vid. Argileum.—Virg., _En._, 8, 345.—Serv., ad loc.)—VI. A hound of _Ulysses_, that recognised its master after an absence on the part of the latter of nearly twenty years. (Od., 17, 301.)

ARGYRAPODÆS, a name given to the troops of Alexander, from the silver plates added by him to their wicker shields about to invade India. (Compare Quintus Curtius, 8, 5, 4, and Justin, 12, 7.) There is some doubt whether the name in question was confined to a particular corps of Alexander's invading army or to the whole. The latter opinion appears to be the more correct one. (Consult on this point the remarks of Schmieder, ad Curt., 4, 13, 27, and 8, 3, 4.)

ARGYTRA, a town of Achaea, a little to the south of the southeast of Patra. The river Selenus flowed in its vicinity, and near it also was the fountain of Argys. (Pausan., 7, 23.)—II. A sea-nymph, of whom Scelemus, a young shepherd, was enamoured. She eventually slighted...
his love, and he piloted away until Venus changed him into a river. The Selemus thereupon, like the Alpheus in the case of Arctous, sought to blend its waters with those of the fountain Argyra, over which the inconstant nymph presided. According to another legend, however, Venus, again moved with pity, exerted her divine influence on him by causing him to forget his love for Ariadne. The waters of the Selemus became, in consequence, a remedy for love, inducing oblivion on all who bathed in them. (Pausan., 7, 23.)—III. A name given by the ancients to the silver region of the East, and the position of which tract of country varied with the progress of geographical discovery. At first Argyra was an island immediately beyond the mouths of the Indus. When, however, under the first Ptolemies, the navigation of the Greeks extended to the Ganges, the Minotaur island was placed near this latter stream. Afterward another change took place, and Argyra, now no longer an island, became part of the region occupied in modern times by the kingdom of Arracan. (Iol., 7, 2.—Gossellin, Recherches, &c., vol. 3, p. 280.)

ARGYRIPS, the more ancient name of Arpi. (Vid. Arpi.)

Ari, the name given: to a country of large extent, according in some degree to the present Khorsain. It comprised several provinces, and was bounded on the west by Media, on the north by Hyrcania and Partia, on the east by Bactria, and on the south by Carmania and Gedrosia. The capital was Artacoana, now Herat. From Aria, however, in this acceptation of the term, we must carefully distinguish another and much earlier use of the name. In this latter sense the appellation belongs to a region which formed the primitive habitation of the Medes and Persians, and very probably of our whole race. It appears to indicate a country where civilization commenced, and where the rites of religion were first instituted. In the Schahnameh it is called Erwan (i. e., Ariman), and in the Zend books Iran or Iran (i. e., Arian). Its position would appear to coincide in some degree with that of ancient Bactia, though some writers, Rhode for example, make it include a much wider tract of country. The name of Arii, given to its early inhabitants, is said by Bohlen to be equivalent to the Latin "sene-rantio," and reminds us (with the change of the liquid into the sibilant) of the far-famed Asia, who play so conspicuous a part in the early Asiatic as well as in the Scandinavian mythology. From these data we may account for the statement of Herodotus (7, 62), that the Medes were anciently called Arii (Aripoi, or Aretes). The priestess under this name was the princess of Sagdiana a people whom he calls Arii (Aripoi). Diodorus Siculus (1, 94) makes mention of another under the name of Arimasp (Arapaspo), where we ought to read Ariaspis (Arapaapoi), or else Ariani (Apapawoi). He also speaks of their lawgiver Zathras, meaning evidently Zoroaster (i. e., Zeretosch- tre)—Consult on this curious subject the following authorities: Von Hammer (Wien. Jahrh., vol. 9, p. 383.—Ritter (Friedlander, vol. 2, p. 91.—Vorhalle, p. 309.—Anquetil (Mém. de l’Acad. des Inscr., vol. 31, p. 376)—Bohlen (De Orig. ling. Zend., p. 51.)

ABORDE, an officer in the army of Cyrus the Younger, the next in command to that Prince over the Asiatic portion of his forces. After the battle of Cumax, the Greeks in the army of Cyrus offered to place him on the throne of Persia, but he declined it, and went over to Artaxerxes with his troops. (Xen., Anab., 1, 8, 3.) The Eton MS. has 'Aparatos (Aristias) in place of 'Arapaipos (Ariaspis). The copyist intended, perhaps, to write 'Apaipos (Ariaspis), as Diodorus Siculus (14, 22) has it. (Compare Wesseling, ad Diod., l. c., and Sturz, Lex. Xen., vol. 1, p. 395, s. v. 'Aparato.)

ARIANDRE, a king of Scythia, who, in order to ascertain the number of the Scythians, commanded each of his subjects, on pain of death, to bring him the point of an arrow. So great a number was collected, that, resolving to leave a monument of the act, he caused a large bowl of brass to be made out of them, and dedicated this in a spot of land between the Borysthenes and the Hypanis, called Exampsus. (Herodot., 4, 81.)—Ritter ascribes this work to an early Cimmerian, or Buddhist colony, migrating from India to the countries of the West. He sees in the name Ariandas, moreover, a reference to Ariana, that is, the land of our species, and the native country of the Buddhist faith. In confirmation of his opinion, he indulges in some very learned and curious speculations concerning the early usage, among both Greeks and barbarians, of consecrating colossal bowls or caldrons to the sun. (Vorhalle, p. 314, seqq.)

ARIARATHES, a name common to many kings of Cappadocia. They appear to have been originally bearing more than satrapes. The names preserved by Photius (Cod., 244, p. 1157), were descended from one of the seven conspirators who slew the false Smerdis. This Persian nobleman was named Anaphus, and his grandson Datames was the first sovereign of the Cappadocian dynasty. After him and his son Ariannes, we have a long list of princes, all bearing the name of Ariarathes.
ARIARATHES.

ARI

for several generations. (Compare Clinton's Fasti Hellenici, vol. 2, Appendix, p. 429.) Although, however, the governors or satraps of Cappadocia held their government in hereditary succession, and are dignified by Diodorus with the title of kings, yet they could claim no such name. Their title, however, like that of some of the their ancestors, was derived from their authority till the death of Seleucus, the last of the successors of Alexander, in January, B.C. 281, removed the power by which the whole of western Asia was commanded. (Clinton, l. c.)—I. The first of the name was son of Ariannes. He had a brother named Holophernes, whom he advanced to the highest offices in the kingdom, and who commanded the auxiliaries that were sent from Cappadocia when Ochus made his expedition against Egypt. B.C. 350, Holophernes acquired great glory in this war, and on his return home lived in a private station, leaving two sons at his death, Ariarathes and Aruses. Ariarathes, the reigning monarch, having no children of his own, adopted the former of these, who was also the elder of the two. Ariarathes was on the throne when Alexander invaded the Persian dominions, and he probably fled with Darius, since we learn from Arrian that the Macedonian phalanx, which had entered Cappadocia against the battle of Issus (Exp. Alex., 2, 4, 2.) After the death of Alexander, Ariarathes, then at the advanced age of eighty-two, attempted to recover his dominions, but he was defeated by Perdiccas, the Macedonian general, and, being taken, was put to a most cruel death. (Diod. Sic., Exc., 18, 10.—Arrian, ap. Phot., Cod., 92, p. 217.)—II. The second of the name was the son of Holophernes, and was adopted by his uncle Ariarathes I. He recovered Cappadocia after the death of Eumenes, and during the contest between Antigonus and the other Macedonian chiefs. He was aided in the attempt by Ardotus, king of Armenia, who furnished him with troops. This Ariarathes transmitted the crown to his son Ariamnes. (Diod. Sic., ap. Phot., l. c.)—III. The third of the name was the son of the preceding Ariannes, and his successor on the throne. Nothing more is recorded of him, except that on his death he left a son of the same name in his infancy. (Diod. Sic., ap. Phot., l. c.)—IV. The fourth of the name, son of the preceding by Stratonice daughter of Antiochus Theos, was a child at his accession. He married the daughter of Antiochus the Great, a union that involved him in a political alliance with that sovereign, and consequent hostility with the Romans. He was saved from dethronement after the battle of Magnesia by a timely and convincing appeal to the pro-Macedonian party in that city, and the payment of 600 talents. Soon after we find him allied to Eumenes, king of Pergamus, who married his daughter; and by means of this monarch he was admitted to the favour and friendship of the Romans. (Liv., 38, 39.) He was also the ally of Eumenes against Pharmaces, B.C. 183-179. After a reign of nearly fifty-eight years he transmitted his crown to his son Ariarathes V.—V. The fifth of the name was prince to whom an account is given of his life. He was dethroned by Demetrius Soter, king of Syria, who brought forward Holophernes, the suppositional son of Ariarathes IV. Being driven from his kingdom, he took refuge with the Romans, by whom he was restored; in which restoration Attalus II., of Pergamus, assisted. According to Appian (Bell. Syr., 47), the Romans appointed Ariarathes and Holophernes to reign conjointly. This joint government, however, did not last long, for in the fifth year afterwards (B.C. 154) Appian describes Ariarathes as sole king. (Polyb., ap. Athen., 10, p. 440, b.—Id., 33, 12.—Id., fragm. Vat., p. 440.) In return for this service he devoted himself to the interests of the Romans, and fell in the war they were carrying on against Antonicus, the pretender to the throne of Pergamus. (Justin, 37, 1.) He left six sons, five of whom were murdered by his wife, the cruel and ambitious Laodice. (Justin, l. c.)—VI. The sixth of the name was the only one of the sons of Ariarathes V. that escaped the cruelty of his mother Laodice. He married the daughter of the celebrated Mithradates, which female also bore the name of Laodie. Mithradates, having ascended the throne assassinated by an illegitimate brother, upon which his widow Laodice gave herself and kingdom to Nicomedes, king of Bithynia. Mithradates made war against the new king, and raised his nephew to the throne. The young king, who was the seventh of the name of Ariarathes, made war against the tyrannical Mithradates, by whom he was assassinated in the presence of both armies, and the murderer's son, a child of eighteen, was elected king. The Cappodocians revolted, and made the late monarch's brother, Ariarathes VIII., king; but Mithradates expelled him, and restored his own son. The exiled prince died of a broken heart; and Nicomedes of Bithynia brought forward a boy, tutored for the purpose, who he pretended was a third son of Ariarathes VI. Laodice aided the deception, and the boy was sent to Rome to claim his father's kingdom. The Cappodocians, however, set up a king of the name of Arsiannes, to be elected king by the people. (Justin, 38, 1.)—VII. The ninth of the name was brother and successor to Ariobarzanes II. (Clinton makes him his son.) He was deposed and put to death by Antony, in the consularship of Gallienus and Nerva, B.C. 36, after having reigned about six years. Archelaus, son of Gephyra, was appointed in his stead. (Dio Cass., 49, 32.—Id., 49, 24.—Val. Max., 9, 15, 2, extern.) Archelaus is called Sicynmes by Appian. (Bell. Civ., 5, 7.— Consult Schnei. ad loc.)

Ariëtia, a city of Latium, a little to the west of Lanuvium. According to Strabo (239), Ariëtia was situated on the Appian Way, but its citadel was placed on the hill above. The origin of this city, which was apparently as ancient as any in Latium, is enveloped in too great a mythological obscurity to be now ascertained. Some have ascribed its foundation to a chief of the Siculi (Solins, c. 13); others to Hippolytus, who, under the name of Viribus, was worshipped in common with Diana in the neighbourhood of this town. (Virg., Em., 7, 774.) The name of Ariëtica often occurs in the history of Rome, and as early as the reign of Tarquinius Superbus. It must have been no mean city to merit the splendid character which Cicero gives of it in the third Philippic. What rendered this city, however, more particularly celebrated throughout Italy, was the custom of Diana, who decreed to people, grove, and lake lay at no great distance from thence. The latter is now known by the name of La-go di Nemi. Strabo tells us (239) that the worship of Diana resembled that which was paid to the same goddess in the Tauric Chersonese; and that the priest of the temple was obliged to defend himself by force of arms against all who aspired to the office; for whoseover could slay him succeeded to the dignity. This barbarous custom, which is mentioned by Pliny and Caligula (Suet., Vit. Calig., 35.—Cramer's Anc. Ital., vol. 2, p. 31.)

Aricina, a surname of Diana, from her temple near Aricia. ( Vid. Ariëtica.)

Arideoes, I. a commander in the army of Cyrus the Younger, otherwise and more correctly called Ariues. (Vid. Ariues.)—II. A natural son of Philip of Macedon, and Philippa a female dancer and courte- sian. He was sent by the King of Larissa, to make a promise of ability, that Olympias, fearing lest he might one day deprive Alexander of the crown, stuffified him by means of secret potions. After the death of Alexander, he was chosen to succeed that monarch, with the proviso that, if Roxana, who was then pregnant, should be delivered of a son, a portion of the kingdom should be given to the latter. As the weak-
ness of mind under which Aridaeus laboured unvisited him for rule, Perdiccas, as protector, exercised the actual sway. He reigned seven years, under the title of Philip Aridaeus, and was then put to death with his wife Eurydice by Olympias.—The more accurate form of the name is Arhidaios, from this Aridaeus, Aridaios.

The king, however, is Aridaeus (Justin. 13, 2, 11.—Id., 13, 3, 1.—Id., 14, 5, 10.—Quint. Curt., 10, 7, 2.—Diod. Sic., 17, 2.—Id., 18, 3.—Arrian, ap. Phot., Cod., 92.)

Ar. Vid. Aria.

Arima (אִירָמָא דֹּרְקָא, Arimi Montes), a chain of mountains, respecting the position of which ancient authorities differ. Some place it in Phrygia (Diod. Sic., 9, 46, 12), others in Lydia, Asia, Cilicia, or Syria. They appear to have been of volcanic character, from the fable connected with them, that they were placed upon Typhæus or Typhon.

(Hom., II., 2, 783.) Those who are in favour of Phrygia, Lydia, or Asia, refer to the district called Cataceacumene (Κατακεακεαμενή), as lying parched with subterranean fires. Those who decide for Cilicia or Syria agree in a manner among themselves, if by the Arimi as a people we mean the Arami who were the forefathers of the Amorites.

(Compare Heyne, ad Hom., II., 2, 783, and consult remarks under the article Ariname.)

Arimaspi, a people of Scythia, who, according to Herodotus (3, 116, and 4, 27), had but one eye, and waged a continual contest with the griffins (εἶδος Γρύφης), that guarded the gold, which, according to the same writer, was found in vast quantities in the vicinity of this people. The name is derived by him from two Scythian words, Arima, one, and Spu, an eye. (Compare Eschyl. Prom. V., 809, seqq.—Mela, 2, 1, 15—Plin., 4, 26.—Dionys. Perieg., 31.—Philost. Vit. Soph., vol. 2, p. 584, ed. Orell.). Modern opinions, of course, vary with regard to the origin of this legend. De Guignes (Mem. de l’Acad. des Inschr., vol. 35, p. 592) makes the Arimaspies to have been the Hseng-mou, of whom the Chinese historians speak, and who were situate to the north of them, extending from the river Irtisch, in the country of the Calmuses, to the confines of eastern Tartary.

Reichard (Thes. Top., p. 17) contends, that the name of the Arimaspies is still preserved in that of Arimaschewa Kaita, in Asiatic Russia, in the Government of Perm. Rennell (Geogr. Herod., vol. 1, p. 178) places this people in the region of Mount Altai, a tract of country containing much gold, the name Altai itself being derived from the Sanskrit Amla, a species of grass, which signifies gold in the Mongul, and Calmuc tongues. With this opinion of Rennell the speculations of Völkner agree. (Myth. Geogr., vol. 1, p. 193, seqq.) Wahl also places the Arimaspies in the regions of Altai, and speaks of a people there whose heads are so enveloped against the cold as to leave but one opening for the vision, whence he thinks the fable of a one-eyed race arose. (Ostind., p. 400.) Ritter transfers the Arimaspies, according to him, from near the mouth of the Oxus, to the southern bank of the Oxus, in ancient Bactria, making them a noble and warlike tribe of the Medes or Cadusii. (Vorhalle, p. 282, seqq., 305.) Halling refers the term Arimaspian to the steel-mounted forefathers of the German race before the migrations of this people into Europe, and he deduces the name from the Persian Arim and esp, the latter of which words means a horse. (Wien. Jahrb., 69, p. 190.) Rhode, on the other hand, makes Arimaspian the Zend term, though his explanation of it, "a mounted native of Ar" approaches that of Halling, esp in Zend meaning "a steed." (Hegate Sage, &c., p. 66, seqq.)

The etymology assigned by Herodotus to the word in question, and which is given at the commencement of this article, is now justly regarded as of no value whatever, and decidedly erroneous, unless, with Gatterer, we consider the words which form the derivation in the Greek text to be a mere interpolation. (Comment. Soc. Göt., 14, p. 9.)

Arimaspas, a river of Scythia with golden sands, in the country of the Arimaspis. (Vid. Arimasp.)

Arimaspi, a people of Phrygia, Asia, Cilicia, or Syria. (Vid. Arima, towards the close of this article.)

Ariminus, a city of Umbria in Italy, at the mouth of the river Ariminus, not far to the southeast of the Rubicon. It was founded by the Umbri, and afterward inhabited partly by them and partly by the Pelasgi. It was taken by the Galil Senones. The Romans sent a colony to it A.U.C. 485. From this time Ariminum was considered as a most important teritorial boundary of Italy, as the route to the eastern coast; hence we generally find a Roman army stationed there during the Gallic and Punic wars. (Polib., 2, 23.—Id., 3, 77.) In this place Caesar is said to have harangued his troops, after having crossed the Rubicon; and here the tribunes of the commons, who were in his interest, met him. It is now called Rimini. (Cramer’s Anc. Italy, vol. 1, p. 255.)

Arimasp, a river of Italy, rising in the Apennine mountains, and falling into the Tyrrhenian Sea. (Vid. Arimines.

Ariobarzanes I., a nobleman of Cappadocia, elected king after the two sons of Ariarathes VI. had died. He was expelled by Mithrdates, but was restored by Sylla, B.C. 92. He was again expelled in B.C. 88, and restored at the peace in B.C. 84. His kingdom, however, was again occupied by Mithrdates in B.C. 66. He was restored by Pompey, and resigned the kingdom to his son. (Cic. pro Leg. Man., c. 2—Id. ibid., c. 5.—Appian, Bell. Mithr., c. 105.—Id., Bell. Civ., 1, 103.—Val. Max., 5, 7, 2, extern.) The second of the name, son of the preceding, and surnamed Eusebes and also Philorhoeus. He supported Pompey against Caesar. (Appian, Bell. Civ., 2, 71, where he is called by mistake Ariarathes.) The latter, however, forgave him, and enlarged his territories. He was slain, B.C. 45, by Cassius. (Dio Cass., 47, 53.—Appian, Bell. Civ., 4, 63.—Clinton, Fast. Hell., vol. 2, p. 437.)—III. A name common to some kings, or, more correctly speaking, satraps of Pontus. Ariobarzanes I. is alluded to by Xenophon (Cyrop., 8, 8, 4) as having been betrayed by his son Mithrdates into the hands of the Persian monarch. (Consult Aristot. Politi., 5, 10, and compare Schneider, ad Xen., l. e.) The second of the name, succeeded the Mithrdates mentioned in the preceding paragraph, B.C. 363, and was probably twenty-six years. In the course of this reign he engaged in rebellion against Artaxerxes, B.C. 362. (Diod. Sic., 15, 90.) Mention is made of him by Nepos, in his account of Datames (c. 2.—Ib., c. 5), and he is there called governor of Lydia, Ionia, and the whole of Phrygia. (Compare Clinton, Fast. Hell., vol. 2, p. 421.)—V. The third of the name, succeeded Mithrdates III. He began to reign B.C. 266. This prince, as we learn from Mommert, A.D. 27, was the son of Artaxerxes, and derived from the country, in conjunction with the Gallo-Gracchi, or Galatia, lately arrived in Asia Minor, an Egyptian colony sent by Ptolem. (Apollod., ap. Steph. Byz., s. v. Ἀγγαῖος.) He was succeeded by his son Mithrdates IV., who was a minor when his father died. (Clinton, Fast. Hell., vol. 2, p. 424.)—VI. A Persian commander, who bravely defended against Alexander the Great the passage in the mountains of Susis (Livy, Hist. 71, 65.—Quint. Curt., 5, 3, 17.—Conre. Wescell., ad Diow, loc. cit.)

Ariion I., a famous lyric poet and musician of Methymna, in the island of Lesbos. His age is stated by Suidas as Olymp. 38; by Eusebius, Olymp. 40 (i.e. 628 or 620 B.C.). Though by birth a Methymnian, and probably a disciple of Terpander, Ariion chiefly
lived and wrote in the Peloponnesus, among Dorian traditions. It was at Corinth, in the reign of Periander, that he first practised a cyclic chorus in the performance of a dithyramb; where he probably took advantage of some local accidents and made beginnings, which alone could justify Pindar in considering Corinth as the native city of the Dithyramb. (Herod., I., 23; Schol. to Aristoph. Chrest., p. 405, ed. Psellus, &c.)—Aristotle, in his Hist. Anim., 1403.—Aristot., ap. Procl., Chrestom., p. 352, ed. Gaisf.—Pind., Olymp., 13, 18.)—A curious festival is related by Herodotus (l. c.) of this same Arion. He was accustomed to spend the most of his time with Periander, king of Corinth. On a sudden, however, feeling desirous of visiting Italy and Sicily, he sailed to those countries, and amassed there great riches. He set sail from Tarentum after this, in order to return to Corinth, but the mariners formed a plot against him, when they were at sea, to throw him overboard and seize his riches. Arion, having ascertained this, offered them all his treasure, only begging that they would spare his life. But the seamen, being inflexible, commanded him either to kill himself, that he might be buried ashore, or to leap immediately into the sea. Arion, reduced to this hard choice, earnestly desired them to allow him to dress in his richest appa- ratus, and to stand upon the poop of the ship. The mariners assented, pleased with the idea of their being about to hear the best singer of the day, and retired from the stern to the middle of the vessel. In the mean time, Arion, having put on all his robes, took his harp and performed the Orphic strain, as it was termed. At the end of the air he leaped into the sea, and the Corinthians continued their voyage homeward. A dolphin, however, attracted by the music, swam near Arion, and its bark, and took him on board. Taenarus. On reaching this place, his story was disbelieved by Periander; but an examination of the seamen, when they also arrived, removed all the monarch's suspicions about Arion's veracity, and the mariners were put to death. In commemoration of this event, a statue was made of brass, representing a man on a dolphin's back, and was consecrated at Tama- rus. Such is the story told by Herodotus. Larcher's explanation is a very tame and improbable one. He thinks that Arion, after a storm, was cast away, and then embarked in the harbour of Tarentum: that the Corinthians, without troubling themselves any farther, set sail; that Arion gained the shore, met with another vessel ready to depart, which had the figure-head of a dolphin, and that this vessel outfitted the Corinthian ship. (Larcher, ad loc.)—The solution which Müller gives is far more ingenious, though not much in accordance with the simplicity of early fable. It is as follows:—The colony which went to Tarentum under Phalanthus, sailed from Tarentum to Italy, with the rites and under the protection of Neptune. The mythic mode of indicating this was by a statue, representing Taras, the son of Neptune, and original founder of the place, seated on a dolphin's back, as if in the act of crossing the sea from Tarentum to Tarentum. This was placed on the Taranian promontory. In process of time, however, the legend ceased to be applied to Taras, and Arion became the hero of the tale, the order of the voyage being reversed; and the love of music, which the dolphin was fabled by the ancients to possess, became a means of adding to the wonders of the story. (Müller, Dorier, vol. 2, p. 359, not.—Plehn, Lesb., p. 166.)—II. A celebrated steed, often mentioned in fable, which not only possessed a human voice (Propert., 2, 25, 37), but also the power of prophecy. (Stat., Theb., 6, 424.) According to one legend, he was the gift of Neptune to Arion; to the other, he fructuously assumed the shape of a mare, in order to avoid the addresses of Neptune, who immediately transformed himself into a steed. (Pausan., 8, 25.—Apollod., 3, 6, 8.) Another account made him the offspring of Neptune and Erimmys, who had in like manner changed herself into a mare. (Schol. ad ii., 23, 346.) Others again related, that he was produced from the ground by a blow of Neptune's trident, in the contest of that deity with Minerva for the possession of Athens. (Serv. ad Vigi., Georg., 1, 12.) Eusta- thius mentions a still different origin for this fabled animal, or rather, a discrepancy, in his manner of telling a story, which the diligent reader will discover. (Eustath. ad ii., l. c.) Quintus Calaber (4, 570), from one of the Harpies and Zephyrus. Arion was trained up by Neptune himself, and was often yoked to the chariot of his parent, which he drew over the seas with amazing swiftness. (Stat., Theb., 6, 303, seqq.) Neptune gave him as a present to Copreus, king of Haliartus, in Boeotia. Haliartus bestowed him on Hercules, who distanced with him Cyneus, in the Hippodrome of the Pagasean Apollo, and the latter also made use of him in his car when contending with Cyneus in fight. From Hercules he came to Ardrastus, who was alone saved by his means from the Theban war. (Schol. ad ii., 23, 346.—Herod., Scut. Hecr., 120, seqq.—Compare Müller, Dorier, vol. 2, p. 480.)—The name of this fabled animal manifestly relates to his superiority over all other coursers ('Apelav, superior), and the legend itself is only one of the many facts of the natural history of earth and water being the cause of growth and increase in the natural world has been enveloped by the ancient mythologists. (Völkcr, Myth. der Jap., p. 165, seqq.)—Ariovistus, a king of the Germans, who invaded Gaul, conquered a considerable part of the country, and subjected the inhabitants to the most cruel and oppressive treatment. Cæsar marched against him, brought him to an action, and gained so complete a victory, that by it he took the army of Ariovistus, among whom was the king and one of the Harpies' escape. He died soon after in Germany, either of his wounds, or through chagrín at his defeat. The name is probably derived from the German words Heer, an army, and Fürst, a leader or prince. (Cass., Bell. Gall., 131, seqq.—Id. ibid., 5, 29.)—Ariisa, I. a town of Lesbo, destroyed by an earthquake. (Plin., 5, 38.) Herodotus states that it was conquered by the people of Methymna (1, 151). Compare Müller, Dorier, vol. 1 (pp. 119, 120).—II. A city of Tross, southeast of Abydus, and founded by a colony of Mytileneans, in whose island there was a town of the same name. (Vid. No. I.) Various traditions respecting the place are to be found in Stephanus of Byzantium. Homer makes mention of the place, together with the river Selleis. (Il., 2, 835.) It was here, according to Arrian (1, 12), that Alexander stationed his army immediately after crossing the Hellespont at Abydus. When the Gauls passed over into Asia, some centuries after, they also occupied Ariisa, but were totally defeated by King Prusias. (Polyb., 5, 3.) Its ruins are supposed to be those at Gangere- tca. (Walpole's Turkey, vol. 1, p. 92.—Cramer's Asia Minor, vol. 1, p. 71.)—Aristænæus, a Greek writer, a native of Nicaea. He is supposed by some to have been the same with that friend of Libanius who perished in the earthquake which destroyed the city of Nicomedia, A.D. 358, and to whom are addressed many of the letters of this sophist that remain to us. If this opinion be correct, it must be confessed that the work of Aristænæus, which we at present possess, does not justify the eulo- giums which Libanius passes on the talents of his friend: the identity of the two individuals, therefore, appears at best extremely doubtful. The only historical fact that occurs in Aristænæus seems to place him towards the close of the 1st century, and the one eulogy on the female dancer Panaretus, where it is said that she imitated the pantomime Caramallus. Now this Caramallus lived in the time of Sidonius Apollinaris, who died A.D. 484. A third view of the
subject would seem to favour the supposition that the author of the work in question never bore the name of Aristæus; this being the appellation given by the writer to the fictitious personage who is supposed to have written the first letter in the collection. And it may so have happened, that the copists mistook this name for that of the author himself. This last opinion has been adopted by Mercier, Bergler, Pauw, and Boissoneau.—The work of Aristæus is a collection of Erotic Epistles, entitled Εὐστόλοι κρατεροί. The greater part of these pieces are only, in fact, so far to be regarded as letters, as bearing a superscription which gives them somewhat of an epis- tolary form; they are, in truth, a species of tales, or exercises on imaginary subjects. In one of them, a lover draws the portrait of his mistress; in another, we have a description of the artifices practised by a cock, and, of the second, which is not complete, twenty-two. The style of Aristæus, which is almost uniformly of a declamatory character, is frequently wanting in nature and taste. It is filled with phrases borrowed from the poets. The best editions of this writer, are that of Abrusc, Ζωνίλα, 3 vols. 12mo, the third volume containing the following pieces:—and that of Boissoneau, Paris, 1822, 8vo. This latter edition is, on the whole, the better of the two. On the merits of Abrusc's edition consult the remarks of Bast, in his Specimen ed. nov. Epist. Arist., p. 9, seqq., and on those of Boissoneau's the observations of Hoffmann, Lit. Bibli., vol. 1, p. 533. (Compare Schöll, Hist. Lit. Gr., vol. 6, p. 248, seqq.) Aristæus, son of Apollo and the nymph Cyrene, was the first poet who taught the art of poetry to his mother, and brought up by the Seasons, who fed him on nectar and ambrosia, and thus rendered him immortal. According to the prediction of the centaur Chiron, as made to Apollo respecting him, he was to be called "Jove," and "holy Apollo," and "Agraeus" (Hunter), and "Nomios" (Hermes); and also Aristæus. (Pind. Pyth., 9, 104, seqq.) The invention of the culture of the olive, and of the art of managing bee-hives, is attributed to him; and (Ad Theor., 5, 63) says he was taught them by the nymphs who had reared him. Tradition also related, that one time, when the isle of Ceos was afflicted by a drought, caused by the excessive heat of the dog-days, the inhabitants invited Aristæus thither; and, on his erecting a altar to Jupiter Icmaus (the Mois- tener), the Etesian breezes breathed over the isle, and after that day, his death, he was deified by the people of Ceos. (Apoll. Rh., 2, 506, seqq.—Schol. ad Apoll. Rh., 2, 498.—Serv., ad Verg., Georg., 1, 14.) Virgil has elegantly related the story of the love of Aristæus for Eurydice the wife of Orpheus, his pursuit of her, and her unfortunate death by the sting of the serpent; on which the Nemean nymphs destroyed all his bees; and the mode adopted by him, on the advice of his mother, to stock once more his hives. (Georg., 4, 292, seqq.—Compare Ovid, Fast., 1, 363, seqq.) Aristæus married Autonoa, daughter of Cadmus, by whom he became the father of Actæon. (Keightley's Mythology, 2d ed., p. 330.) Thus much for the legend. Aristæus would seem in reality to have been an early deity of Arcadia, whence the Persians carried his worship into the island of Ceos; of Thes- saly, whence the same worship was brought to Cyrene; and finally of Bœotia, where he was enrolled in the Cadomian list of gods. He has no other bees to have been identical, originally, with Zēgō Λατοίδιαν, or to have been the god who presided over flocks and herds, over the propagation of bees, the rearing of the olive, &c. (Müller, Or- chom., p. 348.)

Aristophanes, I. a writer who composed a history of Egypt, and who lived in the third century before our era. (Plin. 36, 12.)—II. A son-in-law and nephew of His- tius, tyrant of Miletus, who revolted from Darius, and incited the Athenians and Eretrians against Persia. An expedition, planned though not commanded by him, burned the city of Sardis. This so exasperated the king, that every evening, before supper, he ordered his attendants to remind him of punishing Aristogoras. He was killed in battle against the Persians, B.C. 499. (Herodot., 5, 30.—Id., 5, 101, seqq.)

Aristander, a satyratic, native of the Island of Pa- ros, flourished about the time of the battle of Egos Potamos, in Olymp. 93, 4. He constructed the brazen tripod, which the Lacedaemonians dedicated at Amycæ, out of the spoils taken by them. (Pausan., 3, 18, 5.—Silius, Dict. Art., s. v.)

Aristarchus, I. a tragic poet, a native of Tegea. He was the contemporary of Sophocles and Euripides, and lived upward of a hundred years. He exhibited seventy tragedies, but was only twice successful. Of all these seventy plays only one line is left us. According to Festus, his Achilles was imitated by En- nius, and also by Plautus in his Parnassus (Theatre of the Greeks, 2d ed., p. 151.).—II. A native of Samo- thrace, and preceptor to the children of Ptolemy VI. (Philometor). He composed a great number of verses, and a critic, Anacreon, mentions the number of pupils formed by him so great, that at one time forty distin- guished professors or grammarians might be counted at Alexandria and Rome, who had been trained up in his school. All these disciples vied with each other in extolling the superiority and genius of their com- mon master; and hence the name of Aristarchus was not only perpetuated in the classical tongues, but has passed into the modern language, as indicative of an accomplished critic. Aristarchus quitted Egypt when Euergetes II., his pupil, ascended the throne and be- gan to display his true character in driving men of let- ters from Alexandria. The grammarians, upon this, retired to Cyprus, where he died at the age of seventy- two, B.C. 157. In his old age he became dropical, upon which he is said to have starved himself to death. Aristarchus was the author of a new recension of Ho- mer; and on the death of Socrates, the so-called Aris- tarchians, is nevertheless the basis of our common text at the present day. It is this primitive recension of Ar- istarchus' which Wolf undertook to restore by the aid of the scholia that Villoison published. To Aris- tarchus is also attributed the division of the Liad and Odyssey into twenty-four cantos or books. He wrote likewise commentaries on Archilochus, Alcæus, Anac-reon, Eschylus, Sophocles, Ion, Ænæas, Sophistætes, Aratus, and other poets; and composed in all, it is said, eight hundred different works. Of all the pro- ductions, however, of this industrious writer, we have only remaining at the present day some grammatical remarks cited by the scholiasts. (Schöll, Hist. Lit. Gr., vol. 3, p. 188, seqq.)—III. An astronomer of Samos, who flourished about the middle of the third century before Christ. He is well known to have maintained the modern opinion with regard to the motion of the sun round the earth, and 19 to 10; so that the diameter of the moon is in the child's statement, less than a third part of the earth. The only one of his works now extant is a treatise on the magnitudes and distances of the sun and moon. The best edition is that of Wallis, Oxon., 1668, 8vo. The following work may also be consult-
ed with advantage in relation to this astronomer: Histoire d'Aristarque de Samos, suivie de la traduction de son ouvrage sur les distances du soleil de la lune, &c., par M. de Florigia d'Usur. Paris, 1810, 8vo.

Aristeas, I. a poet of Proconnesus, who, as Herodotus relates, appeared seven years after his death, and composed a poem on the Arimaspians. He then disappeared a second time, and, after the lapse of another hundred years, the same poet appeared in the city of Metapontum in Magna Græcia, and directed the inhabitants to erect an altar to Apollo, and a statue by that altar, which should bear the name of Aristeas the Proconnesian. He informed them also that he attended this god, and was at such times a crow, though now he went under the name of Aristeas. Having uttered these words he vanished. (Herod., 4, 15.—Compare the somewhat different account given by Phyl., 7, 32.) The poem alluded to above was epic in its character, and in three books. The subject of it was the wars between Grifons and Arimaspians. Longinus (§ 10) has recorded six of the verses of Aristeas, which he justly considers more florid than sublime; and Tzetzes (Chil., 7, 688) has preserved six more. (Larcher, ad Herod., l. c.)—Ritter has made this singular legend the basis of some profound investigations. He sees in Aristeas a priest of the Sun (the Koros or Buddha of the early nations of Asia), who, accompanied with this the remark of Porphyry (de Abst., IV., p. 399, ed. Lugd. Bat., 1620), that, among the magi, a crow was the symbol of a priest of the sun. He discovers also in the earlier name of that part of Italy where Metapontum was situate, namely, Botticcia, an obscure reference to the worship of Buddha. Whatever our opinion of his theory may be, the legend of Aristeas certainly involves the doctrines of the metempsychosis. (Ritter, vol. ii., p. 102.—A soldier under Ptolemy Philadelphus, to whom is ascribed a Greek work still extant, entitled, "A History of the Interpreters of Scripture," giving an account of the manner in which the Septuagint was written. The best edition is that printed at Oxford in 1692, in 8vo. It is found also, with a very learned refutation, in a work entitled Dodis de Bibliorum textibus originalibus libri iv., Oxon., 1705, fol.; and likewise in the second volume of Horsley's edition of Josephus; and at the end of Van Dale's Dissertation, de LXX. Interpretibus superstes, Arnstam, Amsterdam, 1705, 4to. As to other works by Aristeas, consult Scharf (Arg., sub fin.—Joseph., ed. Haer., vol. 2, p. 102).

Aristèræa, an island lying to the southeast of the peninsula of Argolis, in the Sinus Hermonicius. (Pausan., 2, 34, 35.)

Aristides, I. a celebrated Athenian, son of Lysimachus, and a contemporary of Themistocles. He entered upon public affairs at a comparatively early age, and distinguished himself so much by his integrity, that, although inclined to the aristocracy, he nevertheless received from the people the remarkable appellation of the Just. His conduct at Marathon did no less honour to his military talents than to his disinterestedness. Of the ten Athenian generals, he was the only one who agreed with Miltiades upon the propriety of risking a battle; and remembering his day of deliverance, he looked upon the favour of this commander, as he prevails upon the other generals to do the same. After services so important as these, he was, nevertheless, finally banished through the intrigues of Themistocles, and it was on this occasion that a singular circumstance is related to have taken place. While the shells were getting inscribed at the assembly that passed upon him the sentence of ostracism, a peasant approached Aristides, and taking him for a person of ordinary stamp, requested him to write upon his shell the name of Aristides, himself being too illiterate to do so.
the ancients assigned to Aristotle the invention of painting on wax. (Sillig, Dict. Art., s. v.)—IV. A Greek orator, born at Hadrianopolis in Bithynia, about A.D. 129, according to the common opinion; but more correctly in A.D. 117. After having applied himself, with extraordinary ardour, to the study of eloquence, he travelled in Asia, Greece, and Egypt, leaving behind him everywhere a high opinion of his talents and virtues. Many cities erected statues to him, one of which is still preserved in the Vatican. On finishing his travels, he took up his residence at Smyrna, where he continued to live until his death, holding a station in a temple of Eucalpius. Aristides, by a diligent perusal of Demosthenes and Plato, was able to avoid the errors of the declaimers of his time. His compatriots ranked him equal to the Athenian orator; an honour, however, to which he had no just claims. His discourses are distinguished for thought and argument. His art is still the study, in Greece.

We have fifty-four declamations of Aristides remaining at the present day, most of them celebrating some divinity, or else the Emperor Marcus Aurelius and other personages. One of these discourses is in the form of a letter to the emperor, on the destruction of Smyrna by an earthquake, A.D. 178. The monarch was so much affected by it, that he immediately gave orders for rebuilding the city. There exists also, from his own handwriting, on a slip of parchment, an address to the people of Alexandria, respecting public affairs, and that suited to plain and simple topics (περιπολιτικός και δήλεως λόγον). Among the discourses of Aristides there are five, and the beginning of a sixth, which were regarded by the ancients as the fruit of imposture, or of a credulity unworthy a man of so much general merit. Some of them appear to touch on animal magnetism.—The Abbé Mäi found, not many years ago, a palimpsest manuscript, inscribed in full and cursive hands, which contained one of the same undated fragments of this orator. The best editions of Aristides are that of Jebb, Oxon., 1722–30, 4to; and that of Dindorf, Lips., 3 vols. 8vo. The latter is decidedly the better of the two, the text having been more carefully corrected by MSS. Reiske complains heavily of the former, on account of the want of care in collating MSS. &c. —V. A platonist philosopher, a native of Ephesus, who died 22nd century B.C. His work is in three books, and the best edition of it is that contained in the collection of Meibomius, Antiquae Musicae Scriptores, Amstel., 1652, 4to.

ARISTIPPUS. I. a philosopher of Cyrene, disciple of Socrates, and founder of the Cyreanic sect, who flourished about 392 B.C. Socrates, however, with whom he remained till his execution (Plut., Phad., p. 599), does not appear to have cured him of his inclination for pleasure. For although there is little consistency in the notices we have of his life and conduct, it is nevertheless clear, from a variety of anecdotes, that, notwithstanding he was able to endure privations and sufferings with equanimity and dignity, his serenity of mind arose principally from the readiness with which he could extract pleasures and gratifications from the most difficult situations of life. Hence he never offended the society of the courtean, or of the tyrant, or suffered of his own accord from the misfortunes of the management of men. Many anecdotes are told of him, which would seem to imply that Aristippus endeavoured to observe faithfully his own maxim, that a man ought to control circumstances, and not be controlled by them. (Horat., Ep., 1, 13.—Diog. Laert., 4, 66, 147.) Aristippus was the first disciple of the Socratic school who took money for teaching. He afterward was compelled to leave Athens, in consequence of the freedom of his manners, and visited, among other parts, the island of Sicily. Here he became one of the flatterers of Dionysius, and gained a large share of royal favour. He left Syracuse before the expulsion of the tyrant, and appears, in his old age, to have returned to Cyrene, where he died. His family and school. (Diog. Laert., 2, 86.) Aristippus taught, that good is pleasure, and pain is evil; but, at the same time, he appears to have maintained, that in true pleasure, the soul must still preserve its authority; his true pleasure was, consequently, nothing more than the Socratic temperance. He taught also that a man ought not to desire more than he already possesses; for all pleasures are similar, and none more pure than that of the mind, and that a man should not suffer himself to be overcome by sensual enjoyment. (Diog. Laert., 2, 87.—Consult Ritter, Hist. Anc. Phil., vol. 2, p. 88, 147, where a luminous account is given of the doctrines of the Cyreanic school.)—II. His grandson of the same name, called the Younger, was a warm defender of his opinions. He flourished about 363 years B.C.—III. A tyrant of Argos, protected by Antigonus Gonatas, whose life was one continued series of apprehensions. He was slain by a Cretan, in a battle with Aratus, near Mycenae, B.C. 242.

ARISTOCLES, I. a name common to some of the high priests and kings of Judae, &c. (Joseph.)—II. A brother of Epicurus.—III. A native of Potidaea, one of the generals of Alexander, who wrote a history of the expedition of that monarch into Asia. His work, which has not remained, is admirably suited to Ctesias, and presented to the Emperor Hadrian an "Apology" for the new religion, which, it is said, induced the monarch to pass his edict, by which no one was to be put to death without a regular accusation and conviction. This edict was directly favourable to the Christians. The Apology is lost, but is highly praised by St. Jerome, who had read it.—VI. A Greek writer on music. He is supposed to have lived about the commencement of the 2nd century. His work is in three books, and the best edition of it is that contained in the collection of Meibomius, Antiquae Musicae Scriptores, Amstel., 1652, 4to. Aristocles, I. a philosopher of Cyrene, disciple of Socrates, and founder of the Cyreanic sect, who flourished about 392 B.C. Socrates, however, with whom he remained till his execution (Plut., Phad., p. 599), does not appear to have cured him of his inclination for pleasure. For although there is little consistency in the notices we have of his life and conduct, it is nevertheless clear, from a variety of anecdotes, that, notwithstanding he was able to endure privations and sufferings with equanimity and dignity, his serenity of mind arose principally from the readiness with which he could extract pleasures and gratifications from the most difficult situations of life. Hence he never offended the society of the courtean, or of the tyrant, or suffered of his own accord from the misfortunes of the management of men. Many anecdotes are told of him, which would seem to imply that Aristippus endeavoured to observe faithfully his own maxim, that a man ought to control circumstances, and not be
during the second Messenian war, and being the cause of the defeat of his Messenian allies, B.C. 682. (Id. ibid.)

ARISTODEMUS, I. son of Aristocles, of the race of the Heraclidæ, who, together with his brothers Temenus and Cresphontes, conquered the Peloponnesus. He was the father of twin sons, Eurythestes and Procles, and was, consequently, the parent-stem of the Eurythestidae and Proclidæ, the two royal lines at Sparta. Herodotus mentions the traditional belief prevalent among the Lacedæmonians, that this monarch had led their forefathers into Laconia (6, 52), whereas the poetic account made him to be the eldest of the gods; it is doubtful whether God or is not a living being. From this last position, it is clear that Ariston strongly inclined towards scepticism; yet he was careful not to extend this doubt to the common branches of knowledge, which are indispensable to the conduct of life. With Ariston, naught is of worth but virtue, nothing is evil but vice. (Diog. Laert., 7, 160.—Stob., Sem., 80, 7.—Sext. Emp. Adv. Math., 7, 12.—Cic., N. D., 1, 14.) Ritter maintains, that Tennemann wholly misrepresents the doctrine of Ariston, when he calls it a practical science for mankind, or a science for life. (Hist. Philos., vol. 3, p. 455, seqq.)—II. A peripatetic philosopher, a native of Iulis, in the island of Céo, and hence called, for distinction' sake, Iulicètes. He was the disciple and successor of Lycon. (Consult the Bibl. Philol. Götting., vol. 1, p. 1, seqq.; and p. 459, seqq., where some well-learned and acute remarks are given on both philosophers.)

ARISTOTLE, the friend of Harmodius, who, together with the latter, slew Hipparchus, one of the sons of Pisistratus. Consult the account given under the article Harmodius.—II. A Theban statuary, who, in connexion with Hypatodorus, made the presents dedicated by the Argives at Delphi. (Pausan., 10, 10.) He is supposed to have exercised his art from Olym. 90 to 102. (Sülg., Dict. Art., s. v.)—III. An Athenian orator, surmounted d éroïs, the dog, from his consummate effrontery. He is the same with the Aristotlon against whom Demostenes and Dinarchus both pronounced discourses. (Schöll, Hist. Lit. Gr., vol. 2, p. 270.)

ARISTOCLES, I. son of Cleodes, grandson of Hyllus, and great-grandson of Hercules. He was the father of Aristocles, Temenus, and Cresphontes, the three Heraclidæ that conquered the Peloponnesus. He was the founder of a new house of alien name, the Aristocles, which eventually fell in battle. (Apollod., 2, 8.—Pausan., 2, 7.—Herod., 6, 52.)—II. A native of Soli in Cilicia, who devoted fifty-eight years of his life to studying the habits of bees. (Plin., 11, 9.)—III. A tyrant of Argos, successor to Aristippus, who resigned the sovereign power at the instigation of Aratus, and caused Arges to join the Achaean league. (Pausan., 2, 8.)

ARISTOMENES, a celebrated Messenian leader, who signalized his valor against the Spartans. A full account of him will be found in the remarks under the article Messenia.—II. An Acsarnian, who lived at Alexandria, and was appointed, by the Roman command, Μέλιος, tutor to the young king Ptolemy Epiphanes. He executed this task with wisdom and talent, but was eventually put to death by his ungrateful pupil, when the latter had come to the throne, B.C. 196.

ARISTOTLE, I. the son of Agasicles, king of Sparta. He repudiated two wives in succession on account of their sterility, and then married a third, said to have been the most beautiful woman in Sparta. She bore him a son, Demaratus, whom he at the moment disowned, but afterward acknowledged to be his. Consult the full account as given by Herodotus (6, 61, seqq.).—II. A stoic philosopher, a native of Chios. He was one of the immediate pupils of Zeno, but, when he became himself an instructor, openly deviated from the views of his master, and founded an independent school. He rejected all other points of philosophy but ethics. He considered physiology to be beyond

man; dialectics or logic to be ill suited to him. He even limited the domain of ethics itself; for he taught that its object is not to treat of particular duties, and of encouragements to virtue, such being the part of nurses and pedagogues; but it is the province of the philosopher to show wherein the supreme good consists, for this knowledge is the source of all useful intelligence. In accordance with his view, that physics transcend human power, Ariston doubted some of the most important doctrines of Zenon. It is impossible, he said, to form a conception of the shape or sense of the gods; it is doubtful whether God is or is not a living being. From this last position, it is clear that Ariston strongly inclined towards scepticism; yet he was careful not to extend this doubt to the common branches of knowledge, which are indispensable to the conduct of life. With Ariston, naught is of worth but virtue, nothing is evil but vice. (Diog. Laert., 7, 160.—Stob., Sem., 80, 7.—Sext. Emp. Adv. Math., 7, 12.—Cic., N. D., 1, 14.) Ritter maintains, that Tennemann wholly misrepresents the doctrine of Ariston, when he calls it a practical science for mankind, or a science for life. (Hist. Philos., vol. 3, p. 455, seqq.)—III. A peripatetic philosopher, a native of Iulis, in the island of Céo, and hence called, for distinction' sake, Iulicètes. He was the disciple and successor of Lycon. (Consult the Bibl. Philol. Götting., vol. 1, p. 1, seqq.; and p. 459, seqq., where some well-learned and acute remarks are given on both philosophers.)
ARISTOPHANES.

peared for the first time on the stage, his face smeared with wine-lees. His success was complete.—The fame of Aristophanes was not confined to his own city. Dionysius of Syracuse would gladly have admitted the popular dramatist to his court and patronage, but his invitations were steadily refused by the independent Athenian. In B.C. 424, the Sophists felt the weight of his latest and most powerful satire, his _Nubes_. The vulgar notion that the exhibition of _Nubes_ in this play was an intentional prelude to his capital accusation in the criminal court, and that Aristophanes was the leagued accomplice of Melitus, has of late years been frequently and satisfactorily refuted. (See particularly Mr. Mitchell's elegant and able introduction to his translation of Aristophanes.) The simple consideration that twenty-four years intervened between the representation of _Nubes_ and the trial of Socrates, affords a sufficient answer to any such charge. In fact, after the performance of this very comedy, we find Socrates and Aristophanes become acquainted, and occasionally meeting together on the best terms. (Plato, Sympos.)

An imperfect knowledge of Socrates at the time, his reputed doctrines, his face, figure, and manners, so well adapted to comic mimicry, were doubtless the more favourable to the selection of _Nubes_ by Coryphaeus. In the _Peace_ and the _Lysistrata_, Aristophanes again reverts to politics and the Peloponnesian war: in the _Wasps_, the _Birds_, and the _Ecclesiazousae_, he takes cognizance of the internal concerns of the state; in the _Thesmophoriazousae_ and the _Racae_, he attacks Euripides, and discusses the drama; while in the _Ploutos_ he presents us with a specimen of the middle comedy. Eleven of his comedies are still extant out of upward of sixty. (Fah., Bibli. Gr., s. a., Aristophanes.)

Their Greek titles are as follows: 1. _Αχαρνεις_; 2. _Ηππεις_; 3. _Νεφελα_; 4. _Εφιπροι_; 6. _Ορνιθι_; 7. _Θεαμοφοριάζουσα_; 8. _Λυσιότατρα_; 9. _Βαταρχεία_; 10. _Εκκλησιαζουσα_; 11. _Πλοῦτος_.—The _Acharnians_ (_Αχαρνεις_) was represented B.C. 425. In this piece the object which the poet proposes to himself is to engage the Athenians to become reconciled with the Lacedaemonians, by making them see, through the aid of an allegory, that peace is preferable to war. He feigns that an Acharnian, called Dicomedus (the _just city_), had found the means of separating his cause from that of his fellow-citizens, by making peace, as far as it regarded himself, with the enemy; while the rest of the Acharnians, led astray by the suggestions of their generals, are about to lose their country; of which the _Euripides_ or _Knights_ (_Ηππεις_) was represented B.C. 454, a year after the _Acharnians_. The professed object of this singular composition is the overthrow of that powerful demagogue, the vainglorious and insolent Cleon, whom the author had professed in his _Acharnians_ that it was his intention, at some future day, to "cut into shoe-leather;" and his assistants on the occasion are the very persons for whose service the exploit was to take effect. The two proprietors, with whom the Athenians constituted the class of horsemen of Athens. For this purpose Athens is here represented as a house; Demus (a personification of the Athenian people) is the master of it; Nicias and Demosthenes are his slaves, and Cleon is his confidential servant and slave-driver. The levelling disposition of the Athenians could not have been presented with a more agreeable effect in a comic person. The _Nepheles_ or _Nubes_ is a series of humiliating pictures of Cleon, and a succession of proofs to Demus that his favourite servant is wholly unworthy of the trust and confidence reposed in him.—The _Clouds_ (_Νεφελαι_, _Nubes_) was twice represented; at first, B.C. 423, when it failed; and the second time, during the succeeding year. By some curious accident, it so happens that the play originally condemned has come down to us, with part of a parabasis (or address to the audience) evidently intended for the second. The author here complains very bitterly of the injustice which had been done to this most elaborate of all his performances. In the play of the _Clouds_, Socrates is made the chief subject of ridicule. As a person given to abstraction and soliloquy, whose moral sense is sought, and thought to be hidden in the clouds, it was but another step, therefore, in the poet's creative mind, to make the clouds the chorus of his piece, just as of the person, whose abstractions and reveries seemed to make him most conversant with them, he had formed the hero of the piece. The effect of this personification in the original theatre was no doubt very striking. A solemn invocation calls down the clouds from their ethereal abode; their application to the hero is feigning a lyric ode as they descend to the earth; and, after wakening attention by a well-managed delay, they are brought personally on the stage as a troop of females, "habitied," says Mr. Cumberland, "no doubt in character, and floating cloudlike in the dance." The character of Strepsiaside receiving the lessons of Socrates, is the original of Molière's "Bourgeois gentilhomme." The play of the _Wasps_ (_Σφικαί_, _Vespae_), represented B.C. 424, is intended to be comic, by making the hero of the piece an Athenian citizen absolutely phrenzied with a passion for litigation. His son endeavours to reclaim him to a better mode of life, by flattering his madness, and instituting a mock court of justice at his own house. The colleagues of the old gentleman are represented under the form of wasps, which circumstance has given name to the piece.—The _Peace_ (_Ειπροεῖα_) was represented B.C. 419, at the period when the Athenians and Lacedaemonians, after having concluded what was called the peace of Nicias, formed an alliance with the view of compelling the other states of Greece to accede to the pacification. The play turns on this point.

The _Birds_ (_Ορνιθι_), represented B.C. 414, turns upon political affairs: two Athenians, disgusted with the divisions that prevail at Athens, transport themselves to the country of the birds, who build them a city. The design of the poet appears to have been to prevent his counsellors from funding _Dipylon_ a war. The fear lest this place might become a rallying-point for the Lacedaemonians, and also to induce them to recall their forces from Sicily, in order to oppose them to their enemies at home.—The _Females celebrating the festival of Ceres_ (_Τεωροφορίαντων_) was represented B.C. 411. The female Athenians take the opportunity this festival affords, of deliberating on the means of destroying Eugipides, the enemy of their sex. In order to save himself, Eugipides is compelled to practise a thousand expedients, and at last obtains pardon.—The _Lysistrata_ (_Λυσιότατρα_), represented the same year with the preceding, has for its object to dispose the people to make peace with the Lacedaemonians. Lysistrata, the wife of one of the first magistrates of Athens, prevails upon all the married females of Athens, as well as of all the hostile cities, to separate themselves from their husbands, until they command him. The _Frogs_ (_Βαταρχεία_, _Racae_), represented B.C. 405, gave Aristophanes the prize, over Phrynichus and Plato. The people demanded a second representation of the piece, which was regarded as an extraordinary distinction. The poet, in this play, ridicules the tragic writers, but especially Eugipides, who had died the year before. The chorus is composed of the frog-
ARISTOPHANES.

of the Styx, over which stream Bacchus passes, in order to bring back to earth the poet Ἀσκηλύπης, in preference to Euripides.— The Females Met in Assembly (Ἐκκλασματικός), represented B.C. 392, is directed against the damagogeus that disturbed the tranquillity of the state. It contains also some attacks levied at the republic of Plato, and, above all, at the community of women. These, and other reflections, are based on the basis of Plato's system. The wife of one of the leading men in the state forms a plot with her female companions, the object of which is to force the people to give the reins of government into their hands. They succeed by a stratagem, and pass some absurd laws, which are a parody on those in existence at Athens.— The Plutus (Πλοῦτος) appears to have been first represented B.C. 409. It was re-exhibited twenty years after this. The second present text is made up of the two editions of the play. The play has no parabasis, and belongs to the Middle Comedy. A citizen of Athens meets with a blind man, and entertains him at his house. This blind personage is Plutus, the god of riches. Having recovered his sight by sleeping in the temple of Ἀσκληπειον, he is made to take the place of the ruler of Olympus, which affords the poet an opportunity of satirizing the cupidity and corruption of his countrymen. — Never, observes Schlegel, did a greater effect of power than this Athenian people, show greater good-humour in permitting the boldest truths to be spoken of it; nay, more, jestingly thrown in its teeth, than in the case of Aristophanes. Even though the abuses of government might not be corrected thereby, yet it was a mark of magnanimity to permit this unparliamentary exposure of them. Besides, Aristophanes shows himself throughout to be a zealous patriot: he attacks the powerful misleaders of the people, the same as which are represented as so destructive to Athens. Thence, he concludes that internal war which irreparably destroyed the prosperity of Greece; he recommends the simplicity and rigour of ancient manners.— But I hear it asserted that Aristophanes was an immoral buffoon. "Why, yes; among other things he was this too; nor do I mean to justify him for sinking so low with all his great qualifications, whether he was invited to it by natural coarseness, or whether he thought it necessary. On the contrary, what astonishes me is, that he could tell the people such bold truths. At any rate, he boasts of having striven for the laughter of the commonalty, by merely sensual jests, much less than any of his competitors, and of having thus contributed to the perfection of his art. To be reasonable, we must judge him in those things which give us so much offence, from the point of view of a contemporary. The ancients had, in certain respects, a completely different and much freer system of morals than we have. This was derived from their religion, which was really the worship of nature, and which had hallowed many public usages grossly offensive to decency. Moreover, since, from the retired manner in which the women lived, the men were almost always by themselves, the language of social intercourse had obtained a certain coarseness, which always seems to be the case under similar cir- cumstances. Since the age of chivalry, women have given the tone to society in modern Europe, and we are indebted to the homage which is thus rendered for the sway of a loftier morality in speech, in the fine arts, and in poetry. Lastly, the ancient comic writer, who took the world as it was, had, for a very corrupted state of morals before his eyes. The most honourable testimonies for Aristophanes are that of the wise Plato, who says, in an epigram, that the graces had selected his mind as their place of habitation, who read him constantly, and sent the Clouds to the elder Dionysius with the inscription, that from this piece (in which, however, together with the trifling of the sophists, philosophy itself and his teacher Socrates were attacked) he might learn to know the state of Athens. It is not likely that he merely meant that the piece was a proof of the unbridled democratic freedom which prevailed at Athens, but that he confessed the deep knowledge of the world displayed by the poet, and his sound views of the whole machinery of that government of citizens. But, however low and corrupt Aristophanes may have fallen in moral conclusions, and however much he may have offended moral feelings by certain passages of his plays, yet, in the general management and conduct of his poems, we cannot deny him the praise of the diligence and masterly excellence of an accomplished artist. His language is elegant to the last degree; it is a specimen of the purest Attic; and he employs it with the greatest dexterity in all its shades of difference, from the most familiar dialogue to the lofty flights of dithyrambic songs. We cannot doubt, that he was a keeper of more serious poetry, when we see how he sometimes laviishes it in the mere wantonness of abundance in order immediately to destroy its effect. This high degree of elegance is the more attractive by contrast; as, on the one hand, he employs the roughest dialects and provincialisms of the common people, and even the broken Greek of foreigners; and, on the other hand, applies the same caprice, to which he subjects all nature, to speech likewise, and gives it a soft and pleasant effect. We may thus declare his poems to be proper for the public with such pre-suppositions; but it was a dangerous privilege. It was not easy to please spectators who understood with so much ease. Aristophanes complains of the too fastidious taste of the Athenians, with whom the best of his predecessors were no longer in favour as soon as the smallest decay in their faculties was perceptible. On the contrary, he says, the rest of the Greeks were out of the question as judges of his productions; and those who were able to understand this line endeavoured to shine at Athens; and here again their contest was compressed into the short space of a few festivals, when the people always desired something new, and obtained it in abundance. It was settled, by a single representation, to whom the prize was to be given, and every one contended for it, as there were no other means of publication." (Schlegel, über Dram. Kunst, &c., vol. 1, p. 286, seqq.—p. 283, Eng. trans.— The Theatre of the Greeks, 2d ed., p. 175, seqq.) Among the numerous editions of Aristophanes the following are most worthy of notice: that of Kuster, Amat. 1710, fol.; that of Brunck, Argent., 1873, 6 vols. 8vo, which would be more complete did it contain the scholia; and that of Invertz, based on the readings of the Ravenna MS., and continued by Beck and Dindorff, Lips., 11 vols. 8vo, 1794—1826. We have also a variorum edition, 5 vols. 8vo, 1829, from the London press. Hoffmann censures severely the careless manner in which the anonymous editor in compiling the notes to this edition, and in assigning many of them to wrong commentators. (Lax, Bibli., vol. 1, p. 273.) Of the editions of separate plays, we may par- ticularize those by Mitchell as displaying very great ability. Five of the series have already appeared, the Frogs, Acharnians, Wasps, Knights, and Clouds. (Lond., 8vo, 1836—1838.) II. A famous grammarian, a native of Byzantium, who flourished about B.C. 400, W'e
ARISTOTLES.

His edition of Homer, in particular, received a high reputation, and was only obscured by the labours of his disciple Aristarchus. It is to Aristophanes that the grammarians Arcadius attributes the invention of accents and marks of punctuation. He is regarded also as the first who arranged the Canon of writers, to which Aristarchus subsequently put the finishing hand. (Vid. Alexandria Schol.) We have nothing remaining of the works of Aristophanes, excepting a small fragment, containing the explanation of certain words, which Boissoneaud found in the library of the King of France. It is published by this scholar at the end of his edition of the Ερωτηματος of Herodotus. Lond., 1819, 8vo. (Scholl, Hist. Lit. Gr., vol. 3, p. 188.)

ARISTOPHANES, a Greek comic poet, contemporary with Alexander.—II. An Athenian orator, whom Demosthenes, in his speech against Leptines, ranks among the most eloquent men of the republic.—III. Another orator of Athens, also distinguished in his profession. He was one of the masters of Ξεχίνες. (Scholl, Hist. Lit. Gr., vol. 2, p. 268.)—IV. A painter, a native of Thasos, and brother of Polygnotus. He is supposed to have flourished about Olymp. 80. Pliny mentions several of his productions (35, 11.—Compare Plut, de aed. poet., 3, p. 69, vol. 7, ed. Hutten.)

ARISTOTELIAN, annual feasts in honour of Aristotle, celebrated by the inhabitants of Stagira, in gratitude for his having obtained from Alexander the rebuilding and repeopling of that city, which had been demolished by King Philip. (Plut., Vit. Alex., 7.—Elian, V. H., 3, 17.—Diog. Laert., 5, 9.)

ARISTOTELIS, a celebrated philosopher, born at Stagira, B.C. 384. His father was Nicomachus, who is said to have left behind him many works on medicine and natural history (Suidas, s. v. Aristotels, and in the library of the king of Macedon.) From the place of his birth Aristotle is frequently called the Stagirite. Having lost both his parents at a very early age, he received the first rudiments of learning from Proxenus of Atarneus in Mysia, of whom he always retained a respectful remembrance. In gratitude for the care which he had taken of his education, he afterwards honoured his memory with a statue, inscribed his name, and dedicated the sciences, and adopted him as his heir. At the age of seventeen Aristotle went to Athens, and devoted himself to philosophy in the school of Plato. The uncommon acuteness of his apprehension, and his indefatigable industry, soon attracted the attention of Plato, and obtained his applause. Plato used to call him the Μινδ of the School, and to say, when he was absent, "Intellect is not here." His acquaintance with books was extensive and accurate, as sufficiently appears from the concise abridgment of opinions, and the numerous quotations which are found in his works. The zeal, in fact, with which he strove to master the treasures not only of the olden philosophy, but of the whole literature of Greece, may be inferred from another name, the Reader," which Plato gave him, as well as by the remark made by that philosopher, when, on conversing with some of his companions, he said that the latter required the spur, but Aristotle the bit. (Diog. Laert., 4, 6.) He continued to reside at Athens for the space of 20 years, all of which time assuredly he did not devote to the instructions of Plato; on the contrary, we must assign to this period the preparatory labours of the great works of his after life. (Ritter, Hist. Phil., vol. 3, p. 2.) It would appear from the language of some ancient writers, that, in the last years of Plato's life, the earlier friendship between the master and disciple had given place to mutual misunderstanding, not to say animosity. Aristotle is accused of ingratitude towards Plato, and the charge is sought to be substantiated, not only by several anecdotes, but by an appeal to the writings of Aristotle himself, who, when every occasion, it is alleged, is made to refute the theory of his master. The anecdotes, however, which are adduced in support of this opinion, will be found, on examination, to be as unworthy of notice as the similar statements which speak of Plato's ingratitude to Socrates. As regards his writings themselves, it is very true that Aristotle nowhere prominently exhibits the signal merit of Plato in the service of philosophy. This, however, may be explained, partly from the scope and design of Aristotle's works, and partly from his scientific character. The object of the former was not so much to give a due estimate of every philosopher, as, by an examination of their systems, to prevent his own disciples being disheartened or perplexed by erroneous opinions, however widely or speciously diffused. The scientific character of Aristotle, on the other hand, prevented him, from reviewing the system of Plato in its spirit; for it cannot be denied that the Aristotelian criticism attaches itself by preference to single tenets, which are estimated, not so much by their philosophical import, and relation to the system to which they belong, as by the form of expression. It cannot be denied, however, that Aristotle often finds fault with Plato, and never mentions him except to refute his doctrines; nay, that he at times evinces something of a bitterness in the zeal with which he attacks the system of Plato and the Platonists, though he represents the latter as opposite to science. (Ritter, p. 5, seq.)—On the death of Plato he left Athens, and some time after was chosen by Philip preceptor to his son Alexander, which office he discharged with the greatest ability during eight years, until his pupil's accession to the throne. The letter which Philip wrote to Aristotle when he chose him preceptor to his son, was couched in the following terms: "Be informed that I have a son, and that I am thankful to heaven for this; he was born in the same age with you; for you will undertake the charge of his education, I assure myself that he will become worthy of his father, and of the kingdom which he will inherit." After Aristotle had left his pupil, he returned to Athens, but the two still carried on a friendly correspondence, in which the philosopher prevailed upon Alexander to employ his power and wealth in the service of philosophy. Alexander then caused philosophers to be sent to him to converse in different parts of Europe and Asia to collect animals of various kinds, birds, beasts, and fishes, and sent them to Aristotle, who, from the information which this collection afforded him, wrote fifty volumes on the history of animated nature, only a small portion of which is now extant. Upon his return to Athens, Aristotle resolved to found a new sect in opposition to the Academy. He chose for his school a grove and mound in the suburb of Athens, called it Lyceum. (Vid. Lyceum.) From his walking about as he discoursed with his pupils, his followers, according to the common account, were termed Peripatetics (Περιπατητικος, απο τον περιπατητη.) Others, however, more correctly derive the appellation from the public walk (περιπατητης) in the Lyceum which Aristotle and his disciples were accustomed to frequent. (Compare Brucker, Hist. Crit. Phil., vol. 1, p. 327, and Ritter, p. 47.) When, however, his pupil Philip had not confined to philosophy, but comprised every branch of inquiry which could profit the youth of an enlightened age, and especially rhetoric. (Diog. Laert., 5, 3.—Cic., de Orat., 3, 35.) His more abstruse discourses were delivered in the morning to his select disciples; this he called his morning walk. He delivered lectures to a more prominent auditory in the evening, when the Lyceum was open to all young men without distinction in his evening walk. The former investigations were called acroatic or acroasmatic, the latter exoteric. Both were much frequented. Aristotle continued his school in the Lyceum for thirteen years, employed at the same time in the com-
position of the principal part of his written works. To this period also must be assigned his important labours in experimental knowledge, especially in the history of animals, wherein he was assisted, as we have already said, by the munificent liberality of Alexander. Subsequently, however, he was induced to lay aside the pleasures to be found under the displeasure of his royal pupil and patron, in consequence of having expressed, in rather free terms, his disapproval of the changed habits of the king. (Diog. Laert., 5, 10.—Plut., Vit. Alex., 55.)

The charge has even been brought against him, that he furnished Antipater with the poison by which Alexander was believed to have been taken off. (Plut., Vit. Alex., 77.)—At the close of this period, Aristotle fell into a habit of maintaining, in every argument, that it is, to escape a fate similar to that of Socrates, a charge of impiety having been, in like manner, brought against him. (Ritter, p. 10, note.) He died at Chalcis not long after this, at the age of 63. It is pretended by some that he took poison, from the fear of being pursued by the Athenians; while others relate a still more idle tale, of his having thrown himself into the waters of the Euphrates (end. Euphrates); it is most probably true, that in after-years, on a very trivial occasion, he committed suicide, in consequence of excessive watchfulness and application. His body was interred at Stagira, where his memory was honoured with an altar and a tomb. Aristotle was twice married. By his second wife he had a son named Nicomachus, to whom he addressed his "Greater Morals." His person was slender; he had small eyes, and a shrill voice; and when he was young, hesitated in his speech. He endeavoured to supply the defects of his natural form by an attention to dress, and commonly appeared in a costly habit, with his beard shaven, his hair cut, and rings on his fingers. (Diog. Laert., 5, 1.—Vit. Aristot., ep. Menag., fn.) Concerning his character, nothing can be more contradictory than the accounts of different writers; some making him a model of every virtue, others the most infamous of human beings. (Athen., 13, p. 566, e.—Ritter, p. 8, note.) The truth appears to be, that his virtues were neither of that exact kind which command admiration, nor his faults so highly criminal as not to admit of some apology.—Aristotle possessed in a high degree the talents of discrimination and analysis, added to the most astonishing knowledge of books and the works of nature. To the latter, more especially, he devoted himself. He rejected the doctrine of ideas, maintaining that all our impressions and thoughts, and even the highest efforts of the understanding, are the fruit of experience. The Peripatetic is the great intellectual school of antiquity. In Aristotle we see the calm and sober inquirer, who does not, like Plato, pursue a lofty ideal, but keeps carefully in view the proximately practicable, and is not easily misled into any extravagance either of language or thought. In Aristotle we have the cold inquirer, and little more. Rarely, if ever, does he step aside to consider the bond which connects the science of the universal and of nature with the human intellect and will. Consequently, his works have none of that impressiveness which constitutes the principal charm of Plato's writings. It is true, we only possess a portion of his writings, and the very portion which is designedly free from all accessory matter and embellishment. Nevertheless, the very manner in which this portion is treated, sufficiently proves that Aristotle, even if his mind were not wholly alien from every poetical element, was unable to combine the sober results of science with the romantic spirit. The school of Aristotle has been termed the intellectual school, with reference to his doctrines; the school of experience, as looking without; and, in a moral point of view, the school of expediency or prudence, as finding the rule of moral conduct in the result of actions.—Philosophy, according to Aristotle, is science arising out of the love of knowledge, or knowledge according to certain principles. These principles cannot, of themselves, be regarded as objects of science, in so far as they are known previously to science (Anal. Post., 1, 1.—Eth. Nic., 5, 3); but they must be viewed as certain and fixed, and underived, and used as necessary to any scientific procedure. Accordingly, he assumes an immediate cognition, which he distinguishes from science in the strict sense, though he calls it certainty, and assigns it to science in a wider sense, or, rather, to wisdom and to reason. Aristotle's mode of deriving knowledge is from externals, Plato's from internals. According to the former, we obtain the knowledge of particulars immediately through the senses, while we acquire the knowledge of universals, only after the experience and logic, Plato, on the contrary, begins with universals, and reasoned downwards. In this we have the leading difference between the two schools. In the system of Aristotle, logic is the Ὀνειροφθήμιν, the instrument by which all general knowledge is obtained. Hence the importance of logic in the peripatetic school. Logic, however, is only the instrument of science or philosophy, quoad formam, for it is experience that constitutes the science, and not the science itself, quoad materia, into general principles. By his works comprehended under the title of Organon, Aristotle has rendered the greatest service to logic, as the science which would establish the formal part of reasoning, and elucidate its theory; and he ought not to be made responsible for the abuse, which afterward prevailed, of this same art among his later followers, the schoolmen. The error into which they fell was to make logic capable of supplying not only the form, but even the matter, of argumentation; in other words, to consider it an instrument that could of itself discover the truth.—Aristotle, more than any other philosopher, enlarged the limits of philosophy. He comprised therein all the sciences (rational, empirical, or mixed), with the single exception of history; and he appears to have divided it, as a whole, into Logic, Physics, and Ethics, or speculative and practical. Aristotle's τὰ Φυσικά is not equivalent to Physics in the modern acceptance of the term, but has a much wider range, comprehending the nature of all beings, and not confined to mere material ones. Under this head, therefore, the nature of Deity comes in for consideration. But, in treating this topic, Aristotle fell from the high and lofty teaching of his master Plato, and taught the existence of deity in a lower sense, without any of those attributes which may be said to constitute his very nature. With him, Nature is a great machine, the first spring of which is Deity. He says nothing of the Supreme Being; he speaks of him merely as a first cause of movements, itself unmovened (τὸ πρῶτον κινοῦν ἀκίνητον).—Aristotle has been accused of being an atheist and a necessitarian. The Christian fathers rejected his philosophy on the ground of atheism, because he taught that the world was eternal. His doctrine, however, would not seem to be in reality an atheistic one. He taught that Creation was not within the limits of time; that the essential nature of Deity was causation. If the cause be eternal, the effect must be eternal, and there never would be a time when Creation did not exist. It is evident that in this he did not mean to teach atheism. He is more justly chargeable with being a necessitarian, since all his reasonings on the Deity make him the first spring of the great machine of nature. —With regard to man, he likewise taught a less lofty doctrine than Plato. He makes the soul distinct from the body; but the mind of men departs from the body, 'he says (νοῦς, ἀπὸ τοῦ μετέπειτα τοῦ κεφαλῆς), it is inseparable therefrom. He says little about the immortality of the soul, and a future state of rewards and punishments; and has even by some been charged with materialism. A perfect unity of plan prevails through his Ethics, Politics, and Economics. Both the latter have for their end to show
ARISTOTLES.

how the object of man's existence, defined in the Ethics, namely, virtue combined with happiness, may be attain
ed in the civil and domestic relations, through a good con
stitution of the state and household. — In the history of
the Aristotelian school, four periods are commonly noticed.
The first, from the death of Aristotle to the
of Cicero, was a period of gradual decline, for
the philosophy of the Stagirite, as it was called
peculiarly his, by the ancient writers, they could not carry it on. Du
ring the second period, from Cicero to the seventh cen
tury of the Christian era, the philosophy of Aristotle
was quite neglected, and almost unknown. From
the seventh to the tenth century, the third period, it
was revived, but in a greatly corrupted state. From
the tenth to the fifteenth, the fourth period, when it
was overthrown by Bacon and Descartes, it went by
the name of Latitudinarian Philosophy, being connect
ed with polemic theology. — Aristotle was the most
voluminous of the ancient philosophers. A large cat
gogue of his writings is given by Diogenes Laertius,
and in modern times by Fabricius and others. From this
it appears that he wrote many books besides those which
have been transmitted to our own day. We have all
his Logical works, five in number, and usually pub
lished under the general title of Organon. We have
16 books on Physics, the first four in 8vo, and the other
three on Morals; the first entituled Nic
amachean Ethics, addressed to his son Nicomachus;
the second Magna Moralia; the third a Discourse on
Virtue and Vice. We have also separate works on
Economics, Government, the Art of Rhetoric, and the
Art of Poetry. The works of Aristotle, together with his
library, passed very early through hazards which have rendered it a subject of critical inquiry how far
the present volumes which bear his name are genuine.
(Consult remarks under the article Apellicon.)— Be
coming this article, it may not be amiss to offer a few observations relative to the term Metaphysics, as
applied to some of the writings of Aristotle. This ap
pellation is not found either in the works of the Stag
rite himself, or in those of any Greek or Roman phi
losopher anterior to Nicholas of Damascus. It is said
that Andronicus of Rhodes, wishing to arrange the
works of Aristotle in their natural order, divided them into
classes, such as works on logic, on rhetoric, on poe
y, &c. The last of these sections or divisions com
prehended the works on Physics. Still, however, there
remained over a number of writings, which he had been unable to assign to any class, because, being
first essays in a new science, they did not fall under any
one of the heads under which he had arranged the rest.
He therefore united these into one class by themselves,
and assigned them the title of "Physics," which word he
must be supposed to have derived from the Greek word

that of Götting, Lips., 1824, 8vo, &c. Among the
substantial works on Aristotle may be mentioned the following:
The Examen Critique de l'ouvrage d'Aristote intitule Metaphysique, par Michelet, Paris, 1836, 8vo
— Essai sur la Metaphysique d'Aristote, par Ravais
son, Paris, 1837, 2 vols. 8vo — La Logique d'Aristote,
par Saint-Hilaire, Paris, 1839, 2 vols. 8vo. These
works are of course written in French, and in many
instances this may be the case of those works of authors
(Ritter's History of Philosophy, vol. 3, p. 1, seqq. —
Tennemann's Manual, &c., p. 121, seqq. — Enfield's
History of Philosophy, vol. 1, p. 260, seqq.)

ARISTOXENUS. I. a native of Tarentum and disci
ple of Aristotle, who wrote both on philosophy and mu
sic. Among the works of a philosophical character
which he composed, may be enumerated his treatise on the
laws respecting Education (εραι δαιδων νομων), his Pythagorean Theses (Πυθαγοραεα ορθώρεως)
—a collection of the precepts of morality inculcated by that
sect; and his Biography of Eminent Philosophers (Εισ 政 υπωνου). — In the last of these works he is unjust to
wards the character of Socrates, as far as we can learn
from some fragments that have come down to us.
The cause of this may either have been the little es
teem in which music was held by Socrates, or a quar
rel which had occurred between the latter and Spino
zial; but the whole is connected with the name of one of his disciples. Aristoxenus was celebrated among
the ancients for applying the Aristotelian doctrine of
knowledge to the scientific investigation of music. He
compared the soul to a musical harmony, and thought
that, as the latter is produced by the different relations
existing between several tones, so, too, the soul is the
consequence of the relative arrangement of the differ
ent parts of the body; for that it is this which produ
ces the movement of the living body, and the soul is to
be regarded as nothing more than a certain tension
of the body. (Cic., Tus., 1. 10.) As a writer on
music, Aristoxenus must be regarded as the earliest
that we possess.

His work on Harmony was pub
lished by Meursius in 1616 (Lugd. Bat., 4to), and
subsequently, in a much more correct form, by Melbo
mius, in his collection of the Writers on Music. The
fragments on Rhythm were published for the first time
by Morier in his Bibliotheca Leptines, 1782, 8vo, and
the remainders of the Biographies of the Greek and
Roman musicians in Venet., 1785, 8vo. The remains of
the philosophical writings of Aristoxenus are principally
in Stobæus, but have not as yet been edited by any
scholar. Compare, with regard to this writer, the re
marks of Meiners, Gesch. der Wissenschaft., vol. 1, p
213, and Mainz, Diariole d'Aristoxeno, Amat., 1793,
8vo. — II. A physician, disciple of Alexander Phila
ethes, called by Galen (dif. puls., 4, p. 47). He rec
commended the use of clysters in hydrophobia; and
boasted much of the efficacy of frictions with oil and
the plant termed by botanists polygonum convolvulus,
in cases of quartan fever. He left a work on the
principles of his school, which has not come down to
us. (Coel. Aurel., acut., 3, 16, p. 238. — Apoll. Dacu,
hist. mirab., c. 33, p. 133. — Galen, l. c.)

ARIUS, a presbyter of the church of Alexandria, in
the 4th century. He denied the divinity and com
stituency of the Word. After having been persecuted for his opinions, he gained the favour of the Emperor
Constantine, and supplanted St. Athanasius, his ad
versary, but died suddenly, when just about to enter in
trumph the cathedral of Constantinople, A.D. 396.

He gave name to the sect of the Arians. (Epiphani,
Heres., 68. — Socrat., Hist. Eccles., &c.)

ARMENIA, a large country of Asia, divided into Ar
menian Major and Minor. The latter, which is the mod
ern Turkey, is sometimes called Armenia, lies south of Mount Caucasus, and comprehends the
Turkish pachalics Erzerum, Kars, and Van, and also the Persian province Iran or Erivan. It was separa
ted from Armenia Minor by the river Euphrates. Ar
menia Minor was, properly speaking, a part of Cappa

203
ARMENIA.

For some remarks on the Armenian language, consult Balbi, Atlas Ethnographique, &c., tab. 4, and Introduc
A R M

.docia. It is now called Aladuia or Pegian, belongs
to the Turks, and is divided between the pachalics
Merashe and Sies. Armenia is a rough, mountain-
ous country, which has Caucasus for its northern
boundary, and in the centre is traversed by branches
carve the way which be
Here the two great rivers Euphrates and Tigirs' take
rise; likewise the Cyprus or Kur, and other less
considerable streams. Herodotus (7, 73) says that
the Armenians were a Phrygian colony, and used arms
like those of the Phrygians; but, as Ritter well re-
marks (Erdkunde, vol. 2, p. 782), the nations whom
he of the father of profane history designates as Phrygians,
Armenians, Cappadocians, and Syrians, are all de-
scendants of the Aramean stock. Hence may, with
some degree of probability, consider the name Armenia
as derived from Aram, and the Semitic Arameans, to
have been the first inhabitants of the land, who were
afterward overpowered by barbarian tribes from Upper
Asia. (Compare Adelung, Mythradas, vol. 1, p. 420.)
According to another opinion, the Armenian tongue
may be traced to Xieuthros or Noah, and may boast of
being antediluvian in its character. (Recherches
Géographiques et Linguistiques, by J. P. A. de Saillant,
Paris, 1806, 8vo.) Of the ancient history of Arme-
nia but little is known. The native writers make
Haiq to have been the first chieftain or prince that
ruled over this country, and from him they called them-
selves Haji. He was the son of Taglath, who, ac-
cording to them, was the same with Thogarma, grand-
sen of Japhet. Twenty-two centuries before the
Christian era he left Babylon, his native place, and es-
dued himself, with all his family, in the mountains
of southern Armenia, in order to escape from the tyr-
anny of Belus, king of Assyria. The latter attacked
him in his new settlements, but perished by his hand.
Aram, the sixth successor of Haiq, became so disting-
ished by his exploits, that, from his time, the sur-
rrounding nations called the country Armenia, after his
name. Ara, son of the preceding, fell in defending
his country against Semiramis, and Armenia became
therefore an Assyrian province until the death of
Sardanapalus, when a succession of native princes
again appeared. (Compare Klapproth, Tableaux His-
toriques de l'Asie, &c., p. 50, seqq.) After the death
of Alexander, it became part of the kingdom of Syria,
and so remained till the overthrow of Antiochus the
Great, when it fell into the hands of different rulers,
and was divided into Armenia Major and Minor.—
Armenia Major was exposed to many attacks. The
Romans, after Parthia had long fought for the right of
giving a successor to the throne, and it was
ruled at one period by Parthian princes, at anoth-
er by those whom the Romans favoured, until Tra-
jan made it a Roman province. Armenia afterwards
recovered its independence, and was under the rule
of its own kings. Sapor, king of Persia, attempt-
ed its subjugation in vain, and it remained free until
650, when it was conquered by the Arabs. After
the death of Sapor II., Armenia fought a long time for
their independence, and at length were Gengia-Khan and Timour-Leng. In 1552, Selim II., conquered it from the Persians, and the greater
part has since remained under the Turkish dominion.
—Armenia Minor has also had several rulers, among
whom Mythradas was first distinguished. From
him Pompey took the kingdom, and gave it to Deolutus.
On the decline of the Roman Empire in the
east it was conquered by the Persians, and in 950 fell
under the dominion of Armenia, of which it has
it shared the same fate as Armenia Major, and was
made, in 1514, a Turkish province by Selim I.—The
earlier capital of Armenia was Armavir, which, during
1800 years, was the residence of the kings. After
Armavir, Artaxata (Artascha) on the Araxes, built
in the time of the Seleucidae, became the capital, but
sink into decay before the end of the 8th century,—

204
hated of his countrymen by aiming at the regal au-
thority. A short time before his death, Adganisteus or
Adganistrius, prince of the Catti, proposed to the
Roman senate to despatch Arminius by poison, but
the senate took no notice of the offer. Arminius was
26 years old when he destroyed the legions of Varus.
In this language so Tacitus, 'Arminius was doubtless
the deliverer of Germany.' He fought against the
Romans, not like other kings and generals, when they
were weak, but when their empire was mighty and
their renown glorious. Fortune, indeed, sometimes
deserted him; but, even when conquered, his noble
character and his extensive influence commanded the
veneration of his conquerors. For twelve years he
presided over the destinies of Germany, to the com-
plete satisfaction of his countrymen; and after his
death, they paid him divine honours.' (Tacit., Ann.,
2, 88.) If we dwell a moment on the results of his
victory, we will find that it had a decided influence on
the whole character of Germany, political and liter-
ary; because it is evident that, had the Romans re-
mained in quiet possession of the country, they would
have given a tone to all its institutions and its lan-
guage, as was the case with all the other countries of
Europe conquered by them. The reason, therefore,
why the language of the Germans remained in a great
degree unmixed with, and uninfluenced by, the Latin,
and why their political institutions retained so much
of their ancient character, is to be found in the victory

ARMINIUS, I. The elder, called also the African,
was born at Sicca Venerea in Numidia, in the latter
part of the third century. He was at first a pagan, and
taught rhetoric in his native city, where he acquired a
high reputation; but he subsequently embraced Chris-
tianity, being moved thereto by dreams, according to
St. Jerome. (Chron. ad ann. xx. Const.—Compara de
evir. ill., 79.) As, however, he had warmly attacked
Christianity before his conversion, in the course of his
public lectures, the bishop of Sicca refused to admit
him within the pale of the church until he had evis-
ced the sincerity of his conversion by some open act.
In consequence of this, while yet a catechumen,
he wrote a pamphlet entitled Præsum genus, in
which he refuted the objections of the heathen against
Christianity with spirit and learning. This work be-
trays, as may well be expected, a definite knowledge of
the Christian religion, but it is rich in materials for
the understanding of Greek and Roman mythology:
hence it is one of the writings of the Latin fathers,
which, like the works of his disciple Lactantius, are
particularly valued by philologists. We have given
above a translation of the whole of Arminius's work.
It is commonly, but less correctly, called Liber vii.
disputationum adversus gentes. (Le Nourry, Appa-
rat. ad Bib. Patr., 2, p. 285.—Bähr, Christlich-
Rom. Theol., 67.) The latest and best edition of
Arminius is that of Orellius (Lips., 1816, 8vo).—
II. The younger, a Gallic divine in the last half of
the 5th century. We have of him an insignificant
commentary on the Psalms, which betrays the princi-
ple of Val Semiliterianus and Bähr, l. c.)

ARNO, a river of Etruria, rising in the Umbrian
Apennines, and falling into the Mediterranean.
It is now the Arno. On its banks stood Florentia, the
modern Florence, and near its mouth Pisa, now Pisa.
The portus Pisana was at the very mouth. (Strab.,
222.—Ruillé, Jbn., I, 351.)

ARNO, one of the three towns of Achaia on the site
of which Patras was afterward built. The other two
were Anthea and Messastis. (Pausan., 7, 18.)

AROMATA, OF AROMATUM PROMONTORIUM, the most
eastern land of the continent of Africa, now Cape
Guardafui. (Plut., 1, 9, p. 11.)

ARPI, a city of Apulia, in the interior of Daunia,
remarkable for its antiquity. Its first name was Argy-
ripa, an appellation supposed to be derived from
'Arpy; ἰπιών, the name which it received originally
from its founder Diomede. When Arpi is first intro-
duced to our notice in the history of Rome, it is rep-
resented as an Apulian city of no great importance,
and of which the Romans possessed themselves with-
out difficulty. (Liv., 9, 13.) In the second Punic
war it fell into the hands of Hannibal after the battle
of Cannae (Polyb., 3, 89 and 118), but was recovered
by the Romans. Arpi was greatly reduced in the
time of Strabo (283), but still continued to exist un-
der Constantine as an episcopal see. (Cramer's An-
cient Italy, vol. 2, p. 252.)

ARPINO, a small town of Latium, southeast of
Rome, still known by the name of Arpino. It is ren-
dered illustrious in the page of history for having
given birth to Marius and Cicero. It originally be-
tongued to the Volsci, but was taken by order of Scipio,
from whom it was again wrested by the Romans.
(Liv., 9, 44.) It became a municipal town, and its
citizens were enrolled in the Cornelian tribe. Of
course, frequent mention is made of Arpino in Ci-
cero's letters: he was fond of his native place, and
dwells with complacency on the rude and primitive
simplicity of its customs, applying to it those lines of
the Odyssey (1, 27, seq.) in which Ulysses expresses
his love for Ithaca. (Cramer's Ancient Italy, vol. 2,
p. 114, seq.)

ARSET, the wife of Cæcina Petus. Her husband,
a man of consular rank, having taken part in the un-
successful revolt of Scribonianus, in Illyricum, against
the Emperor Claudius, was brought to Rome for trial.
Arria, finding all means of saving him ineffectual, and
perceiving him, at the same time, destitute of suf-
cient courage to destroy himself, plunged a dagger
into her own bosom in the presence of her husband,
and then drawing it forth, handed the weapon to him,
calmly remarking at the time, "it does not pain." Mar-
tial has made this the subject of an epigram (1, 14).

ARRIBANUS, I. A Greek historian, a native of Nic-
media, who flourished in the second century under
Hadrian and Antonines. In his own country he was a
worthwhile personage. To get his变为当中的
his residence at Rome, he became a disciple of Epic-
tetus. He was honoured with the citizenship of Rome,
and appointed prefect of Cappadoxia by the Emperor
Hadrian, who patronised him on account of his
learning and talents. In this capacity he distin-
guished himself by his prudence and valour in the
war against the Massagetae, and was afterward ad-
vanced to the senatorial and even consular dignities.
Like Xenophon, he used the history of his native
country conversant with philosophy and learning, and
intimate with those who cultivated them.

No less than seven of the epistles of Pliny the young-
er are addressed to Arrian. His historical writings
were numerous; but of these, with the exception of
some fragments in Photius, only two remain. The
first is composed of seven books on the expedition of
Alexander, which, being principally employed in
the treatment of Herodotus and Aristotle, both of
whom were served under that king, are deemed proportionally
valuable. Arrian, himself a soldier and a politician,
possessed a sounder judgment than Quintus Curtius,
and indulged less in the marvellous. To this work is add-
ed a book on the affairs of India, which pursues the
history of Alexander, but is not deemed of equal au-
thority with the former. An epistle from Arrian to
HADRIAN was also extant, entitled, "A Periplus of the Euxine," probably written while he was prefect of Cappadocia. There are, besides, under the name of Arrian, "A treatise on Tactics" (a Periplus of the Erythraean Sea," to which the authority is Anthius, "A Treatise on Hounds and Hunting"; an "Enchiridion," or Manual, exhibiting an abstract of the doctrines of Epicetus; and the "Discourses," or Dissertations of that philosopher, compiled from notes taken during his lectures. The best editions of Arrian's Expedition of Alexander are, that of Gronovius (Lugd. Bat., 1704, fol.), and that of Schmieder (Lips., 1798, 8vo). The edition of Raphelius (Amst., 1757, 8vo, 2 vols. 8vo) is the best printing of the Greek index, most wholly derived from that of Gronovius. Of the Indian history, the best edition is that of Schmieder (Haare, 1798, 8vo). Of his Enchiridion, that of Upton (Lond., 1739, 4to), and that of Schweighaeuser (Lips., 1799, 8vo), forming part of the edition of the Discourses, by the same, which last-mentioned work is in 5 vols. 8vo, Lips., 1799—1801. Of the rest of his works, the best edition is that of Blancard, Amst., 1835, 8vo. The edition of his geographical writings, by Bell, viii, fol., 1757, is the best. A Roman lawyer, whose era is unknown. A work of his, "De Interdictis," is mentioned in lib. 2, D. V., 3, de hered. petit.—III. A poet who wrote an epic poem in 24 books on Alexander; also another poem on Atalus, king of Pergamus. He likewise translated Virgil's "Georgics" into Greek verse. (Suidas, s. e.) Arrius, a noted grammarian, mentioned by Horace. The poet alludes to an entertainment such as he should direct, which would of course be no unexpensive one. (Serm., 2, 3, 86.) Arises, I. a man of obscure origin, who incited the Parthians to revolt from the power of the Seleucids, and was elevated to the throne on account of his success. Justin (41, 4) makes this revolt to have taken place during the reign of Seleucus Callinicus, son of Antiochus Theos, but his account is inconsistent with his date. Arrian (ap. Phot., Cod., 58) seems to fix the revolt in the reign of Antiochus; while Appian (Bell. Syr., 65) places it at the death of this monarch. Possibly, the establishment of the Parthian power was gradual, and was not completed till the reign of Seleucus. (Clinton, Fast. Hell., vol. 2, p. 18.) Araxes defeated Seleucus in battle, and when this monarch made a second expedition into Parthia, he took him prisoner and kept him long in captivity. (Posidon., ap. Athen., 4, p. 153, a.) Araxes then laid the foundations for the empire which his successors took from him the name of Arasac. According to Justin (I. c.), who seems confirmed by Strabo (515), he reigned long and died in old age: according to Syncellus (p. 284, c.), who quotes from Arrian, he reigned only two years. (Clinton, i. c.)—II. The second of the name, of the preceding, succeeded his father on the Parthian throne, and was, like him, a warlike prince. While Antiochus the Great was engaged in a war with Ptolemy Philopator, of Egypt, Araxes made himself master of Media. (Polyb., 10, 27.—Justin, 41, 5.—Clinton, Fast. Hell., vol. 2, p. 315.)—III. The third of the name, son of the preceding, surnamed Arapiatus or Phraapat. He reigned 15 years, and left the kingdom to his son Phraates. (Justin, 41, 6.)—IV. A king of Armenia, who was on the throne when Julian marched against Sapor, and was ordered to furnish auxiliaries for the Roman army. When Jovian, after the death of Julian, was compelled to sign an ignominious treaty with Sapor, Araxes, by the terms of which, it was left to the mercy of the Persians, and was soon after entrapped and slain. (Amm. Marcell., 53, 2, seq.—Id., 25, 7, et 12.) Arascophé, a name given to some of the monarchs of Parthia, in descent from Arsaces, the founder of the empire. Their power subsisted till the 226th year of the Christian era, when the dynasty of the Sassanides was founded by Artaxerxes. (Vid. Arsaces 1, and Descent of the Greek Index, 3.) Arsamakta, a city of Armenia Major, in the southwestern angle of the district of Sophene, and 70 miles from the Euphrates. It is now Sirmat. Another form of the ancient name is Armosata. (Plin., 6, 9.)—Polyb., Exc. vii., lib. 8, 25, 1.—Tacit., 15, 10.) Arsanias, I. a river of Armenia Major, which D'Anville and Mannert, but especially the latter, consider as another name for the southern arm of the Euphrates. (Vid. Euphrates.)—II. There was another river, also a river of Armenia Minor, which flowed from the northwest toward Sophene, and entered the Euphrates below Melitene, on which Arsamakta was situated. This is now the Arsen. (Pliny, 5, 24.—Tacit., 15, 15.) Arses, the youngest son of Ochus, whom the eunuch Bagoas raised to the throne of Persia, and destroyed with his children after a reign of three years. (Vid. Bagoss.) Arsi, a small river between Illyricum and Histria, and forming the limit of Italy in that quarter, after Histria was added to Italy by Augustus. (Plin., 3, 19.—Flor., 2, 5.) Arsiné, I. daughter of Meleager, and mother of Ptolemy I., of Egypt, by Philip, father of Alexander. During her pregnancy she was married to Lagus. —II. Daughter of Ptolemy I., of Egypt, and Berenice. She married Lyaimachus, king of Thrace, who was already advanced in years, by whom she had several children. Lysimachus, setting out for Asia, left her in Macedonia, with two sons, Lysimachus and Philip, a part of the fruits of their union. This monarch having been slain in an expedition, Ptolemy Ceraunus seized on Macedonia, but could not take the city of Cassandria, where Arsiné had taken refuge with her children. He therefore offered her his hand in marriage, and with much difficulty obtained her consent. But no sooner had she been admitted into the city, than the Ptolemies of Egypt, having completed the nuptials, then caused her two sons to be slain, and exiled Arsiné herself to Samothrace. From this island she soon took her departure to wed Ptolemy Philadelphus, her own brother, the first instance of this kind of union, and which became afterward so common in the time of the Ptolemies. Although many years older than Ptolemy, she nevertheless inspired him with such a passion, that, after her death, he gave her name to one of his cities, and erected several cities both in that country and elsewhere. He even gave orders to have a temple erected to her, but his own death and that of the architect prevented the fulfilment of his wishes. It was intended to have had the ceiling of leadstone, and the statue of iron, in order that the latter might appear to be suspended in the air. (Plin., 24, 14.)—II. Daughter of Lysimachus, king of Thrace, and the earlier wife of Ptolemy Philadelphus. She was the mother of the famous Attalus, whose house she bequeathed to Ptolemy Philadeph, Lysimachus, and Berenice. After Ptolemy's union with Arsiné, his own sister, she was banished to Coptos. The charge brought against her was a design to overthrow her rival. —III. Daughter of Ptol- emy III., and Berenice, married Ptolemy Philopator, her brother. Her husband subsequently having become ensnared of Agathocles, and being completely 206
ruled by this female and her brothers, was induced, at their instigation, to order Arsinöe to be put to death.—IV. A daughter of Ptolemy Auletes, proclaimed queen by Ganymedes, when Cæsar attacked Alexandrea. She was conquered, and brought in triumph to Rome; but, as this proved unplesing to the people, she was set at liberty. Subsequently, on the accession of one of her younger sisters Cleopatra, she was put to death by the orders of Antony, in the temple of Diana at Milœtos. (Hirt., Bell. Alex., 4.—Appian, Bell. Civ., 5, 9.)—V. A city of Egypt, the capital of the Arsinoïtic nome, lying to the west of the Nile, and between Heracleopolis Magna and Lake Moeris. It derived its name from Arsinœ, the sister and queen of Ptolemy Philadelphus. The earlier appellation was the "City of Crocodyles," as the Greeks translated it (Crococôdotæa polis, Herod., 2, 148). This last-mentioned name arose from the circumstance of the crocodile's being worshiped here; and a tamed representative of this fearful class of creatures was carefully nurtured and attended to in an adjacent pond or tank. Strabo gives an account, as an eyewitness, of this curious custom. The bodies of the sacred crocodyles were deposited after death in the cells of the temple in a trough of wax, near the city. The Egyptians honoured the crocodile here, because it was consecrated to Typhon, their evil genius, whom they dreaded, and sought to appease by worshiping an animal which was his symbolic image. The city of Arsinœ is now a pile of ruins, which lie not far to the north of the modern Médinet el Zâouïm. Jomard gives an accurate description of them. (Descript. de l'Egypte, vol. 4, p. 446.)—VI. A city of Egypt, at the head of the Sinús Arabìicus, and not far from which it appears to stand the modern Suez. Philæstrus constructed the harbour, and called the place after his sister and queen Arsinœ. In its immediate vicinity lay the city of Cleopatra, of later erection, and, in consequence of their proximity, both places were often called by the common name of Cleopatria, though actually distinct spots. (Strab., 805.) Arsinœ was connected with the Nile by means of the canal of Ptolemy, and for a long period was the very life of the navigation on the Sinús Arabîicus, forming the connecting link between the traffic of Egypt and that of the East. In process of time, however, the dangerous navigation of the upper part of the gulf induced the Ptolemites to construct harbours lower down, and Arsinœ from this time sank in importance, and finally disappeared from notice. The Peutinger table, in the third century, makes mention thereby of it, but does not even intimate that it ever existed. (Manuet, vol. 10, pt. 1, p. 517.)—VII. A city of Cilicia Trachæa, on the coast, between Celedeneria and the mouth of the Armagdus. (Plin., 5, 27.)—VIII. Another name for Patala, in Lycia. (Vid. Patala.)—IX. A town of Cyprus, near the promontory of Ammochostus. (Strab., 682.)—X. A harbour of Egypt, on the Sinús Arabîicus, below Philæstrum. (Plin., 6, 29.)—XI. Another harbour, in the island of Paros. (Theocritus, 15, 118.)—XII. In the vicinity of Diræ. (Mela, 3, 8.—Artemid., ap. Strab.)

Arsissæ Palus, a great lake in the southern part of Armenia Major, now the Lake of Van. It was on its northern side embellished with cities, which were better known to the Byzantine writers than they had been before, viz., Chalatis or Atlaï, Arzæ or Arzigh, and Perkri. This sheet of water is also sometimes called in the Armenian geography, the Lake of Besouchnik, from the district in which it lies, near a bristling forest. The name Besouchnik is derived from that of Basun, a grandson of Haig, the first ruler of Armenia. (Wahl, Vorder und Mittel Asien, p. 508.)

Arbatanæus, I. son of Hystaspes, was brother to Darius the First. He endeavoured to dissuade his nephew Xerxes from making war upon the Greeks, to no effect; and, after accompanying the monarch to the Asiatic shore of the Hellestom, was sent back by him to Susa, to act as viceroy or regent in his absence. (Herod., 7, 10, seqq.—Id., 7, 17.—Id., 7, 52.) If the story related by Plutarch be true, Arbatanæus must always have possessed great influence with Xerxes, since, according to the Greek writer, the monarch showed him so much respect and confidence, that he permitted the Persians to decide between Xerxes and his elder brother Ariameses. Arbatanæus adjudged the kingdom to the former, as having been born after his father came to the throne, and as being the son of Atossa the daughter of Cyrus. (Plut., de frat. am., p. 488, f. p. 988, Wyttenb.)—Compare the account given by Herodotus, 7, 1, seqq.) We have nothing farther of Arbatanæus in history. He is by no means to be confounded with the individual of this name, Aristobulus II.) who slew Xerxes. (Bähr, ad Citæ, c. 20, p. 151.—Larcher, ad Citæ, vol. 6, p. 287.)—II. An Hycaranian, captain of the guards of Xerxes, and for a long time one of his greatest favourites. When the monarch, after his return from Greece, gave himself up to a life of dissolute pleasure, Arbatanæus conceived this to be a favourable opportunity for seizing on the throne, and, having conspired with Mithradates, one of the eunuchs of the palace, and chamberlain of Xerxes, he introduced himself by night into the royal apartment, and slew Xerxes, B.C. 464. After perpetrating the deed, he ran to Artaxerxes, the son of the monarch, and told him that Darius, his elder brother, had just murdered his father. Artaxerxes believed the story, and his brother was immediately arrested and put to death. After the new monarch had ascended the throne, Arbatanæus conspired against his life, but was betrayed by Megavanus, an accomplice in his plot, and put to death. Such is the account of Ctesias (c. 30), which Larcher very justly prefers to the statements of Justin (3, 1) and Diodorus Siculus (10, 19), both of which appear tinged with absurdity.—III. A monarch of Parthia, known as Arbatanus II., or Arsaces VIII. He succeeded his nephew Phraates II. (Arsaces VII.), and was killed in a war with the Thægæri, a Sianian nation. (Justin, 42, 2.)—IV. A monarch of Parthia, known as Arbatanus III., or Arsaces XIX. He succeeded Vonones I., whom he drove from the throne, having himself previously reigned in Media. Faithful to the Romans, his protectors, as long as Germanicus inspired him with fear, he became, after the death of this commander, cruel and oppressive to his subjects, and arrogant towards Rome. His people complained of him to Tiberius, who named for them Phraates III. This individual of the same name, driving on the route, the emperor nominated Tirdates. Arbatanus fled into Scythia, but, being encouraged by the efficacy of Tirdates, he took up arms again, and recovered his kingdom. The death of Tiberius saved him from punishment, and he made his peace with Caligula by dint of flatteries. Still, however, he was once more driven out by his subjects, and only returned eventually to die in his kingdom, about 44 A.D. (Tacit., Ann., 5, 58.)—V. A monarch of Parthia, son of Vologeses IV., ascended the throne A.D. 216. His historical name is Arbatanus IV., or Arsaces XXXI. He had hardly commenced his reign when he was menaced by Caracalla. The emperor demanded his daughter in marriage, in order to have a pretext for war in case he refused. The Parthian king, however, asserted, and the Roman army was allowed to approach the Parthian borders, where it was sorely defeated. But on a given signal, the Roman troops fell upon the followers of the monarch, and an indiscriminate massacre ensued, from which Arbatanus himself with difficulty escaped. Caracalla thereupon pillaged the surrounding country, and then returned to Mesopotamia. Arbatanus, burning for revenge, assembled the largest army which the Parthians had ever as yet raised, crossed the Euphrates,
laid waste everything with fire and sword, and encoun-
tered the Roman forces in Syria. Macrinus had
succeeded Caracalla. A bloody battle ensued, which
lasted for two days. On the third day, a herald from the
Romans announced the fact of Caracalla's being
dead, and that Macrinus was his successor, and also
proposed a treaty of peace between the two empires.
The Romans accordingly restored the prisoners they
had taken, paid the expenses of the war, and Arta-
banus returned to his capital. His prosperity, however,
was but temporary. Arbiter Babegan, or Artax-
zerxes, excited the Persians to revolt, and Artabanas
was defeated, taken prisoner, and put to death. With
him ended the Parthian dynasty of the Arsacids. The
family itself, however, was not extinct in the person
of Artabanus, but continued to reign in Armenia, as
tributary to the new Persian dynasty, until the time of

**Artabanus.** I. son of Pharmacas, commander of the
Parthians and Chorasmians in the army of Xerxes.
He escorted this monarch through Europe to Asia,
after the battle of Salamis, at the head of sixty thousand
men, and rejoined Mardonius before the battle of Pla-
taea. He endeavoured to dissuade him from engaging in
this conflict, but to no purpose; and, after the death of
Mardonius, succeeded in retreating to Asia with the
residue of his own forces, having obtained a safe pas-
sage through Thessaly by assuring the inhabitants that
Mardonius and himself had been slain in the action.
(Proc. R. Soc., vol. 7, 66.)

Id., 8, 126.—Id., 9, 41.—Id., 9, 83.)—II. A general of
Artaxerxes Longimanus. He remained faithful to
this prince as long as he reigned, and did everything in
his power to conquer Datames, who had revolted
against the king. He himself subsequently revolted
against Ochus, but, after fleeing into Macedonia, was
pardoned by that prince. He fought in the battle of
Arbel, on the side of Darius, and, after the death of
the latter, the succession of the Arsacids was made
him, and he reigned forty years, at least, and was
famous for the courage which he displayed in action.
(Proc. R. Soc., vol. 7, 66.)

**Artaxerxes.** I. a name common to some of the
kings of Persia, and the meaning of which will be con-
cidered at the close of this article. The first of the
name succeeded his father Xerxes, who had been
assassinated by Artabanes, captain of the royal guards.
After discovering and punishing the murderer of his
father, and bringing to a close a war in Bactria,
occasioned by the revolt of a satrap, he reduced to obedi-
ence the Egyptians, who had revolted under Inarus,
and who had been aided by the Athenians. Though
severe in the earlier part of his reign, he became con-
spicuous afterward for mildness and moderation.
This Artaxerxes was called Magnopæus (Longimanaus),
from the extraordinary length of his arms, according
to Strabo, which, on his standing straight, could reach his
knees; but, according to Plutarch, because his right
hand was longer than his left. He reigned thirty years,
and died B.C. 425. (Ctes., Pers., c. 30, seqq., p. 71,
seqq.; ed Bühr.—Plut., Vit. Artax., n. 1.)—II. The
son of Artabanus, in the reign of Caracalla (Proc. R.
Soc., vol. 7, 66.)

**Artea.** A promontory on the northwestern coast of Spain, now Cape Fistarete, in Galicia. It was sometimes called Celticum Promontorium (Proc., 4, 22), and also Xerium. (Strab. 106.)

A long tract of the capital of Aria, now Herat, is a
soil on the river Aries, now the Heri. (Arrian, 3, 25.—
Strab., 350.)

**Artageras or Artagica, a town of Armenia.
**Major, northeast of Amida, where Carus Caesar,
a nephew of Augustus, was dangerously wounded by
one Addruz. It is now probably Arsdis. (Vell. Paterc.
2, 103.)

**Artaphernes, I. a brother of Darius, and son of
Hyestaspes, governor of Sardis. (Herodot., 5, 25.)—
II. A son of the preceding, whom Darius sent into
Greece with Datis. He was conquered at the battle of
Marathon by Miltiades. (Vid. Datis.—Herodot., 4,
153.—Id., 5, 55.)

**Artavasdes or Artabazus, king of Armenia.
**The son and successor of Tigranes, began to reign about
70 B.C. It was principally through his treacherous
advice, as to the mode of entering Parthis, that Crassus
failed in his expedition against that country. He was
subsequently taken by Antony, to whom he had also
acted a treacherous part in his Parthian expedition,
who led him in triumph at Alexandria. He was put
to death, after the battle of Actium, by Cleopatra, who
wished to obtain succours from the King of Media, and
therefore sent them the head of Artavasdes, his ene-
my. The prince appears to have been a very well-
educated man. He wrote in Greek two historical works,
some tragedies, discourses, &c. (Plut., Vit. Anton.,
c. 50, seqq.)

**ARTAXERXES.** A strongly fortified town of Upper Ar-
menia, the capital of the empire, built upon a plain
which Hannibal recommended as a proper site for the
capital to King Artaxises. Near it ran the Araxes. It
was burned by Corbulon, and rebuilt by Trirdates, who
called it Neronea, in honour of Nero. It is now Ar-
desh. (Plin., 6, 9.—Flor., 3, 5.—Tactii, Ann., 13,
39, ed. 41.—Id. ib., 14, 23.—Strab. ib., 15, 15.—Strab. 363.)
After the battle of Cunaxa, the Greeks began their celebrated retreat, so graphic an account of which has been preserved for us in the pages of Xenophon. (Vid. Xenophon.) Artaxerxes was now peaceable possessor of the throne. Being irritated at the Lacedaemonians, who had embraced his brother's cause, he lent aid to Conon the Athenian admiral, and succeeded by his means in wresting from Sparta the dominion of the seas. He then furnished the necessary means for rebuilding the walls of Athens, and finally by employing his soldiery to suppress insurrections among the Grecian states, he forced Agesilaus to abandon the extensive conquests he had already made in the Persian dominions. The war at length was brought to a close by a memorable treaty, by which the Greek cities of Asia were abandoned to his sway. Artaxerxes was not successful in checking a revolt on the part of the Egyptians, nor was his march in person against the Cadusi, in Upper Asia, crowned with success. He was governed entirely by his mother Parysatis, who, by studying his inclinations, had gained a complete ascendency over him. After having put to death Darius, his eldest son, for conspiring against him, he died at the advanced age of ninety-four years, bowed down by sorrow at the loss of two other sons whom Ochus, who reigned after him, had managed to cut off. According to Diodorus, he was on the throne forty-three years; but according to Xenophon, and the Chronicler, Clinton, forty-four years. Plutarch makes his reign sixty-two years, but this is an error of a transcriber. (Diod. Sic., 13, 104. —Clinton's Fast. Hell., vol. 1, p. 316, 323.) The third of the name, called previously Ochus, and known in history as Artaxerxes Ochus, or simply Ochus, succeeded his father Memnon. He commenced his reign with the massacre of his brothers, and of all who belonged to the royal family. Egypt was then in a state of anarchy, and the Persians, and the Egyptians, were averse to each other. They had having in vain attempted to reduce it, and Ochus continued the war by means of his generals. Learning, however, that the Egyptians indulged in ravelleries against his person, and, moreover, that Phoenicia and Cyprus had also rebelled, he put himself at the head of his armies, took Sidon through the treachery of Mentor, commander of the Greek mercenaries, and made an insurrection of the inhabitants. He then marched against Egypt, and reduced Alexandria, the principal city of the Egyptian Empire, by the force of arms, and put to death, as he declared, the Egyptian deities, and, to crown all, caused the sacred Apeis to be killed, and his flesh served up for a repast. This conduct excited the indignation of Bagas, who, being an Egyptian by birth, was, of course, strongly attached to the religion of his country. He continued his angry feelings, however, until Ochus had returned to Persia, and resumed his indolent mode of life, giving up the reins of government entirely to Bagas. The latter thereupon caused him to be poisoned, gave his body to be devoured by cats, and, to indicate his cruelty of disposition, had sabre handles made of his bones. Bagas placed on the vacant throne Arses, the youngest son of Ochus, and put to death all the rest. Ochus reigned eight years, not eighteen, as Mdnmarius gives it. (Ed. v. H., 6, 8.—Justin, 10, 3.) IV. A soldier of fortune, founder of the dynasty of the Sassanides, and called by the Greek historians Artaxerxes. His true name was Ardechir Babegan, and he was the son or grandson of an individual named Sassan, who, though in very reduced circumstances, claimed descent from Artaxerxes Longimanus. He succeeded in dethroning Artaeanus, the last of the Arsacids, and thus laid the foundation of the second or last Persian dynasty. He was a usurper, and Artaxerxes appears to have had a peaceable reign, as far as the internal affairs of his kingdom were concerned. In his external relations he came in contact with the Emperor Severus, who de-
points of mythology. The style is marked by a cer-
tain degree of neatness, if not elegance. The best
edition is that of Reiff, Leips., 1805, 2 vols. 8vo.—
IV. A physician in the age of Hadrian. He is charged with
having mutilated the works of Hippocrates. Not
content with removing expressions that had fallen into
disse, and substituting others that were more intellig-
able, he is said also to have inverted the order of the
遐imes, and to have struck out, at the same
time, whatever appeared to clash with the new matter
thus brought in by him. (Vid. Hippocrates.—Gal en,
comm. in lib. de nat. hum., p. 4.—Sprengel, Hist.
Med., vol. I, p. 294.)—V. A painter, whose country is
uncertain. It flourished towards the end of the first
century of our era, and is referred to by Martial
(Ep., 5, 40), who censures him, because, in painting
Veas, he gives that soft gracefulness to her person which other
artists had done, but rather a de-
gree of the austere dignity of Minerva. (Sillig, Dict.
Art., s. v.)

Artémis (Ἀργείς), the Greek name of Diana.
From a curious passage in Clemens Alexandrinus
(Strom., 1, p. 334, Pott.), it would appear, that the
goddess was called Artemis because of Phrygian origin
(φρυγὸς οὖς οὖς, κελλάδα Άργείς). Hence Ja-
blonki concludes, that the name itself is a Phrygian one,
and compares it with his royal appellation Ar-
temas, as given in Xenophon to a king of Phrygia.
(Cyrop., 2, 1, 5). It is very probable, that the primiti-
ve root of the term Artemis is to be traced to the
Persian tongue (Arta, Arte, Art. Ar., all signifying
"great," or "excellent"), and thus Artemis or Diana
becomes identical with the "great" mother of nature,
even as she was worshipped at Ephesus. As a col-
lateral confirmation of this etymology, we may state,
that in early Persian poetry, more particularly in
Herodot., it originally called themselves Artesi (Artais), which Hel-
icians makes equivalent to the Greek ἡρείος, "heroic,
"i. e., great, strong, powerful. (Hellen., fragm., p. 97,
Sturz.—Id., ap. Steph. Byz., s. v. "Apraia") Other
derivations of the name Artemis are not so satisfac-
tory. Sickler, for example, deduces it from the Semitic Ar,
"a foe," and tama, "impurity," as indicating the
foe of what is unchaste, gloomy, or obscure. (Cudmus,
p. xc.) Wecker, on the other hand, regards it as an
euphemism for their name of the Greek Opis and Nemesis,
and says that it is ήργβαία. (Schoen, Ethym. My-
thol. Ancist., p. 263.) Plato, in his Cratylus, derives
"Armest from ἁρμαγις, "whole," "uninjured," and,
therefore, "sound" and "pure," as referring to the
virgin purity of the goddess. This is about as correct
as the rest of Plato's attempts at etymology. (Crstl.,
p. 50.—Op., ed. Bekk., vol. 4, p. 245.—Consult Creuz-
zer, Synoakt., vol. 2, p. 190.)
Artemisia I. daughter of Lygdamis of Halicarnas-
sus, reigned over Halicarnassus, and also over Cos
and other adjacent islands. She joined the fleet of
Xerxes, when he invaded Greece, with five vessels,
the best equipped of the whole fleet after those of the
Sidonians; and she displayed so much valour and skill
at the battle of Salamis, as to elicit from Xerxes the
well-known remark, that the men had acted like wom-
en in the fight, and the women like men. The Athe-
ians, indignant, that a female should appear in arms
against them, offered a reward of 10,000 drachms
to any one who should take her prisoner. She however
escaped after the action. (Herod., 7, 99.—Id., 8, 98.
—Id., 8, 93.) If we are to believe Ptolemy Hephaes-
tion, a writer who mixed up many fables with some
truth, Artemisia subsequently conceived an attachment
for a youth of Abydos, named Dardanus; but, not
meeting with a return for her passion, she put out her
eyes while she slept, and then threw herself down from
the lover's leap at the Promontory of Leucate. (Ptol.
Hephaest., ap. Phot., Cod., 190, p. 163, Bekk.)—II.
Another queen of Caria, not to be confounded with the
preceding. She was the daughter of Hecatomnus,
king of Caria, and married her brother Mansolus,
a species of union sanctioned by the customs of
the country. She lost her husband, who was remarkable
for personal beauty, B.C. 365, and she became, in
consequence, a prey to the deepest affliction. A splendid
tomb was erected to his memory, called Mausolus,
"the tomb of Mausolus;" (Mausolus, i. e., tomb of Maus-
olus"), and the magnificent writing and ple-
vites to attend a literary contest, in which ample
wards were to be bestowed on those who should celebrate
with most ability the praises of the deceased. Among
the individuals who came together on that occasion
were, according to Aulus Gellius (10, 18), Theopom-
pus, Thodeculos, Naucrates, and even Isocrates.
The prize was won by Theopompus. (Aes. Gell., l. c.)
Valerius Maximus and Aulus Gellius relate a marvel-
ous story concerning the excessive grief of Artemisia.
They say that she actually mixed the ashes of her hus-
band with water, and drank them off! (Val. Max., 4, 6.)
The grief of Artemisia, poignant though it was, did not
cause her to neglect the care of her dominions; she
conquered the isle of Rhodes, and gained possession
of some Greek cities on the main land; and yet it is
said that she died of grief two years after the loss of
her husband. (Vitr., 2, 8.—Strab., 636.—Pith.,
36, 5.)
Artemiu, a promontory of Euboea, on the north-
western side of the island. It had a temple sacred to
Artemis (Diana), whence its name. Off this coast
the Greeks obtained their first victory over the fleet
of Xerxes, on the same day with the action of
Thermopylae. (Herod., 7, 176, &c.)
Artémida, I. a city of Assyria, north of Seleucia,
and southwest of Apollonia. It appears to have been
founded in the 5th century before Christ. (Herod.,
IV, 2, 61.)—II. A city of Caria, near the boundary of
the Chalasar of more modern times. (Tacit., 6, 41.
—Pith., 6, 26.—Isid., Charac. )—II. Another in
Arima Minor, near its southern boundary, now Actamar
or Van. It lay at the southeastern extremity of the
Arsiss Palus, now Lake of Van.
Artémen, I. a celebrated mechanic, a native of
Clazoménès, who was with Pericles at the siege of
Samos, where it is said he invented the battering-ram,
the "triumphus," a kind of large and unusually powerful
military engines. (Plut., Vie Pers., c. 27.)—II. A native of Syra, one
of the lower order, whose features resembled in the
strongest manner those of Antiochus Theos.
The queen, after the king's murder, made use of Artemon
to represent her husband in a lingering state, that,
by his seeming to have died a natural death, she might
conceal her guilt, and effect her wicked purpose. (Pith.,
7, 10.)
Artemis, a name given to a goddess among the
Scythenians, whose attributes resembled those of the
Greek Venus. (Herod., 4, 59.) Some read, in the text of
Herodotus, 'Αρτεμις (Atipousa (Arinesea); others, with Ori-
gen (constr. Cels. V., p. 609), prefer 'Αρτάμις (Artamsa).
Many consider the deity here mentioned to be none
other than the "Earth," the German Hertha, for,
according to Jamieson, the ancient Goths called Venus
Iordem-asa, and Ardem-asa, i. e., "terra des." The
first part of the name reminds us at once of our English
term "earth," through the German "erde," and the
remainder refers to the Asi, or earliest deities of Asiatic and
Scandinavian mythology. (Hermes Scythicus, p. 120.)
Arvès of Ambarvàel, a name given to twelve
priests who celebrated the festivals called Ambarvalia.
This sacerdotal order is said to have been instituted
by Romulus in honour of his nurse Acca Laurentia,
who had twelve sons; and when one of them died,
Romulus, to console her, offered to supply his place,
and called himself and the rest of her sons "Arvès.
Their office was for life, and continued even in
captivity and exile. They wore a crown made of the
corn of wheat, and a white woolen wreath around

210
their temples. The hymn sung by these priests was discovered in 1778, in opening the foundations of the sacred of St. Peter's, inscribed on a stone. Consult Forcellini (Lex. Tot. Lat., s. v. Arvalis), where the question is considered, whether the Arvales and the Ambarvales were distinct priesthoods or not. Reference is there made to the work of Marino, "Dei Attiche Monumenti de' Fratelli Arvali, scolpiti gia in tavoole di marmo, ed ora raccolti, diceretarte commentari. Roma, 1795, 2 vols. 4to."

Arbas, a god of the Egyptians, son of Iasus and Orotus (Vid. Horus.)

Avernus, a powerful people of Gaul, whose territories lay between the sources of the Elaver or Allicer, and Duranius or Dordogne, branches of the Liger and Garunna. The district is now Auvergne. Their capital was Augustunotum, now Clermont. They were a powerful nation, and now were conquered after great slaughter. Their name is supposed to be derived from Ar, or a, "high," and Veurn (fasorum), "country" or "region." (Thierry, Hist. des Gaulois, vol. 2, p. 29.)

Arius Promontorium, a promontory of Chios. The adjacent country was famous for producing a wine (Vinum Ariaicum) that was considered the best of all the Greek wines. (Virg., Eclog., 5, 71. — Strab., 955.— Plut., non posse suae viei, &c., c. 17. — Clem. Alex., Ped., 2, 2.)

Aryandes was a brother of Lucius Tarquinius, or Tarquin the Proud. He was of a meek and gentle spirit, and was married to the younger Tullia. His wife, a haughty and ambitious woman, murdered him, according to the old legend, and married Tarquin the Proud, who had, in like manner, made away with his own spouse. (Liv., 1, 46.— Arnold's Rome, vol. 1, p. 41.)— II. A son of Tarquin the Proud. In the first conflict that took place after the expiry of his father's term, Brutus slew each other. (Liv., 2, 6.— Arnold's Rome, vol. 1, p. 108.)

Aratus, I, a Roman writer, who, with an affection of the style of Sallust, composed in the age of Augustus a history of the first Punic war. (Voss, de Hist. Lat., 1, 18.)— II. A Roman poet, whose full name was Aratus Stelia. He is highly praised by Statius, who dedicated some of his productions to him, and also by Martial. Among the works that he composed was a map of the victory of Domitian over the Sarmates. His writings have not come down to us. (Statius, Silv., 1, 2, 17.— Id. ib., 1, 2, 258,— Martial, 5, 59, 32.— Id., 12, 3, 11, &c.)

Arzita, a town of Armenia Major, situate on the Araxes, east of Ararat, towards the confines of Media. (Strab., 528.) It is probably the Naxons of Pontus.

Axander, a Persian, appointed governor of Egypt by Cambyses. He was put to death by Darius for issuing a silver coinage in his own name. (Herodot., 4, 166.)

Axander, a governor of the Cimmerian Bosporus under Pharnaces. He revolted against him B.C. 47; and having defeated both him and his successor, obtained peaceable possession of the government, which was afterward confirmed to him by Augustus. He was separated by the Tanic Chersonese from the continent. (Appian, Bell. Mithrad., 120.— Dio Cassius, 42, 46.)

Aschburgium, I. a Roman fortified post on the German side of the Rhine. Potomel places it where the Canal of Drusus joined the Yssel.— II. A town of Germany, placed by the Tab. Peutinger: on the western bank of the Rhine, south of the modern Santen. (Compare Mannert, Geogr., vol. 3, p. 454.) Ritter has some curious speculations upon the name of this place, and seeks to trace an analogy between it and that of the Aspurgians, on the Palus Moesia (Strabo, 405), as also between both of these and the familiar

Asgard of Scandinavian mythology. (Ritter's Vorhalle, p. 296, seqq.— Consult remarks under the article Asl.)

Aesopus, a small inland tribe of Africa, situate between the Gilligammas on the east, and the Aushiass on the west (Herodot., 4, 170), and above Cyrenaica. They had no communication with the coast, which was occupied by the Cyrenaeans. According to Herodotus (l. c.), they were beyond all the Africans remarkable for the use of chariots drawn by four horses. (Rennell, of the Environs of Herodot., vol. 2, p. 265.)

Aesopius, I. a son of Mars and Astyoche, went to the Trojan war at the head of the Orchoemenians, with his brother Ialmenus. He was killed by Diophobus. (Hom., II, 2, 513.)— II. A son of Acheron by Gorgyra or Orphne, stationed by Pluto to watch over Proserpina in the Elysian fields. It was he who testified to the fact of Proserpina's having eaten a pomegranate seed in the kingdom of Pluto. (Vid. Proserpina.) He was changed into an owl for his mischievousness. (Ovid, Met., 5, 549.) Another legend says that Ceres placed a large stone on him in Erebos, which Hercules rolled away. (Apollod., 1, 5, 3.— Id., 2, 5, 12.) There are likewise other variations in the fable, as given by the ancient mythologists. According to Antoninus Liberalis (c. 24), who quotes from Nicander, the name of the individual was Ascalabus, son of the nymph Misse (Muncker). His mother having handed Ceres a drink of poison, which was searched in vain by the gods and the goddesses, having through excessive thirst, drained the cup at a single draught, Ascalabus, in despiration, ordered a caldron to be brought; whereupon the offended deity changed him into a lizard. (Compare Manucher, ad Anton. Lib., i., c., and Creuzer, Symbolik, vol. 4, p. 467, seqq.)

Ascalon, a maritime town of Palestine, 320 furlongs from Jerusalem, between Azotus to the north, and Gaza, and near to which Venus Urania was worshipped in this city. Her temple was pillaged, according to Herodotus, by the Scythians, B.C. 690. Here also was worshipped the goddess Derceto. Ascalon was taken from the Assyrians by the Persians, and afterward fell successively into the hands of Alexander the Great, Ptolemy, and Antiochus I.; but, during the wars between Antiochus Epiphanes and his brother Philopator, it became independent, and remained so until it was taken by the Parthians. It was frequently taken by the Saracens, and suffered much during the crusades. Baldwin, king of Jerusalem, took it, after a siege of five or six months, in 1153 or 1154, at which time it was erected into an episcopal town; but, falling at length into the hands of the Turks, it was almost destroyed, and is now an insignificant place, which they occupy for the purpose of opposing the inroads of the Arabs. Its modern name is Scalon. Herodotus states the Great was born in Ascalon, and hence received the appellation of Ascalonites. (Plin., 5, 13. — Amm. Marcell., 14, 26.— Ptol., 5, 16.— Strabo, 530.— Joseph. Ant. Jud., 6, 1.)

Ascanius, I. son of Eneas by Creusa. According to the old legend (for it is not right to dignify such narratives with the name of history) he was saved from the flames of Troy by his father, whom he accompanied to Italy, where his name was changed from Alexander to Ascanius; he was distinguished for great valour in the war which his father carried on against the Latins, and succeeded Eneas in the kingdom of Latins, and built Alba, to which he transferred the seat of his empire from Lavinium. The fabulous chronology of the Roman writers makes the descendants of Ascanius to have reigned in Alba for about 420 years, under fourteen kings, till the age of Numa Pompilius; after which he himself reigned, according to the same authorities, thirty-eight years, of which thirty were passed at Lavinium, and the remainder at Alba. He was succeeded by Sylvius Posthumus, son of Eneas by Lavinia.
the son of Ascanius, disputed the crown with him; but the Latins gave it in favour of Sylvius, as he was descended from the family of Latins, and thus was invested with the office of high-priest, which remained a long while in his family. (Liv. 1, 3. — Serv., ad Virg., Aen. 1, 270. — Donlys. Hal. 1, 76. — Plat., Vit. Rom.)—II. A river of Bithynia, which discharged into the Propontis the waters of the lake Ascanius. (Plin. 5, 22. — Aristoi. ap. Schol. Apollon. R. 1, 1177. — III. A lake in the western part of Bithynia, near the head waters of the Sinus Cianus. At its eastern extremity stood the city of Nicsea. Aristotle observes, that the waters of this lake were so impregnated with nitre, as to cleanse the clothes dipped into them. (Mirab. Auscult., c. 84. — Plin. 31, 10.) According to Colonel Leake, the Ascanian Lake is about ten miles long and four wide, surrounded on three sides by steep woody slopes, behind which rise the snowy summits of the range of Olympus. (Leake's Asia Minor, p. 7. — Cramer's Asia Minor, vol. 1, p. 180.)

Asclepiades (Ἀσκληπιάδης), a festival in honour of Asclepius (Ἀσκληπιός), celebrated in several parts of Greece, but nowhere with so much solemnity as at Epidaurus. One part of the celebration, as we learn from Plato, consisted of contests in poetry and music. (Plat., Ion. init. — Iul. Pol. 1, 37. — Pausan., 2, 36.) Another portion of the name is Asclepius (Ἀσκλη- πιός), respecting which, consult the remarks of Siebelis (ad Pausan., l. c.).

Asclepiades, I. the reputed descendants of Asclepius (Ἀσκληπιός), consisting of several families spread over Greece, and professing to have among them certain secrets of the healing art handed down to them from their great progenitor. The Asclepiades of Epidaurus were among the most famous of the name. The time at which they first began to initiate the mysteries of their science, to swear by Apollo, Asclepius, Hygieia, Panacea, and all the other gods and goddesses, that they would not profane the secrets of the healing art, but would only unfold them to the children of their masters, or to those who should have bound themselves by the same oath. (Consult Hippocr., ἰατρος ἀλευταῖος a Medebornia, 4to, L. B., 1643.) We may, in this point of view, regard all the medicine of these men, especially that part which relates to knowledge of medical practice, which was at first hereditary, and that parents imparted it to their offspring as a kind of family prerogative or possession. This usage, however, became in process of time more relaxed, and then medical secrets began to be imparted to strangers who had gone through the forms of initiation (τίτευσιν ἄνθρωπον), and were in this way rendered less exclusive in their character. (Galen, Administr. Anatomi, lib. 2, p. 129.) It is for this reason that Asclepiades, in a later age, remarks, that knowledge of medicine was at a long time regarded as the attribute of the family of the Asclepiades. (Orat. Sacr., vol. 1, p. 80.) And hence, too, Lucian makes a physician say, "My sacred and mysterious oath compels me to be silent." (Tragopod., p. 818.) The theurgic physicians of the Alexandrian school re-established, at a subsequent period, this ancient custom, in order to impart, by the obligation of religious silence, a greater degree of consideration to their superstitious practices. (Alex. Trall., lib. 10, p. 593, ed. Guinith. Andernac.) The Asclepiades appear to have established, among their disciples and in their manner of instructing, a distinction which we find existing also in the schools of the philosophers. They imparted the ordinary branches of medical knowledge to those who were not yet initiated, but their profound secrets (τα ἄρα πράγματα ἄνοιξαι) only to those who had been admitted into their mysteries. The Asclepiades neglected entirely two essential parts of the healing art, diet and anatomy. Plato says that an acquaintance with dietetics was not cultivated before the time of Prodicus of Selymbria, and Hippocrates confirms the assertion of the philosopher. (Sprengel, Apol. d'Hippocr., pt. 11, p. 271.) Anatomy, again, could not flourish in Greece, through the force of popular prejudice, and these prejudices took their rise from the belief, that the soul, after being disengaged from its material envelope, was obliged to wander on the banks of the Styx until the body was consigned to the earth or devoured by the flames. (Hom., 21, 23, 71. — Sprengel, Hist. Med., vol. 1, p. 169, seqq.)—II. A Greek physician, a native of Prusa in Bithynia, who lived in the age of Cicero, and who was the first that brought the art of medicine into reputation at Rome. After having acquired a name in Asia, he came to the capital of Italy, B.C. 110, rejecting the offers of Mithridates, king of Pontus, who wished him to reside at his court. Asclepiades was one of those ardent spirits destined to bring about a revolution in whatever career they move, and nature had endowed him with an attractive kind of eloquence, which he often abused. At Rome he commenced giving lessons in rhetoric, but all of a sudden, persuading himself, after a very superficial acquaintance with medicine, that he was thoroughly master of the art, he began to practice it. Unhappily, he brought into this new pursuit all the rash eagerness of his independent spirit, and all the philosophical errors of the faction of the followers of Timarchus, and was accordingly adopted. The Romans had given a favourable reception to Archagathus before Asclepiades came among them, but they soon began to dislike his practice, from his having recourse frequently to painful remedies. Asclepiades, in order to gain a reputation, pursued a course directly opposite to this. He made it a point to give only such remedies as were agreeable and easy to bear. He applied, moreover, to the ancient Asclepiades a similar method, and gave him in extending operation day; and, speaking in this way to the Romans of things that entered into the plan of their studies, and alluring them also by the charms of his eloquence, he was enabled to gain their confidence the more easily, from being himself deceived into the belief that he was near the truth. Adopting the corporeal philosophy of Epicurus, he made it the basis of his doctrine. He misunderstood that of Hippocrates, the only true one. He even said of himself, as a physician, namely, the calm observation of nature, and called it, in derision, "the study of death" (θανάτου μελέτην. — Galen, de venæ sect. adv. Erasistr., p. 3). From Pliny's account of him, Asclepiades would appear to have been nothing more than a successful charlatan, who flattered the whims of his patients, and rejected all the tortures which, under the name of regular remedies, had been previously in vogue. He admitted only five means of cure; dieting, occasional abstinence from wine, frictions, exercise on foot, and the being carried in litters. (Plin., 26, 3.) The appearance, too, for the first time in Italy, of the disorder termed elephantiasis, and the alarm which it occasioned, could not fail to add greatly to the reputation of a medical man who was skilful in curing it. (Plut., Sympos. 6, q. 9.) Finally, the relations subsisting between him and the most distinguished Romans of his time, especially Cicero, contributed greatly to his celebrity. (De Orat., 1, 14.) A singular circumstance also gained him great credit among the lower orders. Happening to pass, one occasion, near a funeral train, he perceived that the body which was being conveyed to the funeral pile exhibited signs of life. He immediately employed the most active measures for its resuscitation, and succeeded, to the great astonishment of the bystanders, who had expected what he had done as a restoring from death to life, rather than as an act of ordinary healing. Asclepiades used to boast that he had never been sick; and if we credit Pliny, he did not even die of any malady, but from an
Asclepiades, the founder of a school, which enjoyed great celebrity among the ancients. Stephanus of Byzantium gives the names of several of his pupils (z. V. Aνθρωπον). A scholar of his, not mentioned by the latter, namely, Themistos, was the chief of the sect of the Methodists, as they were termed. (Biogr. Univ., vol. 2, p. 564. — Sprengel, Hist. Phil., 3, 20.)

Asclepiodorus, I. an Athenian painter, contemporary with Apelles, who praised the former for the symmetry of his productions, and yielded him the palm in delineating the relative distances of objects. Mnaso, a tyrant of antiquity, employed him to paint the twelve deities (Dir majores), and paid him 300 minas (over $5277) for each. (Pline, 35, 10.) — II. A statuary, one of those, according to Pline (34, 8), who excelled in representing the philosophers. (Sillig, Dict. Art., s. v.)

Asclepius, a native of Alexandria, the disciple of Jacobus in medicine and of Proclus in eclectic philosophy, in both of which he acquired a distinguished reputation. Damascius gave a long account of him in the Life of Isidorus, of which Suidas and Photius have preserved fragments. In medicine he surpassed his instructor, and is said to have re-established the use of white hellebore, which he had long since neglected. He was well acquainted also with the virtues of plants, and with the history of animals; and made great progress also in the musical art. Some wonderful stories are likewise related of him, which would seem to place him in the class of Thaumaturgists. He wrote a commentary on the Timeus of Plato, which is now lost. (Photius, Cod., 242, vol. 2, p. 342, seqq.; Pline, 35, 10.)

Asconius, a festival in honour of Bacchus, celebrated by the Athenian husbandmen, who generally sacrificed a goat to the god, because that animal is a great enemy to the vine. They made a bottle or bag with the skin of the victim, which they filled with wine, smearing at the same time the outer surface with oil. On this they endeavoured to leap with one foot, and be that first fixed himself was declared victor, and received the basket of the victor. This was called нυμη μελανευς, τω τω άγονν ἀλληλους, from立项γος οίκος in the bottle, whence the name of the festival is derived. It was also introduced into Italy under the name of Vainilla, on which occasion the races put on hideous masks of bark, and invoked Bacchus in joyful strains. They also hung up, at the same time, little images on a lofty pine. These images they called Oscilla. (Schol. ad Aristoph., Plat., 1129, Virg., Georg., 2, 387, seqq.) Spence gives engravings from several gems, on which figures are represented, called oscilla or aloscas. They are found also in the paintings at Herculeanum, and in Mercurialis (Art. Gymn., 3, 8, p. 217). Spence attributes the origin of this rite to the popular belief, that when Bacchus turned his face towards the fields, their fertility was assured. Hence they exposed these small figures to the winds, that they might be free to turn in any direction. Some writers (compare Linn. Nat., 9, 26) suppose that this custom is the primitive meaning of our present word immortal, because the wind helps to the custom of suspending an image. According to him, if a rope was suspended at either extremity from a beam or tree, and in this way a swing was formed, to which a little image or oscillum was suspended. The movement of this swing to and fro, with the image attached, was regarded as a kind of funeral offering to those who had of their own accord committed suicide by hanging. There is evidently some analogy in both forms and meaning; the Latin term oscilla and the Greek ὀσσίλια, and the common derivations given in either case cannot be correct. (Consult the etymology given by Servius, ad Virg., l. c.)

Asconius Pedianus, a grammarian, born at Patauianum, a little before the commencement of our era (Madvig, de Pediani Comment. Disp. Crit., p. 16), and who is known in modern times by three fragments on the orations of Cicero. The statement of Philagryus, that Asconius had heard Virgil in his youth, deserves no credit whatever (ad Virg., Eclog., 3, 100), since it is contradicted in effect by the remark of St. Jerome, who informs us, that Asconius, in the 73d year of his age, and in the 7th of Vespasian's reign, suffered the loss of his sight, but still lived for twelve years after this. (Hieron., in Chronic. Euseb., ad Olymp. oct., 3.) Just as little credit is due to the supposition of there having been two individuals named Asconius, an earlier one, who was the friend of Livy and Virgil, and wrote a commentary on Cicero's orations, and a later one, who was an historical writer. All antiquity knows but one Asconius Pedianus. (Jos., Scal. Animad. ad Euseb. Chron., p. 182, ed. 1. — p. 200, ed. 2.) Few particulars have reached us relative to this writer. He was the chief supporter of Vindex, the former, and of Vindex, the latter, who was the friend of Virgil, now lost (Donat., in Vit. Virg., 16, 64), and another on the life of Sallust, which also has not reached us. He wrote likewise a commentary on the Orations of Cicero, for the use of his own son (ad Orat. prof. Milon, 6), some portions of which have reached our day. The importance of these makes us feel the more sensibly the loss of the other parts. (Madvig, p. 72, seqq.)

We have fragments of the commentaries of Asconius on the fragments of Sophocles, of the three of those against Verres, the oration for Cornelius, the oration in Τόγ. Κανείδ., that against Pico, and those for Scaurus and for Milo. The character of this commentary is in general historical, and Asconius appears in it as a man well acquainted with the history and earlier constitution of Rome. Frequently he is our only authority for certain facts, since the sources from which he has drawn, in such cases, no longer exist. His authority is, however, of respect, and comparatively free from the barbarisms of a declining tongue; always excepting the commentaries on the Vereine orations, which are thought by the learned to have been the work of a later writer, who lived shortly after Servius and Donatus, and who probably derived his materials from some commentary of Asconius, now lost. It is to this same later writer, and not to Asconius, that Niebuhr assigns the scholia found by Mai, in 1814, in the Ambrosian palimpsest. (Nieb., ad Frunt. Op., ed. Berolin., p. xxiiv.—Bähr, Gesch. Röm. Lit., vol. 1, p. 539, seqq.)

Ascra, a town of Bocotia, situate on a rocky summit belonging to Helicon. It could boast of considerable antiquity, having been founded, as the poet Hesiodus, quoted by Pausaniaus (9, 29), asserts, by Ephialtes and Otus, sons of Abbeus. What remained of the place, however, most of whose position had been the residence of Hesiod. The poet was not a native of Cyme, but his father came from Cyme to Ascra, his native city, as he himself informs us (Op. ed. D., v. 635, seqq.). He does not give us a very favourable idea of the climate of the place. From his birthplace Ascra, Hesiod is commonly called the Ascraeus bard. Pausaniaus reports, the sun his day only one tower remained to mark the site of Ascra (9, 29).

Dr. Cramer, who visited the village of Zagara represents Ascra; but Sir W. Gell is inclined to identify it with an ancient tower he observed on a lofty, bare, conical rock; which agrees with the topography of Strabo, who places it to the right of Helicon, and
about forty stadia from Thespiae. (Cramer's Ancient Greece, vol. 2, p. 207, seqq.)

**Asculum.** I. Piczemum, a city of Piczemum, so named to distinguish it from the Asculum of Apulia. It was situated in the interior, on the river Truentus, and some distance to the southwest of Firimum. Strabo describes it as a place of great strength, surrounded by walls and inaccessible heights. It was the first city to declare against the Romans when the Social war broke out, and its example was followed by the whole of Piczemum. Asculum sustained, in the course of that war, a long and memorable siege against Pompey, who finally, however, compelled the place to surrender, and caused several of the chiefs of the rebels to be beheaded. (Liv., Epit., 76. — Vell. Pat., 2, 21. — Florus, 3, 18. — Appian, Bell. Civ., 1, 38. — Plut., Vit. Pomp.) We learn from Pliny (3, 19) that Asculum was a Roman colony, and regarded as the chief city of the province. It is now Ascoli.—II. Apulum, a city of Apulia, to which the epithet *Apulum* was attached to distinguish it from Asculum in Piczemum. It was situated in the interior of Daunia, near the confines of Samnium, and is supposed to be represented by the modern town of Ascoli, which is about six miles to the southwest of Ortona. It was under the walls of this place that Pyrrhus encountered a second time the Roman army, near which he sustained a signal victory in Lucania. The action was attended with no advantage to either side. (Florus, 1, 18. — Plut., Vit. Pyrrh.—Frontin., Strateg., 1, 3.) Frontinus, who classes it among the colonies of Apulia, terms it Ausculum. This is probably the correct orthography, as may be seen from coins, the inscription on which is *ATYCION*, and *ATKIA*.

**Asa.** In Vid. Hasdrubal.

**Asa, Asa or As.** (in the old Scandinavian *Asir* or *Asir*, the plural form of *As*), a general appellation given, in the mythology of northern Europe, to the deities that came in with Odin from the East. Including this latter divinity they were twelve in number, according to some, thirteen (Magnusen, Boreal. Mythol. Lex., p. 720), and there was the same number of female deities or *Asyris*.—While some are inclined to see in the Asi merely a sacristic colony, wandering in from the north, influenced by Germanic, or Teutonic, wandering in this respect, by Greek, and in others, find in the name a curious chain of connexion between the early religions of the Eastern and European worlds. The term *Asi*, in fact, appears to have been an old appellation for deity, and meets us in numerous quarters, under various though not very dissimilar forms. Thus, in the Coptic, *Osa* is said to signify "lord" or "deity"; in the old Persian, good deities or spirits were called *Isis*, while by Berosus the gods are termed *Asi*. (Kanzler. System der Ind. Myth., p. 228.) Again, in Sanscrit we have *Ishah", a lord" or "master", the feminine of which, *Ishana*, reminds us at once of *Asyris*, a female deity, or *Asa*. Among the ancient Greeks, the supreme Being was denominated *Esaus or Hesus*, a name that connects the Druidical worship with the East; while among many nations of Finnish origin, in Asiatic Russia, we have such terms as *Esas*, *Esir*, and *Osas* (Magnusen, p. 719, note. — Heyd., Etymol. Versueh., Tubingen, 1824.) It is curious to connect with this the account given by the Roman writers, that in the Eturian language *Esar* signified "God." (Sueton., Aug., 97. — Dio Cass., 56, 29. — Hesych., s. v. Alous.—Muller, Eutrak., vol. 2, p. 81.) We may compare with this the old augural doctrine among the Eturian priesthood, that the gods had their home or dwelling in the north, by which they were called *Esas*; and it may be that they still venerated the gods regularly into contact. (Scrip. ad Ed., 2, 693. — Dion. Hal., 2, 5. — Plut. Quast. Rom., 78. — Muller, Eutrak., vol. 2, p. 126.) —Again, the traditions in the north of Europe are uniform, that the *Asi* came in from the east or rather southeast, and mention is made of a country called *Asa-land*, and its metropolis *Asgard*, in the vicinity, or to the east, of the Tanais, from which Odin and the *Asa* are said to have come into Europe. (Sagae Odys Tryggd. Ed. Skalh., 2, 49. — Harv., 2, 183. — Append. Ed. Jun., ed. Rask, p. 364. — Magnusen, p. 287, 293.) We see here, at once, the striking analogy between *Asa-land* and Austria, and may suppose that the latter country meant merely a part of the latter, and that the name *Asia* itself means nothing more than the "land of the *Asi*," or "the Holy Land." ("Asa, Asia, solum divinum, sacra terrae."—Hicks, Thes. Ling. Septentr., 1, p. 193.) As Odin and Buddha are the same deity (cud. Odinus), the worship of the *Asi* is to be referred to the remote East as its native home; and Asgard near the Tanais must be regarded as merely one of many sacerdotal stations where this worship was observed, and whence colonies were sent forth. Traces of the root from which these names are derived may be found in several geographical apppellations connected with the country around the Tanais. Thus we have *Caucacus* (Cauc-asos, i. e., the mountain of the *Asi*), the river *Phasis* (Ph-asia, i. e., the holy stream), the name *Amazonius*, sometimes applied to the *Tanais* (Am-azonia, i. e., Am-azon), and we find it referred to the *Tanais* by Frontinus, in the *Vorhalle*, p. 465.)—Many other curious analogies present themselves. Pausanias (3, 2, 45) makes mention of an ancient city in Laconia, named *Les (L-as)*, which had sustained a still earlier city of the same name, that had stood on Mount *Asia* (As-i), and amid the ruins of this latter place were the remains of a temple of *Minerva Asia* (As-i, i. e., Asymin). Pausanias adds that Minerva Asia had also a temple named *As-land*. We might suppose that the Doric form of the name of the goddess, as appearing in Aristophanes, *Aesiva* (Asiana, i. e., Asa-ra or Aesyria). There was also in Crete a very ancient sanctuary of Jupiter *Asius*. (Stych. Byz., p. 181, ed. Berk.) The Greek adjective *biog* (hosios), "sacred," may be traced to the same source, as well as the earlier form of the Latin term *ara", an altar," namely, *asa* (as-a:—Jul. Cels., 4, 3.) We may even carry our speculations into the north, and show that the names of the subject the term *Asi", "mighty" or "strong," and the appellation *Aszel* (Asa-el), given to an idol or false deity. (Consult Geen., Lex. Hebr., s. v.)—If an etymology be sought for the name *Asa*, we may find it in the Sanscrit verb *as", "to be", the participle of which, namely, *sant*, is analogous to the Greek *eog*, and reminds us of *Zar*, one of the old Greek names for Jupiter or the Supreme Being. The *Asi*, then, are the "*Beings", kar* *Zogiv.*

*Asia, I*., one of the three parts of the ancient world, separated from Europe by the *Aegaeon*, the Euxine, the Palaic Maotis, the Tanais or Don, and the *Dinis*; from Africa by the Red Sea and *Thtimus of Sues*. Asia is in extent the largest continent, and in its situation the most favoured by nature. Its square contents amount to 14,000,000 miles. In comparison with other countries it has advantages, and especially over Africa. The three advantages consist in this broken shore, the fruitful islands which lie around it, its numerous gulfs that enter far into the land, its large rivers, and its few deserts in the interior. There are two principal chains of mountains extending from west to east. In the north, the *Alta", which in antiquity was still without a name; in the south, the range of *Taurus*. Branches of both are the *Caucasus*, between the Black and Caspian seas; the *Hindu-Koosh*, the *Eurasian* (of *Coly*); the *Paropamisus*, on the northern side of *India*; the *Uralian* chain, in antiquity still without a name, unless these are the Riphian mountains of the ancient. Of the chief rivers, four flow from
north to south; the Euphrates and Tigris into the Persian Gulf, the Indus and Ganges into the Indian Sea: two flow from east to west, the Oxus, now Gihon, and the Iaxartes, now Sivr.—Asia may therefore be divided into Northern Asia, the country north of the Altai range; Middle Asia, the country between the ranges of Altai and Taurus; and Southern Asia, the country south of Taurus.—Northern Asia lies between 70° and 50° of latitude (Asiatic Russia and Siberia). This in antiquity was very little known, yet not entirely unknown. Dark but true traditions respecting it may be found in the father of history, Herodotus.—Middle Asia, the country between 50° and 40° north latitude, comprehending Scythia and Sarmatia Asiatica (the Great Tartary and Mongolia), is almost one immense unproductive prairie, without agriculture and forests, and, therefore, a mere pasture for innumerable flocks and herds (nomades), without cities and fixed places of abode; and therefore, instead of political union, have merely the constitution of tribes. —Southern Asia, comprising the lands from 40° north latitude to the equator, is entirely different in its character from the countries of Middle Asia: it is, both in soil and climate, possessed of advantages for agriculture, and, in comparison with the other countries of the earth, it is rich in its produce. The great and fruitful regions, the eastward commerce of the world, especially the east, was originally through Asia. The natural places of depot in the interior were on the banks of the large rivers; on the Oxus, in Bactria; on the Euphrates, at Babylon. The natural places of depot on the coast were the western coast of Asia Minor and Phoenicia, where arose the series of Grecian and Phoenician cities.—Asia from these, it appears, presented, in its interior empires of immense extent, by which they are distinguished from those of cultivated Europe, as well as by their constitution. They often underwent revolutions, but their form remained the same. For this cause must have existed, lying deep and of wide influence, and which, notwithstanding these frequent revolutions, still continued to operate, and always gave to the new empires of Asia the organization of the old empires, without (with the exception of that of Alexander) being occasioned by the numerous and powerful nomadic nations which occupied a great part of that continent. Compelled by accident or necessity, they left their places of abode, and founded new empires, while they passed through and subjected the fruitful and cultivated countries of Southern Asia, until, unversed by luxury and effeminacy, consequent on the change in their habits of life, they left the influence of the ancient institutions in the land, almost unknown. From this common origin may be explained in part the great extent, in part the rapid rise and the usually short continuance, of these empires. The development of their internal form of government must, for the same reason, have had great resemblance; and the constant reappearance of despotism in them is to be explained partly from the rights of conquerors, and partly from their great extent, which rendered a government of straights necessary. To this we must add that the custom of polygamy, prevailing among all the great nations of inner Asia, ruined the mutual relations and obligations of domestic life, and thus rendered a good constitution impossible. For a domestic tyrant is formed instead of a father of a family, and despotism at once gains its foundation in private life. (Herrod. History of the States of Antiquity, p. 14, seqq., Bancroft's transl.)—As early as the time of Homer and the Persians, Asia was employed to designate this vast continent. The Greeks, as we learn from that historian, pretended that it was derived from Asia, the wife of Iapetus. The Lydians, on the other hand, derived the name from Asia, one of their earliest kings. (Homer, 4, 66.)

Bochart, in modern days, has traced the appellation to Asie, a Phoenician word according to him, signifying "a middle part," or something intermediate, and hence he makes Asia mean the continent placed between Europe and Africa. (Geogr. Sacr., 4, 33, p. 298.) The true derivation, however, would seem to be that given in the preceding article. (Vid. Asia.)—Homer applies the name of Asia to a small district of Mysia or Lydia, situated near the Cayster. (II. 2, 461.)

Euripides, also, evidently restricts the application to a portion of Lydia, in a passage of the Bacchae (v. 64. —Compare Dionys. Periegl. 386, and Eustath., ad loc.). It would appear, indeed, that the Ionian Greeks, on their first arrival on the banks of the Marander and Cayster, found the name of Asia attached to this part of the continent, and communicated it to their European countrymen, who in process of time applied it to all parts still visited on the coast of Greece. It would be wrong, however, to suppose, that the name in question originally belonged merely to that part of the continent with which the Ionian colonists first became acquainted. It would seem, on the contrary, to have been given at an early period to various spots connected with the worship of the Asie, all pointing, however, to some region of the remote East where the name most probably originated. Some of Herodotus' empires, like the early commerce of the world, were divided between Asia and Europe. The latter of these answers in fact to what we now call Asia Minor, while the former denotes the vast tract of country situated to the east of the Euphrates. It is not exactly known when the peninsula came to be designated by the name of Asia Minor; but it does not appear in any author prior to Orosius, who employs it (1, 2), as well as Constantine Porphyrogenitus (de Terr. 8). The term Anatolia, used by Tacitus to denote this portion of the Roman empire, is a corruption of Anatolia, and this last is derived from the Greek Ἀνατολί (the rising of the sun, i.e., the east), and answers to the Frank word Leonant.—Few countries present such a diversity of soil and climate as the peninsula of Asia Minor: Lydia, Caria, and, indeed, generally speaking, the whole of Western Asia, were remarkable for their general fecundity and extreme fertility; while the mountainous districts of Lycia, Pisidia, Cilicia, and Cappadocia were very thinly inhabited, from the coldness of the climate and the unproductiveness of the soil. Many parts of Phrygia and Galatia were also nearly deserted from the barrenness of the ground, which was strongly impregnated with salt, and exhibited, besides, many traces of volcanic agency. The whole country, in fact, appears to have been subject to earthquakes, and at one period, to violent earthquakes, which destroyed or damaged many flourishing cities. (Strab., 578.) Nevertheless, Asia Minor, taken collectively, was one of the most productive and opulent countries of which antiquity has left us any account; and we have the authority of Cicero for stating, that the Roman treasury derived its largest and surest revenues from this quarter. (Or. pro Leg. Man., 2, 6.)

Some idea of its various productions will be given in the remarks under each particular province. (Homer, Mydas, Bithynia, Phrygia, &c.) Asia Minor was furnished also with numerous excellent harbours along its coast. Nor was any country more favoured by nature, or more calculated to become the centre of a mighty and perhaps universal empire. But the moral character of its population has never kept pace with the resources of the country; and this will probably always be the case as long as the coldness and extreme fertility of the climate continues, and the soil continue to exercise an enervating influence over the character of the people. (Crinmer's Asia Minor, vol. 1, p. 1, seqq.)—H. Provinciae, or Asia Proconsularis, the Roman province of Asia, comprising Mysia, Lydia, Caria, and Phrygia, with the exception of Lycocia. This is
meant by Asia in the legal sense of the term as employed by the Romans, and is the same with what the Greek writers of the Roman era call Asia Proper, or ἡ ἱδίως κατοικημένη 'Asia (Strab., 626), in which sense we find the word Asia used in the New Testament. (Acts, 2, 9.) In another passage, however (Acts, 16, 6.) Asia is used a distinction made between Phrygia and Asia. So, again, in the book of Revelations, which is addressed to the seven churches of Asia, the name appears to be confined to that portion of ancient Lydia, which contained Ephesus, Smyrna, Pergamus, Sardis, &c. (Cellarius, de Sept. Eccles. Asia, inter Disert. Acad., p. 412.—Cramer’s Asia Minor, vol. 1, p. 3.)—III. One of the Oceanides. She married Tepetus, and became by him the mother of Atlas, Prometheus, Epimetheus, and Menetes. (Apollod., 1, 2.—Heyne, ad loc.)

Asia Palus (the 'Ασίας λεγομέναν of Homer), a marsh in Lydia, formed by the river Cayster, near its mouth. It was the favourite haunt of swans and other waterfowl. (Hom., II, 2, 470.—Virg., Geog., 1, 483—Id., En., 7, 699.—Ovid, Met., 5, 386.) Near it was another marsh or lake, formed in like manner by the river, and called Selinusia Palus. Both belonged to the temple of Ephesus, and were a source of considerable revenue. (Cramer’s Asia Minor, vol. 1, p. 361.)

Asiana, one of the later divisions of Asia Minor. Towards the decline of the Roman empire, Asia Minor was divided into two dioceses or provinces, called Asiana and Pontica, each governed by a lieutenant named Vicarius. (Notit. Imper., 1.—Cod. Theod., 5, tit. 2.)

Asinarus, I. the surname of one of the Scipios (Lucius Cornelius), obtained by him for his conquests in Asia. (Vid. Scipio V.)—II. A senator, put to death by Claudius, on a false charge made at the instigation of Messalina, who was desirous of seizing upon the gardens of Lucullus, which were in his possession. (Tac., Ann., 11, 1, seqq.)

Asinarius, a river of Sicily, running into the sea to the north of Helorun. It is now called Fiume di Noti, from the little town of Noto on its northern bank. (Mommt., de Agr., vol. 9, p. 240.)

Asine, I. a town of Argolis, northwest of Hermione, on the Sinai Argolicus, or Gulf of Nauplia. —II. Another in Messenia, southwest of Messene, founded by the inhabitants of the former place, when driven from their city by the Argives. (Asiniius, I. Pollio. (Vid. Pollio.)—II. Gallus, son of Asinius Pollio, was consul A.U.C. 748. He married Vipsania, the repudiated wife of Tiberius, a step which gave rise to a secret enmity on the part of the latter towards him. He starved himself to death, either voluntarily, or, what is more probable, having been ordered by the emperor to destroy himself. Asinius published in his lifetime a parallel between his father and Cicero, in which he assigned to the former a marked superiority over the latter. (Tac., Ann., 1, 76.—Id. ib., 6, 23.—Plin., Ep., 7, 4.)—III. Quadratus, an historian of the third century of our era, who wrote a history of the Greeks, Romans, and Parthians, down to the time of Philip the Arabian, under whose reign he lived.—IV. Capito, a grammarian, who wrote a book of Epistles. Some read Sininus for Asininus. (Awl. Gell., 5, 20.)

Asius, I. a son of Dymas, brother of Hecuba. He assisted Priam in the Trojan war, and was slain by Idomeneus. (Hom., II, 2, 552.—Id. ib., 12, 15.—Id. ib., 19, 384.)—II. Son of Imbracus, accompanied Ennomus to the funeral games of Achilles.—III. A name given to a mythic personage in the legends of Lydia. Consult remarks under the articles Asia and Asia.—IV. A poet of Samos, who wrote about the genealogy of ancient heroes and heroines. (Pausan., 7, 4.)

Asius Campus, a place near the Cayster, and in the vicinity of the Asia Palus. (Vid. Asia Palus.)

Asopoliades, a patronymic of Aeusus, son of Αειγινα a daughter of Asopus. (Ovid, Met., 4, 484.)

Asopis, I. a daughter of the Asopus. —II. A daughter of Thespius, mother of Mentor. (Apollod., 2, 7.)

Asopus, I. a river of Thessaly, rising in Mount Ετα, and falling into the Sinus Malicus. It flows through a gorge in the mountain enclosing the Trachinian plain (Herod., 7, 199.—Strab., 428.)—II. A river of Boeotia, rising in Mount Otieron near Platae, and flowing into the Euripus. It separated the territories of Platae and Thebes, and also traversed in its course the whole of Southern Boeotia. Though generally a small and sluggish stream, it was easily fordable after heavy rains it could not easily be forded. (Theoc., 2, 5.) It was on the banks of the Asopus that the battle of Platae was fought. (Herod., 9, 43.) This river still retains the name of Asopo. The plain along its northern bank was called Parasopias. (Cramer’s Ancient Greece, vol. 2, p. 217.)—III. A river of Achaia, rising in the Arcolic mountains, on the frontiers of Arcadia, near Cyllene, and falling into the Corinthian gulf a little below Sicyon. The sport of the lion-hunters of the territory which it watered was called Asopia. (Strab., 382.—Pausan., 2, 5.) On its banks were celebrated the games which Adrastus instituted in honour of Apollo. (Pind., Nem., 9, 20.) The neighbouring people believed that this river was none other than the Μανερ of Asia Minor, which, emptying into the sea near Miletus, passed under the waters of the Mediterranean, and re-appeared in Achaia as the Asopus. (Pausan., l. c.)—IV. A son of Oceanus, or according to others, of Neptune, and god of the last-mentioned stream. His daughter Αειγινα was carried off by Jupiter, and the father, on seeking her, was struck by a thunderbolt, and driven back to his watery abode. Hence, say some of the ancient mythologists, coals were seen borne along on the surface of the Asopus. (Apollod., 3, 12, 5.—Heyne, ad loc.)

Aspasia, a town of Illyricum, on the southern bank of the Aenus (or Ergene), about 34 miles south of Dyrrachium. (Caz., Bell. Civ., 4, 13.)

Aspasia, I. a celebrated female, a native of Miletus, which place was early and long renowned as a school for the cultivation of female graces. She came as an adventuress to Athens, in the time of Pericles, and, by the combined charms of her person, manners, and conversation, completely won the affections and esteem of that distinguished statesman. Though she had freed her associates from the restrictions which custom laid on the education of the Athenian matron; and she had enriched her mind with accomplishments which were rare even among men. Her acquaintance with Pericles seems to have begun while he was still united to a lady of high birth, before the wife of the wealthy Hippocrates. We can hardly doubt that it was Aspasia who first disturbed this union, although it is said to have been dissolved by mutual consent. But, after parting from his wife, who had borne him two sons, Pericles attached himself to Aspasia by the most intimate relation which the laws permitted him to contract with a foreign woman; and she acquired an ascendency over him which soon became notorious, and furnished the comic poets with an inexhaustible fund of ridicule, and his enemies with a ground for serious charges. The Samian war was ascribed to her interposition on behalf of her brother, who was repudiated by his wife, and she assisted him as ministering to the vices of Pericles by the most odious and degrading of offices. There was perhaps as little foundation for this report as for a similar one in which Phidias was implicated (Plut., Vit. Per., c. 13); though among all the imputations
brought against Pericles, this is that which it is the most difficult clearly to refute. But we are inclined to believe, that it may have arisen from the peculiar nature of Aspasia's private circles, which, with a bold neglect of established usage, were composed not only of the most intelligent and accomplished men to be found at Athens, but also of matrons, who, it is said, were brought by their husbands to listen to her conversation. This must have been highly instructive as well as brilliant, since Plato did not hesitate to describe her as the preceptress of Socrates, and to assert that she both formed the rhetoric of Pericles, and composed one of his most admired harangues, the celebrated funeral oration. (Plut., Menex., 4, vol. 6, p. 148, ed. Bkck.) The innovation, which drew women of free birth and good condition into her company for such a purpose, must, even where the truth was undisputed, have been difficult to defend. Aristotle speaks of the Aspasia, and it was liable to the grossest misconstruction. And if her female friends were sometimes seen watching the progress of the works of Phidias, it was easy, through his intimacy with Pericles, to connect this fact with a calumny of the same kind. There was another rumour still more dangerous, which grew out of the character of the persons who were admitted to the society of Pericles and Aspasia. No persons were more welcome at the house of Pericles than such as were distinguished by philosophical studies, and especially by the profession of new philosophical tenets. The mere presence of Amazagoras, Zeno, Protagoras, and other celebrated men, who were known to hold doctrines very remote from the religious conceptions of the vulgar, was sufficient to make a circle in which they were familiar pass for a school of impiety. Such were the materials out of which the comic poet Hermaeus made the character of the young woman in his prosecution against Aspasia. His indictment included two heads: an offence against religion, and that of corrupting Athenian women to gratify the passions of Pericles. The danger was averted; but it seems that Pericles, who pleaded her cause, found need of his most strenuous exertions to save Aspasia, and that he even descended, in her behalf, to tears and entreaties, which, in no similar emergency, of his own could ever draw from him. (Athén. 12, p. 589.) After the death of Pericles, Aspasia attached herself to a young man of obscure birth, named Lysicles, who rose through her influence in moulding his character to some of the highest employments in the republic. (Thirteenth's 'Greece,' vol. 3, p. 87, seqq.—Compare Plut., Vit. Periclid.—Xen. Mem., 2, 6.—Max. Tyr., 24, p. 461.—Harpocr., p. 70.—Aristid., 2, p. 131.)—And though she has surprised and offended many; and it is said that she received a pension from Assyria. (Vid. Aspasia I.) After the death of the prince, she fell into the hands of Artaxerxes, who for a long time vainly sought to gain her affections. She only yielded at last to his suit through absolute necessity. When the monarch declared his son Darius his successor, the latter, as it was customary in Persia for an heir to ask a favour of him who had declared himself his successor, Aspasia came to Athens. Artaxerxes accordingly sent for her, and, contrary to the king's expectation, made choice of Darius. Artaxerxes therefore gave her up, in accordance with established custom, but soon took her away again, and made her a priestess of Diana at Ephesus; or of the goddess whom the Persians called Anaitis. This station required her to pass the rest of her days in chastity. (Plut., Vit. Artax.) Justin, however, says that Artaxerxes made her one of the priestesses of the sun. (Just., 10, 1.—Aelian, V. H., 12, 1.—Plut., Vit. Artax.—Xen., Anab., 1, 10. Athen., 15, p. 576.)

Aspendus, a city of Pamphylia, lying for the most part on a rocky precipice, on the banks of the river Eurymedon. (Arrian., 1, 27.—Zosimus, 5, 16.—Sclay., p. 39.) Strabo makes it to have been well-peopled, and founded by an Argive colony. On this latter head, however, Sclay is silent. The city of Aspendus was a flourishing place even before the expedition of the younger Cyrus. (Xen., Anab., 1, 2, 12.) It was here that the Athenian patriot Thrasybulus terminated his life. Being off the coast, he leved con tributions from the Aspendians, who, seizing an opportunity when he was on shore, surprised him in his tent at night, and slew him. (Xen., Hist. Gr., 4, 8. —Corn. Nep., Thrazyb., c. 4.) Hierocles (p. 682) makes mention of Aspendus under the name of Tri mopolis, where we must read Primopolis. The site of Aspendus has not yet been explored, but it would easily be discovered by ascending the banks of the Eurymedon. (Manuet, Geogr., vol. 6, pt. 2, p. 125.)

Aspis, i. a town of the Contesti, in hispania Tarragonensis, northeast of Illicia, which lay above Carthago Nova on the coast. It is now Aspe, a village in Valencia.—II. An island on the coast of Ionia, opposite Lacedemus. It was called by some Arconnusus. (Strab., 643.) The modern name is Carabash.—III. A town of Africa Propria. (Vid. Clupea.)

Asklepion, a town of Beosia, about twenty stadia to the southeast of it, as it is said. It received its name from Asapelos, the son of Neptune, according to Pausanias (9, 38), and is mentioned by Homer. (II, 2, 511.) The name, at a later period, was changed to Eudieles, from its advantageous situation. (Strab., 416.) Pausanias, however, affirms that in his time it was deserted on account of the scarcity of water. Dodwell is of opinion, that the site of Aspelon is marked by an old town, on an insulated hill about four miles by a mile and a half, one of the northwestern hills of Orchenomus, near the range of hills which enclose the lake and plain on that side. (Dodwell's 'Tour,' vol. 1, p. 233.)

Assa, a town of Macedonia, on the sinus Singinti. (Herodot., 7, 122.)

Assaracus, a Trojan prince, son of Tros by Callirhoe. He was father to Capses, the father of Anchises. (Homer, II., 20, 239.)

Aspis, town of Mycia, on the coast, west of Adramyttium, founded by a colony from Lesbos. It was the birthplace of Cleanthes, the stocic; and is mentioned also in the Acts (20, 13). The modern site is called Beriam Kalesi. (Leake, p. 128.)

Assyria, a country originally of small extent, but afterward greatly enlarged. It was bounded, according to Ptolemy, on the north by part of Armenia and Mount Niphates; on the west by the Tigris; on the south by Susiana; and on the east by part of Media and the mountains Chosra and Zagros. The country within these limits is called by some of the ancients Adiabene, and by others Aturia or Atyria. Assyria is now called Kurdistan, from the descendants of the ancient Carduchi, who occupied the northern parts. The Assyrian was one of the first and greatest empires of Asia. It is generally supposed to have been founded by Ashur or Assur, son of Shem, who went out of Shinar, as it appears, by Nimrod, and founded Nineveh, not long after Nimrod had established the Chaldæan monarchy and fixed his residence at Babylon. This is the commonly received account of the origin of the Assyrian empire, founded on the Mosaic history as given in the text of our Bible; but
Bochart adopts the marginal translation, which, instead of "Out of that land went forth Assur and builded Nineveh," renders it "that land be (Nimrod) divided, Assur (or Assyria) and built Nineveh." The opinion of Bochart is espoused by Faber, the converse by Michaelis and Bryant. The decision of the point is, indeed, a difficult one; but, if weight of authority can avail, the question will be speedily determined in favour of the marginal translation of the Bible, which represents Nimrod as the founder of Nineveh. This translation is supported by the Targums of Onkelos and Jerusalem by Theophilus, bishop of Antioch, and Jerome, among the ancients; and, in addition to Bochart and Faber, by Hyde, Marsham, Wells, the writers of the Universal History, and Hales, among the moderns. Admitting, then, the force of these united authorities, Nimrod, when driven from Babel, still attended by a strong party of military followers, founded a new empire at Nineveh; which, as it was seated in a country almost exclusively peopled by the descendants of Ashur, was called Assyria. The crown of this new universal empire continued in the family of Nimrod for many ages, probably till its overthrow by Arbaces, which introduced a Median dynasty; while Babel remained in a neglected state until the same era, when Nabonassar became its first king. Whether there was an uninterrupted line of kings from Assur or Nimrod to Sardanapalus, or not, is unknown.

According to Herodotus, an Assyrian empire lasted 550 years, from 1537 to 717. Oriental historians have found the same system of dynasties in Syria, founded by Synecles and Eusebius. (Mansford's Scripture Gazetteer, p. 38, seqq.)—Compare Heren's History of the States of Antiquity, p. 25, seqq., Bancroft's trans.)

Astarabas, a river of Ethiopia, falling into the Nile.

It is now called the Tucacze. (Vid. Nilus.)

Astarics, a city of Bithynia, on the Sinus Asteraceus, founded, according to Strabo (585), by the Magoonians and Atheans. This account is confirmed by Memnon (ap. Pont., p. 729), who says the Maggonians settled here in the 17th Olympiad, and that, some years after this, an Athenian colony joined them. Astaris was subsequently seized by Dudalsus, a native chief, who became the founder of the Bithynian monarchy. In the war waged by his successor Xipocrates with Lysimachus, Astarics was ruined, and the inhabitants were transferred by Nicomedes to the city which he founded and named, after himself, Nicomedia. (Strab. 14, 16, 17; Steph. Byz., s. v. Cramer's Asia Minor, vol. 1, p. 185.)

Astarta, a town of Hispania Bética, east of Hispalia, famed for its vigorous defence against the Romans, A.U.C. 546. It is now Estepa La Vieja. (Liv., 38, 20.)

Astartis, a river of Ethiopia, falling into the Nile. It is now the Abwa, or Bahr-el-Assad, and flows through Nubia, rising in a place called Colos Palus, now Bahr Darrar. This is the same river which Bruce mistook for the Nile. (Joseph., Ant., 2, 5—Strab., 565.)

Astarte, a powerful divinity of Syria, the daughter of Colus and Terra. She had a famous temple at Hierapolis in Syria, which was served by 300 priests. "Astarte," observes R. P. Knight, "was precisely the same as the Cybele, or universal mother of the Phrygians. She was, as Apian remarks (Bell. Parth.), "by some called June, by others Venus, and by others Hecate. She is the chief goddess, who, in all countries, is the beginnings and seeds of things from Humidity; so that she comprehended in one personification both these goddesses, who, were, accordingly, sometimes blended in one symbolical figure by the very ancient Greek artists. Her statue at Hierapolis was variously composed; so as to signify many attributes like those of the Ephesian Diana, Berycynthian Mother, and others of the kind. It was placed in the interior part of the temple, accessible only to priests of the higher order; and near it was the statue of the corresponding male personification, called by the Greek writers Apollo, Indra, or Veer, (In honor of Venus, &c., sect. 218, &c., Clas. Juris., No 53, p. 74.)—Cramer, however, thinks it more than probable, that the legend of Astarte is purely astronomical, and may apply to the moon in connexion with the planet Venus. The name Astarte would seem also, according to him, to signify a star or planet. Compare the Persian astara, as suggested by Von Hammer (Fundgr. des Orients, vol. 3, p. 275), and the Greek asterop, (Creucer's Grammar, p. 26.)—Lucian, De Syria, C. de Nat. D., 3, 93.)

Aster, askillarch, one of the garrison of Methone in Macedonia, when that place was besieged by Philip. He aimed an arrow at the monarch, and deprived him of an eye. On the arrow was inscribed, "Astero Philydo Xavaneum Pedro Belos," an Iambic trimeter, meaning, "Aster sends a deadly shaft for Philp." The king shot back an arrow with the following inscription, "Astero Philydo Sivos, dx lados, kreposeta, another Iambic trimeter, implying, "Philp will suspend Aster" (on the cross) "if he take him." When the place surrendered, Aster was delivered up unto the conqueror, who kept his word, and crucified him. (Suidas, s. v. Karaos.—Plut., Parall., p. 307.—Diod. Sic., 16, 34.) Plutarch calls him an Olyanthus; but Lucian, a native of Amphipolis. (Lucian, Quoauto Hist. sit. conscrib., 38.) These two writers may be reconciled, by supposing him to have been an Amphipolitan, serving in the Olyanthan armies of the Methonians. (Palm., Exeret., p. 557.)

Asteria, I., a daughter of Ceus (Koos) one of the Titans, and Phoebe, daughter of Uranus and Ge (Ceus and Terra). She and Latona were sisters. Astrea married Persus, son of Cius. According to a later fable, she fled from the suite of Jove, and, flinging herself down from heaven to the sea, became the island and afterward named Delos. Callimachus (H in Del., 37), who relates this, makes her to have come down like a star (ciotpi Ion), in allusion to her name Asteria (Starry). Another legend, however, stated that she took the form of a quail (otipc.—Apollod., 1, 4, 1.—Hygin., 53.—Serv. ad Aen., 3, 73), whence the isle was called Ortygia. This identification of Delos and Ortygia appears to have been later than the time of Pindar. who (Nem., 1, 4) calls them sisters. The whole fable seems to owe its origin to the affinity of the names Asteria and Delos. (Keightley's Mythology, p. 81, no.)—II. One of the daughters of Danaus, who married Chatus, son of Egyptus. (Apollod., 2, 1, 4.)

Athestno, I. a rivulet of Argolis, rising on the slope of Mount Eubea, near the temple of the Argive Jove, and soon after disappearing among the rocks. (Paus., 2, 17.)—II. (called also Asterius) A King of Crete, descended from Deucalion, who married Minos, and was the son she previously had from her union with Jupiter. He died without issue, and was succeeded by Minos. (Apollod., 1, 2, 2, seqq.—Schol ad I., 12, 397.) According to another account, he was the son of Minos, and was slain by Theseus, having been the most powerful competitor with whom that hero ever had to contend. (Paus., 2, 31.) Lycophron, again (v. 1301), makes him a leader of the forces of Minos. (Commen. Herc. ad Apollod., 1, c.—Muirc., Cre., 3, 2.—Hick, Kret., 2, 45.)

Asteropia, daughter of Deion, king of Phocis, or more probably Phthiots. (Apollod., 1, 9, 3.—Heyne, ad loc., not crit.)

Asteropo, daughter of Cebron, and wife of Aias. (Apollod., 3, 12, 5.) Some MSS. of Apollodorus read Sterope (Cephtyrr).—For other names, sometimes written Asterope and Asteropae, vid. Sterope and Steropes.
ASTREA, the goddess of Justice. Her origin is differently given. She is either a Titan or a descendant of the Titans; being in the former case the daughter of Jove and Themis (Hesiod, Theog., 135, 191, seqq.), or of Astraus and Hemera, or Astraus and Aurora (Esol). When the Titans took up arms against Jupiter, she left her father Astraus, who, as the son of a Titan, fought on their side, and descended to earth, and mingled with the human race. This intercourse with mortals continued during the golden age, but was interrupted when that of silver ensued, for, during this latter age, she came down from the mountains only amid the shades of evening, unseen by, and reftaining from all communion with, men. When the human race was in the full tide of prosperity, she left the earth the last of the immortals. Jove thereupon made her the constellation Virgo, among the signs of the zodiac. (Arat, Phan., 102, seqq.—Schol. Theon., ad loc.—Hesiod, Op. et D., 254.—Pind. Ol., 13, 6.—Orph., H., 61.—Hygin., Astron., 2, 25.—Eratosth., Cat., 9.) As the constellation Virgo, she is identical with Ergane, having a place in the zodiac between the Scorpion and the Lion. On the old star-tables the reference to these two signs extends over two signs, filling with its claws the space between itself and Virgo. (Voss. ad Virg., Georg., 1, 33.—Eratosth., Cat., 7.—Ovid. Met., 2, 197.) Later astronomers, as we are told by Theon (ad Arat., 89), named the sign occupied by the claws of Scorpio the Balance (Libra), and this balance Astraus (Virgo) held in her hand as a symbol of justice. Others, however, as Hesiod, say the claws must be made of the metal of the equal disposition of the day and night at the equinox. It is very probable that this latter explanation was the earlier one of the two, especially as Astraus ranked among the Horse, and that the moral idea succeeded the physical. (Vollmer, Wörterb. der Mythol., p. 354.—Gruber, Wörterb. der Alterth. Mythol., vol. 1, p. 666.—Idler, Sternnamen, p. 169.)

Astraus, I. a son of the Titan Crius and Eurybia, the daughter of Pontus. By him, however, was made the offspring of Terra and Tartarus, and brother of the giants Enceladus, Pallas, &c. (Hyg. Pref., p. 3, ed. Munk.) He was the father of Astraus, mentioned in the preceding article, and begat also by Eos (Aurora) the winds Boreas, Notus, Zephyrus, and the stars of heaven. (Hes., Theog., 378.) Some assign him also a son named Argestes, but this is merely an epithet of Euphrates, meaning "the swift," Astraus uniting his name to that of the river, by which he was hallowed along with them to Tartarus. (Strab. ad Xen., 1, 136.)—II. A river of Macedonia, running by Be- res, and falling into the Erigonus, a tributary of the Axios. (Allian. Hist. An., 15, 1.) It is now thought to be the Vistra. (Consult, however, as to the course of this river, the remarks of Cramer, Anc. Grecia, vol. 1, p. 252, who makes it fall into the lake Ladina—Compare also Bischf. und Müller, Wörterb. der Geogr., p. 123.)

Astura, a small river and village of Latium, near the coast, below Antium. In the neighbourhood was a villa of Cicer, to which he retired to vent his grief for the loss of his beloved daughter, and where he thought of raising a monument to her memory. (Ep. ad Att., 12, 19.) When prescribed by Antony, he withdrew to this same place from Tuscumal, and sought to escape the threatened massacre by joining Brutus in Macedonia. (Plut., Vit. Cic.) As to PURIA, an extension of the account of Augustus, during an illness, with which he was seized towards the close of his life (Suet., Aug., 99), and also of Tiberius (Suet., Tib., 72). A decisive battle took place on the banks of the river Astura, between the Romans and some of the Latin states, which led to the complete subjugation of the latter. (Livy, 6, 13.—Cramer's Anc. Italy, 3, p. 89.)

Astures, a people of Hispania Tarraconensis, lying west and southwest of the Cantabri. They occupied the eastern half of modern Asturias, the greater part of the kingdom of Leon, and the northern half of Palencia. Their capital was Asturica Augusta, now Astorga. (Manuel, Geogr., vol. 1, p. 363.)

Astyes, son of Cyaxares, was the last king of Media. His reign continued from 595 to 560 B.C. He married Arystis, daughter of Alyattes, and sister of Croesus, by whom he had Mandane. Fearing, from a dream which he had, that he would be dethroned by a grandson, he married his daughter to Cambyses, a Persian, of a good family, but peaceful disposition, and one whom he himself thought inferior to a Mede even of moderate condition. When Cambyses was already advancing with the first, induced him to send to Persia for his daughter, who was near her delivery, and, when she brought forth a son, he gave the infant into the hands of an individual named Harpagus, with strict orders to put it to death. The latter, however, disobeying these injunctions, gave the child to one of the king's herdsmen to expose, and the wife of this man, having just been delivered of a dead infant, took the son of Mandane, and put it to death, but Harpagus exposed their own inanimate offspring. When Harpagus therefore sent some trusty persons to see whether the herdsman had executed his orders, the dead child of the latter was seen by them lying exposed, and was mistaken, for course, of the offspring of Mandane. The child thus preserved grew up, and became Cyrus the Great, dethroning Astyes and according to the import of the two dreams. This was thus deprived of his crown after a reign of about 35 years. (Vid. Cyrus.) He appears to have been of a cruel and vindictive disposition. (Vid. Harpagus.) According to the account of Xenophon, in his historical romance of the Cyropæia, Astyes and his grandson lived on terms of the closest friendship and intimacy, and the former left, besides a daughter, a son named Cyaxares, who succeeded the father, and, dying without issue, left the crown to Cyrus. (Herod., 1, 46, 73, &c.—Xen., Cyrop.) Nothing is said in Herodotus of the end of Astyes. Cestia, however, informs us that, after having been treated kindly by Cyrus, he was sent for by the latter to come to Persia, but that the eunuch charged with this commission led him astray in a desert place, where he perished from hunger and thirst. (Ctes., Pers., 5.) It is probable this was done by the secret orders of Cyrus, although Cestias states that the eunuch was caught by Ctesias and irons (Ctes. c. 5.)—There is great discrepancy in the form of this name, as given by the ancient writers; Herodotus, and most of the Greeks, following his authority, write Αστυάζης. Cestias, on the other hand, gives Αστυόηι, while Diodorus, citing Cestias himself, has Αστυάζαος (3, 34). Compare the remarks of Wesseling (ad Diod., l. c.), Marshall (Can. Chron. p. 528), Bahr, (ad Ctes., Asyr., 19), and Beck (Geldgez., vol. 1, p. 638).

Asturic. The Roman name of the Hector and Cephalus who had called him Scamanderius, after the river Scamander, but the Trojans bestowed on him, out of compliment to his father, their great defender, the name of Astynax, or "Prince of the city." (Hom., II., 22, 651.) He was very young when the Greeks besieged Troy; and when the city was taken, his mother saved him in her arms from the flames. After the capture of the city, the young prince escaped, and entered into the Greek camp, taking a share of a prediction of Calchas, that Astynax, if permitted to live, would avenge the death of Hector, and raise Troy in fresh splendour from its ruins. Andromache, dreading the fury of the victorious Greeks, concealed Astynax in the recesses of Hector's tomb; but his retreat was soon discovered by Ulysses, who, according to some, precipitated the unhappy boy from the battlements of Ilium. This cruelty is by some described to Menelaus, and by Pausanias...
ATA

416 Siculus was, of course, a fertile, almost mire, but the island was fertile, almost mire, and of Phoenicians, who, by the banks of the Atax, or Aude, whence their name. Their capital was Narbo, now Narbonne. (Mannert, Geography, 2, 603.)

ATA, daughter of Iason or Iasion, a descendant of Arcas and Clymene the daughter of Minyas. Her father reigned in Arcadia. He was anxious for male offspring, and, on his wife's bringing forth a female, he exposed the babe in the mountains, where she was suckled by a bear, and at last found by some hunters, who named her Atalanta, and reared her. She followed the chase, and was alike distinguished for beauty and courage. Thus she attained to great renown, and was permitted to carry a dart in her hand. Her lovers were to start first, and whoever arrived at the goal before her would be made her husband; but all those whom she overtook were to be killed by the dart with which she had armed herself. As she was almost invincible in running, many of her suitors perished in the attempt, and

ATAVYRION, a fortified town on the summit of a mountain in Galilee Inferior. Both the town and mountain answer to the Thabor of Scripture. Polybius (6, 70) gives an account of the capture of the place by Antiochus the Great. The Septuagint version gives the name Ταβαβιαν, not Ταβαβιαν. Polybius describes Mount Thabor as a round or breast-like hill (άκρος μαστοτηθείς), while Dr. Clarke gives it a conical form. According to the latter, it is entirely detached from any neighbouring mountain, and stands upon one side of the great plain of Esdraelon. (Clarke's Travels, vol. 4, p. 239, Lond. ed., 1817.)

ATAVYRION, or ATAVYRION, I. a mountain in Rhodes, the highest in the island, where Jupiter had a temple, whence he was named Atabyrion. Ancient fables speak of brazen oxen at this place, which, by their bowing, announced approaching calamity. The meaning of the fable is said to have been, that the priests who refused his sacrifices were to be deprived of their temple, a preparation for the destruction of the city. His grandson, Homer, built a temple and house to the god at this place, and the flocks of bees in the temple were said to be divine sacrifices. (Clemens, S. P.)

As she was almost invincible in running, many of her suitors perished in the attempt, and

ATA, a wind which was frequent in Apulia, and very destructive to the productions of the earth.

ATAVYRION, or ATAVYRION, I. a mountain in Rhodes, the highest in the island, where Jupiter had a temple, whence he was named Atabyrion. Ancient fables speak of brazen oxen at this place, which, by their bowing, announced approaching calamity. The meaning of the fable is said to have been, that the priests who refused his sacrifices were to be deprived of their temple, a preparation for the destruction of the city. His grandson, Homer, built a temple and house to the god at this place, and the flocks of bees in the temple were said to be divine sacrifices. (Clemens, S. P.)
Their heads were fixed round the place of contest, where Meleianon, her cousin, offered himself as a competitor. Venus had presented him with three golden apples from the garden of the Hesperides, or, according to others, from an orchard in Cyprus; and, as soon as he had started in the course, he artfully threw down the apples at some distance one from the other. While Atalanta, charmed at the sight, stopped to gather the apples, Meleianon won the race. Atalanta became his wife, and they had a son named Parthenopeus. But, supposing the same thing to happen at one occasion, they profaned the temples, or sacred enclosure of Jove, with their love, for which offence they were turned into lions. (Apollod., l. c., p. 127.)—II. A place near Pitha, in Mysia, and called "Atarneus under Pitha," to distinguish it from the town of the same name mentioned in the previous article. It was opposite the island of Euboea. The bricks made here are said to be so light as to float in the water. (Strab., 614.)

ATAX, a river of Gallia Narbonensis, rising in the Pyrenean mountains, and falling into the Lacus Rubrensis or Rubreusus, at the city of Narbo (now Narbonne), for which the lake served as a harbour, an outlet or canal being cut to the Mediterranean. The Atax (otherwise called Adax) is now the Aude, and the modern name of the lake is l'etang de Sigean. (Plin., 3, 4.—Mela, 2, 5.—Lucan, 1, 403.)

ATZ, the goddess of evil, and daughter of Jupiter. When Jupiter and his companions were at the waters of Hesperides, and there called the rash oath that rendered Hercules subject to the command of Eurytheus, the monarch of the skies laid the whole blame on Ate, and, having seized her by the hair, flung her to earth, declaring with an oath that she should never return to Olympus. Thenceforward she took up her abode among men. Her feet, according to Homer, are tender, and she therefore does not walk on the ground, but on the heads of mortals (sae
e
t

Athena, the daughter of Zeus and Metis, is the goddess of wisdom and wisdom of the arts, especially music and the fine arts. She is also the goddess of warfare, and is often depicted carrying a spear or a shield.

ATHANATURIA, a river of Africa, ten days' journey from the Garamantes. There was in their country a hill of salt, with a fountain issuing out of the summit. (Heron., 4, 9.—Herod., de Bello, lib. II.)—II. The whole of the MSS. of Strabo (Atarneus) and the Arabic writers (Ataraneus, &c.) (Herodot., iii. 292) first referred to Arapawh, an emendation now almost universally adopted. Rennell thinks, that the people here meant are the same with the Hammamates of Pliny (5, 5). What Pliny, however, says of the Atlanteres suits the case better (5, 8). Castiglioni makes the Atlanteres and Atarantes the same people. (Mem. Geogr. et Numism., ccc., Paris, 1826.) Heerein, on the other hand, places the Atarantes in the vicinity of the Tegea, the last city of Fessan. (Ideen, vol. 2, pt. 1, p. 239.) Herodotus says, that the Atarantes were destitute of names for individuals; and they cursed the sun as he passed over their heads, because he consumed both the inhabitants and the country with his scorching heat. (Heron., l. c.)

ATTAS, a city of Egypt, sacred to Venus, in one of the small islands of the Delta called Prosopitis. The name of the city is said to be derived from Attar or Athar (Etymol. Mag., s. v. 'Athar, which signifies "Venus," and Bek, "a city," as Balbeek, "the city of the Sun," called by the Greeks Helios. Balsi is still found in the same sense among the Copts, and in their language it is pronounced as e. Strabo and Pliny call the city Aphroditeopolis. (Herod., 2, 41.—Laracher, ad Herodot., l. c.)

ATTARUS, an Eastern deity, the same with the Great Goddess of Syria. She was worshipped principally at Mabog or Bambryce (Edessa), and at a later period at Hierapolis. Strabo informs us that her true name was Athara. (Compare Xanth., Lyd. ap. Herod., s. v. 'Atrayadh.—Creuzer, frgm. hist. Græc. antiquiss., p. 183.) Ctesias calls her Der

Cleo. It is probable that this latter name is only a corruption of Attaraxis or Attargis, and that these three appellations designate one and the same person. Lydian, however (de Dea Syria, c. 14.—Op. ed. Bip., vol. 9, p. 96), distinguishes expressly between the goddess worshipped at Attaraxis and the Phoenician Derceo, stating that the latter was represented with the lower extremities like those of a fish, and the fore

Lydian, however (de Dea Syria, c. 14.—Op. ed. Bip., vol. 9, p. 96), distinguishes expressly between the goddess worshipped at Attaraxis and the Phoenician Derceo, stating that the latter was represented with the lower extremities like those of a fish, and the fore
brates the active labours of husbandry, while the males were chiefly employed in tending their flocks. (Herc., Pont. frag.—Cramer's Anc. Greece, vol. 2, p. 95, seqq.)

Athena, king of Thebes, in Boeotia, was son of Aëolus. He married Nephele, and by her had Phrixus and Helle. Some time after, having divorced Nephele, he married her daughter Medes. From whom he had two sons, Leucrotes and Melicerta. Ino became jealous of the children of Nephele, because they were to ascend their father's throne in preference to her own; therefore she resolved to destroy them; but they escaped from her fury to Colchis on a golden ram. (Vid. Argonauta.) Athanas, through the extremity of Juno towards Ino, who had snuck the infant Bacchus, was afterward seized with madness. In his frenzy he sought, and finding no help, was lost. (Ovid, Met. 19. 2.)

Andrea, declared the prelacy of Arian, was a daughter of Athamas, near Attica, in the country of the Athamantia. Here he married Therese, and had by her four children, Leucos, Erythros, Schoneus, and Ptoos. (Apollod., 1. 9.) Such is the account of Apollodorus. There are, however, many variations in the tale in different writers, especially in the tragic poets. (Knightley's Mythology, p. 353.)

Athamanitades, a patronymic of Melicerta, Phrixus, or Helle, children of Athamas. (Ovid, Met. 19, 318.)

Athenasius, a celebrated Christian bishop of the fourth century. He was a native of Egypt, and a deacon of the church of Alexandria under Alexander the bishop, whom he succeeded in his dignity A.D. 326. Previous to his obtaining this high office he had been private secretary to Alexander, and had also for some time an ecstatic life with the renowned anchorite St. Anthony. Alexander had also taken him to the council at Nice, where he gained the highest esteem of the fathers by the talents which he displayed in the Arian controversy. He had a great share in the decrees passed here, and thereby drew on himself the hatred of the Arians. On his advancement to the prelacy he dedicated all his time and talents to the defence of the doctrine of the Trinity, and resolutely refused the request of Constantine for the restoration of Arius to the Catholic communion. In revenge for this refusal, the Arian party brought several accusations against him before the emperor: of these he was acquitted in the first instance; but, on a new charge of having detained ships at Alexandria, laden with corn for Constantinople, either from conviction or policy, he was found guilty and banished to Gaul. Here he remained an exile eighteen months, or, as some accounts say, upward of two years, his see in the mean time being unoccupied. On the death of Constantine he was recalled, and restored to his functions by Constantius; but the Arian party made new complaints against him, and he was condemned by 90 Arian bishops assembled at Antioch. On the opposite side, 100 orthodox bishops, assembled at Alexandria, declared him innocent; and Pope Julius confirmed this sentence, in conjunction with more than 300 bishops assembled at Sardis from the East and West. In consequence of this, he returned a second time to his diocese. But when Constans, emperor of the West, died, and Constantine became master of the whole empire, the Arians again ventured to rise up against Athanasius. They condemned him in the councils of Arles and Milan, and, as the worthy patriarch refused to listen to anything but an express command of the emperor, when he was one day preparing to celebrate a festival in the church, a body of soldiers suddenly rushed in to make him prisoner. But the surrounding priests and monks placed him in security. Athanasius, displaced for a third time, fled into the deserts of Egypt. His enemies pursued him even here, and there succeeded in inducing the emperor to place a firm guard over him, to prevent him from dwelling in these solitary places, and who would not betray his retreat, from suffering on his account, he went into those parts of the desert which were entirely uninhabited. He was followed by a faithful servant, who, at the risk of his life, supplied him with the means of subsistence. In this undisturbed spot Athanasius composed many writings, full of eloquence, to strengthen the faith of the believers or expose the falsehoods of its enemies. When the Arians rose against the throne, he allowed the orthodox bishops to return to their churches. Athanasius, therefore, returned after an absence of six years. The mildness which he exercised towards his enemies was imitated in Gaul, Spain, Italy, and Greece, and restored peace to the church. But this peace was interrupted by the complaints of the heathen, whose temples the zeal of Athanasius kept always empty. They excited the emperor against him, and he was obliged to fly to the deserts of Egypt and be gathered to his fathers. The Arians, the emperor and the accession of Jovian again brought him back; but, Valens becoming emperor eight months after, and the Arians recovering their superiority, he was once more compelled to fly. He concealed himself in the tomb of his father, where he remained four months, until Valens, moved by the pressing entreaties and threats of the Alexandrians, allowed him to return. From this period he remained undisturbed in his office till he died, A.D. 373. He was buried at Rome, and was declared a holy father, of 20 in banishment, and the greater part of the remainders in defending the Nicene Creed. Athanasius is one of the greatest men of whom the church can boast. His deep mind, his noble heart, his invincible courage, his living faith, his unbounded benevolence, sincere humility, lofty eloquence, and strictly virtuous life, gained the honour and love of all. His writings are on polemical, historical, and moral subjects. The polemical treat chiefly of the mysterious consubstantiality of the Trinity, the divinity of Christ, and the divinity of the Holy Spirit. The historical ones are of the greatest importance for the history of the church. In all his writings, the style is distinguished, considering the age in which they were produced, for clearness and moderation. His apology, addressed to the Emperor Constantine, is a master-piece. The Creed which bears his name is now generally allowed not to have been his. Dr. Waterland supposes it was made by Hilary, bishop of Arles. It was first printed in Greek in 1540, and several times afterward to 1671. It has been questioned whether this Creed was ever received by the Greek and Oriental churches. In America, the episcopal church has rejected it. As to its matter, it is given as a summary of the true orthodox faith: unhappily, however, it has proved a fruitful source of unprofitable controversy.—The best edition of his works is that of Montfaucun, Paris, 1698, 3 vols. fol. As a supplement to this may be added the second vol. of the Bibliotheca Patrum, from the same editor, 1706. (Encyclop. Americ, vol. 1, p. 440, seqq.)

Athéna, the name of Minerva among the Greeks (Aθηνα, and 'Αθηνα).

Athena, I. the celebrated capital of Attica, founded, according to the common account, by Cecrops, 1550 B.C. The town was first erected on the summit of a high rock, probably as a protection against attacks from the sea. This primitive settlement was Cranae, from Cranaus, as is said, from whom the Pelasgi took the name of Cranri, and all Attica that of Cranae. At a later period it was called
Cecrops, from Cecrops; and finally Athens by Erechtheum, from its being under the protection of Minerva or Athéné (Ἀθηνή). A distinction was also made between the ancient city on the rock and the part subsequently added in the plain. The former, the primitive Cecrops, was called, from its situation, Ἰαμνῶνιος, or Ἀκρόπολις, "the upper city," where afterward stood the Parthenon, and other splendid edifices; the latter in the plain, where eventually Athens itself stood, were termed ἐκατόφωλις, "the lower city." (Compare, as regards the various names given to this city, Stephan. Byz. s. v. Κρατικόν.—Plin., 7, 56.—Kruze, Hellas, vol. 2, p. 77.) The Acropolis was sixty stadia in circumference. We have little or no information respecting the size of Athens under its earliest kings; it is generally supposed, however, that, even as late as the time of Themistocles, the wall was in the line of Acropolis and the adjoining Hill of Mars. Subsequently to the Trojan war, it appears to have been increased considerably, both in population and extent, since Homer applies to it the epithets of συντήμενος and οἰκονόμος. The improvements continued, probably, during the reign of Pisistratus, and, as it was able to stand a siege against the Lacedaemonians under his son Hippias, it must evidently have possessed walls and fortifications of some extent, if not of the same safety. The invasion of Xerxes, and the subsequent irruption of Mardonius, effected the entire destruction of the ancient city, and reduced it to a heap of ruins, with the exception only of such temples and buildings as were enabled, from the solidity of materials, to resist the action of fire and the work of demolition. When, however, the battles of Salamis, Platae, and Mycale had subsided, and the active spirit of invasion, Athens, restored to peace and security, soon rose from its state of ruin and desolation; and, having been furnished by the prudent foresight and energetic conduct of Themistocles with the military works requisite for its defence, it attained, under the subsequent administrations of Cimon and Pericles, to the highest pitch of beauty, magnificence, and strength. The former is known to have erected the temple of Theseus, the Dionysiac theatre, the Stoa of the Diacs, and Gymnasion, and also to have embellished the Academy, the Agora, and other parts of the city at his own expense. (Plut., Vit. Cimon.) Pericles completed the fortifications, which had been left in an unfinished state by Themistocles and Cimon; he likewise built several edifices destroyed by the Persians, and to him his country was indebted for the temple of Eleusis, the Parthenon, and the Propylaea, the most magnificent buildings, not of Athens, of the age. The wall was in the line of Pericles that Athens attained the summit of its beauty and prosperity, both with respect to the power of the republic and the extent and magnificence of the architectural decorations with which the capital was adorned. At this period, the whole of Athens, with its three ports of Piræus, Munychia, and Phalerus, connected by means of the celebrated long walls, formed one great city, encompassed within a vast peribolus of massive fortifications. The whole circuit and circumference, as we collect from Thucydides, was not less than 124 stadia. Of these, forty-three must be allotted to the circuit of the city itself; the long walls, taken together, supply twenty-five, and the remaining fifty-six are furnished by the peribolus of the three harbors. Xenophon reports that Athens contained more than 10,000 houses, which, at the rate of twelve persons to a house, would give 120,000 for the number of inhabitants of the city. (Xen., Mem., 3, 6, 14.—Id., Euch. 8, 22—Compare Clinton's Fasti Hellenici, Append., p. 395.)—From the researches of Col. Leake and Mr. Hawkins, it appears that the former city considerably exceeded in extent the modern Athens; and though little now remains of the ancient works to afford certain evidence of their circumference, it is evident, from the measurement furnished by Thucydides, that they must have extended considerably beyond the present line of wall, especially towards the north. Col. Leake is of opinion, that on this side the extremity of the city reached to the foot of Mount Aneximus, and that to the westward its walls followed the same brook which terminates in the marshy ground of the Academy, until they met the point where some of the ancient foundations are supposed to be seen near the gate Dipyllum; while to the eastward they approached close to the Ilissus, a little below the present church of the Mologitades, or confessors. The same antiquary estimates the space comprehended within the walls of Athens, the longitudinal enclosure and the peribolus of the ports, to be more than sixteen English miles, without reckoning the sinuosities of the coast and the ramparts; but if these be taken to have worn in the build of the sea, than nineteen miles. (Topography of Athens, p. 365, seqq.) We know from ancient writers that the extent of Athens was nearly equal to that of Rome within the walls of Servius. (Dion. Hal., 4, p. 670.) Plutarch (Vit. Nic.) compares it also with that of Syracuse, which Strabo estimates at 180 stadia, or upward of twenty-two miles. The number of gates belonging to ancient Athens is uncertain, and is ascertainment left to classical writers. The names of these are Dipyllum (also called Thriasian, Sacred, and perhaps Ceramicus), Diomene, Diochior, Melitides, Pirainos, Acharnian, Ionios, Hippad, Herim. (Cramer's Anc. Greece, vol. 2, p. 312, seqq.) The early history of Athens and its kings is blended with more or less of fable. A brief sketch of the affairs of Attica, from the first glimpses of tradition down to the time when Greece fell beneath the Roman yoke, will be found under the article Ceceops. The Athenians have been admired in all ages for their love of liberty, and for the great men that were born among them; but favour there was attended with danger; and there are very few instances in the history of Athens that can prove that the jealousy and fickleness of the people did not persecute the man who had fought their battles and exposed his life in the defence of his country. Perhaps no other people in the world can boast, in the same space of time, of so large a number of illustrious citizens, as regarded either warlike operations or the walks of civil life.—The Athenians claimed to be of indigenous origin, or, in other words, sprung from the earth itself. Hence they called themselves αὐτόχθονες (Autochthones), i. e., Aborigines; and, as a proof of their indigenous origin, the early Athenians are said by Thucydides (1, 6) to have worn in the build of the sea, ornaments, formed like cicada, a species of insect believed to spring from the earth. The custom only went entirely out of use a short time previous to the age of the historian. The Romans, in the more polished ages of their republic, sent their youths to finish their education at Athens, and respected the learning, while they despised the military character, of the inhabitants.—Modern Athens, in Larissos, a fine city, contained 1300 houses, with 1200 inhabitants, 2000 of whom were Turks. The Greeks here experienced from the Turks a milder government than elsewhere. They also retained some remains of their ancient customs and annually chose four archons. The Greek archbishop residing here had a considerable income. In 1822, the Acropolis, after a long siege, fell into the hands of the free Greeks. In 1825, a Greek school, under the care of a Greek priest, George Gen- taladis, was established in the flourishing condition. The most thorough investigation of the places among the ruins of Athens worthy of attention, is contained in Leake's Topography of Athens (London, 1821, with an atlas in folio). The splendid work of Stuart and Revett (Antiquities of Athens) must also be consulted. Leake 298.
makes it appear probable, that, in the time of Pausa-
nias, many monuments were extant which belonged
to the period before the Persian war; because so tran-
sient is the duration of temples and other public edifices
that the number of the ancient remains which the city has
gave him time to finish the destruction of the walls
and principal public edifices. - In the restoration of the
city to its former state, Themistocles looked more to
the useful, Cimon to magnificence and splendour; and
Péricles far surpassed them both in his buildings.
The great supply of money which he had from the
tribute of the other states belonged to no succeeding
ruler. Athens, at length, saw much of her ancient
splendour restored; but, unluckily, Attica was not an
island; and, after the sources of power, which
belonged to the fruitful and extensive country of Mace-
donia, were developed by an able and enlightened
prince, the opposing interests of many free states
could not long withstand the disciplined army of a
warlike people, led by an active, able, and ambitious
monarch. When Sylla destroyed the works of the
Piræus, the power of Athens by sea was at an end,
and with that fell the whole city. Flattened by the
triumvirate, favoured by Hadrian's love of the arts,
Athens was at no time so splendid as under the Anto-
nines, when the magnificent works of from eight to
ten centuries stood in view, and the edifices of Peri-
cles were in equal preservation with the new build-
ings. Plutarch himself wonders how the structures of
Ictinus, of Menesicles and Phidias, which were
built with such surprising rapidity, could retain such
a perpetual freshness. The most correct criticism on
the accounts of Greece by Pausanias and Strabo is
in Leake. Probably Pausanias saw Greece yet un-
plundered. The Romans, from a reverence towards
a religion approaching so nearly to their own, and
wishing to conciliate a people more cultivated than
themselves, were ashamed to rob temples where the
master-pieces of art were kept as sacred, and were sat-
fisfied with a tribute in money, although in Sicily they
did not abstain from the plunder of the temples, on
account of the prevalence of the Cappadocian and
Phenician influence in the island. Pictures, even in
the time of Pausanias, may have been left in their
places. The wholesale robberies of collectors; the
removal of great quantities of the works of art to Con-
stantinople, when the creation of new specimens was
no longer possible; Christian zeal, and the attacks of
barbarians, destroyed, after a time, in Athens, what
the emperors had spared. We have reason to think,
that the monument of Minerva or the temple
standing in the time of Alaric. About 450 A.D. pa-
ganism was totally annihilated at Athens; and, when
Justinian closed even the schools of the philosophers,
the recollections of the mythology were lost. The
Parthenon was turned into a church of the Virgin
Mary, and St. George stepped into the place of The-
aus. The manufacture of silk, which had hitherto
remained, was destroyed by the transportation of a
collection of drawer's frames by Roger of Sicily, in
1422. The danger of the place fell into the hands of
Omar. To complete its degradation, the city of Minerva obtained the privi-
lege (an enviable one in the East) of being governed
by a black eunuch as an appendage to the harem.
The Parthenon became a mosque, and, at the west end
of the Acropolis, those alterations were com-
mented which the new discovery of artillery then
made necessary. In 1687, at the attack of Athens
by the Venetians under Morosini, it appears that the tem-
ple of Victory was destroyed, the beautiful remains of
which are to be seen in the British Museum. On
the 28th September of this year, a bomb fired the powder-
magazine kept by the Turks in the Parthenon, and,
with this building, destroyed the ever-memorable re-
 mains of the genius of Phidias. Probably the Venet-
ians knew not what they destroyed; they could not
have intended that their artillery should accomplish
such devastation. The city was surrendered to them
September 29th. They wished to send the chariot of
Victory, which stood on the west pediment of the
Parthenon, to Venice, as a trophy of their conquest,
but, in removing it, it fell and was dashed to pieces.
In April, 1688, Athens was again surrendered to the
Turks, in spite of the remonstrances of the inhabitants,
who, with good reason, feared the revenge of their
returning masters. Learned travellers have, since that
time, often visited Athens; and we may thank their
relations and drawings for the knowledge which we
have of the monuments of the place. How little the
Greeks of modern times have understood the impor-
tance of these buildings, is proved by Crasius's Turko-
Gracia. From them originated the names Temple of
the unknown God, Lantern of Demothenes, &c. It
is doing injustice to the Turks to attribute to them
exclusively the crime of destroying these remains of
 antiquity. From these ruins the Greeks have sup-
plied themselves with all their materials for buildings
for hundreds of years. The ruins in the neighbour-
hood of inhabited places and in the sepulchral towns
are particularly exposed, because ease of transportation
is added to the daily want of materials. In the mean
time, the most accessible part of Athens has rich
rewards to treasure well-directed searches; and each
fragment which comes to light in Athens proves the
all-pervading art and taste of the ancient race. It is
fortunate that many of the remains of Grecian art have
been covered by barbarous structures until a brighter
day should dawn on Greece. (Encyclop. Amer.,
vol. 1, p. 445, seqq.) For an accurate and interest-
ing account of the various works that have been pub-
lished in modern times, illustrative of the remains
of Grecian art, as well as of the numerous travellers that
have visited these classic regions, consult Kruse's Hel-
las, vol. 1, p. 65-156. In this work also will be found
an account of Lord Elgin's operations. For remarks
on the coinage and commerce of Athens, vid. Mina
and Piræus, and for some account of its public structures,
consult separate articles throughout the volume,
such as Parthenon, Erechtheum, &c. - II. A town of
Euboea, in the northwestern corner of the island, and
near the promontory of Cënemus. It was founded,
according to Strabo, by an Athenian colony; but, ac-
cording to Ephorus, by Dias, a son of Abas. (Steph.
Byz., s. v. Αθηναία.—Eustath., ad II, 2, 537.) The
modern name is Port Calos.—III. An ancient city,
which, according to tradition, stood at an early period,
by the sea, six miles from Eretria, where the city of
Copæ was erected at a later day. Athenæ was situate on the river Triton, which, if it is
the torrent noticed by Pausanias, was near Alase-
mane. (Strab., 407.—Pausan., 9, 24.) Stephanus
of Byzantium reports that, when Crates drained the
waters which had overspread the plain, the ruins of
Athens became visible (s. v. Αθηναία). Some writ-
ers asserted, that it was occupied by the island of
Athenæi. (Steph. Byz., s. v. Αθηναία.) The exis-
tence of such a city, at so remote a date, might
form the basis of no uninteresting theory respecting
the early migrations of the people of Attica from the
north. (Compare Müller, Orbocomenius, p. 58.)
ATHENAE, festivals celebrated at Athens in hon-
or of Minerva. One of them was called Panathenaen,
and the other Chalees ; for an account of which, see
those words. A T H E N A E N , a building at Athens, sacred to Min-
erva, whence its name (Ἀθηναέν, from 'Αθηναία). Here
poets, philosophers, and literary men in general
were accustomed to assemble and recite their com-
positions, or engage in the discussion of literary subjects, as the
Roman poets and others were wont to do in the tem-
ples of Apollo at Rome. The Emperor Hadrian built
an Athenæum at Rome in imitation of that at Athens.
The ancient Athenæa were generally in the form of
ATHENIÆUS.

ATHENIÆUS.

ampli theatres. (Lamprid., in Alex. Sec., c. 35.— Auf. Vici. de Cæs., c. 14.—Forcellini, Lex. Tot. Lat., s. v.)

ATHENIÆUS, I. a native of Naucratis in Egypt, and the author of a very interesting compilation, entitled Deipnosophistæ (Δειπνοσοφισταί, "the learned men at supper"), from which the moderns have derived a portion of their knowledge respecting the private life of the ancient Greeks. He declares himself to have been a little later than the poet Oppian; and, as that poet mentions his name, it is likely that he collected the Cæsarian. Caracalla, the age of Athenæus may be fixed at the beginning of the third century of the Christian era. The professed object of Athenæus was to detail to his contemporaries the convivial antiquities of their ancestors, and he has chosen to convey his information in the form of a dialogue as the most convenient and amusing. The plan of the work is as follows: A considerable number of learned men, among whom were the celebrated Galen, assembled at the table of Laurensius, a liberal and wealthy Roman, where they bestowed a large portion of erudition on every part of their entertainment as the memory or commonplace-book of the author could supply. So much of the business of human life is connected, medially or immediately, with eating and drinking, that it does not require any great share of ingenuity to introduce into a work of this kind, as in fact, if we look at the curious information, which, at first sight, does not appear to be very closely connected with the science of cookery. Accordingly, says the author of the Epitome, "we find disquisitions on fish of every sort, together with potholders and poultry; not to mention historians, poets, and philosophers; likewise a great variety of musical instruments, witty sayings, and drinking vessels; royal magnificence, ships of galleys, magistrates, and many other articles too tedious to mention." Although this kind of conversation bears no very strong resemblance to the dying speculations of Socrates on the immortality of the soul, our author has selected the Phaedo of Plato for his prototype, and has borrowed the beginning of that dialogue, with no alteration, except the substitution of the names of Timocrates and Athenæus for those of Socrates and Plato, and has given the Dialogic form which the work assumes, arises from the impossibility of collecting the productions of all the different seasons at one banquet. The author seems to suppose, that an astonished fishmonger might explain, in the words of Theocritus, Ἀλλὰς τὰ μὲν θέροις, τὰ δὲ γίγνεται ἐν χειμῶνι. The loss of the two first books renders us unable to judge how far he was able to palliate this palpable absurdity. The most valuable part of the work is the large quantity of quotations which it presents from authors whose writings no longer exist. The Athenian comic poets afforded an ample store of materials, and Athenæus seems to have been by no means sparing in the use of them. Many of the extracts from their works, which he has inserted in his own, are highly interesting; and the mass is so considerable, as far to exceed in bulk all that can be brought from every other Greek or Latin writer. The number of theoretical pieces which he appears to have consulted, was probably not less than two thousand. The middle comedy furnished him with eight hundred. —The compilation of Athenæus immediately became the prey of other compilers less diligent than himself. Ἀθλίον, who was nearly his contemporary, has made use very liberally of the Deipnosophists in his Various History. In a later age we find our author again plagiarized by Macrobius, who seems to have taken from him not only many of the materials, but even the form and idea, of his Saturnalia. But of all writers, ancient or modern, there is none who is so highly indebted to Athenæus as the industrious Eustathius. Although the Archbishop of Thessalonica appears never to have seen the entire work, but to have made use of the Epitome, the stores of his erudition would be miserably reduced if he were compelled to make restitution of the property of our author which he has converted to his own benefit. —By the same fortunate accident which has preserved a few of the writings of the ancients, a single copy of Athenæus appears to have escaped from the ravages of time, ignorance, and fanaticism. That MS. still exists. After the death of Cardinal Bessarion, who purchased it from Greece, it passed into the library of St. Mark at Venice. In this sepulchre of books it would certainly have continued for many ages, unknown to the learned, if the French successes had not caused it to be included in the valuable spoils of Italy, which, until lately, enriched the national collection of Paris. Many transcripts of this manuscript exist in different parts of Europe, which were probably made when it was first offered for sale by the Cardinal. All of them betray their origin, as, besides their coincidence in orthographical errors, the same parts are wanting in all of them. The two first books, the beginning of the third, a few leaves in the eleventh, and part of two leaves in the fifteenth, are wanting in the Venetian manuscript, and the deficiency appears evidently to have proceeded from accident. The same lacunas occur in every other manuscript, and it must be evident to every one who has cause to have existed in the copy from which they were transcribed. Fortunately for Athenæus, the integrity of his work is in some measure preserved by an epitome of the whole, which has been transmitted to us without defacement. This abridgment, if it may be called so, is nearly as bulky as the original work. The age of it is uncertain. It is executed in a careless manner; and the copy which the writer had before him appears to have suffered so much from this accident, that he frequently breaks off in the middle of an extract, and declares his inability to decipher the remainder. From these sources our editions are derived; and it will easily be seen that, where the original copies are so few and so faulty, conjectural emendation will find ample scope to display its powers. —The best editions of Athenæus are those of Casaubon, Schweighaeuser, and Agassiz. The edition of Casaubon has different impressions, in the years 1597, 1612, and 1664, which do not differ considerably from each other. To these editions is annexed the Latin translation of James Dalechamp of Caen, which was first printed by itself in 1589. The Greek text is much more perfect and accurate than in the preceding editions; as in the long interval which had elapsed between the edition published at Basle and the first of Casaubon's, many new transcripts had been discovered, and much labour had been bestowed on Athenæus by some of the most celebrated scholars of that age. The most valuable part of the edition of Casaubon is his celebrated commentary which constitutes a folio of no considerable magnitude. The edition of Athenæus by Schweighaeuser was published at Strasbourg (Argentorati) in 1801-1807, and consists of 14 vols. 8vo. The text is in 5 vols., and the volume contains the commentaries and indexes. This commentary is made up of a large portion of the notes of Casaubon, together with others by Schweighaeuser himself. The greatest advantage which this editor enjoyed was the collation of the Venetian manuscript. This was performed by his son. The least commendable part of the work is the critical observations, in which Schweighaeuser's little acquaintance with Greek metre exposes him to many mistakes. The edition, however, is extremely valuable. Dindorf's edition is in 5 vols. 8vo. Lips., 1827. (Elmley, in Edinburgh Review, vol. 3, p 181, seqq.—II. A contemporary of Archimedes His native country is not known. He has left a trea-
ATHEISMS, a Platonicising father of the church, the author of an "Apology for Christians," and of a treatise "On the Resurrection of the Body." It appears from his writings that he was a native of Athens, and that he passed his youth among the philosophers of his time. He flourished towards the close of the second century. After he became a convert to Christianity, he still retained the name and habit of a philosopher, probably in expectation of gaining greater credit to the Christian doctrine among the unconverted heathen. In his Apology he judiciously explains the notions of the Stoics and the Cynics concerning God and divinities, and exposes with great accuracy and strength of reasoning their respective errors. He frequently supports his arguments by the authority of Plato, and discovers much partiality for his system. In what he advances concerning God, and the Logos or Divine Reason, he evidently mixes the dogmas of paganism with the doctrines of Christianity. His two works are contained in the editions of the Greek fathers by Ophærus (Würceb., 1777, vol. 2) and Gallaud (vol. 2, p. 218). There are also separate editions of each, and Latin, French, Italian, and English translations, to say nothing of numerous works illustrating his writings. (Consult Hoffmann, _Lex. Bibl._, vol. 1, p. 427, seqq.) —The romance of Theagenes and Charis is erroneously ascribed to him. This romance was the production of a Frenchman named _Martin Fumée_. It was published in 1599 and 1618, in French, and purported to be a translation from a Greek manuscript brought from Rome. No such manuscript now exists. (Fabric., _Bibl. Gr._, vol. 6, p. 800, seqq.)

**ATHELET, I.** a peripatetic philosopher, 108 B.C. —II. A painter, born at Maronea, and who flourished about 300 B.C. Pliny enumerates several of his productions, and adds, that, had he not died young, he would have stood at the head of his profession (38, 11).

**ATHENODORUS, I.** a philosopher, born at Cana, near Tarsus in Cilicia. He lived at Rome, in the reign of Augustus, and, on account of his learning, wisdom, and moderation, was highly esteemed by that emperor. His opinion and advice had great weight with the monarch, and are said to have led him into a milder plan of government than he had at first adopted. Athenodorus obtained, for the inhabitants of Tarsus, relief from a part of the burden of taxes which had been imposed upon them, and was on this account honoured with an annual festival. He was intrusted by Augustus with the education of the young Claudius; and, that he might the more successfully execute his charge, his illustrious pupil became for a while a resident at his house. This philosopher retired in his old age to Tarsus, where he died in his 82d year. (Fabric., _Bibl. Gr._, vol. 7, p. 391. — Zosim., 1, 6. — Suet., _Vit. Claud._, c. 4. — Enfield's _Hist. Phil._, vol. 2, p. 109.) —II. A stoic philosopher, a native of Pergamum according to some, but more correctly, of Tarsus. He was the son, from the year 307 B.C., of a celebrated stoic, and was intimate with Cato the younger (Uticensis). Cato made a voyage to Pergamum expressly to see him, and brought him back with him to Rome. He died at Cato's house. (Strabo, 673.) —III. An Arcadian stately, mentioned by Pliny (34, 8) as one of the pupils of Polycleitus, and as having made, with great success, the statues of some distinguished females. (Silius, _Dict. Art._, s. v.) —IV. A sculptor, who, in connexion with Agesander and Polydorus, made the celebrated Laocoön group. (Silius, _Dict. Art._, s. v.)

**ATHENODORUS.** _Vid._ Adherbal.

**ATHENS, a mountain in the district Oechalia of Macedonia. It is situated on a peninsula between the Sinus Strymonicus, or Gulf of Conessus, and the Sinus Singiticius, or Gulf of Monte Santo. It is so high that, according to Plutarch and Pliny, it projected its shadow at the summer solstice on the market-place of Myrina, the capital city of the island of Lemnos, though at the distance of 87 miles. On this account a brazen cow was erected at the termination of the shadow, with this inscription,

\[\text{Ἄθως καλύπτει πλευρά Ἀπώλιος βοῦς.}\]

Strabo reports that the inhabitants of the mountain saw the sun rise three hours before those who lived on the shore at its base. (Epit., 7, p. 331.) Pliny, however, greatly exaggerates, when he affirms that Athens extends into the sea for seventy-five miles, and that its base occupies a circumference of one hundred and fifty miles (4, 10). Strabo says the circumnavigation of the whole peninsula was four hundred stadia, or fifty miles. (Epit., 7, p. 331.) When Xerxes invaded Greece, he cut a canal through the peninsula of Athens, in order to avoid the danger of doubling the promontory, the fleet of Mardonius having previously sustained a severe loss in passing around it. This canal was made in the vicinity of the cities Acanthus and Sana. (Vid. Acanthus.)—The architect Dinocrates offered unto Alexander the Great to cut Mount Athos into a statue of the king, holding in its left hand a city, and in its right hand the rivers which flowed from the mountain. The monarch, however, declined the offer, on the ground of their heaving no fields around to furnish supplies, which would have to come entirely by sea. (Vitr., _Pref._, lib. 2.)

**ATIA LEX, a law enacted A.U.C. 690, by T. Atius Labienus, a tribune of the commons. It repealed the Cornelian law, and restored the Dominian, which gave the election of priests to the people, not to the colleges. (Dio Cass., 37, 37.)**

**ATILIA LEX, I.** gave the praetor and a majority of the tribunes power of appointing guardians to orphans and women. It was enacted A.U.C. 443.—II. Another, which ordained that sixteen military tribunes should be created by the people for four legions; that is, two thirds of the whole number. (Adams, _Rom. Ant._, s. v.)

**ATINA, I.** one of the most ancient cities of the Volsci. It was situate to the southeast of Arpinum, and near the source of the river Melis. If we are to credit Virgil (Æn., 7, 629), it was a considerable town as early as the Trojan war. We learn from Cicero (_pro Planc._), that Atina was in his time a prefectura, and one of the most populous and distinguished in Italy. Frontinus says it was colonized during the reign of Nero. The modern name is Atino. —II. A town of Lucania, not far from the Tanager. Several inscriptions (Fabri) have been found there; and it is said that it was an inconsiderable place. (Romanelli, vol. 1, p. 438.) The modern name is Atena. (Cramer's _Ancient Italy_, vol. 2, p. 378.)

**ATINIA LEX,** was enacted by the tribe Atinii, A.U.C. 623. It gave a tribune of the people the priv-
ATLANTIS.

The term Atlantis is a subject of many speculations and theories, as detailed in the text. The writer, discussing the possibility of Atlantis's existence, mentions the work of Plato in his dialogue "Critias," where he describes Atlantis as a vast, powerful, and wealthy island. The text explores various theories regarding Atlantis, both ancient and modern, indicating that the ancient writers Pliny, Herodotus, and Diodorus provided accounts that have been subject to much interpretation and debate.

The text suggests that Atlantis might have been located near the Canary Islands and the Azores, with some historians considering it to be connected with the land of Hyperborea. The author also notes that the island of Atlantis was likely connected to Europe, as evidenced by the political and cultural influences it might have had.

Modern attempts to locate Atlantis have involved various methods, including the use of maps and charts, as well as the examination of ancient texts. The text mentions that the first edition of Pliny's "Natural History," which contains the earliest known reference to Atlantis, was published during the 16th century. The text also notes that the work of Herodotus, who wrote about the ancient Greek account of Atlantis, is foundational to many of the early speculations.

The text concludes by noting that the search for Atlantis continues, with various theories suggesting that it may have been a physical place or a metaphorical concept. The author implies that the story of Atlantis is a testament to the power of human imagination and the enduring fascination with the unknown.
of mountains. (Lyell's Geology, vol. 4, p. 308, Lond.)

However, the evidence furnished us with such facts as these, it may be said, is too fragmentary in our possession to be made the subject of a mere poetic imagination, but must have had some foundation in truth. Nor will it appear surprising if some of the learned, in the ardour of theorizing, have actually constructed maps of the position of this island. Among the number of these we may mention De Lisle and Dureau de la Maîle, but more particularly Bory de St. Vincent, in his Essai sur les Îles Fort, et l'antique Atlantide (Paris, an xi., 4to). Carli also, in the second volume of his work, already referred to, gives maps representing what he terms flats and shallows (seches et bas fonds) between America and Africa, in the vicinity of the equator, and also in the neighbourhood of the Cape of Verd Islands. (Compare his remarks on this subject, vol. 2, p. 225, seqq.)

It has been thought by some, and very erroneously, that the account given in Diodorus Siculus may have reference to some island, now submerged, of the lost Atlantic group. This writer speaks of an island situated at a distance in the Atlantic Ocean, and remarkable for its beauty, to which the Carthaginians had resolved to transfer the seat of their republic in case of any irreparable disaster at home. Aristotle had already, before Diodorus, made mention of a similar island, the charms of which had attracted many of the Carthaginians to it, until the senate at home forbade any person from going to it under pain of death. (Arist., de Mirab., c. 85, ed. Beckman.) The reference here, however, is probably to one of the Canaries.—Before quitting this subject, it may not be amiss to give the description of Atlantis, as handed down to us by the ancient writers. Though a mere picture of the imagination, it will nevertheless serve to show the opinion entertained on this subject by the poetic minds of antiquity. According to this account, the island of Atlantis was one of the finest and most productive countries in the universe. It produced abundance of wine, grain, and the most exquisite fruits. Here were seen wide-spread forests, extensive pasture-grounds, mines of various metals, hot and mineral springs; in a word, whatever could contribute to the necessities or comforts of life. Here commerce flourished under a most excellent system of government. The island, divided into ten kingdoms, was governed by as many kings, all descended from a common line of kings. None of these kings were more than 100 years old, which is a very remarkable circumstance in this respect. They had an annual festival in honour of their joint deities, the most mighty gods in the whole world. He had a temple in this island, a stadium in length, and ornamented with gold, silver, oriel-cham, and ivory. Among various statues with which it was adorned, was seen that of the god himself, which was of gold, and so high that it touched the ceiling. He was represented as standing in a chariot, and holding the reins of his winged steed. Such were some of the bright visions of former days respecting the lost island of Atlantis. (Plato, Critica, p. 114, seqq.—Cicero, de Bip., vol. 10, p. 51, seqq.)

ATLAS.

ATLAS.

(Od., 1, 52.) In the Theogony of Hesiod (517, seqq.) he is said to support the heaven on his head and stand in the extreme West, a tenant of the giant Jupiter, in punishment, the later writers say, for his share in the Titan war. (Hygin., fab. 150.) Atlas was the father of the fair nymph Calypso, who so long detained Ulysses in her island in the distant West. Pleione, an ocean-nymph, bore him seven daughters named Pleiades. (Hes., Op. et D., 383.—Schol. ad ll., 18, 456.) He was also said to be the father of the Hyades. (Timeus, ap. Schol. ad ll., l. c.) It is hardly necessary to state, that the Atlas of Homer and Hesiod is not the personification of a mountain. In process of time, however, when the meaning of the earlier legend had become obscured or lost, Atlas, the keeper of the pillars that support the heaven, became a mountain of Libya. It is remarkable, however, that, in all the forms which the fable assumes, it is the god or man Atlas who is turned into or gives name to the mountain. Thus, according to one mythologist (Ovid, Met., 4, 631), Atlas was a king of the remotest West, rich in flocks and herds, and master of the trees that bore the golden apples. An ancient prophecy, delivered by Themis, had announced to him, that his precious trees would be plundered by a son of Jupiter. When, therefore, Perseus, on his return from slaying the Gorgon, arrived in the realms of Atlas, and, seeking hospitality, announced himself to be a son of the king of the gods, the western monarch, calling to mind the prophecy, attempted to repel him from his dominions. Perseus, inferior in strength, displayed the head of Medusa, and the insatiable prince was turned into the mountain which still bears his name. (Ovid, l. c.—Serv. ad Æn., 4, 246.) According to another account, Atlas was a man of Libya, devoted to astronomy, who, having ascended a lofty mountain to make his observations, fell from it into the sea, and both sea and mountain were named after him. (Tzetzs. ad Lycoph., v. 870.) His supporting the heavens was usually explained by making him an astronomer and the inventor of the sphere. (Diod. Sic., 3, 60.—Id., 4, 27.—Serv. ad Virg., Æn., 1, 741.)—There is also another curious legend relating to Atlas, which forms part of the fables connected with the adventures of Hercules. When this hero, in quest of the apples of the Hesperides, had come to the spot where Prometheus lay chained, moved by his entreaties, he shot the eagle that preyed upon his liver. Prometheus, out of gratitude, offered him of his own fruit, namely, the golden apples, but to send Atlas for them, and, in the mean time, to support the heaven in his stead. The hero did as desired, and Atlas, at his request, went and obtained three apples from the Hesperides; but he said he would take them himself to Eurytheus, and that Hercules might continue to support the sky. At the suggestion of Prometheus the hero feigned consent, but begged him to take hold of the heavens till he had thrown down the apples, and resumed his burden, and Hercules then picked them up and went his way. (Pherecydes, ap. Schol. ad Apoll. Rhod., 4, 1396.)—Various elucidations of the legend of Atlas have been given by modern exponents of mythology. The best is that of Völcker. This writer, taking into consideration the meaning of his name, in connexion with the position assigned him by Homer and Hesiod, and the various species that have been ascribed to him, viz., being the father of two of the constellations, regards Atlas as a personification of navigation, the conquest of the sea by human skill, trade, and mercantile profit. (Völcker, Myth. der Iap., p. 51.)

With this view Müller agrees. (Proleg. zu einer wissenschaft. Myth.—Kightley's Mythology, p. 287, seqq.)—II. A celebrated range of mountains in Africa. It is divided into two leading chains: The Greater Atlas runs through the kingdom of Morocco, as far south as the
desert of Sahara; the lesser Atlas extends from Morocco towards the northeast to the northern coast. The great height of Mount Atlas is proved by the perpetual snows which cover its summits in the east part of Morocco, under the latitude of 32°. According to Humboldt’s principles, these summits must be 12,000 feet above the level of the sea. Leo Africanus, who travelled here in the month of October, narrowly escaped being buried in an avalanche of snow. In the state of Algiers, the snow disappears on the tops of Jurjura and of Felizia in the month of May, just before the beginning of September. The Wanasheze, situated in 30° 55', and forming an intermediate chain between the maritime one and that of the interior, is covered with a mantle of snow nearly the whole of the year. The fertility of the region of Atlas is celebrated by Strabo and Pliny. The latter (15, 18) extols its figs, olives, corn, and valuable woods. (Id., 17, 12.—Id., 18, 7,—Id., 13, 18.) He observes, that the vines had a certain sharpness, which was corrected by adding to them a little plaster (Id., 14, 9), and says that the vineyards had a northern and western exposure. (Id., 17, 2.) Strabo informs us (369), that the vine-trunks were sometimes so thick that two men could scarce-\ly clasp them round, and that the clusters were a cubit in length. A horrible government and a total ab-\sence of civilization have not succeeded in annihilat-\ing the noble tastes of the inhabitants, and the olive-tree still export large quantities of grain. The olive-tree is superior here to that of Provence; and the Moors, notwithstanding the hostility to Bacchus, which marks their religion, cultivate seven varieties of the vine.

The soil of the plains in many places resembles that of the rest of Africa, being light and sandy, and contain-\ing numerous rocks: but the valleys of Mount Atlas, and those of the rivulets which descend from it to the Mediterranean, are covered with sparc
tile, and well-watered soil. Extensive forests cover the sides of the fertile mountains in the northern parts of these countries. All the valleys that have a modera-\te elevation form in April and May so many little Elysiums. “The shade, the coolness, the bright ver-\idue, the diversity of the flowers, and the mixture of agreeable odours, combine to charm the senses of the beholder, particularly when scenes, might forget his na\\tive country, were he not shocked at the sight before him by the barbarity of the inhabitants.” A question has arisen in modern times, whether the chain of mountains here described was really the Atlas of the ancients! This is denied by Ideler, who maintains that the Atlas of Homer and Hesiod is the Peak of Tenerife. The Atlas of the Greek and Roman geographers he allows, on the other hand, to be the modern Mount Atlas. His arguments are given by Humboldt (Tableaux de la Nature, vol. 1, p. 144, seqq.), but are more genious than satisfactory. The Atlas of Herodotus might be a promontory of the southern chain, rising from the plains of the desert, such as Mount Saluban, in Biledulgerid, appears to be. It agrees with the distances assigned by this historian. It is, besides, possi-\ble, that all the contradictions mentioned by Ideler may owe their origin to that optical illusion by which a chain of mountains, seen at a distance, gives the appear-
ance of a narrow peak. “When at sea,” says Hum-\boldt, “I have often mistaken long chains for isolated mountains.” This explanation might be still further simplified, if it were admitted that the name of Atlas belonged originally to a promontory remarkable for form and its peculiar isolated situation, such as most of those on the coast of Morocco. A curious passage in Masson seems to concur with this hypoth-
\esis: “The Ethopian Hesperians,” says he (Des-\38 —p. 457, seqq., ed. Oxyrn.), “worship Mount At-
\las, who is both their temple and their idol. The Atlas is a mountain of moderate elevation, concave, and open towards the sea in the form of an amphite-atre. Half way from the mountain a great valley ex-\tends which is remarkably fertile, and adorned with richly-laden fruit-trees. The eye plunges into this valley as into a deep well, but the precipice is too steep for any person to venture to descend, and the descent is prohibited by feelings of religious awe. The most wonderful thing is to see the waves of the ocean at high water overspreading the adjacent plains, but stopping short before Mount Atlas, and standing up like a wall, without penetrating into the hollow of the valley, though not restrained by any earthly bar-\rier. Nothing but the air and the sacred thicket pre\\vent the water from reaching the mountain. Such is the temple and the god of the Libyans; such is the object of their worship and the witness of their oaths.” In the physical delineations contained in this account, we perceive some features of resemblance to the coast between Cape Tafelzue and Cape Geer, which re-
\sembles an amphitheatre crowned with the highest of detached rocks. In the moral description we find traces of fetishism; rocks remarkable for their shape being still worshipped by some negro tribes. (Male Brum, Geogr., vol. 4, p. 155, seqq.)—Before closing this ar-\ticle it may not be amiss to remark, that, according to Pliny, the ancient Mauritanians called Atlas Dyris. The chain of Atlas, at the present day, bears among the Arabs the name of Darah or Duran, the close ap-
proximation of which to the ancient name is consider-\able. Horn, on the contrary, however, rec-
\ognises the term Dyris in Aya-Dirma, the Guanche name for the Peak of Tenerife. (Hornius de Origin-\ibus Americanorum, p. 185.—Humboldt, Tabl. de Nat., vol. 1, p. 151.)

Atossa, a daughter of Cyrus the Great. She mar-\ried her own brother Cambyses, the first instance of the kind that occurred among the Persians, according to Herodotus. According to Herodotus, she was the wife of the false Smerdis, and sub-
sequently of Darius Hystaspis. (Herod., 3, 88.) She possessed great influence over the last of these, in con-
sequence of her royal birth, and her son Xerxes suc-
ceeded him on the throne. She was cured of a can-
cer in the breast by the Greek physician Demodeces; and this individual, through a desire of returning to his native land, induced Atossa, it is said, to urge Da-
\rius to take her to Greece. (Herod., 3, 133, seqq.)—
According to Creuzer, the name Atossa is in Persi-
\an Atesh. There was also a city called Atusia in As-
\\\nyria, on the river Caprus, whose coins displayed a female head, crowned with turrets, and also the in-
\scription ATOYEIEWN. (Creuzer, ad Herod., 3, 68.

—Götting: Anzeig., 1811, nr. 78.)

Atraces, the people of Atrax, an ancient coto-ny of the Perioby in Thessaly, ten miles from Larissa, higher up the Penus, and on the right bank of that river. It was successfully defended by the Macedoni-
\ans against T. Flamininus. (Liv., 32, 15.—Strabo, 438 and 441.) Dr. Clark was led to imagine, that this city stood at Ampelakia, from the circumstance of the green marble, known to the ancients by the name of Atracium Marmor, being found there; but this supposition is erroneous, since it is evident from Livy that Atrax was to the north of the river, and only ten miles from Larissa; whereas Ampelakia is close to Tempe, and distant more than fifteen miles from Larissa. (Cramer’s Ancient Greece, vol. 1, p. 386, seqq.)

Atrax, I. a son of Ætolus, or, according to others, of the river Peneus. He was king of Thessaly, and built a town which he called Atrax. Hence the ei-
\pithet Atracium is sometimes employed with the same mean-
\ing of Thessalus or “Thessalian.” (Propert., 1, 8, 25.) Atrax was father to Hippodamia, who married Pirithoos, and whom we must not confound

229
with the wife of Pelops, who bore the same name. (Stat., Théb., 1, 106.—Ovid, Met., 12, 209.)—II. An ancient city of Thessaly. (Vid. Atraces.)—III. A river of Attolia, running through the country of the Locri Ozolae, and falling into the Sinus Corinthiacus, to the west of Naupactus. (Plin., 4, 2.)

Atreus, a son of Boreas, reigned over the southern-east of the Morini. They were a powerful community, and promised 15,000 men as their quota for the Nervian war against Julius Cæsar. (B. G., 2, 4.)

After their reduction by the Roman commander, Commius, one of their own nation, and friendly to Cæsar, was placed over them as king. Their capital was Netemacta, afterward Atrebates, and now Arras, or, as the Flemings call it, Atricht. Stibaro writes the name of this place to be Axentium, and Ptolemy Ἀτρέχατος. (Plin., 4, 17.—Ptol., 2, 9.)

ATREBATI, a people of Britain, situate on both banks of the Tamessis or Thames, and occupying the larger part of Oxfordshire, Buckinghamshire, a part of Middlesex, and the southern part of Berkshire. Their chief city was Caleva, now Silchester. (Man- nert, Geog., vol. 2, pt. 2, p. 193.)

Atreus, son of Pelops and Hippodamia, and king of Mykonia, was slaying his a half-brother Thyestes, killed out of jealousy his half-brother Clytemnestra, they were both banished by their father, who at the same time pronounced a curse on them, that they and their posterity should perish by means of one another. They retired to Midea, whence, on the death of Pelops, Atreus came with an army and took possession of his father's throne. (Hellenicus, ap. Schol. ad III., 2, 105.)

Thyestes, it is said, afterward seduced Aërope, the wife of Atreus, who, for this offence, drove him from his kingdom; and Thyestes, out of revenge, sent Atreus' son Plisthenes, whom he had brought up as his own, to murder his father. Atreus, taking the youth to be the son of Thyestes, put him to death, and the curse of Pelops began thus to be accomplished. (Hygin., fab. 56.) Others, however, make Plisthenes to have died a natural death, and on friendly terms with his father, and Atreus to have married his widow Aërope. (Vid. Aërope.—Another legend thus accounts for the enmity between the two brothers: they were both banished, in order to avenge his son Myrillus, whom Pelops had murdered, put a gold-flecked lamb into the flocks of Atreus, between whom and Thyestes, according to this version of the story, the kingdom was disputed. Atreus, in order to prove that the kingdom by right was his, said he would produce a gold-flecked lamb. Thyestes, however, having corrupted Atreus' wife Aërope, had got the lamb; and, when Atreus could not exhibit it as he promised, the people, thinking he had deceived them, deprived him of his kingdom. Some time after, however, Atreus returned, and said that, to prove his right, he would let them see the sun and Pleiades moving from west to east. This miracle Jove performed in his favour, and he thus obtained the kingdom, and drove Thyestes into exile. (Schol. ad Eurip., Orest., 802, 995.—Compare the somewhat different account of this subject in Grill., Græc. vol. 1, p. 77.)—Another legend continues the tale in a more horrible and tragic form. Atreus, it is said, invited his brother to return, promising to bury all enmity in oblivion. Thyestes accepted the proffered reconciliation; a feast was made to celebrate it; but the revengeful Atreus killed the two sons of Thyestes, and served the flesh up to their father; and, while Thyestes was eating, he caused the heads and hands of his children to be brought forward to him. The sun, it is said, at the sight of this horrible deed, checked his chariots in the midst of his course. (Schol. ad Eurip., Orest., 802.—Hygin., fab., 88, et 255.—Sene., Thycyst.) Thyestes fled to Thespries, whence he went to Sicy- on, where his daughter Pelpus dwelt. He arrived on the very night in which she was to offer a sacrifice to Minerva, met her in the dark, and forcibly embraced her, without knowing who she was. In the struggle she drew his sword from the sheath, and, taking it back with her, concealed it in Minerva's temple. Meantime famine and plague had come to punish the crime of Atreus; and the oracle had declared that, to remove it, Atreus should bring back his command. Thespries sent messengers to him, saw Pelopis by the way, and, supposing her to be the daughter of the King of Sicmyon, demanded her in marriage. He obtained her hand. She, however, was already pregnant by her father, and, shortly after her marriage, brought forth a son, whom Atreus caused to be exposed; but the herdsman, taking pity on him, reared him on the dung of a she-goat (ἀλς, ἀλῦς), whence he derived his name, Agis- thus. Atreus, hearing he was alive, had him sought for, and brought him up as his own son. Atreus afterward sent Agamemnon and Menelaus in search of Thyestes. They went to Delphi, where they met him, he having also come to consult the god on the nature of the vengeance which he should seek to take on his brother. They seized and brought him to Atreus, who cast him into prison. Atreus then called Agisthus, and directed him to put the captive to death. Agisthus went to prison, and, drawing the sword which he had not given him; and the moment Thyestes beheld it, he knew it to be the one which he had lost, and asked the youth how he had come by it. He replied that it was the gift of his mother. At the desire of Thyestes, Pelopis came, and the whole deed of darkness was brought to light. The unfortunate daughter of Thyestes, under pretence of examining the sword, plunged it into her bosom. Agisthus drew it forth reeking with blood, and brought it to Atreus as a proof of having obeyed his command. Rejoiced at the death, as he thought, of his brother, Atreus offered a sacrifice of thanksgiving on the seashore; but, while he was engaged in it, he was attacked and slain by Thyestes and Agisthus. (Hygin., l. c.)—This is the most horrible legend in the Grecian mythology. It is evidently post-Homeric, since it is utterly irreconcilable with the account of the Pélopidae, as given in the Homeric poems. Of Agamemnon's sceptre it is there said, "that of his own hands he took it, and gave it to Jupiter, who gave it to Mercury, by whom it was presented to 'horse-lashing' Pelops, who gave it to Atreus, the shepherd of the people, who, when dying, left it to 'lamb-abounding' Thyestes, who left it to Agamemnon." (Hom., I., 2, 101, seqq.) Here we have a family of princes legitimately transmitting the sceptre from one to another, a state of things totally at variance with the atrocities that have been related. It was probably at the time when the Greeks had become familiar with Asia and the barbarous regions round the Euxine, that the nameless deeds of the line of Pelops were invented. The author of the Alemnois, whoever he was, is said to have related the story of the gold-flecked lamb. (Schol. ad Eurip., Orest., 995.) We know not who first told the horrid banquet, but we find it frequently alluded to by Ἐκείθυλος (Agam., 1104, 1228, seqq. ; id., p. 1934, seqq. ; Chrys., 1068), though he does not appear to have made the deeds of Atreus and Thyestes the subject of a drama. Sopho- cles wrote two Thyestes, and Euripides one; and we have probably their contents in the legends transmitted to us by Hyginus. (Keightley's Mythology, p. 447, seqq.)

ATRIDE, a patronymic given by Homer to Aga- memnon and Menelaus, who were brought up by their grandfather Atreus, as if they had been his own sons, the term Atrides meaning "sons of Atreus." (Con- suit remarks at the commencement of the article Agamemnon.)

ATROPATIA or ATROPATENÉ, a name given to the northwestern part of Media, between Mount Taurus and the Caspian Sea. It received this name from
Atropates, a satrap of this province, who, after the death of Artaxerxes, rendered himself independent, and took the title of king, which his successors enjoyed for many ages. It was a cold, barren, and inhospitable country, and on that account allotted by Shalmanezar for the residence of many captive Israelites, after the conquest of their kingdom. It is now called Aderbian, from the Persian term Ader, signifying fire; according to the tradition that Zerdust of Zoroaster lighted a pyre, or temple of fire, in a cave near this city, in the native country. Its metropolis was Gaza, now Tebirz, or, as it is more commonly pronounced, Tauris. (Strab, 360.—Plin., 6, 13.)

Atrōs, one of the Parce, daughter of Nox and Erebus. According to the derivation of her name (a, priv., and ἄρος, "to turn" or "change"), she is inexorable and inflexible, and her duty among the three sisters is to cut the thread of life without any regard to sex, age, or condition. (Vid. Parce.)

Attā, Titus Quintius, a Roman comic writer, who died A.U.C. 633, B.C. 121. His productions appear to have been extremely popular in the time of Horace, through, as would seem from the language of the latter, not very deserving of it. (Hor., Ep., 2, 1, 79.) He received the surname of Attis from a lameness in his feet, which gave him the appearance of a peripatetic musician. Thus Persius remarks: "Attis appellepse qui, proprius vultus aut perum, plantis insistit et attingunt magis terram quam ambulat." It is to this personal deformity that Horace (l. c.) pleasantly alludes, when he supposes the plays of Attis to limp over the stage like their lame author. Bothe's assertion, that Attis also composed tragedies, is contradicted by Schmid. (Ad Hor., l. c.—Compare Cunitz, Fuß, Lat., c. 33.—Bähr, Gesch. Rom., Gesch. Lat. Ant., l. p. 111.)

Attalēs, I, a city of Pamphylia, southwest of Perga, built by King Attalus II. The city of this name is called Palaia Attalēs, while his Distinguished place among the sovereigns of antiquity. He formed, at an early period, an alliance with the Romans, whom he vigorously assisted in their two wars against Philip of Macedon. In conjunction with the Athenians, he invaded Macedonia, and recalled Philip from his enterprise undertaken against Athens; on which account the Athenians gave his name to one of their tribes. He invaded Asia Minor, and became proprietor of Phrygia. (Hor., Od., 1, 12.) He had married Apollonia, a lady of Cyzicus, of obscure birth, but great merit and virtue: by her he had four sons, Eumenes, Attalus, Philetæus, and Atheneus. He died at an advanced age, after a prosperous reign of 43 or 44 years, and was succeeded by Eumenes. (Polyb., 18, 24.—Liv., 33, 21.—Strab., 624.)—II. The 2d of the name succeeded his brother Eumenes II. B. C. 159. Before ascending the throne he had twice been sent to Rome, to solicit aid against Antiochus the Great and against the Greeks. When he commenced his reign, he found two adversaries in Prusias of Bithynia and Demetrius Soter, who meditated the conquest of his kingdom; and the Romans appeared little disposed to aid him. Prusias at first gained some advantages over him, but Attalus eventually, by actually the desert, freed himself from his foes. The friendship of the Romans, subsequently conciliated by him, placed him in security for the time to come, and he devoted the period of repos success afforded him to the building of cities, and the munificent patronage of learning. He died at the age of 82, after a reign of 21 years, having been poisoned by his nephew, the son of Eumenes II. Attalus was succeeded by his son, named Seleucus, for whose great love he displayed towards his brother Eumenes during the lifetime of the latter. (Liv., 35, 23.—Id., 37, 43.—Id., 38, 12.—Justin, 23, 1)—III. The third of the name was son of Eumenes II., and succeeded to the throne after poisoning his uncle Attalus II. He made himself extremely odious by the destruction of many of his relations and friends. Repenting soon after of his cruelties, he assumed all the habiliments of sorrow; and subsequently, giving up the cares of government to others, he turned his attention to gardening. In full accordance, however, with his natural disposition, he bestowed particular attention upon the cultivation of noxious and poisonous plants, which he intermingled with the fruits and flowers that he sent as presents to his friends. He afterward turned his attention to the melting and working of metals. Attalus died after a reign of five years, about 80 B.C., when the Romans, on hearing the erection of a tomb for his mother, his affection for whom had procured him the surname of Philometor. He died without issue, and his will is said to have contained the following words: "Populus Romani bonorum meorum hares esto." The Romans regarded this as conveying to them the entire kingdom, and accordingly made it a province of their empire. Considering all the circumstances of the case, and especially the respect with which the Romans put upon the words in question was far enough. Mithradates, however, in his letter to Arsaces (Sall., Hist. fragm., p. 409, ed. Burnouf), regards it as a forced and fraudulent interpretation. (Justin, 36, 4.—Vell. Patern., 2, 4.—Liv., Ep. et Suppl., 58.)

Attis, a daughter of Cragus the successor of Cecrops. She was fabled to have received this name to the country of Phæacia, (Pind., Bk. 3, 14, 5.)

Atticēs, a country of Greece, without the Peloponnesus, forming a kind of triangular peninsula, and bounded on the north by Boeotia and the Euripus; on the west by Megara; on the south by the Sinus Saronicus; and on the east by part of the Ægean Sea; extending from northwest to southeast about eighty miles, with decreasing breadth, but at an average of about forty miles. According to the popular account, the country of Attica, (Pind., Bk. 3, 6, 4.)

Atticēs, a country of Greece, without the Peloponnesus, forming a kind of triangular peninsula, and bounded on the north by Boeotia and the Euripus; on the west by Megara; on the south by the Sinus Saronicus; and on the east by part of the Ægean Sea; extending from northwest to southeast about eighty miles, with decreasing breadth, but at an average of about forty miles. According to the popular account, the country of Attica, (Pind., Bk. 3, 6, 4.)

Atticēs, a country of Greece, without the Peloponnesus, forming a kind of triangular peninsula, and bounded on the north by Boeotia and the Euripus; on the west by Megara; on the south by the Sinus Saronicus; and on the east by part of the Ægean Sea; extending from northwest to southeast about eighty miles, with decreasing breadth, but at an average of about forty miles. According to the popular account, the country of Attica, (Pind., Bk. 3, 6, 4.)

The situation of Attica marked it out in an eminent degree for a commercial country. The base, or northern side of the irregular triangle which it forms, is applied to the continent of Greece; with its eastern face it looks towards Asia; from its apex on the south, it contemplates Egypt; and on the west it directs its view to the Peloponnesus, and to the countries of Italy and Sicily lying beyond it. By this combination of the advantages of inland communication with those of an extensive and various intercourse with all the civilized countries of the world, it was distinguished from all the other states both of the peninsula and continent of Greece. As Greece was
ATTICA.

the centre of the civilized world of antiquity, so was Attica the centre of Greece; and as the climate and temperature of Hellas was considered to be more favourable than that of any other country of Europe or Asia, and as men were devoted to the physical and intellectual faculties of man, so did every Hellenic province yield in these respects to the superior claims of the Athenian territory. Again: it was not merely aided by these natural advantages, which arose from its form, its position, and its climate; the very defects also under which this country laboured, the very difficulties with which it was compelled to struggle, supplied to Attica the inducements, and afforded by very means, for evoking itself in the most effectual manner of those benefits and privileges with which nature had so liberally endowed it. One of these apparent deficiencies was the barrenness of its soil. The geological formation of Attica is primitive limestone: on its northern frontier a long ridge of mountains, consisting of such a stratification, stretches from east to west: a range of similar character bounds it on the west, and in the interior of the country it is intersected with hills from north to south, which belong to the same range. The absence of all extensive rivers, that the geographical dimensions of Attica, limited as they are, must be reduced by us within a still narrower range, when we consider it as far as it is available for the purposes of cultivation. In this respect, its superficial extent cannot be rated at more than one half the value which has been assigned to the whole country. The mountains of which we have spoken are either bare or rugged, or only clad with scanty vegetation and low herbs. The mountain pine is found on the slopes of Laurium; the steeps of Parnes and Pentelicus are sprinkled over with the dwarf oak, the lentisk, the arbutus, and the bay. But the hills of this country can boast few timber trees; they serve to afford pasture to numerous flocks of sheep and goats, which browse upon their meager herbage and climb among their steep rocks, and to furnish fuel to the inhabitants of the plain. While such is the character of the mountainous districts of the province, its plains and lowlands cannot lay a much better claim to the merit of fertility. In many parts of them, as in the city of Athens itself, the calcareous rock projects above the surface, or is scarcely concealed beneath a light covering of soil: in no instance do they possess any considerable deposit of alluvial earth. The plains of this country are irrigated by few streams, which are rather to be called torrents than rivers, and on none of them can it depend for a perennial supply of water. There is no lake within its limits. It is unnecessary to suggest the reason, where such was the nature of the soil, that the olive was the most common, and also the most valuable, production of Attica. Such then were some of the physical defects of the land. But these disadvantages were abundantly compensated by the beneficial effects which they produced. In Attica, its inhabitants derived its benefits from their own country. It carried its own produce. It filled them with a spirit of activity, which loved to grapple with danger and difficulty: it told them, that, if they would maintain themselves in the dignity which became them, they must regard the resources of their own land as nothing, and those of other countries as their own. It arose also from the barrenness of her soil, that Attica had always been exempt from the most of those civil disturbances which娘家 countries of Greece; and hence Attica, secure in her sterility, boasted that her land had never been inundated by tides of immigration. The race of her inhabitants had always been the same; nor could she tell whence they had sprung; no foreign land had sent them; they had not forced their way within her confines by a violent irruption. She traced the stream of her population in a backward course, through many generations, till at last it hid itself, like one of her own brooks, in the recesses of her own soil. This belief that her people was indigenous, she expressed in different ways. She intimated it in the figure which she assigned to Cecrops, the hero primitive genitor of her primeval inhabitants. She represented him as combining in his person a double character; while the higher parts of his body were those of a man and a king, the serpentine folds in which it was terminated declared his extraction from the earth. The cascade of gold, which she braided in the twining of her hair, were intended to denote the same thing; they signified that the natives of Attica sprang from the soil itself in which they had received the eights was believed to feed them with its dew. (Wordsworth's Greece, p. 69, seq.)—The total population of Attica, in B.C. 317, may be taken at 527,600. Of these the free inhabitants amounted to 90,000; the resident aliens to 45,000; while the slaves made up the residue. Of the free inhabitants of Attica, the citizens, or those who had votes in the public assembly, amounted to 21,000. About 127 years before they had been 19,000, until Pericles reduced their number. Two thousand men were enrolled as the number in the earliest times, under Cecrops. (Schol. ad Pind., Ol., 9, 68.) The slaves of Attica, at the census made B.C. 309, when Demetrius was archon eponymus, were 400,000. Hume, in his Essay on the Populousness of Ancient Nations (Essays, vol. 1, p. 443), thinks, that there is error or corruption in this high number, and that for 400,000 we ought to read 40,000 (namely, ταπακανειος, instead of τρεκανα- κειρανοειος). But he forgets, that in this enumeration of 400,000 we are not to take the slaves as all males of full age. Slaves were property, and therefore, in enumerating them, it would be necessary to compute all the individuals who composed that property. The 400,000 therefore express all the slaves, of either sex and of every age, and in this number the men of full age would be less than 100,000. (Clinton, Fast. Hell., vol. 1, p. 397, seq.)—Some remarks on the ancient kings of Attica will be found under the article Cecrops, and on the coinage and commerce of the Athenians, under Mina and Piraeus.

Atticus, I. Titus Pomponius, a Roman knight, who, in the most agitated times, preserved the esteem of all parties. The Pompeian family, from which he originated, was one of the most distinguished of those of equestrian rank, and pretended to derive its origin from Numa Pompilius. Atticus lived in the latter part of the period of the republic, and acquired great celebrity from the splendour of his private character. He inherited from his father, and from his uncle Q. Caecilius, great wealth. When he attained maturity, the republic was disturbed by the factions of Cinna and Sylla. His brother Sulpicius, the tribune of the commons, being killed, he thought himself not safe in Rome; for which reason he removed with his fortune to Athens, where he devoted himself to letters, and resided there for a considerable time, that he gained the affection of the people in the highest degree. He acquired so thorough a knowledge of Greek, that he could not be distinguished from a native Athenian, and hence the surname of Atticus bestowed upon him. When Rome had acquired some degree of quiet, he returned, and inherited from his uncle ten millions of sesterces. His sister married the brother of Cicero. With this enormous fortune he went to Athens, and lived on terms of intimate friendship. It was his principle never to mix in politics, and he lived undisturbed amid all the successive factions which reigned in Rome. Caesar treated him with the greatest regard, though he was known as a friend of Pompey's. After the death of Caesar he lived in friendship with Brutus, without, however, offending Antony. When Brutus was obliged to flee from Italy, he sent him a million
ATTICUS.

of sestertes; and likewise supported Fulvia, the wife of Antony, after the battle of Mutina, and therefore was spared when fortune again smiled on Antony, and the friends of Brutus generally were the victims of his vengeance. Even in the bad times of the triumvirate, he caused all the proscribed who fled to Epirus to be liberally relieved from his estates in that country, and by his interest recovered the forfeited property of several of them. Such was his credit with Octavius, that his daughter was preferred to all the great matches of Rome as a wife for his friend Agrippa. Octavius himself cultivated the closest intimacy with Atticus, who, at the same time, maintained an equally intimate correspondence with Antony. The mode of living pursued by Atticus was that of a man of great fortune, whose mind was devotedly attached to literary and philosophical pursuits. His domestics were serviceable in the common offices, as well educated; his table was elegant, but not costly; and he delighted in what would now be called literary supperings, where an anagnostes always read something aloud, in order that the guests might enjoy a mental as well as physical banquet. He was extremely studious, much attached to inquiries relative to the antiquities of his country, its laws, customs, and treaties, and wrote several works on these subjects, which appear to have been much valued by his contemporaries. The conclusion of his life was conformable to the principles of Epicurean philosophy, by which it had been all along governed. Having reached the age of seventy-seven with little assistance from medicine, he was seized with a disorder in the intestines, which terminated in an ulcer deemed incurable. Convinced of the nature of his case, he ordered his son-in-law Agrippa, and other friends, to be sent for, and declared to them his intention of terminating his days. On the third day of his disorder, in spite of their affectionate entreaties, he had persisted in this resolution for two days, some of the unfavourable symptoms of his complaint abated; but, not thinking it worth while to take the chance of a cure, he persevered, and the fifth day closed his existence. B.C. 33.—In modern times the character of Atticus has been the subject of much curious discussion, and his neutrality in the midst of civil contentions has given some politicians, who have been termed selfish and criminal. From the fearlessness and generosity which he exhibited to the unfortunate on all sides, it may, however, be presumed that, looking on the state of the commonwealth without passion, he was convinced of the inutility of attempting to stop an inevitable career. Certain it is, that as a medium of friendship, a reconciler of differences, and a protector against the ferocity of party hatred, he was eminently serviceable in the calamities in which he lived; and possibly, with his cast of temper and talents, could scarcely have acted more beneficently for his country as well as for himself. His line of conduct has been attributed to his Epicurean philosophy; but native disposition and temper must have formed his peculiar character much more than speculative principles. The correspondence between Cicero and Atticus is highly honourable to both parties, especially as the latter was also intimate with his rival Hortensius, and a mediator was between them. According to Cicero, Atticus wrote annals of great value, comprising a sort of universal history for 700 years. (Corn. Nep. in Vit.—Aikin's Gen. Dict., s. v.—Gorton's Biog. Dict., vol. 1, p. 134, sqq.—Encyclop. Americ., vol. 1, p. 457.) II. Herodes, or Tiberius Claudius Atticus Herodes, an Athenian philosopher and statesman of the age of the Antonines. His father, Julius Atticus, descended from the family of the rich Hercules, and became a founder of wealth by the discovery of a hidden treasure. Herodes received an education suitable to the condition to which his father had been advanced by this fortunate accession to his property. Scholastic rhetoric, or the art of declamation, then esteemed a most fashionable accomplishment, became his principal study; and he prosecuted it under the first masters of the age with such success as to acquire great reputation as an orator. After travelling abroad, he settled at Athens, and gave public lectures on eloquence, which were attended by sophists and rhetoricians, whose admiration of his talent was, perhaps, not altogether disinterested, as his humanity and munificence were largely extended to his fellows. The fame of Herodes reached from Athens to Rome, and he was invited by the Emperor Antoninus Pius to become rhetorical tutor to Marcus Aurelius and Lucius Verus, the adopted sons and destined successors of Antoninus. This promotion led to his being created consul A.D. 143. He was also made prefect of the free cities of Asia Minor, and president of the Panhellenic and Panathenean games, at which he was crowned. He testified his sense of this honour by building a marble stadium; or course for running matches, one of the grandest works ever executed by a private individual. He also erected a new theatre at Athens, and repaired and embellished the Odeon of Péricles. These and other splendid monuments of his wealth and liberality have perpetuated his name, while his literary productions have perished. The latter part of the life of Herodes was embittered by the ingratitude of his fellow-citizens, who preferred a courtier to a philosopher. His life was passed from his pupil Marcus Aurelius, then emperor. He passed his latter days at Marathon, his birthplace, where he died about A.D. 185, aged seventy-five. His remains were interred at Athens with public honours. (Gorton's Biogr. Dict., vol. 1, p. 134.) ATTILLA (in German, Etzel), the son of Mundzuck, or, as he less correctly called, Mandrag, a Hun of royal descent, was the bastard of Hugh the Huns (A.D. 433), and shared the supreme authority with his brother Bleda. These two leaders of the barbarians, who had settled in Scythia and Hungary, threatened the Eastern empire, and twice compelled the weak Theodosius II. to purchase an inglorious peace. Their power was feared by all the nations of Europe and Asia. The Huns themselves esteemed Attila their bravest warrior and most skilful general. Their regard for him is shown by the respect in which they held his gait. He gave out that he had found the sword of their tutelar god, the Scythian Mars, the possession of which was supposed to convey a title to the whole earth; and, proud of this weapon, which added dignity to his power, he designed to extend his rule over the world. He caused his brother Bleda to be murdered (A.D. 444), and, when he announced that it was done by the command of God, this murder was celebrated like a victory. Being such noble master of a warlike people, his unbounded ambition made him the terror of all nations; and he became, as he called himself, the Scourge of God for the chastisement of the human race. In a short time he extended his dominion over all the people of Germany and Scythia, and the Eastern and Western emperors paid him tribute. The Vandals, the Ostrogoths, the Gepida, and a part of the Franks, united under his banner. Scarcely were his steps arrived in 700,000 men — His portrait, as given by Jornandes, was that of a modern Cæsar, with a large head, swarthy complexion, flat nose, small sunken eyes, and a short, square body. His looks were fierce, his gait proud, and his deportment stern and haughty; yet he was merciful to a suppliant foe, and ruled his own people with justice and lenity. —When he had heard a rumour of a new power, who was directing his march thither. He was defeated on the plains of Armenia, and fell back to satisfy his desire of plunder in the dominions of the emperor of the East. He easily found a pretext for war: he therefore went over to Illyricum, and laid waste all the countries from the Exudine to the Adriatic.
A T T

The Emperor Theodosius collected an army to oppose his progress; but in three bloody battles fortune declared herself for the barbarians, and Constantinople was indebted to the strength of its walls, and to the ignorance of the enemy in the art of besieging, for its preservation. Thrace, Macedonia, and Greece were all submitted to the savage invader, who destroyed seventy flourishing cities. Theodosius was at the mercy of the victor, and was compelled to purchase a peace. A scheme was laid in the court of Theodosius to assassinate him under the cover of a solemn embassy, which intention he discovered; and, without violating the laws of hospitality in the persons of the ambassadors themselves, he ordered their armed retainers to become an integral part of the imperial patrimony. Being of course refused, he affected to be satisfied, and pretended he was only about to enter Gaul to make war upon Theodicus, king of the Ostrogoths. He accordingly crossed the Rhine, A.D. 450, with a prodigious host, and marked his way through Gaul with pillage and desolation, until completely defeated by Theodicus and the famous Attius, in the bloody battle of Chalons. He was, however, allowed to retreat, and when he recruited his forces, he passed the Alps the next year and invaded Italy, spreading his ravages over all Lombardy. This visitation was the origin of the famous republic of Venice, which was founded by the fugitives who fled at the terror of his name. Venetian, unable to avert the storm, repaired from Ravenna to Rome, whence he sent the prelate Leo with a solemn deputation, to avert the wrath of Attius, who consented to quit Italy on receiving a vast sum as the dowry of Honoria, and an annual tribute. He did not much longer survive these transactions; and his death was singular, he being found dead, in consequence of suffocation from a broken blood-vessel, on the night of his marriage with a beautiful young virgin named Ildegund. This event took place in 453. The news of his death spread sorrow and terror in the army. His body was enclosed in three coffins: the first was of gold, the second of silver, and the third of iron. The first, which was kept in the palace, was strangled, in order that the place of interment might be kept concealed from his foes. (Menzel, Gesch. der Deutschen, p. 93, seqq.—Gerton’s Biogr. Dict., vol. 1, p. 135.—Encyclop. Americ., vol. 1, p. 457, seqq.)

ATTILIUS, I. one of the first three military tribunes with consular power, chosen by the people, B.C. 444, in place of the regular consuls. (Liv., 4, 7.—II. Reg. 2.)—III. Consul B.C. 256, in which year he took the city of Mytilaeus, in Sicily. Chosen consul again B.C. 256, he captured Panormus and many cities in Sicily. B.C. 249 he was appointed dictator.—IV. A Roman poet, who translated into Latin verse the Electra of Sophocles. From the allusion made to him by Cicero, he appears to have been a very harsh and rugged writer. (Cic., de Fin., 1, 2.—Ep. ad Att., 14, 20.—Cic.) A freedman, who (A.D. 16) had a heavy fine imposed on him for having so wickedly and badly constructed that it broke down, and killed or wounded 50,000 persons. In consequence of this he was banished, and a law was made prohibiting any individual from exhibiting games who was not possessed of a fortune of 400,000 sexterces, and thus enabled to erect a secure edifice. It was ordained also that buildings intended for such purposes should be erected on a firm foundation. (Tac., Ann., 4, 63.)

ATTIUS, I. (or Accius, as he is sometimes, but improperly, called), a Roman tragic writer, born A.U.C. 564. His style was harsh; but he was notwithstanding, held in high estimation by his countrymen for the force and eloquence of his productions. Horace, in the same line where he celebrates the dramatic skill of Pacuvius, alludes to the loftiness of Attius (Epist., 2, 1, 56), by which is meant sublimity both of sentiment and expression. Most of the plays of Attius were taken from the Greek tragedies; two of them, however, the Brutus and the Dercus, hinged on Roman objects, and were written in compliment to the family of his patron Decius Brutus. (Dunlop’s Roman Literature, vol. 1, p. 350, seqq.—Bähr, Gesch. Röm. Lit., vol. 1, p. 79, seq.)—II. Tullius, the general of the Volsci, to whom Coriolanus fled when banished from Rome. (Vid. Coriolanus.)

ATTUS NAVIUS, a Roman augur, of whom a marvellous story is related. Tarquinius Priscus, after his victory in the Sabine war, which was owing to his having doubled the number of his cavalry, wished to double the number of the equestrian centuries, and to name the three new ones after himself and his friends. His design was opposed by the augur Attus Navius, who represented, that Romulus had acted under the guidance of the auspices in regulating the centuries, and that nothing but the consent of the auspices could warrant a change in the distribution of the knights. Attus was by descent a Sabine; the gift of observing and interpreting auguries was the endowment of his countrymen; even Augur Tarquin, without instruction, he had practised the art, and afterward, on being taught, had acquired the greatest insight into it that any priest ever attained to. Tarquinius, to shame the augurs, or for his own conviction, as Cæsarius tried the veracity of the oracle, commanded him to divine whether what he was at that moment thinking of were possible or impossible. When Attus had observed the heavens and declared that the object of the king’s thoughts could be effected, Tarquinius held out to him a whetstone, and a razor to split it with; the augur did so without delay. The whetstone and razor were preserved in the Comitium under an altar: beside them, on the steps of the senate-house, stood the statue of Attus, a priest, with his head muffled. (Liv., 1, 36.—Dion. Hal., 3, 70, seqq.—Cic., de Div., 1, 17, § 32.—Niebuhr’s Röm. Hist., vol. 1, p. 307, seqq., 2d ed., Cambriæ translat.)

ATTUS, a descendant of Atys, an ancient king of Lydia. (Vid. Attus I.)

ATTUS, I. an ancient king of Lydia. He is mentioned by Herodotus, who calls him the son of Manes (1, 95). The historian, however, in another part of his work, makes the son of Manes to have been Cotsys (4, 45), a circumstance which has occasioned some trouble to the commentators. Wesseling (ad Herod., 4, 45) thinks it probable that Manes had two sons, Attus and Cotys. It seems more natural, however, to make Attys and Cotys two names for one and the same person, the latter appellation being evidently the same as the former, except that it commences with a strong aspirated consonant, and has the vowel sound changed. Ianzi sees in the name Atys an Etrurian root. (Saggio di Ling. Etrusco., vol. 2, p. 223.) The appellation Manes, moreover, is given in the Vatican MS. as Manes (Mānues), which last approaches to Masses (Māsses) in the old Etruscan language. The river god Marvasys. (Plut., de Mus., p. 1133.—Müller, Etrusk., vol. 1, p. 81, not.) Ritter considers Manes and Atys as appellations of Oriental origin, made euphonious by the Greeks, and connects them with the early worship of Buddha. According to this writer, Manes (Man-es) is nothing more than the title "man," and to the same family of words belong the,
Hindu Menu, the Egyptian Menes, the Greek Minos, and even the Latin Menus. On the other hand, Cotys or Khôdo is the same as the Bôda of the Persians. (Vorhalle, p. 365.)—II. A son of Croesus, king of Lydia. His father dreamed that Atys would be killed by wild boars, and therefore, in order to frustrate the prediction, kept his son at home, and carefully avoided exposing him to any danger. Meanwhile, a large wild boar infested the country around the Mysian Olympus, and the inhabitants of the adjacent territory applied to Croesus for assistance against the animal. After urgent entreaties on the part of the young prince, his father allowed him to accompany the hunters sent out from Lydia to the aid of the Mysians, but gave him in charge to Adrastus, a Phrygian boy, who had slain by accident his own brother, and had been purified of the homicide by Croesus. The party encountered the boar, and, in making the onset, Atys was killed by an accidental blow from the javelin of Adrastus, the very one who had been appointed by Croesus to guard him from danger. Such is the account of Herodotus (1, 54, seqq.). Polydeuces, the son of Hephæstes, called the son of Croesus, whom Adrastus was so wont to celebrate in his religious ceremonies. Having proved unfaithful to the goddess, she inspired him with phrenesy to such a degree, that, in a paroxysm of his malady, he deprived himself of his virility. Ovid, however, makes him to have been changed by the goddess into a pine-tree (Met., 10, 104). According to Diodorus, on the other hand, who assigns Maon, king of Phrygia, as the mortal father of Cybele, Atys was put to death by her parent on discovering the intimacy subsisting between the parties. (Diod. Sic., 2, 59.) Another, and wilder legend, of Lydian origin, may be found in Pausanias (7, 17. — Compare Catull., de Aty, &c.—Ovid, Fast., 4, 223.—Lucian, de Dea Syra). The fable of Atys is astronomical in its origin. Atys, deprived of his virility, is a symbol of the sun, shorn of its generative powers in the season of winter, and moving in the lower hemisphere: the luminacy of day resumes its energies on ascending into the upper heavens; while a young fresh-received of Phrygian virility is supposed by themselves the first of the Galli; and his priests, by a voluntary mutilation, celebrate the period of his weakness and impotence. But as, in accordance with a decree of the gods, not a single member of Atys is to perish, every year he returns to the upper world and celebrates anew his union with Cybele. This return, this renewal of the productive powers and the fecundity of nature, gave rise to all those demonstrations of savage joy which are so well described in the verses of Astycheus (2, 618, seqq.). For further remarks illustrative of this curious portion of ancient mythology, consult Cruiser's Symbolik, par Guigniaut, vol. 2, p. 69, seqq. As regards the different forms of the name, Atys, Atis, or Attes, consult the remarks of Hemsterhuis (ad Lucian, D.D., 12), and of Gravius (ad Lucian, de Dea Syra, 15). Diodorus says that Atys was subsequently called Papas (Pâpâs), which is, no doubt, derived from the verb παπαειν or παπακειν "father," other forms of which are άττα, άττα, and ἀτφα. We see lurking, therefore, in the names Atys, Attis, Attes, and Papas, a reference to the sun as the great father of life and parent of fertility. (Compare the remarks on the origin of the name Apollo, under that article.)

Avascum, a strongly fortified town of Gaul, the capital of the Bituriges, now Bourges. It received its former appellation from the river Avarus, or Evre, one of the southern branches of the Liger. It was taken by Caesar during the Gallic wars, and its inhabitants massacred. (Cass. Bell. Gall., 7, 27, seqq.)

Aventinus I. A son of Hercules by Rhea, who assisted Tortus against Æneas. (Virg., Æn., 7, 657.)—II. A king of Alba, buried upon Mount Aventine. (Ovid, Fast., 4, 51.)—III. One of the seven hills of Rome, and the largest of the whole number. It was divided from the Palatine by the valley of the Circus Maximus, and round its northern base flows the Tiber. This hill is said to have derived its name from Aventus, an ancient king of Alba, who was buried there in a laurel grove, which was preserved on this hill to a very late period. The Aventine was the place on which Remus was fabled to have taken his station when watching for an omen in his competition with Romulus for the crown; and here, too, he is said to have been buried. Hence some derive the name from the Latin avenus, "omen." The Aventine, in consequence of what has been said, is often called the "omens" hill. And when it was included within the walls of Rome is differently given. Some make this to have been done by Ancus Marcius, others not till the time of the Emperor Claudius. No authority, however, can be adduced in support of the latter opinion, though advocated by some antiquaries, while an irresistible weight of evidence can be brought against it. (Liv., 1, 38.—Dom. Hal., lib. 2, 3, 4.—Nordini, 1, 5.) In the early ages of Rome, however, it is certain that the whole neither of the Esquiline nor Aventine hills was inhabited. We read in Livy (2, 28) of nightly meetings of the disaffected being held upon the former, to the great alarm of the senate; and the two armies, that joined in rebellion against the tyranny of the decemvirs, encamped upon the latter. (Liv., 3, 56.) But from the prodigious extent of the Aventine, which is computed by Dionysius of Halicarnassus to be three miles in circumference, it is not surprising that there was abundant room for encampments at that early period. The Aventine has two distinct summits; and, indeed, it might almost be called two hills; for they are divided by a valley. Near the base of the more southern of its heights are the gigantic ruins of the baths of Caracalla. (Rome in the Nineteenth Century, vol. 1, p. 191, seqq.)—The Aventine was likewise called Colus Marcus, from Murcia, the goddess of sleep, who had a chapel (esceleum) on a hill called Colus Murcia, in a temple of Diana. (Liv., 1, 33.—Dom. Hal., 3, 43;) and Remonius, from Remus.

Aventinus Laicus, a lake in Campania, near Baiae and Puteoli. It lay within, from the Lucerne lake, and was connected with the latter by a narrow passage. Strabo describes it as surrounded on almost every side, except this outlet, by steep hills. (Strab., 248.) These hills were covered with immense forests, so that the lake, only described in many works of Aristotle (3, 618, seqq.), was surrounded by the enveloped effluvia filled the air with contagion. The ancients even had a popular belief among them, that birds, on attempting to fly over this lake, became stupefied by its exhalations and fell into it. Hence the common though erroneous derivation of the name, from α, priv., and ω,ως, "a bird." (Virg., Æn., 6, 237, seqq.—Lucret., 6, 748.) As little credit is due to the account which places here the scene of the nightly sacrifice of the dead, as described in the Odyssey, together with the subterranean abodes of the Cimmerians. (Strab., 244.)—The forests that covered the hills around Aven tus were dedicated to Hecate, and sacrifices were frequently offered to that goddess. These forests and shades disappeared, when Agrippa converted the lake into a harbour by opening a communication with the
sea and the Lucrine basin. (Vid. Portus Juliae.)

The modern name of the lake is Lago d'Averno. Eustace describes Avernus at the present day as a circular lake, without a single inlet or outlet, being surrounded by cypress, and of great depth (in some places 180 feet). It is surrounded by grounds on one side low, on the other high but steep, cultivated all around, but not much wooded; a scene, on the whole, light, airy, and exhilarating. (Classical Tour, vol. 2, p. 394, Lond. ed.)

Aupidia, a city of Samnium, and the capital of the Caraceni, situate on the Sagrus or Sangro. It is now Avesta. (Lan., 10, 13, —Plin., 3, 13.)

Aupidia Lex, was enacted by the tribune Aupidius Lurco, A.U.C. 692. It contained this singular clause, that if any candidate, in canvassing for an office, promised money to a tribe, and failed in the performance, he should be excused; but if he actually did it, he should be compelled to pay every tribe a yearly fine of 3000 sestercies as long as he lived. ( Cic., ad Att., 1, 13.) This law, however, soon became a dead letter, as is apparent from what Suetonius states respecting the bribery practised by Cassar and Bibulus. (Suet., Vit. Jul., 19.—Compare Heinecc., Antiq. Rom., p. 807, ed. Haubold.)

Aupidius, I. Bassus, an historian in the Augustan age, and in part of the reign of Tibereus. He wrote a history of the Roman civil wars, and another of the war in Germany. This latter work was continued by the elder Pliny. (Plin., Min., Ep., 3, 5, 6.—Quintil., 10, 1, 10.—Dio Cassius, 63, ed.) Camus Bassus, a lyric poet, to whom Persius addressed his sixth Satire. He perished during the same eruption of Vesuvius that proved fatal to the elder Pliny. (Quintil., 10, 1, 96.—Schol. ad Pers., Sat., 6, 1.—Voss, de poet. Lat., c. 3.)—III. Saleius Bassus, a poet in the time of Vespasian. He is highly praised by Quintilian (10, 1, 90), and by the author of the Dialogue "de causis corrupt. eloq." (c. 5).—IV. Lucius, a recorder in the town of Fumuli, ridiculed by Horace in his Elegies, i, 17, 24.

Aupīdus, a river of Apulia, now the Ofanto. It was on the banks of this stream that the battle of Cannae was fought. Polybius (3, 110) remarks of the Aupīdus, that it is the only river which, rising on the western side of the Apennines, finds its way through that continuous chain into the Adriatic. But it may be doubted whether the historian speaks with his usual accuracy. It is certain that the Aupīdus cannot be said "the river which flows parallel to those mountains", since it rises on one side of it, while the Silarus flows from the other. The Aupīdus was remarkable for the rapidity of its course. (Horat., Od., 4, 14.—Id., Od., 30, 3.—Id., Od., 4, 9.—Cramer's Ancient Italy, vol. 2, p. 295.)

Auge, daughter of Alous, king of Teges. She became a mother by Hercules, and secretly laid her offspring, a son, in the sacred enclosure (/cliμενος) of Minerva, whom he conceived within the cliμενος of the goddess; and, searching about, found his daughter's infant, which he exposed on Mount Parnethon. But the babe was protected by the care of the gods, for a hind which had just brought forth came and suckled him; and the shepherds, finding him thus nursed, named him Telephus from that circumstance (cliμος, a hind). Alous gave his daughter Auge to Nauplius, the son of Neptune, to sell him in the country; and he disposed of her to Teuthras, king of Teuthania, on the Caýster, in Myśia, who made her his wife. Telephus having, when grown up, consulted the oracle respecting his parent, came to Myśia, where he was kindly received by Teuthras, whom he succeeded in his kingdom. (Pausan., 8, 4.—Apollod., 3, 9, 1.) This legend is connected apparently with the worship of Minerva Alea. The true meaning of Telephus is Par-shime (τραχύς, Auge (Αὐγή) is bright). (Koghiely's Mythol., p. 367.)

Augeae, I., a town of Laconia, supposed to be the same with Egis. It stood near the coast, northwest of Gythium. (It., 2, 683.—Strabo, 947.)—II. A town of Bithynia. (It., 3, 19.)

Augeas (poetic form Aυγαιας), son of Neptune, according to others, of the Sun, while a third class of mythologists make him to have been the offspring of Phorbas. He was one of the Argonauts, and, after returning from that expedition, ascended the throne of Elis. Augeas kept a very large number of herds, and the fifth and dune of these had been allowed to accumulate for many years, when Eurystheus imposed on Hercules, as one of his tasks, the cleansing of the stables of the Elian monarch. When Hercules came accordingly to Augeas, he said nothing to him of the commands of Eurystheus, but offered for a tenth of his herds to clean out his stables in one day. Augeas agreed, thinking the thing impossible, and Hercules took Phyleus, the son of Augeas, to witness the agreement. He then broke down a part of the wall of the court, and turning in the rivers Penenus and Alpheus by a canal, let them run out at the other side. Augeas, on learning that this was one of the tasks imposed by Eurystheus, not only refused to stand by his agreement, but denied that he had promised anything, and offered to lay the matter before judges. When the cause was tried, Phyleus honestly gave testimony against his father, and Augeas, in a rage, even before the votes had been taken, ordered both his son and Hercules to depart from Elis. The former retired to Phyleus, the latter returned to Eurystheus, stopping first at Olenus, where he aided Demophon against the centaur Eurytion. Eurystheus, however, refused to count the feat of Hercules, in cleansing the Augean stables, among the twelve tasks, saying that he had done it for hire. After the termination of all his labours, Hercules came with an army to Elis, slew Augeas, and set Phyleus on the throne. For an explanation of this myth, consult the article Hercules. (Apollod., i, 10, 1.—Iliad, v, 694.—Hom., Od., ix, 188.—Hesiod, Works and Days, 300.)—To "cleanse the Augean stables" has become a common proverb, and is applied to any undertaking where the object in view is to remove a mass of moral corruption, the accumulation of which renders the task almost impossible. The Latin form of this same proverb is "Augeas stabulum repurgare;" the Greek, merely Αυγαίας βουστασία. (Lucian, Pseud.—Brassius, Chil. 2, cent. 3, n. 21.)

Augeas, the name of two Oases of the great African desert, with a town of the same name. It lay west of Ammon, and south of Cyrene, and was famed for the abundant produce of its date palms. This was one of the stations for the caravans which carried on the inland trade of Africa. It is at present also a caravan station. (Mannert, vol. 10, pt. 2, p. 181.—Pacho, Voyage dans le Marroquine, p. 272, sqq.)

Augeas, a name given to a class of sacerdotal officers among the Greeks, who were the guardians of the oracles and interpret omens, and perform other analogous acts of religion. The term Augeus is commonly but erroneously derived from αυς, "a bird," and γαρίο, "to chirp," on the supposition that this priesthood originally drew omens merely from the notes of birds. The true etymology, however, ought very probably to be referred to some Etrurian term, assimilated both in form and meaning to the Greek αὐγάς, "eighty" (compare Etruscan, aulag missionaries). The primary meaning of the term auger will be "a seer."—The duties and powers of the Roman augurs are given somewhat in detail by Cicero (de Leg., 2, 8), and may be arranged under four heads: 1. The inspecting or observing of omens. 2. The declaring the will of heaven, as ascertained by them from these omens. 3. The inaugurating of magistrates, and the consecrating of places and buildings. 4. The determining whether the omens observed by them allowed a thing
to be done or not, and also in what way the omens themselves were to be taken. (Compare Müller, Etrusk., vol. 2, p. 117.)—The whole system of augural science was of Etruscan origin. In this latter country it served as a powerful engine of state in the hands of the aristocracy, and the same result was for a considerable time effected at Rome. Meetings of the Comitia Centuriata, for example, could not be held at all, if any augur declared the omens unpropitious; or the Comitia were broken off if a magistrate, virtually invested with augural powers, declared that he had heard thunder or seen lightning. So, again, all the business transacted at any comitia, except the Tributa, went for nothing, if, after the assembly had been held, an augur declared that there had been some informality in taking the auspices before the meeting was convened.—The augurs are supposed to have been first instituted by Romulus, who was the one for each tribe. This, however, was mere popular opinion, and had no foundation in reality. A fourth augur was added, it is thought, by Servius Tullius, when he increased the number of tribes, and divided the city into four tribes. The augurs were at first all patricians, until A.U.C. 454, when five plebeians were added. Sylla increased their number to fifteen. The chief of the augurs was called Magister Collegii. The augurs enjoyed a singular privilege, that in whatever crimes they were guilty, they could not be deprived of their office; because, as Plutarch remarks, they were intrusted with the secrets of the empire. The laws of friendship were anciently observed with great care among the augurs, and no one was admitted into their college who was known to be inimical to any of their number.—The augur made his observations on the heavens usually in the dead of night, or about twilight. He took his place upon an elevation, and from this object, at the same time, he saw the view open on all sides, and, to make it so, buildings were sometimes pulled down. Having first offered up sacrifices, and uttered a solemn prayer, he sat down with his head covered, and with his face turned to the east, so that he had the south on his right and the north on his left. Then he determined with his litus the regions of the heavens from east to west, and marked in his mind some object forming straightway the sum of what his eyes could remark, within which boundaries he should make his observations. There were generally five things from which the augurs drew omens: the first consisted in observing the phenomena of the heavens, such as thunder, lightning, comets, &c. The second kind of omen was drawn from the chirping or flying of birds. The third was from the sacred chickens, whose eagerness or indifference in eating the food, which was thrown to them, was looked upon as lucky or unlucky. The fourth was from quadrupeds, from their crossing or appearing in some unaccustomed place. The fifth was from different casualties, which were called Diræ, such as spilling salt on the table, or wine upon one’s clothes, hearing ill-omened words or strange noises, stumbling or sneezing, meeting a wolf, hare, fox, or pregnant bitch, &c. These the augur explained, and taught how they ought to be expiated.—In whatsoever position the augur stood, omens on the left, among the Romans, were reckoned lucky. But sometimes omens on the left are called unlucky, in imitation of the Greeks, among whom augurs stood with their faces to the north, and then the east, which was the lucky quarter, was on the right. Thunder on the left was a good omen for everything else but holding the Comitia. The croaking of a raven on the right, and of a crow on the left, was supposed to have a similar meaning, and was called Pseræa. In short, the whole art of augury among the Romans was involved in uncertainty, and was, in effect, a mere system of deception for restraining the multitude, and increasing, as has already been remarked, the influence of the leading men over them. (Cic., de Div., I. 7.—Id., 2, 36.—Aulus Gallius, 5, 8, &c.)

*Augusta,* I. a name given singly, or in conjunction with some epithet, to a large number of cities, either founded, embellished, or protected by Roman emperors. The epithet is derived from the name of the first emperor of Rome, Augustus. The term Augustus seems to have been an imperial appellation (Sertorius).—II. A title of honour, borne by many Roman empresses.

*Augustalia,* a festival at Rome, in commemoration of the day on which Augustus returned to Rome, after he had established peace in the different parts of the empire. It was celebrated on the 12th of October.

*Augustinius,* one of the most renowned fathers of the Christian church, born at Tagaste, a city of Africa, November 13, A.D. 354, during the reign of the Emperor Constantine. He has related his own life in the work to which he gave the title of *Confessiones,* and it is from this source, together with the *Retractiones,* some of his letters, and the *Vita Possidii,* of the semi-Pelagian Gennadius, that we derive our principal information respecting him. His parents sent him to Carthage to complete his education, but he disappointment that he manifested by this study and his devotion to pleasure. In his sixteenth year he became very fond of women. For fifteen years he was connected with one, by whom he had a son. He left her only when he changed his whole course of life. A book of Cicero’s, called *Hortensius,* which has not come down to our times, led him to the study of philosophy; and when he found that this did not satisfy his feelings, he went over to the sect of the Manichæans. He was one of their disciples for nine years; but, after having obtained a correct knowledge of their doctrines, he left them, and departed from Africa to Rome, and thence to Milan, where he announced himself as a teacher of rhetoric. Saint Ambrose was bishop of this city, and his discourses converted Augustine to the orthodox faith. The reading of St. Paul’s epistles wrought an entire change in his life and character. The Catholic church has a festival (May 3d) in commemoration of this event. He retired into solitude, wrote there many books, and prepared himself for baptism, which he received in the 33d year of his age, together with his son Adeodatus, from the hands of Ambrose. He returned to Africa, sold his estate, and gave the proceeds to the poor, retaining only enough to support him in a moderate manner. As he was once present in the church at Hippo, the bishop, who was a very old man, signified a desire to consecrate a priest to assist and succeed him. At the desire of the people, Augustine entered upon the holy office, preached with extraordinary success, and, in 395, became bishop of Hippo. He entered into a warm controversy with Pelagius concerning the doctrines of free-will, of grace, and of predestination, and wrote a book concerning them. Augustine maintained that men were justified merely through grace, and not through good works. He died August 28, A.D. 403, while Hippo was besieged by the Vandals. There have been fathers of the church more learned, masters of a better language and a purer taste; but none have ever more powerfully touched the human heart and warmed it towards religion. Painters have, therefore, given him for a symbol a flaming heart. Augustine is one of the most voluminous of the Christian writers. His works, in the Benedictine edition of Antwerp, 1700-9, fill 19 folio volumes. They are written in Latin, and are the books which he wrote before he was a priest, and his retractions and confessions; the former a critical review of his own writings, and the latter a curious and interesting picture of his life. The remainder of these volumes consist of a treatise *On the City of God,* &c.
AUGUSTUS.

AUGUSTUS.

aries on Scripture; epistles on a great variety of subjects, doctrinal, moral, and personal; sermons and homilies; treatises on various points of discipline; and elaborate arguments against heretics. With the exception of those of Aristotle, no writings contributed more than Augustus's to encourage the spirit of subtle disputation which distinguished the scholastic ages. This, till, by an instinct of reason, was a matter of reasoning, with more argument than eloquence, and more wit than learning. Erasmus calls Augustus a writer of obscure subtlety, who requires in the reader acute penetration, close attention, and quick recollection, and by no means repays him for the application of all these requisites. His works are now almost wholly neglected. (Encyclop. Americ., vol. 1, p. 498.)—Among the sources of information in modern times respecting the life and productions of St. Augustine, the following may be mentioned: Cotelier, Hist. General. des Aut. Eccles. (Paris, 1744, 4to), vol. 11 and 12.—Tillemont, Memoires, &c., vol. 13.—Vit. August. Vauillant, et Du Frische: ed. Op. Benedict, vol. 11.—Act. Sanct. Mens. Aug., vol. 6, p. 213, seqq.—L. Berti, de rebus gestis S. August. (Venet., 1746, 4to).—Rüster, Bibli. der Kirchemänt., vol. 9, p. 257.—Fabric., Bibl. Lat., vol. 3, p. 519, seqq.—Wiggert, in Script. Theol. Div., vol. 2, 366, seqq.—Wiggert, Verz. einer pragmat. Darstellung des August. und Pelagianismus (Hamburg, 1822, 8vo), vol. 1, p. 7, seqq.

Augustus (Romulus Momyllus, surnamed Augustus, or, in derision, Augustulus), the last Roman emperor of the West. He was the son of Orestes, a patrician and commander of the Roman forces in Gaul. Augustus was crowned by his father A.D. 47; but was dethroned the next year by Odacer, king of the Heruli, who put Orestes to death, and banished the young monarch to Campania, allowing him at the same time a revenue for his support. The true name of this emperor was Augustus, but the Romans of his time gave him, in derision, the appellation of Augustus (The Little Augustus), which has become the historical name of this feeble sovereign. His father Orestes was the actual emperor, and the son a mere puppet, without family or state (Cic. de bel. civ. 2, 32; de ger. et Marcell. in Chron.—Jornandes.—Procopius.)

Augustus (Caes. Octav. Cæsar Augustus), originally called Caes. Octavus, was the son of Caes. Octavius, and of Atia daughter of Julia the sister of Julius Cæsar. The family of the Octavii were originally from Vetulæ, a city of the Volsci. The branch from which Augustus sprung was rich, and of equestrian rank. His father was the first of the name that obtained the title of senator, but died when his son was only four years old. The mother of the young Octavius soon after married L. Philippus, under whose care he was brought up, until his great uncle Julius Cæsar, having no children, began to regard him as his heir (Vell. Patcr., 2, 85), and, when he was between sixteen and seventeen years of age, bestowed upon him some military rewards at the celebration of his triumph for his victories in Africa. (Suet. Aug., 8.) In the following year he accompanied his uncle into Spain; where he is said to have given indications of talent and activity; and in the winter of that same year he was sent to Apollonia in Epirus, there to employ himself in completing his education, till Cæsar should be ready to take him on his expedition against the Parthians. He was accordingly living quietly at Apollonia when the news of his uncle's death called him forth, though he was then only nineteen years of age. To enter upon which principal in the contentions of the times. On Cæsar's death being known, M. Vipsanius Agrippa and Q. Sabidius Rufus, who are here first spoken of as his friends (Vell. Patcr., 2, 85), advised him to embrace the offers which many of the centrifugals and soldiers made him, of assisting him to revenge his uncle's murder. But, as he was not yet aware of the strength of that party which he would find opposed to him, he judged it expedient to return to Italy, in the first instance, in a private manner. On his arrival at Brundisium, he learned the particulars of Cæsar's death, and was informed also of the contents of his will. In presuming that this will was a mere adoption done to an adopted son. (Dio Cassius, 45, 3.—Vell. Patcr., 2, 85.) He did not hesitate instantly to accept this adoption, and to assume the name of Cæsar; and it is said that numerous parties of his uncle's veterans, who had obtained settlements in the districts of Italy through which he passed, came from their homes to meet him, and to assure him of their support. (Appian, Bell. Civ., 3, 12.) At Rome two parties divided the state, that of the republicans, who had distanced with Cæsar, and that of Antony and Lepidus, who pretended to avenge his death, but who had, in reality, no other intention but to elevate their authority above that of the laws. The latter of these two parties was in the ascendant when Octavius visited the capital, and the consul Antony exercised an almost absolute control. He received Octavius with great coolness, and declined any co-operation with him. He wrote to the Senate that, as a young man, he had acted for himself, and not as a political associate, Antony endeavoured to obstruct, or, at least, to delay, his adoption into the Julian family, since Octavius could not claim the possession of his uncle's inheritance till he had gone through the forms by which he became Cæsar's adopted son. (Florus, 4, 4.—Dio Cassius, 45, 5.) On this provocation, Octavius resolved to do himself justice by the most atrocious means; and, although he was only nineteen years of age, he conspired some ruffians to assassinate Antony, the consul of the republic, in his own house. (Cic. ep. ad fam., 12, 23.—Seneque, de Clem., 1, 9.) The attempt was discovered in time, but it threw Antony into the utmost perplexity and alarm. As it had not succeeded, a large portion of the people doubted its reality, and believed that the charge had been falsely brought against Octavius, in order to procure his ruin, that Antony might quickly and easily repair his domestic and civil affairs. The fact, was the public feeling, and so unpopular was Antony at this period, that he did not think it advisable to bring his intended assassins to trial. But he trembled at the insecurity of his situation, and determined to employ a stronger military force than the guard with which he had hitherto protected his person, and by which he had overawed the senate and the forum. With this view Antony endeavoured to gain over the veterans of Cæsar that were stationed at Brundisium, but the more liberal offers of the young Octavius drew them over to the side of the latter. At length the two competitors for empire had recourse to arms, and Cisalpine Gaul became the theatre of warfare. Decimus Brutus, who held the command of this province, threw himself into Mutina, where Antony besieged him, but the latter was defeated by Octavius and the consuls Hirtius and Pansa, and compelled to retreat towards Transalpine Gaul. All the veteran legions which had been commanded by the late consuls (these leaders had fallen in the battle of Mutina) were now, with one exception, under the orders of Octavius, and neither they nor their general were inclined to obey any longer the authority of the senate. Marching to Rome at the head of his forces, Octavius was now elected consul by open intimidation of the senate and people, and the liberty of the state was forever secured. Lepidus, meanwhile, had united their forces, and recrossed the Alps; and Octavius, now invested with the title of consul, and commanding a numerous army, marched back again towards Cisalpine Gaul, and found the two leaders in the neighbourhood of Mutina. A friendly correspondence
AUGUSTUS.

had been carried on between the chiefs of the two armies before they were advanced very near to one another; and it was determined that all differences should finally be settled, and the future measures which they were to take in common should be arranged at a personal interview. This interview resulted in the formation of a triumvirate, in which Antony, Octavius, and himself were placed as the three, for settling the affairs of the Commonwealth during five years. (Liv., Epit., lib. 120.—Appian, Bell. Civ., 4, 3.) They divided among themselves those provinces of the empire which were subject to their power, and the triumvirate was cemented by the most dreadful scenes of proscription and murder, during which fell the celebrated Cicero, a victim to the vengeance of Antony, and basely left to his fate by that same Octavius. After the hopes of the republican party had been crushed at Philippi, Antony, in an evil hour for himself, turned his back upon Italy, and left the immediate government of the capital in the hands of his associate. On returning to Rome, Octavius satisfied the cupidity of his soldiers by the division of the finest lands in the Italian peninsula. This division gave rise to the most violent disturbance. In the midst of the stormy scenes that now followed, Octavius was obliged to contend with Fulvia, whose daughter Clodia he had rejected, and with Lucius, the brother-in-law of Antony. After several battles, Lucius threw himself into the city of Perusia, where he was soon after obliged to surrender. The city was given up to plunder, and 300 senators were condemned to death, as a propitiatory sacrifice to the manes of the deified Caesar. After the return of Antony an end was put to the proscriptions, and much of the proscribed persons as had escaped death by flight, and whom Octavius no longer feared, were allowed to return. There were still some disturbances in Gaul, and the naval war with Sextus Pompeius continued for several years. After his return from Gaul, Octavius married the famous Livia, the wife of Claudius Nero, whom he compelled to resign her, after he himself had divorced his third wife Scribonia. Lepidus, who had hitherto retained an appearance of power, was now deprived of his authority, and died as a private man B.C. 13. Antony and Octavius then divided the empire. But while the former, in the East, gave himself up to a life of luxury, the young Octavius pursued his plan of making himself sole master of the Roman world. He especially strove to obtain the affections of the people. A firm government was established; the system of aedileship and the censorship were abolished; the taxes which had long fostered at Rome and throughout Italy, was speedily and effectually suppressed. He showed mildness and a degree of magnanimity, if it could be so called, without the appearance of striving after the highest power, and even declared himself ready to lay down his power when Antony should return from his war against the Parthians. He appeared rather to permit than to wish himself to be appointed perpetual tribune of the people, and thus virtually did surrender the sovereignty to which he advanced in the affections of the people, the more openly did he declare himself against Antony. Meanwhile the latter had excited a strong feeling of disgust not only among the Romans at home, but even among his own officers, by his shameful abandonment to the celebrated Cleopatra, the queen of Egypt. His divorcing himself from Octavia, the sister of his colleague in the triumvirate, seemed like dishonor to a Roman lady in order to gratify the jealousy of a barbarian paramour; and an act of baseness on the part of Octavius himself completed the blow. Having got possession of Antony's will, he broke open the seals, and read the contents of it publicly, first to the senate, and afterward to the assembly of the people. The clause in it which especially induced Octavius to commit this act, was one in which Antony desired that his body might, after death, be carried to Alexandria, and there buried by the side of Cleopatra. This proof of his romantic attachment for a foreigner seemed, in the eyes of the Romans, to attest his utter degeneracy, and induced the populace, at least, to credit the inventions of Antony. Octavius then returned to Rome, and threw off his pretensions if victorious in the contest that now appeared inevitable, to give up Rome to the dominion of Cleopatra, and transfer the seat of empire from the banks of the Tiber to those of the Nile. It is clear, from the language of those poets who wrote under the patronage of Augustus, that this was the light in which the war was indifferently represented; that every effort was made to give it the character of a contest with a foreigner, in which Antony, the champion of the national pride and jealousy of the people of Rome. (Hor., Od. 1, 37, 5, sogg.—Virg., En., 8, 678, 685, 698.) Availing himself of this feeling, Octavius declared war against the Queen of Egypt, and led a considerable force by both sea and land to the Ambraeian Gulf, where Agrippa gained the naval victory of Actium, which made Octavius master of the Roman world. He pursued his rival to Egypt, and ended the war by putting the Queen to death, and, by the treaty of Augustus, the Egyptian people were allowed to decide their differences by a personal combat. Cleopatra and Antony killed themselves. Octavius caused them to be splendidly buried. A son of Antony and Cleopatra was sacrificed to ensure the safety of the conqueror; and Caesarion, a son of Caesar and Cleopatra, shared the same fate. All the other relations of Antony remained uninjured, and Octavius, on the whole, used his power with moderation. After having spent two years in the East, in order to arrange the affairs of Egypt, Greece, Syria, Asia Minor, and the islands, he celebrated, on his return to Rome, a triumph for three days in succession. Freed from his rivals and enemies, and master of the world, he was undecided concerning the way in which he should exercise his power for the future. Agrippa, whose victory had given him universal dominion, counselled him to renounce his authority. Macenas opposed this, and Octavius followed his advice, or, rather, his own inclinations. In order to make the people willing to look upon him as an unlimited monarch, he abolished the laws of the triumvirate, beautified the city, and exerted himself in correcting the abuses which had prevailed during the civil war. At the end of his seventh consulship, he entered the senate-house, and declared his resolution to lay down his power. The senate besought him to retain it; and the farce ended by his yielding to their pressing entreaties, and consenting to continue to govern through them. He now obtained the surname of Augustus, which marked the dignity of his person and rank, and by degrees he united in himself the offices of imperator, or commander-in-chief by sea and land, with power to make war and peace; of proconsul over all the provinces; of perpetual tribune of the people, which rendered his person inviolable, and gave him the power of interrupting public proceedings; and, in fine, of censor (magistratus), and pontifex maximus, or controller of all things appertaining to public morals and religion. The laws themselves were subject to him, and the observance of them depended on his will. To these dignities we must add the title of "Father of his Country" (Pater Patriae). Great as was the power thus given him, he nevertheless exercised it with moderation. It was the spirit of his powers that from the very first he steadfastly refused to assume the title of Dictator, which Sylla and Caesar had rendered odious.—Augustus carried on many wars in Africa, Asia, and particularly in Spain, where he triumphed over the Cantabri after a severe struggle. His arms subjected Aquitania, Pannonia, Dalmatia, and Illyria, and held the Dacians, Numidians, and
AUGUSTUS.

Ethiopians in check. He concluded a treaty with the Parthians, by which they gave up Armenia, and restored the eagles taken from Crassus and Antony. At the foot of the Alps he erected monuments of his triumphs for the benefit of his kinsmen and countrymen, which are yet to be seen at Susa and Aosta. After he had established peace throughout the empire, he closed (for the third time since the foundation of Rome) the temple of Janus (B.C. 10). This universal repose, however, was interrupted, A.D. 9, by the defeat of Varus, which lost three legions in an engagement with the Germans under Arminius, and killed himself in despair. The intelligence of this misfortune greatly agitated Augustus. He let his beard and hair grow, and often cried out, as if in the deepest sorrow, "Oh Varus, give me back my legions!" Meanwhile the Germans were held in check by Tiberius. During the peace, to which we have just referred, Augustus had issued many useful decrees, and abolished many abuses in the government. He gave a new form to the senate, employed himself in improving the manners of the people, promoted marriage, suppressed luxury, introduced discipline into the armies, and, in a word, did everything in his power to subserve the best interests of the state. He adorned Rome in such a manner, that it was truly said by him, "he found it of brick, and left it of marble." (Sueton., Aug., 29.—Dio Cass., 56, 30.) He also made journeys everywhere, to increase the blessings of peace; he went to Sicily and Greece, Asia Minor, Syria, Gaul, and other quarters; in several places he founded cities and established colonies. (Vell. Patr., 5, 92.) The people erected altars to him, and by a decree of the senate, the month Sextilis was called by the new appellation of Augustus (A.D. 1). Two conspiracies, which threatened his life, miscarried. Caesar, Muræna, and Egnatius were punished with death; Cinna was more fortunate, receiving pardon from the emperor. This forbearance increased the love of the Romans, and diminished the number of the disaffected; so that the master of Rome would have had nothing to wish for, if his family had been as obedient as the world. The debauchery of his daughter Julia gave him the greatest pain, and he showed himself more severe towards those who destroyed the honour of his family than towards those who had threatened his life. History says, that in his old age he was ruled by Livia, the only person perhaps whom he truly loved. He had no sons, and lost by death his sister's son Marcellus, and his daughter's son, whose names had been bestowed on his successors. Drusus, also, his son-in-law, whom he loved, died early; and Tiberius, the brother of the latter, whom he hated on account of his bad qualities, alone survived. These numerous calamities, together with his continually increasing infirmities, gave him a strong desire for repose. He undertook a journey to Campania, from whose pure air he hoped for relief; but disease fixed upon him, and he died at Nola (Aug., 14). in the sixty-third year of his age, and forty-fifth of his reign. Augustus was in his sixty-third year, of mature age, very good figure, rather below the middle size, but extremely well proportioned. (Sueton., Aug., 79.) His hair was a little inclined to curl, and of a yellowish brown; his eyes were bright and lively; but the general expression of his countenance was remarkably calm and mild. His health was throughout his life delicate, yet the constant attention which he paid to it, and his strict temperance, made him appear at all ages of the full age of man. As a seducer and adulterer, and a man of low sensuality, his character was as profligate as that of his uncle. (Sueton., Aug., 69, 71.) In his literary qualifications, without at all rivalling the attainments of Caesar, he was on a level with most Romans of distinction of his time; and it is said, that both in speaking and writing, his style was eminent for its perfect plainness and propriety. (Sueton., Aug., 68, seqq.) His speeches on any public occasion were composed beforehand, and recited from memory; nay, so careful was he not to commit himself by any inconsiderate expression, that, even when discussing any question of importance with his council, he would still write down what he had to say, and read it before her. Like his uncle, he was strongly tinged with superstition. He was very deficient in military talent; but in every species of artful policy, in clearly seeing, and steadily and dispassionately following his own interest, and in turning to his own advantage all the weaknesses of others, his ability, if so it may be called, has been rarely equalled. His deliberate cruelty, his repeated treachery, and his sacrifice of every duty and every feeling to the purposes of his ambition, speak for themselves; and yet it would be unjust to ascribe to a politic premeditation all the popular actions of his reign. Good is in itself so much more delightful than evil, that he was doubtless not insensible to the pleasure of kind and beneficent actions, and perhaps sincerely rejoiced that they were no longer incompatible with his interests.— Among the various arts to which Augustus resorted to beguile the hearts of his people, and perhaps to render them forgetful of their former freedom, one of the most remarkable was the encouragement which he extended to learning, and the patronage he so liberally bestowed on all by whom it was cultivated. To this noble protection of literature he was prompted not less by taste and inclination than sound policy; and in his patronage of the learned, his usual artifice had probably a smaller share than in those other parts of his conduct by which he acquired the favourable opinion of the world. Augustus was, besides, an excellent judge of composition, and a true critic in poetry; so that his patronage was never misplaced, or lavished on those whose writings might rather have tended to corrupt than improve the taste and learning of the age. No writer could hope for patronage except by cultivating a style both chaste and simple, which, if ornamental, was not luxurious, or, if severe, was not rugged or antiquated. The court of Augustus thus became a school of urbanity, where men of genius acquired that delicacy of taste, that elevation of sentiment, and that purity of expression, which characterize the writers of the age. To Maecenas, the favourite minister of the emperor, the honour is due of having most successfully followed out the views of his master for promoting the interests of literature; but it is wrong to give Maecenas the credit, as some have done, of first having turned the attention of the emperor to the promotion of letters. On the contrary, he appears merely to have acted from the orders, or to have followed the example, of his imperial master. (Encyclop. Metrop., Div. 3, vol. 2, p. 294, seqq.—Encyclop. Amer., vol. 1, p. 469.—Biogr. Univ., vol. 3, p. 37, seqq.—Dunlop's Rom. Lit., vol. 3, p. 10, seqq.)—II. A title which descended from Octavius to his successors. It was purely honorary, and carried with it the idea of respect and veneration rather than of authority; for the power of the emperors was often given to the mothers, wives, or sisters of the Roman emperors. Under Dioclesian, when the new constitution was given to the empire, the title of Augustus became more definite, and then began to be applied to the two princes who held sway conjointly, while the appellation of Caesar was given to each of the presumptive heirs of the empire. The term Augustus is derived, not from augere, but from augur, "to divine," a term originally applied to the priests who decided by means of omens or buildings consecrated by augures were originally called augusta; and the name was afterward applied to other things similarly circumstanced. Thus Ennius, as cited by Suetonius (Aug., 7), uses the expression "augusto augurio." (Compare Fest., p. 43.—Ovid., Fast., 1, 607, seqq.) Consequently, when the title Augustus is applied to a person, it is equivalent in meaning to sanctus, sacratus, or sacrosanctus. (Com-
The Aulerci, a town of Bovaria, on the shores of the Euphrates, and nearly opposite to Chalics. It is celebrated as being the rendezvous of the Grecian fleet when about to sail for Troy, and as the place where they were so long detained by adverse winds. (Vid. Iphigenia.) Strabo (403) remarks, that, as the harbour of Aulis could not contain more than fifty ships, the Grecian fleet must have assembled in the neighbouring port of Bathys, which was much more extensive. From Xenophon we learn that, when Agesilaus was present at the point of meeting of his Minor, to carry on the war against Persia, he had intended to offer up sacrifice at Aulis, but was opposed in this design by the Boeotarchs, who appeared in the midst of the ceremony with an armed force. (Hist. Gr. 3, 4, 4.) Livy says the distance between Aulis and Chalics was three miles. (Liv., 45, 7.) Pausanias (9, 19) reports, that the temple of Diana still existed when he visited Aulis, but that the inhabitants of the place were few, and those chiefly potters. (Cramer's Ancient Greece, vol. i. p. 165.) AULON, I. a fertile ridge and valley near Tarentum, in Southern Italy, the wine of which equalled the Falernian in the opinion of Horace. (Horat., Od., 2, 6, 18.)—II. A valley of Palestine, extending along the banks of Jordan, called also Magnus Campus.—III. Another in Syria, between the rivers of Libanus and Antilibanus.—IV. A district and city of Messenia, bordering on Triphylia and part of Arcadia, being separated from it by the Neda. (Strab., 350. Steph. Byz., s. v.) AULUS, I. A praenomen common among the Romans.—II. Gellius. (Vid. Gellius.) Aurelia Lex, was enacted A.U.C. 683, and ordained that judices or jurors should be chosen from the Senators, Equites, and Tribuni. Aurelia. Another, A.U.C. 678. It abrogated a clause of the Lex Cornelia, and permitted the tribunes to hold other offices after the expiration of their tribunatesh.
AURELIANUS.

His next elevation was to the throne, Claudius II., on his deathbed, having recommended Aurelian to the troops of Illyricum, who readily acceded to his wishes. The reign of this monarch lasted only four years and about nine months; but every instant of that short period was filled by some memorable achievement. He put an end to the Gothic war, chastised the Germans who invaded Italy, reconquered Spain, and Britain from the Goths, Tacitus, and destroyed the proud monarchy which Zenobia had erected in the East on the ruins of the afflicted empire. Owing to the ungenerous excuse of the queen, that she had waged war by the advice of her ministers, her secretary, the celebrated Longinus, was put to death by the victor; but, after having graced his triumphal entry into Rome, Zenobia herself was presented with a villa near Tibur, and allowed to spend the remainder of her days as a Roman matron. Aurelian, 474.) to all this, Aurelian followed up his victories by the reformation of abuses, and the restoration throughout the empire of order and regularity, but he tarnished his good intentions by the general severity of his measures, and the sacrifice of the senatorial order to his slightest suspicions. He had planned a great expedition against Persia, and was waiting in Thrace for an opportunity to cross the straits, when he lost his life, A.D. 225, by assassination, the murderer being a brother of the secretaries from whom he intended to call, to account for peculation. Aurelian was a wise, able, and active prince, and very useful in the declining state of the empire; but the austerity of his character caused him to be very little regretted. It is said that he meditated a severe persecution on the Christians, when he was so suddenly cut off. (Hist. August., p. 211, seqq.—Gibbon, Decline and Fall, c. 11.—Biogr. Univ., vol. 3, p. 72.—Encyclo. Am., vol. 1, p. 474.—II. Calviu, a historian of the days of the Emperor Aurelian, who lived between 180 and 240 A.D. He was a member of the medical profession, and has left behind him two works: the one entitled, "Libri Quinque tardarum sive chronicarum passionum," and the other, "Libri tres celerum sive acutarum passionum." Both are drawn from Greek authors; from Themison, Thealles, and, above all, Soranus. Calvis Aurelianus being the only author of the sect called Methodists who has come down to us. (Collect. Epitom., p. 560.—Spen, Biog. Idyll., 6, 18.—Quint., Smyr. lib. 11. 2.7.—Nov. 7, 286, 294.—Id., 25, 567.—Mucius, 110, &c.) Aurora became, by Astrau, the mother of the winds Boreas, Zephyrus, and Notus, and also of the stars of heaven. (Hes., Theog., 378.) She was more than once, moreover, deeply smitten with the love of mortal man. She carried off Orion, and kept him in the isle of Ortygia till he was slain there by the darts of Diana. (Od., 5, 131.) Citius, the son of Mantis, was for his exceeding beauty snatched away by her, "that he might be among the gods." (Od., 15, 250.) She also carried off Cephalus, and had by him a son named Phaethon. (Hes., Theog., 986.—Eurip., Hippol., 457.) But her strongest affection was for Tithonus, son of Laomedon, king of Troy. (Vid. Tithonus.) The children whom she bore to Tithonus were Memnon and Aemathion.—The most probable derivation of the name Eos (Hes., Doro. 'Aeg) seems to be that from dawn, regarding it as the cool morning air, whose gentle breathing precedes the rising of the sun. The Latin term Aurora is similarly related to Aura. (Herrman, über das Wesen, &c., p. 98.—Keightley's Mythology, p. 63, seqq.) Aurora is sometimes represented in a saffron-coloured robe, with a wand or torch in her hand, coming out of a golden palace, and ascending a chariot of the same metal. Homer describes her as wearing a flowing veil, which she throws back to dispel the dispersion of light, and as opening with her rosy fingers the gates of day. Others represent her as a nymph crowned with flowers, with a
AUS

star above her head, standing in a chariot drawn by winged horses, while in one hand she holds a torch, and with the other scatters roses, as illustrative of the flowers springing from the dew, which the poets describe as diffused from the eyes of the goddess in liquid pearls. (Compare Inquirimi, Mon. Etrusc., 1, 5.—Mullin, Vases de Camos, 6. Vases, 1, 15.—Id. ibid., 2, 37.—Eckhel, Syll., 7, 3.—Müller, Archæol. des Kunst, p. 611.)

Aurunci, a people of Latium, on the coast towards Campania, southeast of the Volsci. They were, in fact, identical with the Ausonians. The Italian form of the name Ausones can have been no other than Auruni, for from this Aurunci is manifestly derived. Aurunci in Aurunicus; the termination belongs to the number of adjective-forms in which the old Latin luxuriant, is now even to form Toscancius from Tuscanus. (Niebuhr, Gesch. des Altertums, vol. 1, p. 56; 2d ed., Cambridge transl.)

Aurus, a river of Etruria, which formerly joined the Tiber, not far from the mouth of the latter. At present they both flow into the sea by separate channels. Some indication of the junction of these rivers seems preserved by the name of Osari, attached to a little stream or ditch which lies between them. (Oros., Anc. Italy, vol. 1, p. 174.)

Ausonia, a province of Etruria, the name of a people of Libya. (Herodot., 4, 171.) They extended from above Barca to the neighbourhood of the Hesperides. (Compare Rennell's Geography of Herodotus, vol. 2, p. 266.)

Ausci, a people of Gallia Aquitania. Their capital was Ausci, now Ausch, on the Ger, one of the southern branches of the Garumna or Garonne. Its earlier name was Clembiris or Clémbrum. (Cæs., B. G., 3, 27.—Mela, 3, 2—Amm. Marc., 13, 29.) They were, however, of Libyan origin, and from whom the Ausones, a people of Italy, were fabled to have been descended. (Vid. Ausonia.)

Ausonia, a name properly applied to the whole southern part of Italy, through which the Ausones, one of the ancient races of Italy, had spread themselves. Its derivation from Auson, son of Ulysses and Calypso, is a mere fable. The sea on the southeast coast was for a time called the sea of them More Ausonius. Niebuhr remarks that the Ausonians a portion of the great Ocean nation. (Rom. Hist., vol. 1, p. 56, 2d ed., Cambridge transl.)

Ausonius (Decius, or, more correctly, Decimus, Magnus), a Roman poet of the fourth century. The most authentic particulars respecting him are to be found in his own writings, and more especially in the second volume of his Praefatuncule, wherein he treats the subject professedly. He was born at Burdigala (Bordeaux), where his father, Julius Ausonius, was an eminent physician, and also a Roman senator and member of the Municipal Council. Had his education been solely confided to paternal attentions, it is probable that no record of him would have been necessary among the Latin poets, since the elder Ausonius, although well read in Greek, was but indifferently acquainted with the Latin tongue. By the exertions, however, of his maternal uncle, Eumilus Magnus Arborius, himself a poet, and the reputed author of an elegy still extant, "Ad nympham nimiris cultam," and those of the grammarians Minervius, Nepotian, and Staphylius, the disadvantages of our poet's circumstances were abundantly removed. From these eminent men he acquired the principles of grammar and rhetoric. His success in the latter of these studies induced him to make trial of the bar; but the failure of his attempt, and by the A.D. 397 he was appointed by the Emperor Valentinian tutor to the young prince Gratian, whom he accompanied into Germany the following year. He became successively Count of the empire, quastor, governor of Gaul, Libya, and Latium, and first consul. The last of these dignities he obtained A.D. 379. The question has been often started, whether Ausonius was a Christian or not. Some have doubted the circumstance on account of the extreme licentiousness of certain of his productions. It is difficult, however, to deny the affirmative of this question without attacking the authenticity of some of his pieces, such as the "Idyll" to the first Idyl: besides than we imagine that so zealous a Christian as Valentinian would have confided to a pagan the education of his son! As to the licentious character of some of his poetry, it may be remarked, that, in professing the prevailing religion of the day, he omitted, perhaps, to follow its purer precepts, and hence indulged in effusions revolting to morality and decency. The frequent use which he makes of the pagan mythology in his writings does not prove anything against his observance of Christianity, since the spirit of the times allowed this absurd mixture of fable with truth. —The exact time when Ausonius died is uncertain; he was alive in 392. —The poetry of Ausonius, on the whole, like that of Avienus, is marked by poverty of argument, profusion of mechanical ingenuity, and imitation of, or, rather, compilation from, the ancients. It is valuable, however, to the literary history of his time. It affords an admirable insight into the state of poetry in that age; and the station and pursuits of the author allowed him that familiarity with contemporary poets which has imparted to his works the character of poetical memoirs. —Of the editions of Ausonius, the best, although a very rare one, is that of Tollius, Amst., 1671, 8vo. It contains the learned commentary of Joseph Scaliger, together with selected notes from Accursius, Barthius, Gronovius, Grævius, and others. The Delphin edition is also held in considerable estimation. The Biipton edition, published in 1783, 8vo, is a useful and correct one. (Bähr, Gesch. Rom. Lit., vol. 1, p. 304, seq.—Schöll, Hist. Lit. Rom., vol. 3, p. 52.—Encycl. Metrop., Div. 3, vol. 2, p. 576, seq.)

Auspicia, a sacerdotal order at Rome, nearly the same as the augurs. Auspec (the nom. sing.) denoted a person who observed and interpreted omens, especially those connected with those of flight and flight alone; "auspecia" and "auspecors" being the terms to be derived from anis, a bird, and specio, "to behold" or "observe," the earlier form of the word having been avispec. In later times, when the custom of consulting the auspices on every occasion lost much of its strictness, the term auspec acquired a more general signification. Before this, the name was particularly applied to the priest who officiated at marriages; but now, those employed to witness the signing of the marriage contract, and to see that everything was rightly performed, were called auspices nuptiarum, otherwise proxeneta, conciliatrices, and promubi, in Greek παρατηρητη. (Val. Max., 2, 1, 1.—Cic., de Divin., 1, 16.—Sueton. Claud., 26.—Serv. ad Eqn., 1, 350, et 4, 45.—Buleng., de Aug. et Ausp., 3, 13.) Hence auspec is put for a favourer or director; thus, auspec legis, "one who advocates a law;" dis auspecicul, "under the guidance of the gods;" impusa, "under the inspiration of the muse," &c. (Consult remarks under the article AUSTRIC.)

Auster, the South wind, the same with the Notos of the Greeks. Pliny (2, 48) speaks of it as a dry, withering wind, identifying it, therefore, with the Sirocco of modern times. Aristotle (Probl., 1, 23) ascribes to its influence burning fevers. Horace (Serm., 2, 6, 18) calls it "plumbus Austor," thus characterizing it as unhealthful and the occasion of fevers; and the same person, using the Latin language, as "neces corporis." (Od., 2, 14, 15.) Statius describes the roses as dying at its first approach, "Pudentese rosei primos monitum ad Austro." (Sylv., 3, 3, 129.)
AZAN, I. a mountain of Arcadia, sacred to Cybele. (Stat., Theb., 4, 292.)—II. A son of Arcas, king of Arcadia, by Erato, one of the Dryades. He divided his father's kingdom among his brothers Aphides and Elatus, and called his share the Ezana. Azania a fountain called Chlorous, whose waters gave a dislike for wine to those who drank them. (Virr., 8, 3.—Ovid., Met., 15, 322.—Pausan., 8, 4.—Plin., 21, 2.—Etymol. Mag., s.v. Klitorous.)—III. A region on the northeastern coast of Africa, lying south of Aromatum Promontorium and north of Barbaria. It is now Ajan. (Plin.—Arrian, Peripl. Mar. Eryth. —Stukius, ad Arrian., l.c., p. 90.)

AZANIA, a place in Libya, surrounded on both sides by delightful hills covered with trees, and watered by a river, where Battus built a town, previous to founding Cyrene. (Herod., 4, 157.) Potlemy calls the place Azylis. The harbour of Azanis, mentioned by Synesius (c. 4), appears to coincide with this same place. Pachus thinks, that the Aziris of Herodotus coincides with the modern Termimine. (Voyage, &c., p. 50, seqq.)

AZORUS (the Assod of Scripture), one of the five chief cities of the Pholistines, and, at the same time, one of the oldest and most celebrated cities of the land. The god Dagon was worshipped here. It lay on the seacoast, and in the division of the country among the Israelites, it fell to the tribe of Judah, but was not conquered until the reign of Solomon. In the time of King Hezekiah it was taken by the Assyrians, and subsequently by Pseudoicthinus, king of Egypt, in the year of the captivity of nineteen years. (Herod., 2, 157.) At a later period Azorus became the seat of a Christian bishop. The ruins of the ancient city are near a small village called Eusud. (Mannert, Geogr., vol. 6, pt. 1, p. 261, seq.)

BAB. BABBIS or BABIRUS; or, as the names sometimes corrupted, Gabillas, a Greek poet, who lived, according to Tywhirt, either under Augustus or a short time before that emperor; while Coray, on the other hand, makes him a contemporary of Bion and Moschus. The particulars of his life have not reached us. All that we know of him is, that, after the example of Socrates, who, while in prison, amused himself with verifying the fables of Laoph, Babirus published a collection of fables under the title of μεθιστον, or μεθιστος, from which the fables of Phadrus are closely imitated. They were written in choliambics, and comprised in ten books, according to Suidas, or two volumes, according to Avianus. (Av. Pref. Fab.)—These two accounts are not at variance with each other, as the books were doubtless divisions made by the author, like the books of Phadrus, perhaps with an appropriate introduction to each; while the "volumina" of Avianus were probably rolls of parchment or papyrus, on which the ten books were written. It may be further observed, that Avianus calls the books of Phadrus libelli, and not volumina. In this manner may be explained the statement of Pliny (8, 16), that Aristotle's writings on Natural History were contained in nearly fifty volumina. (Compare Menage, ad Diog. Laert., 5, 26.) This collection threw all preceding ones into comparative obscurity. It appears to have been still in existence as late as the twelfth century, in the days of Tzitzee : the抄写ists, however, could not preserve the charms of the versification which Babirus had adopted, thought they could not do better than convert it into so much prose; and the fragments of verses, which they were unable in this way perfectly to disguise, are all that recalls the original lines which they have spoiled. The collection of Babirus, thus dishonoured, was perpetuated by numerous copies, in which traces

AXI, a people of Africa, on the western or Atlantic coast of Mauritania Tingitana. (Plin., 6, 31.—Lucan, Pharsal., 4, 877.—Sil. Ital., 2, 63.)

AXIUS, a son of Mercury and Philonis, according to the scholiast on Homer (Od., 19, 432), but, according to Pausanias (8, 4), the son of Damalion, and not of Mercury. He dwelt on Parnassus, and was celebrated as a stealer of cattle, which he carried off in such a way as to render it nearly impossible to recognise them, all the marks being defaced. Among others, he drove off those of Sisyphus, and he defaced the marks as usual; but, when Sisyphus came in quest of them, he, to the great surprise of the thief, selected his own beasts out of the herd, for he had marked the initial letter of his name under their hoofs. (The ancient form of the Σ was C, which is of the shape of a horse's hoof.) Autolycus forthwith cultivated the acquaintance of one who had thus proved himself too able for him; and Sisyphus, it is said, seduced or violated his daughter Anticlea (who afterward married Laertes), and thus was the real father of Ulysses. (Thuryeoci, ap. Schol. ad Od., 19, 432.—Schol. ad Il., 10, 267.—Tzetze, ad Lycophr., 344.—Keightley's Mythology, p. 400.)

AUTONEDON, a son of Dioreus, who went to the Trojan war with ten ships. He was the charioteer of Achilles, after whose death he served Pyrrhus in the same capacity. (Hom., Il., 9, 16, &c.—Virg., Aen., 2, 477.)

AUTONOE, a daughter of Cadmus, who married Aristaeus, by whom she had Acteon, often called Auteius heros. The death of her son (vid. Acteon) was caused by his rashly entering the house of Dione at Megara, where she soon after died. (Pausan., 1, 44.—Byrtn., fab., 179.—Ovid., Met., 3, 720.)

AUTHORIPS, a people of Hispania Tarraconensis, among the Cantabri. They occupied what is now the eastern half of La Montana, the western quarter of Biscay and Alava, and the northeastern part of Burgos. Their capital was Flavijorba, now Porto Gallete, near Bilboa. (Florizel, Exp. 8, 24, 10.—Ubert, Geogr., vol. 2, p. 446.) Mannert, however, makes it to be Santander. (Geogr., vol. 1, p. 373.)

AXIUS, the ancient name of the Euxine Sea. The word signifies inhospitable, which was highly applicable to the manners of the ancient inhabitants of the coast. It took the name of Euxinus after the coast was settled by Greek colonies. ( Vid. Pontus Euxinus.)

AXIUS, the largest river in Macedonia, rising in the chain of Mount Scardus, and, after a course of eighty miles, forming an extensive lake near its mouth. It falls into the Sinus Thermaicus, after receiving the waters of the Erigonus, Ludias, and Astraus. In the middle ages this river assumed the name of Bardarus (Theophylact, Epist., 55.—Niceph. Greg., vol. 1, p. 230), whence it has been derived that of Vardari or Vardar, which it now bears. (Cramer's Anc. Greece, vol. 1, p. 235.)
BABYLON.

of the original became more and more obscured, until a single apologue alone, that of the swallow and nightingale, bore marks of a veriﬁed fable. This piece found its way into a collection of fables attributed to Ignatius Magister, a priest of Constantinople, who, being in possession of a copy of the original work in the Coptic, in a Chaldaic version, as that author had written them, resolved to change them into iambic tercets. With this view he abridged and tortured each apologue until he succeeded in reducing them individually to four verses. Fifty-three fables were thus strangled; but as if Ignatius had wished, by means of a comparison, to augment our regrets for those which he had altered, he preserved entire and unaltered two of the smallest, the reasons we have omitted. At the period when the Greek authors began to be printed, the true collection of Babrius no longer existed: it was thought, however, that the collection of Ignatius was the original one, and hence it was published under the name of Babrius, or rather Gabrias, the B in the manuscripts being confounded with a T.

The error of the name was only perceived about the close of the sixteenth century. Two English scholars, thereby inferred that Σαβρίου in his edition, and, at a later period, Tyrwhitt, in his dissertation on Babrius (3rd ed., 1776, 8vo), have avenged the memory of the poet, and dissipated much of the obscurity which hung over this portion of literary history. The latter of these two scholars reunited all the fragments of Babrius to be found in Suidas, as well as all those which were to be met with in other works. In this way he succeeded in recomposing four of the fables of Babrius, that is, the nine numbers now amended in all five.

Thirty-three years afterward (1809) De Furia published many fables of Αἰσοπ, up to that time unedited. In the number of these were thirty-six, which he believed to be written in prose like the rest, and which he printed as prose compositions; they were, in reality, however, vernified fables, and a few corrections sufﬁced to restore them to their primitive form. This service has been rendered by Cory, in his collection of Αἰσοπ's Fables; by J. G. Schneider, at the end of his edition of Αἰσοπ, from the Augustan MS.; by Berger, in an edition of the remains of Babrius, published at Munich in 1816; by Mr. G. Burges, in the Classical Journal (whose collection, however, is unﬁnished); by the present Bishop of London (Dr. Blomfielid), in the third number of the Museum Criticum; and by an anonymous writer in the second number of a photographic Museum. (Schooll, Hist. Lit. Gr., vol. 4, p. 61, seq.-Cambridge Philol. Mus., p. 9, p. 292, seq.)

BABYLON.

I. A celebrated city, the capital of the Babylonian empire, situate on the Euphrates, in 32° 25' north latitude, and 44° east longitude, as is supposed. Its origin is lost in the obscurity of early times. It is remarkable enough that Herodotus should have given us no intimation respecting its founder; he mentions in his history the city of Asarius, two of its queens, strengthened the fortifications, and guarded the city against inundations of the river, as well as improved and adored it. May we not conclude from this, asks Rennell (Geography of Herodotus, vol. 1, p. 442), that its antiquity was very great; and ascended so high that Herodotus could not satisfy himself concerning it? At the same time, this Intelligent writer, the improvements that took place in the city of Babylon after the destruction of Nineveh, occasion the original foundation to be ascribed to her; she having happened in the history of other cities. Herodotus informs us (1, 178), that Babylon became the capital of Assyria after the destruction of Nineveh.

Perhaps, then, we ought to date the foundation of those works which appear so stupendous in history from that period only: for, wonderful as these works appear, even when ascribed to the capital of an empire, the wonder increases when ascribed to the capital of a province only. If, then, with the ancient authors generally, we allow Semiramis to have been the foundress of that Babylon described by Herodotus, we cannot ﬁx the date of the improved foundation beyond the reign of Sennacherib (705-681). For, the duration of this city, in its improved form, was less than 800 years, reckoning to the time of Pliny. (Rennell, Geography of Herodotus, vol. 1, p. 443, seq.)—The shape of the city of Babylon was that of a square, traversed each way by twenty-ﬁve principal streets, which, of course, intersected each other, dividing the city into 625 squares. These streets were terminated at each end by gates of brass, of prodigious size and strength. In the course of time, we have excluded. Respecting the height and thickness of the walls of Babylon, there are great variations among the ancient writers. Herodotus makes them 200 royal cubits, or 337 feet, 8 inches high, and 50 royal cubits, or 84 feet, 6 inches broad. Ctesias gives 50 fathoms (bpvotia), or 300 feet, for the height. An anonymous writer in Diodorus Siculus makes the height 50 common cubits, or 75 feet, and this estimate is followed by the Rev. Mr. Rennell, the Rev. Mr. Strabo, and Quintus Curtius, had Ctesias respectively in view, but that, startled at the number of 50 fathoms, they have reduced it to the number of 50 cubits. The number 200, employed by Pliny, proves that he had consulted Herodotus merely; but that, through inadvertence on his part, or through the fault of later copyists, feet are substituted for cubits. Orosius follows Herodotus, but, forgetting that the latter speaks of royal cubits, he contented himself with giving 200 common cubits. (Lar rer, ad Herod., 1, 178.) But are we to receive the estimate of Herodotus as correct, and entitled to full belief? Evidently not: the measurement is incredible, and bears on its very front the impress of gross exaggeration. A diﬃculty also presents itself with regard to the extent of the walls of Babylon. Herodotus makes them 120 stadia each side, or 480 in circumference. Pliny and Sollinus give the circuit at 70 Roman miles, a number, which, reckoning eight stadia a mile, agrees with the account of Herodotus. Strabo makes it 355 stadia. Diodorus, from Ctesias, assigns 360, but from Clitarchus, who accompanied Alexander, 365. Curtius gives 368. It appears highly probable, remarks Rennell (Geography of Herodotus, vol. 1, p. 447), that 360 or 365 was the true statement of the circumference, since one of these numbers was reported by Ctesias, the other (which diﬀers very little) by Clitarchus, both of whom, it may be supposed, knew the country. The circumference of Babylon at 365 stadia, and these at 491 feet, each side of the square (which is equal to 914 stadia) will be 8485 British miles, or nearly 84. This gives an area of 72 miles and an inconsiderable fraction. If the same number of stadia be taken at 500 feet each, the area will be 74.8. And, ﬁnally, the 385 stadia of Strabo, at 491 feet, about 90. The 480 stadia of Herodotus would give 105 miles, a number which, reckoning eight stadia a mile, agrees with the 480 of London! But that even 72 contiguous square miles should have been in any degree covered with buildings, is on every account too improbable for belief. This famous city, in all likelihood, occupied a part only of the vast space enclosed by its walls. It is a question that no one can positively answer, "what proportion of the space was occupied?" It is possible, however, that nearly two
BABYLON.

The great city of Babylon was one of the seven wonders of the ancient world. It was founded by Nebuchadnezzar, king of Babylon, in the 7th century BC.

The city was located on the east bank of the Euphrates River, in modern Iraq. It was a center of trade, culture, and religion.

The city was laid out in a grid pattern, with a central marketplace and a palace complex. The palace was the largest building in the world at the time.

Babylon was also known for its gardens, which were famous for their beauty. The Hanging Gardens of Babylon were one of the seven wonders of the ancient world.

The city was destroyed by the Persians in 331 BC, and was later rebuilt by Alexander the Great. It was abandoned in the 4th century AD.

Despite its decline, Babylon remains a significant archaeological site in modern times. The ruins of the city are a UNESCO World Heritage Site.

The city was noted for its grandeur and beauty, and its influence on later cities can be seen in the design and layout of many ancient cities, including Rome and Constantinople.

The city was also known for its fortifications, which were considered to be the most advanced of their time. The walls of Babylon were 18 feet thick and 20 feet high, and were made of bricks and reeds.

The city was home to many different cultures, including Babylonian, Assyrian, and Persian. It was also a center of learning and philosophy, with the University of Babylon being one of the most famous in the ancient world.

the army of Cyrus entered the channel from their respective stations on each side of the city, they rushed onward towards the centre of the place; and finding the gates leading towards the river left open, in the drunkenness and negligence of the night, they entered them, and met by concert at the palace before any alarm had been given: here the guards, pertaining, no doubt, in the negligence and disorder of the night, were surprised and killed. While all this was going on without, a remarkable scene of widespread wonder and distraction was transacting within. Daniel was deciphering the writing on the wall; and, soon after, the soldiers of Cyrus, having killed the guard, and meeting with no resistance, advanced towards the banquetting-hall, where they encountered Belshazzar, the ill-fated monarch, and slew him, with his armed followers.—Babylon had suffered much when carried by the troops of Cyrus; but other sufferings were to come. Cyrus having established his capital at Babylon, formerly a most sacred, religious town, was thus reduced to the rank of a provincial city; and the inhabitants, who, grown wealthy and proud during their empire over the East, could ill brook this change of fortune, resolved to make an effort towards regaining their former power and greatness. Accordingly, in the fifth year of Darius Hystaspis, and twelve years after the death of Cyrus, having for several years covertly laid in great stores of provisions, and accumulated a vast army of revolting subjects, which, as they might have expected, soon brought upon them the armies of Darius. The city a second time was taken by stratagem (vid. Zopyrus), and Darius, when he again became possessed of it, gave it up to the plunder of his soldiers. He impaled 3000 of those who were supposed to have been most active in the revolt; took away the gates, and pulled down the walls. The city was of fifty cubits, while the remainder of the reign of Darius, Babylon continued in much the same state in which it was left after the siege. But in the succeeding reign another blow was struck towards her downfall. Xerxes, in his return from his Grecian expedition, partly to indemnify himself for his losses, and partly out of zeal for the Mabrian religion, which held every kind of image-worship in abhorrence, destroyed the temples and plundered them of their wealth. This was the seventh of his reign, which appears hitherto spared, and must have been indeed prodigious; that in the temple of Belus alone amounting, according to Diodorus, to above 6000 talents of gold, or about 21 millions sterling. From this period, Babylon, despoiled of her wealth, her strength, and her various resources, was in no condition for any more revolts; and it is reasonable to suppose, that, with the decay of her power and local advantages, the population also dwindled, and, no longer laboring under the name of a metropolis, the city was of little importance. Accordingly, when the arrival of Alexander at Babylon, whose history he will next consider, the inhabitants of the ancient capital of Persia, and the greatest city the sun ever saw, there was remaining but the walls. And Lucian, about the end of the same century, says, that in a little time it would be sought for, and not be found, like Nineveh. Jerome, in the fourth century, gives the account of a monk, that at that time living in Jerusalem, who had been at Babylon, and who says that the space occupied by the city was measured into a chain for wild beasts, for the kings of Persia to hunt in; that the walls being having been repaired for that purpose. Among more recent travelers, the best accounts of the ruins of Babylon are given by Kinneir, Rich, Porter, and Buckingham. The ancient city is supposed to have been situated in what is now the Turkish pachalic of Bagdad, near the village of Hill or Hella, on the Euphrates. Ruins of various kinds are found for many miles around this spot, which is thought to be the remains of the tower of Belus. Mr. Rich, after refuting the opinion of Ren- nell, who places it on the eastern side of the river, gives the following account of this stupendous ruin,
or, as it is called by the natives, BirI Nemroud ("The Hill of Nimroud"). "If any building," says he, "at Babylon, with its parapet or ziggurat, or truncated pyramid, it is certainly the pyramid or tower of Belus; which, by its form, dimensions, and the solidity of its construction, was well calculated to resist the ravages of time; and, if human force had not been employed, would in all probability have remained to the present day in nearly as perfect a state as the pyramids of Egypt. Even under the dilapidations which we know it to have undergone at a very early period, we might reasonably look for traces of it after every other vestige of Babylon had vanished from the face of the earth. The whole height of the BirI Nemroud above the plain, to the summit of the brick wall on its top, is 235 feet. The brick wall itself, which stands on the edge of the summit, and was undoubtedly the face of another stage, is 37 feet high. In the side of the pile, a little below the summit, is very clearly to be seen part of another brick wall, precisely resembling the fragment which crowns the summit, but which still encases and supports its part of the mound. This is clearly indicative of another stage, of greater extent. The masonry is infinitely superior to anything of the kind I have ever seen; and, leaving out of the question any conjecture relative to the original destination of this ruin, the first impression made by the sight of it is, that it was a solid pile, composed in the interior of unburned brick, and perhaps earth or rubble, and then faced with good bricks, which were stamped and faced with fine burned bricks, having inscriptions on them, laid in a very thin layer of lime cement; and that it was reduced by violence to its present ruinous condition. The upper stories have been forcibly broken down, and fire has been employed as an instrument of destruction, though it is not easy to say precisely how or why. The facing of fine bricks has partly been removed, and partly covered by the falling down of the mass much of it carried away with it. The BirI Nemroud is in all likelihood at present nearly in the state in which Alexander saw it; if we give any credit to the report that 10,000 men could only remove the rubbish, preparatory to repairing it, in two months. If indeed it required one half of that number to disencumber it, the state of dilapidation must have been complete. The immense masses of vitrified brick which are scattered about appear to have been taken from the summit of the mound since the time of its destruction. The rubbish about its base was probably in much greater quantities, the weather having dissipated much of it in the course of so many revolting ages; and possibly portions of the exterior facing of fine brick may have disappeared at different periods." (Second Memoir on the Ruins of Babylon, p. 165, seqq., Lond., 1839.)—The account of Sir Robert Ker Porter is also exceedingly interesting—"As regards the opinion generally entertained, that all traces of the walls of Babylon had disappeared, it may be remarked, that Buckingham considers the hill or mound of Al Heïmar to be a portion of the ancient wall. This mound is about ten miles east of Hillah. It appears to consist of a solid mass of brickwork, and is of an oval form, its length being from north to south. It is from 80 to 100 feet thick at the base, and is a mass of solid wall, about 30 feet in length by 12 to 15 in thickness, bearing marks of being broken and incomplete on every side. The bricks obtained from the ruins of Babylon are celebrated among antiquaries for the inscriptions stamped upon them. These inscriptions are in the cuneiform or Babylonian character: some four, and even seven lines. Groefendé, Burnouf, and Lassen have done much towards deciphering these. (Hercen, Ileen, vol. 2, pt. 2, p. 325, seqq.—Mansfield's Script. Gazetteer, p. 58, seqq.)—II. A city of Egypt, north of Memphis, supposed to have been founded by the Persians during the reign of Cambyses. In the year 400, about one quarter of Babylon, in the town of Old Cairo, marks its position. (Ivrol., 4, 5.—Strab., 555.—Joseph., Ant. Jud., 2, 5.)

Babylonia, a large province of Upper Asia, of which Babylon was the capital. It was bounded on the north by Mesopotamia and Assyria; on the west by Arabia Desert a; on the south by the Sinus Persicus; and on the east by the Tigris. According to Ptolemy (5, 20), it comprised Chaldaea, Amordacia, and, at the most flourishing period, a part of Mesopotamia and Assyria. The modern name is Irâk Arabi, or Babelti. Babylonia is a dry steppe or table-land, but enjoys a delightful climate. It was and still is one of the most fruitful lands in the world. Herodotus (1, 193) gives the following account of its fertility. "All the country about Babylon is, like Egypt, divided by frequent canals; of which the largest is navigable, and, beginning at the Euphrates, has a southeastern direction, and falls into the river Tigris, on which the city of Nineveh formerly stood. No part of the known world produces so good wheat; but the vine, the olive, and the fig-tree, they do not even attempt to cultivate. Yet, in recompense, it abounds so much in corn, as to yield at all times two hundred fold, and even three hundred fold when it is most fruitful. Wheat and barley carry a blade full four digits in breadth; and though I well know to what a surprising and productive height millet and sesame grow in those parts, I shall be silent in that particular; because I am well assured that what has already been related concerning other fruits, is far more credible to those who have never been at Babylon. They use no other oil than such as is drawn from sesame. The palm-tree grows over all the plain; and the greater part bears fruit, with which they make bread, wine, and honey." The products are nearly the same now as they were in ancient times. The southern part of Babylonia was called the Gard. In the more extensive sense of the word, Babylonia was the most important satrapy of the Persian empire, and comprised both Assyria and Mesopotamia. (Plin., 5, 12.—Id., 6, 26.—Id., 18, 45.—Strab., 353, &c.)

Babysa, a fortified castle near Artaxata, where were kept the treasures of Tigranes and Artabanus. (Strab., 364.)

Bacchus, the priestesses of Baccus. (Vid. Baccantes.)

Bacchanalia, festivals in honour of Bacchus at Rome, the same as the Dionysia of the Greeks. (Vid. Dionysia.)

Bacchantes. The worship of Bacchus prevailed in almost all parts of Greece. Men and women joined in his festivals dressed in Asiatic robes and bonnets; their heads, wreathed with vine and ivy leaves, with fawn-skins (velueùde) hanging over their shoulders, and thyrsi, or blunt spindles twisted with vine-leaves, in their hands, they ran through the country, shouting Io Bacche! Ewai! Iacche! &c., swelling their thyrsi, beating on drums, and sounding various instruments. Inde- cent emblems were carried in procession, and the ceremonies often assumed a most immoral character and tendency. The women, who bore a chief part in these frantic revels, were called Bacchiac, Baccaclides, Thyades, Eututades, &c. (Pindar. Pyth., 94.; Wycherley's Mythology, 216.)

Bacchus and Bithys, two celebrated gladiators of equal age and strength; who, after conquering many competitors, engaged with each other and died of mutual wounds; whence the proverb to express equality, Bithus contra Bacchum. (Horat., Serm., 1, 7, 20—but Porphyry, Schol. ad Horat., l. c.)

Bacchus, son of Jupiter and the noble daughter of Cadmus. Jupiter, enamoured of the beauty of Semele, visited her in secret. Juno's jealousy took the alarm, and, under the form of an old woman, she came to
Semele, and, by exciting doubts of the real character of her lover, induced her, when next he came, to ex- act a promise that he would visit her as he was wont to visit Juno. An unwary promise was thus drawn from the god before he knew what he was required to perform; and he therefore entered the bower of Seme- le, with the lightning and thunder flashing about him and roaring around him. Overcome with terror, Semele, who was now six months gone with child, expired in the flames, and Jupiter, taking the babe, thus prematurely born, sewed it up in his thigh. In due time it came forth, and Jupiter, then naming it Bacchus (in Greek Dionysus), gave it to Mercury to convey to Ino, the sister of Semele, with directions to rear it. Juno, whose revenge was not yet sated, caused Abaris, the husband of Ino, to go mad; and Jupiter, to save Bacchus from the machinations of his spouse, changed him into a kid, under which form Mercury conveyed him to the Nymphae of Nysa, by whom he was reared. When he grew up, he disco- vered the culture of the vine, and the mode of extract- ing its precious liquor; but Juno struck him with madness, and he roamed through great part of Asia. In Phrygia Rhes cured him, and taught him his religious rites and mysteries, and caused him to be born to Dionysus. When passing through Thrace, he was so furiously attacked by Lycurgus, a prince of that country, that he was obliged to take refuge with Thetis, in the sea. But he inflicted on the monarch severe retaliation. (Vid. Lycurgus.) When Bacchus reached Thebes, the women readily received the new rites, and ran wildly through the woods of Citharon. Pentheus, the ruler of Thebes, however, set himself against them; and Bacchus caused him to be torn to pieces by his mother and his aunts. He next proceeded to Aeties, where he taught Icarius the culture of the vine. (Vid. Icarius, Ergone.) At Argos the rites of Bacchus were received, as at Thebes, by the women, and op- posed by Perseus, son of Jupiter and Danaë. Jove, however, reduced his two sons to amity, and Bacchus thence passed over to Naxos, where he met Ariadne. On his way to this island he fell into the hands of Tyrrhenian pirates, who bound him with cords, in- tending to sell him as a slave. But the cords fell from his limbs, vines with clustering grapes spread over the sail, and ivy, laden with berries, ran up the masts and sides of the vessel. The god, thereupon assuming the form of a lion, seized the captain of the ship, and the terrified crew, to escape him, leap into the sea and became dolphins. The pilot alone, who had taken the part of friend and guide, was changed by Jupiter to a god that was declared to him who was, and took him under his protection. The expedition of Bacchus into the East is also celebrated. In the Bacchae of Euripides the god describes himself as having gone through Lydia, Phrygia, Persia, Bactria, Media, Arabia, and the coast of Asia, inhabited by mingled Greeks and barbarians, throughout all which he had established his dances and religious rites. India, in particular, was the scene of his labors; and Dionysus, when at last assembled, was composed of both men and women, all inspired with divine fury, and armed with thyrsi, clashing cymbals, and other musical instruments, and uttering the wild- est cries. His conquests were easy and without bloodshed; the nations readily submitted, and the god taught them the use of the vine, the cultivation of the earth, and the art of making honey. Bacchus was also taught the gods in their wars against the giants, having occasion, on one occasion, the form of a lion. He afterward descended to Ere- bus, whence he brought his mother, whom he now named Thyone, and ascended with her to the abode of the gods. (Apollod. 3, 5, 3.; Diod. Sic., 3, 62.; Id., 4, 25. — Horat. Od., 2, 19, 29.)—Like every other portion of the Grecian mythology, the history of the vine-god was pragmatised when infidelity became prevalent. Thus, Diodorus gives us, probably from the cyclograph Dionysus, the following narrative. Ammon, a monarch of Libya, was married to Rhea, a daughter of Manes; but meeting, near the Cœanarian mountains, a beautiful maiden named Amalthea, he became enamoured of her. He made her mistress of the asylum of the god of horses, and, himself bringing a bull's horn in form, was named the Western horn, and then Amalthea's horn, which last name was afterward given to places similar to it in fertility. Amalthea here bore him a son, whom, fearing the jealousy of Rhea, he conveyed to a town named Nysa, situated not far from the Horn, in an island formed by the river Triton. He committed the care of him to Nysa, one of the daughters of Aristus, while Minerva was appointed to keep guard against the attacks of Rhea. This delicious isle, which was precipitous on all sides, with a single entrance, through a narrow glen thickly shaded with trees, is described in a similar manner with Panchaia and other happy retreats of the same nature. It had verdant meads, abundant springs, trees of every kind, flowers of all hues, and evermore resounded with the melody of birds. (Compare Mil- ton, P. L., 4, 275, seqq.) After he grew up, Bac- chus taught the Nysaean cymbals, according to this legend, and a benefactor of mankind, by whom he was finally deified.—Though the adventures of Bacchus were occasionally the theme of poets, especially of the dramatists, they do not appear to have been narrated in continuity, like those of Hercules, until after the de- cline of Grecian poetry. It was in the fifth century of the Christian era that Nonnus, a native of Panopoli, in Egypt, made the history of Bacchus the subject of a poem, containing forty-eight books, the wildest and strangest that can well be conceived, more re- sembling the Ramayuna of India than anything to be found in ancient or modern occidental literature. It forms a vast repertory of Bacchic fable. (Vid. Non- nus.)—Bacchus was represented in a variety of modes and characters by the ancient artists. The Theban Bacchus appears with the delicate lineaments of a maiden rather than those of a young man; his whole air and gait are effeminate; his long, flowing hair is, like that of Apollo, collected behind his head, wreath- ed with ivy or a fillet; he is either naked or wrapped in a large cloak, and the nebrosis, or fawn's skin, is some- times flung over his shoulders; he carries a thyrsus, and a panther generally lies at his feet. In some monuments Bacchus appears bearded, in others horned (the Bacchus-Sebastus), whence in the mysteries he was identified with the god of vegetation. For another legend relative to the horns with which he is depicted, consult the article Ammon. He is some- times alone, at other times in company with Ariadne or the youth Ampelus. His triumph over the Indians is represented in great pomp. The captives are chain- ed, and placed on waggons or elephants, and among them is carried a large crater full of wine. The god himself is in a chariot drawn by elephants or panthers, bearing on Ampelus, propped up on a pedestal by Silenus, the satyr, and Mænaides, on foot or on horseback, who make the air resound with their cries and the clash of their instruments. The Indian Bac- chus is always bearded.—It is with reason that Sopho- cles styles Bacchus many named (πολυνομος, Antig., 1115), for in the Orphic hymns alone we meet with upward of forty of his appellations. The etymology of the most common one, Bacchus, has never been satisfactorily given, and another, which is given as a sole name for Iacchus, (Vid. Iacchus.) Some make it the same with Bagis, one of the names of the Hindu deity Schiva. (Keightley's Mythology, p. 212, seqq.)—Modern writers are much divided in opinion respect- ing the origin of the worship of Bacchus, and many arguments have been urged in support of its having come from a Grecian source. A dispasionate view
of the subject, however, will lead, we think, to the conviction that the religious system of this deity is of Indian origin. In order, however, to reach the soil of Greece, it had to traverse other countries, Upper Asia, Phoenicia, Egypt, and Thrace; and, in its march, its fabulous legends became enlarged and variously modified. It is impossible to deny the identity of Bacchus with Osiris. The birth of Bacchus, drawn living from the womb of Semele, after she had perished beneath the fires of Jove's brand, and his strange translation to the thigh of the monarch of Olympus, bear the impress of Oriental imagery. When he escapes from his mother's womb, an ivy-branch springs forth from a column to cover him with its shade (Eurip., Phæn., 658, seqq.), and the ivy was in Egypt the plant erica, which springs suddenly from the ground and envelops it. (Plut., Thib.) Bacchus and Osiris both float upon the waters in a chest or ark. They have both for their symbols the head of a bull; and hence Bacchus is styled Bougesus by Plutarch.—It is equally impossible not to recognise in Bacchus the Schiva of India, as well as the Lingam his symbol. (Compare Rhod. Relig. Bildung, &c., der Hinhus, vol. 2, p. 232.) If we wish to call etymology to our aid, we shall be still nearer the truth. Buttmann (as Schiva—Svava, the Greek name of Bacchus, bears to Diumuqha, (Dena-Niche), a surname of Schiva. (Langl., Recherches asiatiques, vol. 1, p. 278;—Creuzer's Symbolik, par Guignaut, vol. 1, p. 148, in notes.) An analogy may also be traced between the Greek term μπορ, "thigh," and the Indian Merow, the mountain of the gods. One of the symbols of Bacchus is an equilateral triangle; this is also one of Schiva's. The two systems of worship have some common obscurities, and the same ceremonies are performed in the shrine of Schiva and that of the same name in Asia. However, it cannot be said that Bacchus, probably by means of several successive migrations, through regions widely remote, will ever remain an enigma of difficult solution. The Greeks, indeed, made Thebes the birthplace of this deity; but this proves nothing for the fact of his Ceylon origin. Thebes, in Bactria, was the centre of the Ceylon-Asian mythology: a god, whose worship came to the rest of the Greeks out of Thebes, was for them a deity born in Thebes; and hence arose the legend of the Theban origin of Bacchus. (Buttmann's Mythologus, vol. 1, p. 5.) So, when the Greek mythology makes Bacchus to have gone on an expedition to Asia, and to have conquered India, it merely reverses the order of events, and describes, as the victorious progress of a Ceylon deity, what was in reality the course which the religion of an Oriental deity took, from the East to the West. (Kame, Muths der Griezen, § 81.) In the Anti-Symbolik of Voss (p. 65, seqq.), we have an excellent history of the introduction of the worship of Bacchus into Greece, and its progress in that country, from the 20th to the 60th Olympiad. We find this worship making its first appearance in the mysteries of Smythrace; fossilizing with the Ionian school Phoenician elements; enriching itself with ideas of Asiatic origin by means of the extension of contact with India; and laying its foundation in the doctrine of primitive philosophy in their very cradle; presenting Lydian and Phrygian additions as a primitive basis; giving an occult meaning to the public games at Olympia; carrying back into Egypt, under the reign of Psammetichus, along with Milesian colonies, and enriched with immense developments, what the Egyptian colonies had once carried into Greece; identifying itself with the Orphic doctrine; but remaining always an object of suspicion and aversion, and contemned by the wise in the days of Xenophanes and Heraclitus, as it had been a long time before prescribed by kings and rejected by communities. The fables of which Bacchus is made the hero, with which these fables elucidated, bear at one time the impress of profound sadness, at another of frantic joy, and by turns bloody and licentious, mournful and frantic, never became part of the Grecian system of religion. Wherever they announced themselves, they excited only horror and dread. The sufferings and the destruction of various dynasties attach themselves to their frightful and sudden appearance. Agave rends in pieces her son Pentheus. Ino precipitates herself into the sea, with Melicerta in her arms. The daughters of Minya, becoming furious, commit horrible murder, and undergo a hideous metamorphosis. The language of the poets who relate to us these fearful traditions, is sombre and mysterious in its character, and bears evident marks of a sacerdotal origin. The philosophic Euripides, as well as Ovid, who expresses himself with so much lightness in reference to other legends, appear, in describing the death of Pentheus, to participate in the emotions of the Bacchantes, and the fanaticism of the Bacchantes. One would feel tempted to say, that the sacerdotal spirit had triumphed over these incredulous poets, and that, after the lapse of ten centuries, the phrenzy of the ancient orgies had affected their senses and troubled their reason. In the age of Homer these mournful recitals were either unknown or treated with disdain; for he speaks only once of Bacchus, on occasion of the victory which he gained over Lycurgus. (Pindar, Olympia, 7, 442.) Compare also, that other poets express their surprise, that the poet, after having thus placed Bacchus among the divinities of Olympus, makes him take no part in the subjects that divide them. The Grecian spirit, therefore, renounced, at an early period, every attempt to modify this so heterogeneous a conception. (Constanti, de la Religion, vol. 3, p. 419, seqq.)

BACCHYLIDES, a lyric poet of Ceos, nephew to Simonides. He flourished about 500 B.C. and became celebrated poets of his day. Bacchylides shared with Pindar the favour of King Hiero at the court of Syracuse. That his poetry was but a imitation of one branch of that of Simonides, cultivated with great delicacy and finish, is proved by the opinion of ancient critics; among whom Dionysius addsuces perfect correctness and uniform elegance as the characteristics of Bacchylides. His genius and art were chiefly devoted to the pleasures of private life, love, and wine; and, when compared with those of Simonides, appear marked by greater sensual grace and less moral elevation. Among the kinds of choral songs which he employed, besides those of which he had examples in Simonides and Pindar, we find exotic ones. The elaborate and brilliant execution which is peculiar to the school of Simonides, appears also in the productions of Bacchylides, especially in the beautiful fragment in praise of peace. The structure of Bacchylides' versi is generally very simple; nine tenths of his odes, to judge from the fragments, consisted of dactylic series and trochaic dipodias, as we see in those odes of Pindar, which were written in the Doric mode. We find in his poems trochaic verses of great elegance; as, for example, a fragment, preserved by Athenaeus, of a religious poem, in which the Dioscuri are invited to a feast. (After, 11, 450.) Bacchylides was the first in the Doric dialect. Many fragments of his pieces occur in Plutarch, Dionysius of Halicarnassus, Athenaeus, Clemens of Alexandrea, and particularly in Stobaeus. The fragments of Bac-
Ecylades are found in the collections of Neander, H. Stephens, Orsimi, and Brunck. A more complete edition of them appeared in 1822.

Bacénia, a wood in Germany, generally supposed to be a part of the Hercynia Silva, and to have been in situ the vicinities of the Fulda, or Vol, which flows into the Visurgis. It separated the territories of the Catti from those of the Cherusci, and appears to be the same wood of later writers. (Ces., B. G. 6, 10.—Mannert, Geogr., vol. 3, p. 183, 417.)

Bactra, the capital of Bactria, situate on the river Bactrus, a tributary of the Oxus. It is now Balkh, in the country of the Unbeek Tatars. It was likewise called Zarispe and Zarispa. (Pitr., 6, 16.) This place has been a rendezvous of caravans from the remotest antiquity, and at this point it is probable that commerce united Eastern and Western Asia. To this place the natives of Little Thibet, which Herodotus and Ctesias call Northern India, brought the valuable woollens of their country, and likewise the gold which they procured from the great desert of Cobi. The tales which they told to the Western Asians of these wonderful regions might be a little exaggerated, or perverted through the medium of an interpreter. (Long's Anc. Geogr., p. 13.—Compare Hecren, Boen, vol. 1, pt. 3, p. 408, seqq.) Many of these remarks about Bactra and its commerce with the great Zend race, consult the remarks of Rhod, in his Heilige Sage der Baktrer, &c., p. 60, seqq.

Bactra and Bactriana, a country of Asia, bounded by Aria on the west, the mountains of Paropamisus on the south; the Emonti Montes on the east; and Sogdiana on the north. Bactriana now belongs to the kingdom of the Afghans, or Caubulistan. Its proximity to Northern India, and the possession of a large part of the river, the Oxus, with fertile lands, made it, in very remote ages, the centre of Asiatic commerce, and the point of union for all the nations of this vast continent. (Bid. Bactra.) It would seem also, in very early times, to have been the seat of a powerful empire long prior to that of the Medes or Persians. (Compare Bahr, ad Cles., p. 93.)—This country became remarkable at a later age for the Greek kingdom which was founded in it. The same with the Buchania of later writers, at the same time with the Parthian, B.C. 254; yet the mode of its origin was not only different (for it was here the Greco governor himself, who made himself independent, and therefore had Grecians for his successors), but also the duration, which was much less. Solitary fragments of the history of this kingdom have only been preserved, and yet it seems at one time to have extended to the banks of the Ganges and the borders of China. The founder of this kingdom was Diodatous or Theodotus I. (B.C. 254), as he broke from the Syrian sway in the time of Antiochus II. He appears to have been master of Sogdiana as well as Bactria. He also threatened Parthia, but after his death (B.C. 243) his son and successor, Theodotus II., closed a peace and alliance with Arinaces II., but was deprived of his throne by Euthydemos of Magnesia, about B.C. 229. Euthydemos, passing with Antiochus the Great, after the termination of the Parthian war, was directed against him, but ended in a peace, in which Euthydemos, on giving up his elephants, retained his crown, and a marriage between his son Demetrius and a daughter of Antiochus was agreed upon. Demetrius, although he was a great conqueror, appears not to have been king of Bactria, but of Northern India and Malabar, of which country the history is now closely connected with that of Bactria, although all the accounts are but fragmentary. To the throne of Bactria, Menander succeeded, who extended his conquests to Serica, as Delphi
is an appellation of the Hindoo Scehus, and is also
garded by some as the source whence the Greek
Bacchus is derived. (Mannert, Geogr., vol. 5, pt. 2,
p. 120, seq.)

Gesius, an Egyptian eunuch at the court of Artax-
zerxes Ochus, remarkable for his bravery and military
talents. In concert with Memnon, he brought Egypt,
which had revolted, under the Persian sway again.
Ochus, however, having shocked his religious prejudi-
cies by his conduct towards the deified animals of
Egypt, Bagoas destroyed him (vid. Artaxerxes III.),
and placed Arsies, the monarch's youngest son, on
the throne. He, however, soon deserted this young
prince also. He then called to the throne Darius Co-
domans, whom he attempted to poison not long after.
But Darius, discovering the artifice, made him drink
the poison himself. —It is believed that this is the same
Bagoas who, during the reign of Ochus, entered the
temple of Jerusalem, to avenue the brother of John,
whom the latter had slain in the temple, as a com-
petitor for the high-priesthood. The name Bagoas
is said to be equivalent to "eunuch." (Biogr. Univ.,
vol. 3, p. 216.) II. A favorite name of the Turkish
warriors. (Curt., 6, 5, 23.—Plut., Vit. Alex., c. 67.—
Lemaire, ad Curt., l. c.)

Bagradas, as. river of Africa, flowing between Ulicus and Camarcha in
times of their best members, but later on their
situation as regards it is materially altered. It
makes encroachments on the sea like the Nile, and
hence its ancient mouth is now circumscribed by mud,
and becomes a large navigable pond. (VCid. Camarcha
and Ulicus.) The name of the ancient name is
thought to be found in Polybius, namely, Maxapar,
Maxarp, or Maxap (Schweigk., ad Polyb., I, 75, 5); and
with this, in a measure, the Boucapha of Strabo
coincides. The origin of the name is to be traced to
the Panic Macar,"Hercules," so that Macaras will
mean "the river of Hercules." Gesenius condemns
Bochart's derivation from Barca or Berca, "a marsh." (Gesen., Mem. Pr. p. 429.) The modern name of
the river is the Mejerda. (Plut., 6, 4.)

Baiae, a city of Campania, on a small bay west of
Neapolis, and opposite Puteoli. It was originally a
village, but the numerous advantages of its situation
soon rendered it much frequented and famous. Its
foundation is ascribed in mythology to Baia, one of
the companions of Ulysses. The cause of the rapid
increase of Baiae lay in the fruitfulness of the surround-
ing country, in the beauty of its own situation, in the
richness and fertility of its adjacent plains, the wells
waters afforded, and, above all, in the hot mineral
springs which flowed from the neighbouring mountains,
and formed a chief source of attraction to invaders.
(Compare Florus, 1, 16.—Plin., 3, 2.—Senec., Ep., p. 51.—Josephus, Ant. Jud., 18, 14.—Cassiod., 9, ep. 6.)
Baiae was first called Ague Cumana. Numerous
villas graced the surrounding country, and many were
erected at the mouths extending a great
distance into the sea. It is now called the Baiae
quakes and inundations of the sea, a mere waste compared with what it once was. The modern name is Baia.
Many remains of ancient villas may be seen under the
water. "The bay of Baiae," observes Eustace, "is
a semicircular recess, just opposite the harbour of Poz-
zolana, and about three miles distant from it. It is
lined with ruins, the remains of the villas and the baths of its inhabitants. The whole of Pozzolana has been
built up, and, though now under the waves, are easily distin-
guishable in fine weather. The taste for building in
the waters and encroaching on the sea, to which Horace
alludes, is exemplified in a very striking manner all
along this coast." (Classical Tour, vol. 2, p. 406.)
The same traveller, in commenting on the insalubrity of Baiae at the present day, remarks as follows: "The
present unwholesomeness of Baiae and its bay, if real,
must be ascribed partly to the streets and sources
once collected on the hills behind it in aqueducts and
reservoirs, now spreading and oozing down the decliv-
ities, and settling in the hollows below. In a warm
climate all stagnant water becomes putrid during the hot
months." (Classical Tour, vol. 3, p. 14, in notes.)

Balas, a surname of Alexander, king of Syria. (Justin, 35, 1.)

Balana, a town of Syria, north of Aradus, now
Belinas. (Plin., 5, 20.)

Balbinus, I. A Roman alluded to by Horace,
who speaks of his singular taste in admiring a female
name named Agna, deformed by a polypos in the nostrils.
(Horat., Satyr., 1, 3, 40.) II. Decimus Caius, a
Roman, proclaimed emperor by the senate with Pupu-
nus, on the death of the Gordians, A.D. 237. He
was murdered by his own soldiers after a year's reign.
(Jul., Capit. in Gord.—Herodian, 7, 10, 6, &c.)

Baleares, a name applied anciently to the islands
of Majorca and Minorca, off the coast of Spain.
The name Baleares is of Greek origin, derived from
bailea, "to throw" or "cast," and it alludes to the
remarkable skill of the inhabitants in using the sling.
According to Pausanias (3, 8), this was their only weapon
and they were taught to use it from early boyhood,
their daily food being withheld from the young until
they had hit a certain mark pointed out to them.
The same writer describes them as an uncivilized race, ad-
dicted to piratical habits. The Romans drew from
these islands their best slingers. Each Balearian
went to battle supplied with three slings. (Flor., l. c.,
Id., 3, 22.—Iac. Epit., 60.) The Greeks also
called the islands Gymnesia (Vignesia), either
because, according to Diodorus, the inhabitants were
yuvwoi, naked, in summer, or because, according to
Herodotus, they went to battle armed only with a
sling, yuvwoi being used in Greek to denote light-
armed troops. By many, Ebusus, now Ibiza, is rank-
ed with the Baleares, according to the authority of
Vitruvius. The larger of these islands was called Ba-
learia Major, hence Majorca, and the smaller Balearica
Minor, hence Minorca. In the former was Palma, which
still retains the name. In the latter was Por-
tus Magnos, so called by the Carthaginians from
Mago, one of their generals, now slightly corrupted
into Port Mahon. (Strab., 450.—Diod. Sic., 5, 17.
—Plin., 3, 5.) Q. Caecilius Metellus conquered
these islands for the Romans, and hence obtained the
surname of Balearicus. They were thereafter con-
sidered as forming part of Hispania Tarraconensis.
(Flor., c. 75.)

Balius, a horse of Achilles. (Hom., ll., 16, 146.)

Baliana (baths) were very numerous at Rome,
private as well as public. It was under Augustus
that baths first began to assume an air of magnificence,
and were called Thermae, or "hot baths," although
they also contained cold ones. An incredible number
of these were built throughout Italy, and many of them
were built by the emperors with the greatest splendour. The chief were those of Agrippa, near the Pantheon, of Nero, of Titus, of Domitian, of Caracalla, Antoninus, Dioclesian, &c.
Of these splendid vestiges still remain. The Ro-
mans began their bathing with hot water, and ended
with cold. The cold bath was in great repute after
Antonius Musa restored Augustus to health by its
use. (Strab., 450.) Thus was the notion of "cold baths"
but it fell into discredit after the death of the young
Marcellus, which was occasioned by the very injudi-
cious application of the same remedy. (Sueton., Aug.,
59.—Id. ib., 81.—Plin., 29, 1.—Dio Cass., 53, 30.)
In the magnificent Thermes erected by the em-
perors, not only were accommodations provided for hun-
dreds of bathers at once, but spacious porticoes,
rooms for athletic games and playing at ball, and halls
for the public lectures of philosophers, for rhetoricians and
poets, were added one another, to an extent which has caused them, by a strong figure, to be compared to provinces, and at an expense which could only be supported by the inexhaustible treasures which Rome drew from a conquered world. The general time for bathing was immediately after dinner until the dusk of the evening, at which time the baths were shut until two o'clock the next afternoon. This practice, however, occasionally varied. Notice was given when the baths were ready by ringing a bell; the people then left the exercise of the splanarium, and hastened to the warm bath, lest the water should cool. Hadrian forbade any one but those who were sick to enter the public baths before two o'clock. Alexander Severus, when he joined the people in their profession for bathing, not only suffered the Thermae to be opened before break of day, which had never been permitted before, but also furnished the lamps with oil for the convenience of the people. (Adam’s Rom. Ant., p. 377, ed. Boyd.)

Bantia, a town of Apulia, southeast of Venusia. This town derived some interest from the death of the brave Marcellus, who fell in the battle of Mount Erythrai, where he met his death, and with him many of his followers. The victory was celebrated, the uncivilized tribes from the coast of Africa, from Cyrenaica, and from far beyond. The victory of the Romans, or Scipio Africanus, is said to have been given to the terete, or wily antagonist, Hannibal. (Liv., 27, 25.—Plut., Vit. Marcell.—Cic., Tusc. Disp., 1, 37.)

Baptism, the priests of Coytto, the goddess of lewdness. (Vid. Coytto.) The name is derived from Bap’tico, “to tinge” or “dyed,” from their painting their cheeks, and staining the parts around the eyes, like women. They were notorious for the profanity of their manners. (Juv., Sat., 2, 9, 2.)—II. A Greek comedy written by Eupolis. (Vid. Eupolis.)

Barbary, a name applied by the Greeks to all nations but their own. The term is derived by Damm from Bāṣer, but with the ρ inserted, and the initial consonant repeated, in order to express to the ear the harsh pronunciation of a foreigner. Others derive it from the harsh sound ḫab ḫap. We are informed by Druus, that the Syriac bar means without, extra. This word signified, in general, with the Greeks, no more than foreigner. The Romans sometimes imitate, in this respect, the Grecian usages. Plautus, who introduces Greek characters into his pieces, has Bar-ba-ria for Italia, Barbarica urbes for Italia, and styles Navius, the Latin poet, poeta Barbarus.—As regards the term Bar-barus (Bāḥpaḵaṣ), it may not be amiss to remark that, notwithstanding the etymologies already adduced, the true root must very probably be looked for in the word Bāṣer, which signifies “the coast of Africa.” The country gave the appellation of Barbar to the rude and uncivilized tribes in their vicinity (compare Herodotus, 2, 158), and the Greeks would seem to have borrowed it from them in a similar sense, and with the appadage of a Greek termination. The Sinus Barbaricus occurs on the coast of ancient Africa, a little below the mouth of the Sinus Arabicus, and in this same quarter, existing as a nation, the Bar-bara having been introduced, the name became the Bar-baria. (Compare Berkel, ad Steph. Byz., s. v. Bāḥpaḵaṣ.) So also the root obtained from this quarter was styled Rha Bar-baricus (Rhubarb), in contradistinction to the Rha Ponticum, obtained by the commerce of the Exine. These names, in so remote a part of the ancient world, could never have been more generally applied. They must be traced to Me-rene, and it would be a matter of inquiry to find a trace of connection between Bar-baria, as it is now called, and the ancient Bāṣer of Herodotus. (Compare Herodotus, 2, 158.)

Barca, the name given in the Periplus of the Erythraean Sea to a part of the coast of Africa. Ajan. It was otherwise called Azania. (Vid. remarks under the article Barbary.)

Barbaricus Sinus, a gulf on the coast of Africa, below the mouth of the Sinus Arabicus. (Vid. remarks under the article Barbary.)

Barca, a warlike nation of Africa, in the western part of Cyrenaica. (Vig., Ἀν., 4, 43.—Strab., 7, 25.—ἲν., Poliorcet., c. 37.)

Barce, the nurse of Sichaeus. (Vig., Ἀν., 4, 632.)

Barce of Barca, I. A desert country, containing only a few fertile spots, on the northern coast of Africa, from the Syrtis Major as far as Egypt. Its modern name is still Barca. The country is at present a Turkish province, under a sandiagk in the town of Barca. The ancient Cyrenaica formed, strictly speaking, a part of this region.—II. A city of Cyrenaica in Africa, erroneously confounded with Ptolomais by many writers, both ancient and modern. Mannert, Thrige, and others have fully refuted this erroneous position; and the matter is now placed beyond all doubt by the ocular testimony of Della Cella and Pacho. (Voyage dans la Marocquie et la Cyrenaïque, t. 2, 175.) According to Herodotus (4, 160), the city of Barca was founded by the brothers of Arcesilas, the fourth king of Cyrene; while, on the other hand, Stephanus Byzantinus makes it to have been built by Perseus, Zacynthus, Aristomedon, and Lycus. These two contradictory traditions are perhaps only so in reality, since the founders named by Stephanus may be none other than the brothers of Arcesilas to whom Herodotus alludes, the Barcas, a tribe of Libyans. (Compare Pacho, Voyage, &c., p. 176.) Barca suffered severely for the death of Arcesilas IV., of Cyrene, who was slain here; and the cruelties inflicted by Phereclus are mentioned by Herodotus (4, 162). The Barcan captives were sent to Egypt, and from thence to King Darius, and by his command were settled in a district of Bactria, which they afterward called by the name of their native country. (Herodot., 4, 204.) A more severe blow, however, was struck by the Ptolomais in a later age, when they became masters of Pentapolis or Cyrenaica. They founded a new city on the site of the old Barca, which was called Barca. The Barca that stood, and called it Ptolomais. The increase of this place caused the city of Barca to decline, and its inhabitants became at length only noted for their robberies. III. A district of Bactria, where the Barcan captives were settled by Darius. (Vid. No. II.)

Barca, the surname of a noble family at Carthage, to which Annibal and Amilcar belonged. They became, by their influence, the head of a powerful party in the state, known as the Carthaginians. Barca had stood, and called it Ptolomais. The increase of this place caused the city of Barca to decline, and its inhabitants became at length only noted for their robberies. III. A district of Bactria, where the Barcan captives were settled by Darius. (Vid. No. II.)

Barcha, the celebrated poetico-sarcetical order among the ancient Gauls. They roused their countrymen to martial fury by their strains, and for this purpose were accustomed to follow the camp. (Diod. Sic., 5, 31.—Amm. Marcell., 15, 9.) The name is derived by Gesenius from the Hebrew (Punic) Barak, “a flash of lightning,” “a thunderbolt.” (Gesen., Monum. Phan., p. 403.—Id., Gesch. Hebr. Spr., p. 229.)

Bardi, a celebrated poetico-sarcetical order among the ancient Gauls. They roused their countrymen to martial fury by their strains, and for this purpose were accustomed to follow the camp. (Diod. Sic., 5, 31.—Amm. Marcell., 15, 9.) The language of Tacitus (Germ., 3), some have supposed, that a similar order existed among the ancient Germans. The passage in question, however, involves a doubtful reading. They who adopt bardus as the true lection, make it signify “a bard’s song.” The reading generally adopted, however, is barritus, “a war-cry.” Probability, nevertheless, is strongly in favour of the Germans having also had their bards, like
the Gallic tribes. Festus makes Bardus equivalent to cantor, "a singer." The German etymologists de-

BARIUM, a town of Apulia, on the Adriatic, in the
district of Peucetium, famed for its fisheries. It is now	Bari. (Strab., 283.—Horat., Serm., 1, 5, 97.) Ac-
tording to Tacitus, it was a municipium. (Ann., 16, 9.)

BARISINE or BARISINE, a daughter of Darius Codo-
menus, who married Alexander the Great, and had by	him a son named Hecules. She was secretly put to
death by Cassander, along with her son, when the lat-
ter had reached his fourteenth year. (Justin, 15, 2.)
According, however, to Diodorus Siculus (20, 28), he	was slain by Polysperchon, who had agreed with Cas-
sander that he would commit the deed. Plutarch
says that Polysperchon promised to slay him for 100
8, p. 102.—Consult Wesseling, ad Diocl. 1, e.) We	have followed Arrian (7, 1) in making Barsine the
dughter of Darius. According to Plutarch (vit. Alex.,
et Evm.), she was the daughter of Artabazus; while an-
other authority makes her father to have been Phar-
manabazus. (Porphy., ap. Euseb.)

BASILIA, I. an island famous for its amber, in the	Northern Ocean. It is supposed by Mannert to have	been the southern extremity of Sweden, mistaken	by the ancients for an island, on account of their ig-
norance of the country to the north. According to	Pliny (37, 2), Pytheas gave this island the name of	Abalos; and yet, in another place (4, 13), he contra-
dicts himself, and makes it to have been called Basilia	by the same Pytheas. (Compare the remarks of Man-
It appears to have been originally a fortress erected	by the Emperor Valentinian, and to have increased in	the course of time to a large city. By the writers of	the middle ages it is called Basila. (Amm. Marcell.,
30, 8.—Ictin. Anton.)

BASILIUS, I. an eminent father of the church, born at	Cressaea in Cappadocia, A.D. 326. He is called the	Great, to distinguish him from other patriarchs of	the same name. His father had him instructed in	the principles of polite literature, and he seems, in	the first instance, to have been a professor of rhetoric	and a pleader. Induced to visit the monasteries in the	region of Egypt, and to adopt the monastic life, he led	solitaries so impressed his imagination, that he him-
tself sought a similar retreat in the province of Pontus.
He was ordained priest by Eusebius, the bishop of his	native city, upon whose death he succeeded to the	same dignity. He is the most distinguished ecclesi-
astic among the Greek patriarchs. His efforts for	the regulation of clerical discipline, of the divine ser-
vice, and of the standing of the clergy; the number of
tales of the new discipline, and of the monastic life, of	the Arians; and, above all, his endeavours for the pro-
motion of monastic life, for which he himself prepared	vows and rules, observed by him, and still remaining in	force, prove the merits of this holy man. The Greek	church honours him as one of its most illustrious pa-
tron saints, and celebrates his festival Jan. 1.—In	point of literary and intellectual qualifications, Basil	excelled most of the other early bishops. His taste was	eleg-
ant and lively; and, independently of his exten-
sive erudition, he argues with more force and close-
ness, and interprets scripture more naturally, than	other writers of his class.—The best edition of his	works is that of the Benedictines, Garnier and Mo-
rand, Paris, 3 vols. folio, 1721—30.—II. An arch-
bishop of Seleucia, confounded by some with the pre-
ceding. He was elevated to the archiepiscopal digni-
y about A.D. 440, and assisted at the council of

Constantinople in 449, and in the year following at	the council of Ephesus. Here he had the weakness
to side with the heterodox party, in denying the union	of the two natures held by Christ; for which he was	afterwards made full apology to the council of Chalcedon,
which, in consequence, readmitted him to the com-
munion of the orthodox. History preserves silence re-
specting the rest of his life, which ended in 458 A.D.
Some few productions remain that are generally as-
cribed to him, though there are not wanting those	who deny their authenticity. (Biogr. Univ., vol. 3, p.
479.)

BASILEIUS, a surname of Bacchus. The epithet is
derived by Saint-Croix (Mysteres du Pantheiste, vol.
2, p. 93) from the Bassi (Bassol) mentioned by Herodotus (7, 111) as the priests of the oracle of	Bacchus, among the Satrae, a nation of Thrace. Other	etymologists deduce the term from Baasopis, a par-
ticular kind of garment worn in Asia Minor by the	males who celebrated the rites of this same god. Bo-
chart makes it come from the Hebrew bazar, "to	gather the grapes for the vintage," of which De Sacy	approves. We are inclined, however, to follow	Creuzer (Symbolik, vol. 3, p. 363), who states the root
to be Bassoarot or Bassopsia, a word signifying a	fox," and found in the Coptic at the present day.
(Ignat. Rossii, Etymol. Egypt., p. 35.) Creuzer	thinks, that the garment called Baasopis, mentioned	above, derived its name from its having superseded	the skins of foxes which the Baccantes previously	wore when celebrating their orgies. Creuzer also:
Mag. Λαβετα Bassoarot ἡ ἀλυς ἕπι Κρήτων. Consult also Herodotus (4, 192). The epithet Bassoare	occurs twice in the Orphic hymns (44, 3, and 51, 12.)

BASILIOUS AUPIDUS. Vid. Aupidius

BARTARNE, a people who first inhabited that part	of European Sarmatia which corresponds with a part of	Poland and Prussia, and who afterward established	themselves in the south, to the left and right of the	Tyas. They are supposed to have been the ancestors of	the Russians. (Livi., 40, 58.—Ovid, Trist., 2,
198.)

BATAVI, an old German nation, which inhabited a	part of the present Holland, especially the island
called Batavorum Insula, formed by that branch of	the Rhine which empties into the sea near Leyden (Lug-
dunum Batavorum), together with the Waal (Vahall)
and Meuse (Maas) territories, however, ex-
tended much beyond the Waal. Tacitus commends	their bravery. According to him, they were originally	the same as the Catti, a German tribe, which had	emigrated from their country on account of domestic	troubles. This must have happened before the time of	Caesar. When Germanicus was about to invade	Germany from the sea, he made their island the ren-
dezvous of his fleet. Being subjected by the Romans,
they submitted with the utmost calmness, and fidelity as to	obtain the title of friends and brethren. They were	exempted from tributes and taxes, and permitted to	choose their leaders among themselves. Their caval-
ry was particularly excellent. During the reign of	Vespasian they revolted, under the command of Ci-
vilis, from the Romans, and extorted from them fa-
vourable terms of peace. Trajan and Hadrian sub-
jected them. At the death of Hadrian, the two Sa-
lian Franks obtained possession of the Insula Batavorum. The capital of the nation was Lug-
dunum Batavorum, now Leyden. (Tacit., Hist., 4, 12.
—Id. ib., 19, 32.—Die Casar., 55, 00.—Plin., 4, 17.
—Lucan, Phars., 1, 431, &c.)

BATHYCLCES, a celebrated artist, supposed to have	been a native of Magnesia on the Maender. (Heyne,
Antiq. Auct., vol. 1, p. 108.) The period when he
flourished was given rise to much discussion. It was
 probably in the age of Creesus. (Consult Siliqg, Dict. Art., s. v.)

Bathyulus, I. a youth of Samos, a favourite of Polycrates. He was often alluded to by Anacreon.—II. A youth of Alexandria, a favourite of Meccenas. He came to Rome in the age of Augustus, and obtained great celebrity as a generally renowned orator.—III. A Roman orator celebrated by Juvenal (6: 63). As this was in the time of Domitian, the Bathyulus mentioned under No. II. cannot, of course, be meant here. Salmusiuss thinks, that the name had become a general one for any famous dancer, in consequence of the skill that had been displayed by the Bathyulus who lived in the time of Augustus. (Salmas. ad Vopisc. Car.0., vol. 2, p. 533, ed. Hack.)

Batrachomyomachia, a satire, epic poem, ascribed to Hesiod. It describes the battle between the frogs and mice. It consists of 294 hexameters. Whether Homer actually wrote this poem or not is still an unsettled point among modern critics. The majority, however, incline to the opinion that he was not the author. The piece would seem to be in reality a parody on the manner and language of Homer, and perhaps a satire upon one of the feuds that were so common among the petty republics of Greece. Some ascribe it to Pigreus Caria, this Poem brought to Homer (ed. Lips., p. 6), remarks, that in the third verse mention is made of tablets (δελτης), on which the poet writes: whence he concludes that the author of the piece in question was an Athenian, and not of Asiatic origin, because in Asia they wrote on skins, του δοθειας. In proof of his assertion, he cites Herodotus (5, 58). He makes also another ingenious observation. At verse 321, the morning cry of a cock is alluded to as a thing generally known. This circumstance proves, according to Knight, that the poem under consideration is not as old as the time of Homer, for it is not credible, that the ancient poets would never have spoken of this incident on the part of the cock if it had been known to them, and it would have been known to them if the cock had been found at that period in Greece. This fowl is a native of India, and does not appear to have been introduced into Greece until the third century B.C. It is then found on the money of Samothrace and Himera. The best editions of the Batrachomyomachia are: that of Ernstei, in the works of Homer, 5 vols. 8vo, Lips., 1759, reprinted at Glasgow, 1814; and that of Matthiæ, Lips., 1805. 8vo.—There is also the edition of Maittaire, 8vo, Lond., 1721.

Battodea, I. a patronymic of Callimachus, from his father, Battus (Deid., 1b, 53.) Some think the name was given him from his having been a native of Cyrene. (Vid. No. II.—II. A name given to the people of Cyrene from King Battus, the founder of the settlement. (Pind., Pyth., 5, 73.—Calitm., H. in Apoll., 96.—Sil. Ital., 2, 61.)

Battus, I. a Lacedaemonian, who built the town of Cyrene, B.C. 630, with a colony from the island of Thera. (Vid. Cyrene.) His proper name was Aristoteles Battus. (H. in Apoll., 76.—Schol. ad loc.—Schol. ad Pind., Pyth., 4, 10.) But he was called Battus, according to the tradition of the Thersians and people of Cyrene, from an impediment in his speech. Herodotus, however (4, 155), opposes this explanation, and conjectures that the name was obtained from the Libyan tongue, where it signifies, as he informs us, "a king." Battus reigned forty years, and left the kingdom to his son Arcesilas. (Herod., 4, 150.)—Compare Bahr, ad Herod., 4, 155.—II. The second head of this name was grandson to Battus I., by Arcesilas. He succeeded his father on the throne of Cyrene, and was surnamed Feliz, and died 554 B.C. (Herod., 4, 159.)—III. A shepherd of Pylus, who promised Mercury that he would not discover his having stolen the rocks of Admetus, which Apollo tended. He violated his promise, and was turned into a stone. (Ovid, Met., 2, 702.—Compare the remarks of Gierig, ad loc.)

Batulun, a town of Campania, alluded to by Virgil (En., 7, 739) and Silius Italicus (8, 566). The site of this place is fixed, with some difference, by Pomerii and Pliny, who mention a few miles to the east of Benevento (vol. 2, p. 463.)

Baucis, an aged woman, who dwelt in a small town of Phrygia along with her husband Philenion. They were both extremely poor, and inhabited a humble cottage. Jupiter and Mercury came, on one occasion, in the form of men, to this same town. It was evening; they sought for hospitality, but every door was closed against them. At length they approached the door of a poor house, and, knocking, were gladly received. The quality of the guests was eventually revealed by the miracle of the wine-bowl being spontaneously replenished as fast as it was drained. They told their hosts that it was their intention to destroy the godless town, and desired them to leave their dwelling and ascend the adjacent hill. The aged couple obeyed: ere they reached the summit they turned round to look, and beheld a lake where the town had stood. Their "Suburbs," the modern Baucis and Philebenus, after the hosts had extinguished the fire of their neighbours, became a temple. On being desired by Jupiter to express their wishes, they prayed that they might be appointed to officiate in that temple, and that they might be united in death as in life. Their prayer was granted; and as they were one day standing before the temple, they were suddenly changed into an oak and a lime tree. (Ovid, Met., 8, 620.)—The reader will not fail to be struck with the resemblance between a part of this legend and the scripture account of the destruction of the cities of the plains. (Keightley's Mythology, p. 83.)

Bavicius and Mavinius, two stupid and malevolent poets in the age of Augustus, who attacked Virgil, Horace, and others of their contemporaries. (Virg., Eclog., 3, 90.—Voss, ad loc.—Serv. ad Virg., Georg., 1, 210.—Horat., Epod., 10, 2.—Weicheti, de obtrect. Horatti, p. 12, seqq.)

Battus, one of the aboriginal inhabitants of Bithynia. (Vid. Bithynia.)

Bebrycia, the primitive name of Bithynia. It was so called from the Bebyrices, the original inhabitants of the land. (Vid. Bithynia.)

Bedriacum, a small town of Italy, between Manta and Cremona; according to Cluverius, it is the modern Caneto, a large village on the left of the Oglio. D'Anville, however, makes it correspond to the modern Credeal, on the right side of that river. Mannert places it about a mile west of the modern town of Boscolo. This place was famous for two battles fought within a month of each other. In the first Otho was defeated by the generals of Vitellius; and in the second, Vitellius by Vespasian, A.D. 69. Tacitus and Suetonius call the name of this place Betriacum; and Pliny, Juvenal, and later writers, Bebriscum. (Tacit., Hist., 2, 23, seqq.—Sil., Hist., 3, 15.—Plin., Nat. Hist., 7, 225.—Plut., Vesp., 10, 43.—Sueton., Oth., 9. —Crämer's Anc. Italy, vol. 1, p. 66.)

Beleros, a priest of Babylon, who conspired with Arbaces against Sardanapalus, king of Assyria. Arbaces promised Belides, in case of success, the government of Babylon, which the latter, after the overthrow of Sardanapalus, accordingly obtained. (Vid. Arbaces.)

Belose, a warlike people of ancient Gaul, separated from the Ceneta in the time of Caesar by the rivers Matrona and Sequana. In the new division of Gallia made by Augustus, whose object was to render the provinces more equal in extent, the countries of the Helvetii and Sequani, which till that time were included in Gallia Celtica, were added to Gallia Bel-
Belgica. The Belgae were of German extraction, and, according to Caesar, the most warlike of the Gauls. The name Belgae belongs to the Kymric idiom, in which, under the form Belgiaed, the radical of which is Belg, it signifies "warlike." (Compare Thierry, "Histoire des Gaules").

Belgic, one of the four provinces of Gaul near the Rhine. (Vid. Gallia.)

Belgium, a canton of Gallia Belgica, from which it is distinguished by Caesar (B. G. 5, 24) as a part from the whole, and to which he assigns the Belovaei, to whom Hirtius adds the Attrebies. As the Ambiani were situated between the other two, they must also be included. These three tribes were the genuine Belgae. (Cas., B. G. 5, 24.—Hirt. 8, 46.)

Belidae, a surname given to the daughter of Belus. (Ovid. Met. 4, 463.)

Belides, a name applied to Palamedes, as descended from Belus. (Virg., Æn. 2, 82.)

Belisarion, a Gallic deity, analogous to the Minerva of the Romans. (Compare Meine, "Geschichte der Heidenthums im Nordlichen Europa").

Belisarius, one of the greatest generals of his time, to whom the Emperor Justinian chiefly owed the splendour of his reign. Sprung from an obscure family in Thrace, Belisarius first served in the bodyguard of the emperor, but soon obtained the chief command. In 535, 60,000 men stationed on the Persian frontiers, and, A.D. 530, gained a complete victory over a Persian army not less than 40,000 strong.

The next year, however, he lost a battle against the same enemy, who had forced their way into Syria; the only battle which he lost during his whole career. He was recalled from the army, and soon became, at home, the support of his master. In the year 532, civil commotions, proceeding from two rival claimants to the imperial crown, rent themselves the green and the blue, and who caused great disorders in Constantinople, brought the life and reign of Justinian in the utmost peril, and Hypatius was already chosen emperor, when Belisarius, with a small body of faithful adherents, restored order. Justinian, with a view of conquering the dominions of Gelimer, king of the Vandals, sent Belisarius, with an army of 15,000 men, to Africa. After two victories, he secured the person and the throne of Gelimer. In the battle in which Belisarius was led to victory, the conqueror, in triumph through the streets of Constantinople, and Justinian ordered a medal to be struck, with the inscription Belisarius Gloria Romanorum, which has descended to our times. By the dissensions existing in the royal family of the Ostrogoths in Italy, Justinian was induced to attempt the reduction of Italy and Rome under his sceptre. Belisarius vanquished Vitiges, king of the Goths, made him prisoner at Ravenna (A.D. 540) and conducted him, together with many other Goths, to Constantinople. The war in Italy against the Goths continued; but Belisarius, not being sufficiently supplied with money and troops by the emperor, demanded his recall (A.D. 548). He afterward commanded in the war against the Bulgarians, whom he conquered in the year 559. Upon his return to Constantinople, he was accused of having taken part in a conspiracy. But Justinian was convinced of his innocence, and is said to have restored to him his property and dignities, of which he had been deprived. Belisarius died A.D. 565. His history has been much coloured by the poets, and particularly by Marmontel, in his otherwise admirable politico-philosophical romance. According to his narrative, the emperor caused the eyes of the hero to be struck out, and Belisarius was compelled to beg his bread in the streets of Constantinople. Other writers say, that Justinian had him thrown into a prison, which is still shown under the appellation of the tower of Belisarius. From this tower he is reported to have let down a bag fastened to a rope, and to have addressed the passengers in these words: "Give an obolus to Belisarius, whom virtue exalted, and envy has oppressed." Of this, however, no contemporary writer makes any mention. Tzetzes, a slightly-esteemeed writer of the 12th century, was the first who related this fable. Certain it is, that, through too great indulgence towards his wife Antonia, Belisarius was impelled to many acts of injustice, and that he evinced a servile submissiveness to the detestable Theodora, the wife of Justinian. (Encyclop. Amer. Hist., vol. 1, p. 39, seqq.—Biogr. Univ., vol. 4, p. 82, seqq.)

Bellerophon (Greek form Bellerophontes), son of Glauces and grandson of Sisyphus. His adventures form a pleasing episode in the Iliad (6, 144, seqq.), where they are related to Diomede by Glauces the grandson of Bellerophon. The gods had endowed this hero with manly vigour and beauty. Antea, the wife of Pratus, king of Argos, fixed her love upon him, and sought a corresponding return. But the virtuous youth rejecting all her advances, hasted the place of love in the bosom of the disappointed queen. She accused him to Pratus of an attempt on her honour. The credulous king gave ear to her falsehood, but would not incur the reproach of putting to death a guest. He therefore sent Bellerophon to Lychia, to his father-in-law, the king of that country, giving him "deadly characters," written in a language which could not be understood, so that the king should think it death vengeance, and whose refuge was the island of Lycia, and which were to cause his death. Beneath the potent guidance of the gods, Bellerophon came to Lyicia and the flowing Xanthus. Nine days the king entertained him, and slew nine oxen; and on the tenth he asked to see the token (τίμημα) which he had received from his son-in-law. When he had seen this, he resolved to comply with the desire of Pratus; and he first sent his guest to slay the Chimæra, a monster, with a head of a lion, a body of a goat, and a tail of a serpent, and which breathed forth flaming fire. Depending on the aid of the gods, Bellerophon slew this monster, and then was ordered to go and fight the Solymi, and this, he said, was the severest combat he ever fought. He lastly slew the "manlike Amazon," and, as he was returning, the king laid an ambush for him, composed of the bravest men of Lycia, of whom not one returned home, for Bellerophon thereon passed. Upon this second attempt of the race of the gods, kept him in Lyicia, giving him his daughter and half the royal dignity, and the people bestowed upon him an ample, teumenus (τεμευοϛ) of arable and plantation land. Falling at length under the displeasure of all the gods, he wandered alone in "the Plain of Wandering" (προμον ἀδήλου), "consuming his soul, shunning the path of men."—Later authorities tell us, that Bellerophon was at first named Hipponous; but, having accidentally killed one of his relatives, some say a brother, named Bellerus, he thence derived his second name, which meant "Slayer of Bellers." He was purified of the bloodshed by Pratus, whose wife also is called Stenobia, and the king of Lyicia is named Lobates. By the aid of the winged steed Pegaseus, Bellerophon gained the victory over all whom Lobates sent him to encounter. Stenobiae, hearing of his success, hung herself. Bellerophon, having lost this steed, formed an essential part of the legend of Bellerophon. In Belon's "Theogony" (v. 355) it is said of the Chimaera, that she was killed by Pegaseus and the "good" (ἰσθήδικος),
BEL

BEN

L.e., brave Bellerophon. But though all seem agreed in giving the winged steed to the hero, none tell us how he obtained him. Here, however, Pindar comes to our aid with a very remarkable legend, which connects Bellerophon with Corinth. According to this poet (Ol., 13, 85, seqq.), Bellerophon, who reigned at Corinth, being about to undertake the three adventures mentioned above, wished to possess the proud and steed Pegasus, who used to come to drink at the fountain of Pirene on the Acrocorinthus. After many fruitless efforts to catch him, he applied for advice to the soothsayer Polyeidus, and was directed by him to go and sleep at the altar of Minerva. He obeyed the prophet, and, in the dead of the night, the goddess appeared to him in a dream, and, giving him a bridle, bade him sacrifice a bull to his sire Neptune-Damnos (the Tus- kulon, Belc., Thes., p. 499), and be the sire of Pegasus, and in the two combined we have a Neptune Hippius, the rider of the waves, a symbol of the navigation of the ancient Ephyra or Corinth. The adventures of the hero may have signified the real or imaginary perils to be encountered in voyages to distant countries; and, when the original sense of the myth was lost, the King (Prosus, Προσος), and his Fo (Antae, Ἀνταῖος), and the common horse-tale were introduced, to assign a cause for the adventure. In this myth, too, we find the mysterious connexion between Neptune and Pallas-Minerva and the horse more fully revealed than elsewhere. (Keightley's Mythology, p. 401, seqq.)

BELLÉRUS, a brother of Hipponoës. (Vid. Bellerophon.)

BELÔNA, the goddess of war, daughter of Phor- cydes and Ceto. (Apollod., 2, 4, 2.) According to some authorities, however, she was the sister of Mars. Others, again, make her his spouse. The earlier form of her Latin name, Bellona, was Duellona, from Du- ellium, the old form for bellum, from which last the later appellation of Bellona arose. Her Greek name was Enyo (Ἐννεο). The temple of Bellona at Rome was without the city, near the Carmental gate. Audience was given there by the senate to foreign ambassadors, and before it stood a Tìnha, over which a square Bellerophon found the bridle lying beside him. He obeyed the injunctions of the goddess, and raised an altar to herself as Hippleia (Of-the-Horse). Pegasus at once yielded his mouth to the magic bit, and the hero, mounting him, achieved his adventures.—The best explanation that has been given of the myth of Bellerophon is that which sees in this individual only one of the forms of Neptune, namely, as Hippius (Bellerophon). This is the case in his father (Pind., vii. 499), and he be the sire of Pegasus, and in the two combined we have a Neptune Hippius, the rider of the waves, a symbol of the navigation of the ancient Ephyra or Corinth. The adventures of the hero may have signified the real or imaginary perils to be encountered in voyages to distant countries; and, when the original sense of the myth was lost, the King (Prosus, Προσος), and his Fo (Antae, Ἀνταῖος), and the common horse-tale were introduced, to assign a cause for the adventure. In this myth, too, we find the mysterious connexion between Neptune and Pallas-Minerva and the horse more fully revealed than elsewhere. (Keightley's Mythology, p. 401, seqq.)

BELLÉRUS, a brother of Hipponoës. (Vid. Bellerophon.)

BELÔNA, the goddess of war, daughter of Phor- cydes and Ceto. (Apollod., 2, 4, 2.) According to some authorities, however, she was the sister of Mars. Others, again, make her his spouse. The earlier form of her Latin name, Bellona, was Duellona, from Du- ellium, the old form for bellum, from which last the later appellation of Bellona arose. Her Greek name was Enyo (Ἐννεο). The temple of Bellona at Rome was without the city, near the Carmental gate. Audience was given there by the senate to foreign ambassadors, and before it stood a Tidental, over which a square Bellerophon was thrown on the declaration of war against any people. (Ovid, Fast., 6, 199, seqq.) The priests of Bellona used to gash their thighs in a terrific manner, and offer to her the blood which flowed from the wounds. (Jun., 4, 124.—Varro, L. L., 5.—Virg., Ín., 8, 703. —Stat., Theb., 2, 718.—Id. lb., 7, 73.)

BELLONARI, the priests of Bellona.

BELLOVIĆI, a numerous and powerful tribe of the Beli, the ancient inhabitants of the island of Sali- ca, Ambiani, Veronandui, and Silvanectes. They correspond in position to the present people of Beaufouis. (Cas., Bell., 2, 4)

BELLOVÉSUS, a king of the Celts, who, in the reign of Tarquinius Priscus, was sent at the head of a colo- ny to Italy by his uncle Ambigatus. (Lis., 3, 34.)

BELÔN, I. a city and river of Hispania Bética, the usual name of the region for Tingis in Africa. The modern name Belonia marks the spot, though now uninhabited. The name is sometimes written Bellon. (Mannert, Geogr., vol. 1, p. 301.)—II. A small stream to the west of the city of Belon just named. It answers to that which flows at the present day from the Laguna de la landa into the sea. (Mannert, l.c.)

BELÔS, I. a name given to several kings of the East, whose existence appears extremely doubtful. The most ancient is Belus, king of Assyria, father of Ni- nus, whose epoch it is impossible to determine.—II. A son of Libya, and father of Aegyptus, Danaus, and Cepheus. He is fabled to have reigned in Phoenicia, 1500 B.C.—III. A king of Libya, father of Ninus. (Hdt., 7.)—IV. A king of Belus, king of Assyria, or the remote East, is thought by some to be the same with the Bali of Hindu mythology (Bartolomeo, Viaggio alle Indie Orientali, p. 241), as well as the Baal of Oriental worship. A curious analogy in form is said to exist between the temple of Belus, as described by the ancient writers (vid. Babylon), and the Mexican Teocall- lie or pyramid-temples, especially that of Cholula. (Consol, on this interesting subject, the remarks of Humboldt, Monumentums Américains, vol. 1, p. 117, seqq.)

BENACUS, a lake of Italy, from which the Mincius flows into the Po. Pliny (9, 22) makes this lake to be formed by the Mincus. It is stated by Strabo (209), on the authority of Polybius, to be 500 stadia long and 150 broad; that is, 63 miles by 18: but the real dimen- sions, according to the best maps, do not appear to exceed 30 modern Italian miles in length, and 9 in breadth; which, according to the ancient Roman scale, is about half the distance from the modern name Lago di Garda, and the appellation is derived from the small town of Garda on the northeast shore of the lake. The Benacus is twice noticed by Virgil. (Georg., 2, 158.—En., 10, 204.) Its principal prom- ontory, Sirmium, has been commemorated by Catullus as his favourite residence. Virgil speaks of it as sub- ject to sudden storms. (Georg., 2, 160.) In explana- tion of this, compare the following remarks of Eru- dite: "We left Sirmium (Sirmium), and, lighted by the moon, glided smoothly over the lake to Desenzac- no, four miles distant, where, about eight, we stepped from the boat into a very good inn. So far the ap- pearance of the Benacus was very different from the description which Virgil has given of its stormy char- acter. Before we retired to rest, about midnight, from our windows, we observed it still calm and unruffled. About three in the morning, I was roused from sleep by the door and window sashows bursting and the wind roaring round the room. I started up, and, looking out, observed by the light of the moon the lake in the most dreadful agitation, and the waves dashing against the walls of the inn, and resembling the swelling of the ocean more than the petty agitation of inland waters. Shortly after, the landlord entered with a lantern, closed the outward shutters, expressed some apprehensions, but, at the same time, assured me that their house was built to resist such sudden tem- pests, and that I might repose with confidence under a roof which had withstood full many a storm as ter- rible as that which occasioned our present alarm. Next morning, the lake, so tranquil and serene the evening before, presented a surface covered with foam, and swelling into mountain-billows that burst in break- ers every instant at the very door of the inn, and cov- ered the whole house with spray. Virgil's description now seemed to nature itself." (Classical Tour, vol. 1, p. 203, seqq.)

BENDIS, the name of a Thracian goddess, the same with Diana or Artemis. (Compare Ruken, ad Tim., p. 62. —Pischcr, Index in Palaphat, s. v. Bê- dêca.) This name, and the festival of this deity, spread even to Attica and Bithynia. Bendis had a temple in the Munychium at Athens, and a festival, called Ben- diaca, was celebrated in honour of her in the Piraeus. (Creuzer, Symbolik, vol. 2, p. 129, seqg.)

BENVENTUM, a city of Samnium, about ten miles beyond Cauidum, on the Appian Way. (Strabo, 249.) Its more ancient name, as we are informed by several writers, was Maleventum. (Lis., 9, 27.—Plin., 3, 11.—Festus, s. v. Benvent.) The name of Maleven-
BERENICE.

BERENICE. was said to have been given it on account of its unhealthy atmosphere. The more auspicious appellation of Beneventum was substituted when the Romans sent a colony thither (A.D. 489). Tradition ascribed the earliest possession that the city to Diomedes (Sokratos, c. 8.-Steph. Byz., s. v.), but other accounts would lead us to believe that it was the first possessed by the Ausonenses. (Festus, s. v. Auson.) It remained in the possession of the Romans during the whole of the second Punic war, and obtained the thanks of the senate for its firm attachment to the republic at that critical period. (Livy, 27, 10.) We subsequently hear of its being a second time colonized by the veteran soldiers of Auson. It seems to have been a third time called Beneventum de Col.—Compare Tacitus, Ann., 15, 34.—Ptol., p. 66.) The account which Horace gives of the far he there met with in his journey to Brundisium, will occur to every reader. Beneventum was situated near the junction of the Sabatius and Color, now Sabbato and Calore. Its position was a very important one, since here the main roads intersected each other from Latium into Southern Italy, and from Samnium into Campania. Unlike the Lombards Beneventum became the capital of a powerful dukedom. It abounds in remains of ancient sculpture above any other town in Italy. The most beautiful relic of former days, at this place, is the arch of Trajan, which forms one of the entrances into the city. Near Beneventum Pyrrhus was defeated by Dentatus, A.U.C. 479. It is now Benevento. (Cramer’s Ancient Italy, vol. 5, p. 246.—Mannert, Geogr., vol. 5, pt. 1, p. 781, seqq.)

Berecyntus, a surname of Cybele, is an ancient name of an ocean and is particularly worshipped. (Stat. Theb., 4, 782.—Virg., E.n., 9, 82.)

Berecyntus, a Phrygian tribe, celebrated by the poets in connexion with Cybele, so often styled "Berecyntia Mater." Pliny places the Berecyntian district on the borders of Caria, about the Glaucus and Massander. (Plin., 5, 29.)

Berecyntus, a mountain in Phrygia Major, on the banks of the river Sangarius. It was sacred to Cybele, who is hence styled Berecyntia Mater, “The Berecyntian mother.” (Serv., ad E.n., 9, 82.)

BERENICE (less correctly Berenike), a name common to several females of antiquity. It is of Greek origin, and means “victory-bringing,” or “bearer of victory;” the initial β was written, according to Macedonian usage, for the letter φ, or, in other words, Berenike being put for Φερενικη, just as the Macedonians said Βιλίπνος for Φιλίπνος. (Mallet’s, Dial., p. 184, ed. Sturz.) Most remarkable of this name were the following: I. the granddaughter of Cassander, brother of Antipater. She married Philip, a Macedonian, probably one of the officers of Alexander, and became by him the mother of many children, among whom were Magas, king of Cyrene, and Antigone, whom she married to Pyrrhus, king of Epirus. She followed into Egypt Eurydice, daughter of Antipater, who returned to that country to rejoin her husband Pyrrhus I. Berenice inspired this prince with so strong a passion that he neglected practical affairs, and he had children by her, and married the former. He also gave the preference, in the succession to the throne, to her son Pyulemy, notwithstanding the better claims of his offspring by Eurydice. Berenice was remarkable for her beauty, and her portrait often appears on the medals of Pyrrhus I., along with that of the latter.—II. Daughter of Pyrrhus Philadelphus and Arsinoe. She followed her mother into Egypt, and married, after the death of Magas, at Cyrene, who married Arsinoe, and adopted Berenice. This will serve to explain why Polybius and Justin make Berenice to have been the daughter of Magas, while Callimachus gives Pyrrhus Philadelphus and Arsinoe as her parents. After the death of Magas, Arsinoe engaged her daughter in marriage to Demetrius, son of Demetrius Poliorcetes; but, on the young prince’s having come from Macedonia to Cyrene, she became attached to him herself. Demetrius, conducting himself most insidiously, was slain in a conspiracy, at the head of which Berenice also took a part. This, she was surprised and carried her brother Ptolemy (Euergetes) III. A short time after the nuptials, Ptolemy was obliged to go on an expedition into Syria, and Berenice made a vow that she would consecrate her beautiful head of hair to Venus if her husband returned safe to Egypt. Upon his return she fulfilled her vow in the temple of Venus Zephyrites. On the following day, however, the hair was not to be found. As both the monarch and queen was of the opinion that death must have occurred, Conon the Samaritan, an eminent astronomer of the day, in order to conciliate the royal favour, declared that the locks of Berenice had been removed by divine intervention, and translated to the skies in the form of a constellation. Hence the cluster of stars near the tail of the Lion is called Coma Berenices ("Ber- enice’s hair"). Callimachus wrote a piece on this subject, now lost, but a translation of which into Latin verse by Catullus has reached our time. (Catull., Carm., 56.—Compare Hygin., Pent. Astron.)

—Deorog, ad Catull., i. c.—Hepea, de genio seculi Ptolemaeurum, Opusc., vol. 1, p. 177.) Berenice was put to death B.C. 216, by the orders of Ptolemy Philopator, her son.—III. A daughter of Ptolemy Philadelphus, given by him in marriage to Antiochus Theos, king of Syria, in order to cement a peace between the two countries. After the death of her father, Antiochus put her on a diet, and recalled his former wife Laodice. This last, having taken the poison by poison, sought to destroy Berenice also as well as her son. This son was surprised and carried off by an emissary of Laodice’s, and shortly after put to death; and Berenice, in searching for him, was entrapped and slain, B.C. 246. —IV. Called by some authors Cleopatra, was the only legitimate child of Ptolemy Lathurus, and ascended the throne after the death of her father, B.C. 81. Sylla, who was at that time dictator, compelled her to marry, and share her throne with her cousin, who took the name of Ptolemy Alexander. She was poisoned by the latter only nineteen days after the marriage.—V. Daughter of Ptolemy Auletes. The people of Alexandria having revolted against this prince, B.C. 58, drove him out, and placed upon the throne his two daughters, Tryphena and Berenice. The former died soon after, and Berenice was given in marriage to Seleucus, surnamed Cybiosaeces. His personal deformity, however, and his vicious character, soon rendered him so odious to the queen, that she caused him to be strangled. Berenice then married Archelaus; but, Ptolemy Auletes having been restored by Gabinius, the Roman commander, she was put to death by her own father, B.C. 55.—VI. A native of Chios, and one of the wives of Mithradates of Pontus. On the overthrow of this monarch’s power by Lucillus, Berenice, in obedience to an order from her husband, took poison along with his wives; but this did not satisfy her revenge, and she had the eunuch Bacchus, B.C. 71.—VII. Daughter of Agrippa I., king of Judaea, and born A.D. 28. She was at first affianced to Marcus, son of Alexander; but this young man having died, Agrippa gave her in marriage to his brother Herod, king of Chalcis, by whom she became the mother of two sons, Berenicius and Hyrcanus. Having lost her husband when she was twenty, she lived with her brother Agrippa, a circumstance which is not without reports injurious to her character. To put an end to these rumours, she made proposals to Ptolemy, king of Cilicia, and offered to become his wife if he would embrace Judaism. Ptolemy consented, but she soon left him, and returned, in all probability, to her brother, for she was with the latter when St. Paul was arrested.
at Jerusalem, A.D. 63. The commerce between the guilty pair became now so public, that the rumour even reached Rome, and we find Juvenal alluding to the affair in one of his satires (6, 155). She followed Agrippa when he went to join Vespasian, whom Nero had charged to reduce the Jews to obedience. A new scene now opened for her; she won the affection of Vespasian, who in a few weeks after the death of Vespasian was established on the throne, and Titus returned home after terminating the Jewish war, she accompanied him to Rome along with her brother Agrippa. At Rome she lived openly with Titus, and took up her abode in the imperial palace, as we learn from Dio Cassius, who states also that she was then in the flower of her age. Titus, it is said, intended even to acknowledge her as his wife; but he was compelled by his mother to leave her. When she left Agrippa, she took her away from the city soon after his accession to the throne. Such, at least, is the account given by Suetonius (Tit., 7), who appears more entitled to belief than Dio Cassius, according to whom Titus sent Berenice away before his accession to the throne, and refused to receive her again, when she had returned to Rome a short time after the commencement of his reign. (Dio Cass., 66, 15 et 18.)

Titus turned his attention to his other affections, and this Berenice as regards her intimacy with Titus. She must, at least, have been forty-two years of age when she first became acquainted with the Roman prince, and fifty-one years old at the period of the celebrated scene which forms the subject of Racine’s tragedy. Many are inclined to believe, therefore, that the Berenice to whom Titus was attached was the daughter of Marnamme and Archealas, and, consequently, the niece of the Berenice of Titus. We have been speaking: she would be twenty-five years old when Titus came into Judæa. (Clavier, in Biogr. Univ., vol. 4, p. 241, seqq.)—VIII. A city of Egypt, on the coast of the Sinus Arabicus, from which a road was made across the intervening desert to Coptos on the Nile, by Ptolemy Philadelphus, 258 miles in length. From this harbour the vessels of Egypt took their departure for Arabia Felix and India. It was through the medium of Berenice also, and the caravan route to Coptos, that the principal trade of the Romans with India was conducted. By this line of communication, it is said that a sum not less than what would be now £400,000, was remitted by the Roman traders to their correspondents in the East, in payment of merchandise which ultimately sold for a hundred times as much. (Plin., 6, 23.—Id., 6, 29.—Strab., 560.—Agricola, 2, 15.)

The ruins of his subject at once are found at the modern port of Habes (Murray, Hist. Account, &c., vol. 2, p. 187)—IX. A city of Cyrenaica, called also Hesperia. In its vicinity the ancients placed the gardens of the Hesperides. It is now Bengazi, a poor and filthy town. Few traces of the ancient city remain above ground, although much might be brought to light by excavation. “When we reflect,” remarks Capt. Beechy, “that Berenice flourished under Justinian, and that its walls underwent a thorough repair in the reign of that emperor, it will be thought some what singular, that both the town and its walls should have disappeared so completely as they have done.” Of the latter, scarcely a vestige remains above the surface of the plain. (Modern Traveller, part 49, p. 98.)

Berōs, I. an old woman of Epidaurus, nurse to Semele. Juno assumed her shape, when she persuaded Semele not to receive the visits of Jupiter if he did not appear in the majesty of a god. (Ovid., Met., 3, 278.)—II. The wife of Doryclus, whose form was assumed by Iris at the instigation of Juno, when she advised the Trojan women to burn the fleet of Æneas in Sicily. (Virg., Æn., 5, 620.)

Berea of Berrhoea, a large and populous city of Macedonia, south of Edessa. It was a place of great antiquity, and is often mentioned by the early writers. Its situation, as is generally agreed, answers to that of the present Kara Veria. Some interesting circumstances respecting Berea are to be found in the Acts of the Apostles (17, 11. —Cramer’s Ancient Greece, vol. 1, p. 232).

Berosus, a Babylonian historian, rendered much more service than the interpretation of one fragment which is known of his own performances. He was priest of the temple of Belus in the time of Alexander, and, having learned the Greek language from the Macedonians, he removed to Greece, and opened a school of astronomy and astrology in the island of Cos, where his productions acquired him great fame with the Athenians. The ancients mention three books of his, relative to the history of the Chaldeans, of which Josephus and Eusebius have preserved fragments. As a priest of Belus, he possessed every advantage which the records of the temple, and the learning and traditions of the Chaldeans, could afford, and seems to have composed his work with a serious regard for truth. Annius of Viterbo published a work under the name of Berosus, which was soon discovered to be a forgery. (Cory’s Ancient Fragments, p. viii., Prof.)

Berytos (Berothos, Ezek., 47, 16.—Bpnp5h, Joseph., 1, 61.)—Berytos, a town of ancient times, in Phoenicio, about twenty-four miles south of Byblus, famous in the age of Justinian for the study of law, and styled by the emperor “the mother and nurse of the laws.” The civil law was taught there in Greek, as it was at Rome in Lat. It had also the name of Colonia Felix Julia, from Augustus Cesar, who made it a Roman colony, and named it in honour of his daughter. (Plin., 5, 29.)

The modern appellation is Berrot. The adjacent plain is renowned as the place where St. George, the patron saint of England, slew the dragon; in memory of which, a small chapel was built upon the spot, dedicated at first to that Christian hero, but now changed to a mosque. It was frequently captured and recaptured during the crusades. It is now the seat of one of the most interesting missionary stations in the world, and possesses many important advantages for such a purpose. It is situated on the Mediterranean, at the foot of Mount Lebanon, within three days of Damascus, two days’ sail of Cyprus, two from Tyre, and three from Tripoli. Its present population is about 10,000. (For interesting notices of this place, consult Jessett’s Researches, vol. 1 and 2.—Life of Rev. Phiny Fisk.—Missionary Herald, &c.)

Besippo, a seaport town of Hispania Baetica, east of Junonius Promontorium, where Mela was born. Its ruins lie in the neighbourhood of the modern Porto Barbaro. (Philos. Transact., vol. 30, p. 922.) The town of Vejar de la Frontera, which many think represents the ancient Besippo (Hardouin, ad Plin., 3, 3), lies too far from the sea. (Ukert, Geog., vol. 2, p. 343.)

Besissus, a people of Thrace, occupying a district called Bessica, between Mons Rhodope and the northern part of the Hebrus. The Bessi belonged to the powerful nation of the Sarmatians, the only Thracian tribe which had never been subdued. (Herod., 7, 110.) According to Strabo (318), they were a very lawless and predatory race, and were not conquered finally till the reign of Augustus. (Dio Cass., 54.—Flor., 4, 12.)

Besitis, a governor of Bactriana, who, after the battle of Arbela, seized Darius, his sovereign, with the intention of carrying him off to prison for his treasury; but, being hitherto preserved by the Macedonians, he was murdered, and lying in the way, and effected his own escape. Being subsequently delivered into the hands of Alexander, that monarch, according to one account (Justin, 12, 5), gave him up for punishment to the brother of Darius. (Compare Curt., 6, 12, seqq.—Id., 7, 5.) Plutarch, however, 239
states, that Alexander himself punished the offender in the following manner: he caused two straight trees to be bent, and one of his legs to be made fast to each; then suffered the trees to return to their former posture, his body was torn asunder by the violence of the recoil. (Plut. V it. Alex.) Arrian makes Bias accept the situation to which the tips of his ears had been cut off, and the offender, after this, to have been sent to Ecbatana, and put to death in the sight of all the inhabitants of the capital of Media. (Arrian, Exp. A l. 4, 7.)

Bianor, a son of the river-god Tiber, and of Manto daughter of Tiresias. Servius makes him the founder of Mantus, and identical with Oceanus. (Serv. ad Verg, E s. 22. 2 E n. 16, 198.) The allusion in Virgil's ninth Eclogue is thought to be to this same Bianor, but consult the remarks of Heyne, ad loc.

Bia, son of Amythaon and Idomea, was king of Argos, and brother to the famous soothsayer Melampus. (Vid. Melampus.)—II. One of the seven wise men of Greece. He was son of Teutamus, and was born at Priene, in Ionia, about 570 B.C. Bias was a practical philosopher, studied the laws of his country, and employed his knowledge in the service of his friends, defending them in the courts of justice, settling their disputes. He made a noble use of his wealth. His advice, that the Ionians should fly before the victorious Cyrus to Sardina, was not followed, and the victory of the army of Cyrus confirmed the correctness of his opinion. The inhabitants of Priene, when besieged by Mazares, resolved to abandon the city with their property. On this occasion Bias replied to one of his fellow-citizens, who expressed his astonishment that he had made no preparations for his departure, "I carry everything with me." He remained in his native country, where he died at a very advanced age. His countrymen buried him with splendour, and honoured his memory. Some of his apothegms are still preserved. (Biogr. Univ., vol. 4, p. 455.—Encyclop. Americ, vol. 2, p. 89, seq.)

Bicaccites (M. Furius), a Latin poet, born at Cremona about 103 B.C. He appears to have composed a turgid poem entitled Ethiopis, on the legend, very probably, of the Ethiopian Memnon; and also another on the mouths of the Rhine. This last is thought to have formed part of an epic poem on Caesar's wars in Gaul. (Burmann, Anthol. Lat., lib. 2, ep. 238.) Both works are lost, and we have only a couple of fragments remaining. (Bähr, Gesch. Röm. Lit., vol. 1, p. 124.) Horace (Ser., 2, 5, 40) ridicules a laughable verse of his, in which Jupiter is represented as spitting snow upon the Alps: "Jupiter hisenas cana nive conspexit Alpes." This line occurred in the beginning of a poem which he had composed on the Gallic war. Quintilian (10, 1, 96) enumerates Bicaccius among the Roman Iambic poets, and, in another part of his work (8, 6, 18), gives this same line, citing it as an instance of harsh metaphor. "It is surprising that the critic did not carry his censure farther than this, and therefore spiling well remarks of the omission, "Debet autem notior sodium quoque incursare hace metaphorum." To render his parody more severe, Horace substitutes Furius himself for the monarch of the skies, and, to prevent all mistake, applies to the former a laughable species of designation, drawn directly from his personal appearance, "pingui tentus omens," "distinguished with his fat paunch." (Horat., I. c.)

Bicaures, a large town of the Ædui in Gaul, upon the Arroux, one of the branches of the Ligeris or Loire. It was afterward called Augustodunum, and is now Autun. (Caz., B. G., 7, 55, &c.)

Bicûs, a son of M. Calpurnius Bibulus, by Portia, Cato's daughter. He was Cæsar's colleague in the consulship, but, finding it impossible to thwart the measures of the former, he retired from public affairs in a great degree, and during eight months (the period that remained for his holding the consulship) contented himself with publishing edicts. This conduct placed his colleague in an odious light, and Cæsar endeavoured, by means of the popular pace, to shame him. Cæsar then, in 48 B.C., caused Bibulus to leave his dwelling, and come forth and take an active part in public affairs. The attempt, however, proved unsuccessful. Bibulus was not very conspicuous for military talents. In the war between Cæsar and Pompey, however, he had the chief command of the fleet of the latter. He died at sea in the course of the civil contest. (Biogr. Univ., vol. 4, p. 463.)

Bifrons, a surname of Cleitus, because he was represented with a bull's head. (Vid. Janus)

Bilbîlis, I. a city of the Celtibiri, in Hispamia Tarraconensis, southeast of Numantia, and southwest of Nertobriga. It lay on the western bank of the river Bilbila, and was a Roman municipium. The poet Martial was born here. Bilbila was famed for the temper of the weapons manufactured in it. The ruins of the ancient city lie not far from the modern Cisantad, at a place called Bambolia. (Philarct., 18.)—II. Martin.—III. Megarch, 100 B.C., and Tiberius, the Roman conqueror of Hispamia Tarraconensis, running by Bilbila, in the country of the Celtibiri, and falling into the Iberus. It is now the Xalon. Its waters were famous for tempering iron. (Hieron., Paul. de Flum. Hisp.—Martial, 10, 103, et ult.—Justin, 44, 8.)

Bimâter, a surname of Bacchus, which signifies that he had two mothers, because, when taken from his mother's womb, he was placed in the thigh of his father Jupiter. (Ovid, Met., 4, 12.)

Bingen, a town of Gaul, in Germania Prima, west of Moguntiacum. It lay upon the Rhine, and is now Bingen. (Tacit., Hist., 4, 70.)

Bion, I. a native of Borysthenes, of low extraction. When young he was sold as a slave to an orator, who afterward gave him his freedom, and left him large possessions. Upon this he went to Athens, and applied himself to the study of philosophy. He had several preceptors; but chiefly attached himself to the doctrine of Theodorus, of the Cyreniac sect, of which he was a professed advocate. He flourished about the 120th Olympiad. (Diog. Laert., 4, 46, seq.)—II. An Athenian tragic poet, a son of Ezechylus.—III. A Greek poet, born near Smyrna, in the district of Phlosa. He appears to have lived in Sicily, and to have died there of poison, as his pupil Moschus informs us in an elegy on his death. Some make him contemporary with Theocritus, while others suppose that he flourished a century later, about 187 B.C. He is ranked, along with Moschus, among the bucolic poets, less on account of the subjects of his pieces, which are for the most part a lyric or philosophical character, than by reason of the manner in which he treats them. He is far inferior to Theocritus in simplicity and naïveté. His productions are in general less polished; but in description he succeeds more frequently. His style, however, is not wanting in elegance, and in correct and pleasing imagery. There are many good editions of this poet's works, generally printed with those of Moschus, the best of which is that of Valckenier, Engd. Bat. 1810, 8vo, reprinted at Oxford in 1816, by Gaisford, in the Poetae Minores Graeci.

Bisalpe, a people of Macedonia, situate between the lake Bolbe and the Strymon. They were of Thracian origin. (Herod., 7, 118.) Theopompus, who is cited by Strabo, Byz. (s. v. Bisalpe), affirmed, that almost all the hares in the country occupied by this people were found to have two livers. (Cramer's Anc. Greece, vol. 1, p. 266.)

Bishante, a town on the Propontis, northwest of Perinthus. It was called also Redestus, and is now Rodosto. (Herod., 7, 137.)
BISTONIS, a lake of Thrace, near Abdera. It derived its name from the Bistones, who inhabited its shores, and held dominion over the surrounding district. (Herod., 7, 110.—Sextyn., Ch. 673.)

BITHYNIA, a country of Asia Minor, bounded by the Euxine on the north, on the south by Phrygia and Galatia, on the east by Paphlagonia, and on the west by the Propontis and Mysia. One of the earlier names of this region, more particularly along the shores of the Propontis and Euxine, was Bebycia, derived from the Bebyzos, who are said to have been the primitive settlers in the land. Homer nowhere mentions the people of this country by the appellation of Bithynians, but invariably designates them as Myssians and Phrygians. (Il., 2, 862.—Id., 13, 792.—Strab., 565.) Strabo has also proved, that the Myssians not only occupied the shores of the Lake Ascanius and the plains of Niccæa, but that they extended as far as Chalecedon and the Thracian Bosporus. (Strab., 566.) Though we cannot precisely fix the period at which the Bithyni settled in the fertile district to which they communicated their name, we can have no doubt as to the country whence they came, since the testimony of antiquity is unanimous in ascribing to them a Thracian origin. Herodotus, in particular, asserts that, according to their own traditions, they came from the banks of the Strymon, and, having been driven from their country by the Teucri and Myss, crossed over into Asia Minor (Id., 667.) They were also and Xenophon expressly style them Bithynian Thracians. (Thucyd., 4, 75.—Xen., Hist. Gr., 1, 3, 2.—Id. ib., 3, 2, 2.) Some geographers have noticed a distinction to be observed in regard to this people, namely, that the appellation of Bithyni was properly applicable to the inland population, while that of the coast took the name of Thyini. (Apollod. Rhod., 2, 462.—Dio. Chon., 17, seq.—Plin., 5, 171.) Referring, historically speaking, it is of little value.—The Bithynians, as Herodotus informs us (1, 28), were first subjected by Croesus. On the dissolution of the Lydian empire they passed under that of Persia, and their country became the seat of a satrapy sometimes known in history by the title of Dascylium, sometimes of the Hellespont, but more commonly of Bithynia. The people lived principally in villages; the only cities having been situated on the coast, and inhabited by Greek colonists. This state of things lasted till the death of Alexander, who had taken military possession of the country after the defeat and expulsion of the Persians from the peninsula On the decease of the King of Macedon, we find Bothirus, the son of Dydalsus, a Thracian chief, seizing upon Astacus, a Greek town on the seacoast, and, after defeating Calantus, the officer who commanded the Grecian forces in that country. Establishing an independent principality, which he transmitted, through his lineal descendants Bas and Xipetes, to Nicomedes, son of the latter, who, after the death of Lysimachus, first assumed the title of King of Bithynia. He gave his name to the city of Astacus, from which henceforth was called Nicomedia, and became the capital of the new kingdom. (Mena excerpt. ap. Phot., p. 720, seq.—Pausan., 6, 12.) An account of the succession in this family will be found under the articles Nicomedes and Prusias.—Like other Asiatic sovereigns, the kings of Bithynia are said to have been sensual and effeminate. (Polyb., 37, 2.—Cic., Verr., 5, 11.)

The interior of the country was mountainous and woody (Xen., Anab., 6, 15.—Niceét., Chron., p. 128), but near the sea it was covered with rich and fertile plains, thickly spread with towns and villages. The produce consisted in grain of all sorts; in tobacco, cheese, figs, and various kinds of wood. (Xen., Anab., 6, 4, 4.—Strab., 565.—Plin., 11, 42.) The western portion of Bithynia has received from the Turks the name of Khodavendkhir; and that situated on the Euxine and around the Bosporus they call Ko dyayil. (Cramer’s Asia Minor, vol. 1, p. 167, seq.)

BITON. Vid. Cleobis.

BITUKUM. Vid. Avaricum.

BITURIGES, a people of Gaul. There were two tribes of this name, the Bituriges Cubi and the Bituriges Vivisci. The former were in Gallia Celtaica, to the west of the Alae. Their capital was Avaricum, now Bourges. The Vivisci were in Aquitania, on the Atlantic coast, below the mouth of the Garumna. Their chief city was Bourgignie, now Bordeaux. (Cass., B. G., 8, 5, &c.—Lemire, Index Geogr. ad Cass., s. v. p. 210, seq.)

BIZYA, a city in Thrace, on the shores of the Euxine, above Halmydessus, and northwest of Byzantium. It is now Vizia. The poets fabled that it was shunned by swallows, on account of the crimes of Tereus. (Plin., 4, 11.—Solin., c. 10.—Ovid., Met., 6, 424, seq.)

BLANDEUSIA, or, more properly, Blandusia, a fountain in the immediate vicinage of Horace’s Sabine farm. It is supposed to be the modern Fonte Bello. (Compare the remarks of the commentators on Horace, Odes 3, 13, 1.)

BLASTOPHENAICS, a people of Lusitania. (Appian, de reb. Hisp., 6, 56.) UKert maintains the identity of this people with the Bastuli Poni. (Geogr., vol. 3, p. 563.)

BREMUS, a people of Ehiopia sapra Egyptum, dwelling, according to Strabo and Ptolemy, to the southeast of the Astaboras, towards the Sinus Avallites. They were fabled to be without heads, and to have the eyes and mouth placed in the breast. This fable is supposed to owe its origin to a custom prevailing among these people, of depressing their heads between their shoulders, which they forced upward, so that they might be more readily penetrated by the arrows. But, more probably, it concealed partly by their shoulders, and partly by their long and thick hair. (Strab., 563.—Mela, 1, 4, 8.—Plin., 5, 8.—Amm. Marcell., 14, 4.—Vopisc. in Prog., c. 17.—Procop., Bell. Pers., c. 19.—Claudian, Carm. de Nil., v. 19.—Novm. Dionys., 17, exot.)

BODICEA. Vid. Boudicca.

BOULARUS, a river of the Lucer Epicenimedi, watering the town of Trionum. Strabo asserts it was known by the name of Minos, and was nothing more than a torrent, which was sometimes entirely dry, though occasionally it was swollen so as to be two plethra in breadth. (Compare Lycoaphron, v. 1145.)

BOCCHUS, a king of Getulia, in alliance with Rome, who perfidiously delivered Jugurtha to Sylla, the lieutenant of Marius. Many of the old editions of Sallust read Jugurthum ilia Bocchus nuperarat (Jug. Bell., 80), instead of Bocchi, &c., thereby making Bocchus to have been Jugurtha’s son-in-law. The Abet Brotier, relying upon this reading and some of Sylla’s medals, proposes to substitute in Plutarch’s life of Marius, where mention is made of Bocchus, the term “son-in-law” for “father-in-law;” but M. Vanvilliers more judiciously contends, from six MSS. of Sallust, and in conformity with Florus (3, 1), for the expression “father-in-law” of Jugurtha. Bocchus obtained, as the reward of his treachery, the western part of Numidia, which was afterward, in the reign of Claudius, named Mauritania Caesariensis, now Fez. (Sallust, Jug.—Paterc., 2, 12.)

BOUG-incUS, a leader of the Nervii, when Caesar made war against them. (Cass., B. G., 2, 23.)

BOURDOMAS, an Athenian festival, sacred to Apollo Patroclus, and instituted in commemoration of the assistance which the people of Athens received in the reign of Erechtheus, from Ion, son of Xuthus, when their country was invaded by Eumolpus, son of Nephtune. It was celebrated in the month Boedromion, which took its name from this circumstance. The

The
appellation given to the festival is derived ὄντος τοῦ ὄφουνωτος, from coming to help. (Etymol. Mag., s. v.—
Suid., s. v.—Calhim., H. in Apoll., v. 69.—Pliit.,
Theér., c. 27.—Wachsmuth, Hellen. Alt., vol. 4, p. 143.)

BÖRODÖNIA, the name of one of the Attic months. It was the third in the order of the Attic year, and corresponded nearly to our September. It derived its name from the festival held in Boeotia being celebrated during it. (Vid. Boeotonia.)

BÖROTECII, the chief magistrates in Boeotia. They presided in the national councils, and commanded the forces. They were, in later times at least, elected annually, and rigidly restricted to their term of office. Their number is supposed to have been originally fourteen, the primitive number of the confederate Boeotian states. It was afterward reduced, and underwent many variations. Thebes appears to have had the privilege of appointing two, one of whom was superior in authority to the rest, and probably acted as president of the board. (Thucyd., 2, 2.—Id., 4, 91.

—Arnold, ad Thucyd., l. c.—Thirlwall's Hist. Gr., vol. 1, p. 434.—Liv., 42, 43.)

BOEOTIA, a country of Greece Proper, lying to the northwest of Attica, and shut in by the chains of Helicon, Citharon, Parnassus, and, towards the sea, Parnes, and the Boeotian mountain, constituting the chief part of the country. Numerous rivers, of which the Cephissus was the most important, descending from the heights, had probably stagnated for a long time, and formed lakes, of which the Copai was the largest. These same rivers appear to have formed the soil of Boeotia, which is among the most fruitful in Greece. Boeotia was also perhaps the most thickly settled part of Greece; for no other could show an equal number of important cities. This country, as we learn from the concurrent testimony of Strabo, Pausanius, and other ancient writers, was first occupied by several barbarous clans, under the various names of Aones, Ectenes, Temnicms, and Hyantes. (Strabo, 401.—Pausan., 9, 5.) To these succeeded, according to the common account, Cadmus and his followers, who, after expelling some of the indigenous tribes above mentioned, and conciliating others, founded a city, which became the residential city of the ancient Boeotians, the city of Thebes, and to which he gave the name of Cadmes. The descendants of Cadmus were compelled, subsequently, to evacuate Boeotia, after the capture of Thebes by the Epigonii, and to seek refuge in the country of the Illyrian Enechees. (Herod, 5, 61.—Pausanias, 9, 5.) They regained; however, possession of their former territory, but were once more expelled, as we learn from Strabo, by a numerous horde of Thracians and others. On this occasion, having withdrawn into Thessaly, they united themselves with the people of Arne, a district of that province, and for the first time assumed the name of Boeotians. (Strabo, 401.) After a lapse of some years, they were compelled to abandon Theseus, when they once more succeeded in re-establishing themselves in their original abode, to which they now communicated the name of Boeotia. This event, according to Thucydides, occurred about sixty years after the capture of Troy; but, in order to reconcile this account with the statement of Homer, who distinctly names the Boeotians among the Grecian forces assembled at that memorable siege, the historian admits that a Boeotian division (ἀποκολονωμένος) had already settled in this province prior to the migration of the great body of the nation (1, 12). The government of Boeotia remained under the monarchial form till the death of Xanthus, who fell in single combat with Xerxes, and was slain. His name, which was determined to adopt a republican constitution. This, though imperfectly known to us, appears to have been a compound of aristocratic and democratic principles; the former being apparent in the appointment of eleven annual magistrates named Boeotarchs, who presided over the military as well as civil departments (Thucyd., 2, 2—Id., 4, 92.—Id., 5, 37); these latter in the establishment of four councils, which were in fact, of the sovereign authority, since all measures of importance were to be submitted to their deliberation. The general assembly of the Boeotian republic was held in the temple of the heroic Mnesarchus, in the city of Sparta, which was the name of a river. The Boeotians might have played the first part in Greece, if they had not been prevented by the bad government of the cities, by the jealousy of Thebes, and the consequent want of union. And yet the example of Epaminondas and Pelopidas afterward showed that the genius of two men could outweigh all these defects.—The Boeotians were regarded by their neighbours, the Athenians, as naturally a stupid race. Much of this, however, was willful aggregation, and must be ascribed to the national enmity, which seems to have existed from the earliest times between these two nations. Besides, this country produced, in fact, many illustrious men, such as He-
io, Pindar, Plutarch, Epaminondas, Pelopidas, &c. In Boeotia, too, Mount Helicon was sacred to the Muses, to whom also many of the fountains and rivers of the country were consecrated.—The modern name of the country comprehends within its limits the ancient Boeotia, as one of its component parts.—In Boeotia are several celebrated ancient battle-fields, the former glory of which has been increased by late events; namely, Platara (now the village Koldia), where Pausanias and Aristides established the liberty of Greece by their victory over Mardonius; Leuctra (now the village Parapogia), where Epaminondas triumphed over the Spartans; Coronea, where the Spartan Agesilaus defeated the Thebans; and Cheronae, where Philip founded the Macedonian greatness on the ruins of Grecian freedom.—Near Tanagra, the birthplace of Corinna, the best wine was produced: here also cocks were bred, of remarkable size, beauty, and courage, with which the Grecian cities, passionately fond of cock-fighting, were supplied.—The Boeotians were particularly fond of music, and excelled in it. (Cra- sus's Asian Travels, vol. 3, p. 52.—Heeren's Politics of Anc. Greece, p. 32, Bancroft's trans.—
Encyclopedia Americ., vol. 2, p. 151, seq.)

BOETHIUS, Anicius Manlius Torquatus Severinus, a man celebrated for his virtues, services, honours, and tragical end. He was born about A.D. 470, in Rome or Milan, of a rich, ancient, and respectable family; was educated in Rome, in a manner well calculated to develop his extraordinary abilities; afterward went to Athens, which was still the centre of taste and science, and studied philosophy under Proclus and others. Returning to Rome, he was graciously received by Theodoric, king of the Ostrogoths, then master of Italy, loaded with marks of favour and esteem, and soon raised to the first offices of the empire. He exerted the best influence on the administration of this monarch, so that the dominion of the Goths promoted the welfare and happiness of the people who were subject to them. He was the oracle of his sovereign and the idol of the people. The highest honours were thought inadequate to reward his virtue and his services. But Theodoric, as he grew old, became irritable, jealous, and distrustful of those around him. The Goths now indulged in all sorts of oppression and extortion, while Boethius exerted himself in vain to restrain them. He had already made many enemies by his strict integrity and vigilant justice. These at last succeeded in rousing his sovereign against him, and rendering him suspicious of Boethius. The opposition of Boethius to their unjust measures was construed into a rebellious temper, and he was even accused of a treasonable correspondence with the court of Constantineople. He was arrested, imprisoned, and
executed, A.D. 524 or 526.—While he was at the helm of state, he found recreation from his toilsome occupations in the construction of mathematical and musical instruments, some of which he sent to Clo- thaire, king of France. He was also much given to the study of the old Greek philosophers and mathema- ticians, and wrote Latin translations of several of them. His most celebrated work is that composed during his imprisonment, "On the consolation afforded by Philo- sophy." It is written in prose and verse intermixed. The elevation of thought, the nobleness of feeling, the ease and distinctness of style which it exhibits, make this composition, short as it is, far superior to any of the age. The principal edition is that of Basle, 1570, vol. A more modern one, of some value, appeared at Glasgow, 1751, 4to. (Encyclop. Americ., vol. 2, p. 158, s. v.)

**BOETHIUS.** I. a Stoic philosopher, referred to by Diogenes Laertius and Cicero. (Diog. L., 7, 143— Cic., de Div., 1, 8.—Id. ib., 2, 29.) His opinions differed so far from those of his school, in that he did not regard the world as animated, and in his admitting four principles as the basis of judgment; namely, thought, sensation, appetite, and participation. (Menag. ad Diog. l. c.) I. A pertipatetic philo- sophic, a native of Sidonius. He amassed such a repu- tation, that Strabo, who had been his fellow-disciple, ranks him among the most illustrious philosophers of his time, and Simplicius styles him ἴδων ωτοίς, "the wonderful." (Menag. ad Diog. Laert., 7, 143.)—III. A statuary, and engraver on plate, born at Car- thage. (Pausan., 5, 17.) He appears to have flour- ished before the destruction of the city by the Romans, but we cannot, with any certainty, ascertain the age in which he lived. (Silly, Dict. Art., s. v.)

**BoiL,** a people of Celtic Gaul, who inhabited the country watered by the river Signamus, Signatus, or Igmansus, now the Sollac. From Gaul they passed into Germany, and settled in the present Bohemia (Boerheim, i. e., the residence of the Boi), until they were expelled by the Marcomanni. Abandoning this quarter, they carried their name with them into Boi- rias, Bavaria, or Bavarins. The name Boi is thought to denote "the terrible ones," and to be derived from the Celtic Bo, "fear." (Thierry, Histoire des Gauls, vol. 1, p. 48—Cas., B. G., 1, 28; 7, 17.)

**BoL,** a town of the Æqui in Italy. It is thought to correspond with the small town of Polo, situate in the mountains between Tivoli and Palastrina, the ancient Tibur and Praeneste. It was a colony of Alba. (Verg., Æn., 1, 673.)

**BOLNE,** I. a lake of Macedonia, in the territory of Mygdonia, and emptying into the sea near Aulon and Bormiscus. (Thucyd., 1, 58.) Dr. Clarke, who visited the shores of this lake in his travels, observes, "it is now called Beshek," it is about 12 miles in length, and 6 or 8 in breadth. We can find no notice that has been taken of this magnificent piece of water by any modern writer." (Travels, vol. 8, p. 6.)—II. A town near the Lake Bolne. (Step. Byz., s. v. Bollan.)—Bolivia, one of the mouths of the Nile, in the vicinity of what is now the town of Rosetta. (Vid. Nilus.)

**BoLiNE,** a town of Achaia, between Drepanum and Patra, which no longer existed in the time of Pausa- nias (7, 23). Near it ran a river called Bolinns. (Steph. Byz., s. v.)

**BOLISSAUS,** a town in the island of Chios, situate on the coast, and the centre of which is occupied by the modern village of Volissa. The ancient place is men- tioned by Thucydides (8, 24), and is mentioned also in the life of Homer (c. 23.—Compare Steph. Byz., s. v. Bollissaus.)

**BOLYANUS,** a man whom Horace represents as one of the most irascible temper, and most inimical to lo- quacity. (Serm., 1, 9, 11.)

**BONILCAr,** I. a Carthaginian general, son of Hamil- car. He attempted to seize, by force of arms, upon the government, but was overcome and put to death. (Diod. Sic., 20, 43.)—II. A Carthaginian admiral, sent to relieve Syracuse when besieged by the Romans. He fled, however, before the fleet of Marcellus, and the city fell.—III. A native of Numidia, a secret agent of the Carthaginians, by whose means that monarch effected the assassination of Massiva at Rome. He afterward, at the instigation of Metellus, the Roman commander, conspired with Nabalda against Jugurtha, but the plot was discovered, and he was put to death. (Sallust, Jug., 35, 61, 70.)

**BONOMICIA,** a name applied to the youths who were whipped at the altar of Diana Orthia at Sparta, in honour of that goddess. The festival was called Ἄποδικαιος, and was so named ἀπό τοῦ μαθητῶν ἀπόλειπτον. They were learnt from skipping. These boys were, at first, freckled Spartans, but afterward of meaner birth, being fre- quently the offspring of slaves. They were called Bonominice (Bonomiacus) from the scourging they un- derwent at the altar, and which was very severe and cruel; and, lest the officer should, out of compassion, remit any of its rigour, Diana's priestess stood by all the time holding in her hand the goddess's image, that the king of light and earth might be borne, but if the boys were scarred, became so puer- dulous that the priestess was scarcely able to support its weight. The parents of the boys were also pres- ent, and exhorted their sons to bear their sufferings with patience and firmness. He who showed the most firmness was highly honoured. Some of the boys even died under the lash; these they buried in a public funeral, with garlands on their heads, in token of joy and victory. The origin of this cruel custom is variously accounted for by the ancient writers. Some ascribe it to a wish on the part of Lycurgus to inure the Lacedaemonian youth to labour and fatigue, and to render them insensible to pain or wounds. Others maintain that it was a mitigation of an oracle, which ordered that human blood should be shed on Diana's altar. Another tradition mentions that Pausa- nias, at the battle of Platea, being disturbed at the Jagarata's sacrifices by a party of Lydians, and his attendants having repelled them with stones and stones, the only weapons they had at the moment, instituted this custom subsequently in commemoration of the event. (Pausan., 3, 16.—Plut., Vit. Lycurg.)

**Bona Dea** ("the Good Goddess"), a name given by the Romans to Ops or Tellus, or, in other words, to the goddess Earth. The first of May was the time for celebrating her festival, and it was also the anniversar- y of the dedication of her temple on the Aventine Hill (Ovid, Fast., 5, 148, seq.) She was worshipped by the Roman matrons in the house of the chief pontiff, and everything relating to the other sex was carefully ex- cluded. (Vid. Clodius.) As the most probable deriv- ation of the name of the month of May is from Māia, it has been inferred that this goddess and Bona Dea were the same deities. The Romans had a legend among them, that Bona Dea was Fauna or Pata, the daugh- ter of Faunus, who, ous of modesty, never left the house, or let herself be seen of men; for which she was deified, and no man entered her temple. (Ma- crob., 1, 12.)

**BononTa,** a city of Pannonia, on the Danube, north of Sirmium. Its site corresponds with the modern Il- lock or Ujilak. (Anton., Itin.—Notit. Imp.)—II. A city of Italy. (Vid. Velsina.)—III. A city of Gaul. (Vid. Gesandum.)

**Bona Dea, a Roman deity, whose worship was first introduced by the peasants. He was repre- sented holding a patera or pan in his right hand, and in his left ears of corn. (Varro, de R. R., 1, 1.—Plut., 31, 48.)

**Boosera (boos eaud), a town of Cyprus, on the
southeastern coast. Venus had an ancient temple here.

Boötes, a northern constellation, near the Ursa Major. The name is Greek. Boötes and means "the Oxen-driver," Boötes being regarded in this sense as the driver of the Wain (Auriga), another appellation for the "Greater Bear." (Aratus, 91.—Manilius, I, 313.) The Greeks generally saw in Boötes, Arcas son of Callisto. Ovid, however, calls him on one occasion Lycaon, after the father of Callisto. (Fast., 6, 235.) Others regarded him as Icarus, the father of Ereigone. (Vid. Icarus.) Proserpina hence calls the seven stars of the Greater Bear, "bones Icarii." (El., 2, 24, 24.)

Boreas, the North wind, regarded in the Greek mythology as a deity. According to the poets, he was the son of Astraus and Aurora, but others make him the son of the Smyphon. He loved Orthivia, the daughter of Erechtheus, king of Athens, and carried her off to Thrace, where she bore him the winged youths Zetes and Calais; and two daughters, Chione and Cleopatra. (Plat., Phaedr., 259.—Apollod., 3, 15, 2.—Apoll. Rhod., 1, 511.) The Athenians ascribed the destruction of the fleet of Xerxes by a storm to the partiality of Boreas for the country of Orthivia, and built a temple to him after that event. (Herod., 7, 189.) Boreas is also said by Homer to have turned himself into a horse, out of love to the mares of Erichthonius, and to have begotten on them twelve foals remarkable for their fleetness. (Il., 20, 223.—Keightley's Mythology, p. 255, seq.)

Bostra, I. a large river of Scythia, falling into the Euxine Sea, now called the Dniester. Herodotus considers it the greatest of the Scythian rivers after the Ister, and as surpassing all others except the Nile. He does not appear, however, to have known much about its course, and seems not to have been apprized of the famous cataracts of this river, which occur at the height of 200 miles above its mouth, and are said to extend 40 miles, being 13 in number. (Vid. Danaparta.—II. There was a city on the banks of this river called Borysthenes, and also Olbia. (Vid. Olbia.)—III. A favourite steed of the Emperor Hadrian's, to whom he erected a monument after death.

Bostra, I. a name applied to a strait of the sea. There were two straits known in antiquity by this appellation, namely, the Thracian and the Cimmerian Bosphorus; the former now known by the name of the Straits or Channel of Constantinople, the latter the Straits of the Oxus, or Bosphorus. In the latter, the figure of an ox on the column of the Themis of the same denomination, the Straits of Zabache. By the Russians, however, it is commonly called the Bosphorus. Various reasons have been assigned for the name. The best is that which makes the appellation refer to the early passage of agricultural knowledge from East to West (βοῖς, an ox, and πῶς, a passage). Nymphius tells us, on the authority of Accarion, that the Phrygians, desiring to pass the Thracian strait, built a vessel called a Boreas, the figure of an ox on the strait which it carried them, βοῦς πῶς, Bosphorus, or the ox's passage. Dioscurus of Helicarnassus, Valerius Flaccus. and others of the ancient writers, refer the name to the history of Io, who, when transformed into a cow (βοῦς) by Juno, swam across this strait to avoid her tormentor. Arrian says that the Phrygians were directed by a divinity to follow the route which an ox would point out to them, and that one being found braved for the strait. —The strait of the Thracian Bosphorus properly extended from the Cymene rock to the harbour of Byzantium or Constantinople. It is said to be 16 miles in length, including the windings of its course, and its ordinary breadth about 1 miles. In several places, however, it is very narrow; and the ancients relate that a person might hear birds sing on the opposite side, and that two persons might converse across with one another. Herodotus, Polybius, and Arrian make its length 120 stadia, from the Cyanean rocks to Byzantium. The new castles of Europe and Asia are erected on either coast, on the site of the ancient temples of Asclepius and Jesus. Justin, however, by the Greek emperors, command the narrowest part of the strait, where it is not more than 500 paces across. Here Darius is said to have crossed, on his expedition against the Scythians.—For some remarks on the kings of Bosphorus, as they are styled in history, consult Clinton's Fasti Hellenici, p. 321, seqq., 2d ed.—II. A city in the Bersonesus Taurea, the same as Panticapaeum. (Vid. Panticapaeum.)

Bottica, or Bottis, a name given to a narrow space of country in Macedonia, situated between the Haliacmon and Lydias, as Herodotus informs us (7, 127); but in another passage he extends it beyond the Lydias as far as the Axios. The Bottii had been, however, early expelled from this district by the Macedonian princes, and had retired to the other side of the Axios, about Therme and Olympos (Herodot., 9, 127), where they formed a new settlement with the Chalidianians, another people of Thracian origin, occupying the country of Chalcidice. (Cramer's Anc. Greece, vol. 1, p. 220.)

Boudicea or Boadicea, queen of the Iceni, in Brit-ain, during the reign of Nero. Having been treated in the most ignominious manner by the Romans, she headed a general insurrection of the Britons, attacked the Roman settlements, reduced London to ashes, and put to the sword all strangers to the number of 70,000. Suetonius, the Roman general, defeated her in a decisive battle, and Boudicca, rather than fall into the hands of her enemies, put an end to her own life by poison. (Tacit., Ann., 14, 31.)

Bovillae, I. an ancient town of Latium, on the Appian Way, between the ninth and tenth milestones; and answering, according to the opinion of Holstenius, to the situation of the inn called Pustoria delle Fratte, It is distinguished from another town of the same name in Novum Latium by the title of Suburbanam. Bovillae was one of the first towns conquered by the Romans, according to Florus (1, 11). We learn from Cicero that it was a municipium (Orat. pro Plancio), but he represents it as almost desolated.—II. A town of Novum Latium; its precise situation has not been ascertained. Vulpius says, that some vestiges of this town may be traced near a place called Bantco, not far from Verulam. (Vit. Lat., p. 120.)

Brachmanes, Indian philosophers. (Vid. Gymnosophists.)

Brachidae, a surname of Apollo. (Vid. Branchidae.)

Branchidae, I. the inhabitants of a small town in Sogdiana, on the river Oxus, put to the sword by Alexander. They were descended from the Branchidae, a family who held the priesthood of the temple of Apollo Didymæus at Didyma near Miletus. The Persians under Xerxes plundered and burned the temple, and the Branchidae, who had betrayed it into their hands, came on the defeat of Xerxes, the voluntary companions of his flight, in order to avoid the justice of their countrymen. They settled on the Oxus, and grew up into a small state. Alexander's motive in the cruel massacre of this people was retaliation for the sacrifice of their ancestors. (Curt., 7, 5.)—II. The priests of Apollo Didymæus, who gave oracles in Caria. (Vid. Didim.)

Branchus, a youth of Miletus, beloved by Apollo, who gave him the power of prophecy. He gave oracles at Didyma. (Vid. Didyma.)
ly settled by Greek colonies, a large number of which he brought under the control of Sparta by his arms or personal influence. He lost his life at the taking of Amphipolis. (Vid. Amphipolis.) The virtues of his private character were worthy of the best days of Sparta. (Thucyd., 2, 25.—Id., 4, 11.—Id., 4, 78.—Id., 4, 81.—Id., 4, 102, &c.—Id., 5, 46.) The city was granted to them in honour of Brasidas. But freemen born Spartani were permitted to enter the lists, and such as were absent were fined.

BRAVON, a town of Attica, celebrated in mythology as the place where Iphigenia first landed after her escape from Tauris with the statue of Diana. From this circumstance, the goddess was here held in peculiar veneration, under the title of Brauronia. (Pausan., 1, 33.—Steph. Byz., s. v. Brauronia.—Strabo, 398.) The ruins of Brauron are pointed out by modern travellers near the spot called Palatio Brauna. Chandler calls the modern site Vronna. (Travels, vol. 2, ch. 34.—Compare Bell's Itinerary, p. 77.) Diana had three festivals here, called Brauronia, celebrated once every fifth year by ten men who were called ιπροσωιοι. They sacrificed a goat to the goddess, and it was usual to sing one of the books of Homer's Iliad. The most remarkable of all the sacred animals was the goat, consecrated to Diana. They were about ten years of age, and not under five, and therefore their consecration was called δεκατετευεχ, from δεκα, δεκεμ; and sometimes οκταυετευεχ, as the virgins themselves bore the name of οκτοιοι, bears, from this circumstance. There was a bear in one of the villages of Attica so tame, that he ate with the inhabitants, and played harmlessly with them. This familiarity lasted long, till a young virgin treated the animal too roughly, and was killed by it. The virgin's brother killed the bear, and the country was soon after visited by a pestilence. The oracle was consulted, and the plague removed by consecrating virgins to the service of Diana. This was so faithfully observed, that no woman in Athens was ever married before a previous consecration to the goddess. The statue of Diana of Tauris, which had been brought into Greece by Iphigenia, was preserved in the town of Brauron. Xerxes carried it away when he invaded Greece. (Cramer's Ancient Greece, vol. 2, p. 382.)

BRENNI and BRENNI, a people of Italy, occupying, together with the Genauni, the present Val d'Agno and Val Braunna, to the east and northeast of the Lacus Verbanus (Lago Maggiore). They, together with the Genauni, were subdued by Drusus, whose victory Horace celebrates. Strabo calls them Brenni and Genauni; others term the former Brenni. (Horat., Od., 4, 14, 16.)

BRENNU, I. a general of the Galli Senones, who entered Italy, defeated the Romans at the river Allia, and entered their city without opposition. The Romans fled into the capitol, and left the whole city in the possession of their enemies. The Gauls climbed the Tarpeian rock in the night, and the capitol would have been taken, had not the Romans been awakened by the noise of the sacred geese in the temple of Juno, and immediately repelled the enemy. (Vid. Manlius.) Camillus, who was in banishment, marched to the relief of his country, and so totally defeated the Gauls, that not one remained to carry home the news of their destruction. —The destruction of the Gauls by Camillus is the national account given by the Roman writers, and is replete with error and exaggeration. (Consult remarks under the article Camillus.)—As regards the name Brennu, it is remarkable more than the Cymric word Brenhin, which signifies "king" or "leader," converted into a Latin form. The Romans mistook it for a proper name. (Thierry, Hist. des Gaul., vol. 1, p. 57.—Arnold's Rome, vol. 1, p. 524.) Pritchard, however, maintains that it is rather the proper name Bran, which occurs in Welsh history. (Arnold, l. c.)—II. Another Gallic leader, who made an irruption into Greece at the head of an army of his countrymen, consisting of 152,000 foot and 20,000 horse. After ravaging various parts of Northern Greece, they marched against Delphi, and endeavoured to plunder the temple. But the army of the invaders, consisting of 200,000, was seized with a panic terror during the night, and being attacked at daybreak by the Delphians and others of the Greeks, retreated in the utmost confusion. Large numbers perished, the Greeks continuing on the skirts of the retreating foe; and Brennus, wounded, and dispirited by his overthrow, killed himself in a fit of intoxication, B.C. 278. (Pausan., 10, 19.—Id., 10, 23.—Justin, 24, 6, &c.) It would appear, that beside the Gauls mentioned here, another body of the same race were ravaging Thrace and Macedonia; and these latter were they who crossed over into Asia, not the remains of the army of Brennus. (Consult Siecle, ad Pausan., 10, 23, 8.)

BRIAREUS, I. a giant famous in early fable. He and his two brothers Cottus and Gyes, were the offspring of Uranus and Gé (Ceulus and Terra), and had each a hundred hands. According to Homer, he was called the son of the aegis-god; and in yellow and red tunics, he entered Amphipolis. When Juno, Neptune, and Minerva conspired to de-throne Jupiter, Briareus being brought by Thetis to the aid of Jupiter, ascended the heavens, and seated himself next to him, and so terrified the conspirators by his fierce and threatening looks, that they shrunk from their purpose. (Hom., ii., 1, 403.) Briareus also appears in fable as one of the Cyclopes. (Vid. Cyclopes.)

BRIANTON, a people in the northern parts of Britain, regarded as the greatest, most powerful, and most ancient of the Britons, who conquered the country from sea to sea, comprising the counties of York, Durham, Lancaster, Westmoreland, and Cumberland. Their capital was Eboracum, York. The Brignates (Briges, Bryges) would seem to have been originally of Thracian origin, and to have wandered forth from their mountain homes, between Macedonia and Thrace; over various parts of Europe, such as Gaul, Spain, Britain, &c. They also penetrated into Asia Minor, and were there called Phryges (Phrygians). Consult, as regards the root of the name, the remarks under the article Mesembria.

BRIGANTINUS LACUS, a lake in Vindelicia, separating the Helvetii from the Vindelic cognate and other German tribes. Another name for it was Bodamericus Lacus. It is now the Lake of Constance (Constanzer-See), as the Germans call it, who have likewise another apellation for it, resembling one of the ancient names, i. e., Boden-See. (Plin., 9, 17.—Mela, 3, 2.—Amm. Marcell., 15, 6.)

BRIGANTIUM, I. called also Brigantia, a city of Vindelicia, near the southeastern extremity of the Lacus Brigantinum. It was the station of a force in the time of the Antonines, for the purpose of watching the movements of the Alemanni. The modern name is Bracenzo.—II. A city of Hispania Tarraconensis, now Covaruna. See erroneously identify Abeorbia with this place. (Dio Cass., 37.)

BRILLES,US, a name given to the range of hills that united Mount Pentelicus with Archeclus. (Strab., 399.) The modern name is Turkio vanni. (Bell's Itin., p. 68 and 77.)

BRIMO (from δριμος, "to roar," "to rage"), a name L L
given to Hector, and chiefly employed to denote her terrific appearance, especially when she came summoned by magic arts. Apollonius describes her as having her body surrounded by serpents twining through branches of oak, while torches flamed in her hands, and the infernal dogs howled around her. (Apoll. R., 3, 1214, seqq.)

Briseis, a patronymic of Hippodamia, or Lynnessis, daughter of Brises, a high-priest of Jupiter at Pe- dasus in Troas. She was remarkable for her beauty, and was the wife of Minos, who was killed in the siege carried on by Achilles against Lynnessis. From Lynnessis the Grecian warrior brought her away captive. She was taken from him by Ajax,—a name, during the quarrel occasioned by the resolution of Chryseis, but she was given back to him, when a reconciliation took place. (Hom., I., 1, 336, &c.—Ovid, A. A., 3, 2.— Propert., 2, 8, 20, &c.)

Brises, a surname of Bacchus, said to signify "the discoverer of honey." Some derive the appellation from the nymphs called Brises, the nurses of the god. Cornutus, the interpreter of Persius, deduces it from bris, equivalent, as he informs us, to tunucus. Bochart gives a Syriac derivation, bri dousa, "a lake of honey." (Rolle, Recherches, &c., vol. 3, p. 390.)

Britannia, the inhabitants of Britain. (Vid. Brit- annia.)

Britannia, called also Albion. (Vid. Albion.) An island in the Atlantic Ocean, and the largest in Europe. The Phoenicians appear to have been early acquainted with it, and to have carried on here a traffic for tin. (Vid. Casiterides.) Commercial jealousy, however, induced them to keep their discoveries a profound secret. The Carthaginians succeeded to the Phoenicians, but were equally mysterious. Avienus, in his small poem entitled Ora Maritima, v. 412, makes mention of the voyages of a certain Himilco in this quarter, and professes to draw his information from the long-concealed Punic Annals. Little was known of Britain until Caesar's time, who invaded and endeavoured, although ineffectually, to conquer the island. After a long interval, Ostorius, in the reign of Claudius, reduced the southern part of the island; and Agricola, subsequently, in the reign of Domitian, extended the Roman dominion to the Frith of Forth and the Clyde. The whole force of the empire, although exerted to the utmost under Severus, could not, however, reduce to subjection the hardy natives of the highlands. Britain continued a Roman province until A.D. 426, when the troglodytic tribes, particularly the Picts and the Valentinian the Third against the Huns, and never returned. The Britons had become so enervated under the Roman yoke as to be unable to repel the incursions of the inhabitants of the north. They invoked, therefore, the aid of the Saxons, by whom they themselves subjugated, and at length obliged to take refuge in the mountains of Wales.—The name of Britain was unknown to the Romans before the time of Cae- sar. Harford, from an He- brew term Barathmus, "the land of tin." Others deduce the name of Britons from the Gallic Britti, "painted," in allusion to the custom on the part of the inhabitants of painting their bodies. (Aeliusing, Mihri- dates, vol. 2, p. 50.) Britain was famous for the Roman walls built in it, of which traces remain at the present day. The first was built by Agricola, A.D. 79, nearly in the situation of the rampart of Hadrian, and is called by some the Wall. In the year A.D. 115, Agricola built a line of very strong forts from the Frith of Forth to the Frith of Clyde. This, however, was insufficient to check the barbarians after his departure. In A.D. 120, therefore, Hadrian erected a famous wall from Boulogne on Solway Frith, to a spot a little beyond Newcastle upon Tyne. It was sixty-eight English or seventy-four Roman miles long. Twenty years after this, Lollius Urbicus, under the Emperor Antoninus, restored the second wall of Agriola, which is commonly called the Wall Antonini. But the greatest of all was that of Severus, begun A.D. 209, and finished the next year, which was a continuation of Hadrian's wall. It was traversed by ten thousand men. (Cass. G. 4, 21, seqq.—Id. ib., 5, 2, &c.—Id. ib., 6, 13.—Plin., 4, 16.—Mela, 3, 6.— Vell. Paters., 2, 46, &c.)

Britannicus, Caesar (Tiberius Claudius Germanicus), son of the Emperor Claudius and Messalina, was born a few days after the accession of his father to the throne. After the return of the emperor from his expedition to Britain, the surname of Britannicus was bestowed on both the father and son. As the eldest son of the emperor, Britannicus was the lawful heir to the empire; but Claudius was prevailed upon by his second wife, the ambitious Agrippina, to adopt Domitius Nero, his son by a former marriage, who was three years older than Britannicus, and to declare him his successor. The venal senate gave its consent. In the mean time, Agrippina, under the pretext of motherly tenderness, strove to keep Britannicus as much as possible in a state of inutility. She removed his servants, and substituted her own creatures. Sosibius, his tutor, was murdered by her contrivance. She did not permit him to appear beyond the precincts of the palace, and even kept him out of his father's sight, under the pretence that he was insane and epileptic. Although the weak emperor showed that he penetrated the artifices of Agrippina, yet his death, which she effected by poison, prevented him from re- trieving his error. Nero was proclaimed emperor while Britannicus was kept in close confinement. In a dispute with Nero, Agrippina threatened to place Britannicus, who was then fourteen years of age, on the throne, upon which Nero caused him to be poisoned at a banquet. His funeral took place the same night. His body was burned, without any pomp, in the Campus Martius, amid a violent storm, which the people regarded as announcing the anger of the gods. It is said that Nero had caused the face of his victim, already blackened with the poison, to be painted white, but that the heavy rain washed off this artificial colour, and the gleam of the lightning revealed the crime which had been confided to the bosom of the night. According to some authorities, Britannicus was naturally characterized by the same feebleness of spirit as his father, and Nero corrupted and abused his youth. They also state, that Agrippina assassinated his death. According to others, he has immoralized the name of this Roman prince by one of his finest tragedies. (Tacit. Ann., 11, 11.—Id. ib., 12, 2.—Id. ib., 12, 25, et 41.—Id. ib., 13, 16.—Encyclop. Americ., vol. 2, p. 275, seqq.—Biog. Univ, vol. 5, p. 627, &c.)

Britomartis, a Cretan nymph, daughter of Jupiter and Charme, and a favourite companion of Diana. Minos, falling in love with her, pursued her for the space of nine months, the nymph at times concealing herself from him amid the trees, at other times taking shelter under the waves of the sea. At length, being nearly overtaken by him, she sprang from a cliff into the sea, where she was saved in the nets (chiruxa) of some fishermen. The Cretans afterward worshipped her as a goddess, under the name of Dictyna, from the above circumstance, which was also assigned as the reason for the cliff from which she threw herself being called Dicteon. At the rites sacred to her, wreaths of pine and myrtle were thrown into the sea from the latter had caught her garments, and impeded her flight. Leaving Crete, Britomartis then sailed for Eginia in a boat: the boatman attempted to offer her violence, but she got to shore and took refuge in a grove on that island, where she became invisible (hia-): hence she was worshipped in Eginia under the name of Aphra. (Callim., H. in Dam., 190, seqq.—Dieud. Sic., 5, 76.—Anton., lib. 40.—Pausan., 2, 206
BRU

30.— Müller, *Égine*, p. 164, seqq.— Keightley's *Mythology*, p. 131.)

Brixellum, a town of Italy, in Gallia Cispadana, northeast of Parma, where Pompey slew himself when defeated. It is now Brescello. (Tact., Hist., 2, 33.)

Brixia, a city of Gallia Cisalpinia, to the west of the Lacus Bencanus, and southeast of Bergomum. It was the capital of the Cenomanni, as we learn from Livy (32, 30). Brixia is known to have become a Roman colony, but we are not informed at what period this event took place. (Plin., H. N., 3, 19.)

Strabo speaks of it as inferior in size to Mediolanum and Verona. (Cramer's *Anc. Italy*, vol. 1, p. 63.)

Bromia, an appellation given to Bacchus, from the noise with which his festivals were celebrated. It is derived from *βρούηθος*, "thunder." (Virg., *Aen.*, 3, 425.)

Bructeri, a people of Germany, between the Amisia and Ems, and Lucus Flevus or Zuyder Zee. (Tacit., Ann., 1, 51.)

Brundisium, or less correctly Brundivism, a celebrated city on the coast of Apulia, in the territory of the Calabri. By the Greeks it was called *BpEvriaiov,* a word which, in the modern Italian language, signifies the head, from the resemblance which the different harbours and creeks bore to the snout of that animal. (Strabo, 282.— Festus, s. v. Brundisium.— Steph., Byz., s. v. BpEvriaiov.) It is not necessary to repeat the various accounts given by different writers respecting the foundation of this city: its antiquity is evident from the statement of Strabo, that Brundisium was already in existence, and under the government of its own princes, when the Lacedaemonian Phalanthus arrived with his colony in this part of Italy. It is recorded also to the honour of the Brundisians, that although this chief had been instrumental in depriving them of a great portion of their territory, they generously afforded him an asylum when he was expelled from Tarentum, and after his death erected a splendid monument to his memory. (Strab., 282.— Aristot., Politi, 5, 3.— Justinian, 3, 4.)

The situation of its harbour, so advantageous for communicating with the opposite coast of Greece, naturally rendered Brundisium a place of great resort, from the time that the colonies of that country had fixed themselves on the shores of Italy. Herodotus speaks of it as a place generally well known, when he compares the Tauric Chersonese to the Iapygian peninsula, which might be considered as included between the harbours of Brundisium and Tarentum. (4, 15.) Brundisium soon became a formidable rival to Tarentum, which had hitherto engrossed all the commerce of this part of Italy. (Polyb., frag. 11); nor did the facilities which it afforded for extending their conquests out of that country, escape the penetrating views of the Romans. Under the pretence that several towns on this coast had favoured the invasion of Pyrrhus, they declared war against them, and soon possessed themselves of Brundisium (3). When a colony was sent over, they accepted it A.D. 508. (Flor., 3, 20.—Epit., 19.— Pol. Patrec., 1, 14.) From this period the prosperity of this port continued to increase in proportion with the greatness of the Roman empire. Large fleets were always stationed there for the conveyance of troops into Macedonia, Greece, or Asia; and from the convenience of its harbour, and its facility of access from every other part of Italy, it became a place of general thoroughfare for travellers visiting all the countries. When the rapid advance of Caesar forced Pompey to remove the seat of war into Epirus, he was for some time blockaded by his successful adversary in Brundisium, before the return of his fleet enabled him to evacuate the place, and carry his troops over to the opposite coast. Caesar describes accurately the works undertaken there by his orders for preventing the escape of his enemy. From his account we learn that the city possessed two harbours, one called the inner, and the other the outer, communicating by a very narrow passage. (Caes. Bell. Civ., 1, 25.— Appian, B. C. 2, 49.— Cic., Ep. ad Att., 9, 12, seqq.)

Strabo considers the harbour of Brundisium as superior to any other in Italy, and the event which terminates with the poet's arrival at the place of his destination. Brundisium is now Brindisi. Here the Appian Way ended. (Vid. Appia Via.— Cramer's *Ancient Italy*, vol. 2, p. 303, seqq.)

Brutii, a people of Magna Graecia, in Italy, below Lucania. The origin which ancient historians have ascribed to the Brutii, or, as they are called by the Greeks, *Βροττον*, is neither remote nor illustrious: they were a tribe of slaves, who had been thrown out of their own country, and settled as some refugee slaves and shepherds of the Lucanians, who, having concealed themselves from pursuit in the forests and mountains with which this part of Italy abounds, became, in process of time, powerful from their numbers and ferocity. Their very name is said to indicate that they were revolted slaves; *Βροττον* για καλουνεν *αποσταγα*, says Strabo, speaking of the Lucanians. This appellation the insurgents are supposed to have accepted as a term of defiance. (Niebuhr, *Rom. Hist.*, vol. 1, p. 51, *Cambridge transl.*)

This savage race is represented as pouring forth to attack their Lucanian masters, and to molest the Greek settlers on the coast of either sea; and so formidable had they at length rendered themselves, that the Lucani were compelled to acknowledge their independence, and to cede to them all the country south of the rivers Laus and Crathis. This advancement of the Brutii to the rank of an independent nation is supposed by Diodorus Siculus to have taken place about 397 years after the foundation of Rome. Dion, the Syracusan, was at this time prosecuting his undertaking against the younger Dionysius; and it is conceived that the hostilities of the Brutii were fomented by his means, in order to prevent the tyrant from deriving any aid from his Lucanian allies. (Diod. Sic., 16, 15.— Strabo, 255.)

The enterprising and turbulent spirit of this people was next directed against the Greek colonies; and, in proportion as these were rapidly declining, from jealousies and internal dissensions, and still more from luxury and indolence, their antagonists were acquiring a degree of vigour and stability which soon enabled them to accomplish their downfall. The Greek towns on the western coast, from being weaker and more detached from the main body of the Italian confederacy, first fell into the hands of the Brutii. The principal cities of this tribe, which was composed now became alarmed for their own security, and sought the aid of the Molossian Alexander against these dangerous enemies, with whom the Lucanians also had learned to make common cause. This prince, by his talents and valour, for a time checked the progress of these barbarians, and even succeeded in penetrating into the heart of their country; but after his death they again recovered their ground. They reduced the whole of the peninsula between the Laus and Crathis, with the exception of Crotona, Locri, and Rhegium. At this period, Rome, the universal foe of all, put an end at once to their conquests and independence. After sustaining several defeats, both the Lucanians and Brutii are said to have finally submitted to L. Papirius Cursor, 287.
Such is the legend of Brutus. "That Brutus procured the banishment of the Tarquins, in his capacity of Tribune of the Celeres, is demonstrated," observes Niebuhr, "by the other historian." (Pomponius, i. 2, D. de origine urbis.) From this source is the information that he bore that office: the lay which spoke of his feigned idiocy cannot have known anything of this, and was incompatible with it; the annalists combined the two. That poetical tale may have been occasioned by his surname: which yet may have had a very different meaning from the one there affixed to it. Brutus, in Osca, meant a runaway slave: now it is easy enough to understand, that the partisans of the Tarquins may have called him such; and, that, on the other hand, he and the Romans might not be sorry to let the nickname pass into vogue." (Rom. Hist., vol. 1, p. 453, Cambridge transl.)—II. D. Junius, master of the horse A.U.C. 418, and consul A.U.C. 429. (Liv., 8, 12, et 29.)—III. D. Junius, consul A.U.C. 615, obtained a triumph for his successes in Spain.—IV. M. Junius, father of the Brutus who was concerned in the assassination of Caesar. He embraced the party of Marius, and was overcome by Pompey. After the death of Sylla, and the renewal of hostilities, he was besieged by Pompey in Mutina, who compelled him to surrender after a long resistance, and caused him to be put to death. He was brother-in-law to Catius by his wife Servilia. Brutus was an able lawyer, and wrote on the Civil Wars. (Cic., Brut., 62.—Id., 1, 32.—Id. pro Client., 61.)—V. Marcus Junius, son of the preceding, was by the mother's side nephew of M. Catius (Ulicensis). He accompanied his uncle to Cyrus, A.U.C. 695, where the latter was sent by Clodius to annex that island to the Roman empire. It appears, however, that he did not copy the example of Catius's integrity; for, having become the creditor of the citizens of Salamis to a large amount, he employed one Scapilius, a man of infamous character, to enforce the payment of the debt, together with an interest four times exceeding the rate allowed by law. (Cic., ad Att., 5, 21.—Id. id., 6, 1. seqq.) And when Cicero governed the province of Cicilia, to which Cyrus seems to have been annexed, Brutus wrote to him, and was supported by Atticus in his request, entreating him to give Scapilius a commission as an officer of the Roman government, and to allow him to employ a military force, in order to exact from the Salaminians the usurious interest which he illegally demanded. Cicero was too upright a magistrate to comply with such requests. Fearing the jealousy of his colleague at times, that he continued to live on intimate terms with the man who could prefer them; and the literary tastes of Brutus were a recommendation which he could not resist; so that he appears soon to have forgotten the affair of Scapilius, and to have spoken and thought of Brutus with great regard. They both, indeed, were of the same party in politics, and Brutus actively exercised himself, in the service of Pompey, in opposing the ambition of his fellow countryman. The order of that commander. Being taken prisoner in the battle of Pharsalia, he received his life from the conqueror. Before Caesar set out for Africa to carry on war against Scipio and Juba, he conferred on Brutus the government of Cisalpine Gaul, and in that province Brutus accordingly remained, and was actually holding an office under Caesar, while his uncle Catius was maintaining the contest in Africa. Brutus, however, was saved alive among the hands of the enemy. His character, however, seems to have been greatly improved since his treatment of the Salaminians, for he is said to have governed Cisalpine Gaul with great integrity and humanity. In the year 708 he returned to Rome, but afterward set out to meet Caesar on his return from Spain, and in an interview which he had with him, at Nicia, pleaded the cause of the Deucalis, tetrarch of Galatia, with such warmth.
and freedom, that Caesar was struck by it, and was reminded of what he used frequently to say of Brutus, that, what his inclinations might be, made a very great difference; but that, whatever they were, they would be nothing lukewarm. It was about this time also that Brutus divorced his first wife, Appia, daughter of Appius Claudius, and married the famous Porcia, his cousin, the daughter of Cato. Soon after he received another mark of Caesar's favour (Plut., Vit. Brut., c. 7. — Dio Cass., 44, 12), in being appointed Praetor Urbanus, A.U.C. 709; and he was holding that office when he resolved to become the assassin of the man whose government he had twice acknowledged by consenting to act in a public station under it. He was led into the conspiracy, it is said, by Cassius, who sought, first by writing, and afterward by meeting, to convert his wife, Junia, the sister of Brutus, to obtain his consent to become an accomplice; and Plutarch informs us, that when the attack was made on Caesar in the senate-house, the latter resisted and endeavoured to escape, until he saw the dagger of Brutus pointed against him, when he covered his head with his robe and resigned himself to his fate. After the assassination of Caesar, truth stipulated to stir up the feelings of all the people in favour of liberty; but Plutarch, in reading the will of the dictator, excited against them so violent a storm of odium, that they were compelled to flee from the city. Brutus retired to Athens, and used every exertion to raise a party there among the Roman nobility. Obtaining possession, at the same time, of a large sum of the public money, he was enabled to bring to his standard many of the old soldiers of Pompey who were scattered about Thessaly. His forces daily increasing, he soon saw himself surrounded by a considerable army, and Hortensius, the governor of Macedonia, siding him, Brutus became master in this way of all Greece and Macedonia. He went now to Asia and joined Cassius, whose efforts had been equally successful. In Rome, on the other hand, the triumvirs were all powerful; the conspirators had been condemned, and the people had taken up arms against them. Brutus and Cassius returned to Europe to oppose the triumvirs, and Octavius and Antony met them on the plains of Philippi. In this memorable conflict Brutus commanded the right wing of the republican army, and defeated the division of the enemy opposed to him, and would in all probability have gained the day, if, instead of pursuing the fugitives, he had brought succours to his left wing, commanded by Cassius, which was hard pressed and eventually beaten by Antony. Cassius, upon this, believing himself inevitably beaten by Antony, and resolved to avoid the evils which were about to fall on himself in despair. "Brutus bitterly deplored his fate, styling him, with tears of the sincerest sorrow, "the last of the Romans." On the following day, induced by the ardour of the soldiers, Brutus again drew up his forces in line of battle, but no action took place, and he then took possession of an advantageous post, where it was difficult for an attack to be made upon him. His troops remained to the same state, without hazarding an engagement, for his officers were dissatisfied with the provisions and the fleet that was bringing them supplies had been totally defeated by the vessels of Brutus. This state of things, however, was unknown to the latter, and, after an interval of twenty days, he hazarded a second battle. Where he himself fought in person, he was still successful; but the rest of his army was soon overcome, and the conflict ended in a total defeat. After escaping with only a few friends, he passed the night in a cave, and, as he saw his cause irretrievably ruined, ordered Strato, one of his attendants, to kill him. Strato refused for a long time to perform the painful office; but, seeing Brutus resolved, he turned away his face, and held his sword while Brutus fell upon it. He died in the forty-third year of his age, B.C. 42.—A great deal of false glare has been thrown round the character of Brutus. That he was a stern and consistent patriot throughout the whole of his career, the sketch which we have given of his movements prior to the assassination of Caesar most clearly disproves. Why hold office under one who was trampling upon the liberties of his country? Why require so much solicitation and legislation in the conspiracy? Was he not aware that Caesar was a usurper?—this would show a miserable want of penetration. Or did he prefer security to danger?—where was the Roman patriot in this! The truth is, Brutus, notwithstanding all that has been said of him, was but a tardy patriot. His motives towards the close of his career were no doubt pure enough, but he ought to have had nothing to do with a movement that general began to act with treason towards his country. As a student and man of letters, the character of Brutus appears to me more advantage than as a patriot. He was remarkable for literary application, usually rising with this view long before day, and it is said that, on the evening previous to a battle, while his army was in a state of anxious suspense and alarm, he calmly occupied himself in his tent with writing an abridgment of the history of Pompey. He who frequently, in the life of Brutus is that of the so-called appendices bard, it is said appeared to him, on one occasion, in his tont at midnight. "Who art thou?" inquired Brutus. "Thy evil genius," replied the phantom; "we will meet again at Philippi." And so it happened. The spirit re-appeared on the eve of the second battle of Philippi! We have here either an illusion on the part of Brutus, or a trick played off by some partisan of Antony's, in order to discourage and dismiss the re-publican commander, or, what is most likely of all, a tale utterly untrue. (Plut., Vit. Brut.—Encyclop. Metropol., Div. 3, vol. 2, p. 274, seqq.)

BRYGES, a people of Thracian origin, living at one time in Macedonia. They afterward crossed into Asia, where their name was changed to Phryges. (Vid. Phrygia.)

BUBASTICUS FLUVIUS (Bubasticus Fluvius, Plut.), a name sometimes given to the easternmost arm of the Nile, from the circumstance of its passing by the city of Bubastis. (Vid. Bubastis.)

BUBASTIS (or Bubastus), a city of Egypt, in the eastern part of the Delta, and the capital of the Bubastitic nome. This city is called in scripture Phi-Beseoth, which is now altered into Basta. It was situated on a canal leading from the Pelusiac mouth of the Nile to the canal of Trafan. The Pelusiac branch was sometimes called the Nile, the Bubastian branch was called the Nile; but Bubastis was remarkable as being the place where great numbers assembled to celebrate the festival of the goddess Bubastis, who had a splendid temple here. More than 70,000 persons were accustomed to meet here on these occasions. The custom had ceased, however, in the time of Herodotus. This was the place, also, where the sacred cats were interred. Jablsinski (Panth. Egypt., 3, 3.—Voc. Egypt., p. 65) explains the term, "Bubastis," to mean "she who conceals or "vanishes," or "she who multiplies her aspects." This appellation suited very well, therefore, the goddess of the new or increasing moon, for such Bubastis, the Egyptian deity, in reality was. Hence, too, we see why Herodotus says, that the name "Bubastis," in the Egyptian tongue, was equivalent to "Artemis," or Diana, in Greek (γί δε Βοσσαίας, κατά Ελλάδα γίνεται, Αρτεμις, Νερίσσεις, καί Αργεσία).

Bucephalus, the famous horse of Alexander, was born near the Hydaspes, built by Alexander in honour of his favourite horse Bucephalus. It is supposed to have been situated somewhere on the road between Attock and Lahaur. (Curt., 9, 3.—Justin, 12, 8.)

Bucephalus, a horse of Alexander's, so called either because his head resembled that of an ox (βους κεφάλη), or because he had the mark of an ox's head.
impressed upon his flank; or, according to another account, because he had a black mark upon his head resembling that of an ox, the rest of his body being white. Plutarch gives an account of the mode in which Bucephalus came into the hands of Alexander. The horse had been offered for sale to Philip, the prince's father, by a Thessalian, but had proved so unmanageable that the monarch refused to purchase, and ordered it to be taken away. Alexander thereupon expressing his regret that there were losing so fine a creature of so skilful and spirited a nature, Philip agreed to pay the price of the steed if his son would ride it. The prince accepted the offer, and succeeded in the attempt. Bucephalus, after this, would allow no one but Alexander to mount him, and he accompanied the monarch in all his campaigns. In the battle with Porus, he received, according to the same authority, several wounds, of which he died not long after. A writer, however, quoted by the same Plutarch, states that he died of age and fatigue, being thirty years old. Arrian also (Ep. Al. 5, 19) expressly confirms this last account: ἀπετίθεν γάρ τοῦτον, οὐ βεβηλίζει πρὸς ὁδόν, ἄλλῳ ἀπὸ κακούσιος τε καὶ ἀτάξιος: ἦν γὰρ ἀμφ' τὰ τρίκαλα ἐτῶν. Alexander, upon this occasion, showed as much regret as if he had lost a faithful friend and companion. He built a city near the Hydaspes, which he called Bucephala, after the name of his steed. (Plut. Vit. Alex. 61.—Phil. Ep., vol. I. 153. Bucephalus, one of the mouths of the Nile, situate between the Sebennytic and Mendesian mouths. It is the same with the Phatnetic. (Herod. 2, 17.)

Bulas, I. a town of Phocis, on the shore of the Sinus Corinthiacus, southeast of Anticyra. The town was situate on a hill, only seven stadia from its port, which is doubtless the same as the Mychos of Strabo, and the Naucleos of Pliny (4, 3). Pausanias seems to assign Bupsال (101. 9) and Bupalus (p. 87), to Phocius, Βυπαλος, Anc. Greece, vol. 2, p. 158. Bupalus, a friend of Horace's, who was roaming abroad for the purpose of dispelling his cares. The poet addressed an epistle to him, in which he instructs him to take care that his passage does not depend upon climate or place, but upon the state of one's own mind. (Horat. Epist., 1, 11.)

Bupalus, a sculptor and architect, born in the island of Chios, and son of Anthermus, or rather Archenuus. (Vid. Anthermus.) He encountered the animosity of the poet Hipponax (Callim., fragm. 90, p. 480, ed. Erneart.), the cause of which is said to have been the refusal of Bupalus to give his daughter in marriage to Hipponax, while others inform us that it was owing to a statute made in derision of the poet by Bupalus. (Welcker, fragm. Hippon., 12.) The satire and invective of the bard were so severe, that, according to one account, Bupalus hung himself in despair. (Horat. Epod., 6, 14.—Acron. ad Horat., l. c.—Plin., 36, 5.) As Hipponax flourished in the reign of Da-rus (Proc. ad fin. Hephaest., p. 380, ed. Gaisf.), Bupalus must have been living not only in Olymp., but probably in Olympia, 58 B.C., according to his brother's name was Athens. In addition to the statute which Bupalus made in derision of Hipponax, other works are mentioned by Pliny (l. c.) as the joint productions of the two brothers. (StiUig, Diet. Art., f. e.)

Bupontia, a festival in honour of Jupiter at Athens. The legend connected with this festival is a singular one. Among the laws given by Triptolemus to the Athenians, three more especially remarkable were: "Reverence your elders. Honour the gods by offerings of the first fruits.—Hurt not the labouring beast," i.e., the beast employed in agriculture. The latter, who offended against this last command was a person named Thaulon, who, at the feast of Zeus Polieus, observing a steer eating the sacred σπάνων on the altar, took up the axe and slew the trespasser. The expiation-feast (Bupontia), instituted for the purpose of atoning for this involuntary offence, it was found afterward expedient to continue. The ceremonies observed in it are not a little amusing. First was brought water by females appointed for the office, for the purpose of sharpening the axe and knife, with which the slaughter was to be committed. One of these females having handed the axe to the proper functionary, the latter felled the beast and then took to flight. To slay the beast outright was the office of a third person. All present then partook of the flesh. The meal finished, the hide was stuffed, and the beast, apparently restored to life, was put to the plough. Now commenced the steer-trial. A judicial assembly was held in the Prytaneum, to which all were summoned who had been parties in the above transaction. Each lays the blame upon the other. The water bearers throw the guilt upon the sharper of the axe and knife: the sharper of the knife casts it upon the person delivering it to the feller of the beast: the feller of the beast upon the actual slaughterer, while this last ascribes the whole guilt to the knife itself. The knife, unable to speak, is thrown to the sea. (Aristoph., Nub., 945.—Mitchell, ad Aristoph., l. c.—Gruzer, Symbolik, vol. 4, p. 123, seq.)

Burus, a city of Ilia. It was the first town on the Elean side of the Larissus, and is often mentioned by Homer as one of the chief cities of the Epeans. (Il., 2, 615.—Il., 11, 765.)

Bura, one of the twelve original Achaean cities, as we learn from Herodotus (1, 146), which stood at first close to the sea; but having been destroyed, with the remains of the inhabitants, by the Heimillé and inundation, the surviving inhabitants rebuilt it afterward, about forty stadia from the coast, and near the small river Buraicus. (Paus., 7, 25.—Strabo, 386.)

Buralucus, I. an epitaph applied to Hercules, from his temple near Bura.—II. A river of Achaea, near the town of Bura. (Pausan., 7, 25.)

Burgundy, a German nation, one of the principal branches of the Vandals. They are the descendants of the Vandres (Oder) and the Vistula, in what is now the New Mark, and the southern part of West Prussia. They were distinguished from the other Germans by living together in villages, burgen, whence, according to some, they received the name of Burgundi. Others, however, derive the name from Gunti, "combat," as alluding to the warlike character of the race, and make Burgundii mean "the lance of war." (Maltz-Brun, Dict. Geogr., p. xiii., Vocab. de motu gentium.) They preserved their own language, and in consequence they were distinguished from the other German nations, they passed over into Gaul. After a long struggle, and many losses, they succeeded in possessing themselves of the southeastern part of this country by a contract with the Romans. A part of Switzerland, Savoy, Dauphiny, Lorraine, and Franche-Comté, once belonging to their new kingdom, which, even in the year 470, was known by the name of Burgundy. The seat
of government seems to have been sometimes Lyons (Lugdunum), and sometimes Geneva.—By their old constitution, they had kings, called hendes, whom they chose from their nobility; and they considered it as a great calamity to be so, as a failure of the crops, a pestilence, or a defeat, the king was made responsible for it, and his throne was given to another, from whom they hoped for better times. Before their conversion to Christianity (which happened after their settlement in Gaul), they had a priestly called Sinestus, whose person was sacred, and whose office was for life. The trial by combat even then existed among them, and was regarded as an act of the judgement of God. Continually endeavouring to extend their limits, they became engaged in a war with the Franks, by whom they were at last completely subdued, under the son of Clovis, after Clovis himself had taken Lyons. They still preserved their constitution, laws, and customs for a time. But the dignity of king was soon abolished, and, under the Carlovingians, the kingdom was divided into provinces, which, from time to time, shook off their dependence. Their later movements belong to modern history. (Claud., Mameert. Paneg. Maximian., c. 5.—Hadr. Vales. Res. Franc., 1, p. 50.—Jornand., de Regnum. Success., p. 54.—Id. de reb. Get., p. 93.—Paul. Warn. de gest. Longob., 3, 3.—Encyclop. Americ., vol. 2, p. 329.)

Busiris, a king of Egypt, son of Neptune and Ly- sia nassa daughter of Epaphus, or (as Plutarch states, from the Samian Agalbho), of Neptune and Anippe, daughter of the Nilt. (Plut., Paral., p. 317.) This king, in consequence of an oracle, offered up strangers on the altar of Jupiter: for Egypt having been afflicted with a dearth for nine years, a native of Cyprus, named Tharsius, a great soothsayer, came thither, and said that it would cease if they sacrificed a stranger every year to Jupiter. Busiris sacrificed the prophet himself first of all, and then continued the practice. When Her- cules, in the course of his wanderings in Egypt, he was seized and dragged to the altar; but he pulled his bonds, and slew Busiris, his son Amphidamas, and his herald Chalbea. (Apollod., 2, 5, 11.)—Now who was this Busiris?—We have here a question to which the ancients themselves gave very different answers. Isocrates, in defending the memory of the Egyptian monarch, pretends that he lived two centuries before Perseus, and, consequently, long anterior to Hercules. (Isocr., 20, 10.) Others writers have made mention of three to five kings of Egypt under this same name. (Heyne, ad Apollod., l. c.—Sturz., ad Pherecyd., p. 141.—Compare Theon, Propygm., c. 6.—Syncl., Chron., p. 152.—Interpret. ad Diad., 1, 88.) Herodotus contradicts the common tradition, and seeks to free the Egyptians from the reproach of having offered up human victims. He may be right as regards the times immediately preceding the period when he himself flourished, since it is well known that king Amon abolished human sacrifices at Helicinon, and great changes took place also after the Persian conquest. Still, however, numerous scenes and images delineated in the temples and sepulchres of Egypt, speak but too plainly for the existence of this frightful custom in earlier times. (Costaz, Descript. de l’Eg. vol. 1, c. 9, p. 401.—Guignaude, planche lxxiv.—Compare Manetho, ap. Porphyry de Abatin, 2, 55.—Plut., ad Diad., 3, 89.—Plin., ad Malg., Hieron., p. 857.) According to Eratosthenes, as cited by Strabo (902), Egypt never had a king named Busiris, but the whole superstructure of fable erected upon this name has no other origin than the odious inohabitation of the inhabitants of the Busirite nome. We have here, without doubt, a glimpse of the truth, which is fully revealed to us by Diodorus Siculus. According to this writer, or, rather, the tradition collected by him, the kings of Egypt immolated in earlier times, on the tomb of Osiris, men of the same colour with Typhon, that is, red-haired. (Diod. Sic., 1, 88.) They sacrificed also cattle of this same hue, a circumstance that reminds us of the red heifer mentioned in Scripture, (Num. 21, 8.) and the golden lamb, (Ex. gibrus Hcbr. ritual., 15, p. 489, ed. Pfaff.—Witsius, Egyptiaca, 2, 8.) Now, continues Diodorus, these red-haired persons were almost always strangers, few of the Egyptians being found with hair of that colour; and hence arose theable of human sacrifices by Bu- siris. In fact, expressly adds this writer, Busiris is not the name of a king, but means, in the Egyptian lan- guage, a place of adoration, or Osiris. We have here, then, a solution of the whole legend. The fettered Hercules is the sun in the winter season, enfeebled in the hands of his enemy. He is about to become the prey of the tomb (the victim of Busiris); but, on a sudden, resumes his strength, breaks his fetters, and triumphs over gloom and darkness.—But why sacrifice victims of the peculiar colour mentioned above? Pos sibly we have here a traditionary allusion to the shepherd race, the red-haired, blue-eyed strangers, who once overran the land, and whose cruel devastations well entitled them to be identified, in a degree, with Typhon, the spirit of all evil.—Jahblonski (Voc. Egypt., p. 54) and Zoega (de Obelisc., p. 388) explain the word Busiris through the Coptic Be Ousir, i. e., “the tomb of Osis,” in accordance with the remark of Diodorus, mentioned above. Champollion, on the other hand, writes the word Pousir, and sees in it only the name of Osis, preceded by the article. He concedes, at the same time, as altogether absurd, the etymology given by many of the Greeks, namely, Bo scop and Osiris. (Compar. Steph. Byz., s. v.) Agreeing with him on this latter point, we must nevertheless regard the explana tion of Diodorus, which he also rejects, as entitled to great weight. Plutarch, moreover (de Is. et Os., c. 21), says expressly, that Be eiris is the same as Taphiopis, which he derives, in consequence, from τάφος, “a tomb,” and Osiris. (Oeserter, Symbolik, vol. 1, p. 365, seqq., ed. 2, p. 548, seqq.)—II. There were three or four cities of this name in ancient Egypt, the most celebrated of which is placed by Herodotus in the centre of the Delta. It had a magnificent temple of Isis. (Herod., 2, 59.—Compare Strab., 802.—Diod. Sic., 1, 85, et 88.—Wesseling, ad Diad., l. c.—Champollion, L’Egypte sous les Pharaons, vol. 1, p. 685; vol. 2, 42, &c.) It is worthy of remark, that these were all sepulchral cities.

Butes, I. one of the descendants of Amycus, king of the Bebryces, very expert in the combat of the cestus. He was one of the Argonauts, and leaped overboard in order to swim to the island of the Sirens, but Venus caught him up and conveyed him to Lilibenus in Sicily. Here she became by him the mother of Eryx. (Apoll. R., 4, 912.—Virg., Enn., 5, 372.)—II. A son of Pandion king of Athens, and brother of Erechtheus. The father of Erechtheus, the officer of the temple giving Erechtheus his kingdom, and Butes the priestly lord of the temple of Minerva and Neptune Erechtheion. Butes married Chthonia, the daughter of his brother, and the sacerdotal family of the Butade deduced their lineage from him. (Apollod., 3, 15, 1.)—III. An armour bearer to Anchises, and afterward to Ascanius. Apollo assumed his shape when he descended from heaven to encourage Ascanius to fight. Butes was killed by Turnus. (Apollod., l. c., p. 240, seqq., ed. 9, 644, seqq.)

Buthōn, a town of Epirus, opposite Coreya. It was originally a small village, but was subsequently fortified by the Romans, in order to keep in subjection the inhabitants of the interior, and became a place of great consequence. Virgil makes Helenus to have reigned here. (Enn., 3, 295, seqq.) Stephanus By zantius derives the name from an ox (boe) having broken loose at this place when about being sacrificed. (Cramers Anc. Greece, vol. 1, p. 107.)
BYZANTIUM.

Byzantium, a city of Egypt, at the Sebennytic mouth of the Nile, or, rather, on the southern shore of the Butus Lacus, the outlet from which into the sea is formed by the Ostium Sebennyticum. It was famed for its temples of Apollo, Diana, and Latona, that is, of Egyptian deities supposed to coincide with these. The temple of Latona had a celebrated oracle connected with it, and the goddess had also an annual festival here, which was one of the most numerous attended in Egypt. The shrine of the goddess, according to Pliny, was on one small island, having equal sides, each side forty cubits long. It was brought from a quarry in the isle of Philae, near the cataracts, on rafts, for the distance of 200 leagues, to its destined station, and seems to have been the heaviest weight ever moved by human power. It employed many thousand men for three years in its transportation. The modern Kom-Rasir is thought to correspond to the ancient city. Schleichhorst, however, gives the modern name of the ancient site as El-Bucbi. (Herod., 2, 59, et 63.—Plin., 5, 10.)

Byblos, a town of Phoenicia, nearly midway between Tripolis and Berytus. Stephanus of Byzantium calls it a very ancient city, but this expression suits better an earlier place, called Palaemyblos. The name Byblos itself shows very plainly that the founders of the place were Greeks, and merely took the inhabitants of Palaemyblos to reside with them. The influence of Greek customs here is also shown by the fact that where cotton was escaped in this city, and the river called after whom was in the neighbourhood of this place. Bydus did not lie directly on the coast, but on a height at some distance from it. The modern name is Enbe, or, according to the Frank pronunciation, Dachibul. The appellation Zebelet occurs already in Phocas. (Joh. Phoc. c. 5.—Mannert, Geogr., vol. 6, pt. 1, p. 383.)

Byrsa, the citadel of Carthage. The story commonly told about the origin of this name is, that when Dido came to Africa she bought of the inhabitants as much land as could be encompassed by a bull's hide. After the agreement, she cut the hide in small, and enclosed a large piece of territory, on which she built a citadel, which she called Byrsa (σπορα, a hide). This, however, is a mere fabrication of the Greeks. The name is derived from the Punic term Basra, "a fortification," or "a citadel," the abode of irrigation.” (Miscell. Phoen., p. 234.)

BYZANTIUM, a celebrated city of Thrace, on the shore of the Thracian Bosporus, called at a later period Constantinople, and made capital of the Eastern empire of the Romans. It was founded by a Dorian colony from Megara, or, rather, by a Megarian colony in conjunction with a Thracian prince. For Byzas, whom the city acknowledged, and celebrated in a festival as its founder, was, according to the legend, a son of Neptune and Ceresosa the daughter of Io, and ruled over all the adjunct country. The meaning of the myth would appear to be, that a Thracian prince, having united himself to a Megarian family, and with the aid of a Greek colony, and gave the place a name derived from his own. (Sceyn., 715.—Euseb., Chron. Ol., 30, 2.—Steph. Byz., a. e.—Eustath., ad Dion. Perieg., 803.—Dionys. Byzant., p. 5.—Geogr. Gr. Min., vol. 3.) The early commerce of Megara was directed principally to the shores of the Propontis, and this people had founded Chalcedon seventeen years before Byzantium, and Selymbria even prior to Chalcedon. (Herod., 4, 144.—Reisch, 714.) When, however, their trade was extended still farther to the north, and had reached the shores of the Euxine, the harbour of Chalcedon sank in importance, and a commercial station was required on the opposite side of the strait. This station was Byzantium. The appellation of "blind men," given to the Chalcedonians by the Persian general Megabyzus (Herod., 4, 144), for having overlooked the superior site where Byzantium was afterward founded, does not therefore appear to have been well merited. As long as Chalcedon was the northernmost point reached by the commerce of Megara, its situation was preferable to any offered by the opposite side of the Bosporus, because the current on this latter side runs down from the north more strongly than it does on the side of Chalcedon, and the harbour of this city, therefore, is more accessible to vessels coming from the south. On the other hand, the site of Byzantium was commanded by the most convenient position for a commercial station, since the current that set in strongly from the Euxine vessels directly into the harbour of Byzantium, but prevented their approach to Chalcedon in a straight course. (Polib., 4, 43.) The harbour of Byzantium was peculiarly favoured by nature, being deep, capacious, and sheltered from every storm. The current of the Euxine swept vessels into it without the aid of sail or oars, and it also brought thither vessels from various parts of the Euxine and along the western coast of the black sea, thus contributing to the commerce. From its shape, and the rich advantages thus connected with it, the harbour of Byzantium obtained the name of Chrysocorys, or "the Golden Horn," which was also applied to the promontory or neck of land that contributed to form it. (Plin., 4, 11.—Amn. Marcell, 22, 8.) And yet, notwithstanding all these advantages, Byzantium remained for a long time an inconsiderable place. The declining commerce of Megara, of Chalcedon, and the commerce which was obtained of being a half-barbarian place, may serve to account for this. At a subsequent period the Milesians sent hither a strong colony, and so altered for the better the aspect of things, that they are regarded by some ancient writers as the founders of the city itself. (Vell. Patcr., 2, 15.) When, at a later day, the insurrection of the Asiatic Greeks had been crushed by Darius, and the Persian fleet was reducing to obedience the Greek cities along the Hellespont and Propontis, the Byzantines, together with a body of Chalcedonians, would not wait for the coming of the Persians, but, leaving their habitations, and fleeing to the Euxire, built the city of Mesembria on the upper coast of Thrace. (Herod., 6, 33.) The Persians destroyed the empty city, and no Byzantium for some time thereafter existed. This will explain why Scylax, in his Periplus, passed by Byzantium in seiner thebes, while he left the Propontis and Thrace in this quarter, and among them even Mesembria itself. Byzantium reappeared after the overthrow of Xerxes, some of the old inhabitants having probably returned, and here Pausanias, the commander of the Greek forces, took up his headquarters. He gave the city a code of laws, and a government modelled, in some degree, after the Spartan form, and hence he was regarded by some as the true founder of the city. (Justin., 11, 6.) The Athenians succeeding to the hegemony, Byzantium fell under their control, and received so many im-
portant additions from them, that Ammianus Marcellinus, in a later age, calls it an Attic colony (22, 8). The city, however, was a Doric one in later age, customs and laws, of each other to maintain rivalry, and neither could lay claim to the empire of the sea, Byzantium became an independent city, and turned its whole attention to commerce. Its strong situation enabled it, at a subsequent period, to resist successfully the arms of Philip of Macedon; nor did Alexander, in his eagerness to march into Asia, make any attempt upon the place. It preserved also a neutral character under his successors. The great evil to which the city of Byzantium was exposed came from the inland country, the Thracian tribes continually making incursions into the fertile territory around the place, and carrying off more or less of the produce of the fields. The city suffered severely also from the Gauls; being compelled to pay a yearly tribute, amounting at least to eighty talents. After the departure of the Gauls it again became a flourishing place, but its most prosperous period was during the Roman sway. It had the advantage of being at the opening of the war against the younger Philip of Macedon, and enjoyed from this people not only complete protection, but also many valuable commercial privileges. It was allowed, moreover, to lay a toll on all vessels passing through the straits, a thing which had been attempted before without success, and this toll it shared with the Romans. (Strabo, 320.—Herodian, 3, 1.) But the day of misfortune at Agisium came, and the contest for the empire between Severus and Niger, Byzantium declared for the latter, and stood a siege in consequence, which continued long after Niger's overthrow and death. After three years of almost incredible exertions, the place surrendered to Severus. The few remaining inhabitants whom famine had spared were sold as slaves, the city was razed to the ground, its territory given to Perinthus, and a small village took the place of the ancient colony. Republicans in the name of the emperor, expectation of a new empire, but it never recovered its former rank till the days of Constantine. (Herodian, 3, 6.—Dio Cass., 74, 10.—Sparitan, Caracall., c. 1.—Zosimus, 2, 30. —Suidas, s. v. Zeleipor.—Trea. Polio, Gallien, c. 6.—Claud., c. 9.) Constantine had no great affection for Rome as a city, nor had the inhabitants any great regard for him. He felt the necessity, moreover, of having the capital of the empire in some more central quarter, from which the movements of the German tribes on the one hand, and those of the Persians on the other, might be observed. He long sought for such a locality, and believed at one time that he had found it in the neighbourhood of the Sigean promontory, on the coast of Troas. He had even commenced building here, when the superior advantages of Byzantium as a centre of empire attracted his attention, and he finally resolved to make this the capital of the Roman world. For a monarchy possessing the western portion of Asia, and the largest part of Europe, together with the whole coast of the Mediterranean Sea, nature herself seemed to have destined Byzantium as a capital. Constantine's plan was carried into effect in 324. The ancient city had possessed a circuit of forty stadia, and covered merely two hills, one close to the water, on which the Seraglio at present stands, and another adjoining it, and extending to- wards the interior to what is now the Beistant, or great market. The new city, called Constantinople, was commenced first, and was thrown into a circuit of somewhat less than fourteen geographical miles. Every effort was made to embellish this new capital of the Roman world; the most splendid edifices were erected, an imperial palace, numerous residences for the chief officers of the court, churches, baths, a hippodrome; and inhabitants were procured from every quarter. Its rapid increase called, from time to time, for a corresponding enlargement of the city, until, in the reign of Theodosius II., when the new walls were erected (the previous ones having been thrown down by an earthquake), Constantinople attained to the size which it at present has. (Zonaras, 13, 23.) Chalcondylus supposes the walls of the city to be 111 stadia in circumference; Gyllius, about thirteen Italian miles; but, according to the best modern plans of Constantinople, it is not less than 19,700 yards. The number of gates is twenty-eight; fourteen on the side of the port, seven towards the land, and as many on the Propontis. The city is built on a triangular promontory, and the number of hills which it covers is seven. Besides the name of Constantino, or Constantinopolis (Koutstavto[v noun'), this city had also the more imposing one of New Rome (Nou Pome), which, however, gradually fell into disuse. At the present day, the peasants in the neighbourhood of the old city, say in vulgar Greek that they are going to Bain bain (i. e., to vav noiv), "to the city," whence has arisen the Turkish name of the place, namely, Stamboil. The more polished or less barbarous inhabitants, however, frequently call it Constantinople. It is easy to recognise in the vulgar Greek of the peasantry, as has been already remarked, the remains of the ancient Doric. (Mannert, Geogr., vol. 7, p. 154, sert.) We shall now proceed to the succeeding article, at the end of which also will be found some remarks on the Byzantine historians, as they have been denominated. —Constantineople was taken by Mohammed II., on the 29th May, A.D. 1453.

Byzantium Imperium. The Byzantine, or Eastern Roman Empire, comprehended at first, in Asia, the country on this side of the Euphrates, the coasts of the Black Sea, and Asia Minor, in Africa, Egypt; and in Europe, the countries from the Adriatic to the Danube. This survived the Western Empire 1000 years, and was even increased by the addition of Italy and the coasts of the Mediterranean. It commenced in 395, when Theodosius divided the Roman empire between his two sons, Arcadius and Honorius. The Eastern Empire fell to the elder, Arcadius, through whose weakness it suffered many misfortunes. During his minority Rufinus was his guardian and minister, between whom and Stilicho, the minister of the Western Empire, a fierce rivalry existed. The Goths laid waste Greece. Eutropius, the successor, and Gainas, the murderer, of Rufinus, were ruined by their own crimes. The latter lost his life in a civil war excited by him (A.D. 400). Arcadius and his empire were now ruled by his proud and covetous wife Eudoxia, till her death (A.D. 404). The Isaurians and the Huns wasted the provinces of Asia, and the country along the Danube. Theodosius, the younger, succeeded his father (A.D. 408), under the guardianship of his sister Pulcheria. Naturally of an inferior mind, his education had made him entirely imbecile, and unfit for self-command. Pulcheria, who bore the title of Augusta, administered the kingdom ably. Of the Western Empire, which had been ceded to Valentinian, Theodosius retained the province of Gaul. The Greeks fought with success against the King of the Persians, Varanes. The kingdom of Armenia, thrown into confusion by internal dissensions, and claimed
the same time by the Romans and the Persians, became now an apple of contention between the two nations. A.D. 518. An first, however, a daughter of Theodosius, and obliged him to pay tribute. After the death of her brother, Pulcheria was acknowledged empress (A.D. 450). She was the first female who attained this dignity. She gave her hand to the senator Marcian, and raised him to the throne. His wisdom and valour averted the attacks of the Huns from the frontiers, but he did not support the Western empire in its wars against the Huns and Vandals with sufficient energy. Though the death of Germanus and Sarmatians, who were driven to the Roman frontiers by the incursions of the Huns. Pulcheria died before him in 453. Leo I. (A.D. 457), a prince raised by contemporary authors, was chosen successor of Marcian. His expeditions against the Vandals (A.D. 467) were unsuccessful. His grandson Leo would have succeeded him, but died a minor shortly after him, having named his father Zeno his colleague (A.D. 474). The government of this weak emperor, who was hated by his subjects, was disturbed by rebellions and internal disorders of the empire. The Goths depopulated their provinces till their king, Theodoric, turned his arms against Italy (A.D. 489). Ariadne, widow of Zeno, raised the minister Anastasius, whom she married, to the throne (A.D. 491). The nation, once excited to disorders and tumults, could not be entirely appeased by the alleviation of their burdens and by wise decrees. The forces of the empire, being thus weakened, could not offer an effective resistance to the Persians and the barbarians along the Danube. To prevent their incursions into the peninsula of Constantineople, Anastasius built the long wall, as it is called. After the death of Anastasius, the soldiers proclaimed Justin emperor (A.D. 518). Notwithstanding his low birth, he maintained possession of the throne. Religious persecutions, which he undertook at the instigation of the clergy, and various crimes into which he was seduced by his nephew Justinian, disgraced his reign. After his early death, in 521, he was succeeded by the same Justinian, to whom, though he deserves not the name of the Great, many virtues of a ruler cannot be denied. He was renowned as a legislator, and his reign was distinguished by the victories of his general Belisarius; but how unable he was to revive the strength of his empire was proved by its rapid decay after his death. Justin II., his successor (A.D. 565), was an aversive character, and owed all his power to an able general. The Lombards tore from him part of Italy (A.D. 568). His war with Persia, for the possession of Armenia, was unsuccessful; the Avari plundered the provinces on the Danube, and the violence of his grief at these misfortunes deprived him of reason. Tiberius, his minister, a man of merit, was declared Caesar, and the general Justinian conducted the war against Persia with success. The Greeks now al lied against the Vandals and Avari; the former, first, under the command of the Tiberius, and the latter under Kallinikus. Against his successor, Tiberius II. (A.D. 579), the Empress Sophia and the general Justinian conspired in vain. From the Avari the emperor purchased peace; from the Persians it was extorted by his general Maur itius or Maurice (A.D. 582). This commander Tiberius declared Caesar in the same year. Mauritius, under other circumstances, would have made an excellent monarch, but for the times he wanted prudence and resolution; and his conduct, in defending the provinces of the eastern frontier to the gratitude of King Choe roes II., whom, in 591, he restored to the throne from which he had been deposed by his subjects. Nevertheless, the war against the Avari was unsuccessful, through the errors of Commentious. The army was discontented, and was irritated, now by untimely severity and parsimony, and now by timid indolence. They finally proclaimed Phocas, one of their officers, emperor. Mauri tus was taken in his flight and put to death (A.D. 602). The vices of Phocas, and the incompetency of his ministers for government, produced the greatest disorders in the empire at the time of the governor of Africa, took up arms, conquered Constantineople, and caused Phocas to be executed (A.D. 610). He distinguished himself only in the short period of the Persian war. During the first twelve years of his reign, the Avari, and other nations of the Danube, plundered the European provinces, and the Persians conquered the coasts of Syria and Egypt. Having finally succeeded in pacifying the Avari, he marched against the Persians (A.D. 622), and defeat ed them; but, during this time, the Avari, who had renewed the war, made an unsuccessful attack on Constantineople in 626. Taking advantage of an insurrection of the subjects of Choores, he penetrated into the centre of Persia. By the peace concluded with Siroes (A.D. 628), he recovered the lost provinces and the holy cross. But the Arabians, who, meanwhile, had become powerful under Mohammed and the califs, conquered Phoenicia, the countries on the Euphrates, Judea, Syria, and all Egypt (A.D. 631 641). Among his descendants there was not one able prince. He was succeeded by his son Constantine III., probably in conjunction with his step-brother Heraclonas. The former soon died, and the latter lost his crown and was mutilated. After him, Const ans, son of Constantine, obtained the throne (A.D. 642). His sanguinary spirit of persecution, and the murder of his brother Theodosius, made him detestable to the nation. The Arabians, pursuing their conquests, took from him part of Africa, Cyprus, and Rhodes, and defeated him at sea (A.D. 653). Internal disturbances obliged him to make peace. After this he left Constantineople (A.D. 659), and, in the following year, carried on an unsuccessful war against the Lombards in Italy, in which he lost his life at Syracuse (A.D. 660). Constantine IV., Pogonatus, son of Constans, vanquished his Syracusan competitor Miesz, and, in the beginning of his reign, shared the government with his brothers Tiberius and Heraclius. The Arabians inundated all Africa and Sicily, penetrated through Asia Minor into Thrace, and attacked Constantinople for several successive years by sea (A.D. 669). Nevertheless, he made peace with them on favourable terms. But, on the other hand, the Bulgarians obliged him to pay a tribute (A.D. 680). Justinian II., his son and successor, weakened the power of the empire by his many campaigns in the East against the Bulgarians and Arabians. Leo, in his reign, was dethroned this cruel prince, had him mutilated, and sent to the Tauric Chersonese (A.D. 685). Leo, in his reign, was dethroned by Apaimar, or Tiberius III. (A.D. 698), who was himself dethroned by Trebélius, king of the Bulgarians, who restored Justinian to the throne (A.D. 705); but Philippicus Bardanes rebelled anew against him. With Justinian II. the race of Heraclius was ended; and the empire, in the hands of the heretics, saw the spreading of Monotheism, while the Arabians wasted Asia Minor and Thrace. In opposition to this prince, who was universally hated, the different armies proclaimed their leaders emperors, among whom Leo the Isaurian obtained the superiority (A.D. 713 714). Leo repelled the Arabians from Constantinople, which they had attacked for almost two years, and suppressed the rebellion excited by Basilius and the former propaganda. In the meantime, the worship of images absorbed his attention, and the eastern provinces were allowed to become a prey to the Lombards, while the Arabians plundered the eastern provinces. After his death (A.D. 741) his son Con stantine V. ascended the throne, a courageous, active, and noble prince. He vanquished his rebellious brother-in-law Artabasus, wrested from the Arabians part of Syria and Armenia, and overcame at last the
IMPERIUM.

Bulgarians, against whom he had been long unsuccessful. He died (A.D. 775), and was succeeded by his son Leo III., who fought successfully against the Bulgarians; and this latter, by his son Constantine VI., whose imperious mother Irene, his guardian and associate in the government, raised a powerful party by other means to support herself. He endeavoured in vain to free himself from dependance on her and her favourite Stauratius, and died in 796, after having had his eyes put out. The war against the Bulgarians was long continued; against the former it was unsuccessful. The design of the empress to marry Charlemagne excited the discontent of the patricians, who placed one of their own order, Nicephorus, upon the throne (A.D. 802). Irene died in a month (A.D. 802). Leo II., his son, was married to a patrician lady, who was afterwards deposed, but he had five sons. After the death of Constantine (A.D. 811). Stauratius, his son, was deprived of the crown by Michael I., and he in turn by Leo IV. (A.D. 813). Leo was dethroned and put to death by Michael II. (A.D. 826). During the reign of the latter, the Bulgarians conquered Sicily, Lower Italy, Crete, and other countries. Michael prohibited the worship of images; as did also his son Theophilus. Theodore, grandson of Leo IV., succeeded Michael II. and in a dispute about images (A.D. 841). During a cruel persecution of the Manichæans, the Arabs devastated the Asiatic provinces. The dissolute and extravagant Michael confined his mother in a monastery. The government was administered in his name by Bardas, his uncle, and after the death of Bardas by Basil, who was put to death by Michael (A.D. 867). Basil I., who came to the throne in 867, was not altogether a contemptible monarch. He died (A.D. 886). The reign of his learned son, Leo V., was not very happy. He died A.D. 911. His son, Constantine VIII., Porphrygenitus, a minor when he succeeded his father, was placed under the guardianship of his colleague Alexander, and after Alexander's death in 912, under that of his mother Zoe. Romanus Laksopenus, his general, obliged him, in 919, to share the throne with him and his children. Constantine subsequently took sole possession of it again, and reigned mildly but weakly. His son Romanus II. succeeded him in 959, and fought successfully against the Arabs. To him succeeded, in 963, his general Nicephorus, who was put to death by his own general, John Zimisces (A.D. 970), who carried on a successful war against the Russians. Basil II., son of Romanus, succeeded this good prince. He vanquished the Bulgarians and the Arabs. His brother, Constantine IX. (A.D. 1025), was not equal to him. Romanus III. became emperor (A.D. 1028) by a marriage with Zoe, daughter of Constantine. This dissolute but able princess caused her husband to be executed, and successively raised to the throne Michael IV. (A.D. 1034), Michael V. (A.D. 1041), and Constantine X. (A.D. 1052). Russians and Arabs meanwhile devastated the empire. Her sister Theodora succeeded her on the throne (A.D. 1059). Her successor, Michael VI. (A.D. 1056), was dethroned by Isaac Comnenus in 1057, who became a monk (A.D. 1059). His successor, Constantine XI., Ducas, fought successfully against the Uzès. Eudocia, his wife, guardian of his sons Michael, Andronicus, and Constantine, was entrusted with the administration (A.D. 1067), married Romanus IV., and brought him the crown. He carried on an unsuccessful war against the Turks, who kept him for some time prisoner. Michael VII., son of Constantine XI., died his father's place in 1071, and Michael was dethroned by Nicephorus III. (A.D. 1078), and the latter by Alexius I., Comnenes (A.D. 1081). Under his reign the crusades commenced. His son, John II., came to the throne in 1118, and fought with great success against the Turks and other barbarians. The reign of his son Manuel I., who succeeded him in 1143, was also not unfortunate. His son, Alexius II., succeeded (A.D. 1180), and was dethroned by his guardian Andronicus, as was the latter by Isaac (A.D. 1185). After a reign disturbed from without and within, Isaac was dethroned by his brother, Alexius III. (A.D. 1195). The crusaders restored him and his sons to the throne, but for a short time. The pope proclaimed Alexius V., Ducas Murzuphulus, emperor, who put Alexius IV. to death. At the same time Isaac II. died. During the last reigns, the kings of Sicily had made many conquests on the coasts of the Adriatic. The Latins now forced their way to Constantinople (A.D. 1204), conquered the city, and retained it, together with most of the European territories of the empire. Baldwin, count of Flanders, was chosen emperor, and his name was Baldwin I. But the Latins had obtained Thessalonica as a kingdom, and the Venetians acquired a large extent of territory. In Rhodes, the Philadelphians, and Ephirus, independent sovereigns arose. Theodore Lascaris seized on the Asiatic provinces, bore the title of emperor at Nice, and was, at first, more powerful than Baldwin. A descendant of the Comneni, named Alexius, established a principality at Trebizond, in which his great-grandson John III. took refuge. After the death of John III. and of his other successors were able to secure the tottering throne. He himself died in captivity among the Bulgarians (1206). To him succeeded Henry, his brother, with Peter, brother-in-law of Henry, and his son Robert (A.D. 1221). With the exception of Constantinople, all the remaining Byzantine territory, including Thessalonica, was conquered by John, emperor of Nice. Baldwin II., brother of Robert, under the guardianship of his colleague, John Brienne, king of Jerusalem, died in 1237. Michael Palæologus, king of Nice, conquered Constantinople in 1261, and Baldwin died in the West a private person. The sovereigns of Nice, up to this period, were Theodore Lascaris (A.D. 1204); John Ducas Patazes, a good monarch and successful warrior (A.D. 1222); Theodore II., his son (A.D. 1259), who was deprived of the crown by Michael Palæologus (A.D. 1260). In 1261 Michael took Constantinople from the Latins. He laboured to unite himself with the Latin church, but his son Andronicus renounced the connexion. Internal disturbances and foreign wars, particularly with the Turks, threw the exhausted empire into confusion. Andronicus III., his grandson, obliged him to divide the throne (A.D. 1322), and, at length, wrested it entirely from him. Andronicus died a monk (A.D. 1328). Andronicus IV., who ascended the throne in the same year, waged war unsuccessfully against the Turks, and died A.D. 1341. His son John was obliged to share the throne with his guardian, John Cantacuzenus, during ten years. The son of the latter, Matthew, was also made emperor, but John Cantacuzenus resigned the crown, and Matthew was compelled to abdicate (A.D. 1355). Under the reign of John, the Turks first obtained a firm footing in Europe, and conquered Gallipoli (A.D. 1357). The family of Palæologus, from this time, were gradually deprived of their European territories, partly by revolt, and partly by the Turks. The sultan Amurath took Adrianople A.D. 1361. Bajazet conquered almost all the European provinces except Constantinople, and obliged John to pay him tribute. The latter was, some time after, driven out by his own son Manuel (A.D. 1391). Bajazet besieged Constantinople, defeated an army of western warriors under Sigismund, marched into Italy, and crowned his son Andronicus, on his throne. Timour's invasion of the Turkish provinces saved Constantinople for this time (A.D. 1402). Manuel then recovered his throne, and regained some of the lost provinces from the contending sons of Bajazet. To him succeeded his son John (A.D. 1425), whom Amurath II. stripped of all his
territories except Constantinople, and extorted from him a tribute (A.D. 1444). To the emperor John he succeeded his brother Constantine. With the assistance of his general, the Genoese Justinian, he withstood the superior forces of the enemy with fruitless courage, and fell in the defence of Constantinople, by the conquest of which, May 29, A.D. 1453, Mohammed II. put an end to the Greek or Byzantine empire. (Encyclopa. Americ., vol. 3, p. 393, seqq.) The events which have just been detailed are recorded by a series of Greek authors, known by the general name of Byzantine historians. Their works relate to the history of the lower empire, from the fourth century to the conquest of Constantinople by the Turks, and to the Turkish history for some period later. They display in their writings the faults of a degenerate age, but are valuable for the information which they furnish, being the principal source of our knowledge of the history of the decay of the Eastern empire. The most valuable of the number are Zonaras, Nicetas, Nicephorus, and Chalcondylus. These four form a continued history of the Byzantine empire to the year 1470. Of the remaining authors, who give us histories of detached portions of this same period, the following deserve particular mention, and are given in chronological order: 1. Procopius; 2. Agathias; 3. Theophylactus; 4. Nicephorus, patriarch of Constantinople; 5. Johannes Skylitzes; 6. Anna Comnena; 7. Georgius Acropolita; 8. Georgius Pachymeres; 9. Johannes Cantacuzenus; 10. Georgius Codinus; 11. Constantinus Porphyrogenitus; 12. Duca; 13. Anselmus Bandurius; 14. Petrus Gyllius; 15. Zosimus; 16. Georgius Phranza.—Besides editions of individual works or of entire authors, we have the united works of these writers in what is called the Corpus Byzantinum, in 27 (counted sometimes as 28) volumes, issued in Latin, German, and perhaps in other languages. On the whole, however, is that which was published at Paris, under the title of Corpus Scriptorum Historiae Byzantinae (from the royal press, 23 vols. fol.). This was reprinted at Venice, with a different arrangement of the works, in 1729-1733. These collections, however, are rarely to be found complete. The best edition will undoubtedly be that, now in course of publication, from the press of Weber, at Bonn in Germany. It was commenced under the editorial care of the celebrated Niebuhr, aided by other eminent scholars, in 1828, and has been continued since his death. It is of the octavo form. (Pierer, Lex. Univ., vol. 4, p. 582.)

Byzas, a Thracian prince. (Consult remarks at the commencement of the article Byzantium.)

C.

CABILICA, a town of Albania, on the southeastern declivity of Caucasus, near the Caspian Sea (Plin., 4, 10). Ptolemy calls it Chabala (XødazA). It is thought to correspond to the modern Cabilasar, in Georgia. (Bischoff and Müller, Wörterb. der Geogr., p. 217.)

CABILLUNUM, a town of the Eedu, in Gallia Lugudensis, southeast of Bibracte, now Chalon-sur-Saône. Ptolemy gives Cabillunum (Kado2Adnuv), as here written by Casser (Cas., 7, 44, ed. 90) has Cabillum, the Etr. Consentes, Cabillo, the Iun. Ant., Cabillio, and Ammianus Marcellinus, Cabillo (14, 31).

CABIRA, I. a wife of Vulcan. She was one of the Oceanides. Her offspring, according to the Ionian school, were the deities called Cabiri. (Vid. Cabiri.)—II. A city of Pontus, in Asia Minor, south of Magnopolis, and at the foot of Mount Paryadies. It was at one time the favourite residence of Mithradates. His palace, and his gardens were still in existence when Strabo wrote, as well as a water-mill (ὑδατηγὸς) erected by him, probably for the use of the mines which were in this vicinity. (Strab., 556.) It was here that Mithradates posted himself with his army, in the campaign which followed the disastrous retreat from Cyzicus, in order that he might afford succours to the neighbouring cities of Amusus and Euapatoria, besieged by Lucullus. (Appian, Bell. Mithr., c. 78.) On his second defeat, however, it fell into the hands of C. Caesar, and was reduced by him. When the Roman army, on its way to Zalemy afterward enlarged the place, and changed its name to Diopolis. Pythodorus subsequently made farther improvements in this city, and, having finally fixed his residence there, bestowed on it the appellation of Sebastopolis. (Strab., 1, c.) The modern Sireas appears to some to indicate the site of the ancient Sebastopolis, but belongs rather to Sebastea, at least 120 miles from Magnopolis, whereas Cabira was only 150 stadia from the latter place. We must look rather for the remains of the city of Cabira or Sebastopolis (Sebastopolis) on the right bank of the Lycean, between Niksar and Tchenkesh, or Magnopolis. (Cramer's Asia Minor, vol. 1, p. 311, seqq.)

Cabiri, certain deities held in the greatest veneration at Thebes and Lemnos, but more particularly in the islands of Samothrace and Imbros. Their number was not fixed, but was commonly given as four, and the names of these four were Azeteros, Aziskerus, Aziokeres, and Calesmus. They were celebrated with great solemnity, and, according to some, with much impurity. They were supposed, among other things, to preside over metals, and were represented as small of size, with a hammer on the shoulder, and a half eggshell on the head. They were still farther deformed by projecting bellies and phallic appendages. Creuzer traces the worship of the Cabiri, in the first instance, to the Phoenicians, and makes them the prototypes of these deities. He also believes, which, he has been shown to be false, that these deities were originally Amphi, or Cabiri, by the Phoenicians. (Herodot., 3, 37.) He then proceeds to find vestiges of these same Cabiri in Upper Asia, in the name of the Pontic city Cabira; in the Mesopotamian Carm, the medals of which place seem to associate the worship of the Cabiri with that of the god Lunus, and also in the Chaldæan river Chobar or Chaboras. He discovers also in Malta, among the remains of Punic preserved in the vulgar dialect of the island, the name of a town symbolically named Cabira, which seems to designate an ancient pagan divinity, and is now taken to denote "the devil." (Creuzer's Symbolik, par Guigniaut, vol. 2, p. 286. —Münter, Religion der Carthaginer, ed. 2, p. 87.) Other writers believe, that they discover traces of the Cabiri in Persia, and refer to the Cabarmin, or "strong men," whom the essential ideas of metallurgy and of arms would seem naturally to assimilate, either to the robust forge-men of Vulcan at Lemnos, or to the armed priests of Phrygia, Crete, and different parts of Greece. (Foucher, sur la Religion des Perse. — Mem. de l'Acad. des Inscrip., &c., vol. 20.) Others, again, have recourse to the mythology of India, and find the root of the name Cabiri in the Hindu Cukera. (Wilford, Asiatic Researches, vol. 5, p. 297, seqq. —Poller, Myth. des Indous, vol. 2, p. 312, seqq.) The best etymology, no doubt, is that which makes the appellation of these deities a Phænician one, denoting "powerful," or "strong," in the sense of "divine," or "god," which is the root, Cuk- roi, which the Cabiri frequently received among the Greeks. With the Cabiri, viewed in this light, may be compared the Dii Potes of the augural books of the Romans. (Varro, L. L., 4, 10, ed. Scalig.) Schelling, however (über die Gottheiten von Samo- thrace, p. 107, seqq.), gives a new etymology (the Hebrew Chabberim), by which the name Cabir is made to signify "the associate deities," and he compares these deities with the Dii Consentes or Dii Complices, whose worship the Romans borrowed from the Etrur-
CABIRI.

The same learned writer compares the names Cabirus, Kabara, Kobalos (which, according to him, are identical), with the German Koubold, "goblin," and finds in them all a common idea. His theory respecting the worship of the Cabiri, which he refers exclusively to Phoenician, Hebrew, and Egyptian accounts, is an entirely different one from that of Creuzer, and has excited a great deal of attention on the continent of Europe. It is in following the footsteps of Schelling that Pictet thinks he has found, in the mythology of the ancient Irish, the worship, and even the very names, of the Cabiri of Samothrace. (Du Culte des Cabires chez les anciens Irlandais, Geneva, 1824. —Compare Bibliothèque Universelle, vol. 24.) On the other hand, Prof. D. Müller, in a very interesting dissertation appended to his work on Orchoenmus (Orchoenmus und die Minyer, Beitrag 2, p. 450, seqq.—Gesch. der Hellenischen Stämme, &c., vol. 1), and Welcker (Triologie der Prometheus, Darmstadt, 1824, Svo), reject the Phoenician, or, more properly speaking, Oriental origin of the Cabiri. The first of these writers sees in them a worship purely Pelasgic, and, up to a certain point, the primitive religion of the Greeks entire, with a strong connection between the Pythagorean mythology of India; the second discovers a mixture of various elements, successively amalgamated, and the most ancient of which would be the Dardan or Trojan Penates, becoming, in process of time, the Dioscuri, or else confounded with them, and at an early period transported to Rome.—According to Constant (de la Religion, vol. 2, p. 430), the Cabiri designated the two grand opposing powers in each department of nature, and represented by turns the earth and the heavens, moisture and dryness, the body and soul, inert matter and vivifying intelligence. Their number was not fixed, but varied according to the necessity under which the priests found themselves of expressing the cosmogonical powers. Their figures were at first excessively deformed; they were represented under the guise of distorted dwarfs, and under these forms were brought to Samothrace. Their worship consisted in orgies closely resembling those of the Phrygian Cybele. The Grecian mythology at length received them, and the poets, in examining their attributes, sought to ascertain which of them were susceptible of the necessary transformation. The statues of the Cabiri were placed in the port of Samothrace. They presided over the winds. Hence, with the Greeks, they became gods favourable to navigators and terrible to pirates. (Nigid. ap. Schol. Germ. in imag. Gemin.) They appeared also, according to the Grecian belief, at the tops of masts, under the form of brilliant flames, to announce the end of tempests. (Didiod. Sic., 4, 43.) Expressing, as they did, among other things, the opposition between light and darkness, they became with the Greeks two deities, one of whom was hidden beneath the earth, while the other shone in the skies. The Cabiri proceeded from the cosmogonical egg: and hence, with the Greeks, the new deities came forth, according to the Grecian belief, as judgment and punishment from the cosmic egg, and the hideous Cabiri became the benevolent Tyndarids.—The whole fable of the Cabiri is singularly obscure. In Egypt they were at first five in number, in allusion to the five intercalary days necessary for completing the year. Under this astronomical point of view they had three fathers, the Sun, Hermes, and Saturn. (Plut., de Is, et Os.) In the transition from Egypt to Greece they lost this triple origin: three of them remained hidden powers, sons of the cosmogonical Jove, and of Proserpina, the passive principle of fecundity as well as of destruction: the two others took the Greek names of Castor and Pollux, and have become the twin heroes of Olympian Jove. (Cic., N, D, 3, 21.) For, in Egypt, their mother was not Leda, but Nemesis, one of the appellations of Atrýor, or the primitive night. The amour of Jupiter also has here a fantastic character, which is sensibly weakened in the Grecian fable. Not only does Jupiter change himself into a swan, but he likewise directs Venus to pursue him under the form of an eagle, and he takes refuge in the bosom of Nemesis, born from slumbering seizes, and who with the utmost solicitude requests his divine lover. Hermes thereupon conveys the egg to Sparta, and Leda incubates it. The Greeks, rejecting altogether the cosmogonical personage Nemesis, made Leda the real mother, and the ancient Cabiri became thus a component part of the national mythology. The Ionian school, however, faithful to the principles of a sacerdotal philosophy, continued to call them the offspring of the eternal fire, Vulcan, and of the nymph Cabira. Their history is of great interest, which recalls the generation by fire and water. When astronomy was introduced into the religion of Greece, they became the star of the morning and the star of evening. It is possible to see an allusion to this idea in Homer. (II, 3, 243.—Od., 11, 302.) At a later period they became the Twins. (Constant, de la Religion, vol. 2, p. 433, seqq., in notis.) —As regards the names of the individual Cabiri, it may be remarked, that they all appear decidedly Oriental. The etymologies given to them are as follows: Axieros is said to have signified, in Egyptian, "the all-powerful one," and he is supposed by some to be identical with Phtha or Vulcan. Axierokerus is made to denote "the great fecundator," and is thought to have been the same with Mars, the planet named in Egyptian Ertos, a word which presents the same idea. Axierokerus is consequently "the great fecundatrix," Aphrodite or Venus, the companion of Mars. (Zoega, de Odleis, p. 220.—Compare Müntr., Antiquar. Abbhändel., p. 190, seqq.) As to the fourth personage, Casmiurus, the name is said to import "the all-wise" by those who trace it to the Egyptian. (Zoega, l. c.) Bochart, however, with more probability, compares it with the Hebrew Casmial, which signifies "a servant," "a minister of the deity." (Geogr. Sac., 1, p. 396.) Bochart gives Hebrew derivations also for the other names of the Cabiri. Schelling, more recently, proceeding on the same principle, arrives at a similar result with Bochart, but in a quite different way. (Samothrac. Gottheiten, p. 16, 17, 63, 67, seqq.) His new etymologies, however, as those of Zoega, are not regarded very favourably by De Sacy, in the note to Sainte Croix's work, Mystères du Paganisme, vol. 1, p. 43. Müntr. defends the explanations of Zoega, and maintains, in general, with Creuzer, the Oriental origin of the Cabiri. He inclines, however, to consider the name of Casmiurus as derived from the Persian dab, and explains it with Schelling, in a more simple manner than Bochart, by the term Cadmil, "he who stands before the deity," or "who beholds the face of the deity." (Religion der Karriger, 2 ed., p. 89, seqq.) Müller, Welcker, Schwenk, and Völcker have explored the Greek language alone for an elucidation of these mysterious names. And yet the first of these learned writers, in spite of his purely Hellenic system, cannot prevent himself from considering Cadmil, or Cadmilus, as a word capable as well real as verbal, between Cama, the Hindu god of love, and Casmiurus (Creuzer's Symbalik, par Gugniart, vol. 2, p. 293, seqq., in notis.)

CAPRIGA, I. a surname of Ceres.—II. The festivals of the Cabiri. (Vid. Cabirii.)

CAUMA, a goddess among the Romans, sister to Ca-
CADMUS.

CADMUS, I. son of Agenor, king of Phoenicia, by Telephassa, was sent by his father, along with his brothers Phoenix and Cilix, in quest of their sister Europa, who had been carried off by Jupiter, and they were ordered not to return until they had found her. The brothers were accompanied by their mother, and by Thaus, a son of Neptune. Their search was to no purpose, for they could get no information of their sister; and, fearing the indignation of their father, they resolved to settle in various countries. Phoenix thereupon established himself in Phoenicia, Cilix in Cilicia, and Cadmus and his mother went to Thrace, where Thaus founded a town also named after himself. (Apollod., 3, 1, 1.) Compare the somewhat different genealogy given by Pherecydes. (Schol. ad Apoll. R., 3, 1179.) After the death of his mother, Cadmus went to Delphi, to inquire of the oracle respecting Europa. The god desired him to cease from troubling himself about her, but to follow a cow as his guide, and to build a city where she should lie down. When Cadmus in the morning went to the fields, he saw a cow, accompanied by a serpent, and meeting a cow belonging to the herd of Pelagon, he followed her. She went through Boeotia till she came to where Thebes afterward stood, and there lay down. Wishing to sacrifice her to Minerva, Cadmus sent his companions to fetch water from the fountain of Mars, but the fount was guarded by a serpent, who killed the greater part of them. Cadmus then engaged and destroyed the serpent. By the direction of Minerva he sewed it up, restored the fount, and again turned the three rivers backward into his cave to prevent discovery. Hercules, after having enjoyed the hospitality of Evander, was preparing to depart, without being aware of the theft; but his oxen, having lowed, were answered by the cows in the cave of Cacus, and the hero thus became acquainted with the loss he had sustained. He ran to the place, attacked Cacus, and strangled him in his arms, though vomiting fire and smoke. Hercules erects on this occasion a temple of Apollo on the spot of his victory; and an annual festival was instituted by the inhabitants in honour of the hero who had delivered them from such a pest. (Ovid, Fast., 1, 551.—Virg., Aen., 8, 194.—Propert., 4, 10.—Ju., 5, 125.—Liv., 1, 7.—Dionys. Hal., 1, 9.) The allegorical character of the fable here related is sufficiently indicated by the names of the parties. Thus Evander, who received Hercules on his return from the conquest of Geryon, and Cacus (in Greek Eensor and Koda), seem to be nothing more than appellations intended to characterize the individuals to whom they are applied: Evander, therefore, the leader of the Pelasgi, the head and chief of the division of that great sacerdotal caste which passed into Italy, and, consequently, to apply a modern term, the high-priest of the order, is the Good Man (esbusophos), and Cacus, his opponent, is the Bad Man (axdsc) (Ovid, Met., 4, 963 sqq.). Hercules destroys Cacus, that is, the solar worship, or some other Oriental system of belief professed by the Pelasgi, was made to supplant some rude and probably cruel form of worship; and as Evander was high-priest of the one, so Cacus, whoever he was, may be regarded as the head of the other. (Compare Ritter, Vorhalle, p. 343, seqq.)

Cadcim, the citadel of Thebes, famed to have been built by Cadmus. It represents very evidently the early city, built upon a height, around which the later city of Thebes was subsequently erected, and then the former answered for a citadel, as in the case of the Acropolis of Athens. Of the walls of the Cadmea, a few fragments remain, which are regularly constructed. These were probably erected by the Athenians, when Alexander restored the city of Thebes. (Diot. Thes., 3, 1.)

CADMEI, an ancient name of Boeotia.

CADMUS, II. a famous robber, son of Vulcan, represented in fable as of gigantic size, and vomiting forth smoke and fire. He inhabited the gloomy recesses of the forest on Mount Aventine, and a deep cave there was his dwelling-place, the entrance to which was hung around with human heads and limbs. He plundered and kept in continual alarm the neighbouring country; and, when Hercules returned from the conquest of Geryon, he snatched his cows, dragged them backward into his cave to prevent discovery. Hercules, after having enjoyed the hospitality of Evander, was preparing to depart, without being aware of the theft; but his oxen, having lowed, were answered by the cows in the cave of Cacus, and the hero thus became acquainted with the loss he had sustained. He ran to the place, attacked Cacus, and strangled him in his arms, though vomiting fire and smoke. Hercules erects on this occasion a temple of Apollo on the spot of his victory; and an annual festival was instituted by the inhabitants in honour of the hero who had delivered them from such a pest. (Ovid, Fast., 1, 551.—Virg., Aen., 8, 194.—Propert., 4, 10.—Ju., 5, 125.—Liv., 1, 7.—Dionys. Hal., 1, 9.) The allegorical character of the fable here related is sufficiently indicated by the names of the parties. Thus Evander, who received Hercules on his return from the conquest of Geryon, and Cacus (in Greek Eensor and Koda), seem to be nothing more than appellations intended to characterize the individuals to whom they are applied: Evander, therefore, the leader of the Pelasgi, the head and chief of the division of that great sacerdotal caste which passed into Italy, and, consequently, to apply a modern term, the high-priest of the order, is the Good Man (esbusophos), and Cacus, his opponent, is the Bad Man (axdsc) (Ovid, Met., 4, 963 sqq.). Hercules destroys Cacus, that is, the solar worship, or some other Oriental system of belief professed by the Pelasgi, was made to supplant some rude and probably cruel form of worship; and as Evander was high-priest of the one, so Cacus, whoever he was, may be regarded as the head of the other. (Compare Ritter, Vorhalle, p. 343, seqq.)

Cadcim, the citadel of Thebes, famed to have been built by Cadmus. It represents very evidently the early city, built upon a height, around which the later city of Thebes was subsequently erected, and then the former answered for a citadel, as in the case of the Acropolis of Athens. Of the walls of the Cadmea, a few fragments remain, which are regularly constructed. These were probably erected by the Athenians, when Alexander restored the city of Thebes. (Diot. Thes., 3, 1.)

Pindar frequently speaks of Cadmus; he places him with the Grecian heroes, Pelus and Achilles, in the island of the blessed (Ol., 2, 142); but it is very remarkable that this Thessalian poet never hints even at his Phoenician origin. It was an article, however, of general belief in Pindar's time. There is a curious coincidence between the name Cadmus and the Semitic term for the east, Ke-nor, and this may form the foundation of the notion of a Phoenician colony at Thebes; for none of the usual evidences of colonization are to be found. We do not, for example, meet with the slightest trace of Phoenician influence in the language, manners, or institutions of Boeotia. It is farther a thing most incredible, that a seafaring, commercial people like the
Phoenicians should have selected, as the site of their very earliest foreign settlement, a place situated in a rich fertile valley, away from the sea, and only adapted for agriculture, without mines, or any of those objects of trade which might tempt a people of that character. It is also strange, that the descendants of these colonists should have so entirely put off the Phoenician character, as to become noticed in after ages for their dislike of trade of any kind. We may, therefore, now venture to dismiss this theory, and seek a Grecian origin for Cadmus. (Müller, Orchoemenus, p. 113, seq.)—Homer and Hesiod call the people of Thebes Cadmeans or Cadmeonians, and the country the Cadmean land; the citadel was at all times named the Cadmea. Cadmus is therefore apparently (like Pelas- gus, Dorus, Ion, Thessalus, and so many others) merely a personification of the name of the people. Again, Cadmus this to Pherecydes, was a name of Mercury in many mysteries of Samothrace, which were instituted by the Tyrrhenian Pelasgi, who, at the time of the Dorian migration, being driven from Boiotia, settled on the islands in the north of the Aegean. The name Cadmus, moreover, occurs only at Thebes and Samothrace; Harmonia also was an object of worship in this last place, and the Cabiri were likewise worshipped at Thebes. Now, as the word Kadmos may be deduced from καδόμ, a certain "command" words exemplary, and to Kadmos, the name of the chief magistrate in Creto, it has been inferred, that Cadmus-Hermes, i.e., Hermes, the Regulator or Disposer, a cosmogonic power, gave name to a portion of the Pelasgic race, and that, in the usual manner, the god was made a mortal king. (Müller, Orchoemenus, p. 461, seq.—Id., Prolegom., p. 146, seq.—Keightley's Mythology, p. 325, seq.) The ancient tradition was, that Cadmus brought six tame serpents from Ethiopia to Greece, which, together with the six serpents of Medusa added subsequently four more, θ, ι, χ, and Simonides, at a still later period, four others, Δ, Τ, Φ, Θ, the traditional alphabet of Cadmus is supposed to have been the following: Α, Β, Γ, Δ, Ε, Φ, Ι, Κ, Λ, Μ, Ν, Ο, Π, Σ, Τ, and the names were, Αλάγα, Βότρα, Τυμίια, Δελτρια, Ελ. Φάε, Ιούρα, Κανώπα, Δαμόδα, Μί, Νύ, Οί, Πόο, Στίρτα, Τάτ. The explanation which has just been given of the origin of Cadmus, and its connexion with the Pelasgi, has an important bearing on the question relative to the existence of an early Pelasgic alphabet in Greece, some remarks on which will be found under the article Pelasgi. II. A native of Mileus, who flourished about 520 B.C. Pliny (7, 56) calls him 'the most ancient of the logographers.' In another passage (5, 29), he makes him to have been the first prose writer, though elsewhere he attributes to Aeschylus the name of Mercury in many mysteries of Isocrates (in his discourse προν γονιανοκ). Cadmus was the first that bore the title of σοφιατις, by which appellation it was then meant an eloquent man. He wrote on the antiquities of his native city. His work was abridged by Bion of Proconnesus. (Scholl, Hist. Lit. Gr., vol. 2, p. 134.)

Cæcum, the wand of the god Mercury, with which he conducts the souls of the departed to the lower world. In the case of the "dweller," it is of gold, hence called by the poets avres virga, and was said to have been given him by Apollo in exchange for the lyre, which the former had invented. Commonly speaking, however, it was a wand of laurel or olive, with two little wings on the upper end, and with two serpents entwined about this same part, having their heads turned towards each other, the whole serving as a symbol of peace. According to the fable, Mercury, when travelling through France, sat down to dine with one another, and threw the rod of peace between them, whereupon they instantly ceased from the contest, and wound themselves around the staff in friendly and lasting union. Böttiger, however, gives a much more rational explanation. According to this writer, the caduceus was of Phoenician origin, and what were the serpents in latter days consisted originally of nothing more than a mere knot, skilfully formed, and used to secure the chests and wares of the Phoenician traders. This knot became very probably attached, in the course of time, to a bunch adorned with green leaves at the end, and the whole thus became a symbol of the origin of the wings. The caduceus served Mercury also as a herald's staff, and hence its Greek name κανονικός, whence, as some think, the Latin caduceus is corrupted. The term caduceus was also applied sometimes to the white wand or rod, which the ancient heralds regarded as the symbol of peace. (Consult Böttiger, Amathia, vol. 1, p. 104, seq.)

Caducii, a people of Galilia Celts, living between the Odus or Ulis (the Ol) and the Duramius (Dör- dago), two of the northern branches of the Garumna. Their capital was Divona, afterward called from their own name Caduci, now Cahors. (C. B., 7, 4.)

Cädystes, a town of Syria, mentioned by Herodotus (2, 159). It is supposed by Reland to have been the same with Gath, D'Anville, Renell, and many others, however, identify it with Jerusalem. This latter opinion is undoubtedly the more correct one, and the place where stood the former Temple of the Hebrew Kolosos, i.e., "holy city." With this, too, the present Arabic name El Kads, i.e., "the holy," clearly agrees. (Renell, Geog. Herod., vol. 1, p. 324.—Rosenmüller, Bibl. Alterthumk., vol. 2, pt. 1, p. 497.—Heeren, Ideen, vol. 1, pt. 2, p. 114.—Dahilman, Herod., vol. 7, p. 75.—Valekener, Opusc., vol. 1, p. 152, seq.—Bähr, Ezzurrins, 11, ad Herod., i, c.)

Cæa, an island of the Ægean sea, among the Cyclades, called also Ceres and Cretum.

Cæcitas, a wind blowing from the northeast. (Compare Animus Gallius, 2, 25, and Schneider, Lex. s. v. Caucasios.)

Cæcilia Calia, of Tanagru. Vid. Tanagrus.

Cæcilia Læx, I. was proposed A.U.C. 693, by Cæcilius Metellus Nepos, to exempt the city and Italy from taxes. (Cic., Ep. ad Att., 2, 9.—Dio Cass., 37, 51.)—II. Another, called also Didis, or Didius et Cæcilia, H.C. 604, in which Cæcilius Metellus and T. Didius, that laws should be promulgated for three market-days (17 days), and that several distinct things should not be included in the same law, which practice was called ferre per saturam.—III. Another, A.U.C. 701, to restore to the censors their original rights and privileges, which had been lessened by P. Cidius, the tribune.—IV. Another, called also Gabinia, A.U.C. 685, against usury.

Cæcilia (sens.), a distinguished plebeian family of Rome, the principal branch of which were the Metellii. They pretended to have derived their origin from Cæculus, son of Vulcan.

Cæcilius, I. Metellus. (Vid. Metellus.)—II. Statius, a comic poet, originally a Gallic slave. (Aul. Gell., 4, 20.) His productions were held in high estimation by the Romans, and were sometimes ranked on an equality with those of Plautus and Terence, at other times preferred to them. (Horat. Ep., 2, 1, 56.)—Cic., de Orat., 2, 10.—II. ad Attic., 7, 3.—Vulgatis Sedigittus, ap. Aul. Gell., 15, 24.) He died one year after Ennius. We possess the names and fragments of more than thirty of his comedies, in which he appears to have copied the writers of the New Comedy among the Greeks, especially Menander. (Bähr, Gesch. Rom. Lit., p. 70.)

Cæcina, Allerius, a celebrated general, a native of Gaeta, who, according to Livy, saved a legion for Galba, in Germany; then he embraced the party of Vitellius, and gained him the crown by the victory of Bedriacum, where Otho was defeated. Soon after this, however, he abandoned Vitellius and went over to Vespanius, irritated at not being promoted by the new en-
peror to the honours at which he aimed, he conspired against him, but was slain by order of Titus at a banquet. Some writers have thrown doubts on this conspiracy, and have pretended that Titus was actuated by a feeling of jealousy in seeing Cæcina regarded with attachment by Berenice. (Tactit., Hist., 1, 61. —Id. ib., 3, 13. —Dio Cass., 66, 16.) Cæcina, in the vicinity of Formia and Caetia in Latium, famous for its wines. Pliny (14, 6) informs us, that, before his time, the Cæcuban wine, which came from the poplar marshes of Amycle, was most esteemed, but that at the period when he wrote, it had lost its repute, through the negligence of the growers, and partly from the limited extent of the vineyards, which had been nearly destroyed by the navigable canal begun by Nero from the Lake Avernus to Ostia. Galen (Anlen. 1, 21) describes the Cæcuban as a generous and durable wine, but apt to affect the head, and ripening only after many years. When new it probably belonged to the class of rough sweet wines. It was Horace’s favourite, and scarce after the breaking up of the principal vineyards. The best, and, at the same time, the oldest vintage, was the Optimian. L.Oppius Nepos was consul A.D. 639, in which year the excessive heat of the summer was counteracted by Tyrrhenian wine, which attained an uncommon degree of perfection. (Vid. Fadernum, and Massicus. —Henderson’s Hist. Anc. and Mod. Wines, p. 81, seq.)

Cæcilius, a son of Vulcan, conceived, as some say, by his mother as she was sitting by the fire, a spark having leaped forth into her bosom. After a life spent in plundering and rapine, he built Prænesta; but, being unable to find inhabitants, he improvised Vulcan to tell him whether he really was his father. Upon this a flame suddenly shone around a multitude who were assembled to see some spectacle, and they were immediately persuaded to become the subjects of Cæcilius. Virgil says, that he was found on the hearth, or, as some less correctly explain it, in the very fire itself, and hence was fabled to have been the son of Vulcan. The name Cæcilius refers, it is said, to the small size of the pupils of his eyes. (Verg., Aen., 7, 680. —Serv. and Virg.)

Cælia Lex, was enacted A.D. 630, by Cælius, a tribune. It ordained, that in judicial proceedings before the people, in cases of treason, the votes should be given by ballot; contrary to the exception of the Cassian law. (Heinecc., Antiq. Rom., ed. Huabold, p. 250.)

Cælius, I, a young Roman of considerable talents and accomplishments; intrusted to the care of Cicero on his first introduction to the forum. Having imprudently engaged in an intrigue with Clodia, the well-known sister of Clodius, and having afterward deserted her, she accused him of an attempt to poison her, and of having borrowed money from her in order to procure the assassination of Dio, the Alexandrian ambassador. He was defended by Cicero in an oration which is still extant. —II. Aureliamus, a medical writer. (Vid. Aureliamin Vestum.) —III. Sabinius, a writer in the time of Vespasian, who composed a treatise on the edicts of the curule ediles. —IV. One of the seven hills on which Rome was built. Romulus surrounded it with a ditch and rampart, and it was enclosed by walls by the succeeding kings. It is supposed to have received its name from Cæsars Vibenna.

Cæne, or Cænepolis, I, a town of Egypt, in the Panopolitan nome, supposed to be the present Ghiza, or Ken. —II. A town near the promontory of Thaenarum; its former name was Tanarum. (Vid. Thaenarum.)

Cænus, Vid. Cenius.

Cænus, a town on Lake Avernus, near Rome, placed by Cluverius on the banks of the Anio. The inhabitants, called Canensines, made war against the Romans after the rape of the Sabines. Having been conquered by Romulus, Cænus is said to have received a colony from the victor, together with Antemmus. (Dion. Hal., 2, 36.) It is thought to have stood on the banks of fiume Angelo, or Montecelle. (Holstein., Adnot., p. 103.)

Cænus, a Thessalian son of Elatus, and one of the Lapiths. He was, according to the fable, originally a female, and obtained from Neptune the privilege of changing sex, and of becoming a warrior and invulnerable. In this new sex he became celebrated for his valour and his exploits in the war against the Centaurs. He offended Jupiter, and was changed into a bird. Virgil represents Cænus as a female bird in the lower world. (Ep., 6, 449.) The name is sometimes, but less correctly, given as Cænus. (Cons. Heye, ad En., l. c.)

Cænys, a promontory of Italy, in the country of the Bruttii, north of Rhegium. It faced the promontory of Pelorius in Sicily, and formed, by its means, the narrowest part of the Strait Siculicum. (Strabo, 256.) According to Pliny (3, 10), these two promontories were separated by the sea; and by Tucidides (2, 45), or a mile and a half: a statement which accords with that of Polybius (1, 42). Thucydides, on the other hand (6, 1), seems to allow two and a half for the breadth of the strait, but, at the same time, considers this as the utmost amount of the distance. Topographers are divided as to the exact point of the Italian coast which answers to Cape Cænys; the Calabrian geographers say, the Punta del Pezzo, called also Costa del Vally, in which opinion Cluverius and D’Anville coincide; but Holstenius contends for the Torre del Casullo. This perhaps may, in fact, be the narrowest point; but it does not apparently answer so well to Strabo’s description of the figure and bearing of Cape Cænys. (Cramer’s Ancient Italy, vol. 2, p. 426, seqq.)

Cæsar, or, as it is always called by the Greek writers, Agyia, one of the most considerable cities of Etruria. It seems to have been acknowledged to have been founded by the Tyrrhenian Pelagii. (Dion. Hal., 1, 20. —Id., 3, 60.) It was situated near the coast, to the west of Veii. Ancient writers seem puzzled to account for the change of name which this city is allowed to have undergone, the Romans never calling it anything but Cære, except Virgil. (En., 8, 478.) Strabo (250) relates, that the Tyrrheni, on arriving before this city, were hailed by the Pelagi from the walls with the word Xaipo, according to the Greek mode of salutation; and that, when they had made themselves masters of the place, they changed its name to that form of greeting. Other variations of this story may be seen in Servius (ad En., 8, 597.) According to one of them, given on the authority of Hyginus, the Romans, and not the Lydians, changed its name from Agylia to Cære. All these explanations, however, are very unsatisfactory. It has been supposed that Cære might be the original name, or perhaps that which the Siculi, the ancient possessors, gave to the place before the Pelasgic invasion. Ker is a Celtic word. (Cramer’s Ancient Italy, vol. 1, p. 205.) According to Mühler (Die Etrusker, vol. 1, p. 87), the two names for the place point to two different stems or races of inhabitants. This same writer makes the genuine Etrurian name to have been CISRA. (Compend. Virg. Etrur. Plac. Etrac. 1. 1 p. Interp. En., 10, 183, Veron.) The earliest name known is found of the history of Agylia is in Herodotus (1, 166.). That writer informs us, that the Phocæans, having been driven from their native city on the shores of Ionia by the arms of Cyrus, formed establishments in Coriacis, of which the Tyrrhenians and Cartaginians
jealous of their nautical skill and enterprising spirit, eager to dispossess them. A severe action accordingly took place in the Sea of Sardinia, between the Phocrians and the combined fleet of the latter powers, in which the former gained the day; but it was such a victory as left them little room for exultation, they having lost several of their ships, and the rest being nearly all disabled. The Agyleans, who appear to have constituted the principal force of the Tyrrhenians, on their return home landed their prisoners and barbarously stoned them to death; for which act of cruelty they were soon visited by a strange calamity. It was observed, that all the living creatures which approached the spot where the Phocrians had been murdered, were immediately seized with convulsive distortions and paralytic affections of the limbs. On consulting the oracle at Delphi, to learn how they might expiate this censure, the Agyleans were not admitting the celebration of the obsequies of the dead, and to hold games in their honour, which order, the historian informs us, was punctually attended to up to his time. We learn also from Strabo (220), that the Agyleans enjoyed a great reputation for justice among the Greeks; for, though very powerful, and able to send out large fleets and numerous armies, they always abstained from piracy, to which the other Tyrrhenian cities were much addicted. According to Dio (45), the Agyleans, the Romans, the Gauls, and the Phocrians were engaged in hostilities with Cære under the reign of Tarquin the Elder, and subsequently under Servius Tullius, by whom a treaty was concluded between the two states (3, 28). Long after, when Rome had been taken by the Gauls, the inhabitants of Cære rendered the former city an important service, by receiving their priests and vestals, and defeating the Gauls on their return through the Sabine territory; on which occasion the Agyleans were rewarded, and it is said to have purchased its liberation. This is a curious fact, and not mentioned by any historian; but it agrees very well with the account which Polybius gives us of the retreat of the Gauls (1, 6). In return for this assistance, the Romans required the Cærites by declaring them the public guests of Rome, and admitting them, though not in full, to the rights enjoyed by her citizens. They were made citizens, without the right of voting; whence the phrases, in Cærum tabulas referre aliquem, "to deprive one of his right of voting," and Cærite cera dignit, "worthless persons," in reference to citizens of Rome, since what would be an honour to the people of Cære would be a punishment to a native Roman citizen. (Cram-mer's Ancient Italy, vol. 1, p. 207.)—"It is a weak notion of Strabo," observes Niebuhr, "that the Romans, by the'Cærites, were not admitting the Cærites to a higher franchise. It was not in their power to do so, unless the Cærites themselves preferred renouncing the independence of their state, receiving their landed property from the republic, according to the Roman law, and forming a new; tribe; and this they were certainly far from wishing at that time, as fortune had been more favourable to them in the Gallic war than to Rome; if, indeed, the Roman citizenship were really conferred on the Cærites at this time, and not considerably earlier, in the flourishing days of the ancient Agylin." (Roman History, vol. 1, p. 403, Walter's trans.) In the first edition of his work (vol. 1, p. 193, seqq., in notis), Niebuhr starts the bold hypothesis, that Cære was the parent city of Rome. In the second edition, however (Cambridge transl.), this theory is silently withdrawn.
