time in the greatest prosperity, Priam expressed a
desire to recover his sister Hesione, whom Hercules
had carried into Greece, and married to Telamon,
his friend. To carry this plan into execution, Priam
manned a fleet, of which he gave the command to his
son Paris, with orders to bring back Hesione. Paris,
to whom the goddess of Beauty promised the most
handsome of mortals (vid. Paris), neglected, in some
measure, his father's injunctions, and, as if to make
reprisals upon the Greeks, he carried away Helen, the
wife of Menelais, king of Sparta, during the absence of
her husband. This violation of hospitality kindled the flames of war. All the suitors of Helen, at the request of Menelaus (the Menelaus), assembled to avenge the abduction of his spouse, and the combined armament set sail for Troy. Priam might have averted the impending blow by the restoration of Helen; but this he refused to do when the ambassadors of the Greeks came to him for that purpose. Troy was accordingly beleaguered, and frequent skirmishes took place, in which the success was various. The siege was continued for ten successive years, and Priam had the misfortune to see the greater part of his sons fall in defence of their native city. Hector, the eldest of these, was the only one upon whom now the Trojans looked for protection and support; but he, too, fell a sacrifice to his own courage, and was slain by Achilles. The father thereupon resolved to go in person to the Greek camp, and ransom the body of the bravest of his children. The gods interested themselves in his behalf, and Mercury was directed to guide the aged monarch in safety amid the dangers of the way, and conduct him to the tent of Achilles. The meeting of Priam and Achilles was solemn and affecting. The conqueror paid to the Trojan monarch that attention and reverence which was due to his dignity, his years, and his misfortunes; and Priam, in a supplicant manner, addressed the prince whose hands had robbed him of the greatest and best of his sons. Achilles was moved by the supplication, and pronounced him a suppliant, and permitted Priam a truce of 12 days for the funeral of his son. Some time after, Troy was betray- ed into the hands of the Greeks by Antenor and Xene- as, and Priam was slain by Neoptolemus, the son of Achilles, at the foot of the altar of Jupiter Herceus, at which that prince had killed the wounded Polites, one of the sons of Priam, who, after the example of his fa- ther and mother, had fled thither for protection during the battle (Iliad, ii. 80). 

Pathus. I. a deity introduced at a comparatively late period into the Greek mythology. He was a ru- dical god, worshipped by the people of Lampsacus, a city on the Hellespont famous for its vineyards. Pri- apus was not, as is supposed, from the employment usually assigned him by the Romans after they had adopted him as a god. He was the type of the fruitfulness in general. “This god,” says Pausanias, “is honoured elsewhere by those who keep sheep and goats, or stocks of bees, calling him the son of Bac- chus and Venus.” (Pausan., 9, 31.) Fishermen also made offerings to him, as the deity presiding over the fisheries (Anth., 6, 33, 190, 192); and in the Antho- logy, Priapus of the haven (Aquæviræ) is introduced, giving a pleasing description of the spring, and invoking the mariners to put to sea. It was fabled that Priapus was the son of Venus by Bacchus, whom he met on his return from his Indian expedition at the Lam- pcene cune Aparris. Owing to the malignity of Juno, he was born so deformed that his mother was struck with horror and renounced (ἀνεμπρετo) him. (Schol. ad Apoll. Khod., 1, 932.) Others said that he was the son of Bacchus by Chione, or a Naiad (Schol. ad Theor., 1, 21); others, that he had a long-eared fa- ther, Pan or a satyr, perhaps, or it may be his own sacred beast, the ass. (Afran. ap. Macrobr., Sat., 6, 5.—Ovid, Fast., 1, 391.—Id. ib., 6, 345;) others gave him Mercury or Adonis (Hygin., fab., 169.—Eudocia, 24), or even Jove himself for a sire. (Eudocia, 345.)—Priapus, like the other rural gods, is of a ruddy com- plexion. His cloak is filled with all kinds of fruits; he has a scythe in his hand, and usually a horn of plen- ty, from which he fills the baskets of the ancients, or imparts the same to those who are in need. “It is entitled to a more philosophical view of the character and attribu- tions of this deity. According to him, Priapus, like Osiris, is a type of the great generating or productive principle of the universe. In this universal character he is celebrated by the Greek poets under the name of Love or Attraction, the first principle of Animation; the father of gods and men; and the regulator and dispos- er of all things (Aristoph., A., 693, ed. Brunck. —Parnemid., ap. Stob., c. 12.—Orph., Hyg., 5, 5.) He is said to pervade the universe with the motion of his wings, bringing pure light; and thence to be called the splendid, the self-illumined, the ruling Priapus (Orph., Hyg., 5, 5); light being considered, in this primitive philosophy, as the great nutritive principle of all things. (Soph., Ed. Tyr., 1437.) Wings are attributed to him as the emblems of spontaneous motion; and he is said to have sprung from the egg of night, because the egg was the ancient symbol of organic matter in its inert state. (Inquiry, &c., § 23.—Class Journ., vol. 23, p. 12.) The same writer considers the name Priapus as equivalent to Briapis (BPIA- HOY2), i.e., “Clamorosa,” from the ancient custom of attaching bells to statues and figures of this deity; the ringing of bells and clatter of metals being almost universally employed as a means of consecration, and a charm against the destroying and inert powers. (Class. Journ., vol. 26, p. 48.) Schwenk makes Priapus identical with the Sun, the great source of life and fecundity; and taking ἄπειρα, “father,” as a cognate term, derives Πηαπαίος from Βπαίας (Bp, in- tensive, and ἀπο), “the mighty father,” i.e., the great protectress of mankind. Priam (Iliad, 20, 184), the monarch of the ancient town of Mysia, not far from Lampsacus, which had a harbour on the Propontis. It derived its name from the god Priapus, who was worshipped here with peculiar honours; and to this place he is said to have re- tired when driven away from Lampsacus. The mod- ern name is Karaba. (Plin., 5, 31.—Mela, 1, 19.) Priene, a city of Caria, north of the mouth of the Meander, and at the foot of Mount Mycale. It was not properly Priene, but Stratonikeia, and Polonius remove it some distance inland. Yet Herod- othus speaks of the vessels which it furnished for the Ionian fleet (6, 8), and Sclayx assigns it two harbours (37). One of these was probably choked up at a later period by the alterations which the Meander has made along this coast. Priene was an Ionian colony (Pau- san., 7, 2), and formed one of the twelve confederate cities of the Ionian league; it lay, however, according to Herodotus, on the coast of Asia Minor (Herod., 1, 142.) It was the native place of Bias, one of the seven sages of Greece. The ancient city would seem to have existed as late as A.D. 1290. (Pachy- meres, vol. 1, p. 320.) The modern village of Sam- son-Kalesi now occupies its site. (Munnerti, Geogr., vol. 6, p. 3, 264.) Priscianus, one of the most celebrated gramma- rians of antiquity, surnamed Casarianus, either having been born in Cesarea in Palestine, or from having there principally taught his art. He passed a part of his life at Constantinople, during the reign of the Emperor Justinian; as appears, not only from the title of the 13th chapter of the Orthography of Cas- siodorus, his contemporary, but also from a Hamburc manuscript bearing the following inscription: “Pris- cianus ars Grammatica viri eloquentissimi, grammatici Casariani; scripsit ego Theodorus Dionysius a memoriaibus sacri servitii, epistolario et adjecto V. M. guerstorin in urbe Roma Constantinopolitana die Cal. Oct. indictione quinta. Obliuvo vio clarissimo Cos.” This Olibrius was sole consul in 526, the year in which the manuscript was written, the copist of which calls himself the disciple of Priscian. (Pabrr., Bibl. Lat., vol. 3, p. 398, ed. Ernesti.) Priscian is the author of the most complete grammar that has come down to us from antiquity. It is entitled “Commentarium in grammatarum libri, xvi.,” or “De octo partibus orationis earundemque constructione,” and is addressed to Julian, a man of consular and patrician rank.
The first sixteen books, which are commonly styled "the Great Priscian," are treated of the eight parts of speech of Greek. The last, generally called "the Little Priscian," are occupied with the Syntax. (Putch., p. 592.) This is not, however, the only grammatical work of Priscian; we also have from him treatises on accents; on the declension of nouns; on syntactical modes; on numbers, rules, and measures ("De figuris et nominibus numerorum, et de normis ac ponderibus"), etc. He is probably, too, the author of three poems that are ascribed to Rhamnus Faustus. One of these is a version of the Itinerary of Dionysius of Charax, the second is on weights and measures, and the third on the stars. The first of these poems, entitled "Periergesis di Dionysio, or De situ orbis terrae," is an imitation rather than strict version of the Greek original, and consists of 1057 verses. Priscian follows, in general, the author's train of ideas; but he makes, at the same time, certain alterations which he deems necessary, especially in substituting Christian ideas for what related in the original to the worship of the heathen gods. To the description of places he adds various remarkable particulars, generally obtained from Solinus. The object being the introduction of the young, to whom he wished to present a general summary of geography, he writes in a very clear and simple style, without even venturing on any digressions. The book on coins is, indeed, is incomplete; we have only 162 verses. In the first 55, the author treats briefly of weights, probably because he had already discussed this branch of his subject more fully in his prose work already mentioned. He enters, however, into very full details respecting the measures of liquids and fruits, to which the rest of the poem is entirely devoted. The third poem of Priscian's consists of more than three thousand verses; it is a dry nomenclature of the stars and planets, and is entitled "Epitome phenoménon," or "De sideribus." These three poems are given in the fifth volume of Werner'ssof' Poetae Latini Minorae, and the third also in Burmann's Anthology (vol. 2, p. 333). The grammatical works of Priscian are given by Putschius among the Grammatici Latini, 1605. The latest edition of the Grammatical Commentaries is that of Krause, 1819. Two of the minor works, that of Lindemann, Lrugd. Bat., 1818. (Scholl, Hist. Lit. Rom., vol. 3, p. 113, 329. — Ihhr, Gesch. Röm. Lit., p. 541.)

Privernum, a city of Latium, in the territory of the Volsces; the ancient name of which is but partially lost in that of the modern Piperno, which marks its situation. Virgil makes it the birthplace of Camilla (Enn. 11, 553). We have the authority of the same poet (l. c.) for ascribing it to the Volsces; but Strabo (231) would seem to consider the Privernates as a distinct people from the Volsces, for he particularizes them among the petty nations conquered by the Romans and incorporated in Latium. The same geographer elsewhere points out the situation of Privernum between the Latin and Appian Ways. (Strabo, 237.) This is apparently the best place to seek for this ancient strength and remote situation, presumed to brave the vengeance of Rome by making incursions on the neighbouring colonies of Setia and Norba. (Liv. 7, 15.) A consul was immediately despatched to chastise the offenders, and in the submission of the town obtained the honours of a triumph. The Privernates again, however, renewed their hostile depredations; and the offence was repeated so often, that it was found necessary to establish their walls and to remove their senate to Rome. An assembly was held in that city, and a debate ensued on the punishment to be inflicted on the inhabitants of Privernum. A deputy of the conquered town being asked what penalty their rebellious conduct deserved, boldly replied, "Such punishment as they merit who claim their freedom." The Romans had the generosity and good sense to be pleased with this spirited reply; and, instead of the usual penalty, transferred to the Privernates the rights of Roman citizens. (Liv., 8, 1, seqq.—Val. Max., 6, 2.) Festus, however, mentions it among the praefecturae, or those towns in which the praetor at Rome administered justice by deputy. Frontinus classifies Privernum among the military colonies. (Cramer's Anc. Italy, vol. 2, p. 109, seqq.)

Probos, I. M. Aurelii Severus, a native of Sirium in Pannonia. Having been early an orphan by his father Maximus, who died a tribune in Egypt, and having opened a road to distinction by his sword, he was long regarded as the man upon whom the election to the empire was, at one time, likely to fall. Aurelian, when appointing him to the command of the tenth, his own legion, which had been that of Claudius, says in his letters, that "by a sort of prerogative of good fortune, it had been always commanded by men who were one day to be princes." Tacitus had recommended Probus to the senate as a fitter person than himself for their sovereignty; and, when acquainting Probus with the circumstances of his own election, wrote to him, "You know, however, that the weight of the commonwealth rests rather upon your shoulders, and the senate knows it too." When the tribunes, on the usurpation of Flavianus, harangued their divisions in different parts of the city, under a concerted plan, to describing what the qualities of an emperor should be, without directly naming Probus; but the cohorts everywhere, as by a unanimous impulse, broke out into acclamations, "Probus Augustus, the gods preserve thee!" Snatching a purple robe from the statue of a neighbouring temple, they threw it over the shoulders of Probus, and hurried him along the whole of the tribunal of that day, which had been hastily raised, that he might deliver to them his inaugural harangue. On the receipt of the dispatches by the senate, one of their number, Manlius, whose turn it was to speak, enlarged upon the victories of Probus over the Franks and Alemani, the Sarmatians and Goths, the Parthians and Persians; on his respectable life; his clemency and justice, in which he resembled Trajan; but who was interrupted by shouts of "all, all," in attestation of their unanimous admiration. The senate, who had not consolidated the grace of Probus confirmed the privileges which Tacitus had granted to the senate, and the right of appointing proconsuls, hearing appeals from the courts, and ratifying the constitutions or edicts of the emperor. The Franks and Burgundians having overrun Gaul, Probus marched to repel their invasion. In the several battles fought 400,000 of the barbarians fell; 70 cities opened their gates to the spoil which had been taken was restored, contributions were furnished of corn, of cattle, of horses, and of sheep; 16,000 Germans were drafted into the legions of Rome, and nine princes offered their hostages and their homage. Having recovered Gaul, he carried his arms into the countries beyond the Adriatic; forced the Getai to submit to his arms or fort his alliance; overcame the Persians at Chalcedon, and subdued Isauria, the province of Palphirus, a famous robber, who was slain; obtained by his arms peace from the Persians; subdued the Blemmyæ, a people inhabiting the borders of Egypt and Ethiopia; rescued Captors and Potolemas from the barbarian yoke; reduced Saturnus, Proculus, and Bonoeus, the former of whom had usurped the sovereignty in Egypt, and the latter in Gaul; and, after annihilating, the destruction of whom he had transplanted to the Roman soil, and who had broken their pledge of fidelity. Groups of all nations preceded his triumphal car. Amid the transplanted trees that formed a forest in the amphitheatre, thousands of stages, wild boars, and goats were turned loose as prizes for the most dexterous of the people; three hun-
dread bears were exposed to the archers; and a hundred lions, transfixed by the javelins of the hunters, lay stretched between Isaurian robbers and Blemmyan captives; of the latter tradition tells us, perhaps from some peculiarity in their armour, that they were headless, and that their eyes and mouths were seated in their breasts.—It was the favourite maxim of Probus, after he had secured peace by his victories, that in a short time soldiers would be unnecessary. With the wisdom of a statesman and the policy of a general, he employed them, during the intervals of war, in the construction of bridges and aqueducts, and in the planting of Mount Alma, at Sirmium, with vines. The draining of a marsh, at the latter place, which was the place of his birth, proved fatal to him. The soldiers, impatient of their labours, aggravated by a hot sun, rose in mutiny, and, pursuing their emperor into an iron turret, which he had erected for the more convenient inspection of the workmen, put him to death, in the 50th year of his age, after a reign of six years and four months, A.D. 282. The deed was no sooner executed than they repented. They raised a monument to his memory, and inscribed on the marble, “Probus, emperor, a man of real probity, the conqueror of the barbarians and the usurpers.” A weapon or a piece of armour was the sole share which Probus could be prevailed upon to receive of the booty of the field. He left behind him an Arabian horse, which was said to run a hundred miles in a day, he said, “it was fitter for a runaway soldier than for a fighting one.” The simplicity of his manners strikingly contrasted with the pride and spirit of his bearing as a Roman general. An embassy from the Persians entered his camp with a pompous retinue, bearing presents to the Emperor of Rome. They found him seated on the grass at the hour of his repast, hard pressed and careworn. Diggings up at the astonished and half-credible envoy, he spoke lightly of their presents, saying “that all their king possessed was already his, and that he should come for the rest whenever he chose.” Then, removing the cap which he wore, and exposing the crown of his head, he added, “Tell your master that, if he does not submit to Rome, I will make his kingdom as bare as this head is bald.” The threat was believed, and the submission was tendered. (Voposc. Vit. Prob.—Zonim., 1, 64, seqq.—Elton’s Roman Emperors, p. 181.) Ammianus, a grammatician in the age of Theodosius. The lives of excellent commanders, written by Cornelius Nepos, have been falsely attributed to him by some authors. (Vid. Nepos.)

Proclus, a king of Alba, after his father Aventius. He was father of Anullius and Numitor. (Liv., 1, 3. Oros. Met., 14, 622—Verg. Aen., 6, 787.)

Procyth, an island off the coast of Campania, and adjacent to Æaria. It is now Procida. (Verg., Æn., 9, 714.—Sil. Ital., 8, 542.) The poet last quoted makes Procyth to have been placed on the giant Mimas, as Æaria was on Iapetus or Thyrphoeus (12, 147).

Procles, a son of Aristodemus and Aggia, and twin-brother of Eurysthenes. (Vid. Eurysthenes.)

Proclina, the descendants of Procles, who sat on the throne of Sparta together with the Eurysthenides. (Vid. Eurysthenes.)

Proclus, a celebrated philosopher of the New-Platonic sect, born at Constantinople A.D. 412. He spent his ardent and enthusiastic youth at Xanthus, in Lydia, a city devoted to Apollo and Minerva, where his parents resided; and from this circumstance he was called "the Lycean." From Xanthus he removed to Alexandria, where his attention was fixed on the lectures of Olympiodorus, a celebrated Pythagorean. From Alexandria he went to Athens, and became the disciple of the Platonist Syrusian, and of Asclepiagenia, daughter of Plutarch. At the age of twenty-eight he wrote his Commentary on the Timaeus of Plato, which is generally regarded as a masterpiece of the school. Syrianus designated him as his successor, and from this circumstance he obtained the surname of Diadochos (Diadokhos, "successor"). Proclus threw himself blindly into the mystic theology of the day, and was initiated into the arcana of all the Oriental sects. He united an imaginative temper to great learning, but was unable to balance his acquirements by any weight of understanding. He looked upon the Orphic Hymns and the Chaldean Oracle, which he had diligently studied, as divine revelations, and capable of becoming instrumental to philosophy by means of an allegorical exposition; whereby, also, he endeavoured to make Plato and Aristotle agree. He called himself the last link of the Hermetic chain, that is, the last of men consecrated by Hermes, in whom, by perpetual tradition, was preserved the occult knowledge of the mysteries. (Marini, Vita Procli, p. 59, seqq.—Id. ibid., p. 76.) He elevated himself above science, as forming a closer bond of union with Good and Unity. (Theolog. Plat., 1, 25, 29.) His sketch of philosophy contains a commentary on the doctrines of Plotinus, and an attempt to establish this point, that there is but one real cause and principle of all things, and that this principle is Unity, which produces all things in one uniform order, by triads. His obscure system is delivered in a system of triads, which is the thesis of the properties of Being, of which it admitted three grand divisions, Existence, Life, and Reason, or Nous. All these he derived from Unity, and made them the source of three other triads. He distinguished the Divinities (making these also descend from Unity and give birth to triads) into Intelligible and Intelligent, Supernatural and Natural; attributed a supernatural efficacy to the name of the Supreme Being, and proved that he is an Looz of the above Philosophy. Proclus also attacked the Christian religion, being principally offended by the doctrine of the creation of the world. In his three treatises on Providence, Fate, and Evil, he states with great ability his notion that the latter does not spring from Matter, but from the limitation of power, and labours to reconcile the system of Plotinus with the conclusions of sound reason. Proclus died A.D. 485, with the name of Augustus, and was regarded by his followers as approaching adoration, leaving behind him a crowd of followers. (Tennemann, Manual of Philosophy, p. 200, seqq., Johnson’s transl.)—The best edition of the entire works of this philosopher is that of Cousin, 1820–27, Paris, 6 vols. 8vo. We have of Proclus, 1. A work on the Theology of Plato (Elc τῆς Πλά- τωνος θεολογίας), in six books. It was published in 1618, fol., from the Hamburg press.—2. Theological Institutions (Συστηματα Ἰεροθεολογίας), the best edition of which is that of Creuzer, Frankfort, 1822, 8vo.—3. A work On Motion (Περὶ κίνησεως), also entitled Στοι- χείων φυσική ("Physical Institutions"), the best edition of which is that of Weis, Basel, 1545, 8vo.—4. A Commentary on the Works and Days of Hesiod (Τριῳμμά τῆς Ἰδίου Ἀθηναίου καὶ Ἡλπικοῦ), appended as scholia to some of the editions of Hesiod. 5. A Grammar of Grammar (Σηματολογία), in two books. It is a sort of treatise on style, extracted and derived from the ancient grammarians, and its principal object is to point out the different kinds of poetry, and the writers who have distinguished themselves in the same. We have only fragments of this work remaining, which lead us to regret very deeply the loss of the other portions. These fragments are of three kinds: (a) Notices extracted from the grammatical analysis and summaries preserved in his Bibliotheca. (b) A Life of Homer, which owes its preservation to its having been placed by some copyists at the head of certain MSS. of the Iliad. (γ) Arguments of many of the minor epic poems, ap-
pertaining to the mythic and Trojan cycles, now lost.

8. Eighteen Arguments against the Christians ("Epistulae Platonicae"") (c. 252 C.E.). In this work, Proclus attempts to prove the eternity of the world, that favourite thesis of Platonism. The treatise would probably have been lost, had not Johannes Philoponus written a refutation, in which he has literally inserted the work which he attacks.—7. A Commentary on the Timaeus of Plato (Eis τὸν τοῦ Πλάτωνος Τιμαίου ὑμνημόνιον), in five books. As these five books contain no more than one third of the dialogue, it is possible that they do not belong to Proclus. It is regarded as the best of the productions of Proclus, and has, moreover, the accidental merit of having preserved for us the work of Timæus of Locri, because, viewing it as the source whence Plato derived his materials, he placed it at the head of his commentary.—8. A Commentary on the First Alcibiades of Plato (Eis τὸν Πλάτωνος πρώτον Ἀλκιβιάδηον). The best edition is that of Creuzer, Francof., 1890, 8vo.—9. Commentary on the Republic of Plato (Eis τὸν Πλάτωνος πολειτικόν), 4 vols. (Schöll, Hist. Lit. Gr., vol. 7, p. 104, seqq.)—Proclus was also the author of six hymns, one to the Sun, another to the Muses, two to Venus, one to Hecate and Janus, and one to Minerva. They belong properly to the same class with the Orphic hymns. The latest edition of the Hymns is that of Boissoneau, Paris, 1874, 32mo.

Pacorus the Younger.

Proconnesus (or the Isle of Stages), an island and city of Asia Minor to the northeast of Cyzicus. It is now Marmara, whence the modern name of the Proponis is derived (Sea of Marmara). Proconnesus was much celebrated for its marble quarries, which supplied most of the public buildings in Cyzicus with their materials. (Strabo, 583.) The marble was white, with black streaks intermixed. (Plutarch, Cyprian, de Marm. Antig.) Aristides, who wrote a poem on the Arimaspans, was a native of the city. (Herod., 4, 14.—Strab., 583.)

Procopius, one of the most celebrated historians of the Eastern empire. He was born at Cesarea in Palestine, and exercised at Constantinople the profession of rhetorician and sophist. It has been disputed whether he was a Christian or not. The indifference and love of all religions which animated his mind, and the disputes that agitated the Church in his day have caused him to be suspected of paganism, but it is more than probable that he regarded those miserable quarrels as unworthy to occupy a place in a political history. Justin the elder assigned him to Belisarius as his secretary and counsellor, with the charge of accompanying this general in his several expeditions. This nomination took place a short time previous to A.D. 557, the year when Justin died. Belisarius, whom he had, in consequence of this appointment, followed in his campaign in Africa against the Vandals, sent him to Syracuse, on some business relative to the army. In 556 he employed him usefully in his campaign against the Goths in Italy. Subsequently to 559 he was named a senator, and about 562 prefec of Constantinople, a place which Justinian afterward transferred to his son-in-law. In his History of his own times (Τον κατά αὐτόν ἱστορίαν τῆς ζωής), in eight books, of which the first four bear the title of Persica, and the others that of Gothica, Procopius describes the wars of the Byzantine Empire with the Persians, the Vandals, the Moors, and the Goths, adding to the narrative, from time to time, an account of contemporaneous events. According to two modern Oriental scholars, Procopius derived his materials for an account of Persia and Armenia from the Armenian work of the Bishop Puzunt Posdus, who was born at Constantinople, of Greek parents, and who wrote a history of Armenia in six books, of which the last four have reached us. (Châtelet, Hist., and F. Martin.—Recherches sur l'Histoire ancienne de l'Aste, Paris, 1806, 8vo, p. 294.)

Procopius is the author of a work entitled Anecdota, or secret history, in which Justinian and his Empress Theodora are represented in the most odious light. Procopius assigns as a reason for writing this last work, that in his history he could not speak of persons and things as he wished. He was the author of a third work, "On the edifices erected by the Emperor Justinian." As an eyewitness of many events which he describes, Procopius is entitled to great attention. He wrote his History from the age of Constantine; but, when he reached the age of fifty, he suspended his labours in the Emperor's service, and left the task of finishing the history to his pupil Probus, who added the last twenty-four years of Justinian's reign. (Procopius, in the Life and Works of Probus.) The works of Procopius form part of the collection of the Byzantine historians. (Scholl, vol. 6, p. 349, seqq.)

Procures, a famous robber of Attica, killed by the Vandals near Cephissus. He compelled travellers to lie down on a couch, and, if their length exceeded that of the couch, he lopped off as much of their limbs as would suffice to make the length equal. If they were shorter than the couch, he stretched them to the requisite length. The Vandals proceeded against and slew him. According to Plutarch, his true name was Damastès, and Procrustes was only a surname. (Plut., Vit. Thea., 11.) Panania, on the other hand, makes it to have been Polyphemus. (Pausan., 1, 38.)

Proculeius, a Roman knight, and the intimate friend of Augustus, who held him in such high esteem as to entertain thoughts at one time of making him his son-in-law. He is celebrated by Horace for his fraternal affection towards his brothers L. Licinius and M. Terentius. They had lost their estates for siding with the enemy of Ptolemy, and Proculeius generously shared his own with them. He was the individual sent by Augustus to Cleopatra to endeavour to bring her alive into his presence. He destroyed himself when suffering under a severe malady. (Horat., Od., 2, 2, 5.—Plin., 36, 24.)

Procules, I. Julites, a Roman, who, after the death of Romulus, declared that he had seen him in appearance more than human, and that he had ordered him to make him a likeness. He now desired to have the name of Quirinus, and to rest assured that Rome was destined by the gods to become the capital of the world. (Plut., Vit. Rom.—Liv., 1, 16.)—II. A Roman elegiac poet, mentioned by Ovid as an imitator of Callimachus. (Ep. ex Pont., 4, 16, 33.)—III. A Roman lawyer mentioned in the Pandects. He is supposed by some to have been the same with the Proculus of whom Tacitus speaks as praetorian proconsul in the reign of Otho. (Tacit., Hist. 1, 87.) He gave name to the legal party termed Proculians. (Dig., lib. 1, tit. 2, leg. 2.)

Procyon, a constellation, so called from its rising just before the dog-star (Procyon, from πρό, "before," "in front of," and κῦων, "a dog"); whence its Latin name of Antecanus or Ante-Cancem. (Compare Cicero, N. D., 2, 41.—Plin., 19, 58, and the remarks of Ideler, in the last-cited authority.—Stirmannus, p. 283.)

Procudius, a sophist and rhetorician of Iulia in the island of Ceos, contemporary with Democritus and Gorgias of Leontini, and a disciple of Protagoras. He flourished in the 86th Olympiad, and had, among other disciples, Socrates, Euripides, Thersennedes, and Isocrates. His countrymen, after bestowing upon him several public employments, had sent him, it seems, to Athens, where he died. He had been so well received here as to be induced to open a school of rhetoric. Plato, who makes frequent mention of him, and even with applause, but not without sometimes employing irony, inaniates, that a desire of gain

1129
prompted Proclus to open this school, and, indeed, he amassed considerable wealth by his lectures. Philostratus also declares that Proclus was fond of money. He used to go from one city to another displaying his eloquence, and, though he did it in a mercenary way, he nevertheless had great honours paid to him in Thebes, and still greater in Lacedæmon. His charge to a pupil was fifty drachmas. The style of Proclus must have been very eloquent, since such numbers flocked to hear him, although he had a disagreeable voice. (Philost., Vit. Soph.) It is related that Xenophon, when a prisoner in Boeotia, being desirous of hearing Proclus, procured the requisite bail, and went and gratified his curiosity. (Philost., l. c.) Few pieces have been often referred to than that in which Proclus narrated what is termed "The Choice of Hercules." The original is lost; but we have the substance of it in theMemorabilia of Xenophon (2, 1, 21). Proclus was at last put to death by the Athenians, on the charge of corrupting their youth. Sextus Empiricus ranks him among the atheists, and Cicero remarks that some of his doctrines were subversive of all religion. (Cic., N. D., 1, ad fin.—Bailie, Dict., s. v.)

Procris, the daughters of Proetus, king of Argos, were three in number, Lysippe, Iphinoë, and Iphimaesa. They were seized with insanity for contending among them for the heiress of the Lacedæmonian throne. (Apollod., 2, 2—Eustath. ad Od., 15, p. 1746.) Another legend made them to have been thus punished for casting ridicule on Juno and her temple. (Schol. ad Od., 15, 225.) While under the influence of their phreny, the Procrides roamed over the plains, the woods, the wastes of Argos and Arcadia, fancying themselves changed into cows. (Virg., Eclog., 5, 48—Serë, ad loc.) Proetus thereupon applied to Melampus to end his misfortunes; and the soothsayer was the first that exercised the art of medicine, demanded beforehand, as a recompense, one third of the kingdom. Proetus refused. Thereupon the madness of the maidens increased, and even extended to the other women, who killed their children, abandoned their dwellings, and fled to the wilds. The reluc-
tance of Proetus was now overcome, and he offered to comply with the terms of Melampus; but the sooth-
sayer, who had already prophesied the downfall of the third of the realm bej gin to his brother Bias. Proetus, fearing that delay would only make him advance farther in his demand, consented, and Melampus set about the cure. He took a number of the ablest young men of the place, and made them, with shouts and a certain inspired kind of dance, chase the maidens from the mountains to Sicyon. In the chase, Iphinoë, the eldest of the Procrides, died; but the oth-
ers were restored to sanity; and Proetus gave them in marriage to Melampus and his brother Bias. (Knight-
ley's Mythology, p. 413.) A fragment of Hesiod, cited by Eustathius (l. c.), describes the complaint of the Procrides as a species of leprosy, a malady often followed by insanity. The cure appears to have been effected by the cutaneous transpiration brought about by the violent exercise to which the daughters of Pro-
etus were subjected, and also to their having been made to bathe after this in the waters of the Antirris, which were long after this famous for their medical virtues in healing the leprosy. (Strabo, 593.—Sprengel, Hist. de la Méd., vol. 1, p. 95, seq.)

Proetus, a king of Argos, son of Abas and Ocalea. He was twin brother to Acrisius, with whom he quarreled even before their birth. This dissension be-
tween the two brothers increased with their ages. After the death of their father, they both tried to obtain the kingdom of Argos; but the capital city was given to Proetus pre-
valled, and Proetus left Peloponnesus, and retired to the court of Jobates, king of Lycia, where he married Stenoboea, called by some Antea or Antiope. He af-
terward returned to Argolis, and, by means of his father-in-law, he made himself master of Tirynthus. Stenoboea had accompanied her husband to Greece, and she became by him mother of the Proctides, and of a son called Megapenthes, who, after his father's death, succeeded on the throne of Tirynthus. (Vid. Stenoboea.—Apollod., 2, 2.) Prometheüs, a son of Iapetos, by Clymene, one of the Oceanides. He was brother of Epimetheus, Me-
netus, and Atlas, and was famed to have surpised all mankind in sagacity. In Prometheüs and Epime-
theus are personified the intellectual vigour and weak-
ness of man. In this myth, however, there is great confusion, for its original sense seems to have been lost very early, and Prometheüs to have been viewed as a Titan, and the creator or instructor of men. In Homer there is no allusion whatever to Prometheüs. Hesiod, however, says, that when the gods and men had a controversy at Mecone, Prometheüs meditated and, dividing it, put the flesh and entrails in the hide, and, wrapping the bones up in the inside fat, desired Jupiter to take which he would. The god, though aware of the deceipt, selected the bones and fat, and in revenge he withheld fire from man. But Prometheüs again deceived him, and, stealing the fire in a hollow staff (vádpfóv, ferusula), brought it and gave it to man. Jupiter then sent Pandora on earth, to deceive man to steal fire, and fastened Egaüs with chains to a pillar, and sent an eagle to prey without ceasing on his liver, which grew every night as much as it had lost in the day. After a long interval of time, how-
ever (according to some, thirty thousand years), Her-
cules slew the eagle and freed the sufferer. (Blomf., Gloss. ad Ech., P. V., 94.) In this narrative there is a combination of a local myth of Sicyon (anciently called Mecone) with a doctrine of a much higher na-
ture. The former relates the story of the跌废 and the other, which Jupiter, in kindness, withheld from them. But the inquisitive and inventive genius (i.e. Prometheüs) introduced fire, and the arts which result from it, and man henceforth became a prey to care and anxiety, the love of gain, and other evil passions which torment him, and which are personified in the eagle that fed on the inconsumable liver of Prometheüs. ( Müller, Pro-
pog., p. 122.—Petronius, ap. Fulgent., 2, 10.) In this word, we have here a Greek myth of the fall of man, which we shall find carried out in that of Pan-
dora. (Vid. Pandora.)—The simple narrative of Her-
siod was, as usual, expanded by later writers, and Mount Caucasus was fixed upon as the place of Prometheüs' punishment. The pragmatisers also explain-
ed the myth after their own fashion. Prometheüs was, they say, a king of the Scythians, and his country was wasted by the river named Eagle (Arctòs), whose inundations when he was unable to prevent, his sub-
jects laid him in chains. But Hercules, coming thither, opened a passage for the Eagle into the sea, and thus freed the captive monarch. (Apoll. Rhod., 2, 1248.)—The name of Prometheüs led to his being viewed as the bestower of all knowledge on mankind. (Asch., Prom. Vinct., 442, seq.—Id. ib., 505, seq.) A philosophical myth, in Plato, says that the gods formed man, and instructed him as to every thing, and then committed to Prometheüs and his brother the task of distributing powers and qualities to them. Epimetheüs prayed to be allowed to make the distribution. Prometheüs assented; but, when he
PROTEUS.  

came to survey the work, he found that the silly Eum- 
metheus had abundantly furnished the inferior animals, 
while man was left naked and helpless. As the day 
for their emerging from the earth was at hand, Pro- 
metheus was at a loss what to do. At length, as the 
only remedy, he stole fire, and with it the artist-skill 
of Minerva and Vulcan, and gave it to man. He was 
also regarded as the creator of the human race. An- 
other legend said, that all mankind having perished 
in Deluge's flood, Jupiter directed Prometheus and 
Minerva to make 120 of these 'Titanes'; and as they 
led them out, the winds blew, and thus gave them life. (Etym. 
Mag., et Steph. Byz., s. v. Λέυκών.) A third said, that 
Prometheus had formed a man of clay, and, and 
holding it up for a time, when he beheld his creation 
he applied his ferula to the wheel of his chariot, and 
thus stole some of the fire, which he then applied to 
the breast of his man, and thus animated him. Jupiter, to punish Prometheus, 
bound him, and appointed a vulture to prey upon his liver, and the incensed gods, 
and other living creatures. (Ovid. Met., 1, 7, 1191.)—H. H. Milman.  

When Prometheus had stolen fire from heaven for 
the good of mankind, they were so ungrateful as to 
betray him to Jupiter. For their treachery, they got 
in reward a remedy against the evils of old age; but, 
not only did they enjoy the value of the gift, but, instead 
of carrying it themselves, they put it on the back of 
an ass, and let him trot on before them. It was sum- 
mer-time, and the ass, quite overcome by thirst, went 
up to a fountain to drink; but a snake forbade all 
approach. The ass, ready to faint, most earnestly 
implored relief. The cunning snake, who knew the 
value of the burden which the ass bore, demanded it 
as the price of access to the fountain. The ass was 
forced to consider; and, in the end, the prize of the 
gift of Jupiter, but with it, as a punishment of 
his art, he got the thirst of the ass. Hence is it 
that the snake, by casting his skin annually, renews 
his youth, while man is born down by the weight 
of the evils of old age. The malignant snakes, moreover, 
when they have an opportunity, communicate their 
thirst to mankind by biting them. (Elian, Nat. An., 
5, 81.—Nicander, Ther., 340, seq.—Schol., ad loc.) 

—The wife of Prometheus was Pandora (Hesiod, op. 
Schol. ad Apoll. Rhod., 3, 1086), or Clymene (Schol. 
ad Od., 10, 2), or Heione (Esch., Prom. Vinc., 
560), or Asia (Herod., 4, 45). His only child was 
Duceaion. (Keightley's Mythology, p. 258, seq.)— 
Rosenmüller sees in the fable of Prometheus a resem- 
blance to the scripture account of the fall (Rosenm., 
ad Gen., 3, 7.—Schütz, Excurs. 1, ad Pyr. Vinc. 
Schütz, Mythol. Fabels. 1, 123.)—Another doctrine 
tries this theory still farther, and in the combined fables 
of Prometheus, Epimetheus, and Pandora, discover an 
analogy, not only to the fall of Adam, but also to the 
promise of a Redeemer. (Compare Horne's Intro- 
duction, vol. 1, p. 163, Am. ed.) Nay, some of 
the early fathers even proceeded to the length of tracing 
a resemblance between Prometheus and our Saviour. 
(Schütz, Excurs. 1, ad Pyr. Vinc. 123.)—But we must 
not overstate the probability of the belief, as this 
myth refers it to the overthrow of some early re- 
ligious system in Greece. Tzetzes, in his scholia on 
Lycothron (v. 1191), relates, that Ophion, and Eury- 
nome, daughter of Oceanus, reigned over the gods 
previous to Saturn and Rhea. Saturn overthrew Ophion, and Rhea overcame Eurynome in wrestling, 
and they hurled them both to Tartarus. Prometheus 
conquered by Jove is thought to be a tradition of a 
similar nature; and an ancient monument at Athens, 
at the entrance of a temple of Minerva, in the Aca- 
demia, fully testified, if we believe the scholar to 
Sophocles (Ed. Col., 57), the priority of the Titan 
Prometheus to the Homeric Vulcan. Prometheus 
and Vulcan were there represented, and the former, 
as the first and eldest of the two, held a sceptre in his 
hand (δε προθεσθη, πῆρας καὶ προθεσθείται, et δε- 
ποιηθε), the latter brandishing a thunderbolt (τῆς 
Krusse adopts the same opinion, and makes the contest 
in question to have taken place between the Pelasgi on 
Olympus (the fabled seat of Jove), and some primitive 
race occupying the region of Mount Othrys, the latter of 
whom were conquered, and compelled to wander 
from their previous settlements towards the mountains 
of Caurus (Kruze, Hellas, vol. 3, p. 451.) 

PRONADES, an ancient Greek poet, a native of Athens, 
and the reputed preceptor of Homer. (Dind. 
Sic., 3, 66.—Fabric, Bibl. Gr., vol. 1, p. 27.) 

PRONÈBA, a surname of Juno, because she presided 
over marriages. (Vid. Jumo.) 

PROPERTIUS, Sextus Aurelius, a celebrated Roman 
elogium poet, born in Umbria on the confines of 
Etruria. Seven towns of the Umbrian territory disputed 
with each other for the honor of being the birthplace of 
Properitius. From the poet's own account, Mevania 
(the modern Bevagna) appears to prefer the strongest 
claims on this head (4, 1, 121). The time of Proper- 
tius' birth has also been made a subject of controversy, 
being placed by some writers as early as 696 A.C. 
and by others as late as 705. From the import of 
eight lines in the fourth book of his elegies (4, 1, 123), 
which refer to himself, the year of his birth may 
be most safely placed between these periods, and no great 
error will probably be committed if it be fixed in the 
year 700. In these verses we are told that his father 
died prematurely, while Properitius was yet young, 
and that his inheritance, about the same time, was divvided 
among the soldiers.—Properitius was descended of an 
equestrian family of considerable possessions. But, 
his father having espoused the side of the consil Lucius 
Antonius, by the fall of this statesman, the dissection 
that arose with Octavius, he was made prisoner on 
the capture of Perugia, and slain at the altar erected to 
the memory of Julius Caesar. About these statements 
there exists, however, a great deal of doubt. While 
Properitius was yet in his boyhood, the chief part of 
his inheritance, like that of Tibullus, was divided, as 
we have seen, among the soldiers of the triumvirs. 
With the view of re-establishing his fortune, he went 
from Rome in early life, and there commenced those 
studies which might qualify him to shine as a patron 
in the Forum. He soon, however, relinquished this 
pursuit, and devoted himself entirely to the Muses. 
His early proficiency in poetry, his learning and agree- 
able manners, procured for him the friendship of 
Galles, of the poet Ponticus Bassus, and of Ovid, who 
frequently attended the private recital of his elegies. 
These expectations had been formed, he had been written about 
the year 730. In the second, third, and fourth books, 
our poet gives Octavius Caeas the name of Augustus, 
which was first bestowed on him in 727. In the third 
book he alludes to the death of Marcellus, who died in 
730. Farther, in the last elegy of the second book, 
he speaks of Virgil as still alive, and of his Eneid as 
a work which was in progress, and for which he expected 
remunerations. Now Virgil commenced his Eneid in 724, and had made considerable 
progress in 730, in which year he read three books of 
it to Augustus and his sister Octavia. Virgil sur- 
vived till the year 734, and the Eneid was published 
immediately after his death.—The first appearance of 
the elegies attracted the notice of Meeceus, who as- 

1131

Properzius a house in his own gardens on the Esquiline Hill. He also procured for him the patronage of Volcatius Tullus, who was consul with Augustus in the year 731, and became, after the death of Maccenas, the general protector of learning and the arts. It appears that the patrons of those days teascd their dependant poets with pressing solicitations to accompany them on military expeditions and embassies; and this sort of flattery, persuading Properzius to attend him to Egypt and Asia Minor, seems to have been declined (lib. 1, el. 6). But it would appear that he at length undertook a journey to Athens, probably as a follower of Maccenas, when he attended Augustus in his progress through Greece (3, 21). Little farther is known concerning the events of his life, and even the precise period of his death is uncertain. He was alive in 736, when the emperor promulgated a law concerning marriage, in which severe penalties were imposed on celibacy. His death is generally placed about the year 740, when he had not exceeded the age of 40. But there seems no sufficient proof that he died earlier than 760, at which time Ovid, during his banishment, wrote an elegy, where he speaks of him as deceased. — The whole life of Properzius was devoted to female attachments. He was first enticed, in early youth, by Lycinna, an actress, and frequently became infatuated and more permanent object of his affections. The lady whom he has celebrated under this name was the daughter of the poet Hostius, and her real name was Hostia (3, 13). This fascinating object of his ruling and permanent attachment had received an education equal to that of the most distinguished Roman ladies of the day. She was skilled in music, poetry, and every other accomplishment calculated to make an impression on youthful and susceptible minds. But with all these advantages, she shared no small portion of the artifice and extravagance which characterized the domestic manners of the Roman fair in the age of Augustus. Hence our poet was the constant sport of the varying humours of his Cynthia. But, notwithstanding occasional jealousies and estrangements of affection, this female, until her death (which happened when the poet was about thirty years of age), continued to be the object of youthful and susceptible minds. — The elegies. — These productions, which are nearly one hundred in number, are divided into four books. The first book is almost exclusively devoted to the celebration of the poet's love for Cynthia. In the second and third books, also, she is still his principal theme, but his strain becomes moral and didactic. He now declaims against the extravagance of his age; against that love of pomp and luxury, which, in his time, dis honoured the Roman fair, and which he beautifully contrasted with the simple manners of a distant period, concluding with a pathetic prediction of the fall of Rome, accelerated by its own overgrown wealth, and the pernicious thirst of gold. The elegies of the fourth book, which were not made public till after the death of the poet, are entirely of a different description from those by which they are preceded. They are chiefly heroic and didactic, comprehending the praises of Augustus, and long narrations drawn from Roman fable and Italian antiquities. — In point of general composition, the elegies of Properzius are almost perfect. He flourished at a period and in a capital in which style had attained its greatest purity. He lived in the society of Gallus, Ovid, and Maccenas, and under the sway of a prince whose greatest boast was the protection of learning and genius. The patronage and society he enjoyed communicated to his writings a degree of taste and polished elegance, which they might have attained had he lived at an earlier period, or at a distance from the court of Augustus. Even a slight acquaintance with his works may convince us that he was an extensive reader, and his learning had supplied him with such numerous topics of allusion and illustration, that it seduced him into what has justly been considered as his chief fault. Whatever is pleasing or natural in his elegies, he destroys by mixing up with it history and fable; and it is this injudicious and ill-timed pedantry that, pervading, as it does, almost all the elegies of Properzius, renders them often fatiguing, perplexing, and obscure. The adoption of this style of writing was ust, and it was natural to Properzius to study and imitate of the Greek authors. None of the Latin poets had so sedulously studied the Alexandrian writers, or so closely formed on them their style and sentiments. The great objects of his imitation were Callimachus and Philetas, the latter the preceptor of Ptolemy Philadelpbus. — In this respect Properzius is totally different from Tibullus, with whom he has been so frequently compared. The writings of Tibullus breathe a native freshness, a simplicity and purity which are remarkably contrasted with the profusion of obscure mythological fables by which the elegies of Properzius are entangled and darkened. In consequence of this learned imitation of the Greeks, there is an appearance of labour and display in most of the elegies of Properzius, and he has always the air of what has been called an ambitious writer. Tibullus is a poet, and in love; his successor is more of an author. The latter took much of temperance and less of sentiment than the passion of Tibullus. Properzius often thought what he should write; Tibullus always wrote what he thought. — Before closing this article, we may remark, that one peculiarity distinguishes the versification of Properzius from that of all the other Latin poets; his pentameters often terminate in a polysyllable, while those of Tibullus and Ovid end almost always in a word of two syllables; and Properzius was more in the habit of stopping, as it were, in any of those cases which he called his small enjambments. Critics are not agreed whether this is the result of accident or design on the part of Properzius. It is certain, however, that the plan pursued by Tibullus and Ovid is far more conducive to harmony. (Dunlop's Roman Literature, vol. 3, p. 316, seqq. — Schöll, Hist. Lit. Rom., vol. 1, p. 334, seqq.) — The best editions of Properzius are, that of Brouckhuisusus, Amst., 1727, 4to; that of Vulpius, Patav., 1755, 2 vols. 4to; that of Proust, 1761, 4to; that of Loppe, 1768, 4to; that of Lachmann, Lips., 1816, 8vo; and that forming part of the collection of Lemaire, Paris, 1832, 8vo. PROSPONTRIS, a name given by the Greeks to that minor basin which lies between the Ægean and Euxine, and communicates with those seas by means of two narrow straits, the Hellespont and Bosphorus. Herodotus estimates its breadth at 500 stadi, and its length at 1400. (Herod., 4, 85.) Modern navigators reckon about 120 miles from one strait to another; while its greatest breadth, from the European to the Asiatic coast, does not exceed 40 miles. It received its ancient name from the circumstance of its lying in front of, or between the Pontus Euxinus (προς Πόστων) the modern appellation is the Sea of Marmara, from the modern name of the island Proconnesos. (Mela, 1, 19. — Crater's Asia Minor, vol. 1, p. 34.) As regards the probable formation of the Properitis, vid. Mediterranean Mares, and Cyane. PROSERPINA, a daughter of Ceres by Jupiter, called by the Greeks Paragene (Παριγενή). The legend connected with her will be found under the article Ceres. — Propercine, like Diana, presents the double idea of the creative and destroying power, and hence she is styled, in one of the Orphic Hymns (29, 15), ζωή καὶ θάνατος μοίην θνητοὶ πολεμοῦντες. On the same association of ideas was founded, at another a pious belief which ranked Venus among the Parca or Fates. (Compare Pausan., 1, 19 — Hemi. und Creuzer, Briefe über Homer, &c., p. 38.) Wilford endeavours to prove that the name PROSERPINA (Παριγενή) is of Sanscrit origin. But this, like many other of his Ori-
mental etymologies, is remembered only to be condemned. (Ariastic Researches, vol. 5, p. 298.) On the supposition that Proserpina was regarded as the daughter of Mother Earth, and a personification of the corn, her name will signify Terra, earth; (from dééna, déépha, "to feed," and φα, φαενα, "to show." — Wälcker, Myth. der Lap. p. 201, seq.) Regarded, however, as the queen of the monarch of Erebus, the appellation will mean Light-destroyer, the first part of the name being akin to τυόμ, "fear," and to the Pers in Perse and Perseus. (Schwenck, Ancient, p. 247.)

The common explanation of the term is Death-bearer, from αθάνατος Προσέρπαντι, "dead bearing." The Persephassa of the Dramatists seems to be only a corruption of Persephone; and the same remark may be made of the Latin Proserpina. Vossius is right in condemning the etymology given by Arnobius: "Di-Citís quod sata in lucem proserpant, cognsminatam esse Proserpinam." (Arnob., p. 119.) According to Knight, Proserpina was in reality the personification of the heat of fire supposed to pervade the earth, which was held to be at once the cause and effect of fertility and destruction, as being at once the cause and effect of fermentation, from which both proceed. (Knight's Inquiry, 117.—Class. Journ., vol. 25, p. 39.)

Протагорас, a Greek philosopher, a native of Abdera, and disciple of Democritus. In his youth, his poverty obliged him to perform the servile offices of a porter; and he was frequently employed in carrying logs of wood, by which he was subject to many inconveniences. It happened, that as he was going on briskly one day towards the city under one of these loads, he was met by Democritus, who was particularly struck with the neatness and regularity of the bundle. Desiring him to stop and rest himself, Democritus examined more closely the structure of the load, and found that it was put together with mathematical exactness. On this he invited the youth to follow him, and, taking him to his own house, maintained him at his own expense, and taught him philosophy. Протагорас afterward acquired repute at Athens, among the sophists, for his eloquence, and among the philosophers for his wisdom. His public lectures were much frequented, and he had many disciples, from whom he received the most liberal rewards, so that, as Plato relates, he became exceedingly rich. At length, however, he brought upon himself the displeasure of the emperors, by teaching doctrines favorable to impiety. His writings were ordered to be diligently collected by the common crier, and burned in the market-place, and he himself was banished from Attica. He wrote many pieces upon logic, metaphysics, ethics, and politics, none of which are at present extant. After having lived many years in Ephesus, he was lost by sea on his voyage from that country to Sicily. The tenets of Протагорас, as far as they have been discovered, appear to have leaned towards scepticism. (Engfield's History of Philosophy, vol. 1, p. 432, seq.)

Протей, a king of part of Thessaly, son of Ipichlos, originally called Iolaus, grandson of Phylaucus, and brother to Alcmeone, the mother of Jason. He married Laodamia, the daughter of Acastus, and some time, after departed, with the rest of the Greeks for the Trojan war. He was the first of the Greeks who set foot on the Trojan shore, and was killed as soon as he had leaped from his ship. Homer has not mentioned the person who slew him. His wife Laodamia destroyed herself when she heard of his death. (Vid. Laodamia.) Протей has received the patronymic of Phylacides, either because he was descended from Phylacus, or because he was a native of Phylace. (Homer, Il. 2, 601.)—Her., 13, 38; Herod., 1, 19.—Hygin., fab. 103.)

Протей, a sea-deity, son of Oceanus and Tethys, or, according to some, of Neptune and Phorcides. In the fourth book of the Odyssey Homer introduces this sea-god. He styles him, like Nereus and Phorcides, a Sea-elder, and gives him the power of foretelling the future. (Od., 4, 384; 5, 591.) He calls him Εγγυτην, and the servant of Neptune (Od., 3, 385), and says that his task was keeping the voice or seaclaws. (Od., 5, 411.) When Menelaus was wind-bound at the island of Phars, off the coast of Egypt, and he and his crew were suffering from want of food, Erotheus, the daughter of Proteus, accosted him, and, bringing seashells, directed him to disguise himself and three of his companions in them; and when Proteus, at noon, should come up out of the sea and go to sleep amid his herds, to seize and hold him till he discovered the deceit from which Menelaus obeyed the nymph; and Proteus came up and counted his herds, and then lay down to rest. The hero immediately seized him, and the god turned himself into a lion, a serpent, a pard, a boar, water, and a tree. At length, finding he could not escape, he resumed his own form, and revealed to Menelaus the remedy for his distress. He at the same time informed him of the situation of his friends, and particularly notices his having seen Ulysses in the island of Calypso—a clear proof that his own abode was not confined to the coast of Egypt. Homer does not name the parent of this marine deity, and there is no mention of him in the Theogony. Apollo muses makes him the son of Neptune, and Euripides would seem to make Nereus his sire. (Apoll., 2, 5, 9.—Eurip., Hec., 1, 800.) He is represented as resembling the gods as having been originally mere men, said that Proteus was a king of Egypt; and the Egyptian priests told him that he had retained Helen when Paris was driven to Egypt, and gave him an image or phantom in her stead, and then restored her to Menelaus. (Keightley's Mythology, p. 246, seq.) The name of this deity, signifying First (πσ, πστροφον), has induced Creuzer to consider him as representing the various forms and shapes assumed by the primitive man (τηλα πστροφονον), the substance itself remaining always the same. (Symbolik, vol. 1, p. 425.)

Протогенес, a very eminent painter and sculptor, one of the contemporaries of Apelles. He appears, however, to have survived the latter artist, insasmuch as he was still living in Olympia, 119, when Rhodes was besieged by Demetrius. Meyer (Hist. Art., 1, 738) declares that Protogenes was born about Olympia, 104. Протогенес was a native of Caunus, a Carian city, subject to the Rhodians. Suidas alone makes him to have been born at Xanthus in Lycia. His early efforts were made amid the pressure of very contracted means. Who his master was is unknown; and necessity for a long time compelled him to employ his abilities on subjects altogetherness unworthy of them. Compelled to paint ornaments on vessels in order to secure a livelihood, he passed fifty years of his life without the gifts of fortune, and without any marked reputation. His talents and perseverance at length triumphed over every obstacle; and possibly the generous aid of Apelles may have contributed to hasten this result; for the latter, on perceiving that the paintings of Протогенес were neither sought after nor held in much estimation by the Rhodians, is said to have purchased some himself at the high price of fifty talents, and to have openly declared that he intended to sell them again for his own productions. This friendly stratagem opened at length the eyes of his contemporaries, and Протогенес rose rapidly in fame. Pliny tells a very pleasing story of Apelles and Протогенес. The former having come to Rhodes, where Протогенес was at this time, said to the latter, on finding him at home, obtained permission, from a domestic in waiting, to enter the atelier of the painter. Finding here a piece of canvas ready on the frame for the artist's pencil, he drew upon it a line (according to some, a figure in outline) with
PROTogenes.

PRU

wonderful precision, and then retired without disclosing his name. Protogenes, on returning home, and discovering that he alone had executed such a sketch. Still, however, he drew another himself, a line more perfect than that of Apelles, and left directions with his domestic, that, when the stranger should call again, he should be shown what had been done by him. Apelles accordingly came, and perceiving that his line had been excelled by Protogenes, drew a third one still more perfect than the other two, and cutting both. Protogenes now confessed himself vanquished, and ran to the harbour, sought for Apelles, and the two artists became the warmest friends. (Consult, as regards the question whether the story refers to a mere number of separate lines having been drawn on this occasion, or to entire outlines, the remarks of Quatremere de Quincy, Mem. de l'Inst., vol. 7. — Journ. des Sav., April, 1823, p. 219. — Magasin Encyclop., 1808, vol. 4, p. 153, 407.) The canvas containing this famous trial of skill became highly prized, and at a later day was placed in the palace of the Caesars at Rome. It was destroyed by a conflagration, together with the edifice itself. Protogenes was employed for seven years in finishing a picture of Ilyasus, a celebrated huntsman, supposed to have been the son of Apollo, and the founder of Rhodes. During this time the painter lived only upon lupines and water, thinking that such aliments would leave him greater facility in this difficult task, which he made so much more successful in the perfection of his picture. He was to represent in the piece a dog pasting, and with froth at his mouth; but this he never could do with satisfaction to himself; and, when all his labours seemed to be without success, he threw his sponge upon the piece in a fit of anger. Chance alone brought to perfection what the labours of art could not accomplish: the fall of the sponge upon the picture represented the operations of nature. The picture is said to be perfect and natural manner, and the piece was universally admired. The same story is told of Nealea white engaged in painting a horse; and probably one of these anecdotes has been copied from the other. According to Pliny, Protogenes painted this picture with four layers of colours, in such a way, that, when one was destroyed by the hand of time, the layer underneath would reproduce the piece in all its original freshness as it was seen. The secret is a difficult one to comprehend. Apelles, on seeing this production of the pencil, is said to have broken out into loud expressions of admiration; but what consoled him was the reflection that his own pictures surpassed those of Protogenes in grace. When Demetrius besieged Rhodes, he refused to set fire to a part of the city, which might have made him master of the whole, because he was informed that this part contained some of the finest productions of the pencil of the artist. Protogenes himself occupied, during the siege, a house in the suburbs, in the very midst of the enemy's lines; and when Demetrius expressed his astonishment at the feeling of security which the painter displayed, the latter replied, "I know very well that Demetrius is making war upon the Rhodians, not upon the arts." The prince thereupon, for greater safety, posted a guard around his dwelling. During the reign of Tiberius, sketches and designs of Protogenes were to be seen at Rome, which were regarded as models of the beau ideal. His picture of Ilyasus was brought from Greece, and placed in the temple of Peace in the Roman capital, where it perished in a conflagration. — Protogenes was also an excellent modeller, and executed several statues in bronze. Suidas states that he wrote two works, on painting and on figures. (Plin., 35, 10, 96.) — The talents of Protogenes were not so fertile as those of many artists, a circumstance to be ascribed to his minute and scrupulous care. This is the quality which Quintilian mentions as his great characteristic; and Petronius likewise observes, that his outlines vied in accuracy with others who were more skilful. (Quintil., 12, 10. — Petron., Sat., 84.)

PROXENUS, a Boeotian, one of the commanders of the Greek forces in the army of Cyrus the younger. He was put to death with his fellow-commanders by Artaxerxes. Protogenes was the one who induced Xenophon to join in the expedition of Cyrus, and, after the death of Protogenes, Xenophon was chosen to supply his place. (Anab., 1, 11. — Ioh., 2, 6, 1, dcc.)

Prusias, a younger Cusimen, who flourished about A.D. 392. He was born at Calagurris (Calahorra), or, according to a less probable opinion, at Cesaragusta (Caragosa). (Nic. Anton., Bibl. Vet. Hisp., 2, 10, p. 218, seqq.—Middendorf, de Prudentio, &c., Wratisl., 1823, 4to, p. 3, seqq.) Some particulars of his life are given in the poetical preface, appended to one of his works (Kabjupeww Libewr), from which we learn, that, according to the custom of his time, he first attended the schools of rhetoric, and then followed the profession of an advocate, in which he appears to have acquired considerable reputation, as he was twice appointed Prefectus Urbis, but over what places is not menioned. He was, after this, elected to a still higher office, but whether military or civil in its nature is uncertain, probably the latter: this was under the Emperor Theodosius, (Middendorf, p. 8, seqq.—Nic. Anton., p. 371.—Suidas, X., 1, 7. — Prudentius, Cath., v. 1, seqq.), he abandoned the world, in order to pass the remainder of his days in devotion. From this period (A.D. 405) to the time of his death (about A.D. 413), he is supposed to have been occupied with the composition of the works that have come down to us. Prudentius is sometimes styled "the first Christian poet," a title, however, which means but little. In no case can he be compared with the classic writers: his labours are, with such exceptions as we have noticed, a Latin poet. Ausonius. His style is often marked by inaccuracies, and he offends heavily against the laws of metre. — The poem entitled Apotheosis is directed against the Patripassians, Sabellians, and other heretics; and we may regard as a continuation of it the other poem "On the Origin of Sin" (Hamartigenia, Αμαρτυρευσα,). In this latter production the author refutes the doctrine of the Marcionites, and Monophysites, and also vindicates the origin of evil to an evil principle. The Psychomachia (Ψχογιατρία) describes the battles between our virtues and vices, of which the heart is the arena. We may also regard as didactic the poem of Prudentius against Szymmachus (contra Szymmacho Oratiorum libri duo), relative to the restoration of the altar of Victory. The poet gives the origin of the gods of mythology, and narrates their scandalous histories; and he then proceeds to show, that Rome could never have owed her greatness to such contemptible divinities. The lyric pieces of Prudentius form two collections; one entitled Kabjupeww Libewr, containing twelve hymns for the different parts of the year and for certain festivals; the other, De Coronis, or Ἡπειροφωπεω Libewr, containing fourteen hymns in honour of as many martyrs. These lyric effusions contain some agreeably touching passages, and Christian sentiments expressed with great force, but also a great many superstitious ideas. Those of them that are written in elegant measures are distinguished by facility of versification: as, for example, the hymn in honour of St. Hippolytus. There is also attributed to Prudentius a Biblical Manual (Diptychon seu Enchiridion utriusque Testamenti), containing an abridgment of Sacred History in forty-nine sections, each section consisting of four verses. It is doubtful, however, whether Prudentius ever wrote it. Some are of opinion that it is the production of a native of Spain, who lived in the fifth century, and who is named Pru-
that, but this was built at the instigation of this great general, when he resided at the court of Prusias, from whom the name of the city seems evidently derived. But Strabo, following a still more remote tradition, affirms that it was founded by Prusias, who made war against Cressus. (Strab., 564.) In Stephanus, who copies Strabo, the latter name is altered to Cyrus (v. s. Ptolemeo). But it is probable that both readings are faulty, though it is not easy to see what substitution should be made. (Consult the French Strabo, vol. IV, lib. 12, p. 82.) Dio Chrysostom, who was a native of Prus, did not favour the tradition which ascribed to it so early an origin as that authorized by the reading in Strabo. (Orat., 43, p. 585.) Stephanus informs us that Prus was but a small town. Strabo, however, states that it enjoyed a good government, which enabled it to flourish in the kingdom, as may be seen from Pliny the younger (10, 85); but under the Greek emperors it suffered much from the wars carried on against the Turks. (Nietz. Chin., p. 186, D., p. 359, A.) It finally remained in the hands of the descendants of Osman, who made it the capital of their empire, under the corrupted name of Brusa or Broussa. It is still one of the strongest fortresses in the empire, and is inhabited in Anatolia. (Browne's Travels, in Walpole's Turkey, vol. 2, p. 108.—Cramer's Asia Minor, vol. 1, p. 176.)

Prusias I, king of Bithynia, son of Ziaelas, began to reign about B.C. 228, and was still reigning B.C. 190, at the time of the war between the Romans and Antiochus; for Polybios intimates that the Prusias who was solicited by Antiochus had been reigning for some time, and that this town was called in the latter's day Prusia. (Polyb., 5. 111.) In B.C. 207 he invaded the territories of Attalus I. He was included in the treaty with Philip in B.C. 205. (Liv., 29, 12.) Strabo asserts that it was this, the elder, Prusias with whom Hannibal sought refuge. (Strab., 563.) And the accounts of other writers contain nothing to disprove this testimony. But if the elder Prusias received Hannibal, he was still living at the death of Hannibal in B.C. 183. (Cic., Fast. Hell., vol. 2, p. 415, seq.)—II. The second of the name appears to have ascended the throne of Bithynia between B.C. 183 and B.C. 179. The two reigns of Prusias I. and Prusias II. occupied a period of about 79 years (B.C. 228-150). Prusias II. married the sister of Perseus, king of Macedon. (Appian, Bel. Mithrid., c. 2.) He was surnamed Kuvy-gye, or The Hunter, and was long engaged in war with Attalus, king of Pergamus. He is commonly supposed to have been the monarch who abandoned Hannibal when the latter was sought after by the Romans; though Strabo assigns this to Prusias I. This monarch extended considerably the limits of the Bithynian empire, by the accession of some towns conceded to him by his ally Philip of Macedon. (Strab., 563.—Liv., 32, 34), and several advantages gained over the mercenary troops. As a last refuge, the latter was finally able to overcome his antagonist, by stirring up against him his own son Nicomedes, who, after drawing the troops from their allegiance to his father, caused him to be assassinated. (Liv., Epit., 50.—Justin, 34, 4.—Clint., Fast. Hell., vol. 2, p. 417.—Cramer's Asia Minor, vol. 1, p. 169.)

Prusias I. of Ethiopia. This king, a member of the Saetic dynasty, the twenty-sixth of the royal line that ruled in this country. Julius Africanus calls him Prasmechernis. He was the son and successor of Amasis, and ascended the throne at the very moment that Cambyses was marching against Egypt to dethrone the father. Psammetimus met Cambyses on the frontiers, near the Pelusiac branch of the Nile, and according to Polybius, with all his forces, Egyptians, Greeks, and Carians, but was at once overwhelmed in a battle. After raising himself up in Memphis, he was besieged here by Cambyses, and, according to Ctesias, was finally betrayed and taken prisoner. All Egypt thereupon fell under the Persian power, and the reign of Psammetimus ended after a duration of only six months. The greatest outrages were heaped upon the unfortunate monarch and his family; but the firmness with which he endured them all touched at last even the ferocious Cambyses with compassion. Psammetimus was thereupon retained at court, treated with honour, and finally sent to Susa along with 6000 Egyptian captives. Having been accused, however, subsequently, of attempting to stir up a revolt, he was compelled to drink bolt's blood, and ended his days. (Herod., 3, 10, seq.—Ctes. Pers., 9.—Bair, ad Ctes., i. e.—St. Martin, in Biogr. Univ., vol. 36, p. 177, seq.)

Psammetichus being quite young at the time of his father's death, had been carried into Syria to avoid a similar fate, and, after the retreat of the Persians, was recalled to his native country by the inhabitants of the Saetic nome. It would seem that the Ethiopians, on their departure, had left Egypt a prey to trouble and dissension, and that the early princes of the Saetic dynasty, also, had never enjoyed sovereign authority over the whole kingdom. When Psammetichus, therefore, ascended the throne, he was obliged to share his power with eleven other monarchs, and Egypt was thus divided into twelve independent states. The government was like what the Greeks called a duo-decarchy (dodecarchy). The twelve kings regulated in common, in a general council, all that related to the affairs of the kingdom considered as a whole. This state of things lasted for fifteen years, when it met with a singular termination. An oracle had declared that the whole kingdom would fall to the lot of that one of the twelve monarchs who should one day offer a libation with a brazen cup. It happened, therefore, one day, that the kings were all sacrificing in common in the temple of Vulcan at Memphis, and that the high priest, who distributed the golden cups for libations, had brought with him, by some accident, only eleven. When it came, therefore, to the turn of Psammetichus, who was the last in order to pour out a libation, he unhappily employed for this purpose his brazen helmet. This incident occasioned great alarm to his colleagues, who thought they saw in it the fulfilment of the oracle. Being unable, however, with any appearance of justice, to punish an unpunished act, they contented themselves with banishing him to his own kingdom, which lay on the coast, and with forbidding him to take any part thereafter in the general affairs of the country. Psammetichus, however, retaliated upon them by calling to his aid some Greek mercenaries, who landed on the Egyptian shore, and eventually conquered all his colleagues, and made himself master of the whole of Egypt, B.C. 652. The monarch now recompensed his Greek allies, not only...
by paying them the sums of money which he had promised, but also in assigning them lands on the Syrian frontier, and, in doing so, the old historian, in his story, shows a great partiality for the Greeks on all occasions; and, in a Syrian expedition, he gave them the place of honour on the right, while he assigned the left to the Egyptians. The discontent of the national troops so great at this, that a large number of the military caste, amounting, it is said, to 240,000 men, left Egypt and retired to Ethiopia. (Consult, on this subject, the learned note of St. Martin, Biogr. Univ., vol. 36, p. 180, seq.) So strong was the partiality of Psammitichus for everything Greek, that he caused a number of children to be trained up after the Greek manner, and with these he formed the caste of interpreters, whom Herodotus found in his day existing in Egypt. Psammitichus also embellished his capital with several beautiful structures, and, among others, with the southern propylea of the great temple of Vulcan. He carried on a long war in Syria, and his forces are said to have remained 29 years before the city of Azotus. It was during this period, probably, that he arrested by presents the victorious career of the Scythians, who had overrun Asia Minor, and were advancing upon Palestine and Egypt. This event would seem to have happened 625 B.C., or in the 13th year of the reign of the Jewish king Josiah, when the prophet Isaiah announced the approaching irruption of the Scythian invaders into the territories of Egypt. In the 17th year, the invasion of the Scythians died after a reign of 54 years, leaving the crown to his son Necho. — Herodotus relates a very foolish story of Psammitichus, who it seems, was desirous of ascertaining what nation was the most ancient in the world; or, in other words, what was the primitive language of men. In order to discover this, he took two newly-born children, and, having caused them to be placed in the midst of a herd of sheep, directed a shepherd to nourish them with the milk of the sheep, and to guard them when they were men of years, at stated times, and to take care himself never to utter a word in their hearing. The object was to ascertain what words they would first utter of themselves. At length, on one occasion, when the shepherd went in to them as usual, both the children, running up to him, called out Bekos. Psammitichus, on being informed of the circumstance, made inquiries about the word, and found that it was a Scythian term. From that time, therefore, he concluded that the Scythians were the most ancient of men! The truth is, the cry which the children uttered (supposing the story to be true) was bek (with the Greek termination as given by Herodotus, bek-os), and the children had learned it from the cry of the goats which suckled them. (Herod., 2, 151, seq.) — St. Martin, in Biogr. Univ., vol. 36, p. 178, seq.) — II. A descendant of the previous king, came to the throne about 400 B.C., as a kind of vassal-king to Persia. (St. Martin, in Biogr. Univ., vol. 36, p. 181.)

Psophis, a very ancient city in the northwestern part of Arcadia. Pausanias places it at the foot of the chain of Erymanthus, from which descended a river of the same name, which flowed near the city, and, after receiving another small stream called Aromius, joined the Alpheus on the borders of Elis (9, 24). Psophis itself had previously borne the names of Erymanthus and Phegea. At the time of the Social War, it was in the possession of the Eleans, on whose territory it bordered, as well as on that of the Achaeans; and, as it was a place of considerable strength, proved a source of great annoyance to the latter people. It was taken by Philip, king of Macedon, then in alliance with the Achaeans, and made over by him to the latter people, who garrisoned it with their troops. — The remains of Psophis are to be seen near the Khan of Tripotamia, so called from the junction of three rivers. (Pausovilla, vol. 5, p. 448. — Gell, Itinerary of Mo-
PTOLEMUS.

PTOLEMUS, I., surnamed Soter, and sometimes Lagi (i.e., son of Lagus), king of Egypt, and son of Arsinoë, who, when pregnant by Philip of Macedonia, married Lagus. (Vid. Lagus.) Ptolemy was educated in the court of the King of Macedonia. He became one of the friends and associates of Alexander, and, when that monarch invaded Asia, the son of Arsinoë joined him as one of the principal generals. During the expedition he behaved with uncommon valour; he killed one of the Indian monarchs in single combat, and it was to his prudence and courage that Alexander was indebted for the reduction of the rock Aornus. After the conqueror's death, in the general division of the Macedonian empire, Ptolemy obtained as his share the government of Egypt, with Libya, and part of the neighbouring territories of Arabia. In this appanage, as well as in those of his successors, he disposed of the people by acts of kindness, by benevolence and clemency, though he did not assume the title of independent monarch till seventeen years after. He made himself master of Cœlosyria, Phœnecia, and the neighbouring coast of Syria; and when he had reduced Jerusalem, he carried above 100,000 prisoners to Egypt, to people the extensive city of Alexandria, which became the capital of his dominions. After he had rendered them the most splendid improvements, he threw his subjects by his liberality and the grant of various privileges, Ptolemy assumed the title of King of Egypt, and soon after reduced Cyprus under his power. He made war with success against Demetrius and Antigonus, who disputed his right to the provinces of Syria; and from the assistance he gave to the people of Rhodes against their common enemies, he received the name of Soter. While he extended his dominions, Ptolemy was not negligent of the interests of his subjects at home, and estabished many wise regulations for the improvement of his people, and the cultivation of literature and the arts. He died at the age of eighty-four, having governed Egypt for seventeen years, and then ruled it over as monarch for twenty-three years. The date of his death is B.C. 283. (Clinton, Fast. Hell., vol. 1, p. 184.—Id. ib., p. 237.—Id. ib., vol. 2, p. 379.) He was succeeded by his son Ptolemy Philæolphus, who had been his partner on the throne the last two years of his reign. Ptolemy has been commended for his abilities not only as a sovereign, but as a writer; and among the many valuable compositions of antiquity which have been lost, we have to lament a history of the life and expeditions of Alexander the Great by the King of Egypt, greatly admired and valued for elegance and authenticity, and from which Arrian obtained important materials for his work on the same subject.—II. Son of Ptolemy the First, succeeded his father on the Egyptian throne, and was called Philæolphus from the affection entertained by him for his sister and wife Arsinoë. He showed himself worthy in every respect to succeed his great father, and, conscious of the advantages which arise from an alliance with powerful nations, he sent ambassadors to Italy to solicit the friendship of the Romans, whose name and military reputation had become universally known for the victories which they had just obtained over Pyrrhus and the Tarentines. But while Ptolemy strengthened himself by alliances with foreign powers, the internal administration of his kingdom was disturbed by the revolt of Magas, his brother, king of Cyrene. The sedition, however, was stopped, though kindled by Antiochus, king of Syria, and the death of the rebellious prince re-established peace for some time in the family of Philæolphus. Antiochus, the Syrian king, married Berenice, the daughter of Ptolemy; and the father, though old and infirm, conducted his daughter to her husband's kingdom, and assisted at the nuptials. Philæolphus did not live to see his fourth year of his age, two hundred and forty-six years before the Christian era. He left two sons and a daughter by Arsinoë, the daughter of Lysimachus. He had after married his sister Arsinoë, whom he loved with uncommon tenderness, and to whose memory he began to erect a celebrated monument. (Vid. Diocrates.) During the whole of his reign, Philæolphus was employed in exciting industry, and in encouraging the liberal arts and the useful sciences; and the inhabitants of the adjacent countries were allured by promises and presents to increase the number of the Egyptian subjects, and Ptolemy could boast of regaining over numerous well-peopled cities. He gave every possible encouragement to commerce; and by keeping two powerful fleets, one in the Mediterranean, and the other in the Red Sea, he made Egypt the mart of the world. His army consisted of 200,000 foot, 4000 horse, 2000 elephants, and 2000 small chariots. With justice, therefore, he has been called the richest of all the princes and monarchs of his age; and, indeed, the remark is not false, when it is observed that at his death he left in his treasury 750,000 Egyptian talents, a sum equivalent to two hundred millions sterling. His palace was the asylum of learned men, whom he admired and patronised; and by increasing the library which he himself, or, according to some, his father, had founded, his taste for learning, and his wish to encourage genius. (Vid. Alexandrea, and Alexandria Schola.) The whole reign of Philæolphus was 38 years, and from the death of his father 36 years. (Clinton, Fast. Hell., vol. 2, p. 373.)—III. The third of the name, succeeded his father Philæolphus on the Egyptian throne B.C. 245. He early engaged in a war against Antiochus Theos for his unkindness to Berenice, the Egyptian king's sister, whom he had
married with the consent of Philadelphia. With the most rapid success he conquered Syria and Cilicia, and advanced as far as Bactriana and the confines of India; but a sedition at home stopped his progress, and within but five years brought him to the spoil of conquered nations. Among the immense riches which he brought, he had many statues of the Egyptian gods, which Cambyses had carried away into Persia when he conquered Egypt. These were restored to the temples, and the Egyptians called their sovereign Euergetes (or Benefactor), in acknowledgment of his attention, beneficence, and religious zeal for the gods of his country. The last years of Ptolemy's reign were rather memorable for religious than for military events. The renewal of the war with the Jews was the pretext for the tribute of 20 silver talents which their ancestors had always paid to the Egyptian monarchs. Euergetes died 221 years before Christ, after a reign of 25 years; and, like his two illustrious predecessors, was the patron of learning. — IV. The fourth, succeeded his father Euergetes on the throne of Egypt, and received the surname of Philopator, probably from the regard which he manifested for the memory of his father; though, according to some authorities, he destroyed him by poison. He began his reign with acts of the greatest cruelty, and he successively sacrificed to his avance his own mother, his wife, his sister, and his brother. He received, in derision, the name of Typhon, from his evil morals, and that of Gallus, because he appeared in the streets of Alexandria with all the gestures of the priests of Cybele. In the midst of his pleasures Philopator was called to war against Antiochus, king of Syria; and at the head of a powerful army he invaded his enemy's territories, and might have added the kingdom of Syria to Egypt if he had made a prudent use of the victories which attended his arms. In the latter part of his reign, the Romans, whom a dangerous war with Carthage had weakened, but, at the same time, roused to superior activity, renewed, for political reasons, the treaty of alliance which had been made with the Egyptian monarchs. Philopator at last, weakened and embarrassed by intercourse and continued debauchery, died in the 37th year of his age, after a reign of 17 years, 204 years before the Christian era. — V. The fifth succeeded his father Philopator as king of Egypt, though only in the fourth year of his age. During the years of his minority he was under the protection of Sosicetus and of Aristomenes, by whose prudent administration Antiochus was disposed of the provinces of Cæsarea and Palestine, which he had conquered; and in the seventh year of Ptolemy's reign he showed his alliance with him after their victories over Hannibal and the conclusion of the second Punic war. This flattering embassy induced Aristomenes to offer the care of the patronage of the young monarch to the Romans; but the regent was confirmed in his honourable office, and, by making a treaty of alliance with the people of Achaea, he convinced the Egyptians that he was qualified to wield the sceptre and to govern their country. The Roman Senate, who had rejoiced him, as their partner, in the 14th year, according to the laws and customs of Egypt, the years of his minority had expired. He received the surname of Epiphanes, or Illustrious, and was crowned at Alexandria with the greatest solemnity, and the faithful Aristomenes resigned into his hands an empire which he had governed with honour to himself and with credit to his sovereign. Young Ptolemy was no sooner delivered from the shackles of a regency than all those magnetic and princely qualities which had characterized his father. The counsels of Aristomenes were despised, and the minister, who for ten years had governed the kingdom with equity and moderation, was sacrificed to the caprice of the sovereign, who abhorred him for the salutary advice which his own vicious inclinations did not permit him to follow. His cruelties raised seditions among his subjects, but these were twice quelled by the prudence and the moderation of one Poreticus, the most faithful of his corrupt ministers. In the midst of his extravagance, Epiphanes did not forget his alliance with the Romans. Above all other nations he was eager to cultivate friendship with a nation from whom he could derive so many advantages, and during their war against Antiochus he offered to assist them with money against a monarch whose daughter, Cleopatra, he had married, but whom he hated on account of the seditions he had raised in the very heart of Egypt. After a reign of 24 years, Ptolemy was poisoned, 180 years before Christ, by his ministers, whom he had threatened to rob of their power. The Romans, having heard this report against Seleucus, king of Syria. — VI. The sixth, succeeded his father Epiphanes on the Egyptian throne, and received the surname of Philometor, probably by antiphrasis, an account of his hatred against his mother Cleopatra. He was in the sixth year of his age when he ascended the throne, and during his minority the kingdom was governed by his mother, and at her death by a eunuch, who was one of his favourites. He made war against Antiochus Epiphanes, king of Syria, to recover the cities he had lost to him, but, after a short war, was bound to his allies to return. He was part of the Egyptian dominions, and, after several successes, he fell into the hands of his enemy, who detained him in confinement. During the captivity of Philometor, the Egyptians raised to the throne his younger brother Ptolemy Euergetes, or Physcon, also son of Epiphanes; but he was no sooner established in his power than Antiochus turned his arms against Egypt, drove out the usurper, and restored Philometor to all his rights and privileges as king of Egypt. This artful behaviour of Antiochus was soon comprehended by Philometor; and when he saw that Pelusium, the key of Egypt, had remained in the hands of his Syrian ally, he recalled his brother Physcon, and made him partner on the throne, and concerted with him how to repel their common enemy. This union of interest in the two royal brothers incensed Antiochus: he entered Egypt with a large army, but the Romans checked his progress and obliged him to retire. No sooner were they delivered from the impending war, than Philometor and Physcon, whom the fear of danger had united, began with mutual jealousy to oppose each other's views. Physcon was at last banished by the superior power of his brother, and, as he could find no support in Egypt, he immediately repaired to Rome. To excite more effectually the compassion of the Romans, and to gain their assistance, he appeared in the meanest dress, and took his route from the obscure corner of the city. He received an audience from the senate, and the Romans settled the dispute between the two royal brothers by making them independent of one another, and giving the government of Libya and Cyrene to Physcon, and confirming Philometor in the possession of Egypt and the island of Cyprus. These terms of accommodation were gladly accepted; but Physcon soon claimed the dominion of the island of Cyprus, which was opposed by the Romans, who wished to agrandize themselves by the diminution of the Egyptian power. Philometor refused to give up the island of Cyprus, and, to call away his brother's attention, he fomented the seeds of rebellion in Cyrene. But the death of Philometor, 145 years before the Christian era, left Physcon master of Egypt and all the dependent provinces. — VII. The seventh Ptolemy, named Physcon, was a man of too many vices produced by his intemperate habits (vid. Physcon), ascended the throne of Egypt after the death of his father Philometor; and, as he had reigned for some time conjunctly with him (vid. Ptolemaeus VI.), his succession was approved, though the wife and the son of the deceased monarch laid claims to the crown. Cleopatra was supported in her claims by the Jews,
and it was at last agreed that Physis should marry the queen, and that her son should succeed on the throne at his death. The nuptials were accordingly celebrated, but on that very day the tyrant murdered Cleopatra's son in her arms. He ordered himself to be called Euergetes, but the Alexandrians refused to do so, and stigmatized him with the appellation of Kakergetes, or Evil-doer, a surname which he deserved by his tyranny and oppression. A series of barbarities was now committed, but, as one attempted to invade Egypt of her tyrant, the Alexandrians abandoned their habitations, and fled from a place which continually streamed with the blood of their massacred fellow-citizens. If their migration proved fatal to the commerce and prosperity of Alexandria, it was of the most essential service to the countries where they retired; and the numbers of Egyptians that sought a safe asylum were increased some of those inhabitants of those countries the different professions that were practised with success in the capital of Egypt. Phycyon endeavoured to repeople the city which his cruelty had laid desolate; but the fear of sharing the fate of its former inhabitants prevailed more than the promise of riches, rights, and immunities. The king, at last, disgraced with Cleopatra, repudiated her, and married her daughter by Philomotor, called also Cleopatra. He still continued to reside with his second queen, but continued to exercise authority upon his subjects; but the prudence and vigilance of his ministers kept the people in tranquillity, till all Egypt revolted when the king had basely murdered all the young men of Alexandria. Without friends or support in Egypt, he fled to Cyprus, and Cleopatra, the divorced queen, ascended the throne. In his banishment Phycyon dreaded lest the Alexandrians should also place the crown on the head of his son by his first wife, or of his own right, as Phycyon was a native of Cyprus; and under these apprehensions he sent for the young prince, called Memphitis, to Cyprus, and murdered him as soon as he reached the shore. To make the barbarity more complete, he sent the limbs of Memphitis to Cleopatra, and they were received as the queen was going to celebrate her birthday. Soon after this he invaded Egypt with an army, and obtained a victory over the forces of Cleopatra, who, being left without friends or assistance, fled to her eldest daughter Cleopatra, who had married Demetrius king of Syria. This decisive blow restored Phycyon to the throne, where he continued to reign for some time, hated by his subjects and feared by his enemies. He died at Alexandria in the 67th year of his age, about 116 years before Christ. This prince, notwithstanding his cruel disposition, was a lover of learning, and introduced some of the inhabitants of those countries the different professions that were practised with success in the capital of Egypt. Aristearchus was his preceptor, and he added also to have made important additions to the Alexandrian library, as well in original manuscripts as in copies. — VIII. The eighth, surnamed Soter II., succeeded his father Phycyon as king of Egypt. He had no sooner ascended the throne than his mother Cleopatra, who reigned conjointly with him, expelled him to Cyprus, and placed the crown on the head of his brother Ptolemy Alexander, his favourite son. Soter, banished from Egypt, became king of Cyprus; and soon after he appeared at the head of a large army, to make war against Alexander Januarius, king of Judea, through whose assistance and intrigue he had been expelled by Cleopatra. The Jewish monarch was conquered, and 50,000 of his men were left on the field of battle. Soter, after he had exercised the greatest cruelty upon the Jews, and had made vain at- tempts to conquer Egypt, retired to Cyprus till the death of his brother Alexander restored him to his native dominions. Some of the cities of Egypt refused to acknowledge him as their sov- ereign, and Thebes, for its obstinacy, was closely besieged for three successive years, and from a powerful and populous city it was reduced to ruins. In the latter part of his reign Soter was called upon to assist the Romans with a navy for the conquest of Athens; but Lucullus, who had been sent to obtain the wanted supply, though received with kingly honours, was dis- missed with evasive and unsatisfactory answers, and the monarch refused to part with troops which he deemed necessary to preserve the peace of his kingdom. Soter died about 16 years before Christ. After a reign of 36 years, since the death of his father, Phycyon, eleven of which he had passed with his mother Cleopatra on the Egyptian throne, eighteen in Cyprus, and seven after his mother's death. This monarch is sometimes called Lathyrus, from an ex- currence like a vetch (λάθυρος) on his nose. — IX. The ninth, called also Alexander Ptolemy I., was raised to the throne by his mother Cleopatra, in pref- erence to his brother, and crowned with her. Cleo- patra expelled, but afterward recalled him; and Alex- ander, to prevent being expelled a second time, put to death; for which unnatural action he was him- self murdered by one of his subjects. — X. The tenth, or Alexander Ptolemy II., was son of the preceding. He was educated in the island of Cos, and, having fallen into the hands of Mithridates, escaped subse- quently to his native country. He was an able states- man; — XI. The eleventh, or Alexander Ptolemy III., was king of Egypt after his brother Alexander, the last mentioned. After a peaceful reign he was banished by his subjects, and died at Tyle B.C. 65, leaving his kingdom to the Romans. — XII. The twelfth, the illegitimate son of Soter II., ascended the throne of Egypt at the death of Alexander III. He received the surname of Auletes, from the skill with which he played upon the flute. Besides his royal title, he had the surnames of Philopator, Philo- delphus, and Neodionyus (the New Bacchus or Oaris, these deities being often confounded by the Greeks). His rise showed great marks of prudence and circum- spection; and as his predecessor, by his will, had left the kingdom of Egypt to the Romans, Auletes knew that he could not be firmly established on his throne without the approbation of the Roman senate. He was successful in his application; however, this de- cision of the Roman senate was conditional, he was then consul and in want of money, established his succession, and granted him the alliance of the Ro- mans, after he had received a very large sum. But these measures rendered the monarch unpopular at home; and, when he had suffered the Romans quietly to take possession of Cyprus, the Egyptians revolted, and Auletes was obliged to fly his kingdom, and seek protection among the most powerful of his allies. As the consequences of this flight were fatal to Rome at first with indifference; and the murder of a hundred noblemen of Alexandria, whom the Egyptians had sent to justify their proceedings before the Roman senate, rendered him unpopular and suspected. Pompey, however, supported his cause, and the senators decreed to re-establish Auletes on his throne; but, as they proceeded slowly in the execution of their plans, the monarch retired from Rome to Ephesus, and was besieged in that city by theRomans. When the city was taken, the Romans executed the king before the temple of Diana. During his absence from Alexandria, his daughter Berenice had made herself absolute, and established herself on the throne by a marriage with Archelaus, a priest of Bel- lon's temple at Comana; but she was soon driven from Egypt, when Gabinius, at the head of a Roman army, approached to replace Auletes on his throne. Auletes was no sooner restored to his mother's kingdom, when the Roman army attacked his father Berenice, and be- heaved with the greatest ingratitude and perfidy to Ra- birius, a Roman who had supplied him with money when expelled from his kingdom. Auletes died four years after his restoration, about 51 years before the Christian era. He left two sons and two daughters, and by his will ordered the elder of his sons to marry 1139
PTOLEMÆUS. 

the elder of his daughters, and to ascend with her the vacant throne. As these children were young, the dying monarch recommended them to the protection and paternal care of the Romans; and accordingly Pompey the Great was appointed by the senate to be their patron and their guardian. Their reign was as tumultuous at least as the predeceasing one. It is remarkable for no uncommon events; only we may observe that the young queen was the Cleopatra who soon after became so celebrated.—XIII. The thirteenth, ascended the throne of Egypt conjointly with his sister Cleopatra, whom he had married according to the directions of his father Attalus. (Vid. Cleopatra VII.)—XIV. Apion, king of Cyrene, was the illegitimate son of Ptolemy Physcon. After a reign of twenty years he died; and, as he had no children, he made the Romans heirs of his dominions. The Romans presented his subjects with their independence.—V. Cæranus, a son of Ptolemy Soter by Eurydice, the daughter of Antipater. Unable to succeed to the throne of Egypt, Cæranus fled to the court of Seleucus, where he was received with friendly marks of attention. Seleucus was then king of Macedonia, an empire which he had lately acquired by the death of Lysimachus. In a battle in Phrygia, both Apion the rhodian and Cæranus Flagellus murdered him, and ascended his throne 280 B.C. The murderer, however, could not be firmly established in Macedonia as long as Arisæo the widow, and the children of Lysimas- chus, were alive, and entitled to claim his kingdom as the lawful possession of their father. To remove these obstacles, Cæranus made offers of marriage to Arisæo, who was his own sister. The queen at first refused, but the protestations and solemn promises of the former, and at last prevailed. He sent the hostages to Phrygia, where he was received with great kindness and respect. The nuptials, however, were no sooner celebrated than Cæranus murdered the two young princes, and confirmed his usurpation by rapine and cruelty. But now three powerful princes claimed the kingdom of Macedon: for: Antiochus, the son of Seleucus; Antigonus, the son of Demetrius; and Pyrrhus, the king of Epirus. These enemies, however, were soon removed; Cæranus conquered Antigonus in the field of battle; and, at last, abandoned the hope of the hostilities by promises and money. He did not long remain inactive: a barbarian army of Gauls claimed a tribute from him, and the monarch immediately marched to meet them in the field. The battle was long and bloody. The Macedonians might have obtained the victory if Cæranus had shown more prudence. He was thrown down from his elephant, and taken prisoner by the enemy, who immediately tore his body to pieces. Ptolemy had been king of Macedonia only eighteen months. (Justin, 24, &c.—Pausan., 10, 10.—XVI. An illegitimate son of Ptolemy Soter II., or Lathyrus, king of Cyprus, of which he was tyrannically dispossessed by the Romans. Cato was at the head of the forces which were sent against Ptolemy by the senate, and the Roman general proposed to the monarch to retire from the throne, and to pass the rest of his days in the obscure office of high-priest in the temple of Venus of Ephesus. This offer was rejected with the indignation which it merited, and the monarch poisoned himself at the approach of the enemy. The treasures found in the island amounted to the enormous sum of £1,356,250 sterling, which were carried to Rome by the conquerors.—XVII. A son of Pyrrhus, king of Epirus, by Antigone, the daughter of Berenice. He was left governor of Epirus when Pyrrhus went to Italy to assist the Tarentines against the Romans. He received a commission to conduct it with moderation. He was killed, bravely fighting, in the expedition which Pyrrhus undertook against Sparta and Argos.—XVIII. Claudius, a celebrated astronomer, chronicler, musical writer, and geographer of antiquity, born in Egypt, and who flourished about the middle of the second century of our era, under the Antonines. During the middle ages, it was generally supposed that he had reigned in Egypt, and the first edition of his Almagest, that of Grynæus, 1538, is dedicated to the King of England as the production of a king. This error is thought to have originated with Sylvius Albanus, who, was led into the mistake by the Arabic name of the astronomer (Bathalnus), which, according to Herbelot, means in Arabic "a king of Egypt" (Bibliotheca Orient., s. v.), just as the ancient monarchs of the land were named Peraoun (Pharaohs). Ptolemy, however, is styled King of Alexandria almost two centuries before Albumazar, by Isidorus of Seville. (Originum, 3, 25.)—Another opinion, not less generally received, but probably just as erroneous as the former, is that which makes Ptolemy to have been born at Pelusium. Suidas and Eudoxias call him a philosopher of Alexandria; but it has been said that this appellation has only been given him on account of his long sojourn in the capital of Egypt. No ancient writer makes mention of his native country, though many manuscripts of the Latin translations of his works, and also the printed editions of these versions, are described as "Ptolemais," which many regard as a corruption for Ptolœmais. (Curtius, de Ptol. Geogr., Norim., 1737, 4to, p. 3) cites the Arab scholar on the Tetrabiblos, Ali-ibn-Redman, named Haly, to prove that Pelusium was the native place of our astronomer. Buttmann, on the other hand, proves the citation of Railed to be false. Haly, or his translator, makes no mention whatever of the native place of Ptolemy; he only calls this writer al-Fuludi (Phi- ludianus), from the surname which the Arabs have given him. It is true, in a biography or paraphrase found at the head of a Latin version of the Almagest, made from the Arabic, we read the following: "Hic autem orius et educatus fuit in Alexandrea majori, terrae Egypti. Hujus tamen propago de terra Sem, et de provincia qua dictur Pelusidus." This absurd passage, however, which does not even say that Ptolemy was born out of Alexandria, proves nothing else but the desire of the Arab translator to represent the astronomer as the composer of this work. We have two versions of this work, the one by Bartholomäus de terræ Sem.—Museum der Alterthums, Wissenschaft, vol. 2, p. 463, seqq.).—Theodorus Meliteniota states that Ptolemy was born at Ptolemais, or Hermione, in the Thebaid, and that he was contemporary with Antoninus Pius. This writer does not, it is true, cite his authority; yet nothing prevents our admitting the accuracy of his statement, derived, no doubt, from some ancient writer, provided we can reconcile it with the surname al-Fuludi, which the Arabs have given to Ptolemy. This surname has only thus far been found in the Latin translations: in the Arabic books Ptolemy is sometimes named Bathalnus, al Kaludi. (Abulpharagii Hist., p. 73, l. 5; p. 105, l. 3; p. 123, l. antep.—Casiri, Biblioth. Arab. Hist., vol. 1, p. 348. —Mémoires sur l'Egypte, p. 389, where an extract is given from Abderrahouch et Bakin, who calls Ptolemy Bartalnusmou el Qidaly). The name Kaludi is expressed by Claudius in the Arabic version of his works. The change from Ka- ludi to Fuludi is extremely simple, since in Arabic the letter K is distinguished from F only by an additional point. Thus Ptolœdiaus is merely corrupted from Claudius, and ought not to be rendered by Pelusianus. Thus, too, Bathalnus al Kaludi is only an Arabic version of Iرلفظا و كنف، as Suidas writes the name, the pronomens being mistaken by the Arabi- an translators for an appellative.—Another point, of importance, is that in his works Ptolemy speaks of a middle of the year which he had made his observations, because on this depends the degree of precision of which his observations on latitude were susceptible. The astronomer states positively that he made these observations under the parallel of Alexandria; while, on the other hand, there 1140
PTOLEM.EUS

exists a sche'mum of Olympodorus (in Phad., Plat.— Bonallida, Testimonia de Ptolemiae, p. 295), which in- formed that Ptolemy passed 40 years of his life in pros'ous'tos, or the temple of Canopus ("in the wings of Canopus"), occupied with astronomical observations, and that he placed columns there on which he caused to be cut the theorems of which he had been the author. An in- scription has come down to us which illustrates this remark of Olympodorus: Θεός Σωτήρ Καθαίρει Πτολε- μαῖος δρᾶς καὶ ὑπόθεσες μαθηματικῆς, κ. τ. λ., "Claudius Ptolemy dedicates to the god, the Preserver, his signs and geometric constructions," for the pur- posing this dedication with the scholium of Olympodorus, the Abbé Halma states, that he would be inclined to believe the deity alluded to in the inscription to be Ca- nobus, if the inscription did not expressly declare, farther on, that the monument containing it was placed in the city of Canopus (ἐν Κανούδῳ), whence he infers that the protecting deity in Serapis, and that Ptolemy made his observations in the wide-buildings connected with the temple of this god. He thinks that this posi- tion is not in contradiction with the passage in which Ptolemy informs us that he made them under the par- allel of Alexandria; for, according to Halma, the city of Alexandria was gradually extended to Canopus, which became a kind of suburbs to it, so that Ptole- my, though residing at Canopus, may nevertheless be said to have observed at Alexandria, or that, observ- ing at Canopus, he also gave instructions in his obser- vations to the parallel of Alexandria, by reason of the trifling difference of latitude. A difficulty here presents itself, of which the Abbé Halma is aware, and which he proposes to remedy by an alteration of the text. If Ptolemy had made his observations in the temple of Serapis at Canopus, Olympodorus, in place of saying ἐν περιοῦ τοῦ Κανούδου, "in the wings of (the temple of) Canopus," would have had ἐν περιοῦ τοῦ Σεραπείου, "in the wings of (the temple of) Canopus." Halma therefore proposes to substitute the latter reading for the former, or else to regard Canopus as the same divinity with Serapis, and to suppose that Ptolemy observed in the temple of Canopus at Can- opus. This reasoning of Halma’s has been attacked by Lettez, and ably refuted. The latter shows, that Canopus, situated at the distance of 120 stadia, or more than two and a half geographical miles, northeast of Alexandria, was even in the time of Ptolemy, a place, where there were several places, such as Nicopolis and Ta- posiris Parva, between the two cities; that, conse- quently, the Serapeum, in which Ptolemy observed, could not have belonged to Canopus; and, finally, that Ptolemy knew the difference in latitude between Ca- nopus and Alexandria, and could not confound them together in one point. It is more probable, as Lettez remarks (Journal des Savans, 1818, p. 202), that Olympodorus was mistaken as to the place where Ptolemy observed. It is ascertained that there was a temple of Serapis at Canopus as well as at Alexan- dria. (Strabo, 801.) Olympodorus, therefore, must have supposed that the word Serapeum, in the author from whom he copied his remark, belonged exclusive- ly to the first of these cities, when it was referred, in fact, in this particular instance, to Alexandria the capital. The statement of Olympodorus might therefore be explained, from the circumstance of the Serapeum at Canopus having become at one time a celebrated seat of the New-Platonists, and having acquired great distinc- tion on this account among the last apostles of pagenism. A commentator on Plato, therefore, would be very ready to suppose that this last asylum of true light, as he believed it, was the place where the great Ptolemy also made his observations and discoveries. —We will now proceed to the works of this distin- guished writer. 1. Μνήμεια Συντάξεων ("Great Con- struction"), in thirteen books. This work contains all the astronomical observations of the ancients, such as those of Aristyllus, Timocharis, Metro, Euclimon, and, above all, of Hipparchus. After the example of all the succeeding astronomers, excepting Aristarchus, Ptolemy regards the earth as the centre of the universe, and makes the stars to revolve around it. This system was that of all succeeding astronomers until the days of Copernicus. Ptolemy is the inventor of epicycles, as they are called, an erroneous but ingenious system, and the only one that can explain the irregular revolu- tions of the planets, if we deny the sun to be the cen- tre of our system. He inserted into his work, with all this tiring laboriousness, the name of Aristarchus; the list, however, contains only 1022 stars, di- vided into 48 catasterrisms. He corrected the theory of the lunar revolutions, by determining the equation in the mean distances between the new and full moon; he reduced to a more regular system the parallax of the moon, though he has, in fact, traced it too large; he de- termined that of the sun by the size of the shadow which the earth casts on the moon in eclipses; he taught the mode of finding the diameter of the moon, and of calculating lunar and solar eclipses. "Ptolemy," says Delambre, "was not, indeed, a great astronomer, since he observed nothing, or, rather, has transmitted to us no observation on which we can rely with the least confi- dence; but he was a learned and laborious man, and a distinguished mathematician. He has collected to- gether into one body all the learning that lay scatter- ed in different directions, and in this respect he was, at the same time, must be acknowledged, that he might have been more sober in his details, and more communicative respecting certain observations which are now lost to us for ever." The same modern writer, after complaining of the little reliance that can be placed on the calculations of Ptolemy, praises the trigonometrical portion of the Τεραδοθηκη, and the mathematical theory of eclipses; adding, however, that Ptolemy, even with all his laboriousness, was not so happy as to have copied from Hipparchus, who had resolved all these problems before him. Indeed, it ought to be born in mind, as a general remark, that Ptolemy owed a part of his great reputation to the circumstance of the writings of Hipparchus being extremely rare, and having been, soon after Ptolemy’s time, completely lost.—An analysis of the Μνήμεια Συν- τάξεων is given in the Preface to the former edition. A translation of Ptolemy’s was commented upon by Theon of Alexandria, Pappus, and Ammonius. Of these commentaries we have remaining only that of Theon, and some notes of Pappus. We have, how- ever, the labours of Nilus (or Nicolaus) Cabasillas, a mathematician of the thirteenth century, on the third book. The Μνήμεια Συντάξεων of Ptolemy was trans- lated into Arabic in the 9th century. The Arabian gave it the title of Tahrib el magenshi, the last word being corrupted from the Greek μαγεσθι ("the great- est"), and this title is intended to express the admira- tion with which the work had inspired them. From the Arabic word just given was formed the appella- tion of Almagest, under which name the work is still frequently cited; for the knowledge of this production was brought into Europe by the Arabians, who, during the middle ages, were the possessors of all the science. A Latin translation was made about 827 A.D., by Al-Hacer-ben-Josef and the Chris- tian Sergius. The Caliph Almamoun himself also lent his literary aid to the undertaking. The second version is that of Honain or Isac-ben-Honain, a Chris- tian physician, who had fled to the court of the Ca- liph Motawakl. It was on this Arabic translation that a Spanish one was made by San Ben-Sid-el- Haza. The Emperor Frederic II., a member of that Spanish house under which Germany began to emerge from barbarism, and to enjoy a dawning of national literature before any other of the countries of Europe, directed Egidius Tebuldinus to turn this Spanish
PTOLEM.EUS.

Another translation was made from the Arabic into Latin by Gérald de Crémo-
na, an astronomer of the twelfth century, who estab-
lished himself for some time at Toledo, in order to
learn the Arabic language. He did not understand it
perfectly, and was therefore unable to translate cer-
tain technical terms, which he consequently com-
pelled to leave in the original language. His classical
erudition could not have been very profound, since he
was acquainted with Hipparchus, whom he every-
where calls Abrakel, as the Arabic translator had
done. It was not until the fifteenth century that a
manuscript of the original Greek was discovered, from
which the astronomer, John Müller, better known by
the name of Regiomontanus, made his Latin abridg-
ment. About the same period, George of Trebizond
made a Latin translation from this original, but a very
unfaithful one. — The Alexandrians called the work
of Ptolemy which we have just been considering the
Great Astronomer, Μέγας Αστρονόμος, in contradistin-
ction to another collection which they called the
Little Astronomer, Μικρός Αστρονόμος, and which was composed of the works of Theodosius of Tripolis; the
Data, Optics, Catoptrics, &c., of Euclid; the works of
Autolycus. Aristarchus of Samos, Hypsicles, &c. —
The best and most useful edition of the Almagest is
that of Halma, Paris, 1819-1828, 2 vols. 4to. It
contains a new French version, and notes by Delam-
bare. A new French edition of the work, arranged as
we have already stated, is the Pœdœcorum Kannavé.
This is a collection of Manual Tables intended for makers of
almanacs, to facilitate their calculations, and which are
often only extracts from the Almagest. Halma
gave the editio princeps of this work in the first vol-
ume of his edition of Theon's Commentary, which he
published in 1822. — 3. Τερπανιδῆς, ή Σέντας μαθ-
ηματικής ("Petroboli, or Mathematical Syntheses"),
in three books, of which only the second and third are
in use. It is commonly cited under the title of Quadripartitum. Some critics consider this work as unworthy of Ptole-
my, and suppositions. Proclus has made a para-
phrase of it. The latest edition is that of Melanchton,
Basil, 1553, 8vo.— 4. Καρπίς ("Fruit"), that is, one
hundred astrological propositions collected from
the works of Ptolemy. It is usually cited under the title of
Centum Dicta. It is published with the Quadrip-
partitum, and is nearly the same as the χαρακτηρίον τῶν ἐπισκούο-
σιασεων ("Appearances of the fixed stars, and a
collection of the things indicated by them"). This is a
species of almanac, giving the rising and setting times
of the stars, the prognostics of the principal changes of
temperature, &c. The work is intended for all cli-
mates; and, to make it answer this end, and prove
useful to all the Greeks spread over the surface of
the globe, Ptolemy gives the appearance of the stars for
certain years at once, namely, Syene, Lower Egypt,
Rhodes, the Hellespont, and the Pontus Euxinus. The
best edition is that of Halma, Paris, 1820, 4to. It
was preceded by the edition of Ideler, Berol. 1819.
— 6. Περὶ Ἀναλημμάτων ("Of the Analemma"). The
Analemma was a species of sundial, and in this work
we have an exposition of the whole gnomonic theory of
the Greeks. — 7. Τύπθεις τῶν πλανήματων ("Hy-
pothesis of the Planets"). The latest edition is that
of Halma, Paris, 1820, 4to. — 8. Απόλως ἐπισκούο
σιασαὶ ("Planisphere") This work exists only in
an Arabic version, by Maslem, and a Latin translation
made from this. It is a treatise on what is called ste-

ero-graphic projections. The work is probably one of
Hipparchus's. The latest edition is that of Command-
dinus, from the press of Paulus Mantuus, Venet.,
1558, 4to. — 9. Αἰσχρός ("Elements of Harmony"),
and the best. Ptolemy has the merit of having redu-
ted the thirteen or fifteen times of the ancients to
seven. It is generally supposed, also, that he deter-
niered the diatomic octave more conformable to na-
morial time. Some critics, however, are inclined to
accuse this improvement rather of the Greek
Dydimus, whom Ptolemy has frequently criti-
cised, though he obtained from his writings a large
portion of his own work. The best edition is that of
Wallis, Οξον., 1682, 4to. — 10. Ὀπτικὴ πραγμα-
τικά ("A treatise on Optics"), cited by Heliodorus of
La-
rissa, and frequently also by the Arabs, but now
lost. A Latin translation, from two Arabian MSS.,
exists in an unedited state in the Royal Library of
Paris. It contains, however, only four books of the
five which composed the original. In this work Pto-
lemy gives the most complete idea of astronomical re-
strictions of any writer down to the time of Kepler.
— 11. Κανών Βασιλέων ("Canon, or Table of Kings")
a part, properly, of the Ποδεκάριον Κανώνων. This table
contains fifty-five reigns, twenty of which belong to
kings of Babylon subsequent to Nabonassar, ten to
kings of Persia, thirteen to kings of Egypt of the line
of the Ptolemies, and the remainder to Roman emperors
after the time of Augustus. This canon was not pre-
pared with a historical view, but was intended for a-
stronomers, to facilitate the calculation of intervals of
time that may have elapsed between different astronomi-
unal observations. As, however, the years of each
monarch's reign are indicated in it with great exact-
ness, it becomes, consequently, of great value and in-
terest in the hands of those who, having lost all
record, at the same time, that all the dates of this canon
are given in Egyptian years, an arrangement very well
adapted to the object in view, but productive of some
inconvenience for chronology. Thus, for example,
the reigns of the Babylonian, Persian, and Roman
monarchs, calculated according to the method of their
respective countries, ought to be in advance of, or be-
hind, the years numbered in Ptolemy's canon, by some
fifty-five years. We are thus enabled, from the reigns
of the emperors, the difference, in Ptolemy's time, amounted
to forty days, and the variation must have been still
more marked as regarded the Babylonian and Persian
reigns. The only exact part is that which relates to
the line of the Ptolemies. Halma gave the latest
edition of this work in 1820, Paris, 4to. — 12. Γεω-
γραφικὴ Ἀσύνης ("Geographical Narration," or
"System of Geography"). This work is in eight books,
contains the geography of the known world, and is the
only known manual of systematic geography. It still
remains for us one of the principal sources whence we
derive our information respecting the geography of
the ancients. Pursuing the plan traced out by
Marinus of Tyre, Ptolemy undertook to perfect the
labours of that geographer. The map of Marinus and
Ptolemy was covered, as it were, with a species of
network; the meridians were traced on it for every
five degrees; the degrees of latitude were marked by
lines running parallel to the equator, and passed
through the principal cities, such as Syene, Alexan-
drea, Rhodes, Byzantium, and, consequently, were at
unequal distances from each other. In this network
were marked the points, the height of which had
been taken according to their true latitude; but, in
order to determine their longitude, and the positions,
also, of other places, which were only known by the
geometric distance, it was necessary to fix the length
of a degree on one of the great circles of the globe.
Marinus and Ptolemy, without themselves measuring
any great distances, took the most accurate measure-
ments existing in their day, and gave 500 stadia as
the length of a degree. This was one sixth less than
the truth, and from this error must necessarily have
resulted many faults and erroneous deductions. Ptol-
emy determined the length of the known part of the
globe, under the parallel of Rhodes, at 72,000 stadia,
following geometrical measure-
ments. These 72,000 stadia make, according to his

1142
PTOLEMAEUS. calculation, 180 degrees; and in this way he believed he had discovered the extent of one half of the globe. The fact, however, is, that he was acquainted with only 125 degrees. His error, consequently, is nearly a third, namely, one degree by reason of the mistake he commits relative to the measurement of a degree as above mentioned, and about a sixth as the result of errors in geometric distances. With regard to latitudes, a large number of which were based on astronomical determinations, the errors committed by Ptolemy are very unimportant; and the latitude, for example, which he gives to the southern point of Spain is so exact, as to lead us to imagine that observations had been made in this quarter by some of his predeces-
sors.—Strabo had limited to 42 degrees the lati-
itude of the known part of the earth (situate between the 12th and 54th degree of north latitude). Ptole-
my, on the other hand, makes 80 degrees, from 16°
south latitude to 63° north; and yet he believed that he knew only about a quarter more than the earlier geographers, because these allowed 700 stadia to a degree, which makes nearly 30,000 stadia altogether; whereas Ptolemy, admitting only 500 stadia, found the sum total to be 40,000.—Marinus and Ptolemy derived some information respecting the easternmost parts of Asia from the Itineraries of a Macedonian trader, who had sent his factors on overland journeys from Mesopotamia, along Mount Taurus, through In-
dia, and even to the distant capital of the Seres. These journeys must have been executed very soon after the time of Alexander the Great, under the first two monarchs of the dynasty of the Seleucids; since it is not probable that, after the defection of the Bact-
rians and Parthians, a route remained open through these countries to the traffic of the Greeks. Ptolemy thus could hardly have gained much information re-
specting these lands from the narratives of overland travellers. The communication by sea, however, be-
tween Egypt and India, became frequent in the time of Ptolemy, and was a constant source of far safer, more direct, and certain information, than for India, and, in the time of Pliny, the coast of the country this side of the Ganges was perfectly well known. The navigators of the West, however, did not go beyond this stream. It was supposed that from this point the shore of Asia bent directly to the north, and joined the eastern extremity of Taurus. At a later period navigators went beyond the mouths of the Ganges, and, to their great astonishment, found that the land made in this quarter by the great samples he formed a large gulf (Bay of Bengal—Sinus Gangeticus). They pushed their adventurous career still far-
erther: taking their departure from the southern point of the western peninsula of India, they crossed the gulf in a straight line, and reached the coast of Siam and the peninsula of Malacca; this last they called the Golden Chersonese, a proof of the profitable trade which was there carried on by them. Having doubled the southern point of the island, the modern compiler of maps, found on a new gulf (that of Siam—Magnus Sinus). From the eastern coast of the Golden Chersonese they passed in a southern direction, and reached a large continent, on the shore of which was situated the city of Kattigara. This country was probably the Isle of Borneo. The discoverer of this country was called Alexander. (Ptol., Geogr., 2, 14.) Ptolemy, who, as Pliny observed, added the coast of Africa, gave a prolongation of that which formed the Gulf of Siam (the coast of Cambodio), founded thereon his hypothe-
sis, that the Indian was a Mediterranean sea. He supposed that, after Kattigara, the land extended from east to west as far as the southeast coast of Africa, with which it united, forming one common continent—Ma-
inus and Ptolemy were well acquainted with the east-
ern coast of Africa, and mention is no longer made, in their pages, of the fabulous monsters which the credul-
ity of a previous age had established as the dwellers of this region. They knew the coast, however, only to the tenth degree of south latitude, that is, to the prom-
ontory of Prasum, which is probably the same with the modern Cape Del Gardo, as his city of Rapa would seem to be Melinoes as far as the Dominia, with consid-
erable accuracy, but he is not aware that this sea is a mediterranean one, for his Gulf of Veneda is only a part of this sea, from Memel to Dantzig. The question has been asked, By what chance Ptolemy was enabled to obtain more accurate notions respecting those coun-
tries than those which Pliny and Tacitus possessed, and that, too, although the principal depot of amber, the well-known production of the shores of the Baltic, was in the time of Ptolemy as well as in the time of the ambers chiefely carried to Rome, the traffic was conducted by merchants from Alexandria, and it was through them that Ptolemy obtained the materials for this portion of his work,—In the last book of his geog-
raphy, Ptolemy teaches the mode of preparing charts or maps. We here find the first principles of projec-
tion; but the book itself has reached us in a very cor-
rupt state through the fault of the copyists. The mor-
phology of Mannert (Geogr., vol. 1, p. 151) is good, No good common text was ever made of Ptolemy's Geography has ever ap-
peared. One, however, has recently been commenced in Germany, by Wilherg, of which the first fasciculus, containing the first book, has thus far appeared. Es-
sendine, 1838, 4to. In 1475, Lichtenstein (Lerfastes) printed at Cologne, in folio, the Latin translation of this work, made by Angelo, a Florentine scholar of the fifteenth century, or, rather, compiled by Chry-
solus and finished by Angelo. It was revised, for the purposes of this publication, by Vadius and Pica-

Ptolemaeus. Publlicola, a surname given to Publius Valerius, according to Dionysius and Plutarch, on account of his

1144

PUBL.
productions, which seem to have been peculiar to Ro-
man genius. The sentiments of Publius Syrus now ap-
pear trite. They have become familiar to mankind, and
have been re-echoed by poets and moralists from age
to age. All of them are most felicitously expressed,
and few of them are neglected, while, at the same
time, they are perfectly free from the selfish or worldly-
minded wisdom of Rochefooucauld or Lord Burleigh.
(Dunlop's Roman Literature, vol. 1, p. 558, seq.)
The sentences of Publius Syrus are appended to many of
the editions of Phaedrus. The most useful edition of
these sentences is perhaps that of Gruter, Lugd. Bat.,
1727, 8vo. The latest and most accurate edition,
however, of Publius Syrus, appended to his edition of
Phaedrus, Turici, 1832, 8vo. It contains, also, thirty
sentences never before published. (Bähr, Gesch. Lit-
rom., vol. 1, p. 776.)

PULCHERIA, I. sister of Theodosius the Great, and
celebrated for her piety and virtues.—II. A Roman
empress, daughter of Arcadius, and sister of Theodo-
sius the younger. She was created Augusta A.D.
414, and shared the imperial power with her brother.
After the death of her husband, she threw herself
into the arms of Marcianus. (Vid. Marcianus 1.) Pulcheria
died A.D. 454, and was interred at Ravenna, where
her tomb is still to be seen.

PULCHERIUM PROMONTORIUM, the same with Herma-
um Promontorium. (Vid. Hermaunm.)

PUNICUM BELLOM, the name given to the wars be-
tween Rome and Carthage. The Punic wars were
three in number. The first took its rise from the af-
fair of the Carthaginians in Spain, and was ended by
the battle ofтиy, which Caesar offered his countrymen in exchange
for their freedom. (Macrob. Sat., 2, 7.) On one oc-
casion he challenged all persons of his own profession
to contend with him on the stage; and in this compe-
tition he successfully overcame every one of his rivals.
By his success in the representation of these popular
entertainments, he amassed considerable wealth, and
lived with such luxury, that he never gave a grand sup-
ner without having sows' udder at table, a dish which
was prohibited by the censors as being too great a
luxury even for the table of patricians. (Plin., 2, 51.)
Nothing farther is known of his history, except that
he was still continuing to perform his dramas with
applause at the period of the death of Laborius, which
happened ten months after the assassination of Caesar.
(Chron. Euseb. ad Olymp., 184.) We have not the
name, or the career, or the works of his rival, Publius
Fuscus. We have, however, preserved to us something
of their nature or subject; all that is pre-
served from them being a number of detached senti-
ments or maxims, to the amount of 800 or 900, seldom
exceeding a single line, but containing reflections of
unnerved force, truth, and beauty, on all the various
relations, situations, and feelings of human life. Both
the writers and actors of maxims were probably careful
to have their memory stored with commonplacees and
precepts of morality, in order to introduce them appro-
riately in their extemporean performances. The
maxims of Publius were interspersed through his
dramas; but, being the only portion of these produc-
tions now remaining, they have just the appearance of
thoughts or sentiments, like those of Rochefooucauld.
His maxims must either have been very numerous, or
very thickly loaded with these moral aphorisms. It is
also curious to find in these maxims such a close
connexion between the dramatic and the maxim tone
even of regular comedy, and appear for the
greater part to be almost stoidal maxims. Seneca has re-
marked, that many of his eloquent verses are fitter for
the buskin than the slipper. (Ep. 8.) How such ex-
alted precepts should have been grafted on the lowest
farcce, and how passages, which would hardly be appro-
priate in the most serious sentimental comedy, were
adapted to the actions or manners of gross and drunken
buffoons, is a difficulty which could only be solved had
we fortunately received entire a larger portion of these

7 F

protecting the rights of the people (poppium and colo,
Poplicola, Publicola). Niebuhr differs from this ety-

mology in the following remarks: "We cannot agree with the Greek Dionysius and Plutarch in translating
Publilola as a compound term by δημοσιος, 'the
protector of the people,' but we must recognise there-
in the old Latin form of the adjective with a superflu-
ous termination, which is sometimes mistaken for a
diminutive, sometimes for a compound. It is equiv-
lent to Publicus, in the sense of δημοτικος. Thus
Scaevola is not the diminutive, but synonymous with
Scaurus, and Equicola is nothing but Equius or
Equius; Volcacius nothing but Volcatus." (Roman
History, Vol. 2, p. 40.)

PULSILLÀ LEX. I. a law proposed by Publius the
Dictator, A.U.C. 414, ordaining, that before the, people
gave their votes, the senate should authorize what-
ever they might determine. (Livy, 8, 12.)—II. A law
ordaining that the plebeian magistrates should be
created at the comitia tributa. (Liv., 2, 56.)

Publius Syrus, a celebrated composer and actor of
mimes. He was a native of Syria, and was brought
from there to Rome in the days of the Roman
proconsul, with his countryman and kinsman Maiulius Antiochus,
the professor of astrology, and Stabierus Eros, the
grammarian, who all, by some desert in learning, rose
above their original fortune. He received a good ed-
cucation and liberty from his master, in reward for his
witticisms and his facetious disposition. He first rep-
resented his mimes in the provincial towns of Italy,
whence, his fame having spread to Rome, he was sum-
moned to the capital. He brought to Rome his fam-
cles which Caesar offered his countrymen in exchange
for their freedom. (Macrob. Sat., 2, 7.) On one oc-
casion he challenged all persons of his own profession
to contend with him on the stage; and in this compe-
tition he successfully overcame every one of his rivals.
By his success in the representation of these popular
entertainments, he amassed considerable wealth, and
lived with such luxury, that he never gave a grand sup-
ner without having sows' udder at table, a dish which
was prohibited by the censors as being too great a
luxury even for the table of patricians. (Plin., 8, 51.)
Nothing farther is known of his history, except that
he was still continuing to perform his mimes with
applause at the period of the death of Laborius, which
happened ten months after the assassination of Caesar.
(Chron. Euseb. ad Olymp., 184.) We have not the
name, or the career, or the works of his rival, Publius
Fuscus. We have, however, preserved to us something
of their nature or subject; all that is pre-
served from them being a number of detached senti-
ments or maxims, to the amount of 800 or 900, seldom
exceeding a single line, but containing reflections of
unnerved force, truth, and beauty, on all the various
relations, situations, and feelings of human life. Both
the writers and actors of mimes were probably careful
to have their memory stored with commonplacees and
precepts of morality, in order to introduce them appro-
riately in their extemporean performances. The
maxims of Publius were interspersed through his
dramas; but, being the only portion of these produc-
tions now remaining, they have just the appearance of
thoughts or sentiments, like those of Rochefooucauld.
His mimes must either have been very numerous, or
very thickly loaded with these moral aphorisms. It is
also curious to find in these maxims such a close
connexion between the dramatic and the maxim tone
even of regular comedy, and appear for the
greater part to be almost stoidal maxims. Seneca has re-
marked, that many of his eloquent verses are fitter for
the buskin than the slipper. (Ep. 8.) How such ex-
alted precepts should have been grafted on the lowest
farcce, and how passages, which would hardly be appro-
priate in the most serious sentimental comedy, were
adapted to the actions or manners of gross and drunken
buffoons, is a difficulty which could only be solved had

1145
Puteoli, a city of Campania, now Pozzuoli, on the coast, and not far from the Lucrine Lake. Its Greek name was Dicumarchia; but, when the Romans sent a colony thither, they gave it the name of Puteoli, probably from the number of its wells, or perhaps from the stench which was emitted by the sulphurous and aluminous springs in the neighbourhood. (Strabo, 245, —Plin., 31, 2.) Respecting the origin of this place, we learn from Strabo that it was at first the harbour of Cumæ. Hence we may fairly regard it as a colony of that city, without calling in the Samians to assist in its foundation, as Stephanus Byzantinus reports, and Hieronymus. (Euseb., Chron., 2.) The Romans appear to have first directed their attention to this spot in the second Punic war, when Fabius the consul was ordered to fortify and garrison the town, which had only been frequented hitherto for commercial purposes. (Liv., 24, 7.) In the following year it was attacked by Hannibal without success (Liv., 24, 13), and about this time became a naval station of considerable importance; armies were sent to Puteoli from thence (Liv., 26, 17), and the embassy sent from Carthage, which was to sue for peace at the close of the second Punic war, was seized here, and sent back by land (Liv., 30, 22), as did St. Paul about 250 years afterward. The apostle remained seven days at Puteoli before he set forward on his journey by the Appian Way. (Acts, xxviii., 13.) In the time of Strabo, this city appears to have been a place of very great commerce, and particularly connected with Alexandria; the imports from that city, which was then the emporium of the East, being much greater than the exports of Italy. (Strabo, 793, —Suet., Aug., 98, —Nestor, Ep., 77.) The harbour of Puteoli was spacious and of peculiar construction, being formed of vast piles of mortar and sand, which, owing to the strongly cementing properties of the latter material, became very solid and compact masses; and these, being sunk in the sea, afforded secure anchorage for any number of vessels. (Strab., 245.) Pliny (35, 13) has remarked this quality of the sand in the neighbourhood of Puteoli, which made it the best sand in the world. The same writer informs us (38, 12), that this harbour possessed also the advantage of a conspicuous lighthouse. The remains which are yet to be seen in the harbour of Puteoli are commonly, but erroneously, considered to be the ruins of Caligula’s bridge; whereas that emperor is said expressly to have used boats, anchored in a double line, for the construction of the bridge which he threw over from Puteoli to Baiae; these were covered with earth, after the manner of Xerxes’s famous bridge across the Hellespont. Upon the completion of the work, Caligula is described as appearing there in great pomp, on horseback or in a chariot, for two days, followed by the praetorian band and a splendid retinue. It is evident, therefore, that this structure was designed for a temporary purpose, and it is farther mentioned that it was begun from the piles of Puteoli. (Suet., Calig., 19.—Josephus, Antiq. Jud., 19, 1.) Puteoli became a Roman colony A.U.C. 558, was re-colonized by Augustus, and again, for the third time, by Nero. (Tacit., Ann., 14, 27.) This place appears to have esposed the cause of Vesuvian with great zeal, from which circumstance, according to an inscription, it obtained the title of Colonia Flavia. The same memorial informs us, that Antoninus Pius caused the harbour of Puteoli to be repaired. (Cra-mer’s Anc. Italy, vol. 2, p. 193.) At the time of the battles at Rome, in the vicinity of the Esquiline. The Campus Esquilius was, in the early days of Rome, without the walls of the city, and a number of pits were dug in it to receive the dead bodies of the lower orders. These holes were called putuli, from their resemblance to wells, or, more probably, from the stench which issued from them, in consequence of this practice. (Varro, L. L., 4, 5.—Fest., s. v. Putuli.) The Esquiline seem to have been considered as unwelcome still this mode of burial was discontinued, which change took place in the reign of Augustus, when the gardens of Maecenas were laid out here. (Hor., Sat., 1, 86.—Id., Ep., 5, 100.) Pyrgus, a city of Macedonia, on the western shore of the Sinus Thermaicus, above Diun. The earliest mention of this town is in Scylax, who styles it a Greek city (p. 26), from which it appears that at that time to have been independent of the Macedonian princes. Pyrgides speaks of an attack made upon it by the Athenians before the Peloponnesian war (1, 61). It was afterward taken by Archelaus, king of Macedon, who removed its site twenty stadia from the sea, as Didorus asserts; but Thucydides states, that it had been, long before that period, in the possession of Alexander the son of Amyntas, and that Theinosticles sailed thence on his way to Persia (1, 137). After the death of Archelaus, Pydna again fell into the hands of the Athenians; but the circumstances of this change are not known to us. It was afterward taken from them by Philip, and given to Olynthus. The next fact relative to Pydna which is recorded in history, is posterior to the time when, after the death of its mother Olympia, was here besieged by Cassander; and, all hopes of relief being cut off by the intrenchment having been made round the town from sea to sea, famine at length compelled Olympia to surrender, when she was thrown into prison, and afterward put to death. (Diod. Sic., 19, 51.) Pydna is also famous for the decisive victory gained in its neighbourhood by Paulus Emilius over the Macedonian army under Pergamus, which put an end to the confederacy of the Phocians. The epitomiser of Strabo says, that in his time it was called Kitros (Strab., 509); as likewise the scholar to Demostenes; and this name is still attached to the spot at the present day. Dr. Clarke observed at Kitros a vast tumulus, which he considered, with much probability, as marking the site of the great battle fought in these plains. (Cramer’s Anc. Greece, vol. 1, p. 214, seqq.) Pyrgus was a famous nation of dyes, placed by Aristotle near the sources of the Nile (Hist. An., 8, 12.—Elian, H. A., 2, 1; 3, 13); by Ctesias, in Indasia (Ind., 11); and by Eustathius, amusingly enough, in England, over against Thule (ἐν τῇ Τρύλη). (Eustath. ad Ili., 3, 6, p. 372) —They were of a very diminutive size, being, according to one account, of the height merely of a νυμφή, or 20 fingers’ breadth (Eustath. l. c.), while others made them three σπυρα-μαί, or 27 inches in size. (Plin., 7, 2.) The Pyrgi- nes are said to have lived under a salubrious sky and amid a perpetual spring, the northern blasts being kept off by lofty mountains. (Plin., l. c.) An annual war- fare was waged between them and the cranes (Hom., Ill., 3, 3); and they are said to have advanced to battle against these birds, mounted on the backs of rams and goats, and armed with bows and arrows. They used also a kind of bells or rattles (εἰρησιδήρεα) to scare them away. (Hecateus, ap. Schol. ad Ili., 3 6.—Heyne, ad loc.—Plin., l. c.) Every spring they came down in warlike array to the seashore, for the purpose of destroying the eggs and young of the cranes, since otherwise they would have been overpowered by the number of their feathered antagonists. (Hecateus, ap. Plin., l. c.) Their dwellings were constructed of clay, feathers, and the shells of eggs. Aristotle, however, makes them to have lived in houses which ancient people to have come out at harvest-time with hatchets to cut down the corn, as if to fell a forest. (Eustath., l. c.) Philostorus relates, that Hercules once fell asleep in the deserts of Africa after he had con-
quered Antæus, and that he was suddenly awakened by an attack which had been made upon his body by an arrow from the Liliputians, who professed to be the avengers of Antæus, since they were his brethren, and earthborn like himself. A simultaneous onset was made upon his head, hands, and feet. Arrows were discharged at him, his hair was ignited, spades were thrust into his eyes, and coverings or doors (ψάκα) were applied to his mouth and nostrils to prevent respiration. The hero awoke in the midst of the war-party of so much strength wielded with so much courage by a hand played by his tiny foes, that he gathered them all into his lion skin and brought them to Euryseus. (Philostr., Icon., 2, 22, p. 517, ed. Morell.)—The Pygmies of antiquity, like those of more modern times, may be safely regarded as mere creatures of the imagination. We have had them even placed, by popular belief, in our own country. A number of small graves, two or three feet in length, containing fragments of evidently adult bones. The idea of a pigmy race was immediately conceived; but it was unknown to the discoverers, that the Indians, after disinterring their dead, buried them in graves just large enough to hold the bones made up into a small bundle for the convenience of transportation. (M'Cullock, Researches on America, p. 516.)—With respect to the Pygmies of ancient fable, it may be remarked, that they were frequently Ingram a large number of lands, without specifying their particular locality; nor does he say a word respecting their diminutive size. (Heyne, ad Hom., II., 3, 3.) Aristophanes, as we have already said, assigns them a residence near the sources of the Nile (Hist. An., 8, 15), in which he is followed by Eliaii (H. A., 2, 1; 3, 15) and others. Some agree with Ctesias in making India their native country. Pliny, in one passage, places them in India (7, 2), but in another in Thrace (2). Others, again, make the cranes to wing their way from the northern regions over the Pontus Euxinus, regard Scythia and Thrace as the Pygmy land. Many have supposed that the fable of the Pygmies and cranes has a reference to the country of Egypt. As the cranes make their appearance there about the month of November, the time in which the waters are subsided, and devour the corn sown on the lands, the whole fable of the Pygmies may be explained by supposing them to have been none other than the Egyptians, and the term pygmán (πυγμαῖος) not to refer to any diminutiveness of size, but to the cubita (πυγμάξ, πυγμάης) of the Nile’s rise. Some scholars suppose the germe of the fable to be found in the remarks of Strabo, respecting the μερισμάτα τῶν ἐν ἄρδεα φθείρων. (Strabo, 820.) Bowron, in his Travels to the Cape of Good Hope (vol. 1, p. 299), endeavours to identify the Boeotians of the Cape, and the Pygmies of the ancients, but with no great success. Heeren regards the whole Pygmy narrative as fabulous, but assigns it an Indian origin, and makes it to have spread from the East into the countries of the West (Idées, vol. 1, p. 368). Malte-Brun inclines in favour of the existence of a pygmy race, from the accounts of modern travellers, who state that they have seen in the remote East small and diminutive beings not more resembling the pygmies of former ages, and for the most part only four feet in size. Hence he thinks it not unlikely that a diminutive race, resembling, in some degree, the ancient pygmies, may still be existing among the remote and desert regions of Thibet! (Malte Brun, Annales des Voyages, vol. 1, p. 355, seq.—Bähr, ad Ctes., p. 295.)

PYGMAEUS, I., a son of Strophius, king of Phocis, by one of the sisters of Agamemnon. He was educated together with his cousin Orestes, with whom he formed a most intimate friendship, and whom he aided in avenging the murder of Agamemnon by the punishment of Clytemnestra and Egisthus. He received in marriage the hand of Electra, the sister of Orestes, by whom he had two sons, Medon and Strophus. The friendship of Orestes and Pylades became proverbial. (Vid. Orestes.)—II. A celebrated actor in the reign of Augustus, banished by that emperor for pointing with his finger to one of the audience who had hissed him, and thus making himself known to all. (Suet., Vit. Aug., 45.—Macrob., Sat., 2, 7.)

PYLOIDES, I., a son of Strophius, king of Phocis, by one of the sisters of Agamemnon. He was educated together with his cousin Orestes, with whom he formed a most intimate friendship, and whom he aided in avenging the murder of Agamemnon by the punishment of Clytemnestra and Egisthus. He received in marriage the hand of Electra, the sister of Orestes, by whom he had two sons, Medon and Strophus. The friendship of Orestes and Pylades became proverbial. (Vid. Orestes.)—II. A celebrated actor in the reign of Augustus, banished by that emperor for pointing with his finger to one of the audience who had hissed him, and thus making himself known to all. (Suet., Vit. Aug., 45.—Macrob., Sat., 2, 7.)

PYLON, I., ancient city of Elis, about eighty stadia to the east of the city of Elis, and which disputed with two other towns of the same name the honour of being the capital of Nestor’s dominions; these were Pylos of Triphylia, and the Messenian Pylus. This somewhat interesting question in Homeric geography will be considered under the head of the last-mentioned city. Paussinus informs us (6, 22) that the Elean city was originally founded by Pylus, son of Cleson, king of Megara; but that, having been destroyed by Hercules, it was afterward restored by the Eleans. (Compare Xen., Hist. Gr., 7, 4, 16.) This town was deserted and in ruins when Paussinus made the tour of Elis. We collect from Strabo (330) that Pylos was at the foot of Mount Pholoc, and between the heads of the rivers Peneus and Selleis. This site agrees sufficiently with a spot named Portes, where there are vestiges of antiquity, under Mount Mountain, which must be that Pylaon mentioned by Cicer., Dix., of Arg., 30, ed.—Cramér’s Anc. Greece, vol. 3, p. 91.)—II. A city of Elis, in the district of Triphylia, regarded by Strabo, with great probability, as the city of Nestor. (Vid. Pylus III.) It is placed by that geographer at a distance of thirty stadia from the coast, and near a small river once called Amathus and Pamisius, but subsequently Mamais and Arcadiceus. The epithet of ὀμαθείς, applied by Homer to the Pallian territorians referred to the first of these names. (Strabo, 344.) Notwithstanding its ancient celebrity, this city is scarcely mentioned in later times. Pausanias, even, does not appear to have been aware of its existence (6, 22). Strabo affirms that on the conquest of Triphylia by the Eleans, they annexed its
PYLOS.

territory to the neighbouring town of Lepanto. (Strab., 355.) The vestiges of Pylos are thought by Sir W. Gell to correspond with a Palatio Castro, situated at Pischia or Piskini, about two miles from the coast. Near this is a village called Sarone, perhaps a corruption of Arene. (Isth. of the Morea, p. 40.—Cramer's Anc. Greece, vol. 3, p. 117.—III. A city of Messenia, on the western coast, off which lay the island of Spachteria. It was situated at the foot of Mount Egealeus, now Geranio or Agio Elia. (Strabo, 459.) This city was regarded by many as the capital of Nestor's dominions, and, at a later period, was celebrated for the brilliant successes obtained there by the Athenians in the Peloponnesian war. It is necessary, however, to distinguish between the ancient city of Pylos, and the fortress which the Athenian troops under Demostenes erected on the spot termed Coryphasion by the Lacedaemonians. (Thucyd., 4, 3.) Strabo affirms, that when the town of Pylos was destroyed, part of the inhabitants retired to Coryphasion; but Pausanias makes no distinction between the old and new town, simply stating that Pylos, founded by Pylus, son of Cleson, was situated on the promontory of Coryphasion. To Pylos he has also attributed the foundation of Pylos in Elis, which chief retired on his expulsion from Messenia by Neleus and the Thessalian Pelasgi. He adds, that a temple of Minerva Coryphasia was to be seen near the spot, and that the horse's monument was likewise to be seen there. Strabo, on the contrary, has been at considerable pains to prove that the Pylos of Homer was not in Messenia, but in Triphylia. From Homer's description, he observes, it is evident that Nestor's dominions were traversed by the Alpheus; and, from his account of Telemaechus' voyage when returning to Ithaca, it is also clear that the Pylos of the Odyssey could neither be the Messenian city, for which Homer made the pass Cruni, Chalcis, Phea, and the coast of Elis, which he could not have done if he had set out from the last-mentioned place; if from the former, the navigation would have been much longer than from the description we are led to suppose, since we must reckon 400 stadia from the Messenian to the Triphylion Pylos only, besides which, we may presume, the poet would in that case have named the Neda, the Acidon, and the intervening rivers and places. Again, from Nestor to Pylos Homer assigned the whole, he must have been separated from that people by the Alpheus, a statement which cannot be reconciled with the position of the Elean Pylos. If, on the other hand, we suppose him to allude to the Messenian city, it will appear very improbable that Nestor should make an incursion into the country of the Epei, and return from thence with a vast quantity of cattle, which he had to convey such a distance. His attempt to the enemy as far as Buprasium and the Oleman rock, after their defeat, is equally incompatible with the supposition that he marched from Messenia. In fact, it is not easy to understand how there could have been any communication between the Epeans and the subjects of Nestor, if they had been so far removed from each other. But as all the circumstances mentioned by Homer agree satisfactorily with the situation of the Triphylion city, we are necessarily induced to regard it as the Pylos of Nestor. Such are the chief arguments adduced by Strabo.—According to Thucydides, the Messenian Pylos had two entrances, one on each side of the island of Spachteria, but of unequal breadth; the narrowest being capable of admitting only two vessels abreast. The harbour itself must have been very capacious for two such considerable fleets as those of Athens and Sparta to engage within it. These characteristics sufficiently indicate the port or bay of Nanarino as the scene of those most interesting events of the Peloponnesian war which are detailed in the fourth book of Thucydides. A spot named Pila, and laid down in Lapie's map as nearly in the centre of the bay, probably corresponds to the ancient Pylos. (Cramer's Anc. Greece, vol. 3, p. 132, seqq.)

PYRAMIDES, famous monuments of Egypt, of massive masonry, which, from a square base, rise diminishing to a point or vertex when viewed from below.—The pyramids commence immediately south of Cairo, but on the opposite side of the Nile, and extend in an uninterrupted range for many miles in a southerly direction parallel with the banks of the river. The perpendicular height of the first, which is ascribed to Cheops, is 480 feet 9 inches, that is, 43 feet 9 inches higher than St. Peter's at Rome, and 136 feet 9 inches higher than St. Paul's in London. The length of the former base was 764 feet, that of the present base is 746 feet. (Vycy, Operations at the Pyramids of Gizeh, vol. 2, p. 109.) The following are the dimensions of the second pyramid: the base, 684 feet; the central line down the front from the apex to the base, 509; the perpendicular, 356; calculating from the top to where it ends, 140. These dimensions, being considerably greater than those usually assigned even to the first or largest pyramid, are to be accounted for by their being taken (by Belzoni) from the base as cleared of sand and rubbish, while the measurements of the first pyramid given by others only applied to it as measured from the level of the surrounding sand —which they were, at the time of the measurement, which they were formed, have furnished matter for much ingenious conjecture and dispute in the absence of certain information. It has been supposed that they were intended for scientific purposes, such as that of establishing the proper length of the cubit, of which they contain, in breadth and height, a certain number of multiples. They were, at all events, constructed on scientific principles, and give evidence of considerable knowledge of the science of geometry; and it is accurately adapted to the four cardinal points. Whether they were applied to sepulchral uses, and intended as sepulchral monuments, has been doubted; but the doubts have in a great measure been dispelled by the recent discoveries made by means of laborious excavations. The drifting sand had, in the course of ages, collected around their base to a considerable height, and had raised the general surface of the country above the level of the sea; for it passed on over the chambers constructed. The entrance to the chambers had also been, in the finishing, shut up with large stones, and built round so as to be uniform with the rest of the exterior. The largest, called the Pyramid of Cheops, had been opened, and some chambers discovered in it, but not so low as the base, till Mr. Davison, British consul at Algiers, explored it in 1763, when accompanying Mr. Worlty Montague to Egypt. He discovered a room before unknown, and descended the three successive wells to a depth of 155 feet. Captain Cavigilia, master of a merchant-vessel, afterward pursued the principal oblique passage 200 feet farther down than any former explorer, and found it communicate with the bottom of the well. This circumstance creating a circulation of air, he proceeded 28 feet farther, and found a spacious room 66 feet by 27, but of unequal height, under the centre of the pyramid, supposed by Mr. Salt to have been the place for containing the Thea or sarcophagus, though now none is found in it. The room is 30 feet above the level of the Nile. The upper chamber, 354 feet by 174, and 181 high, still contains a sarcophagus.—Three chambers, hitherto undiscovered, were exposed and opened, in 1836—7, by Colonel Vyse. The longest, measuring 35 feet 1 inch, by 17 feet 1 inch, has been designated by him the Horus chamber. The second (38 feet 9 inches, by 16 feet 8 inches) he named "Nelson's;" and the third (37 feet 4 inches, by 16 feet 4 inches) has been called after

1148
PYRAMIDES.

Lady Arbuthnot, who was present at the time of the discovery. These chambers vary as to height, and the blocks of granite which form the ceiling of the one below serve as the pavement of the one above it. According to Colonel Vyse, these three chambers were chiefly intended as voids in that portion of the pyramidal top above what is termed the "king's chamber" (the only one that appears to have had any destination), and thereby to lessen the superincumbent mass. (Consult the costly and elaborate work of Colonel Vyse, "Operations carried on at the Pyramids of Gizeh in 1837," &c., London, 1840, 2 vols. 4to.—vol. 1, pp. 205, 233, 256.)—In the course of the work just alluded to (vol. 2, p. 105), Colonel Vyse has some remarks on the question whether the pyramids were intended in any way with astronomical purposes. It seems that, in six pyramids which have been opened, the principal passage preserves the same inclination of 26° to the horizon, being directed to the polar star. "As it had been supposed," remarks the colloquy, "that the inclined passages were intended for astronomical purposes, I mentioned the circumstance to Sir John Herschel, who, with the utmost kindness, entered into various conversations with me. He supposed, from the fact that the inclined passage of Sir John of the allusion in the 'Quarterly Review' to Mr. Caviglia's remarks respecting the polar star, and likewise of its having been seen by Captain Irby and Mangles from the inclined passage in the Great Pyramid, at the period of its culminating, on the night of the 21st of March, 1817. It would appear from the remarks of Sir John, which here follow, that the direction of the passage was determined by the star which was polar at the time that the pyramid was constructed, and that the exact aspect of the building was regulated by it; but it could not have been used for celestial observation. The coincidence of the relative position of a Dracconis is at all events very remarkable." 1

"Four thousand years ago, the present polar star, a Ursa Minoris, could by no possibility have been seen at any time in the twenty-four hours through the gallery in the Great Pyramid, on account of the precession of the Equinoxes, which at that time would have displaced every star in the heavens, from its then apparent position on the sphere, by no less a quantity than 55° 43' of longitude, and would have changed all the relations which the pyramids were connected in any way with astronomical purposes. The supposed date of the pyramid, 2123 years B.C., added to our present date, 1839, form 3962 years (say 4000), and the effect of the precession on the longitudes of the stars in that interval having been to increase them all by the above-named quantity, it will follow that the pole of the heavens, at the erection of the pyramid, must have stood very near to the star a Dracconis, that is, 26° 51' 15" from it to the westward, as we should now call it; a Dracconis was therefore, at that time, the polar star; and as it is comparatively insignificant, and only of the third magnitude, if so much, it can scarcely be supposed that it could have been seen in the daytime even in the climate of Gizeh, or even from so dark a recess as the inclined entrance of the Great Pyramid. A latitude, however, of 30° 3, and a polar distance of the star in question of 165° 51' 15", would bring it, at its lower culmination, to an altitude of 2° 32' above the horizon, a position which might very conveniently have been taken right in view of an observer stationed in the descending passage, the opening of which, as seen from a point sixty-three feet within, would, by calculation, subtend an angle of 7° 7'; and even from the bottom, near the septural chamber, would still appear of at least 2° 9' in breadth. In short, speaking as in ordinary parlance, the passage may be said to have been directly pointed at a Dracconis, at its inferior culmination, at which moment its altitude above the horizon of Gizeh (lat. 30°) would have been 27° 9', and the star being neglected as too trifling (about 2°) to affect the question. The present polar star, a Ursa Minoris, was at this epoch 29° more or less in arc from the then pole of the heavens, and, of course, at its lower culmination, it was only 7° above the horizon of Gizeh." (Vyse, Operations, &c., vol. 2, p. 107, seq.)

2. Operations of Belzoni.

Belzoni, after some acute observations on the appearances connected with the second pyramid, or that of Chephrenes, succeeded in opening it. The stones which had constituted the coating (by which the sides of most of the pyramids were connected in any way with astronomical purposes) were removed or forced out by the force of water, and the face that had been kept under a state of compact and ponderous rubbish, presenting a formidable obstruction; but somewhat looser in the centre of the front, showing traces of operations for exploring it in an age posterior to the erection. On the east side of the pyramid he discovered the foundation of a large temple, connected with a portico appearing above ground, which had induced him to explore that part. He also observed that, if it were not fifty feet distant, a way was cleared through rubbish forty feet in height, and a pavement was found at the bottom, which is supposed to extend quite round the pyramid; but there was no appearance of any entrance. On the north side, notwithstanding the same general appearance presented itself after the rubbish was cleared away, one of the stones, though nicely adapted to its place, was left out of the face; and when it was removed, a hollow passage was found evidently forced by some former enterprising explorer, and rendered dangerous by the rubbish which fell from the roof; it was therefore abandoned. Reasoning by analogy from the entrance of the first pyramid, which is to the east of the centre on the north side, he explored in that situation, and found, at a distance of thirty feet, the true entrance. After incredible perseverance and laborious operations, he brought numerous passages, all cut out of the solid rock, and a chamber forty-six feet three inches by sixteen feet three inches, and twenty-three feet six inches high. It contained a sarcophagus in a corner, surrounded by large blocks of granite. When opened, after great labour, this was found to contain bones, which moulder down when touched, and, from specimens afterward examined, turned out to be the bones of an ox. Human bones were also found in the same place. The time of the pyramid, as estimated from the inscription, was on the wall, signifying that "the place had been opened by Mohammed Ahmed, lapicid, attended by the master Othman, and the king Ali Mohamed," supposed to be the Ottoman emperor, Mohammed I., in the beginning of the fifteenth century. It was observed that the rock surrounding the pyramids, on the north and west sides, was on a level with the upper part of the chamber. It is evidently cut away all around the chamber, and large stones, lastly, probably applied to the erection of the pyramid. There are many places in the neighbourhood where the rock has been evidently quarried, so that there is no foundation for the opinion formerly common, and given by Herodotus, that the stones had been brought from the east side of the Nile, which is only probable as applied to the granite brought from Syene. The operations of Belzoni have thrown much light on the subject, in which the ancients were constructed, as well as the purposes for which they were intended. That they were meant for sepulchres can hardly admit of a doubt. It is remarkable that no hieroglyphical inscriptions are found in or about the pyramids as in the other tombs; a circumstance which is supposed to indicate the period of their construction to have been prior to the invention of that mode of writing, though some think that the variation may be accounted for by a difference
PYRAMIDES.

3. Who were the labourers employed on the Pyramids?

A very curious inquiry now remains as to the labourers employed in erecting these stupendous structures, and the following remarks on this subject, though they may not be acceded to in their full extent, will yet, it is conceived, not prove unacceptable. They are from Calmet's Dictionary (vol. 3, p. 217, seq.).

On the supposition that they were native Egyptians, Voltaire has founded an argument in proof of the slavery of that people; but that they were really natives is a point which admits of considerable doubt. The universal practice of all ancient Oriental nations seems to have been, to employ captive foreigners in erecting laborious and painful works, and Diodorus (1, 2) expressly asserts this of the Egyptian Sesostris. Is it improbable to suppose that one at least, if not all, of the structures in question, were the work of the Israelites?

Bondage is expressly attributed to them in the sacred writings; and that the Israelites did not make brick only, but performed other labours, may be inferred from Exodus, 9, 8, 10. Moses took "sack of the furnace," no doubt that which was tendered him by his people. So Psalm 81, 6, "I removed his shoulder from the burden, and his hands were delivered from the mortar-basket," not pots, as in our translation; and with this rendering agree the Septuagint, Vulgate, Symmachus, and others. Added to this, we have the positive testimony of Josephus that the Israelites were employed. The space of time allotted for the erection of these immense masses coincides with what is usually assigned to the slavery of the Israelites. Israel is understood to have been in Egypt 215 years, of which Joseph ruled seventy years; nor was it till long after his death that a "new king arose who knew not Joseph." If we allow about forty years for the extent of the generation which succeeded Joseph, added to his seventy, there remain about 105 years to the Pharaohs. According to Herodotus (3, 124, seqq.), Egypt, until the reign of Rhamnusius, was remarkable for its abundance and excellent laws. Cheops, who succeeded this prince, degenerated into extreme profligacy of conduct. He barred the avenues of every temple, and forbade the Egyptians from offering sacrifices. He next proceeded to make them labour servilely for himself by building the first pyramid. Cheops, the second, who reigned 86 years, did not succeed, and adopted a similar course: he reigned fifty-six years. Thus, for the space of 106 years, were the Egyptians exposed to every species of oppression and calamity; not having, during all this period, permission even to worship in their temples. The Egyptians had so strong an aversion to the memory of these two monarchs, that they would never mention their names, but always attributed their pyramids to one Philitis, a shepherd who kept his cattle in those parts.

We have here very plain traces of a government by a foreign family; and of a worship contrary to that which had been previously established in Egypt, as appears in the prohibition of sacrifices. In its continuance, moreover, of 106 years, it coincides with the bondage of the Israelites. There appears to be something mysterious concealed under the name and mention of the shepherd Philitis. It is clear that the Egyptians did not call the kings, by whose orders the pyramids were built, by this name in the hearing of Herodotus, since they referred them to their kings Cheops and Cheophrenes. It would seem, moreover, that the sheepherd Philitis had formerly, and at other times, customarily fed his cattle in the same spot. The following, then, may be regarded as the meaning of the passage in question: they attributed the labour of constructing the pyramids to a shepherd who came from Philistia, but who, at that time, fed his cattle in the land of Egypt; implying that they more readily told the appellation of the workman (the son of Israel, the shepherd, Gen., 47, 5) employed in the building, than of the kings by whose commands they were built. They seem to have pursued the same course in the case of Diodorus, who remarks (1, 2), "They admit that these works are superior to all which are seen in Egypt, not only by the immensity of their mass and by their prodigious cost, but still more by the beauty of their construction; and the workmen, who have rendered them so perfect, are much more estimable than the kings who paid their cost; for the former have hereby given a proof of their genius and skill, whereas the kings have employed the riches left them by their ancestors, or extorted from their subjects. They say the first was erected by Armaus; the second by Ammosis; the third by lnaron." In the common Greek text we read "Amaeis for the second name, but the best critics decide in favour of "Amaaiax. If we make a slight change also in the first name, and, instead of Armaus ("Amaeis), read Aramans ("Amaaiax), the result will be a curious one. On comparing the narrative of the Gospel with that of Moses and Aaron in the description of Moses and Aaron, we find that the proper appellation is the same, as near as pronunciation by natives of different countries could bring it: a Monwsis, or ha Mousis, is hu Moushe in Hebrew; and in Aron, or hin Aron, is written ha Aron, which certainly, when two vowels came together, took a consonant between them, being spoken as if written han Aron. This similarity, therefore, agrees with the supposition, that the Israelites were employed on the pyramids; first under the appellation of the Syrian or Aramean (the very title given to Jacob, Deut., 26, 5, "An Ara- mite ready to perish," &c.), and afterward under the names of the two most famous leaders of that nation, Moses and Aaron. (Calmet's Dictionary, l. c.)

4. Various etymologies of the word Pyramid (Πυραμίς).

Some derive the name Pyramid (Pyramix, Πυραμίς) from ραμώς, "to heap," on the supposition that they were meant for granaries! (Steph. Byz. s. v. —Etymol. Mag., s. v.) It is surprising that this etymology should have been approved of by Vossius. Another class of etymologists deduce the term from the Greek word ραμός, "fire," in allusion to the flame-shaped appearance of the structure, as it tapestys to a conical point. (Dilleday, Macaro, loc. cit. Schol. ad Horat., Od. 3, 30, 2 —Amm. Marcell., 22, 15) These and other derivations proceed upon the supposition that the word pyramid is of Greek origin, which nothing can be more erroneous. (Jablon- ski, Voc. Ελληνικ. —Opuscul., vol. 1, p. 221.) Some, taking the passage of Pliny for their guide, where he explains the term ὑστερακός by "radius Solis," and, regarding the pyramid as a species of the line of the sun from the Copti Pira-muce, which they make to signify "a ray of the sun." (Jablonski, p. 222) Wilkins thinks that pyramis comes from the Copitic Pouro misi, equivalent to "regia generatio," the pyramids being so called, according to him, "because they served as places of sepulture for lines of kings. Jablonski, however, well observes, that Pouro (or Pouro) misi can signify nothing else but "enclosed from kings." Finally, De Saey, the late eminent Oriental scholar of France, favours us with the
following. He makes ματ, in the word Ἱππατις, a mere Greek termination. It is then the Egyptian article, for which the Greeks wrote ί, in their wish to deduce the term from ταῖο, "fire." The syllable πυρ it refers to the root ἱππ, which, according to him, had in the Egyptian tongue, the meaning of separating, or settling anything apart from common use. Ἱππατις, therefore, will denote a sacred place or edifice, set apart for some religious purpose. (De Sacry, Observations sur l'origine du nom donné par les Grecs et les Arabes aux Pyramides d'Egypte.—Te Water, ad Jablonski. Voc. Πυρρος. p. 224.)

Pyramus, I. a youth of Babylom. (Vid. Thisbe.) This hero does not appear in any ancient history, but is mentioned in a romance of the mediaeval times, in the romance of the Alexander, rising in Mount Taurus, and falling into the Sinus Issicus. It is now the Giresham. This river forces its way, by a deep and narrow channel, through the barrier of Taurus; and such was the quantity of soil which it carried down, that an oracle affirmed that one day it would reach the sacred isle of Cyprus. (Strab. 536.) This, however, has not taken place; but a remarkable change has occurred with respect to the course of this river, which now flows by an easy and easy river, twenty-three, miles more to the east, in the Gulf of Scænderoon. (Cramer's Asia Minor, vol. 2, p. 351.)

Pyrenæi, a well-known range of mountains, separating Gallia from Hispania. The name was commonly supposed to be derived from the Greek term πυρ, "fire," and various explanations were attempted to be given of this etymology. According to some, these mountains were to be regarded as the home of Pyrrhus and his followers, who were, in the opinion, which Poseidonius deemed not improbable. (Diod. Sic. 5, 35 —Strab., 146. —Lucret. 5, 12, 42.) The true derivation, however, is evidently the Celtic Pyrens or Pyrn, "a high mountain," and from this name in a like manner he deduced the name of Mount Brenner in the Tyrol; that of Pyren, in upper Austria, that of Pernor, in many, and others. (Adlang, Mithradates, vol. 2, p. 87.) —The range of the Pyrenees is about 394 miles in length. These mountains are steep, difficult of access, and only passable at five places: 1st, From Languedoc to Catalonian; 2d, from Camminge into Aragon; 3d, at Tarrafa; 4th, at Maya and Pampeluna, in Navarre; and 5th, at Sébastián, in Biscaya, which is the easiest of all. (Polyb., 3, 34, seqq.—Mela, 2, 5.—Plin., 3, 3.)

Pyrgodes, a celebrated engraver on gems in the age of Alexander the Great. He had an exclusive privilege of engraving the conqueror, as Lysippus was the only sculptor who was permitted to make statues of him. Two gems carved by this artist are said to be extant (Bracci, Memorie, tab. 98, 99); but Winckelmann has, by many powerful arguments, proved them to be spurious. (Op., 6, 1, p. 107, seqq.)

Pyrrha, I. a daughter of Epicomenes and Pandora, and wife of Deucalion. (Vid. Deucalion.) II. A promontory of Thessaly, on the western coast of the Sinus Pagusarius, and a short distance below Demetrias. It is now Cape Antikstr. —III. A rock, with another in its vicinity named Deucalion, near the promontory mentioned in the preceding paragraph. (Strabo, 435.)

Pyrrho, a celebrated Greek philosopher, a native of Elea. In his youth he practised the art of painting; but, either through dissimulation, or because he did not much scruple at the art of painting and his love of painting, he was shut out from the school of painting to that of philosophy. He studied and admired the writings of Democritus, and had, as his first preceptor, Bryson, the son of Stipo, a disciple of Clementhalus. After this he became a disciple of Anaxarchus, who was contemporary with Alexander, and he accompanied his master, in the train of Alexander, into Asia. Here he conversed with the Brahmins and Gymnosophists, imbuing from their doctrine whatever might seem favourable to his natural disposition towards doubting: a disposition which was cherished by his master, who had formerly been a disciple of a sceptical philosopher, Metrodorus of Chios. Every advance which Pyrrho made in the study of philosophy involving him in fresh uncertainty, he left the school of the Dogmatists (so those philosophers who were called who professed to be possessed of a certain knowledge), and established a new school, in which he taught that every object of human knowledge is involved in uncertainty, so that it is impossible ever to arrive at the knowledge of truth. (Diag. Laert., 58, seqq.) It is related of this philosopher that he acted upon his own principles, and carried his scepticism so to ridiculous an extreme, that his friends were compelled to go about to abdomen him by fire and fire, lest he might not be run over by carriages or fall down precipices. If this was true, it was not without reason that he was ranked among those whose intellects were disturbed by intense study. But, if we pay any attention to the respect with which he is mentioned by ancient writers, or give any credit to the general history of his life, we must conclude these reports to have been calumnies invented by the Dogmatists, whom he opposed. He spent a great part of his life in solitude, and always preserved a settled composure of countenance, undisturbed by fear, or joy, or grief. He endured bodily pain with great fortitude, and in the midst of dangers discovered no signs of apprehension. In disputation he was celebrated for the subtlety of his arguments and the perspicacity of his language. Epicurus, though no friend to scepticism, was an admirer of Pyrrho, and esteemed him the greatest man of his age, because of his self-command which produces undisturbed tranquillity, the great end, in the judgment of Epicurus, of all physical and moral science. So highly was Pyrrho esteemed by his countrymen, that they honoured him with the office of chief priest, and, out of respect to him, passed a decree, by which all philosophers were indulged with immunity from public taxes. He was a great advocate of the welfare and happiness of Helen, and frequently repeated passages from his poems. Could such a man be so foolishly enslaved by an absurd system as to need a guide to keep him out of danger? Pyrrho flourished about B.C. 340, and died about the nineteenth year of his age, probably about B.C. 229. After his death, the Athenians honoured his memory with a statue, and a monument to him was erected in his own country. (Enfield, History of Philosophy, vol. 1, p. 29.)

Pyrrhus, I. a son of Achilles and Deidamia, the daughter of King Lycomedes, who received this name from the yelloweness of his hair. He was also called Neoptolemus, or new warrior, because he came to the Trojan war in the last years of the celebrated siege of the capital of Troas. He was brought up, and remained at the court of his maternal grandfather until after his father's death. The Greeks, then, according to an oracle which had declared that Troy could not be taken unless one of the descendants of Aeacus were among the besiegers, despatched Ulysses and Phoenix to Scyros for the young prince. He had no sooner arrived before Troy, than, having paid a visit to the tomb of Achilles, he was appointed to accompany Ulysses in his expedition to Lemnos, for the purpose of prevailing on Philoctetes to repair with the arrows of Heracles to the assistance of the Trojans. This was done, and Pyrrhus sacrificed him to the muses of his father. Pyrrhus is also among the number of those whom the precipitation of the young Astyanax from the summit of a
PYRRHUS.

PYRRHUS.
tower is attributed; and it was he that immaculated
Polyxena to his father's shade. In the division of the
captives after the termination of the war, Andromache,
the widow of Hector, and Helenus, the brother of the
latter, were assigned to Pyrrhus. After some time
had elapsed, he gave up Andromache to Helenus, and
sought and obtained the hand of Hermione, daughter
of Menelaus and Helen; but he was slain for this by
Orestes, son of Agamemnon. (Europ., Andr., 1244,
A. 18; Liv., Lv., 319, sec. 31; Xen., Hell., 12, ad Æn., 3.)—II. A king of Epirus, descended
from Achilles on the mother's side. He was saved
when an infant, by the fidelity of his servants, from
the pursuits of the enemies of his father, who had been
banished from his kingdom, and he was carried to
the court of Glautias, king of Illyricum, who educated him
with great tenderness. Cassander, king of Macedo-
nia, wished to despatch him; but Glautias not only
refused to deliver him up into the hands of his enemy,
but he even went with an army, and placed him on his
throne of Epirus, though only twelve years of age.
About five years after, the absence of Pyrrhus to at-
tend the nuptials of one of the daughters of Glautias
raised new commotions. The monarch was expelled
from his throne by Neoptolemus, who had usurped it
after the death of Æacides; and being still without
resources, he applied to his brother-in-law Demetrius
for assistance. He accompanied Demetrius at the
battle of Philippi, and survived the fragments of the
intrepid and intrepidty of an experienced general. He
afterward passed into Egypt, where, by his marriage with
Antigone, the daughter of Berenice, he soon obtained
a sufficient force to attempt the recovery of his throne.
He was successful in the undertaking; but, to remove
all causes of quarrel, he took the usurper to share
with him the royalty, and some time after he put him
to death, under pretence that he had attempted to poison
him. After remaining many years in the service of
Pyrrhus, engaged in the quarrels which disturbed the peace
of the Macedonian monarchy. He marched against
Demetrius, and gave the Macedonian soldiers fresh proofs
of his valour and activity. By dissimulation he ingra-
tiated himself in the minds of his enemy's subjects;
and when Demetrius laboured under a momentary ill-
ness, Pyrrhus made an attempt upon the crown of Ma-
cedonia, which, if not then successful, soon after ren-
dered him master of the kingdom. After the death of
the king, which happened in conjunction with Lysimachus
for seven months, till the jealousy of the Macedonians
and the ambition of his colleague obliged him to retire.
Pyrrhus was meditating new conquests, when the Tarntines
invited him to Italy to assist them against the encroaching power of Rome. He gladly accepted the invitation, but his passage
across the Adriatic proved nearly fatal, and he reached
the shores of Italy after the loss of the greatest part of
his troops in a storm. At his entrance into Tarnt-
tum, B. C. 280, he began to reform the manners of the
inhabitants, and, by introducing the strictest discipline
among their troops, to accustom them to bear fatigue
and to despise dangers. In the first battle which he
fought with the Romans he obtained the victory; but
for this he was more particularly indebted to his ele-
phants, whose bulk and uncommon appearance aston-
ished the Romans, and terrified their cavalry. The
number of the slain was equal on both sides, and the
commentator said that another such victory would ruin
him. He also sent Cines, his chief minister, to
Rome, and, though victorious, he sued for peace.
These offers of peace were refused; and when Pyrrhus
questioned Cines about the manners and the char-
acter of the Romans, the sagacious minister replied that
their senate was a venerable assembly of kings, and
that to fight against them was to attack another Hydra.
A second battle was soon after fought near Asculum,
but the slaughter was so great, and the valour so con-
spicuous on both sides, that the Romans and their
emies reciprocally claimed the victory as their own.
Pyrrhus still continued the war in favour of the Tarent-
tines, when he was invited into Sicily by the inhabi-
tants, who laboured under the yoke of Carthage and
the cruelty of their own petty tyrants. His fondness
for novelty soon determined him to quit Italy. He
left a garrison at Tarentum, and crossed over to Si-
cily, where he obtained two victories over the Cartha-
ginians, and took many of their towns. He was for a
time in favour of the project of invading Africa; but his popularity soon vanished. His troops
became insolent, and he behaved with haughtiness,
and showed himself oppressive, so that his return to
Italy was deemed a fortunate event for all Sicily.
He had no sooner arrived at Tarentum than he renewed
hostilities with the Romans with great acrimony; but
when his army of 80,000 men had been defeated by
20,000 of the enemy under Curius, he left Italy with
precipitance, B. C. 274, ashamed of the enterprise, and
mortified by the victories which had been obtained over
one of the descendants of Achilles. In Epirus he be-
gan to repair his military character by attacking Anti-
gonus, who was then on the Macedonian throne. He
obtained some advantages over his enemy, and was at
last restored to the throne of Macedonia. He after-
ward marched against Sparta at the request of Cleony-
mus; but, when all his vigorous operations were insuf-
ficient to take the capital of Lacoonia, he retired to
Sicily, and here died. He was succeeded by his son
The Argives desired him to retire, and not to interfere
in the affairs of their republic, which were confined
by the ambition of two of their nobles. He complied
with their wishes; but in the night he marched his
forces into the town, and might have made him-
self master of the place had he not retarded his prog-
ess by entering it with his elephants. The combat
that ensued was obstinate and bloody; and the monarch,
when an attraction offered to conquer the Argives with
more facility, exchanged his dress. He was at-
tacked by one of the enemy; but, as he was going to
run him through in his own defence, the mother of the
Argive, who saw her son's danger from the top of a
house, threw down a tile, and brought Pyrrhus to the
ground. His head was cut off and carried to Anti-
gonus, who gave his remains a magnificent funeral,
and presented his ashes to his son Helenus, 272 years
after his death. He was a man of a pleasant, amiable
and bellicose character, and his strength and power of
bearing the severest fatigue were such as called forth
the admiration of all who knew him. The turn and
character of his mind corresponded with such powers
of body; and he seemed to be formed for war as much
by his spirit of enterprise and resolution, as by his skill
in the use of arms and the power of enduring priva-
tions. His patience was not merely the endurance of
physical evils; it was a moral quality of much higher
value, which showed that he had not naturally an
arbtrary and tyrannical disposition; and it was admi-
ably exemplified in the calmness with which he bore
the reproofs of Cines, and the pleasure he took in listen-
ing to the rough and homely truths uttered by Fabricius.
His admiration of the Romans arose as much from his
veneration for their probity as from astonishment at
their resoluteness; and though his policy sometimes
partook of the tortuous character of the Greek and
Asiatic courts, in action he was always magnanimous.
This great quality showed itself even in his domestic
intercourse with his friends, and checked that ardour
and quickness, which, without it, would have made
him a tyrant as well as a conqueror. The whole of
his history shows that he was misled by passions not
sufficiently controlled, but that his understanding was
powerful, quick, and acute. His rapidity, indeed, in
projecting and executing, hurried him into an error,
and he seldom allowed himself time enough for delib-
eration and judgment: hence it was that he might be

said to deserve the sarcastic remark of Antigonus, who compared him to a gambier, "who makes many good throws, but never seems to know when he has the first of the game." (Plut., Vit. Pyth. — Encyclop. Metropol., div. 2, vol. 1, p. 667.)

**PYTHAGORAS.**

A celebrated philosopher of Samos.

Great uncertainty exists as to the year when he was born. Some, as, for example, La Nauze and Freret, make it to have been the first year of the 43d Olympiad. Bentley is in favour of the fourth year of the same Olympiad, Meiner contends for the second of the same, and the fourth of another. There is a difference of sixty-three years between the extremes of these dates. Some authors assert that all which can be stated with any degree of certainty is, that seventy-five or eighty-five years of the life of Pythagoras (for even the duration of his life is a subject of controversy) fall within the one hundred and forty-two years that elapsed between A.C. 608 and A.C. 466. Viceconti in the preference to Eusebius, who places the date of the adjunction of Egypt, during the interval between the four hundred and forty-sixth year B.C., and the sixtieth Olympiad, asserts that this is the correct date. This interval, which is accurately determined by the three observations of the Olympiad, the date of the death of Pythagoras in the 496th year B.C., expresses his doubts respecting the advanced age to which the philosopher is said to have attained. By his mother's side he is said to have been connected with one of the oldest families in the island. But his father, Mnesarchus, was generally believed to have been a foreigner, and not of purely Greek origin, though it was disputed whether he was a Phoenician, or belonged to the line of the Persian Parians of Lycos. He was converted to a branch, therefore, of the Pelasgian race. If we dismiss the tales of Iamblichus concerning the early wisdom, gravity, and temperance of Pythagoras, which are said to have been such as to have filled all men with admiration, to have commanded respect and reverence from grey hairs, and even to have led many to assert that he was the son of God (Iamb., Vit. Pyth., n. 2.); it is for too credible particulars of his childhood and early education. Iamblichus was first instructed in his own country by Creophilus, and afterward by Phercydes in the island of Scyros. (Thirldall's Greece, vol. 2, p. 140, in notis.) When he had paid the honours to his preceptor, for whom he appears to have entertained a high respect, he returned to Samos, and again studied under the direction of his first master. Much is said by Iamblichus and others concerning the visit of Pythagoras to Egypt, and his visits to Thales and Anaximander; but we find no ancient account of his journey, nor any traces of its effects on his doctrine, which differs essentially from that of the Ionic school. On his way to Egypt, Iamblichus asserts that he visited Phoenicia, and conversed with the descendants of Mochus and other priests of that country, and was initiated into the peculiar mysteries. And it may seem not entirely improbable that he might wish to be further acquainted with the Phoenician philosophy, of which he had doubtless heard a general report from his father, who was probably of Phoenician origin. But it is certainly a fiction of the Alexandrian school that Pythagoras received his doctrines of numbers from the Phoenicians, for their knowledge of numbers extended no farther than to the practical science of arithmetic. In Egypt, Pythagoras found himself, by the recommendation of Polykrates, tyrant of Samos, to Amasis, king of Egypt, a great patron of learned men, particularly those of Greece, that he might the more easily obtain access to the colleges of the priests. The king himself could scarcely, with all his authority, prevail upon the priests to admit a stranger to the knowledge of their sacred mysteries. The college of Heliopolis, to whom the king's instructions were sent, refused Pythagoras admission to the college of Memphis, as of greater antiquity; from Memphis he was dismissed, under the same pretense, to Thebes. The Theban priests, not daring to reject the royal mandate, yet loth to comply with it, prescribed Pythagoras many severe and troublesome some preliminary ceremonies, among which was that of circumcision, hoping thereby to discourage him from following his design. Pythagoras, however, executed all these injunctions, and Valerius Maximi gave confidence, and was instructed in their most recondite doctrine. He passed twenty-two years in Egypt. During this time he made himself perfectly master of the three kinds of writing which were used in that country, the epistolary, the hieroglyphic, and the symbolic; and, having obtained access to their most internal secrets, the learning of the colleges of priests, he became intimately conversant with the ancient records, and gained an accurate knowledge of their doctrines concerning the origin of things, with their astronomy and geometry, and, in short, with Egyptian learning in its whole extent. To his stay in Egypt he was most likely indebted, not so much for any positive knowledge or definite opinion, as for hints which whetted his curiosity and impressions which decided the bias of his mind. In the science of the Egyptians he perhaps found little to borrow; but in their political and religious institutions he saw a mighty engine, such as he might wish to wield for noble purposes. Many writers who flourished after the commencement of the Christian era, both pagan and Christian, have related that Pythagoras, immediately after he left Egypt, visited the Persian and Chaldean Magi, and travelled so far into the Orient as to have conversed with the fabulous and ancient philosophers of that country. The occasion of this journey is thus related by Iamblichus: "After spending twenty-two years in Egypt, he was conveyed by the victorious army of Cambyses, among a numerous train of captives, to Babylon, where he made himself perfectly acquainted with the learning and philosophy of the East; and, after the expiration of twelve years, when he was in the sixtieth year of his age, he returned to Samos." Pherecydes, Ciceronian, and other ancient historians, though they say nothing of the captivity, agree that he visited the Persian Magi. Some have even maintained that in this journey he attended upon the instructions of the celebrated Zoroaster; while others, who have placed the life of Zoroaster in an earlier period than that of Pythagoras, have asserted that the latter conversed with certain Jewish priests, who were at that time in Egypt. Cambyses, however, was not conversed with the priests of Babylon, and he would not have become intimately acquainted with the Jewish laws and customs. After all, however, there is great reason to suspect the truth of the whole narrative of Pythagoras's journey into the East; for the relation is encumbered with inextricable chronological difficulties. The whole proof of the reality of this expedition rests either upon the evidence of certain Alexandrian Platonists, who were desirous of exalting as much as possible the reputation of those ancient philosophers to whom they looked back as the first oracles of wisdom; or upon that of certain Jewish and Christian writers, who were willing to credit every tale which might seem to render it probable that the Pythagorean doctrine was derived from the Oriental philosophers, and ultimately from the Hebrew Scriptures. It seems, therefore, on the whole, most reasonable to look upon the story of his eastern journey as a combination to conclude that Pythagoras never passed over from Egypt to the East, but returned thence immediately to Samos. Pythagoras, on his return to his native island, was desirous that his fellow-citizens should reap the benefit of his travels and studies, and for this purpose attempted to institute a school for their instruction in the elements of science, but chose to adopt the Egyptian mode of teaching, with the consul- rate his doctrines under a symbolical form. His attempt was unsuccessful. He then visited in succession Delos, Crete, Sparta, Elis (being present at the Olympic games celebrated in the latter district), and finally Phlius in Achaea, the residence of Leon, king.
of the Phliasian. Here he first assumed the appellation of philosopher. Cicero ascribes the invention of this term to Pythagoras. If this be correct, Pythagoras probably did not intend, as has been commonly imagined, to depreciate the reputation for wisdom, but to profess himself devoted to the pursuit of it. The well-known story, which explains the origin of the name, suggests an entirely false notion of his view of life, so far as it implies that he regarded contemplation as a sacrifice of human enjoyment. The tale is as follows: It seems that Leon, charmed with the ingenuity and eloquence with which he discoursed on various topics, asked him in what art he principally excelled, to which Pythagoras replied, that he did not profess himself master of any art, but that he was a philosopher. Leon, struck with the novelty of the term, asked Pythagoras who were philosophers, and wherein they differed from other men. Pythagoras replied that, as in the public games, while some are contending for glory, and others are buying and selling in pursuit of gain, there is always a third class, who attend merely as spectators; so in human life, amid the various characters of men, there is a select number who, despising all other pursuits, assiduously apply themselves to the study of nature and the search after wisdom; these, added Pythagoras, are the persons whom I denominate philosophers. — Pythagoras is generally believed to have found Polycrates ruling at Samos, and from his acquaintance with that prince the suggestion to the tyrant's government was sometimes assigned as the motive which led him finally to quit his native island. If there were any foundation for this story, it must probably be sought, not in any personal enmity between him and Polycrates—who is said to have furnished him with letters of recommendation to Amasis—but in his conviction that the power of Polycrates would oppose insuperable objections to his design of removing to the East. Before he set out for the West, he had already conceived the idea to which he dedicated the remainder of his life, and only sought for a fit place and a favourable opportunity for carrying it into effect. We, however, find intimations, that he did not leave Samos until he had acquired some celebrity among the Asiatic Greeks, by the introduction of certain mystic rites, which Herodotus represents as closely allied to the Egyptian, and to those which Hisame, a king of Lydia, is said to have introduced. Pherecydes of Eleusis and Orpheus are their reputed founder. But as we cannot believe that the establishment of a new form of religion was an object that Pythagoras ever proposed to himself apart from his political views, we could only regard these mysteries, supposing the fact ascertained, in the light of an essay or an experiment, by which he sound the disposition or the capability of his countrymen for the reception of other more practical doctrines. The fame of his travels, his wisdom, and sanctity had probably gone before him into Greece, where he appears to have stayed some time, partly, perhaps, to enlarge his knowledge, and partly to heighten his reputation. It was no doubt for the former purpose that he visited Crete and Sparta, where he found a model of government and discipline more congenial to his habits of thinking than he could have met with anywhere else but in Egypt or India. If, as is highly probable, he stopped on the same journey at Olympia and at Delphi, it was, perhaps, less from either curiosity or devotion, than from the desire of obtaining the sanction of the oracles, and of forming a useful connexion with their ministers. Thus we are told that he was indebted for many of his ethical dogmas to Themistocles of Delphi, probably the priestess. The legends about his appearing at Olympia—where he is said to have shown a thigh, like the shoulder of Pelops, of gold or of ivory, and to have fascinated an eagle as it flew over his head—may very well be connected with this journey, and would indicate that he was looked upon as a person partaking of a superhuman nature, and as an especial favourite of Heaven. He was far from excited or encouraged such a delusion, is in all cases very difficult to determine; but it seems unquestionable that he did not rely solely on his genuine merits and acquirements, but put forward marvellous pretensions which he must have been conscious had no real ground, and which, we must suspect, were calculated to attract the veneration of the credulous. The most famous of these was the claim he laid to the privilege—conferred on him, as he asserted, by the god Hermes—of preserving a distinct remembrance of the events of many states of existence which his soul had passed through; an imposturo generally acknowledged by his contemporary Xenophanes, who, as his character in this respect stands much higher than that of Pythagoras, appears to have treated it in his elegies with deserved ridicule. (Dioec. Arcit. 3, 9.) —What were the precise motives which induced him finally to fix his residence among the Italian Greeks, and particularly at Crotona, is only matter for conjecture. The peculiar salubrity of the air of this place, its aristocratical government, a state of manners which, though falling far short of his idea, was advantageously contrasted with the luxury of Sybaris, might suffice to determine his choice, even if there were no other circumstances in its condition which opened a prospect of successful exertion. In fact, however, the state of parties in the island of Crotona was essentially favourable; it had been singularly favourable to the undertaking which he meditated. Causes of discord were at work there, as in most of the neighbouring cities, very similar to those which produced the struggle between the patricians and plebeians at Rome. There was a body, called a senate, composed of a thousand members, and probably representing the descendants of the more ancient settlers, invested with large and irresponsible authority, and which had hitherto been able to excite discontent among the people. The power of the oligarchy was still preponderant, but apparently not so secure as to render all assistance superfluous. The arrival of a stranger outwardly neutral, who engaged the veneration of the multitude by his priestly character, and by the rumour of his supernatural endowments, and who was willing to throw all his influence into the scale of the government, on condition of exercising as far as possible its authority, was sure to produce some event which could not but he hailed with great joy by the privileged class. And, accordingly, Pythagoras seems to have found the utmost readiness in the senate of Crotona to favour his designs. The real nature of these designs, and of the means by which he endeavoured to carry them into execution, is a question which has exercised the sagacity of many inquirers, and has been variously solved, according to the higher degree of importance which Pythagoras has been supposed to have attached to religion, or to philosophy, or to government. But it seems clear that his object was not exclusively, or even predominantly religious, or philosophical, or political, and that none of the objects stood in the relation of an end to the other two as its means. On the other hand, we cannot be satisfied with the opinion of a modern author, that the aim of Pythagoras was to establish the empire of a Lo- tan state. (Müller, Doriana, 3, 9, 15.) This is, perhaps, in one sense more, and in another less, than he really attempted, and the opinion seems to affect the character of the Dorians rather than the views of Pythagoras. His leading thought appears to have been, that the state and the individual ought, each in its way, to reflect the image of that order and harmony by which he believed the universe to be sustained and regulated. He did not frame a constitution or a code of laws; nor does he appear ever to have assumed any public office. He instituted a society—an order we might now call it—of which he became the lead-
er. It was composed of young men carefully selected from the noblest families, not only of Crotona, but of other Italiot cities. Their number amounted, or was confined, to three hundred; and if he expected by their efforts to exorcise a wayfaring monster and make it subsiding, he went down to Crotona, and, in the end, over all the Italiot cities, his project, though new and bold, ought not to be pronounced visionary or extravagant. This celebrated society, then, was at one a philosophical school, a religious brotherhood, and a political association; and all these characters appear to have been inseparably united in the founder’s mind. The ambition of Pythagoras was, assuredly, that of a magician. He aimed at establishing a dominion which he believed to be that of wisdom and virtue, a rational supremacy of minds, enlightened by philosophy and purified by religion, and of characters fitted to maintain an ascendant over others by habits of self-command. At first Pythagoras obtained unbounded influence over all classes atCrotona, and effected a general reformation in the habits of the people; while in other Italian cities he was met with?<br/>

In the wars that arose against the Sybarites, and after which they destroyed the city of the latter, the senate of Crotona and the Pythagorean associates seem to have been so clouted by this success as to have fancied that it was the triumph of their cause, and that they alone were to reap its fruits. When the question arose as to the distribution of the spoil and of the conquered land, they insisted on retaining the whole in the name of the state, and refused to concede any share to those who had earned it all by their toil and blood. The commonalty were, of course, irritated by the attempt. Their fury was directed against the society, chiefly, it is said, by Cylon, a noble and wealthy man, who is believed to have been rejected by Pythagoras when he sought to be admitted among his followers. A turn-out took place, in which the populace set fire to Milo’s house, where the Pythagoreans were assembled. Many perished, and the rest only found safety in exile. It is not clear whether Pythagoras himself was at Crotona during this commotion; the general belief seems to have been that he died, not long after, at Metapontum. The rising at Crotona appears to have been caused by similar civil rising in other Italian cities, at Caulonia, Locri, and Tarentum, which would prove the extensive ramifications of the order, and that it everywhere disclosed the same political character. Many of the fugitives took refuge in Greece, but confusion and bloodshed continued to prevail for many years in the cities which had been the seats of the society. Tranquillity was at length restored by the me- dities of Cylon and of the two last exiles, and sixty of the exiles returned to their homes. But their presence seems to have given rise to fresh troubles, perhaps through their opposition to the democratic institutions which Crotona and other cities adopted from Achaia: and at a later period we find some cele- brated Pythagoreans in Greece, who had been driven out of Italy by their political adversities, while others remained there, and endeavoured, with partial suc- cess, to revive the ancient influence of the order. (Thirkill’s Greece, vol. 2, p. 145, seqq. — Ritter’s History of Philosophy, vol. 1, p. 327.) Many tales are related of Pythagoras which carry with them their own refutation. That, by speaking a word, he tamed a Daunian bear, which had lied waste the country; that he prevented an ox from eating beans by whispering in its ear; that he was on the same day present, and discoursed in public, at Metapontum in Italy, and at Tauromenium in Sicily, that he ad- dicted earthquakes, storms, and other future events, and that a river, as he passed over it with his friends, cried out, “Hail, Pythagoras,” are wonders which would require much clearer and better evidence to gain them credit than the testimony of Apollonius. Porphyry, and Lamblichus, or even of Laertius as a brief, vain, appears upon the face of the history of this philosopher, that he owed much of his celebrity and authority to seeking to excite the veneration of the credulous. His whole manner of life, as far as is known, confirms this opinion. Clothed in a long white robe, with a flowing beard, and, as some relate, with a golden crown on his head, he preserved among the people, and in the presence of his disciples, a commanding gravity and an air of loftiness. He maintained continually the tranquility of his mind, frequently singing for this purpose hymns of Thales, Hesiod, and Homer. He had such an entire command over himself, that he was never seen to express in his countenance grief, joy, or anger. He refrained from animal food, and confined himself to a frugal vegetable diet. By this artificial demeanour, Pythagoras passed himself off as a man of an order superior to the common condition of humanity, and recommended them that he had received his doctrine from heaven. Pythagoras married Theano of Crotona, or, as some relate, of Crete, by whom he had two sons, Telages and Mnesarchus, who, after his death, took charge of his school. Whether Pythagoras left behind him any writings is a point much disputed. Diogenes Laertius enumerates many pieces which appeared under his name, and Lamblichus increases the list. But Plutarch, Josephus, Lucian, and others, confess that there were no genuine works of Pythagoras extant; and from the pains which Pythagoras took to confine his doctrine to his own school during his life, it appears highly probable that he never committed his philosophical system to writing, and that those pieces to which his name was early affixed were written by some of his followers, according to the tenets which they had learned in his school. Among the pieces at- tributed to Pythagoras, no one is more famous than the Golden Verses (Χρυσή Ἑτίπη), which Hierocles has illustrated with a commentary. It is generally agreed that they were not written by Pythagoras; and perhaps they are to be ascribed to Epicurus or Emp- edocles. (Stanley, Hist. Phil., p. 301. — Fabric, Bibl. Gr., vol. 1, p. 794. — Brucker, Hist. Phil., vol. 1, p. 1109.) They may be considered as a commentary upon the Pythagorean doctrines. The method of instruction adopted by Pythagoras was twofold, exoteric and esoteric, or public and private. This distinc- tion he had seen introduced with great advantage by the Egyptian priests, who found it admirably adapted to strengthen their authority and increase their emol- ument. He therefore determined, as far as circum- stances would admit, to form his school upon the Egyptian model, and he placed public assemblies, in which he delivered discourses in praise of virtue and against vice; and in these he gave particular instructions, in different classes, to husbands and wives, parents and children, and others who filled the several relations of society. The auditors who attended these public lectures did not properly belong to his school, but continued to fol- low their usual mode of living. Among the select body of disciples, the one he called his companions and friends, who submitted to a peculiar plan of discipline, and were admitted by a long course of in- struction into all the mysteries of his esoteric doctrine. Before any one could be admitted into this fraternity, Pythagoras examined his features and external appearance; and inquired in what manner he had been accu- tomed to behave towards his parents and friends; re- marked his manner of conversing, laughing, and keep-
PYTHAGORAS.

inclined to indulge, with what kind of company he chose to associate, how he passed his leisure moments, and what incidents appeared to excite in him the strongest emotions of joy and sorrow. From these and other circumstances it was not without an accurate judgment of the qualifications of the candidate; and he admitted no one into his society till he was fully persuaded of his capacity of becoming a true philosopher. Upon the first probationary admission, the candidate and self-command of the candidate was put to the trial by a long course of severe abstinence and rigorous exercise. The infliction of silence has already been alluded to. This silence, or ἡ συγκρί-βασις, as it was called, consisted not to be confounded with that sacred reserve with which all the disciples of Pythagoras were bound, upon oath, to receive the doctrines of their master, that they might, from no inducement whatsoever, suffer them to pass beyond the limits of their sect. Pythagoras, like all other philosophers, had his exoteric, or public, and his esoteric, or private, doctrines. The restraint which he put upon the words of his pupils, by enjoining silence for so long a time, was certainly, in one point of view, a very judicious expedient, as it restrained impertinent curiosity, and prevented every inconvenience of contradiction. Accordingly, we find that his disciples silenced all doubts, and refused all objections, by appealing to his authority. Νό-ρός ἐγώ, ἵππος διέξελ ("he himself," i. e., the master, "said so"), decided every dispute. Nor was this preparatory discipline deemed sufficiently severe without adding, during the years of initiation, an entire prohibition of seeing their master, or hearing his lectures except from behind a curtain. And even this privilege was too great to be commonly allowed; for in this stage of tuition they were usually instructed by some inferior preceptor, who barely recited the doctrine of Pythagoras, without assigning the reasons or demonstrations on which they were founded, and required the obedient pupil to receive them as unquestionable truths upon their master's word. Those who had sufficient perseverance to pass those several steps of probation were at last admitted among the Exoterics, and allowed to see and hear Pythagoras behind the curtain. But if it happened that any one, through impatience of such rigid discipline, chose to withdraw from the society before the expiration of the term of trial, he was dismissed with a share of the common stock, the double of that which he had advanced; a tomb was erected for him as for a dead man; and he was to be, as much, forgotten by the brethren as if he had been actually dead. It was the peculiar privilege of the Exoterics to receive a full explanation of the whole doctrine of Pythagoras, which to others was delivered in brief precepts and dogmas under the concealment of symbols. They were also permitted to take minutes of their master's lectures in writing, and to propose questions and offer remarks upon every subject of discourse. These disciples were not confined to the instruction in the Pythagoreans; they were also called the Mathematicians, from the studies upon which they entered immediately after their initiation. After they had made a sufficient progress in geometrical science, they were conducted to the study of nature, the investigation of primary principles, and the knowledge of God. Those who pursued these sublime speculations were called Theorists; and such as more particularly inclinéd to the mathematical and philosophical study, mathematico-religious. Others, according to their respective abilities and inclinations, were engaged in the study of morals, economics, and policy; and were afterward employed in managing the affairs of the fraternity, or sent into the cities of Greece to instruct them in the principles of government, or assist them in the institution of laws. The brethren of the Pythagorean college at Crotona, who were about 800 in number, lived together, as in one family, with their wives and children, in a public building called ὑπαρχόν, the common auditory. The whole business of the society was conducted with the most perfect regularity. There was a most minute and scrupulous deliberation upon the manner in which it should be spent, and concluded with a careful retrospective of the events which had occurred, and the business which had been transacted. They rose before the sun, that they might pay him homage; after which they repeated select verses from Homer and other poets, and made use of music, both vocal and instrumental, to enliven their spirits, and fit them for the duties of the day. They then employed several hours in physical exercises, and such intellectual studies as were preceded by an interval of leisure, which was commonly spent in a solitary walk for the purpose of contemplation. The next portion of the day was allotted to conversation. The hour immediately before dinner was filled up with various kinds of athletic exercises. Their dinner consisted chiefly of bread, honey, and water; for, after they were perfectly initiated, they wholly denied themselves the use of wine. The remainder of the day was devoted to civil and domestic affairs, conversation, bathing, and religious ceremonies. The Exoteric disciples of Pythagoras were taught after the Egyptian manner, by images and symbols, which must have been exceedingly obscure to those who were not initiated into the mysteries of the school. And those who were admitted to this privilege were trained, from their first admission, to observe inviolable silence with respect to the recondite doctrines of their master. That the wisdom of Pythagoras might not pass into the ears of the vulgar, they committed it chiefly to memory; and where they found it necessary to make use of writing, they were careful not to suffer their minutes to pass beyond the limits of the school. After the dissolution of their assembly by Cylon's faction, Lysias and Archippus thought it necessary, in order to preserve the Pythagorean doctrine from total oblivion, to reduce it to a systematic summary; at the same time, however, strongly enjoining their children to preserve these memories secret, and to transmit them in confidence to posterity. From this time books began to multiply among the followers of Pythagoras, till at length, in the time of Plato, Philo-lus exposed the Pythagorean records to sale, and Archytas of Tarentum gave Plato a copy of his commentaries upon the aphorisms and precepts of his master. It is sufficiently evident, from this account of the manners and usages of the Pythagoreans, that the sources of information concerning his doctrine must be very uncertain. Instructions designedly concealed under the veil of symbols, and chiefly transmitted by oral tradition, must always have been liable to misrepresentation. Of the imperfect records of the Pythagorean philosophy left by Lysias, Archytas, and others, nothing has escaped the wreck of time, except, perhaps, sundry fragments collected by the diligence of the monks concerning Pythagoras. It is evident there are some grounds for suspicion; and which, if admitted as genuine, will only exhibit an imperfect view of the moral and political doctrine of Pythagoras under the disguise of symbolical and enigmatical language. The strict injunction of secrecy, which was given by oath to the initiated Pythagoreans, has effectually prevented any original records of their doctrine concerning nature and God from passing down to posterity. We are, therefore, at present only to conjecture, and, indeed, concerning the whole doctrine of Pythagoras, upon Plato and his followers. Plato himself, while he enriched his system with stores from the magazine of Pythagoras, accommodated the Pythagorean doctrines, as he did also those of his master Socrates, to his own system, and thus gave an imperfect, and, we may suppose, in many particulars, a false representation of the doctrines of the Samian philosopher.
PYTHAGORAS.

It was farther corrupted by the followers of Plato, even in the Old Academy, and afterward in the Alexandrian school. The latter, especially, made no scruple of obtaining their own dogmas upon the world, under the sanction of Pythagoras or any other ancient sage, and were chiefly employed in attempting to reconcile, or, rather, confound the doctrines of the ancient philosophers with later systems.—If the disconnected and doubtful records which remain can enable us to form any judgment upon this subject, the following may possibly be considered as a faint suggestion of the Pythagorean philosophy: The end of philosophy is to free the mind from those encumbrances which hinder its progress towards perfection, and to raise it to the contemplation of immutable truth, and the knowledge of divine and spiritual objects. This effect must be produced by easy steps, lest the mind, hitherto conversant only with sensible things, should revolt at the world formed by the union of the ideas of the mind of mathematics, a science which contemplates objects that lie in the middle way, being corporeal and incorporeal beings, and, as it were, on the confines of both, and which most advantageously inures the mind to contemplation.—The most probable explanation of the Pythagorean doctrine of numbers is, that they are used as symbolical or emblematical representations of the first principles and forms of nature, and particularly those which, being, beyond any possibility of change, were held by Plato afterward gave the appellation of Ideas. Not being able, or not choosing, to explain in simple language the abstract notions of principles and forms, Pythagoras seems to have made use of numbers, as geometers make use of diagrams, to assist the conceptions of scholars. More particularly, conceiving some analogy between numbers and the intelligent forms which subsist in the Divine Mind, he made in the forms of symbols of the numbers proceeding from unity, or the Monad, as a simple root, whence they branch out into various combinations, and assume new properties in their progress, so he conceived the different forms of nature to recede, at different distances, from their common source, the pure and simple essence of Deity, and at every degree of distance to assume certain properties in some measure analogous to those of numbers; and hence he concluded that the origin of things, their emanation from the first being, and their subsequent progression through various orders, if not capable of a perfectly clear explanation, might, however, be illustrated by symbols and resemblances borrowed from numbers. According to some writers, the Pythagorean Monad denotes the active principle in nature, or God; the Duad, the passive principle, or matter; the Triad, the world; the Tetrad, the heavenly spheres; and the Pentad, the Tetractys, or quadrature, according to the Pythagoreans, was the root of the eternally flowing nature. (Carm., Aur., 47.—Iamblich., Vit. Pythag., 162.) What they understood by the grand Tetractys, whether the sum of the first four numbers, that is, ten; or the sum of the first four odd and the first four even, that is, thirty-six, is unimportant; for the essential is not the symbol, but what the symbol represented. (Plato, de l. et Oe., 76. —Id., de Anim. Procr., 30. —Ritter, Hist. of Philos., vol. i. p. 363.) Next to numbers, music had the chief place in the preparatory exercise of the Pythagorean school, by means of which the mind was to be raised above the dominion of passion, and inured to contemplation. Pythagoras considered music not only as an art to be judged of by the ear, but as a science to be reduced to mathematical principles in the same sense as the other sciences. The most important have been discovered by him in the following manner: As he was one day reflecting on this subject, happening to pass by a smith's forge where several men were successively striking with their hammers a piece of heated iron upon an anvil, he remarked that all the sounds produced by their strokes were harmonious except one. The sounds which he observed to be chords were the octave, the fifth, and the third; but that sound which he perceived to lie between the third and the fifth he found to be discordant. Going into the workshop, he observed that the diversity of sounds arose, not from the forms of the hammers, nor from the force with which they were struck, not from the position of the iron, but merely from the difference of weight of the hammer. He then observed the actual weight of the several hammers, he went home, and suspended four strings of the same substance, length, and thickness, and twisted in the same degree, and hung a weight at the lower end of each, respectively, equal to the weight of the hammers; upon striking the strings, he found that the musical chords of the strings corresponded with those of the hammers. He thus learned that he proceeded to form a musical scale, and to construct stringed instruments. His scale was, after his death, engraved on brass, and preserved in the temple of Juno at Samos. Pythagoras conceived that the celestial spheres in which the planets move, striking upon the ether through which they pass, must produce a sound, and that this sound must vary according to the diversity of their magnitude, velocity, and relative distance. Taking it for granted that sound should be produced upon the impact of a hammer, which was adjusted with perfect regularity, he further imagined that all the circumstances necessary to render the sounds produced by their motions harmonious, were fixed in such exact proportions, that the most perfect harmony was produced by their revolutions. This fanciful doctrine respecting the music of the spheres gave rise to the names which Pythagoras applied to musical tones. The last note in the octave or the first tetrachord was called He (Hephaestus), the second tetrachord was called Lyre (Lyra), the third was called Neate (Neastra), from the sphere of the moon, which, being the lowest or nearest the earth, he imagined produced the shrillest sound. In like manner of the rest. It was said of Pythagoras by his followers, who hesitated at no assertion, however improbable, which might seem to exalt their master's fame, that he was the only one who really enjoyed the favours of the gods as to have been permitted to hear the celestial music of the spheres. Besides arithmetic and music, Pythagoras cultivated geometry, which he had learned in Egypt; but he greatly improved it by investigating new theorems, and by digesting its principles, in an order more perfectly systematic than had before been done. Several Grecians, about the time of Pythagoras, applied themselves to mathematical study, especially Thales in Ionia. But Pythagoras seems to have done more than any other philosopher of this period towards reducing geometry to a regular science. His definition of a point is a monad or unity with position. He taught that a geometrical point corresponds to unity in arithmetic, a line to two, a superficies to three, a solid to four. Of the geometrical theorems ascribed to him, the following are the principal: That the circumference of every circle is equal to the sum of the squares of the sides of every polygon, which will fill up the whole space about a given point are the equilateral triangle, the square, and the hexagon; the first to be taken six times, the second four times, and the third three times; and that, in rectangular triangles, the square of the side which subtends the right angle is equal to the sum of the squares of the sides that contain the right angle. Upon the investigation of this latter proposition (Euclid, Book IV., 47), Plutarch says that Pythagoras offered an ox, others, an hecatombe to the gods. But this story is thought by Cicero inconsistent with the institutions of Pythagoras, which, as he supposes, did not admit of animal sacrifices.—Pythagoras inferred the statute of
Hercules from the length of the Olympic course, which measured six hundred of his feet. Observing how much shorter a course six hundred times the length of his foot would be, he measured the Olympic course, he inferred, by the law of proportion, the length of Hercules' foot; whence the usual proportion of the length of the foot to the height of a man enabled him to determine the problem.—On Astronomy, the doctrine of Pythagoras, or, at least, of the ancient Pythagoreans, was as follows: The term Heaven either denotes the sphere of the fixed stars, or the whole sphere between the moon and the earth. In the latter view of the universe, it is admitted that the earth is not without motion, nor situated in the centre of the spheres, but is one of those planets which make their revolutions about the sphere of fire. The distance of the several celestial spheres from the earth corresponds to the proportion of notes in a musical scale. The moon and other planetary globes are habitable. The earth is a globe, which admits of Antipodes. From several circumstances respecting the astronomical and mathematical doctrine of Pythagoras, it has been inferred that he was possessed of the true idea of the solar system, which was revived by Copernicus, and fully established by Newton. With respect to God, Pythagoras appears to have taught, that he is the universal mind, diffused through all things, the source of all animal life, the proper and intrinsic cause of all motion, in substance similar to light, in nature like truth, the first principle of the universal, incapable of pain, insensible, incorruptible, and only to be comprehended by the human mind. Cicero also remarks, that Pythagoras conceived God to be a soul pervading all nature, of which every human soul is a portion, which is nothing more than the modern system of Pantheism. The doctrine of the Pythagoreans respecting the nature of brute animals, and meteorphysis, the Transmigration of Souls, was the foundation of their abstinence from animal food, and of the exclusion of animal sacrifices from their religious ceremonies. The Pythagoreans, it is probable, learned it in Egypt, where it was commonly taught. Nor is there any sufficient reason for understanding it, as some have done, symbolically.—We will end this article with a few specimens of his Symbols, which, though they were at first made use of for the purpose of concealment, and though their meaning has always been religiously kept secret by the Pythagoreans themselves, have awakened much curiosity, and have occasioned many ingenious conjectures, which, however, unless they were more satisfactory, it would answer no purpose to repeat. Among the Symbols of Pythagoras, recited by Iamblichus and others, are the following: Adore the sound of the whispering wind. Stir not the fire with a sword. Turn aside from an edged tool. Pass not over a balance. Setting out on a journey, turn not back, for the Pythagoreans, born to these ceremonies, do not encourage any impudence or impertinency as to this veneration, as to be almost unintelligible. Pythias has been generally regarded as very mendacious in his narratives. His memory, however, has been successfully vindicated by several modern writers. (Bougainville, loc. cit.—Schweingruber, Abhandlung, in Allg. Weltgesch., Halle, vol. 31.—Adelung, Aeltere Ge- schichte der Deutschen, Leipzig, 1806, Soc. man- nert, Geogr., vol. 1, p. 73, seqq. —Schöll, Hist. Lit. Gr., vol. 2, p. 198.)

PYTHAGORAS.

PYTHIALL, the priestess of Apollo at Delphi. (Vid
QUA
delphii, and Oraculum.)—II. Games celebrated in honour of Apollo at Delphi. They were first instituted, according to the fabulous opinion, by Apollo himself, in commemoration of the victory which he had obtained over the serpent Python, from which they received their name; but their origin seems, in fact, to have been a Panhellenic festival celebrated by the people of the Delphic Communion, in connexion with the Delphic oracle. With this the Delphians combined games for the purposes of amusement, which originally consisted of a contest between singers in praise of the Delphian god. This assembly was, in its more important capacity, denominated the Amphictyonic council, and was charged with the superintendence of the games. (Wachsmuth, Gr. Ant., vol. I, p. 169, Eng. trans.) The Pythian games were, at their first institution, only celebrated once in nine years, but afterward every fifth year. The crown was of bay.—For an account of the exercises in the public games of the Greeks, consult the article Olympia. (Potier, Gr. Ant., 2, 23.)

Pythii, I. a Syracusan, who defrauded Caius, a Roman knight, to whom he had sold his gardens, &c. (Cic., de Off., 3, 14.)—II. A surname of Apollo, which he received for having conquered the serpent Python, or because he was worshipped at Delphi; called also Pytho. (Vid. Pytho.)

Pytho, the ancient name of the town of Delphi, which it was said to have received άπό του πιθήκου, because the serpent which Apollo killed rotted there. A better derivation, however, is from πυθεα, to inquire,” with reference to the oracle that was consulted here. The difference of quantity (Πυθο, Πυθεα) does not appear to form a material objection, although Passow thinks otherwise. (Gr. D. Handwort., s. v. Πυθο.)

Python, a celebrated serpent sprung from the mud and stagnated waters which remained on the surface of the earth after the deluge of Deucalion. This monster abode in the vicinity of Delphi, and destroyed the people and cattle of the surrounding country. Apollo, on coming to Delphi, slew the serpent with his arrows; and as it lay expiring, the exulting victor cried, “Now rot (πιθήκον) there on the man-feeding earth;” and hence, says the legend, the place and oracle received the appellation of Pytho. (Vid. Pytho.) The Pythian games were said to have been established in commemoration of this victory. (Vid. Pythia.)—Dodwell supposes that the true explanation of the allegorical fiction relating to Apollo and Python is, that the name of Panhellenic Cephalis, which, after the deluge of Deucalion had inhabited the central part of Greece, surrounded Parnassus with its serpentine involutions, and was reduced by the rays of the sun within its due limits. (Dodwell’s Tour, vol. I, p. 180.) It is more probable, however, that the fable was one of Oriental origin, and was carried from that quarter of the world to Greece. (Vid. remarks under the article Apollo.)

Qua,

A German nation on the southeastern borders of the country, in what is now Moravia. They were connected with the Marcomanni, and, along with them, wagged war against the Romans. The Emperor Marcus Antonius proceeded against them in person and repelled their inroads, but they soon after renewed hostilities with increased vigour. Their name does not appear to correspond with the etymology of the modern Bohemian word Gauer, from which the Hungarians have derived the term Qua. This tribe included five more, whence their name. (Vid. Decimviri and Duumviri.)

QUAEDERFONS OF QUAEDICENAE, a surname of Janus, because he was sometimes represented with four faces. (Vid. remarks under the article Janus.)

Quindecmviri, an order of priests whom Tarquin the Proud appointed to take care of the Silician lines. They were originally two, but afterward the number was gradually increased to thirty, number which the Sylla doubled five more, whence their name. (Vid. Decimviri and Duumviri.)

Quinquatrita, a festival in honour of Minerva at Rome, at first for one day, but afterward for five (quinque), whence the name. The beginning of the celebration was the 19th of March. On the days of the celebration, scholars obtained holiday, and it was usual for them to offer prayers to Minerva for learning and wisdom, and on their return to school, to deliver their master with a gift, which received the name of Minervial. (Ovid, Fast., 3, 810.—Aul. Gell., 2, 21.)

Quintillianus, Marcus Fabius, an eminent Roman rhetorician, born at Calagurris, a city of Hispания Tarracensis, A.D. 42.—The orthography of the name varies in different editions. Gibson was the first that gave the form Quintinchus, in which he has been followed by Mr. Coxe; the form Quintilinus is found in a single inscription and on a single coin, the other mode of expressing the name has become well established. (Compare Spalding, Pref. ad Quinti., p. xxii., seqq.)—Quintilian was still young when his father, after the death of Nero, conveyed him to Rome, and this circumstance appears to be the cause why some editors have believed that he was born in this last-mentioned city. The father of Quintilian was a professor of rhetoric, and the son, devoting himself to the same pursuits, opened a school under Vespasian. He was the first rhetorician that received a regular salary from the imperial treasury, and his emoluments amounted to 100,000 sesterces. Flavia Domitia, niece of Domitian, and Pliny the younger, were among the number of his pupils. He obtained the distinction of the laiclive, or senatorian dress, and under Domitian he was nominated consul. After having lost his wife and two sons, he united himself by a second marriage to a daughter of the rhetorician Titullius, by whom he had a daughter who espoused Nonius Celer, governor of Spain. He had professed rhetoric for the space of twenty years, when he retired from active life, and composed, between 92 and 94 A.D., his Institutes of the Orator. The year of his death is unknown: it was subsequent, however, to 118 A.D. There exist, under the name of Quin
tillian, many imitations, declamations of some length, and forty-five minor ones. They are incorrectly, however, ascribed to him, and are rather the productions of a much later age, and of several writers. Gerard Vosius (de Rhet nat. et const., p. 168) thinks that they were written by Postumus the younger, one of those ephemeral emperors called in Roman history the thirty tyrants. Some manuscripts give M. Florus as their author; a circumstance entirely inconsistent with the work by which Quintilian has immortalized his name is entitled De Institutione Oratoria, or, rather, Institutiones Oratoriae. It is in twelve books, and dedicated to Marcellus Victorius. This work is not merely a complete treatise on the rhetorical art; it embraces a plan of study for the orator, from the first elements of grammar. Quintilian here states the results of long experience and deep reflection. He shows the student, by judgment, of a refined and critical spirit, of a pure taste, and of extensive and varied reading. This work is preferable to all that we have from Cicero respecting the theory of eloquence. Quintilian has profited by the precepts of this great master, but he does not stop where the other stops: he adds to his labours the observations which a long course of practical experience had suggested. He has formed his style upon that of Cicero.
QUINTUS.

and he writes with an elegance which would entitle him to a rank by the side of the purest models of the Augustan age, if certain obscure expressions and some specimens of affected phraseology did not betray their origin. In the latter age. His manner, when he speaks of the Greek and Roman authors of the higher class, is one of the most instructive, and of great importance in relation to the history of ancient literature. Time has preserved for us only two manuscripts of the Institutes of Quintilian. One, which is complete, was found, at the period of the council of Constance, in a tower of the Abbey of St. Gall, by the celebrated Poggio of Florence; he made a copy of it which is now in England. Nearly at the same time Leonard Arctin discovered another manuscript in Italy, but very defective. From these two original ones are derived all the other manuscripts of Quintilian. It is not known what has become of the manuscript of St. Gall.—With regard to the dialogue De Claris Ortutoribus, commonly ascribed to Quintilian, some remarks will be offered under the article Tacitus.—The best editions of Quintilian are, that of Burmann, *Lugd. Bat.*, 1720, 9 vols. 4to; that of Cap- pong, 1759; that of Bünting, 1766, 4to; and particularly that of Spalding, *Lips.*, 1798-1834, 8 vols. the fifth volume of which contains supplementary annotations by Zumpt, and the sixth a Lexicon and Index by Bonelli. The edition of Quintilian forming part of Lemaire's collection is a reprint, for the most part, of Spalding's. (Schöll, *Hist. Lit. Rom.*, vol. 2, p. 398, seqq.—Bähr, *Gesch. Rom. Lit.*, p. 401, seqq.—Fuhrmann, *Rom. Lit.*, vol. 2, p. 168, seqq.)

**QUINTUS CURTIIUS RUPES, a Latin historical writer, with regard to whose era great uncertainty prevails.** No ancient writer makes mention of him; the first who speak of him are John of Salisbury and Pierre deBlois, who lived in the 12th century. Curtius himself furnishes no information respecting his own condition and origin, if we except one passage in which he speaks of an event which happened in his time (10, 9). He mentions this event, however, in such obscure terms, that the commentators are all at variance respecting the period when he flourished. Some, as, for example, Pithou and Longars, place him in the Augustan age. Others, as Ausonius Popma and Perizonius, under Tiberius. Others, as Justus Lipsius and Brissou, under Claudius. Others, as Freisinus, Rutgers, Vossius, and many other editors, under Vespasian. Some, following the example of Pontanus, make him to have flourished under Trajan. Count Bagno (Della gente Curzii e dell' eta di Q. Curzio, &c., Bologna, 1741, 8vo), and one of the latest editors of Curtius, Cunze, whose edition appeared at Helmstadt in 1795, 8vo, have adduced some specious arguments for fixing the period of this writer under Constantine the Great. Finally, Barth brings him down as low as the first Theodosius.—The history of Quintus Curtius is entitled *De rebus gestis Alexandri Magni*. Thucydeus is the first who divided it into books; but the first two, the end of the fifth, and the beginning of the sixth are lost. Freisinus has written a supplement to the work, so as to complete what is thus defective, and has succeeded in bringing together a learned collection of facts from the different historians who have made mention of the operations of Alexander.—The work of Quintus Curtius is rather to be termed a romance than a historical composition. It is the production of a rhetorician who sacrifices truth to the desire of brilliancy of expression, and to a love of the marvellous. The barbarages which he puts into the mouths of his heroes are mere scholastic declamations, without any regard to the characters of those who are to utter them. As a critical historian Quintus is very far below mediocrity. He is only sup-perficially acquainted with the good historians of Alexander, and appears to have given the preference to those Greek writers who had distorted by fable the true history of the Macedonian monarch, such as Chircherus and Hesegovius. His compilation is made without any judgment; he gives himself to the mere correction of the contradictions which exist among the authors whom he follows, nor does he at all concern himself about testing the truth of their narratives. It would seem, moreover, that his knowledge of Greek is very slight. So ignorant is he in the military art, that it is difficult to understand his accounts of battles and sieges; and oftentimes it is but too apparent that he does not understand himself what he copies mechanically from his authentically learned geographers. His ignorance is equally great. He confounds Mount Taurus with Caucasus, and makes the Caspian and Hyrcanian seas two different sheets of water. He observes no chronological order, and does not mention either the years or the seasons in which the events of which he treats took place. If, however, Quintus Curtius be refused the name of an historian, we cannot deny his claim to being considered an amusing and instructive writer. His manner is graceful and agreeable. Some of his barangues are master-pieces of their kind. He is rich in beautiful descriptions. His style is too ornamented, and sometimes declamatory; oftener, however, he happily imitates his model, Livy. In the beginning of the sixteenth century, an impostor, named Hugo Rogenus or Ruggieri, a native of Rhegio, published a pretended collection of the letters of Quintus Curtius, divided into five books, and supposed to contain not only letters written by the historian himself, but others also from various distinguished individuals. The fabrication, however, was so clumsily executed, that no one was imposed upon. The best editions of Quintus Curtius are, that of Snakenburg, *Lugd. Bat.*, 1724, 4to; that of Schmiedner, *Götting.*, 1804, 2 vols. 8vo; and that of Lemaire, Paris, 1822-24, 3 vols. 8vo. (Schöll, *Hist. Lit. Rom.*, vol. 2, p. 383, seqq.—Bähr, *Gesch. Rom. Lit.*, vol. 1, p. 441, seqq.)—I. (or Cointus) Calaber, a Greek poet, a native of Smyrna, but surnamed Calaber from the circumstance of the Cardinal Bessarion's having found a manuscript of his work in a convent of Calabria, in Lower Italy; and thus a distinguished scholar, a native of Greece, only became acquainted with one of the poets of his nation, because chance had conducted him to the convent of St. Nicholas, in the city of Otranto. Quintus (or Cointus) lived probably about the beginning of the sixth century. He was the author of a poem, entitled Παραδεξόμενα Έρως ("Things omitted by Homer"). It is a continuation of the Iliad down to the destruction of Troy, or, rather, an historical composition in verse, interspersed with mythological fictions, and adorned with abundant imagery. Vicious in its arrangement, because no unity either of action or of interest prevails in it, this production is, at the same time, not without merit as regards its ornaments and its dictation. It is the residuum of Homer's epics apparently; but it shows itself only in details, and the author did not possess the art of varying his descriptions of combats, in which his model shows himself so superior. He offreis, also, in too frequent an introduction of deities into the combats of the two contending parties, and their intervention is frequently as unceiled for as their departure is unexpected. Notwithstanding these defects, however, the poem of Quintus is not without its use as a means of conjecturing the dilapidations of the age in which he is supposed to have lived, that many critics have regarded these Paralipomena as a kind of enlargement or amplification of the Little Iliad of Lesches, which is lost. Others have viewed it as a cent of various passages borrowed from the cyclic poets.—Another poem, ascribed to Quintus, is found in MS. in the library of St. Marc, and in that of
the king of Bavaria at Munich. It is on the twelve labours of Hercules.—The best editions of Quintus Calaber are, that of Rhodomanus, Hanov., 1604, 8vo; that of De Pauw, Lang. Bat., 1784, 8vo; and that of Tychsen, Argent., 1807, 8vo. The last, however, has never been completed. (Scholl, Hist. Lit. Gr., vol. 6, p. 91, seq.)

Rabanus, the name of a hill at Rome, added to the city by Servius Tullius. (Liv., l. 44.) Nama, indeed, had a house upon this mountain, but it was not considered a part of the city until enclosed within the Tullian wall. The temple of Romulus Quirinus, from which it derived its name, was built by Numa, but afterward reconstructed with greater magnificence by Papirius Cursor, the dictator. (Lut., 10, 40.) Some vestiges of this edifice are said to exist in the garden of the Jesuits, close to the church of S. Andrea, a Monte Cavallo. The expression Monte Cavallo is a corruption from Mons Caballus, a name applied to the Quirinal at a later day from two marble horses placed there. The Quirinal is the only one of the Seven Hills at the present day that is populous. It is covered with noble palaces, churches, streets, and fountains. (Rome in the Nineteenth Century, vol. 1, p. 208, Am. ed.)

Quirites, I. a surname of Mars among the Romans. This name was also given to Romulus after his translation to the skies. (Ovid, Fast., 2, 475.)—II. A surname of the god Janus. (Vid. remarks under the article Janus.)

Quirites, (Vid. remarks under the article Roma, page 1172, col. 2.)

R.

Rabirius, I. C. A Roman knight contemporary with Julius Caesar. The latter had, on one or two occasions, expressed with some ostentation his attachment to the party of Marius, and he now attempted to vindicate the memory of L. Saturninus, who, having been for a long time the associate of Marius, was afterward opposed by him as the reluctant instrument of the senate, and, having been taken by him in actual rebellion, had been murdered by the armed citizens, who broke into his place of confinement. Caesar, it is said (Sueton., Vit. Jul., 12), instigated Labienus, at this time one of the tribunes, and afterward distinguished as one of Caesar's lieutenants in Gaul, to accuse Rabirius, then advanced in years, as the perpetrator of this murder. The cause was first tried before L. Caesar and C. Caesar (Dio Cass., 37, 48), who were appointed by lot to act as special commissioners in this case, by virtue of the praetor's order; and the accused was arraigned according to the old law of murder, by which, if he had been found guilty, he would have been condemned to be hanged. But this mode of proceeding was stopped by Rabirius appealing to the people, or by the interference of Cicero as consul, as his speech seems to imply (pro Rab., c. 4, seq.), and his procuring the removal of the cause before another tribunal. The people, however, it is said, was likely to condemn him, as accused, when Q. Metellus Celer, one of the praetors, obliged the meeting to break up, by tearing down the ensign which was always flying on the Janiculum while the people were assembled, and without which, according to ancient custom, they could not lawfully continue their deliberations. In this manner Rabirius escaped; for Labienus or his instigators did not think proper to bring forward the business again; whether despairing of again finding the people equally disposed to condemn the accused, or whether the progress of the conspiracy of Catiline began now to turn men's attention more entirely to a different subject. (Dio Cass., 37, 42.—Cic., Or. pro Rab.)—II. C. Postumus, a Roman knight, son of C. Curias, and adopted son of the preceding. He became implicated in the affair of Gabinius and Ptolemy Auletes. Gabinius had been accused and condemned for receiving a very large sum of money (10,000 talents) for restoring the Egyptian king. His estate, however, did not yield, when sold, sufficient to reimburse this sum, and Rabirius therefore, who was concerned in the affair, was sued for the balance (causa de residuis). Rabirius, it seems, had advised Gabinius to undertake the restoration of the king, and the king, over-concerned him in Egypt. Here he was employed to solicit the payment of the money, and lived at Alexandria for that purpose, in the king's service, as the public receiver of his taxes. Cicero's defense of Gabinius and Rabirius, especially the former, excited great surprise, as Gabinius had ever been his most vehement enemy. It was occasioned, however, by Pompey's influence. Rabirius was acquitted. (Cic., pro Rab. Post., c. 8, 12.—Val. Max., 4, 2, 111.) A Roman knight named Rabirius (598, 3) was a witness of four thousand talents, a somewhat large estate. (Cicero, pro Rab. Post., c. 6, 12.)

Ramus of Ramnenses, one of the three centuries instituted by Mario. (Vit. Mar., 26.)

Rampinisurus, an Egyptian monarch, of whom Herodotus relates the following legend. "After this, they said, Rampinisurus descended alive into those places which the Grecians call Hades; where, playing at dice with Ceres, he sometimes won, and at other times lost; that, at his return, he brought with him as a present a napkin of gold" (2, 122). Szathmari applies it to the years of plenty and scarceness which happened under Pharaoh. Creuzer, however, refers it to the great principles, pervading all nature, of decay and restoration. (Symbol., vol. 4, p. 231.)

Raudii Campi, plains about ten miles to the northwest of Mediolanum, in Cisalpine Gaul, which were rendered memorable by the bloody defeat of the Cimbri by Marius. (Flori., 3, 3.—Vell. Paterc., 2, 12.—Oros., 5, 16.) The spot, however, on which the battle took place, seems very uncertain, as no authority except Pline mentions the situations of these plains. He describes them as lying in the vicinity of Vercellae (Vit. Mar.); but even this designation is very general. The Cimbri are represented as having entered Italy by the Tridentine Alps or the Tyrol; and we farther learn, that, after beating back the consul Catulus at the Athisus or Adige, they forced the passage of that river, by which time Marius having come up with considerable re-enforcements, a battle took place in the plains of which, we are speaking. (Ringlemann, sur la situation des Raudii Campi.—Mem. de l'Acad. des Inscri., &c., vol. 6, p. 360.) The small place called Rho is thought by D'Anville to preserve some traces of the ancient appellation. (Chramer's Anc. Italy, vol. 1, p. 52.)

Ravenna, an important city of Cisalpine Gaul, situated on the coast, a short distance below the Sannine mountains of the Padus or Po. It lay in the midst of marshy and built entirely on wooden piles. A communication was established between the different parts of the town by means of bridges and boats. (Compare Sil. Ital., 8, 602.—Marciel, 13, 18, &c.) But, as Strabo observes, the noxious air arising from the stagnant waters was so purified by the tide, that Ravenna was considered by the Romans a very healthy place; in proof of which, they sent geld-
nators there to be trained and exercised. The wine grew in the marshes with the greatest luxuriance, but perished in the course of four or five years. (Strabo, 218—Plin., 14, 2.) Water was scarce at this place, and hence Martial observes that he would rather have a cistern of water at Ravenna than a vineyard, since he would then have water for a price, whereas the wine was abundantly available. (Ep., 3, 56.) The same writer sportively alludes to his having been imposed upon by a tavern-keeper at Ravenna: on his calling for a glass of water, he received one of wine!—We are not informed at what period Ravenna received a Roman colony (Strab., 217); but it is not improbable, from a passage in Cicero (Orat. pro Balb., 22), that this event took place under the consulship of Cn. Pompeius Strabo. Ravenna seems to have been occupied by the Romans on the Adriatic, in the latter times of the republic, a measure which seems to have originated with Pompey the Great. It was from Ravenna that Caesar held a parley with the senate, when on the point of invading Italy. (Bell. Civ., 1, 5.) It was from this city, also, that he set forward on that march which brought him to the Rubicon, and involved his country and the world in civil war. (Appian, Bell. Civ., 5.)

Pompey had an important naval station near Ravenna: this was noted by Tacitus, who, in his account of the operations of the Roman fleet, says that this city was the only one that had not been attacked by the enemy. (Tacit., Ann., 42.)

The Romans made Ravenna their base of operations for the invasion of the island of Sardinia. (Codd., 48, 3.) It was the headquarters of the naval force that was sent against the pirates of Sardinia. (Codd., 48, 3.)

The city was the scene of many important events in the history of Italy. It was the headquarters of the Roman fleet during the war with the pirates of the western Mediterranean. (Codd., 48, 3.) It was also the place of meeting of the assembly of the senators, which decided the fate of the republic. (Codd., 48, 3.)

In the capture of Ravenna by the Persians, in the year 404, the city was laid waste, and the inhabitants were enslaved. (Codd., 48, 3.) The city was afterward restored to Roman rule, and became a centre of Jewish activity. (Codd., 48, 3.)

The city was also the centre of the Christian church in the early times of the empire. (Codd., 48, 3.) It was the seat of the bishopric of Ravenna, which was established in the year 232. (Codd., 48, 3.) The see was suppressed in the year 751 by the Lombards. (Codd., 48, 3.)

The city was also the seat of a university, which was founded in the year 1002. (Codd., 48, 3.) The university was suppressed in the year 1381. (Codd., 48, 3.)

The city was also the seat of a military college, which was founded in the year 1727. (Codd., 48, 3.) The college was suppressed in the year 1815. (Codd., 48, 3.)

The city was also the seat of a cathedral, which was founded in the year 1159. (Codd., 48, 3.) The cathedral was suppressed in the year 1815. (Codd., 48, 3.)

The city was also the seat of a hospital, which was founded in the year 1250. (Codd., 48, 3.) The hospital was suppressed in the year 1815. (Codd., 48, 3.)
Regulus. Punic war. He reduced Brundisium, and, in his second consularship, took 64, and sunk 30 galleys of the Carthaginian fleet off Ecnomus, on the coast of Sicily. After this victory, Regulus and his colleague Manlius sailed to Africa, and the Carthaginian city of Utique, a place situ- ate to the east of Carthage, not far from the Hermean promontory, which they made their place of arms. Manlius was recalled, but Regulus was left to prosecute the war; and so rapid was his success, that he made himself master of about 200 places on the coast, in the number of which was Tunetum or Tunis. The Carthaginians sued for peace, but Regulus would grant them no terms on conditions that Regulus Cartha- ginius triumphus — Magazin für offentl. Schulen, Bremen, 1791, vol. 2, pt. 1, p. 50, seqq.) The arguments in favour of this opinion are strong, and we might almost say decisive. In the first place, the Roman writers are all at variance among themselves respecting the nature of the punishment supposed to have been inflicted on Regulus. Cicerio (De fun., 20. — Ibid., 5, 27, Pis., c. 19, — De Off., 3, 27, Senecca (De Pror., c. 2), Valerius Marianus, Hist., vol. 2, ext. 1, Tuiditanus and Tubero (ap. Aurel. Gall., 6, 4), Silius Italicus (6, 539, seqq.), Aurelius Victor (c. 40), and Zonaras (Ann., vol. 2), make Regulus to have had his eyelids cut off, and to have died of want of sleep and of hunger. Senecca (loc. cit., Epist., et seq. 98), Silius Italicus (2, 343, seqq.), and Floros (2, 2), speak also of the case as an insignis of his suffer- inces. Arn. finale (1, 9, vol. 3, tranq., c. 15, — Epist., 67), Cicerio (Pis., c. 19), Valerius Marianus (9, 2, ext. 1), Aurelius Victor and Zonaras (liv., cc.), Silius Italicus (6, 539, seqq.), Orosius (4, 8), Augustin (De civ. Dei, 1, 15), Appian (De Reb. Pun., c. 4, — Excc., 2, ex. lib. 5, — De Reb. Sic., vol. 1, p. 93, ed. Schweich.), tell of a narrow box or barrel, full of nails, in which he was confined; and, being compelled to stand continually, perished at last with carelessness and neglect of his disappearance, therefore, gives the whole story much the appearance of a popular fable, owing its origin to, and heightened in many of its features by, national feeling. — Another argument against the authenticity of the narrative in question is derived from the total silence of Polybius, who treats fully, in his history, of the events of the first Punic war, respecting not merely the punishment of Regulus, but even his coming to Rome and his return to Carthage. — Rome, the great and still stronger republic, was induced from the language of Diodorus Siculus, who makes the widow of Regulus to have been urged to punish the captives in hands; and the passage that her husband had died the victim of carlessness and neglect on the part of the Carthaginians (vovianca de' άφέλεσαν απ' τον ικαλοματια το γυν, frag., lib. 24; vol. 9, p. 344, ed. Bip.) The natural inference from such language is, that the husband had not been treated with ordinary care, which would produce malady, and that this neglect caused his death; it is impossible to derive from the words of the text any meaning favourable to the idea of positive and actual punishment.—The captives in hands of the widow of Regulus were two in number, Bostar and Hamilcar, and they had been delivered up to her, it is said, to pacify her complaints, and as hostages for the safety of Regulus. But still this is a subject only of romantic food : Bostar died of hunger and grief, and Hamilcar was then shut up with the dead body for five days longer, a scanty allowance of food being at the same time given him. The stench from the corpse and other circumstances caused the affair to become known, and the sons of Regulus narrowly escaped being condemn- ed to death by the people. Hamilcar was taken away from his cruel keeper, and carefully attended until his restoration to health. (Diss. Sic. frag., lib. 24, vol. 9, p. 346, ed. Bip.) Would the Roman senate and
people have acted thus, had the story of Regulus and his cruel sufferings been true! If any, notwithstanding what has been here adduced, are inclined to favour the other side of the question, they will find some plausible arguments in its support in Ruperti's edition of Silius Italicus (Ad Arg., lib. 6).

Remi, a people of Gallia Belgica, southwest of the Treveri, and southeast of the Vermandui. Their capital was Duoctororum, now Rheims. (Cass. B. G. 2, 3, 5.—Tac. Hist., 4, 67.—Plin., 4, 17.)

Remus, the brother of Romulus, exposed together with him by the cruelty of his grandfather. (Vid. Romulus.)

Rexena, a city on the river Chabors, in northern Mesopotamia. (Steph. Byz., s. v. Ptevus.) Its site was afterward occupied by Theodosiopolis (Chron., Edessen., p. 339), which must not be confounded with another city of the same name in northern Armenia. The modern name of Rexena is Ras-el-aim. (Niembr, vol. 2, p. 394.)

Rha, (Pā), a large river, now the Volga. No writer, prior to Ptolemy, mentions either its name or course. The appellation occurs, it is true, in our edition of Mela (3, 5), but it is a mere interpolation. The true reading in Mela is, "E Ceraunis montibus uno alveo descendit, duobus exit in Caspium [Rha] Arazes Tauri latere demissus." The word Rha, which we have enclosed in brackets, does not belong to the text.—Ptolemy's acquaintance with this river was so accurate, that he knew not only its mouth, but its western bending towards the Tanais, its double sources (the Wolga and the Kama), the point of their union, and the course of some streams flowing from the mountains on the east into the Wolga. All this knowledge of the Rha was obtained from the caravan traders, except, perhaps, a small portion made known to the world by the Roman conquests in this quarter. Subsequent writers never lost sight of this river. Agathemerus (2, 90) reckons it among the larger sized rivers, and calls it, probably by a corrupt name, Rhaos or Rhaes. Rhamnuses Marcellinus (22, 8) speaks of a plant growing on its banks of great use in medicine. Every one will see that he alludes to the rhubarb (Rha barbarum) of pharmacy. The plant, it is true, did not, in fact, grow here, but was brought to this quarter by the caravan trade. As the Romans, however, received their supplies of it from this part of the world, they associated with it the name of the river, and thus the appellation arose. The name Rha appears to be derived, having 1164

Rhachotis, or Rhaetia, a country of Europe, which occupied part of the Alps, and was situate to the north of Italy and east of Helvetia. It is not easy to ascertain its limits to the north, but we may say that it was bounded in that quarter by Vindelicia, and, in general, that it corresponded to the country of the Grisons, and to the cantons of Uri, Glarus, &c., as far as the Lake of Constance: it extended also over the Tyrol. This country was called western Illyricum, and was subjected to the Romans by Drusus, in the reign of Augustus. Soon afterward Vindelicia was reduced by Tiberius, so that the Roman possessions extended to the Danube. This double conquest formed a province called Rhaetia, comprehending Vindelicia, without obliterating altogether the distinction. But in the multiplication that Dioclesian, and some other emperors after him, made of the provinces, Rhaetia was divided into two, under the names of Prima and Secunda; a circumstance which caused Rhaetia, Noricum and Vindelicia to resume their primitive distinctions. (Verg., G. 3, 96.—Plin., 3, 20; 14, 2, &c.—Hor., Od., 4, 4, 14.)

Rhamnus, a town of Attica, situate on the coast, sixty stadia northeast of Marathon. (Pausan., 1, 32.—Strabo, 399.) It was so named from the plant rhambus (thornbush), which grew there in abundance. This demus belonged to the tribe Anxites, and was, much celebrated in antiquity for the worship of Ceres, hence styled Rhamnusia. (For an account of her temple and statue, vid. Nemesis.) Scylax speaks of Rhamnus as being fortified. (Peripl., p. 21.) It was the birthplace of the orator Antiphon. A modern traveller, who has accurately explored the site of this ancient town, informs us that it now bears the name of Vraco Castro. The ruins of the temple of Nemesis lie at the head of a narrow glen which leads to the principal gate of the town, but building is not allowed to those Doric temples which still remain in Attica. Its fall seems to have been occasioned by some violent shock of an earthquake, the columns being more disjointed and broken than in any other ruin of the kind. (Raike's Journal, in Walpole's Memoirs, vol. 1, p. 307.—Cramer's Anc. Greece, vol. 2, p. 389, seqq.)

Rhamnitis. Vid. Rampeinitus.

Rhamessis or Rames, a powerful king of Egypt, the father of Rames VI., the famed Sesostris. (Vid. Sesostris.)

Rhamius Campus, a part of the Thriasian plain, in Attica, near Eleusis. It was in this plain that Ceres was said to have first sown corn. (Pausan., 1, 38.)

Dodwell observes, that the soil, though arid, still produces abundant harvests (vol. 1, p. 588).

Rhea, I. a daughter of Coeus and Themis, who married Saron, by whom she bore the gods Ceres, Juno, Pluto, Nemesis, &c. Her husband, however, devoted them all as soon as born, as he had succeeded to the throne with the solemn promise that he would raise no male children, or, according to others, because he had been informed by an oracle that one of his sons would dethrone him. To stop the cruelty of her husband, Rhea consulted her parents, and was advised to impose upon him. Accordingly, when she brought forth, the child was immediately concealed,
RHE and Saturn devoured a stone which his wife had given him as her own child. The fears of Saturn were soon proved to be well founded. A year after, the child, whose name was Jupiter, became so strong and powerful, that he drove his father from his throne. (Virgil, Sat., II. or Rhea Silvia, the mother of Romulus and Remus. (Vid. Illa.)

Rhegium, the most celebrated and flourishing cities of Magna Graecia, at the extremity of Italy, in the territory of the Bruttii, and in a southeastern direction from Messana on the opposite coast of Sicily. This city is known to have been founded nearly 700 years B.C., by a party of Zancanites from Sicily, together with some Chalcidians from Eubea, and Messenians from the Peloponnesus. (Antioch. Syr. Strab., 276.—Herod. Pont. fragm., 55.—Pausan., 4, 273.) It may, however, be claimed to a still more remote origin, if it be true, as Cato affirmed, that it was once in the possession of the Aurunci. (Ap. Val. Prob. et fragm. Hist.) According to Eschylus, as quoted by Strabo, the name of Rhegium was supposed to refer to the great catastrophe which had once separated Italy from Sicily (αἰδ/δ' Ρῆγον καταληκτεν.—Compare Virg., Æn., 3, 414.) That geography makes ready his hand is in itself a proof that the name was derived from the Latin word Reginum; and thus considers it as only expressive of the importance and dignity of the town to which it was attached. (Strab., 257.) It appears, however, from the more ancient coins of Rhegium, that the original name of the place was REGION. In these the epigraph is more REGI. RECINOS, in characters partaking more of the Oriental than of the Greek form. Those of a more recent date are decidedly Greek, PHI. PHITINON, being inscribed on them. (Sestini, Mon. Vet., p. 18.)—We may collect from different passages, that the constitution of Rhegium was at first an oligarchy under the superior direction of a chief, who was always chosen from a Messenian family. (Hevære, Opusc. Acad., vol. 2, p. 270.—Sainte-Croix, sur la Legislation de la Grande Grece, Mem. des Acad. des Inscri., vol. 42, p. 312.) Chorридias, the celebrated lawyer of Catana in Sicily, is said also to have given laws to the Rhegians (Hercol. Pont., l. c.—Elian, V. H. III, 3, 17.—Aristot., Polit., 2, 10.) This form of government lasted nearly 200 years, until Anaxilaus, the second of that name, usurped the sole authority, and became tyrant of Rhegium about 496 B.C. (Strabo, l. c.—Aristot., Polit., 5, 12.) Under this prince, who, though aspiring and ambitious, appears to have been possessed of considerable talents, he administered the city like a king and the prosperity of Rhegium, far from declining, reached its highest elevation. Anaxilaus having succeeded in making himself master of Messana, in conjunction with a party of Samians, who had quitted their country, which was then threatened with the Persian yoke, (Herod., 6, 23.—Thucyd., 6, 5), confided the sovereignty of that important town to his son Cleophroros. (Schol. ad Pind. Pyth., 5, 34.) His views were next directed to Attica; and it seems, also he would have been successful, having already obtained a decided advantage over them in the field, and having proceeded, farther, to lay siege to their town (Justin, 21, 3), when he was compelled to withdraw his forces by the influence of Hiero, king of Syracuse, whose enmity he was unwilling to incur. (Schol. ad Pind., l. c.) Anaxilaus reigned eighteen years, and, on his death, intrusted the state to Min, his eldest son; but, as Min then was but a child, until his sons should arrive at a proper age to undertake the management of affairs. He held the power until the young princes had attained this age, and then resigning it to them, retired to Tegea. About six years after his resignation, the Rhigians succeeded in recovering their liberty, and freeing themselves from the tyrannical government of the sons of Anaxilaus. The city, however, remained long a prey to adverse factions, and it was not till it had undergone various changes and revolutions in its internal administration that it obtained at last a moderate and stable form of government. (Thucyd., 4, 1.—Justin, 4, 3.) The connexion which subsisted between Rhegium and the Chalidian colonies in Sicily, induced Rhegium to take part with the latter against the Syracusans and Locrians; the latter, indeed, proved their constant enemies, and sought to injure them by every means in their power. (Thucyd., 4, 24.) In the great Sicilian expedition the Rhigians observed a strict neutrality; for, though the Athenian fleet was long moored in their roads, and its commanders employed all their arts of persuasion to prevail upon them to join their cause, they remained firm in their determination. (Thucyd., 6, 44.) The same policy seems to have directed their counsels at the time that Dionysius the elder was meditating the subjection of Sicily and Magna Graecia. They constantly opposed the designs of that tyrant; and, had the other states of Magna Graecia displayed the same energy, the ambitious views of this artful prince would have been completely frustrated; but, after the defeat of his forces on the Echinus, they offered no further resistance; and Rhegium being left unsupported, was compelled, after a gallant defence of nearly a year, to yield to the Sicilian forces. The few inhabitants who escaped from famine and the sword were removed to Sicily, and the place was given up to pillage and destruction. Some years after, it was, however, partly restored by the younger Dionysius, who gave it the name of Phœbia. (Strabo, 258.) During the war with Pyrrhus, this city was seized by a body of Campanians, who had been stationed there as a garrison by the Romans, and was, in consequence, exposed to all the licentiousness and rapacity of those mercenary troops. The Roman senators at length freed the unfortunate citizens from their persecutors, and consigned the latter to the fate which they so justly merited. (Strabo, l. c.—Polyb., 1, 7.—Liv., Epit., 12 et 15.) The city of Rhegium sustained great injury at a later period from the repeated shocks of an earthquake, which occurred not long before the Social war, or 90 B.C. It was, in consequence, nearly deserted when Augustus, after having conquered Sextus Pompeius, established there a considerable body of veteran soldiers for his fleet; and Strabo affirms, that in his day this colony was in a flourishing state. (Strab., 259.) Hence also the appointment of a new settlement of Roman citizens, who were permitted to designate this town. (Iustin., p. 65.) Few cities of Magna Graecia could boast of having given birth to so many distinguished characters as Rhegium, whether statesmen, philosophers, men of literature, or artists of celebrity. Among the first were many followers of Pythagoras, who are enumerated by Iamblichus in his life of that philosopher. Theagenes, Hippys, Lycus, surnamed Butera, and Glauceus, were historians of some note; Dysssines, the father of the famous father of Lycophron, were poets, whose works were well known in Greece. Cleararchus and Pythagoras are spoken of as statuaries of great reputation; the latter, indeed, is said to have even excelled the famous Myron. (Plin., 35, 8.—Pausan., 6, 4.) The modern name of the place is Reggio. (Cramer's Anc. Italy, vol. 2, p. 457.)

Rhegium is 6½ miles from near Delos; so near, in fact, that Polycrates of Samos is said to have dedicated it to Apollo, connecting it to the latter island by means of a chain. (Thucyd., 3, 104.) Strabo says the distance which separates them is four stadia. (Strabo, 480. Herod., 3, 96.—Plin., 4, 12.) Its other names were Celadussa and Artemis. According to modern maps, Rheia, which is larger than Delos, is also called Salius. (Cramer's Anc. Greece, vol. 3, p. 401.)
RHÉNIUS, I. a celebrated river of Europe, rising in the Leptoline Alps, a little to the east of Mount St. Gothard, in the country of the Grisons. It passes through Lucus Brigantinus, or the Lake of Constance, and afterward through Lucus Aenonius, or the Lake of Zell, and continues to run nearly west until it reaches the Rhénil Po, which is a northern direction, and becomes the boundary between Gallia and Germania, and afterward between the latter and Belgium. At Scheneck, or Schenken Schanze, the Rhénil sends off its left-hand branch, the Vahalis or Waal, which flows west, and joins the Mosel or Meuse. After parting with the Vahalis, the Rhénil flows on a few miles farther to the north, and then divides into two streams, of which the one to the right had the name of Flevo, or Flevus, or Flevum, now the Yssel, and the other that of Helium, now the Leck. The latter joins the Meuse above Rotterdam. The Yssal was originally uncoupled with the Rhine, but was joined to it by the canal of Druus. Before it reached the sea, it traversed a small lake called Flevo, which, by the increase of waters it received through the Yssal from the Rhine, became in time expanded, and forms now the Zuyder Zee. (F. P. Flevo) twentieth century, of which 630 are navigable from Bâle to the sea. The Rhine was long a barrier between the Romans and Germans; it was first crossed by Julius Cæsar. —The word Rhein, which signifies a "current" or "stream," appears to be of Celtic or ancient Germanic origin. (Cas., B. G. 4, 20. —Tac., Germ., 1, 28, 29.—Id., Ann., 2, 6.—Id., Hist., 2, 26.—Mela., 2, 3.—Id. 3, 2.—Plin., 4, 15.)—If a small river of Oisalpine Gaul, rising in the northern part of Æturia, and falling into the Po of the Po, or into the Rhone, knows the name of Reno, and is celebrated in history for the meeting of the two triumvirate, which took place A.D. 709, in an island formed by its stream. Appian seems to place the island in the Lavinius; but his testimony ought not to stand against the authority of Plutarch (Vit. Cæs. et Ant.), Diò Cassius (46, 55), and Sue-tanon (Vit. Aug., c. 96), who all agree in placing the scene of the event close to Bononia or Bologna. The two Rhine tributaries which measure exactly is probably that which is now known by the name of Crocetta del Trebbio, where there is an island in the Rheno, about half a mile long and one third broad, and about two miles to the west of Bologna. (Cramer's Anc. Italy, vol. 1, p. 88.)

RHÉNUS, a king of Thrace, son of the Styron and the muse Tersiphore, who marched, at a late period of the Trojan war, to the aid of Priam, with a numerous army. His arrival was expected with great impatience, as an ancient oracle had declared that Troy should never be taken if the horses of Rhénilus drank the waters of the Xanthus, and fed upon the grass of the Trojan plain. This oracle was well known to the Greeks, and therefore two of their best generals, Diomedes and Ulysses, were commissioned by the rest to intercept the Thracian prince. The Greeks entered his camp in the night, slew him, and carried away his horses to their camp. (Apollod., 1, 3.—Virg., Aen., 1, 473.—Ovid., Met., 13, 98.)

RHÉNIUS, a Greek poet, a native of Bena in Crete, who flourished about 230 B.C. He was originally a slave in a school of exercise. Rhénius wrote an Herculeis, Thessalica, Messenica, Achila, and Eliaca. Of all these poems we have only about thirty-three lines remaining. Of the titles of his productions appear to indicate, that if, like Ouerius of Samos, he gave his poem a title, and this title, as is usually the case, only of such subjects which lost themselves in remote antiquity, or which, like the Messenian war, were almost as much within the domain of imagination as of history. —The fragments of Rhénius are contained in the collections of Winterton, Brunkis, Gaisford, and Boissoneau.

Ten epigrams of his also remain, which are given in the Anthology. (Schiit, Hist. Lit. Gr., vol. 3, p. 123.)

RHÉNOULX, a town on the coast of the Mediterranean; assigned at one time to Egypt, at another to Syria, and lying on the confines of both. It was an important place in the north, and was used as a port and mart for the Arabian trade. The modern El Arish occupies its site. It derives its name, according to Strabo, from the circumstance of offenders being sent thither as to a place of exile, after having been first deprived of their noses (fivw, the nose, and aivous, to mutilate), a custom said to have been practised by one of the Æthiopian invaders of Egypt. (Strab., 780.) The story is evidently untrue; and the name would appear to be, not of Greek, but Egyptian origin. Diodorus Siculus (1, 60) says that this town was destined to enjoy the conveniences of life; that its water was bitter and obnoxious; and that it was surrounded with salt marshes. It was in the vicinity of this place that the Israelites were nourished with quails. (Liti., 45, 11.—Plin., 5, 13.—Itin. Ant., 151.—Hieroc., p. 726.)

RHON, or, as the Latins write the word, Rheum, a promontory of Achaea, opposite Antium in Αἰθλία. The strait is seven stadia across. The castle of the Moraca marks the site of the present day. (Itin. of Moraca, p. 6—Chandler's Travels, vol. 2, ch. 72.) Strabo makes the strait only five stadia, but he seems to identify Rheum with Drepum. (Strab., 335. —Vid. remarks under Antium.)

RHÉPHE, mountains in the north of Europe, near the sources of the Tanais, according to Ptolemy. What he designates, however, as such, do not, in reality, exist there. If he marks a chain of mountains more to the north, the actual observations afford nothing corresponding, except it be the chain which separates Russia from Siberia. (Plin., 4, 12.—Lucean, 3, 272; 3, 382; 4, 418.—Virg., G., 1, 240; 4, 518.)

RHÉDANUS or RHÔNE, a large and rapid river of Europe, rising among the Leptoline Alps, not more than two leagues south of the sources of the Rhine. It passes through the Lucus Lemanus, or Lake of Geneva, five leagues below which it disappears below 12, and reappears above 240 miles, where it rises with great rapidity in a southern direction, and discharges itself by three mouths into the Sinus Callicus, or Gulf of Lyon, in the Mediterranean. The largest of these mouths was, in the days of Pliny, called Massiliocium; the other two were much less, and had the common name of Libya, although each was also known by a distinct appellation. Hespanhese Ostium denoted the western or the one nearest to Hispania, and Metapinùm that in the middle. The course of the Rhone is about 400 miles, during which it falls 5400 feet. In Strabo's time it was navigable some distance up; but its mouths are now so full of rocks, brought down from the mountains by its impetuous current, that no ship can enter them. The upward navigation in smaller vessels can only, on account of the rapid current, be performed by draught or steam. This river is largest in summer, at its greatest height soon after the longest day. This is most probably occasioned by the heat of the sun melting part of the snow on the Alps during the summer months. For some remarks on the origin of the name Rhédanus, vide Eridanus. (Mela., 2, 5; 3, 2.—Ovid., Met., 2, 355.—Sil. Ital., 3, 447.—Cas., B. G., 1, 1.—Plin., 3, 4.—Lucean, 1, 433; 6, 475.)

RHÔDEA, a mountain range of Thrace, forming, in a great degree, its western boundary, and commonly called Herodotan, or the chief mountain of Thrace (2, 96). Herodotus gives it the appellation of Rhodope, and asserts that the Thracian river Escius (now Ister) rises in this mountain (4, 49), while Thucydides makes it flow from Scamius. Again, Herodotus has placed Rhodope in the vicinity of the Bialae, who were cer-
tainly much to the south of the sources of the Styx. But all this is easily explained, when we take into consideration the vague manner in which these writers employ the various names of this great chain. Virgil has several times mentioned Rhodope as a mountain on Thrace (Georg. 9, 461; iud. 4, 401. — Eclog. 6, 90.)—Theoristes (Georg. 5, 461; stat. 4, 401. — Cramer's Anc. Greece, vol. 1, p. 272).

Rhodope or Rhodope, a celebrated hetairist of antiquity, a native of Thrace. She was contemporary with Æsop, the fabulist, and was a slave under the same roof with him at Samos. Xanthis, a Samian, afterward took her to Egypt, where she was purchased and manumitted by Charaxus, the son of Sappho, who became deeply enamored of her. (Herod. 2, 134.—Strab., 808.) She settled, after her manumission, at Naucratis, in Egypt; and, according to one account, a pyramid was erected in honour of her by some of the governors of the adjacent nomes, at their common expense. (Diod. Sic. 1, 64.—Strabo, l. c.) Ælian relates, that as Rhodope was bathing on one occasion, an eagle, having flown down, seized her by the arm and carried her off to the summit of Psemitmicthus, which was dispensing justice at the time. The monarch, having admired the beauty and elegant shape of the sandy, and being struck also by the singular mode in which he had become possessed of it, caused inquiry to be made for the owner throughout the land of Egypt; and when he discovered that the sandal belonged to Rhodope, he made her his queen. (Ælian, V. H. 8, 13.—Strab., l. c.) According to this version of the story, the pyramid was erected to her after death, as a royal tomb. — Herodotus, in arguing against the supposition that the pyramid in question was the tomb of Rhodopis, makes her to have lived under Amasis (2, 138). Now, as there was an interval of forty-five years between the death of Psemitmicthus and the accession of Amasis, Perizoneus is no doubt right in thinking that there were two hetairists named Rhodopis, one who became the queen of Psemitmicthus, and the other the fellow-slave of Æsop, in the time of Amasis. The latter will be the one whom Sappho calls Doricha, and of whom her brother Charaxus was enamoured. (Perizon, ad El., l. c.—Bailly, Dict. s. v. Rhodope.) Achilles Tatius states, that there was near Tyre a small island which the Tyrians called the tomb of Rhodope. This, however, has never been confirmed by the writer. (Achill. Tat., de Cid. et Lexc. am., 2, 17.)

Rhodus (Pódoç), a celebrated island in the Mediterranean Sea, lying southwest of the coast of Caria, and being about forty-three miles distant from the mainland. It is longer from north to south than from east to west. Strabo gives its circuit 900 stadia (Strabo, 651), but Pliny 150 miles, or, according to another measurement, 103. (Pliny, 5, 29.) According to Suidas (Ophiussa), Rhodus was the birthplace of Leander, and its breadth six, while its circumference is commonly estimated at forty-four leagues. Its form is nearly triangular, whence it obtained the name of Trianaea. According to Strabo, it was originally called Ophiussa (Ophiósssa) and Stadia, and subsequently Telchinis. Its latest name, Rhodes, was derived, according to Diodorus Siculus (6, 55), from Rhodes, a daughter of Apollo and Hestia. Others, however, have sought for the origin of its name in the solar rays, the Greek Ροδος, signifying a rose, with which species of flower the island is said to abound; and, in confirmation of this etymology, it has been alleged that the figure of a rose is given on the reverse of many Rhodian coins still extant. (Rasche, Lex. Rei. Num., vol. 7, p. 1057.—Bayer, Diss. de Nummo Rh odio, p. 492.—Compare Schol. ad Find., Olymp., 7, 24.) Ritter, however, maintains, that the flower here mistaken for a rose is none other than the lotus, and he seeks from this to connect the early religious system of Rhodes with the most ancient worship of the East. (Vorhalle, p. 338.) Bochart, of course, is in favour of a Phoenician etymology, and, availing himself of one of the ancient names of the island mentioned above, namely, Ophiussa, he concludes that among the first inhabitants, says that the Phoenicians also called it Snake Island, which in their language was Geszrath-Rhod. From this last word, which signifies "a snake," the Greeks, he thinks, formed the name Pódoç (Rhodes). The same scholar derives the appellation Stadia from the Hebrew or Phoenician Tadna, "a desert." (Geogr. Sacr., 1, 7, c. 369, seqq.) In addition to the earlier names cited above former, Strabo, it may not be amiss to mention the following as given by Pliny (5, 31), namely, Asteria, Ætheira, Corymbia, Presasa, Ataribia, Macris, and Oloessa.—As this island lay on the dividing line between the Ægean and the eastern part of the Mediterranean, it became, at a very early period, a stopping-place for navigators, as well for the Phoenicians as for the Greeks in their route to the farther coast of Asia. Hence, too, the island was early inhabited. As its first settlers, we find the Telchines mentioned, who are styled "sons of Thalassa" (τοίς Θαλάσσης, l. e., "of the sea," in allusion, evidently, to their having come from foreign parts. (Diol. Sic. 5, 55.—Strabo, 664.) They were said to have migrated originally from Crete to Cyprus, and from the latter island to Rhodes. They brought with them the art of working iron and copper; they were the first, also, to form statues of the gods, and they, in addition to this, powerful enchanters, who could summon at pleasure clouds, rain, hail, and snow, and could assume various forms. (Diol. Sic. et Strabo, l. c.) In all this we recognise the wonder produced among a barbarous race of men, by a race of strangers possessed of the elements of useful knowledge, and taught by experience to prognosticate the variations of the atmosphere (Vid. Telchines). Tradition goes on to state, that Neptune, who had now attained to manhood, became the father of six sons and one daughter by Halia, the sister of the Telchines. This daughter's name was Rhodes, and hence, according to the legend, was derived the name of the island. The Telchines subsequently, made aware, by their skill in divination, of an approaching deluge, left, nearly all of them, the island, and were scattered over various countries. Some of them, however, when the deluge came, fled to the higher grounds, where they saved themselves. It was here that the Sun beheld Rhodes, and became captivated by her beauty. He checked the inundation, called the island after her name, and became by her the father of the Heliaed, seven in number, and of one daughter, called Electryone. The Heliaed are said to have been well skilled in navigation, to have taught the art of navigation, and to have divided the day into hours. From one of their number the Egyptians obtained a knowledge of astrology. (Diol. Sic. 5, 57.) The island of Rhodes remained from henceforth consecrated to the sun; and, according to Pliny (2, 62), it continued ever after a favourite boast on the part of the Rhodians, that not a day passed during which their island was not visited by some sun. The eldest of the Heliaed was succeeded in the government of the island by his three sons, Lindus, Ialysus, and Camirus, who each founded a city, and called it after his name. About this period, Danais, flying from Egypt, came to Rhodes, with his daughters, and built a temple to Minerva; and, not long after, Cadmus, with his Pho- nicians, also came, being in quest of his sister Europa. From these and other mythical legends, it will ap
ppear very plainly that the earliest known inhabitants of Rhodes were not Greeks, but persons from the neigh-
bouring mainland. The Greeks came in at a later pe-
riod, and drove the earlier settlers into the interior of
the island: hence we find all the cities on the coast
with Grecian forms of constitution, and Strabo ex-
pressly styles the inhabitants as of Dorian origin.
(Strab., 653.)—All that we have thus far related coin-
cides with the period prior to the Trojan war, except
the migration of the Greeks, which took place in the
course of the century next after the fall of Troy. It
was long before the Rhodians attracted the notice of
the rest of the Greeks, and before their commercial op-
erations raised them to any consequence. They fell
under the power of Persia, and in the war between this
power and the Greeks, and in those between Sparta and
Athens, it always sided with the conquering party,
though without adding any remarkable weight to the
scale. The execution of a plan subsequently
conceived first laid the foundation of the political im-
portance of Rhodes. The three cities of Lindus, Ialysus,
and Camirus came to the conclusion, to-
wards the close of the Peloponnesian war, of uniting to-
gether and forming one common city. This city, sit-
uate in the northern quarter of the island, took the
name of Rhodes, and continued ever after the capital.
The three older cities, which had united in its ere-
tion, did not actually cease to exist from this period,
though a large portion of their inhabitants migrated to
the new city. The inhabitants of the new capital were
oligarchically governed when under Lacedaemonian su-
premacy; democratically when under Athenian; but
the state flourished under both. When Rhodes com-
bined with Chios and Byzantium in revolt against the
Athenians, the democracy seems to have been still
maintained; but after the termination of that war it
was overthrown by an insurrection of the wealthy few
and their adherents, assisted by Mausolus, the king of
Caria. Under its new government, Rhodes continued
to increase in trade and shipping; from which it may
be inferred that the administration was not inattentive
to the wishes and interests of the people; for mari-
time power always strengthened the popular party, and
a jealous and arbitrary oligarchy would therefore have
discouraged rather than favoured the growth of the
navy. We are told, indeed, in one fragment of a con-
temporary historian (Theopompus, quoted by Atha-
enus), that there was a time when all power was in
the hands of a small knot of profligate men, who sup-
ported each other by war and robbery, living in ex-
pulsions or brutal captives could prompt. But, what-
ever chances may have enabled a small faction to ex-
cercise for a while so hateful a tyranny, it must have
quickly fallen, and the government have reverted to
the great body of citizens having certain qualifications
of birth and property. In the ordinary state of the
Rhodian aristocracy, its conduct was moderate and
upright; so we are told by ancient writers, and their testi-
mony has been confirmed by the continuing
wealth, and by its continual increase in commer-
cial wealth and naval power. When all the Grecian
seas were swarming with pirates, the Rhodians alone
for the common good undertook and effected their sup-
pression. They were highly respected by Alexander,
though he kept a garrison in their city, which, on re-
ceiving the news of his death, they immediately ex-
pelled. As a Rhodian, an oligarchy appears to
have been generally favourable to Alexander, notwith-
standing the patronage which Alexander, in the outset
of his career, found it expedient to bestow on the dem-
cratic interest in Asia Minor, it is possible that this
change was accompanied with an increase of power in
the great body of the people. The Rhodians stood
aloof from the quarrels of the chiefs who divided the
empire of Alexander, and kept friendship with them all,
thus enjoying peace when every other state was at
war. This could not last for ever. Their habits and
interests especially inclined them to close connexion
with Ptolemy and Egypt; and though they avoided
giving any just cause of offence to Argus, this vio-
 lent spirit would be satisfied with nothing short of
full qualified support. This being refused, he commis-
sioned officers to seize the Rhodian traders bound for
Egypt; and when the execution of the order was re-
sisted, he prepared an armament against the island.
The Rhodians endeavoured to pacify him by compli-
ants and submissions; but, finding him inexorable,
they made ready for defence. — In the year which fol-
lowed they defeated Argus, C. 344, Demetrius laid siege to
Rhodes. The Rhodians sent to solicit aid of Ptolemy, Lysimachus, and Cassander, and took measures to increase to the utmost their mil-
itary force, and to unite the hearts and quicken the
zeal of all who were in the city. Strangers and foreign
residents were invited to join in the defence, but all
unserviceable persons were sent away. It was voted
that slaves, who fought with courage and fidelity,
should be purchased from their masters, emancipated,
and made citizens; that every citizen who fought in bat-
tle should have a public funeral; that his surviving
parents should be supported, and his children educated
by the state; that marriage portions should be given
to his daughters, and a suit of armour publicly present-
ed at the feast of Bacchus to each of his sons on com-
ing of age. The rich men freely gave their money,
the poor their labour, the artificers their skill; all strove
to surpass each other in zeal and execution. The be-
sieging army was numerous and disciplined, and well
applied and well appointed, and provided with every va-
riety of warlike engines which the science of the age
and the mechanical genius of the commander could
furnish. Assaults were made by land and sea, in va-
rious fashions and with various success; but no deci-
dative advantage could be gained over the resolute
and active defenders of the city, who not only kept the
walls, but made several vigorous sallies, in some of
which they destroyed many ships and en-
gines of the besiegers. Demetrius at length gave up
the hope of successfully attacking them from the sea,
and turned all his attention to his operations on the
side towards the land. The Rhodians, taking advan-
tage of this to employ their ships in distant cruises,
made prizes of many vessels belonging to Antigonus,
and intercepted some convoys which were coming to
the enemy's camp. Meantime the siege was pressed by
every means to which the besiegers were capable, all
which the Rhodians made good by new defences
built within; and just as they were beginning to be
discounted by the power and perseverance of their ad-
versary, their confidence was renewed by the arrival
of an Egyptian fleet, with supplies in great abundance.
— The siege was protracted for a year. A second
fleet was sent by Ptolemy, which brought large sup-
plies, and a considerable reinforcement of men, to
assist the army. Among the fresh arrivals was a part
of the Athenians, and from many other Grecian states, to entertain that Demetrius would be reconciled with the Rhodians. He yielded so far as
to grant a suspension of arms and commence a ne-
gotiation; but the terms could not be agreed on,
and the war was renewed. He then attempted a surprise
by night. Under cover of the darkness, a chosen body
of soldiers entered the town through a breach which
had been formed by blowing up the rest of the posts,
and then by daybreak by a general assault on the walls.
But the Rhodians were cool and firm. All who were
defending the ramparts remained at their posts, and
made them good against the enemies without; while
the rest of the citizens, with the auxiliaries from Egypt,
went against those within the city. In the violent
contest which ensued, the townsmen were victorious,
and few of the storming party escaped out of their
hands. Letters now came from Antigonus, directing
Rhodes. Rho

his son to make peace with the Rhodians on what conditions he could; and Demetrius accordingly wished for an accommodation on any terms that would save his credit. The Rhodians were no less anxious for peace; and the more so, as Ptolemy had written to them, promising farther aid in case of need, but advising them to put an end to the war on any reasonable terms. There were the same contrasts in the Rhodians' case; and all the terms that the Rhodians should be independent, and should retain all their revenues; but that they should assist Antigonus in all his wars, excepting against Ptolemy, and should give one hundred hostages in pledge of fidelity to their engagements. Thus released from danger, the Rhodians proceeded to fulfil their promises, and reward those who had served them well. Pit honours were bestowed upon the bravest corsairs of John, never having lost possession, with citizenship, given to such of the slaves as had deserved it. Statues were erected to Ptolemy, Ly-simachus, and Cassander, all of whom had assisted them largely with provisions. To Ptolemy, whose benefits had been by far the most conspicuous, more extravagant honours were assigned. The oracle of Ammon was consulted, to learn whether the Rhodians might be benefited by the donation: the answer was that permission being given, a temple was actually erected in his honour. Such instances had already occurred in the case of Alexander, and in that of Antigonus and Demetrius at Athens; but it must be remembered that such a practice would not bear, in Grecian eyes, the same unnatural and impious character which it does in ours, since the step was easy from hero-worship, which had long formed an important part of their religion, to the adoration of distinguished men, even while alive (Hist. of Greece, p. 161, sqq.—Locr. Us. Knowl.).—After miking more or less in the various collisions which ensued between the successors of Alexander and their respective descendants, Rhodes sided with the Romans, and became a valuable auxiliary to the rising power. In return for the important services thus rendered, it received from its new friends the territories of Lycia and Caria; but suspicion and distrust, eventually arose, the Rhodians were deprived of their possessions in Asia, and at last, in the reign of Vespasian, of their freedom, and with it of the right they had so long enjoyed of being governed by their own laws. A new province was formed, consisting of the islands near the coast of which Rhodes was the capital, and the island henceforth became an integral part of the Roman empire, and shared in its various vicissitudes. In a later age, it fell into the hands of the knights of John, and inhabited, as long as the possession of Palestine, A.D. 1309. In 1490 they repelled an attack of the Turks, but in 1522 were compelled to surrender the island to Soliman II. The population is diversely estimated: Savary makes it 36,500, of which about one third are Greeks, with an archbishop. The capital, Rhodes, has a population of about 6000 Turks. The suburb, Neochoria, is inhabited by 3000 Greeks, who are not permitted to reside within the city. The town is surrounded with three walls and a double ditch, and is considered by the Turks as impregnable. It has two fine harbours, separated only by a mole.—Rhodes was celebrated for its Colossus, an account of which will be found elsewhere. (Vid. Colossus.) Its maritime laws were also in high repute, and were adopted as the basis of marine law on all the coasts of the Mediterranean. Their main principles are an almost absolute freedom for the freebooters in all times. The legislative enactments at Rhodes respecting the condition of the poorer classes were also very remarkable. The government, though far from being a democracy, had a special regard for the poor. They received an allowance of corn from the public stores; and the rich were taxed for their support. There were likewise certain works and offices which they were called upon by law to undertake, on receiving a certain fixed salary. (Strab., 653.) Rhodes produced many distinguished characters in philosophy and literature: among these may be mentioned Panaitius (whom Cicero has so much followed in the Offices), Statocles, Andronicus, Eudemus, and Hieronymus. Posidonius the Stoic resided for a long time in this island, and gave much useful instruction in the sciences. The prime writer, author of the Heracleid, as well as Simmias and Aristides, are likewise found in the list of the Rhodian literati.—The serene sky of the island, its soft climate, fertile soil, and fine fruits, are still praised by modern travellers. "Rhodes," observes Dr. Clarke, "is a truly delightful spot: the air of the place is healthy, and its gardens are filled with delicious fruit. Here, as in Cos, every gale is scented with the most powerful fragrances; the jasmine, the lily, the rose, the citron tree. Numberless aromatic herbs exhale at the same time such profuse odour, that the whole atmosphere seems to be impregnated with a spicy perfume. The present inhabitants of the island confirm the ancient history of its climate; maintaining that hardly a day passes throughout the year in which the sun is not visible. The winds are liable to little variation: the most prevailing wind is the "Carin," blowing every month."—(Travels, vol. 3, p. 278, Lond. ed.—Compare Turner's Tour in the Levant, vol. 3, p. 10.) Rhæcæus, i. one of the Centaurs, slain by Atalanta. (Apollod., 3, 9, 2.)—II. One of the giants, slain by Bacchus under the form of a lion, in the conflict between the giants and the gods. (Horat., Od., 2, 19, 23.) The Greek form most in use is Pa'kos, but, as Bentley remarks, the Latin writers in general prefer the form Rhatio. (Compare Heyne, ad Apollod., 3, 9, 2.) Rhæteum, a promontory of Troad, on the shore of the Hellespont, in a northeastern direction nearly from Sigeum. On the sloping side of it the body of Ajax was buried, and a tumulus still remains on the spot. (Melà, 1, 18.—Plin., 5, 30.—Lit., 37, 37.) Between this promontory and that of Sigeum was the position of the Grecian camp. (Consult Rennell, Topography of Troy, p. 70.) According to Leake, Palto Kastro, near the Turkish village of Il-gheimes, marks the probable site of Rhæteum. (Tour, p. 275.) Rhœus, a city of Syria, the southernmost one in the district of Pieria, fifteen miles from Seleucia, and lying on the Sinus Iassicus. It was northwest of Antiocchia. When Pliny speaks of it as lying near the Syrian Pass, he must be understood as speaking of the southern pass, not the northern one on the confines of Syria. (T. H., 3, 22.—C. i. 40, 1, 1.—Ep. ad Att., 6, 10.) Rhoxalâni, a Sarmatian race to the north of the Palus Mæotis. From the testimony adduced by Malte-Brûn and others, there is no reason to doubt that the appellation of Russians is derived from that of the Rhoxalani or Rhoxani. This derivation is neither difficult nor improbable. The x, it is supposed, was substituted by the Greeks for the sΣ or θ of thebarbarians. In the Doric and Æolic dialects that consonant was expressed by the simile x; Hence from Rhosaxi to Rhosaxani, Rosani, Rosi (the proper orthography requires the o, not the u, in the first syllable), the transition is natural and easy. A manuscript of Jornaudes, in the Ambrosian Library at Milan, has Rossomannorum instead of Rhoxalâniormor, a reading which confirms the identity of sound between the x and the ss. The addition by that historian of the letter to the primitive word will surprise no one. In the time of Strabo, the Rhoxalani were settled on the vast plains near the source of the Tanais and Borystances. Appian tells us that they were warlike and powerful; and we learn from other writers of at least equal weight, that, having joined their arms to those of a neighbouring nation, they frequently attacked the Roman confines near the Dan-
uba and the Carpathian Mountains; that in A.D. 68
they surprised Moesia; in 166 carried on war against
the Marcomanni, and in 270 were numbered among
the enemies over whom Aurelian triumphed. During
the first three centuries they occupied the southern
parts of Poland, Red Russia, and Kiovia, the very
seas of the north ruled by the Russians of the ninth
century. Jornandes assigns them the same region; and
the anonymous geographer of Ravenna fixes them in Li-
thuania and the neighboring countries. These au-
thorities are to us decisive that the Rhoszalani and the
Russians are the same people; but, if any doubt re-
mained, it would be removed by the concurrent tes-
timony of the native chronicles, the Polish traditions,
the Byzantine historians, and the Icelandic sagas, all of
which, it would appear, are equally inapplicable to the
inhabitants of the countries formerly possessed by the
Rhoszalani. Hence, as they were the most cel-
brated of the original tribes, that term, by synecdocic,
became generic. (Foreign Quarterly Review, No. 5,
p. 151, seqq.)

Ruthen or Ruthini, a people of Gallia Aqui-
tanica, in Narbonensis Prima. The territory was sit-
uate on either side of the Tarn or Tarn. Segovu-
num was the capital of their chief town. (Cas., B. G.,
1, 7—Pliny, 4, 19.)

Rhynacrus, a river of Asia Minor, rising in Mount
Tennus, on the northern borders of Phrygia. Pliny
states, that the Rhynacus was formerly called Lycesus,
and took its source in the lake Antynia, near Millop-
olis; that it received the Macestus and other rivers,
and separated the province of Asia from Bithynia.
(Pliny, 5, 32.) His account, though quite at variance
with that of Strabo, is confirmed by other writers, and
especially by modern geographers, so that he alone is
to be followed. (Cramer's Asia Minor, vol. 1, p. 50.)

Rhodope, a town of Gallia Belgica, in the terri-
tory of the Treveri, and northeast of Augustus Trever-
orum. It lay on the river Mosella, and answers to the
modern Redol. (Tac., Hist., 4, 71.)

Ronzo or Ronjaus, a deity of the Romans, wor-
shipped to avert mildew. The Rohigla were cele-
brated on the 28th of April, just before the Floralia.
(Ovid, Fast., 4, 911.—Pliny, 18, 2.—Tertull. ad
Gent., 16, 25.)

Rom, the celebrated capital of Italy and of the Ro-
man empire, situate on the Tiber, below the junction
of that river with the Anio. The history of the impor-
tial city is identified with that of the empire itself, and
may be found scattered under various heads throughout
the present volume. A much more interesting subject of
inquiry is that which relates to the authenticity of the
earlier Roman history, as it has been handed down to us by the Romans themselves. The re-
searches of modern scholars have here produced the
most surprising results, and especially those of the
celebrated Niebuhr. In what may be called, however,
the work of demolition, even Niebuhr himself appears
to have had several predecessors. The sceptical tem-
per of Bayle did not suffer him to acquiesce in a nar-
native so open to a reasonable incredibility as the early
history of Rome. Beaufort's treatise on the "Un-
certainty of the Roman History," though it did not go to
the bottom of the matter, was sufficiently convincing
to all persons who were not unwilling to be convinced.
His views are often false; but his arguments utterly
destroyed the credit of the received stories. Hooke
devouraged to refute him; but all that he could make
out was a general prevision which he considered the his-
tory of Rome too far down the destruction of the city by the
Gauls as uncertain as the history of the kings. To
this modification of Beaufort's conclusions even Nie-
buhr assents. Ferguson showed the conviction which
Beaufort's treatise had worked in his mind, by passing
very rapidly over all the period anterior to the second
Punic war, and commencing his more circumstantial
narrative of the Roman history only at the point where
its events had begun to be noted by contemporary an-
nalists. Bayle and Beaufort were popular writers, and
their remarks produced a wide and general effect. At
a somewhat earlier period, Perizionius, a scholar of an
independent mind, endeavored to establish the Roman
History with great freedom and originality in his
"Anamalizations Historiae;" but the consequence of his
outstripping his age was, that his disquisitions
remained in obscurity. Bayle and Beaufort take no
notice of him; and his inquiries were unknown even
to Niebuhr when he published his history (note 673,
vol. 1). Perizionius anticipated Niebuhr in his per-
ception of the poetical origin of the history of the early
Gauls, and in his attempt to explain it by a combi-
nation among the Romans of popular songs in praise of
the heroes of old time. That Niebuhr should have
perceived this truth in an age in which scholars are ac-
customed to comprehend a wide range of objects and
to form independent judgments, is not extraordinary;
especially after Wöl's prelomomena to Homer had
given birth to a new school of criticism in all that re-
lates to the early literature of nations. But that Per-
izionius, at the beginning of the middle ages should
have discovered that the ancient Roman poets had so-
ded men had scarcely ceased to receive with unques-
tioning faith everything that was written in Latin or
Greek, gives a high notion of the originality and
strength of his perceptions. Niebuhr, therefore, in
showing the early history of Rome to be unworthy of
credit, has only followed a path already open, or, rath-
er, already beaten. He has done more, however, than
those who have preceded him, by resolving the vulgar
narrative into its elements, and showing how it ac-
tuited its present shape. He has thus examined the
whole subject thoroughly, and made it impossible for
any one ever to revive the old belief. Still, however,
though we may now safely withhold our assent from
a large portion of what used to pass current as the early
history of Rome, we must take care not to carry this
scepticism so far as to reject, by one sweeping sen-
tence of condemnation, every portion that has come
down to us on this head. Even allowing a considera-
ble degree of doubt and uncertainty to pervade the
first records of the Roman history, from the alleged
foundation of the city to its capture by the Gauls, for
that is a point which Livy himself does not scruple to
concede (6, 1); we must yet regard even this dubious
period as luminous and authentic, when compared with
the times which preceded the foundation of Rome.
Few sober-minded critics, indeed, will be disposed to
indulge in scepticism, so far as to imagine that any
thing which relates to the kings of Rome is fictitious
and apocryphal. It appears to us that there are cer-
tain facts recorded in the early history of that city,
which rest on too undisputed a basis, too universal a
consent of authorities to be easily set aside. Where
these are borne out by the succeeding and indubitable
parts of the history, and exhibit a connected account
of the growth and progress of the state, we should
be inexcusable to reject them, except in the case of evident contradiction or
striking improbability. Great uncertainty exists, no
doubt, on many points; but, after all, it is more in
matters of detail than of real importance, and espe-
cially in the relation of those petty events and circum-
stances with which Livy and Dionysius have, perhaps,
without due discrimination, endeavored to dress up
the meagre annals of the earliest days of the republic
into the dry records of the pontifical volumes.
Let us retrench, if it must be so, the gaudy decora-
tions and fanciful ornaments with which these
historians have embellished their work, but let us not
at the same time, overthrow the whole fabric. We
may prune what is exuberant or decayed, and weed
what is rank and unprofitable; but we must beware,
in the process, of encroaching upon what is sound, or
route out what is wholesome and nutritious. Let it
be granted that the rape of the Sabine women is a fik-
cion, it may still be true that the Sabines became, at
one time, an element in the population of Rome. The
state of the early Roman city, as described by Poly-
Curati, which belonged to Rome and which to Alba,
we may still believe that the latter city sank beneath
its more powerful rival. The elder Tarquin's reign
does not cease to be an historical fact, because we hear
an absurd story of an eagle uncovering his head on his
arrival at the gates of Rome. The constitution said
to have been formed by Servius Tullius may have been
the result of longer experience and more primitive
wisdom than falls to the lot of a single reign; but it was
such a constitution as Rome did receive, and which it
was afterward enabled to bring to a state of greater per-
fection than any ancient form of government that we
are acquainted with. Suppose the story of Lucretia
false, we cannot deny that monarchy was abolished at
Rome, and made way for consular authority about the
time that Livy pretends, though that historian may be
wrong in what he tells us. In dealing with Publius
Horatius Barbatus, as a colleague to Brutus. (Polyb., 2,
23.) The valour of Horatius Cocles, and the fortu-
tude of Muntius Scevolus, may be left to the admiration
of schoolboys; but the siege of Rome by Poenenna
is no idle tale invented for their amusement, though
it should be proved that the consequences of that event
were not so honourable to the Romans as Livy has
chosen to represent them. (Tacit., 3, 72.—Plut., 34,
14.) It is a disputed point whether two or five tribes
of the people were elected at first; but does that doubt
invalidate the fact of the secession to the Mona Sa-
cer! Cancel three fourths of the Roman victories and
triumphs over the Equi and Volsci, will it be less
true that the former were nearly destroyed, the latter
completely subjugated? Say it was gold, and not the
valour of her dictator and his troops, which delivered
Rome from the Gauls; she may surely boast of having
lived to revenge herself on them with the barbarians
having, by a hundred triumphs, blotted out the stain
of that transaction, and of the shameful rout on the banks
of the Allia. In short, though we may sometimes
pause when reading the early annals of Rome, and
hesitate what judgment to form on many of the events
which they record, there are landmarks enough to pre-
vent us from straying far from our course, and to lead us
on safely to the terra firma of her history. But we are
not the same judges of truth and justice, nor the
same guarantees to certify us that we are treading in the
right path, when we come to explore the truth of the
accounts on which the origin of Rome, and the actions
of its reputed founder, must mainly depend for their
credibility. On the contrary, after reading all that
Plutarch has said in the opening of his life of Romu-
lus, and that Dionysius has collected on the sub-
ject, it is in giving Velleius Plocilus, as not having
connected the story of the foundation of Rome rests on very
questionable grounds. Here it is not merely the more
undisguised appearance of fiction, or the greater fre-
quency of the marvellous, which is calculated to awa-
ken suspicion; but it is the inconsistency and improb-
ability of the whole, as an attempt to explain the first
rise and progress of unquestionably the most interesting
city of antiquity, which ought to stantle the mind as
a perpetual and necessary object of the moral and
moral critic. It is not also because these tales are to be
traced to a Greek source that we would reject them;
for we are inclined to think that the early Greek his-
torians who made the antiquities of Italy their study,
and they form a numerous class, were better informed
about what they wrote, and more trustworthy, than
perhaps they are generally allowed to be. The objec-
tion rather lies against the particular authority on whose
testimony they seem entirely to rest for support. A Dio-

1171
2. Original site, and subsequent growth of Rome.

All traditions agree, that the original site of Rome was on the Palatine, whether they ascribe its foundation to Evander or to Romulus. The steepness of the sides of the hill would be its natural defence; and on one quarter it was still farther strengthened by a swamp which lay between the hill and river, which was afterward drained and called the Velabrum. In the course of time dwellings sprung up around the foot of the hill; but the Palatine still must have remained the citadel of the growing town; just as at Athens that which was the original city (πόλις) became eventually the Acropolis (ἀκρόπολις). These suburbs were enclosed with a line, probably a rude fortification, which the learning of Tacitus enabled him to trace, and which he calls the pomerium of Romulus. (Ann., 12, 24.) It ran under three sides of the hill: the fourth side was occupied by the swamp just mentioned, where it was neither needful nor possible to carry a wall. The ancient city comprised within the pomerium, or, possibly, only the city on the summit of the hill, was called by Roman antiquaries the "Square Rome" (Roma Quadrata—Ennius, ap. Fest., s. v. Quadrata Roma—Plut., Vit. Rom.—Dio Cass., fragm.—Dion. Hal., 1, 88.) There is reason to suppose, that some at least of the adjacent hills were the seat of similar settlements. The legend of the twin brothers, Romulus and Remus, appears to have arisen from the proximity to Rome of a kindred town called Remoria, either on the Aventine, or on an eminence somewhat more distant towards the sea. (Dion. Hal., 1, 85.—Niebuhr, Rom. Hist., vol. 1, note 618.)—The first enlargement of Rome seems to have been effected by the addition of the Caelian Hill, which, as we shall presently show, was probably occupied by a different tribe from the people of the Palatine. Dionysius speaks of Romulus as holding both the Palatine and the Caelian Mount (2, 50.) The next addition was to the Quirinal Hill. The festival of Septimontium preserved the memory of a time when Rome included only Palatium, with its adjacent regions, Velia, Cermalus, and Fagutal; the Caelian Hill; and Oppius and Cispius, the two summits of the Esquiline. (Festus, s. v. Septimontium.—Niebuhr, vol. 1, p. 383.) The Capitoline, Quirinal, and Viminal Hills were not yet comprehended in the pomerium: the Aventine was always excluded from the hallowed boundary, even when it was substantially a part of the city. Thus we see that the notion that Rome was built on seven hills, was fitted originally to circumstances different from those to which it was afterward applied.—The Quirinal and Capitoline Hills seem to have been the seat of a Sabine settlement, distinct from the Rome on the Palatine, and in early times even hostile to it. The most poetical incident in the legend of Romulus, the rape of the Sabine maid, seems to be a mythological memorial. It appears to refer to a time when the Romans did not possess the right of intermarriage with some neighbouring Sabine states, and sought to extort it by force of arms. (Niebuhr, vol. 1, p. 286.) By the right of intermarriage (coniunium) is meant the mutual recognition, that the children of parents, citizens of the two states, were entitled to the full rank of citizens in the state of their father. This right among the ancient states of both Greece and Italy was established only by express treaty. A citizen might live with a foreign woman as his wife; but, unless the intermarriage were sanctioned by public compact, he could not have children. That the Romans, at an early period, preserved, that even the poetic legend did not regard Rome as a genuine and lawful colony from Alba; otherwise it would, from the very beginning, have enjoyed the right of intermarriage with the mother city and the other Latin towns; and there would have been no consistency in the story of the want of women (vol. 1, note 628).—In the narrative of the war with the Latins, Livy calls Tatius only king of the Sabines; but when he mentions city, at the close of the war, the Sabine appellation Quintes was extended to the people of Romulus, he derives it from Cures. (Livy, 1, 10, 13.) Dionysius has followed the Annalists, who expressly specified Cures as the seat of the kingdom of Tatius. Strabo adopted the same tradition. Now, when we consider the exceedingly narrow limits within which all the other incidents of the early Roman traditions are confined, and even the historical events of the first years of the republic, after the kingly dominion of the city was reduced, it seems very unlikely that Rome, in its infancy, could have come into collision with Cures, which was distant from it more than twenty miles. Moreover, nothing is told of the war before the seizure of the Capitoline Hill. This is the point from which all the attacks of the Sabines proceed. Again, after the termination of the war, we hear nothing of the return of Tatius to Cures. Dionysius, therefore, who assigns Tatius to the Quirinal, and establishes him and his Sabines on the Capitoline and Quirinal Hills. (Dion. Hal., 2, 46, 50.) The senate of the people of Romulus and Tatius met in conference in the valley between the Palatine and Capitoline Hills; and as the Palatine was the proper seat of the one, so the Capitoline must have been that of the other. Cures vanishes from our sight; and though the union of the Romans with the Sabine people, with whom they had warred, endured for a long time, there is no trace of their possessing a wider territory than the district immediately adjacent to the hills of Rome.—These considerations are sufficient to expose the inconsistency of the vulgar legend: but the testimony to the incorporation of a part of the Sabines with the Roman people is far too strong to be set aside. The most probable supposition is, as has been before stated, that the Sabines, who in the early periods of the republic lived on the Caleian Mount, and down the left bank of the Tiber, had advanced even to the neighbourhood of Rome, and had established a settlement on the Quirinal and Capitoline Hills. Of this town the Capitoline must have been the citadel. It was likewise the seat of its religious worship: for the pontifical books recorded, that, before the building of the Capitol, its site was occupied by shrines and fanes consecrated by Tatius. (Livy, 1, 55.) Tatius we can scarcely regard as a more certainly historical personage than Romulus, though the story of his death at Lavium has an historical aspect. He is only the personification of the tribe of the Titienses or Titii, who are said to have taken their name from him. But his people had a real existence. The name of their town has been lost; their own name was undoubtedly Quirites. This people lived in close neighbourhood with the Romans on the Palatine; but they were of a different race, and their own origin was a mere course subsisted between them. Between two petty states, so situated in immediate neighbourhood, it is not at all improbable that women may have been a cause of contention. We can gather from the traditions that war took place between them, which ended at last in a compact, by which not only the right of intermarriage, and a community of all other rights, were granted, but the two nations were combined into one. We can even trace the stages of their union. It appears at first to have been a federal union.
people had its own king and its own senate; and they only met to confer upon matters of common interest. Afterward one king was acknowledged as the common chief of the united people: the two senates became one body, and consulted for the welfare of the whole state: the national names of Romans and Quirites were extended indiscriminately to both divisions of the citizens; and they were no longer distinguished as nations, but only as tribes of the same people, under the denomination of Rames and Titenses.

3. Early Roman Tribes.

We are told that the people of Rome were divided into three tribes; and, besides the Rames and Titenses, a third tribe appears, who are called Luceres. That they were looked upon as an important element in the state, is manifest from the legend that Roma was the daughter of Italus and Luceria. As the distinction of the two former tribes arose from the difference of their national origin, so we may conclude that the Luceres were a people of a third race, and united either by confederacy or submission with the other two. The origin of the Titenses is distinctly marked: they were Sabines. That of the first tribe, the Rames, the genuine Romans of the Palatine, is not so clear; but it seems probable that they belonged to the Opiac stock of the Latins. From these circumstances we might reasonably conjecture that the third tribe, the Luceres, were the remains of a portion of the Pelasgian race. They are always enumerated in the third place, as the Rames are in the first, which accords well with the idea that they were a conquered and subject class. But there is evidence that points more directly to this conclusion. Though the origin of the Luceres was accounted uncertain by the Roman historians, so that Livy does not venture to assign a tribal rank to the Captive (Livy, i., 13.), it does appear to have been generally supposed to be derived from the Etruscan Lucumo, who had fought with Romulus against Tatius. (Varro, L. L., 4, 9.—Cic., Repub., 2, 8.—Propert., 4, 1, 29.) Now the "Lucumo" was only a title mistaken for a proper name, so that nothing could be derived from it, even if the incidents of the legend were received as historical facts. Moreover, the Etruscan, in the infancy of Rome, had not penetrated so far to the south. But Tacitus, if we admit that we have here the customary confusion between the Etruscan and Tyrhenian, and that the allies of the Rames of the Palatine were a Tyrhenian or Pelasgian people, a portion of the inhabitants of Latium. Dionysius adds a circumstance to the legend which confirms this hypothesis. He says that Lucumo brought his Tyrhenians from the city Solonum (2, 37). No such city is known to have existed; but the level tract on the south-east of the Tiber, lying between Rome on the one hand, and Laurentum and Lavinium on the other, was called the Solonian plain. This region Dionysius probably found mentioned in some annals; this would assuredly be the seat of Pelasgian Latins; and in this very direction we are expressly told that the early dominion of Rome extended most widely. (Niebuhr, vol. i., note 739.)

The Tyrhenian or Pelasgian origin of the Luceres may be deduced yet more clearly from the legend which described their leader as Lucerus, king of Ardea. (Festus, s. v. Luceres.) If we inquire for the town or chief settlement of the Luceres, we shall find reason to conjecture that it was upon the Caelian Hill. We have seen that, according to one tradition, Romulus was supposed to possess the Palatine and the Caelian, while Tatius and his Quirites held the Quirinal and the Capitoline; and it is natural to suppose that the latter hills were the seat of the second tribe, the Titenses; and the Palatine of the Rames, the first and genuine Romans, it seems reasonable to conclude that the Caelian was the chief of the third and subject tribe, the Luceres. Moreover, there is a tradition, though a confused one, that the Caelian took its name from a Tyrrhenian Houses or King Calibus, a chief of the Curturia, or Tuscan chief, Caelus or Caelus, an auxiliary of Romulus; in short, the Lucumo from whom the Luceres were supposed to deduce their appellation. (Dion. Hal., 2, 36.—Varro, L. L., 4, 8, 9.—Festus, s. v. Caelus Monz.—Tac., Ann., 4, 65.)

4. Of Patricians and Clients; and of the Plebeian Order.

Among the original population of the city, those who could show a noble or free ancestry constituted the Patrician Order, the term Patrici being equivalent to ingenui (Livy, 10, 8.—Cic., Ap. Fest., s. v. Patricii); and to them alone belonged a share in the government of the state. The rest of the people were subject to the king and to the body of the Patricians; and each man, with his household, was attached, under the appellation of Client, to the head of some Patrician family, whom he was bound to serve and from whom he looked for protection and help. It has already been stated, that after the Sabine war and the union of the people of Romulus and Tatius, the citizens were distributed into three tribes, to which were given the names of Rames, Titenses, and Luceres; these three primitive tribes were subdivided into thirty curiae, ten in each tribe. In the national assembly the people were called together in curiae; and the members of the household in each curia were taken in the separate curia; and the votes of the greater number of the thirty curiae determined the business before the assembly. This assembly was called the Comitia Curiata. Besides this popular assembly, there was a select and perpetual council, called the senate. At its first institution it was composed of a hundred chief men of the Patrician order. Ten of these were of higher rank than the rest; and to one of these the ancient title of Curial (Patres Curiae), Caeles, was given. This title was assumed solely by the chief men of the order; and the senate was generally called the Curiae Curiales, or Patres Curiales, or Patres Minormon Gentium. (Dion. Hal., 2, 21.)

The senators admitted by Tarquinii were called "Fathers of the Less House or Kins" (Patres Minorum Gentium); and the old senators, "Fathers of the Old House or Kins" (Patres Majorum Gentium). Such is a correct, although imperfect outline of the forms of the primitive constitution. The leading feature in this outline is the position that the original population of Rome was composed only of the Patrician order and their Clients. Upon this statement all our authorities are agreed, either by express assertion or implied consent. But this statement is generally accompanied by another, arising from a false conception, which has obscured and embarrassed the whole course of early Roman history. The Clients are supposed to have been the same with the Plebeians. They are conceived to have been called Plebeians as a body, in opposition to the Patrician body, but Clients individually, in relation to their particular patrons. Such, at least, is the explicit statement of Dionysius, and of Plutarch, who has followed his authority; and this view of the matter has been repeated without question by modern writers. This, however, is a positive error. The Plebs, or Commonalty, was of more recent origin; and the Plebeians, in their civil rights, held a middle place between the ruling Patrians and their dependant clients. One proof of this, and perhaps the strongest that can be adduced, is drawn from the nature of the Comitia Curiata. This great national council was the most important of all the institutions in the curia. At its first origin, and as long as it continued to have a real existence, it was composed exclusively of the Patrician order. (Dion. Hal., 2, 21.) It cannot be thought strange that the Clients, an inferior order of men, personally
dependant on individuals of the Patrician body, should not appear in the supreme council of the state. The great distinction which demands our attention is this, that the Plebeians were still more certainly excluded from it. Even when the Plebeian state had grown up to such magnitude and importance that it had its peculiar magistrates, and was become a chief element in the state, the law of the Comitia Curiatia, and even when the Comitia Curiata were exclusively Patrician, and the Plebeians had no part in them. The fact was, that the distribution of the people into tribes and curiae, and the still farther division into Gentes, or Houses, had respect only to the original stock of the nation; and this original stock kept itself distinct from the body of new citizens, which was added by conquest, or sprung up insensibly from other causes. The Clistius, inasmuch as they were attached to individual Patricians, were attached to the Gentes; and so may be considered, in this sense, as included in the greater divisions of curiae and tribes; although it is manifest that they could not appear as members of the curiae, when these were called together as the component parts of the sovereign popular assembly. But the Plebeians grew up as a separate body by the side of the original Patrician citizens, and were never incorporated under the division of the Gentes, that is, under the members of the Gentes, or of the curiae, or of the three tribes; consequently they had no share in the Comitia Curiata; and this assembly, in which resided the supreme power of the state, was, as we have already said, exclusively Patrician. It is needless to insist upon the importance of this distinction to a right view of the constitution, and of its successive changes; and, indeed, to a right notion of the whole internal history, which, for more than two centuries, is made up of the struggles of the Patrician and Plebeian orders. Yet this distinction was overlooked by all the writers on Roman history; and they suffered themselves to be misled by the superficial theory of Dionysius, who represented the government of Rome as thoroughly democratical from the very foundation of the city, and conceived the public assembly to be composed of the whole male population of the state, with the exception of household slaves.

5. Of the Patrician Gentes or Houses.

The Patrician citizens of Rome were all comprehended in certain bodies which were called Gentes (Kins or Houses). The word Kin would be the most exact translation of Gens; but as this word is nearly obsolete, except in particular phrases, and as the translators of Niebuhr have rendered Gens by House, the latter term is now generally adopted. (Philol. Museum, No. 2, p. 348.) The members of the same Gens were called Gentiates. In each house were contained several distinct families. It is probable that these families were originally single households; but where their numbers increased, they became families in the wider acceptance of the term. From the etymology of the term Gens, it is evident that a connexion by birth and kindred was held to subsist among all the members of the same house. The name of the house or the family seems always to have been derived from some mythical hero; and in the popular belief, the hero from whom the house was named was regarded as a common ancestor. Thus the Julian house was regarded as the progeny of Juleus, the son of Æneas (Dion. Hal., 1, 70. — Virg., Aen., 6, 789); and the Valerian house was derived from Volusus, a Sabine warrior, and companion of Tatius. (Dion. Hal., 2, 46.) Even those whose connection with the heroes of these fabulous genealogies, adhered to the notion of an original connexion by birth; and a fictitious and conventional kindred was acknowledged by the members of the same house. In describing this kindred of the Gentiates as fictitious and conventional, we do not mean to assert that in no case did such a connexion really exist. No doubt what were called Houses were first formed by natural consanguinity. But it is probable that these natural alliances had suggested an artificial arrangement, and that families not akin to one another had been distributed into houses by some legislative power. This will appear certain, if we consider that the whole of the houses of the state are derived from the numerical divisions which will be explained presently. If it be true that originally each curia contained ten gentes, and each gens ten householders, it is obvious that this exact division must have been made arbitrarily. A precisely similar division existed among the ancient Athenians. The Eupatridae, a body which corresponds to the Patrician order at Rome, were divided into four Phyle, which correspond to the three Roman tribes; each Phyle into three Phratriæ, which correspond to the Curiae; and each Phratriæ into thirty Genea or Houses; so that the total number of Houses was three hundred and sixty. The Athenian Houses were distinguished by names of a patronymic form, which were derived from some hero or mythic ancestor. But, notwithstanding this fictitious kindred, and though all the terms which expressed the relation were derived etymologically from the notion of connexion by birth, the relations of the Gents were not perfectly understood. This, as being within our precise knowledge of the institution directly and pointedly deny the reality of such a connexion, and ascribe the origin of the Genea to an arbitrary division. (Pollux, 8, 9, 111. — Horace, c. s. v. nepyras. — Niebuhr, vol. 1, note 795.) The great bond of union among the members of a House was a participation in its common religious rites. It seems that each House had its peculiar solemnities, which were performed at a stated time and place. There can be no doubt that, at a fitting age, the children of the Gens were admitted to these solemnities, and publicly recognised as members of it; just as in Attica, at the feast of Apatria, Athenian citizens of the pure blood were admitted and registered in their hereditary Phratriæ. — We have spoken of the Gentes as pertaining only to the Patricians. This is affirmed upon direct testimony. (Lust, 10, 8. — Niebuhr, vol. 1, p. 316, note 1.) Notwithstanding this statement, bear in mind that constructions of a similar nature existed among the Plebeians, which had their origin when the subject and municipal towns were independent states. The Gentile connexions of the Plebeians were older than their character as Roman citizens. Thus, the Cecili, though Plebeians at Rome, were Patricians of Praeneste, and claimed as the ancestor of their house Cæculeus, the son of Vulcan. The distinction between the Patrician and Plebeian Houses was, in the first place, that every Patrician was a member of a House, while, among the Plebeians, comparatively but few families could claim the honours of hereditary nobility; and, in the second place, that the Patrician Houses were constituent elements of the Roman state. Their existence affected the constitution of the great councils of the nation, the Comitia Curiata and the senate, and their internal laws and usages were part of the common law of the Roman people; while in the Plebeian Houses the state took no cognizance. — The nature of the Roman Gentes may be illustrated in some points by the analogy of the Greek clans. All who belonged to the Gens or to the Clan bore a common name. But as the clan contained not only the freemen or gentlemen of the clan, the Deinouches, who were the companions of the chief and the warriors of the clan, but also their dependent people; while in the Plebeian Houses the state took no cognizance—The nature of the Roman Gentes may be illustrated in some points by the analogy of the Greek clans. All who belonged to the Gens or to the Clan bore a common name. But as the clan contained not only the freemen or gentlemen of the clan, the Deinouches, who were the companions of the chief and the warriors of the clan, but also their dependent people; while in the Plebeian Houses the state took no cognizance.
kindred of the Gentiles, the Gentes were really, in many cases, composed of families which had no na-

tional consanguinity, but had been arbitrarily arranged in them, will appear less strange when we remember

that not only the Divus Cossus, but the meanest fol-

lowers of a Highland clan, claim kindred with their chief, although, in many cases, it may be shown, by

the strictest historical evidence, that the chief and his blood relations are of an entirely different race from

the rest of the clan. The clansmen are Gaels or Celts,

while the chief is not uncommonly of Norman descent.

(Maenalis Roman History, p. 123, sect.)

ROMULUS, according to the old poetic legend, was the son

of Mars and Iliia or Rea Silvia, daughter of Numitor,

and was born at the same birth with Remus. Amulius,

who had usurped the throne of Alba, in defiance of the

right of his elder brother Numitor, ordered the infants

to be thrown into the Tiber, and their mother to be

burned alive, the doom of a vestal virgin who violated

her vow of chastity. The river happened at that time

to have overflowed its banks, so that the two infants

were not carried into the middle of the stream, but

drifted along the margin, till the basket which contain-

ed them became entangled in the roots of a wild vine

at the foot of the Palatine Hill. At this time a she-

wolf, coming down to the river to drink, suckled the infants, and carried them away. One of the hind-

chicks was found by Faustulus, the king's herdman, who took them home to his wife Laurentia,

by whom they were carefully nursed, and named Romu-

lus and Remus. The two youths grew up, employed in

the labours, the sports, and the perils of the pastoral oc-

cupation of their foster-father. But, like the two sons

of Cymbeline, their royal blood could not be quite con-

cealed. Their superior mien, courage, and abilities soon

bore witness to what punishment they intended to in-

fluence their young companions, and they became leaders of the youthful herdsmen in their contests with robbers or with

rivals. Having quarrelled with the herdsmen of Num-

itor, whose flocks were accustomed to graze on the

neighbouring hill Avruntin, Remus fell into an amb-

buscade, and was dragged before Numitor to be pun-

ished. While Numitor, struck with the noble bearing of

the youth, and influenced by the secret stirrings of nature, was prepared to yield them what he believed was their birthright, Romulus, accompanied by Faustulus, hastened to the rescue of Remus. On their arrival at Alba, the secret of their origin was discovered, and a plan was speedily organized for the expulsion of Amulius, and the restoration of their grandfather Numitor to his

thron. This was soon accomplished; but the twin-

brothers felt little disposition to remain in a subordi-

nate position at Alba, after the enjoyment of the rude liberty and power to which they had been accustomed among their native hills. They therefore requested from their grandfather permission to build a city on the banks of the Tiber, where their lives had been so miraculously preserved. Scarcely had this permission been granted, when a contest arose between the two brothers respecting the site, the name, and the sover-

eignity of the city which they were about to found. Romulus wished to choose a spot which his ancestors had selected for them, and which they had before called by his name; Remus preferred the Aven-

tine, and his own name. To terminate their dispute amicably, they agreed to refer it to the decision of the gods by augury. Romulus took his station on the Pal-

atine Hill, Remus on the Aventine. At sunrise Remus

saw six vultures, and immediately after Romulus saw

twelve. The superiority was adjudged to Romulus,

because he had seen the greater number; against

which decision Remus remonstrated indignantly, on

the ground that he had first received an omen. Rom-

ulus then proceeded to mark out the boundaries for

the wall of the intended city. This was done by a plough with a brazen ploughshare, drawn by a bull

and a heifer, and so directed that the furrow should

fall inward. The plough was lifted and carried over

the spaces intended to be left for gates; and in this

manner a square space was marked out, including the

Palatine Hill, and a small portion of the land at its

base, termed Romas Quadrata. This took place on the

21st April, on the day of the festival of Pales, the
goddess of shepherds. While the wall was beginning to rise above the surface, Remus, whose mind was still

rankling with his discontent, leaped over it, scorn-

fully saying, 'This is the wall of my city!' Immediately Romulus, or, as others say, Ce-

ler, who had charge of erecting that part of the wall, stuck him dead to the ground with the implement

which he held in his hand, exclaiming, 'So perish

whosoever shall hereafter overleap these ramparts.'

By this event Romulus was left the sole sovereign of

the city; yet he felt deep remorse at his brother's

fate, buried him honourably, and, when he sat to ad-

minister justice, placed an empty seat by his side, with

a sceptre and crown, as if acknowledging the right of

his brother to the possession of equal power. To aug

ment as speedily as possible the number of his sub-

jects, Romulus set apart, in his new city, a place of

refuge, to which any man might flee, and be there prot

ected from his pursuers. By this device the popula

tion increased rapidly in males, but there was a great

famine which arose from the adjoining states, regard-

ing the followers of Romulus; he therefore captured a

bhorde of brigands, refused to sanction intermarriages.

But the schemes of Romulus were not to be so frustr

ated. In honour of the god Consus, he proclaimed

games, to which he invited the neighbouring states.

Great numbers came, accompanied by their families;

and, at an appointed signal, the Roman youth, rushing

suddenly into the midst of the spectators, snatched up

the unarmed men in their arms, and carried them off by force. This outrage was immediately resented, and Romulus found himself involved in a war with all the neighbouring states. Fortunately for Rome, though these states had sustained a common injury, they did not unite their forces in the common cause. They

fought singly, and were each in turn defeated; Ca-

nina, Crustumarum, and Antemmus fell successively before the Roman arms. Romulus slew with his own hand the king of the Hands Agin, and bore away the spoils, dedicating them, as spolia opima, to Jupiter Feretius. The third part of the lands of the conquered towns was seized by the victors; and such of the people of these

towns as were willing to remove to Rome were re-

ceived as free citizens. In the mean time, the Sa-

bines, to avenge the insult which they had sustained, had collected together forces under Titus Tatius, king of the Etrurians. The Romans were unable to meet

so strong an army on the plain, and withdrew within

their walls. They had previously placed their flocks

in what they thought a place of safety, on the Capito-

line Hill, which, strong as it was by nature, they had

still farther secured by additional fortifications. Tar

pea, the daughter of the commander of that fortress,

having fallen into the hands of the Sabines, agreed to

betray the access to the hill for the ornament of their

troops, and to open the gate, when they should

see it was opened, they entered, and plundered her to

death beneath their shields. From her the cliff of the

Capitoline Hill was called the Tarpeian Rock. The at

tempt of the Romans to regain this place of strength

brought on a general engagement. The combat was

long and doubtful. At one time the Romans were

almost driven into the city, which the Sabines set

on fire; but, at length, when fresh courage was infused into the fugitives in consequence of Romulus vowing a temple to Jupiter Stator, and by a

stream of water which rushed out of the temple of

Digitized by Microsoft
Romulus, the founder of Rome, is merely the Roman people personified as an individual. It was the fashion in ancient tradition to represent races and nations as sprung from an ancestor, or composed of the followers of a leader, whose name they continued to bear; while, in reality, the name of the fictitious chief was derived from the name of the people; and the transactions of the nation were not unfrequently described as the exploits of the simple hero. (Hetherington's History of Rome, p. 4, seqq.—Madden's Hist Rome, p. 122, seqq.)

Romulus Silvius, I., a king of Alba—II. Momyl—Augustus, the last of the emperors of the western empire of Rome. (Vid Augustus.)

Romus, a king of the Latins, who expelled the Tyrrhenians from the city afterward called, from him, Ro—ma. (Plut., Vit. Rom.—Consult remarks under the article Roma, page 1172, col. 1.)

Roscius, I. Q., a Roman actor, from his surname Gallus supposed to have been a native of Gaul, north of the Po, although educated in the vicinity of Lanuvium and Aricia. He was so celebrated on the stage that his name has become, in modern times, a usual term to designate an actor of extraordinary excellence.

Ciceron, in his work on Divination, (1, 36), makes his brother Quintus say that the young Roscius was found one night in his cradle enveloped in the folds of a serpent; that his father, having consulted the auspices respecting this prodigy, they told him that his child would attain great celebrity. Quintus adds, that a certain Praxiteles had represented this in sculpture, and that the poet Archias had celebrated it in a song.

Roscius had some defect in his eyes, and is therefore said to have been the first Roman actor who used the Greek mask; the performers, before this, using only caps or beavers, and having their faces daubed and disguised with a drop of wine, as at the commencement of the dramatic art in Greece. And yet, as appears from the following passage of Cicero, the mask was not invariably worn even by Roscius: "All, as says Cicero, "depends upon the face, and all the power of the face is centred in the eyes. Of this our old actors were not men and women; so, when they put on their appliance even to Roscius in a mask." (De Orat., 3, 59.)

Valerius Maximus (8, 7) states, that Roscius studied with the greatest care the most trifling gesture which he was to make in public; and Cicero relates, that though the house of this comedian was a kind of school where good actors were formed, yet Roscius declared that he never had a pupil with whom he was completely satisfied. If Plutarch be correctly informed, Cicero himself was his master; for in a passage for Roscius, Lit., i, 4, seqq.—Dion. Hal., &c.—So terminates what may be termed the legend of Roscius, the founder and first king of Rome. That such an individual never existed is now very generally allowed, and, of course, the whole narrative is entirely fabulous. As to Roscius were ascribed all those civil and military institutions of the Romans which were handed down by inmemorial tradition; those customs of the nation the form of which is said to be "the mask of Roscius." Many of the defects of the nation were attributed to the institutions and establishments of the national religion. As the idea of the ancient polity was imbedded under the name of Romulus, so was the idea of the national religion under the name of Numa. The whole story of Roscius, from the violation of his vestal mother by Mars, till the end of his life, when he is borne away in clouds and darkness by his divine parent, is essentially poetical. In this, as in the other tragedy Dionysus, Aspasia, the present form of the tradition is also the most ancient and genuine: and the variations, by which it is reduced into something physically possible, are the falsifications of later writers, who could not understand that, in popular legends, the marvellous circumstances are not the only parts which are not historically true, and that, by the substitution of commonplace incidents, they were spoiling a good poem without making a good history.

Roscius died about 62 B.C.; for, in Cicero's defence of Archias, which was delivered A.D. 693, the death of Roscius is alluded to as a recent event. (Horat., Epist., 2, 1, 82.—Plut., Vit. Cic.—Dunlop's Rom. Lit., vol. 1, p. 951.)—II.
Thebes, a native of America, famed by Cicero in the first public or criminal trial in which that orator spoke. The father of Roscius had two mortal enemies, of his own name and district. During the proscriptions of Sylla, he was murdered one evening while returning from supper; and on the pretence that he was in the list of the proscribed, his estate was purchased for a mere nominal price by Chrysogonus, a favourite slave, to whom Sylla had given freedom, and whom he had permitted to buy the property of Roscius as a forfeiture. Part of the valuable lands thus acquired was made over by Chrysogonus to the Rosci.

These new proprietors, in order to secure themselves in their possessions, hired one Erotes, an informer and prosecutor by profession, to charge Roscius with the murder of his father, and they, at the same time, sold Roscius and his family, in order to convict him of the parental murder. Cicero succeeded in obtaining his acquittal, and was highly applauded by the whole city for his courage in espousing a cause so well calculated to give offence to Sylla, then in the height of his power. The oration delivered on this occasion is still extant, and must not be confounded with another that also came down to us in defence of the tragedian Roscius, and which involved merely a question of civil right. (Cic., pro Rosc. Amer.)—III. Otho. (Vid. Otho II.)

Rotonius, a city of Gallia Lugdunensis, at a later period the capital of Lugdunensis Secunda. Now Rouen. (Ptol.)

Roxana, a Bactrian female, remarkable for her beauty. She was the daughter of Oxyartes, commander of the Sogdian rock for Darius; and, on the reduction of this stronghold by Alexander, became the wife of the conqueror. At the death of the monarch she was eneinte, and was subsequently delivered of a son, who received the name of Alexander Æxus, and who was acknowledged as king along with Philip Aridaeus. Roxana having become jealous of the authority of Statira, the other wife of Alexander, destroyed her by the aid of Perdiccas; but herself was afterward shut up in Amphipolis, and put to death by Cassander. (Plut., Vit. Alex.—Quint. Curt., 8, 4.—Id., 10, 6.—Justin, 12, 15, &c.)

Rubæus Promontorium, a promontory mentioned by Pytheas (Plin., 4, 13), and supposed by many to be the same with the North Cape, but shown by Mannert, to be in the northern extremity of Curnand. (Geogr., vol. 3, p. 309.)

Rubi, a town of Apulia, between Canusium and Butunum, now Ruvo. The inhabitants were called Rubustini and Rubitini. (Plin., 3, 11.) It is also referred to by Horace and Frontinus. (Horat., Sat., 1, 5, 94.—Frontin., de col.) For an account of some interesting discoveries made near Ruvo, consult Romanelli (vol. 2, p. 172).—Cramer's Ancient Italy, vol. 2, p. 429.)

Rubicon, a small stream of Italy, falling into the Adriatic a little to the north of Ariminum, and forming, in part, the northern boundary of Italia Propria. It was on this last account that it was forbidden the Roman generals to pass the Rubicon with an armed force, under the most dreadful imprecations; for in violating this injunction they would enter on the immediate territory of the republic, and would be, in effect, declaring war upon that army which, as a military stream, they had kept with him at the commencement of the civil war, and harangued his troops at Ariminum. When Augustus subsequently included Gallia Cisalpina within the limits of Italy, the Rubicon sank in importance; and in modern times it is difficult to ascertain the position of the true stream. D'Anville makes it correspond with a current which, formed of three brooks, is called at its mouth Fluusisma. A formal papal decree, however, issued in 1756, decided in favour of the

Luca; but popular tradition designates the Pisatell as the true stream, and this river best suits the account we have of the situation of the Rubicon. (Mannert, Geogr., vol. 9, pt. 1, p. 243, seqq.—Appian, Bell. Civ., 2, 135.—Strab., Cos., 39.—Pest., Vit. Cos et Pomp. —Cic., Phil. Acad., 227.—Pest., 3, 15.)

Ruginia, a goddess (Vid. Robigo).

Rubru, a river of Sarmaest, now the Windau according to Wilhelm (Germanien, und seine Bewohner, Weimar, 1823); but, according to Gesellin, the Niemen.

Rudiae, I. a city of Italy, in the territory of the Calabri, in Ipygia, and below Brundisium. It was afterwards famous by being the birthplace of Eupatro of Epirus. (Sil. Ital., 12, 392.—Horat., Od., 4, 8, 20.—Ovid, Am., 3, 409.—Strabo, 381.) The more proper form of the name is Rhudiae, the appellation being one of Greek origin. According to an antiquarian writer, the remains of Rhudiae, still known by the name of Ruga, were to be seen close to those of the town of Lypiae; he also states, that these towns were so near to each other that they might be said to form but one. (Ant. de Pler. H. et An., 7, 10.)—Cramer's Anc. It. (vol. 2, p. 308.)—II. A town of Apulia, in Italy, placed in the Tabula Theodosiana between Canusium and Ruvi. It is sometimes called, for distinction sake, Rudiae or Rhudiae Penecstis, as it lay in the district of Peucea; the other Rudiae being styled Rudiae Calabriai. Romanelli places the site of this town at Andria (vol. 2, p. 170.—Plin., 3, 11.—Melis, 2, 4, p. 298).—Cramer's Anc. It. (vol. 2, p. 298.)

Rufinus, I. minister of state to the Emperors Theodoreos and Arcadius, and a native of Gaul. He was naturally vindictive and cruel, and is supposed to have stimulated Theodosius to the dreadful massacre of Thessalonians. After the death of this monarch, he succeeded, in fact, to absolute authority over the Eastern empire in the reign of Arcadius. He soon, however, fell beneath the power of Stilicho, general under Honorius in the Western empire, and was put to death by the army. He is said to have aspired to the supreme authority. —II. A Latin poet, supposed to have flourished about the sixth century. Criccius published a small poem, which he attributed to Rufinus, on the fall of Pasiphaæ, which he found in an old manuscript. This poem is composed of verses written in all the different measures employed by Horace, and is, therefore, sometimes prefixed to editions of the latter poet. It regards the play as the production of some grammian, and, probably, of the same Rufinus, a treatise on metres by whom still remains, as well as a small poem, in thirty-two verses, on Love. (Burmann, Anthol. Lat., vol. 1, p. 513, 663.—Schött, Hist. Lit. Rom., vol. 3, p. 99.)—III. A grammarian of Antioch, alluded to in the previous article. Besides the works there mentioned, he wrote also a commentary on the works of Virgil; and an Odes, VII. An ecclesiastical writer, a native of Concordia, a place near Aquileia. By some he is called Toranius. He was the friend of St. Jerome, with whom, however, he had at one time a quarrel on points of doctrine. His death occurred A.D. 408. Rufinus translated, from Greek into Latin, Josephus, and the Ecclesiastical History of Eusebius, &c.; besides which, he left some treatises in defence of Origen, and on other subjects. His works were printed in the Tenth and Eleventh centuries.

Rougi, a people of Germany, on the coast of the Sinus Codanus, between the Viadus or Oder and the Vistula, and situate to the west of the Gothones. They were in possession of the isle of Rugia (now Rügen), where the goddess Hertha was worshipped with peculiar reverence. Polyeze given by the Coginius as their capital. At a subsequent period they founded a new kingdom on the northern side of the Danube, named after them Rugiland, in Austria and Upper Hungary,
which was overwritten by Odoacer. (Tuc., Germ., 48; Dion. Cass., Hist. Pacif., 59, 57.)

Rutilius, Lucius Flaminius, surnamed Rex, who, having been procured by Octavianus, then a triumvir, fled to the army of Kutus, and became a fellow-soldier of Hotace. Jealous, however, of the military advancement which the latter had obtained, Rutilius complained to him with the meanness of his origin, and Horace therefore retaliates in the seventh Satire of the first book, where a description is given of a suit between this Rutilius and a certain Persius, tried before Marcus Brutus, at the time governor of Asia Minor.

(Compare Gesner, ad loc.—Daniol's Roman Literature, vol. 3, p. 251.)

Ruténi, a people of Celtic Gaul, whose territory answered to the modern Rouergue. Their chief city was Segedunum, now Rhodes. (Ces., B. G., 1, 45. —Id. 16, 7, 7, &c.)

Rutilies, I. Lupus, a rhetorician, a treatise of whose, in two books, De figura Sententiarum et Elocutionis, still remains. The period when he flourished is uncertain. A false reading in Quintilian (3, 1, 21) has given rise to the belief that he was contemporary with this writer; but Ruhnken has shown that, in this passage of Quintilian, we must read Rutulus for Rutilius, and that Rutilius was anterior to Celsius, who lived under Augustus and Tiberius. The work of Rutilius already alluded to is extracted and translated from a work by a certain Gogias, a Greek poet, who flourished about the 1st century B.C., and who was among the celebrated Gorgias of Leontini. The best edition is that of Ruhnken, Lugd. Bat., 1768, 8vo, republished by Frotscher, Lips., 1831, 8vo. —II. Numantius, a native of Gaul, born either at Tolosa (Toulouse) or Pictavi (Poitiers), and who flourished at the close of the fourth and commencement of the fifth centuries of our era. We have an imperfect poem of his remaining, entitled Itinerarium, or De Ritupiis. It is written in elegiac verse, and, from the elegance of its diction, the variety and beauty of its images, and the tone of feeling which pervades it, assigns its author a distinguished rank among the later Roman poets. Rutulius had been compelled to make a journey from Rome into Gaul, for the purpose of visiting his estates in the latter country, which had been ravaged by the barbarians, and the Itinerary is intended to express the route which he took along the coast of the Mediterranean. Rutulius is supposed by some to have been prefect at Rome, and that the Itinerary was taken by Alaric, A.D. 410. He was not a Christian, as appears from several passages of his poem, though the heavy complaints made by him against the Jewish race ought not, as some editors have imagined, to be extended to the Christians. We have remaining of this poem the first book, and sixty-eight lines of the second; and perhaps the particle potius, in the first line of the first book, would indicate that the commencement of this book was also lost. The remains of the poetry of Rutulius are given by Burmann and Wermsohn, in their respective editions of the Poetae Latinii Minores. There are also separate editions.

Rutilii, a people of Latium, along the coast below the mouth of the Tiber. They were a small community, who, though perhaps originally distinct from the Latins, became subjects of the latter part of the 8th century B.C., and so do not require a separate notice. Their capital was Ardea, and Turnus was their prince, according to the fable of the Æneas, when the Trojans arrived in Italy. (Vid. Ardea, Latium, Turnus.)

Rutulius (called also Ritupia, Portus Ritupia, and Portus Ritupius), a harbour on the coast of Britain, famed for its excellent oysters. It is generally considered as corresponding to Richborough, though D'Anville is in favour of Sandwich. (Compare Bede, 1, 1, "Rutulius, nunc corrupit Regiacastri." Rutulius was the port to which the Romans commonly came, from the opposite coast of Gaul, the harbour on this latter side, whence they usually started, being Gaius, Gaio. Thus the Itinerarium Maritimum (p. 496) says, "A portu Gesoriacensi ad portum Ritupiam Statia CCCCLIII" (46 geographical miles). It is on this account that the name of the Ritupian harbour frequently occurs in the later writers. The Itin. Ant. (p. 463) gives the same statement as the Itin. Marit. relative to the passage across. (Mannert, Geogr., vol. 2, p. 2, p. 160.) As regards the Rutupian oyster, consult Juvenal (4, 141), and the remarks of the commentators, and also Pliny (8, 54; 32, 6).

S.

Sabra, the capital of the Sabæi, in Arabia Felix, situate on a rising ground, in the interior of the country, and in a northeastern direction from the harbour of Pudum (Ojyzaun). According to Strabo (778), it was also called Maribab; and in this he is followed by later writers, who, however, give the more correct form Maribab. It would seem, that Mariba is a general term for a chief city, and hence we find more than one appearing in the geography of Arabia. According to Mannert, Sabra would appear to correspond with the modern Saada or Saada. (Geogr., vol. 6, pt. 1, p. 66.)

Saracus of Saracanus, a king of Ethiopia, who invaded Egypt, and reigns there after the expulsion of King Agramant. After a reign of fifty years he was terrified by a dream, and retired into his own kingdom. Diodorus Siculus states (1, 66), that after the departure of Sabacus, there was an anarchy of two years, which was succeeded by the reign of twelve kings, who, at their joint expense, constructed the labyrinth. (Consult remarks under the article Pammitibus.) The name of Sabacus, in hieroglyphic character, signifies "Amid the ruins of Abyssus." (Bühler, ad Herod., 2, 36.)

Sarab, a people of Arabia Felix, represented by some of the ancient writers, especially the poets, as one of the richest and happiest nations in the world, on account of the valuable products of their land. Another name, viz., that of the Homeriti (thought to be derived from Himiar, the name of a sovereign, and which signifies the red king), appears in a later age confounded with that of the Sabaeni. (Vid. Sabæi.)

Sabate, a town of Etruria, northeast of Cere, and not far from the site of the present Bracciano. It was in the immediate vicinity of a lake, called from it the Lacus Sabatinus. The town was said to have been swallowed up by the waters of the lake, and it was even asserted, that in calm weather its ruins might still be seen below the surface of the water. (Sallust., de Mirand. Font.) Columella notes the fish of the lake, and Frontinus speaks of its water being conveyed by an aqueduct to the capital. (Columell., 8, 16.—Front. de Agric., 1.—Cramer's Anc. Italy, vol. 1, p. 235.)

Sabbiti, a people of Campania, who derived their name from the small river Sabatus that flowed through their territory. They are mentioned by Livy (26, 53) among the Campanian tribes that revolted to Hannibal. (Cramer's Anc. Italy, vol. 2, p. 247.)

Sabaieus, a surname of Bacchus, given him, according to some, by the Thracians (Schol. ad Arist., Vesp., v. 9), or, according to others, by the Phrygians. (Strabo, 470.—Schol. ad Aristoph., Aet., v. 814. —Schol. ad Lyrist., v. 398.) De Scyri inclines to the opinion that the root of this appellation may be found in the name of the Arabian city Saba. (Santé-Croz, 1178)

SABINI.

SABINA or SABAUTHA, a city of Arabia Felix, the capital of the Chettamontes. Most commentators on the Periplus, in which mention is made of it, suppose it to be the same, with Sabuham or Sabinum, which to Al-Edrisi places in Hadramaut, at four stations, or a hundred miles, from Mareb. (Vincenzo Periplus, p. 334.) Mannert, however, declares for Mareb (Geogr., vol. 6, pt. 1, p. 83). The modern name Mareb will be a corruption from Muriab, a name common to many cities of Arabia. This place was the great depot for the incense-trade. (Vid. Saba.)

SABINA, Julia, grand-niece of the Emperor Trajan, and wife of Hadrian, to whom she became united chiefly through the means of the Empress Plotina. She lived unhappy with her husband, partly from her own asperity of temper, and partly, perhaps, from the gross vices of her consort. Hadrian's unkindness to her is said to have been the cause of her death. (Vid. Hadrians.)

SABINI, a people of Italy, whose territory lay to the northeast of Rome. The Sabines appear to be generally considered as one of the most ancient indigenous tribes of Italy, and one of the few who preserved their race pure and unmixed. (Strabo, 228.) We are not to expect, however, that fiction should have been more sparing of its ornaments in setting forth their origin, than in the case of other nations far less interesting and less celebrated. Dionysius of Halicarnassus, among other statements, according to Sabinius, mentions one which supposed them to have been a colony of the Lacedemonians about the time of Lycurgus (2, 49), an absurd fable which has been eagerly caught up by the Latin poets and mythologists. (Sil. Ital., 15, 545.—Ovid, Fast., 1, 260.—Hygin., Ap. Ser. ad En., 8, 638.) Their name, according to Cato, was derived from the god Sabas, an aboriginal deity, supposed to be the same as the god invoked by the Latins in the expression Mes Naus. (Cramer's Anc. Italy, vol. 1, p. 237.)—The Romans, observes Niebuhr, have no common national name for the Sabines, and the tribes which are supposed to have issued from them: the latter, whether Marsians and Pelignians, or Samnites and Lucanians, they term Sabellians. That these tribes called themselves Savini or Sabini is nearly certain, from the inscription on the Samnite denarius coined in the province. From the Sabellian, which is in every form manifest, and in the Greek Σαβηλίται directly, derived from Savini: but the usage of a people whose writings have perished, like everything that is extinct in fact, has lost its rights. I think myself at liberty to employ the term Sabellians for the whole race; since the tribes which were so named by the Romans are far more important than the Sabines, and it would clearly have offended the ancient ear to have called the Samnites Sabines. When Rome crossed the frontiers of Latium, the Sabellians were the most widely extended and the greatest people in Italy. The Etruscans had already sunk, as they had seen the nations of earlier greatness sink, the Tyrrhenians, Umbrians, and Ausonians. As the Dorians were great in their colonies, the mother-country remaining little; and as it lived in peace, while the tribes it sent forth diffused themselves daily by conquest, the Sabellians, who would have extended their name, and was it with the old Sabine nation. Their original home is placed by him among Ametimum, in the highest Apennines of the Abruzzo, where, on Mount Majella, the snow is said never wholly to disappear, and where the mountain-pastures in summer receive the Apulian herds. From this district they issued in very ancient times, long before the Trojan war; and, expelling in one quarter the Aborigines, in another the Umbrians, took possession of the territory which for three thousand years has borne their name. Out of this the overwhelming population migrated to different parts. It was an Italian religious usage, in times of severe pressure from war or pestilence, to vow a sacred spring (see auriurn); that is, all the creatures born with the spring; for the end of only a few years the cattle were slaughtered or redeemed, then the vow went out. (Liv., 33, 44.—Pestus, s. v. Mamertum.—Dion. Hal., 1, 16.) Such a vow the Romans made in the second year of the second Punic war; but only as to their flocks and herds. (Liv., 22, 9.) Such vows, the tradition runs, occasioned the sending out of the Sabine colony: the gods to whom each was dedicated charged sacred animals to guide them on their way. One colomy was an old woodcutter named Lukanus, who took his flock into Picenum, then peopled by Pelagians or Liburnians: another multitude by an ox into the land of the Opicans; this became the great Samnite people; a wolf guided the Hirpini. That colonies issued from Samnium is known historically. The Frenthom on the Adriatic were Sammites, who emigrated in the course of the second Roman war; Sammites conquered Campania as far as the Silarus; another host, calling themselves Lucanians, appears to have name to Lucania.—The Italian national migrations came down like others from the North; and Cato's opinion, that the origin of all the Sabellians was derived from the neighbourhood of Ametimum, admits of no other rational meaning than that the most ancient traditions, whether they may have been Sabine or Umbrian, assigned that district as the habitation of the people that were conquered Raste. Dionysius, indeed, seems to have understood Cato as having derived all the Sabines, and, consequently, through them their colonies, from a single village, Testrins, near Ametimum, as it were from a germ; but so extravagant an abuse of genealogy ought not surely to be imputed to Cato's sound understanding. He must have known and remembered how numerous the nation was at the time of its utmost greatness, when it counted perhaps millions of freemen. At Reate, in the Sabina, in the country of the Marsians, they found and subdued or expelled the Aborigines; about Beneventum, Opicans, and probably, therefore, in the land of the Hirpini also. On the left bank of the Tiber they dwelt in the time of the Roman kings, low down, intermingled with the Latins, even south of the Anio, not merely at Collatia and Regillum, but also on two of the Roman hills. Wars were still being made with the Etruscans: at the earliest annals of Rome; but with the year 306 they totally cease, which evidently coincides with their diffusion in the south of Italy. Towards this quarter the tide now turned, and the old Sabines on the Tiber became quite insignificant.——Strictness of morals and cheerful contentedness were the peculiar glory of the Sabellian mountaineers, but especially of the Sabines and the four northern cantons: this they preserved long after the ancient virtue had disappeared at Rome from the hearts and the demeanour of men. Most of the Sabellian tribes, and the Sabines themselves, inhabited open hamlets; the Sammites and the members of the northern confederacy dwelt, like the Epirots, around the fortified summits of their hills, where a brave people could defend the approaches even without walls; not that they had walled towns, but the mountain was their town. The Sabellians themselves masters of all Italy, had they formed a united or even a firmly-knit federal state, which should have lastingly appropriated its conquests, holding them in dependence, and securing them by colonies. But, unlike the Romans, the enjoyment of the greatest freedom was what they valued the highest; more than greatness and power, more than the permanent preservation of the state. Hence they did not keep their transplant. tribes attached to the mother-country: they became forthwith foreign, and frequently
hostile to the state they had issued from: while Rome, sending out colonies of small numbers, was sure of their fidelity; and by means of these, and by imparting dependant civil rights, converted a far greater number of small tribes to devoted subjects. (Niebuhr, History of Rome, vol. 1, p. 71, seqq., Cambridge translation.)—In fixing the limits of the Sabine territory, we must not attend so much to those remote times when they reached nearly to the gates of Rome, as to that period in which the boundaries of the different people of Italy were marked out with greater clearness and precision, namely, the reign of Augustus. We shall then find the Sabines separated from Latium by the river Anio; from Etruria by the Tiber, beginning from the point where it receives the former stream, to within a short distance of Otiricioli. The Nar will form their boundary on the side of Umbria, and the central ridge of the Apennines will be their limit on that of Picenum. To the south and southeast it may be stated generally, that they bordered on the Äqui and Vestini. From the Tiber to the frontiers of the latter people, the length of the Sabine country, which was its greatest dimensions, might be estimated at 1000 stadia, or 120 miles, its breadth being much less considerable. (Strabo, 228.—Cramer's Ancient Italy, vol. 1, p. 300.)

Sabinus, Aulus, a Roman poet, the friend and contemporary of Ovid, and to whom the last six of the heroic epistles of that bard are generally ascribed by commentators. These are, Paris to Helen, Helen to Paris, Leander to Hero, Hero to Leander, Acontius to Cydippe, and Cydippe to Acontius. He was the author, also, of several answers to the epistles of Ovid. As Ulysses to Penelope, Äneas to Dido, &c., and likewise of a work on Days, which his death prevented him from completing. This last-mentioned production is thought by some to have given Ovid the idea of his Pasti. (Bahr, Geach. Röm. Lit., vol. I, p. 291.)

Sabi, a river of Gallia Belgica, rising in the territory of the Nervii, and falling into the Mosus (Maese) at Namurcum (Namur), in the territory of the Adustici. It is now the Sambre. (Cass., B. G., 2, 16, 18.)—II. A river of Carmania, between the southern promontory of Carmania and the river Andanis. Mannert is inclined to identify it with the Anamis, which runs by the city of Hormuzza, and falls into the Persian Gulf near the promontory of Armuzum. (Mela, 3, 8.—Plin., 6, 23.) It is also called the Sagusan.—III. A river of Cisalpine Gaul, rising in Umbria, and falling into the sea at the mouth of the Rubicon. It is now the Serio. At its mouth lay the town of Savia, now Torre del Savio.

Sabra, a city of Africa, in the Regio Syrthica, west of Òea and east of the Syrtis Minor. It formed, together with Òea and Leptis Magna, what was called Tripolis Africana. Justianin fortified it, and it is now Sabart or Tripoli Vecchio. (Itin. Anton.—Solin., c. 27.—Plin., 5, 4.—Procop., Edif., 6, 4.)

Sabra, now called the Severn in England. (Pil.—Tac., Ann., 12, 31.)

Sacae, a name given by the Persians to all the more northern nations of Asia, but which, at a subsequent period, designated a particular people, whose territory was bounded on the west by Sogdiana, north and east by Scythia, and south by Bactriana and the chain of Imaus. Their country, therefore, corresponds in some degree to Little Bucharey and the adjacent districts. The Sacae or Scythians uncivilized habits, without cities, and dwelling in woods and caves. (Herod., 7, 9.—Mela, 3, 7.—Plin., 6, 17.—Ammian, Marcell., 23, 6, 3.)—As regards the origin of the name Sacae, which some etymologists deduce from the Persian Sagh, "a dog," and which they suppose to have been used as a term of contempt for a people of different race and religion, consult remarks under the article Scythia.
Sagra, we can have no difficulty in recognising that river as the ancient Sagra; more especially as its situation accords perfectly with the topography of Stra-

Saucumber or Saguntus, a city of Hispania Tar-
racconesia, north of Valencia, and some distance be-
low the mouth of the Iberus. It was situate on a
rising ground, about 1000 paces from the shore; Po-
lybus (3, 17) says seven stadia, Pliny (5, 4) three
miles. This place was said to have been founded by
a colony from Zacynthus (Σαγγυνός, Σάγγυνος, Sa-
guntius), intermingled with Rutulians from Ardea.
(Liv., 21, 7, 14.—Sil. Ital., 1, 291, &c.) It became
at an early period the ally of the Romans (Polyb., 3,
30), and was besieged and taken by Hannibal previous
to his march upon Italy. The siege lasted eight
months, and, being an infraction of the treaty with
the Romans, led at once to the second Punic war. Han-
nibal, with colossal arms, and not nearly
vol.

Sais, a city of Egypt, situate in the Delta, between the
Sennobic and Canopic arms of the Nile, and
nearly due west from the city of Sennobytus. It was
not, indeed, the largest, but certainly the most famous
and important city in its day of all those in the Delta
of Egypt. This pre-eminence it owed, on the one
hand, to the yearly festival celebrated here in honour of
Neith, the Egyptian Minerva, to which a large con-
course of spectators was accustomed to flock (Herod.,
2, 59) ; and, on the other, to the circumstance of it
being the native city, the capital, and the burying-place
of the last dynasty of the Pharaohs. (Herod., 2, 169.)

For the purpose of embellishing it, King Amasis built
a splendid portico to the temple of Neith in this
city, far surpassing all others, according to Herodotus,
in circumference and elevation, as well as in the
dimensions and quality of the stones: he also adorned
the building with colossal statues, and the immense figures
of Androscyn. Herodotus likewise informs us, that
a large block of stone, intended for a shrine, was
brought hither from Elephanta. Two thousand men
were employed three whole years in its transportation.
The exterior length of the stone was twenty-one cu-
bits, its breadth fourteen, and its height eight.
The inside was eighteen cubits and twenty-eight digits in
length, twelve cubits in breadth, and five in height.
This remarkable edifice was placed by the entrance of
the temple, it being found impossible, it would seem,
to drag it within, although Herodotus assigns a differ-
ent reason (2, 175).—When Egypt had fallen under
the Persian power, Memphis became the new capital, and
Saiss was neglected. It did not, however, fall as
low as the other cities of the Delta. Strabo, even in
his days, acknowledges it to have been the chief city
of Lower Egypt; he speaks also of the temple of Neith,
and of the temple of Psmutichus. In another pas-
 sage, he remarks, that somewhat to the south of this
city was a very sacred temple of Osiris, in which, ac-
ting to tradition, that deity was buried. (Strab.,
802.) Saiss was also famous for its festival of lamps,
The modern Saiss, with its ruins, marks the site of the
ancient Saiss.—This city must not be confounded with
other more easterly, Saiss, commonly called Tanis.
(Manneri, Geogr., vol. 10, pt. 1, p. 561, seqq.)

Salamis, I. a daughter of the river Asopus by Me-
thone. Neptune became enamoured of her, and car-
ried her to an island of the Ægean, which afterward
bore her name, and where she gave birth to a son call-
ed Cenechreus. (Diod. Sic., 4, 72.—Compare the
marks of Stickel, vol. 1, 35, war. 42.) An island in
the Sinus Saronicus, opposite Eleusis to the coast of
Attica, and said to have derived its name from Salamis, mentioned in the preceding article. It was
also anciently called Scyrus and Cychrea, from the
heroes Scyrus and Cychreus, and Pitussa from
its abounding in firs. (Strab., 393.) It had been
already celebrated in the earliest period of Greek his-
tory from the colony of the Æacides, who settled
there conformance to the splendid victory on the jals of Spa-
session of Salamis, as we learn from Strabo, was once
obstinately contested by the Athenians and Megareans;
and he affirms that both parties interpolated Homer,
in order to prove from his poems that it had belonged to
them. Having been occupied by Athina, it revolted
to Megara, but was again conquered by Solon, or, ac-
cording, some, to Phisistratus. (Plistacher, Vit. Sol-
on.) From this time it appears to have been al-
tually a subject of the Athenians. On the other hand,
Xerxes, they were induced to remove thither with their
families; in consequence of a prediction of the orac-
acle, which pointed out this island as the scene of the
famous of their enemies (Herodotus, 8, 56); and,
soon after, by the advice of Themistocles, the whole
of the naval force of Greece was assembled in the Bay
of Salamis. Meanwhile, the Persian fleet station-
ated at Phalerum he Christians were completely
defeated, and retired in the greatest disorder to Pharon-
us; notwithstanding which, the Persians were said to be plan-
ing their flight to the Isthmus. The Persian fleet
accordingly were ordered to surround the island during
the night, with a view of preventing their escape.
In the morning, the Grecian galleys moved on to the at-
tack, the Æginetans leading the van, accorded by the
Athenians, who were opposed to the Phanian ships,
while the Peloponnesian squadron was engaged with
the Alban fleet. The galleys of the Athenians were
engaged, and retired in the greatest disorder to Phaler-
um ; notwithstanding which, the Persians were said to have made dem-

name is Colouri, which is that also of the principal town. (Cramer's Anc. Greece, vol. 2, p. 364, seqq.)—III. A city in the island of Cyprus, situated about the middle of the eastern side. It was founded by Teucer, son of Telamon, and called by him Salamis, his native place, from which he had been banished by his father (Horat., 1, 7, 21.) This city was the largest, strongest, and most important one in the island. (Diod. Sic., 14, 4, 16, 32, 42.) Its harbour was secure, and protected against every wind, and sufficiently large to contain an entire fleet. (Strab., p. 41.—Diod., 20, 21.) The monarchs of Salamis exercised a leading influence in the affairs of the island, and the conquest of this place involved the fate of Cyprus at large. (Diod., i. c.—Id., 12, 3.) Under the Roman dominion the entire eastern part of the island was attached to the jurisdiction of Salamis. The insurrection of the Jews in Trajan's reign brought with it the ruin of a great portion of the city (Euseb., Chron., ann. 19, Traj. —Oros., 7, 12); but, however, the cause of the whole downfall of Salamis, as it is still mentioned after this period by Ptolemy and in the Peutinger Table. In the reign of Constantine, however, an earthquake and inundation of the sea completed the downfall of the place, and a large portion of the inhabitants were buried beneath its ruins. (Clemens Alex. 29, 11, 20, Const. Mag.—Malala, Chron., 1; Strabo, 17, Sup. Con., 28, Chon. 1.) A small portion only of it, nearly the latter half of it, made it the capital of the whole island, and called it, from his own name, Constantia. (Hierocles, p. 706.) A few remains of this city still exist. (Ptolemaïs, v. 6, pt. 1, p. 572, seqq.)

SALAPIA, a city of Apulia, near the coast, above the river Aufidius, and between that river and the Salapia Palus. According to Strabo, it was the emporium of the whole coast, and occupied, and administered, by Cnaeans, who have fixed upon Sipontum as answering that purpose better, from its greater proximity. (Strab., 232.) This town laid claim to a Grecian origin. The Rhodians, who early distinguished themselves by a spirit of enterprise in navigation, asserted, that, among other distant colonies, they had founded, in conjunction with some Coan's, a city named Salapia, on the Daunian coast. This account of Strabo's (654) seems confirmed by Vitruvius, who attributes the foundation of this settlement to a Rhodian chief named Elipias (1, 4.—Compare M.ours. in Rhod., 1, 18.) It is probable, however, that Salapia was at first dependant upon the more powerful city of Arpi, and, like that city, it subsequently lost much of the peculiar character which belonged to the Greek colonies from its intercourse with the natives. We do not hear of Salapia in Roman history till the second Punic war, when it is represented as falling into the hands of the Carthaginians, after the battle of Cannae (Liv., 24, 29); but, not long after, it was delivered up to Marcellus by the party which favoured the Roman interest, together with the garrison which Hannibal had placed there. (Livy, 26, 29.) The Carthaginian general seems to have felt the loss of this town severely; and it was probably the desire of revenge which prompted him, after the death of his own son, to defend Marcellus, to adopt the stratagem of sending letters, sealed with that commander's ring, to the magistrates of the town, in order to obtain admission with his troops. The Salapitani, however, being warned of his design, the attempt proved abortive. (Liv., 27, 28.—App. Han., 51.)

The proximity of Salapia to the lake or marsh already mentioned, is said to have proved so injurious to the health of the inhabitants, that some years after these events they built another city, where they owed to the assistance of M. Hostilius, a Roman praeator, who caused a communication to be opened between the lake and the sea. Considerable remains of both towns are still standing, at some distance from each other, under the name of Salpi, which confirms this account of Vitruvius (1, 4.—Compare Cicero, de Leg. Agr., 2.—Plut., 3, 11.—Cramer's Anc. Italy, vol. 2, p. 284.)

SALASSI, a people of Gallia Cisalpina, in the north-western angle of that country, and at the foot of the Alps. The main part of their territory lay chiefly, however, in a long valley, which reached to the summits of the Graenum and Penne Alpa, the Little and Great St. Bernard. The passages over the cantons into Gaul were too important an object for the Romans not to make them anxious to secure them by the conquest of the Salassi. But these hardy mountaineers, though attacked as early as 609 U.C., held out for a long time, and were not finally subdued till the reign of Augustus. Such was the difficult nature of their country, that they could easily intercept all communication through the valleys by occupying the heights. Strabo represents them as carrying on a sort of predatory warfare, during which they seized and stunned some distinguished Romans, and even ventured to plunder the baggage and military chest of Julius Caesar. Augustus caused their country at last to be occupied permanently by a large force under Terentius Varro. A large number of the Salassi perished in this last war, and the rest, to the number of 36,000, were sold and reduced to slavery. (Strabo, 17, vol. 3, p. 53.) A city was built on the ground occupied by Varro's camp, and Augustus honoured the rising colony by giving it the name of Augusto Preatoria, now Aosta. (Cramer's Anc. Italy, vol. 1, p. 49, seqq.)

SALENTINI, a people of Italy, in the territory of Messapia. They cannot be distinguished with accuracy from the Calabri, as we find the former appellation used by several writers in a very extensive sense, and applied not only to the district of Messapia or Iapiga, but even to districts entirely removed from it. Strabo himself confesses the difficulty of assigning any exact limits to these two people; and he contented himself with observing, that the country of the Salentini lay properly around the Iapigian promontory. (Strab., 277, 281.) It was asserted that they were a colony of Cretans, who, under the conduct of Idomeus their king, had arrived thither in their wanderings after the fall of Troy. (Virg., Æne., 3, 410.) The Romans, under pretence of their having assisted Pyrrhus in his expedition into Italy, soon after invaded the territory of this insignificant people, and had no difficulty in taking the few towns which they possessed. (Florus, 1, 20.—Liv., Epit., 15.) The Salentini subsequently revolted, during the second Punic war, but they were again reduced by the consul Claudius Nero. (Liv., 27, 26.)—It is probable that they derived their name from a town called Salentia, the existence of which is, however, only attested by Stephanus Byzantinus, who calls it a Messapian city (s. p. Saleria.)—The Salentinian promontory is the same with the Iapigian. (Cramer's Anc. Italy, vol. 2, p. 313.)

SALERNUM, a city of Campania; southeast of Neapolis, and near the shore of the Sinus Pusanus. It was said to have been built by the Romans as a check upon the Picentini. It was not, therefore, like the modern town of Salerno, close to the sea, but on the height above, where considerable remains have been observed. (Clem., It. Antig., vol. 2, p. 1189.—Romaneîi, vol. 3, p. 612.) According to Livy, Salernum became a Roman colony seven years after the conclusion of the second Punic war (34, 45.—Vell. Patr., 1, 14.)—Horace tells us, that the air of Salerno was so invigorating that he recommended it to his physician for a complaint in his eyes. (Cramer's Anc. Italy, vol. 2, p. 214, seqq.)

SALISI, I. a college of priests at Rome, instituted in honour of Mars, and appointed by Numa to take care

1182
of the sacred shrines called Ancilia, B.C. 709. (Vid. Ancil.) They were twelve in number. Their chief was called præsul, who seems to have gone foremost in the procession; their principal musician, satius; and he who admitted new inmembers, magister. Their number was afterward doubled by Tullius Hostilius, after he had obtained a victory over the Fidenates, in consequence of a vow which he had made to Mars. The Salii were all of patrician families, and the office was very honourable. The 1st of March was the day in which the Salii observed their festival in honour of Mars. They were generally dressed in a short scarlet tunic, of which only the edges were white, they wore a large purple-coloured belt above the waist, which was fastened with brass buckles. They had on their heads round bonnets with two corners standing up, in their right hand they carried a small rod, and in their left a small buckler, one of the auctorii, or shields of Mars. Lucan says that it hung from the neck. In the observation of their solemnity, they first offered sacrifices, and afterward went through the streets dancing in measured motions, sometimes all together, or at other times separately, while musical instruments were playing before them. Hence their name of Salii, from their moving along solemn dance (Salii a saliendo). They placed their body in different attitudes, and struck with their rods the shields which they held in their hands. They also sung hymns in honour of the gods, particularly of Mars, Juno, Venus, and Minerva; and the Sabine chief. At the sacrifice for certain number of virgins, habited like themselves, and called Saliae. We have in Varro a few fragments of the Salian hymns, which, even in the time of that writer, were scarcely intelligible. Thus, for example,

"Dirum extra cante, Dirum Deo supplice cante," i. e., Deorum extra cante, Deorum Deo suppliciter cante; and also the following:

"omnia
dapalitía comités iani cusiones
doumon cerises dirus jaunusque remi,"
i. e., Omnia dapali comides Jani Curiones. Bonus creator Dirus Janusque venit.—Their feasts and entertainments were uncommonly sumptuous, whence dapés saltarius is proverbially applied to such repasts as are most splendid and costly. (Livy, 1. xii. 17. Varro, II. 4. 15. of the edges were white.) —II. A German tribe of Frankish origin, whose original seat is not clearly ascertained. Wiarda makes it between the Silva Carbonaria (part of the forest of Ardeennes) and the River Ligers (Lyis, in Brabant); Wessebe, however, in the vicinity of the Sala or Sault. They first made their appearance on the Insula Batavorum, where they were conquered by Julian; afterward in the territory of the Chamavi, by the Mosse or Meuse. Mannert seeks to identify them with the Cherusci. (Amn. Marcell., 17, 8. seqq. — Zoism. 3, 6.)

Sallustius, Crispus, a celebrated Latin historian, born at Amiernurn, in the territory of the Sabines, in the year of Rome 668. He received his education in the latter city, and in his early youth appears to have been desirous to devote himself to literary pursuits. But it was not easy for one residing in the capital to escape the influence of the seconic and the politics of distinction. He obtained the situation of quæstor, which entitled him to a seat in the senate, at the age of twenty-seven; and about six years afterward he was elected tribune of the commons. While in this office he attached himself to the fortunes of Cæsar, and, along with one of his colleagues, conducted the prosecution against Mili for the murder of Claudius. In the year of the city 704, he was excluded from the senate on the pretext of immoral conduct, but more probably from the violence of the patriotic party, to which he was opposed. Aulus Gallius, on the authority of Varro's treatise, Pius aut de Pace, informs us that he incurred this disgrace in consequence of an intrigue with Fausta, the wife of Mili, who caused him to be secured by his master (vita A., 17, 18.) It has been doubted, however, by modern critics, whether it was the historian Sallust who was thus punished, or his nephew Crispus Sallustius, to whom Horace has addressed the second ode of the second book. It seems, indeed, unlikely that, in so corrupt an age, an amour with a woman of Fausta's abandoned character should have been the real cause of his expulsion from the senate. After undergoing this ignominy, he went to Spain, where, some time afterward, he met Cicero, who, endeavoring to recompense him, he quit Rome, and joined his patron, Cæsar, in Gaul. He continued to follow the fortunes of that commander, and, in particular, bore a share in the expedition to Africa, where the scattered remains of Pompey's party had united. That region being finally subdued, Sallust was left by Cæsar as prætor of Numidia; and about the same time married Terentia, the divorced wife of Cicero. He remained at a year in his government, but during that period enriched himself by despoothing the province. On his return to Rome he was accused by the Numidians, whom he had plundered, but escaped with impunity by means of the protection of Cæsar, and was quietly permitted to betake himself to a luxurious retirement with his ill-gotten wealth. He chose for his favourite retreats a villa at Tibur, which had belonged to Cæsar, and a palace in Rome, which had been given him by that prince. He resided at first in his villa at Tibur, Sallust passed the concluding years of his life, dividing his time between literary avocations and the society of his friends; among whom he numbered Lucullus, Messala, and Cornelius Nepos.—Such being his friends and studies, it seems highly improbable that he had indulged in that excessive libertinism which has been attributed to him, on the erroneous supposition that he was the Sallust mentioned by Horace in the first book of his Satires. The subject of Sallust's character is one which has excited some investigation and interest, and on which very different opinions have been formed. That he was a man of loose morals is evident; and it cannot be denied that he rashly and plundered the Roman city, his native city, of some of its most valuable works. But it seems doubtful if he was that monster of iniquity he has been sometimes represented. He was extremely unfortunate in the first permanent notice taken of his character by his contemporaries. The decided enemy of Pompey and his faction, he had said of that celebrated chief, in his general history, that he was a man "orsi probi, animo inseveranda." Lucan, the freedman of Pompey, avenged his master, by the most violent abuse of his enemy (Suetonius, de iul. Hist. Gram., 15), in a work which should rather be regarded as a fratic satir than as a historical document. Of the injustice which he has done to the life of the historian, we may, in some degree, judge from what he says of him as an author. He calls him, as we farther learn from Suetonius, "Nabalonem vita scriptisque monstrum; praeterea priscorum Catonisque, inerunktissimum forum;" namely, the man of Suetonius, by Augustus, and might have acted, at the present day, as a corrective or palliative of the unfavourable impression produced by this injurious libel, has unfortunately perished; and the next work on the subject now extant is a professed rhetorical declamation against the character of Sallust, which was given to the world in the name of Cicero, but was not written by himself, but all his later and all his works were totally destroyed, and the death of the publicist, and is now generally assigned to a rhetorician in the reign of Claudius, called Porcius Latro. The calumnies invented or exaggerated by Lucan, and propagated in the scholastic theme
of Porcius Latro, have been adopted by Le Clerc, professor of Hebrew at Amsterdam, and by Professor Mmeiser, of Prague, in their respective accounts of the life of Sallust. His character has received more justice from the preface memoir and notes of De Brosses, his French translator, and from the researches of Wieland in Germany. From what is known of Fabius Pictor and his immediate successors, it must be apparent that Sallust, who ranks at Rome, was in the lowest state, and that Sallust had no model to imitate among the writers of his own country. He therefore naturally recurred to the productions of the Greek historians. The native enjoyment and lucrative familiarity of Herodotus were not adapted to his taste; and simplicity, such as that of Xenophon, is, of all things, the most difficult to attain; he therefore chiefly emulated Thucydides, and attempted to transplant into his own language the vigour and conciseness of the Greek historian, but the strict imitation with which he followed him has gone far to lessen the effect of his own original genius. The first work of Sallust was the Conspiracy of Catiline. There exists, however, some doubt as to the precise period of its composition. The general opinion is, that it was written immediately after the author went out of office as tribune of the commons, that is, A.U.C. 703. And the details of that conspiracy, at least as regards its origin, as well as of his general history, is fixed by Le Clerc between that period and his appointment to the praetorship of Numidia. But others have supposed that they were all written during the space which intervened between his return from Numidia in 702, and his death, which happened in 718, four years previous to the battle of Actium. It is maintained by the supporters of this last idea, that he was too much engaged in political tumults previous to his administration of Numidia, so as to have no opportunity to form his plan, that, in the introduction to Catiline's Conspiracy, he talks of himself as withdrawn from public affairs, and refutes accusations of his voluptuous life, which were only applicable to this period; and that, while instituting the comparison between Caesar and Cato, he speaks of the existence and competition of those celebrated opponents as things that had passed over. — "In memória ingenti virtute, diversa moribus, suae virtutis quoque amicitia Cæsar Cato." On this passage, too, Gibbon, in particular, argues, that such a flatterer and party tool as Sallust would not, during the life of Caesar, have put Cato so much on a level with him in the comparison. De Brosses argues with Le Clerc in thinking that the Conspiracy of Catiline at least must have been written immediately after 703; as he would not, after his marriage with Terentia, have commemorated the disgrace of her sister, who, it seems, was the vestal virgin whose intrigue with Catiline is recorded by Sallust. But whatever may be the case as to Catiline's Conspiracy, it is quite certain that the Jugurthine War was written subsequently to the author's residence in Numidia, which evidently suggested to him this theme, and afforded him the means of collecting the information necessary for completing his work. The subject chosen by Sallust form two of the most important and prominent topics in the history of Rome. The periods, indeed, which he describes were painful, but they were interesting. Full of conspiracies, usurpations, and civil wars, they chiefly exhibit the mutual rage and iniquity of imbritted factions, furious struggles between the patricians and plebeians, open corruption in the senate, venality in the courts of justice, and rapine in the provinces. This state of things, so forcibly painted by Sallust, produced the Conspiracy, and, in its turn, was the cause of Catiline. But it was the oppressive debts of individuals, the temper of Sulla's soldiers, and the absence of Pompey with his army, which gave a possibility, and even a prospect, of success to a plot which attempted the vital existence of the commonwealth; and which, although arrested in its commencement, was one of those violent shocks which hasten the fall of a state. The History of the Jugurthine War, if not so imposing or menacing to the vital interests or immediate safety of Rome, exhibits a more extensive field of action, and a greater theatre of war. No prince, except Mithradates, gave so glorious a proof of the royal authority at Rome, of the course of no war in which they had ever been engaged, not even the second Carthaginian war, were the people more desponding, and in none were they more elated with ultimate success. Nothing can be more interesting than the accounts of the vicissitudes of this contest. The endless resources and hairbreadth escapes of Jugurtha; his levity; his fickle and faithless disposition, contrasted with the perseverance and prudence of the Roman commander Metellus, are all described in a manner the most vivid and emotional. Sallust had attained the age of twenty-two when the conspiracy of Catiline broke out, and was an eyewitness of the whole proceedings. He had, therefore, sufficient opportunity of recording with accuracy and truth the progress and termination of the conspiracy. Sallust has certainly acquired the praise of a veracious historian, and we do not know that he has been detected in fallacies or fact; but, as his historical works are intended to be free from the defects of art and of composition, there are few historical compositions of which the truth can be proved on such evidence as the conspiracy of Catiline. The facts detailed in the orations of Cicero, though differing in some minute particulars, coincide in everything of importance, and highly contribute to illustrate and verify the work of our historian. But Sallust lived too near the period of which he treated, and was too much engaged in political tumults, to be a faithful historian in the sense of accurate annality or prediction; he could not have raised himself above all hopes and fears, and prejudices, and therefore could not, in all their extent, have fulfilled the duties of an impartial writer. A contemporary historian of such turbulent times would be apt to exaggerate through adulation, or conceal through fear; to instil the precepts, not of the philosopher, but the partisan; and colour facts into harmony with his own spirit of the day. Few words of Couc, follower of Caesar, he has been accused of a want of candour in varnishing over the views of his patron; yet it is hard to believe that Caesar was deeply engaged in the conspiracy of Catiline, or that a person of his prudence should have leagued with such rash associates, or followed so desperate an adventurer. But the chief objection urged against his impartiality is the feeble and apparently reluctant commendation bestowed on Cicero, who is now acknowledged to have been the principal actor in detecting and frustrating the conspiracy. Though fond of displaying his talents in drawing characters, he exercises none of it on Cicero, whom he merely terms "homo egregius et optimus consuli," which was but cold applause for one who had saved the commonwealth. It is true, that, in the early part of the history, praise, though sparingly bestowed, is not absolutely withheld. The election of Cicero to the consulship is fairly attributed to the high opinion entertained of his talents and capacity, which overcame the disadvantages of obscure birth. The mode adopted of gaining over one of the accomplices, and for fixing his own waving and disaffected colleague, the dexterity manifested in seizing the Alobrojans with the letters, and the irresistible effect produced by confronting them with the conspirators, are all understood. The exclusive attention of Sallust in the conclusion of the business that the historian withholds from him due share of applause, and contrives to eclipse him by always interposing the character of Cato, though it could not be unknown to any witness
of these transactions that Cato himself and other sen-
ators publicly hailed the consul as the father of his coutry; and that a public thanksgiving to the gods was decreed in his name, for having preserved the city from conflagration, and the citizens from massa-
cre. This omission, which may have originated partly in enmity, and partly in disgust at the ill-disguised
vanity of the consul, has in all times been regarded as the chief defect, and even stain, in the history of the
Catinian Conspiracy. — Although not an eyewitness of the
war with Jugurtha, Sallust's situation as prator of Numidia, which suggested the composition, was fa-
vourable to the authority of the work, by affording op-
portunity of collecting materials, and procuring infor-
mation, of the events incident to his own period. It was written as well as traditionary, concerning the history of Africa, particularly the documents preserved in the archives of King Hiempsal, which he caused to be translated for his own use, and which proved peculiar-
ly serviceable in the detailed account which he has given of the inhabitants of Africa. In this history he has been accused of showing an undue partiality to-
wards the character of Marius; and of giving, for the sake of which the war are chiefly occupied with the massacre at Vacca. But he appears to do even more
than ample justice to Metellus, since he represents the
war as almost finished by him previous to the arrival of Marius, though it was, in fact, far from being con-
cluded. — Sallust evidently regarded a fine style as one
of the chief merits of an historical work. The style
on which he took so much pains was carefully formed
on that of Thucydides, whose manner of writing was,
in a great measure, original, and, till the time of Sal-
lust, peculiar to himself. The Roman has wonderfully
succeeded in imitating the vigour and conciseness of the Greek historian, and infusing into his composition something of that dignified austerity which distinguishes the
work of his great model; but when we say that Sallust has imitated the conciseness of Thucydides, we mean the rapid and compressed manner in which his narrative is developed, but he sometimes sacrifices
it to the sake of language. For Thucydides, although he brings forward only the principal idea, and discards what is collateral, yet frequently employs long and in-
volved periods. Sallust, on the other hand, is abrupt
and sententious, and is generally considered as having
carried this sort of brevity to a vicious excess. The
use of copulative, either for the purposes of connect-
ning his sentences with each other, or uniting the clause
so as to produce the effect of a continuous sentence,
this produces a monotonous effect, and a total want
of that flow and variety which is the principal charm
of the historic period. Seneca accordingly (Epist., 114) talks of the "Amputata sententiae, et
verba ante expectation cadentia." which the practice of Sallust had succeeded in rendering fashionable. It
was, perhaps, partly in imitation of Thucydides that
Sallust introduced into his history a number of words almost certainly borrowed from the Grecian his-
torians, which he had taken from the works of the older authors of Rome, par-
ticularly Cato the censor. It is on this point he has
been chiefly attacked by Pollio, in his letters to Plau-
cus. He has also been taxed with the opposite vice,
of coin ing new words, and introducing Greek idioms;
but the severity of judgment which led him to imitate
the ancient and austere dignity of style, made him re-
ject the barbarisms and introduction of copulative
words begin ning to infect the Roman taste, in conse-
quency of the increasing popularity of the rhetorical
schools of declamation, and the more frequent inter-
course with Asia. On the whole, in the style of Sal-
lust, there is too much appearance of study, and a want
of that graceful ease, which is generally the effect of
art, but in which art is nowhere discovered. — Of all
the departments of history, the delineation of charac-
ter is the most tending to the temper and importance of the
writer, more especially when he has been contempo-
rary with the individuals he portrays, and in some de-
gree engaged in the transactions he records. Five or
six of the characters drawn by Sallust have in all ages
been regarded as master-pieces. He has seized the
delic ate shades, as well as the prominent features, and
thrown over them the most lively and appropriate col-
ouring. Those of the two principal actors in his tra-
gic histories are forcibly given, and prepare us for the
incidents which follow. The portrait drawn of Cat-
line conveys a lively notion of his mind and person,
while the parallel drawn between Cato and Caesar is one of the most celebrated passages in the history of
the conspiracy. Of both these famed opponents we are presented with characters so favourable that their
faults are thrown into the shade; and the bright quali-
ties of each different species by which they were
distinguished, are contrasted for the purpose of show-
ing the various qualities by which men arrive at emi-
ience. The introductory sketch of the genius and
manner s of Jugurtha is no less able and spirited than
the character of Catiline. The portraits of the other
principal characters who figured in the Jugurthine
wars are more susceptible of the writer's treatment,
particularly, is happily touched. His inattainable
artfulness is artfully disguised under the mask of patriotism; his
credibility and avarice are concealed under that of
martial simplicity and hardihood; but, though we know,
from his subsequent career, the hypocrisy of his pre-
tensions, the character of Marius is presented to us in
a more favourable light than that in which it can be
viewed on a survey of his whole life. We see the
blunt and gallant soldier, and in the celebrated
massacre of his own countrymen, the
immortal cruelty of soul was first about to burst forth for the
destruction of his countrymen. In drawing the por-
trait of Sulla, the memorable rival of Marius, the his-
torian represents him also such as he appeared at that
period, not such as he afterward proved himself to be.
We behold him with pleasure as an accomplished and
sublime commander, eloquent in speech and versatile in
his resources; but in his character as an individual, there is no trace of the cold-blooded
assassin, the tyrant, and usurper. — History, in its or-
iginal state, was confined to narrative; the reader being
left to form his own reflections on the deeds or events
recorded. The historic art, however, conveys not
complete satisfaction, unless these actions are connect-
ed with their causes—the political springs or private
passions in which they originated. It is the business,
therefore, of the historian, to apply the conclusions
of the poet to the history of men, and to point out
the relations of the transactions he relates. These transactions
the author must receive from authentic monuments or
records, but the remarks deduced from them must be
the offspring of his own ingenuity. The reflections
with which Sallust introduces his narrative, and those
he draws from it, are so just and numerous, that he
has by some been considered the father of philosophic
history. It must always, however, be remembered,
that the poet has placed much of his history in
improbable transactions; that whatever forms not a part
of the narrative is episodical, and therefore improper,
if it be too long, and do not grow naturally out of the
subject. Now some of the political and moral di-
gressions of Sallust are neither very immediately con-
ected with his subject nor very obviously suggested
by the narration. The discursive nature and incom-
pleteness of his style might have been pointed out by
his contemporaries; but the appearance of the books
have been objected to. The first four sections of Catiline's Conspiracy have indeed little relation to the
topic. They might as well have been prefixed to any
other history, and much better to a moral or philosoph-
ic treatise. In fact, a considerable part of them, des-
canting on the fleeting nature of wealth and beauty,
and all such adventitious possessions, are borrowed
from the second oration of Isocrates. Perhaps the
eight following sections are too dispropor tioned to the

SALLUSTIUS.

This work was the mature fruit of the genius of Sallust, having been the last he composed, and is inscribed to Lucullus, the son of the celebrated commander of that name. Its first part, occupying a period of thirteen years, extending from the resignation of the dictatorship by Sylla till the promulgation of the Manilian Law, by which Pompey was invested with authority equal to that which Sylla had relinquished; and obtained, with unlimited power in the East, the command of the army destined to act against Mithradates. This period, though short, comprehends some of the most interesting and luminous points which appear in the Roman annals. During this interval, and almost at the same moment, the republic was attacked in the East by the most powerful and enterprising of the monarchs with whom it had yet waged war; in the West by one of the most skilful of its own generals; and in the bosom of Italy by its gladiators and slaves. The work was also introduced by two discourses, the one presenting a picture of the government and manners of the Romans, from the origin of their city to the commencement of the civil wars; the other containing a general view of the dissections of Marius and Sylla; so that the whole book may be considered as connecting the termination of the Jugurnate War and the breaking out of Catiline's conspiracy. The loss of this valuable production is the more to be regretted, as all the accounts of Roman history which have been written are defective during the interesting period it comprehended. Nearly seven hundred fragments belonging to it are well known, from scholiasts and grammarians, by De Brosses, the French translator of Sallust; but they are so short and disconnected that they merely serve as landmarks, from which we may conjecture what subjects were treated of and what events recorded. The only parts of the history which have been preserved in any degree entire, are four orations and two letters. The first is an oration pronounced against Sylla by the turbulent M. Æmilius Lepidus, and delivered to the people as a whole, and composed, it is supposed, at the expiration of his year, to be appointed a consul, excused for that purpose a civil war, and rendered himself master of great part of Italy. His speech, which was preparatory to these designs, was delivered after Sylla had abdicated the dictatorship, but was still supposed to retain great influence at Rome. He is accordingly treated as being still the tyrant of the state; and the people are exhorted to throw off completely, and to deliver the nation to the bold assertion of their liberties. The second oration is that of Lucius Philippus, which is an invective against the treasonable attempt of Lepidus, and was calculated to rouse the people from the apathy with which they beheld proceedings that were likely to terminate in the total subversion of the government. The third harangue was delivered by the tribune Licinius. It was an effort of that demagogue to depress the patrician and raise the tribunitian power; for which purpose he alternately flatters the people and reviles the senate. The oration of Marcus Atilius, chiefly against the Jugurnate War, he directed to the people, during the period of his consulship, in order to calm their minds and allay their resentment at the bad success of public affairs; which, without any blame on his part, had lately, in many respects, been conducted to an unprosperous issue. Of the two letters which are extant, the one is from Pompey to the senate, complaining in very strong terms of the deficiency in the supplies for the army which he commanded, his want of money being of the most pressing. The other is supposed to be addressed from Mithradates to Arses, king of Parthia, and to be written when the affairs of the former monarch were proceeding unsuccessfully. It exhorts him, nevertheless, with great eloquence and power of argument, to join him in an alliance against the Romans: for this purpose, it places in a strong point of view their unprincipled policy and ambitious desire of universal empire: all which could not, without this device of an imaginary letter by a foe, have appeared with the same effect. The whole work includes with showing the extreme danger which the Parthians would incur from the hostility of the Romans, should they succeed in finally subjugating Pontus and Armenia. The only other fragment of any length, is the description of a splendid entertainment given to Metellus on his return, after a year's absence from his government of Farther Spain. It appears, from several other fragments, that Sallust had introduced, on occasion of the Jugurnate war, a geographical account of the shores and countries bordering on the Euxine, in the same manner as he enters into a topographical description of Africa in his history of the Jugurnate War. This part of his work has been much applauded by ancient writers for exactness and liveliness, and is frequently referred to, as the highest authority, by Strabo, Pomponius Mela, and other geographers. Besides his historical works, there exist two political discourses, concerning the administration of the government, in the form of letters to Julius Caesar, which have generally, though not on sufficient grounds, been attributed to the pen of Sallust. The best editions of Sallust are, that of Curtius, Lips., 1742, 4to; that of Havercamp, Amst., 1742, 4to, 2 vols.; that of Burnouf, Paris, 1821, 8vo; that of Gerash, Basil., 1823, seqq.; 3 vols. 4to.; and that of Frotches, Lips., 1829-30, 2 vols. 8vo. (Dunlop's Roman Literature, 2, p. 301—347.)

SALMIAC, a fountain near Halicarnassus in Caria, which was failed to render effervescence all who drank of its waters. It was here that Hermaphroditus, according to the poets, underwent his strange metamorphosis. The fountain was situate at the foot of a rock, and on the summit of this rock was a very strong castle, which a Persian garrison long held against Alexander. (Arrian, Exp. Al., 1, 24.)

SALONIÆCA, a city of Macedonia, in the northeastern part of Greece. It is very probably the same with the Elmantica of Polybius (3, 14) and the Hermeanca of Livy (21, 5), which Hannibal took in his expedition against the Veneti. It is now Salamanca. (Manzini, vol. 1, p. 348.)

SALONGNE, a city of Ellis, of great antiquity, north-west of Olympia. It is said to have been founded by Salmoneus. (Apollod., 1, 9, 7. — Strabo, 1, 355.) Salmoneus, a king of Salmoneus, was the son of Æolus and Enodia and was appointed by Alcidæus, by whom he had Tyro. He wished to be called a god, and to receive divine honours from his subjects; and, therefore, to imitate the thunder, he used to drive his chariot over a brazen bridge, and darted burning torches on every side, as if to imitate the lightning. This impiety provoked Jupiter. Salmoneus was struck with a thun-
derbolt, and placed in the infernal regions near his brother Sisyphus. — Consult, in explanation of this legend, the article Elicius, p. 467, col. 1, near the end. (Hom. Od., 11, 235.—Apollod., 1, 9.—Hygin., Fab., 60.—Virg., Æn., 6, 5, 85.)

SALMYDESUS (Σαλμύδησος), or, as the later Greek and the Latin writers give the name, Halamydesus (Ἀλάμυδησος), a city of Thrace, on the coast of the Eu- xine, below the promontory of Thyas. The name properly belonged to the entire range of coast from the Thymian promontory to the mouth of the Bospo- rus. And it was this portion of the coast in particu- lar that obtained for the Euxine its earlier name of Azenos, or "inhospitable." The shore was rendered dangerous by shallows and marshes; and when any vessels, either through want of skill or the violence of the wind, became entangled among these, the Thra- cians, whose name was Ἱλαμυδησείς, included under this name. The republic of Byzantium put an end to this system of plunder.—The modern Modjik answers to the ancient city of Salmydesus. (Melas, 2, 2.—Plin., 4, 11.—Diod. Sic., 14, 38.—Manneri, Geogr., vol. 7, p. 149.)

Satón, now Salona, the principal harbour of Dal- matia, and always considered as an important post by the Romans after their conquest of that country. Pliny styles it a colony (3, 22), which it has been the business of various inscriptions. (Gruter, Thes., 32, 12.) The name is sometimes written Salona and Salona. (Cosm. B. G., 3, 9.—Hirt., B. Alex., 43.) It was not the native place of the Emperor Dioclesian, as is commonly supposed. That monarch was born at Dioeclea, in its vicinity; and to this quarter he retired after he had abdicated the imperial power. Here he built a splendid residence, the ruins of which are still to be seen at Spalatro, about three miles from the town, which has given its name to Salona. (Vid. Lemaire, ad itin. Anton., p. 270.—Adams Antiquities of Spalatro.—Cramer’s Anc. Greece, vol. 1, p. 36.)

Salvianus, a native of Colonie Agrippina (Col- ogne), one of the early fathers of the Christian Church. He led a religious life at Massilia during the greater part of the 5th century, and died in that city. Salvian was the author of several works on devotional sub- jects, of which there are extant a treatise "On the Providence of God" (De gubernatione Dei, &c.), in eight books; another in four books, written "Against avarice, especially in priests and clerical persons;" and nine pastoral letters. His works, as far as they remain, were collected and printed to- gether, in two volumes 8vo, by Baluzius, Paris, 1663.

Salvés, a people of Gaul, extending from the Rhone, along the southern bank of the Drunetia or Dunet, almost to the Alps. They were the fullest opponents of the Greeks of Massilia. (Liv., 5, 34.)

Sámara, a river of Gaul, now called the Somme. The name of this stream in intermediate geography was Sumina or Sumena, corrupted into Somona; whence the modern appellation. (Vid. Sarmoarobriva.)

Sámara, a city and country of Palestine, famous in sacred history. The district of Sama lay to the north of Jaffa. As the origin of the Samaritan nation was as follows: In the time of Solomon it is said, was made of the people of Israel into two distinct kingdoms. One of these kingdoms, called Judah, consisted of such as adhered to Rehoboam and the house of David, comprising the two tribes of Judah and Benjamin; the other ten tribes retained the an- cient name of Israelites under Jeroboam. The capi- tal of the state of these latter was Samaaria, which was also the name of their country. The Samaritans and the people of Judæa were lasting and bitter ene- mies. The former devised in several respects from the strictness of the Mosaic law, though afterward the religion of the two nations became more closely as- similated; and, in the time of Alexander, the Samari- tans obtained leave of that conqueror to build a tem- ple on Mount Gerizim, in the city of Samaaria. It was a imitation of the temple at Jerusalem, where they prac- tised the same forms of worship. Among the people of Judæa, the name of Samaaria was a term of bit- ter reproach, and disgraceful in a high degree. The city of Samaaria was situated on Mount Sameron, and was the residence of the kings of Israel, from Omri its founder to the overthrow of the kingdom. It was razed to the ground by Hysavcus, but rebuilt by He- rod, who completed the work begun by Gabinius, pro- consul of Syria. Herod called it Sebaste, in honour of Augustus. (1 Kings, 16, 24.—Ibid., 17, 6.—Ibid., 22, 52.—2 Kings, 17, 6.—Jerem., 23, 13.—Joz., Ant., 8, 7.—Id. Ibid., 13, 15.—Id. Ibid., 15, 11.—Bell. Jud., 1, 6.)

Samarobrīva, a town of Gaul, now Amiens, the capital of the Ambiani. Its name appears to mean "the city on the banks of the river Amanius;" and since the termination brīvus in Celtic is thought to have had, among its other meanings, that of "city" or "place." (Vid. Mesembria.) Some, less correctly, make it signify "the bridge" or "passage of the Sa- mara," as, for example, Lemaire, in his Geographical Index to Caesar. (Amm. Marcell., 15, 27.—Cas., B. G., 5, 24; 45, 51.)

Sāme, the only town in the island of Cephalenia no- toed by Homer, and marked by various inscriptions, the only one which we may infer that it was the most ancient and considerable. (Od., 2, 249.) It was maintained by Apollodorus, that the poet used the word Samo to designate the island, and Same the town. It is certain, however, that in another passage (Od., 14, 122), the latter name is applied to the island. (Strabo, 453.) When Cephalenia submitted to the Romans, Same, with other towns, gave hostages; but having afterward revolted, it sustained a vigorous siege for four months; and after the length of the citadel Cyasis being taken, the inhabitants retired into their larger fortress; but surrendered the following day, when they were all reduced to slavery. (Liv., 38, 28, seqq.) Strabo re- ports that some vestiges of this town remained in his day on the eastern side of the island. (Strabo, 455.) This spot retains the name of Same, which is also that of the bay at the extremity of which it is situated. It ex- hibits still very extensive walls and excavations among its ruins, which have afforded various specimens of an- cient ornaments, medallions, vases, and fragments of statues. (Holland’s Travels, vol. 1, p. 55.—Dodwell, vol. 1, p. 75.—Cramer’s Anc. Greece, vol. 2, p. 52.)

Samnites, a people of Italy, whose territory was bounded on the north by the Pefigni and Ferentum; to the west it bordered on the extremity of Latium and on Campania, being separated from the latter province by the Volturnus river; and, on the south by the river Mount Tifata. To the south a prolongation of the same ridge divided the Samnites from the Picentini and Lucani. To the east they were contiguous to Apulia, from the river Tiferuns to the source of the Anpudus. It is usual with geographers to regard the ancient Samnites as divided into three tribes, the Car- accini, Pentri, and Hirpini; to which others have added the Caudini and Ferentini; but the former classification is by no means unobjectionable. Whatever dif- ference of opinion may prevail among the writers of antiquity respecting the origin of other Italian tribes, they seems agreed in ascribing that of the Samnite na- tion to the Sabines. (Consult remarks under the arti- cle Sabini.) The Samnites, like the Romans, were an
ambitious and rising nation, rendered confident by their
successes over the Tuscans and the Oscans of Cam-
pania; and formidable not only from their own re-
sources, but also from the ties of consanguinity which
connected them with the Frentani, Vestini, Feligni, and
other hardy tribes of Central Italy. The rich and fer-
tile terroir of Samnium was the last and the greatest
object of the contest which ensued, but in reality they
fought for the dominion of Italy, and consequently that
of the world; which was at stake so long as the issue of
the war was doubtful. Livy seems to have formed a just
idea of the importance of that struggle, and the fierce
obstinacy with which it was carried on, when he pauses
in the midst of his narrative, in order to point out the
unwearied constancy with which the Samnites, though
so often overmatched, never failed to maintain the
empire, at least for freedom and independence (10, 32).
But when that historian recounts an endless succession
of reverses sustained by this nation, attended with
losses which must have quickly drained a far greater
population, it is impossible to avoid suspecting him
of considerable exaggeration and repetition; especi-
ally as several campaigns are mentioned without a single
distinct fact or topographical mark to give reality and
an object to the narration, which is always careful to point
out the danger which not unfrequently threatened Rome on
the part of these formidable adversaries. It is true that he relates
with great beauty and force of description that
which befell the Roman arms at the defiles of Caudium;
but has he been equally explicit in laying before
his readers the consequences of that event, which not
only opened the victorious Samnites the gates of
several Valcanian cities, but exposed a great portion
of Latium to be ravaged by their troopers, and
brought them nearly to the gates of Rome? (Livy, 9, 12—
Compare Strabo, 232, 249.) In fact, though often at-
tacked in their own territory, we as often find the
Samnite legions opposed to their inverteate foes in
Apulia, in the territories of the Volsci and Hernici,
and even in those of the Umbrians and Etruscans.
(Livy, 10.) Admirably trained and disciplined, they
executed the orders of their commanders with the
greatest alacrity and promptitude; and such was the
warlike spirit of the whole population, that they not
unfrequently brought into the field 80,000 foot
and 8000 horse. (Strabo, 259.) A victory over such a foe
might well deserve the honours of a triumph; and
when the Romans had at length, by repeated successes,
established their superiority, they could then justly lay
claim to the title of the first troops in the world. But
though the Samnites were often overmatched and
finally crushed by the superior conduct and power
of the Romans, it is evident that the spirit of inde-
pendence still breathed strong in their hearts,
and waited but for an opportunity to display itself.
Thus, when Pyrrhus raised his standard in the plains of
Apulia, the Samnite bands swelled his ranks, and
seemed rather to strengthen the forces of that prince
than to derive assistance from his army. Nor did they
neglect the occasion which presented itself, on the
appearance of Hannibal in the centre of Italy,
and the Roman yoke, but voluntarily offered to join him in
the field against the common enemy. (Livy, 23, 42.)
Rome had already triumphed over Carthage, Macedon,
and Antiochus, and was regarded as mistress of the
world, when a greater danger than any she had before
encountered threatened her dominion in Italy, and
shook the very seat of her power. This was the break-

ging in of the Samnites, a fact the most con-
vincing proof that the Samnite people were not yet
conquered, in that bloody contest, which in the space
of a few years, is said to have occasioned the loss of
300,000 lives. (Vell. Patert., 2, 15.) This people
formed the chief strength and nerve of the coalition;
such was their determined enmity against the Romans,
SAMOS.

Polycrates. After the death of this ruler, the government was held for some time by Meandrius, his secretary; but he was expelled by the troops of Darius, who placed on the throne Sylosus, the brother of Polycrates, on account of the moves he had rendered him in Egypt, when as yet he was but a private person. (Herod., 3, 140.) Strabo reports, that the yoke of this new tyrant pressed more heavily on the Samians than that of Polycrates, and that, in consequence, the island became nearly deserted; whence arose the proverb, "Έχαι Συλώνων των ευρύχωρων." (Strab., 638.

—Compare Hesiod., Pont., p. 211.) From Herodotus, however, we learn, that the Samians took an active part on the side of the Persians against the Greek confederacy, and the fleet assembled at Lade; but, by the intrigue of Εαςες, son of Sylosus, who had been deposited by Aristogoras, and consequently favoured the Persian arms, the greater part of their squadron deserted the confederacy in the battle that ensued, and thus contributed greatly to the defeat of the allies. (Herod., 6, 8, seqq.) On learning the result of the battle, many of the Samians determined to quit the island rather than submit to the Persian yoke, or that of a tyrant imposed by them. They accordingly embarked on board their ships, and sailed for Sicily, where they first occupied Calacte, and soon after, with the assistance of Anaxilas, tyrant of Rhegium, the important town and harbour of Zancle. Εαςες was replaced on the throne of Samos, and, out of consideration for his services, the town and its temples were spared. After their occupation of Calacte, the Persians, and the deputation from the Greek fleet stationed at Delos, to urge them to liberate Ionia, they being at that time governed by a tyrant named Theomestor, appointed by the Persian king. (Herod., 9, 90.) In consequence of this invitation, Leotychidas, the Spartan command-er, advanced with his fleet to the coast of Ionia, and gained the important victory of Mycale. The Samians of Samos, however, had independently joined together with the other Ionian states, the Grecian confederacy, and with them passed under the protection, or, rather, the dominion of Athens. The latter power, however, having attempted to change the constitution of the island to a democracy, had nearly been expelled by the oligarchical party, aided by Pissuthnes, satrap of Sardis. Being overpower'd, however, finally by the overwhelming force brought against them by the Athenians, the Samians, at the instance of their western neighbours, promised to collect a fleet, and immediately set sail to Pergamus in order to destroy their fortified places, and make them desolate, and pay the expense of the war by instalments. This occurred a few years before the breaking out of the Peloponnesian war. (Thucyd., 1, 115, seqq.) After this we hear little of Samos till the end of the Sicilian expedition, when the maritime war was transferred to the Ionian coast and islands. At this time Samos became the great point d'appui of the Athenian fleet, which was stationed there for the defence of the colonies and subject states; and there is little doubt that the power of Athens was alone preserved at this time by means of that island. We learn from Polybius (5, 35, 11), that, after the death of Alexander, Samos became for a time subject to the kings of Egypt. Subsequently it fell into the hands of Antiochus, and, on his defeat, into those of the Roman. The Ionian revolt of territores and formation of cities under the Emperor Vespasian, A.C. 70.—The temple and worship of Juno contributed not a little to the fame and influence of Samos. Pausanias asserts that this edifice was of very great antiquity: this, he says, was apparent from the statue of the goddess, which was of wood, and the work of Smilis, an artist contemporary with Daedalus. (Pausan., 7, 4.—Callim., Epigr., ap. Theop. Philostr, p. 74, Eclog. Alex., Protr., p. 30.) In Strabo's time, this temple was adorned with a profusion of the finest works of art, especially paintings, both in the nave of the building and the several chapels adjoining. The outside was equally decorated with beautiful statues by the most celebrated sculptors. Besides this great temple, Herodotus describes two other works of the Samians which were most worthy of admiration: one was a tunnel carried through a mountain for the length of seven stadia, for the purpose of conveying water to the city from a distant fountain. Another was a mole, made to add security to the harbour; its depth was twenty fathoms, and its length more than two stadia. (Herod., 3, 60.) The circuit of this celebrated island, which retains its ancient name, is 600 stadia, according to Strabo. Agathemerus reckons 630. Pliny, however, 57. An offspring of the city is seen in the following passage (Plin., 5, 31). It yielded almost every kind of produce, with the exception of wine, in such abundance, that a proverbial expression, used by Menander, was applied to it, φέρει καὶ ὄρη ἡμέρα. (Strab., 637.)—The city of Samos was situation exactly opposite the Troglodye Promontory and Mount Mycale. The port was secure and convenient for ships, and the town, for the most part, stood in a plain, rising gradually from the sea towards a hill situated at some distance from it. The citadel, built by Polycrates, was called Astypalae. (Steph. Byz., s. v. Αστυπάλαια. —Cramer's Asia Minor, vol. 1, p. 402, seqq.) Dr. Clarke has the following remarks concerning this island: "As we sailed to the northward of the island of Patmos, we were surprised to see Samos so distinctly in view. It is hardly possible that the relative situation of Samos and of the other Samian islands can be more strikingly represented than in D'Anville's, or any more recent chart; for, keeping up to windward, we found ourselves to be so close under Samos, that we had a clear view both of the island and of the town. This island, the most conspicuous object, not only of the Ionian Sea, but of all the Εἰγένη, is less visited, and, of course, less known than any other; it is one of the largest and most considerable of those islands lying in the vicinity of the mainland, that it has been affirmed persons upon the opposite coasts may hear each other speak. Its surprising elevation and relative position with regard to the lower islands of Φουρνί and Νικαία makes it a landmark all over the Archipelago. According to Constantine Porphyrogenitus, any very lofty place was called Samos. The name of Καταβωρί was anciently given to that terrible rock which forms the cape and precipice upon the shores of the Εἰγένη, and was celebrated by Horace in the following couplet: "O filia Samos, impia mea: suavis est occasus, nec suavis est occasus."

SAMOSA (Τὰ Σαμοσατα, but in Ammianus Marcellinus, 14, 8, Samosata, -α), a city of Syria, the capital of the province of Commagene, and the residence of a petty dynasty. (Amm. Marcell., 18, 4.) It was not only a strong city itself, but had also a strong citadel, and in its neighbourhood was one of the ordinary passages of the Ephrates, on the western bank of which river Samosata was situated. Samosata was the birthplace of Lucian. The modern name is Somaissah or Seesmapat. (Abulfeda, Tab. Syr., p. 244.—Mannert, Geogr., vol. 6, pt. 1, p. 491.)

SAMOTHRACE, an island in the Εἰγένη, off the coast of Thrace. According to Pliny (4, 12), it lay opposite to the mouth of the Hebrus, and was twenty-eight miles from the coast of Thrace, and sixty-three miles from Thasos. This account is supported by the fact that, from Thasos to it, there is conveniently a circuit of thirty-two miles in circuit. Though insignificant in itself, considerable celebrity attaches to it from the mysteries of Cybele and her Corybantes, which are said by some to have originated there, and to have been disseminated thence over Asia Minor and different parts of Greece.—It was said that Dardanus, the son of Jupiter and Electra, who was the inventor of the art of engraving, had long dwelt at Samothrace before he passed over into Asia; and it is affirmed, that he first introduced into his new kingdom the mysteries practised in the island from which he had migrated (Strabo, 331), 1189.
SAN
and which, by some writers, was from that circumstance named Dardania. (Calisth., op. Plin., 4, 12.) Samothrace was also famous for the worship of the Thracian myth of Sancioniath, and the latter may be connected. (Vid. Cabiri.)—Various are the names which this island is said to have borne at different periods. It was called Dardania, as we have already seen; also Electris, Melite, Lencosia (Strabo, 472.—Schol. in Apoll. Rhod., 1, 917), and was said to have been named Samothrace (Thracian Samos) by a colonist from the Ionian Samos, though Strabo conceives this assertion to have been an invention of the Samians. He deduces the name either from the word Σάμος, which implies an elevated spot, or from the Saït, a Thracian people, who at an early period were in possession of the island. (Strabo, 457.) Homer, in his frequent allusion to it, sometimes calls it simply Samos (Il., 24, 78.—Il., 24, 753); at other times the Thracian Samos. (Il., 13, 12.) The Samothracians joined the Persian fleet in the expedition of Xerxes; and one of their vessels distinguished itself in the battle of Salamis. (Herod., 8, 90.) Perseus, after the battle of Pydna, took refuge on Samothrace, and was there seized by the Romans when preparing to escape from Demetrium, a small harbour near one of the promontories of the island. On this occasion, Livy asserts that the chief magistrate of Samothrace was dignified with the title of king (45, 6). Stephanus Byzantinus informs us there was a town of the same name in this island. The island was reduced, in the reign of Vespasian, along with the other isles of the Aegean, to the form of a province. It is now Samothraki. (Cramer's Anc. Greece, vol. 1, p. 335.)

SAN, a town of Macedonia, on the Sinus Singiticius, and situated on a neck of land connecting Atos with the continent. On the opposite side was Acanthus, and between the two places was cut the canal of Xerxes. (Vid. Acanthus.)

SANCIONIATHON, a Phoenician author, who, if the fragments of his works that have reached us be genuine, and if such a person ever existed, must be regarded as the most ancient writer of whom we have any knowledge after Moses. His father's name was Thabion, and he himself was chief hierophant of the Phoenicians. According to some, he was a native of Berytus, but Athenaeus (3, 37) and Suidas make him a Tyrian. As to the period when he flourished; all is uncertain. Some accounts carry him back to the era of Sanchoniathon; others assign him to the period of the Trojan war. St. Martin, however, appears to prove that he was a contemporary of Gideon, the judge of Israel, and flourished during the fourteenth century before the Christian era. (Biographie Univ., vol. 40, p. 305, seqq.) The titles of the three principal works of this writer are as follows: 1. Περὶ τῆς Ἑρμοῦ φυσιολογίας ("Of the Physical System of Hermes"). 2. Ἀγαθετικὴ Θεολογία ("Egyptian Theology"). 3. Πολλαπλασία Θεολογίας ("Theology of the Phoenicians").—All these works were written in Phoenician, and the preceding are their titles in Greek. The history was translated into the Greek language by Herennius Philo, a native of Byblus, who lived in the second century of our era. It is from this translation that we obtain all the fragments of Sancioniathon that have reached our times. Philo had a translation of the above of which Porphyry made use in his diatribe against the Christians. It is from the fourth book of this last work that Eusebius took, for an end directly opposite to this, the passages that have come down to us. (Prop. Eigen., 1, p. 31.) And thus we have these documents relative to the mythology and history of the Phoenicians from the fourth hand. St. Martin and others are inclined to the opinion that the three works mentioned above as having been written by Sancioniathon, were only so many parts of one main production. According to Porphyry, the Phoenician history of Sancioniathon was divided into eight books, while we learn, or at least have been assured, that Eusebius, that the version of Philo consisted of nine. Hence it has been supposed that the Greek translator had united two works, and that thus the treatise on the physical system of Hermes, or that on Egyptian theology, became a kind of introduction to the Phoenician History, and increased the number of books in the latter by one. And it has been farther supposed that the two titles of "Egyptian Theology" and "Physical System of Hermes" belonged both to one and the same work. (Compare Bochart, Geogr. Sacr., 2, 17.)—The long interval of time between Sancioniathon and his translator renders it extremely probable that the latter must often have erred in rendering into Greek the ideas of his Phoenician original; and we may suppose, too, that occasionally Philo may have been tempted to substitute some of his own. And yet, at the same time, the fragments of Sancioniathon contain so many things evidently of Oriental origin, that it is extremely difficult to believe they were forged by Philo. A difference of opinion, however, ever has existed, and will continue to exist on this head. Grotius and other writers highly extol the fragments in question, on account of the agreement which they discover between them and the books of the Old Testament. Cunningham and Melnet; on the other hand, only see in them an attempt to prop up the religious system of the Phoenicians and Egyptians, and discover in them merely a principle but that of the Porch concealed under Phoenician names. (Cumberland, Sancioniathon's Phoenician Hist., Lond., 1720, 8vo.—Meinehe Hist. Doctrinae de Vero Deo, vol. 1, p. 63.—Schöll, Hist. Lit. Grec., vol. 4, p. 115.)—In 1836 a work appeared in Germany with the following title: "Sancioniathos Urgeschichte der Phönizier in einem Auszuge aus der wieder aufgefundene Handschrift von Philo vollständiger Uebersetzungen." Nebst Berednungen. Berlin. Wagenfeld. Mit einem Vorwort von Dr. G. F. Grotefeld, Hannover, 1836'" (Sancioniathon's early History of the Phoenicians, condensed from the lately-found manuscript of Philo's complete translation of that work. With annotations by Fr. Wagenfeld, and a preface by Dr. G. F. Grotefeld). This was followed, in 1837, by another work, purporting to be the Greek version of Philo itself, with a Latin translation by Wagenfeld: "Sancioniathos paene omittens uraeor historiam, sive, Grœce versus Philoœ Byblæœ, editis, Latince versione donavit F. Wagenfeld, Bremæ, 1837."—The whole is a mere forgery, very clumsily executed; and the imposture has been very ably exposed in the 37th and 39th numbers of the Foreign Quarterly Review.

SANCUS, a deity of the Sabines, according to some, identical with Hercules. The name is said to have signified the 'Sancus' or 'Sando.' (Caprot.) The name is equally supposed to derive from Sancus, a god of Rome; or, according to another etymology, from Sancus, a Sabine name, and the same as the Sabine deity Samnus; or, according to yet another etymology, from Scantii, a Sabine (Cic. Tusc., 3, 20; De Leg., 1, 97 ed. Schol., 250 ed. Ratcher.) Sancus at first view would seem to have some connexion in form with the Sandacaces of Cilicia and the Sando of Lydia. Another name for this deity was Semo, which recalls the Sem or Som of Egypt. (Creuzer's Symbolik, par Guigniaut, vol. 3, p. 493.)

SANđALÔTIS, a name given to Sardinia from its resemblance to a sandal. (Vid. Ichnusa.)

SANDROCOTTUS, the son of Decius, of whose existence we have no certain information, who, having on one occasion been guilty of insolent conduct towards Alexander, was ordered by that monarch to be seized and put to death. He escaped, however, by a rapid flight, and at length dropped down completely exhausted. As he slept on the ground, a lion of immense size came up to him, licked the perpiration from his face, and, having awakened him, fawned upon and then left him. The singular tameness of the animal appeared preternatural to Sandrocottus, and was con-
strued by him into an omen of future success. Having collected, therefore, a band of robbers, and having roused the people of India to a change of affairs, he finally attained to sovereign power, and made himself master of a part of the country which had been previously the scene of his bands of Selaus, and that, while waging war, and before coming to the throne, a wild elephant of very large size approached him on one occasion, and with the greatest docility suffered him to mount on its back, and used after this to bear him into the fight. (Justin, 15, 4.) The Sandrocottus of the Greeks is thought to be the same as the Chandragupta of the Hindu writers. And Chandragupta (i. e., "saved the moon") is regarded by many as having been the first or true monarch of the Hindu monarch Visharadha. (De Martvis, Hist. de l'Inde, vol. 3, p. 255.—Id. ib., vol. 1, p. 420.)

Sangārēs, a river of Asia Minor, rising near a place called Sangia (Σαγγίαν), in Mount Adorea, a branch of Mount Diudymus, in Galatia, and falling into the Euxine on the coast of Bithynia. Its source was 150 stadia from Pessinoë. According to Strabo (540), it formed the boundary between the provinces of Attica and the Attic coast, and his account coincides in this with that of the earlier writers. (Sclaz., p. 34.—Apol. Rhod., 2, 724.) The Bithynian kings, however, gradually extended their dominions farther to the east, and the Romans gave the country a still farther enlargement on this side. This river is called Saugarīs by Constantine Porphyrogenitus (1, 5), and Sagaris by Ovid (ep. e. Pont., 4, 10). The modern name is the Sakaria. (Mannert's Geogr., vol. 6, p. 3, p. 607.)

Sannvirion, an Athenian comic poet, contemporary with Aristophanes. Little is known of him. One of his plays, entitled Sāvānā (Δανάη), in which he burlesqued a verse of the Orestes of Euripides (Schol. ad Aristoph., Ran, p. 142.—Schol. ad Eurip., Orest., 279), appears to have been acted about 407 B.C. (Clinton, Fast. Hellen., p. 91.—Bentley's Phalaris, vol. 1, p. 261, ed. Dyce.)

Sántones, a people of Gallia Aquitanica, north of the mouth of the Garumna, on the coast. Their capital was Mediolanum Santonum, now Saintes. (Plin., 4, 19.—Cass., B. G., 1, 10.—Id. ibid., 3, 11.)

Sápis, a river of Cisalpine Gaul, rising in Umbria, and falling into the Adriatic below Ravenna. It is now called the Moro. It was also called Salus. (Plin., 3, 15.—Sil. Ital., 8, 449.—Hist. Rom., 2, 405.)

Sápor, I, a king of Persia, who succeeded his father, Artaxerxes, about the 238th year of the Christian era. Naturally fierce and ambitious, Sápor wished to increase his paternal dominions by conquest; and, as the indolence of the emperors of Rome seemed favourable to his views, he laid waste the provinces of Mesopotamia, Syria, and Cilicia; and he might have continued the true eastern boundary of Bithynia, and his progress. If Gordian attempted to repel him, his efforts were weak, and Philip, who succeeded him on the imperial throne, bought the peace of Sápor with money. Valerian, who was afterward invested with the purple, marched against the Persian monarch, but was defeated and taken prisoner. Odenatus no sooner heard that the Roman emperor was a captive in the hands of Sápor, than he attempted to release him by force of arms. The forces of Persia were so vast, that, while the armies were engaged at Gaugamela, the Persian king fell into the hands of the conqueror, and Odenatus penetrated, with little opposition, into the very heart of the kingdom. Sápor, soon after this defeat, was assassinated by his subjects, A.D. 273; after a reign of 32 years. He was succeeded by his son, named Hormizd.—If the second of that name, succeeded his father Hormizdas on the throne of Persia. He was as great as his ancestor of the same name, and by under-

taking a war against the Romans, he attempted to enlarge his dominions, and to add the provinces on the west of the Euphrates to his empire. Julian marched against him, but fell by a mortal wound. Jovian, who succeeded Julian, made peace with Sápor; but the Persian monarch, always treacherous and indefatigable, renewed his hostile designs, invaded Armenia, and defeated the Emperor Valens. Sápor died A.D. 380, after a reign of 70 years, in which he had often been the sport of fortune. He was succeeded by Artaæxeres, and Artaæxeres by Sápor III, a prince who died after a reign of five years, A.D. 389, in the age of Theodosius the Great.

Sápho, I, a celebrated poetess, a native of Mytilene in the island of Lesbos, and nearly contemporaneous with the other celebrated lyric poetess, Sappho. She was among the greatest of the poetesses, and the largest poetess, of the period. Her poetry was not only admired, but imitated by the last of the poetesses, Sappho, and arrayed with the highest admiration. It is certain that Sápho, in her odes, made frequent mention of a youth, to whom she gave her whole heart, while he required her passion with cold indifference. But there is no trace whatever of her having named the object of her passion, or sought to win his favour by her beautiful verses. The pretended name of this youth, Phaon, although frequent, has not been found to have occurred in the poetry of Sápho. If Phaon had been named in her verses, the opinion could not have arisen that it was the courtess Sápho, and not the poetess, who was in love with Phaon. (Athenaeus, 13, p. 596, e.) Moreover, the marvellous stories of the beauty of Phaon have manifestly been borrowed from the myth of Adonis. (Muller, Hist. Grec. Later., p. 174.) According to the oxymoron account, Sappho, according to the story of Orpheiades, looked from the Leucadian rock, in the hope of finding a cure for the pangs of unrequited love. But even this is rather a poetical image than a real event in the life of Sappho. The Leucadian leap was a religious rite, belonging to the expiratory festivals of Apollo, which were celebrated in this as in other parts of Greece. Atspecified times, criminals, selected as expiatory victims, were thrown from the high overhanging rock into the sea: they were, however, sometimes caught at the bottom, and, 1191
SAPPHO.

they were sent away from Lycadus. (Concerning the connexion of this custom with the worship of Apollo, see Müller’s Dorians, b. 1, ch. 11, § 10.) The interest of Alcaeus in various aspects of the time to the description of lovers. Steichorus, in his poetical novel named Calycæ, spoke of the love of a virtuous maiden for a youth who despised her passion; and, in despair, she threw herself from the Lycadian rock. The effect of the leap in the story of Sappho (namely, the curing her of her intolerable passion) must, therefore, have been unknown to Steichorus. Some years later, Anacreon says in an ode, "Again casting myself from the Lycadian rock, I plunged into the gray sea, drunk with love" (ap. Hephasst., p. 130). The poet can scarcely, by these words, be supposed to say that he cured himself of a vehement passion, but rather means to describe the delicious intoxication of violent love. The story of Sappho’s leap probably originated in some poetical images and relations of this kind; a similar story is told of Venus in regard to her lament for Adonis. (Pind., Hephast., ap. Phôt., cod. 191.—ed. Bekk., vol. 1, p. 153.) Nevertheless, it is not unlikely that the leap from the Lycadian rock may really have been made, in ancient times, by desperate and frantic persons. Another proof of the fictitious character of the story is, that it leaves the principal point in uncertainty, namely, whether Sappho survived the leap or perished in it. (Müller, Hist. Gr. Lit., p. 175.) It appears that Sappho became united in marriage to an individual named Cerelas, and the fruit of this union was a daughter, named Cleis (Kléiç), who is mentioned by the poetess in one of her fragments. Having lost her husband, Sappho turned her attention to literary pursuits, and inspired many of the Lesbian females with a taste for similar occupations. She composed lyric pieces, of which she left nine books, elegies, hymns, &c. The admiration which these productions excited was universal; her contemporaries carried it to the highest pitch of enthusiasm, and said that the Greeks were attached to her, because the Lesbian placed her image on their coins, as that of a divinity.—Sappho had assembled around her a number of young females, natives of Lesbos, whom she instructed in music and poetry. They revered her as their benefactress, and her attachment to them was of the most affectionate description. This intimacy was made a pretext by the licentious spirit of later ages for the most dishonourable calumnies. An example may be cited from Plutarch’s Life of Sappho (Epist. 1822, p. 28) has been thought to countenance this charge, but its meaning has been grossly misunderstood; and, what is still more to the purpose, it would appear that the illustrious poetess has been ignorantly confounded with a dissolute female of the same name, a native of Lesbos, though not of Mytilene. (Vid. Sappho II.) Indeed, as the Abbé Barthelemy has remarked, the accounts that have reached us respecting the licentious character of the Lesbian women, must be considered subsequent to the age in which she lived. Sappho, the favoured of the Muses, was, as we have just endeavoured to show, never enamoured of Phaon, nor did she ever make the leap of Lycadus. Indeed, the severity with which Sappho censured her brother Charaxus for his love for the courtisan Rhoepis, obliges us to form some judgment of the principles by which she guided her own conduct. For although, at the time of this ode, the love of young women had been quenched within her breast, yet she never could have reproached her brother with his love for a courtisan, if she had herself been a courtisan in her youth; and Charaxus might have retaliated upon her with additional force. Besides, we may plainly discern the feeling of unimpressed honour due to a bornwell and well-educated maiden, in the verses which refer to the relation of Alceus and Sappho. Alceus testifies that the attractions and loveliness of Sappho did not derogate from her moral worth, when he calls her "violet-crowned, pure, sweetly-smiling Sappho." (Alceus, fragm., 38, ed. Blüm.)—Sappho’s reputation for virtue probably contributed to the appointment of love; they had, on the contrary, a political origin, and terminated in exile. It is probable that, being drawn into a conspiracy against Pittacus, tyrant of Mytilene, by the persuasions of Alceus, she was banished from Lesbos along with that poet and his partisans. (Marm., Osson., ep. 37.) She retired, as we have already remarked, to Sicily.—We know nothing farther of the life of Sappho. Her productions, which gained for her so exalted a reputation, are almost equally unknown. All that has reached us consists of 1. A beautiful Ode to Venus, in the Sapphic measure, preserved by Dionysius of Halicarnassus.—2. A second ode, in the same measure, still more beautiful, descriptive of the tumultuous emotions of love, and preserved in part by Longinus.—3. Various fragments, all unfortunately very short, found in Aristotle, Plutarch, Athenæus, Stobæus, Hephæstion, Macrobius, Eustathius, and others.—4. Three epigrams.—Sappho also composed hymns to the gods, in which she invoked them to come from their favourite abodes in different countries; but there is little information respecting their contents.—The poems of Sappho are little susceptible of division into distinct classes. Hence the ancient critics divided them into books, merely according to the metre, the first containing the odes in the Sapphic measure, for the poetess enriched the melody of the language by lyricism. It is the most harmonious character, called after her own name; a measure which Catullus and Horace afterward introduced with so much success into the Latin tongue.—The best text of Sappho is that given by Blomfield, in the Museum Criticum (vol. 1, p. 3, segg.). The best and fullest edition, however, is that of Neue, Berol., 1827, 4to. (Scholl, Hist. Lit. Gr., vol. 1, p. 205.—Müller, Hist. Lit. Gr., p. 179.—Barnes, Vit. Anacre., p. 292.)—Sappho was a native of Lesbos. A native of Eresus, in the island of Lesbos, for a long time confounded with Sappho of Mytilene. The distinction between the two has only been recently drawn, and the memory of the celebrated poetess has at last been freed from the dishonourable imputations which had been so long attached to it. An ancient medal, brought from Greece in 1822, presents, along with the name ΣΑΠΘΟ (Sappho), a female head, with a representation of the Roman bath, in the Lesbian city of Eresus, where the medal was struck. (Convers. De Hautcoche, Notice sur la courisante Sappho d’Eresus, Paris, 1822.) This settles the question as to there having been two Sapphos, both natives of the same island. The period when this second Sappho flourished is far from being easy to determine. That she was a female of some celebrity appears evident from the inhabitants of Eresus having stamped that small piece of coin with the name Sappho. But there is nothing but a few words, scattered here and there in ancient authors, relative to this namesake of the Mytilenean Sappho. The first of these authors is the historian Nymphius, cited by Athenæus (13., p. 596, c.), who speaks of Sappho, a courtisan of Eresus, as having been enamoured of Phaon (Και ἡ ἐς Ἐρεών τίς ἡ ἔταιρα Σαπφοῦ, τοῦ καλοῦ Φάοον ἐρωτεύετο, περιήγορόν ἐγώ, ἢς ἐν Νιφώ Ερέων ὑπενδύοντο τό στέφανον Αὐρατιός Ἀρνάτου Ἁλεστροχείν. Var. Hist., 12, 19), who remarks, “I learn, too, that there was also another Sappho in the island of Lesbos, a courtisan, not a poetess” (Πυθαγόμων δὲ, ἢ τι καὶ ἔταιρα ἐν τῷ Λέσβῳ ἑγένετο Σαπφοῦ ἐταιρά, ὃν τοῦτο ζητοῦσαν. This third authority is Suidas, who distinguishes between Sappho the poetess, and Sappho who was enamoured of Phaon. And who led away from Leucate; only by some negligence or other, he makes the poetess a native of Eresus, and the other of Mytilene. The fact of the existence of two Sapphos ...
SAR

being thus proved by the testimony of three authors, it remains to examine which of the two was the one that loved Phao, and leaned in despair from the promontory of Lanceat. Herodotus, the oldest author that makes mention of Sappho, only knew the native of Mytilene. He is silent respecting her love for Phao, and, considering the discursive nature of his books, would have mentioned it had the circumstance been true. Hence a piece of whose on the loves of poets is quoted by Athenaeus (13, p. 598, seqq.), speaks of Sappho's attachment for Anacreon, but is silent respecting Phao, when, in fact, her fatal passion for the latter, and particularly its sad catastrophe, suited so well the spirit of his piece, that he could not have avoided mentioning them had they been true. In an epigram, which has been included with the poems of Phoebus, in which is detailed a kind of history of the leaps of Sappho, it is said:—

"And mention is made in this account of the fate of Sappho, although many instances are cited of those who had made the hazardous experiment. All these negative authorities would seem to more than counterbalance the testimony of Ovid, who, in one of his Heroïdes, confounds the female who was enamoured of Phao with the lyric poetess.—According to Strabo (452), Menander made Sappho to have been the first that ever took her leap. (Menandri, Relig., ed. Mainke, p. 105.) Now Menander lived in the fourth century before our era, and the existence of the Sappho, therefore, who threw herself from the rock of Leucate, may be traced up as far at least as three centuries prior to the Christian era. It does not, however, go back as far as the fifth century, since Herodotus, who flourished at that period, makes no mention of the tragic end of the Mytilenean poetess: the natural inference, therefore, is, that Sappho of Mytilene did not leap from the promontory of Leucate, and that Sappho of Eresus, who did, was not born when Herodotus wrote his history.—Visconti has the merit of having been the first modern writer who suspected that the episode of Phaeon and the catastrophe at Leucate belonged rather to the second than the first Sappho. (Usogr. Greca, vol. 1, p. 91, seqq.) His suspicions would not have been substantiated certainly if he had have foreseen the discovery of the ancient medal, brought to light after his decease, and which so fully establishes the existence of a second Sappho, a native of Eresus. (Biogr. Univ., vol. 40, p. 398.—Compare the remarks of Welcker, Sappho von einem harrschenden vorurtheil befreit, Gött., 1816, 8vo.)

Saraceni, or, more correctly, Arraceni, a name first belonging to a people in Arabia Felix, and derived most probably from that of the town Arra. The application of the name Saraceni to all the Arabsians, and thence to all Mohammedans, is of comparatively recent origin. Ammianus Marcellinus employs the term in question as having been used by others before him. (Ammianus Marcell., 14, 4; 22, 15; 23, 6; 24, 2.)

Sardanapalus, the last king of Assyria, infamous for his love and the voluptuousness of his armies. The rebels were defeated in three successive battles; but at last Sardanapalus was beaten and besieged in the city of Ninus for two years. When all appeared lost, he burned himself in his palace, with his eunuchs, concubines, and all his treasures, and the empire of Assyria was divided among the conquerors. This event happened B.C. 820, according to Eusebius, the Jews, and the Persians, with less probability, place it 80 years earlier. (Herod., 2, 150.—Cic., Tusc., 5, 35.)

Sardi, the inhabitants of Sardinia. (Vid. Sardinia.)

Sardes, Vid. Sardes.

Sardica of Sardica, and also Ulpia Sardica, a city belonging originally to Thrace, but subsequently included with the Latins and Romans. It rises, dethroned, and as the capital of the province. It was situated in a fertile plain, through which flowed the river Cesius. The Emperor Maximiian was born in its vicinity, and it is known in the annals of the Church from a council having been held within its walls. Attila destroyed the city, but it was rebuilt, and the name changed by the Bulgarians to Triadiitza, under which appellation it still exists. (Bibl., 9, 22, Nicetas, 5.)

Sardinia, the island that lies in the Mediterrenian Sea south of Corsica and west of Italy. The oldest Greek form for the name was Σαρδώ, undeclined, but of the feminine gender, which the Latins converted into Sardina. Herodotus writes ἴς Σαρδώ; Scylax and Semoninus give no inflections of the word; and Diodorus, in most instances, follows the original usage. (Herod., 1, 170.—Id., 5, 106.—Scylax, p. 2.—Semon., ch. v, 204.—Diod., 4, 29, 82, etc.) At a later period the form began to gradually declined, and hence we have Σαρδόνια in Polybius, though he gives Σαρδόνιος (from which others have the genitive Σαρδόνιος) as the form of the nominative. Strabo writes Σαρδόνη, gen. Σαρδόνιος. The inhabitants were called Sardi (Σαρδιοὶ) and Sardoni (Σαρδονίοι); the Romans named them Sardi, rarely Sardinienses. Scylax gives the distance between Sardinia and the mainland as one and a half days' sail, or 750 stadia; this, however, is too small, and Artemidorus is more correct when he makes it 1200 stadia. (Scylax, p. 2.—Strabo, 222.)

In this island, we can learn from Strabo, and also from modern travellers. The area of Sardinia is given at the present day at 9200 miles, and the number of the inhabitants is estimated at about 4,000,000. The Greeks compared the shape of this island to that of a human foot, and hence the appellations and name of the island that was sometimes given to it (Τριαντομέαν—Τριανταφυτία.) Others, from its resemblance to the lower part of the sandal, term it Sandaliotis. (Vid. Ichnusa, and compare the remark of Pliny, 3, 7, "Sardinium Timaen in Sardalium appellavit ab efficii solea, Myrrhis Ichnusam a similitudine vestigii.")

Sardinia may be called a mountainous island, a chain of mountains running from north to south, though nearer to the eastern than the western coast. From the northern part of this chain another rises, which proceeds from east to west, and which separates the island, as it were, into two parts, from the present Capo Comino to Capo Malargin. This cross range is called by Ptolemy Malaqveva phon (Inani Monte,—"The Mad Mountains"). The mountains of Sardinia exercise a very considerable influence in the character of its coast, in the temperature, and on the production of the island. The numerous sides ranges, running down to the very coast, form spacious bays, and, on the southern and western shores, safe harbours. On the east side of the island, however, the cliffs are high and steep, and scarcely afford anywhere a safe anchoring place; while gusts of wind frequently blow with very sudden and great fury.
from the interior of the mountain ranges, and do great damage to vessels along these shores. Hence probably the appellation of Sardonia (Strabo, 2, 3, 35), for the island is too, in the opinion of Claudian (Bell. Gildon, v. 512), "Insana in sanitatis montes.") Along the whole range, therefore, of the eastern coast, although so conveniently situated for intercourse with Italy, the ancients had but one harbour, Olbia, and that far to the north; and in modern days, too, no place of any importance is found along this part of Sardinia. The mountain atmosphere was healthy, but the rugged nature of the ranges and the wild nature of the inhabitants forbade any attempts at cultivation. In the western and southern parts, on the other hand, the soil was fertile and well cultivated, but the climate very unhealthy. Thus Mela (2, 7), "ut secunda ita pene pestilens insula." The noxious effects of the climate were still more sensibly felt by strangers than by natives. Hence, whenever the Romans wished to designate a particularly unhealthy region, they named Sardonia; and so greatly did they dread the effects of its climate, that they never ventured to keep a standing force in it for any length of time. (Cic. ep. ad Quint., fratrem, 2, 3.—Strabo, 225.) The principal causes of this unhealthiness were the pools of stagnant water in the hollows of the island, and the want of northerly winds. These winds were kept off, as Pausanias believed (10, 17), by the mountains of Corsica and even of Italy. The Insani Montes also contributed their share in producing this. (Herodot., Bell. Gildon., v. 512, seqq.) The fertility of the island is attested by all the ancient writers; neither was it infested by any snakes, nor by any beasts of prey. Rome obtained her supplies of grain not only from Sicily, but also from Sardonia; large quantities of salt, too, as in modern times, were manufactured on the western and southern coasts. The ancient writers speak of mines, and Solinus (c. 11) of silver ones; the names of various places in the island indicate a mining country, as Metalia, Insula Plumbaria, &c.; and Ptolemy mentions mention of several mineral springs and baths. Two products of the island, however, deserve particular notice. One of these is its wool. Numerous herds of cattle were reared in the island, as might be expected among a people who paid little attention to, and derived little subsistence from, agriculture. (Diad., 5, 15.) It must be remarked, however, that the animals chiefly killed for food were of a long-legged kind, bred between a shaggy and shaggy goat and a wild ass. (Phin., 8, 49.—Pausan., 10, 17.) They were covered with a long and coarse hair, and their skins served for the common clothing of the mountaineers, whom Livy hence styles Pelliti. In winter they wore the hair inward. (Aelian, H. A., 16, 34.) In war they had small bucklers covered with these skins. They were named from this attire Mastrocti; and the Mastrocti Latrunculi were often taken in large numbers by the Romans. The other remarkable product of Sardonia is a species of wild parsley (apiastrum), called by Solinus herba Sardonia. It grew very abundantly around springs and wet places. Whoever ate of it died, apparently laughing; in other words, the nerves became contracted, and the lips of the sufferer assumed the appearance of an involuntary and painful laugh. Hence the expression Sardonicus risus. (Pausan., 10, 17; 13, 20, 11.) It is remarkable, however, that the phrase μεταχειρίσθη Ἡλείονium occurs also in Homer (Od., 20, 302), and that other explanations besides the one just mentioned are given by Eustathius. —Whence Sardonia received its first inhabitants we are not informed by any ancient writer. They speak, indeed, of settlements made at various times in the island, but the new-comers always found a rude race of inhabitants already in possession. The first that migrated to Sardinae were said to have been the Etrurians and Tyrrhenians, under Phorcys, a son of Neptune; these settled on the eastern coast. (Sert. ad Verg., 1, 8, 16.) At a subsequent period, Sardus, son of Hercules, and other heroes, who came from Sambucus, a colony of the Albanians, under Aneas, wished to found a town on Sardinian shores. The Adepti were received inauspiciously, but they were resolved to fight their way to a settlement. They crossed the strait of Messina, and landed on the island. They were then met with such obstacles that they were forced to return. The gods then commanded them to continue their voyage to the Sardinian coast; and they were landed at a spot on the western side of the island, called by the ancients Volturnum. Returning thither, they were received with expressions of friendship by the Sardinians. The ensuing contest, in which the Samnites were completely defeated, gave the conquerors the right of settling on Sardinia. This account, which is given in various writers, has been the subject of many disputes, and is opposed by princes and writers of Sardinia. It is thought by many that the Etrurians came of their own accord, and that they were not, as has been thought, expelled by a war. (Cic., De nat., 2, 13.) The Sardinians, however, have at all times been remarkable for the admiration they have shown for true and honourable conduct. When the Romans came into the island, they were received with the greatest marks of friendship; and in their state of annual alliance, they sent annually to the Roman senate a present of salt and wine. (Cic., Att. 7, 4, 3.) The inhabitants were divided into two classes, the ruler and the warriors, and the common people. The first of these were called the Insani, or Inisans; the second the Eunani, or Eunani. The former were the governors of the state, and the latter the warriors. The constitution of the state of the Sardinians, however, was similar to that of the Etrurians, with whom they were much allied. (Cic., Att. 7, 4, 3.) They received indeed, as ambassadors, a reception of the highest kind. (Livy, 24, 20, 8.) The Sardinians were distinguished for the handsomeness of their females. (Diod., Sic., 4, 24, &c.—Id., 5, 15.) The fertility of Sardonia soon invited over numerous Grecian settlers; and various petty republics were established, independent of each other. All of these engaged with activity in agriculture and commerce, and all rendered divine honours to Sardus, Aristaeus, and Iolus. The Carthaginians long coveted a footing in Sardina at a very early period, as the situation of the island in a commercial point of view was most important to be neglected. Its fertility, moreover, made it one of their granaries, and they used every means in their power to promote agricultural labours. Sardinia fell into the hands of the Romans 237 B.C., in the interval between the first and second Punic war. Its new masters could only, as the Carthaginians had foreseen, maintain their power for a long period of the shores of the island. The inhabitants of the interior defended themselves successfully for nearly 100 years. Indeed, it may be said that Sardina was never completely subdued by the Roman arms (Strabo, 225), and the predatory movements of the mountaineers still occasioned trouble in the days of the emperors. (Tac., Ann., 2, 85.) In the fifth century it fell into the hands of the Vandals. (Procop., Bell. Vandal., 2, 13.) The Carthaginians, however, who at the present day, exhibit an astonishing degree of barbarism: the peasants are still dressed in leather or skins, and the mountains are still infested by banditti. —The present island of Sardina presents many monuments that recall the successive sway of its several conquerors. The most remarkable, however, of these, are the very ancient structures called Nurage or Nuraghes, which have exercised the sagacity of various travellers. The number of these remains is enormous; and those which are entire are 50 feet high, with a diameter of 90 feet at the base, and terminating at the summit in a cone. They are built on little hills, in a plain, of different sorts of stone, and, in some cases, are surrounded by a wall. The blocks of stone are of large size, and put together without cement. Some nuraghes are flanked by cones, to the number of from three to seven, which are grouped around the principal cone; they form a kind of casemates. The encompassing
Sar is the residence of Achaean, the governor, under the Syriac kings, of the whole Asiatic peninsula. (Polyb., 577.) It was taken, after a long siege, by Antiochus (Polyb., 7, 15.—Id., 8, 25), and again laid waste. At a subsequent period we find Sardis in the hands of the Romans, who, in accordance, probably, with a general rule: pursued by them in Asia Minor, dismantled the citadel; at least, neither Strabo nor any writer after him makes mention of the castle of Sardis. The city sank, after this, into a place of inferior importance, and its principal trade was transferred to Smyrna and Ephesus. The Romans, however, made it the seat of a consular juris- dic- tion for the Lydian part of Asia, and it still remained considerable. (Strabo, 625—πολεος μεγάλος.) In the reign of the Emperor Tiberius, Sardis, along with eleven other of the principal cities of Lower Asia, was destroyed by an earthquake. The calamity, according to Tacitus (2, 47), happened in the night, and was, for that reason, the more disastrous. Hills are said to have sunk, and valleys to have risen to mountains. The emperor made liberal grants to the ruined cities; and Sardis was indebted for its restoration to his munificence. Its inhabitants were exempted from all taxes for five years; and received a supply of one hundred thousand great asteirites.—Sardis is remarkable in the annals of Christianity as having been one of the seven churches of Asia. The Turks made themselves masters of Sardis in the eleventh century, but soon lost it to the Franks. However, it again fell into their hands, together with its citadel. Timur subsequently took both, and by him the place was probably destroyed for the last time. A miserable village called Sart is now found on the site of this once famous city. For an account of the present condition of the place, and of the antiquities in its neighbourhood, consult Arnaldell’s Seven Churches of Asia, p. 176, seqq. —Minor, History of the Seven Churches of Asia, p. 350, seqq. —Leake’s Tour, p. 265, 342.

Sardis, a son of Hercules, who led a colony to Sardinia, and gave it his name. (Vid. Sardinia.)

Sarrepta or Zarephath, now Sarafend, a city on the shore of the Mediterranean, between Tyre and Sidon. It was the scene of one of the miracles of Elia. (1 Kings, 17, 9.)

Sarma’tia, an extensive country, bounded, according to Strabo, to the west by the river Vistula, and extending from the Sinus Codanus or Baltic Sea, to the Tanais or Don. Potomos, on the other hand, makes it reach from the Vistula to the Rha or Wolga, and to be separated by the river Tanais into two great divisions: 1. Sarmatia Europaea, the boundaries of which tract of country were, the Vistula on the west, Mount Carpathus and the river Tyas or Dniester on the south, the Palus Moeis on the east, and the Sinus Codanios on the north. It corresponded to what is now part of Russia, Poland, Lithuania, Prussia, Little Tartary, &c.—2. Sarmatia Asiatica. This country reached from the Tanais to the mouth of the Rha, and from the northernmost point of Caucasus to unknown regions in the north. It corresponded, therefore, to Astrachan, Orenburg, &c. —Polybius had finished from his map of Europe the account of Sarmatia; but we have nothing else but the general boundaries of the Tana and Vistula as Sarma'tiaths. On the contrary, he expressly calls the Alani, whom he places between the Borysthenes and Tanais, a Scythian race.—The greater part of the Sarmatic nations, in the strictest sense of this name, were confounded together under the name of Hamazobiti, a term which alludes to their living, like the Scythians, in yurt-like huts (Marte-Brunt, Hist. de la Geogr., vol. 1, p. 126, seqq.)

Sarno, a river of Campania, now the Sarno, falling into the sea about a mile from Pompeii. Accord
ing to Strabo, it formed the harbour of that town, which was also common to the inland cities of Nola, Acerrae, and Nuceria. The same writer adds, that it was navigable for the space of eighteen miles; a circumstance which will scarcely be found applicable to the present stream; whence we should be led to conclude that a considerable change has taken place in its course. (Strabo, 247.) The Pelagii, who occupied this coast at an early period, are said to have derived the name of their city from this river. (Cramer's Anc. Italy, vol. 2, p. 180.)

SARON, a king of Trozene, unusually fond of hunting. He was drowned in the sea while pursuing a stag which had taken to water, and divine honours were paid him after death. According to one account, he gave name to the Sinus Saronicus. Saron built a temple to Diana at Trozene, and instituted festivals in honour of her, called himself Saronus. (Pausan., 2, 30.—Mela, 2, 3.)

SARONIC Sinus, now the Gulf of Enginia, a bay of the Egean Sea, lying to the southwest of Attica, and northeast of Argolis, and commencing between the promontories of Sunium and Scyllum. Some suppose that this part of the sea received its name from Saron, who was drowned there, or from a small river which discharged itself on the coast. Pliny, however, makes the name to have come from the forests of oak which at one time covered the shores of this bay. In ancient times, in early Greek, it was signified "an oak." (Pliny, 4, 9.—Compare Schol. ad Callim., H. i. in Jov., 52.)

SAREPÒON, I. a son of Jupiter by Europa, the daughter of Agenor. He was driven from Crete by his brother Minos (vid. Rhadamantus), and thereupon retired to Lycia, where he aided Cilix against the people of that country, and obtained the sovereignty of a part of it. Jupiter is said to have bestowed upon him a life of tranquillity. (Herod., 3, 173.)—II. A son of Jupiter and Laodamia the daughter of Bellerophon. He was king of Lycia, and leader with Glauccus of the Lycian auxiliaries of Priam. The character of Sarpedon is represented as the most faultless and amiable in the Iliad. He was by birth superior to all the chiefs of either side, and his valour was not unworthy of his descent. The account of his conflict with Patroclus; the concern of Jupiter at his perilous situation; the mention of this god whether he should avert the hostile decrees of fate; and the subsequent description of his death, are among the most striking of all the episodes of the Iliad. (Hom., ii., 16, 419, seqq.)—III. A promontory of the same name in Cilicia, beyond which Antiochus was not permitted to sail by a treaty of peace which he had made with the Romans. (Liv., 39, 35.—Mela, 1, 13.)

SARRA, the earlier Latin name for the city of Tyre. The Oriental form was Tar or Sar, for which the Carthaginians said Teor or Sar, and the Romans received the term from those, converted it into Sarras, whence they also formed the adjective Sarranum, equivalent to "Tyrian." (Virg., Georg., 2, 506.— Scaliger, ad Paul. Diac., s. v. Sarra.) Servius erroneously deduces the appellation from Sar, which, according to him, is the Phoenician name for the murex, or shellfish that yielded the purple. (Serv. ad Virg., l. c.) The Greek name Téos proceeds probably from an Aramaic pronunciation, Tór. (Geniunx, Hebr. Lex., vol. 2, p. 672, ed. Leo.)

SARRASTES, a people of Campania on the Sarnus. (Virg., Ab., 7, 739.—Vid. remarks under the article Sarnus, at the end.)

SARSNA, a city of Umbria, in the northern part of the country and on the left bank of the Saps, towards its source. It still retains its name. This city was the birthplace of Plautus, the comic writer, a circumstance to which he alludes in his Mostellaria (3, 2). Sarina must have been once a place of note, as it gave its name to a numerous Umbrian tribe. (Polyb., 2, 24.) From ancient inscriptions we may collect that it was a municipal town. (Cramer's Anc. Italy, vol. 1, p. 237.)

SATCELLA, a town of Samnium, the site of which has not been precisely determined. It seems, however, evident from Livy (23, 14), that we must seek for it among the mountains south of the Vulturinus and on the borders of Campania. It is supposed to correspond to the ancient Agrata dei Gotti. (Cramer's Anc. Italy, vol. 2, p. 237.)

SATURNIA, a town in the Tarentine territory, frequently alluded to by the ancient writers. It was famed for the fertility of the surrounding country and for its breed of horses. (Horat., Sat., 1, 6, 59.)

SATURNIA, a festival in honour of Saturn, and the most remarkable one in the whole Roman year. It was celebrated in December, and at first lasted but one day (the 19th); it was then extended to three, and subsequently, by order of Caligula and Claudius, to seven. (Macrobi., Sat., 1, 10.) The utmost liberty prevailed during its continuance: all was mirth and festivity; friends made presents to each other; schools were closed; the senate did not sit; no war was proclaimed; no criminal executed; slaves were permitted to jest with their masters, and were even waited on at table by them. This last circumstance probably was founded on the original equality of master and slave in early Greek society: in early Rome, usually a captive taken in the war or an insolvent debtor, and, consequently, originally the equal of his master. (Dion. Hal., 4, 24.—Niebuhr, Hist. Rom., vol. 1, p. 319.) According to some, the Saturnalia were emblematic of the freedom enjoyed in the golden age, when Saturn ruled over Italy. (Keightley's Mythology, p. 524.)

SATURIA, I. a name given to Italy, because Saturn was said to have reigned there during the golden age. (Virg., G., 2, 178.)—II. A name given to Juno, as being the daughter of Saturn. III. An ancient city of Etruria, whose ruins may be seen near the source of the Albina, and which is mentioned by Dionysius of Halicarnassus (1, 21) as formerly occupied by the Pelasgi. According to Pliny (3, 5), its more ancient name was Aurinia. Aurinia received a colony from Rome, A.U.C. 569. (Liv., 99, 55.)

SATURIA, a son of Tiberius, whom Augustus, a tribune of the commonwealth, in A.U.C. 654, B.C. 100, united with Marius against the patricians, excited a sedition at Rome, intimidated the senate, caused several popular laws to be passed, and exercised a sort of usurped and tyrannical power for the space of three years. At length breaking out into open rebellion, and seizing, with his adherents, upon the Capitol, he was besieged there by Marius, who was now compelled, as consul, to act against him. Saturnius and his adherents eventually surrendered themselves to Marius, upon his promising to save their lives; but the people fell upon and destroyed them. (Plut., Vit. Mar.—Flor., 3, 16.)—II. P. Sempronius, a general of Valerian, proclaimed emperor in Egypt by his troops after he had rendered himself celebrated by his victories over the barbarians. His integrity, his complaisance and affability, had gained him the affection of the people; but his fondness for ancient discipline provoked his implacable enemy, who famously murdered him in the 43rd year of his age, A.D. 262.—III. Sextus Julian, a Gaul, intimate with Aurelian. The emperor esteemed him greatly, not only for his private virtues, but for his abilities as a general, and for the victories which he had obtained in different parts of the empire. He was saluted emperor at Alexandria, and compelled by the clamorous army to accept of the purple, which he had rejected with disdain and horror. Probus, who was then emperor, marched his forces against him, and besieged him in Alpamea, where he destroyed himself.
when unable to make head against his powerful adver-
sary.—IV. Pompeius, a writer in the reign of Trajan. He was greatly esteemed by Pliny the younger, who speaks of him with great warmth and approbation as an historian, a poet, and an orator. Pliny always con-
sulted the opinions of Saturninus before he published his compositions. (Plin. Epist., 1, 8.—Id., 1, 16.)

Saturnus (called by the Greeks Κρόνος), a son of Ourus or Uranus, and Terra, or the goddes of the earth. Terra bore to Uranus a mighty progeny, the Titans, six males and six females. The youngest of the former was Saturn. These children were hated by their father, who, as soon as they were born, thrust them out of his sight into a cavern of Earth. (Völker, Mythol., p. 337, on the, or, and, or, 1, 3.) Earth, grieved at this unnatural conduct, produced "the substance of hoary steel," and, forming from it a sickle, roused her children, the Titans, to rebellion against their father; but fear seized on them all except Saturn, who, lying in wait with the sickle with which his mother had armed him, mutilated his unsuspect-
ing father. The drops which fell on the earth from his own blood were born, the Graces, the Giants, and the Melian nymphs. (Hex. Theog., 29.) After this, Saturn obtained his father's kingdom, with the consent of his brethren, provided he did not bring up any male children. Pursuant to this agreement, Saturn always devoured his sons as soon as born, be-
cause, as some observe, he dreaded from them a retaliation of his unkindness to his father, till his wife Rhea, unwilling to see her children perish, concealed from him the child of Jupiter, who was called Pluto, and, instead of the children, she gave him large stones, which he immediately swallowed, without per-
ceiving the deceit. The other Titans having been in-
forned that Saturn had concealed his male children, made war against him, dethroned and imprisoned him with Rhea; and Jupiter, who was secretly educated in Crete, was no sooner grown up, than he flew to de-
 deliver his father, and to place him on his throne. Sat-
urn, unmindful of his son's kindness, conspired against him; but Jupiter banished him from his throne, and the father fled for safety into Italy, where the country re-
tained the name of Latium, as being the place of his concealement (from lateo, "to lie concealed"). James, who was then King of Italy, received Saturn with marks of attention. He made him his partner on the throne; and the King of Heaven employed himself in civilized the barbarous manners of the people of Italy, and introduced among them all the liberal arts. His reign there was so mild and popular, so beneficent and virtuous, that mankind have called it the golden age, to intimate the happiness and tranquili-
ity which the earth then enjoyed. Saturn was father of Chiron, the centaur, by Philyra, whom he previously changed into a mare, to avoid the observation of Rhea. —Hesiod, in his didactic poem, says that Saturn ruled over the Isle of the Blessed, at the end of the earth, by the "deep-eddying ocean" (Op. et D., 167, seq.) ; and Pindar gives a luxuriant description of this blissful abode, where the departed heroes of Greece dwelt beneath the mild rule of Saturn and his assessor Rhadamanthus. (Ol., 2, 123, seq.) At a later time, it was fabled that Saturn lay asleep, guarded by Priuereus, in a desert island near Britannia, in the Western Ocean. (Plut., de Defect. Orac., 18.—Id., de Olim. Orac., 12.) To the island is ascribed the own construction of the temple of Jupiter Capitolinus. (Compare Terz. ad Lyocoph., 1204.) Saturn was in after times confounded with the grim deity Moloch, to whom the Tyrians and Carthaginians off-
ered their children in sacrifice. The slight analogy of this practice with the legend of Saturn's devouring his children, may have sufficed for the Greeks to infer an identity of their ancient deity with the object of Phoenician worship. It was not improbable the cir-
cumstance of both gods being armed with a sickle,
sin-nymphs, were the offspring of the five daughters of the union of Hecatous with the daughter of Phoroneus (ap. Strab., 471). The Laconian term for a Satyr was Tityrus (Schol. ad Theocr., 7, 72), which also signified the buck-goat, or the ram that led the flock. (Schol. ad Theocr., 3, 2.) Æschylus calls a Satyr a buck-goat (τριώγος.—Pfragn., ap. Plut., de Cæp., 2.)—The Satyrs were associated with Bacchus, and they formed the chorus of the species of dramas which derived its name from Bacchus. It has been supposed that they were indebted for their deification to the festivals of this deity, and that they were originally merely the rusticus who formed the chorus, and danced at them in their goatskin dresses. (Welcker, Nachtr. zur Tril., p. 211, seqq.—Keightley’s Mythology, p. 233, seq.)

Sáromatés, a people called Sarmata by the Latins. (Vid. Sarmata.)

Sávus, a river of Pannonia, rising in the Alpes Carnicæ, and flowing into the Danube at Singidunum. It forms near its mouth the southeastern boundary of Pannonia, and is now the Sava or Saaone. (Plin., 3, 18.—Appian, Ill., 22.) The Danube, after its junction with the Savus, took the name of Ister. (Vid. Danubius.)

Sáxonés, a people of Germany, whose original seats appear to have been on the neck of the Cimbric Chersonese, from the mouth of the Elbe to the Sinus Colanus and the river Chalusus (or Tharace), corresponding to the modern Elbe and Ister, and for the first time in history about the beginning of the fourth century, as the chief tribe among the Ingavones. In the eighth century we find them in possession of a large part of Germany. A portion of the northernmost Saxons, in the fifth century, in connexion with the Angli, conquered England. —For some remarks on the etymology of the name of Saxones, vid. the article Scythe.

Scála (scil. Porta.—Σκάλα, scil. πόρτα), one of the gates of Troy. It derived its name from σκαλέω, 'left,' as it was on the left side of the city, facing the sea and the Greek camp. (Vid. Troya.)

Scávit, 861 A.D., the name of the most celebrated branch of the house of the Mucii, and said to have been derived from that of individual of the line who acted with so much heroic firmness in the presence of Porena. (Vid. Porrenna.) The most distinguished of the name were the following: I. Caius Mucius Scævola. (Vid. Porrenna.)—II. Quintus Mucius Scævola, was prætor in 216 B.C. The next year he received Sardinia as a province. He died 209 B.C., while holding the office of Decemvir sacris faciundis,—III. Publius Mucius Scævola, eldest son of the preceding, was quaestor 183 B.C., tribune of the commons 183 B.C., prætor urbānus 179 B.C., and finally consul with M. Æmilius Lepidus, 175 B.C. In conjunction with his colleague, he carried on the war successfully in Cisalpine Gaul, especially against the Ligurians, and obtained the honours of a three days’ thanksgiving and a triumph. This last circumstance is confirmed by the Capitoline fragments, and also by some consulat medals. IV. Mucius Scævola, the younger son of the preceding, was quaestor 185 B.C., prætor urbānus 179 B.C., and finally consul with M. Æmilius Lepidus, 175 B.C.

Scaevola, was tribune of the commons, and accused the praetor L. Tubulus of bribery on a certain trial where he had presided. Tubulus anticipated his sentence by going into exile. As aedile (133 B.C.) Scævola restored the temple of Hercules, which had fallen in ruins to the ground. In 131 B.C. he was prætor urbānus; and soon after consul. He obtained Italy for his province.—V. Publius Mucius Scævola, son of the preceding, was at first tribune of the commons, then praetor, and at last pontifex maximus. He was particularly conspicuous as an opponent of the Gracchi. Having obtained the province of Asia, he distinguished himself so much in that government by his probity and justice, that the Asiatæs celebrated a festival in his honour.—VI. Quintus Mucius Scævola, more commonly called by the Roman jurists Quamus Mucius, enjoyed an illustrious reputation as a lawyer. He collected together the opinions of previous lawyers, and he also gave a better order to the civil code. Mucius is the earliest jurist mentioned in the Pandects. He was Cicero’s legal instructor.—VII. Cervidius Scævola, one of the most eminent jurists of later times. He is ranked by Modestinus after Paulus and Alpranus. (Arnold, de Vitis Scalaburum, ed. Arnaun Ultraj., 1676.)

Scænalia, a city of Lusitania, north of the Tagus, called by Ptolemy Scalabicusa. It formed the third Conventus Juridicus of the province, and its jurisdiction probably took in all the country that lay to the north of the river. As a Roman colony it took the name of Præsidium Julium. It answers to the modern Santarem, a corruption for St. Irene. (Plin., 4, 22.—Itin, Ant., p. 430.)

Scaldus, a river of Gallia Belgica Secunda, rising in the territory of the Atrebates, and falling into the Moselle, where it is now the Schelde. (Cass., B. C., 6, 37.—Plin., 4, 13.)

Scamander, a river near Troy, rising in Mount Ida, and, after receiving the Sinois, falling into the Hellespont near the promontory of Sigeanum. According to Homer, it was called Xanthus by the gods and Scamander by men. The name Xanthus would seem to refer to the colour of its waters (ζανθός, “yellow”).

The modern name of the Scamander is the river of Beharburg. (Vid. Troya.—Crane’s Asia Minor, vol. 1, p. 97.)

Scandinavia, a name given by the ancients to that tract of territory which contains the modern Norway, Sweden, Denmark, Lapland, Finland, &c. The ancients had a very imperfect knowledge of Scandinavia, believing it to be totally encompassed by the sea, or even composed of many islands. The manner in which these islands, of the name of Scandins, are represented on an chart prepared from Ptolemy, has no relation to the real state of the country. The southern extremity, however, and of which the Danish isles of Iceland, Fæmne, &c., make a part, recall, in the name of Skåny or Scone, the memory of its ancient denomination. Tacitus, without naming Scandinavia, speaks of this country as being environed by the ocean, which forms spacious gulfs, embracing islands of great extent; he ascribes it to Suevia, and places two nations therein. What he reports of the Sueves, in having a marine, appears remarkable when we recollect that the ancient laws concerning navigation had their origin in Wishy, in the isle of Gotland. (Germ., 44, seqq.)

The country to which Tacitus conducts us retains the name of Sueconia in the writers of the middle ages, speaking precisely of Sweden. The other nation, the Stiones, whose sovereignty was in the hands of a woman, may have been Norway. According to earlier historians, which was known was occupied by the Hillewiones, a numerous nation. (D’Anville, vol. 1, p. 123, seqq.)

Scaphytæ, Scaphytae, Scaphytae, were a tribe, which latter is the more correct form, a place on the coast of Thrace, over against the island of Thasos. It was celebrated for its gold-mines, which, according to Herodotus, belonged to the Thracians, and produced annually eighty talents. In these mines Timarchus, the historian had some property, as he informs us (4, 104). The author of his life states that he resided there after

1198
his banishment, and employed himself in arranging the materials for his history. (Marcellin, Vit. Thucyd., p. 40, 4, 5.)

Sciurus or Scordurus, a ridge of lofty mountains, forming the natural boundary of Illyria on the side of Macedonia. It was connected on the north with the great chain extending from the head of the Adriatic to the Euxine, and so well known in ancient times under the names of Orbulus, Rhodope, and Haemus; while to the south its prolongation assumed the appellation of Pindus. The Turks and Servians call the range of Scears, I Char Dagh. (Cramer's Anc. Gr., vol. 1, p. 79, seq.)

Scærus, I. M. Æmilius, a Roman consul, who distinguished himself by his eloquence at the bar, and by his successes in Spain in the capacity of commander. He was sent against Jugurtha, and was, some time after, accused of suffering himself to be bribed by the Numidian prince. According to Sallust, this nobleman tarnished the lustre of his splendid talents by avance and other degrading passions; while Cicero, on the contrary, speaks of him in the highest terms in various parts of his writings. Sallust's known dislike to the nobility may account, in some degree, for this discrepancy. Scærus wrote a work in three books, recording the principal occurrences and transactions of his own life, which Cicero commends, and considers equal to Xenophon's Life of Cyrus. Scærus conquered, and in his triumphs be built the Milvian bridge at Rome. He began to pave the road which, from him, was called the æmilian. His son, of the same name, made himself known by the large theatre he built during his aedileship. This theatre, which could contain 30,000 spectators, was supported by 360 columns of marble, 38 feet in height, and adorned with 3000 brazen statues. This celebrated edifice, according to Pliny, proved more fatal to Roman citizens than the proscriptions and wars of Sylla had done to the inhabitants of the city. (Cic. Brut. 29 — Val. Max., 4, 4. — Plin., 34, 7, 36, 2.) — II. A Roman of consular dignity. When the Cimbri invaded Italy, the son of Scærus behaved with great courage, upon which the father sternly ordered him never to appear again in the field of battle. The severity of the father's reproach induced the son to destroy himself. Pliny places Rome near the Colline gate, where the vestal Minucia was buried alive when convicted of unchastity, and where a similar punishment was afterward customed to be inflicted on other similarly offending females. (Liv., 8, 14.) — III. One of the gates of Rome was called Scælerata, because the 300 Fabii who were killed at the river Cremera had passed through it when they went to attack the enemy. It was before named Carmentala. There was also a street at Rome which received the name of the Scæleratus Vicus, because there Tullia had ordered her chariot to drive over the body of her father, Servius Tullius. (Liv., 1, 48. — Ovid, lib. 16, 365.)

Scæna or Scena, a river of Hibernia, now the Shannon. (Oris., 1, 2.)

Scenæ, I. a city of Mesopotamia, on the borders of the country of the Torchi. 749, 2. — II. Mandra, a city of the Middle East, the seat of a bishopric, between Aphrodisopolis and Babylon. (Itin. Ant., p. 163, 169.) — III. Veteranorum, a village in Lower Egypt, on the east side of the Nile, between Heliopolis and Vicus Judaeorum. (Itin. Ant., p. 169.)

Sceniztæ, I. a nomadic tribe in Arabia Felix. (Plin., 5, 11, 24.) — II. A nomadic tribe in Ethiopia (Plin., 6, 26); according to Strabo, in Mesopotamia. They were, according to Theopompus, the sailors of the river Cabren, near the highest part of Ida. It was founded by the Milesians; though Demetrius, a native of the place, assigns its origin to the son of Hector, and Ascanius the son of Æneas. The city was a strong one, and possessed a strong citadel; and, at a later period, was the seat of a particular dynasty of Dardian origin, which acknowledged, however, the power of its old pre-ee

Antigonus, at a later period, transferred its inhabitants to his new city of Alexandria; they returned, however, under Lysimachus, and founded another city, to the north of the older Scæpsis, which latter place from thenceforth took the name of Palæa Scæpsis. The old city was afterward again inhabited; the new one, however, so increased, that in time it came to be known to the modern Esquiaschi. (Strabo, 607, Plin., 5, 30.) — Strabo relates that the library of Aristotle, left by him to Theophrastus, fell, together with that of the latter, into the hands of Neles, a scholar of the Theophrastus. Neles left his books to his descendants, illiterate persons, who kept them locked up and neglected; and, when Attalus of Pergamus was seeking to enlarge his library, they hid them under ground, where they were much injured by the damp and by worms. They were at last sold for a large sum to Apollonius of Teos. (Strabo, 609.) The whole subject is discussed by Brandis in the Rheinisches Museum (No. 1, p. 236, seq.)

Scheida, a considerable village of Egypt, on the western side of the Canopic arm of the Nile, and the place where duties were levied on exports and imports. (Strabo, 800.) According to Reichard, its site is now occupied by the village of Schieria, an ancient name of Corycia. (Pausan., 2, 5 — Plin., 4, 12.)

Scithos, an island off the coast of Thessaly, about four miles to the east of the Magnesian promontory. It is nearly fifteen miles in circuit. (Plin., 4, 12.) The island once possessed a town of some size, which was destroyed by Philip, the son of Demetrius, to prevent its being used as a refuge against the depredations of the Romans than the proscriptions and wars of Sylla had done to the inhabitants of the city. (Cic. Brut. 29 — Val. Max., 4, 4. — Plin., 34, 7, 36, 2.) — II. A Roman of consular dignity. When the Cimbri invaded Italy, the son of Scærus behaved with great courage, upon which the father sternly ordered him never to appear again in the field of battle. The severity of the father's reproach induced the son to destroy himself. Pliny places Rome near the Colline gate, where the vestal Minucia was buried alive when convicted of unchastity, and where a similar punishment was afterward customed to be inflicted on other similarly offending females. (Liv., 8, 14.) — II. One of the gates of Rome was called Scælerata, because the 300 Fabii who were killed at the river Cremera had passed through it when they went to attack the enemy. It was before named Carmentala. There was also a street at Rome which received the name of the Scæleratus Vicus, because there Tullia had ordered her chariot to drive over the body of her father, Servius Tullius. (Liv., 1, 48. — Ovid, lib. 16, 365.)

Scena or Scena, a river of Hibernia, now the Shannon. (Oris., 1, 2.)

Scenæ, I. a city of Mesopotamia, on the borders of the country of the Torchi. 749, 2. — II. Mandra, a city of the Middle East, the seat of a bishopric, between Aphrodisopolis and Babylon. (Itin. Ant., p. 163, 169.) — III. Veteranorum, a village in Lower Egypt, on the east side of the Nile, between Heliopolis and Vicus Judaeorum. (Itin. Ant., p. 169.)

Sceniztæ, I. a nomadic tribe in Arabia Felix. (Plin., 5, 11, 24.) — II. A nomadic tribe in Ethiopia (Plin., 6, 26); according to Strabo, in Mesopotamia. They were, according to Theopompus, the sailors of the river Cabren, near the highest part of Ida. It was founded by the Milesians; though Demetrius, a native of the place, assigns its origin to the son of Hector, and Ascanius the son of Æneas. The city was a strong one, and possessed a strong citadel; and, at a later period, was the seat of a particular dynasty of Dardian origin, which acknowledged, however, the power of its old pre-
SCIPIO.

Scipio, a celebrated family at Rome, whose name is identified with some of the most splendid triumphs of Roman arms. They took their name from Cornelius, who possessed a considerable estate at the Roman Capitol. The house of Cornelius was situated near the Capitol, and was said to have derived its family appellation from the Latin term scipio, "a staff," because one of their number, Cornelius, had guided his blind father, and been to him as a staff; or, as Macrobius expresses it, "Non alter dicit Scipiones; nisi quod Cornelius, qui cognominem patrem luminibus carentem pro baculo regeret, Scipio cognominavit."—(Suet., Vit. Cn., 2, 1.)—The most eminent of the name were, I. P. Cornelius Scipio, who served, B.C. 393, under the dictator Camillus, and distinguished himself at the taking of Veii. In 392 B.C. he was chosen military tribune with consular power, and, in conjunction with his colleague Cossus, ravaged the territory of the Faliscus, and compelled them to sue for peace.—II. P. Cornelius Scipio, son of the preceding, was curule aedile 363 B.C.—III. P. Cornelius Scipio, son of the preceding, was master of the horse to the dictator Camillus, 346 B.C.—IV. P. Cornelius Scipio, son of the preceding, was dictator 305 B.C.; having been appointed such, not so much with a view to any war-like operations, as for the purpose of holding the consular comitia, the two consuls being absent in the field.—V. L. Cornelius Scipio, son of the preceding, was chosen interrex on the refusal of the dictator Manlius to hold the election for consuls under the Licinian law. He presided over the election of the commons by procuring the election of C. Marcus Rutilius, a plebeian, to the consulship. He obtained the consulsiphip himself 348 B.C., but, being prevented by severe illness from conducting the war against the Gauls, he transferred the command to his plebeian colleague, M. Popilius Lænus.—VI. L. Cornelius Scipio Barbatus, grandson of the preceding, was consul 293 B.C. He fought a bloody but indecisive battle with the Carthaginians; the latter were the enemy, however, having abandoned their camp in the night-season, the consul laid waste the adjacent country with fire and sword. He also reduced Samnium and Lucania. His tomb was discovered in 1780, containing an epitaph in very early Latin, commemorating the events of his life and his many virtues. (Dunlop's Rom. Lit., vol. I, p. 52, seq.)—VII. Cn. Cornelius Scipio Asina, so called from his having brought in by the back of the house of Asina a large piece of ground for money for a piece of ground which he had purchased, or, according to another account, his daughter's marriage-portion, in order to display it before the eyes of suitors. He was the son of the preceding. In 260 B.C. he superintended, with Duilius the consul, the building of the first Roman fleet, and subsequently sailed with 17 ships, in advance of the main fleet, to Messana in Sicily. He was taken, however, by a Carthaginian squadron, and carried to Africa. Having been at length released from confinement in Carthage, he returned home and obtained the consulsiphip; and he now avenged his former disgrace by taking many places in Sicily, and particularly Panormus. He conquered also great part of Sardinia and Corsica. He was father to Publius and Cneus Scipio. Publius, in the beginning of the second Punic war, was sent with an army to Spain to oppose Hannibal; but, when he reached Spain, he heard the Carthaginian general had attempted, by his quick marches and secret evolutions, to stop his progress. He was conquered by Hannibal near the Ticinus, where he would have lost his life had not his son, afterward surnamed Africanus, courageously defended him. He again passed into Spain, where he obtained some memorable victories over the Carthaginians and the inhabitants of the country. His brother Cneus shared the supreme command with him, but their great confidence proved their ruin. They separated their armies, and soon after Publius was at
dashed by the two Hasdrubals and Mago, who commanded the Carthaginian armies. The forces of Publius were pursued to within sight of the Carthaginian generals. The Romans were cut to pieces, and their commander was left on the field of battle. No sooner had the enemy obtained this victory, than they immediately marched to meet Cneus Scipio, whom the revolt of 30,000 Celtiberians had weakened and alarmed. The general, who was already apprised of his brother's death, secured an eminence, where he was soon surrounded on all sides. After desperate acts of valour he was left motionless at the slain, or, according to some, he fled into a tower, where he was burned with some of his friends by the victorious ene-
voy. VIII. Publius Cornelius, surnamed Africanus, was son of Publius Scipio, who was killed in Spain. He first distinguished himself at the battle of Ticinus, where he saved his father's life. The battle of Cannæ, which proved so fatal to the Roman arms, did not dishearten the young Scipio; and he no sooner heard that some of his countrymen wished in despair to abandon Italy, than, sword in hand, he obliged them to swear eternal fidelity to Rome, and to promise to put to immediate death the first person who attempted to retire from his country. In his twenty-first year Scipio was made aedile. Not long after this, the Romans heard of the defeat and death of the two Scipios in Spain, and immediately young Scipio was appointed to avenge the death of his father and of his uncle, and to put an end to the viles of Hannibal. He had long been known how able he was to be at the head of an army. The various nations of Spain were conquered, and in four years the Carthaginians were completely driven out. The whole province became tributary to Rome; New Carthage submitted in one day; and in a battle 54,000 of the enemy were left dead on the field. After these signal victories, Scipio was recalled to Rome, which still trembled in continual dread of Hannibal. The conqueror of the Carthaginians in Spain was looked upon as a proper general to encounter Hannibal in Italy; but Scipio opposed the measures which his coun-
ymen wished to pursue, and he declared in the sen-
ate that if Hannibal was to be conquered, he must be conquered in Africa. These bold measures were immediately adopted, though opposed by the age and experience of the great Publius, and Scipio was en-
trusted with the conduct of the business in Africa. With the dignity of consul he embarked for Carthage. Success attended his arms; his conquests were here as rapid as in Spain. The Carthaginian armies were routed, the camp of the crafty Aedruba was set on fire during the night, and his troops totally defeated in a drawn battle. These repeated losses alarmed Car-
thage. Hannibal, who was victorious at the gates of Rome, was instantly recalled to defend the walls of his country, and the two greatest generals of the age met each other in the field. Terms of accommodation were proposed; but in the parley which the two com-
manders had together, nothing satisfactory was offered; and, while the one enlarged on the visions of hu-
man affairs, the other wished to dictate like a con-
quero; and recommended the decision of the contro-
versy to the sword. This celebrated battle was fought near Zama, and both generals displayed military spirit, skill, and knowledge of tactics and in choosing their ground. Their courage and intrepidity were not less conspicuous in charging the enemy. A thousand acts of valour were performed on both sides; and though the Carthaginains fought in their own defence, and the Romans for fame and glory, yet the conqueror of Italy was vanquished. About 20,000 Carthaginians were slain, and the same number made prisoners of. B.C. 202. Only 2000 of the Romans were killed. This battle was decisive: the Carthaginians sued for peace, which Scipio at last granted on the most severe
and humiliating terms. The conqueror after this retraced to Rome, where he was received with the unsounded applause, honoured with a triumph, and dignified with the appellation of Africans. Here he enjoyed for some time the tranquility and the honours which his exploits merited; but in him also, as in other great men, fortune showed herself inconstant. Scipio offended the populace in wishing to distinguish the senators from the rest of the people at the public exhibition. Ennius, in the applause, expressed his approbation for two of his friends, Scipio Nasica and Caius Lælius; he had the mortification to see his application slighted, and the honours which he claimed bestowed on a man of no character, and recommended neither by abilities nor meritorious actions. He retired from Rome no longer to be a spectator of the ingratitude of his countrymen, and in the capacity of lieutenant he accompanied his brother, Asicanus, in the enterprise. In this expedition his arms were attended with his unusual success, and the Asiatic monarch submitted to the conditions which the conquerors dictated. At his return to Rome Africans found the malevolence of his enemies still unabated. Cato, his invertebrate rival, seemed bent on his ruin; and he urged on the Petilii, two tribunes of the commons, to move in the senate that Africans should be cited to give an account of all his actions, as if he had been the cause of the war together with such spoil as was taken in that war. As soon as the Petilii had preferred their charge in the senate, Scipio arose, and, taking a roll of papers out of his bosom, which had been drawn up by his brother, he said, "In this is contained an accurate statement of all you wish to know; in it you will find a particular account both of the money and plunder received from Antiochus." "Read it aloud," was the cry of the tribunes, "and afterward let it be deposited in the treasury." "That I will not do," said Scipio; "nor will I so insult myself;" and, without saying a word more, he tore it in pieces in the presence of all. It is improbable that this tearing of his accounts furnished his enemies with the chief advantage they subsequently had against him. Not long after this, a tribune of the name of Nævius cited Scipio to answer before the people to the same charges as those which the Petilii had brought forward, and to other additional ones of a similar purport. The first day was spent in hearing the different charges. On the second day the tribunes took their seats at a very early hour. The accused soon after arrived, with a numerous train of friends and clients; and, passing through the midst of the assembly to the rostra, ascended without the least emotion, and, with that air of dignity and confidence which can brook no opposition and excite the highest emotion, are able to inspire, addressed the assembly as follows: "On this day, tribunes of the people, and you, Romans, I conquered Hannibal and the Carthaginians. Is it becoming to spend a day like this in wrangling and contention? Let us not then, I beseech you, be ungrateful to the gods, but let us leave this man here, and go to the Capitol, to thank them for the many favours they have vouchsafed to us, and to extinguish the desire of their friends. The tribes and all the assembly followed Scipio; the court was deserted, and the tribunes were left alone in the seat of judgment. Yet, when this memorable day was past and forgotten, Africans was a third time summoned to appear; but he had fled before the impending storm, and retired to his country-house at Litternum. The accusation was therefore stopped, and the accusers silenced, when Gracchi, one of the tribunes, former opponents of Scipio, rose to defend him, and declared in the assembly that it reflected the highest disgrace on the Roman people that the conqueror of Hannibal should become the sport of the populace, and be exposed to the malice and envy of disinterested ambition. Some time after, Scipio died in the place of his retreat, about 181 years before Christ, in the 57th year of his age; and so strong was his sense of the ingratitude of his countrymen, that he directed his remains to be interred at Litternum, not to be conveyed to Rome. (Vid. Liternum.)—Notwithstanding all the displeasure and rancorous feeling that existed among certain individuals at Rome, the day on which the news of Scipio's death was known proved a day of general sorrow: for the very men who refused to listen to him, and for the men of inconstant and usual honours, could not help mingling their tears with those of the people at large. Livy says he saw at Litternum the monument which was erected to him, and the statue which had stood on the top of it lying on the ground, where it had been blown down by a storm (38, 56). Pliny writes, that in his time was to be seen a myrtle of an extraordinary size growing at Litternum, under which what was a cave, wherein, it was said, a dragon watched the soul of that great man. There were also to be seen some olive-trees planted by his own hand. (Plin., 16, 43.) All these inconceivable objects seem to show how much the idea of greatness is attached to every circumstance connected in the most distant manner with illustrious men; and the reason is, that each inspires interest, and, in spite of us, claims some degree of attention.—No character has been celebrated with more than that of Scipio Africans. Besides the many rare gifts of nature that Scipio had above all others, there was in him also, as the old writer of his life words it, "a certain princely grace and majesty. Furthermore, he was marvellous gentle and courteous unto them that came to him, and had an eloquent tongue, and a passing gift to win every man. He was very grave in his gesture and behaviour, and even wore long hair. In fine, he was a truly noble captain, worthy of all commendation, and excelled in all virtues, which did so delight his mind that he was wont to say that he was never less idle than when at leisure, nor less alone when alone. (Cic., Off., i, 1.)—In all Scipio's campaigns, Lælius was his chief assistant, and the man in whom he placed the greatest confidence. But the friendship subsisting between them was not more conspicuous than that which connected afterward the son of the one with the grandson of the other. Whether Lælius cheered the hours of Scipio's retirement is not distinctly marked in history by any writer. The poet Ennius is known to have been held in such esteem by him, that he ordered the statue of his learned friend to be placed on his sepulchre by his own, and the remains of the poet to be deposited in the same tomb. (Plin., 4, 76—78; Ovid, A. M., 4, 376; cf. Tac., Ann., V. 56.) The life of Scipio's confinement, ancient authors state that the conqueror of Spain refused to see a beautiful princess that had fallen into his hands after the taking of New Carthage, and that he not only restored her inviolate to her parents, but also added large presents for the person to whom she was betrothed. (Beverly's Life of Scipio Africans, p. 140; see.)—IX. Lucius Cornelius Scipio, surnamed Africanus, was the brother of his other brother, Scipio, and at Rome, young. He was rewarded with the consulship A. U. C. 562, for his service to the state, and was empowered to attack Antiochus, king of Syria, who had declared war against the Romans. Lucius was accompanied in this campaign by his brother Africanus; and by his own valour and the counsels of the conqueror of Hannibal, he soon routed the enemy. In a battle near the city of Sardes he killed 50,000 foot and 4000 horse after he settled by the submission of Antiochus, and the conqueror, at his return home, obtained a triumph and the surname of Asiaticus. He did not, however, long enjoy his prosperity. Cato, after the death of Africanus, turned his rancour against Asiaticus, and the two Petilii, his devoted adherents, presented a petition to the people, in which
they prayed that an inquiry might be made for the pur-
pose of ascertaining what money had been received
from Antiochus and from his allies. The petition
was instantly received, and Asiaticus, charged with
having suffered himself to be corrupted by Antiochus,
was summoned to appear before the tribunal of Te-
rentius Culeo, who was on this occasion created pra-
tor. The judge, who was an inveterate enemy to the
family of the Scipios, soon found Asiaticus, with his
two lieutenants and haranguer, guilty of having re-
ceived, the first 6000 pounds' weight of gold and 480
pounds' weight of silver, and the others nearly an equal
sum, from the monarch against whom, in the name of
the Roman people, they were enjoined to make war.
They were condemned to pay large fines; but, while
the others gave security, Scipio declared that he had
accounted to the public for all the money which he
had brought from Asia, and therefore that he was
innocent. Notwithstanding this grave protestation,
the officers of justice were ordered to convey him
to prison; but, while they were in the actual discharge
of their duty, Sempronius Graccus, one of the tri-
unes, interfered, and declared, "that he should make
no objection to their raising the money out of his ef-
tects, but that he would never suffer a Roman general
to be dragged to the common prison, wherein the lead-
ers of the enemy, that were taken in battle by him,
and therefore were their prisoners, were kept. When
the statue of Lucius Scipio was seized and valued, it was found in-
adequate to the payment of the sum demanded; and
what redounded to his honour was, that, among all his
affectst, there was not found the trace of the smallest
article that could be considered Asiatic. His friends
and relations, indignant at the treatment he had re-
ceived, came and offered to make compensation for
his loss; but he refused to accept of anything except
what was barely necessary for subsistence. Whatever
was needful, says Livy, for domestic use, was pur-
 chased at the sale of his property by his nearest rela-
tions; and the public hatred now recoiled on all who
were concerned in the prosecution. (Livy, 38, 60.)
Some time after he was appointed to settle the dis-
putes between Eumenes and Seleucus; and, at his re-
turn, the Romans, ashamed of their severity towards
him, rewarded his merit with such uncommon liberal-
ity, as enabled him to conduct five campaigns, in
honour of his victory over Antiochus, for ten succes-
sive days at his own expense. — X. P. Cornelius Scipio
Nasica was son of Cneus Scipio, and cousin to Scipio
Africanus. He was refused the consulship, though
supported by the interest and the fame of the conquest
or of Hannibal; but he afterward obtained it, and in
that honourable office conquered the Boii, and gained
a triumph. He was also successful in an expedition
which he undertook in Spain. When the statue of
Cybele was brought to Rome from Phrygia, the Ro-
man senate delegated one of their body, who was the
most remarkable for the purity of his manners and the
innocence of his life, to go and meet the goddess in
the harbour of Ostia. Nasica was the object of their
choice, and, as such, he was enjoined to bring the statue
of the goddess to Rome with the greatest pomp and solemnity.
Nasica also distinguished himself
by the active part he took in conducting the accu-
sions laid against the two Scipios, Africanus and Asiaticus.
There was also another of the same name,
who distinguished himself by his enmity against the
Gracchi, to whom he was nearly related. (Paterc., 2,
1, &c.— Flor., 2, 15.—Liv., 29, 14, &c.) XI. Pub-
lius Emilianus, son of Paulus Emilius, the conquer-
or of Persia, was adopted by the son of Scipio Af-
ricanus, being already a relation of the Scipio family,
so that he was married to a daughter by the same
surname as his grandfather, and was called
Africanus the Younger on account of his victories
over Carthage. Emilianus first appeared in the Ro-
man armies under his father, and afterward distin-
guished himself as a legaturne tribune in the Spanish
provinces, where he killed a Spaniard of gigantic
stature, and obtained a mural crown at the siege of
Intercitia. He passed into Africa to visit King Mas-
inassa, the ally of Rome, and he was the spectator of
a long and bloody battle which was fought between
that monarch and the Carthaginians. (Vid. Masmis-
sa.) Some time after Emilianus was made aulice,
and had tiscribed through your favour the age
required for that important office. The surname which
he had received from his grandfather he was destined
lawfully to claim as his own. He was empowered
To finish the war with Carthage; and as he was permitted
by the senate to choose his colleague, he took with
him his friend Lælius, whose father of the same name
had formerly enjoyed the confidence and shared the
victories of the first Africanus. The siege of Car-
thage was already begun, but the operations of the
Romans were not continued with vigour. Scipio had
no sooner appeared before the walls of the enemy than
every communication with the land was cut off, and,
that they might not have the command of the sea,
a stupendous mole was thrown across the harbour with
immense labour and expense. This, which might
have disheartened the most active enemy, rendered
the Carthaginians more eager in the cause of freedom
and independence, and, with the utmost vigour,
without distinction of rank, age, or sex, employed them-
selves without cessation to dig another harbour, and to build
and equip another fleet. In a short time, in spite of
the vigilance and activity of Emilianus, the Romans
were astonished to see another harbour formed, and
galley suddenly issued under sail, ready for the
engagement. This unexpected fleet, by immediately
attacking the Roman ships, might have gained the vic-
tory; but the delay of the Carthaginians proved fatal
to their cause, and the enemy, finding themselves
in no condition to prepare themselves. Scipio soon got the pos-
session of a small eminence in the harbour, and, by the suc-
cess of his subsequent operations, he broke open one
of the gates of the city and entered the streets, where
he made his way by fire and sword. The surrender
of above 50,000 men was followed by a reduction of
the citadel, and the total submission of Carthage, B.C.
147. (Vid. 140.) and, though Scipio was obliged to demolish its very walls by
the orders of the Romans, yet he went bitterly over
the melancholy and tragic scene; and, in bewailing
the miseries of Carthage, he expressed his fears lest
Rome, in her turn, in some future age, should exhibit
such a dreadful conflagration. The return of Emili-
anus to Rome was that of another conqueror of Han-
nibal, and, like him, he was honoured with a magnifi-
cent triumph, and received the surname of Africanus.
He was not long left in the enjoyment of his glory be-
fore he was called to obtain fresh honours. He
was chosen consul a second time, and appointed to finish
the war which the Romans had hitherto carried on
without success against Numantia. The fall of Nu-
mantia was more glorious for Scipio than that of the
capital of Africa. From his conquests in Spain
Emilianus was honoured with a second triumph, and
with the surname of Numantianus. Yet his popular-
ity was short-lived; and, by telling the people that the
murder of their favourite, his brother-in-law Grac-
chus, was lawful, since he was turbulent and inimical
to the peace of the republic, Scipio incurred the dis-
pleasure of the tribunes, and was received with hisses
by the assembled people. His authority for a mo-
ment quelled their turbulences, when he reproached
them for their cowardice, and exclaimed, Ptoxicus
and Terentius, you shall see how you shall un-
iate me? me, whom the fury of your enemies never
daunted? Is this the gratitude that you owe to my
father Paulus, who conquered Macedonia, and to me?
SCI

Without my family you were slaves. Is this the respect you owe to your deliverers? Is this your affection? This firmness silenced the murmurs of the assembley, and Scipio, with the utmost security, directed theclamours of Rome to Caieta, where, with his friend Lelius, he passed the rest of his time in innocent pleasures and amusement, in diversions which had pleased them when children; and those two eminent men were often seen on the seaside picking up light pebbles, and throwing them on the smooth surface of the waters. Though fond of retirement and literary ease, Scipio often interested himself in the affairs of state. His enemies accused him of aspiring to the dictatorship, and the clamours were most loud against him when he had opposed the Sempronian law, and declared himself the patron of the inhabitants of the provinces of Italy. This active part of Scipio was seen with pleasure by the friends of the republic; and not only the senate, but also the citizens, the Latins, and the neighbouring states, conducted their illustrious friend and patron to his house. It seemed almost the universal wish that the troubles might be quieted by the election of Scipio to the dictatorship, and many presumed that that honour would be on the morrow conferred upon him. In this, however, the expectations of Rome were frustrated: Scipio was found dead in his bed, to the astonishment of all; and those who inquired for the causes of this sudden death, perceived violent marks on his neck, and concluded that he had been strangled, B.C. 128. This assassination of Scipio, preserved with great accuracy by Polybius, was committed by the triumvirs, Papius Carbo, G. Grachus, and Fulvius Flaccus, who supported the Sempronian law, and by his wife Sempronia, who is charged with introducing the murderers into his room. No inquiries were made after the authors of his death. Grachus was the favourite of the mob, and the only atonement which the populace made for the death of Scipio was to attend his funeral, and to show their concern by their loud lamentations. Zémilianus, like his grandfather, was fond of literature, and he is said to have saved from the flames of Carthage many valuable compositions, written by Phocianic and Punic authors. In the midst of his greatness he died poor; and his nephew, Q. Fabius Maximus, who inherited his estate, scarce found in his house thirty-two pounds’ weight of silver and two and a half of gold. His enemies accused him of aspiring to the greatest commendations; and, indeed, no higher encomium can be passed upon his character, private as well as public, than the words of his rival Metellus, who told his sons, at the death of Scipio, to go and attend the funeral of the greatest man that ever lived or should live in Rome.—XII. Q. Metullus Scipio, adopted son of Quintus Cæcilius Metellus. His previous name was P. Cornelius Scipio Nasica. Metellus Scipio was consul with Pompey, his son-in-law, towards the close of the year 52 B.C., the latter having been sole consul previously. Metellus and Pompey re-established the consulship, which had been completely prostrated by Clodius; and the former was afterward sent into Syria as proconsul, having sided, of course, with Pompey against Caesar. After the battle of Pharsalia he passed into Africa to Juba, assembled a body of troops there along with that of Juba, and defeated a Roman army under Servilius, who was in the battle of Thapsus, but was totally defeated, 46 B.C. Having endeavoured to escape to the coast of Spain, and being driven back by stress of weather to the African shore, his vessels were overpowered by the fleet of P. Sithus, and he, to avoid falling into the hands of Caesar, destroyed himself. (Appian, Bell. Cit., 2, 100.—Auat., Bell. Afric., 96.)

Scipio, a celebrated thief in Attica, who plundered the inhabitants of the country, and threw them down from the highest rocks into the sea, after he had obliged them to wait upon him and to wash his feet. Theseus attacked him, and treated him in the way that he himself was accustomed to treat travellers. According to Ovid, the earth, as well as the sea, refused to receive the bones of Scipio, which remained suspended in the air, till they were changed into large rocks, called Scironides Petreæ, or Scirona Saxa. (Vid. Scironides Petreæ.) (Ovid, Met., 7, 444.—Mela, 2, 13.—Plin., 2, 47.—Seneca, N. Q., 5, 17.)

Scironides Petreæ or Scironia Saxa, a celebrated pass or defile on the southern coast of Megara, said to have been the haunt of the robber Sciron until he was destroyed by Theseus. (Enuiri, Hippol., 979.—Ovid, Met., 7, 444.) This narrow pass was situated, as we learn from Strabo (391), between Megara and Cromonyan, a small maritime town belonging to Corinth. The road followed the shore for the space of several miles, and was shut in on the land side by a lofty mountain, while towards the sea it was lined by dangerous precipices. Pausanias reports (1, 44), that it was rendered more accessible by the Emperor Hadrian, so that two carriages could pass each other. According to modern travellers, the Scironian Way, now called Kaki Scala, is difficult and rugged, and only frequented by passers-by. The precipices are two hours from Megara and six from Corinth. (Chandler, vol. 2, c. 44.—Dodwell, vol. 2, p. 182.—Walpole’s Collection, vol 1, p. 332.)

Scodra, a city of Illyria, the capital of Gentius, situated between the rivers Clauzula and Barmania. From this position of Scodra the armies of Carthage were driven back, conquered, and destroyed. (Polybius, 44.—Suetonius, 47.) In the division of the territory of Gentius, Scodra retained its distinction as capital of the Labantes. (Cramer’s Anc. Greece, vol. 1, p. 41.)

Scumbns, a mountain range of Thrace, near Rhodope, and, together with the latter, forming part of the same great central chain. Thucydidcs calls the name Scumbns (2, 96), but Aristotle Scombrus. (Meteorol., 1, 13.)

Scopas, a celebrated architect and sculptor, born in the island of Paros, and who appears to have flourished chiefly between Olymp. 97 and 107 (B.C. 392 and 352). It was his fortune to be employed as one of the four artists who were engaged by Artemisia, queen of Caria, in erecting and adorning the Mausoleum, that splendid monument to the memory of her husband Mausolus. Scopas was employed also to contribute one of the columns to the temple of Diana at Ephesus, and the one which he executed was regarded as the most beautiful of all. He seems, indeed, to have been scarcely, if at all, inferior to Polykleus or Myron. His statues were numerous; among the most remarkable of them were, the images of Venus, Pothus, and Phaethon. Many of his compositions were among the noblest ornaments of Rome in the days of Pliny. An Apollo of his workmanship stood on the Palatine Mount. A Vesta seated, with two female attendants reclining on benches, adorned the temple of Ceres. His statues also of Neptune, of Thetis, and of Achilles, of the Nereids riding on the mightiest monsters of the deep, were highly prized, and placed in the chapel of Cneius Domitius in the Flaminian circus. A colossal image of Mars, and an exquisite statue of Venus, were also greatly admired at Rome, and the latter was preferred to a similar statue by Praxiteles, which has been thought to have for- nished the original idea of the Venus de Medicis. (Silius, Dict. Art., s. v.—Strab., 604.—Pausan., 8, 45, 4.—Plin., 36, 5, 4.)
Scordisci, a numerous and powerful tribe of Illyria, in the interior of the country, and reaching as far as the不利于在尼日尔的萨格拉法尔科，the river left, indicated the Thibali and Myri of Thrace. The Scordisci having successively subdued the nations around them, extended their dominion from the borders of Thrace to the Adriatic. They were, however, in their turn conquered by the Romans, though not without numerous struggles and much bloodshed. Though Strabo classed the Scordisci with the Illyrian nations, he seems also to acknowledge them as of Gallic origin; they were probably of the same race as the Taurisci and Carni, both Celtic people. (Strab., 313.—Id., 318.—Flor., 3, 4.—Liv., Epit., 63.—Cramer's Anc. Greece, vol. 1, p. 46.)

Scotii, the ancient inhabitants of Scotland. It is generally conceded that the earliest inhabitants of Caledonia were of Celtic origin. According to Scottish traditions, the Scotii came from Spain, and were one people with the Silures, who occupied what now answers to Wales. They first possessed themselves of Ireland, which from them received the name of Scotia, and for some time retained the appellation. They afterward passed over into what was called from them Scotland. (Anamni. Marcell., 20, 1. —Id., 26, 4.—Id., 27, 8.—Beda, Hist. Eccles., 1, 1.—Ael., Mithradates, vol. 2, p. 64.—Mannert, Geogr., vol. 1, pt. 5, p. 92, seq.)

Scrobinius Sura, a daughter of Scrobinius, who married Augustus after he had divorced Claudia. He had by her a daughter, the celebrated Julia. Scrobina was some time after repudiated that Augustus might marry Livia. She had been married twice before she came the wife of the emperor. (Suet., Vit. Aug., 62.)

Scrobinius Sura, a Roman historian, author of Annals cited by Cicero (Ep. ad Att., 13, 31).—II. Largus Designianus, a physician, born at Rome, or in the island of Sicily. In 443 he accompanied the Emperor Claudius on his expedition into Britain. He was a physician of the Eclectic school, and wrote a treatise De Compositione medicamentorum. As this work is written in very inferior Latin, some critics have supposed that it was originally composed in Greek, and afterward translated into Latin. Scrobinius has copied from Nicander, and has also derived many absurd and superstitious remedies from other medical writers. The best edition of this work is that of the edition of the Palatine, 1655, 4to.

Scuttena, a river of Cisalpine Gaul, rising on the northern confines of Eturia, and flowing from the east of Mutina into the Padus. It is now the Panaro. (Strab., 218.—Liv., 41, 12.)

Sycgium, a Greek city, on the coast of the Bruttii, in a southwest direction from Crotons, and communicating its name to the adjacent gulf (Sinus Syciaceus). According to Strabo, it was colonized by the Athenians after the departure of the Aeginaeans; but he neither mentions the time, nor the circumstances which led to its establishment. (Strab., 361.) Servius, however, observes, that these Athenians were returning from Africa (ad En., 3, 552). At a later period it received a Roman colony. (Vell. Paters., 1, 15.) Sycgium was the birthplace of Cassiodorus. It is now Squilace. The epithet navifragum is applied by Virgil to this place. (Ex., 3, 553.) Heune considers the appellation to allude to a rocky head, or the sharpness of its vicinity, or else to the frequent storms which prevailed in this quarter, between Tria Promontoria Iapygum and Cumicinum. (Heune, ad Virg., 1, 2.——Cramer's Anc. Italy, vol. 2, p. 398.)

Sclav, a celebrated geographer and mathematician of Caria. He is noticed by Herodotus in a passage where the latter speaks of various discoveries made in Asia by Darius son of Hystenus, and tells of Sclav of Caryanda being sent by that monarch, along with others, to ascertain where the Indians were, and how far off they were. He makes them to have reached the Indus, sailed down the river till they reached the Ganges, continuing their voyage on the sea towards the west, to have reached, in the 30th month, the place from which the Phenician king despatched the Phenicians to circumnavigate Africa. (Herod., 4, 44.) Suidas gives a brief account of Sclav, in which he has evidently confounded different persons of the same name: "Sclav of Caryanda, a mathematician and musician, wrote a periplus of the coast beyond the Pillars of Hercules, a book respecting Hercules, king of Myalassa, a description of the circuit of the earth, and an answer to Polybius's history." The periplus, which still remains, bears the name of Sclav, is a brief survey of the countries along the shores of the Mediterranean and Euxine, of the western coast of Europe, together with part of the western coast of Africa, surveyed by Hanno, as far as the island of Cerne. It concludes with an account of the passages across the sea, from Greece to Asia, and an enumeration of 20 important islands in the order of their magnitude. A question has been raised as to the date of the periplus of Sclav. The subject has been discussed by Niebuhr, in his historical and philological tracts. (Kleine historische und philologische Schriften, p. 105, seqq.) Having first stated the opinions of former critics, and rejected the argument derived from the omission of the city of Rhodes (which was founded 408 B.C.), on account of the corruption of the text, Niebuhr remarks that the proofs of its date are partly positive and partly negative, viz. derived either from the notice of or a silence respecting certain towns. By positive arguments, it is shown that this work was written after, by negative that it was written before a certain date. The uncertain interval being thus narrowed by different historical proof, Niebuhr determines that this periplus was written about 360 B.C. (Foreign Rev., vol. 4, p. 193.) L'Etocline has subsequently written on the same subject (Journal des Sçans, Feb., Aer. et Mai, 1825.), and has pronounced the periplus of Sclav a compilation, in which the materials of different writers and times have been made use of. In this opinion Müller coincides. (Etrusker, vol. 1, p. 159.) Clinton (Fasti Hellenici, pt. 2, p. 564) thinks that Suidas confounded him with the more ancient Sclav, who wrote, according to him, after Polybius, B.C. 146, and he considers the Sclav of Suidas as the subject of that work. In that case the earliest work is an epitome of the ancient Sclav. This periplus has reached us in a corrupted state. The best editions of Sclav are, that of Hudson, in the Geographi Graeci Minores; and that of Gail, in his edition of the same writers, Paris, 1826, vol. 1, p. 151, seqq.)

Sylla, I. A daughter of Nius, king of Megara, who became enamoured of Minos as that monarch praised her father's capital. (Vid. Nius.)—II. A near contemporary of the Odysseus, and wrote the Odyssey. Having escaped the Sirens, and shunned the Wandering Rocks, which Circe had told him lay beyond the mead of those songsters, Ulysses came to the terrific Sclav and Charybdis, between which, the goddess had informed him, his course lay. She said (Od., 12, 73, seqq.) he would come to two lofty cliffs opposite each other, between which he must pass. One of these cliffs towers so much a height that its top is lost to view even if he had twenty feet and as many, could ascend it. In the middle of this cliff, she says, is a cave facing the west, but so high that a man in a ship passing under it could not shoot up to it with a bow. In this den dwells Sclav (Bitch), whose voice sounds like that of a young whelp; she has twelve feet and six long necks, with a terrific head, and three rows of close-set teeth on each. Evermore she stretches out
these necks and catches the porpoises, sea-dogs, and other large animals of the sea which swim by, and out of every ship that passes each mouth takes a man. The opposite rock, the goddess informs him, is much lower, for a man could shoot over it. A wild fig-tree grows on it, stretching its branches down to the water; but beneath, "divine Charybdis:" three times each day absorbs and regorges the dark water. It is much more dangerous, she adds, to pass Charybdis than Scylla. As Ulysses sailed by, Scylla took six of his crew; and when, after he had lost his ship and companions, he was carried by wind and wave, as he floated on a part of the rock, the eldest of the months, the heat by which he supported himself was cooled by the cold water, and he held by the wild fig-tree till it was thrown out again, when he resumed his voyage.—Such is the earliest account we have of these monsters, in which, indeed, it may be doubted if Charybdis is to be regarded as an animate being. The ancients, who were so anxious to localize all the wonders of Homer, made the Straits of Messina the abode of Scylla and Charybdis. The whole fable has been explained by Spallanzani, according to whom Scylla is a lofty rock on the Calabrian shore, with some caverns at the bottom, which, by the agitation of the waves, emit sounds resembling the barking of dogs. The only danger is when the current and wind are in opposition, so that vessels are impelled towards the rock. Charybdis is not a whirlpool or involving vortex, but a spot where the waves are greatly agitated by pointed rocks, and the current, in some parts of the passage, is 12 leagues, or 500 fathoms, per hour. (Strabo, 6. 1, 28.)—In Homer the mother of Scylla is named Ctra·sis (Od., 12, 124), but her sire is not spoken of. Stesichorus called her mother Lamia (Eudocia, 377). Hisiod said she was the daughter of Phorbas and Hecate (Schol. ad Apoll. Rhad., 4, 829); Arcesilas said, of Phoires and Hecate (Schol. ad Od., 12, 85); others asserted that Triton was her sire. (Eudocia, 377.) Lamia is said to have been once a beautiful maiden, who was fond of associating with the Nereids. The seagoed Glaeucus beheld and fell in love with her, and, being rejected, applied to Circe to exercise her magic arts in his favour. Circe wished him to transfer his affections to herself; and, filled with rage at his refusal, she afflicted with noxious juices the water in which Scylla was wont to bathe, and thus transformed her into a monster. (Od. Met., 14, 12, 10.) According to some, a tame animal was chained up here, and, from the contrary account, the change in Scylla's form was effected by Amphitrite, in consequence of her intimacy with Neptune. (Tzetz. ad Lyocroph., 660.) Charybdis was said to have been a woman who stole the oxen of Hercules, and who, when in consequence, struck with thunder by Jupiter, and turned into a whirlpool. (Sero. ad En., 3, 420.—Keightley's Mythology, p. 271, seq.)

SCYLLA, a promontory of Argolis, opposite the Acrocorinth promontory of Sunium, and said to have derived its name from Scylla, the daughter of Nisos. It formed, together with the promontory of Sunium, the entrance of the Saronic Gulf, and closed, also, the Bay of Hermione. (Strab., 373.)

SCYMNUS, a Greek geographer, a native of Chios, who flourished about 80 B.C., during the reign of Nicomedes II., king of Bithynia. He dedicated to the god of the wreck both this work and another (Hidropigraphia, or Description of the World, written in Greek; Jambics. We have remaining of this the first 741 lines, and fragments of 236 others, which together form, according to the critics, not more than a fourth part of the entire work. Scymnus informs the monarch that he has collected and abridged, for his use, all the information he found scattered among various writers respecting the establishment of colonies, the founding of cities, &c. He proposes to give, first, an account of all that is clear and well ascertained in geographical knowledge; while he promises to treat, in a separate part of the work, of what is obscure, in order that Nicomedes may thus have a concise outline of the geography of the day. This work, which has little merit as a poem, is somewhat more valuable as a geographical treatise, the information it gives respecting the establishment of the Greek colonies is particularly useful; but in some other respects it is not very accurate. This production, together with the fragments (which we owe to the labours of Holstenius), may be found in the minor Greek geographers, of Hudson, Gail, &c.

SCYRAS, a name applied to Deidamias as a native of Scyros. (Ovid., A., 1, 692.)

SCYRAS, a name applied to The Aegean Sea, northeast of Euboea, and now called Scyros. Thucydides informs us that its first inhabitants were Dolopiains, who were afterward expelled by the Athenians (1, 98). It is to this early period that we must assign the adventures of Achilles and the birth of Neoptolemus. (Strabo, 437.) Here Theseus is said to have terminated his existence, by having fallen, or been pushed down a precipice. (Lycolph., 1324.) Scyros, according to Strabo, was also celebrated for its breed of goats and its quarries of varied marble, which vied with those of Carystus and Synnada. In the geographer's time it was in great request at Rome for public edifices and other ornamental purposes. (Strab., 437.—Plin., 36, 26.—Cramer's Anc. Greece, vol. 1, p. 433.)

SCYTHIA, the inhabitants of Scythia. (Vid. Scythia.)

SCYTTHIA, a general name given by the ancient Greeks and Romans to the country between the Caspian Sea and the Black Sea. It is divided by them into Scythia intra and extra Imcim, that is, on either side of Mount Imaus. The Scythians have been considered by some writers as the same people with the Goerians, and as being the descendants of Goer, the eldest son of Japheth. Their name is derived from some of the Teutonic schett or schen, or the Gothic sktus, all signifying "to shoot," or "to shoot in my native country to a large extent. (Compare Jamieson's Herms Scythicus, p. 6.) Others make it equivalent to the Latin patrones; others, again, derive it from shakhaa, "a fowler," while a fourth class deduce the term from the Persian Ssagh, "a dog," and suppose it to have been applied by way of contempt. This last opinion, however, to say nothing of the others, is decidedly erroneous, since the dog was held in high estimation among the Persians, and was not considered a menial animal. In the Persian language, the plural of the word consists of five syllables, shakhaast, which renders it to be "a Moor." (Compare Isid. de Isid. &c. p. 269, F., p. 514, Vichtig.) It was a symbol also of faith, and especially of the hope of an immortal existence, and holds a conspicuous place, therefore, on sepulchral monuments. (Compare Creuzer, Symbolik, vol. 1, p. 752.) Sir William Jones likewise indulges in some speculations on this subject (Asiatic Researches, vol. 2, p. 401), as well as Ritter in his Erdkunde (vol. 1, p. 729). Von Hammer, however, appears to furnish the most ingenious explanation. According to this learned Orientalist, the writers of the East, and, more particularly, the work entitled Schahnameh, refer what the Greeks tell us concerning the incursion of the Saci, to the Turks and Saokalib, as they are styled; and even the very festival which the Greeks term τάτακα is found in the ancient Persian calendar as a day set apart for the memory of this great incursion among the Turks. Hence Von Hammer propounds to read Toηγόνγας, or Ταρταρόν in the text of Herodotus (7, 64). These Turks are the same, according to the German scholar, with the Turanians, and with the Saokalib of the Schahnameh; and this name Saokalib, from Saokalib or Sokalib, presents a remarkable coincidence with what Herodotus states respecting the Saokalib. (Cedren, c. 9, 5.) in their time, they call themselves Σακαληδον, or Σακαληδόν, in Herodotus, therefore, the Saci and Amyrgii are said to be the same, so in the Schahnameh the Turks and the Saokalib are identical. This same term Saokalib will
turbish also the root of the name Sestri; and if the theory of another writer be admitted, the Saxones will be descended from the Sæcæ. (Compare Bähr, ad Otes, p. 97.)—The earliest detailed account of the Sceatnian race is given by Herodotus, who states, as has already been remarked, that they called themselves by the general name of Scwati (Σκωτᾶ). The appellation of Scythian (Σκυθας) originated with the Greeks along the Euxine. Their primitive seats were in the vicinity of the Caspian; but, being driven from these by the Massagetae, they migrated to the countries around the Tanais and north of the Euxine, and the head settlement of the race, according to Herodotus, was now between the Tanais and Borysthenes. Only a few Scythians were agriculturists and had fixed abodes; the greater part were of nomadic habits, and roamed about in their wagons, which served them for abodes. These last subsisted on the produce of their flocks and herds. Herodotus divides them into Royal Scythiians (Βασιλείου Σκυθας), the Nomadic Scythians (Νομαδείς), and the Agricultural (Τευ-γοί). Besides these, there were other tribes living to the west of the Borysthenes, and separated from the main body of the race, such as the Alazones. Until the time of Ptolemy, but little was known respecting the Scythians except what had been obtained from the narrative of Herodotus. In the days of Ptolemy, Scythia, as known to Herodotus, had changed its name to that of Sarmatia (compare Plin., 4, 12), and the northern part of Asia above the Sace and beyond Sogdiana, with an indefinite extent towards the east, was now denominated Scythia. The range of Mount Imaus was considered as dividing this extensive region into two parts, and hence arose the two divisions of Scythia inutra Imaum and Scythia extra Imaum, or Scythia within and without the range of Imaus. The former of these, Scythia inutra Imaum, had the following limits assigned to it: on the north, unknown lands; on the east, Imaus; on the south, the Sace, Sogdiana, and Margiana, as far as the mouth of the Oxus, and the Caspian Sea to the mouth of the Rha; on the west, Asiatic Sarmatia. Scythia extra Imaum had the following boundaries: on the north, unknown lands; on the west, Imaus; on the south, a part of India; and on the east, Serica.—The Scythians made several irruptions into the more southern provinces of Asia, especially B.C. 624, when they remained in possession of Asia Minor for 28 years.

Scythopolis, a city of Judaea, belonging to the half tribe of Manasseh, on the west of and near to the Jordan. Its Hebrew name was Beth Những, Bethshean, or Bethshan. It was called Scythopolis, or the city of the Scythians, as the Septuagint has it (Σκύθων πόλις).

—Judges, 1, 27), from its having been taken possession of by a body of Scythians in their invasion of Asia Minor and Syria. It is now Byssan or Basan. (Plin., 5, 18.—Ammian. Marcell., 19, 27.—Joseph, Ant., 5, 1.—Id. ibid., 12, 12.—Id., Bell. Jud., 3, 4.)

Serasta, I. vid. Samaria.—II. The name was common to several places, as it was in honour of Augustus. Sebasto (Σεβαστός, sc. οικός) is the Greek form for Augusta, ac. urbs.

Skenëtus, a town of the Delta in Egypt, north of Busiris, and the capital of the Sebennytic nome. The modern Semendy corresponds to its site. (Plin., 5, 18.)

Sibetua, a small river of Campania, now the Med-ulan, falling into the Bay of Naples, whence the epithet of Naias (Ναιας) was given them. One of the nymphs of which frequented its borders, and became mother of Cebalus by Telon. (Virg., Aen., 7, 734.)

Sediri, a people of Spain, supposed to have been the same with the Edetani. (Vid. Edetani.)

Sedini, a nation of Gaul on the south bank of the Rhodanus, to the east of Lacus Lemanus. They opposed Hannibal near the very summit of the Alps, when he crossed these lofty mountains to invade Italy.

Their capital was afterward called civitas Sedanorum, now Sion. They appear to have sent out numerous colonies, in quest, no doubt, of a milder climate. Hence we find tribes of this name in various places. (Curt. l, 4, 2.)

Seduna, a German nation on the northeast bank of the Rhenus. They are named in conjunction with the Marcomanni, and are supposed to have been situated between the Danube, the Rhine, and the Neckar (Nicer).

Sekstra, a town of Sicily. (Vid. Agrig.)

Sekna, a people, with a town of the same name, in Belgic Gaul. A small town, called Scegni, points out the spot where the Gallic camp is said to have been

Soboabina, the capital of the Celtiberi, in Hispania Tarracconensis, southwest of Cesaragusca. According to Reichard, it is now Priege; but the actual position is much disputed. (Compare Ubert, Geogr., vol. 2, p. 459.)

Segontia or Seguntia, I. a town of Hispania Tar- racconensis, in the territory of the Celtiberi, and to the west of Cesaragusca.—II. A city of the Arevaci, in Hispania Tarraconensis, now Seguencæ. (Hist. Ant., 436, 438.)

Segovia, a city of Hispania Tarraconensis, in the farthest part of the territory of the Arevaci, towards the southwest. It is now Segovia. (Plin., 3, 4.)

Selinus, Elysia, a native of Vulcini, in Etruria, and prime minister to the Emperor Tiberius. His father was Selus Strabo, a Roman knight, commander of the praetorian guard in the reign of Augustus. His mother was descended from the Junian family. Seleucus was at first one of the train of Caius Caesar, but he afterward gained so great an ascendancy over Ti- berius, that the emperor, who was naturally of a suspicious temper, was free and open with him, and, while he distrusted others, he communicated his greatest secrets to this favouring favourite. For eight years did this unprincipled man retain an univided influence over the mind of the emperor; and during that period he contrived to procure the death or banishment of almost every person who might have checked his progress to the possession of imperial power, which was the object of his treacherous ambition. The death of Drusus, the son of Tiberius, was effected by him and the adulterous Jovilia (vid. Drusus II.); to him also is attributed the death of the two eldest sons of Germanicus, and the banishment of their mother, the celebrated Agrippina. The younger son, Caligula, escaped, in all probability, in consequence of his almost constant residence with the army. But the master-stroke of poli- cy by which Sejanus strove to secure his object, was his persuading the emperor to remove from the cares and dangers of Rome, and to indulge his passions in a retirement where he would have none around him but the depraved ministers of his vices. Tiberius accordingly retired to Capreæ, where he abandoned himself to the most disgusting and unnatural indulgences, leaving Sejanus at Rome, in possession of all but the name of imperial power. To this base and bloody favourite the senate displayed the most degrading servility; the people gave him honours second only to those of the em- peror; and the sceptre itself seemed on the point of passing into his grasp. Already were his statues set up by the Romans in their dwellings, in public places, and in temples, along with those of the reigning family, when Tiberius, in an interval of sobriety (he was now imprisoned by Sejanus), passed to him a bill which, had it been carried out, the pass to which matters had come, or was made aware of the real views of Sejanus by his own suit for the hand of an imperial princess, the adulterous widow of Drusus; or finally, as Josephus states, was informed of his plans by a bill from Antonia, the widow of the emperor’s brother. The whole demeanour and management of Tiberius, when he had formed the res-
olition of destroying the man who had hitherto been his all-intrusted confidant and all-powerful minister. is admirably described by Dio Cassius. After a singular course of dissembling, by which he withheld his vic from proceeding to extremities, he sent Macro with full powers to arrest Seleucus put him to death, end take his place. The decree of arrest was accord-
ingly read in the senate; Seleucus was enticed into the sena-house, by the pretext that Macro was the bear-er of a letter, by virtue of which the minister was to receive the dignity of tribune; and, being instantly con-
demned, was dragged through the streets, and put to death with the utmost ignomy, by those who, a few hours before, had followed him with acclamations. The execution was performed by that of his innocent children, relations, and even distant connex-
ions. The numerous persons crowded into the pris-
ons as friends of Seleucus were, without any judicial proceeding, massacred en masse, and even their bodies were subjected to indignities. (Suet., Vit. Tiber.)

Seleucus, the son of Helios, and but the, Some is. The usual Hymn.,

Pandia; known to the public as by Tacit., Ann., 4, 1, seqq. — Id. ib., 5. — Dio Cass., 58, 9, seqq.

Seleucus. Vid. Argyra II. Sele-se, the sister of Helios, and the same with Luna or the Moon. According to another view of the subject, she was the daughter of Helios, the latter being regarded as the source of light. (Eurip., Phen., 178, seqq. — Nonnus, 44, 191.) A third view makes her the mother by him of the four Seasons. (Quint. Smyrn., 10, 334, seq.) In one of the Homeric hymns Selene is called the daughter of Pallas, soon the bane of the Romans. It was said that her inhabitants were amoured of Endymion, on whom Jupiter had bestowed the boon of perpetual youth, but united with per-

tupal sleep; and that she used to descend to him every night, on the summit of Mount Latmus, the place of his repose. She bore to Jupiter a daughter named Pandia; and Hera (Deus) was also the offspring of the King of Heaven and the Goddess of the Moon. (Hymn., 32, 15. — Alcman, op. Plut., Quaest. Nat., 24.) In explanation of this last legend, it is thought that she was called Selene (Σελήνη) i.e. plainly derived from οἶλος, brightness, and is one of the large family of words of which ἡλιος or ήλη (Helle, Germ.) may be regarded as the root. (Homer, 1, 24, seqq.)

Seleucia, I. a famous city of Asia, built by Seleucus, one of Alexander's generals, and situated on the western bank of the Tigris, about forty-five miles north of ancient Babylon. It was the capital of the Macedonian conquests in Upper Asia, and is said to have been the first and principal cause of the destruct-
ion of Babylon. Pliny reports (6, 26) that the inten-
tion of Seleucus was to raise, in opposition to Babylon, a Greek city with the privilege of being free. Many ages after the fall of the Macedonian empire, Seleucia retained the genuine characteristics of a Grecian col-
yony, arts, military virtue, and the love of freedom. Its population consisted of 600,000 citizens, governed by a senate of 300 nobles. The rise of Ctesiphon, however, in its immediate vicinity, proved inimical to Seleucia; but it was fated to receive its death-blow from the fangs of Antiochus, who, without provocation ever shown themselves friendly to the latter people, and had yielded them very effectual aid in their expedi-
tions against the Parthians; and yet a general of the Emperor Trajan's plundered and set fire to the place. The cause of this severe treatment is un-
known: it may have been that the inhabitants, accus-
tomed to self-government, were restless under the yoke of their new allies. (Dio Cass., 68, 30.)

The sudden death, however, of Trajan, and the may de-

departure of his army, prevented at this time the total destruction of the city. That fate befell it under Ver-
sus, the colleague of Marcus Aurelius. A general of his, notwithstanding a friendly reception from the in-
habitants, destroyed the city under the pretext of its having violated its faith. (Euseb., 6. — Capitoliun, Verus, c. 6. — Dio Cass., 71, 2.) Some ideas of the size of the place in its best days may be formed from the circumstance that even at this period 400,000 prisoners were taken. (Oras., 8, 15.) The ruins of Seleucia, and those of Ctesiphon on the opposite side of the river, are called by the Arabs at the present day Al Modain (El Madeinen), or "the two cities." (Manuet, Geogr., vol. 5, p. 397, seqq., part 2.) — II. A city of the Romans, condemned, according to Strabo, it was subsequently called Solele (Σολέινα), and lay on the river Hedyphon. (Strabo, 744.—Plin., 6, 27.) A city of Cilicia Trachae, a short distance to the north of the mouth of the Caly-
cadus. It was founded by Seleucus Nicator, and is sometimes called, for distinction sake, Seleucia Tra-
chae. (Steph. Byz., s. v. — Amm. Marcell., 14, 2.)

IV. A city in the northwestern part of Pisidia, son of Ambreus, sometimes called Porozan, sometimes 
Peres, and ad Taurum. (Hierocl., p. 673.) — V. A city on the coast of Pamphylia, west of Side, and coinci-
ding probably with the Sylphon of Scylax — VI. A city of Apamene, not far from the city of Apamea. It was sometimes called Seleucia ad Belum. (Plliny, 5, 23. — Hierocl., p. 712.) — VII. A city of Syria, on the seacoast, near the mouth of the Orontes, and south of Tripolis. It was called Seleucia on the Pierus, from Mount Pierus in its vicinity, and was founded by Seleucus. The city was strongly fortified, and had a large and secure harbour. Browne identifies Seleucia with Suadea, the port of Antioch, about four hours distant from it. Others give the modern name as Kaie. (Strabo, 751. — Polyb., 5, 59.—Mela, 1, 12.—Plinny, 5, 18.)

Seleucides, a surname given to the dynasty of Sele-
ucus, comprising the monarchs who reigned over Syria from B.C. 312 to B.C. 66. The first of these dates gives the commencement of the reign of Seleu-

cus Nicator, the founder of the dynasty. The last date gives the time when Pompey reduced Syria un-

Seleucia, a division of Syria, which received its name from Seleucus, the founder of the Syrian em-

}
Seleucus, the latter himself and his son Demetrius being too far distant to act in person. But Seleucus, having planted an ambuscade, surprised the hostile camp in the night, and gained a complete victory. For Ptolemy, the young son of Ptolemy Euergetes, the monarchs of all nations, except the Chaldaans alone, date the era of the Seleucidae, or dynasty of Seleucus, in Upper Asia. A temporary absence of Seleucus in Media, where he was prosecuting his conquests, left Babylon at the mercy of the enemy, and Demetrius, by rapid marches, was enabled to regain possession of it; but his subsequent departure, and the return of Seleucus, soon restored things to their former condition. Seleucus now carried his victorious arms into Persia, Bactria, Hyrcania, and many other countries of Upper Asia, and, on account of the rapidity of his conquests, assumed the title of Nicator, and with it that of king, in imitation of the other successful generals of Alexander. Having united subsequently with Ptolemy, Cassander, and Lysimachus against Antigonus, and the latter having lost his life in the defeat at Ipsus, the kingdom of Syria, Armenia, Mesopotamia, Cappadocia, and a part of Asia Minor, were added to the possessions of Seleucus, and he became the greatest and most powerful of all the generals of Alexander. He now built Antiochia, calling it after the name of his father, and made it the capital of his dominions. Many other cities, too, were erected in other quarters. The great power of Seleucus having caused at first uneasiness, and afterward having given rise to a con- federacy against him, this monarch sought to draw Demetrius to his side, by giving him in marriage his daughter Stratonice, and intrusting him with an army. But jealousy towards his son-in-law soon induced Seleucus to deprive him of his new command, and hold him in confinement until his death. Seleucus after this took up arms against Lysimachus, at the urgent entreaties of the friends of Agathocles, son of Lysimachus, whom the father had put to death on a false charge brought against him by his stepmother. His real motive, however, was the removal of a dangerous neighbour; and in this he was completely successful; for, having invaded Asia Minor, he defeated and slew Lysimachus in the battle of Compedon (B.C. 281). Ptolemy Soter had died above a year before this battle took place, and Seleucus now remained alone of all the Macedonian captains, the fellow-soldiers and friends of Alexander. He became ardently desirous of revisiting Macedonia, and reigning in a country where the blood of his own brethren had been shed, were frustrated by assassination. As he was on his march to Macedonia, he was murdered by Ptolemy Ceraunus, the expatriated prince of Egypt, who wished to obtain for himself the Macedonian throne; and he thus fell B.C. 280, in the 73d year of his age, and the 32d of his reign.—II. The second of the name, sur- named Callimicus, succeeded his father Antiochus Theos on the throne of Syria. He attempted to make war upon Ptolemy II., who, having been defeated by King Ptolemy in a sea-fight was wrecked in a violent storm, and his ar- mies soon after conquered by his enemy. He was at last taken prisoner by the Parthians, and retained by them ten years, until the period of his death, which was occasioned by a fall from his horse in hunting, B.C. 226.—III. The third, succeeded his father Seleucus II., while the latter was in captivity. He was sur- named Antonius, and although he had already, by emerited title, as he was a very weak, timid, and irresolute monarch. He was murdered by two of his officers after a reign of three years, B.C. 223, and his brother Antiochus, though only fifteen years old, ascended the throne, and rendered himself so celeb- rated that he acquired the name of the Great.—IV. The fourth, succeeded his father Antiochus the Great on the throne of Syria. He was surnamed Philopo- mor, according to Josephus, Soter. His stature had been weakened by the Romans when he became a monarch, and the yearly tribute of a thousand talents to these victorious enemies concurred in lessening his power and consequence among nations. Seleucus IV. was murdered, as pd. Feb. 175. B.C. 175. His son Demetrius had been sent to Rome, to receive his education, and he became a prince of great abilities. — V. The fifth, succeeded his father Demetrius Nicator on the throne of Syria, in the twentieth year of his age. He was put to death in the first year of his reign by Cleopatra, his mother, who had also sacrificed her husband to her ambition. He is not reckoned by many historians in the number of the Syrian monarchs.—VI. The sixth, one of the Seleucids, son of Antiochus Gryphus, killed his uncle Antiochus Cyzicus, who wished to obtain the crown of Syria. He was some time after banished from his kingdom by Antiochus Pius, son of Cyzicus, and fled to Cilicia, where he was burned in a palace by the inhabitants, B.C. 93.—VII. A prince of Syria, to whom the Egyptians offered the crown of which they had robbed Auletes. Seleucus accepted it, but he soon disgusted his subjects, and received the surname of Cybiosactes, for his meanness and avarice. He was at last murdered by Berenice, whom he had mar- ried.

Seleucia, the largest and most powerful of the cities of Phœnia, situate north of the Eurymedon. It is said by some of the ancient writers to have been founded by a Lacedæmonian colonist. (Strabo, 570.—Diomys. Perieg. v. 860.—Steph. Byz. s. v.—Polyp. §, 76.) The probability, however, is, that this was founded some time after Seleucus had planted the Seleucidae. The city was large, and the inhabitants very warlike. They could bring into the field, according to Strabo, an army of 20,000 men (Strab., 570), and they maintained their independence for a long period against the petty princes in the vicinity. To the Romans they subsequently paid a stipulated sum for permission to live under their old republican institutions; but under the weak government of Cæsar and Augustus they were rendered little more than a mere nominal obedience. At a later period we read of its effectually resisting an army of the Goths. (Zosimus, 5, 15.) Mr. Fellows describes some splendid ruins, which he considers to be those of Seleucia. (Asia Min., 172, sqq.) Seleucia (σελεύκεια, -ουσία) is a large and flourishing city of Sicily, situate on the southern shore of the western part of the island, and in a south- west direction from Lilybæum, and was, according to Thucydides (6, 4), by a Doric colony from Megara or Hybla, on the eastern coast of Sicily, a hundred years after the establishment of the parent city, which latter event took place about the eighteenth Olympiad. (Compare, however, the remarks of Mannert, Geogr., vol. 9, pt. 2, p. 370.) Seleusina soon became a rich and powerful city, in consequence of the formation of a Spanish colony, which was engaged in almost continual wars with the neigh- bouring city of Egesta or Segesta. The weakness of the latter place induced its inhabitants to call to the aid of Carthage, which power gladly availed it- self of an opportunity of meddling in the affairs of the island. A powerful Carthaginian army was accordingly sent, and Seleusina, notwithstanding the brave resist- ance of its inhabitants, was taken, plundered, and in a great measure destroyed. (Diad. Sic., 13, 42.—Id.,
SEMIRAMIS.

13, 57.) About 16,000 men fell in the siege or during the slaughter that followed the taking of the place, 5000 were led away to Carthage into slavery, 2600 fled to Agrigentum, and many wandered about the adjacent country. Selinus would seem, from this account, to have been a city of more than 30,000 inhabitants.—The Carthaginians afterward allowed the fugitives to return to their ruined city, and again inhabit it. (Diod., 13, 55.) A short time before his death, Dionysius of Syracuse had made himself master of Selinus and the adjacent places, but they all, not long after, reverted to their former possessors. The Carthaginians at last, during the first Punic war, feeling the difficulty of maintaining this post, transferred the few remaining inhabitants to Lilybaum, and Selinus was destroyed. (Diod. Sic., 24, 1.—Manmert, Geogr., vol. 9, pt. 2, p. 370, seqq.) A description of the ruins of Selinus may be found in Hoare's Classical Tour, vol. 2, p. 78, seqq. The ruins exist near what is called Torre de l'Ollace, and, according to Sir R. Hoare, their modern appellation is Pilieri del Castel Vetruo.—II. A city of Cilicia Trachea, the most westerly place in that province with the exception of Laertes, and situated on the coast. Its site was on a rock surrounded by the sea, at the mouth of the river Selinus. The Emperor Trajan died here; and from his tomb, the site of which he had commanded to be hollowed, a tower was erected. (Strabo, 681. —Liv., 33, 20.) The modern name is Selunci.—Its territory was called Selenitis. (Manmert, Geogr., vol. 6, pt. 2, p. 85.)

SELLASIA, a town of Laconia, northeast of Sparta, and commanding one of the principal passes in the country. It was situated near the confluence of the Óenus and Gorgylus, in a valley confined between two mountains, named Evas and Olympic. (Polyb., 2, 6.) It commanded the only route by which an army could enter Laconia from the north, and was, therefore, a position of great importance for the defence of the capital. Thus, when Epaminondas made his attack on Sparta, his first object, after forcing the passes which led from Arcadia into the enemy's country, was to march directly upon Sellasia with all his troops. (Xen., Hist. Gr., 5, 5, 17.) Cleomenes, tyrant of Sparta, was attacked in this strong position by Agis, the son of Donos, and totally defeated after an obstinate conflict. (Polyb., 2, 66, seqq.)—No modern traveller appears to have explored the site of Sellasia. (Cramer's Anc. Greece, vol. 3, p. 221.)

SELLÉS, a river of Elis, in the Peloponnesus, rising in Mount Phoneo, and falling into the sea below the Peneus. Near its mouth stood the town of Ephrye. (Strabo, 337.)

SELLYNÁ, a city of Thrace, founded by the Megarensians at a still earlier period than Byzantium. (Scymn, c. 714. —Scylax, p. 28. —Herodot., 6, 33.) The name of its founder, the leader of the colony, was Selys (Σελύς), at least, Strabo explains the name by Σέλυνοι πόλις ("the city of Selys"), the term bria being the Thracian word for "a city." It became a flourishing city, of considerable strength, and for a long time held the place of a kind of capital between the Illyrians and the Attic tribes, and the attempts of Philip of Macedon. It fell at last, however, into the hands of the Illyrians. It sank in importance after this event.—With the common people in the Doric dialect, the form Salambria was used. The writers of the middle ages give Salambria, from which comes the modern Schiera. The city changed its name at a late period to that of Eu-doxiopolis, in honour of the wife of the Emperor Arcadius. (Manmert, Geogr., vol. 7, p. 174, seqq.)

SEMÉLE, a daughter of Cadmus by Hermione, the daughter of Mars and Venus. (Vid. Bechsee.)

SEMIRAMIS, a celebrated queen of Assyria, daughter of the goddess Derceto by a young Assyrian. She was exposed in a desert, but her life was preserved by doves for one whole year, till Simmus, one of the shepherds of Ninus, found her and brought her up as his own child. Semiramis, when grown up, married Menones, the governor of Nineveh, and was present at the siege of Bactra, where, by her advice and directions, she hastened the king's operations and took the city. The monarch, having seen and become enamoured of Semiramis, asked her of her husband, and offered him her daughter Susanna instead; but Menones, who tenderly loved his wife, refused, and, when Ninus heard of this action, set his son against him. No sooner was Menones dead than Semiramis married Ninus, by whom she had a son called Ninyas. Not long after this Ninus died, and Semiramis became sole ruler of Assyria. Another account, however, makes her to have put Ninus to death. According to this latter statement, Semiramis, having secured the co-operation of the chief men of the state by gifts and promises, solicited the king to put the sovereign power in her hands for five days. He yielded to her request, and all the provinces of the empire were commanded to obey Semiramis. These orders were executed but too exactly for the unfortunate Ninus, who was put to death, says this account, either immediately, or after some years' imprisonment. Semiramis, on attaining to sovereign power, resolved to immortalize her name, and with this view commenced the building of a city to honor of Ninus. She is said to have employed two millions of men, who were collected out of all the provinces of her vast empire. She visited every part of her dominions, and left everywhere monuments of her greatness. To render the roads passable and communication easy, she hollowed mountains and filled up valleys, and water was conveyed, at a great expense, by large and convenient aqueducts. She planted desert plains, and made deserts bloom with fruitful plains. She was not less distinguished for her political talents, and reduced many neighbouring and also distant nations under her sway. India, in particular, felt the power of her arms. At length, being plotted against by her son Ninyas, and recalling to mind a response which she had received some time before from the oracle of Ammon, she voluntarily abdicated in favour of her son, and immediately disappeared from the eyes of men, to be believed that she was changed into a dove, and that several birds of this species having alighted upon the palace, she flew away along with them. Hence, according to the legend, the dove was held sacred by the Assyrians. Semiramis is said to have lived 62 years, and to have reigned 42 years. (Diod. Sic., 2, 4, seqq. —Val. Max., 9, 3. —Herod., 1, 185. —Mela, 1, 3.—Petere, 1, 6,—Justin, 1, 1, &c.—Propert., 3, 11, 21.)—For an account of Semir- amis altogether different from the received one, consult the work of Ciribed and Martin, Recherches Curieuses sur l'Histoire Ancienne, cap. 17, p. 176, seqq.—The legend of Semiramis serves to connect together the Assyrian and Syrian mythologies. That she was an historical personage seems extremely doubtful, inasmuch as all that is related of her wears so evidently the garb of fiction. There appears, indeed, a strong tradition in favour of her having been a true symbol of the rise of Semiramis and the Hindu fable of Mahadev and Parvadi as detailed in the Puranas, and both narratives have probably emanated from the same source. The very name, too, would seem to favour this idea, for Semiramis becomes in Sanscrit Sami-Ramesi or Tisi, "qua Sami arborum colit." Others, however, give a different etymology, and make the term Semir-amis denote a "dove of the night" (Tisna, or Tisna, used) and a third class regard it as equivalent to "the mother of doves" (Semiur or Somur, the Syrac. for "a dove," and Amis). The worship of doves among the Syrians and Assyrians is well known, and appears to tie at the base of the whole fable. (Conul Voss, Idolol., 1, 23.—Crewer, Symbolik, vol. 2, p. 70, seqq.— Von Hammer, Fundgruben des Oriens,
Semnones, called by Strabo Σεμνώνες, by Ptolemy Σεμνώνες, by Velleius Paterculus Semnones, and by Tacitus Semnones. They were a German nation, and, according to Velleius Paterculus (2, 106), the Albis or Elbe separated their territories from those of the Hermunduri; while from Ptolemy's account, they would seem to have inhabited what is now Brandenburg. They originally formed a part of the kingdom of Maroboduus, but afterward separated from it along with the Langobardi. Manner is of opinion that the name of Semnones was given by the German tribes, not to a single nation, but to all the nations in the vicinity of the Elbe, from whom the more southern Germans were descended. (Geogr., vol. 3, p. 384.) The Semnones must not be confounded with the Semones, a Celtic race who settled on the coast of Umbria. (Vid. Semones.)

Semnones, an inferior class of divinities, such as Priapus, Silenus, the Fauns, &c. They were called Seinones (i.e., semi-homines) from their holding a middle kind of rank between gods and men. Certain deified heroes were also included under this appellation. (Ovid. Fast., 6, 213.)

Sempronia, l. a Roman matron, daughter of Scipio Africanus the elder, and mother of the two Gracchi. (Vid. Cornelia III.)—II. A sister of the Gracchi, and wife of the younger Scipio Africanus. She was suspected of having been privy, along with Carbo, Gracchus, and Flaccus, to the murder of her husband.—The name of Sempronia was common to the females of the families of the Semproni, Scipio, and Gracchi.

Sempronia Lex. I. de Magistratibus, by C. Sempronius Sulpicius, M. Censor. It was enacted that no person who had been legally deprived of a magistracy for misdemeanor should be capable of bearing an office again. This law was afterward repealed by the author.—II. Another, de Civitate, by the same, A.U.C. 630. It ordained that no capital judgment should be passed over a Roman citizen without the order of the people.—III. Another, de Comitis, by the same, A.U.C. 635. It ordained that, in giving the voting power the colonies should be chosen by lot, and not give it according to the order of their classes.—IV. Another, de Provinciis, by the same, A.U.C. 630. It enacted that the senators should appoint provinces for the consuls every year before their election.—V. Another, called agraria prima, by T. Sempronius Gracchus, the tribune, A.U.C. 620. (Vid. Agrarie Leges.)—VI. Another, called agraria altera, by the same. It required that all the ready money which was found in the treasury of Attalus, king of Pergamus, who had left the Romans his heirs, should be divided among the poorer citizens of Rome, to supply them with all the various instruments requisite in husbandry, and that the lands of that monarch should be farmed out by the Roman censors, and the money drawn from thence should be divided among the people.—VII. Another, de Civitate Italia danda, by the same, that the freedom of the state should be given to all the Italians.—VIII. Another, called Fruentaria, by C. Sempronius Gracchus. It required that corn should be distributed among the people, so much to every individual, for every modius (or peck) of which it was sold. Euergetism, therefore, held only of semismissa and a triens.—IX. Another, de Usura, by M. Sempronius, the tribune, A.U.C. 560, long before the time of the Gracchi. It ordained that, in lending money to the Latins and the allies of Rome, the Roman laws should be observed as well as among the citizens. The object of this law was to check the fraud of usurers, who lent their money in the name of the allies at a higher interest than what was allowed at Rome.—X. Another, de Judiciae, by C. Sempronius Gracchus, A.U.C. 630. It required that the right of judging, which had been assigned to the senatorial order, should be transferred from them to the Roman knights.—XI. Another, Militaris, by the same, A.U.C. 630. It enacted that the soldiers should be clothed at the public expense, without any diminution of their usual pay. It also ordered that no person should be obliged to serve in the army before the age of seventeen. (Plut., Vit. Grac.)

Sempronius, the father of the Gracchi. (Vid. Gracchus.)

Sena. I. Julia, a city of Etruria, to the east of Volaterrae. The designation Julia implies a colony founded by Julius or Augustus Caesar. It is mentioned by Tacitus (Hist., 4, 45) and Pliny (3, 5). The modern name is Sienna.—II. A city of Umbria in Italy, on the seacoast, northwest of Aeneas, and near the mouth of the river Minus. It was a settlement made by the Galli Senones, after their irruption into Italy, A.U.C. 396. The Romans colonized it after they had expelled, or, rather, exterminated the Senones, A.U.C. 471 (Polyb., 2, 19), but, according to Livy (Eplt., 11), some years before that date. During the civil war between Sylla and Marius, Sena, which sided with the latter, was taken and sacked by Pompey. (Appian, Civ. Bell., 1, 88.) The modern name is Senigaglia. (Gratian's Anc. Italy, vol. 1, p. 285.)

Seneca, I. M. Annus, a rhetorician and orator, born at Corduba, in Spain, of equestrian family, about 58 B.C. He came to Rome, where he contracted an intimate friendship with Porcius Latro, and where he taught rhetoric and oratory until his fifty-second year. He then returned to his native city, and married Helvia, a female distinguished for her beauty and talents, who made him the father of three sons, L. Annaeus Seneca, M. Annaeus Helvius, or M. Annaeus Naso, who, having been adopted by Junius Gallio, took the name of Junius Annius Gallio, and was, as procensor of Achaea, the judge of St. Paul (Acts, 18, 12); and Annaeus Mela, the father of the poet Lucan. After the birth of his three sons, Seneca went back to Rome, and there passed the remainder of his life. We have two works of this writer remaining; one entitled Sus- sarcirum libri i, the other Controscirirum libri x. Each of these contains extracts from the orations which had been pronounced on various occasions, and from debates which had taken place in the schools, in his presence, between the most celebrated rhetoricians. The subjects of these were fictitious causes or questions, proposed for discussion by the professors, such as the following: "Shall Alexander embark on the ocean?"—"Shall the three hundred Spartans at Thermopylae, after being abandoned by the other Greeks, have the hardihood to stand their ground, and fight?"—"Shall Cicero sacrifice to Marc Antony?"—"Shall Cicero consent to burn his works, if Antony insists upon the sacrifice?" &c.—Seneca addressed these works to his sons. We discover in them some fine thoughts, and some traits of eloquence; but they are filled, at the same time, with subtile refinements and frigid declamation. We see plain indications of a declining taste. Neither of these productions is complete. They have been often
printed along with the works of Seneca the philoso-
pher, and the best of the editions thus given is that of
Heinicus, Amst., 1620, 8vo. A separate edition ap-
peared from the Bifont press in 1738, 8vo; and in
1831, from the Paris press, by Bouillet, forming part of
the collection of French researches. From these
researches of Niebuhr, he would seem to have been
inspired, as well as of a history. (Niebuhr, ad Cic.,
Liv. et Seneca, fragm., p. 104, Rom., 1820.)—II. A
celebrated Roman writer, son of M. Annæus Seneca, the
rhetor-
ician, and Helvia, born at Corduba, in the second or
third year of the Christian era. He was still very
young when his father removed to Rome, where the
son received his education. The oratorical profes-
sion became the favorite of his early years, and,
maturing, he plied in several causes before the
public tribunals. The frantick Caligula, who was jeal-
ous of every species of talents, sought to destroy him,
but spared his life, it is said, when it was represented
to him that Seneca's health was feeble, and that he
would, in all probability, be only short lived. He
afterward attained to the quasatorship. In the first year
of the reign of Claudius, Messalina, who hated him, had
Seneca's head put in a bag, and sent him to the
island of Cirene, but his son was brought against the
pararms of Julia, daughter of Germanicus, and caused
him to be banished to the island of Corsica, where he
passed eight years of se-
clusion. Agrippina, the second wife of Claudius, re-
called him from banishment, and appointed him tutor
to Nero, in conjunction with Burhhus. The latter
was the young prince's instructor in military science,
and endeavoured to cultivate his own sedateness and
gravity of manners. Elegant accoutrements, bestowing
for the arts, and polite address were Seneca's prov-
ence. Among other tutorial employment, he
composed Nero's speeches. The first, a funeral oration
for Claudius, was unfortunate in its effect, according
to Tacitus. (Ann., 13, 3.) Nero's next harangue, probably
also written by Seneca, though Tacitus does
not say so, gave universal satisfaction. It was de-
ivered on his first appearance in the senate, and promis-
ed a reign of moderation. Dio Cassius says that
this address was ordered to be engraven on a pillar of
solid silver, and to be publicly read every year when
the consuls entered on their office. —Seneca soon ob-
tained an exclusive influence over his pupil, and en-
gaged Annæus Senenus, who stood high in his esteem
and friendship, to assist him in the means, not very
creditable, of preserving his ascendancy, by supplying
Nero became the choice when he attained to years of
maturity. His indignation rose above all restraint.
Tacitus puts into her mouth a few emphatic words, said
to have been uttered in the emperor's hearing. They
have been finely imitated and expanded by Ra-
cine, in his tragedy of Britannicus; and Gray, in his
short fragment of Agrippina, has done little more than
translate Racine. Agrippina regained a temporary in-
fluence, and succeeded in punishing some of her ac-
cusers and rewarding her friends. Annæus Senenus
of Agrippina, whose indignation rose above all restraint.

SENECA.

but whence firmity, interests persons highly short

biography, was for the time, licentious.

stemming that sophistical terms, king of

parents."—The sketch of Seneca's life here given, when consulted by the authorities, will not warrant his being ranked in any respect with the first Christian worthies. His early career was confessedly irregular and licentious. This, if sincerely repented of, might be forgiven. But his conduct after his recall, making allowance for the calumny and wholesale libel of the times, was, to speak of it in measured and negative terms, not altogether commendable. That his philosophical professions had some occasional influence on his immediate pupil; that they directed him in a stemmimg the torrent of profliquity with the people for a time, we are willing and desirous to concede: but that the practice of the preacher too frequently counteracted the tendency of his preaching, it would be uncandid to deny. Of the later political delinquencies he was unquestionably innocent. With respect to Piso's conspiracy, it was the current report at Rome, that the conspirators, after having employed Piso to gain the approval of Nero, meant to dethrone himself, and raise Seneca to the vacant throne; but the conception of such a scheme could have been nothing short of madness. Seneca was at the time old and infirm; and his tamperings in conduct with the virtue which he rigidly taught, and with the self-denial he stoically enforced in his writings as what the wise man could undeniably exemplify, had rendered him too unpopular to make the tenure of the empire safe in his hands for the interests of himself. The charge he was shamed to make. But his personal biography, on the whole, has an unfortunate tendency. Whatever may be thought of his excellences or defects as a writer, or of the caricature and priggishness of the Stoic sect, he was in his writings an earnest, a highly-pretending, and apparently a sincere advocate of ascetic severity. When the professions of such persons are belied by their lives and conduct, the infirmity of character and failure fall to the charge. If his mind was corrupt, his behaviour under Nero's frown was not magnanimous. It is true, he did not abandon his literary pursuits; but his resignation was lip-deep; and his exaggerated affection of sickness under infirmity, his anxiety about diet and fear of poison, show that his fine reasoning and great calms when doom- ed to die, his excellent discourse and ostentation of firmness, had more of theatrical exhibition than of natural and self-possessed reality. His calling for the particular poison (hemlock) which was given to crimin als at Athens, shows that philosophical ostentation and a self-sacrificing spirit were not uncommon among him even in the agonies of death; for he had thus expressed a wish to die himself. Seneca's Ex ecuta magnum Socratem fecit: Catoni gladium asser- torem libertatis extorqure, magnam partem detrahera glorier. (Ep. 13.)—His character and love of Stoical paradox are admirably delineated by Massinger, who had considered him well; and, though the quantity and studied point of his manner had rendered him almost indiscriminately acceptable to the readers and writers of that period, the shrewd old dramatist had thoroughly appreciated him when he was weak as well as where he was strong.—It remains that we consider Seneca as a philosopher and an author. He was the principal ornament of Stoicism in his day, and a valuable instructor of mankind. If, when com manded to die, neither he nor his nephew Lucan main tained to the utmost the dignity of philosophy, the infirmity of human nature may plead as the excuse. Some little vanity may appear on the scene of Seneca's dissolution; but there was nothing cowardly and nothing inconsistent. As a writer, he was exactly made of that stuff which invites to controversy. To say that his style is faulty is to say no more than that he lived after the Augustan age. But perhaps our admira tion of pure style, and our desire, by constant contem plation, to impregnate our own with the same spirit, makes us too exclusive. We shall lose much that is instructive and valuable if we determine to read nothing which is not perfectly written. The highest admirers of Juvenal, as well as Seneca and Lucan, are beyond the pale of best Latinity. Yet who would relinquish the possession of either. Mr. Hodgson thinks that Quin tilian's character of Seneca is nothing short of absolute condemnation. He asks why he should have been so scrupulous in omitting Seneca's name, while he examined every different style of eloquence, if he intended to attack him at the close of his discussion. The celebrated and unanswerable stab of Lipsius is directed to his estimate of Seneca to a certain extent; but surely he bears a little hard on Quintilian, as he avers that the great critic does on his client. In various passa ges Quintilian will be found to bestow no faint praise upon Seneca. Suetonius, in his Caligula, gives the contradictory opinions of the emperor and the public rather than his own. The decision of Aulus Gellius is unfavourable, but his verdict is comparatively little impressive. He is far from being eloquent, and lan- dily pleasantly fill up many an hiatus in the small talk of classical literature. (Malkin's Classical Disquisitions, p 286, seqq.)—The works of Seneca that have come down to us are the following: 1. De Ira, "On Anger," in three books. Lipsius concludes, from a passage of this treatise, that it was composed in the time of Caligula; whence it would follow that this is the earliest of the productions of Seneca, since it is as certain that letters of this kind did not come into existence under Claudius than that they were composed under Claudius and Nero. The inference drawn by Lipsius, however, has been disputed. The work itself is well written, and contains some good reasoning, blended, however, with some exaggeration as regards the principles of the porch. 2. De Consolatione, ad Helviam matrem, "On Consolation, addressed to his mother Helvia." Seneca addressed this work to his mother during his imprisonment to Cor na. It is true he had been banished; but the mother who had befallen her him, says: but under all that had ever been experienced by her. It is well written, and is that one of his works which inspires the reader with most esteem for the moral character of the author. 3. De Consolatione, ad Polybium, "On Consolation, addressed to Polybius." This piece was written, according to the generally-received opinion, during the third year of Seneca's banishment, to a freedman of Claudius named Polybius, who had lately lost a broth
er, a young man of great promise. It contains some fine passages, but is unworthy of coming from the pen of Seneca, on account of the gross flattnery with which it abounds. Diderot, in his Essay on the Life of Seneca, has attacked the authenticity of the work, and Rushkop, one of the latest editors of Seneca, has followed in the same path. — 4. De Consolatione, ad Marciunum. Another consolatory epistle to a friend who had lost her son. It is a touching and eloquent piece, and was written under Claudius, after the return of Seneca from exile. — 5. De Providentia, sive quae rerum natura accidit, cum suis providentiae, "On Providence, or why, if there be a superintending Providence, evils happen to the good. It is not a general dissertation on Providence, but deals more particularly with the point of whether Providence justifies the evils of life."

It was written under the reign of Nero, and forms part of a complete treatise on ethics, of which Seneca speaks in his letters. — 6. De Animis tranquillisit, "On Serenity of Mind." This work, written after the return of Seneca to Rome, has not the usual form of his productions. It is preceded by a letter of Annæus Senenus, in which that friend departs to Seneca the disquietude, and disgust of life, which torment him, and requests his advice. Seneca replies, and shows the mode in which this mental malady may be combated. — 7. De Constantia sapientis, sive quod in sapienti non cadit injury, "Of the firmness of the sage, or proof that the wise man can suffer no injury." This work is based on the principles and paradoxes of the porch. It is addressed to Annæus Senenus. — 8. De Clementia, "On Clemency," Addressed to Nero. It was in three books, and was composed during the second year of the prince's reign. The subject is rather the mild administration of government. A great part of the second, and the third book, are lost. "The dictation in this work is simpler and nobler than in the other works of Seneca." — 9. De Beneficibus, sive accensus sapiens, "On the Leisure or Retirement of the Sage." The first twenty-seven chapters are wanting. Some critics believe that it formed part of the preceding. — 12. De Beneficibus, "On Beneftis." In seven books. Seneca treats, in this fine work, of the manner of conferring benefits, and the duty of him who receives them, and collaterally of gratitude and ingratitude. It was written at the close of Seneca's life when he had retired from the court of Nero, and was addressed to the solitude of his villa. — 13. One hundred and twenty-four letters, addressed to Lucilius Junior. Though Seneca has given to these pieces an epistolary form, they are rather moral treatises on various subjects. We find in them many excellent maxims, and a real treasure of practical philosophy. They were written during the later years of Seneca, after his retirement from court. — 14. "Argumentum suum," — "On the Suicide of Saure, directed against the Emperor Claudius. It is unworthy a philosopher like Seneca, and in very bad taste. — 15. Naturalium Questionum libri vii., "Seven books of Questions on Nature." Independently of the importance of the subjects discussed, the work has the accidental merit of making us acquainted with the point to which the ancients carried their scientific researches without the aid of instruments. In some cases it will be found that they have anticipated modern discoveries. "The theory of earthquakes," says Humboldt, "as given by Seneca, contains the germ of all that has been stated in our own times concerning the action of elastic vapours enclosed in the interior of the globe, the (Voyage aux contrées equinoctiales, vol. 1, p. 313, ed. 4to.) We have also, in the early editions, fourteen letters of Seneca to St. Paul, or of the apostle to the philosopher, which were at one time received as genuine, but are now regarded as spurious. And yet St. Jerome and St. Augustine cite them, without expressing the least doubt as to their authenticity. It may be remarked, moreover, that an old tradition in the church makes an intimate connexion between the Pauline and Senecan. This tradition can scarcely be regarded as mere fable, and derives considerable support from the singular resemblance that has been found to exist between many passages from the writings of these distinguished men. (Consult Scholz, Hist. Lit. Rom., vol. 2, p. 446, seqq.) Neither is there anything improbable in this tradition as regards the time. The apostle is supposed to have arrived in the spring of 61 A.D. The Philippians were, it is supposed, sent to occupy a separate dwelling, with a soldier for a guard. This prefect was Burrus, the friend of Seneca; and the latter, it is very natural to suppose, heard of the new-comer through him. Seneca, indeed, may have received some information respecting the apostle at an earlier period; for the propror of Achaia, before whom St. Paul was brought at Corinth, was Seneca's own brother, who, having passed by adoption into another family, had also not the least connection with the sons of Junius Annus Gallio. The Roman governor could hardly fail to make some mention of the apostle in his letters home. — There are also some tragedies ascribed to Seneca. Quintilian supposes that the Medea is his composition; while, according to others, the Troades and the Hippolytus were also written by him, and the Agamemnon, Hecule Fures, Thysasteis, and Hercole in Oa, were composed by his father. Lipsius has imagined that the Medea, which he regards as the best of these tragedies, was written by Seneca the philosopher, and that the rest were the productions of another of the same name, who lived in the time of Trajan. Most critics, following the first part of the hypothesis of Lipsius, assign the Medea to Seneca; but they likewise ascribe to him the Hippolytus, Agamemnon, and Troades; and of some of these we are without the name of the author. Two of the remaining tragedies they consider to be the productions of various writers, appended to the tragedies of Seneca by editors or copyists. As to these compositions, it is hardly possible to find a really good tragedy among them. All, even the Medea, are defective in plan and in the management of the piece; they are all barren of action and full of declamation. We find in them, it is true, occasional bold thoughts, and expressions of great passion; but the sentiments are too often misplaced. They are modelled after the Greek tragedies, but are very far from being good copies, and are generally fatiguing by reason of the exaggeration and emphatic tone which reign throughout. The best editions of Seneca are. that of Lipsius, Ante, 1652, fol. (the best of his five); that of nolius varius, printed at Amsterdam, 1672, 3 vols. Svo; that of Rushkop, Lips. 1817—1811, 6 vols. Svo; a volume of thoughts of that of Bonillet, Paris, 1827—30, 5 vols., forming part of the collection of Lemaire. The best editions of the tragedies separately are, that of Geronovius, Lugd. Bat., 1661, Svo; that of Baden, Lips., 1821, Svo, 2 vols.; and that of Pierrot, Paris, 1829—32, 3 vols. Svo, forming part of Lemaire's collection. — SENONES. I. a nation of Gallia Transalpina, who, under the conduct of Brennus, invaded Italy and pil-
aged Rome. They afterward settled in Umbria, on the coast of the Adriatic. After some years of conflict with the Romans they were expelled, or rather exterminated, A.U.C. 471. (Polyb., 2, 19.) Livy, however, makes the date of this event some years earlier. (Liv., Epit., 11.)—II. A people of Germany. (Vid. Semnones.)

Septimius I. or Titus Septimius, a Roman knight, intimate with Horace, and, in whom the latter addressed one of his Odes (1, 2). He appears, from the words of Horace on another occasion (Epist. 1, 3, 9, seqq.), to have been a votary of the Muses; and, according to one of the scholiasts, he composed lyric pieces and tragedies. None of his productions have reached us.—II. Anulus Septimius Severus, a Roman poet, who flourished under Vespasian. He was highly esteemed for his lyric talents, but none of his pieces have reached us. One of his poems was entitled Opuscula Rustica or Opuscula Rustica, consisting of several books; another was called Florida, in which he sang the praises of his villa among the Falsici. The metre of this poem was peculiar in its kind, each line being composed of three dactyls and a pyrrhic.

Wernsdorff ascribes to him the Moretum, a poem commonly assigned to Virgil. (Burmann, ad Anthol. Lat., lib. 1, ep. 27.—Wernsdorff, Poet. Lat. Min., vol. 2, p. 247, seqq.)—III. Q. Septimius, the translator of that work of Dictys Cretensis into Latin, and who lived in the time of the Emperor Dioclesian. (Vid. Dictys I.)

Sequana (called by Ptolemy Sequanae, a river of Gallia Transalpina, rising in the territory of the Edui, and flowing by Lutetia or Paris into the Atlantic. It is now the Seine. (Ces., B. G., 1, 1.—Id. ib., 8, 87.)

Sequani, a people of Gallia Transalpina, whose territory lay to the east of that of the Edii and Lingones, and was separated from them by the Arar; while it was bounded on the south by the Helvetii and on the north by the Trangulians and the Mount Jura. Their country answers to the modern Departemens du Doubs et du Jura. (Ces., B. G., 1, 9.—Id. ib., 6, 12, &c.)

Serapeum or Seraphion. I. A name given to the temples of Serapis in Egypt, of which there were a great number. (Cruzenr, Dionysius, p. 181.)—II. A celebrated temple of Serapis in Alexandria, and one of the two temples in which the famous library was distributed. (Vid. Serapis, and Alexandria.)—III. Another temple of Serapis in Egypt, sittuate to the south of Hieropolis. A settlement grew up around it; and the place was also famous for being the middle point in the road from north to south. (Mannert, Geogr., vol. 10, pt 1, p. 486.)—IV. A temple of Serapis at Rome, on the Capitoline Hill, erected by Caracalla. (Vid. Serapis.)

Seraphion. I. Vid. Serapeum.

Seraphion. I. A physician of Alexandria, the successor of Philinus, in what was called the Empirc school (i.e., the school of observation and experience.) In consequence of the great extension which he gave to this system, he is regarded by some as its inventor. (Cels., Praf., p. 3.) Mead believes that he was a disciple of Erasistratus, from his having found the name of Seraphion on a medal discovered at Smyrna; but this opinion is untenable. (Sryenget, Hist. de la Med., vol. 1, p. 433, seqq.)—II. An epigrammatic poet, of a native of Alexandria, who lived in the time of Trajan. One of his poems is preserved in the Anthology. (Jacob, Catal. Poet. Epig., s. v.)—III. An Alexandrian rhetorician. (Suid., ed. Kust., vol. 3, p. 284.—IV. A philosophical poet of Alexandria. (Plut., Op., vol. 2, p. 396, D. F.)

Serapis or Seraph, a celebrated Egyptian deity. There are many places which have been attributed to Serapis, in an earlier and a later one. I. The earlier Serapis, we are assured by Plutarch, was none other than Osiris himself. (Plut., de Sid., c. 28.) Diodorus Siculus makes the same declaration (1, 2); and in a hymn of Maritianus Capella we find both these names assigned to one god: "Te Serapism Nilus, Memphis veneratur Osirism." (Hymn. ad Sol.) The same inference may be drawn from the connexion of the name of Serapis with that of Isis. He is frequently mentioned by ancient authors as the consort of this goddess, which shows that they regarded Serapis as another title of Osiris. Diogenes Laertius, Clemens Alexandrinus, and Suidas (Suid., p. 15), and Mannert, (Hist. Rom., vol. 1, 20), to whom we might add many other authors, speak of Isis and Serapis as the great divinities of the Egyptians. Yet the same authors make some distinction between Osiris and Serapis. Thus, Plutarch asserts that Serapis was Osiris after he had changed his nature, or after he had passed into the subterranean world; and it is apparently in conformity with this idea that Diodorus calls him the Egyptian Pluto. (Cuper. Harpoe., p. 55.) Jablonski, after having regarded Osiris as simply the orb of the sun, obtains an easy explanation of the nature and distinction of Serapis. The latter, according to this author, represented the sun in the winter months, after he had passed the autumnal equinox, and had reached the latter days of his career; or the solar Osiris, after he had entered upon the period of his decrepitude in the month of Athyr. Osiris then descended to the shades, and it is under this title that he appears in the Catalogue of Pri/eshard, Analysis of Egyptian Mythology, p. 89, seqq.)—II. Another and later Egyptian deity, whose statue and worship were brought from Sinope to Alexandria, during the reign of Ptolemy Soter. A curious passage in Tacitus (Hist., 4, 83) gives us the legend connected with this singular affair. The worship of this Serapis had not been confined to Sinope, but had spread along the coasts of the Euxine, and the deity was regarded by mariners in this quarter as the protector of their voyage. His name had even travelled eastward, and a temple anciently raised to him in Babylonia was repaired and adorned by Alexander. Ptolemy's object in bringing the worship of this divinity into Egypt appears to have been, that the blind superstitions directed in that country against a safearing life might be counteracted by other superstitions of a more useful tendency. In what way his worship was blended with that of Osiris, the earlier Serapis, has not been clearly shown; but the general points of resemblance in the attributes of the two deities, and some accidental similarity in name. Be this as it may, however, the worship of the latter Serapis soon merged in itself that of the earlier Osiris, and Jupiter-Serapis became the great divinity of Alexandra. (Compare Cruzenr, Dionysius, p. 183, seqq.)

Serdon, a lake between Egypt and Palestine, and near Mount Oasius. Pliny makes it have been 150 miles long. Strabo assigns it 200 stadia of length and 50 of breadth. It had communicated with the Mediterranean by an opening which was filled up in the time of Strabo. The fable makes Typhon to have lain at the bottom of this lake or morass, and the Egyptians called its opening the breathing-place of Typhon. The place has taken the name of Behabat-Bardoi, from a king of Jerusalem of that name, who died at Rhinocolura on his return from an expedition into Egypt.

Seres, a nation of Asia. Isaac Vossius, in his commentary on Pomponius Mela (ad Pom. Met., 2, 27), observes, that whoever doubts the identity of the Seres, mentioned by the ancient writers, with the modern Chinese, may as well doubt whether the sun which now shines be the same with that which formerly impinged light: "Sinaenses habint antiquos Serenses, et esse dubium est, si tenebris hic orbe "nume nunc atque signum lucis retinet." An eminent geographer of more recent times, M. Maute-Brunt (System of Geography, vol. 2, p. 462.)—Compare the note of the English trans-
lately) has ventured, however, in opposition to an opinion so positively expressed, to consider Serica, or the country of the Seres, as including merely the western part of Thibet, Serinagur, Cashmire, Little Tibet, and perhaps a small portion of Little Bkuchara. On the other hand, an English writer, Mr. Murray, in a paper inserted in the Transactions of the Royal Society of Edinburgh (vol. 8, p. 171), maintains, in accordance with Vossius, the perfect identity of the Seres with the natives of China. This latter production we have never had the opportunity of perusing. It is said, however, to be extremely interesting and satisfactory, and it is certain that it will be received with great respect by the geographer, and in part upon various discoveries made by modern travellers in the mountainous regions of Asia which lie immediately north of India. This subject has likewise been discussed in some of the numbers of the Classical Journal (vol. 1, p. 53; 3, p. 295; 6, p. 204; 7, p. 32).—As Ptolemy is our chief authority in settling this long-agitated question, his statement is entitled to the first notice, although he is far from being the earliest writer who makes mention of the Seres. According to this geographer (Pltol., Geogr., ed. Erasm., p. 20, seq.), it appears that the agents of a Macedonian merchant, on their way from Hierapolis to Seres, crossed the rivers Ephratah and Tigris, entered Assyria, and advanced to Ecbatana, the capital of Media; then passing through the Pyli Caspse, and the chief cities of Parthia, Hyrcania, and Media, to the Caspian Sea, which is called in the ancients Caspia, thence they proceeded to the mountainous country of the Comedes, and reached a place in Scythia called Λιθινος πύργος, the Stone-Castle or Tower of Stone; from this spot to Seres, the capital of Scythia, they were travelling during the seven months. What is meant by the Stone-Castle seems never to have been satisfactorily explained until very recently. J. Hager, in his 'Ptol. Historiae', says of Chinese (Dionysius) Medailles Chimaeas du Cabinet Imperial de France, precede d'un Essai du Numismatisme Chinois: par J. Hager.—Compare Class. Jour., vol. 1, p. 54), considers the Stone-Castle to have been the same with the Tashkand of modern times, and the principal city of eastern Turkestan. This, indeed, he demonstrates, not only from geographical coincidences, but from the obvious etymology of its Tartar name; Tash signifies the 'castle', khand, 'fortress.' And in this etymology he is confirmed by parallel instances given by Du Halde, in his description of China, by the Oriental geography of Ebn Haukal, and other works. The route of the caravans, after leaving the Stone-Castle and proceeding farther to the east, is involved in difficulty and obscurity. Ptolemy's only source of information respecting this part of their journey seems to have been the verbal statements of the traders themselves. They informed him that the time occupied by this part of the undertaking was seven months, and that the direction along which they proceeded inclined from east a little to the south. Marius, the geographer, as quoted by Ptolemy, computes these seven months' travel at 36,200 stadia; Ptolemy, however, taking into consideration the slow progress which the caravans must necessarily make in passing over mountains more or less covered with snow, and in stopping at various places on the route, diminishes this distance by one half, and makes the space traversed during these seven months to have been about 18,100 stadia, or 1709 geographical miles. It appears unnecessary here to enter into the computation of latitude and longitude as made by the Greek geographer. (Pltol., Geogr., ed. Erasm., p. 113, et seq.) The computation of Mannert, however, is in due proportion with the former, and which recent researches in this direction are incor rectly printed in the edition of Erasmus: ("In der Erasmischen griechischen Ausgabe ist diese Verkleinerung unrichtig ausgedruckt.") Suffice it to say, that, to one who examines the text with care and attention, the Seres of Ptolemy will appear, if not actually to coincide with, at least to have been in the immediate vicinity of, Soergaw, the chief city of the modern province of Shen-si in China. (Mannert, Geogr., vol. 4, p. 505.)—Let us now compare, for a moment, with what we have thus far stated, the account given of Serica by Ptolemy himself. (Ptolem., Geogr., p. 414).—'H Serica peregrinatur, a non venefice giktis Ιμαον ὁλετὸς Σκυθίως. Ἀπὸ ὅπερ ἄρκτος, ἀγωνίζον τὴν ἡμέραν δίκαια ἐν καὶ ἄνω τοῦ ἀνατολικοῦ ἀγωνίαν γεμάτη. Ἀπὸ δὲ περιπομάτως τοῦ λιμενί τῆς ἕπετος Ιλισσός ἄροτρον ἐκεῖνο εἰπάται καὶ τῆς Συριακῆς ἀπεικόνισε τῷ χαλκῷ τοῦ Νεήματος τῆς Σερικῆς. rex αὐτοῦ, 'εν τῇ Σκυθίᾳ εἶναι Ἀγαθοκλειακῷ, 'εν τῷ Περιπομάτω καὶ Σερικῶν καλυμμένου τοῦ ἀνατολικὸν μέρους, καὶ τοῦ Ξάλκου, τῆς ἄνωτοτὴς σταθεράς τοῦ σφαίρας τοῦ Νεήματος.' (Scythia extra Imaum; on the north by unknown land, as well as on the east; on the south by the remaining portion of India beyond the Ganges, and also by the Sinus.' The geographer then proceeds to state (ibid.): 'Ορή δὲ διέπονεν Σερική, τά τε καλομένα "Ἀσσυρία, καὶ τῶν Λαζίων τὸ ἀνατολικὸν μέρος, καὶ τὸ καλομένα "Ασφραάρα ὕδωρ, καὶ τῶν Κασιων τὸ ἀνατολικὸν μέρος, καὶ τὸ Οὐγανω ρον ὤρος, ἐπὶ τῶν Πνεύμων καὶ Σερικῶν καλυμμένον τὸ ἀνατολικὸν μέρος, καὶ τὸ καλομένου οὖτος ἐκ Τύβρος, "Mountains intersect Serica; namely, the range which is called Anniba, and the eastern part of the Asmian chain, together with those that are denominated Asinria, the eastern parts of the Casian range, Mount Thagurons, the eastern part of the Monte Emodi and the Seric chain as those are styled, and also the northern boundary of the desert of Coth; the Casian range extends from the country of the Chochotes for the most part along the Chinese wall towards the north-east; Mount Thaguron is the southern part of the Mongolian Mountains, which stretch from the Hoang-ho towards the north; Mount Emodi is the chain which stretches from Northern Thibet towards the southern part of the Chinese province of Shen-si, while Oottorkoras is its continuation, traversing the province of Shen-si, and giving rise to numerous tributaries of the Hoang-ho. (Mannert, Geogr., vol. 4, p. 495.) The geographer next proceeds to describe the rivers of Serica. According to him, two streams in particular flow through the greater part of that region. The 'Senar, or 'The river of the eastern part of Serica (τοῦ εὐορίου ποταμοῦ τοῦ πολὺ τῆς Σερικῆς), the Excharades (Οὐκράνθιζο) and the Bautians (Βαυτισο), The Erasmian edition of Ptolemy calls this river Bauris.' The former of these springs from three sources: one among the Asmian Mountains under the 51st parallel of latitude; a second farther to the southeast, among the Asmian Mountains, under the parallel of 47°; and the third much farther to the west, among the Casian Mountains, under the 44th parallel. The Excharades, from this description of it, appears to be no other than the modern Selanya. The Bautius, the second river which is mentioned, rises in the Casian chain, on the borders of Serica, to the southwest of one of the sources of the Excharades, under the 43d parallel, runs towards the southeast to the Monte Emodi, for the distance of about four degrees, and here receives a second arm. This last branch runs towards the Monte Emodi under the 37th parallel. (Carte des Ptolémaeus, appended to Uberti's Geogr.) From this map it will appear that the 51st parallel nearly coincides with the mouth of the Borysachten, and the 43d nearly with that of Byzantium. The parallel of 37 is one degree north of that of Rhodes by the same map. Eight degrees eastward of the spot where these two arms unite, the Bautius receives its third branch, which receives the source of Oottorkoras. It would be difficult for one at this present day, who had only of the main branches, to do more accu-
rately than Ptolemy has done; for that the Bautiusus and Hoang-ho are one and the same river hardly admits of a doubt. Its northern arm, the Oman-Muzen, rises in the country of the Chochotes, or Calmucks of Hoho-Nor, among the mountains which bound the desert of Cobi, and to the northeast of it rises the El-zan, which must therefore be one of the sources of the Chardes. The Hoang-ho was called by the Chinese in order to unite with its southern arm, the Hara-Muzen, which rises in the southern chain of mountains between China and Thibet, and directs its course to the northeast. After this, the united streams take a high northerly direction, crossing the great wall, and then, bending to the south, pass once more the great wall, and re-enter China proper. Of the northern part of its course Ptolemy makes no mention, for a very natural reason, because it passes far beyond the ancient caravan routes. They make their appearance again near the site of the ancient capital of Serica, where Ptolemy again mentions them, and where he places the third tributary, probably the Hor-ho. From all that has been said, it follows, as an irresistible consequence, that the Serica of antiquity comprehends the eastern portion of the country of the Chochotes, the Chinese province of Shen-ti and also Mogul Tartary from the northern confines to the sea, to the north of Serica; (Mannert, ubi supra.)—D'Anville, it is true, gives in his map of the ancient world a somewhat different view of this quarter. But D'Anville erred in placing too much reliance on the false representations given by Mercator to the rivers of Serica, in his maps illustrating the geography of Ptolemy. Still, the authority of the French geographer is valuable as far as it goes, since he so far makes Serica a portion of China as to consider Serica, its metropolis, identical with Kanikson in the modern province of Shesh-ti. (D'Anville, Geogr. Anc. abrég., vol. 2, p. 326.—Id., Recherches Histoire et Historiques sur la Serica des Anciens.—Memoires de l'Academie des Inscriptions, vol. 32, p. 573, et seq.) In pointing out the land of Serica, Ptolemy (Ptolem., Geogr.—Compare Mannert, vol. 4, p. 506) makes mention also of two other caravan routes, a northern and a southern one. The former of these commenced at Serica, its metropolis, identical with Kanikson, and passed through the districts of the same name (the modern Don), and ran onward to the farthest east. It was by means of this route that Ptolemy obtained his information respecting what are now the Volga and Jeak, of which nothing was known before his time by the Greeks. He learned also the existence of the mountainous chains along the southern confines of Siberia, and was enabled to give a tolerably correct account of their situation and direction. He even pushed his inquiries as far as the Issedones, the most remote people to the east. All this information he obtained from the traders. No Greek seems ever to have undertaken this long and perilous journey. Unacquainted with the manners and language of the various predatory tribes which roamed along this vast tract of country, the attempt would have exposed themselves to certain destruction, and their merchandise to the custody of the savage Nomades. The traders, therefore, who were the first to mention it has just been made, must have belonged to some one of the native tribes in this quarter, perhaps to the same Kirghiz Tartars who at the present day carry on the Russian inland traffic with the countries to the south. In this way, and in this alone, can we satisfactorily account for the knowledge possessed by the Greeks of the countries mentioned above, and, at the same time, for the very loose and general nature of their information. The most eastern people, who were the greatest communicators ever to have been the Issedones. They would seem to have been identical with the Issedones of Herodotus, whom that historian names as the most remote nation of the northeast (lib. 4, c. 13 and 27). If an opinion may be ventured respecting them, it would be that they coincide with the modern Kalbas of Mongolia in Chinese Tartary. (Mannert, ubi supra.) Ptolemy, in one part of his work, considers this nation as a part of Serica, insomuch as they were under the sway of the Seres. In his eighth book, however, he calls them a Scythian race, and even their capital he names of Ταντηνά Σκαθυκα (Ptolem., Geogr., Mannert, ubi supra.). These Issedones had cities of their own, and were, of course, some degrees removed from the barbarism of the Nomadic state. Their cities may also have been well known, since Ptolemy gives us the longest day of two of them. This nation appears to have formed the link of communication between the caravan traders and the country of the Seres, a circumstance which arose from their being in subjection to the Seres, all immediate access to whom was reserved to the merchant. Two cities close to the borders of China seem to have been the marts of this traffic: Ταντηνά Σκαθυκα, so called from its having among its inhabitants Seres as well as Issedones, and φερσικ, farther to the southeast. It is curious to compare with what has just been stated a passage from Ammi- anus Marcellinus, in which he makes mention of the Seres. According to this writer (Ammianus Marcell. ed. D. T, vol. 14), 'the inhabitants of Seres are called the continuous wall surrounds the land of the Seres. "In orbis speciem consorta celsorum aggerum summatim ambiant Seres." Is not this a description of the great wall of China which encloses the country of the north? When this writer speaks of the western side of Seres, and of the route of the caravans beyond the Stone Castle, he makes no mention whatever of any wall, which in reality does not exist on this side, but only in the north. —The second (Mannert, vol. 4, p. 511.—Ptol., Geogr., 1, 17) of the routes alluded to above proceeded from Palimbortha, the modern Patna on the Ganges, in a northeast direction through Thibet, and from thence along the southern arm of the Bautius or Hoang-ho, in an eastern direction to Sera. This is precisely the same route which the Jesuit Guebner and D'Orville took in the seventeenth century. (Thesnerot, Divers Voyages, fol. vol. 2.) It is known that the inhabitants of the Orissa, the people of India obtained the silk and other productions of China, concealing, at the same time, from the natives of the west, the true quarter whence these commodities were brought. The Europeans received the silk of which they were in quest from the hands of the Indians, and, in answer to their inquiries respecting the country which produced it, they only received statements that were calculated to lead them astray. The truth, however, could not remain long concealed, and accordingly we find even Ptolemy in possession of the true account. The natives of India informed him that Serica and the city of Sera lay to the north of the Sin: that there was another route to this quarter besides the one by the Stone Castle; and that this route was through India by the way of Palimbortha. (Mannert, ubi supra.) From this last-mentioned city the route in question led through India, until, having proceeded eight degrees north of Palimbortha, it passed over the high mountains in Northern Thibet. Here was situated the city of Sota, having on its left the range of Imaus, and on its right the eastern portion of the chain denominated Montes Einodi, and which formed the boundary between India and Seres. Farther on to the northeast was a city named Chaurana, and then the way proceeded along the southern arm of the Bautius, passing by the city of Oro- san. The Chinese caravan route had the city of Palimbortha as the capital of a people named Otorokorina, from whom the easternmost portion of the Montes Emidii received the appellation of Otorokorinas. We now stand on ground with which, it is curious to observe, the Greeks
seen to have had some acquaintance long before the time of Ptolemy. In the earlier fables and traditions of the West, mention is made of a people named Atta- cori, dwelling in a valley which was always warmed by the genial rays of the sun, and protected by encircling mountains from the rude blasts of the north, a people closely assimilated in the peculiarities of their situation to the fabled Hyperboreans. (Compare Plin., 6, 173.) For this reason it is easy to see that the ancients, in enlarging the region of the Seres, must have drawn their ideas from the description of a people of the extreme and northern extremity of Asia. The tradition of the Otterorokorres, the route led by Solona, in a northeastern direction, to the city of Sera.—Kosmas Indicopleustes (Kosmas Indicopol., Monumanc., N. Col. Patr., 2, 137, D., et seqq.) states, that the Brahmins informed him, "that if a line were drawn from the country of the Sinis (Σηρίνης) through Persia to the Roman world, so as to strike Byzantium, it would divide the earth into two equal parts. From this account also, it is seen we may obtain very satisfactory data for the position of Serica, which in the days of Kosmas was confounded with the land of the Sinis, both of them being known merely as the country of silk. — Among modern writers, the author of the "Decline and Fall of the Roman Empire" is decidedly in favour of identifying the Seres with the people of China (Gibbon, Decline and Fall of the R. E., c. 40), and his words, which seem to refer to the same idea, are: "It is known that the Seres were sometimes assimilated by the ancients of the West, or the Hyperboreans, to the Scythians, Huns, and Huns, who were dispersed by the Chinese near the sources of the Irtysh, about the 91st year of our present era. The remnant of this nation directed their course towards the west, in order to penetrate into Sogdiana, but they could not reach this country, and were compelled to stop in the region to the north of Khouvei thas, or the Koutche of modern days. After this they moved towards the northeast, and occupied a part of the empire of Khouch, which the annals of China cease to make mention of. And yet De Guignes, without giving the least authority for what he advances, observes: "Ce sont les Huns qui passe- rent dans la suite en Europe sous le regne de l'Empe- reur Valens." It may not be amiss, before leaving this part of the subject, to say a few words in relation to the early history of the Huns, in order to disprove more fully the statement which has led to these remarks. (Cf. Klapproth, u. a.) The most ancient author who makes mention of the Huns is Dionysius Periegetes. This geographer, who wrote probably about A.D. 160, enumerates four nations, which, in the order of this narrative, followed each other, as regarded position, from north to south along the shores of the Caspian, viz., the Seythenians, the Huns (Οβρος), the Gasprians, and the Atabians. (Dionysi Periegetes, v. 730, Eustach, ed. in loc.) Klapproth, in his "Lettres en France," has given a number of particulars concerning the legend of the China offi de plus remarquable, c'est l'observation sur l'origine du nom de Sérige, cherché par M. Klapproth, dans le nom même de la soie, sse, en Chinois, qui vraisemblablement, dit-il, a pu être, dans d'autres dialectes du nord de la Chine, changé en sér. M. Klapproth, ayant déjà publié cette conjecture (Journal Asiatique, vol. 2, p. 243), j'ai eu l'occasion d'y joindre l'indication d'un fait qui me paraît propre à la changer en certi- tude: c'est qu'en effet, dans un vocabulaire coréen, qui fait partie de l'Encyclopédie japonaise, la soie est désignée par le nom de Sirou (prononcer Sîr), qui est tout-a-fait identique avec le Zîp (prononcer Sir) des écrivains Grecs. It has been ascertained, from a very early period of history, that the Huns were a branch of the nomadic tribes of the north, and that they were the first of the Huns, who were dispersed by the Chinese near the sources of the Irtysh, about the 91st year of our present era. The remnant of this nation directed their course towards the west, in order to penetrate into Sogdiana, but they could not reach this country, and were compelled to stop in the region to the north of Khouvei thas, or the Koutche of modern days. In order to make Seres mention the silk..."

and assign them, for their place of residence, the country to the north of Caucasus, between the Volga and the Don. For this same reason they call the pass of Derbend the rampart of the Huns. In the geography which is incorrectly ascribed to Moses of Khorene, the following passage also occurs: "The Massagetae inhabit as fat as the Caspian, where is the branch of Mongol Caucasus which contains the rampart of Tarman (Derbend), and a wonderful tower built in the sea: to the north are the Huns, with their city of Varhatchan, and others besides." Moses of Khorene, in his Armenian history, makes mention of the wars which King Tirdates the Great, who reigned from A.D. 259 to A.D. 312, waged against the northern nations who had made an irruption into Armenia. This monarch attacked them in the plains of the Karakmens, in northern Albania, between Derbend and Tehek, defeated them, slew their prince, and pursued them into the country of the Honk or Huns. It was useless, however, to multiply authorities. (Compare Klaproth, p. 235.)

...The surprising accuracy of his account, considering his imperfect sources of intelligence, may well demand our attention. The passage is as follows: 'Εκ δέ των σκληρών μεγαλού, ἐκ ἄγιον κορατα καὶ διαφέρει τῶν ἄλλων, γίνεται δὲ πρὸς τόν μὲν, μεταβαλτόν τοῦ σκληροῦ κάμην, ἐπειτα βεβαιαὶ, δέ τοιοῦτοι τοποδελθοῦν καὶ διὰ τὸν οὐρανόν ἔχειν καὶ διὰ τὸν κόσμον καὶ τα Βούδη άναλλος τῶν γυμνῶν περίφημον ἐναπτυσσόμενα κάπετα φώσαντον. Πρῶτα δὲ λέγεται φώσαν τον κόσμον τρίτον..."

Athenæus refers to this passage in the following terms: "Istoriel [Arystotels] θέτει καὶ έκ της των φιλωπο..."

...Dr. Vincent unites these two passages together, making the one supply what is defective in the other, and gives the following translation of them: "There is a worm which issues from an egg as small as the nit of lice: it is of a large size, and has [protuberances, bearing the resemblance of horns, in which respect] it differs from other worms. The first change which it undergoes is by the conversion of the worm into a caterpillar; it then becomes a grub or chrysalis, and along a certain period. The whole of this is completed in a month. There are women who wind off a thread from this animal, which it spins while it was in the state of a caterpillar; and that is the material from which they afterward form the texture of the web. This invention is attributed to Pampilda, a woman of the isle of Cos, and daughter of Latioi."

The learned translator then enters into a full examination of this passage of Aristotle, for the purpose of ascertaining whether the silk mentioned in it be the true silk which we have at the present day, and produced by the true silkworm. He considers a link of the chain to be wanting in the account of the passage, as it is not proved that the cocoon is not wound off from the animal itself, but from the cocoon. In the next place, the true silkworm is not of large size, but small, at its first appearance and before it becomes a caterpillar. "Neither can it properly be called a worm, as distinguished from the caterpillar. A caterpillar is discriminated from a worm by its small protuberances which serve for legs, and is called καμήν in Greek, from its bending or undulating motion; these legs Ctesius of Carthage may be hardly distinguishable at its first production, which may have induced Aristotle to call it a worm. As regards the Coan vestments, no one, after reading the passage cited above, will feel inclined to maintain that they were of cotton. They seem to have been entirely of fine, thin, transparent silk, inferior, however, in softness and splendor to the Oriental. Salmasius and Hoffman furnish an additional reason for the inferiority of the Coan article, which is, that the Coans suffered the aurelia to eat its way out of the cocoon. This ruins the silk for all fine work, for the thread is then obtained by spinning it from a flock; whereas, to have it reeled off continuously, the aurelia must be killed by heat, and the cocoon preserved from perforation." We find no mention made of the Seres, or their peculiar manufacture, in any Greek author for a long period subsequent to the age of Aristotle, unless it be that the fine stuff of the Seres is mentioned in the works of some writers. (Athenæus, v. l. p. 115, and the authorities there cited), which are described as having been almost transparent, and in point of fineness, as well as of price, ranked before those made of Byssus and Carpathus, were similar to those manufactured in the island of Cos.—The Romans appear to have first become acquainted with the name and product of the Seres about the reign of Augustus. Hence, whatever we find on this subject in the works of the ancients, may be credited for both. Virgil appears to be the first Roman writer who makes mention of the Seres. (Georg. 2, 121, seqq.) Who are meant in this passage by the "Ethiopians has been a subject of much more controversy, especially as the geographical situation of the Seres will depend, in a great measure, upon this. "Ethiopians" (Aithiotes) was a general name among the Greeks for every nation of a dark or swarthy complexion, an effect supposed to be a result of the heat and dryness of the great African deserts and the vicinity of the Nile, which caused the color of the skin to become blacker. Their first acquaintance with a race of this description seems to have been derived from Egypt and Phoenicia, in both of which countries they would naturally meet with many accounts of the tribes that occupied the interior of Africa. The name was afterward extended to the dark-brown natives of southern Africa, who brought their wares to Sidon by the overland trade, and hence it is that Homer makes mention of two Ethiopian races, the western and eastern (Odyssey, 1. v. 23.) The opinion of Aristarchus (Eustathius, p. 1386), and other of the Greg- cian commentators on Homer, which makes the Nile to have been the dividing line between these two races, is too refined for the age of the poet, and implies a more accurate acquaintance with the interior of Africa, and the course of the river of Egypt, than he appears to have possessed. Homer's western "Ethiopians" were the descendants of the Phoenicians, who sent their people to the western, those of southern Africa, who were thought by the earlier Greeks to dwell in the immediate vicinity of the great source of light. When the army of Xerxes, in a subsequent age, was poured upon Greece, the inhabitants of the latter country, perceiving some dark-coloured nations among the followers of the monarch, applied to them the name of Ethiopians, in perfect conformity with its original import, and hence Herodotus (7, 69 and 70: 3, 94 and 97), in speaking of the forces which served on that expedition, en-
merates two distinct races, the eastern and western Ethiopians. It is easy to perceive, from his description of the former, and their "long, straight hair," that none other are meant than the people of India. If this deduction be correct, the Seres of Virgil will, of course, be the people of China. As to their combing fleeces from the leaves of trees, the allusion is manifestly to the sericines or native silk spinners, who were believed to be a sort of down gathered from the leaves of trees. Thus Pliny (Plin., 6, 17), in a subsequent age, remarks, "Primi sunt hominim qui noscuntur Seres, lanicio sylvarum nobles, perfusum aqua depurantes frondium canantem."—The moment silk became known among the western nations, it was eagerly purchased as an article of luxury, and began to form a conspicuous part of Greek and Roman attire. At that period of growing corruption, it was no wonder that such an invention should be hailed with transport, which, while it supplied the person with a covering, still, like our gauze, exposed every limb to the eye of the beholder in almost perfect nudity. The Emperor Helogabalus, it is true, in a later age, was the first who disgraced himself by appearing in a dress wholly of silk; yet Seric and Cano vestments are frequently mentioned by the Roman writers either contained within the sacred tame of Virgil. (Tibullus, 2, 4, 29.—Id., 2, 6, 35.—Propert., 1, 4, 22.—Id., 4, 8, 23.—Ovid, Am., 1, 4, 16.) About the period of which we are speaking, it would appear that Seric vestments found their way to Rome also from foreign nations. Florus (Florus, 4, 12, 16) states, that in the reign of Augustus, an embassy from the Seres came to Rome, with presents of precious stones, elephants, and other gifts. Among these last, Seric vestments, or else raw silk, are doubtless included. It is with the gaudy and glittering productions of the Greek writers that flourished about this period, we shall be surprised to find Strabo passing over, in almost total silence, both the nation of the Seres as well as their singular manufacture, the more especially as his contemporary, Dionysius Periegetes, makes such full mention of it. Thus we find Dionysius describing the Seres as a nation of the farthest East, who paid no attention to cattle, but occupied themselves in combing the variegated fleeces gathered from their selected land, and in making vestments of an ingenious and costly kind, resembling in hue the meadow flowers, and with which even spiders' webs could not compare to the fineness of texture. (Dionysius Periegetes, v. 762, et seq.) Eustathius, archbishop of Themiscomania, who flourished about 1160 A.D., and wrote a learned commentary on the work whence this extract is taken, gives a very curious account of the Seres, which would tend still more strongly to confirm the belief that they were identical with the Chinese. He describes them (Eustath., in Dionys. Perieget., p. 239, ed. Oeconom.) as an unusual nation, refusing all intercourse with strangers (απροφερεσαι τον ομονομον και αναγκαιον). They marked the price on the articles which they wished to sell, and, having left them in a particular place, retired. The traders then came, and placed by the side of the goods the amount demanded, or else so much as they were willing to give. Upon this they withdrew in their turn, and the Seres coming back, either took what was offered, or carried away the goods again. We have here the same cautious system of commercial dealing which characterizes the Chinese of our own days, only in a far stricter degree. This peculiarity in the traffic of the Seres is noticed also by Pliny, Pomponius Mela, and Athenaeus Marcellinus. (Plin., 6, 17.—Pomponius Mela, 2, 18.—Athenaeus, 574, 8a, 236, 6 p., 399, ed. Ernesti.)—But to return to the order of chronology: in the reign of the Emperor Tiberius, according to Tacitus (Tacit., Annal., 2, 33), a law was passed at Rome ordaining that men should not disgrace themselves by the use of Seric vestments, or, to adopt the strong language of the original, "ne vestis Serica viros fodaret." Lipsius, in an Exurculus on this passage, endeavours to prove that a Seric vestment means one of cotton that grows spontaneously on trees in the country of the Seres, and that vestis bombicyna, on the other hand, means one of silk. But surely the idea of an exotic kind of cotton is very remote from the interposition of the Roman senate. Besides, Sylvester (Forcel., Lex Tot. Lat., s. v. Bombys), in his remarks on the 2d Satire of Juvenal (v. 66), has conclusively shown that sericum means "silk on the loom," and bombysa "raw silk."—At a later period we find Seneca (Seneca, de Benef., 7, 9) exclaiming, "Video Sericæ vestes, si vestes vocant saepe, in quibus nihil est quo defendit aut corpus, aut denique pudor posuit: quibus umitque, mulie parum lurum, nudam se non esse juravit. Hec ignent summa ab igniis citam ad commercium gentilium accessorura." And again, in another portion of his works, we have the following (Id., Ep., 90): "Posse nos vestitos esse sine commercio Serum."—It is in the elder Pliny, however, that we find the strongest authorities on this subject. The passage of Aristotle, which we have cited above, he quotes once (Plin., 11, 56) expressly as "quod nunc illudque," and another (Plin., 6, 17) instance, he alludes, in the following expressive words, to the object of the Roman females in adopting this dress: "ut in publico matrona transulcit." In the proem to the 12th book, he remarks, "Caid montes in marmora, vestes ad Seras peti." Among many other passages in this author, there is one too long to quote here, which proves conclusively that the Cano vestments were of silk, and the produce of a particular kind of silk worm bred in the island of Cos. Forcellini (Lex Tot. Lat., s. v. Bombys) cites the opinion of Salmassius (Sauima), who supposed that the silk worms of Pliny were the same as those of our own time, and that Pliny had, from want of sufficient information on the subject, quoted an incorrect description of them from some earlier writer. Quintilian also alludes to the toga serica (Quintilin., Inst. Ort., 12, 16), and Juvenal, as may well be imagined, finds the subject of considerable mention in one of his Satires (Juvenal, Sat., 6, v. 560.—Sat., 8, v. 101, and the comments of Ruperti.) In Martial, likewise, the allusions to Seric vestments are more than once met with. (Martial, Epistles, 11, 28.—Id., ib., 9, 38.) Suetonius (Suetonius, Vit. Calig., c. 52) only once makes mention of Seric garments, and then very slightly, in the case of the Emperor Caligula: "Sepe depictos, gemmataque inditus pavulæ, manumittet, et armillatus in pubibus processit, atque unquam serious tuæ." They are named also, once in Plutarch (Plutarch, Conjug. Præceps.—Op., ed. Reiske, vol. 6, p. 560), but the allusion is a very general one. A young female is admonished not to make use of τα σπικὰ, which can only be obtained at great expense. Pausanias is the next writer in the order of time who challenges our attention on this subject. He gives a long account of the silk worm, in a very interesting passage, which may be translated as follows: "The Seric worm (ζωκήφοιν) in their (the Seres') country, which the Greeks call ser (δυ σπιρα καλοντος Ελληνος), but to which the natives give a different appellation. It is twice as large as the largest-sized beetle, but in other respects resembles the spiders which weave their webs under the trees, and, like them, has eight feet. The Seres, in summer as well as winter, rear these insects in houses, and spin their silk on very slender thread, which is twined around their feet. They are fed nearly four years on panic (παραγομενοι φασι τροφι πλοιων); in the fifth (for they know that they will not live longer) they give them a green reed to eat. This is the animal's favourite food, which it devours until it bursts
from repletion. The Seres obtain a quantity of thread from its bowels." What Pausanias adds, however, respecting the situation of Serica, that it is "an island in the recess of the Indian Ocean," probably refers to Ceylon, and is grounded upon the mistaken idea (Ritter) that the silk worm, having been introduced into Asia by commerce, and the article of export from that island, was likewise manufactured there. Terrullian (de Paltio, c. 3) and Clemens Alexandrinus (in Pedagog, 2, 10) also speak of the silkworm, and appear better acquainted with the several changes which it undergoes than Pausanius. The principal points in which they differ from the correct accounts of modern times are, their making the insect incapable of producing the spider in the mode of forming its thread, and their ascribing a different fate from that of the mulberry for its food. (Memoires de l'Academie des Inscriptions, vol. 7, p. 342.) Dio Cassius and Herodian both make mention of the Seric manufactures. The former describes the ancient ἀπρόκτου in the following language (Dio Cassius, ed. Reimar, 43, 24, p. 358, l. 25): Toúo de τὸ ὕπόαεμα χλῆς βαρδάρου ήτοι ἕρων, καὶ παρὰ κείσιν καὶ πρὸς ἑκάστη, ἐς τρισθῆν τῶν πάνω γωνικῶν πεπτοῦσας. This expression of the uncertainty of the time, is the more to be esteemed, as it has found its way from that distant quarter even unto us, in order to furnish our higher class of females with the materials for excessive extravagance." Herodian speaks of Seric vestments as fitter for females than for men (Herodian, ed. Irmisch., 5, 5, 9, vol. 3, p. 144): Τὰ τινάκα καλλιϊπόμενα σὰν ἀνάθρα ἄλλας φθαίνει τρεῖς. Vopiscus (Vit. Aurelii, c. 45) informs us, " obsc nonius erat, ut unique, pulito blateo serico uterum, utle respondit: absti ut auro libra pen-sentur; libra enim auri tunc libra serici fuit." The extravagant price which is here mentioned, a pound of gold for a pound of silk, may easily be accounted for by the circumstance of the overland trade to Seric-being rendered more precarious by the rapid rise of the second Persian Empire. Passing by the several authors who mention the Seric vestments without any accompanying circumstances sufficiently important to merit a quotation, we come to Lampridius, who devotes to infamy the Emperor Heliogabalus (Lampridius, Vit. Heliogab., c. 26) for having first dared to appear in a dress wholly of silk. St. Basil (S. Basil. in exam. homil., 8) makes a curious application of the knowledge that appears to have been generally diffused, about this period, respecting the transformation of the (silkworm) Marcilia, and remarks upon the fear of rich, who could not be induced to dispense with garments of silk, to remember, at least, in putting them on, that the worm, of whose substance they were made, is a type of the resurrection. Julius Pollux (c. 384, 31, cap. 17, lib 7) also alludes to this insect: Σκάλκηςκε εἶναι Ὀδόντος, ἢ ὁν τὸ νῆμα ἁνών, ὀς ἔργος ἁράκτης ἐνεῖ, καὶ τὸν Ἐρασο απὸ τοιουτοῦ ἔτοιμον ὄνων ἀνθρώπων τὰ ὕπατα. Ammianus Marcellinus (22, 8, 5) follows, who gives the following narrative: They (the Seres) weave a delicate and tender thread, formed from moistened wool, combining it into a kind of fleece by frequently sprinkling with water the pods of the tree; spinning this into inner garments, they manufacture that celebrated silk which anciently composed the dress of the (Roman) nobility, but in my age is the indiscriminate and extravagant clothing of our times. In the interval, however, between the date of the former, and that of this passage, much ignorance of the true origin of silk in so late an age, and on the part of a writer otherwise so intelligent. One would imagine that Ammianus was describing the cotton-tree. A distinction appears to have been made, long before this period, between Bombycinum and Sericum: the former appellation being given to the produce of the Assyrian silkworm and that of Cos, the latter being used to denote the genuine silk, whether the work of an insect or the produce of a plant. Hence we find the distinction observed in St. Jerome (S. Hieron, de Instit. medici), "Spernunt Bombycinum telas, Serum velutina."

Next follows (Hezicassius, "S. et Σήραρος, who makes Σήραρος to have been the name of the insect whence the silk was obtained, and the silk itself to have been named Oloesýrkon, or, to use his own words, Σήραρος, ἕνα νήματα μεταξὺ, ἡ δύναμις ἔνθεν ἢ ἔντονα ἐχρήσται καὶ το ὄλοσφρυτον."

But yet, as if to show how very fluctuating was all the knowledge which the ancients possessed on this subject, we find Achilles Tatius, about this same period, speaking of silk as " the work of the Seres, who import it from India, and give it a name different from their own."

It remains but to add some passages from Isidorus. "Bombyce sens est a Bombyc, vermiculio, qui longisimia ex se filia generat, quartus textura bombycinum dictur, conficiturque in insula Co.—Serica a Serico dicta, sed quod etiam Seris primi miserunt; holoseric toa serica; tramosericus stamine lino, trama ex serici; holohorpyra toa ex purpura; byssina candida, byssina pelliculata; fortis linius, fortis linius de, cornu, duris, de coloribus, lib. 19, c. 17, p. 1294.) And again, "Byssus genus est quoddam linium candidi et mollissimi, quod Græci papavem vocant.—Sericum dietum, quia id Seris primi miserunt: vermiculii enim ibi usci perhibetur, a quibus huc circume arborum facit dulcurn; verrmes autem ipsi Graeci ολοσφρυκας nominantur." (Id., de nominibus Vestitum, c. 22, p. 1299.)—Before concluding we will take the liberty of adding a few remarks in relation to the high price of silk in the ancient world, for which we are indebted to the pen of Dr. Vincent. (Class. Journ., vol. 7, p. 35.) "As late as the time of Aurelian, Vopiscus informs us that silk sold for its weight in gold. The Coan fabric seems never to have reached this extravagant price, but only the pure Oriental silk. The expense of conveyance undoubtedly, and the difficulty of obtaining it, were the immediate causes of this enormous value being assigned to the article. The price seems never to have been depressed until Constantine became the centre of commerce for the Eastern and Western world; and there the depression advanced till the fifth century, when Ammianus mentions that silk, which had formerly been worn only by the nobility, was then the common dress of the lower orders." The learned writer then puts the question, why Justinian, as Procopius (Procop., Goth., 4, 17) remarks, showed his aversion to China, and that to the Orient in general, "whether both the insect and the manufacture were in existence at Cos? The one was a journey of hazard and difficulty, of nearly three thousand miles; the other a pleasant voyage short of four hundred. He proposes an answer to the question, namely, that the manufacture of Oriental silk had superseded the manufacture at Cos, which could only have happened from the superiority of the material or the manner of its fabrication. "If the learned writer were to take into account the remarks of Antipatros, as to the excellence of the silk manufactured by the Romans in the time of Constantine, we are at liberty to ask, whether the supposed superior quality of the silk of Cos was driven out of the market."—The learned writer, however, is wrong in censuring D'Avville for supposing that the monks sent by Justinian went only as far as Sirhind in India, and not to China itself. There is every reason to believe that the inhabitants of that part of India which lies between the Pendjib and the river Jumna had learned the process of silk manufacture from their
SERTORIUS.

Eastern neighbours. Hence their territory and capital took the name of Serinda (Ser-Ind), and even at this day some countries bear the names of Sertor, Sertonia, and "the land where the Hindus nurture the silkworm." It was to this quarter, very probably, that the monks of Justinian came. Gibbon, however, boldly asserts that these monks were missionaries, who had previously penetrated to China, and resided at Nan-kin, (Decline and Fall, ch. 40.)

Serranus, an island of the Aegean, south of Cythnus, and now Serpico. It was celebrated in mythology as the scene of some of the most remarkable adventures of Perseus, who changed Polydeuces, king of the island, and his subjects, into stones, to avenge the wrongs offered to his mother Danae. (Pind. Pyth., 12, 19.) Strabo seems to account for this fable from the rocky nature of the island. (Strab., 487.) Pliny makes its circuit twelve miles. In Justinian's time state-prisoners were sent there (16, 169). The frogs of this island were said to be mute, but to utter their usual note when carried elsewhere; and hence the proverbial saying, Βραχυς γεν Σαρπινος (Rasa Serphec), applied to dull and silent persons, who on a sudden became loquacious. (Compare, however, the remarks of Erasmus, Chil. 1, cent. 5, ad. 31, ed. Steph., p. 166.)

Serranus, I, a surname given to C. Attilius, from his having been engaged in saving his field (serere, "to sow") when intelligence was brought him of his harvest being destroyed by fire. He was appointed to the dictatorship. (Piso, 18, 4.—Peres. Animadw. Hist., c. 1.—Lit., 3, 26.—Virg., Æn., 6, 844.)—II. A poet in the time of Nero, to whom Spero has ascribed the eclogues that pass under the name of Calpurnius. (Quat. Philolog., 2, p. 11, seqq.—Bühr. Gesch. Röm. Lit., vol. 1, p. 303.)

Sertorius, Quintus, a distinguished Roman general, born at Nursia. He made his first campaign under Marius, and was appointed to the command of an island, which he reduced into Gaul; and he distinguished himself subsequently under Marius, when the same enemy made their memorable irruption into Italy. After the termination of this war he was sent as a legionary tribune, under Didius, into Spain, and soon gained for himself a high reputation in this country. On his return to Rome he was appointed questor for Cisalpine Gaul; and the Marian war soon after breaking out, Sertorius being of the second in age of the conspirators, took upon himself the command, and distinguished himself exceedingly useful in that capacity, and performed important services for the state. On the ruin of the Marian party, to which he himself belonged, Sertorius hastened back to Spain, and found no difficulty in resuming possession of that province. As soon as Sylla was informed of this act of rebellion, he sent into Spain a considerable army under Caius Annius, with orders to crush the insurgent forces. Sertorius, compelled to yield to the powerful forces thus brought against him, was induced to seek for safety in Africa. Pursued by bad fortune even to the wilds of Mauritania, he was reduced to the necessity of again putting to sea; but, being unable to effect a re-landing in Spain, he strengthened his little fleet by the addition of some of the Cilician pirates, and made a descent upon the island of Ebusus (now Isica), in which Annius had placed a small garrison. The lieutenant of Metellus, having the command of the enemy's coast, and, sailing to Ebusus with a strong squadron, was resolved to bring Sertorius to battle. A storm prevented the engagement; most of the ships were driven ashore, or swallowed up in the waves; and Sertorius, who had with difficulty escaped from the fury of the tempest, bore away with a few small vessels for the Straits of Gibraltar, and, landing near the mouth of the Batia, refreshed his men on the shores of the Atlantic Ocean. It was on this occasion that, fatigued by the vicissitudes of a hard fortune, and filled with gloomy views of the future, he is said to have listened to the romantic description of certain sailors, who charmed his ears with the delights and peaceful security of a group of happy islands lying scattered at a convenient distance in the Western sea. He would have retired to that fabled paradise, had not the Cilician rovers, who preferred a more enterprising life, refused to accompany him, and sailed back to the coast of Africa. Sertorius in like manner returned into the Mediterranean, and, having landed in Africa, soon came in contact with Pacianus, a lieutenant of Sylla's, and, though greatly inferior in number, gained a decisive victory with all the opposing army prisoners. The reputation acquired by this victory recovered the affairs of Sertorius. The Lusitani, irritated at the conduct of Annius, resolved to throw off the yoke; and, inviting the conqueror of Pacianus to assume the command of their army, they took the field against the deputy of Sylla, and set the whole power of Rome at defiance. The most brilliant success attended the arms of Sertorius. With 2600 men, whom he called Romans (though of these 700 were Africans), and an addition of 4000 light-armed Lusitani and 700 horse, he carried on the war against four Roman generals, who had 120,000 foot, 6000 horse, 2000 archers and slingers, and cities without number under their command. Of the officers opposed to him, he beat Cotta at sea, near the modern Trafalgar; he defeated Phidius, who had the chief command in Baetica, and killed 4000 Romans on the banks of the Guadalquivir by his own hand; he defeated Metellus, and Lucius Manlius, proconsul of Hither Spain; he likewise slew Thoranius, one of the officers sent against him by Metellus, and cut off the whole army under his command. Even Metellus himself, one of the most experienced and successful generals of the age, was not a match for Sertorius in the species of warfare which the Lusitani waged under his conduct. The Lusitani and the Afriics, having been driven from one fastness to another with a small body of active men, he cut off the Romans in every quarter, without allowing them time to make any arrangement for their defence, or even to see the enemy under whose hands their numbers were so rapidly reduced. In short, he combined in his character all the activity and hardness of savage life with the policy and military skill of a Roman general. Nor did Sertorius think it necessary to keep up his victories by, the acquisition of new advantages; he also undertook to establish among them the habits and advantages of civilization. He taught their soldiers all the more useful parts of Roman tactics; he founded schools for the education of youth; distinguished the meritorious by marks of his approbation; and even introduced among the higher orders the dress of Roman citizens. Sertorius possessed unbounded influence over the minds of the natives, as well from the high degree of military talent which he displayed, as from the conviction on the part of the Lusitani that he held secret communion with Heaven. This belief arose principally from the circumstance of his being attended wherever he went by a tame white fawn, which he led the rude natives to believe was a gift from Diana, and disclosed to him many important secrets. —The dangerous state of their affairs in Spain induced the Romans to send out another army of the Lusitani, under the command of another lieutenant commander proved in no degree more successful than the old; nay, on one occasion, Pompey had the mortification of seeing the city of Lauron taken and burned by Sertorius, without being able to render it any assistance, though near enough (to use the strong language of an ancient writer) to have warmed his hands at the flame. At last, however, private treachery for the most part defeated the attempts of the Lusitanians, their own citizens, one of his officers, who was jealous of his fame and tired of a superior, conspired against him. At a ban-
Of Servius, his age and character had hitherto claimed deference from others. Perpenna overthrew a glass of wine as a signal to the rest, and immediately Antonius, one of his officers, stabbed Servius, and the example was followed by all the other conspirators (B.C. 73).—No sooner had Perpenna accomplished his noxious object, than he announced himself as the successor of Servius. But he soon proved as unfit for the duties as he was unworthy of the honour attached to that high office. Pompey, upon hearing that his formidable antagonist was no more, attacked the traitor, whom he easily defeated. He was taken prisoner, and afterward executed as an enemy to his country; and in this way ended a war which at one time threatened the overthrow of the whole fabric of the Roman power in Spain.—Of Servius it has justly been remarked, that his great qualities and military talents would have undoubtedly raised him to the first rank among the chiefs of his country, had he been, not the leader of a party, but the commander of a state. With nothing to support him but the resources of his own mind, he created a powerful kingdom among strangers, and defended it for more than ten years against the arms of Rome, although wielded by the ablest generals of his time; and his achievements of this period would have rendered a people happy under his rule at a less turbulent period. (Plut. Vit. Sector. — Vell. Patr. 2, 30, seqq. — Flor. 3, 21, seqq.)

Servilia Lex, I. de Peonnia repetundia, by C. Servilius, the prator, A.U.C. 653. It ordained severer penalties than formerly against extortion; and that the defendant should have a second hearing. (Cic. in Ver. 1, 9.)—II. Another, de Judicibus, by Q. Servilius Capito, the consul, A.U.C. 657. It declared null all judgments of the senators and the equites, a privilege which, though originally belonging to the senators, had been taken from them by the Sempronian Law, and given to the equites, who had exercised it, in consequence, for seventeen years. (Cic. Brut. 43, seqq. — Tac. Ann. 12, 60.)—III. Another, de Civitate, by C. Servilius Glacia, ordained that if a Latin accused a Roman senator so that he was condemned, the accuser should be honoured with the privileges of the patricians of Rome. (C. Iuv. — T. V. Another, Agraria, by P. Servilius Rullus, the tribune, A.U.C. 690. It ordained that ten commissioners should be created, with absolute power, for five years, over all the revenues of the republic; to buy and sell what lands they saw fit, at what price and from whom they chose; to distribute them at pleasure to the citizens; to settle new colonies wherever they judged proper, and particularly in Campania, &c. But this law was prevented from being passed by the eloquence of Cicero, who was then consul. (Cic. in Pia. 2.)

Servilius, I. Publius Ahala, a master of horse to the dictator Cincinnatus. When Marius refused to appear before the dictator to answer the accusations which were brought against him on suspicion of his aspiring to tyranny, Ahala slew him in the midst of the people whose protection he claimed. Ahala was accused of this murder, and beheaded; but this sentence was afterward repealed. He was raised to the dictatorship.—II. Publius, a prosenul of Asia during the age of Mithradates. He conquered Isauria, for which service he was surnamed Isauricus, and rewarded with a triumph. (Vid. Isaurius.)—III. Nonius, a Latin historian, who wrote a history of Rome in the reign of Nero. He is praised by Quintilian (10, 1, 102).

Servius Sulpicius, the sixth king of Rome. The accounts respecting his origin are as obscure as those of any of his predecessors. The most ancient and poetical legend represents him as the son of Ocrisia, a captive and slave of Tanaquil, the wife of Tarquinus Priscus, by the Lae, or household god. Later legends made him a son of one of the king's clients, and for some time a slave; or the son of a man of rank and power in one of the conquered Latin cities, who being slain in the war, his widow was carried to Rome in her pregnancy, and she and her infant son were protected by Tanaquil. Another account of the origin of Servius has been preserved by a speech of the Emperor Claudius, as given in the Etruscan Annals. This speech was engraved on a brass plate, and was dug up at Lyons about two centuries ago. It is now preserved in that city. It was printed by Broter at the end of his edition of Tacitus, and has been also published in the Collections of Inscriptions. Claudius begins to recount how often the form of government had been changed, and even the royal dignity bestowed on foreigners. Then he says of Servius Tullius, "According to our Annals, he was the son of the captive Ocrisia; but if we follow the Tuscans, he was the faithful follower of Caesus Vibenna, and shared all his fortunes. At last, quitting Etruria with the remains of the army which had served under Caesus, he went to Rome, and occupied the Celian Hill, giving it that name after his former commander. He exchanged his Tuscan name, Mastama, for a Roman one, obtained the kingly power, and employed it to the great benefit of his country and its subjects." (Neb. Rom. Hist., vol. 1, p. 381.)—All accounts, however, betraying the favour of Tarquin and his queen, as having married the daughter of that monarch, and obtaining the throne in a great measure by the judicious management of the latter. It would seem as if Servius had in the very beginning of his reign encountered the opposition of the patricians. He is said not to have allowed any interregnum, or to have permitted the senate to sit to deliberate about the election to the sovereignty; but, as he had already acted a king, and his death of Tarquinus was publicly known, to have made a direct application, without any other preliminary process, to the comitia curiata, and to have been invested with the powers of former kings. The only historical conclusion which can be deduced from these incidental notices is, that a contest had begun between the kings and the patrician body, in which the kings sought to alienate the people from the patrician party, and to win the support of the equites. But as no direct diminution of their power could have been attempted without exciting an immediate insurrection, it was deemed expedient by these kings to raise a counterbalancing power in the state, which, having received its existence from them, might be expected to lend them aid in repressing the exorbitant power of the patrician body, combined with their hereditary privileges.

That Servius was a friend of the people, and that the patricians hated and plotted against him, appears from a passage of Festus: "Patrickus Vicus Rome dictus co quod ubi patricii habitaverunt, jubente Servio Tullio, ut, si quid molientur adversus eum spectum, ex locis superioribus opprimantur." Indeed, it might be indirectly gathered from the statement of Livy (1, 44), that he chose his habitation on the Esquiline, for that was the plebeian quarter. (Dion. Hal. 4, 18.) The government of Servius Tullius, was, from beginning to end, a sort of revolution. The organic changes ascribed to him can hardly be conceived of, as projected under any but republican institutions. At all events, they seem to have paved the way for the republic. Servius prepared his constitutional innovations by a division of land and of building ground for habitations to the poor. His constitution, however, had no resemblance to a pure democracy. Properly, it was the standard for republican institutions, as the public contributions and franchise; and on this principle his famous division into classes was based. When it is considered that out of a hundred and
eighty-nine (or ninety-three) centuries, the first class alone contained eighty, to which must be added the eighteen centuries of ephesians, and the last class and single. But, all in all, it is easy to see that Servius, if in effect he made this arrangement, substituted an aristocracy of wealth for the former patrician preponderance in the curia. As in these times the property of land was for the most part in the hands of the patricians, they of course retained preponderance in the new aristocracy likewise. But this was accidental, and soon ceased to be the case. — The war-like undertakings of Servius were princeps directed against the Etruscans. He is said to have carried on war, for twenty years, with the citizens of Veii, Care, Tarquinii, and, lastly, with the collective force of the Etruscans, till all allowed the pre-eminence of Rome and her king. — Servius enlarged the city, so as to bring within its compass the Viminal and Esquiline Hills; he finished the work begun by Tarquinius, by building the walls of the city of hewn stone; and, for the purpose of consolidating more firmly the union of the races of which the nation was composed, he erected the temple of Diana on the Aventine Hill, which was to be the chief abode of the Latin population recently brought to Rome. — The terrible tale of the last Tarquin’s accession to the throne might be regarded as incredible, were it not that Italian history in the middle ages affords us many similar examples. The narrative in question is as follows: The two daughters of Servius were betrothed to the sons of Tarquin. The one murdered her husband Aruns, and her sister, with the aid of the other son of Tarquin, and paved the way to the throne for herself and her new husband by the murder of her father. — The personal existence of Servius Tullius is regarded by many recent writers as involved in considerable doubt. The constitution of the classes and centuries is as real as Magna Charta, or the Bill of Rights, in English history; yet its pretensions stand in need of serious examination. We do not even know with certainty his name or his race; still less can we trust the pretended chronology of the common story. The last three reigns, according to Livy, occupied a space of 107 years; yet the king, who, at the end of this period, is expelled in nature, but not in declining age, is the son of the king who ascends the throne a grown man, in the vigour of life, at the beginning of the 8th cent. Servius was of very short duration before he is made king, yet immediately after his accession he is the father of two grown-up daughters, whom he marries to the brothers of his own wife. The sons of Ancus Marcus wait patiently eight-and thirty years, and then murder Tarquinii to obtain a throne which they had seen him so long quietly occupy. Still, then, we are, in a manner, upon enchanted ground; the unreal and the real are strangely mixed up together; but, although some real events exist, yet the general picture before us is a mere fantasy: single trees and buildings may be copied from nature, but their grouping is ideal, and they are placed in the midst of fairy palaces and fairy beings, whose originals this earth never witnessed. (Liv., i, 41, seqq.) — Hetherington’s History of Rome, p. 23, seqq. — Arnold’s Roman History, vol. 1, p. 48, seqq.) — II. Sulpitius Rufus, an eminent Roman jurist and statesman, descended from an illustrious line. He was contemporary with Cicero, and probably born about a century B.C. He cultivated polite literature from a very early period, especially philosophy and poetry. At an early age he appeared as a pleader at the bar. In consequence of a reproof received from Quintus Mucius, an eminent lawyer, grounded upon his ignorance of the law, he applied himself with great industry to legal studies, and became one of the most eminent lawyers of Rome. Cicero highly commends his legal knowledge. Sulpitius passed through the various offices of the Roman state, and was consul B.C. 51. Cæsar made him governor of Achæia after the battle of Pharsalia; but, when that chief was taken off, Sulpitius returned to Rome, and acted with the Roman party. He died in the camp of Antony, under the walls of Modena, having been sent on an embassy to that leader from the Roman senate. Cicero, in his 9th Philippic, pleads for a brazen statue to be erected to Sulpitius, which honour was granted by the senate. — III. Honoratus Maurus, a learned grammarian in the age of Arcadius and Honorius. He has left Latin commentaries upon Virgil, still extant. These are, however, considered rather as commentaries to Virgil than remarks and criticisms on the poet than as composed by himself. They contain many valuable notices of the geography and arts of antiquity. These commentaries are found annexed to some of the older editions of Virgil. They are most correctly given in the edition of Virgil by Burmann, Amst., 1746, 4 vols. 4to.

Sesostris, a celebrated king of Egypt, whose era will be considered in the course of the present article. According to the common account, his father ordered all the children in his dominions who were born on the same day with him to be publicly educated, and to pass their youth in the company of his son. This plan succeeded fully, and Sesostris, on attaining to manhood, saw himself surrounded by a number of faithful ministers and active warriors, whose education and intimacy with their prince rendered them inseparably devoted to their king. Sesostris, during several brilliant conquests as his father’s lieutenant, had succeeded his parent on the throne, he became ambitious of military fame, and, after he had divided his kingdom into 36 different districts or nomes, he marched at the head of a numerous army to make the conquest of the world. Libya, Ethipia, Arabia, with all the islands of the Red Sea, were conquered, and the victorious monarch marched through Asia, and penetrated to the confines of the East and the conquest of Darius. He also invaded Europe, and subdued the Thracians; and, that the fame of his conquests might long survive him, he placed columns and images in the several provinces he had subdued; and, many ages after, inscriptions were still to be seen commemorating his conquests. At his return home the monarch employed his time in encouraging the fine arts, and in improving the revenues of his kingdom. The work of the first Sesostris was continued for the victories he had obtained, and mounds of earth were heaped up in several parts of Egypt, where cities were built for the reception of the inhabitants during the inundations of the Nile. After a long and glorious reign, Sesostris, now grown old and infirm, is said to have destroyed himself. (Diod. Sic., i, 53, seqq.) — Such is the common legend relative to this celebrated king and conqueror; the hero of Champollion’s system, as of all early Egyptian history and, if we are to believe Diodorus, of their poetry, the Sesostris of Herodotus, the Sesoisis of Diodorus, the Sethos of Manetho, the Rhames of The Great of the monuments, he appears at the head of the nineteenth dynasty as the greatest of the Theban kings. Everywhere this mighty monarch stands forth in prominent grandeur. Before and in the temples of the Southern temples, from an image in Thebes, in the ruins of Memphis, his colossal statues appear stamped, Champollion asserts, with the reality of portraiture. In almost every temple, up to the confines of Ethiopia, his deeds and triumphs are wrought in relief and painting. The greater part of the celebrated obelisks either are inscribed to him or bear his record. That of the Lateran has been long known (from the curious interpretation of it in Agriculturae, and long to a King Rameses; one side of Cleopatra’s Needle is occupied with his deeds; and, besides his legends in the ruins of Luxor and Carnac, the immense
The question resolves itself into the relative degrees of weight attached to Africanus, Eusebius, or the Old Chronicle, as to the reign of the Twentieth Dynasty. It should be observed, that there may be five years of error in the date of the capture of Jerusalem, and it is uncertain at what period in the reign of Sesostris that event took place. M. Champollion Figeac's date, therefore, for different reasons from his own, is as probable as any other.—Ancient history is full of the triumphs of this Egyptian Alexander: was it the echo of native legends, either poetic, or, if historical, embellished by national vanity, or containing substantial truth? The memorable passage in Tacitus is at once the most brief and the fullest statement of the glories of his reign. The works of Germanicus to Thoebes, the elder of the priests, interpreting the inscriptions in his native language, related to the wondering Roman the forces, the conquests in Africa, Asia, and Europe, and the tribute levied by the Great Rhameses. (Tacitus, Ann., 2, 60.)—Let us trace this line of conquest, which appeared so vast, and perhaps romantic, as to have induced those writers who, towards the end of the last century, were for resolving all history, mythology, and religion into astronomy, upon grounds rather more plausible than usual, to consider the king of Egypt no more than a mythological personification of "the giant that rejoiced to run his course from one end of Heaven to the other." The first conquest generally attributed to Sesostris is Ethiopia. Some writers, indeed, make him commence with a maritime expedition against Cyprus and Phoenicia; but the most probable account states that, either during his father's life or after his own accession, he led the triumphal procession of the gods to the temple of Menophres, and so to the Nile to the sacred Memoi. He conquered, says Diodorus, the southern Æthiopians, and forced them to pay tribute, ebony, gold, and elephants' teeth. No where do the monuments so strikingly illustrate the history. In the Nubian temples, representations of the victories of this great king line the walls. One at Kalabsche has been described with great spirit by Heeren, from Gau's engravings. It represents a naked queen sitting on a throne, her children imploring mercy from the conqueror. Now, though female sovereigns were rarely known in Egypt, in Æthiopia they were common. Even at a late period, the Òdace of the Acts will occur to every reader. Besides the queen, there are the spoils at the feet of the conqueror, what seems to be ivory, with golden ingots, and huge logs of ebony. We proceed on our course, first remarking a fact which, if we remember rightly, we escaped the notice of Heeren, that the career of Sesostris is led precisely along the line on which he has traced, with so much ingenuity and research, the road of ancient commerce. It might almost seem that the conqueror followed the track of the caravan or fleet, to plunder or make master of the successive centres or emporia of commerce, and of the different countries from which the richest articles of traffic were sent forths. The first step as stated by Dionysius of Æthiopia, the next of Africa to the west: of this, it is true, we have but an indifferent voucher, that of a Latin poet, and one, in general, more to be suspected of timid hyperbole than his brethren, namely, Lucan. (Veni ad occasum, mundique extrema Sesostris, 10, 276.) Still, some extensive subjugation of the Libyan tribes may be assumed without much hesitation. The wild animals of the desert are perpetually led in the triumphal car of the Egyptians—the antelopes, the apes, the giraffes, and the ostriches.—Arabia, to the older world, was the land of wonder and of wealth. From the Hebrew prophets, who delighted to dwell on "the gifts to be brought from Arabia and Saba," to the latest Greek and Latin poets, the geographer Dionysius and the luxuriant Nonnus, the riches and marvels of the land and people are perpetually displayed. Araby the Blessed, either producing or possessing the carrying the tribute of those costly spices and incenses which were so prodigally used in Egypt in embalming the dead and worshipping the gods, would naturally be an object of ambition to an Egyptian conqueror. Accordingly, even before the triumphant career of Rhams-
Sesostris.

The Great, curious vestiges of Egyptian conquest in the Arabian peninsula have been brought to light, and Arhab (the Red Earth) is described as under the feet of Rameses Memnon, in one of those curious representations of his conquests said to line the walls at Medinet-Abou. It was on a height overlooking the narrow strait which divides Africa from Arabia that Sesostris, according to Strabo, erected one of his columns. The wars between the later Abyssinian kings and the sovereigns of Yemen, in the centuries preceding Mohammed, may illustrate these conquests. The hatred or terror of the sea attributed to the later Egyptians was either unknown or disclaimed, as the monuments clearly prove, by the great Theban kings; more than one regular naval engagement, as well as descents from invading fleets, being represented in the sculptures. On the Red Sea, Sesostris, according to history, fitted out a navy of four hundred sail; but whither did he or his admirals sail? Did they commit themselves to the trade-winds, and boldly stretch across towards the land of gold and spice? Are some of the Hill-forts represented in the sculptures those of India? Did his triumphant arms pass the Ganges? Do the Indian hunches on the cattle, noticed by Mr. Hamilton, confirm the legend so constantly repeated of his conquests in that land of ancient fable? Or, according to the modest account of Herodotus, did they coast cautiously along, and put back when they encountered some formidable shoals? Did they follow the later Egyptian-Chaldaean monarchies of the Assyrians and Medes, or press on to that great kingdom of Bactria, which dimly arises amid the gloom of the earliest ages, the native place of Zoroaster, and the cradle of the Magian religion? Champollion boldly names Assyrians, Medes, and Bactrians as exhibited on the monuments; but the strange and barbarous appellations which he has read, as far as we remember, bear no resemblance to those of the countries he named. Quatremere, Coquerel, and others, however, have observed that the features, costume, and arms of the nations with which the Egyptians join battle are clearly Asiatic; the long, flowing robes, the line of face, the beards, the shields, in many respects are remarkably similar to those on the Babylonian cylinders and the sculptures of Persepolis. "The dominions of Sesostris," our legend proceeds, "spreads over Armenia and Asia Minor. His images were still as Egyptians were then unknown to the nations of the East, between Ephesus and Phocaea, and another between Smyrna and Sardis. They were five palms high, armed in the Egyptian and Ethiopian manner, and held a javelin in one hand and a bow in the other; across the breast ran a line, with an inscription: 'This region I conquered by my strength (lit. my shoulders).' They were mistaken for statues of Memnon." This universal conqueror spread his dominion into Asia and Europe. The sea was the limit of his victories. On the eastern shore of the Euxine he left, according to tradition, a part of his army, the ancestors of the circumcised people, the Colchians. But his most formidable enemies were the redoubted Scythians. Pliny and other later writers assert that he was vanquished by them, and fled. But Egyptian pride either disguised or had reason to deny the defeat of her hero. There is a striking story in Herodotus that when he was in Egyptarius, and heard that his statue should take the place of that of Sesostris, the priests boldly interfered, and asserted the superiority of their monarch, who had achieved what Darius had in vain attempted, the subjugation of the Scythians. Are we then to dismiss all this long history of triumphs and conquests into the regions of mythic or allegorical legend? Are we to consider it the pure creation of the monstrous exaggeration of national vanity? to resolve it into the audacious mendacity of the priest or the licensed fiction of the bard! A priori, there is nothing improbable in the existence of one or of a line of Egyptian conquerors: Egypt was as likely to send forth "its mighty hunter, whose game was men," as Assyria, Persia, Macedonia, Arabia, or Tartaria. On the other hand, we have the uniform testimony of ancient history, ancient tradition, and existing monuments. Egyptian history is reported to us by every ancient author, Herodotus, Diodorus, Manetho, Strabo, and is assuredly deserving of as much credit as the scattered fragments of the Oriental annals, which bear the name of Berosus or Sanchoniathon, or the traditions preserved by more modern antiquaries. The only history which has approximated to modern accuracy in this is that which we shall presently consider. How far the general tradition may be traced to Egypt as its sole fountainhead, may be doubted; there is some semblance of a connexion with Scythian tradition preserved in Justin and Jornandes; in the former we find the name of a Scythian king contemporary with Sesostris. But the monuments which cover the walls of the Nubian cities, more particularly of Thebes, afford the strongest confirmation to the extensive conquests of one or more of the mighty Pharaohs. These monuments, entirely independent, it must be remembered, of the interpretations of their legends by Champollion, represent battles and sieges, combats by land and sea, in countries apparently not African, against nations which have every character of remote, probably Asiatic races. There are rivers which cannot be the Nile; fortresses which resemble, not those of Egypt, those of those of the districts bordering on Egypt. But how is it that the sacred writings preserve a profound silence on all the invasions, conquests, and triumphs of this Egyptian Alexander, or, if Champollion is to be credited, this race of Alexanders? We must take up the question of the connexion between the sacred and Egyptian history at an earlier period. On this interesting inquiry two writers, M. Coquerel, a Protestant, and M. Greppo, a Roman Catholic divine, have entered with much candour and ingenuity. To what period in the Egyptian history is the Mosaic Exodus to be assigned? This question seems to have been debated, if we may so speak, on the scene of action among the Jewish and Grecian writers in Alexandria. The fact was universally admitted, though the chronology was warmly contested; as to the fact, it may be safely asserted, that no recorded conquest can approach the dependence of its religious sanction, has generally as high a claim to the character of authenticity and credibility as any ancient document; he who should reject it would not merely expose his own sincerity as a believer in revealed religion, but his judgment as a philosophical historian. Nor can we read the histories of Diodorus, or Tacitus, or the treatise of Josephus against Apion, without clearly seeing that the Egyptian historians, however they might disfigure, no doubt did notice the servitude and the escape of the Israelites from Egypt. But both this and the chronological question were carried on with the blinding feelings of national pride and animosity on each side, and it is far from likely that we should disentangle the web which has thus been ravelled, nor can we expect to receive any direct information on this subject from the monuments. One pious writer has added "it is a singular evidence; but surely without much reason, for the monuments almost exclusively belong to Upper Egypt; nor does a proud nation inscribe on its enduring sculptures its losses and calamities; it is the victorious, not the discomfited, monarch whose deeds are hewn in stone.—Both M. Coquerel and M. Greppo adopt the common Usharian date, 1491, for the Exodus. Now, though this date is as probable as any other, we cannot admit the conclusion. The great variation of chronologists on this point is well known; nor is any question of biblical criticism more open to fair debate than the authenticity of the text of 1 Kings, 6, 1, the
basis of this calculation. Our authors likewise adopt M. Champollion Figeac's date, 1473, for the accession of Sesostris, and the common term of two hundred and fifteen years for the residence of the Israelites in Egypt. Joseph might thus have been sold under Mosaic; Jacob and his family entered Egypt under his successor, Miphe-Thuotmosis, and departed in the thirty-sixth of his reign. Several curious incidental points make in favour of this system. At a period assigned to the ministry of Joseph, clearly, the native princes were on the throne; the priesthood were in honour and power, particularly those of Phre. The obelisk raised by Mipris Miphra, at Heliopolis, will be remembered: his son likewise bore the title of Miphra. Now Joseph was married to the daughter of Pet-e-phre, the priest of Phre, at On or Heliopolis. At this period, too, the shepherds were recently expelled, and, therefore, an "abomination to the Egyptians," and the land of Goshen was vacant by their expulsion. Diodorus, it may be observed, gives seven generations between Mipris and Sesostris, which, at three for a century, amounts nearly to the date of the residence of the Israelites in Egypt. Towards the close of the period the race of Raamses ascended the throne; and Raamses is the name of one of the cities. It is true that there are the curious incidental illustrations of this system, the same, we may observe, with that of Usher and Bishop Cumberland; but we must not dissemble the difficulties. The Exodus, according to the dates adopted, took place seventeen years before the death of Amenophis; he, therefore, could not have been the Pharaoh drowned in the Red Sea; a difficulty rendered still more startling by the very interesting description of the sepulchral cave of this Amenophis by V. of Champollion, and which seems clearly to intimate that this Pharaoh reposed with his ancestors in the splendid excavation of Bcn-el-Malouk. Here, however, M. Greppo moves a previous question.—Have we distinct authority in the Hebrew Scriptures for the death of Pharaoh? In the contemporary descriptions it is the host, the chariots, the horsemen of Pharaoh which are swallowed up; and there is no expression that intimates, with any degree of clearness, the death of the monarch; the earliest account of this Amenophis of the death of the king is a poetical passage in the one hundred and thirty-sixth Psalm (v. 15), which is generally considered to have been written after the captivity, and even this may, perhaps, bear a different construction. There is a second difficulty still more formidable.—The scene of the Mosaic narrative is undoubtedly laid in Lower Egypt, and seems to fix the residence of the kings in some part of the northern region; but it seems equally clear that Thbes was the usual dwelling-place of this Ammonian race of sovereigns. Tradition agrees with the general impression of the narrative; it hovers between Tanis and Memphis, with a manifest predilection for the former. The Tanitic branch of the Nile is said to be that on which Moses was exposed; and the "wonders in the field of Zoan" indicate the same scenes on much higher authority. The LXX. and the Chaldee paraphrase render Zoan by Tanis. We are aware that Champollion will not "bear a rival near the throne" of his magnificent Pharaohs, and other opponents may object the "all Egypt" of the Scriptures. As to the latter objection, it may certainly be questioned whether "all Egypt" included the Thebaid; but if Champollion (we were to suggest the possibility of a collateral dynasty and a second kingdom, at this period, in the northern part of the region) the claim of the great sovereigns like Horus, Mandoue, or especially Rameses Memiamoun, would ensure the independence of a part, as it were, of the great Egyptian monarchy; we can only rejoin the frequency with which the great sovereigns of the East are dismembered by the assertion of independence of some powerful satrap, or the division between the sons on the death of a king. In the twenty-eighth year of Egyptos, (the Rameses Memiamoun of the monuments,) says Eusebius, in the Chronicon (Armen. Vers.), "Busiris in partibus Niti fluvii tyrannidem exercet, transcansitque perigrioris sphodrat."—Have any of these dynasties been discovered in Lower Egypt between Mipris and Sesostris? Would there be the dominion of the latter part of the great Theban dynasty to Upper Egypt, and of their conquests to the south and east, account for Herodotus, who wrote from Memphian authority, making Sesostris the immediate successor of Mipri? Might not the blow inflicted on the Tanite kingdom by the loss of its slave population and its army, enable Sesostris with greater ease to consolidate the whole native monarchy? We are not, however, blind to the objections against this scheme, and rather throw it out for consideration than urge it with the least positive-ness. Yet far be it from us to confine the inquisitive reader to a choice between these two hypotheses. He may consult Mr. Faber, who will inform him that the Pharaoh who perished in the Red Sea was one of the shepherd kings. We may turn to Josephus, and find that the shepherd who did the same; and we may urge that this transformation was a peaceful minister and his family of seventy persons became a horde of conquering savages and a dynasty of kings, we are at a loss to conceive: Perizonius, however, has ably supported this untenable hypothesis. There is another theory, which we are inclined to suspect was that of Manetho, and, therefore, worthy of consideration; but it is so strangely disfigured in Josephus, that it is difficult to know to whom we are to refer it. By this account, Amenophis was inserted by Manetho after Sesostris and his son Raamses, yet he is immediately after represented, either by Manetho or Josephs, as their predecessor; he it was who expelled a second race of leprous shepherds, and his fate was moulded up with a tradition of a great catastrophe connected with religion. This would throw the Exodus's century later (the Jewish date comes as low as 1912), and would become the flattest coming of all, that it would settle the question about Sesostris; and the Jews of all ages were more likely to exaggerate than depress the antiquity of their nation.—If, however, according to the general view, we place the Exodus before the accession of Sesostris, in what manner do we account for the silence of the holy books concerning this universal conqueror? M. Coquereul and M. Greppo answer once, and with apparent probability, that the trans-plant armies of the Egyptians streamed through Pales- tine during the forty years which the Israelites passed in the secret and inaccessible desert. Yet a prelimi- nary question may be started — according to the general accounts, Did the Egyptian pass through Palestine? By the line of march which we have drawn out from what seem the best authorities, he certainly did not, excepting possibly on his return, and of his return nothing is said, excepting that he survived, whether by land or sea is not stated, at Pelusium. We will not urge the words of Justin, that this great conqueror had a strange predilection for remote conquests, and de- spised those which lay near his own borders; but it is possible that the comparative insignificance of Palest- ine, or its ready submission, might preserve it from actual invasion, if it did not happen to be on the line of march. It is true that Herodotus sends forth the Egyptian to win his first laurels by the conquest of Cyprus and Phoenicia; but the subjugation of the islan- clearlly denotes a maritime expedition. The con- quest of Phoenicia is confirmed by a very singular monument, a bilingual inscription in hieroglyphics and arrow-headed characters the former of which show the
legend of Rhameses the Great. This has been found at Nahar-el kelt, in Syria, near the ancient Berytus. In fact, while Phenicia, already perhaps mercantile, might attract an Egyptian conqueror, Palestine, only rich in the fruits of the soil, which Egypt produced in the utmost abundance, was a conquest which might datter the pride, but would offer no advantage to the sovereignty of the Nile. Herodotus, indeed, expressly asserts, that he had seen one of his obscene trophies of victory raised among those nations which submitted without resistance in Syria Palastina. Larcher has already observed on the loose way in which the boundaries of Palestine were known by the Greeks, and has urged the improbability that the magnificent sovereigns of Judeas, David and Solomon, would suffer such a monument of national disgrace to stand; he supposes, therefore, that it might be in the territory of Ascalon. We are somewhat inclined to suspect that many of these pillars might be no more than the symbols of the worship of Baal-Peor. Was Herodotus likely to read a hieroglyphic inscription without the assistance of his friends, the priests of Egypt? Be this as it may, after all, if we can calmly consider the nature of the Jewish history in the Bible, all difficulty, even if we suppose the peaceful submission to the great conqueror, ceases at once. The Book of Judges, in about fourteen chapters, from the third to the sixteenth, contains a story of the city of the city of the children of Israel. Its object appears to be to relate the successive calamities of the nation, and the deliverances wrought "by men raised by the Lord." But the rapid march of Sesostris through the unresisting territory, as it might exercise no oppression, would demand no deliverance. More particularly, if it took place during one of the periods of servitude, when masters and slaves bowed together beneath the yoke, it would have added nothing to the ignomy or burden of slavery. (Quarterly Review, vol. 43, p. 141, seqq.)

SESTOS, a city of Thrace on the shores of the Hellespont, nearly opposite to Abydos, which lay somewhere to the south. From the situation of Sestos it was always regarded as a most important city, as it commanded in a great measure the narrow channel on which it stood. (Theopomp., ap. Strab., 591.) It appears to have been founded at an early period by some ancients of the name of Euxus, who was, according to Herodotus and Leander, and still more the passage of the vast Armament of Xerxes, have rendered Sestos celebrated in ancient history. Sestos is said by Herodotus to have been strongly fortified; and, when besieged by the Greek naval force, after the battle of Mycale, it made an obstinate defence; the inhabitants being reduced to the necessity of eating the thongs which fastened their beds. The barbarians at length abandoned the place, which surrendered to the besiegers. (Herod., 9, 115.—Thucyd., 1, 89.) The Athenians, when at the height of their power, justly attached the greatest value to the possession of Sestos, which enabled them to command the active trade of the Euxine; hence they were wont to call it the corn-crest of the Pireus. (Aristot., Rhet., 3, 10, 7.) After the battle of Ægospotamos, Sestos recovered its independence with the rest of the Chersonese; but the Athenians, many years after, having resolved to recover that fertile province, sent Chares to the Hellespont with a considerable force to attempt its conquest. The Sestians were summoned to surrender their town, and, on their refusal, were speedily besieged; after a short resistance the place was taken by assault, when Chares barbarously caused all the male inhabitants capable of bearing arms to be butchered. This severe blow probably caused the death of the town, as from this period little mention of it occurs in history, and they might be regarded as Sestos as being a considerable place in his time; he observes, that the current which flowed from the shore near Sestos greatly facilitated the navigation of vessels from thence, the reverse being the case with those sailing from Abydos. (Strab., 3, 10, 7.—Polyb., 16, 29.) Munnell says the site of Sestos is now called Ialacus (Geogr., vol. 7, p. 193.—Cramer's Anc. Greece, vol. 1, p. 328.)

Sethon, a priest of Vulcan, who made himself king of Egypt after the death of Ancyra. He was attacked by the Assyrians, and delivered from this powerful enemy by an immense number of rats, which in one night gnawed their bowstrings and thongs, so that on the morrow the Assyrians were found to be useless. From this wonderful circumstance Sethon had a statue which represented him with a rat in his hand, with the inscription of Who so ever sees this statue let him be proud. "The Babylonian Talmud," observes Pridaux, "states that the destruction made upon the army of the Assyrians was executed by lightning, and some of the Targums are quoted for saying the same thing; but it seems most likely that it was effected by bringing on them the hot wind which is frequent in those parts, and often, when it lights among a multitude, destroys great numbers of them in a moment, as frequently happens to caravans; and the words of Isaiah, that God would send a blast against Sennacherib, denote also the same thing. Herodotus gives us some kind of a disguised account of this deliverance from the Assyrians in a fabulous application of it to the Egyptian country. It would have been more than the Egyptian instead of Hezekiah." The learned dean then remarks upon the strong confirmation given to the account in Scripture by the statement of Herodotus, and his mentioning the very name of Sennacherib. (Pridaux's Connexions, vol. 1, p. 23, seqq., ed. 1831.)

SETIA, a town of Latium, northeast of Antium and north of Circei. It is now Sessa. Its situation on a steep and lofty hill, which it is said it was thought in the time of Lucullus, preserved by Aulus Gellius (16, 9). The wine of this town was in considerable repute, and Augustus, according to Pliny (14, 6), gave it the preference, as being of all kinds the least calculated to injure the stomach. We may infer from Statius (Silv., 2, 6), that it was sometimes poured on the ashes of the wealthy dead. (Cramer's Anc. Italy, vol. 2, p. 107.)

SEVERUS, I. LOCUS SEPTIMUS, a Roman emperor, born at Nemausus in France, and a member of the imperial family. Upon coming to Rome in early life, he received the benefit of a liberal education, and was subsequently raised to the dignity of a senator by the favour of Marcus Aurelius. His youth, it is said, did not escape untainted by the impurities that disgraced the capital; and on one occasion he was tried for a flagrant crime at the tribunal of Didius Julianus, whom he after ward deposed and put to death. Having held the usual offices which qualified a candidate for the consular power, Severus was intrusted with several military appointments of great honour and importance. He served in Africa, in Spain, and in Gaul; and finally obtained one of the most desirable commands in the empire, that, namely, of the legions employed in Pannonia, to defend the banks of the Danube against the inroads of the barbarian tribes who dwelt beyond it. When the news was conveyed to him that Didius Julianus had ascended the imperial throne, rendered vacant by the assassination of Pertinax, he resolved to seize the opportunity which was thereby presented for gratifying the ambition which had long been lurking in his bosom. The memory of Pertinax was dear to the legions of Pannonia, whom he had often led to victory; and Severus lost no time in taking advantage of this reverence and affection for the murdered prince. The ardour of the troops which he addressed on this occasion to his chief on the field by the names of emperor and Augustus, and a rapid march soon brought him to Rome. Julianus was put to death by a decree of the senate, Severus ascended the imperial throne, the
SEVERUS.

Praetorian guards, who had murdered Pertinax and sold the empire to Didius, were disbanded by the new monarch, and a triumphal pageant witnessed the entrance of Severus into the Roman capital. Next followed the overthrows of Niger and Albinus, the two competitors with Severus for the empire (vid. Niger and Albinus) ; and these events were succeeded by the death of many nobles of Gaul and Spain, and also of twenty-nine senators. Many of his lieutenants were accused and put to death. Meanwhile the Parthians, under Vologeses, availing themselves of the absence of Severus, had overrun Mesopotamia, and besieged Lestus, one of his lieutenants, in Nisibis. The emperor resolved to march against them, and it was his intention to establish the power of Rome beyond the Euphrates on a much firmer foundation than it had enjoyed since the days of Trajan. The Parthians retired at his approach ; he ascended the Euphrates with his forces, while the army marched along its banks; and having occupied Seleucia and Babylon, and sacked Ctesiphon, he carried off 100,000 inhabitants alive, with the women and treasures of the court. Leading his army, after this, against the Atreni, through the desert of Arabia, his foragers were incessantly cut off by the light cavalry of the Arabs; and after lying by before Atara twenty days, and making an ineffectual attempt to storm, he was compelled to retreat. Some wrote that he was driven by the Palestines. He wrote that he made the tour through Egypt, visited Memphis, and explored the Nile. His return to Rome was celebrated by a combat of 400 wild beasts in the amphitheatre, and by the nuptials of his son Bassianus Caracalla with the daughter of Plautianus. (Vid. Plautianus.) After a short residence in his capital, a period marked by increased severity on the part of the emperor, and a degree of tyranny rendered the more odious by the growing unpopularity of his suspicious temper, Severus took refuge from the discontents of the two sons, Geta and Caracalla, and from the intrigues of state, in the stirring scenes of a foreign war. He passed over into Britain, accompanied by his sons, with the view of securing the northern boundaries of the Roman province against the incursions of the Caledonians, and of the other barbarous tribes who dwelt between the wastes of Northumbria and the mountainous ranges of Scotland. In the latter, also, that the love of military glory might exalt the ambition of his sons, and chase from their breasts those malignant passions, which at once disturbed his domestic repose, and ever and anon threatened to tear the commonwealth in pieces. His success against the foreign enemy was much more complete than his scheme for restoring fraternal concord. The difficulties which he had to overcome, however, were very great, and must have complicated the resolution of a mind less firm than that of Severus. He was obliged to cut down forests, level mountains, construct bridges over rivers, and form roads through fens and marshes. His triumph, such as it was, was soon disturbed by the restless spirit of the Caledonians, and by the intrigues of his ungrateful son Caracalla. This young prince, after failing in an attempt to excite the soldiers to mutiny, is said to have drawn his own sword against the person of his father. Irritated by such conduct, on the part of his friends as well as of his enemies, Severus allowed himself to fall a prey to the corroding feelings of anger and disappointment. He invited his son to complete his act of meditated paricide; while in respect to the revolted Britons, who had abused his clemency, he expressed, in the words of Homer (II., 8, 97, seqq.), his fixed resolution to exterminate them from the face of the earth. But death soon put an end to the contest of his son and himself. Having returned as far as York (Eboracum), he was attacked with a disease which he himself forewarned would, at no distant period, terminate his career; and, in the expectation of this event, he called for his sons, whom he once more exhorted to union and mutual affection. He expired at York, A.D. 211., in the sixty-sixth year of his age, having reigned nearly eighteen years. It is difficult to obtain from the pages of ancient writers a fair or consistent representation of the character of Severus. One of the authors of the Augustan history applies to him an expression which was suggested by the effects which the conduct of the emperor would have on the wants of Syria, and the fortunes of his country, namely, that it would have been well for the state if he had never been born, or had never died. (Spartian, c. 18.) This remark has in it, perhaps, more point than truth; for, though Severus was no ordinary man, he nevertheless rather followed than directed the general current of events. He considered the Roman world as his property, and had no sooner secured the possession, than he bestowed the utmost care on the cultivation and improvement of so valuable an acquisition. Judicial law, executed with firmness, soon corrected most of the abuses which, since the time of Marcus Aurelius, had infected every department of the state. Yet in his maxims of government he often displayed, not the legislator, but the mere soldier. Harsh, un pitying, and suspicious, although generous to those for whom he had conceived an attachment, it was perhaps fortunate for Rome that Severus had evaded engaging his principal thoughts, and employed the greater part of his reign. His taste for public buildings and magnificent spectacles recommended him very greatly to the Roman people. He also showed himself a patron of literature. The habits of a life spent chiefly in the camp were, no doubt, quite incompatible with any distinguished progress in science or in letters; but his taste, notwithstanding, induced him to spend a large sum in the prosecution of them. He was much devoted, however, to that perversion of natural knowledge which was known by the ancients under the name of magic. Astrology also came in for its share of his attention; and he is said to have been determined in his choice of a second wife by the discovery that a young Syrian lady, whose name was Julia, had been born with a royal nativity. Severus wrote Memoirs of his own Life, in Latin ; a work of which the Augustan history prays the study of not less than the fidelity. But Dio Cassius, who had better means for forming a correct judgment, insinuates that Severus did not, on all occasions, pay the strictest regard to truth, and that, in his attempts to vindicate himself from the charge of cruelty, he laid greater stress on hidden motives and refined views of policy, than on the palpable facts which met the eye of the public. (Spartian, Vitt. Did. Jul., II., Vitt. Postem. Nigr., Id., Vitt. Albien., Id., Vitt. Sen., Dio Cass., lib. 74, seqq.—Herodian, 2, 9, 2, &c.—II. Alexander or Marcus Aurelius Alexander Severus, a native of Syria, and cousin to the Emperor Heligabalus. Messa, grandmother of the latter, perceiving his folly and grossly vicious disposition, thought of conciliating the Romans by prevailing upon her dissolute grandson to associate Alexander Severus with himself in the empire. But Heligabalus becoming afterward jealous of him, and wishing to put him out of the way, spread a false report of Alexander's death, whereupon the pretorians broke out into open mutiny, Heligabalus was slain, and Alexander Severus succeeded to the empire. The new emperor was of a character diametrically opposite to that of his predecessor. Among the first acts of his sovereignty, he banished all the guilty and abandoned creatures of Heligabalus, restored the authority of the Senate, and remaining himself the supreme head of the state, he placed the best members of that body, and revoked, also, all the persecuting edicts that had been issued by his predecessors against the Christians. This just and merciful procedure is thought to have been adopted by the ad-
vice of his mother Mammas, who maintained an inter-
course with some of the most distinguished Chris-
tians, among others, the celebrated Origen, and who
was, perhaps, herself a convert. But, however de-
struous of proof, that his reign proceeded his alleged
reform, Alexander was soon called to encounter the
perils and toils of war. A revolution in the East,
which began in the fourth year of his reign, was pro-
ductive of consequences deeply important to all Asia.
Ardeshir Babegan, or Artaxerxes, who pretended to be
descended from the imperial race of ancient Persia,
rise a rebellion against the Parthian monarchs, the
Arsacids. The Parthian dynasty was overthrown, and
the ancient Persians restored; and with its restora-

ion was renewed its claims to the sovereignty of all
Asia, which it had formerly possessed. This claim
gave rise to a war against the Romans, and Alexander
Severus led his troops into the East, to maintain the
imperial sway over the disputed territories. In
the army he displayed the high qualities of a warrior, and
and a great victory over the Persians, but was pre-
vented from following up his success in consequence of
a pestilence breaking out among his troops. The
Persians, however, were willing to renounce hostili-
ties for a time, and the emperor returned to Rome in

imperial. Scarcely had Alexander tasted repose from
his Persian war, when he received intelligence that
the Germans had crossed the Rhine and were invad-
ing Gaul. He at once set out to oppose this new
enemy, but he encountered another still more for-
duible. The armies in Gaul had sunk into a great re-
laxation of the rigid discipline necessary for even their
own preservation. Alexander began to restore the
ancient military regulations, to enforce discipline, and
to reorganize such an army as might be able to keep
the barbarians in check. The demoralized soldiery
could not endure the change. A conspiracy was
formed against him, and the youthful emperor was
murdered in his tent, in his 29th year, after a short but
illustrious reign, which so completely overawed the
Persians that much of what rendered the reign of Alex-
ander Severus truly glorious was owing to the counsels
of his mother Mammas. Ulpian, too, the friend of
Papinian, the most rigidly upright man of his time, a
man more skilled in jurisprudence than any of his con-
temporaries, was the friend of Alexander, and the only
person with whom he was accustomed to converse in
strict confidence. This alone may be regarded as the
youthful emperor's highest praise. The character of
Alexander presented so many points worthy of praise,
that the writer of his life in the Augustan History
exhausts all his powers of description in the attempt
to do it justice. (Lamp. Pris., Vit. Alex. Srm.—Dio
Cas., lib. 80.—Herodian, 5, 3, 7, seqq.)—Nil.
Sulpicius, an ecclesiastical historian, who died A.D. 429.
The best of his works is his Historia Sacra, from the
creation of the world to the consilium of Stilicho, the
work he sent to his successor to the age of which he lived.
The best edition is in 2 vols. 4to. Patalavi,
1741.—IV. A celebrated architect, employed, with
another architect named Celer, in erecting Nero's
"Golden House." (Tacit., Annal., 15, 42. Vid.
Nero.)

Sevo, a ridge of mountains between Norway and
Sweden. It assumes various names in different parts
of the world, as the Lamie, the Krumbach, the
Silverfield Mountain, \\nfrountain. Some suppose the ridge of
Sevo to have been the Rhiphian Mountains of

antiquity. (Plin., 4, 15.)

Sextius Aquae now Aix, a town of Gallia Narbon-
ensis, and the metropolis of Narbonensis Secunda. It
owed its foundation to Sextius Calvinus, who, in the
first expedition of the Romans into Gaul, reduced the
Salluvii or Salyes, in whose territory it was situate.
It was founded on account of the warm mineral springs
in its neighbourhood. These springs, however, had
already lost their warmth, and much of their efficacy,
in the time of Augustus. (Liv., Epit., 61.—Strabo,
180.) Marius defeated the Teutones near this place.
(Plut., Vit. Mar.—Florus, 3, 3.)

Lois, in the reign of the Emperor Constantius Chlorus, sup-
pposed to be inspired by Heaven, who flourished in different parts of the
world. According to the received opinion, founded
on the authority of Varro, they were ten in number:
the first was the Persian Sibyl, of whom Nicander,
one of the historians of Alexander the Great, made
mention; the second was the Libyan, alluded to by
Euripides in the prologue of one of his lost plays, the
Lamia. The Libyan, according to Sacrani, was
mentioned by Chrysippus in his lost work on Demy-
colos. For the first Sibyl, the name was the Cumaan,
in Italy, spoken of by Navius, and other Latin writers, especially Virgil; the fifth was the
Erythraean, whom Apollodorus of Erythrae claimed
as a native of that city, though some made her to
have been born in Babylonia. She is said to have
predicted to the Greeks, when they were sailing
for Troy, that this city was destined to perish, and
that Homer would compose fables in relation to it; the
sixth was the Samian, of whom Eubulo says he
found mention in the ancient annals of the Samians;
the seventh was of Cyma, in Aeolis, and was called
Amastrus, Demophle or Herophile; the eighth was
the Hellepontine, born at Marpeusus, in the Trojan
territory. According to Heracleides Ponticus, she
flourished in the time of Cyrus and Solon; the ninth was the
Phrygian, who gave oracles at Ancyra; the tenth
was the Thracian, and came from Phrygia, in Italy, and was named
Albenus. (Varro, ap. Laest., 1, 8.—August., Cis.
D., 18, 23.) The most celebrated one of the whole
number was the Cumaean, the poetical fable relative to
which is as follows: Apollo, having become enam-
oured of her, offered to give her whatever she should
ask. The Sibyl demanded to live as many years as
she had grains of sand in her hand, but unfortunately
forgot to ask for the enjoyment of her life. The god
granted her request, but she refused, in return, to listen to his
suit; and the gift of longevity, therefore, unac-
panied by freshness and beauty, proved a burden
rather than a benefit. She had already lived about 700 years
when Aeneas came to Italy, and, as some have imag-
ined, she had six centuries more to live before her
years were as numerous as the grains of sand which
she had then in possession. At the expiration of this
period she was to withdraw quite away, and become
converted into a mere voice. (Ovid., Met., 14, 104.—
Serg. ad Virg., As., 6, 321.) This was the Sibyl
that accompanied Aeneas to the lower world. It was
usual with her to write her predictions on leaves, and
place them at the entrance of her cave; and it re-
quired great caution on the part of those who consul-
ted her to take up these leaves before the wind drove
them from their places, and, by mingling them
together, broke the connexion, and rendered their meaning unin-

According to a well-known Roman legend, one
of the Sibyls came to the palace of Tarquin the
Second with nine volumes, which she offered to sell
for a very high price. The monarch declined the offer,
and she immediately disappeared, and burned three of
the volumes. Returning soon after, she asked
the same price for the remaining six. But in

the temple to them, she burned three
more, and still persisted in demanding the same sum
of money for the three that were left. This extraor-
dinary behaviour astonished the monarch, and,
with the advice of the augurs, he bought the books;
upon which the Sibyl immediately disappeared, and
was never seen after. These books were preserved
with great care, and called these. A colony
of priests was appointed to have charge of them,
and they were consulted with the greatest solemnity when
the state seemed to be in danger. When the Capitol
was burned in the troubles of Sylla, the Sibylline verses, which were deposited there, perished in the conflagration. But the books which seemed to have sustained, commissioners were immediately sent to different parts of Greece to collect whatever could be found of the inspired writings of the Sibyls.—Thus far the common account. It is generally conceded, however, that what the ancients tell us respecting these prophetesses is all very obscure, fabulous, and full of contradictions. It appears that the name "Sibylla" is properly an appellative term, and denotes "an inspired person," and that the etymology of the word is commonly sought in the "Aeolic or Doric Σιβύλη, to the "god," and "voudi, "advice" or "counsel."—As regards the final fate of the Sibylline verses, some uncertainty prevails. It would seem, however, according to the best authorities, that the Emperor Honorius issued an order, A.D. 399, for destroying them; in pursuance of which, Stilicho burned all these prophetic writings, and demolished the temple of Apollo in which they had been deposited. Nevertheless, there are still preserved, in eight books of Greek verse, a collection of oracles pretended to be Sibylline. Dr. Cave, who is well satisfied that this collection is a forgery, supposes that a large part of it was composed in the time of Hadrian, about A.D. 130; that other parts were added in the time of the Antonines, and the whole completed in the reign of Commodus. Dr. Prideaux says that this collection must have been made between the sixth and eighth centuries. The Christian fathers, not regarding the imposition, have often cited the books of the Sibyls in favour of the Christian religion; and hence Celsus takes occasion to call the Christians Sibyllists. Dr. Lardner states his conviction that the Sibylline oracles quoted by St. Clement and others of the Greek fathers are the forgeries of some Christian. Bishop Horsey has ably supported the opinion, however, that the Sibylline books contain genuine predictions. His two dissertations are not only quite in keeping with the patriarchal families and the Jewish commonwealth, before the general defection to idolatry. Although the books were at last interdicted, yet, according to the views taken of the subject by the learned bishop, this was too late to throw discredit on the confident appeal made to them by Justin.—The first ancient writer that makes mention of the Sibylline verses appears to have been Heraclitus. (Oeuvres de Lecoy de la Marche, p. 14.) The Sibyl, however, in relation to them, is that of Dionysius of Halicarnassus (4, 62). The most ancient Sibylline prophecy that has been preserved for us is that mentioned by Pausanias (10, 9), and which the Athenians applied to the battle of Ægospotamo, because it speaks of a fleet destroyed through the fault of its commanders. Another Sibylline prediction is found in Plutarch (Vit. Demosth. Op. ed. Reiske, vol. 4, p. 729), which relates to a bloody battle on the banks of the Thermodon. The Athenians applied this oracle to the battle of Chersonea. Plutarch states that there was no river of this name, in his time, near Chersonea, and he conjectures that a small brook, falling into the Cephissus, is here meant, and which his fellow townsmen called Ἀλμοὺς (Hermion), or "the bloody" brook. Pausanias (9, 19) speaks of a small stream in Boeotia called Thermidon; but he places it somewhere to the north of Larissa, and the name of Larissa has preserved for us two Sibylline predictions, not, indeed, in their literal form, but yet of a very definite nature. One of these forbade the Romans to extend their sway beyond Mount Taurus. Were it well ascertained that this prohibition, with which we are made acquainted by Livy (38, 18), actually formed part of the Sibylline books, it would suffice to show that these books were not composed for the Romans; a prophecy which fixes Mount Taurus as the eastern limit of an empire, could only have been made for the monarchs of Lydia. It is almost superfluous, moreover, to remark, that, with regard to Rome, at least, this prediction has not been fulfilled. It is as if the second prophecy preserved for us in Roman history is the one that was applied to the case of Ptolemy Alex- eus. This prince having solicited aid from the senate against his rebellious subjects, the Sibylline books were consulted, and the following answer was found in them: "If a king of Egypt come to ask aid of you, refuse him not your alliance, but give him no troops." The turbulence and faction of the day render it extremely probable that this prediction was a mere forgery. What we have remaining under the title of Sibylline Oracles were evidently fabricated by the pious fraud of the early Christians, ever anxious to discover traces of their faith in pagan mythology. St. Clement of Rome himself is not free from the suspicion of having participated in the falsification, or else of having attached credit too readily to a corrupted text. According to St. Justin, this pontiff had cited, in his Epistle to the Corinthians, the Sibylline predictions, for the purpose of confirming by their means the truths which he was announcing to the pagans (Quast. ad Orthod. Resp. ad quast. lixiv.) A contemporary of St. Clement's, the historian Josephus, refers to passages in these same oracles, where allusion is made to the tower of Babel (Antiq. Jud., 1, 5), a circumstance, by-the-way, which proves the early falsification of these predictions. The first book of the Sibylline oracles is called "the giving up," or "forging the Sibylline collection." (Orig. adv. Cels., lib. 7.) The fathers of the Church in the second, and, still more frequently, those in the third century, refer to passages evidently interpolated, as if they were genuine. (Tholauri libri Sibyllatarum, &c., Hafnia, 1615, 8vo.)—The Sibylline collection, as it exists at the present day, is composed of eight books. In the first book, the subjects are, the Creation, the Fall, and the Deluge. It has been seen that this book is taken from Genesis, but also that its author made use of the Greek translation of the Septuagint. The subject of the second book is the Last Judgment. In the third Antichrist is announced. The fourth predicts the fall of divers monarchies. The fifth is occupied with the Romans down to Lucius Verus. In the sixth the Baptist of our Saviour by St. John is made the subject. The seventh is devoted to the destruction of Rome. The eighth relates to the Last Judgment and the Destruction of Rome.—A manuscript discovered by Maio in the Ambrosian Library at Milan, contains a fourteenth book, in 334 verses ; the books, however, between it and the eighth are lost. This last-mentioned book, the fourteenth, speaks of a destruction of Rome so complete that the traveller will find no traces of the city remaining, and its very name will dis- appear. The prophetess then goes on to enumerate a long series of princes under whom Rome shall be rebuilt.—The most complete edition of the Sibylline oracles is that of Gallus, which appeared at Amster- dam in 1688-9, 2 vols. 4to, to which must be added the 14th book, published by Maio, at Milan, 1817, 8vo. —In relation to the Sibylline oracles generally, con- suit the remarks of Niebuhr (Rom. Hist., vol. 1, p. 441, sqq., Cambridge transl.). Sicilians, the most powerful German tribe, whose original seats were around the Rhine, the Sieg, and the Lippe. They were dangerous foes to the Romans, who finally conquered them under the leading of Druss. Tibersius transferred a large part of this people to the left or southern bank of the Rhine, where they reappear under the name of Oegerni. (Flor. 42, 12. — Cas., B. G., 4, 16. — Dio Cassius, 54, 32. — Tac., Ann., 2, 53. —Id. ibid, 4, 12.) Sicilians, an ancient nation of Sicily. (Vid. remarks under the article Sicilia.)
SICILIA, an ancient name of Sicily. (Vid. Sicilia.)
SICCA VERNÆÀ, a city of Numidia, on the banks of the river Bagradas, and at some distance from the coast. We are first made acquainted with the existence of the place in the history of the Jugurthine war. (Sall., Bell. Jug., 3, 56.) Pliny styles it a colony (5, 3); and, though no other writer gives it this title, yet, from the way in which it is represented on the Peutinger table, as well as from Ptolemy's having selected it for one of his places of astronomical calculation, we see plainly that it must have been an important city. It received the appellation of Venereca from a temple of Venus which it contained, and where, in accordance with a well-known custom, the young maidens of the place were accustomed to prostitute their persons, and thus obtain a dowry for marriage. (Val. Max., 2, 6.) Bochart and De Brosses derive the name of Sicca from the Punic Succoth Benoth ("tabernacula puellarem"); and make Benoth ("puella") the origin of the name Venus among the Romans.—Shaw regarded the modern Kaff as near the site of the ancient city, having found an inscription there with the name promiscus on it. But Man- nert thinks the stone was brought to Kaff from some other quarter, a circumstance by no means uncommon in these parts. (Mannert, Geogr., vol. 10, pt. 2, p. 322, seqq.)

SICILIA. Vid. Acerbas.
Sicilia, the largest, most fruitful, and populous island of the Mediterranean, lying to the south of Italy, from which it is separated by the Pretum Siculum, the strait or foro of Messina, which, in the narrowest part, is only two miles wide. Its short distance from the mainland of Italy gave rise to an hypothesis, among the ancient writers, that it once formed part of that country, and was separated from it by a powerful flood. (Compare the authorities cited by Cluver, Sicil., 1, 1.) This theory, however, is a very improbable one, the more particularly as the point where the mountains commence on the island by no means corresponds with the termination of the chain of the Apennines at the promontory of Leucopetra, now Capo dell'armi; but is many miles to the north. It is more natural to suppose, therefore, that, in the first formation of our globe, the waters, finding a hollow here, poured themselves into it. —The island is a three-cornered one, and this shape obtained for it its earliest name among the Greek navigators, Trinakia (Trinakia, i. e., "three-cornered"). This name, and, consequently, the island, was given to Sicily by the Oriental custom, under which name, with the island, must have been of a very early date, since Homer was already acquainted with the "island Thrinakia" (Ovocxro  }35c0.—Od., 12, 135). with the herds of Helios that pastured upon it, and in its vicinity the wonders of Scylla and Charybdis, together with the islands which he terms Plangkie (PMIGKVA) or "the Wanderers." —The later Greek writers, and almost all the Latin authors, make a slight alteration in the form of the name, and write it Trinacia (3, 8) translates the term in question by Triquetra, a form which frequently appears in the poets. The name Trinacia very probably underwent the change just alluded to, in order to favour its derivation from the Greek τρις (three), and ἀπα (a promontory), in allusion to its three promontories; though, in fact, only one of them, that of Pachynus namely, is deserving of the appellation. Homer's name Ομωνα is, in fact, a name more appropriate, since the root is ὀμήν, "a point." —The island of Sicily is indebted for its existence to a chain of mountains, which commences in the vicinity of the Pretum Siculum, runs towards the west, keeping constantly at only a small distance from the northern coast, and terminating on the northwestern coast, near the modern Capo di St. Vito. The name of this range is Montes Nebrodos. A side chain issues from it and pursues a southern direction, and out of this, Etina bears its lofty head. From the same Montes Nebrodos another chain runs through the middle of the island, called Montes Hermi (HiPHTHT l^N). and the adjoining mountain-masses correspond with the peaks of the chain from those of the Sicani. (Diod. Sic., 4, 84.) —Sicily has no large rivers; the moderate extent of the island, and the mountainous character of the country, preventing this. The only considerable streams are the Symethus and the Himera. The former of these receives most of the small rivers that flow from the eastern side of the Herenn Mountains: the Himera also is swelled by numerous smaller streams in its course, and the issuing meanders of the river Herenn from the island —a country like Sicily, lying between the 36th and 38th parallels of latitude, and, consequently, belonging to the southernmost regions of Europe, and which is well supplied with streams of water from its numerous mountain chains, must, of course, be a fertile one. Such, indeed, was the character of the island throughout all antiquity; and the Romans, while they regarded it as one of the granaries of the capital, placed it, in point of productiveness, by the side of Italy itself, or rather regarded it as a portion of that country. The staple of Sicily was its excellent wheat. The Romans found it growing wild in the extensive fields of Leontini, and, when cultivated, it yielded a hundred fold: that which grew in the plains of Enna was regarded as decidedly the best. It was natural enough, therefore, in the early inhabitants of the island to regard it as the parent-country of grain; and they had a deity among them whom they considered as the protectress of agriculture and the discoverer of agriculture to man. In this goddess the Greeks recognised their Ceres, and they made Minerva, Diana, and Proserpina to have spent their youth here, and the last mentioned of the three to have been carried off by Pluto from the rich fields of Enna. —It has been already remarked, that the Romans regarded Sicily as one of their granaries. They obtained from it, even at an early period, the necessary supplies which their military and civil needs required; and the far-northern tribes, the Patrai and the Trinakia, had spoken of these giant races, and subsequent writers could find no more probable place for their abode than an island where the strange phenomenon represented by Ετινο seemed to point to an equally strange race of inhabitants. Homer, it is true, had not made these two races neighbours to each other, nor had he placed them both in his island of Thrinakia: the exponents of his mythology, however, regardless of geographical details, considered them as having been more closely united, and, therefore, according to them, dwelled the Cyclopes and Lastrygones. Thucydides alone (6, 2), after mentioning the common tradition, honestly confesses that he cannot tell what has become of these giant-races. Other writers, however, were better informed, it seems, and made the Cyclopes disappear from view in the bowels of Ετινο, and amid the caverns of the Lipari isles. —The Sicans in Sicily, however, are connected with the fact of the existence of two early tribes in this island, the Sicani and Siculi. They knew, also, that the former of these lived at a much earlier period than the latter; but they were divided in their opinions as to the origin of the more ancient people. The most of them, with Thucydides at their head (6, 2), derive the Sicani from Iberia, and those that have been driven by the Ligures (Ligures) from their original seats in that
SICILIA.

country, around the river Sicanus, to the island which, from them, received the name of Sicania. But, on moving in intimate acquaintance with Iberia, the Greeks found no river thither of the name of Sicanus; they therefore conceived it to be identical with the Sicoris, a tributary of the Iberus. No Ligurians, however, ever settled in Spain, and therefore no Sicani could ever have been driven by them from that country. The only solution of this difficulty is, that as the Iberians settled also along the coast of Gaul, the Sicanans were driven thither too. Consequently, as the Greeks were driven thither, they changed its name, and could not afterward be identified. But another difficulty presents itself. In what way did the Sicani, after being thus expelled, reach the island of Sicily? The nearest and readiest route was by sea; but where could these rude children of nature have obtained a fleet? Did they proceed by land? This path would be, if possible, still more arduous, as they would have to cut their way through various branches of their very conquerors, the Ligures, and then encounter many valiant tribes in central and southern Italy. Virgil seems to have been startled by the difficulties of this hypothesis, since he makes the Sicani inhabitants of Latium, or, rather, with the license of a poet, confounds them with the Siculi. (Aen., 7, 795; 8, 342.) Other writers, however, whom Diodorus Siculus (5, 2) considers most worthy of reliance, declared themselves against this wandering of the Sicani, and made them an indigenous race in Sicily. These philosophers, in favor of this position, have been deduced from the traditions of the people themselves, who laid claim to the title of Autochthones. (Thucyd., 6, 2.) This opinion found a warm supporter in Timaeus, as we are informed by Diodorus (5, 6).—To these 'primitive inhabitants came the Siculi. These were an Italian race from Latium (vid. Siculi), and, previously to their settlement in Sicily, they had established themselves, for a time, among the Morganites, in what is now called Calabria. On their crossing over into the island, the Siculi took possession of the country in the vicinity of Acetna. They met with no opposition at first from the Sicani, for that people had long before been driven away by an eruption from the mountain, and had fled to the western parts of the island. (Diod., 5, 6.) As the Siculi, however, extended themselves to the west, they could not fail eventually of coming in contact with the Sicani. Wars ensued, and the Sicani were defeated, by means of their limits. (Diod., 5, 6.) According to Thucydides, however, the Siculi defeated in battle the Sicani, and drove and confined them to the southern and western parts of the island.—Sicily received accessions also to the number of its inhabitants from other sources. 1. The Cretans; these, according to traditions half historical and half mythological, came to this island along with Minos, when in pursuit of Dedalus. After the death of their king, they settled in the territories of Cocalus, a monarch of the Sicani. They subsequently became blended with the Siculi. 2. The Elymii. According to Thucydides, a number of Trojans escaping to Sicily, and settling in the country bordering on the Sicani, they both together obtained the name of Elymii. 3. The Phoenicians, too, formed settlements around the whole of Sicily, taking in the promontories and little islands adjacent. These settlements were not, however, as in Caracus, the island of the Phoenicians to Mediterranean stations. After, however, the Greeks had come over in great numbers, they abandoned the greater part of their settlements, and drew together the rest, occupying Motya, Solchia, and Panormus, near the Elymii, both in reliance on their assistance, and because from this part of Sicily was the shortest passage to Carthage. (Thucyd., 6, 2.) An account of the Greek settlement is given in Thucydides (6, 9), and they had already attained a flourishing maturity before a new power, or developed itself and entered the lists with them for possession of the island. This was Carthage, and the first serious demonstration was made when Xerxes had left his imperial banner in Ionia. The Carthaginians, who, as Diodorus asserts, were in league with the Persian monarch, landed with a large army at Panormus, and threatened Himera. The pretext for this movement on the part of Carthage was furnished by a quarrel with Theron, tyrant of Agrigentum; and, according to the usual practice of the Carthaginians, the armament had been strengthened from many bar- tizations, the Tuscan fleet being also joined to it by treaty. But Gelon, monarch of Syracuse, marched to the assistance of Theron, leaving the command of his fleet to his brother Hiero; and Hiero defeated the Carthaginian and Tuscan fleet, while, about the same time, the Carthaginian land force was completely broken at Himera by the united armies of Syracuse and Agrigas. It is said by some authors that Ge- lon's victory took place on the same day with the battle of Salamis. No farther conquest was attempted in Sicily by Carthage for many years after, though she still remained in possession of the old Phoenician settlements, and could therefore make a descent on the island whenever she might again feel inclined. It was not till after the termination of the contest between the Athenians and Syracusans, when the latter, notwithstanding their success, remained greatly emboldened by the struggle, that Carthage again sought an opportunity of invading the island. This was soon after Hiero's death (466 B.C.) when the Carthaginians landed at Motya, took Selinus, and established themselves over the entire western half of Sicily. They would have spread themselves farther, had it not been for the power of Dionysius of Syracuse; and to this man, with all his tyrannical qualities, the Greeks of Sicily were mainly indebted for their deliverance from the yoke of Carthage. He was often defeated, it is true, but as often found the means of withstanding his attacks, and he was agreed between the contending parties that the river Himera should form the limit between the Syracusan and Grecian territories on the east, and the Carthaginian dependencies on the west. The peace that ensued was, however, of short duration, and Carthage sought every opportunity of advancing her power, afforded by the internal dissensions of the Greeks, as often as these occurred. From time to time, it is true, and often with success, they were expelled from Sicily, as such as a Timoleon and an Agathocles, who kept in check the aspiring power of Carthage; yet it was but too apparent that this power was gaining a decided ascendancy, when the Romans, alarmed at the movements of so powerful a neighbour, were induced to interfere (vid. Messana), and, after a protracted struggle of twenty-four years, succeeded in making themselves masters of the whole of Sicily. (Vid. Punicum Bellum.) It must not be supposed, however, that, during these contests of the Carthaginians with the Greeks in the first instance, and afterward of the former with the Romans, the early inhabitants of the country were merely idle spectators. In what relation the Sicani, in the western part of the island, stood to the Greeks, we have no means of ascertaining. When the Carthaginians appeared there they submitted without a struggle, though they are supposed to have occupied the territories, they assumed a brief attitude of independence. The situation of the Siculi, in the eastern quarter of the island, was different from this. They acknowledged the sway of Gelon, and also of his two brothers; but when, on the expulsion of the latter of these, intestine dissensions arose in Syracuse, an individual of commanding character among the Siculi, by name Dukelius, succeeded in forming a union among the petty states of his countrymen, and placed himself at the head of the confederacy. The effort was, however, only short-
lived. After some successes he was compelled to surrender to the Syracusans, who sent him to Corinth in exile. Here, however, he soon raised new forces, returned to Sicily, and, landing on the northern coast, at a point where the Greek arms had not reached, founded there a city called Calacta. Death frustrated the schemes which he had again formed for the union of the Siculi, and the latter were reduced once more beneath Athenian suzerainty; but they did not long continue in this state of forced obedience. We find them appearing as the enemies of the Syracusans at the time of the Athenian expedition; and also as the allies of the Carthaginians when the latter had begun to establish themselves in the island. Dionysius, however, again reduced them; and Timoleon afterward restored to them their freedom, and they continued for some time subsequently either in the en-
joyment of this privilege, or in some other form, which gave them the power which they had once enjoyed in the island, whether Syracusan or Carthaginian, until the whole of Sicily fell into the hands of the Romans. Under this new power the cities on the coast of the island were seriously injured, both because the Roman policy was not very favorable to commerce, and the conquerors were unwilling that the Greek colonies in Sicily should again become powerful. With the exception of Messana, the Sicilian cities were allowed the enjoyment of their civil rights as far as regarded the form and administration of their gov-
ernments, and hence the mention so often made by Cicero of a Senatus Populusque in many cities of the island. Hence, too, the power they enjoyed of regul-
ating their own coinage. As, however, collisions arose between this conceded power and the magis-
trates sent to govern them from Rome, we read of a common massacre of the Sicilians, in which the Sicilian cities were the victims, and the Roman tribune Publius Rutillius, by whom a perma-
nent form of government was devised, which the Si-
cilians ever after regarded as their palladium against the tyranny of Roman magistrates. At a later pe-
riod, Julius Caesar extended to the whole island the Jus Latii, and, by the last will of the dictator, as An-
tony pretended, though brought about, in fact, by a large sum of money paid to the latter, all the inhabi-
tants of Sicily, Sicans and Syracusans, were made citizens. (Cic., Ep. ad Att., 14, 12.) It would seem, however, to have been a personal privilege, and not to have extended to their lands, since we find Augustus establishing in the island the five Roman colonies of Messana, Tauromenium, Catana, Syracuse, and Ther-
mae. (Plin., 1, 38.—Dio Cass., 54, 7.) Strabo names also as a Roman colony the city of Panormus. (Strabo, 2722.—Marcelli, Geogr. voce, p. 5, 236; to that point.—The Romans remained in possession of Sicily until Genseric, king of the Vandals, conquered it in the fifth century of our era. Belisarius, Justinian's general, drove out the Vandals, A.D. 535, and it remained in the hands of the Greek emperors nearly three cen-
turies, when it was taken by the Saracens, A.D. 827. The Normans, who ruled in Naples, conquered Sicily A.D. 1072, and received it from the pope as a papal fief. Roger, a powerful Norman prince, took the name of King of Sicily in 1102, and united the island with the kingdom of Naples, under the name of the King-
dom of the two Sicilies.

Sicelius, Denarius L., a tribune of Rome, cele-
brated for his valor, and the honours he obtained in the field of battle during the period of 40 years, in which he was engaged in the Roman armies. He was present in 120 battles; obtained 14 civic crowns; 9 mural crowns; 8 crowns of gold; 150 gold chains (torques); 160 bracelets (armilla); 18 spears (hasta pura); 25 sets of horse-trappings; and all as the re-
ward of his extraordinary valour and services. He could show the scars of 40 wounds which he had re-
ceived, all in the breast. (Val. Max., 3, 5, 24.) Dio-

nysius of Halicarnassus, who calls him Sicelius, states that he gave great offence subsequently to Appius Claudius, the decemvir, by the freedom of his re-
marks relative to the incapacity of the Roman leaders who were at that time carrying on war against the en-
emy; and that Appius, pretending to coincide with him in his views, induced Sicelius to go as legatus to the Roman camp near Crustumeria. When the brave
man had reached the camp of his countrymen, the generals, finding that he was disposed upon the army,
mand; and then, upon his objecting to the site of their camp, as being in their own territory, not that of the enemy, they begged him to select a new spot for an encampment. A body of their immediate partisans, to the number of 100 men, were sent with him, on his setting out for this purpose, as a guard for his person, who, attacked and, after a valiant resistance on his part, killed him. Cicero, in a letter to his friend, records this with indignation, and in accordance with previous in-
structions, and then brought back word that he had been slain by the enemy. The falsehood, however, was soon discovered, and the army gave Sicelius a splendid burial. (Dion. Hal., 11, 37.)

Sicela, a river of Spain, now the Segre, rising in the Pyrenees, and running into the Iberus, after flow-
ing by the city of Hiera. It divided the territories of the Ilertetes from those of the Lacetani. Some writers regard it as the Sicelus of Thucydides. (Cass., B.C., 1, 40.—Plin., 3, 3.)

Sicelus, an ancient nation, who in very early times dwelt in Latium and about the Tiber, and, indeed, upon the site of Rome itself. All this is confirmed by Latin and Oenotrian traditions. (Dion. Hal., 1, 9.—Id., 2, 1.—Varro, L. L., 4, 10.—Antiochus, ap. Dion. Hal., 1, 73.) A part of the town of Tibur bore the name of Sicelion (Sicelium) in the time of Dionysius (1, 16). The fragments of Niebuhr lead to the conclu-
sion that these Siculi were the Pelasgians of Latium. They were eventually driven out by an indigenous race, highlanders of the Apennines, who descended upon them from the mountains, and from the basins of the Nar and Velinus. Moving south after this dis-
lodgment, they eventually crossed over into Sicily then named Sicania, and gave its new and latest ap-
pellation to that island. (Vid. Sicilia, and Roma.—Malken's Annalen, B.C. 766.)

Sicelium Fratum, the straits that separated an-
cient Italy from Sicily; now the Straits of Messina, or Faro di Messina. The name was applied in strict
ness to that part of the strait which lay between the Columna Rhetina on the Italian side, and a similar column or tower on the promontory of Pelorum. The Columna Rhetina marked the termination of the con-
tral road leading to the south of Italy. The most prevalent and the best grounded opinion seems to be that which identifies this spot with the modern la Ca-
tona. The Sicilian strait was generally supposed by the ancients to have been formed by a sudden disrup-
tion of the island from the mainland. But consult remarks at the commencement of the article Sicilia. (Mela, 2, 4.—Plin., 3, 5.—Cramer's Anc. Italy, vol. 2, p. 427.)

Sicily or Sicio, a city of Greece, in the territory of Sicypo-
nia, northwest of Corinth. Few cities of Greece could boast of so high antiquity, since it already existed under the names of Aegialus and Mecone long before the arrival of Pelops in the peninsula. (Strabo, 382.
—Pausan., 2, 6.—Hesiod, Theog., 537.) Homer represents Sicyon as forming part of the kingdom of Mycene, with the whole of Achaia. (Ib., 2, 572.) Pausanias and other geographer have shown us to a long list of the kings of Sicyon, from Aegialus, its founder, to the conquest of the city by the Dorians and Heraclides, from which period it became subject to Argos. (Pausan., 2, 6.—Euseb., Chron.—Clem. Alex., Strom., 1, 321.) Its population was then di-
vided into four tribes, named Hyllus, Pamphyli, Dy-

1253
mantia, and Aegialus, a classification introduced by the Dorians, and adopted, as we learn from Herodotus (5, 68), by the Argives. How long a connexion subsisted between the two states we are not informed; but it appears that when Clisthenes became tyrant of Sicyon, they were independent of each other, since Herodotus relates a quarrel with them afterwards. The names of the Sicyonian tribes, which were Dorian, that they might not be the same as those of the adverse city; and in order to ridicule the Sicyonians, the historian adds that he named them after, such fresh animals as pigs and asses; sixty years after his death the former appellations were, however, restored. Sicyon continued under the domination of tyrants for the space of one hundred years; such being the mildness of their rule, and their observance of the existing laws, that the people gladly beheld the crown thus transmitted from one generation to another. (Aristot., Politi., 5, 12.—Strab., 332.) It appears, however, from Thucydides, that, at the time of the Peloponnesian war, it had been changed to an aristocracy. In that contest, the Sicyonians, from their Dorian origin, naturally espoused the cause of Sparta, and the maritime situation of their country not unfrequently exposed it to the maritime force of the Athenians. (Thuc., Hist. Gr., 4, 4, 7.) After the battle of Leuctra, we learn from Xenophon that Sicyon once more became subject to a despotic government, of which Ephrhus, one of its principal citizens, had placed himself at the head, with the assistance of the Argives and Arcadians. (Xen., Hist Gr., 7, 1, 32.) His reign, however, was not of long duration, he being waylaid at Thebes, whither he went to conciliate the favour of that power, by a party of Sicyonian exiles, and murdered in the very citadel. (Xen., Hist Gr., 7, 3, 4.)—On the death of Alexander the Great, Sicyon fell into the hands of Alexander, son of Polyperchon; but, on his being assassinated, a tumult ensued, in which the inhabitants of the city attempted to regain their liberty. Such, however, was the courage and firmness displayed by Cratesipolis, his wife, that they were finally overpowered. Not long after this event, Demetrius Poliorcetes made himself master of Sicyon, and, having persuaded the inhabitants to retire to the acropolis, he levelled to the ground all the lower part of the city which connected the citadel with the port. A new tower was then built, to which the name of Demetrius was given. This, as Strabo reports, was placed on a fortified hill dedicated to Ceres, and distant about 12 or 20 stadia from the sea. (Strab., 382. —Compare Pausan., 2, 7.) The change which was thus effected in the situation of the city must inevitably have produced any alteration in the character and political sentiments of the people. For many years after they still continued to be governed by a succession of tyrants, until Aratus united it to the Achaean league. By the great abilities of this distinguished citizen, Sicyon was raised to a high rank among the other Achaean states, and, being already celebrated as the first school of painting in Greece, crowned this by the exhibition of the most exquisite productions of all the finest arts; it being said, as Plutarch reports, that the beauty of the ancient style had there alone been preserved pure and uncorrupted. (Plut., Vit. Arat. —Strabo, 382. —Plin., 35, 12.) Aratus died at an advanced age, after an active and glorious life, not without suspicion of having been poisoned by order of Philip, king of Macedon. He was interred at Sicyon with great pomp, and a splendid monument was erected to him along the sea. (Plut., Vit. Arat. —Pausan., 2, 8.) After the dissolution of the Achaean league, little is known of Sicyon; it is evident, however, that it existed in the time of Pausanias, from the number of remarkable edifices and monuments which he enumerates within its walls; though he allows that it had greatly suffered from various calamities, but especially from an earthquake, which nearly reduced it to desolation. The ruins of this once great and flourishing city are still to be seen near the small village of Basitico. Dr. Clarke informs us that these remains of ancient magnificence are still considerable, and in some instances exist in such a state of preservation, that it is evident the buildings of the city must either have survived the earthquake to which Pausanias alludes, or have been constructed at some later period. In this number is the theatre, which that traveller considers as the finest and most perfect structure of the kind in all Greece. (Clarke's Travels, vol. 6, p. 553, Lond. ed.) Sir W. Gell reports, that "Basitico is a village of fifty houses, situated in the angle of a little rocky ascent, along which runs the road from the sea to the town. The theatre is in a singular state, and placed upon a high flat, overlooking the plain, about an hour from the sea, where is a great tumulus on the shore. On the highest angle of the theatre was the citadel." (Ibn. of the Morea, p. 15. —Doddrell, Tour, vol. 2, p. 294. —Cramer's Anc. Greece, vol. 3, p. 46, seqq.) Sicyonian almonds are mentioned by Athenaeus (5, p. 349, c.), and are supposed to have been of a softer shell than ordinary. (Cassius, vol. 1, p. 124.) The local sickness known as "Sicyonian fever" (Sicyonica) was very celebrated, and were worn by the luxurious and effeminate in other countries. (Athenaeus, 4, p. 155, c.) Sicyonta, the territory of Sicyon, on the Sinus Corinthiacus, west of Corinth, and separated from it by the small river Nemea. (Strabo, 382. —Vit. Sicyon.) Side, i. A city of Pamphylia, west of the river Meilas, and lying on the Chelidoniaen bay. It was founded by the Cummans of Aolis. (Sieglet, Peripl., p. 40. —Strab., 667.) Arrian relates, that the Sidetae, soon after their settlement, forgot the Greek language, and spoke a barbarous tongue peculiar to themselves. It surrendered to Alexander in his march through Pamphylia. (Arrian, Exp. Alex., 1, 26.) Side many years after, was the scene of a naval engagement between the fleet of Antiochus, commanded by Hannibal, and that of the Rhodians, in which, after a severe contest, the former was defeated. (Livy, 37, 23, seqq.) When the pirates of Asia Minor had attained to that degree of audacity and power which rendered them so formidable, we learn from Strabo that Side became their principal harbour, as well as the marketplace where they disposed of their prisoners by auction. (Strabo, 642.) Side was still a considerable town under the emperors; and, when a division was made of the empire by the Emperor Diocletian, it became the metropolis of Pamphylia Prima. (Hieroc., p. 652. —Consil. Const., 2, p. 240.) Minerva was the deity principally worshipped there.—An interesting account of the ruins in this place is to be found in Captain Beaufort's valuable work, with an accurate plan. "It stands," observes this writer, "on a low peninsula, and was surrounded by walls. The theatre appears like a lofty acropolis rising from the centre of the town by far the two most best preserved of any that come under our observation in Asia Minor. The harbour consisted of two small moles, connected with the quay and principal sea-gate. At the extremity of the peninsula were two artificial harbours for larger craft. Both are now almost filled with sand and stones, which have been borne in by the swell." (Beaufort's Karamania, p. 148, seqq.) Mr. Fellows, however, says, that the ruins of Side are infested by robbers, and he remarks that he had previously seen. The Greek style is scarcely to be traced in any of the ruins; but the Roman is visible in every part. In few buildings except the theatre are the stones even hewn, the cement being wholly trusted to for their support. "The glowing colours," continues Mr. Fellows, "in which this town is described in the
Modern Traveller," as quoted from Captain Beaufort's admirable survey, show how essential it is to know upon what knowledge able deductions are founded. It now, however, seem to have given Captain Beaufort much pleasure to have gone inland for a few miles, and to have seen the theatres and towns in perfect preservation as compared with Side, and of so much finer architecture. From the account which he gives, I was led to expect that this would form the climax of the many cities of Asia Minor, but I found its remains among the least interesting. (Pellican's "Journal of an Excursion in Asia Minor," 1838, p. 203, seq.) In the middle ages, the site of this place bore the name of Scandeler or Candeler, but it is now commonly called Eski Adalia. (Crarmr's "Asia Minor," vol. 2, p. 283.)—II. A town of Pontus, to the east of the mouth of the Themnodon, and giving name to the adjacent plain (Sidene). The river Sidin, which flows at the present day in this same quarter, recalls the ancient name of the town. (Cramer's "Asia Minor," vol. 1, p. 272.)

Sidicinum, or, more correctly, Teanum Sidicinum, a town of the Sidicini, in Campania. (Vid. Teanum.)—The territory of the Sidicini was situate to the east of that of the Atrunci. They were once apparently an independent people; but included afterward under the common name of Campani. This nation was of Ocean origin, and powerful enough to contend with the neighboring Samnites, and even to afford employment to Roman envoys and tribunes. The period of their reduction by the Romans is not mentioned. (Cramer's "Ancient Italy," vol. 2, p. 193.)

Sidon, in Scripture Tsidon, the oldest and most powerful city of Phcenicia, five geographical miles north of Tyrus, on the seacoast. It is supposed to have been founded by Sidon, the eldest son of Canaan, which will carry up its origin to about 2000 years before Christ. (Gen., 10, 15 — Rosenm. ad Gen., i. c. — Bischoff, vol. ii. p. 205.) Though located by Sidon, his descendants were driven out by a body of Phcenician colonists, most probably, who are supposed either to have given it its name, or to have retained the old one in compliment to their god Sidon or Dagon. Justin says that the name Sidon referred to the abundance of fish in this quarter (nam piscem Phcenices Sidon vocati, 68, 3), an opinion in which Bochart concurs, who understands by "Sidon, the Phcenician," instead of "Sidon, the Phcenician colonists." Bishop of Sidon, the Sidonians and the founder of Sidon, whatever his individual name may have been.——The inhabitants of Sidon appear to have early acquired a pre-eminence in arts, manufactures, and commerce; and from their superior skill in hewing timber (by which must be understood their cutting it out and preparing it for building, as well as the mere act of felling it), Sidonian workmen were hired by Solomon to prepare the wood for the building of his Temple. The Sidonians are said to have been the first manufacturers of glass, and Homer often speaks of them as excelling in many useful and ingenious arts, giving them the title of potir
daiadaios. (II., 23, 742.) Add to these, they were at a very early period distinguished for their commerce and their skill in maritime affairs. The natural result of these advantages to Sidon was a high degree of wealth and prosperity; and, with contents with the riches which their trade and manufactures brought them, they lived in ease and luxury, trusting the defence of their city and property, like the Tyrians after them, to hired troops; so that to live in ease and security is said in Scripture to live after the manner of the Sidonians. In all these respects, however, Sidon was totally eclipsed by Tyre, at first her colony and afterward her rival. The more enterprising inhabitants of this city, however, and pushed their commercial dealing to the extremities of the known world; raised their city to a rank in power and opulence before unknown, and converted it into a luxurious metropolis, and the emporium of the produce of all nations. — Sidon, however, under her own kings, continued to enjoy a considerable degree of independence. From this time we learn that Sidon was rich and powerful when the Israelites took possession of Canaan; and St. Jerome states that it fell to the lot of the tribe of Asher. In the year 1015 B.C. Sidon was dependent on Tyre, but in 720 it shook off the yoke, and surrendered to Salma-
nazar when he entered Phcenicia. When the Persians became masters of this city in the reign of Cyrus, they permitted the Sidonians to have kings of their own. Sidon was raised in the year 1015 B.C. by Ochus, king of Persia. When the inhabitants saw the enemy in the city, they shut themselves up in their houses with their wives and children, and perished in the flames of the place. According to Diodorus Siculus, those Sidonians who were absent from the city at the time, returned and rebuilt it after the Persian forces were withdrawn. Sidon afterward passed into the hands of the Macedonians; and, lastly, into those of the Romans. After the Roman it fell under the Saracen power, the Seljukian Turks, and the sultan of Egypt; who, in A.D. 1289, that they might never more afford shelter to the Christians, destroyed both it and Tyre. But it again revived, and has ever since been in the possession of the Ottoman Turks. Sidon, at present called Sade, is still a considerable trading town, and the chief mart for Damascus and upper Syria; being near the mouth of the Sidon. Though presenting an imposing appearance at a distance, as it rises from the water's edge, it is, like all Turkish towns, ill-built and dirty, and full of ruins; having still discoverable without the walls some fragments of columns, and other remains of the ancient city. Mr. Conner makes the number of inhabitants 15,000; of whom 2000 are Christians, chiefly Maro-
nites, and 400 Jews, who have one synagogue. They are chiefly engaged in the manufacture of some silk, and boots and shoes, or slippers, or morocco leather, forming their articles of commerce. (Mansford's "Scripture Gazetteer," p. 438, seq.)

Sidonius Insulae, islands in the Persian Gulf, supposed to be the same with the Sidodona of Arrian. (Vincent's "Commerce of the Ancients," vol. 1, p. 358. — Bischoff and Muller, "Worther der Geogr.," p. 916.)

Sidonius Apollinaris, a Christian poet and writer. He was born near Gaul, and his father and grandfather had exercised the functions of praetor
prefect, and was born at Lugdunum (Lyons) about 438 A.D. He received a very finished education, and was well acquainted with all the sciences known in his time; but poetry was his favourite occupation. He married Papianilla, daughter of the consul Fl. Avitus, who in 455 was named emperor. Sidonius accompanied his father-in-law to Rome, and the pro
cnounced, on the first day of the ensuing year, a poet
cal panegyric in honour of the new monarch, who rec
compensed his talent by appointing him senator and prefect of Rome, and raising a statue to him in the library of Trajan's forum. Soon after, Ricimer, that Frank who enjoyed at Rome a much greater power than the emperor himself, deposed Avitus, and named Majorianus in his stead. Sidonius was present in the battle in which his father-in-law was slain. He then retired to Lyons, and fell with this city into the hands of the conqueror, who treated him so well, that, in the following year, Sidonius pronounced a eulogi
um on this emperor, and was honoured with the title of count (comes). Under the reign of Severus, and during the interregnum which succeeded his death, Sidonius retired once more to Gaul, and settled in the province which afterward bore the name of Arles. Here he spent some months on an estate which belonged to his wife. Anthemius having obtained the empire in 467, Sidonius went to Rome, and pro
nounced a panegyric upon him. The prince, in re...
turn, named him anew prefect of Rome and senator. Although Sidonius was not then a priest, his countrymen, notwithstanding this, chose him, in 472, Bishop of Augustunometum (Clermont au Aurègne). After having transferred to his son his honours and fortune, he entered on the duties of the episcopate, and acquitted himself with zeal and fidelity. When the Visigoths seized upon a portion of Gaul, Sidonius fell into the power of the king. Stilicho, the protector of Leo, the minister of this barbarian monarch, was re-established in his bishopric, and discharged the episcopal functions until the day of his death, which appears to have taken place in 484. A French savant traces the pedigree of the Polignac family to Apollinaris. (Mangon de la Lande: Essais historiques, &c., 1828.—Compare Revue Française, 1828, n. 6, p. 503, seqq.—We have remaining of Sidonius a collection of letters in prose; and twenty-four pathetic, the principal of which are the three panegyrics pronounced as above, and some epithalamia. We see in these the productions of a man of talent, not deficient in imagination and poetic fire, and who knows how to interest and please. Although marked by the vices which characterized the literary efforts of the age, namely, subtle conceits and exaggerated metaphors, he may still be regarded as one of the best of the Christian poets who flourished in Gaul. The signature of Sidonius. Apollinaris is that of Labbaeus (Labbe), Paris, 1652. (Schull, Hist. Lit. Rom., vol. 3, p. 96, seqq.)

Siga, a city in the western part of Numidia, or what was afterward called Mauritania Cæsariensis. The Itinerary Antoninus makes it three miles distant from the coast, whereas Ptolomy ranks it among the maritime cities. It had a harbour, probably, on the sea, while the city itself stood inland. Siga was an old Tyrian settlement, and is the only one of the many mentioned by Eusebius that is found fixed upon with certainty. A river of the same name ran by it. Syphax, prince of the Massaesyli, selected this city for his residence, having taken it from the Carthaginians. He afterward took up his abode in Cirta. The modern Ned-Roma, mentioned by Leo Africanus, is thought to answer to the ancient city. (Manmerti, Geogr., vol. 10, pt. 2, p. 427.)

Sigæum or Sigæum. I. A celebrated promontory of Tröja, and the location of the Scæan阙. The modern name is Cape Jenischcher, or, as it is more commonly pronounced, Cape Janissery. Homer does not mention either the promontory of Sigæum or of Rhoe- teum. These names rather referred to cities which were built after their time. These two promontories formed the limits on either side of the station of the Grecian fleet. Achilles, Patroclus, and Antilochus were buried on Sigæum, and three large tumuli, or mounds of earth, are supposed to mark at the present day the three tombs; though, from a passage of Homer (Od. 24, 75, seqg.), it would seem that one mound or tomb covered the ashes of all three. "We visited," says Dr. Clarke, "the two ancient tumuli called the tombs of Achilles and Patroclus. They are to the northeast of the village of Yeni-Cher. A third was discovered by Sir W. Gell near the bridge for passing the Mender; so that the three tumuli mentioned by Strabo are yet entire. (Strabo, 360.) The largest was opened by order of M. de Choiseul. Many authors bear testimony to the existence of the tomb of Achilles, and to its situation on or by the Sigean promontory. It is recorded of Alexander the Great, that he anointed the stèle upon it with perfumes, and ran naked around it, according to the custom of honouring the manes of a hero. (Elian, Var. Hist., 12, 7.—Diod. Sic., 17, 17.) Ælian distinguishes the tomb of Achilles from the tumulus at which the exander crowned one, and Hephæstus the other. It will not, therefore, be easy to determine, at the present day, which of the three tombs now standing upon this promontory was that formerly venerated by the inhabitants of Sigæum for containing the ashes of Achilles. —It should also be observed, that to the south of Sigæum, upon the shore of the Ægean, are yet other tumuli, of equal if not greater size, to which hardly any attention has yet been paid; and these are visible far out at sea." (Travels, vol. 3, p. 210, seqg.—II.

A town of Troas, on the sloping side of the promontory. There the poet assigned to the siege of Troy by an Æolian colony, headed by the patriarch of Mytilene. He is said to have employed the stones of ancient Ilium in the construction of his town. The Athenians, some years afterward, sent a body of troops there, headed by Phrynon, a victor at the Olympic games, and expelled the Lesbians. This act of aggression led to a war between the two states, which was long waged with alternate success. Pitaeus, one of the seven sages, who commanded the Mytilenians, is said to have saved Phrynon, the Athenian leader, in single fight. The poet Alceaus was engaged in one of the actions that took place, and had the misfortune to lose his shield. At length both parties agreed to refer their dispute to Periander of Corinth, who decided in favour of the Athenians. (Strab., 599.—Herod., 5, 95.—Diog. Laert., 1, 74.) The latter people, or, rather, the Pisistratids, remained in possession of Sigæum, and Hippias, after being expelled from Athens, is supposed to have retired to it with his family. (Herod., 5, 65.) The town of Sigæum no longer existed when Strabo wrote, having been destroyed by the citizens of New Ilium. (Strab., 600.—Plin., 5, 50.—Cramer’s Asia Minor, vol. 1, p. 100.) The modern Jeni Schehr marks the site of the ancient Sigæum. (Leake’s Tour, p. 276.)

Sigellia, a city of Latium, southwest of Anagnia. It became a Roman colony as early as the reign of Augustus, and it possessed a consul, which it was only a military post, which, in process of time, however, became a city. (Dion. Hal., 4, 63.) When Tarquin was de-throned, he sought the assistance of Sigellia, but the inhabitants remained faithful to Rome. (Dion. Hal., 5, 58.) They appear to have continued in the same sentiments even during the severe trial of the second Punic war; as we find Sigellia mentioned by Livy among the colonies of that period most distinguished for their steady attachment to the Roman cause. Sigellia was noticed by several writers as producing a wine of an astringent nature. (Strabo, 237.—Plin., 14, 6.—Sil. Ital., 8, 380.—Martial, 13, 116.) It was noted, also, for a particular mode of flooring with bricks, which was called “opus Sigillum.” (Plin., 15, 12.—Viru- tre, 8, in fn.) The modern Segni marks the ancient site. (Cramer’s Anc. It., vol. 2, p. 109.)

Silia Silvæ, a forest of vast extent, in the country of the Brutti, to the south of Consentina. It consisted chiefly of fir, and was celebrated for the quantity of pitch which it yielded. (Plin., 15, 7.—Columella, 12, 20.—Dioscorides, 1, 98.) Strabo describes the Silva as occupying an extent of 700 stadia, or eighty-seven miles, from the neighbourhood of Rhegium northward. (Strab., 260.—Plin., 3, 11.) Virgil alludes to it in a beautiful passage. (Aen., 12, 715.) These immense woods may probably, in ancient times, have furnished the Tyrrhenian with timber for their fleets; and we know they afterward did so to the sovereigns of Sicily and to the Athenians. (Thucyd., 6, 90.—Athen., 5, 43.—Cramer’s Anc. Italy., vol. 2, p. 437.)

Silanus, the name of a Roman family belonging to the plebeian house of the Junii. The most remarkable of the name were the following: I. Marcus Silanus, served under Scipio in Spain (B.C. 207), and was sent, on one occasion, by that commander, with a force of 5,000 men, to attack the Gauls at the battle of the Trebia, whom he succeeded in conquering. In the following year he brought to Scipio the auxiliaries from the Spanish prince Colcha, and aided him in gaining the victory
SIL

near Baccula, over the forces of the Carthaginians.—II. Marcus Junius Silanus, was consul B.C. 109 with Q. Cecilius Metellus. He obtained the command of the forces against the Cimbri, but was so unfortunate as to be more than once defeated, and even to lose his camp. Five years after this, the tribune Domitius brought him a charge of this illiberal treatment of his tribesmen—III. D. Junius Silanus, son of the preceding, was consul elect B.C. 63, when Cicero accused him of his opinion in the Roman senate as to the punishment to be inflicted on the accompanists of Catiline. He gave his opinion in favour of punishment. In the following year he entered on the consular office with L. Licinius Murena.—IV. M. Junius Silanus, son of the preceding, served first under Cesar as lieutenant in Gaul, and, after the assassination of that individual, attached himself to the party of Lepidus. This party, however, he afterward left, and joined that of Antony. In consequence of this, he was proscribed and his property confiscated. He afterward, however, was pardoned by Augustus, and, returning to Rome, became at last on such good terms with Augustus, that the latter made him his colleague in the consulsipaper, 28 B.C.—V. Junius Silanus Criticus, was the son of L. 7, and afterward consul of Syria. Tiberius removed him from that province, on account of the friendship subsisting between him and Germanicus.—VI. D. Junius Silanus, was banished by Augustus for adultery with Julia. He obtained his recall under Tiberius, through the intercession of his brother.—VII. M. Junius Silanus, brother of the preceding, was a man of great reputation and influence, on account of his talents as an orator. His daughter Claudina married Caligula, and he himself was afterward sent as governor into Spain. The tyrant, becoming jealous of him, compelled him to destroy himself.—VIII. L. Junius Silanus, pretor A.D. 49, a brave and illustrious individual, stood so high in the favour of the Emperor Claudius that the latter intended to give him his daughter Octavia in marriage. This, however, was prevented by the artful Agrippina, who obtained her hand for her own son Nero. Various false charges were brought against Silanus; he was expelled from the senate, and, in his despair, destroyed himself.—IX. Turpilus, an officer of Metellus in the Jugurthine war. Having been left by that commander at the head of the Roman garrison in Vaca, and having, through want of care, allowed the town to be retaken by the inhabitants, he was tried, and condemned to death. (Sallust, Bell. Jug., 66, 67, 123, 129.) The account of this river is stated by ancient writers to have possessed the property of incrusting, by means of a calcareous deposition, any pieces of wood or twigs which were thrown into them. (Strabo, 251, Plin., 2, 106.) This fact is confirmed by Baron Antomini, della Lucania, p. 2, disc. 1. The banks of this river were greatly infested by the gadfly. (Virg., Georg., 3, 146, seqq.) The modern name of the stream is the Silaro. (Cramer's Ancien Italy, vol. 2, p. 360.)—II. A river of Cisalpine Gaul, on the east of Bononia, running into the Padus, or Spinetic branch of the Padus. It is now the Silaro. (Cramer's Ancien Italy, vol. 1, p. 89.)

SILENTIARIUS, Paulus, a poet in the reign of the Emperor Justinian. He was the primarus or chief of the Silentarii at the court of that monarch, whence the second part of his name. The title of Silentarii, it may be remarked in passing, designates various employments; it is sometimes synonymous with ἐπισκόπος, and denotes an officer whose duty is to preserve quiet in the imperial palace; at other times the Silentarius is a private secretary of the prince. —Paul, the Silentius, has left various poetical productions, which are not without merit. In the Greek Anthology he has left an eighty-eighth epigram of which are of an erotic character. They are deficient neither in spirit nor elegance. We perceive that their author was well read in the ancient writers; but it is evident, at the same time, that his verses have not the conciseness so essential to the epigram. The most celebrated of his productions, however, are, his poem on the Pythian Batha in Bithynia (Μιαλώτισσα νυμφή τον Ηέλιον) to the Church of St. Sophia ('Ἐκκλησία τῆς μεγάλης ἐκκλησίας'), which was publicly read at the dedication of that structure, A.D. 562. We have also a third poem, forming, in fact, a supplement to the second, on the pulpit placed in the great aisle of the patriarchal palace ('Εκκλησία τοῦ Ἀγίου κ. τ. λ.). The poem on the Pythian Batha is given in Brünck's Analekta, and in the editions of the Anthology. The description of the Church and St. Sophia (Nign) is given in the life of Johannes Cinnamus, in the edition of Ducange. In 1822, Grozze published a critical edition at Leipzig, in 8vo, to which is added the Description of the Abon or pulpit. Bekker gave an edition of this last-mentioned poem, from a Heidelberg manuscript, Berol, 1815, 4to. (Schöll, Hist. Est. Gr., vol. 6, p. 46, 116.)

Silenus, a demigod, who became the nurse, the preceptor, and the attendant of Bacchus. Pindar calls him the Naiad's husband (fragm. incert, 73). Socrates used to compare himself, on account of his baldness, his flat nose, and the quiet raihyl in which he was so fond of indulging, to the Sileni born of the divine Naiads. (Xenophon, Symp., 5, 7.—Compare Ἀτλιαν, V. H., 3, 18.) Others said that Silenus was a son of Earth, and sprung from the blood-drops of Uranus. (Serv. ad Virg., Éd., 6, 13.—Nom., 14, 97.—Id., 29, 262.) Marsyas is called a Silenus. Like the satyrs, Silenus was noted for wisdom. Hence some modern expounders of mythology think that Silenus was merely a river-god, and they derive the name from Σληνος, Σληνος, to roll, expressive of the motion of the streams. The connexion between Silenus and Bacchus and the Naiades thus becomes easy of explanation; in their opinion, all beings desiring to water or moisture. (Keightley's Mythology, p. 1014.)—In the same structure, and their vessels have already been noticed under the former article. (Vid. Midas.)—Silenus was represented as old, bald, and flat-nosed, riding on a broad-backed ass, usually intoxicated, and carrying his can (cantharos), or tottering along supported by his staff of jennel (ferula).—For other views of the legend of Silenus, consult Creuzer (Symbolik, vol. 3, p. 207, seqq.), Rolle (Recherches sur le Culte de Bacchus, vol. 3, p. 354), and Wackernagel (Recherches sur le Culte de Bacchus, vol. 3, p. 214, seqq.).—According to another account, Midas mixed some wine with the waters of a fountain to which Silenus was accustomed to come, and so inebriated and caught him. He detained him for ten days, and afterward restored him to Bacchus, for which he was rewarded with the power of turning into gold whatever he touched. Some authors assert that Silenus was the Indian philosopher, who accompanied Alexander in his Indian expedition, and was preserved by the soundness of his counsels. From this circumstance, therefore, he is often introduced speaking, with all the gravity of a philosopher, concerning the formation of the world and the nature of things.—The legend of Silenus is evidently of Oriental origin. (Symbolik, vol. 3, p. 207, seqq. —Consult also Rolle, Recherches sur le Culte de Bacchus, vol. 3, p. 354, seqq.)
SILIUS ITALICUS.

SILIUS ITALICUS, C. a Latin poet, born about the 25th year of the Christian era. He has been supposed to have been a native of Italia, in Spain; but his not being claimed as a fellow-countryman by Martial, who has bestowed upon him the highest praises, renders this improbable. Some make him to have been a native of Tarraconensis. He is called in Italy, his country, its authors, which, according to Strabo, was called Ilitica in the time of the Social war; but Velleius Paterculus informs us that Corfinium merely intended to change its name to Ilitica, and that the project was never carried into effect. Whatever, however, he was a native of Italy in Spain, or of an Italia elsewhere, his surname certainly does not show it; for in that event it would have been Ilitcensis. It is most probable that Italia or Tarraconensis seems have been given to one of his ancestors, when residing in some province, to show that he was of Italian origin.—Silius Italicus applied himself with great ardour to the study of eloquence and poetry. In the former of these pursuits he took Cicero for his model, and acquired at the bar the reputation of an eminent speaker. In poetry he gave the preference to Virgil. His predilection for these two great writers led him to purchase two estates which had belonged to Cicero at Tusculum, and that of Virgil near Naples, on which the poet had been interred. Silius often visited the tomb of the latter, and celebrated his birthday annually with great solemnities.—Our poet passed through all the public employments which led to the consulsip. He is said also to have insinuated himself into the favour of Nero by following the vile trade of an informer. Pliny the younger, who mentions this fact, which, for the honour of literature, one could wish might be impugned, adds, that if it be true that Silius was thus guilty, he made amends for his fault by a long course of subsequent virtue, and enjoyed at Rome a high degree of consideration. The first consulship of Silius (for it is thought, on no very sufficient grounds, however, that he thrice held this magistracy) was in the famous year 68, when Nero died.—Silius enjoyed the favour of Vitellius and Vespasian; under the latter he was proconsul of Asia. Loaded with honours, and having accumulated an ample fortune, he retired in his old age to Campania, and there passed the rest of his days in the society of the Muses. Attacked, at the age of 75 years, with an incurable malady, he starved himself to death, in the reign of Trajan, A.D. 100.—Silius, through all his life, had a strong attachment for poetry and literature, and devoted to them all the leisure moments which his public employments allowed. It was only, however, in his later years, and during his retreat at Naples, that he formed the serious idea of aiming at a place in the list of poets. He then composed an epic, or, rather, historical poem, in seventeen cantos, the subject of which was the second Punic war. This poem, entitled Punicia, has come down to our times. It confirms the judgment which Pliny passed upon its author, who also was possessed with more diligence than genius. (Ep. 3, 7, 5.) It appears that Silius was one of those men to whom Nature has granted a certain facility, which makes them succeed in some degree in whatever they undertake, and which, when it is seconded by learning and taste, may, to a certain degree, occupy the place of genius. The subject which he chose for his poem was one that possessed an unusual share of interest to the Romans. Three centuries had elapsed since the memorable period, and, though all the details of the war were still well known, because many Greek and Roman historians had recorded them in their respective works, still there remained a wide field for the imagination of the poet, and he might indulge in the fictions and employ all the machinery of which the epic poem was naturally susceptible. Silius disdained to use these means for interesting and pleasing his readers; but, like Lucan, he chose a defective plan, in preferring the historical method, that makes known all the consequences resulting from any event, to the poetic mode, that selects from a series of facts some single circumstance, which it makes the principal action, and that, in this manner, exerts a strong and interesting effect on the passions of the reader. This defect, however, ought to tend. Had he transported his readers in the very outset to the later years of the war, he might have taken for his theme Hannibal’s attempt to make himself master of Rome; this would have afforded the different parts that are regarded as necessary for an epic action, namely, a commencement, a plot, and a catastrophe. By pursuing a different plan, by preferring to the epopee the march of history, he ought to have shown his strength in giving the employment of mythological fictions, which are entirely out of place in an historical narrative. And yet, falling into the same error as Lucan, he calls these very fictions to his aid. It is this intermingling of the sober details of history with the flights of mythology that has given birth to a strange and misshapen offspring, to which it would be no easy task to assign its proper appellation. Is it an epic poem? it wants unity. Is it an historical poem? it suffers from many revolting improbabilities, and its machinery is altogether out of place.—Silius drew the subject of his poem from the histories of Livy and Polybius; his poetical ornaments he chiefly borrowed from Virgil; but he does not possess the art of borrowing these last in such a way as to conceal their parent source; his imitations, on the contrary, are altogether too palpable. Nor are these limitations limited to Virgil: Silius has pilfered also Lucretius, Horace, Homer, and Hesiod, a circumstance which imparts a disagreeable inequality to his style. Like Valerius, he endeavours to hide his mediocrity under an appearance of erudition and affectation of pomp, which imparts an air of coldness to his composition. To give the character of Silius in a few words, we may say that he possessed a portion of those talents, the union of which forms the great poet; he was versed in historical, geographical, and physical knowledge, which imparts to his poem a character of greater interest in the eyes of antiquarian critics, from the circumstance of its containing various facts omitted by Livy. He chose a subject at once great and interesting; his personages have a character of historic truth, but there is wanting that degree of elevation which true poetry would have bestowed. He is most successful in his description of battles. Silius wants enthusiasm; his style consists of borrowed phrases, which he has not known how to appropriate to himself, or mark, as it were, with the impress of his own zeal. Does he attempt to express anger or tenderness? his coldness freezes the reader.—Whatever may have been the reputation which this poet enjoyed among his contemporaries, he fell soon afterward into neglect; no grammarians cites him, and Sidonius Apollinaris alone names him among the eminent poets. At the revival of letters, however, it was found that the poem was lost, and thus to inspire the celebrated Petrarch with the idea of supplying its place by his Af- rica, the subject of which production is also the second Punic war. This point, however, is contested among scholars. During the sitting of the council of Cen- tence, Poggio succeeded in finding a manuscript of Silius, probably at the monastery of St. Gall. A copy was made of this, which thus became the original of all the subsequent imitations. Gallus, in his Historia Carian discovered, about 1575, at Cologne, another manuscript, which he thought might date from the era of Charlemagne. A third, of still more modern date, was found at Oxford. Villebrune, who published, in 1781, an edition of Silius Italicus, which he pretended was the first complete one that had as yet appeared, inserted into the sixteenth book, after the twenty-sev
enth verse, thirty-three other verses which he said he had found in a MS. at Paris, and which exist, with some slight changes, in the sixth book of Petrarch's Latin poem entitled Africa. More recent critics, however, and especially Heine, in a review written by him on the subject, think that the thirty-three verses in question are rather from the pen of Petrarch than from that of Silius. — The best editions of Silius Italicus are, that of Rapertii, Göting., 1795-98, 2 vols. 8vo, and that of Lemaire, Paris, 1823, 2 vols. 8vo. The following editions are also valuable: that of Drakenborch, Traiect. ad Rhen., 1717, 4to; that of Villebrune, Paris, 1781, 8vo; and that of Erneeti, Lips., 1791-92, 2 vols. 8vo. (Schött, Hist. Lit. Rom., vol. 2, p. 496, sec. 1. — Compare Dähn, Gesch. Röm. Lit., vol. 1, p. 151, seq.)

Silvanus, a deity among the Romans who had the care of fields and cattle (Virg., Æn., 8, 601), and who also presided over boundaries. (Horat., Epod., 2, 22.) Groves were consecrated to him, whence perhaps his name. He was usually represented as old, and bearing a cypress plucked up by the roots (Virg., Georg., 1, 29); and the legend of Apollo and Cypha- thene is a later development of the same idea (Georgica, 1, 20). The usual offering to Silvanus was milk. (Horat., Epist., 2, 1, 143.)—According to the Agrimensores, every possession should have three Silvani: one domestic, for the possession itself; one agricri, for the herdsman; a third oriental, for whom there should be a grove on the boundary. (Scal. ad Fest., s. v. Marsapeda.) The meaning of this obscure passage probably is, that Silvanus was to be worshipped under three different titles; as protector of the family, for we meet with an inscription Silvano Larum; of the cattle, perhaps those on the public pastures; and of the boundaries, that is, of the whole possession. The Mars Silvanus, to whom Cato directs prayer to be made for the health of the oxen, is probably the second (R. R., 60), and the third is the tutel funim of Horace. (Keightley's Mythology, p. 538.)

Silures, the people of South Wales, who were in Britain, occupying the counties of Hereford, Monmouth, Radnor, Brecon, and Glamorgan. Their capital was Isca Silurum, now Caerleon, on the river Isca or Uske, in Glamorganshire. Caractacus was a prince of the Silures. (Tac., Ann., 12, 32.—Plin., 4, 16.) Siméthrius, a river of Sicily, rising in the Herzan Mountains, and falling into the sea below Catana. It receives a number of small tributaries, and is now the Gomphius, (Plin., 8, 65.—Plin., 9, 53.) Simmias, I. a native of Rhodes, who flourished between the 120th and 170th Olympiad. The period when he existed cannot be ascertained with more precision. He published a collection of poems, in four books, entitled Διάφορα παιιτα. Athenaeus cites one of these pieces, entitled Gorgo, which appears to have been of an epic character. Simmias is perhaps the inventor of a kind of sport, which we do not find to have existed before him, and which had not been conceived of at a period when the public taste had become extremely corrupt. It consisted in so arranging verses of different length as to represent an altar, an axe, a pair of wings, &c., the several verses at the same time making one poem. A production of this kind, forming a Stüep, or Pondean pipe, has often been ascribed to Theocritus. It consists of twenty verses, every two of the same size, and each pair less in length than the preceding, forming an instrument composed of ten pipes, each shorter than the other. (Schött, Hist. Lat. Gr., vol. 3, p. 126.) The remains of Simmias are given in the Anthology, and in the Poetae Graeci Minores.—II. A Theban philosopher, a disciple of Socrates. He was the author of twenty-three dialogues, which are lost. (Schött, Hist. Lat. Gr., vol. 2, p. 357.)

Simbus (-entis), a river of Troas, which rises in Mount Ida, and falls into the Xanthus. (Consult remarks on the Topography of Troy, under the article Troja.)

Simon, a shoemaker or currier of Athens, from whom the so-called "Συμωνίου διάλογοι," mentioned under the article Plato, are supposed to have derived their origin. (Vid. Plato, near the conclusion of that article.)

Simonides, I. a poet of Amorgus (one of the Cyclades), who died 490 B.C. He was grandfather to the poet of Cos, from whom he is distinguished by the title of Σαμοθρακιος, "writer of Iambics." We have a fragment of his preserved by Stobæus; it is a satiric piece, remarkable for its simplicity and elegance. In his poem, entitled πεπί γενέσας, he calls to women. This fragment is given in the collections of Winckelmann, Brunn, Gaisford, and separately by Koeler, Göt. 1781, 8vo, and Welecker, Bonn, 1835, 8vo.—II. A celebrated poet of Cos, son of Locrepas, and grandson of the preceding, born at the city of Iulis, 556 B.C., and who lived until B.C. 467. He attained, in fact, to a very advanced age, so as to become a contemporary not only of Pittacus and the Pisantriaides, but of the three celebrated πεπί γενέσας, and of Cimon. This prince and Theron, king of Agrigentum, reconciling these two sovereigns at the very moment when the two armies were on the point of contending. Plato calls him a wise man (De Regub., 1, p. 411), and Cicero, in speaking of him, says, "Non enim poeta sumps, verum etiam certamen doctissimo magistro tradidit." (N. D. 1, 22.) He was the master of Pindar. Simonides is regarded as the first who applied the alternating hexameter and pentameter, or, in other words, the early elegiac measure to mournful and plaintive themes. This measure at first was martial in its character, not plaintive, and Cullinns is said to have been its inventor. Neither was it called elegy originally, but ἔρως, a general term, subsequently confined to heroic verse. Simonides became so distin- guished in elegy (in the later acception of the term) that he must be included among the great masters of elegiac song. He is stated to have been victorious at Athens over ᾿Ερέχθιλες himself, in an elegy in honour of those who fell at Marathon, the Athenians having instituted a contest of the chief poets. The ancient biographer of ᾿Ερέχθιλες who gives this account, adds, in explanation of the fact, that elegy requires a tenderer touch of feeling which was foreign to the character of ᾿Ερέχθιλες. To what degree Simonides possessed this quality, and, in general, how great a master he was of the pathetic, is proved by his celebrated lyric piece, containing the lament of Danae, and by other remains of his poetry. Probably, also, in the elegies upon those who died at Marathon and Plataea, he did not omit to bewail the death of so many brave men, and to introduce the very words of their arrows and their plans, which was quite consistent with a lofty, patriotic tone, particularly at the end of the poem. Simonides likewise used the elegy as a plaintive song for the death of individuals; at least the Greek Anthology contains several pieces of his, which appear not to be entire epigrams, but fragments of longer elegies, lamenting, with heartfelt pathos, the death of persons dear to the poet. Among these are the beautiful and touching elegy of Morgan, the chief of the Ioni, to his son Gorgo, who, while plucking the sweet bay, set these words to her mother: "Remain here with my father, and become, with a happier fate, the mother of another daughter, who may tend thee in thy old age."—It was Simonides who first gave to the epigram the perfection of which, consistently with its purpose, it was capable. In this respect he was favoured by the circumstances of his time; for, on account of the high consideration which he enjoyed in both Athens and the Peloponnesus, he
was frequently employed by the states which had fought against the Persians, to adorn with inscriptions the tombs of their fallen warriors. The best and most celebrated of these epitaphs is the imitable inscription of Simonides, who died at Thermopylae, of which we possess nothing but the following proverb: "Stranger, tell the Lacedaemonians that we are lying here in obedience to their laws." Never was heroic courage expressed with such calm and undaunted grandeur. With the epistles are naturally connected the inscriptions on sacred offerings, especially where both refer to the Persian war; the former being the discharge of a debt to the dead, the latter a thanksgiving of the survivors to the gods. Among these, one of the best refers to the battle of Marathon, which, from the neatness and elegance of the expression, loses its chief beauty in a prose translation (fragm., 25, ed. Gaisf.).—The form of nearly all the epigrams of Simonides is elegiac. When, however, a name (on account of a short between two long syllables) could not be adapted to the dactylic metre (as Ἄρχιτατος, Ἰπποκράτιος), he employed trochaic measures. (Müller, Hist. Lit. Gr., p. 125, seqq.)—Simonides became aversacie and mercenary towards the close of his life; and it is mentioned as a subject of disgrace, that he was the first who wrote verses for money. Plautus relates, that some one having reproached him with his sordid aversacie, he returned for answer that age, being deprived of all other sources of enjoyment, the love of money was the only passion left for it to gratify. (Plut., An seni sit gerenda respull.—Opp., ed Reiske, vol. 9, p. 143.)—To Simonides the Greek alphabet is indebted for four of its letters, E, Ψ, Η, O; and to him, also, is attributed the invention of a system of Mnemonics, or artificial memory. (Compara Cic., de Orat., 2, 84.—Plin., 7, 24.—Quintil., 11, 2, 11.)—It was Simonides that gave the celebrated answer, when Hiero of Syracuse inquired of him concerning the nature of God. The poet requested one day for deliberating on the subject; and when Hiero repeated his question on the morrow, the poet asked for two days. As he still went on doubting the number of days, and the monarch, lost in wonder, asked him why he did so, "Because, the longer I reflect on the subject, the more obscure does it appear to me to be." (Cic., N. D., 1, 22.)—The remains of the poetry of Simonides are given in the collections of Stephens, Brunck, Gaisford, Boissoneade, and others. The latest separate edition is that of Schneidewin, Bruns, 1835, Svo. (Scholl, Hist. Gr., 1, 3, 2, 1835, 1st ed.—Compara Botz, Gesch. der Lyrischen Dickentunken, vol. 2, p. 122, seqq.)—III. A son of the daughter of the preceding. Being also a native of Ceos, he was distinguished from the former by the appellation of the "Younger." He wrote "on Inventions" (περὶ εὑρίσ-
καρων), and a work in three books on Genealogies. (Beurette, Mem. de l'Acad. des Inscr., &c., vol. 13, p. 257.—Van Goens, De Simonidei Cae et philosoph., Praef. ad viv. 1833.)

Numicius, a native of Cilicia, the clearest and most intelligent of the commentators on Aristotle. His commentaries are extremely valuable, from their containing numerous fragments of the works of previous philosophers. He flourished in the seventh century of our era, and was involved in some disputes with the Christian writers, particularly John Philoponus, on the subject of the eternity of the world. His commentary on the Meteorologica of the Ciceronian is regarded as one of the best moral treatises that has come down to us from antiquity, and proves that Simplicius did not confine himself to the tenets of the Peripatetic school. The works of Aristotle on which we have the commentaries of Simplicius are, the eight books of Physics, the Categories, the four books of the Heavens, and the three of the Soul. The best edition of the commentary on Epictetus is that of Schweigheuser, making part of his edition of Epictetus. The commentary on the Physics of Aristotle was published at the Aldine press, Ven., 1526, fol., and a Latin version by Lucillus Philalethus, Ven., 1543, fol. The most correct edition of the commentary on the Categories is that printed at Basle, 1551, fol. There is a Latin version by Dorethous, Ven., 1541, 1550, 1567, fol. The commentary on the treatise De Caelo was published at the Aldine press, Ven., 1526, fol. There is a Latin version by Morbeke, printed in 1540, and another by Dorethous, in 1544, both from the Venice press. The commentary on the treatise De Anima was published at the Aldine press in 1527, and a version by Pseudo, made from a more perfect manuscript, in 1543, both at Venice. There is another version by Langes, which has been often reprinted at Venice. (Scholl, Hist. Lit. Gr., vol. 7, p. 129, seqq.)

Sinæ, I. a people of India, called by Ptolemy the most eastern nation of the world. These Sinæ, who dwelt beyond the river Serus, or Menan, are supposed to have occupied what is now Cochis-China. —II. There was another nation of the same name east of Serica, who were probably settled in Shen-ti, the most westerly province of China, immediately adjoining the great wall. In this province was a kingdom called Ten, which probably gave name to these Sinæ.

Sindi, a people of Asiantic Sarmatia, below the Cimmerian Bosporus, and opposite the Tauric Chersonese. Their name would seem to indicate an Indian origin, and Ritter has attempted to prove this in his learned work on the earlier history of some of the ancient nations. (Ritter, Vernakl., p. 157, seq.)

Singenæ, a strongly fortified city of Mesopotamia, the southernmost possession of the Romans on the eastern side of that country, from Trajan to Constantius. It is now Sindchar. (Plin., 5, 25.—Amm. Marcell., 18, 5.)

Sinus, a town of Macedonia, in the peninsula of Sitionia, on the lower shore of, and giving name to, the Sinus Singiticus. The modern name of the gulf is that of Monte Santo. (Herod., 7, 122.—Thucyd., 6, 18.)

Sinon, a Greek, who accompanied his countrymen to the Trojan war. When the Greeks had fabricated the famous wooden horse, Sinon went to Troy, in the instigation of Ulysses, with his hands bound behind his back, and by the most solemn protestations assured Priam that the Greeks were gone from Asia, and that they had been ordered to sacrifice one of their soldiers every day to appease the wrath of the gods, because the lot had fallen upon him, he fled away from their camp, not to be cruelly sacrificed. These false assertions were immediately credited by the Trojans, and Sinon advised Priam to bring into his city the wooden horse which the Greeks had left behind them, and to consecrate it to Minerva. His advice was followed, and Sinon, in the night, to complete his perfidy, opened the side of the horse, from which issued a number of armed Greeks, who devoured the city, and pillaged their city. (Dares Phryg.—Hom., Od., 8, 492.—Virg., Aen., 2, 79, &c.—Pausan., 10, 21, 4—Q. Smyrr., 12, &c.)

Saginus, I. a daughter of the Asopus by Methone. She was beloved by Apollo, who carried her away to the borders of the Euxine Sea, in Asia Minor, where she gave birth to a son called Suryus. (Apoll. Rhod., 2, 946.—Schol., ad loc.)—II. A city of Paphlagonia, on the river Amastris, and esteemed for its extremity. It was the most important commercial place on the shores of the Euxine, and was founded by a Milesean colony at a very early period, even prior to the rise of the Persian empire. The particular year of its origin, however, is not known: the Peripl. Anon. (p. 8) says it was at the time when the Cimmerians were ravaging Asia Minor. The leader of the colony was named Autolyeus, and he received from the latest
inhabitants of the place divine honours. In the mytho-
logy of the Greeks he became one of the compan-
ions of Jason. Various accounts, too, are given of the origin of the city's name, one of which traces it to Sinope, daughter of the Anopsus. (Compare Apoll. loc. cit. & Dion. Hal., V. 8, 141—Val. Flacc., 5, 108.)—The situation of Sinope was extremely well chosen. It was built on the neck of a peninsula; and, as this peninsula was secured from any hostile landing along its outer shore by high cliffs, the city only needed defending on the narrow isthmus connecting it with the mainland, while at the same time it had two convenient harbours, one on either side. The outer part of the peninsula afforded room for spacious suburbs, for gardens and fields, on which the city could easily rely for support in case of any scarcity produced by a siege. (Polyb., 4, 56.—Strabo, 545.) Sinope soon increased in wealth and power, and, became possessed of a dependant territory which reached as far as the Halys, and which was in-
habited by the Lucosyrii; it became also the parent city of many colonies along the coast. So flourishing a place could not but excite the envy of the people in the interior who, but for the powerful ally sent by Alexander, it is probable, that it was occasionally besieged by the neigh-
bouring satraps of Paphlagonia and Cappadocia; and yet at other times, we are informed by Xenophon (Anab., lib. 5 et 6), it stood on a very friendly footing with them. It then became more dangerous from the monarchs that arose subsequently to the time of Alexander. Against open attacks from these, however, it was able to make a successful stand (Polyb., 4, 56); but it could not defend itself against a surprise on the part of Pharnaces. (Strabo, i. c.) It lost its freedom, but not its commerce and prosperity, and from this time forward became the residence of the monarchs of Pon-
tus, until Lucullus took it from the last Mithridates. It suffered severely on this occasion, and the Roman commander stripped it of many fine statues and valuable works of art. Among the articles carried off on this occasion Strabo makes mention of the sphere of Bilinus. From this period Sinope remained subject to the Roman power, and received, according to Strabo and Pline (Pline, 6, 2), a Roman colony. This colony was settled there in the year of Julius Cæsar's assassination. Strabo found the city in his time well fortified, and adorned with many handsome edifices both public and private. The commerce of the place, indeed, had somewhat declined, having been drawn off partly to Byzantium, partly to the cities of the Tauric Chersonese. Still the Sunny-fisheries in its immediate vicinity continued to afford a very lucrative branch of trade to Sinope. The city, however, had begun to decline in political importance, and we find, not it, but the city of Amasea the capital of the later province of Hellenopontus. In the middle ages Sinope made part of the petty Greek kingdom of Tra-
pezus; and after this it had independent Christian monarcby for a time, and was a sort of frontier for the naval power and their piracies. (Abulfeda, p. 318.) The last of this dynasty surrendered his city and pow-
er to Mohammed II. in 1461. The modern Sinüb is still one of the most important Turkish cities along this coast.—Sinope was the birthplace of the Cynic Di-
genes. (Manert, Geogr., vol. 6, pt. 3, p. 11, seqq.)—III. An ancient Greek city of Campania. (Vid. Sinuessa.)—Sipon, a Thracian community, who appear to have occupied a district on the banks of the Strymon north of the Siropenses. (Thucyd., 2, 98.) Strabo affirms that they once occupied the island of Lemnos, thus identifying them with the Sinties of Homer. (H., 1, 593.—Od., 8, 294.—Strab., 231.—Id., 457.—Id., 549.—Schol. ad Thucyd., 2, 93.—Gatterer, Com-
ment. Soc. Göttingen. v. 1784, vol. 6, p. 53.) Livy in-
forms us that, on the conquest of Macedonia by the Romans, the Sinti, who then formed part of that em-
pire, were included in the first region, together with the Bisalts; and he expressly states that this part of the region was situated west of the Strymon, that is, on the right bank of that river (45, 29). Ptolemy gives the name Sinties to the district in question (p. 83.—Cramer's Ancient Greece, vol. 1, p. 304).—Etymologists derive the name of the Sinties from the Greek verb σίπων, "to hurt" (σίτερος, "an injurer; σι
ter, "a pirate"), either because they were reputed to have been the inventors of weapons, or from their hav-
ing been notorious for piracy. Ritter, however, seeks to connect their name, and, consequently, their origin, with that of India. (Vorhalle, p. 162.)—Sinuessa, a city of Calabria, subsequently of New Latium, on the seacoast, southeast of Minturnae and the mouth of the Liris. It was said to have been founded on the ruins of Sinope, an ancient Greek city. (Livy, 10, 21.—Pline, 3, 5.—Mela, 2, 4.) Strabo tells us that Sinuessa stood on the shore of the Sinus Setinus, and derived its name from that circumstance, or, in other words, from the sinuosity of the coast (σινοξὶ γὰρ ὡς κλίτσος.—Strab., 234). The same writer gives the name Sinuessa, and says that in Strabo's time, informed us that it was traversed by the Appian Way. Hor-
ace also confirms this. (Sat., 1, 5, 39, seqq.) Sin-
uesa was colonized together with Minturna, A.D. 456 (Liv., 10, 21), and ranked also among the maritime cities of Italy. (Id., 27, 88.—Polyb., 3, 91.) Its territory suffered considerable devastation from Hannibal's troops when opposed to Fabius. Cæsar, in his pursuit of Pompey, halted for a few days at Sinuessa, and wrote from that place a very concilia-
tory letter to Cicero, which is to be found in the correspondence with Atticus (9, 16).—The epithet of tepens, which Silius Italicus applies to this city (8, 529), has reference to some warm sources in its neigh-
bourhood, now called Bagno, while Sinuessa itself an-
swers to the rock of Monte Dragone. The Aque Sinuessaenses are noticed by Livy (22, 14), Tacitus (Hist., 1, 77.—Anna. 12, 66), Plutarch (Vit. Oth.), Pline (31, 2), Martial (6, 49), and others. (Cramer's Anc. Italy, vol. 2, p. 133.)—Sion, one of the hills on which Jerusalem was built. (Vid. Hierosolyma.)—Sipnos, an island in the Ægean Sea, one of the Cyclades, southeast of Serifus, and northeast of Melos. Herodotus reports that it was colonized by the Ionians (8, 48), and elsewhere speaks of the Siphnians as deriving colonists from Melos. The island, not far from the Strymon, was of considerable size, having a length of thirty-two miles, and containing a vast surface of rich pasture and excellent soil. The inhabitants, it is asserted, were not inconsiderable in numbers, and the poor and insignificant as to give rise to the proverb Σίφνων ἀστράγαλος, and Σίφνως ἀδραμος. (Strab., 44.—Eustath., ad Dion. Perig., 525.) Pliny makes it twenty-eight miles in circuit (4, 12). Sipnos was famed for its excellent fruit, and its pure and whole some air. The modern name is Sifanto. (Cramer's Anc. Greece, vol. 3, p. 405.—Bondelmonti, Ins. Ar-
chipel., p. 82.)—Siprus, or, as the Greeks write it, Ἡπείρος (gen.
-ουργος), a city of Apulia, in the district of Daunia, and to the southwest of the promontory of Garganum. It lay on the Sinus Urias. Sipontum was a place of great antiquity, and unquestionably of Greek origin, even though the tradition which ascribes its foundation to Homedoe should be regarded as fabulous. Strabo, who mentions this story, states that the name of this city is derived from the circumstance of
great quantities of cuttle-fish (in Greek ocean) being thrown up by the sea on its shores. (Strab., 284.) Little is known of the history of Sipontum before its name appears in the annals of Rome. We are told by Livy that it was occupied by Alexander, king of Epirus, when he was invited into Italy to aid the Tarrentines against the Bruttii and Lucani (8, 24). Several years after, that is, A.U.C. 558, the same historian informs us that a colony was sent to Sipontum; but it does not appear to have prospered; for, after the lapse of a few years, it was reported to the senate that the town had fallen into a state of complete desolation, upon which a fresh supply of colonists was sent there (34, 45; 39, 22). Sipontum is said to have been once dependant upon the city of Arpi. In Strabo's time its harbour could still boast of some trade, particularly in corn, which was conveyed from the interior by means of a considerable stream, which formed a lake near its mouth. (Strab., 284.) This river, which Strabo does not name, is probably the Cerulus of Pliny (3, 11), now Cerere. The ruins of Sipontum are said to exist about two miles to the west of Monfredomum, the foundation of which led to the final desertion of Sipontum by its inhabitants, as they were transferred by King Manfred to this modern town, which is known to have risen under his auspices. (Cramer's Anc. Italy, vol. 2, p. 273.)

Syrto, a mountain in Lydia, rising to the south of the Sirens' abode, was called the Atlas, from the chain of Timolus to the southeast, and by another from Mount Mastainis to the south. Sipylus is celebrated in Grecian mythology as the residence of Tantalus and Niobe, and the cradle of Pelops. These princes, though more commonly referred to by classical writers as belonging to Phrygia, must, in reality, have reigned in Lydia if they occupied Sipylus; not the mountain merely, but a city of the same name, situated near Mount Sirens, called (Strab., Minor, vol. 1, p. 437.) "It was growing dark," it seems, Mr. Arndell, "or we might have seen, as the traveller by day might, the abrupt termination of Mount Sipy- lucus at a considerable distance on the left, behind which lies the town of Magnesia." It is described by Chishull as a stupendous precipice, consisting of a naked mass of stone, and rising perpendicularly almost a fur- long high. It was here, too, that Chishull saw "a certain noble work, resembling an exact niche, and statue, with the due shape and proportions of a human body." (Arndell's Asia Minor, vol. 1, p. 18.) The rock just mentioned as the termination of Sipy- lucus, and also the rock of the Acropolis behind the town of Magnesia, have been supposed to contain some magnetic iron; and the magnet is said to have taken its name from this locality. Mr. Arndell and some friends made experiments in this quarter, to test, as far as it could be done, the truth of the story, and found clear indications of considerable magnetic in- fluence. (Arndell's Asia Minor, l. c., in nat.-II.) A city of Lydia, situate on the slope of Mount Sipy- lucus. According to traditions preserved in the country, it was swallowed up at an early period by an earth- quake, and was plunged into a crater afterward filled by a lake. The existence of this lake, named Sale or Salce, is attested by Pausanias, who reports, that for some time the ruins of the town, which he calls Idea, if the word be not corrupt, could be seen at the bot- tom. (Pausan., 7, 24.---Siebelia, ad loc.)---Crater's Asia Minor, vol. 1, p. 437.)

Siren's Insula, three small rocks on the south side of the promontory of Surrentum or Minerva, de- tached from the island, and celebrated in fabula as the islands of the Sirens. (Strabo, 22.---Id., 247.---Mela, 4. 4---Plin., 3, 5.)

Sirus, a city of Lucania, on the Sinus Tarentinus, at the mouth of a river of the same name, now the Sinn. It was said to have been founded by a Trojan colony, which was afterward expelled by some Ionians, who migrated from Colophon under the reign of Alyattes, king of Lydia; and who, having taken the town by force, changed its name to that of Polioeum (Strabo, 284.) The earliest historian who has mentioned this ancient city is the poet Archilochus, cited by Athenau- us (12, 5). He speaks with admiration of the sur- rounding country, and in a manner which proves that
he was well acquainted with its beauties. In the pas-
sage of Athenaeus where Archilochus is cited, Athe-
naeus represents the inhabitants of Siris as railing in all
respects the luxury and effluence of the Sybarites.
Siris and Sybaris had reached, about 500 B.C., the
summit of their prosperity and opulence. Shortly af-
fterward, according to Justin (20, 2), the former of the
two was almost destroyed in a war with Metapontum
and Sybaris. When the Tarentines settled at Herac-
cles they removed all the Sirites to the new town,
of which Siris became the harbour. (Diod. Sic., 12, 36.
—Strabo, 263.) No vestiges of this ancient colony are
now apparent: but it stood probably on the left bank
of the river, and at the mouth of the Sinnus. (Cramer's Anc.
Italy, vol. 2, p. 352.)
Siris (Σείριος), a name given to the dog-star.
Homer, though he mentions the dog-star twice, does
not employ the term. Hesiod, however, uses the ap-
pellation on several occasions (Op. et D., 417, 587,
619. — Scut. Her., 397.) But then, in the first of these
passages, he means by Siris the sun. Nor is this the
only instance of such a usage. In Hesychius, for
example, we have, Σείριος, οὗ θεός, of the θεός οὗ
αστρόν, "Siris, the sun, and also the dog-star."
He then goes on to remark, Ἐφαρμάζει τὸν ἀστρόν
κύριον, ὃν ἐν Αρχόλυχος τοῦ ἔλεος, ἤχος δὲ πάντα τὰ
dostrα, "Sophocles calls the dog-star so; Archilochus
the sun; Iliou, however, all the stars."
Eratosthenes, moreover (c. 33), observes: "Such stars (as Siris) astro-
nomers call Σείριος (Siris) διὰ τὸν τῆς φλογῆς
cύμωνα, 'on account of their light."
It would seem, therefore, that σείριον was an
originally an appellative, in an adjective form, em-
ployed to indicate any bright and sparkling star; but
which originally became a proper name for the bright-
est of the fixed stars. The verb εὐσείρεσθαι, formed
from this, is, according to Proclus, a synonyme of
χαμένων, "to shine," "to be bright."
(Ibler, Sternm.
p. 239, 269.)
Sirisian mounds, found on the shores of the Lacus
Benacus (Lago di Garda), now Sirmine, and the fa-
vourite residence, in former days, of the poet Catullus.
(Catull., 31.)
Sirmium, an important city of Pannonia Inferior,
on the northern side of the Sauss or Sae, between
Ulimi and Bassiana. Under the Roman sway it was
the metropolis of Pannonia. The Emperor Probus
was born here. The ruins of Sirmium may be seen at
the summit, not far from the town of Microcurne.
(Plin., 3, 23. — Zosim., 2, 18. — Herodian, 7, 2. — Amm.
Marc., 21, 10.)
Sisà, a town or, rather, village of Hispания, in
the northern part of Bética, supposed to answer to Alma-
den, on the southwestern limits of La Mancha.
The territory around this place not only yielded silv-
er, but excellent cinnaemon; and even at the present day
large quantities of quicksilver are still obtained from
the ground near Sisà. The Sisà of Ptolemy (which
(probably the same with the Cissalone of Antoninus)
was a different place, and lay more to the northwest
of the former, among the Rotani. (Mannert, Ge-
Sisenna, L., a Roman historian, the friend of Pom-
ponius Atticus. He wrote a history, from the taking
of Rome by the Gauls down to the wars of Sylla, of
which we shall hereafter hear near the town of Microcurne.
He was considered superior to all the Roman histo-
rians that had preceded him, and hence Varro entitled
his own treatise on history Sisenna. This same wi-
ter commented on Plautus. (Sohll, Hist. Lit. Rom.,
vol. 1, p. 164.)
Sisygmus or Sisygambis, the mother of Darius,
the last king of Persia. She was taken prisoner by
Alexander the Great, at the battle of Issus, with the
rest of the royal family. The conqueror treated her
with the greatest kindness and attention, saluted her
with the title of mother, and often granted to her in-
tercession what he had sternly denied to his favourites
and ministers. On the death of Alexander, a most
touching tribute to his memory was offered by Sisy-
gambis. She had who survived the massacre of her
eighty brothers, who had been put to death in one day
by Ochus, the loss of all her children, and the entire
downfall of her house, now, on the decease of the en-
emy and conqueror of her line, seated herself on the
ground, covered her head with a veil, and, notwithstanding
the entreaties of her grandchildren, refused
nourishment, until, on the fifth day after, she expired.
—Thirrion, Ant., 7, 3.)
Sisyphus, I. the son of Eolus, was said to have
been the founder of Ephyra, or ancient Corinth.
He married Merope, the daughter of Atlas, by whom he
had four sons, Glauce, Ornytion, Thersandrus, and
Halmus. When Jupiter carried off Eagina, the daugh-
ter of the Asopus, the river-god, in his search, came
after her to Corinth. Sisyphus, on his giving him a
spring for Acrocorinthus, informed him who the rav-
isher was, that a demi-god (the
former; but Sisyphus contrived to outweigh
Death, and even to put fetter to him; and there was
great joy among mortals, for no one died. Pluto, however,
did not allow Death at liberty, and Sisyphus was given up to
him. When dying, he charged his wife to leave his
body unburied; and then, complaining to Pluto of her
unkindness, he obtained permission to return to the
light, to inform the living of his situation. But Sisyphus,
who had himself again in his own house, refused to
leave it. Mercury, however, reduced him to obe-
dience; and when he came down, Pluto set him to
roll a huge stone up a hill, a never-ending still-begin-
ing toil; for, as soon as it reached the summit, it
rolled back again down to the plain. The craft of
Sisyphus, of which the following is an instance, was
proverbial. Autolycus, the son of Mercury, the
celebrated cattle-stealer, who dwelt on Parnassus, used
to deface the marks of the cattle which he carried off
in such a manner as to render it nearly impossible to
identify them. Among others, he drove off those of
Sisyphus, and he defaced the marks as usual; but,
when Sisyphus came in quest of them, he, to the great
surprise of the thief, selected his own beasts out of
the herd; for he had marked the initial of his name
under their hoof. (The ancient form of the word was WC,
which is probably the same as the name of the mountain.
The earliest form of the word was Wκαβλος, which
forthwith cultivated the acquaintance of one who had
thus proved himself too able for him; and Sisyphus,
it is said, seduced or violated his daughter Anticlea
(who afterward married Laertes), and thus was the
real father of Ulysses. (Thurcayd., ap. Schol. ad Od.,
19, 43. — Schol. ad Itr., 10, 267. — Tzetzes ad Lyoerth.,
344, &c.)—Homer calls Sisyphus the most crafty of
men (H., 6, 153); Hesiod speaks of him in a similar
sense. The name Sisyphus, however, seems to mean,
the most artful; but if the name is of Indian origin, the
lessons of wisdom, morality, and religion were sensibly
impressed on the minds of men. Sisyphus is, then,
the representative of the restless desire of knowledge,
which aspires to attain a height it is denied man to
reach; and, exhausted in the effort, suddenly falls
back into the depths of earthly weakness.
This expression is in the fine picture of the Odyssey, we
see every word is significant, and where, we may observe,
Sisyphus is spoken of in indefinite terms, and not as
assigned any earthly locality or parentage. (Weleker,
1243)
tr. p. 550.) In the legendary history, however, we find him placed at Corinth, and apparently the representative of the trading spirit of that city. He is, as we have already said, a son of Eolus, probably on account of his name (Alóboc, "cunning"); or it may be that the crafty trader is the son of the Windman, as the wind enables him to import and export his merchandise. He is married to a daughter of the symbol of navigation, Atlas, and her name would seem to indicate that he is engaged with men in the active business of life (Mépoer, mortals; from μωπος, death; φη λεγειν, being a mere adjectival ending). His children are Glauce, a name of the sea-god; Ornytion (Quick-mover); Thersandrus (Warm-man); and Halmus (Sea-man), who apparently denote the fervor and bustle of commerce. (Keightley's Mythology, p. 399, seqq. —Weikler, tr., p. 550, seqq.—Volcker, Myth. der Iap., p. 118, note.)—II. A dwarf of M. Antony. He was of very small stature, under two feet, but extremely shrewd and acute, whence he obtained the name of Sisyphus, in allusion to the cunning and dexterous chieftain of fabulous times. (Horat., Sat., 1, 3, 47.—Compare Heindorf, ad loc.)

Sithonia, the central one of the three promontories which lie at the southern extremity of Chalcidice in Macedonia. As Chalcidice was originally a part of Thrace, the term Sithonia is often applied by the poets to the latter country; hence the epithet Sithonia. In the literature of the Greeks the mention of the word often occurs as a writer of a person. (Lycoeurp., 1408, et Schol., ad loc.) Elsewhere the same poet alludes obscurely to a people of Italy descended from the Sithonian giants (v. 1354).

Sittænes, a German tribe in Scandinavia (Tacit., Germ., 54), separated by the range of Mount Sev from the Siuones. Reichard places them on the southern side of Lake Malar, where the old city of Stettin now stands. (Bischoff und Müller, Würterb. der Geogr., p. 923.)

Sittæs, P., a Roman knight, a native of Nuceria, and hence called Nucerinus by Sallust (Cat., 21).

Having been prosecuted a short time before the discovery of Catiline's conspiracy, he fled from a trial, and, being accompanied by a body of followers, betook himself to Africa, where he afterwards proved of service to Julius Caesar, against Scipio and Juba, and received from the latter a codex as his reward. (Appian, Bell. Civ., 4, 55.—Vit. Cirta.)

Slati, an ancient and powerful tribe in Sarmatia, stretching from the Dniester to the Tansis, and called also by the name of Antes. Having united with the Veneti, they moved onward towards Germany and the Danube, and became engaged in war with the Franks that dwelt north of the Rhine. In the reign of Justinian they crossed the Danube, invaded Dalmatia, and finally settled in the surrounding territories, especially in what is now called Slavonia. As belonging to them were reckoned the Bohemani or Bohemi (Bohemians); the Maharenes; the Sorabi, between the Elbe and Saale; the Silesii, Poloni, Cassubii, Rugii, &c. They did not all live under one common rule, but in separate communities. They are represented as large, strong, and warlike, but very deficient in personal cleanliness. Among the descendants of the Slavonic race may be enumerated the Russiens, Polos, Bohemians, Moravians, Carinthians, &c. (Consult Helmond, Chron. Slavorum.—Karamsin, Histoire de l'Empire de Russie, trad. par St. Thomas, Paris, 1819-26.—Foreign Quarterly, vol. 3, p. 152, seqq.)

Smaragdus-Mons (Σμαραγδος ὄρος), a mountain of Egypt, to the north of Berenice, where emeralds (smaragdi) were dug. It appears to have been one of a group of mountains, and the highest of the number; and all of them would seem to have contained more or less of this valuable material. The modern name of this mountain is Zubaera, and the situation is twenty-five miles in a straight line from the Red Sea.

These mines were formerly visited by Bruce, whose account of them is amply confirmed by the later travellers. The Smaragdus Mons appears to have been a very short distance from the sea; being that called by the Arabs Maden Uzzumurud, or the Mine of Emeralds. (Strab., 225.—Plin., 37, 5.—Russell's Egypt, p. 418.)

Smerdis, i. a son of Cyrus, put to death by order of his brother Cambyses. The latter, it seems, had become jealous of Smerdis, who had succeeded in partially bending the bow which the Ichtymophaghi had brought from the King of Ethiopia, a feat which no other Persian had been able to accomplish. Cambyses had also subsequently dreamed that a courier had come to him from Persia (he was at this period in Egypt) with the intelligence that Smerdis was seated on his throne, and touched the heavens with his head. This vision having filled him with alarm, lest Smerdis might destroy him in order to seize upon the crown, he despatched Prexaspes, a confidential agent, to Persia, with orders to kill Smerdis, which was accordingly done. According to one account, he led the prince out on a hunt, and then slew him; while others said that he brought him to the borders of the Persian Gulf, and there threw him headlong from a precipice. (Herod., 3, 30)—II. One of the Magi, who strongly resembled Smerdis the brother of Cambyses. As the writer of the History of Persia, who was a state secret, to which, however, some of the Magi appear to have been privy, the false Smerdis declared himself king on the death of Cambyses. This usurpation would not, perhaps, have been known, had he not taken too many precautions to conceal it. Otanes, a Persian noble of the first rank, suspecting at last that there was some imposture, from the circumstance of Smerdis never quitting the citadel, and from his never inviting any of the nobles to his presence, despatched the Magus through his daughter Phaedra. This female had been the wife of Cambyses, and, with the other wives of the late king, had been retained by the usurer. At her father's request, she felt the head of Smerdis while he slept, and discovered that he had no ears. Otanes, on this, was fully convinced that the pretended monarch was no other than the magus Smerdis, he having been deprived of his ears by Cyrus on account of some treason. He conducted the usurper, the conspiracy ensued which ended with the death of Smerdis, and the elevation of Darius, son of Hystaspes, to the vacant throne. (Herod., 3, 69, seqq.) A general massacre of the Magi also ensued, which was commemorated by the annual festival called by the Greeks Megapohonia. (Consult remarks at the beginning of the article Magi.)

Sminthius (two syllables), one of the surnames of Apollo. He was worshiped under this name in the city of Chrysia, where he also had a temple called Sminthium. The names Smintheus and Sminthium are said to have been derived from the term σμινθος, which in the ἀρμοδιος dialect signifies a rat; and Strabo gives the following legend on the subject, from the old poet Callinus. According to him, the Teucri, migrating from Crete, were told by an oracle to settle in that place where they should first be attacked by the original inhabitants of the land. Having waited for the night in this place, a large number of field-mice came and gnawed away the leathern straps of their baggage and thongs of their armour. Deeming the oracle fulfilled, they settled on the spot, and raised a temple to Apollo Sminthius. Various other fabulous tales respecting these rats are to be found in Strabo, who observes that there were numerous spots on this coast at which the name of Sminthia was attached. The temple itself was called Sminthium. (Strab., 604, 612.) The same geographer, however, does not allow, as Scylax does (p. 36), that this edi-
Smyrna, a celebrated city of Asia Minor, on the coast of Ionia, and at the head of a bay to which it gave name. The place was said to have derived its name from an Amazon so called, who, having conquered Ephesus, had in the first instance transmitted her appellation to that city. The Ephesians afterward founded the town, to which it has ever since been appropriated; and Strabo, who dwells at length on this point, cites several poets to prove that the name of Smyrna was once applied specifically to a spot near Ephesus, and afterward generally to the whole of its precincts. The same writer affirms that the Ephesian colonists were afterward expelled from Smyrna by the colonists of Colophon, who had received them into their city, they once more returned to Smyrna and retook it. (Strabo, 634.) Herodotus differs from Strabo in some particulars: he states that Smyrna originally belonged to the Eoli ans, who received into the city some Colophonian exiles. These afterward basely required the hospitality of the inhabitants by shutting the gates upon them while they were without the walls celebrating a festival, and so made themselves obnoxious to the Eoli ans, but to no purpose; and at last it was agreed that they should remain in possession of the place upon delivering up to the former inhabitants their private property. (Herod., 1, 149.) Smyrna after this ceased to be an Eolian city, and became a member of the Ionian confederacy. It was subsequently taken and destroyed by Alyattes, king of Lydia, and the inhabitants were reduced to serfdom, and their city was burned (Pausan., 5, 8.) They were besieged by the Eoli ans, but to no purpose; and at last it was agreed that they should remain in possession of the place upon delivering up to the former inhabitants their private property. (Herod., 1, 16. — Stylax, p. 37.) They lived thus for the space of four hundred years, and the city remained during all this time deserted and in ruins, until Antigonus, one of Alexander's generals, charmed with the situation, founded, about twenty stadia from the site of the old, a new city called Smyrna, on the southern shore of the gulf. Lysias machus completed what Antigonus had begun, and the new city became one of the most beautiful in Lower Asia. (Strabo, 646.) Another account makes Alexander the founder of this city, and Pliny and Pausianias both adopt this opinion; but it is contradicted by the simple fact that Alexander, in his expedition against Darius, never came to this spot, but passed on rapidly from Sardis to Ephesus. (Pliny, 5, 29. — Pausan., 7, 5.) Smyrna was one of the many places that laid claim to being the birthplace of Homer, and if enjoyed, perhaps, the best title of all to this distinguished honour. In commemoration of the bard, a beautiful square structure was erected, called Homerion, in which his statue was placed. This same name was given to a brass coin, struck at Smyrna in commemoration of the same event. (Strabo, l. c. — Cic., pro Arch., c. 8.) The Smyrneans also showed a cave, where it was said that Homer composed his verses. Chandler informs us that he had searched for this cave, and that the people described it as the probable seat of the Muses. It is about four feet wide, the roof formed of a huge rock, cracked and slanting, the sides and bottom sandy. Beyond it is a passage cut, leading into a kind of well.
Socrates.

SOCRATES.

and the hardships with which he endured fasting. During the severity of a Thracian winter, while others were clad in furs, he wore only his usual clothing, and walked barefoot upon the ice. In an engagement, in which he saw Aleiabdes, whom he accompanied during his campaign, he so startled the men as to cause them to fall and break their necks. He threatened to defend him, and saved both him and his arms, and then, with the utmost generosity, entrusted the judges to give the prize of valour, although justly his own due, to the young Aleiabdes. Several years afterward, Socrates voluntarily entered upon a military expedition against the Boiotians, during which, in an unsuccessful engagement at Delium, he retired with great coolness from the field; when, observing Xenophon crying, "Why don't you go home?" "I have not done," he answered. "For those shoulders, and bore him out of the reach of the enemy. Soon afterward he went out a third time, in a military capacity, in the expedition for the purpose of reducing Amphipolis; but this proving unsuccessful, he returned to Athens, and remained there until his death. It was not until Socrates was upward of sixty years of age that he undertook to serve his country in any civil office. At that age he was chosen to represent his own district in the senate of five hundred. In this office, though he at first exposed himself to some degree of ridicule from want of experience in the forms of business, he soon convinced his colleagues that he was superior to them all in wisdom and integrity. While they, intimidated by the clamours of the populace, were willing to put to the vote the illegal proposition relative to the Athenian commanders who had conquered at the Arginusae, Socrates, as presiding officer for the day, declared the motion illegal, and declared that he would only act as the law permitted to be done. Under the subsequent tyranny he never ceased to condemn the oppressive and cruel proceedings of the thirty tyrants; and when his boldness provoked their resentment, so that his life was in danger, fearing neither treachery nor violence, he still continued to support, with undaunted firmness, the rights of his fellow-citizens. The tyrants, that they might create some new ground of complaint against Socrates, sent an order to him to apprehend, along with several others, a wealthy citizen of Salamin; the rest executed the commission; but Socrates refused, saying that he would rather himself suffer death than be instrumental in inflicting it unjustly upon another. Observing with regret how much the opinions of the Athenian youth were misled, and their principles and taste corrupted by so-called philosophers, who spent all their time in refined speculations upon nature and the origin of things; and by misbehaving sophists, who taught in their schools the arts of false eloquence and deceitful reasoning, Socrates formed the wise and generous design of instituting a new and more useful method of instruction. He therefore assumed the character of a moral philosopher: and, looking upon the whole city of Athens as his school, and all who were disposed to lend their attention as his pupils, he seized every occasion of communicating moral wisdom to his fellow-citizens. In this capacity he used to call upon his custom in the morning to visit the places of public resort, and those set apart for gymnastic exercises; at noon to appear among the crowds in the market-place or courts of law; and to spend the rest of the day in those parts of the city where he would be likely to meet with the largest number of persons. The method of instruction which Socrates chiefly made use of was to propose a series of questions to the person with whom he conversed, in order to lead him to his own unforeseen conclusion. He first gained the assent of his respondent to some obvious truths, and then obliged him to admit others, in consequence of their relation or resemblance to those to which he had already assented. Without making use of any direct argument or persuasion, he chose to lead the person he meant to instruct to deduce the truths of which he wished to convince him, as a necessary consequence from his own concessions. He commonly conducted these conferences with such address as to conceal his design, till the respondent had advanced too far to recede. On some occasions he made use of this method, he showed himself so dangerous to his own life, and had no other intention than to convince his hearers of the narrow limits of the human understanding. Nothing was farther from his thoughts than to encourage universal scepticism: on moral subjects he always expressed himself with confidence and decision; but he was desirous of exposing to contempt the arrogance of those pretenders to science who would acknowledge themselves ignorant of nothing.—The moral lessons in the Xanthis declaration, which Socrates taught, he himself diligently practiced; and he pronounced as barbarous all other philosophers in personal merit no less than in his method of instruction. His conduct was uniformly such as became a teacher of moral wisdom.—Though Socrates was rather unfortunate in his domestic connexion, yet he converted this infelicity into an occasion of exercising his virtues. Xanthippe, concerning whose ill humour ancient writers relate many amusing tales, was certainly a woman of a high and unmanageable temper. But Socrates, while he endeavoured to curb the violence of her temper, improved his own. And, after all, indeed, it is very probable that the infirmities of this female have been greatly exaggerated, and that calumny has had some hand in finishing the picture. (Vid. Xanthippe.)—We have already alluded to the constant warfare between Socrates and the Sophists. It was this same warfare that brought him, how undeservedly we need hardly say, under the lash of the comic Aristophanes. Not that the poet was in this case guilty either of the foulest motives or of the grossest mistake; but if we suppose, what is in itself much more consistent with the opinions and pursuits of the comic bard, that he observed the philosopher attentively, indeed, but from a distance, which permitted no more than a superficial acquaintance, we are then at no loss to understand how he might have confounded him with a class of men with which he had, in reality, little in common, and who represented them. He probably first formed his judgment of Socrates by the society in which he usually saw him. Aristophanes, too, might either immediately, or through hearsay, have become acquainted with expressions and arguments of Socrates, apparently contrary to the established religion. And, indeed, it is extremely difficult to determine the precise relation in which the opinions of Socrates stood to the Grecian polytheism. He never could reconcile it with the rites of the national worship, but testified his respect for the oracles in a manner which seems to imply that he believed their pretensions to have some just ground. On the other hand, he acknowledged one Supreme Being as the framer and preserver of the universe (τὸ δὸλον ὄλον κατασκευής, τοῦ σωτήρος). (Mem, 4, 13.) used the singular and the plural number indiscriminately concerning the object he wished to reclaim one of his friends, who scoffed at sacrifices and divination, it was, according to Xenophon, by an argument drawn exclusively from the works of the one Creator. (Mem, 1, 4.) We are thus tempted to imagine that he treated many points to which the vulgar attached great importance, as matters of indifference, on which it was nei-
SOCRATES.
their possible nor very desirable to arrive at any certain conclusion: that he was only careful to exclude from his notion of the gods all attributes which were inconsistent with the moral qualities of the Supreme Being; and that, with this restriction, he considered the popular mythology and all the harmless nonsense of language and rite indiscriminately adopted.—The Athenians caused Aristophanes to bring Socrates on the stage in preference to any of the sophistical teachers, are much more obvious than the causes through which he was led to confound them together. Socrates, from the time that he abandoned his hereditary art, became one of the most conspicuous and notorious persons in Athens. There was, perhaps, hardly a mechanic who had not, at some time or other, been made a cripple, or diverted by his questions. (Men. 1, 2, 37.) His actions were so formed by nature, as to serve, with scarcely any exaggeration, for a highly laughable mask. His usual mien and gait were no less remarkably adapted to the comic stage. He was subject to fits of absence, which seem now and then to have involved him in ludicrous mistakes and disasters. Altogether, his exterior was such as might of itself have tempted another poet to find a place for him in a comedy. It was no unprecedented device, however, to suppose, as some have done, that the holding up of Socrates to ridicule in the comedy of the "Clouds" was the prelude, and, in fact, the true cause of his condemnation and death. In the first place, twenty-four years intervened between the first representation of the "Clouds" and the trial of the philosopher; and, besides, Aristophanes was not the only comic poet who traduced him and his disciples on the stage. The symptoms, for example, had charged him with a sleight of hand like that described in the "Clouds" (Schol. ad Nub., 180), and had also introduced Chaerephon, in his Kôlîcêç, as a parasite of Callias. (Schol., Plut., Bcker, p. 331.)

The time, in fact, in which Socrates was brought to trial, was one in which great zeal was professed, and some was undoubtedly felt, for the revival of the ancient institutions, civil and religious, under which Athens had attained to her past greatness; and it was to be expected that all who traced the public calamities to the neglect of the old laws and usages should consider Socrates as a dangerous person. But there were also specious reasons, which will presently be mentioned, for connecting him more immediately with the tyranny under which the city had lately groaned. His accusers, however, were neither common sycophants, nor do they appear to have been impelled by purely patrimonial motives, but all of them, which must always remain involved in great uncertainty. Anytus, who seems to have taken the lead in the prosecution, and probably set it on foot, is said to have been a tanner, and to have acquired great wealth by his trade (Schol., Plat., Apol. Socr., p. 331, Bcker) ; but he was also a man of great political activity and influence, for the Thirty thought him considerable enough to include him in the same scheme of banishment with Thrasylalus and Alcibiades (Xen., Hist. Gr. 2, 23; 42), and he held the rank of general in the army at Phyle. (Lyttus, Agorat., p. 137.) With him were associated two persons much inferior to him in reputation and popularity: a tragic poet named Miltius or Meletus, in whose name the indictment was brought, and who, if we may judge of him from the manner in which he is mentioned by Aristophanes, was not very celebrated or successful in his art. The other associate was one Lycon, which describes an orator, according to Diog. Laert. 2, 39), and who probably furnished all the assistance that could be derived from experience in the proceedings and temper of the law-courts. According to an opinion ascribed to Socrates himself (Apol., p. 23), they were all three instigated by merely personal resentment, which he had innocently provoked by his personal habits. The indictment charged Socrates with three distinct offences: with not believing in the gods which the state believed in, with introducing new divinities, and with corrupting the young. The case was one of those in which the prosecutor was allowed to propose the penalty due to the crime (δύναμις τῆς ἁγιασμοῦ). Before the trial began, Socrates was tried, Lytian composed a speech in defence of Socrates, and brought it to him for use. But he declined it as too artificial in its character. Among the works of Plato is an Apology, which purports to be the defence which he really made; and, if this was written by Plato, it probably contains the substance at least of his answer to the charge. The tone is throughout that of a man who does not expect to acquit. The speech is the result of the orator's meeting with a direct denial, and observes that he has been calumniously burdened with the physical doctrines of Anaxzogoras and other philosophers. But that part which relates to the introduction of new divinities he does not positively contradict; he only gets rid of it by a question which involves his adversary in an apparent absurdity. The charge itself seems to have been ineptly framed, so as to aggravate and distort a fact which was universally notorious, but which was then very little understood, and has continued ever since to give rise to a multitude of conjectures. Socrates, who was accustomed to reflect profoundly on the state of his own mind, had, it seems, gradually become convinced that he was favoured by the gods (who, as he believed, were always willing to communicate such a knowledge of futurity to their worshippers as was necessary to their service) with an inward sign, which he describes as a voice, by which, indeed, he was never positively directed, but was often restrained from action. It was by this inward monitor that he professed to have been prohibited from taking a part in public business. In the latter part of his life its warning had been more frequently repeated, and it had consequently become a matter of more general notoriety. There was nothing in such a claim as this inconsistent with any doctrine of the Greek theology. But the language of the indictment was meant to impute to that in this supernatural voice Socrates pretended to hear some new deity, the object of his peculiar worship.—His answer to the third charge is also somewhat evasive, and seems to show that he did not understand its real drift. Nevertheless, we have the best evidence that it was on this the issue of the trial mainly turned. The accusers who were most particular of this celebrated cause from his father, asserts that Socrates was put to death because it appeared that he had been the instructor of Critias (Timarch., p. 24); and that the orator neither was mistook, nor laid too much stress on this fact, seems to be clearly proved by the anxiety which Xenophon shows to vindicate his master on this head. (Mem., 1, 2.) But, at the same time, we learn from him, that the possibility to disguise to themselves the ill effects which had arisen from the teaching of Socrates, and that they made him answerable also for the calamities which Alcibiades had brought upon his country. It was, however, no doubt, the case of Critias that supplied them with those most efficacious appeals to the passions of their hearers. Critias, the bloodthirsty tyrant, the deadly enemy of the people, had once sought the society of Socrates, and had introduced his young cousin and ward, Charmides, to the philosophers, with his father's assistance. It was true, and probably was not disputed by the accusers of Socrates, that Critias had afterward been entirely alienated from him. But this fact, and many others along with it, were not likely to counteract the impression that he contributed to form the mind and character of Critias. When we consider, too, that Socrates, notwithstanding his con-
duct during the Anarchy, must have been accounted one of the party of the city, since he remained there throughout the whole period, and that the prosecutors were probably able to give evidence of many expressions apparently unfavourable to democracy, which had fallen from him in his manifold conversations, we cannot be surprised that the verdict was against him, but rather, as he himself professed to be, that the votes of the judges were almost equally divided. It appears, indeed, most likely, that if his defence had been conducted in the usual manner, he would have been acquitted; and that, even after the conviction, he would not have been condemned to death if he had not provoked the court by wanton conduct which must have been interpreted as a sign of profound contempt or of insolent defiance. When the verdict had been given, the prisoner was entitled to speak in mitigation of the penalty proposed by the prosecutor, and to assign another for the court to decide upon. Socrates is represented as not only disdaining to deprecate its severity by such appeals as were usually made in the Athenian tribunals to the feelings of the jurors, but as demanding a reward and honour instead of the punishment of a malefactor; and he was at last only induced by the persuasions and offers of his friends to name a trifling pecuniary mulct. The execution of his sentence was delayed by the departure of the Theoris, the sacred vessel which carried the yearly offerings of the Athenians to Delos. From the moment that the priest of Apollo had crowned its stem with laurel until its return, the law required that the city should be kept pure from all pollution, and, therefore, that no criminal should be executed while it lay at rest. The opening ceremony had taken place on the day before the trial of Socrates, and thirty days elapsed before the Theorie again sailed into the Piraeus. During this interval some of his wealthy friends pressed him to take advantage of the means of escape which they could easily have procured for him. But he refused to prolong a life which was so near to its natural close—for he was little less than seventy years old—by a breach of the laws, which he had never violated, and in defence of which he had before braved death; and his attachment to Athens was so strong that life had no charms for him in a foreign land. His imprisonment was cheered by the society of his friends, and was probably spent chiefly in conversation of a more than usually elevated strain. When the summons came, he drank the fatal cup of hemlock in the midst of his weeping friends, with as much composure, and as little regret, as though it were a long consecrated draught. The sorrow which the Athenians are said to have manifested for his death, by signs of public mourning, and by the punishments inflicted on his prosecutors, seems not to have been so well attested as the alarm it excited among his most eminent disciples, who perhaps considered it as the signal of a general persecution, and are said to have taken refuge at Megara and other cities. (Diog. Laer., 2, 19, seqq.—Enfeld, Hist. Phia., p. 44, seqq.—Hist. de l'Antiqu. Gr., 2, p. 1, 16, seqq.—Thirlwall's Greece, vol. 4, p. 265, seqq.—) II. Surnamed Scholasticus, an ecclesiastical historian, who flourished about the middle of the fifth century. He was a native of Constantinople, and a pupil of the grammarians Ammonius and Helladius. Socrates wrote an ecclesiastical history in seven books, from 306 to 439 A.D. He at first took for his guide the work of Rufinus; but having afterward perceived, from various causes, the want of correspondence in the earlier parts of the history, he consulted the opinions of the Novatians, and at other times with being led away by a certain Sabinus, who made a collection of the acts of councils. Both reproaches, however, are devoid of foundation.—The best edition of his history is that of Reading, Cant., 1720, fol.

SOGDIANA, a country of Upper Asia, between the Jaxartes and Oxus, lying to the west of Scythia extra Imaum, from which it is separated by the range of Imaus. It is bounded on the north by the Jaxartes, and on the south by the Oxus, and appears to correspond at the present day to northern Bukhara, the country of the Usbek Tartars, a part of the country of Pelur and of Little Thibet. The chief range of mountains in this tract was called the Sogdian, and traversed the whole region between the Oxus and Jaxartes. This mountain range which formerly separated the Sogdian, the Pashik, the Iatii, the Tachori, &c., along the Sogdian Mountains; the Mardyeni in what is now the land of the Usbek Tartars; the Oxiani and Chorsammi along the Oxus; the Drepsiani, at the sources of the Jaxartes, &c. In the middle ages, Sogdiana became famous, under the Arabic name of Soğd, for its great fertility, and was represented as a country eight days' journey in length, full of gardens, groves, cornfields, &c. The territory around Samarcand, in particular, the Arab geographer describe as a terrestrial paradise. The rich valley of Soğd presented so great an abundance of exquisite grapes, melons, pears, and apples, that they were exported to Persia, and even to Hindustan. Marcanda answers to the modern Samarcand. (Bischoff and Möller, Wirtarb. der Geogr., p. 925.—Matte-Brun, Geogr., vol. 2, p. 379, Am. ed.)

SOGDIANUS, a natural son of Antiochus, son of Longina, who murdered his brother Xerxes. He was dehonred, however, in his turn by Ochus, after a reign of only six months and fifteen days, and was suffocated in ashes according to the Persian custom. (Diod. Sic., 12, 71.—Ctes., 47, seqq.)

Sol, the Sun. (Vid. Apollo, Hercules, Mithras, &c.)

SOLDES, C. Julius, a Latin writer, whose period is unknown. Some critics place him in the middle of the second century; while others make him contemporary with the Emperor Heliogabalus, because they find that this prince had for a colleague, in his first consulship, a certain Adventus, and Solinus dedicated his work to a friend of the same name. This production is entitled Polyhistor, and is divided into fifty-six, or, according to other editions, seventy chapters. It is a collection of various notices, principally geographical, taken from different authors, of which some have been lost, and others, in part, are very imperfect. Salmasius has proved, as far as things of this nature are susceptible of proof, that Solinus published two editions of his work, the first under the title of Collectanea rerum memorabilium, and the other, re-touched and enlarged, under that of Polyhistor. These two editions have been blended and confounded together by the copyists. We have also two other works, a Short History of the Romans, entitled Pontica. (Durmann, Anthol. Lat., vol. 2, p. 383.)—The best edition of the Polyhistor is that of Salmasius (Samaunis), Traj. 1089, 2 vols. 8vo.

SOLIS FONS, a celebrated fountain in Africa. (Vid. Ammon.)

SOLÉS, I, a city of Cyprus, on the northern shore of the island, and southwest of the promontory Crommyon. The inhabitants of this city were also called Soli, were native of the name of the city as Soli. It was founded by an Athenian colony (Strabo, 683), and Solon is mentioned by Herodotus as having visited Philocypres, the tyrant of the place, and having praised him in his verses (5, 113). Plutarch informs us that, at the time of Solon's arrival, Philocypres reigned over a small city near the river Clarius, in a strong situation indeed, but in a very indifferent soil.
SOL

As there was an agreeable plain below, Solon persuaded him to raise there a larger and more pleasant city, which he named Thasos after the island. He also assisted in laying out the whole, and building it in the best manner for convenience and defence, so that Philecyprus shortly had it peopled in such a manner as to excite the envy of the neighbouring princes; and, therefore, though the former city was called Aeapia, yet, in honour of Solon, he called the new one Soli.

This story, however, appears to want confirmation, the more particularly, as Herodotus, who is fond of relating such things, makes no mention of the matter. It is more than probable that the anecdote owed its origin to the accidental similarity between the name of Solon and that of the city. Pococke found traces of the ancient place, which still bore the name of Soloea (vol. 2, p. 324). The inhabitants of this city, as well as those of Soloe in Cilicia, were charged with speaking very ungrammatical Greek, whence the term Solociam (Σολοκιαμ), to denote any gross violation of the idiom of a language. (Stridias, s. v. Soloe.)

II. A city of Cilicia Campestris, near the mouth of the river Lamas. It was founded by an Argive colonist, strengthened by settlers from the city of Lindus in Rhodes. By intermarrying with the rude Cilicians, the inhabitants so far corrupted their own dialect as to give rise to the term Solociam (Σολοκιαμ), to denote any violation of the idiom of a language. (Vid. Soloea.)

It is doubtful whether the term in question belongs properly to Soloea or some other city on the mainland, or the one in Cyprus; the greater number of authorities appear to be in favour of the former. Soloe suffered severely from Tigranes, king of Armenia, who wrested the greater part of Syria, and also Cilicia, from the Seleucidæ. He carried the inhabitants of the place to Tigranocerta, his Armenian capital, in order to introduce there European culture. Pompey, therefore, had the means of founding in his visit to those parts during the war with the Parthians and established here the remainder of the latter after they were conquered. The city was henceforward known, besides its own name, by that of Pompeipolis. (Strab., 671.—Appian, Bell. Mithrad., 105.) This city was the birthplace of Chryippus, Menander, and Aratus. (Melas, 1, 13.—Strabo, l. c.) Captain Beaufort gives a detailed account of the topography and remains of this interesting city. (Karavanus, p. 201, seqq.)

Mezoin is the name the modern natives give to the modern site. (Beaufort, I. b., p. 266.—Mannert, Geogr., vol. 6, pt. 2, p. 67.)

Solecis, a promontory on the western coast of Mauritania Tinginace, now Cape Cancin. (Herod., 2, 32.—Id., 4, 43.)

SOLON, a celebrated Athenian lawyer, and one of the seven sages of Greece. According to the most authentic accounts, he was the son of Excestides, and was sprung from the line of Codrus. His father had reduced his fortune by his imprudent liberality; and Solon, in his youth, is said to have been compelled, in order to repair the decay of his patrimony, to embark in commercial adventures—a mode of acquiring wealth which was not disdained by men of the highest worth, as it frequently afforded them the means of forming honourable alliances in foreign countries, and even of raising themselves to princely rank as the founders of colonies. It was, however, undoubtedly not more the desire of affluence than the thirst of knowledge that impelled Solon to seek distant shores; and the most valuable fruit of his travels was the experience he collected of men, manners, and institutions. We are unable to ascertain the precise time at which he returned to settle in Athens; but if, as is most probable, it was in the period following Cylon's conspiracy, he found his country in a deplorable condition, distracted within by the contents of exaggerated parties, and scarcely able to resist the attacks of its least powerful neighbours. Even the little state of Megara was at this time a formidable enemy. It had succeeded in the conquest of Salamis from the Athenians, who had been repeatedly baffled in their attempts to recover what they esteemed their rightful possession. The losses they had sustained in this tedious war had broken their spirit, and had driven them to the resolution of abandoning for ever the assertion of their claims. A decree had been passed, which, under penalty of death, forbade any one so much as to propose the renewal of the desperate undertaking. Solon, who was himself a native of Salamis, and was, perhaps, connected by various ties with the island, was indignant at this pusillanimous policy; and he devised an extraordinary plan for rousing his countrymen from their despondency. He was endowered by nature with a happy poetical talent, of which some specimens are still extant in the fragments of his numerous works; which, though they never rise to a very high degree of beauty, posses the charm of a vigorous and graceful simplicity. He now composed a poem on the loss of Salamis, which Plutarch praises as one of his most ingenious productions. To elude the prohibition, he assumed the demeanour of a madman; and, rushing into the market-place, mounted the stone from which the heralds were used to make their proclamations, and recited his poem to the bystanders. It contained a vehement exposition on the disgrace which the Athenian name had incurred, and the reproach of a superior and a sublime fate condemned to the loss of their native country to the lovely island. The hearers caught the poet's enthusiasm, which was seconded by the applause of his friends, and particularly by the eloquence of his young kinsman Pisistratus. The restraining law was repealed, and it was resolved once more to try the fortune of arms. Solon not only inspired his countrymen with hope, but led them to victory, aided in the camp, as in the city, by his influence and counsel. The stratagem with which he attacked the Megarians is variously related; but he is said to have finished the campaign by a single blow, and certainly succeeded in speedily recovering the island. We may even conclude that the Athenians at the same time made themselves masters of the port of Megara Nisaea, since it is said to have been soon after reconquered by the Megarians. The reputation which Solon acquired by his political and poetic praises was widely diffused throughout Greece by the part he took in the Sacred War, which ended with the destruction of Cirra. But already, before this, he had gained the confidence of his fellow-citizens, and had begun to exert his influence in healing their intestine divisions. The outcry against Megacles and his associates in the massacre had risen so high, that it became evident that quiet could never be restored until they had expiated their offence, and had delivered the city from the curse which they seemed to have brought upon it. Solon, with the assistance of the most moderate nobles, prevailed on the party of Megacles to submit their cause to the decision of an impartial tribunal. Under such circumstances their condemnation was inevitable: those who had survived went into exile, and the bones of the deceased were taken out of their graves and transported beyond the frontiers of the city. In the mean while the Megarians had not relinquished their pretensions to Salamis, and they took advantage of the troubles which occupied the attention of the Athenians to dislodge their garrison from Nisaea, and to reconquer the island, where five hundred Athenian colonists, who had voluntarily shared Solon's first expedition, had been rewarded with an allotment of lands, which gave them a predominant influence in the government. It seems probable that it was after this event that the two states, seeing no prospect of terminating by arms a warfare subject to such vicissitudes, and equally harassing to both, that now their
honour had been satisfied by alternate victories, agreed to refer their claims to arbitration. At their request the Lacedaemonians appointed five commissioners to try the cause. Solon, who was the chief spokesman on the Athenian side, maintained their title on the ground of ancient possession, by arguments which, though they never silenced the Megarians, appear to have convinced the arbitrators. The strongest seem to have been derived from the fact that the commoners, to which he pointed out traces in the mode of interment observed in Salamis, as well as inscriptions on the tombs, which attested the Attic origin of the persons they commemorated. He is said also to have adduced the authority of the Homeric catalogue of the Grecian fleet, by forging a line which described Ajax as ranging the ships which he brought from Salamis in the Athenian station; and he interpreted some oracular verses, which spoke of Salamis as an Ionian island, in a similar sense. Modern criticism would not have been much better satisfied with the plea, which he grounded on the Attic tradition, that the sons of the same hero had settled in Attica, and had been adopted as Athenian citizens, and, in return, had transferred their hereditary dominion over the island to their new countrymen. The weight, however, of all these arguments determined the issue in favour of the Athenians; and it appears probable that the Megarians acquiesced in a decision to which they had not entirely been appealed, than that, as Plutarch represents, they almost immediately renewed hostilities. Party feuds continued to rage with unabated violence at Athens. The removal of the men whom public opinion had denounced as objects of divine wrath, was only a preliminary step towards the restoration of tranquillity; but the evil was seated much deeper, and required a different kind of remedy, which was only to be found in the active and systematic employment of the powers of the state. Solon already meditated, as he must long have perceived its necessity. But he saw that, before it could be accomplished, the minds of men must be brought into a frame fitted for its reception, and that this could only be done with the aid of religion. There were superstitious fears to be stilled, angry passions to be soothed, barbarous usages, ill-advised by long prescription, to be abolished; and even the authority of the state itself had to be prepared for the purposes. He therefore looked abroad for a coadjutor, and fame directed his view to a man peculiarly qualified to meet the extraordinary emergency. This was no other than the famous Epimenides, whom his contemporaries regarded as a being of a superior nature, and who, even to us, appears in a mysterious, or, at least, an ambiguous light, from our inability to decide how far he himself partook in the general opinion which ascribed to him an intimate connexion with higher powers. This person was publicly invited to Athens, to exert his marvellous powers on behalf of the disturbed city; and, when his work was accomplished, he was dismissed with tokens of the warmest gratitude. (Vid. Epimenides.) But, though the visit of Epimenides was attended with the most salutary consequences, so far as it applied a suitable remedy to evils which were merely sectional in the imagination, and, though it may have wrought still happier effects by calming, soothing, and opening hearts which had before only beaten with wild and malignant passions, still it had not produced any real change in the state of things, but had, at the utmost, only prepared the way for one. This work remained to be achieved by Solon. The government had long been in the hands of men who appear to have wielded it only as an instrument for aggrandizing their own power. They had possessed that part of the class whose industry was employed in the labours of agriculture to a state of abject dependence, in which they were not only debased from all but, perhaps, a merely nominal share of political rights, but held even their personal freedom by a precarious tenure, and were frequently reduced to actual slavery. The smaller proprietors, impoverished by bad times or casual disasters, were compelled to borrow money at high interest, and to mortgage their lands to the rich, or to receive them again as tenants upon the same hard terms as were imposed upon those who cultivated the estates of the great. This state of things was remedied by the law made by the nobles, the insolvent debtor must be either set free by his creditor and sold into slavery; or torn from his home and condemned to end his days in the service of a foreign master, or driven to the still harder necessity of selling his own children. The eyes of Solon had frequently been struck with the dismal monuments of aristocratic oppression scattered over the fields of Attica, in the stone-posts, which marked that what was once a property had become a pledge, and that its former owner had lost his independence and was in danger of sinking into a still more degraded and miserable condition; and such spectacles undoubtedly moved him, no less than that which roused the holy indignation of the elder Gracchus against the Roman grandees. (Plut., Tib. Grach., c. 8.) Those who groaned under this tyranny were only eager for a change, and cared little about the means by which it might be effected. But the population of Attica was not sufficiently numerous to employ, or to be employed by, such a gigantic geographically division of the country, which, from time immemorial, had determined the pursuits and the character of its inhabitants, now separated them into three distinct parties (Hethoe; or Hethaioi, lowlanders; Δημοκρίτοι, highlanders; and Παπαοι, the men of the coast), animated each by its peculiar interests, views, and feelings. The possessions of the nobles lay chiefly in the plains. As a body, they desired the powerful, independent, and angry state of their nation to be recognized, and the exercise of their power and exclusive privileges depended; but there were among them some moderate men, who were willing to make concessions to prudence, if not to justice, and to resign a part for the sake of securing the rest. The inhabitants of the highlands, in the eastern and northern parts of Attica, do not seem to have suffered any of the evils inflicted on the lowland peasantry; but, though independent, they were probably in the situation of their more fortunate neighbours, and existed for a revolution which should place them on a level with the rich. Unitmg their cause with that of the oppressed, they called for a thorough redress of grievances, by reducing, namely, that enormous inequality of possessions, which was the source of degradation and misery to them and their fellows. (Plut., Sol., 13, 29.) The men of the coast, who probably composed a main part of that class which subsisted by trade, by the exercise of the mechanical arts, and perhaps by the working of the mines, and now included a considerable share of affluence and intelligence, were averse to violent measures, but were desirous of a reform in the constitution, which should promote the prosperity of the country by removing all grounds of reasonable complaint, and should admit a larger number to the enjoyment of those rights which were now only enjoyed by a few. The people in general felt the need of a leader, and would have preferred even the despotic rule of one man to the tyranny of their many lords. As Solon belonged to the nobility by birth and station, and had recommended himself to the people by the proofs he had shown of activity, prudence, justice, and humanity, he was chosen, with the unanimous consent of all parties, to mediate between them, and arbitrate their quarrels. The first step he took was to effect the emancipation of the state; and, under the title of archon, he was invested with full authority to frame a new constitution and a new code of laws (Ol. 46.3, B.C. 594). As such an office, under such circumstances, conferred
almost unlimited power, and an ambitious man might easily have abused it to make himself master of the state, but the Senate, though exercising the full power of determining of becoming tyrant of Athens; and they were not at a loss for fair arguments to colour their soul ad-
vice, reminding him of recent instances—of Tynnondas in Eubea, and Pittacus at Mytilene, who had ex-
gerated a sovereignty over their fellow-citizens without forfeiting their love. Solon saw through their sophis-
try, and was not tempted by it to betray the sacred trust reposed in him; but, satisfied with the approba-
tion of his own conscience and the esteem of his coun-
trymen, instead of harbouring schemes of self-aggran-
dizement, he bent all his thoughts and energies to the execution of the great task which he had undertaken.

This task consisted of two main parts: the first and most pressing business was to relieve the present dis-
tress of the commonality; the next to provide against the recurrence of like evils, by regulating the rights of all the citizens according to equitable principles, and fixing them on a permanent basis. In proceeding to the first part of his undertaking, Solon held a mid-
cle course between the two extremes—those who wished to keep all, and those who were for taking ev-
erything away. While he resisted the reckless and extravagant demands of those who desired all debts to be cancelled, and the lands of the rich to be confis-
cated and parcelled out among the poor, he met the requests of those of a more moderate temper, that the debt to the property to their owners; though it does not seem cer-
tain whether this was one of the express objects of the measure, or only one of the consequences which it involved. Finally, he abolished the inhuman law which enabled the creditor to enslave his debtor, and restored those who were pining at home in such bondage to immediate liberty; and it would seem that he 

had discharged by his own conduct his duties. This seems to be the true view of the measure, though it has been said, and not without reason, that the law was 

entirely cancelled all debts, and as having only disguised the violence of this proceeding under a soft and attractive mien. It does not appear that the an-
cients saw anything to censure in his conduct accord-

ing to either view. But the example of Solon cannot fairly be pleaded by those who contend that either public or private faith may be rightly sacrificed to ex-
cediency. He must be considered as an arbitrator, to whom all the parties interested submitted their claims, with the avowed intent that they should be decided by him, not upon the footing of legal right, but accord-
gaing to the present exigency of the case. And in this light that he himself regarded his office, and he appears to have discharged it faithfully and discreetly.

The strongest proof of the wisdom and equity of his measures is, that they subjected him to obloquy from the violent spirits of both the extreme parties. But their murmurs were soon drowned in the general appro-
plication with which the disburdening ordinance was received; it was celebrated with a solemn festival; and Solon was encouraged, by the strongest assurances of the increased confidence of his fellow-citizens, to proceed with his work; and he now entered on the sec-
ond and more difficult part of his task. He began by repealing all the laws of Draco, except those which concerned the repression of bloodshed, which were, in fact, customs hallowed by time and by religion, and had been retained, not introduced, by his predecessors. Of course, it will probably be contended, that these laws, or 

example, he published an amnesty, by which he 

restored those citizens who had been deprived of their franchise for lighter offences, and recalled those who had been forced into exile; and it seems probable that this indulgence was extended to the house of Megacles, the Alcmaionidae, as they were called from a re-

mote ancestor, the third in descent from Nestor, and to the partners of his guilt and punishment: the city, which was now protected by the support of foreign 

was not to be no longer either polluted or endangered by their presence; and it was always liable to be disturbed by their machinations so long as they remained in ban-
ishment. The four ancient tribes were retained, with all their subdivisions; but it seems probable that 

Solon admitted a number of new citizens; for it is said that he invited foreigners to Athens by this boon, though he confined it to such as kept up the same habits and had 

bent their connexion with their native land. The distinguishing feature of the new constitution was the substitution of property for birth, as a title to the honours and offices of the state. (Compare Niebuhr, Rom Hist, 2, 305, 2d ed., Camb. trans.) This change, though its consequences were of infinite importance, would not appear so vi-

olent or momentous to the generation which witnessed it, since at this time these two claims general-
ly concurred in the same person. Solon divided the citizens into four classes, according to the gradua-
tions of their fortunes, and regulated the extent of their franchise and their contributions to the public 

necessities by the amount of their incomes. The first class, as its name expressed, consisted of persons whose estates yielded a nett yearly income, or rent, of 500 measures of dry or liquid produce. The second class had three fiftieths of this amount: that of the third, two thirds, or, more probably, half of the latter. The members of the second class were called knights, being accounted able to keep a warhorse; the name of the third class, whom we might call yeomen, was derived from the yoke of cattle for the plough, which a farm of the 

text described was supposed to require (Zeytiras). The fourth class comprehended all whose incomes fell 

below this. The third, and, according to its name, consisted of hired labourers in husbandry (ᾼρες). The first class was exclusively eligible to the highest offices, those of the nine archons, and probably to all
others which had hitherto been reserved to the nobles; they were also destined to fill the highest commands in the army, as it later times, when Athens became a military state, the archons in all lower offices were undoubtedly left open to the second and third class, though we are unable to define the extent of their privileges, or to ascertain whether, in their political rights, one had any advantage over the other. They were at least distinguished from each other by the mode of their military service; the one furnishing the cavalry, the other the heavy-armed infantry. But, for their exclusion from the higher dignities occupied by the wealthiest few, they received a compensation in the comparative lightness of their burdens. They were assessed, not in exact proportion to the amount of their incomes, but at a much lower rate; the nominal value of their property being for this purpose reduced below the truth, that of the knights by one sixth, that of the third class by one third. The fourth class was excluded from all share in the magistracy, and from the honours and duties of the full-armed warrior, the expense of which would, in general, exceed their means: by land they served only as light troops; in later times they manned the fleets. In return, they were exempted from all direct contributions, and were permitted to take a part in the popular assembly, as well as in the exercise of those judicial powers which were now placed in the hands of the people. We shall shortly have occasion to observe how amply this boon compensated for the loss of all the privileges that were withheld from them. In other words, as the example of Solon himself seems to prove that Attica must already have carried on some foreign trade, it is not unlikely that there were fortunes of this kind equal to those which gave admission into the higher classes. But it can hardly be supposed that they placed their possessors on a level with the owners of the soil; it is more probable that these, together with the newly-adopted citizens, without respect to degrees of influence, were all included in the lowest class. Solon's system then made room for all free men, but assigned to them different places, varying with their visible means of serving the state. His general aim in the distribution of power, as he himself explains it in a fragment which Plutarch has preserved from one of his poems, was to give such a share to the commonalty as would enable it to protect itself, and to the wealthy few, what would preserve their dignity; in other words, for ruling the people without the means of oppressing it. He threw his strong shield, he says, over both, and permitted neither to gain an unjust advantage. The magistrates, though elected upon a different qualification, retained their ancient authority; but they were now responsible for the exercise of it, not to their own body, but to the governed. The judicial functions of the archons were preserved to each of the institutions, but those of the archons were preserved from them individually, to courts numerously composed, and filled indiscriminately from all classes. (Plut., Sol., 19.) Solon could not foresee the change of circumstances by which this right of appeal became the instrument of overthrowing the equilibrium which he hoped to have established on a solid basis, when that which he had designed to exercise an extraordinary jurisdiction over the ordinary tribunals, was, by almost all causes to itself, or overruled every other power in the state. He seems to have thought that, while he provided sufficiently for the security of the commonalty by permitting the lowest of its members to vote in the popular assembly, and to sit in judgment on cases in which the parties were dissatisfied with the ordinary modes of proceeding, he had also ensured the stability of his new order of things by two institutions, which appeared to be sufficient guards against the sallies of democratical extravagance—anchors, as Plutarch expresses it, on which the vessel of state might ride safely in every storm. These were the two councils of the Four Hundred and the Areopagite. It is supposed that the first of these, that of the Four Hundred was uniformly attributed to Solon; and, if this opinion be correct, which has, however, been made the subject of some dispute, then, according to the theory of Solon's constitution, the assembly of the people will appear to have been little more than the organ of that council, as it could only act upon the proposition laid before it by the latter. But the judicial power which Solon had lodged in the hands of the people was the most powerful instrument on which he relied for correcting all abuses and remedying all mischiefs that might arise out of the working of his constitution. A body of 6000 citizens was every year created by lot to form a supreme court, called the Heliaea which was divided into several smaller ones, not limited to any precise number of persons. The qualifications required for this were the same with those which gave admission into the general assembly, except that the members of the former might not be under the age of thirty. It was therefore, in fact, a select portion of the latter, in which the powers of the larger body were concentrated, and exercised under a judicial form. Passing over the other features of the Athenian constitution, as settled by Solon, on which our limits will not allow us to dwell, we proceed at once to the remainder of his history. Solon was not one of those reformers who dream that they have put an end to innovation, and that the changes they have brought about exempt from the general condition of mutability. But the very provisions which he made for the continual revision and amendment of his laws, seems to show the improbability of Plutarch's account: that he enacted them to remain in force for no more than a century. They were inscribed on wooden tablets, arranged in pyramidal blocks turning on an axis; which were kept at first in the Acropolis, but were afterwards placed in a more secure repository, brought down to the Prytaneum. According to Plutarch, Solon, after the completion of his work, found himself exposed to such incessant vexation from the questions of the curious and the cavils of the discontented, that he obtained permission to withdraw from Athens for ten years, and set out on the travels in which he visited Asia Minor, Cyprus, and Egypt, collecting and diffusing knowledge, and everywhere leaving traces of his presence by his memorials of himself and the mem- ories of men. But there is some difficulty in reconciling this story with chronology, since it supposes him to have found Cyrus in Lydia, who did not mount the throne within twenty or thirty years after; and the alleged occasion of the journey is very doubtful, though it is in substance the same with that assigned by Herod- otus. It is probable that Solon remained for several years at Athens, to observe the practical effect of his innovation upon the operation by his personal influence. He was, undoubtedly, well aware how little the letter of a political system can avail until its practice has become familiar, and its principles have gained a hold on the opinions and feelings of the people, and that this must be a gradual process, and liable to interruption and disturbance. Hence it could not greatly disappoint or affect him to hear voices raised to cavil at his work and to persuade him that his views were not generally or fully comprehended. But he may at length have thought it prudent to retire for a season from the public eye, the better to maintain his dignity and popularity; and, as he himself declared, that age, while it crept upon him, still found him continually learning, we need not be surprised if, at an unusually late period of life, he set out on a long course of travels. On his return, he found that faction had been actively labouring to per- vert and undo his work, and was compelled eventually
to witness the partial overthrow of his system in the usurpation of Pisistratus. (Vid. Pisistratus.)—It is not certain how long he survived this inroad upon his institutions; one account, apparently the most authen-
tic, places his death in the year following, that in
which the revolution occurred (B.C. 559). The le-
isure of his retirement from public life was to the last
devoted to the Museus: and if we might trust Pla-
то’s assertions on such subjects, he was engaged at
the time of his death in the composition of a great po-
em, in which he had designed to describe the flourish-
ing state of Attica before the Ogygian flood, and to
celebrate the wars which, according to some, were
indulged in the vast island which afterward sank in the Atlantic
Ocean. On the fragments of this poem, preserved in the
family, Plato, himself a descendant of Solon, pro-
fesses to have founded a work which he left unfinished,
but in which he had meant to exhibit his imaginary
state in life and action. It is certainly not improba-
able that Solon, when the prospect of his country be-
came gloomy, and his own political career was closed,
indulged his imagination with excursions into an ideal
world, where he may have raised a social fabric as un-
like as possible to the reality which he had before his
eyes at home, and perhaps suggested by what he had seen or heard in Egypt. It is only important to ob-
serve that the fact, if admitted, can lead to no safe
consclusions as to his abstract political principles, and
can still less be allowed to sway our judgment on the
design and character of his institutions. (Thirteenth’s
Greek, vol. 2, p. 23 seqq.)—Solon is generally ranked
under the homeric poets, and some fragments of his
productions in this department have been preserved by
the ancient writers. Of these the finest is his
"Prayer to the Museus." The fragments of Solon
are found in the collections of H. Stephens, Winter-
ton, Brunck, Gaisford, and Boissoneade.—(Schött,
Hist. Lit. Gr., vol. 1, p. 258.)
Solèn, a people of Lycia, of whom an account is
given in the Lycian attitude.
Sonns, son of Erebus and Nox, was one of the
deities of the lower world, and the god of Sleep. The
Latin poet Ovid (Met. 11, 592, seqq.), probably after
some Grecian predecessor, as was usually the case,
gives a beautiful description of the Cave of Sleep, near
the land of the Cimmerians, and of the cortège which
there attended on him, as Morphoeus, Icelos or Phor-
bērī, and Phantasia: the first of whom takes the form
of man to appear in dreams, the second of animals, and
the third of inanimate objects. Keightley’s Mythology,
p. 200.)
Sonus, a river of India, falling into the Ganges, and
now the Saum or Son. As this river towards its ori-
gin is called Ano-nadi, it appears that the name An-
domatis (given also in Arrian), or, rather, Arada-natis,
can denote no other than it. (Plin., 8, 18.)
Sophēne, a country of Armenia, was the prin-
cipal occupation of the Priests of Euphrates and Mount-Masis. It is
now called Zoph. (Die Cass. 36, 36.—Plin., 5, 12.)
Sophocles, a celebrated tragic poet, born at Colo-
inus, a village little more than a mile from Athens,
B.C. 495. He was, consequently, thirty years junior to
Eschylus, and fifteen senior to Euripides, the for-
er having been born B.C. 525, and the latter B.C.
480.—Sophocles, his father, a man of opulence and re-
 spectability, but a provincial, raised his son to the light
of an elegance unrivalled in education, and the literary and personal accomplishments of his age and country. The powers of the future
 dramatist were developed, strengthened, and refined by
a careful instruction in the principles of music and poe-
try; while the graces of a person eminently handsome
derived fresh elegance and ripened into a noble
manhood amid the exercises of the palaestra. The gar-
lands which he won attested his attainments in both
these departments of Grecian education. A still more
striking proof of his personal beauty and early pro-
ciency is recorded in the fact that when, after the bat-
tle of Salamis, the population of Athens stood in sol-
lemn assembly around the trophy raised by their val-
our, Sophocles, at the age of sixteen, was selected to
dedicate the work which had performed the pan of their country’s triumph. (Athen.
1, p. 20, e.) The commencement of his dramatic ca-
reer was marked not more by its success than by the
singularity of the occasion on which his first tragedy
appeared. The bones of Theseus had been solemnly
transferred by Cimon from their grave in the isle of
Scyros to Athens (B.C. 468.—Marm. Arund., No.
37). An eager contest between the tragedians of the
day ensued. Sophocles, then in his twelfth year, was
ventured to come forward as one of the candidates, am-
ong whom was the veteran Æschylus, now for thirty
years the undisputed master of the Athenian stage.
Party feelings excited such a tumult among the spec-
tators, that the archon Aphephon had not bollted the
judges, when Cimon advanced with his nine fel-
low-generals to offer the customary litanies to Bac-
chus. No sooner were these completed, than, detain-
ing his colleagues, he directed them to give him the
requisite oath, and then seat themselves as judges of
the performance. Before this self-constituted tri-
bunal Sophocles exhibited his maiden drama, and by
their decision was proclaimed first victor. This
remarkable triumph was an earnest of the splendid ca-
reer before him. From this event, B.C. 458, to his
death, B.C. 405, during a space of three-and-sixty
years, he continued to succeed; in which time he
frequently obtained the first prize, still more frequent-
ly the second, and never sank to the third. An accu-
nulation of success which left the victories of his two
great rivals far behind. Æschylus won but thirteen
dramatic contests. Euripides was still less fortunate.
—Such a continuation of poetic exertion and triumph is
the more remarkable, from the circumstance that
the powers of Sophocles, so far from becoming dulled
and exhausted by unceasing and multitudinous efforts, seem to
have contracted nothing from labour and age save a
mellower tone, a more touching pathos, a sweet and
gentle character of thought and expression. The life
of Sophocles, however, was not altogether devoted to
the service of the Museus. In his fifty-seventh year
he was one of the ten generals, with Pericles and
Thucydides among his colleagues, and served in the war
against Samos. But his military talents were of the
merely military kind, and his generalship added no
brilliance to his dramatic fame. At a more advanced
age he was appointed priest to Alon, one of the an-
cient heroes of his country; an office more suited to
the peaceful temper of Sophocles. In the civil duties of
an Athenian citizen he doubtless took a part. Nay,
in extreme age, we find him one of the commit-
tees of the πρόσωποι, appointed, in the progress of the
resolution brought about by Pisander, to investigate
the state of the public offices. He then, in his eighty-
fifth year, retired with the people as
sembled on the hill of Colonus, his native place. (Aris-
tot., Rhet., 3, 18.) And there, as πρόσωπος, he as-
sented, with characteristic easiness of temper, to the
establishment of oligarchy, under the council of four
hundred, "as a bad thing, but the least pernicious mea-
sure which circumstances allowed." The civil dissen-
sions and extreme reverses which marked the clos-
ing years of the Peloponnesian war were, however,
fallen heavily also upon him, whose chief delight was in
domestic tranquillity, and who remembered that proud
day of Salaminian triumph in which he bore so con-
spicuous a part. His sorrows as a patriotic citizen were
aggravated by the unnatural conduct of his own fami-
ly. (Vit. Athen. — Cic., de Sen., § 7.) Jealous at
the old man’s affection for a grandchild by a second wife,
an elder son or sons endeavoured to deprive him of
the management of his property, on the ground of
dog-
Athen produced, was read to before the court his Oedipus at Colonus, a piece which he had just composed; or, according to others, that beautiful chorus only in which he celebrates the loveliness of his father's rescentiment. The admirers, judges instantly arose, dismissed the cause, and accompanied the aged poet to his house with the utmost honour and respect. Sophocles was spared the misery of beholding the utter overthrow of his declining country. Early in the year 405 B.C., some months before the defeat of Egosotamene put the finishing stroke to the misfortunes of Athens, death came gently upon the venerable old man, full of years and glory. The Athenians, indeed, had maintained him in his old age, and the poet himself left the world, having resolved to live in peace and retires to the marvellous. Ister and Neamneth state that he was choked by a grape; Satyrus makes him to expire from excessive exertion, in reading aloud a long paragraph out of the Antigone; others ascribe his death to extreme joy at being proclaimed the Tragic victor. Not content with the singularity of his death, the ancient recorders of his life add prodigy to his funeral also. He died when the Athenians were cooped up within their walls, and the Lacedaemonians were in possession of Decea; the place of his family sepulchre. Bacchus twice appeared in a vision to Lyssander, the Spartan general, and bid him allow the interment; which accordingly took place with all due solemnity. Pausanias, however, tells the story somewhat differently (1. 21). Ister states, moreover, that the Athenians passed a decree to appoint an annual sacrifice to so admirable a man. (Vit. Anon.)—Sev- en tragedies alone remain out of the great number which Sophocles composed; yet among these seven we probably possess the most splendid productions of his genius. Suidas makes the number which he wrote one hundred and twenty-three. Aristophanes, the grammarian, one hundred and thirty, seventeen of which he deemed sprinie Böckh considers both statements erroneous. It appears from the argument to the Antigone, that this play was exhibited a little before the generalship of Sophocles, B.C. 441, and that this was his thirty-second drama; and it is known that Sophocles began to exhibit B.C. 468. Hence Böckh argues that, as during the first twenty-seven years of his dramatic career he produced thirty-two trag- edies, so during the remaining thirty-six years it is not probable he composed many more than this number. He therefore supposes that the true number is seventy, or nearly so. To Iophon, the son of Sophocles, he re- fers many of the plays which bore the father's name; others he ascribes to the favourite of his brother, Sappho, son of Ariston, by his wife or mistress Theoris. The result of Böckh's investigation is, that of the one hundred and six dramas whose titles remain, only twenty-six can, with any certainty, be assigned to the elder Sophocles. (Böckh, ad Trag. Graec., c. 8, seqq.)—The personal character of Sophocles, without rising into spotless excellence or exalted heroism, was honourable, calm, and amiable. In his younger days he seems to have been averse to the public scenes of the city, (Cic., Off., 1, 40.—Athen., 13, p. 609.) And a say- ing of his, recorded by Plato, Cicero, and Athenæus, while it confirms the charges just mentioned, would also imply that years had cooled the turbulent passions of his youth. “I thank old age,” said the poet, “for delivering me from the tyranny of my appetites.” Yet even in later days, the charms of a Theoris and an Archippus are evident in his buildings. He was an incomparable dramatist. Aristophanes, who, in his Rame, manifests so much respect for Sophocles, then just dead, had, fourteen years before, accused him of avarice; an imputation, however, scarcely recon- cilable with all that is known or can be inferred respecting the character of Sophocles. The old man, who was so absorbed in his art as to incur a charge of larceny from the utter neglect of his affairs, could hand- ly have been a miser. A kindly and contented disposition, however blemished by intemperance in pleasure, was the characteristic of Sophocles: a characteristic which Aristophanes himself so simply and yet so beatifully depicts in that single line, “Ο δ' ευκολός μην ενδίδα, εύκολος δ' εκεί—Rame, 82.” It was Sophocles who gave the last improvements to the form and exhibition of tragedy. To the two per- formers of Eschylus he added a third sector; a number which was never afterward increased. Under his directions the effect of theatrical exhibitions was height- ened by the illusion of scenery carefully painted and finely arranged on a stately arch of the temple, which was still curtailed, and the dialogue carried out to its full de- velopment. The odes themselves are distinguished by their close connexion with the business of the play, the correctness of their sentiments, and the beauty of their poetry. His language, though at times marked by harsh metaphors and perplexed constructions, is pure and majestic, without soaring into the gigantic phraseology of Eschylus on the one hand, or sinking into the commonplace diction of Euripides on the other. His management of a subject is admirable. No one understood so well the artful envelopment of incident, the secret excitation of the feelings, and the gradual heightening of the interest up to the final cri- sis, when the catastrophe bursts forth in all the force of overwhelming terror or compassion. Such was Sophocles; the most perfect in dramatic arrange- ments, the most sustained in the even flow of digni- fied thought, word, and tone, among the tragic trium- virate. Longinus, it is true, while bestowing the highest praises upon Sophocles, alleges a frequent in- equality; but this is scarcely borne out by anything in his extant tragedies (§ 33.—Theatre of the Greeks, 3d ed, p. 43, seqq.).—Nature, observes Schlegel, had refused Sophocles only one gift, a voice for song. He could only call forth and guide the harmonious em- phasizations of other voices, and is therefore said to have departed from the established precept that the poet should act a part in his own play; so that once only, he made his appearance in the character of the blind songster, Thanysiris, playing on the lyre.—In so far as he had Eschylus for his predecessor, who had fashioned tragedy from its original rudeness into the dignity of his Cothurnus, Sophocles stands, in respect to the history of his art, in such a relation to that poet, that he could avail himself of the enterprise of that original master; so that Eschylus appears as the projecting point, Sophocles as the finis and summa. That there is more art in the compositions of the latter is evident: the restriction of the chorus in propor- tion to the dialogue, the finish of the rhythms and of the pure Attic diction, the introduction of more nu- merous persons, the richer connexion of the fables, the greater multiplicity of incidents, and the complete development, the more quiet sustentation of all mo- ments of the action, and the more theatrical display of the tragic passion, are the peculiar properties of the whole, even in a more outward point of view. But there is yet another respect in which he outshines Eschylus, and deserved the favour of Destiny, which allowed him such a predecessor, and to compete with him on the same subjects: I mean the inward har- mony and completeness of his mind, by virtue of which he satisfied, from his own inclination, every requisition of the heart, and yet accomplished by a self-consciousness clear even to transparency. To surpass Eschylus in daring conception might be impossible; but I maintain that it is only on account of his wise moderation that Sophocles seems to be less daring; since everywhere he goes to work with the greatest energy, nay, perhaps with more sustained severity; as a man who is accurately acquainted with his limits insists the more confident-
SOPHOCLES.

ly on his rights within those limits. As Aeschylus delights in carrying all his fictions into the disturbances of the old world of Thanatian, Sophocles, on the contrary, seems to avail himself of Divine interference only of necessity. He formed human beings, as was the general agreement of antiquity, better, that is, not more moral and unerring, but more beautiful and noble than they are in reality. —As characteristic of this poet, the ancients have praised that native sweetness and gracefulness, on account of which they called him the Attic Bee. Whoever has penetrated into the feeling of this peculiarity, may flatter himself that the spirit for antique art has arisen within him; for no unerringly, very far from being able to fall in with that judgment, would be more likely to find in the Sophoclean tragedy, both in respect of the representation of bodily suffering and in the sentiments and arrangements, much that is insufferably austere. —We will now proceed to give a brief sketch of the tragedies of Sophocles that have come down to us. 1. Ἀλκασκίνη: "Ajax armed with the lash." The subject of this piece is the madness of Ajax, his death, and the dispute which arises on the subject of his interment. Many critics have regarded the play as defective, because the action does not terminate with the death of the hero; but, after this catastrophe, an incident occurs which forms a second action. To this it has been replied that there is not, in fact, any double action, since the first is not terminated by the death of Ajax, but by the sacrifice. The arrangement of funeral rites was regarded by the ancients in the light of one of the greatest misfortunes, the spectators could not have gone away satisfied so long as the question of burial remained unsettled in the case of one whose death they had mourned. —2. Περσεφώνη, "Electra," The subject of this piece is the vengeance which a son, urged on by an oracle, and in obedience to the decree of Heaven, takes on the murderers of his father. By continuing to despise his own mother. The character of ELECTRA, the daughter of Agamemnon, who here plays the principal part, is admirably delineated, and sustained with exceeding ability throughout the whole play. The recognition between the brother and sister forms one of the most touching scenes in the whole compass of the Grecian drama. —3. Οἰδίππος Τάρανος, "King Edipus." It would be difficult to devise a subject more tragic than that of which forms the basis of this play. The grand and terrific meaning of the fable, however, as Schlegel has well remarked, is a circumstance which is generally overlooked: to that very Edipus, who solved the riddle of human life procreated by the Sphinx, his own life remained an inexplicable riddle, till it was cleared up, all too late, in the most dreadful manner, when all was irrecoverably lost. This is a striking image of the arrogant pretensions of human wisdom, which always proceeds upon generalities, without teaching its possessor the right application of them to himself. The Edipus Tyrannus is regarded not merely as the chef-d'œuvre of Sophocles, but also, as regards the choice and disposition of the fable, as the finest tragedy of antiquity. And yet we know that it failed of obtaining the prize. It has been imitated by Seneca, P. Cornelle, and Voltaire. —4. Αὐρελία, "Antigone." Crown, as the departure of the Thebians, had ordered that no one should bestow the rites of burial on Polynices, and his object in so doing was to punish him for having borne arms against his country. Antigone, sister to the young prince, listening to the dictates of affection rather than those of fear, ventured to disregard this mandate, and falls a victim to her pious act. —5. Προμηθεύς, "The Theban Women," or the "Women of Thebes." It is a sequel to the Trachinian and the chorus is composed of young females of the country. Seneca has imitated this piece in his Hercules Furens, and Rotron in his Hercule Mournant. —

6. Φιλοκτέτης, "Philoctetes." It has been decreed by fate that Troy could not be taken without the presence of Philoctetes, whom the Greeks had abandoned in the island of Lemnos. Ulysses and Pyrrhus are sent to him to induce him to return to the Grecian camp. They succeed with great difficulty in accomplishing their object. This tragedy, though very simple in its plot, is marked by a constantly increasing interest, and the characters are well-supported. —7. Οἰδίππος ἐκ Κοιννίση, "Edipus at Colonus." The subject is the death of Edipus, near the temple of the Eumenides at Colonus. Edipus, blind and driven from his home, sends for the guidance of his daughter, for a tomb in a foreign land, where the tale of his woes had arrived before him, and causes his intended presence to be regarded with dread. There is need of manifest proof of Divine protection to enable him to find an asylum and tomb in this stranger land, and these proofs are vouchsafed him at the closing scene of his life. —The best editions of Sophocles are, that of Bruna, Argent., 1726, 4to. 2 vols., and 1786-9, 8vo. 3 vols.; that of Erfurt, Lips., 1802—1811, 7 vols. 8vo.; and that of Herrmann, Lond., 1826, 2 vols. 8vo. The separate editions of the plays are numerous, and some of them valuable.

SOPHONISA, a daughter of Aesdrubal, the Carthagian, celebrated for her beauty and unfortunate end. (Vid. Masinissa.)

Sophron, a native of Syracuse, born about 430 B.C., and esteemed as a writer of mimes. His pieces, composed in the Doric dialect, and not in verse properly so called, but in a species of cadenced prose (καταλογγραφ.). —Athen., ed. Schweich, vol. 11, p. 315, were great favourites with Plato, who became acquainted with them through Dion of Syracuse, and spread the taste for this species of composition at Athens. We have only a few titles and fragments. Remaining of the mimes of Sophron, which are altogether insufficient to enable us to form any very definite opinion of the character of these compositions: although we know that the fifteenth Idyl of Theocritus is an imitation of one of Sophon's mimes. Barthelmay thinks that these productions were in the style of the Fables of La Fontaine. Athenæus cites two kinds of mimes: one called Μίμησις ἁρπώνεις (Male mimes); the other Μίμησις γυναικεῖος (Female mimes). Apollodorus, and Aristotle, give a commentary on the mimes of Sophron. —The fragments of Sophron are given in the Classical Journal, vol. 4, p. 380, and with additions and corrections in the Museum Criticum, vol. 2, p. 340—358, 559—560. Both these collections are by Blohmfield. (Schött, Hist. Lit. Gr., vol. 2, p. 117.—Consult Müller, Die Dorier, vol. 3, p. 360, seqq.)

SOPHONICUS, the father of Socrates.

SORACUS, a mountain of Etruria, a little to the southeast of Faleri, now Monte Santo Silvestro, or, as it is modern corruption sometimes termed, Sant' Oreste. On the summit was a temple and grove dedicated to Apollo, to whom an annual sacrifice was offered by a people of the country, distinguished by the name of Hirpi, who were on that account held sacred, and exempted from military service and other duties. (Plin., 7, 2.) The temple is said to have been passing over heaps of red-hot embers without being burned by the fire. (Sen., 11, 785. —Sil. Ital., 5, 175.) A remarkable fountain, the exhalations of which were fatal to birds, is mentioned as existing in the vicinity of this mountain by Pliny (31, 2) and Vitruvius (8, 3.—Cramer's Anc. Italy, vol. 1, p. 230.)

SOSSIGÉS, an Egyptian mathematician, who assisted Julius Caesar in regulating the Roman calendar. Tracily accurate observations, discovered that the year was 365 days and 6 hours; and, to make allowance for the odd hours, he invented the intercalation of one day in four years. The
duplication of the sixth day before the calends of March was called the intercalary day, and the year in which this took place was styled Bisextile. This was the Julian year, the reckoning by which commenced 45 B.C., and continued till it gave place to something more accurate, and a still farther reformation under Pope Gregory XIII. Sosigenes was the author of a commentary upon Aristotle's book de Calo.

Sossi, celebrated booksellers at Rome, in the age of Horace. (Ep. 1, 50, 2. — Ep. ad Pis. 345.)

SO'TATRAX, I. a grammarian in the age of Augustus. He was Strabo's preceptor. — II. An architect of Cnidian, B.C. 284, who built the tower of Pharon, in the Bay of Alexandria. (Vid. Pharon.) — III. A poet, who wrote a poem on the expedition of Xerxes into Greece. (Jun., 10, 178. — Lemaire, ad loc.)

SPATES, I an Athenian poet of the middle comedy. (Scholl., Hist. Lit. Gr., vol. 2, p. 115.) — II. A Greek poet, a native of Maronea, whose name has descended to posterity covered with infamy. He was the author of Cinemologic strains, which exceeded in impurity anything that had gone before them. These poems, at first called Ionica, were subsequently designated Satades. Having, before leaving Alexandria, where he had been living some time, written a very gross epigram on Ptolemy Philadephus, that prince caused him to be pursued. Satades was seized in the island of Caunus, enclosed in a case of lead, and cast into the sea. (Athen., 14, p. 620, ed. Scholz-sq., vol. 5, p. 247.)

SOTER, a surname of the first Ptolemy. (Vid. Ptolemaus I.)

SOTHEIS, the Egyptian name of the star Sirius. (Vid. Sirius.)

SOTHEIS, a people of Gaul conquered by Caesar. Their country, which formed part of Aquitania, extended along the Garunna or Garonne, and their chief town was Sutatun, of which some traces still remain at the modern Soa. (Cass. B. G., 3, 59.)

SOTIOX, a grammarian of Alexandria, preceptor to Seneca. B.C. 204. (Senec., Ep. 49, 59.)

SOXOMEN, an ecclesiastical historian, born, according to some, at Salamis, in the island of Cyprus, but, according to others, at Gaza or Bethulia, in Palestine. He died 450 A.D. His history extends from the year 324 to 439, and is dedicated to Theodosius the Younger, being written in a style of inelegance and mediocrity. He is chargeable with several notorious errors in the relations of facts, and has incurred censure for his commendations of Theodorus of Mopsusesta, with whom originated the heresy of two persons in Christ. His history is usually printed with that of Socrates and the other ecclesiastical historians. The best edition is that of Reading, Cantab., 1720, folio. A work of Sozomen, not now extant, containing, in two books, a summary account of the affairs of the Church from the ascension of our Saviour to the defeat of the Persians by Belshazzar, is lost.

SPARTA, a celebrated city of Greece, the capital of Laconia. It was situated in a plain of some extent, bounded on one side by the chain of Taygetus, on the other by the less elevated ridge of Mount Thornax, and through which flowed the Eurotas. In the age of Thucydates it was an incomparable town, without fortifications, presenting rather the appearance of a collection of villages than of a regularly-planned and well-defended city. It had one very few, and these conspicuous neither for their size nor architectural beauty: so that the appearance of Lacedemon, as the historian observes, conveyed a very inadequate idea of the power and resources of the nation (1, 10). Before the Peloponnesian war, a great portion of the city had been destroyed by an earthquake, which also occasioned considerable damage in other parts of the country. Elian states, that only five houses were left in Sparta after the shock had ceased. (Var. Hist. 6, 7. — Compare Plut., Vit. Cim. — Cic., de Divin. 1, 50. — Plitt., 2, 79.) It continued without wall-building for the first flourishing period of Spartan history, Lycurgus having induced the Lamian farmers with the idea that the real defence of a town consisted solely in the valour of its citizens. When, however, Sparta became subject to despotic rulers, fortifications were erected, which rendered the town capable of sustaining a regular siege. By that time it had increased considerably, being forty-eight stadia in circumference, as we are informed by Polybius, who adds, that it was double the size of Megalopolis in regard to the number of its houses and inhabitants, though it did not occupy an equal extent of ground, since the circuit of the Arcadian city was fifty stadia. The remains of Sparta are about two miles distant from the modern town of Misitra. Sir W. Gell observes, that "the walls are of the lower ages, and consist of fragments and blocks taken from ancient edifices. The whole city appears to have been a mile long, in which were included five hills; some of these have been called "their summits." (Dun. of the Morea, p. 221. — Compare Dodwell, vol. 2, p. 408.) — We will now proceed to give a brief outline of Spartan history. According to fable, Lacedemon, son of Jupiter, and of the nymph Taygeta, married Sparta, daughter of Eurystas, king of the Leleges, succeeded his father-in-law on the throne, and gave the country its own name, calling the city by that of his wife. He was probably a Hellenic prince, and one of the leaders of the Achaean colony, which Archander and the Architees led into Laconia, after their expulsion from Phthiois. Here Lacedemon, having persuaded the natives to receive a colony, gave his own name to the united people. Among the most celebrated of the early kings was Tyndarus, with whose sons Castor and Pollux the male line of Lacedemon became extinct. Menelaus, between whom and Lacedemon five kings had reigned, married Helen, the daughter of Tyndarus, and thus acquired the throne. Orestes, son of Agamemnon, who had married Hermione, the daughter of Menelans, united Argos and Mycenae with Lacedemon. In the reign of his son and successor Tissamenos, it was conquered by the Heraclids, about 1080 B.C., who established a dicych or double dynasty of two kings in Sparta. For, as neither the mother nor the Delphic oracle could decide which of the twin sons of Aristodemus, Euryphanes and Procles, was the legitimate governor, they inscribed censure for his commendations of Theodorus of Mopsuesta, with whom originated the heresy of two persons in Christ. His history is usually printed with that of Socrates and the other ecclesiastical historians. The best edition is that of Reading, Cantab., 1720, folio. A work of Sozomen, not now extant, containing, in two books, a summary account of the affairs of the Church from the ascension of our Saviour to the defeat of the Persians by Belshazzar, is lost.

SPARTA. — A city, a large town, and seat of an archbishopric, in the county of Limerick, in Munster, Ireland, on the right bank of the river Shannon, at the head of a bay. The city is only five miles from the sea, and has an extensive dockyard, which serves the whole southern part of the kingdom. The country in which Sparta is situated is the most fertile in Munster, and the produce of the country is corn and meat. The town has a population of about 10,000, and is divided into two parts, the one being inhabited by the English, and the other by the Irish. The principal buildings are the castle, the barracks, the church, and the houses of the garrison. The town is governed by a mayor and council, and is under the government of the lord lieutenant of Ireland. The county of Limerick is the most fertile in Munster, and the produce of the country is corn and meat. SPARTA.

land and sea, to the Spartans. Pausanias, guardian of the infant son of Leonidas, gained the celebrated victory of Platea over the Persians (B.C. 479), at the head of the allies. On the same day, the Grecian army and fleet, under the command of the Spartan king Leotychides, and the Athenian general Xanthippus, defeated the Persians by land and sea, near Mycale.

With the rise of the polis, the Spartans, the social organization of the nation was developed. The power of the kings was gradually limited, while that of the ephors was increased. After the Persians had been victoriously repelled, the Grecian states, having acquired warlike habits, carried on hostilities against each other. The jealousy of Sparta towards Athens rose to such a height, that the Lacedaemonians feared that the Persians, in case of a renewal of the war, would find a better path to their end in Athens, opposed the rebuilding of its walls and the fortification of the Piraeus. Themicreoles, discerning the real grounds of this proceeding, baffled the designs of Sparta by a stratagem, and thus contributed to increase the ill-will of that state towards Athens.

The tyrannical conduct of Pausanias alienated the other allies from Sparta; and most of them submitted to sitting as umpires. After the battle of the Euripus, Athens increased its learning and moderation. Athens became so arrogant towards the confederates, that they again attached themselves to the former power, which now began to make preparations in secret for a new struggle. The Athenians, however, formally renounced the friendship of Sparta, and began hostilities (B.C. 431). This war, the Peloponnesian, ended in the ascendency of Sparta, and the entire humiliation of her rival (405). The rivalry of the Spartan general Lyonsander, and the king Pausanias soon after produced a revolution, which delivered the Athenians from the Spartan yoke.

The Spartans next became involved in a war with Persia, by joining Cyrus the Younger in his rebellion against his brother Artaxerxes Mmonen. The Persian throne was shaken by the victories of Agesilaus; but Athens, Thebes, Corinth, and some of the Peloponnesian states were instigated by Persian gold to declare war against the Lacedaemonians, who found it necessary to recall Agesilaus. The latter defeated the Thebans at Coropus; but, on the other hand, the Athenian commander, Conon, gained a victory over the Spartan fleet at Citidus, and took fifty galleys. This war, known as the Boeotian or Corinthian war, lasted eight years, and increased the reputation and power of Athens by the successes of her admiral, Conon, and her fortunate expeditions against the Spartan coasts and the islands of the Aegean. The arrogance of Athens again involved her in hostilities with Persia; and Antalcidas (B.C. 388) concluded the peace which bears his name, and which, though highly advantageous to Persia, delivered Sparta from her enemies. The ambitious designs of Sparta in concluding this peace soon became apparent: she continued to uppress her allies, and to sow dissension in every quarter, that she might have an opportunity of acting as a umpire. Besides other outrages, she occupied, without provocation, the city of Thebes, and introduced an aristocratical constitution there. Pelopidas delivered Thebes, and the celebrated Theban war followed, in which Athens took part, at first against Sparta, but afterward in her favour. The latter was so much enfeebled by the war that she thenceforward cease to act a distinguished part in Greece. No state was more prosperous than Sparta, and the Macedonian king Philip at last made himself master of all Greece. Agis, king of Sparta, one of the bravest and noblest of its princes, ventured to maintain a struggle for the liberties of Greece; but he lost his life in the battle of Megalopolis, against Antipater. Archidamus IV. was attacked by Demetrius Poliorcetes, and Sparta was saved with difficulty. New troubles soon arose: Cleonymus, nephew of the king Areus, invited Pyrrhus into the country in aid of his ambitious projects, which were frustrated, partly by the negligence of Pyrrhus, and partly by the courage of the Spartans. Luxury and licentiousness were continually growing more and more prevalent, and, though several succeeding kings attempted to restore the constitution of Agesilaus, they deserted the powerful state without success. Cleomenes, indeed, accomplished a reform, but it was not permanent. After an obstinate war against the Achaeans and Antigonus, king of Macedonia, Cleomenes fled to Egypt, where he died. The state remained three years without a head, and was then ruled by the tyrants Machanidas and Nabis, by the latter of whom the most atrocious cruelties were committed. The Romans and the Achaean league elected a double magistrate for the state, which had been held for a short time by Nabis. Sparta was obliged to join the Achaean league, with which it afterward passed under the dominion of the Romans. (Encycl. Americ., vol. 11, p. 529, seqq.)—This appears the proper place to make a few remarks relative to the legislation of Lycurgus. The first important change introduced by this lawyer into the Spartan constitution was the creation of a senate, consisting of fifteen ephors, eight members, who, being, in the beginning, deliberative, possessed of equal authority with the kings, proved an effectual check against any infringement of the laws on their part, and preserved a just balance in the state by supporting the crown against the encroachments of the people, and protecting the latter against any undue influence of the regal power. It was also enacted that the people should be occasionally summoned, and have the power of deciding any question proposed to them. No measure, however, could originate with them; they had only the right of approving or rejecting what was submitted to them by the senate and two kings. But, as danger was to be apprehended from various attempts subsequently made by the people to extend their rights in these meetings, it was at length ordained that, if the latter endeavoured to alter any law, the kings and senate should dissolve the assembly and annul the amendment. With a view of counterbalancing the great power thus committed to the legislative assembly, and which might degenerate into oligarchy, five annual magistrates were appointed, named ephori, whose office it was, like that of the tribunes at Rome, to watch over the interests of the people, and protect them against the influence of the aristocracy. (Vid. Ephori.)—Lycurgus, in order to banish wealth and luxury from the state, divided the landed property into fractions, the income and possessions of all were rendered equal. He divided the territory of Sparta into 9000 portions, and the remainder of Laconia into 30,000, of which one lot was assigned to each citizen and inhabitant. These parcels of land were supposed to produce seventy minni of grain for a man and twelve for a woman, besides a sufficient quantity of wine and oil. The more effectually to banish the disadvantages of the state, Sparta divided the land and gold and silver, and allowed only iron money, affixing even to this the lowest value. He also instituted public repasts termed Phididia, where all the citizens partook in common of such frugal fare as the law directed. The kings even were not exempted from this regulation, but ate with the other citizens; the only distinction observed with respect to them being that of having a place reserved for them. The state having in public appears to have been borrowed from the Cretans, who called these repasts Andria. (Plut., Vit. Lycurg.—Aristot., Polit., 2, 8.)—At the age of seven, all the Spartan children, by the laws of Lycurgus, were enrolled in companies, and educated agreeably to his rules of discipline and exercise, which were strictly enforced. These varied according to the ages of the boys, but
were not entirely remitted even after they had attained to manhood. For it was a maxim with Lycyergus, that no man should live for himself, but for his country. Every Spartan, from four, was regarded as a soldier, and the city itself resembled a great camp, where every one had a fixed allowance, and was required to perform regular service. In order that they might have more leisure to devote themselves to martial pursuits, they were forbidden to exercise any mechanical arts or trades, which, together with the labours of agriculture, devolved upon the Helots. —

Till the seventh year the child was kept in the gymnastic under the care of the women; from that age to the eighteenth year they were called boys (σπουδάζων), and thence to the age of thirty youth (φίλαθλος). In the thirteenth year the Spartan entered the period of manhood, and enjoyed the full rights of a citizen. At the age of seven the boy was withdrawn from the paternal care, and educated under the public eye, in company with others of the same age, without distinction of rank or fortune. If any person withheld his son from the care of the state, he forfeited his civil rights. The principal object of attention, during the period of boyhood and youth, was the physical education, which consisted in the practice of various gymnastic exercises — running, leaping, throwing the discus, wrestling, boxing, the chase, and the pancratium. These exercises were performed naked, in certain buildings called gymnasia. Besides gymnastics, dancing and the military exercises were practised. A singular custom was the flogging of boys (diamastigiosis) on the annual festival of Dion Ochos, for the purpose of inducing them to bear pain with firmness. (Vid. Bonon. i. c.)

To teach the youth eunying, vigilance, and activity, they were encouraged to practise theft in certain cases; but if detected, they were flogged, or obliged to go without food, or compelled to dance round the altar, singing songs in ridicule of themselves. The dread of the shame consequent on being discovered sometimes led to the most extraordinary acts. Thus it is related of a boy who had stolen a young fox, and concealed it under his clothes, suffered it to gnaw out his bowels rather than reveal the theft by suffering the fox to escape. Modesty of deportment was also particularly attended to; and consciencc of language was so much studied, that the term laconic is still employed to signify a short and pithy manner of speaking. The Spartans were the only people of Greece who gradually despised learning, and excluded it from their youth. The institution consisted in learning obedience to their superiors, the endurance of all hardships, and to conquer or die in war. The youth were, however, carefully instructed in a knowledge of the laws, which, not being reduced to writing, were taught orally. The education of the females was entirely different from that of the Athenians. Instead of remaining at home, as in Athens, spinning, &c., they danced in public, wrestled with each other, and practised the discourse, &c. The object of this training of the women was to give a vigorous constitution to their children. (Encyclop. Americ., vol. 11, p. 529, seqq. — Cramer's Anc. Greece, vol. 3, p. 158, seqq.)

SPARTACUS, a celebrated gladiator, a Thracian by birth, who escaped from the gladiatorial training-school at Capua along with some of his companions, and was soon followed by great numbers of other gladiators. Burdened with the weight of life, slave and pirate, he fled to Rome, where he soon himself found himself at the head of a force able to bid defiance to Rome. Four consular armies were successively defeated by this daring adventurer, and Rome itself was considered in imminent danger. But subordination could not be maintained in an army composed of such materials. Spartacus proposed to march into Gaul, invite Sertorius to join him, and then together march on Rome. Had this plan been carried into ef- fect, Rome, in all probability, must have fallen into the hands of the combined forces; but the tumultuous fol- lowers of Spartacus, longing for the pillage of the capital, compelled their leader to abandon his project, and bend his course towards Rome. He was met and completely routed by the prtor Crassus, who thus acquired some renown in war, in addition to the influence which he possessed from his unequalled wealth. Spartacus behaved with great valour; when wounded in the leg, he fought on his knees, covering himself with his buckler in one hand, and using his sword with the other; and when at last he fell, it was upon a heap of Romans who he had sacrificed to his fury (B.C. 71). In this battle no less than 40,000 of the followers of Spartacus were slain, and the war was thus brought to an end. (Plut., Vit. Crass. — Liv., Epit., 97. — Eutrop., 6. 2. — Paterec., 2, 30.)

SPARTI (Σπαρτη), a name given to the men who sprang from the dragon's teeth which Cadmus sowed. They all destroyed another except five, who survived, and assisted Cadmus in building Thebes. The names of the five, as given by Ovid, are: Elpidas, Antipater, Diomedes (Phaeniss., 498), are Chthonius, Udeus, Pelorus, Hyperenor, and Echidon. (Vid. Cadmus.)

SPARTAN or SPARTIAN, the inhabitants of Sparta. SPARTANUS AELIUS, a Roman historian in the reign of Dioclesian. In his life of Aelius Verus, he informs us of his intention to give the biographies of all the emperors and Caesars from the time of Julius. Whether he ever executed this project is uncertain. We have only his pellation of Dioclesian, Aelius Verus, Diudius Julianus, Septimius Severus, Pescennius Niger, Caracalla, and Geta, among which the first part of the life of Hadrian, drawn from good sources, is the best. The first part of these biographies is addressed to Dioclesian; that of Caracalla to no one; the life of Geta is dedicated to Constantine. Heyne, therefore, is led to conclude that the last mentioned biography is not by Spartianus. The absence of Geta's biography is singular, and it is remarkable for historical arrangement and method: his style also bears evident marks of the decline of the language. His works form part of the collection known by the name of "Scriptores Historiae Augustae," the best edition of which is that from the Leyden press (Lugd. Bat., 1671, 2 vols. 8vo. — Schöll, Hist. Lit. Rom., vol. 3, p. 155. — Bähr, Gesch. Rom. Lit., p. 337).

SPARTO, Σπάρτον, (Σπάρτη), a river of Thessaly, flowing from Mount Tymphrestus, a lofty range forming part of the chain of Pindus, in the country of the Aenianes. (Strabo, 433.) Homer frequently mentions this river as belonging to the territory of Achil- es, around the Malian Gulf. (Ili. 16, 174.—II. 25, 142.) The tragic poets likewise allude to it. (Esch., Pers., 492.—Soph., Phædo, 722.) The ancient name appears to have reference to its rapid course (σπατος, "swift; rapid"). The modern appellation is the Hellada. (Cramer's Anc. Greece, vol. 1, p. 438.)

SPREUSIPPUS, an Athenian philosopher, nephew to Plato, who occupied the chair of instruction during the term of eight years from the death of his master. Through the interest of Plato, he enjoyed an intimate friendship with Dion while he was resident at Athens; and it was at his instigation that Dion, encouraged by a band of noble youths and pirates, flocked to him from all quarters; and he soon found himself at the head of a force able to bid defiance to Rome. Four consular armies were successively defeated by this daring adventurer, and Rome itself was considered in imminent danger. But subordination could not be maintained in an army composed of such materials. Spartacus proposed to march into Gaul, invite Sertorius to join him, and then together
him; the sutly philosopher refused to return the salute, and told him that such a feeble wretch ought to be ashamed to live; to which Speusippus replied, that he lived, not in his limbs, but in his mind. At length, being wholly incapacitated by a paralytic stroke for the duties of the chair, he resigned it to Xenocrates. He is said to have been of a violent temper, fond of pleasure, and exceedingly avaricious. Speusippus was a philosopher who are now lost, but which Aristotle thought sufficiently valuable to purchase at the expense of three talents. From the few fragments which remain of his philosophy, it appears that he adhered very strictly to the doctrines of his master. (Ensfeld, History of Philosophy, vol. 1, p. 243, seq.)

Sphaxtéra, an island off the coast of Arcadia, and at the entrance of the harbour of Pylos Messeniaca, which it nearly closed. It was also known by the name of Spagia, which it still retains. Sphactere is celebrated in Grecian history for the defeat and capture of a Lacedemonian detachment in the seventh year of the Peloponnesian war. (Strabo, 359.)

Sphinx, a fabulous monster, an account of which will be found under the article Οἰδώρα. — The Sphinx is not mentioned by Homer; but the legend is no- ticed by Hesiod. — (Pausan. xvi. 25. 6.) Though this legend is probably older than the time of the first intercourse with Egypt, the Theban monster bears a great resemblance to the symbolical statues placed before the temples of that land of mystery. In the pragmatizing days it was said (Pausan., 9, 26) that the Sphinx was a female pirate, who used to land at Athuson, and advance to the Phocean Hill, whence she spread her ravages over the country. Oidipus, according to the traditions of mythology, came from Corinth with a numerous army, and de- feated and slew her. (Keightley's Mythology, p. 341, not.) — The Sphinx was a favourite emblem among the ancient Egyptians, and served, according to some, as a type of the enigmatical nature of the Egyptian theology. M. Maillet is of opinion that the union of the head of a virgin with the body of a lion is a symbol of what happens in Egypt when the Sun is in Cancer. The length of the Sphinx and the apparent flow. According to Herodotos, however, the Egyptians had also their Androasphinges, with the body of a lion and the face of a man. At the present day there still remains, about 300 paces east of the second pyramid, a celebrated statue of a sphinx, cut in the solid rock. Formerly, nothing but the head, neck, and top of the back were visible, the rest being sunk in the said. It was, at an expense of 800L of 900L (con- tributed by some European gentlemen), cleared from the accumulated sand in front of it under the superin- tendence of Captain Caviglia. This monstrous pro- duction consists of a virgin's head joined to the body of a quadraped. The body is principally formed out of the solid rock; the paws are of masonry, extending forward 50 feet from the body; between the paws are several sculptured tables, so arranged as to form a small temple; and farther forward a square altar was erected. The length of the statue, from the front part of the neck to the tail, is 125 feet. The face is disfigured by the arrows and lances of the Arabs, who are taught by their religion to hold all images of men or animals in detestation.

Spina, a city of Gallia Cisalpina, near the entrance of the most southern branch of the Padus, called from it Ostium Spineticum. If we are to believe Dionysius of Halicarnassus, who deduces his information ap- parently from Hellenicus of Lebos (Ant. Rom., 1, 18), Spina was founded by a numerous band of Pelasgi, who arrived on this coast from Epirus long before the Trojan war. The same writer goes on to state that, in process of time, this colony became very flourishing, and held for many years the dominion of the seas, from the fruits of which it was enabled to present to the temple of Delphi tithe offerings more costly than those of any other city. Afterward, however, being attacked by an overwhelming force of the surrounding barbarians, the Pelasgi were forced to quit their settle- ment, and finally to abandon Italy. It appears that no doubt can be entertained of the existence of a Greek city of this name. Ostium Spinetum of Strabo, which it is noticed in the Periplus of Scylax (p. 13), and by the geographers Eudoxus and Artemidorus, as cited by Stephanus of Byzantium (v. v. Σπίνα). Strabo also speaks of it as having been once a celebrated city. The same geographer adds, that Spina was still in exis- tence when he wrote, though reduced to the condi- tion of a mere village. (Strab. 214.—Id., 421.— Plin., 3, 6.) But the extreme antiquity which is assigned to the found of the intern city, and those also which lay axis has been thought by some modern critics to be liable to dispute. (Consult, in particular, the dis- sertation of Frett, Mem. de l'Acad. des Inscr., vol. 18, p. 90.) — Spina would seem to have stood on the left bank of the Po di Primaro, not far from the latter town or village of Argenta. (Cramer's Anc. Italy, vol. 1, p. 97, seq.)

Spintarius, a Corinthian architect. By the order of the Achaean council he erected a new temple at Delphi after the burning of the old one (Olymp. 58, 1.—B.C. 544). Respecting the latter event, con- sult Philochor. fragm., p. 45.— Clinton, Fost. Hist., p. 4. The age of Sinfinthus is very probably fixed about Olympia 60. (Silly, Dict. Art., s. v.)

Spoleto, a city of Umbria, northeast of Interam- na, in the southwestern section of the country. It was colonized A.U.C. 512 (Vell. Patert., 1, 16), and is famous in history for having withstood an attack from Hannibal after the battle of Thrasymene. (Liv., 22, 9.) This resistance had the effect of checking the advance of the Carthaginian general towards Rome, and compelled him to draw off his forces to Pise- num. It should be observed, however, that Polybius makes no mention of this attack upon Spoleto; but expressly states that it was not Hannibal's intention to approach Rome at that time, but to lead his army towards Crete and the coast of Asia Minor. (Strabo, 484.—Scyl., Peripl., p. 18.—Plin., 4, 12.)

Spurina, an astrologer, who told Caesar to beware of the ides of March. As he went to the senate-house on the morning of the ides, Caesar said to Spurina, "The ides are at last come." "Yes," replied Spurina, "but not yet past." Caesar was assassinated a short time after. (Sueton., Vit. Jul., 81.— Dio Cass., 44, 18.— Val. Max., 8, 11, 2.)

Stabiae, a town of Campania, on the coast, about two miles below the river Sarnus, now Castellamare di Stabbia. It was once a place of some note, but, having been destroyed by Sylla during the civil wars, its site was chiefly occupied by villas and pleasure- grounds. (Plin., 3, 5.) It was at Stabiae, after hav- ing just left the villa of his friend Pompeius Magnus, and the elder Pliny fell a victim to his ardent curiosity and thirst for knowledge. (Plin., Ep., 6, 16.) According to Columella (R. R., 10), this spot was celebrated for its fountains; and such was the excellence of the pastures in its vicinity, that the milk of this district was reputed to be more wholesome and nutritious than that of any other country. (Cramer's Anc. Italy, vol. 2, p. 161.)
Stagira, a city of Macedonia, on the upper shore of the peninsula of Mount Athos, near its junction with the coast of the east. It was a colony of Andros, as we learn from Thucydides (4, 188), and celebrated as the birthplace of Aristotle. (Diog. Laert., 5, 14, seq.) Some trace of the ancient name is apparent in that of Stauros.

Staes, a peripatetic philosopher, who resided many years at Rome with M. Piso. (Cic. de Orat., 1, 22.—Id. Fin., 5, 3, et 25.)

Staevia, an early poet of Cyprus, the author according to some, of the Cyprian Epics, which others ascribe to Hegesias. This poem, entitled in Greek τὸ Κύπρια ἔπος, was in eleven books, and comprehended for its subject the whole period from the nuptials of Peleus and Thetis to the time when Jupiter resolved to excite the quarrel between Achilles and Agamemnon. It would appear from a passage in Herodotus (2, 117), that this poem was ascribed by some to Homer. The Hymn to Venus is thought to have formed part of the Cyprian Epics. We have only a few verses otherwise remaining of the poem. (Schöll, Hist. Lit. Gr., vol. 1, p. 166, seq.)

Statira, I. the sister and wife of Darius, taken captive by Alexander, who treated her with the utmost respect. She died in childbed, and was buried by the conqueror with great magnificence. (Plut., Vit. Alex.—Consult, however, the remarks of Bougainville, as to the accuracy of Plutarch’s statement respecting the capture of the sisters, Mem. de Plutarque et de l’Hermès, t. 25, p. 34, seqq.—II. The eldest daughter of Darius, taken in marriage by Alexander. The nuptials were celebrated at Susa with great magnificence. She appears to have changed her name to Arsinoë after this union. This is Droysen’s conjecture, which seems highly to explain the variations in the name which we find in Arrian (7, 4), compared with Ptolemy (p. 686, seqq.) and other authors. (Thirriult’s Greece, vol. 7, p. 77.) She was murdered by Roxana, who was aided in this by Pococres. (Plut., Vit. Alex., sub fin.)—III. A wife of Artaxerxes Mnoemon, poisoned by her mother-in-law, Queen Parysatis. (Plut., Vit. Artax.—IV. A sister of Mithradates the Great, celebrated for the fortitude with which she met her end, when Mithradates, after his defeat by Lucullus, sent Bacchides, the eunuch, with orders to put his wives and sisters to death. (Plut., Vit. Lucull.)

Stappius, a Latin epic poet, born at Neapolis A.D. 61, and descended from a family that came originally from Epirus. His father, who was distinguished by his talent for poetry, taught at Neapolis the Greek and Latin languages and literature. Statius received his education at Rome, his father having gone with him to this city, where he became one of the preceptors of the young Domitian. This prince fixed his attention on the son of his instructor, who had been recommended to him by Paris, a celebrated comedian, and a favourite of Domitian. Statius, who was very poor, had sold to this actor his tragedy of Agave, which Paris published as his own composition. Out of gratitude, he invited the poet to a grand imperial banquet.—Statius gained the prize three times in the Alban games, but was defeated in the Capitoline. At the age of nineteen years he married the widow of a musician; her name was Claudia; and she was the only lady of his companions, her abilities and virtues. Disguised at last, as he himself informs us, at the luxury of the Romans, he retired, a year before his death, to a small estate in the vicinity of Naples, which the emperor, perhaps, had given him, and there died, still quite young, A.D. 96.—Statius gained many admirers at Rome by the great facility with which Nature had endowed him for composing verses, on the spur of the moment, upon all kinds of subjects. He collected these productions together in a work which he entitled Sybila, or, as we would call it, Mélanges. It is divided into five books, and comprehends thirty-two small poems, mostly written in hexameters and iambics; he has preferred in prose, and is dedicated to one of the friends of the poet, at whose instance the preface to the first book Statius informs us that these poems have been composed in haste; that no one of them occupied more than two days, and that some are the work of merely a single day. These pieces treat of various subjects; we find among them a complimentary effusion addressed to Domitian, on the occasion of an equestrian statue being erected to him; an epitaph on Valerius Flaccus, an ode for Lucian’s birthday, &c.—Statius has also left an epic poem in twelve books, entitled Thebaeis ("The Thebaid"), and the commencement of another, called Achilles, which his death prevented him from completing. The Thebaids, addressed to Domitian, is, like the Punica of Silnus Italicus, the Argonautica of Valerius Flaccus, and the Pharsalia of Lucan, rather a historic than an epic poem. The principal source whence Statius borrowed was the poet Antimachus, whose Thebaid has not come down to us: his model was Virgil.—The subject of the Thebaids was well chosen; the war between the sons of Ædipus offered a fable truly epic, and rich in fearful scenes. Statius, however, has spoiled it, by giving it an historical form, adorned merely with episodes and machinery. He is not wanting in imagination, and in bold and daring ideas and sentiments; in this respect, indeed, he is preferable to Valerius Flaccus; but he is ignorant of the sublime art in which Homer surpasses the poets, that of giving each hero an individual character. His diction is deficient in simplicity and native ease; he mistakes exaggeration for grandeur, and subtle refinements for proofs of talent. These defects are the characteristics of his age, as well as that of making a great display of erudition, a fault which shows itself in all the epic poets of this period. Scaliger passes rather a favourable opinion on Statius. According to his criticism, the ode was not a poem.—(Arg., ed. 4, p. 6, s. 841.)—Of the Achilleis, Statius finished only the first book; the second remains imperfect. It is probable that this poem, had the author lived to finish it, would have presented the same beauties and the same defects as the Thebaids. The plan was defective; the poet had not attended to unity of action, but proposed to himself to give the entire life of his hero.

The best editions of Statius are, that of Gronovius, Amst., 1693, 12mo; that of Barth, Cypriae, 1664, 3 vols.; and that of Mair and Lemarié, Paris, 1825, 4 vols. 8vo. (Schöll, Hist. Lit. Rom., vol. 2, p. 303, seqq.)

Stator, a surname of Jupiter, given him by Romulus, because he stopped the flight of the Romans in their battle with the Sabines, after the carrying off by the Romans of the Sabine virgins. Romulus erected a temple on the spot where he had stood when he interceded for the Sabine girls, to stay the flight of his forces. The name is derived a sestudio. (Livy, I. 12.)

Stello, a youth turned into a kind of lizard by Ceres, because he derided the goddess. (Ovid. Met., 5, 461.)

Stentor, a Grecian warrior in the army against Troy. His voice was louder than the combined voices of fifty men. He is erroneously regarded by some commentators as a national hero. (Ovid., II., 5, 785. seqq.; ad loc.)

Stenobius Lucas, an estuary which the Hebræi forms at its mouth. (Herod., 7, 58.)

Stephanus, a grammarian, who flourished, as is conjectured, about the close of the fifth century. He was professor in the imperial college at Constantinople, and composed a dictionary containing words denoting the names of places, and designating the inhabited parts of regions. Of this work there exists only an abridgment made by Hermias, and dedicated to

discourses. On moral topics Stilpo is said to have taught, that the highest felicity consists in a mind free from the dominion of passion, a doctrine similar to that of the Stoics. (Engel's History of Philosophy, vol. 1, p. 202.)

Stobæus, Joannes, a native of Stobi, in Macedonia, whence his name Stobæus. The particulars of his life are unknown, and we are even ignorant of the date in which he lived. All that is said of his character is, that he was a frequent visitor to Hierocles of Alexandria, since he had left us extracts from his works; and as he cites no more recent writer, it is probable that he lived not long after him. Stobæus had read much; he had acquired the habit of reading with a pen in his hand, and of making extracts from whatever seemed to him remarkable. Having made a large collection of these extracts, he arranged them in systematic order for the use of his son, whose education seems to have constituted the principal employment. This was the origin of a collection in four books, which he published under the title of 'Ἀθεολόγου αξιογόνων, ἀποθεομέτων, υποθεκὼν' (An Anthology of Extracts, Sentences, and Precepts). This work has come down to us, but under a form somewhat different, and which has consequently embarrassed the commentators. We have three books of extracts made by Stobæus, but they are given in the manuscripts as two, because one of the books, that of the philosophical, is composed of four different objects. The Eclogae form, so to speak, an historical work, because they make us acquainted with the opinions of ancient authors on questions of a physical, speculative, and moral nature, whereas the Discourses constitute merely a moral work. It is on account of this diversity that some critics have thought that the Eclogae never formed part of the Anthology, but originally made a separate work, and that the third and fourth books of the Anthology are lost. This hypothesis, however, seems to variance with the account that Photius gives of the Anthology of Stobæus.

"The first book," says he, "is entirely physical; the commencement of the second is strictly philosophical (λογικός), but the greater part is moral. The third and fourth books are almost entirely devoted to moral and political subjects." It would seem from this that it is wrong to divide the extracts of Stobæus into two works, and that we possess actually, under two titles, his Anthology in four books, excepting that the copyists have united the third and fourth books into one. —

It is from Photius also that we learn the object which Stobæus had in view when he made these selections, for we have not the beginning of the first book, where no doubt it was stated. Stobæus had devoted this part to a eulogium on philosophy, which was followed by an historical sketch of the ancient schools, and of their doctrines in relation to geometry, music, and arithmetic: of this chapter we have only the end, in which the subject of arithmetic is treated. The object of Stobæus, according to Photius, was to erect a column which might serve as a landmark to his son Septimius during the latter's course through life. The first book is subdivided into sixty chapters; the second contained forty-six, but we have only the first nine. The third book, or the first of the Discourses, was also composed by Photius, comprised of four chapters, and the second of fifty-eight. In the manuscripts these one hundred chapters form only one book: the copyists, however, have, by their subdivi-

Arabia. At a subsequent period, Strabo travelled over Greece, Macedonia, and Italy with the exception of Cisalpine Gaul and Liguria. It is important to determine the extent of Strabo's travels, that we may know how far he has been when we refer to him, and when he merely copies the accounts of his predecessors, we must give the narratives of other travellers. At an advanced period of life he compiled a work on Geography (Γεωγραφίς), in seventeen books, which has come down to us complete, with the exception of the seventh book, which is imperfect. — It is remarkable that, during a space of near five hundred years, from the time of Herodotus to that of Strabo, so little should have been done in the science of geography. The conquests of the Romans westward did certainly bring them acquainted with parts of Europe hitherto little known; but in the East, neither the Macedonian nor the Roman expeditions seem to have brought much to light that was before unknown of the state of Asia; while in Africa, as Rennell justly observes, geography lost ground. In the course of this period, indeed, many writers on this subject appeared; but, whatever we may say of the synopsis of the ancients and the eminence among them seem to be not highly rated by Strabo), it is certain that they are all lost. We may collect, indeed, from a curious circumstance little known or regarded, that no complete or systematic work on geography at that time existed: for it appears from two or three of Cicero's letters to Atticus, that he once entertained thoughts of writing a treatise himself on the subject. He was deterred, however, he says, whether from the extent of it, or from the difficulties of an undertaking, and by perceiving how severely Eratosthenes had been censured by the writers who succeeded him. In fact, he was probably restrained by a consciousness of his own incompetency in point of science, of which he makes a pretty broad confession to his friend, and whoever values the reputation of Cicero cannot regret that it was never risked on a system of geography, to be got up, as he himself hints it was intended to be, during a short summer tour among his country houses in Italy.—It is not, however, merely to the respective character of the two individuals that we must attribute the inferiority of the geography of Herodotus, in all essential requisites, to that of Strabo, Much undoubtedly is owing to the manners and complexion of the times in which they respectively lived. The former came to the task with few materials supplied by his own history and by his own industry, without the aid of previous history, without political documents or political authority. The taste, moreover, and the habits of the people for whom he wrote, which must ever have a powerful influence over the composition of any writer, demanded other qualities than rigid authenticy, and a judicious selection of facts. It should be remembered that he was only a merchant, and the man of letters even of the most mediocre sort, he was not marked by the pleasure of knowing, and the desire of relative ascertainment of facts; he did not see these truer truths, which have been so insufficient to complete or adorn his narrative. Before the age of Augustus, however, an entire revolution had been effected in the intellectual habits and literary pursuits of men. The world had become in a manner, what it now is, a reading world. Geography, indeed, extended from the Cape of Good Hope to the Fortunate Islands, as being the most westerly point of the earth known at that time. The ancient astronomers and geographers could not but be conscious how defective were their instruments for observing the heavenly bodies; and how much greater dependance might be placed on their mechanical measurement of distances, to the accuracy of which we have reason to think they paid great attention, than on their celestial observations, to ascertain the truth of which they had so little artificial as
to the support of the authority of the fables related by the bard. After Homer, Strabo passes in review the works of Anaximander, Hecateus, Democritus, and Eudoxus of Cnidus; he commends the latter for his mathematical acquirements and for everything he relates concerning Greece, while he censures him for being fabulous in his account of the Seythians. Herennes Dicewareus among the writers that have treated of general geography, therefore to be merely known that he wrote the "Epik", a first book of Geography, and the list of the geographical books of the Euphoros of Cusma; Eratosthenes, Hipparchus, Polybius, and Posidonius forming the class of modern ones. His criticism on the first two books of Eratothenes furnishes him with an opportunity of indulging in some researches relative to the adventures of Ulysses as given by Homer, the degree of acquaintance which the poet had with Egypt, and also the revolutions which the surface of the earth has undergone.

In the second book Strabo confines his geography to the work of Eratothenes, and takes up the third book of that production. He makes many corrections on Hipparchus, and defends Eratothenes against many unjust criticisms. He then proceeds to an examination of the works of Posidonius and Polybius. The remainder of the book treats of the knowledge requisite for a geographer, and particularly that of a mathematical nature: he then treats of the figure of the earth, and the shape of the universe. He states that the earth has the form of a globe, or, rather, seems to have such a form. The habitable portion of the earth resembles, according to him, a chlamys or military cloak; it is contained between two parallels, one of which passes through Ierne or Ireland, and the other through what is now the island of Ceylon. The earth is immovable and in the centre of the universe. The length of the earth from the equator to the pole is 38,100 miles; the breadth is about 70,000 stadia. The Caspian Sea is a gulf. The Sacram Promontorium (Cape St. Vincent) is the most western point of Europe.—With the third book commences the chorographical part. Spain is the first country that occupies Strabo's attention; he first describes Betica, then Lusitania and the northern coast as far as the Pyrenees, then the southern coast of France, the Columns of Hercules, and the country of Numidia; finally, the Atlantic coast, in the neighbourhood of Spain, the Balears, Gades, and the Cassiterides. In giving the description of this country Strabo follows three writers who had travelled in it. The first of these are Artemidorus, who boasted of having pushed his way as far as Gades, although the account which he gives of the phenomena that there attended the setting of the sun does not seem to indicate one who had observed them himself; this traveller was very exact in his determination of distances.

The second source whence Strabo derived his information concerning Spain, and his principal guide in this book, is Posidonius. The third is Polybius. Strabo, however, notes the changes which had taken place since the period of the last-mentioned writer. Independently of these three authorities, our geographer cites Ephorus, Eratothenes, Timothenes, Aselepiades of Myreia, and Athenodorus. The fourth book is taken up with the description of Gaul, Britain, Ireland, Thule, and the Alps. After having treated of the four grand divisions of Gaul, Narbonensis, Aquitania, Lugdunensis, and Belgium, Strabo gives some general details on this country and its inhabitants. The Alps afford him an opportunity of treating of the Ligurians, Salyes, Raeti, Windelici, Taurici, and other inhabitants of these mountains. For these descriptions he obtained information from persons who had filled public offices in that country (for in his day this country was completely subject to the Romans), as well as from those who had traded thither. In other respects
Caesar was his principal guide, especially in the description of the Silva Auruenna, and the account of the manners and customs of the Germans in general. He makes use, also, of the same geographers that had aided him in the third book. For example, his description of the Rhone and Isere, of their embouchures, and of the countries lying between these rivers, appears to be taken from Artemidorus. In the description of Gallia Narbonensis, of which Caesar does not treat, Polybius is his authority. In what relates to the ancient constitution of Massilia (Marseilles) he has followed Polybius, or perhaps Aristotle's work on Greece, and he is wise unlike the true patron of the latter writer on this occasion; but we see from another passage that he had consulted his work. (Strabo, 321.) The other accounts that he gives respecting Massilia are obtained from travellers with whom Strabo was personally acquainted. He gives the narrative of Timagenes, according to whom the treasure which Cæpio found at Tolosa made part of the plunder which the Teutones had carried off from Delphi. With respect to Britain, the description of which follows that of Gaul, as this country was not yet subjected to the Romans, Strabo had no other sources of information than the fifth book of Caesar's Commentaries, and the verbal accounts of travellers. He confesses, also, that he has but scanty materials for Ireland. In speaking of Thule, he makes mention of Pytheas, whom he unjustly considers as a writer dealing in geographical fables. At this point he diverges from the Alps, and of their inhabitants, which terminates the fourth book, his authority was Polybius.—The fifth and sixth books are devoted to Italy. The sixth ends with a survey of the Roman power. With the exception of Cisalpine Gaul and Liguria, Strabo knew Italy from personal observation. Polybius is his principal guide among the writers whom he cites, particularly for Cisalpine Gaul: in his description of Liguria he quotes also from Posidonius. What he says respecting the origin of the Etrurians is found in Herodotus: his account of the early kings of Rome is probably abridged from Dionysius of Halicarnassus. In treating of the Etrurians, he makes a digression concerning the Pelasgi, and cites Ephorus, Anticleides, and others. For the description of Etruria he has consulted Polybius, Eratosthenes, and Artemidorus. In giving the dimensions of Corinna and Sardinia, he refers to the works of Homer. He seems to have been guilty of parading many of the citie under the title of a "Chorographer," but whom he distinguishes from Eratosthenes, Polybius, and Artemidorus. This is a Roman writer, for his measurements are not in stadia, but in miles; and perhaps he is the same with the Agrippa who prepared a description of the Roman empire, which Augustus caused to be placed in the portico commenced by his sister. (Plin., 3, 2.) Fabius Pictor and Cæcilius are his authorities for what he says respecting the origin of the Romans; and for the rest of Central Italy and Magna Graecia, he follows Polybius, Artemidorus, Ephorus, Timaeus, Apollodorus, but, above all, Antiochus of Syracuse. For Sicily he cites Posidonius, Artemidorus, Ephorus, and Timaeus.—The seventh book commences with a description of the countries situated along the Ister or Danube, and inhabited by the Germans, Cimbri, Getas, and Taures: it then proceeds to notice the regions between this river, the Exone, the Adrianitic, Illyricum, and Epirus. The chapters on Thrace and Macedonia are lost. Here Strabo was unable to procure as good authorities as in the preceding books, and he himself confesses that he was wandering in the dark. Strabo seems to have had under his eyes an historian who treated of the wars between the Romans and Getas, and who had described the Oceanitis, the Thracian Ocean; and the name of the writer appears to have been Assinius. All that Strabo relates concerning the Cimbri is taken from Posidonius; for Ephorus the grammarians, Apollodorus, and Hypsocrates of Amisus are only cited for isolated facts. The two latter appear to have left histories of the war with Mithradates. Illyricum is one of the regions which Strabo has treated of. From what he says on the subject, we see that in Aristotle's work on Governments, the constitutions of Achaia, Megaris, Eetolia, and Oitya were, among others, considered. Polybius and Posidonius have supplied Strabo with his materials for these regions; Theopompus and Ephorus were his guides in Epirus, and Philochorus in what relates to Dodona. He cites, also, a certain Cineses; but whatever he drew from this other source, his authority is immediately lost in the fourth book.—The eighth book, and the two immediately following, contain Greece in general, and the Peloponnesus in particular. In the description of Greece, Strabo takes the Homeric poems for a basis. In the geographical part he consults also Ephorus and Polybius; in the physical part, Posidonius and Hipparchus; in the description of bays and harbours, Artemidorus and Timosthenes; and, in addition to all this, draws largely on his own information as a traveller in this country. Passing on to the description of Asia, he cites, for the fabulous ages, Homer and his commentators, Apollodorus, and Demetrius of Scepsis, as well as the other early poets; he relies principally, however, upon Ephorus. The other writers consulted by him for his account of the Peloponnesus are Philochorus, Callisthenes, Hellenicus, Demetrius of Scepsis, Theopompus, and Ctesias. Achaeus is a different Achaeus from the Achaean league is taken from Polybius. The distances between places are obtained from Artemidorus and Eratosthenes.—In the ninth book he describes Megaris, Attica, Boetia, Phocis, Locris, and Thessaly, as well as Hellas, properly so-called. The dimensions of Attica are taken from Eudoxus, the mathematician; its history from the Athiographi, among whom he cites Philocorus and Andron. He has consulted, also, the memoirs of Demetrius Phalerus, for the purpose of learning the condition of Attica during the time of that individual. For Boetia, Locris, and Phocis, Ephorus and others have been his authorities. What he gives respecting Thessaly is a kind of commentary on those passages in Homer where mention is made of the Thessaliens.—The tenth book is occupied with the rest of Greece; Euboea, Achaia, Attica, Eetolia, Crete, the Cyclades, and the numerous islands. For the Proconsul of Euboea, Homer and his commentators have been consulted; for its history, Theopompus and Aristotle. When he treats of Achaia and Eetolia, he follows Homer and another epic poet, probably a Cyclic bard, who had composed an Alcmeneid, which Ephorus had under his eyes. His other sources of information were Apollodorus, Demetrius of Scepsis, and Artemidorus. Before passing to Crete, Strabo makes a long digression respecting the Cretians. Among the crowd of writers who had treated of the subject, he distinguishes Demetrius of Scepsis, from whom he appears to have derived the account that he gives respecting the religious ceremonies of the Cretans; he refers, also, to Archamachus of Euboea, an historian of an unknown epoch, cited frequently by Athenæus, to Pherecydes of Syros, Acusilaus of Argos, who gave a prose translation of the poetry of Hesiod, and to Theopompus of Thasos. The only passage that Strabo presents as his copy of Crete's principal authority was Sosicles. He names also Eudoxus, Artemidorus, Hieronymus of Cardia, and Staphylus of Naucratis. What relates to the government of Crete is taken from Ephorus. The account of the islands of the Ægean is the result of Strabo's own observations. —The eleventh book begins the description of Asia. Strabo bounds this part of the world by the Jaxus, the Jaxus, and the Isthmus of Suez; but he believed it to be much less extensive than it is in reality. He was acquainted with the vast regions of Asiatic Russia, and with those of Central Asia occu-
plied by Tartar and Mongul tribes: he knew merely a portion of Southern Asia. What he states respecting the Caspian Sea and the countries draining into it for the most part, if not altogether, from the narratives of travellers; perhaps, also, from his own personal observations. For the measurement of distances he follows Artemidorus. In relation to Iberia and Albania, Strabo consulted, besides Artemidorus, the historians of the Mithradatic war, of whom Thaophanes and Posidonius were the two principal ones. To these must be added Metrodorus of Scepsiis, and Hyspicrates of Amynta, who lastly, perhaps, have some misapprehension respecting the Amazonis. In his description of the Caspian Sea, Strabo has followed very bad guides. His prejudice against Herodotus prevented him from following that historian, who knew very well that the Caspian is a lake, and who gives its dimensions with tolerable accuracy. The opinion which made it a gulf of the Northern Ocean originated very probably with the followers of Alexander, who were either deceived as to its nature, or misled by national vanity. The chief author of Strabo's mistake relative to the Caspian appears to have been Patroclus, the admiral of Seleucus and Antiochus. Pliny states that this navigator entered into the Northern Ocean by the way of the Caspian Sea; but Strabo corrects Pliny's error, by making Patroclus merely conjecture that one might sail by this route to India. The description of Hycanias and the neighbouring countries is taken from Patroclus, Eratosthenes, Aristobulus, and Polyceitus; that of the Massagetas from Herodotus; that of Bactrians from Eratosthenes. For Parthia, Strabo's authority was Apollodorus of Artemis, whom we know merely through the medium of the geographer, but who would seem to have lived only a short time before him, since he had written the history of the war between the Romans and Parthians. An extract from the same historian, on the kingdom of Bactria, is almost all the information that is given us respecting this state. The exact ideas which Strabo has in relation to the Oxus and Oxartes are owing to Patroclus; the fables respecting the Derbices, Casipi, and Hycanias are found in Herodotus. For the description of Media he cites Apollonides, and especially Q. Dellius, the friend and companion of Marc Antony, whom Plutarch mentions in his life of the triumvir. In place of Q. Dellius, some editions of Strabo have the corrupt reading Adelphius.—In the twelfth book commences the description of Asia beyond the caspian Sea, more particularly of the country of his youth, and relates much that he himself had seen. As regards the earlier periods, he relies on the authority of Hellanicus, Ephorus, Theopompos, the historians of the Mithradatic wars, and particularly Thaophanes. When treating of the Mysians, to whom some writers join the Lydians, he speaks of Xanthus the Lydian, and of Menecrates of Elae, his contemporary, who had written an "Eleus· siums zu St$A$ $a$(suz)\, a proposition, and a work on the utility of married life (τεταύ oτεγετης).—In the thirteenth book Strabo returns towards the Propontis, and describes the seas coast from Cyzicus to Cumæ, comprehending the Troad and Æolis. To this he adds an account of Lebos, which lies opposite. From thence, turning towards the interior, he stops by the way at the cities of Pergamus, Sardis, Hierapolis, and some others. In his description of the Troad, Homer is Strabo's first and leading authority. A work on the Propontis (ινΓιεινιορ) is mentioned; Codr. has subtracted. The name of Onisimus, Damastes of Sigean, Charon of Lampas· cus, Sclavas, and Ephorus, occupy the second rank. To these must be added Callisthenes, and a writer born in this country, Demetrius of Scepsiis, who had written thirty books on sixty verses of the Iliad. From this author is taken the story about Aristotle's library. (Vid. Scepsiis.) Ephorus, Thucydides, and Artemidorus are cited for distances: Lycurgus the orator, Hellanicus, and Menecrates are the authorities for the different theories among the ancients respecting the origin of the Trojans.—In the fourteenth book Strabo occupied with Asia Minor; he describes Ionia, with the island of Samos and the coast of Rhodes, Caria, Lycia, Pamphylia, Cilicia, and the isle of Cyprus. The ancient history of Ionia is taken from Thucydides and Procles, and the poets, such as Mimnermus and Hipponax. On the subject of the foundation of Miletus, our author consulted Ephorus; and, as regards the colonies planted by this city, Are· ximenes of Lampascus. The history of the Cyzicis and the description of its islands are from the Athenian expedition to Samos, from Thucydides. In the account of the early history of Ephesus, Artemidorus is followed; in the case of the other cities, Thucydides of Scyros, and Ephorus, as well as the poets. The history of the kingdom of Pergamus, and of the attempt of Aristicnesus, is taken, very probably, from Posido· nius. Strabo had himself visited these countries and collected materials; the same was the case with Rhodes. For Caria he obtained accounts from the grammarians Apollodorus; but especially from a cer· tain Philip, who had written a history of the early times of Caria. The authority for Lycia was proba· bly Artemidorus, whom Strabo cites for distances. What he states respecting Cilicia, and of the great number of slaves sent from that country to the slave· market at Delos, in order to supply the Roman de· mand for this unfortunate class of beings, appears to have been extracted from Posidonius. It is, at· least, that the writer from whom Strabo obtained these particulars was subsequent to the war of Pom· pey with the pirates. Strabo then engages in a dis· cussion against the grammarians Apollodorus, who, ac· cording to him, had misunderstood both Homer and Ephorus in many things relating to Asia Minor. In the description of Cyprus he corrects Damastes and Eratosthenes, on the authority, probably, of Ar· temidorus.—In the fifteenth book Strabo describes the description of Asia beyond the Caspian Sea: this book is devoted to India and Persia. Here our author describes regions which he never saw. He himself acknowledges that all that was known in his day respecting India was full of obscurity and contra· diction. His own idea, too, concerning the shape of this country, is altogether false; he represents it as a rhomboid, the northern and southern sides of which measured 3000stadis (near 11000 English miles). He had, consequently, no knowledge whatever of the peninsula of Ocean. In the whole of India he was only acquainted with three cities: Taxila, Patala, and Palibothra. If, however, the geographical information relative to this country be meager and unsatisfactory, the deficiency is, in some degree, compensated by the very full account that is given of the manners and institutions of the people. Besides Eratosthenes, whom he calls his principal source of information from the historians of Alexander and his successors, particularly Patroclus and Aristobulus, whom he considers most worthy of reliance; after them he ranks Megas· thanes and Nearchus: he gives little credit to Onises· citus, Daimachus, and Chlartucus. In treating of the course of the Ganges, he gives the opinion of Ar· temidorus: he cites the account given by Nicolaus Damas· cenus of his interview with the natives on that river from which he quotes, also, a certain Megillas, who had written on the culture of rice.—After India, Strabo describes the Empire of Persia. He comprehends, under the name of Arias, the prov·inces situated between the Indus and a line drawn from the Caspian Gates (Pyle Caspim) to the embou· cher of the Persian Gulf. In his description of the coasts of Persia he follows Nearchus and Onesicritus; and with regard to the countries in the interior, he re· marks, that he has nothing more to say respecting
them than Eratosthenes had, who himself derived his own information from the historians of Alexander. For the dimensions of the country he cites Bato and Diogenes. His authorities for the description of Persia Proper (or Persis) are Eratosthenes and Polyclitus: his account of Persepolis and Passargada is borrowed from Aristobulus, and he adds also an account from Arrian. In speaking of the worship of fire, he gives us to understand that he has been an eyewitness of the ceremony, since he remarks that Cappadocia, a province over which he had travelled, contained many Magi, or worshippers of fire (παραβωτοι). The remainder of his account of Persian manners is taken from Herodotus and Xenophon. — The sixteenth book terminates the account of Asia: it contains a description of Assyria, a name under which Strabo, besides Aristobulus, comprehends also Babylon and Mesopotamia; to this succeeds an account of Syria, together with Phoenicia and Palestine; and last of all comes Arabia. The description of Aturia, or the Assyrian province in which was situated the city of Ninus, is taken from an historian of Alexander, who, together with Herodotus, Polyclitus, and Eratosthenes, has also been his authority for Babylonia. What he states concerning the Persians is taken from the histories of Posidonius; for mention is made, in the course of it, of the war waged by Pompey against Tigranes. The account which he gives of the stone dikes, by which the Assyrians had fettered the navigation of the Tigris, is found also in Arrian, and appears to have been borrowed from Aristobulus and Nearcias. The picture of Babylonian manners is traced after the original drawn by Herodotus, and also after that of Posidonius. Strabo had travelled in Syria, and therefore speaks of it as an eyewitness. He gives the distances according to Eratosthenes and Artemidorus; in the history of the Seleucidae he follows Posidonius. We find here a remarkable passage respecting Moses and the Jews, taken from some author who wrote after the capture of Jerusalem by Pompey. — What Strabo mentions under the head of Arabia is taken from Eratosthenes, with the exception of the account that is given of the western part of the country; this appears to have been drawn from Artemidorus, who had himself copied it from Agatharchidas. The book concludes with accounts derived by Strabo from conversations with traders, particularly with the Stoic philosopher, Athenodorus of Tarsus, the friend and preceptor of Augustus, who had visited Petra, the chief city of the Nabatheans, and in company with Aristobulus, with whom he accompanied Agatharchidas to Egypt. — The sixteenth book comprehends Egypt, Ethiopia, and Libya, which we call Africa, and which comprised under the name of Libya the countries of Cyreneisca, Mauritania, and the territories of Carthage. The division of the Roman empire into provinces terminates the work. What Strabo relates concerning the Nile is obtained from Eratosthenes, Eudoxus, and Arison. Strabo, moreover, more particularly with the consent of the Cataractis as far as the Cataractas. His account of the Ptolemites is based upon the testimony of Polybius, and in part, very probably, upon his continuator, Posidonius. In the narrative of Alexander's march across the desert to the oracle of Ammon, Strabo follows Callisthenes and the other companions of the prince. The recital of Petronius, who, during the reign of Augustus, carried on war against the Ethiopians, is borrowed from Aristobulus, and his account of Ethiopia, as Polybius and Herodotus, are the sources whence he draws his materials for an account of the countries lying to the south of Egypt. With regard to Libya, and particularly the Oases and the temple of Ammon, he takes Eratosthenes for his guide, and for the distances, Artemidorus: while for the historical portion, Posidonius, in all likelihood, served as authority. He cites also Timosthenes and Ephratus, writers otherwise unknown, who had treated of the botany of Libya. Although, in treating of Mauritania, he makes mention of the two Jugas, he does not seem to have been acquainted with the work of the younger on Africa; for, had he known it, he would certainly have furnished us with many interesting selections relative to the interior of the country. But the extant work of Callisthenes, or rather the fragments of Strato, or perhaps the work of Posidonius, makes mention of Persis, which he himself cites under the title of ʿYarūsūwra liw ruxūnī (Historical Memoirs). These memoirs were carried down a little farther, it would seem, than the continuation of the same historian made by Posidonius; for it appears from Plutarch that the death of Cesar was mentioned in them. Among the most useful editions of Strabo may be mentioned that of Casaubon, Genev., 1587, fol., reprinted at Paris by March, 1690, fol., by J. H. Almeloeven, Amer., 1708, fol., which is a reprint of Casaubon's, enriched with notes from various scholars; that of Siebenkees, continued by Tzschucke, and after him by Friedemann, but never completed, Lips., 1796—1818, 7 vols. 8vo; and that of Coray, Paris, 1816—19, 4 vols. 8vo. This last contains the best Greek text: it has no Latin version, but is accompanied by an excellent apparatus and many tables. The Oxford edition of Strabo, by Falconer, 1597, 2 vols. fol., is a beautiful specimen of typographical art, but a very unfortunate model of accurate scholarship: it is noted also for having given rise to an angry controversy between the Edinburgh Review and some of the scholars of England. — The French translation of Strabo, undertaken at the command of government, and executed by Du Theil and Coray, enjoys a high reputation. The translation, with the critical and historical notes, was assigned to the two scholars just named; and M. Gosselin had charge of the formation of the maps and the geographical illustrations. It appeared during 1805—20, and is in 5 vols. 4to. An able review of it is given in the London Quarterly, vol. 5, p. 273, seqq. (Schöll, Hist. Lit. Gr., vol. 5, p. 278, seqq.)

Strato I. a philosopher of Lampascus, disciple and successor in the school of Theophrastus, or the peripatetic school, of which he took charge B.C. 286, and who continued over it for eighteen years, with a high reputation for learning and eloquence. Ptolemy Philadphus made him his preceptor, and repaid his services with a royal present of eighty talents. In his opinion concerning matter, Strato departed essentially from the system both of Plato and Aristotle, and he is said to have nearly approached the ideas and elements of a new metaphysics, a novelty from the formation of the world. Cicero states that this philosopher conceived all Divine power to be seated in nature, which possesses the causes of production, increase, and diminution, but is wholly destitute of sensation and figure. He taught, also, that the seat of the soul is in the middle of the brain, and that it only acts by means of the senses. (Enelrod's His. Phys., ed. 1708, vol. 1, p. 294, seq.) A physician of Berophon, of the school of Euthenius, and of Heron, and like him, a determined enemy to bleeding. He became the head of a school. (Schöll, Hist. Lit. Gr., vol. 3, p. 403.) — III. A licentiate poet, a native of Sardis. Many epigrams of his are preserved in the Greek Anthology (Schöll, Hist. Lit. Gr., vol. 4, p. 56.)

Straton. Vid. Strato.

Stratonice, wife of Antiochus I. (Soter), king of 1627.
Syria, and previously the wife of Seleucus. (Con-
sult remarks at the commencement of the article An-
ticle.)

Stratonicea, I. a city of Caria, between Alabanda and Allinda, and one of the three most important cities in the interior of the country. It was founded and fortified by Antiochus Soter, and called after his wife Stratonice. The modern Eskhiassar marks the ancient site. It would seem from Stephanus of Byzantium (c. e. 2nd century), that an earlier city called Idias, and also Heccaetes and Chrysoras, occupied the spot where Stratonice was afterwards founded. In conse-
quence of some restorations by Hadrian, this latter city received the name of Hadrianopolis, but did not retain it. (Herod. - Strabo, 660. - Polyb., 19, 19. - Plin., 5, 29.)

Stratonice, a city of Judaea, afterward called Cesarica by Herod, in honour of Augustus. (Vid. Cesarica.)

Strongyle, one of the Lepri islands, or the first of the Æolite Islands to the northeast. It was called Strongyle (Στρογγυλή) by the Greeks on account of its round figure, whence, by corruption, the modern name Stromboli. It is celebrated for its extraordinary volcano, which is only one of many whose eruptions are continued and uninterrupted. The island is, in fact, merely a single mountain, whose base is about nine miles in circumference. The crater is supposed to have been actually situated on the summit of the mountain; it is now on the side. From various tes-
imonies collected by Spallanzani, he concludes that the volcano has burned for more than a century where it now does, without any sensible change in its situa-
tion. The same writer is of opinion that the material origin and the name of Stromboli, be attributed to porphyry, which, melted by subterraneous con-
flagrations, and rarefied by elastic gaseous substances, arose from the bottom of the sea, and, extending itself on the sides in lava and scorie, has formed an island of its present size. The earliest eruptions of Strom-
boli, authenticated by historical accounts, are prior to the Christian era by about 290 years, the date of the return of Syracuses from the Syracuses, (Schol. ad Apoll. Rhod., 4, 761.) It burned, likewise, in the

STY

time of Augustus and Tiberius. After this latter pe-

di, a long succession of ages ensued, during which, from the want of historical documents, we are ignorant of the state of Stromboli. In the seventeenth century we again know that it ejected fire, which it has continued to do to the present time. The ancients made this island the residence of Æolus, monarch of the winds; and Pliny gives us the germe of the whole fa-

cile when he states that the inhabitants could tell three days beforehand, from the smoke of the volcano, what winds were going to blow. (Plin., 3, 8.)-Strongyle was inhabited as early as the days of Thucydides. About twenty-five years ago, Stromboli did not con-
tain more than two hundred inhabitants; but at presen-
t more than two thousand are collected in a single town. (Mannert, Geogr., vol. 3, pt. 2, p. 465.-Malte-

Brus, vol. 4, p. 750.) According to the scho-

nus of Borea turned to Jupiter Æneas, whose altar stood on a promontory of Cephallenia, and sup-
pplanted him for aid to overtake the Harpies. (Heyne, and Apollod., i. 16, 3.) These are known to

gicators at the present day under the name of Stiri-
vati. (Cramer's Anc. Greece, vol. 3, p. 121.)

Strophitis, I. a king of Phocis. He married a sis-
ter of Agamemnon, by whom he had Pylades, cele-
brated for his friendship with Orestes. After

the murder of Agamemnon by Clytemnestra and Ægis-
thus, the king of Phocis educated at his own house, with the greatest care, his nephew, whom Electra had secretly removed from the danger of his mother and her adulterer. (Pausan., 2, 29. - Hygin., fab., 1, 17.) - II. A son of Pylades by Electra, the sister of Orestes.

Styrmon, a large river of Thrace, forming the bound-
ary of that country on the side of Macedonia. (Seil., Peripl., p. 27.) It rises in the chain of Mount Scon-

ius, and, after a course of nearly two hundred miles, through the territory of the Paeonians, the Maed, Sinti, and Edones, which were Thracian tribes, falls into the
gulf to which it communicated the name of Styrmoni-
cus, now Gafso di Contessa. (Strabo, 331.) Pliny
states, that the Styrmon had its source in Mount Ha-
mus, and that it formed seven lakes before it proceed-
ed on its course (4, 10). The Styrmon gave its name to a wind which was prevalent in the gulf into which that river discharges itself, and blew with great vio-

lence from the north. (Herod., 8, 118.) The Styr-
mon was also celebrated by Homer, (Odys., 21, 4-5; Athen., 7, 54.) According to Lucas, the modern name of this stream is Karavos, or the 'Black River;' but some maps term it the river of Orphano, from a small town near its mouth. (Cramer's Anc. Greece, vol. 1, p. 389.)

Stymphalîs, I. a region of Macedonia, south of

Orestis, and annexed to the former country upon the con-
cussion that kingdom by the Romans. (Liv., 48, 30.) - II. Pausanias, vol. 5, p. 217. A town

of Stymphalus, and once the fabled haunt of birds, thence called Stymphalides. (Apollod., 2, 5, 6. - Schol. ad Apoll. Rhod., 2, 1054.) Pausanias imagines that these came from Arabia, as there existed some of the same name in that country (8, 22). The Stymphalides, confounded by others with the Harpies, are said to feed on human flesh, and were fabled to have been destroyed by Hercules. The Stymphalides, killed and tossed to and fro, were covered with the scum of a small river of Argolis. (Herod., 6, 76. - Strabo, 371.) The Em-
peror Hadrian caused water to be conveyed from a fountain in the Stymphalian territory to Corinth. (Cramer's Ancient Greece, vol. 3, p. 309.)

Stymphalus, a town of Arcadia, northeast of Or-
chomenus, and near the confines of Achaea. In the

time of Pausanias it was annexed to Argolis by the voluntary choice of its inhabitants; but it was an Ar-
cadian town at the epoch of the Trojan war, having

been founded, according to the traditions of the country, long before that period by Stymphalus, a descendant of Arcas. (Pausan., 8, 22.) Its antiquity is also at-
tested by Pindar, who calls it the mother of Arcadia. (Olymp., 6, 167.) The remains of Stymphalus are about an hour to the west-southwest of Zaraka, and stand upon a rocky eminence rising from the northeast

er side of the lake. (Cramer's Anc. Greece, vol. 3, p. 309.)

Styx, I. a daughter of Oceanus and Tethys. She

married Pallas, by whom she had Victory, Strength, and Puck (Ζώος.-Heyne ad Apollod., 1, 2, 4, not. crit.) and Violence. (Apollod., 1, 8.) - II. A celebrated tor-
rent in Arcadia, which precipitated itself over a rocky

height in the vicinity of Nonacris, to join the river

Crathis. The waters of the Styx were said to be as-

sanous, and to possess the property of dissolving met-
als and other hard substances exposed to their action.
The only thing in which it could be kept was a mule’s hoof; every other kind of vessel split immediately on receiving it. Hence, say the ancient writers, it was in a mule’s hoof that some of this water was sent to Asia by Antipater, for the purpose of poisoning Alexander. (Plin., 30, 53.—Aelian, H. A. 1, 10, 40.—Justin, 12, 14.—Quint. Curt., 10, 10, 25.—SeneC, Quaest. Nat., 3, 25.—Vitrus, 8, 3.—Varro, ap. Solin., c. 7.) Herodotus relates that Cleomenes, king of Sparta, assembled in this quarter the Arcadian chiefs whom he had united in a plot against that city, and made them swear by this "inflamed" water that they would persevere in their resolutions. The historian describes the Nonacrian Styx as a scanty rill, distilling from the rock, and falling into a hollow basin surrounded by a wall (6, 75). Pausanias, however, represents the Styx as falling from one of the most elevated summits that he had ever seen (8, 17, 5), and this statement agrees with the accounts of modern travellers. (Von Stackelberg, La Grèce, Vues pittoresques, &c., lib. iv., t. 2, Paris, 1841.—Pouqueville, Voyage de la Grèce, vol. 5, p. 458.) On comparing the language of Herodotus with that of Pausanias in another passage (8, 18, 2), it would appear that the historian merely speaks of the Styx after it has descended from the mountain-height. The modern name of the Styx is Manusor, or "Black Water," an appellation derived from the dark colour of the rocks over which it flows. (Von Stackelberg, l. c.—Pouqueville, l. c.) Von Stackelberg, following the ancient name, Servius derives it from the hateful and alarming nature of the stream (vid. τοῦ στυγνοῦ.—Serv. ad Virg., Æn., 6, 133.) According to another account, when Ceres, in the course of her journey to recover her lost daughter, was pursued by Neptune, and compelled to change herself into a mare, she came to this Arcadian stream, and, having beheld her altered form in it, was so disgusted at the sight that she regarded its waters with hatred, and made them change their ancient name. Servius derives it from the hateful and alarming nature of the stream (vid. τοῦ στυγνοῦ.—Serv. ad Virg., Æn., 6, 133.) A fabulous river of the lower world, the idea of which was in all probability borrowed from the Styx of Arcadia. It was said to encompass the lower region nine times in its winding course (Virg., Georg., 4, 480), and is described by the poets as a broad, dull, and sluggish stream of but little depth, whence the expression "they then swayed by this "inflamed" water" (8, 3, 124.—Plin., Nat., 6, 323), and the like, so frequently applied to it. According to the popular belief, the gods regarded this stream with so much reverence that they were accustomed to swear by it, and deemed such an oath the most binding in its nature. (Æn., 6, 324.) If, however, any deity ever violated an oath thus taken, the punishment was believed to be deprivation of nectar and ambrosia, and the loss of all heavenly privileges for the space of ten whole years. For if a king of the city, or any other person, assailed the passage of the Theogony, gives the particulars of this punishment very minutely, but makes it apply to the case of celestial perjury only, in general, not merely to the violation of an oath taken in the name of the inferior river. According to the poet, when any one of the gods is guilty of perjury, Iris is sent down to Hades, and brings up thence, in a golden vase, some of the chilling water of this celebrated stream. The offending deity is compelled to swallow the noxious draught, and thereupon he lies stretched out for one whole year, without sense or motion, nor partakes of the nectar and ambrosia. At the end of this year other troubles are in store for him. For nine whole years is he now separated from the society of the gods, neither attending at the council of Jove nor partaking of the banquet. These are called his punishment ends, and he is restored to his former privileges. (Hes. Theog., 783, seqq.—Compare Hom., ll. 14, 272.—Heyne, ad loc.) Suida, the goddess of Persuasion, called Pithe (Hesiod) by the Greeks. Hermesianax made her one of the Graces. (Hermes, ap. Pausan., 9, 35.)

Suanus, a river of India, falling into the Indus near the modern city of Attock. D'Anville makes the modern name of the Suanus to be the Suraet. Man- nert supposes this to be the same river with that called Choaspes by Strabo and Curtius, and the name Suanus, which is used by Ptolemy in speaking of this stream, to be an error. (Mannert, Geogr., vol. 5, pt. 1, p. 30.)

Sublucius Pons, the most ancient, and also the first in order, if we ascend the river, of all the bridges thrown over the Styx. It was called Sublucius because constructed of wood, and resting on piles or stakes (subicibus.—Pest., a. v., Subicinii.) This bridge was built by Ancus Marcius (Liv., i, 33), but was rendered more celebrated for the gallant man- ner in which it was defended by Horatius Cocles against the forces of Porsenna. For some centuries after, this bridge was, through motives of religious feel- ing, kept constantly in repair with the same materials of which it had been originally framed, without the addition of a single nail for the purpose. This continued, as we learn from Dio Cassius (50, 9), till towards the end of the republic, when it was rebuilt of stone by the censor Paulus EÜmius Lepidus. (Plut., Vit. Num.) Julius Capitolinus states (c. 8) that it was repaired by Antoninus Pius in marble. (Cramer's Anc. Italy, vol. 1, p. 467.)

Subura, one of the most populous and busy parts of ancient Rome. If, however, the Subura was one of the most frequented parts of Rome, it was also the most profligate. (Propert., 4, 7, 15, seq.—Horat., Epod., 5, 57.—Martialis, 6, 66.) The term Subura is sometimes used synonymously with that of Rome, especially by Juvenal. (Sat., 3, 5—16, 10, 155.) Julius Caesar is said to have first lived in this part of Rome, and in rather a humble dwelling. (Sueton., Vit. Aug., 29.) Varro gives various etymologies for the name (L. L., 4, 8), but they all appear unsatisfac- tory. (Cramer's Anc. Italy, vol. 1, p. 369.)

Suco, I. now Xucar, a river of Hispania Tarra- conensis, in the territory of the Continenti. It rises in Mount Iudubes, and falls into the Mediterranean. (Mel. 2, 6.—Plin., 3, 3.) II. A city of Hispania Tarraconensis, in the territory of the Edetani, and at the mouth of the river Suco. It lay between Cogo and the river Iberus. (Strabo, vol. 5, p. 333.) Suco was burned and surnamed by the days of Pliny. The modern Culera marks its site. (Plin., 3, 3.—Liv., 28, 26.—Id., 29, 19.)

Suessa, I. Pometia, an ancient Volscian city, the site of which must ever remain a matter of mere con- jecture. It appears to have been in the neighbourhood of the Pompinum Paludes, to which it gave name. This town was taken and sacked by Tarquinius Superbus, and the booty is said to have furnished him with the means for laying the foundation of the Capit- ol. (Liv., 1, 53.) It was again, at a later period, taken and sacked by the consul Servilius, and from that period we lose all traces of it in history. Suessa Pometia was a colony of Alba, according to Dionysius (1, 4) and Virgil (Æn., 6, 773—Cramer's Anc. Italy vol. 2, p. 95, seq.)—II. Aurunca, the capital of the Aurunci. (Vid. Aurunci.)

Sucina, a river of Gallia Belgica, between the Remi, Veromandui, Vadocasses, Meldi, and Cata- launi. Their capital, Augusta, afterward Suessonia, now Soissons, stands on Oxona. now the Aisne. They were subdued by Caesar. (Cass., B. G., 8, 6.—Liv., Epit., 104.—Plin., 4, 17.)

Sutonius, 1. C. Paulinus, a Roman commander, who, in the reign of Claudius, with the forces of the Mauri, and with the first Roman general that crossed Mount Atlas with an army. He commanded subse- quently in Britain, and there crushed a dangerous re-bellion. He wrote an account of his campaign in Af-
Suida, a Greek lexicographer, of whom so little is known that some have doubted whether a person of this name ever existed. His name, however, is found in all the MSS. of his Lexicon, and is often mentioned by Eustathius in his commentary on Homer. He seems to have flourished between 900 and 1025 A.D. He is the author of a Lexicon compiled from various authorities. He appears from other works of this kind, in giving not only the name of a word, but, at the same time, an historical notice of the most celebrated authors, and extracts from their works. On account of the peculiar uniformity of style which prevails in the biographical notices, it has been conjectured that Suida borrowed them all from some Ononapston; and, from an expression which he himself uses in the article Hesychius, some have been led to believe that he made use of his Ononapston in the composition of his Lexicon, but with his own materials. In making his compilation, however, Suida has shown great negligence, and a total want of judgment and critical talent. He cites from vitiated and corrupt readings; he confounds individuals and authors; and oftentimes his citations do not prove what he intends. It is uncertain whether the carelessness of copyists may not have been the cause of many of these errors. Notwithstanding its errors and imperfections, it is a very useful book, and it is re-edited and furnished with a new house of all sorts of erudition. It furnishes an account of poets, orators, historians, &c., with many passages from ancient authors whose works are lost. The best edition, until of late, used to be that of Kuster, Cantab., 1705, 3 vols. fol. In 1834, however, a new edition of Kuster's work appeared from the Clarendon press, Oxford, in 2 vols. fol., by Gaisford, which is in every respect far superior to the former. In the same year Bernhardy, a German scholar, commenced re-editing Gaisford's labors, in the 4to form, at the Halle press. This latter work is still in a course of publication. (Hoffmann, Lex. Bibliograph., vol. 3, p. 650.—Scholl, Hist. Lit. Gr., vol. 6, p. 289.)

Suidaeus, a people of Scandinvia, famed for their skill in navigation as early as the days of Tacitus (Germ., 44). They were the earliest inhabitants of what is now called Sweden, which country in early times was called Sueia. From them Sweden, in the middle ages, received the appellation of Sveonland and Sueonia. (Bischoff and Müller, Wörterb. der Geogr., 935.)

Sulla. Vid. Sylla.

Sulma, I. a city of Latium, which stood on the site of the modern Serronetta Vecchia. It must not be confounded with the place of the same name situated among the Peligni. Virgil probably alludes to it when he gives the name of Sulmo to a Latin warrior. (Aen., 10, 517.) In Pliny's time no vestige of it remained.—II. A city of the Peligni, about seven miles southeast of Corfinium, now Sulmone. It was the birthplace of Ovid, who has made us acquainted with that fact in more than one passage. The improbable story of its having been founded by Solymus, a Phrygian, one of the companions of Xenas, which we find in the same poet (Posid., 9, 76), we learn from Florus (3, 21) that this city was exposed to all the vengeance of Sulla for having been attached to the cause of Marius. It was not, however, destroyed by that general, since we soon after hear of its having fallen into the hands of Caesar, together with Corfinium. (Bell. Civ., 1, 16.) Frontinus states that it was a Roman colony. (Cramer's Anc. Italia, vol. 1, p. 334.)

Sulinthus, a city in the time of Domitian, who wrote a poem on the banishment of the philosophers by that emperor. We have remaining a Satire in seven verses, entitled "De edicto Domitiani, quo Philosophos urbe ejecto." It is found in many editions of Persius and Juvenal, and even of Ausonius. This is supposed to be, in fact, the production of Sul-
Sulpitius. (Bähr, Gesch. Röm. Lit., p. 181.) The Sulpitius here alluded to must not be confounded with another in the time of Tibullus. To the latter are ascribed by some critics a portion of the elegies in the fourth book of Tibullus, namely, from the 2d to the 12th inclusive. (Barke, Advers., 59, 16.—Brockhaus, ed Tibull, p. 90.)

Servius Sulpitius Rufus, by P. Sulpitius, the tribune, A.U.C. 665. It ordained that the prosecution of the Mithradatic war should be taken from Sylla and vested in Marius. II. Another, de Senatu, by Servius Sulpitius, the tribune, A.U.C. 665. It required that no senator should contract a debt over 2000 denarius ($300).—III. Another, de Cistiate, by P. Sulpitius, the tribune, A.U.C. 665. That the Italian allies, who had been robbed of their property, and had been formed into eight new tribes, should be distributed throughout the thirty-five old tribes; and also that the manumitted slaves, who used formerly to vote only in the four city tribes, might vote in all the tribes.

Sulpitia Genia, a distinguished patrician family at Rome, the two principal branches of which were the Camerini and Galbar.

Servius Sulpitius Rufus, a distinguished law of C. Licinius Stolo. He was highly esteemed for his talents and virtues, and filled many important offices in the state. Sulpitius was four times military tribune with consular power; the last of these times in 400 B.C.—II. Servius Sulpitius Patricius, was consul B.C. 362, with Licinius Stolo. Scene exhibits are said to have been first given during this year, and it was during this same year that Sulpitius drove a nail into the side of the temple of Jupiter to account of the cutting of a pestilence.—III. Publius Sulpitius Saverio, was consul B.C. 279, with P. Decius Mus, and defeated Pyrrhus at Asculum.—IV. Servius Sulpitius Galba. (Vid. Galba II. and III.)—V. Caius Sulpitius Gallus. (Vid. Gallus I.)—VI. Publius Sulpitius, a tribune of the commons in 122 B.C., and a person of most turbulent character. As a partisan of Marius, he brought forward a law to deprive Sylla of the charge of the war against Mithradates, and to vest it in Marius. He also proposed another law respecting the Italian allies. (Vid. Sulpitia Lex III.) While these matters were pending, he paraded the streets, surrounded by armed bands, and a set of ruffians whom he called his anti-senate: the Italians also streamed in extraordinary numbers to the city, to await the passage of the law in which they were interested. On the 14th of June, he was put to death, and the new tribes had been created for them, whose suffrages were only then demanded when the old five-and-thirty gave no decision. Sulpitius now proposed by his law to distribute them throughout all the tribes. Rome became thereupon a scene of confusion and riot; both parties, the old citizens and the Italians, fought with sticks and clubs in the streets and forum; and the law was near being passed by force, when Sylla, who had been consul, and Rutilius Rufus, of the senatorial party, assembled the senate in the temple of Castor, and regularly besieged by the people because it had caused to be announced the measure usual in extreme confusion of an interruption of all public business. In the tumult that arose, Sylla's son-in-law was slain; his colleague escaped the hands of the mob with difficulty; and Sylla himself, too, was compelled to take refuge at this time, and his administration upon public business merely to be let out of the city. He betook himself to his army, while Sulpitius carried his law, and the appointment also of Marius in Sylla's stead, as commander-in-chief against Mithra- dates. Sylla now marched upon Rome, and the city was stormed like a hostile town. Sulpitius the tribune perished, a price having been set upon his head, and Marius himself narrowly escaped being taken.—

Servius Sulpitius Rufus, a contemporary and friend of Cicero's, and one of the most eminent lawyers of his time. He had been a pupil, in judicial studies, of P. Balbus and C. Aquilus Gallus. According to the testimony of Cicero, Sulpitius was the first that gave a scientific form to Roman jurisprudence; in other words, he carried it back to first principles. He was consul several times, with M. Marcellus. Of his legal writings (Repromomae, M. Aurelii tre- role capita; De testamentis sacrati; De dote, &c.), and also of his speeches, nothing remains. (Consult Otto, "de Vita, studiis, scriptis, et honoribus Serv. S. Rufi," Traj. ad Rhen., 1737.)—VIII. C. Sulpitius Apollinaris, a native of Carthage, and grammarians, flourished in the time of the Antonines. We have nothing from him relative to the branch of knowledge which he Professed to teach. The authorities that are found at the commencement of Terence's plays, as arguments to the respective pieces, are supposed to be his. We have also an epigram of his on the order which Virgil gave to burn the Æneid. (Burmann, Anthol. Lat., vol. 1, p. 352. Schön, Hist. Lit. Rom., vol. 3, p. 303.)—IX. Sulpitius Severus, an ecclesiastical historian, born about 363 A.D., a part of the life of Sulpitius, Rufus, was written by Sulpitius Severus, and has vanished. A sacred history (Historia Sacra), from the creation of the world to A.D. 410; a Life of St. Martin of Tours, and some dialogues and letters. The latest edition of his united works is that of Prato, Verona, 1741-5, 2 vols. 4to.

Summanus, an Etrurian deity, whose worship was adopted, probably very early, at Rome. A temple was erected to him at the Circus Maximus in the time of the war with Pyrrhus (Ovid, Fast., 6, 731), and his earthen image was used as a charm to check the storm. (Suet. Aug.)—He was consulted by the Romans on their expeditions to the south. (Plin., N.H., 31, 10.)—The temple to him, erected on the capitol, was another of the gods worshipped by the Sabine Tatius. (L. L., 4, p. 22.) As his Roman name was probably a translation, the usual derivation of it, Summanus Manium, is perhaps founded on truth. His festival, the Summanalia, was on the 20th of June, when cakes shaped like a wheel were offered to him. (Keightley's Mythology, p. 530, seq.)

Syracuse, a city, was consul 60 B.C. Attorney, forming the extreme point of that province towards the south. Near the promontory stood the town of the same name, with a harbour. (Pausan., 1, 1.) Sunium was held especially sacred to Minerva as early as the time of Homer (Od., 3, 278), and here the goddess had a beautiful temple, whence her appellation of Sunias. The promontory of Sunium is frequently mentioned in Greek history. Herodotus, in one place (4, 90), tells it was cut off from the rest of the country. (Reiske, l.c.) Thucydides reports that it was fortified by the Athenians after the Sicilian expedition, to protect their vessels which conveyed corn from Euboea, and were, consequently, obliged to double the promontory (8, 4, 1).—Travellers who have visited Sunium inform us that this edifice was originally decorated with six columns in front, and probably thirteen on the sides. (Müller, 380, 596.)

The whole edifice was of white marble, and of the most perfect architecture. According to Hobhouse (vol. 1, p. 342, Am. ed.), nine columns, without their entablatures, front the sea, in a line from west-northwest to east-southeast; three are standing on the side towards the land, on the north; and two, with a pilaster, next to the corner one of the northern columns, are at the sea on the east; and

1271
there is a solitary one on the southeastern side. This last has obtained for the promontory the name of Cape Colomi, or the Cape of the Column. The whiteness of the marble has been preserved probably by the sea-vapour, in the same manner as Trajan's triumphal arch at Ancora. The rock on which the column rests is of a monstrous size, and is not far from thirty feet high. It bears, according to Hobbouse, a strong resemblance to the picture in Falconer's "Shipwreck!" but the view given in Anacharsis places the temple just in the wrong position. Sunium was considered by the Athenians an important post, and as much a town as the Piraeus, but could not have been very large, according to Hobbouse, who is of opinion that, when Euripides styles it the rich rock of Sunium in his Cyclops, he alludes to the fertility of the soil, not the fertility of the soil. The same writer justly considers the assertion of Pausanius to be unworthy of belief, when he states that the spear and the crest of the statue of Minerva in the Acropolis might be seen from Sunium, a straight line of nearly 30 miles. —Sir W. Gell observes that "nothing can exceed the beauty of this spot, commanding from a portico of white marble, erected in the happier period of Greek art, and elevated 200 feet above the sea, a prospect of the Gulf of Egeus and the whole of the city of Athens," (Itin. p. 82.) Dodwell states that "the temple is supported on its northern side by a regularly constructed terrace wall, of which seventeen layers of stone still remain. The fallen columns are scattered about below the temple, to which they form the richest foreground. The walls of the tower, of which there are a few remains, may be traced nearly down to the port on the southern side; the greater part of the opposite side, upon the edge of the precipice, was undefended, except by the natural strength of the place and the steepness of the rock; the walls were fortified with square towers." (Tour, vol. 1, p. 540.—Cramer's Anc. Greece, vol. 2, p. 377.)

SUPPER MARE, a name of the Adriatic Sea, as situate above italy. The name of Mare Infernum was applied for the opposite reason to the sea below Italy.

SURENA, a powerful officer under Odros, king of Parthia, and who had aided in raising that monarch to the throne. He distinguished himself at the storming of Seleucia, and was afterward appointed commander of the Parthian forces against Crassus, whom he overthrew in the memorable victory at Charae, and afterward entrapped and put to death. Surena himself was not long after put to death by Odros. (Plut., Vit. Crass.)

SURRENTON, a city of Campania, on the lower shore of the Sinus Crater, and near the Promontorium Minervae. The place is reported to have been of very ancient date, and was said to have derived its name from the Sirens, who, as poets sung, in days of yore made this coast their favourite haunt, and had a temple consecrated to them here. (Strab. 247.) Surrentum appears to have become a Roman colony in the reign of Augustus. The wine of the Surrentine hills was held in great estimation by the ancients. (Ovid. Met. 15, 709, vol. 13, 110.—Stat. Silv., 3, 5.) Pliny, however, relates that Tiberius used to say of this wine, that physicians had agreed to give it a name, but that, in reality, it was only a better sort of vinegar. (Plin., 14, 16.) The modern name of Surrentum is Sorrento, and it is celebrated as the birthplace of Tasso, and admired for the exquisite beauty of its scenery and the salubrity of its climate. (Cramer's Anc. Italy, vol. 2, p. 183.)

Susiana, a province in Parthia, and the most fertile in Persia, on the east side of the Eiusus or Choaspeas. (Herod., 5, 52.) The founder, according to Herodotus, was Darius; whereas Strabo gives, from Grecian traditions, the name of Tithonus, the father of Memnon; and Memnon himself is said to have built the palace at Susa, afterward called Memnonium or Memnonia. Susa itself is sometimes called Memnonia. (Vid. Memnon.) Susa was 120 stadia in circumference; according to Polybius 200 stadia; and the account of the last-mentioned writer, which Strabo quotes, that the city had no walls, deserves full credit, since, at the time of Alexander and his successors in this quarter, it is constantly represented as an unfortified city. (Strabo, 727.) When, therefore, mention is made in other writers of walls, we must refer what is said to the citadel merely. This citadel was termed Memnonium, and is represented as a place of great strength. Alexander found great treasures here. (Strabo, 731.) We are informed by Strabo that Susa or Susian meant in Persian "a lily," and that the city was so called from the abundance of these flowers that grew in and about it. Perhaps they may have had somewhat more of an Oriental meaning, and have denoted the lily (i.e., the fairest) among cities. —Great difficulty exists in relation to the site of this ancient place. Mannert declares for Trotter or Schoscher; and not for the more northwestern Sus; but consult the remarks of Williams (Geography of Ancient Asia, p. 12, seqq.) It was customary with the kings of Persia to spend the summer in the cool, undefended and mountainous seat of Susiana, that is to say, Susa, the climate being warmer there than elsewhere.

Susarion, a Greek poet of Megara, who is supposed by some to have been the inventor of comedy, on the authority of the Arundel marble. If the marble, however, be correct, by the term komodia, as applied to him, we can understand nothing beyond a kind of rough, extemporal farce, performed by the chorus, into which Susarion might have improved the Phallaid songs. His date may be inferred to be about 562 B.C. (Theatre of the Greeks, 3d ed., p. 70, in notis.—Compare the remarks of Bentley, Dissertation on Phalaris, vol. 1, p. 249, seqq., ed. Dyce.)

Susiana or Susis, a province of Persia, to the east of Balkonya proper. It was a large level tract, shut in by lofty mountains on all sides but the south, and was hence exposed to the hot winds from this quarter, while the cool winds from the north were kept off by the mountains. Hence Susiana was selected as the winter residence of the Persian king, but suffered much from heat in summer. The chief rivers were the Ulueus and Tigiris, and, on the confines of Persis, the Orotatis. The modern name of Susiana is Chaustan. The ancient capital was Susa, whence the appellation of Susiana was derived. (Vid. Susa.)

Suside Pyle, narrow pass over mountains from Susiana into Persis. (Curt., 5, 5, 1.—Consult Schneider, ed Inc., and Dicey, Ser. 17, 68.)

Suthul, a town of Nomidua, of which mention is made only in Sallust (Bell. Jug., 37) and Priscian (5, 2; vol. 1, p. 173, ed. Krehl). Barbic du Bocage suspects that this town is the same with that called Sujatha (now Sheita) in the Itin. Ant. The name Suthul is said by some to signify "the town of eagles," but with what authority it is hard to say. Gesenius more correctly deduces its meaning from the Hebrew, and makes it equivalent to "fortyargarhalten." It was a settlement or colony. (Gesen., Phan. Men., p. 427.)

Sutritum, a city of Etruria, about eight miles to the west of Nepete, and in a northeastern direction from Care. It was a city of some note, and was considered by the Romans as an important acquisition in furtherance of their designs against Etruria. Having been surprised by the latter power, it fell into their hands, but was almost immediately invested by Caesarea. (Curt., 5, 2.) Sutritum was colonized by the Romans, as Velleius Paterculus reports, seven years after Rome had been taken by the Gauls (1, 14). It is now Sutri. (Cramer's Anc. Italy, vol. 1, p. 234.)

Sygonus, an early Greek poet, who, according to Alexian (V. H., 14, 21), lived after Orpheus and Mu
was, and that was the first that sang of the Trojan war.

Diogenes Laërtius writes the name Sagmaris, and makes him the contemporary and rival of Homer. (Diog. Laert., 2, 46.)

Sybaris, or, a river of Lucania, running by the city of the same name, and falling into the Sinus Tarentinus.

It is now the Cokile. Its waters were said to render horses shov. (Strab., 263.—Elian. N. H., N. 2, 36.)—H. A celebrated city of Lucania, on the Sinus Tarentinus, and near the confines of Bruttium. It was situated between the rivers Sybaris and Cathris, and was said to have been founded by the people of Troæene, not long after the siege of Troy. (Aristot., Politi., 5, 3.—Solin, 8.) But these were subsequently joined by a more numerous colony of Achaenans, under the conduct of Iseliceus (Strab., 263), about 720 B.C. (Euseb., Chron., 2.) The rise and progress of this celebrated republic must have been wonderfully rapid. There are said to have been from 300,000 by several ancient writers, and which is said to have been actually brought into the field, is so prodigious as to raise considerable doubts as to the accuracy of these statements. The accounts which we have of their luxury and opulence are not less extraordinary: to such a degree, indeed, did they indulge their taste for luxury, that a Sybarite and a voluntary became synonymous terms. Athenaeus, in particular, dwells on their inordinate sensuality and excessive refinement. His details are chiefly drawn from Timæus, Phylarchus, and Aristotle. Among other particulars which he gives, upon the authority of these Greek writers, are the following. It was forbidden by law to exercise in the city any trade or craft, the practice of which was attended with the least inconvenience to the inhabitants; they might be disturbed; and, for the same reason, an edict was enforced against the breeding of cocks. On the other hand, great encouragement was held out to all who should discover any new refinement in luxury, the profits arising from which were secured to the inventor by patent for the space of a year. Fishermen and dyers of purple were specially exempted from the payment of taxes and duties. A crown of gold was awarded to the first who should discover any new refinement in luxury, or any new device for avoiding the sumptuousness of their entertainments, and their names were proclaimed by heralds, at the solemn festivals, as public benefactors. To these banquets their women were also invited, and invitations were sent them a year in advance, that they might have sufficient time to provide themselves with dresses suitable to the occasion. These were of the most costly description, and often composed of silk and other costly materials, and of the finest Milesian wool. Dionysius of Syracusæ, having become possessed of one of these robes, which was esteemed a singular rarity from its peculiar magnificence, sold it to the Carthaginians for 120 talents, upward of 20,000. When they retired to their villas, the roads were covered with an awning, and the journey, which might easily have been accomplished in one day, was the work of three. Their cellars were generally constructed near the seaside, wherein wine was conveyed from the country by means of pipes. The Sybarites were also said to have invented vapour baths.—History has recorded the name of one individual, famed beyond all his countrymen for his effeminacy and sensuality. Sminydes, the son of Hippocrates, is stated by Herodotus to have been by far the most luxurious man that ever lived (6, 127). It is reported, that when he went to Sicyon as suitor, he was accompanied by a train of 1,000 cooks and fellows, and that he far surpassed that prince and all his court in magnificence and splendour. (Athen., 12, 7 Y. 1273)

3) But this prosperity and excess of luxury were not of long duration; and the fall of Sybaris was hastened with their luxury only equalled by that of its sudden elevation. The events which led to this desolation are thus related by Diodorus Siculus. A democratical party, at the head of which was Telys, having gained the ascendency, expelled five hundred of the principal citizens, who sought refuge at Crotona. This city, upon receiving a summons to give up the fugitives or prepare for war, by the advice of Pythagoras made choice of the latter alternative; and the Sybarits, who having been driven out of their native territory, the forces of Crotona, headed by the celebrated Milo, amounted to 100,000 men, while those of Sybaris were triple that number; the former, however, gained a complete victory, and but few of the Sybarits escaped from the sword of the enemy in the route which ensued. The victorious Crotonians, following up their success, advanced against Sybaris, and, finding it in a defenceless state, totally destroyed the town by turning the waters of the Cathris, and thus overwhelming it with the inundation. This event is supposed to have happened nearly 510 years B.C. (Diod. Sic., 12, 9.—Herod., 5, 44.—Strab., 263.) The greater part of the Sybarits who escaped from the general destruction retired to their colonies on the Tyrrhenian sea; but a small remnant still adhered to their native soil, and endeavoured, but in vain, to stem the tide of this great change. (Strab., 263.) It was afterward erected in the immediate vicinity. (Vid. Thurii.)—As Sybaris was utterly destroyed, no ruins remain to guide us in our search of its position. Swinburne imagined, however, that he had discovered some vestiges of this city about three miles from the coast. (Cramer's Anc. Italy, vol. 2, p. 354 seq.)

Sybaris, an inhabitant of Sybaris. (Vid. Syba- ris.)

Syene, now Aswan, a town of Thebais, on the extremities of Egypt. Juvenal, the poet, was banished there on pretence of commanding a legion stationed in the neighbourhood. It is famous for being the place where the first attempt was made to ascertain the measure of the circumference of the earth by Eratosthenes. In this town, according to Strabo, a well was sunk, which marked the summer solstice, and the day was known when the style of the sundial cast no shade at all, and the water rose to the bottom of the well. The observations of the French astronomers place Aswan in 24° 5' 23' of latitude. If this was formerly situated under the tropic, the position of the earth must be a little altered, and the obliquity of the ecliptic diminished. But we should be aware of the vagueness of observations made by the ancients, which have conferred so much celebrity on these places. The phenomenon of the extinction of the shadow, whether within a deep pit or round a perpendicular gnomon, is not confined to one exact mathematical position of the sun, but is common to a certain extent of altitude, corresponding to the visible diameter of that luminary, which is more than half a degree. It would be sufficient, therefore, that the northern margin of the sun's disk should reach the zenith of Syene on the day of the summer solstice, to abolish all other shadow farther than perpendicular to it. Now, in the second century, the obliquity of the ecliptic, reckoned from the observations of Hipparchus, was 23° 49' 25". If we add the semidiurnal of the sun, which is 15' 57", we find for the northern margin 24° 5' 22", which is within a second of the actual latitude of Syene. At present, when the obliquity of the ecliptic is 23° 28', the northern limit of the sun is no nearer the latitude of Syene than 21° 3', yet the shadow is not completely visible. We have, therefore, no imperious reason for admitting a greater diminution in the obliquity of the ecliptic than that which is shown by real astronomical observation of the most authentic and
exact kind. That of the well of Syene is not among the number of these last, and can give us no assistance in ascertaining the position of the tropic thirty centuries ago, as some respectable men of science seem to have believed. — Nature presents a peculiar spectacle around Syene. Here are the terraces of reddish granite of a part of it, which is thicker, beneath a green; a terrace extends to those rocks which differ from granite in containing particles of hornblende. These mighty terraces, shaped into peaks, cross the bed of the Nile, and over them the river rolls majestically its impetuous and foaming waves. Here are the quarries from which the obelisks and colossal statues of the Egyptian temples were dug. An obelisk, partially formed and still remaining attached to the native rock, bears testimonies, on its surface and patina of human art. (Malte-Brun, vol. 4, p. 89, seqq., Am. ed.)

SYENNESIS, a satrap, or, rather, tributary monarch of Cilicia, when Cyrus the Younger made war upon his brother Artaxerxes. The name Syenennesis appears, in fact, to have been a common appellation for the native princes of this country. (Consul. Bahr, ad Herod., 1, 64. — Kriger, ad Xen., Anab., 1, 2, 12. — Staun., ad Echec, Pers., 926.)

Sylla, the younger, was born at Rome A.U.C. 616, B.C. 138, in the consulate of M. Emilius Lepidus and C. Hostilius Mancinus, four years before the death of Tiberius Gracchus. Sylla was a patrician by birth; his father, however, did nothing to promote either the honour or the wealth of his family, and his son was born with no very flattering prospects either of rank or fortune. We know not by whom his education was superintended; but he acquired, either from his instructors, or by his own exertions in after life, an unusual portion of knowledge; and he had the character of being very profoundly versed in the literature of both his own country and Greece. (Sallust, Bell. Jug., 95.) But intellectual superiority affords no security for the moral principles of its possessor; and Sylla, from his earliest youth, was notorious for gross sensuality, and for his keen enjoyment of low and profligate society. He is said to have merely occupied lodgings at Rome, and to have lived in a way which seems to have been reckoned disgraceful to a man of patrician family, and to have incurred great indignation. For his first advancement in life he was indebted to the fondness of a prostitute, who had acquired a large sum of money, and left it all to him by her will; and he also inherited the property of his mother-in-law, who regarded him as her own son. Sylla was chosen one of the questors A.U.C. 646, and joined the army of Marius, who, after rallying his forces, was elected to the consulship, and carrying on the war against Jugurtha in Africa. Here his services were of great importance, since it was to him that Jugurtha was at last surrendered by Bocchus, king of Mauritania. This latter circumstance excited, as is said, the jealousy of Marius; but Sylla nevertheless served under him as one of his lieutenants in the war with the Cimbri, where he again greatly distinguished himself. Finding, however, that the army of Marius, who was equal to the task, and served in the army of Lutatius Catulus, the colleague of Marius: and in this situation, being charged with the duty of supplying the soldiers with provisions, he performed it so well, that the army of Catulus was in the midst of abundance, while that of Marius was labouring under severe privations. This still further inflamed the animosity with which Marius already treated him; and when, at the end of this period Sylla seems to have lived in the mere enjoyment of his favourite pleasures of intellectual and sensual excitement. At length, A.U.C. 657, he became a candidate for the office of praetor, but without success. In the following year, however, he was more fortunate, having been elected to this same magistracy without the previous step of going through the office of adile; and he is said to have exhibited on the occasion no fewer than a hundred lions; the first time, it is said, that the male lion was ever brought forward in the sports of the circus. (Plin., 8, 16.) On the expiration of the praetorship he obtained the province of Cilicia, and was commissioned to replace on the throne Ariobarzanes, king of Cappodocia, who had been lately expelled from it. He confiscated the property of the country, and established an embassy to Rome in their alliance. In the interview between the Roman praetor and the Parthian ambassador, Sylla claimed the precedence in rank with the usual arrogance of his countrymen; and by this behaviour, in all probability, left no very friendly feeling in the mind of Arsaces; and rather encouraged than lessened that jealousy of the Roman power, which the Parthians in the sequel were often enabled to manifest with more seductive than any other nation of the time. On the return of Sylla to Rome, he was threatened with a prosecution on account of corrupt proceedings in his province; but the matter was never brought to a trial. Soon after this the Social War broke out, in which Sylla served as lieutenant under the consul Lucius Julius Caesar; and during this same contest the name of Marius is hardly mentioned, whereas the services of Sylla were of the most eminent kind. Towards the close of this war, A.U.C. 88, Sylla went to Rome to stand candidate for the consulship; and the prospect of his attaining to that dignity was most galling to the jealousy of Marius, especially as a war with Mithradates now appeared certain; and, if a general of Sylla's reputation filled the office of consul, his claims to the command of the army employed in the contest would prevail over all others. Sylla's application for the consulship was a successful one, and Q. Pompeius was chosen as his colleague. Information soon after was received that Mithradates had attacked and overrun the Roman dominions in Asia Minor, and war was therefore declared against him at Rome; whereupon Asia and Italy being named as the province of the consul, the latter fell to the lot of Q. Pompeius, and the former to that of Sylla. But the turbulent tribune Publius Sulpicius, the devoted partisan of Marius, was soon after elected by Mithradates, who impetuously rushed into effect. The army which Sylla was to command was at this time employed near Nola, as that city, which had revolted in the Social War, still refused to submit to the Romans; but he himself remained in the city with his colleague, endeavouring to baffle the project of Sulpicius by proclaiming frequent holydays, and ordering, consequently, a suspension of public business. A violent tumult in consequence ensued; but Sylla, being joined by the city of Rome, was compelled to yield, and immediately thereafter left Rome for his army, and Sulpicius soon caused a law to be passed depriving Sylla of the command against Mithradates, and vesting it in Marius. Two military tribunes were sent to announce this change to Sylla. The army of the latter, however, were as indignant as himself at this new arrangement. The two military tribunes, however, being murdered in conveying six legions, broke up from their quarters, and began to march upon Rome. The city was assaulted and taken; Sulpicius, being betrayed by one of his slaves, was put to death by Sylla's orders, and his head exposed on the rostra; while Marius, after a series of romantic adventures, escaped to Africa. Sylla having thus crushed the opposite faction
proscribed Marius, his son, and his chief adherents, re-established the power of the senate, and appointed his friend Octavius and his enemy Cinna to the consulsip, set out against Mithradates. The relief of Greece was the first object of Sylla; and this he accomplished after taking Athens by storm, and defeating the armies of Mithradates in two great battles. Weakened and dispirited by these reverses, the King of Pontus readily concluded a treaty with the Roman general, who, on his part, was equally desirous of a peace, that the population entire of his dominions, where the Marian faction had regained the ascendency, Sylla had probably expected to produce a comparative equilibrium at Rome by the appointment to the consulsip of one from each of the contending factions. Here, however, his policy failed, probably from being too refined, or from his not taking into consideration the new element which had been introduced by the admission of the Mithridatian auxiliaries. In the cut of pieces, he had, in a great measure, exterminated the democratic party in Rome itself, and restored the power of the senate; but Cinna perceived the means of raising a powerful body of new adherents, by proposing to throw open all the tribes to the Italian states, which would have given them a preponderance in every popular assembly. This the other consuls, Octavius, opposed; and Cinna was compelled to withdraw to the countries of his former order, he restored at least to the disaffected allies, Marius, who had fled to Africa, being informed of the turn which affairs had taken at Rome, conceived hopes of recovering his power, and immediately returned to Italy, joined Cinna, and, at the head of an immense horde of robbers and semi-barbarians, the very dregs of the populace of all Italy, who flocked to his standard from all quarters, advanced against the city. At his approach Rome was throwing up no resistance; but the forces sufficient to oppose him, the senate offered to capitulate, on condition that the lives of the opposite party should be spared. During the progress of these negotiations, Marius entered the city at the head of his armed and barbarous adherents, secured the gates that none might escape, and gave the signal for slaughter. On rushed his barbarians like wolves, sparing neither age nor sex, while Marius gazed, on the horror scene with grim and savage delight. During five days and five nights the hideous massacre was continued with relentless ferocity, while the streets were deluged with blood, and the heads of the murdered victims were exhibited in the forum, or laid before the monster himself for his peculiar gratification. At length Cinna grew sick of the protracted butchery; but the barbarians of Marius could not be restrained till the surrender was given, and it was the work of Cinna's soldiers. Having gratified his revenge by this bloody butchery, Marius nominated himself consul for the seventh time, and chose Cinna to be his colleague. This he did without the formalities of a public assembly, as if to consummate his triumph over the liberties of his country, thus trampled upon by an act at once of violation and of insult. But a short time did he enjoy his triumph and vengeance, for fortune chose the teenth day of his seventh consulate, and in the seventy-eighth year of his age, he expired, leaving behind him the character of having been one of the most successful generals and most pernicious citizens of Rome. Sylla, having concluded a treaty with Mithradates, returned to the head of his victorious army, prepared and determined to inflict the most signal and ample vengeance upon the Marian faction, which had so lately obtained the ascendency. After his arrival in Italy, Cinna had been killed in a mutiny of his own troops; and none of the other leaders possessed talent and influence enough to make head against him. After a short but severe struggle, Sylla prevailed, and immediately commenced his dreadful, deliberate, and systematic course of retribution. All who had either taken part directly with Marius, or who were suspected of attachment to the democratic party, were put to death without mercy, and, what was almost more terrible, apparently without wrath. Sylla even produced publicly a list of those he had doomed to death, and offered a reward for the heads of each. He thus set the example of proscription, which was afterward so fatally imitated in the various convulsions of the state. His next step was to dem- onstrate the collapse of the Marian faction, and to parcel out the lands among his own veteran troops, whom he thus at once rewarded and disbanded in the only manner like-ly to reconcile them to peaceful habits. Having thus satisfied his revenge, his next care was to reform and reconstruct the constitution and government of the state, shattered to pieces by long and fierce intestine convulsions. He caused himself to be appointed dic- tator for an unlimited time. He restrained the influ- ence of the tribunes by abolishing their legislative privileges, reformed and regulated the magistracy, limited the authority of governors of provinces, enacted police regulations for the maintenance of public tranquillity, deprived several of the Italian states of their right of citizenship, and, having supplied the due number of the senate by additions from the equestrian order, he restored its proper consuetudinary order. Having at length completed his career as a political reformer, Sylla voluntarily resigned his dic- tatorship, which he had held for nearly three years, declared himself ready to answer any accusation that could be made against him during his administration, walked unmolested in the streets as a private person, and then withdrew to his villa near Cumae, where he fancied himself secure from further and further persecutions. Whether his retirement might have remained long undisturbed by the relatives of his numerous vic- tims cannot be known, as he died in the year after his abdication of power, leaving, by his own direction, the following characteristic inscription to be engraved on his tomb: "Here lies Sylla, who was never out-done in good offices by his friend, nor in acts of hos- tility by his enemy." The civil wars between Marius and Sylla may be considered even more remarkable a careful study of the historian than those of Caesar and Pompey, for a right understanding of the circumstan-ces which led to the destruction of Roman liberty, as the latter but concluded what the former had begun. Indeed, the strife between Marius and Sylla was itself the natural sequel of that contest between the aristocratic and democratic factions, if they ought not rather to be termed the factions of wealth and poverty, which gave rise to the sedition of the Gracchi, and which, being conducted on both sides with no spirit of mutual concession, none of mutual regard for public welfare, deepened into the most bitter and rancor- ous animosity, such as could end in nothing but mutual destruction. Of the worst spirit of democracy, we see in Marius what may be called a personification; of the fierce, turbulent, sanguinary, revenging spirit of ex- cess, but saturated with blood, passed down to and effaced in Sylla; of full of wily stratagems in order to gain his object, then dashing from him ev- ery hard-won advantage by his reckless brutality. On the other hand, the aristocratic spirit had its representa- tive in Sylla; haughty, cautious, and determined, forming his schemes with deep forethought, prosecut- ing them with deliberate perseverance, and abandon- ing them with cold contempt when his object was ac- complished. He had his districtal sway till he had satiated his revenge, and re-established, as he thought, the government on an aristocratical basis; then scorn- fully laid aside his power, and yielded himself up to voluptuous indulgence. By these means it was made clearly evident that Rome no longer possessed sufficient public or private virtue to maintain her republican.
institutions; that she was tottering on the very brink of a complete and final revolution, leading with fatal certainty to a military despotism; and the only question was, whether her despotick ruler should be a Marius or a Sylla; whether he should spring from among the democratic populace or the aristocratic nobility: a question not long to be left in doubt. Many of the laws enacted by Sylla were of a wise and beneficent character, though their general aim was too manifestly the restoration of aristocratic power to the senate. What effect his personal influence, had his life been prolonged, might have had in consolidating his political reforms, cannot certainly be known, though it may very safely be conjectured that not even his power could long have prevented new convulsions. The malady lay too deep to be reached by any merely political measures of a remedial nature. It had its essence in the dogeneracy and moral turpitude of the senate, which there was nothing in their external circumstances to prevent, or in their national religion to heal. Besides, as, in the recent wars and revolutions, almost all property had experienced a change of possessors, there were vast numbers throughout all Italy eager for a counter revolution. Several young men also of abilities and ambition were prepared to emulate the career of Marius or of Sylla, which could not be done without a change of the form of government, which had not yet wholly subsided. Of these, the chief were Lepidus, Crassus, Pompey, and Sertorius, and perhaps Locullus. (Heerigen's Hist. Rome, p. 141, seqq. Encyclop. Methapl., div. 3, vol. 2, p. 113.)

SYMMACHUS, a Roman senator of the fourth century, who became prefett of Rome, pontiff, augur, and proconsul of Africa. He vigorously resisted the changes that were made in the national religion by the Lateran Synod and the Emperor Valentinian II., requesting the re-establishment of priests and vestals, and of the altar of Victory. This application was resisted by St. Ambrose, bishop of Milan, who composed an answer to the petition of Symmachus, as did also the poet Prudentius. Symmachus lost his cause, and for some reason was banished by Valentinian or Theodosius, the latter of whom recalled him, and raised him to the consulsbhip, A.D. 391. The petition above mentioned is preserved in the ten books of Symmachus's epistles, still extant. His oratory was of that kind which characterized the decline of Roman literature. "The luxuriance of Symmachus," says Gibbon, "consists of barren leaves without fruit, and even without flowers. Few facts and few sentiments can be extracted from his verbose correspondence." Of these epistles the best edition is that of Scholz, Magn., 1608, 4to. (Scholl, Hist. Lit. Rom., vol. 3, p. 200, seqq.)

SYMPLEIDES, two islands or rocks at the entrance of the Euxine Sea. (Vid. Cynanm.)

SYNCELUS, one of the Byzantine historians, who derived his name from his being Synellus, or Constant Resident, with Tarsius, patriarch of Constanti- nople. Syncelus lived in the time of Charlemagne, and began to write his history in 792, but was prevented by death from extending it beyond the times of Maximian and Maximin. Notwithstanding its many defects, the work of Syncelus forms a valuable addition to the study of ancient chronology. Since the first book of the Chronicle of Eusebius was discovered, it has been ascertained that this work was one of the principal sources whence Syncelus drew his materials. He has, in fact, copied Eusebius to such a degree, that, by reuniting the scattered passages which he has culled from him, we might almost re-establish the text of the former. The only edition, until lately, was that of Goar, Paris, 1652, fol. A new edition, however, corrected from two valuable Paris MSS., was published in 1829, 2 vols. 8vo, as part of the Bonn collection of the Byzantine writers. (Scholl, Hist. Lit. Gr., vol. 6, p. 365.)

SYNESIUS, I. a native of Cyrene, and one of the most remarkable among the literary men of the fifth century. He was born A.D. 378, of a distinguished family, and studied at Alexandria under Hypatia and other celebrated instructors. So rapid was the progress he made, that, at the age of nineteen years, he was chosen by the inhabitants of Cyrene to write to the Emperor Arcadius a golden crown which had been voted him. The discourse which he delivered on this occasion, and which is still preserved, has been much admired. At this period he was still a pagan; subsequently, however, he was persuaded by Theophilius, bishop of Alexandria, to embrace Christianity. He was for a long time, however, very unsettled in his theological notions, and it was this very uncertainty which caused him to be regarded by some as a Christian and by others as a pagan. He continued to write theological and literary works, and to withstand the solicitations of Synesius, and not accept a bishopric. He yielded, however, A.D. 410, and separating from a wife for whom he cherished a deep affection, he was consecrated bishop of Polemaea in Cyrene. Synesius appears to have died prior to 431, since, among the members of the council of Ephesus, which was held this same year, we find Eupomius, the brother of Synesius, and his successor in the dioce- sty of Cyrene, who on the latter occasion expressed a decided philosophical and literary opinions in the school of Plato that he always continued to be more or less attached. The most complete edition of his works is that of Petavius (Petau), Paris, 1612, fol.; reprinted in 1631 and 1640. (Scholl, Hist. Lit. Gr., vol. 7, p. 91.)—II. A philosopher, who wrote a commentary on the work of Longinus respecting the phenomena of the poetic imagination. This work was published in the Biblioteca Graccia of Fabricius (vol. 8, p. 233.).

SYNAXIS (-ados), or SYN[XA]NA (-iun), a town of Phry- gia, northwest of the plain of Ipsus. Plutemy gives the name as Synade, probably through an error of the copyist: the form Synaxas (-ados) is customary with the poets. (Stat. Sylo., 1, 5, 36) According to Stephanus Byzantinus, the name arose from the circumstance of some Greek colonists settling here, the city being originally called Synaes (Συναια), and this term being corrupted by the neighbouring inhabitants into Synnada (Συνναδα, from συν and ναος, to live). Strabo calls it a small place (νομικως, 777).—Strabo, 757, and we know nothing very important in relation to it: with the Romans, however, it was a Carb- ventus Juridicus. (Pliny, 5, 29, where the name appears as a feminine, Synnada.)—Between this place and Dociumin, which lay to the northwest, was a pretty beautiful kind of white marble, with red spots, was obtained. This was held in very high repute by the Romans, and was much used in buildings. The Romans named this marble, after the town of Synnada, lapis Synnadicus; whereas the inhabitants of the country called it Lidos, Λοίδοις, or Λόιδαις; from Dociumin. Strabo speaks of the high degree of value attached to these quarries (/.e. of the quality of it), which having been transported to Rome at a great expense.—The site of Synnada appears to have been in the neighbourhood of the modern Bulteudân, where extensive quarries are still to be seen. (Leake's Tour, p. 54.)

SYPHAX, a king of the Masselyi in Libya, who
married Sophonisba, the daughter of Asdrubal, and forsook the alliance of the Romans to join himself to the interest of his father-in-law and of Carthage. Encamping his army, they set sail from Carthage under a Sign Manual of Ten Thousand, and in three ships, under the command of his son-in-law, Scipio. Afterward, in a general engagement, the united Carthaginian and Numidian armies were defeated. Syphax, upon this, hastened back to his own country; but, being pursued by Lalius and Masinissa, he, together with his son Verma, was taken prisoner, and brought back to Scipio. The conqueror carried him to Rome, where he adorned his triumph. The Romans guarded him for several years, one of the inhabitants of the city, and then, with a public funeral. His possessions were given to Masinissa.

(Liv., 24, 48, seqq.—Id., 29, 23, seqq.—Id., 30, 5, seqq.—Id., 30, 45.)—This proper name has the penult in the oblique cases always long, except in a single instance in Claudian (15, 91), where we find Syphæcum. The context (haurire venena compulsimus) cannot by any possibility apply to Syphax, and therefore Barth conjectures Haurombile for Syphæcum, in the passage of Claudian just referred to, an emendation which is now very generally received. Artaud, however (in Lemaire's edition), retains the old reading.

SYRACUSE, a celebrated city of Sicily, founded about 732 years before the Christian era, by Archias, a Corinthian, and one of the Heracleides. (Thucyd., 6, 3.)—The parts of the city were five in number: Ortygia, the island on which the city was built; Syrakos, or Syracuse proper, which was the first hilly nature of terrain so colonized and fortified by the Corinthians under Archias; and being then an island, and most of it rocky and of difficult approach, it must have been very strong. It is now about two miles in circumference, and probably obtained its name from the abundance of quails there (δρυν, "a quail"). In process of time the city extended to the continent, and a suburb was added, called Akhrydine, probably from the rockiness of that ground. This, in turn, occupied all the lower part of that peninsula between the Portus Laccius and the Portus Trogiliorum, and was, next to Ortygia, the best peopled, though not, perhaps, in proportion to its extent. A wall was then drawn in a straight line from the Portus Trogiliorum to the docks at Syracuse, and this was for some time the limit of its city. Afterward, however, were added no less than three suburbs, Tyca, Temenites (subsequently called Arigine), and Epipolae, to which the Greeks added a fourth, called from the Temple of Apollo and of Fortune situated there, and of which the θυελη, or sacred closes, no doubt, originally occupied a great part of their sites. Τυκία was probably Syracusan for τυχή ("fortune"). Neapolis was of later foundation, and occupied the site of Temenites. These several parts were all gradually surrounded by walls, and included in the city; and, thus, in the end, Syracuse became one of the most extensive cities in Europe. Ortygia, being the original city, was called the citadel, or the city, καὶ τνεκευ. The Epipolae, which was north of Temenites and Tyca, and of a triangular figure, derived its name from its elevated site, now called Belvedere; the highest parts of which were occupied by the Syracusan castles of Euryalus and Labellum. (Compare Gürler, de situ et origine Syracusarum, Lips., 1818, Soc.—Bloomfield ad Thucyd., 6, 75; vol. 2, 182, 118.)

Syracuse had two harbours, formed by the island of Ortygia: one, called the smaller harbour, and also Portus Laccius, between the upper side of Ortygia and the mainland; the other on the southern side, between Ortygia and the Plemmyrian promontory, and running up far like a bay; this was called the great harbour, and was not only extremely capacious, but also opposite a small island against which, they said, the oracle of the sea.—The original constitution of Syracuse, like that of so many Doric settlements, was aristocratic. It subsequently fell under the power of tyrants, some of whom advanced its power and prosperity to a very high pitch. (Vid. Gelon, Hiero, Dionysius.)—It occupies also a conspicuous place in the Peloponnesian war, on account of the large expedition sent thither by the Athenians. (Vid. Pelo- ponnæaciam Bellum.) After a long period of alternate fortune, Syracuse at last fell into the hands of the Romans under Marcellus, after a siege of about three years, B. C. 312.—Of the five ancient divisions of Syracuse, Ortygia alone is now remaining; it is about two miles round, and supposed to contain about 17,000 inhabitants, though some remains, however, still visible of the ancient Syracuse, such as ancient fortresses, temples, and palaces. The famous fountain of Arethusa rose in the island of Ortygia; but, though still a striking object from its discharge of waters, it now serves merely as a resort for washerwomen.—"If mighty names and events," observes a modern writer, "crowd upon the mind when we barely read the name of Syracuse, what vivid historical associations must be awakened by the soil itself! The city of Syracuse was invoked by Pindar as 'The Pan of Mars,' and extolled by Cicero as the most beautiful in the Grecian world. It was the scene of some of the greatest battles and events of antiquity; of Gelo's patriotism, of Harmocrates' valour, and of Dionysius' transcendent Genius. It baffled Carthage; it crushed and captured the proudest armada ever offered by Athens in the pleasing of her power; and, after imposing the peace of Archelaus on the Romans of Rome, it was lost only by the inebriety of its guards during the night of Diana's festival. Its fate stirred compassion even in the heart of its rugged conqueror. When Marcellus looked down at morning from its heights on the whole expanse of Syracuse, the sight of its palaces and temples glittering in the sun, of its harbours so lately impregnable, and its fleets so lately invincible, the recollection of its ancient glory, the knowledge of its impending fate, and the importance of his own victory impressed him with such emotions that he burst into tears. After a lapse of two thousand years, the traveller who looks down from the same spot sees the scene of desolation completed. Groves, palaces, and temples have all disappeared; and the arid rock alone remains, where the serpent basks, a. the solitary wild-flower is unbtent by human footsteps. From the resources of the island, its treasures plundered, its pictures and statues torn away, and its liberties crushed. arts, commerce, agriculture, and population simultaneously declined. Some vestiges of the grandeur of Syracuse undoubtedly remained, even under the oppression of Rome and the degeneracy of the Byzantine empire; but the convulsion of earthquakes and the fanatic fury of Saracen invaders at last effaced it from the catalogue of large cities; and now, under the feeblest branch of the Bourbons, it has only a squalid, superstitious, and idle population of 17,000 souls. The portion of its land that was once most fertile is at present become a pestilential marth. But though at this day there are so few remains of the numerous and vast buildings of Syracuse that it is difficult to guess how their material have disappeared, there are still some of its ancient grandeur. Especially fortunate to the site of the ancient city of Syracuse called Ortygia, some foundations have been discovered which apparently belonged to the stupendous granaries built amid the fortifications of the place by the great Dionysius. The modern cathedral, dedicated to 'Our Lady of Columns,' is so called from its enclosing within its walls the celebrated temple of Minerva, with twenty-four of its noble pillars, twenty-five feet in height, and five feet in diameter. The nave of the modern church is formed out of the ancient cells, the walls having been perforated.
to admit of passages into the side aisles, which consist of the north and south porticoes of the ancient peri-
style. Cicero is diffuse in his description of this ancient edifice, which, though spared by Marcellus, was
stripped to the bare walls of all its splendid ornaments by the famous Lysicrates. Under the summit of its roof
there was elevated an enormous gilded shield, that was consecrated to Minerva. This object, which was
visible a great way off in the reflection of the sun, was beheld with religious respect; and the mariner at
sea made an offering when he took leave of its last glimmerings. In that quarter of the city which was
called Achradina there are also vestiges of the walls once defended by the genius of Archimedes. Here and
there the rock itself is chiselled into huge columns; and, wherever there are remains of gateways, they are
found so placed that they must have obliged the ass-
sailant to approach them for a great length of way with
his unshielded right side unprotected. The Hexap-
ylon of Syracuse was not, as many commentators on
Livy have supposed, a mere part of the wall, but a
noble fortress, constructed with such consummate
skill as to have excited the admiration of the best
modern military architects. Its ruins still exhibit the size and extent of its subterranean passa-
ges, whence both infantry and cavalry might make their
sallies, and retreat again under protection of the
fort; the huge, square towers of its solid masonry are
still to be traced; and the ground is strewed with the
vast blocks of parapets, which are bored with grooves
for pouring melted pitch and lead on the heads of the
assailants. Such was ancient Syracuse. The fullest
sympathy need not prevent our repeating a doubt as
to the vast population of old ascribed to it. True,
the circuit of its walls was twenty-two miles; and
Thucydidcs, long before its era of prosperity under
Dionysius, allowed that it was equal to Athens; but
the increase of its population after Thucydidcs' time
is merely conjectured, and the inhabitants of all At-
tica scarcely exceeded half a million.10
Syria, a country of Asia, bounded on the east by the
Euphrates and a small portion of Arabia, north by the
range of Taurus, west by the Mediterranean, and
south by Arabia. The name Syria has been trans-
mitted to us from the Greeks. Pococke conjectures
that it might possibly come from Sur, the ancient name of
Tyre, the chief city of the whole country. It is
more natural, however, to suppose that the name
Syria is a corruption or abridgment of Assyria, and
that the form in question was first adopted by the
Assyrians, who in their day called the coast of Syria,
the name Nineveh, was made a part of their empire,
about 750 B.C. (Mannert, Geogr., vol. 6, pt. 1, p. 432, seqq.)—It was divided into several districts
and provinces, including, besides Syria Proper, Phoeni-
cia, Palestine, and, according to Pliny, Mesopotamia
and Babylonia. Syria is called in Scripture Aram,
and the inhabitants Arameans, a name derived from
Aram, the fifth son of Shem, the father of the Syrians
Maz and Magog. As far as Syria is called Aram,
but the appellation Naharih, i.e., between the rivers,
is always added, for distinction' sake, to the latter.
The name transmitted to us by the Greeks is, as
above stated, a corruption or abridgment of Assyria.
The Greeks, however, were not unacquainted with the
term Arameans, but they gave it a wide appellation,
making it comprehend the Syrians, the inhabitants of
Mesopotamia, the Assyrians, and the White Syrians,
or, in other languages, as Faras. In every case it
is inferred from the sacred texts that all these nations used a common language, the
same customs, and the same religious faith. The his-
tory of Syria is included in that of its conquerors. It
appears to have been first reduced by Tiglath Pileser,
king of Assyria, about 750 B.C.; previously to whose
invasion it was divided into petty territories, of which

1279
neighbourhood of Damascus and Mount Libanus. The Arabic predominates both in the country and the towns. A corrupt mixture of Syriac and Chaldee is spoken in some parts by the peasantry, while the Turkish is spoken by the Osmanli and the nomadic hordes of the north. These various nations and tribes will come more particularly under our notice in describing the districts to which they respectively belong. The most natural division of the country is that which corresponds to its present political distribution into parishels, to which we shall accordingly adhere. The coast from Akka to Djebail, with the mountains inhabited by the Druses, is comprehended under the paschal of Seide and Akka. Near Djebail, the pass of the port, the town of Tripoli, the Trisib, and a number of lesser passes, lead to the coast to Latium. The north of Syria, from the Levant to the Euphrates, is included within that of Haleb (Aleppo).

The remainder of the country, including by far the largest territory, is the vicereignty of the Pacha of Sham (Damascus). (Mod. Trav., pt. 3, p. 1.)

Syrix, a nymph of Arcadia, daughter of the river Ladon. (Vit. Pan, page 967, col. 3.)

Syria, the vast country on the northern coast of Africa, one called Syrta Minor, on the coast of Byzacium, and now the Gulf of Cephas; the other called Syrta Major, on the coast of Cyrenaica, now the Gulf of Sidra. The former is supposed to derive its modern name from the city of Tacepe, which was at the head of it. The latter is called by the ancients Syrta of Kilidria i. e., "The great Syrta," which the sailors have corrupted into Sidra. The Syrta Minor is about 45 geographical miles in breadth, and runs up into the continent about 75 miles. It is still an object of apprehension to sailors, in consequence of the variations and uncertainties of the tides on a flat and shelvy coast. The Syrta Major is about 180 geographical miles between the two capes, and penetrates 100 miles into the land of Tarablos (Tripoli). Strabo is 'led by the Greeks' σημαία, "to drag," in allusion to the agitation of the sand by the force of the tides. (Compare Sallust, Bell. Jug., c. 78.) It is more than probable, however, that the appellation is to be deduced from the term Sert, which still exists in Arabic as the name for a desert tract or region: for the term Syrta does not appear to have been confined to the mere gulfs themselves, but to have been extended also to the greater country adjacent, which is still, at the present day, called Sert. (Ritter, Erdkunde, vol. 1, p. 929, 2d ed.)

T.

Tabarruna, i. Rhenana, a city of Gallia Belgica, in the territory of the Nemetus, now Rhein-Zabern. (Ann. Marcell., 16, 2)—II. A city of Gallia Belgica, between Argentaratum (Strassburg) and Divodurum (Metz). The modern name is Berg-Zabern.—III. Tribocorom, a town in the territory of the Triboci, now Eisnaa-Zabern. (Bischoff and Müller, Wörterb. der Geogr., p. 949.)

Tabor, a mountain of Galilee. (Vid. Isaburyus.)

Tabræca, a city on the coast of Numidia, and near the limits of the Provincia Zeugitana, now Tabarka. (Polyb., 12, 11.)

Taelemy, the name of the Tabraca and Pliny, Tabracha. (Plin., 5, 3.)

Taburnus, a lofty mountain in Samnium, the southern declivities of which were covered with olive grounds. It closed in the Caudine Pass on the southern side. When modern name is Taburno or Tabor. It derives celebrity from Virgil. (En., 12, 715. — Georg., 2, 307.)

Tàgèf, a town of Africa, at the head of the Syrtis Minor. It is now Cazes or Gaps. Near it were some medicinal waters, called Agua Tacapina, now El Hamma. (Plin., 5, 4. — Itin. Anton., 50, 59, 74, &c.)

Tàgarfànas, a Numidian by birth, and the leader of a revolt in Africa against the Roman power, in the reign of Tiberius. He had served among the Roman auxiliaries, and acquired in this way some knowledge of military discipline. Deserting, subsequently, from the forces among which he had been enrolled, he collected together some predatory bands, whom he accustomed to discipline, and finally appeared as the leader of the Musulani, a powerful nation on the borders of the desert. The Mauri also were drawn into the confederacy, and the Cintibi too were forced to adhere to it. Furius Camillus, the proconsul of Africa, marched against and defeated him. He afterward, however, renewed the war, and was again defeated by Aprodius, and driven into the desert. Still unsubdued in spirit, he appeared a third time as an enemy, and was defeated by Blautus. He again carried on the war, after this, with renewed strength and vigour, but was again overcome by Dolabella, and fell fighting bravely in it. (Tacit., Ann., 5, 52. — Id. ib., 3, 20. — Id. ib., 3, 74. — Id. ib., 4, 23, seqq.)

Tâchampso, an island in the Nile, near Philæ. The Egyptians held one half of this island, and the rest was in the hands of the Ethiopians. (Consult Herod., 5, 29.)—The name Tâchampso is thought to signify "the island of crocodiles," the Egyptian term for these animals being χαμπσο, according to Heroldotus (3, 193.)

Tâchampso, a city in Numidia. (Vid. Champsyche.)

Mannert makes it answer to the modern Derar (Geogr., vol. 10, pt. 1, p. 231); but Heeren is in favour of Calapispeth (Ideen, vol. 2, pt. 1, p. 359.)—Consult Bahr, ad Herod., 2, 29.)

Tâchos, a king of Egypt in the time of Antiochus the Great. Having revolted against the Persians, he drew the Greeks into his interests, especially the Athenians and Spartans. The former sent Chabrias to his aid; the latter, Aegeslaus. A misunderstanding soon arose between the Spartan leader and Tâchos, on account of Aegeslaus having offered advice which was rejected by Tâchos, and also because the former had merely the command of the mercenaries, whereas Chabrias had charge of the fleet, which Tâchos exerted over all the forces. Aegeslaus, in consequence of this, espoused the interests of Nectanebus, cousin to Tâchos, and had him proclaimed king while Tâchos was absent in Phœnicia with the Egyptian forces. Tâchos, upon this, fled to the Persians, B.C. 361. He reigned about two years. (Corn. Nep., Vit. Ages. — Died. Sic., 15, 92. — Id. 16, 48, seqq.)

Tâcticus, G. Corneilius, a celebrated Latin historian, born in the reign of Nero. The exact year cannot
be ascertained; but as Pliny the Younger informs us that he and Tacitus were nearly of the same age, it is not improbable that he lived to the age of 80 or 81; and about the sixth year of Nero's reign. The place of his nativity is nowhere mentioned, but it is generally thought to have been Interamna (now Terrin), in Umbria. He was the son of Cornelius Tacitus, a procurator appointed by the prince to manage the imperial revenue and govern a province in Belgic Gaul. The person so employed was, by virtue of his office, of equestrian rank. The place where Tacitus received his education was.Magula, now Maine-St-Georges; at that time the seat of literature and polished manners. Agricola was trained up there; but there is no reason to think that Tacitus formed and enlarged his mind at the same place, since, when he relates the fact about his father-in-law, he is silent respecting himself. If he was educated at Rome, we may be sure that it was a method very different from the fashion then in vogue. Tacitus, it is evident, did not imitate the smallest trace of that frivolous science and that vicious eloquence that debased the Roman genius. He most probably had the good fortune to be formed upon the plan adopted in the time of the republic; and with the help of a sound scheme of home discipline, and the best domestic example, he grew up, in a course of virtue, to that vigour of mind which gives such animation to his writings. It is reasonable to suppose that he attended the lectures of Quintilian, who, in opposition to the sophists of Greece, taught for more than twenty years the rules of that manly eloquence which is so nobly displayed in his Institutes. Some critics have applied to Tacitus the passage in which Quintilian, after enumerating the writers who flourished in that period, says, "There is another person who gives additional lustre to the age; a man who will deserve the admiration of posterity. I do not mention him at present: his name will be known hereafter" (10, 1).—If this passage relates to Tacitus, the prediction has been fully verified. When Quintilian published his great work, in the reign of Domitian, Tacitus had not then written his Annals or his History. Those immemorial compositions were published in the time of Trajan. The infancy of Tacitus kept him untainted by the vices of Nero's court. He was about twelve years old when that emperor finished his career of guilt and folly; and in the tempestuous times that ensued, he was still secured by his tender years. Vespasian restored the liberty of the constitution, and gave encouragement to men of genius. Our author's first ambition was to distinguish himself at the bar. Agricola was joint consul with Domitian, A.D. 80, for the latter part of the year. Tacitus, though not quite twenty, had given such an earnest of his future fame, that Agricola chose him for his son-in-law. Thus distinguished, our author began the career of civil preferment. Vespasian had a just discernment of men, and was the friend of rising merit. Rome at length was governed by a prince who had the good sense and virtue to consider himself as the chief magistrate, whose duty it was to redress all grievances, restore good order, and give energy to the laws. In such times, the early genius of Tacitus attracted the notice of the emperor. The foundation of his fortune was laid by Vespasian. Tacitus does not tell the particulars, but it is probable that he began with the functions of the Vigintivir; a body of twenty-four men appointed to execute the new jurisdiction for the better regulation of the city. That office, according to the system established by Augustus, was a preliminary step to the gradations of the magistracy. The senate had power to dispense with it in particular cases, and accordingly we find Tiberius applying to the fathers for that indulgence in favour of Drusus, the son of Germanicus. It is probable that Tacitus became one of the Vigintiviri, and, consequently, that the road of honour was laid open to him. The death of Tiberius did not check his progress. He was, however, the son-in-law of Vespasian. The office of guardian was, in the regular course, the next public honour; and it qualified the person who discharged it for a seat in the senate. Titus reigned little more than two years. Domitian succeeded to the imperial dignity. Suspicious, dark, and sullen, he made the policy of Tiberius the model of his government. He saw public virtue, and he destroyed it; and yet, in that disastrous period, Tacitus rose to preferment. The historian himself furnishes a solution of this enigma. Agricola, he tells us, had the address to restrain the headlong violence of the tyrant by his prudence and moderation. Tacitusimitated this line of conduct, and, instead of giving umbrage to the prince and provoking the tools of power, he was content to display his eloquence at the bar. Tacitus had a talent for poetry, and his verses, most probably, served to gratify him with the tyrant, who affected to be a votary of the Muses. If, in addition to this, he was the author of a book of apophthegms called Faecitas, that very amusement could not fail to prove successful in gaining for him the notice of Domitian. By this emperor Tacitus was made praetor, A.D. 88; and he was also appointed one of the college of Quindecimviri. In A.D. 78 he married the daughter of Julius Agricola. On the death of his father-in-law, A.D. 93, he quitted Rome, but returned to it in the year 97, when Nerva was on the throne. This prince named him successor in the consulsipio to Virginia, who had just died. In honour of Virginius, the senate decreed that the rites of sepulture should be performed at the public expense. Tacitus delivered the funeral oration from the rostra. Praise from such an orator, Pliny says, was sufficient to crown the glory of a well-spent life. (Epist., 2, 1.) Nerva died A.D. 95, having about three months before adopted Trajan for his successor. In that short interval the critic has agreed to place the publication of the Life of Agricola; and their reason is, because Tacitus mentions Nerva Caesar, but does not style him Divus, the deified Nerva, which, they say, would have been the case if the emperor was then deceased; but they forget that, in the same tract (c. 44), our author tells us how ardently Agricola wished to see the elevation of Trajan to the seat of empire, and that wish would have been an awkward compliment to the reigning prince. Tacitus was discharged from the censorship in A.D. 102. Agricola was published in the reign of Trajan. The production just mentioned is one of the most perfect specimens of biography that any language can show, and the noblest monument ever erected by any writer to any individual. We know not, on perusing it, which most to admire, the exalted and amiable character of the hero, or the truth, sensibility, and tone of calmness that prevail throughout the piece. The misfortunes of the time had imparted a redounding air of melancho-
second consulship of Trajan is mentioned in the tract (c. 37), and that was A.U.C. 551, in conjunction with Nerva, who died before the end of January. It is therefore certain that the description of Germany saw the light in the course of that year. In this treatise but little reliance can be placed on the geographical notices of Tacitus, which are very defective. His remarks on the manners, usages, and political institutions of this people are, on the other hand, peculiarly valuable. The state of Germany is exposed by the best critics to have derived his principal information relative to the Germans from persons who had served against them, and, in particular, from Virginius Rufus, who, as we learn from the Letters of Pliny, was the friend of Tacitus. The great work, also, of the elder Pliny on Germany, now lost, must have been an important aid. As to the object of the historian in composing this work, some have even gone so far as to suppose that his sole intention was to satirize the corrupt morals of his contemporaries, by holding forth to view an ideal and highly-coloured picture of barbarian virtue. According to these same writers, his object was to bring back his countrymen to their ancient simplicity of manners, and thus oppose an effectual barrier to those enemies who menaced the safety of their descendants. But a perusal of the work in question destroys all this fanciful hypothesis. The analogy between many of the notions of Tacitus and those of any relation of the aborigines of North America at once stumps the work with the seal of truth. What if Tacitus dwells with a certain predilection upon the simple manners of Germany? It is not to go in one who had be-

come disgusted with the excesses of Italy. We are not to suppose, however, that this work of Tacitus is free from errors. The very manner in which he ac-
quired his information on this subject must have led to misconceptions and mistakes. Religious prej-
dices also served occasionally to mislead the historian, who beheld the traces of Greek and Roman mythol-
ogy even in the North. — The friendship that subsisted between Tacitus and the younger Pliny is well known. It was founded on the consonance of their studies and their virtues. They were both convinced that a stri-
king picture of former tyranny ought to be placed in contrast to the felicity of the times that succeeded. Pliny, who had the advantage of some disquisitions on Trajan, where we find a vein of satire against Domi-
tian running throughout the whole piece. It appears in his letters that he had some thoughts of writing a history on the same principle; but he had not resolu-
tion to undertake that arduous task. Tacitus had more vigour of mind; he thought more intensely, and with deeper penetration than his friend. We find that he had formed, at an early period, the plan of his History, and resolved to execute it in order to show the horrors of slavery, and the debasement of the Ro-
man people through the whole of Domitian's reign. (Vit. Agr., c. 3.) He did not, however, though em-
ployed in a great and important work, renounce im-
mediately all his practice in the forum, but continued to be employed there until the trial of Marius Priscus, who had been proconsul of Africa, and stood im-
peached before the senate at the suit of the province. Priscus had presented a memorial, praying to be tried by a commission of select judges. Tacitus and Pliny, by the special appointment of the fathers, were advoca-
cates on the part of the Africans. They thought it their duty to inform the house that the crimes alleged against Priscus were of too atrocious a nature to fall within the cognizance of an inferior court. The case was therefore heard at an adjourned meeting of the senate, and the eloquence of Pliny and Tacitus, but more especially that of the latter, succeeded in establish-
ing the guilt of the accused. The senate concluded the business with a declaration that Tacitus and Pliny had executed the trust reposed in them to the full sat-
isfaction of the house. The cause was tried A.U.C. 853, in the third year of Trajan's reign. From that time Tacitus dedicated himself altogether to his His-
tory. Pliny informs us (Ep., 4, 13), that our author was frequented by a number of visitors, who admired his genius, and for that reason went in crowds to his levee. From that conflux of men of letters Tacitus could not fail to gain the best information. Pliny sent a full detail of all the circumstances attending the death of his uncle, the elder Pliny, who lost his life in the eruption of Vesuvius, in order that an exact rela-
tion of that event might be transmitted to posterity. — Trajan reigned nineteen years. He died suddenly in Cilicia, A.U.C. 870, A.D. 117. The exact time when Tacitus published his History is uncertain, but it was in some period of Trajan's reign. He was re-
solved to send his work into the world in that happy age when he could think with freedom, and what he thought he could publish with perfect security. (Hist., 1, 1.) He began from the accession of Galba, A.U.C. 882, and followed down the thread of his nar-

TACITUS.

temperate: every phrase is a maxim; the narrative goes on with rapidity; the author is sparing of words, and prodigal of sentiment; the characters are drawn with a profound knowledge of human nature; and when we see them figuring on the stage of public business, we perceive the internal spring of their actions. We are prepared to judge of their conduct. The Annals, as well as the History, have suffered by the barbarous rage and more barbarous ignorance of the tribes that overthrew the Roman empire. Of the sixteen books which originally composed the Annals, the following are lost: a part of the fifth, from the seventh to the tenth both inclusive; the beginning of the eleventh, and the middle of the twelfth. We have, therefore, three years of Tiberius, the entire four years of Caligula; and the first six of Claudius, and the last two of Nero. And, on the other hand, we have the history of the reign of Tiberius, with the exception of the three years just mentioned, the latter years of Claudius, and the history of Nero down to A.D. 67. We find that Tacitus intended, if his life and health continued, to review the reign of Augustus (Ann., 3, 24), in order to detect the arts by which the old constitution was overturned or masked, crowning the government of a singular ruler. This, in the hands of such a writer, would have been a curious portion of history; but it is probable he did not live to carry his design into execution.

The time of his death is not mentioned by any ancient author. It seems, however, highly probable that he died in the reign of Trajan, and we may reasonably conclude that he survived his friend Pliny. Those two writers were the ornaments of the age; both men of genius; both encouragers of literature; the friends of liberty and virtue. The esteem and affection which Pliny cherished towards our author is evident in many of his letters, but nowhere more than in the following passage: "I never was touched with a more sensible pleasure than by an account which I received lately from Cornelius Tacitus. He informed me that, at the last Cæsarian games, he sat next to a stranger, who, after much discourse on various topics of learning, asked him if he was an Italian or a Provincial. Tacitus replied, 'Your acquaintance with literature must have informed you who I am.' 'Ay!' said the man; 'pray, then, is it Tacitus or Pliny I am talking with?' I cannot express how highly I am pleased to find that our names are not so much the proper appellations of men as a kind of distinction for learning itself.' (Ep., 10, 23.) Had Pliny been the survivor, he, who, like Tacitus, had so much been accounted short of a supernumerary to the great ruler. The esteem and affection which Pliny cherished towards our author is evident in many of his letters, but nowhere more than in the following passage: "I never was touched with a more sensible pleasure than by an account which I received lately from Cornelius Tacitus. He informed me that, at the last Cæsarian games, he sat next to a stranger, who, after much discourse on various topics of learning, asked him if he was an Italian or a Provincial. manner, and, it may be added, the omissions of the copyists, have occasioned some difficulties; but he who has made himself familiar with the peculiarities of his style will not be much embarrassed. But still it may be said that, in so long a work, one continued strain of studied brevity fatigues the ear, and tires the reader by an unvaried and disgusting monotony. Variety should be introduced, and the author should accord occasional breaths to the narrative, and prevent too much uniformity. The celebrated Montaigne observes, that Tacitus abounds with strong and vigorous sentences, often constructed with point and subtility, agreeably to the taste of the age, which delighted in the gay and brilliant; and when those were not in the thought, the writer was sure to find an antithesis in the expression. And yet it is remarkable that the same writer, who owns that for the most part he neither mother nor father his style, tells us himself that he read Tacitus a second time in one regular train, without interruption. — A third allegation of the critics is, that Tacitus was a misanthrope, who beheld human nature with a malignant eye, and, always suspecting the worst, falsified facts, in order to paint men worse than they were. The answer is obvious: Tacitus was fallen on evil times; he says, "A black and evil period lies before me. The age was the time, the man the despot, the king the despotism, so much that not only the most illustrious citizens, in order to secure themselves, were obliged to crouch in bondage; but even men of consular and praetorian rank, and the whole senate, tried, with emulation, who should be the most obsequious of slaves." (Ann., 3, 65.) In such times, who could live free from suspicion? Tacitus knew the character of Tiberius; he was an accurate observer of mankind: but he must have been credulous indeed, or the willing dupe of a prodigal king, if he had not laid open the secret motives of all, and traced their actions to their first principles. At the head of the critics who have endeavored to enforce the charge of falsehood and malevolence stands Firmarius Strada, the elegant author of the well-known Protostoriae Academicae, and the wars in Holland, entitled De Bello Belgico: but it will be sufficient, in answer to his laboured declamations, to say with Lord Bolingbroke, "He was a rhetor, who condemned Tacitus, and presumed to write history himself." —The imputation of atheism, which has been urged by critics of more piety than discernment, is easily refuted. Whatever our author's doubts concerning fate, free-will, and the influence of the planets, let the fine apostrophe to the departed spirit of Agricola be perused with attention, and every sentiment will discover a mind impressed with the idea of an overruling Providence. There are many passages in the Annals and the History to the same effect: but more on this head is unnecessary. Nor does the paradox suggested by Boccalini deserve a longer discussion. That author gives it as his opinion, that the whole design of the Annals was to teach the art of despotism: it may, with as good reason, be said, that Lord Clarendon wrote the history of the Grand Rebellion with intent to teach sh. schismatics, Puritans, and Republicans how to murder the king of a prodigal king, if he had not laid open the secret motives of all, and traced their actions to their first principles. TACITUS.

first six books of the Annals had not then been found. Leo X. promised a pecuniary recompense and indulgence; but he should face the position of the work. One of his agents, Angelo Arcocholdi, discovered in the monastery of Corvey, in Westphalia, a manuscript which had belonged to Anschaina, the founder of the convent, and a bishop of the church. It contained the first five books of the Annals, the last book imperfect. Beraudus published them at Rome, in 1515, by order of the pope.—Among the numerous editions of Tacitus, the following may be mentioned as the best: of Gramont, L. ed., 1721, 2 vols. 4to; that of Bro tier, Paris, 1776, 7 vols. 12mo (reprinted by Valpy, Lond., 1823, 4 vols. 8vo); that of Ernesti, Lips., 1760, 2 vols. 8vo; that of Oberlinus, Lips., 1801, 2 vols. 8vo, in four parts, reprinted at Oxford in 1813, 4 vols. 8vo; that of Walther, Hl. Saz., 1831—3, 4 vols. 8vo; and that of Naudet, forming part of Lemaire's collection, Paris, 1819—20, 5 vols. 8vo. (Skell, Hist. Lit., Rom., vol. 2, p. 366, seq. — Bähr, Gesch. Röm. Lit., p. 311, seq.)—II. M. Claudius, a Roman, elected emperor by the senate after the death of Aurelian. The assassination of Aurelian had so much enraged the army, that the soldiers were more intent, for a time, on bringing his murderers to condign punishment than on providing a successor. Even after they had recovered from the first paroxysm of wrath, they hesitated whether they should immediately seize the height which long custom had placed in their hands, or in the anxiety which they felt to see the senate in choosing a head for the empire. Upon a short deliberation, they adopted the latter alternative, and resolved to write, or else to send a deputation to Rome. The senators, long unused to such deference, knew not how to act when the message came; and, unwilling to incur responsibility, referred the matter back to the legions. But the army, actuated by a very uncommon degree of moderation, renewed their requests to the senators, and by a show of force obtained the advantage; the senate selecting a head for the empire. Meanwhile, six or seven months had insensibly passed away; an amazing period, it has been remarked, of tranquil anarchy, during which the Roman world remained without a sovereign, without a governor, and without a sedition. (Vopisc., Vit. Tacit. 13. 36.) In the month of June the senate was convoked to exercise once more the valuable prerogative with which the constitution of Rome had invested their order. The individual whom they elected inherited the name and the virtues of Tacitus, the celebrated historian, and was, besides, respected for his wisdom, his experience in business, and his mild benevolence. This venerable legislator had already attained his 76th year, a circumstance which he urged, with a great show of reason, for declining the honour which was now assigned him. But his objections were repelled by the most flattering encomiums, and his election was confirmed by acclamation among both citizens and soldiers. It was the wisdom not less than the inclination of the aged emperor that induced him to leave much of the supreme power in the hands from which he received it. He encouraged the senate to retain their wonted authority; to appoint prelates to all the guards, and to assume all the other privileges which had been conferred upon them by Augustus. His moderation and simplicity were not affected by the change of his condition; the only expense which he permitted to himself was the encouragement which he bestowed on the fine arts, and the only personal inducements which he would not resign were reading and conversation with literary men. He took great pains to preserve the writings of his ancestor the historian; for which purpose he gave orders that every public library should possess that author's works, and that, to render this object more practicable, ten copies of them should be transcribed every year. But during the latter part of his reign, however, prevented any good results from being produced by this decree. — Having obtained the approbation of the citizens, Tacitus departed from the capital to show himself to the army in Thrace. The usual largesses secured his popularity among the soldiers; and the reverence which he found still subsisting for the memory of Aurelian, dictated the punishment of certain chiefs of the conspiracy which had taken away his life. But his attention was soon withdrawn from the investigation of past delinquencies to meet an urgent danger. When the late emperor was making preparations to invade Persia, he had negotiated with a Scythian tribe, the Alani, to re-enforce his ranks with a detachment of their best troops. The barbarians, faithful to their engagement, arrived on the Roman frontiers with a strong body of cavalry; but, before they made their appearance, Aurelian was dead, and the Persian was suspended. In these circumstances, the Alani, impatient of repose, and disappointed of their prey, soon turned their arms against the unfortunate provinces. They overran Pontus, Cappadocia, and Cilicia before Tacitus could show his readiness to satisfy their claims or punish their aggressions. Upon recovering, however, the stipulated reward, the greater number retired peaceably to their deserts; while, those who refused to listen to terms were subdued by the emperor's successors. (Annals, c. 13.— Zosim., 1, 63, seqq. — Zonar., 12, 27.) But the triumphs and reign of this venerable sovereign were not of long duration. It is said that he fell a victim to the jealousy of certain officers of rank who were offended at the undue promotion of his brother Florianus; or to the angry passions of the soldiery, who despised his pacific genius and literary habits. But it is no less probable that he sank under the fatigue and anxiety of that state of war in which he was engaged, to both of which the pursuits of his later years had rendered him a stranger. It is clear, at all events, that he died at Tyana, in Cappadocia, after having swayed the sceptre of the Roman empire about two hundred days. (Vopisc., Vit. Tacit., c. 13.— Zosim., 1, 63. — Encyclop. Metropol., div. 3, vol. 3, p. 67.)

TAEH, a river of Spain, near New Carthage, called by Polyene the Terebris. It is now the Segura. 

TENNES, a promontory of Lacoenia, forming the southernmost point of the Peloponnesus. It is now called Cape Matapan, which is a modern Greek corruption from the ancient πέτρων, a front, the promontory boldly projecting into the Mediterranean. Ancient geographers reckoned thence to Cape Phycus in Africa 3000 stadia, to Cape Pachynus in Sicily 1000 or 4000, and to the promontory of Malea 670. (Strabo, 363.) Near it was a cave, said to be the entrance to Orcus, by which Hercules dragged Cerberus to the upper regions. Pausanias cites another version of the fable from Heckataeus of Miletus, which makes the cavern to have been the haunt of a large and deadly serpent, conquered by Hercules, and brought to Eu rystheus (2, 25. — Cruzer, Hist. Gr. Fyarna, p. 46.) There was a temple on the promontory sacred to Nep tune, and which was accounted an inviolable asylum. Mt. Hecate was sacred to the god of caverns. On the promontory, also, was a statute of Arion seated on a dolphin. Tenarus became subsequently famous for the beautiful marble of its quarries, which the Romans held in the highest estimation. It was a species of Verb Antiquae. About forty stadia from the promontory stood the city of Tenarus, afterwards called Cane or Canoepolis. Mr. Morris, in his journey through Lacoenia (Walpole's Memoirs, vol. 1, p. 68), was informed that there were considerable remains of an ancient city on Cape Groso, agreeing, as far as the dis-
Tanagra, a city of Boeotia, situate on an eminence, on the north bank of the Asopus, and near the mouth of that river. Its more ancient appellation was Graea. (Hom., II., 2, 498. — Lycophr., 644.) An obstinate battle was fought in this neighbourhood, between the Athenians and the Macedonians, prior to the Peloponnesian war, when the former were defeated. The first mention of Tanagra was first discovered by Cockrell, at Gra- mada or Grimath. — This place was famed among the ancients for its breed of fighting-cocks. (Cramer's Anc. Greece, vol. 2, p. 269.)

Tanagrus or Tanager, a river of Lucania, rising in the central chain of the Apennines, between Casal Nuovo and Lago Negro, and, after flowing thirty miles through the valley of Dolabella, falls from an under ground for the space of two miles, and not turning as it is stated in Pliny (2, 103). It reappears beyond La Polla, at a place called Pertosa, and falls into the Silanus below Conturis. The modern name of the river is Negro. (Cramer's Anc. Italy, vol. 2, p. 377.)

Tanais, I. now the Don, a large river of Europe, rising, according to Herodotus, in the territory of the Thasagetae, from a large lake, and falling into the Palus Moatis. Herodotus appears to have conflated the Tanaïs in the upper part of its course with the Rha or Wolga. Of the course of the latter, and its falling into the Caspian, he appears to have known nothing. The Tanaïs rises in the Valdai hills, in the government of Tula, and is about 800 miles in length. This river separated in ancient times European and Asiatic Sarmatia. In voyages written more than two thousand years ago, Varro says: at the same time communicating this name to the Palus Moatis; the modern name Don is only a corrupt abbreviation of the ancient appellation. A city named Tanaïs, situate at its mouth, and which was the emporium of the commerce of the country, is celebrated in tradition by the Slavons under the name of Aas-grad, or the city of Aas; and it is remarkable to find the name of Aos confounded on the same site. It may, moreover, be remarked, that this name contributes to compose that of Tanais, formed of two members, the first of which expresses the actual name of the river. The Greeks in the age of Alexander confounded the Tanais with the Iaxartes. (Vid. Iaxartes.) — Dr. Clarke (Travels in Russia, &c., vol. 1, p. 337, Lond. ed.) found the Cossack pronunciation of the name of this river to be Dunaets, Dunaetsz, or Tanatsz, and when sounded with emphasis and volubility, to be the same as Tanais. Hence the ancient name of the river may satisfactorily be accounted for. According to the same intelligent traveller, when the word Tanais was introduced into the Greek language, it had reference, not to the Don, but to another river, which enters that stream about ninety-nine miles from its mouth, and which, according to a notion entertained from time immemorial, the people in this quarter, it leaves it, taking a northwesterly direction, and
TAN falling into the Palus Mesia to the north of all the
other mouths of the Don. This northernmost mouth of
the Don, owing to the river whose waters its channel
is supposed peculiarly to contain, is called Dan-
etz also, and, to express either its sluggish current or
its lapse into the sea, Dead Danetz. The Greeks,
steering from the Crimea towards the mouths of the
Don, where the Don was then the nearest passage to
the shore, entered first this northernmost mouth of
the river, and gave it the name of Tanais, from its native
appellation. As regards the etymology of the name,
on which head Dr. Clarke is silent, it may be remark-
ed that Bauer (Comm. Acad. Petr., vol. 9, p. 375)
supposes an early European people to have once ex-
istd, in whose language a word like Tan, Ten, Don,
or Donai may have signified "water," from which were
gradually derived such names of rivers as Tan-ais,
Tanais, Danaperis, Danaster, Danibus (Tanace in the
Niedelungenleit., v. 6116.—Savoves in Procopius),
Don, Duna, Po'dov (in Ptolemy), Eridan, Rod- dan, &c.
It is a curious confirmation, in part at least, of
this hypothesis, that the Ossetes, a Caucasian tribe,
have the word Don in their language as a general term
for "water," "river," &c., and designate all mount-
ain streams by this appellation. (Compare Lehberg,
Ueber die Namen der Flüsse, in the "Oesterr. gele-
halle, &c., p. 304.)—II. A city in Asiatic Sarmatia,
at the mouth of the Tanais, which soon became suf-
ciently powerful, by reason of its extensive commerce,
to withdraw itself from the sway of the kings of
the Bosporus, and establish its independence. One
of these same monarchs, however, by name Polemo,
subsequently took and destroyed it. It was afterward
rebuilt, but never attained its former eminence.
TANAKUJ, in Etrurian Tanchajul (Müller, Etrusker,
1, p. 72), called also Caia Caecilia, was the wife of
Tanaricians Priscus, the fifth king of Rome. (Vid.
Tanaricius I.) Niebuhr makes the Tarquini family
of Latium, not of Etrurian origin; and thinks that the
name Caia Caecilia belongs to a legend concerning
Tanaricius entirely different from that which became
prevalent, and is the latter legend," observes this em-
cinating writer, "that the name Caia Caecilia is of
Tarcius, and oublies it; it is not even pretended anywhere
that she, too, changed her Etruscan name. Cecilia
had a statue in a temple, so intimately was she asso-
ciated with the older tradition; and her name implies a
connexion with Prænest, said to have been built by
Caeculus (Serv. ad Virg., En., 9, 681), the hero after
whom the Caecili were called. In point this
feigned Etruscan Tanaricius has not quite obliterated the
traces of the Latin Priscus; the historians throw
aside altogether what they cannot bring into union
1, p. 324, Camb. transl.)—Tanaquili was represent-
ed in the Roman traditions as a woman of high spirit,
and accustomed to rule her husband; hence the name
is used by the Latin poets to indicate generally any
imperious consort. (Aesop, Epist., 23, 31.—Juv-
enal, Sat., 6, 566.) She was also celebrated in the
same legend as an excellent spinner (laminca) and
housewife; and her distaff and spindle were preserved
in the temple of Sancus or Hercules. (Cic., pro Muc.,
12.—Plin., 8, 48.) It was Tanaquili that, after the
murder of Tarquinius Priscus, managed adroitly to
secure the succession to Servius Tullius, her son-in-law.
(Vid. Tanaricius I., near the close of that article.)
TANIS, a city of Egypt, at the entrance of, and giv-
ing name to, the Tanitic mouth of the Nile, between
the Tanis and the Nile; the site of the mouth of the
Tanitic branch of the Nile; and of the 26th chapter
of the Scriptures, and its remains are still called San.
The Ostium Tanitici is now the Omna-Faridje
mouth. (Numbers, 13, 22.—Isaias, 19, 11, 13.)
TANTALIDES, a patronymic applied to the descend-
ents of Tantalus, such as Niobe, Hermione, &c.—
Agamemnon and Menelais, as grandchildren of Tantalus,
are called "Tantalia fratrie" by Ovid. (Her., 8,
45, 122.)
TANTALUS, a king of Lydia, son of Jupiter by a
nymph called Pluto (Wealth), was the father of Pe-
lops, and of Niobe the wife of Amphion.—Ulysses,
when returning to Ithaca from Crete, was saved by
him, who had been held in the lower world, describes Tantalus as stand-
ing up to the chin, in water, which constantly eludes
his lip as often as he attempts to quench the thirst
that torments him. Over his head grow all kinds of
fruits; but, whenever he reaches forth his hands to
take them, the wind scatters them to the clouds. (Od.,
11, 581, seqq.) The passage of Homer, however,
which on this account rests, was regarded by Aristar-
chus as spurious, according to the scholiast on
Olymp., 1, 97. If we reject the verses of the Odys-
sey which have just been referred to, and the authen-
ticity of which has been farther invalidated by an
unedited scholar whom Poseidon (cit. ad Eurip., Orest.,
5), we then come, in the order of time, to the account
given first by Archilochus (Pausan., 10, 21, 12), and
after him by Pindar. According to this poet, Jupiter
hung a vast rock in the air over the head of Tantalus,
which, being intended to descend and crush him,
depresses him of all joy, and makes him "a wanderer
from happiness." (Ol., 1, 57, seqq., ed. Böckh.
Böckh, ad loc.) Pindar does not mention the place
of his punishment, but Euripides says it was the air
between heaven and earth, and that the rock was sus-
pended over him by golden chains. (Eurip., Orest.,
6, 7, 972, seq.)—The offence of Tantalus, which call-
ed down upon him this severe infliction, is variously
stated. The common account makes him to have
killed and devoured his own son Polops, and to have placed
his remains as food before the gods, whom he had in-
vited to a banquet, in order to test their divinity. (Vid.
Pelops.) Pindar, however, rejects this legend as un-
becoming the majesty of the gods, and says, that if
ever mortal man was honoured by the dwellers of
Olympus, it was Tantalus; but that he could not de-
guest his happiness. They admitted him, he adds, to
feast at their table on nectar and ambrosia, in the
name of the gods, he was given some of the divine food,
and gave it to his friends on earth. This, according
to Pindar, was the crime for which he was punished.
(Pind., l. c.) Euripides, on the other hand, says that
the offence of Tantalus was his not restraining his
tongue; that is, probably, his divulging the secrets
of the gods. (Eurip., Orest., 10.)—The residence of
Tantalus was placed at the foot of Mount Sipyhus in
Lydia. Hence, according to another legend, Jupiter
cast this mountain upon him; for Pandareus having
stolen the golden dog which had guarded the goat
that reared the god, gave it to Tantalus to keep. Mer-
cury being sent to reclaim the dog, Tantalus denied all
knowledge of it, and, for his falsehood, the mountain
was thrown upon him. (Schol. ad Pind. Ol., 1, 97.
Anton, lib. 36.) This last trifling legend is, as we
can easily see, one of the many attempts at localizing
the ancient myths; for Sipyhus, it is plain, was design-
ed to take the place of the mythic rock.—The name
Tantalus is, like Sisyphus, a reduplication, and his
myth is evidently one of those handed down from grave
old Pelasgic times. The root of Tantalus is probably
διόλλω, and he represents the man who is flourishing
and abounding in wealth, but whose desires are insa-
tiable (ουδίλλωσι, for euphony made Ταντάλος, the
letters ι, ι, ι, ι, and v being frequently commut-
ted), and designs to take the place of the mythic rock.
—The Homerice picture exhibits in lively colours the misery of such a
state. The other form of the legend represents, per-
haps, the cares and fears attendant upon riches; or,
"it may be, as has ingeniously been conjectured, an im-

1286
age of the evils of ambition and the inordinate pursuit of honours; for when Tantalus, it was said, had attained his ultimate desire, and was admitted to the table of the gods, his joy was converted into terror by his fancying a rack to have been screwed over his head, and ready to crush him: and he sought permission to resign his seat at the celestial table. (Alcean, ap. Schol. ad Pind., i. c.—Nic. Damasc., ap. Stob., 14, 7.—Wet-cker, das Epische Cyclus, p. 280, seqq.) It was probably the idea of the great wealth of Lydia that caused the myth of Tantalus to be localized at Sipylos. (Keightley’s Mythology, p. 442, seq.)

Taphi, islands in the Ionian Sea, on the north coast of Italy, or in the east of Acaarnia. They form a considerable group, and are often mentioned by Homer and other classical writers as the haunt of notorious pirates. (Od., 1, 417.) The principal island is that which is called by Homer Taphos, but by later writers Taphius and Taphissus (Strabo, 458), and is probably the one known to modern geographers by the name of Magnesia. Mr. Dodwell informs us that Cafano, another of the Taphian groups, may be perhaps the finest of the whole, which is sent to Corsica, and sold as a luxury (vol. 1, p. 61). The Taphii were also called Telaboi. (Cramer’s Anc. Greece, vol. 2, p. 55.) They were fabled to have received these names from Taphius and Telebous, the sons of Neptune, who reigned there. The Taphians made war against Electryon, king of Mycenae, and murdered all his sons; upon which the monarch promised his kingdom and his daughter in marriage to the victor. It is surprising, however, to hear of the death of his children upon the Taphians. Amphitryon did it with success, and obtained the hand of the maiden. (Apollod., 2, 4.)

Taphoe, a city in the Tauric Chersonese, on the narrowest part of the isthmus. The ancient name is derived from ταφως, a ditch or trench, one having been cut close to the town to defend the entrance into the Chersonese. The modern Turkish gives the site of the ancient city. (Mela, 2, 1.—Plin., 4, 12.)

Taphros, the strait between Corsica and Sardinia, now the straits of St. Bonifacio. (Plin., 3, 6.)

Taphrobus, an island in the Indian Ocean, now called Ceylon. The Greeks first learned the existence of this island after the expedition of Alexander, when ambassadors were sent by them to the court of Patalinboths. The account then received was amplified to such a point, that this island was Leucania and the commencement of another world, inhabited by antichthonics, or men in a position opposite to those in the known hemisphere. Ptolemy, better informed, makes it an island, five times greater, however, than it really is. Strabo speaks of it as though it lay off the hither coast of India, looking towards the continent of Africa. The name of Salice, which we learn from Ptolemy to have been the native denomination of the island, is probably the same as that of Seleucus, by which the proper name Seleucus is called, and the apppellative for an island in the Indian language, and it is apparent that the name of Ceilian or Ceylon, according to the European usage, is only an alteration in orthography. Ptolemy calls it a very fertile island, and mentions as its produce rice, honey (or rather, perhaps, sugar), ginger, and also precious stones, with all sorts of metals; he speaks, too, of its being inhabited with abundantly more than 5000 souls and which, at a later period, when transferred to Rome, served to decorate the Capitol. But their grandeur was not of long duration; for wealth and abundance soon engendered a love of ease and luxury, the consequences of which proved fatal to the interests of Tarentum, by sapping the vigour of her institutions, enervating the minds and corrupting the morals of her inhabitants. Effeminy and venality gradually usurped the place of energy and courage, and the Tarentines became the abandoned slaves of licentiousness and vice. To such excess,
indeed, was the love of pleasure carried, that the numbers of their annual festivals is said to have exceeded that of any other city. Hence the expressions so often applied to it by Horace, of "mōlle" and "im-belle Tarentum," and by Juvenal (6, 297), of "Ae-gae coronatum et petulius madidumque Tarentum." (Strabo, 280. — Thuc. p. ap. Athen., 4, 19. — Cle-arch., ap. Pundt., 12, 4. — Aelian, V. H., 12, 30.) En-feebled and degraded by this system of demoralization and corruption, the Tarentines soon found themselves unable, as they were unwilling, to overawe and keep in subjection the neighbouring barbarians of Iapygia, who had always hated and feared, but now learned to despise them. These, leagued with the still more warlike Lucanians, who had already become the terror of Magna Græcia, now made constant inroads into their territory, and even threatened the safety of the city. Incapable of exertion, and having no leaders possess- ed of any military talent or energy, the Tarentines were compelled to call in to their aid experienced commanders from Greece, whom ambition, perhaps, or the desire of gain, might induce to quit their native soil in search of wealth and renown. A more gener- ous motive, perhaps, influenced Archidamus, king of Sparta, who was the first to engage in their defence. Alexander of Epirus, who was the next ally of the Tarentines, proved a still more active and irresolution conduct, and abandoned their cause to prosecute his own ambitious designs. (Strabo, 1, c. — Liv., 8, 17.) He was followed by the Spartan Cle-omenes, and afterward by Agathocles; but the ser- vices of these adventurers were productive of little benefit to the republic, they being more intent on their own interests than those of the people which sought their aid. Tarentum, in consequence of these failures, might have been induced, in a desperate struggle, to seek their resources, had the barbarians of Iapygia or Lucania re- mained her only foes. But a more formidable enemy now entered the lists. This was Rome, who, by con- tinued successes over the Samnites, and the subjec- tion of Apulia, had now extended her dominion nearly to the walls of Tarentum. A pretext for war was soon found by these powerful invaders. An insult said to have been publicly offered one of the Roman ambassadors by a rustic, who insulted the decres- sion of war, and the Tarentines again had recourse, in this emergency, to foreign aid. The valour and forces of Pyrrhus for a time averted the storm; but, when that prince withdrew from Italy, Tarentum could not longer withstand her powerful enemies, and soon after fell into their hands; the surrender of the town being hastened by the treachery of the Epireot force which Pyrrhus had left there. The Tarentines were compelled by the Romans to surrender their arms and their ships of war; their walls were dismantled, and a heavy fine was imposed as the condition of peace. (Liv., Epit., 15.) To this harsh treatment may justly be ascribed the subsequent conduct of the Tarentines during the second Punic war, in declaring for Hannibal, whom they must have regarded more in the light of a deliverer from a state of oppression than an invader of their country. They opened their gates to the invading host, and this verso of their arms dis- tinguished the Roman garrison, which still held out in the citadel. (Polyb., 8, 26. — Liv., 25, 9.) Such, however, was the strength of their fortress, that it effectually withstood all the attacks made upon it; and when the attention of the Carthaginian general was drawn off to other parts of Italy, Tarentum was surprised and recaptured by the Romans, under the command of Fabius Maximus, who treated it as a city taken from the enemy. The plunder obtained by them on this occasion was immense; the pictures and statues be-
Sabines covered with gold, as, Faureel remarks, the bards of modern Greece do their Cephis. Here is popular poetry unequivocally obvious for one who has eyes to see it. The fiction of Propertius (4, 4) seems to be a transfer, warranted by no tradition, from the history of the Megan and Scylla. (Rom. Hist., vol. 1, p. 192.) The same writer informs us, that the remembrance of Tarpeia's guilt still lives in a popular legend at the present day. "The whole of the Capitoline Hill," he observes, "is pierced with quarries, passages of remote antiquity worked through the loose tufo; many of these have been walled up; but near the houses erected upon the rubbish which covers the Hundred Steps, on the side of the Tarpeian rock that looks towards the forum, beside some monumental buildings, gold and jewels, enchanted: he who endeavours to reach her never finds out the way; once only she had been seen by the brother of one of our guides. The inhabitants of this quarter are smiths and low victualers, without the slightest touch of that seemingly living knowledge of antiquity which other classes have drawn from the most turbid sources of vulgar books. Rich in trade, therefore, has kept Tarpeia for five-and-twenty hundred years, to the mouth of the common people, who for many centuries have been strangers to the names of Cloelia and Cornelia." (Nieberh., Rom. Hist., vol. 1, p. 193.)—II. One of the female attendants of Camilla in the Rutulian war. (Virg., Aen., 11, 636.)

Tarpeius, Sp., the governor of the citadel of Rome under Romulus. (Vid. Romulus, Tarpeia, and Capitoline III.)

Tarpeius Mons. Of, more correctly, Tarpeia Rupe, a celebrated rock at Rome, forming a part of the Mons Capitolinus, and on the steepest side, where it overhung the Tiber. From this rock state criminals were accustomed to be thrown in the earlier Roman times. It received its name in commemoration of the treachery of Tarpeia, and of her having been killed here by the Sabines.—Vasi gives the present height at least a thousand feet above Lazio, and the summits are as follows: "Though it is certain that the Tarpeian rock was on the western side of the Capitoline Mount, it would be in vain to inquire where was the precise spot of execution; whether Manlius was hurled down that part of the precipice at the extremity of Monte Caprino, or that behind the Palazzo de' Conservatori. There is still height enough in either to make the punishment both tremendous and fatal; although not only the accidents of time, war, and violence, but the very convulsions of nature, contributed to lower it; for repeated earthquakes have shattered the friable tufo of which it is composed, and large fragments of it fell as late as the middle of the fifteenth century. The fall of these masses has diminished the elevation in two ways: by lowering the actual height, and filling up the base, to which the ruins of the overthrown buildings, that consisted of various materials, were cemented. Still the average of various measurements and computations of its present elevation make it above 60 feet; nor do I think it overrated. Certainly those who have maintained that there would be no danger in leaping from its summit, would not, I imagine, be bold enough to try the experiment themselves. The entrance to it is through a mean, filthy passage, which leads to an old wooden door." (Rome in the Nineteenth Century, vol. 1, p. 175, Am. ed.)

Tarquinii, one of the most powerful cities of Etruria, and celebrated in history for its early connexion with Rome. It was situated in the lower part of Etruria, near the coast, and to the northwest of Cervi. Strabo ascribes the foundation of the place to Tarchon, the famous Etruscan chief, who is so often mentioned by the poets. It was called a city, and is fast makes it to have been founded by some Thessaliains and Spinumbiri, meaning, doubtless, the Pelasgi and Umbri, who came from Spina on the Adriatic. According to the common account, the progenitor of the Tarquinian family, Demaratus, settled here, and from this city the Tarquinian family came to Rome. Niebuhr, however, holds a different opinion, and makes the Tarquinian family of Latin, not Etruscan, stock. (Conus remarks under the name of Tarquinii, Tarquinius Superbus, and Tanaquil, and Taranu.)--I. The name of the Tarchonia is attached, point out the ancient site of Tarquina. (Cramer's Anc. Italy, vol. 1, p. 197.) The Etrurians regarded Tarquinii as the metropolis, or parent of all their other cities: a strong proof in favour of civilization having come to this country from the sea. (Müller, Etrusker, vol. 1, p. 72.)

Tarquinia, a daughter of Tarquinius, who married Servius Tullius, became, it would seem, the wife of the latter, by Tarquinius Superbus, and public rites of sepulture were denied to his remains by the usurper, she, together with a few friends, conveyed away the corpse by night, and gave it a private burial. Tarquinia survived her consort only one day, having died either through grief, which caused her to commit suicide, or else having been put to death secretly by Tarquinii Superbus and his wife. (Dion. Hal., 4, 40.)

Tarquinius, P. Servius, the fifth king of Rome. According to the common account, as found in the Latin writers (for Niebuhr's theory will be given at the end of this article), he was a noble and wealthy Tuscan, son of Demaratus, a native of Corinth, who had come from Greece and settled in Etruria. (Vid. Demaratus II.) Demaratus having married an Etruscan female of high rank, his son, whose original name was Lucumo, belonged, on the mother's side, to the Lucumones, or ruling caste of Etruria. (Vid. Lucumo.) But the pride of that caste would not permit them to suffer a person of mixed descent to participate in their hereditary honours. He married an Etruscan lady of the noblest birth, Tanaquil by name, who could not brook that her husband should be disgraced by her haughty kindred. They left Tarquinii and journeyed to Rome, in the hope of being received by the Tarquinii. They arrived at Rome, and, as some record has it, the Senate was the only body which received them, and it conferred upon them citizenship. They had reached the brow of the Janiculum, and were in sight of Rome, when an eagle hovering over them, stooped, snatched his cap, and, after soaring aloft with it to a great height, again descended and placed it on his head. Tanaquil, versed in the lore of Tuscan augury, understood the omen, and embracing her husband, bade him proceed joyfully, for the loftiest fortunes awaited him. He was received as a citizen, and the name of Lucius Tarquinus. His courage, his wisdom, and his wealth, soon recom- mended him to the favourable notice of the king, and made him greatly esteemed also by the people generally. On the death of Ancus he was chosen king, and received from the assembly the customary sanction to his assumption of sovereignty. Scarcely was Tarquinii seated on the throne, when the Etruscan king Ancus Maria, returned from the Adriatic, with Ancus, and began to make inroads upon the Roman territory. Tarquinii marched against them, defeated them in battle, and took and plundered Apiole, where he obtained an immense booty. Prosecuting his victorious career, he made himself master of Cameria, Crustumerium, Medullia, Amerilia, Ficulna, Corniculum, and Nomentum. The Equi also felt the power of his arms, and were obliged to humble themselves before him. While he was engrossed with the Latins, the Sabines availed themselves...
of his absence, mustered their forces, crossed the Anio, and ravaged the country up to the very walls of Rome. Tarquinius returned from his Latin wars, encountered the Sabines, and, after a desperate conflict, drove them from the Roman territories. Next year they again passed the Anio in a bridge of boats, so that the routed Sabines were cut off from their retreat and driven into the river, where great numbers of them perished. Their bodies and arms, floating down the Tiber, brought the first intelligence of the victory to Rome. Tarquinius, in his triumph, placed the river Anio in a second defeat, and compelled them to surrender the town and lands of Collatia, which they had previously taken from the Latins. Tarquinius placed a strong garrison in the town, and assigned the capture to his brother's son, who thence took the name of Collatinius. In this war, the king's son, a youth of fourteen, slew a foe with his own hand, and received as a reward of honour a robe bordered with purple, and a hollow ball of gold. Tarquinius, as he advanced upon the enemy, continued to be the distinctive dress and ornament of Roman youth of patrician rank, till they assumed the toga virilis, or manly gown. Tarquinius is likewise said to have engaged in war with the Etruscan nations, to have taken several of their cities, and to have overthrown them, notwithstanding a confederacy of all their twelve states against him. In token of their submission to his power, the Etruscans at length sent him a golden crown, an ivory throne and sceptre, a purple tunic and robe figured with gold, and twelve axes bound up in bundles of rods, to be borne before him, such as they used when their twelve cities chose a common leader in war. These, by the permission of the people, Tarquinius adopted as the insignia of kingly power; and, with the exception of the crown and of the embroidered robe, they remained as such both to his successors on the throne and to the consuls, unless on the days when they went in public triumph to the Capitol. Such were the military exploits ascribed to Tarquinius; and there is nothing so improbable in them as to stagger our belief. It is, indeed, manifest from other indications, that about the period assumed as the reign of Tarquinius Priscus, as he is called for sake of distinction, the dominions of Rome must have comprised nearly all the territory which he is said to have conquered, and also that the city must have risen from a shadow to the city and the adjacent hills; but the cloaca maxima remains to this day unimpaired, an enduring monument of the power and skill of the king and the people by whom it was constructed. He built the cloaca maxima, or great sewers, to drain off the water from between the Palatine and Capitoline, and the Palatine and Aventine Hills. This vast drain was constructed of huge blocks of hewn stone, triply arched, and of such dimensions that a barge could float along in it beneath the very streets of the city. Earthquakes have shaken the city and the adjacent hills; but this cloaca maxima remains to this day unimpaired, an enduring monument of the power and skill of the king and the people by whom it was constructed. The Circus Maximus, or great racecourse, was also a work of this monarch, intended for the display of what were called the great, or Roman games. 'The forum, with its rows of shops, was also the work of Tarquinius; and he began to surround the city with a wall of massive stones. It is like this work was to fulfill a vow to build a great temple on the Capitoline Hill to the chief deities of Rome. To conclude the legendary history of Tarquinius, he is said to have been murdered by the treachery of the sons of his predecessor Ancus Marcus. They, perceiving the favour with which the king regarded Servius Tullius, and fearing an attempt to make him king, to the exclusion of their own pretensions and hopes, hired two countrymen to pretend a quarrel, and to appear before the king seeking redress. While he was listening to the complaint of one, the other struck him on the head with an axe, and then they both made their escape. The conspirators did not, however, obtain the fruits of their treachery. Tarquinius was not slain; but the king was not dead, but only stunned by the blow, and had appointed Servius Tullius to rule in his name till he should recover. Servius immediately assumed the ensigns and exercised the powers of royalty. The murderers were seized and punished, and the Marsch field, disappointed, from the city. When the death of Tarquinius could no longer be concealed, the power of the Senate was declared that the people were ready perfectly to grant him that usual confirmation in the powers of the sovereignty. (Hetherington's Hist. of Rome, p. 19, seqq.)—Such is a sketch of the first Tarquin, as given by the ancient writers. Nieuwh, however, insists that the Grecian origin of the Tarquinian family is a mere and very clumsy invention of the Roman annalists, and utterly at variance with the received chronology. (Rom. Hist., vol. 1, p. 109, seqq.) The Etruscan whom Nieuwh regards as the sovereign of the Etruscan, or as he conceives, from the circumstance of his name having been deduced from that of the Etruscan city, so that he seemed, moreover, a suitable person for the Tuscan epoch of Rome to be referred to. "Far from regarding Tarquinii as the birthplace of his race, I hold that race," observes Niebuhr, "of Latin origin. The account which makes him and Collatinius members of nothing more than a single family, is disproved by the fact that a whole Tarquinian house existed at Rome, which was banished along with the last king. We also find mention of Tarquinius of Laurentum (Dion., Hal., 5, 54): these may be supposed to have been exiles of that house; but, even assuming this, yet the legend or tradition must have made them turn their steps thither, as it made Collatinius settle at Lavinium. When such a belief was current, assuredly Tarquinii was not looked upon as their home. The Latin origin of the Tarquinii is pointed out by the surname of the first king, in the same way in which the names of other patricians pointed out from what people they sprang. Thus we have Aurunculus, Siculus, Tuscus, Sabinius, &c. The name Priscus has the exact form and character of the national names, Tuscus, Caeceus, Opusce. The same is the meaning of Priscus as a surname of the Servilii, and as the original one of the censor Marcus Porcius, who was the last of the line of kings and princes accorded from Latin ancestors. (Plut., Vitt. Cat., c. 1.) Supposing the house of Tarquinius to have sprung from one of the Tyrrhenian cities on the coast, this accounts for that worship of the Etruscan gods at the Roman games, which in an Etruscan is quite incomprehensible. Lucumo, too, would have been just such a name for an Etruscan, as Patricius for a Roman. That no such event ever occurred among the Tuscan is a matter of great importance, which was demonstrated to the best advantage as witnesses. If the legends of the Romans give it to individuals, to the ally of Romulus, to the nobleman of Clusium (Dion. Hal. 5, 27.—Liv. 5, 33), and to Tarquinius, it is a proof how utterly uninformed they were on everything that concerned a nation so close to them; a natural consequence of their not understanding a word of its language." (Niebuhr, Rom. Hist., vol. 1, p. 323, seqq.)—II. Superbus the Etruscan.—The Romans, as the Roman annalists, with the exception of Piso, who adulterated what he found followed Fabius in calling Tarquinii Superbus the son of Priscus; and this account was adopted by Cicero and Livy. On the other hand, Piso the annalist, and Dionysius of Halicarnassus, make Superbus the grandson of Priscus, a refinement which, according to Niebuhr, destroys all manner of connexion in the
story of the Tarquins, and necessitates still more falsifications than they themselves had any notion of, in order to restore even a scantling of sense and unity."

(Niebuhr, Rom. Hist., vol. 1, p. 320. — Compare, in opposition to this, however, the dissertation of Valla, Pref., not. in Liv. )—According to the ordinary account, Servius Tullius had given his two daughters in marriage to Tarquinius and his brother Aruns. Now it is quite a self-evident fact that the Roman patricians were also their brothers. The elder Tullia was of a gentle disposition; her younger sister, fierce, imperious, and ambitious. Aruns Tarquinius was of a mild and quiet character; his brother Lucius proud, restless, and domineering. To counteract these tempers, Servius had given the gentle princess to the ambitious prince, and made the haughty damsel wife to the child like a slave. The idea of this attempt was encouraged by the unconcealed dissatisfaction of the patricians with the influence obtained by the plebeians in the new constitution. Their dissatisfaction was increased by a rumour that Servius intended to abolish the monarchical form altogether, and divide the sway between the two consuls, one to be chosen from the patrician, and one from the plebeian body. Having formed a strong faction among the patricians, Tarquinius went to the senate-house, seated himself in the royal chair, and summoned the senators to meet King Tarquinius. Servius, having heard the rumour, hastened to the senate-house, accused Tarquinius of treason, and laid hold of him to remove him from the royal chair. The usurper instantly seized the old man, dragged him to the door, and threw him with great force down the steps. There he lay for a few moments, stunned and bleeding with the fall. He then arose, got into his chariot, seated himself in the palace. Some riffians employed by Tarquinius pursued, overtook, and killed him, leaving the body lying bleeding in the street. Meantime, tidings of what was going on had reached Tullia, who immediately mounted her chariot, drove to the senate-house, and saluted Tarquinius as king. He bade her withdraw from such a tumult; and she, on her return, drove her chariot over the body of the newly-murdered father.

(Vid. Tullia.) Tarquinius, having thus obtained the forcible possession of the throne, declined to submit to the form of an election, or to make the customary appeals to the comitia curiata for the ratification of his kingly power. He seized the crown as if it were hereditary, and seemed resolved to rule without the concurrence of any of the great assemblies. But as he had been raised to the throne by the aid of the patricians, his first act was to gratify them by repealing the privileges which Servius had granted to the plebeians. He suppressed the institution of the comitia centuriata, and even prohibited the meetings of the country tribes at the paganalia. But this was only the beginning of his tyranny. He deprived the commons or plebeians; but he had no intention to permit the power of the patricians to become too strong, especially as he himself but too well knew the treachery to the former king. He therefore surrounded himself with a body-guard, the ready instruments of his oppression, and, under colour of justice, banished or put to death, on false accusations, all who were either too powerful or too wealthy to be trusted, or whom he suspected of disaffection to himself. In this manner he reduced the patricians into a state of subjection almost as deep as that into which they had assisted him to reduce the plebeians. Being now possessed of nearly despotic power, he turned his attention to the enlargement of his kingdom. He gave his daughter in marriage to Octavius Mamilius of Tusculum, the most powerful of the Latin chiefs; and partly by intrigues, partly by force, he procured Rome to be acknowledged the head of the Latin confederacy. One of the consequences of this was that he was enabled to impose his proud demeanour, he caused to be put to death by false accusations, and completely incorporated the Latin troops with those of Rome. The Hernici were also included in this confederacy. One Latin city, Gabii, refused to join this league, and was assailed by Tarquinius. The struggle was long and severe, but at length he obtained possession of it by the aid of a large army, commanded by his son Sextus, similar to that by which Zopyrus gained the city of Babylon for Darius Hyastasius. (Vid. Tarquinius IV.) He next turned his arms against the Volsci, and took Suea Pometia, where he obtained a very great booty, the title of which he retained for his own share. Thus powerful and enriched, he next proceeded to finish the great works left incomplete by his predecessors. He finished the cloacas maxima, and prepared to build the temple of Juno on the Capitol. The Sibyl, by the side of the Tiber, had revealed to him that the temple of Juno, now called the Temple of Minerva, was a replica of that which Zeus had. The Sibyl, by the side of the Tiber, had revealed to him that the temple of Juno, now called the Temple of Minerva, was a replica of that which Zeus had
Lucretia. (Vid. Collatinus.)—V. Sextus, eldest son of Tarquinius Superbus according to Dionysius of Halicarnassus (4, 55), but, according to Livy (1, 53), the youngest. His name is celebrated in the old legend for the stratagem by which he placed the city of Gabii in the power of his father. Having played the part of an insurgent against his parent, the king, for whose anger his wanton insolence afforded a specious provocation, condemned him to a disgraceful punishment, as if he had been the meanest of his subjects. Sextus thereupon came to the Gabines, to all appearance as a fugitive: the bloody marks of his ill-treatment, and, above all, the infatuation which comes over such as are doomed to perish, gained him belief and goodwill: at first he led volunteers, then troops were instilled to his charge; every enterprise succeeded; for buoyant and soldiers were thrown into his way at certain appointed places: the deluded citizens raised the man, under whose command they promised themselves the pleasures of a successful war, to the dictatorship. The last step of his treachery was yet to come: where the troops were not hirelings, it was a hazardous venture to open a gate. Sextus sent a confidential slave to demand of his father in what way he should deliver up Gabii into his hands. Tarquinius was in his garden when he admitted the messenger into his presence: he walked along in silence, striking off the heads of the tallest poppies with his staff, and dismissed the man without an answer. On this hint Sextus put to death, or, to be more correct, the Gabines as were able to oppose him: the distribution of their fortunes purchased him partisans among the lowest class; and, possessing himself of the uncontested rule, he brought the city to acknowledge his father's supremacy. (Liv., 1, 53.—Dion. Hal., 4, 55.) This story, as Niebuhr well observes, is patched up from the well-known two in Herodotus (3, 154; 5, 92.—Vid. Zopyrus, and Periander). Besides, it is quite impossible that Gabii should have fallen into the hands of the Roman king by treachery: had such been the case, no one would have granted the Roman franchise to the Gabines, and have spared them all chastisement by the scourge of war, as Tarquinius is said to have done by Dionysius himself (4, 58.—Niebuhr, Rom. Hist., vol. 1, p. 450).—The violence which, some time after this, Sextus offered to Lucretia, was the cause of his father's banishment, and the downfall of the whole Roman scheme of annexation, in which his father had before this made him king (Dion. Hal., 4, 53), and was assassinated here by certain persons whom his acts of bloodshed and rapine had roused to vengeance. (Liv., 1, 60.)—V. Aruns, a brother of Tarquinius Superbus. (Vid. Aruns I.)—VI. Aruns, a son of Tarquinius Superbus. (Vid. Aruns II.)

Taras, now Tarracona, a town of the Costaei in Hispania Citerior, on the coast of the Mediterranean, and northeast of the mouth of the Ibertus. This was the first place where the Scipios landed in the second Punic war, and which, after having fortified it, they made their place of arms, and a Roman colony. (Plin. 3, 4.—Solin., c. 23, 26.) Tarracon, in consequence of this, soon rose to importance, and in time became the rival of Carthago Nova. It was the usual place of residence for the Roman prefects. On the division of Spain, which took place in the reign of Augustus (37 B.C.), Tarracon was assigned to the province of Tarraconensis, to which had been previously called Hispania Citerior. (Plin., 1. c.—Melas, 2, 6.—Compare Uberti, Geogr., vol. 2, p. 420.)

Taras, a river of Troas, near Zeleia, which, according to Strabo, had to be crossed, on account of its meandering route, twenty times by those who followed the road along its banks. Homer styles it Heptaporus, referring to its being crossed seven times. (Strabo, 587.)

Tarxien, a celebrated city of Cicilia Campestris, on the river Cydnus, not far from its mouth. Xenophon gives it a plural form, Tarxidi (θαρξιδί . . . ές Ταρξίδας, Αναβ., 1, 2, 23); later writers, however, used the singular, Tarxides. This city was, from the earliest authentic records that we have of it, the capital of Cicilia, and, during the Perian domination, was the residence of a dependant king. The people of Tarxien ascribed the origin of their city to Sardanapalus, who is said to have built it, together with Anchialae, in one day. (Vit. Anchialae.) When, however, the Greeks and Gabines saw it threatened to become a step in the conquest of Alexander, they discarded the old account of the origin of Tarxien, and in its stead adopted one of a more poetical cast. Tarxien (Ταρξίδος) in their language signified a hecat, and also a hektef. This name they connected with the old legend, that Bellerophon had been conveyed, in the course of his wanderings, by the winged horse Pegasus to the country of Cicilia. Upon this they founded the fable that the horse Pegasus had stumbled here, and left behind a deep impression of one of his feet. According to another account, he lost a hoof in this quarter; while a third made Bellerophon to have been unhorsed in this place, and, in falling, to have struck the earth violently with his heel. (Dionys., Perig., v. 869.—Euastath. ad Dionys., l. c. Steph. Byz., s. v. Tarxides.) Strabo, however, makes the city to have been founded by Tripolomenus and his Argive followers, who, in sending for information about the wondering To, found here the traces of her hoofs; (Strabo, 4, 2, 2.) The Graces, having by chance hither, found Tarxien a large and flourishing city, traversed by the Cydnus, a stream 200 feet broad. (Xen., Anab., 1, 2, 23.) It continued to flourish for a long period after, and became so celebrated for learning and refinement as to be the rival of Athens and Alexandria. Alexander nearly lost his life by bathing, when overheated, in the cold stream of the Cydnus, and it is here that Cleopatra paid her celebrated visit to Antony in all the pomposity of the day. After her, Emperor Tiber, in his olden time, would sometimes sit as Venus, and her attendants as Cupids, in a galley covered with gold, whose sails were of purple, the oars of silver, and corse of silk; a fine description of which may be seen in Shakespear's play of Antony and Cleopatra (act 2, sc. 2). In the civil wars Tarxien sided with Caesar, and the inhabitants called their city, out of compliment to him, Julianopolis. This, though it exposed them at first to many annoyances and revolts, ended by being rewarded with the peace which had been before the city, and which eventually, both freedom and exemption from tribute, after Caesar had become master of the Roman world. (Appian, B. C., 4, 64.—Id., 5, 7.) Tarxien was the birthplace of St. Paul. (Acts, 22, 3.) It still survives, but only as the shadow of its former self. It is now called Tarxiscus, and is in subjection to Adana, an adjacent city. (Piocke, vol. 2, p. 256.) Julian the Apostate was buried in the suburbs of this city. (Ammianus, Marcell., 53, 3.—Manetti, Geogr., vol. 6, pt. 2, p. 96, seqq.)

Tartares (in the plural a- or orem), the fabled place of punishment in the lower world. According to the ideas of the Homeric and Hesiodic ages, it would seem that the World or Universe was a hollow globe, divided into two equal portions by the flat disk of the earth. (II. 8, 16.—Hes., Theog., 720.) The external shell of this globe is called by the poets brazen earth, or Tartarum, for it was only by the piercing of Styx that the superior hemisphere was named Heaven, the inferior one Tartarus. The length of the diameter of the hollow sphere is given thus by Hesiod. It would take, he says, nine days for an avil to fall from Heaven to Earth; and an equal space of time would be occupied by its fall from Earth to the bottom of Tartarus. (Theog., 722.) The luminaries which gave light to gods and men shed their radiance through all the interior of the upper hemisphere; while that of the inferior one was filled with eternal gloom and darkness, and its still air
was unmove by any wind. Taurus was regarded, at this period, as the prison of the gods, and not as the place of torment for wicked men, being to the gods what Erebus was to men, the abode of those who were driven from the supernal world. The Titans, when conquered, were shut up in it, and in the Iliad (8, 13) Jupiter menaces the gods with banishment to its murky regions. The Oceanus of Homer encompassed the whole earth, and beyond it was a region unvisited by the sun, and therefore shrouded in perpetual darkness, the abode of a people whom he names Cimmerians. Here the poet of the Odyssey also places Erebus, the realm of Pluto and Proserpina, the final dwelling of all the race of men, a place where the poet of the Iliad describes, as lying within the bosom of the earth. At a later period, the change of religious ideas gradually affected Erebus, the abode of the dead. Elysium was moved down to it, as the place of reward for the good; and Taurus was raised up to it, to form the prison in which the wicked suffered the punishment due to their crimes. (Kirkley's Myth. Myth., p. 32, 39, 43.)

Tartessos, a town of Spain, situate, according to the most general, though not the most correct opinion, in an island of the same name at the mouth of the Bats, formed by the two branches of the river. No traces of this island now remain, as one of the arms of the river has disappeared. With regard to the actual position of the town itself, much difference of opinion exists both in ancient and modern times; and it is evident that since the voyage of Marcus, Hispalis the Tartessos of Herodotus, and opposes the idea of its being the same either with Carteia or Gades, as many ancient writers maintain. It could not, according to him, correspond with Carteia, since Tartessus lay without the Straits of Hercules; nor could it be the same as Gades, since Herodotus speaks of both Gades and Tartessus by their respective names, and the latter was not subject to the Place of others, who had a king of its own. (Mannert, Geogr., vol. 1, p. 294.) According to Strabo, the Bats itself was anciently called Tartessus, and the adjacent country Tartessia. (Strabo,148.) Bochart, however, makes Tartessus to have been the Tartash of Scripture, and the same with Gades. (Geogr. Sacr., 3, 7, coll. 170.)

Tarquinia, a city of Galilia Belgica Secunda, in the territory of the Morini, now Terentoua. (Ptolemy.)

Tarsus, an ancient city of Venetia, on the river Silis. At a later period it became the seat of a bishopric, and only a town of note about the middle ages. It is now Trestso. (Procop., B. G. 3, 1. — Paul. Diacon., 2, 12.)

Tatianus, a Syrian rhetorician, converted to Christianity by Justin Martyr, whom he followed to Rome in the latter part of the second century. After the death of Justin, the opinion of his pupilslye took a turn towards those of Marcion, with whom he was contemporaneous; but, differing from that heresich in some material points, he became the head of a sect of followers of his own, who acquired the appellation of Eucratists and Hydroparastratae, from the abstinence which they enjoined from wine and animal food, and their substitution of water for the former, in the administration of the Eucharist. The 'editio princeps' by Basilius of Trier, 1548, fol., contains merely the Greek text. The best edition is that of Worth (Gr. et Lat.), Oxon., 1700, 8vo. Tatian's work is sometimes appended to editions of Justin Martyr. (Clare, Bibliograph. Dict., vol. 6, p. 150.)

Tatiennes or Titienses, the name of one of the three original Roman tribes. (Vid. Roms, p. 1173, col. 1.)

Tatius, Titus, king of the Sabines, reigned conjointly with Romulus. (Vid. Romulus.)

Tatta, a salt lake in the northeastern part of Phrygia, now Taslag (i. e., "the Salt"). According to Strabo, it produced salt in such abundance, that any substance immersed in it was very soon entirely covered with salt, and men were unable to fly if they once dipped their wings in it. (Strabo, 548.)

The lake still furnishes all the surrounding country with salt, and its produce is a valuable royal-farm in the hands of the Pacha of Kir-Shehr. In 1638, Sultan Murad IV. made a causeway across the lake, upon the occasion of his army marching to take Bagdad from the Persians. (Leake's Tour, p. 70.)

Taurus, a mountain range of Germany, lying in a northwestern direction from Frankfurt at Mt. to Mayen, between Wiesbaden and Hornberg. It is sometimes called the Hohe or Heyrich. (Bischoff and Muller, Wörterb. der Geogr., p. 950.)

Tauri, a people of European Sarmatia, who inhabited Tauricia Chersonesus, and sacrificed all strangers to Diana. The statue of this goddess, which they believed to have a fallen down from heaven, was said to have been carried away to Sparta by Iphigenia and Orestes. (Herod., 4, 92. — Mela, 2, 1. — Pausan., 3, 16. — Eurip., Iphig.)

Taurica Chersonesus. Vid. Chersonesus III.

Taurica, a surname of Diana, because worshipped by the inhabitants of Taurica Chersonesus. (Vid. Tauri.)

Taurini, a people of Liguria, occupying both banks of the Padus, in the earlier part of its course, but exposed to the incursions of pirates between the river and the Alps. The river Orcus (now Orca) marked the extent of their territory towards the east. The Taurini are first mentioned in history as having opposed Hannibal soon after his descent from the Alps (Polyb., 3, 60); and their capital, which Appian calls Taurasia (Bell. Hann., c. 5), was taken and plundered by that general, after an ineffectual resistance of three days. As a Roman colony, it subsequently received the name of the town of the Taurini (Taurinum) in Piedmont. (Cramer's Ann. Italy, vol. 1, p. 32.)

Taurum, now Taormino, a town of Sicily, between Messana and Catana, but nearer the latter than the former. An ancient city named Naxos previously occupied the site of Taorminum. There were, in fact, two cities of the name of Naxos, both erected in succession on the same spot. The first was destroyed by Dionysius the tyrant, and the inhabitants scattered over Sicily. (Diod. Sic., 14, 15.) The Siculi, instigated by the Carthaginians, subsequently rebuilt the city, but Dionysius again reduced it. Instead of destroying it, however, he colonized it with a number of his mercenary soldiers. (Diod. Sic., 14, 59 et 96.)

In process of time Syracuse regained her freedom, and Andromachus, a rich inhabitant of Naxos, having invited the old inhabitants of the latter city to return to their homes, they accepted the offer. The city now changed its name to Taalomum from Taurus, the name of an adjacent mountain, and μανυ, a place of abode, the appellation being selected as designating more particularly their new place of residence. (Diod. Sic., 16, 7.) The hills in the neighbourhood were famous for the fine grapes which they produced, and they surpassed almost the whole world for the extent and beauty of their prospects. (Mannert, Geogr., vol. 9, p. 33.)

Taurus, I. the mountains of Taurus, according to all the descriptions of the ancients, extended from the frontiers of India to the Aegan Sea. Their principal chain, as it shot out from Mount Iaunus towards the sources of the Indus, wound, like an immense serpent, between the Caspian Sea and the Euxine on the one side, and the sources of the Euphrates on the other. Caucasus seems to have formed part of this line, according to Pliny; but according to Strabo, who was better informed, the principal chain of Taurus runs between the bases of the Euphrates and the Araxes; and the geographer observes that a detached chain of Cau-
Taurus.

TEA
casus, that of the Moschian mountains, runs in a southern direction and joins the Taurus. Modern accounts represent this junction as not very marked. Strabo, who was born on the spot, and who had travelled as far as Armenia, considers the entire centre of Asia Minor, Paphlagonia, Armenia, Cappadocia, and Greater Asia, or Koordistan, as a very elevated country, crowned with several chains of mountains, all of which are so closely joined together that they may be regarded as one.

"Armenia and Media," says he, "are situated upon Taurus." This plateau seems also to comprehend Koordistan, and the branches which it sends out extend into Persia as far as the great desert of Kerman on one side, and towards the sources of the Gibon and the Euphrates on the other. By the talk of the various Tauruses of the ancients as an upland plain, and not as a chain, the testimonies of Strabo and Pliny may be reconciled with the accounts of modern travellers.

Two chains of mountains are detached from the plateau of Armenia to enter the peninsula of Asia; the one first confines and then crosses the channel of the Euphrates near Samosata; the other borders the Pontus Euxinus, leaving only narrow plains between it and that sea. These two chains, one of which is in part the Anti-Taurus, and the other the Parysades of the ancients, or the mountain Tcheldir or Keldir of the moderns, are united to the west of the Euphrates, between the towns of Sisas, Tocas, and Kaisarieh, by means of the chain of Argeus, now named Argel-Dag, whose summit is covered with perpetual snows, a circumstance which, under so low a latitude, shows an elevation of from 9 to 10,000 feet. The centre of Asia resembles a terraced steppe on all sides by chains of mountains. The chain which, breaking off at once from Mount Argeus and from Anti-Taurus, bounds the ancient Cilicia to the north, is more particularly known by the name of Taurus, a name which in several languages appears to have one common root, and simply signifies mountain. The elevation of this chain must be considerable, since Cicero affirms that it was impassable to armies before the month of June, on account of the snow. Diodorus details the frightful ravines and precipices which it was necessary to cross in going from Cilicia into Cappadocia. Modern travellers, who have crossed more to the west of this chain, now called Alah-Dag, represent it as similar to that of the Apeninnes and Mount Haemus. It sends off to the west several branches, some of which terminate on the shores of the Mediterranean, as the Cragus, and the Masicystes of the ancients, in Lyicia; the other entering the sea in the same manner as the Pontus, across the coasts of the Archipelago opposite the islands of Cos and Rhodes. To the east, Mount Amanus, now the Alma-Dag, a detached branch of the Taurus, separates Cilicia from Syria, having only two narrow passes, the one towards the Euphrates, the other close by the sea; the first answers to the Pyle Amanice of the ancients, the other to the Pyle Syrias. Two other chains of mountains are sent off from the central mountain, one towards the north, and the other towards the south, of both of which the most northerly is the Baba-Dag of the moderns, which formed the Tmolus, the Messogis, and the Sipylus of the ancients, and which terminates towards the islands of Samos and Chios; the other, extending in a north-west direction, presents more elevated summits, among which are the celebrated Idas and the Mysian Olympus. Lastly, the northern side of the plateau is propelling towards the Euxine, and gives rise to the chain of the Oocyrenns, a detached chain, which branches all the chain between the Sangarius and the Halys. Throughout the range of mountains just described, limestone rocks appear to predominate. (Mallet-Brun, Geogr., vol. 2, p. 64, seqq.)—II. A mountain and promontory on the eastern coast of Sicily, near which Tauromenium was built. It is now Capo di S. Croce. (Vid. Tauromenium.)—III. Statilius Taurus, a friend of Agrippa's, conquered Lepidus in Sicily, and gained also many victorries in Africa, for which he obtained triumphal honors (B.C. 26). He was twice consul; and is said also to have built the first durable amphitheatre of stone, at the desire of the Senate. He was present at the defeat of the Africans, A.D. 53, in the reign of Claudius. On his return, Agrippina, who was anxious to get possession of his fine gardens, induced Tarquitius, who had been his lieutenant in Africa, to accuse him of extortion, and also of having practised magic rites. Taurus, indignant at the charge, would not wait for the decision of the senate, but destroyed himself.

Taygetus, or, in the plural form, Tayvata (taurum), part of a range of mountains, which, traversing the whole of Laconia from the Arcadian frontier, terminates in the sea at the Promontory of Tenarum. Its elevation was said to be so great as to command a view of the whole Peloponnesus, as may be seen from a fragment of the Cyprian verses preserved by the scholiast on Pindar. (Nem., 10, 113.) This great mountain abounded with various kinds of beasts for the chase, and supplied also the celebrated race of bouquets, so much valued by the ancients, as are the accounts of their sagacity and keenness of scent. It also furnished a beautiful green marble much esteemed by the Romans. (Strabo, 367.—Plin., 37, 18.) In the terrible earthquake which desolated Laconia before the Peloponnesian war, it is related that immense masses of rock, detaching themselves from the mountain, caused dreadful devastation in their fall, which is said to have been foretold by Anaximander of Miletus. (Plin., 2, 79.—Strabo, 367.) The principal summit of Taygetus, named Tatableum, rose above Bysæus. It was dedicated to the sun, and sacrifices of horses were there offered to that planet. This point is probably the same now called St. Elia. (Cramer's Anc. Greece, vol. 3, p. 216.) "From the western side of the plain," observes Mr. Dodwell, "rise the grand and abrupt precipices of Taygetus, which is broken into many summits. The bases also of the mountain are formed by several projections distinct from each other, which branch into the plain, and hence produce that rich assemblage and luxuriant multiplicity of lines, and tints, and shades, which render it the finest locality in Greece. All the plains and mountains that I have seen are surpassed in the variety of their combinations and in the beauty of their appearance by the plain of Lacedaemon and Mount Taygetus. The landscape may be exceeded in the dimension of its objects, but it is not equalled in the extent and grandeur of its mountains. It is also the finest of the hotest climates of Greece, and subjects the inhabitants to fevers." (Dodwell's Tour, vol. 2, p. 410.)—Compare the account of Colonel Leake (Travels in the Morea, vol. 1, p. 84, 191, &c.)

Teos. I. Apulumia, a city of Apulia, on the right bank of the river Fronto (Fiori). The appellation of Apulumia was added to distinguish it from the
of the Sidicini. Strabo, speaking of the Apulian Teanum, says it was situated at some distance from the coast, and at the head of a lake formed by the sea, which here encroaches so considerably upon the land, that the breadth of Italy between this point and Puteoli did not exceed 1000 stadia. (Strabo, 285.) The ruins of this place are said to exist on the site of Cistitiae, about a mile from the right bank of the Nocera, and ten miles from the sea. (Cramer's Anc. Italy, vol. 2, p. 373.)—U. Sidicinium, the only city ascribed to the Sidicini, a Campanian tribe. It is now Teano, and was distant about fifteen miles from Capua, in a northwest direction. Strabo informs us that it stood on the Latin Way, being the most considerable of all the towns so situated, and inferior to Capua only in extent and importance among the Campanian cities. (Strab., 237, 248.) This fact seems to derive additional confirmation from the numerous remains of Vainonia and Lycurgus, and subsequent still-visible on its ancient site. Teanum became a Roman colony under Augustus. (Front., de Col.—Plin., 3, 5.)—Some cold acridous springs are noticed in its vicinity by Vitrivius: they are now called Acqua delle Calderelle. (Pratili, Via Apia, 2, 9. —Cramer's Anc. Italy, vol. 5, p. 194.)

Tearus, a river of Thrace, rising in the same rock from 98 different sources, some of which are hot, and others cold. Pausan. (v. 15, p. 102.)—Hesiod. (Thesmophoria, 9, 10.)—Herod. states, that Heracles and Heya were equidistant from Heryma, a city near Perinthus, and from Apollonia on the Euxine, being two days' journey from each. It emptied into the Contadesus, this last into the Agrianes, and the Agrianes into the Hebrus. Its waters were esteemed of service in curing cutaneous disorders. Darius raised a column there when he marched against the Scythinians, to denote the sweetest and salubrity of the waters of that river. (Herod., 4, 90, &c.—Plin., 4, 11.)

Tecmessa, the daughter of a Phrygian prince, called by some Teuthras, and by Sophocles Telautae. When her father was killed by Ajax, son of Telamon, at the time the Greeks sacked the towns in the neighbourhood of Troy, the young princess became the property of the conqueror, and by him she had a son called Euryssaces. Sophocles introduces her as one of the characteristics in his play of the Ajax. (Schol. ad Soph., v. 300.)

Tectosages, a Gallic tribe, belonging to the stem of the Volscis, and whose territory lay between the Sinus Gallicus and the Ausei, and in the immediate vicinity of the Pyrenes. They appear to have been a numerous and powerful race. A part of them were led off by Sigyvus in quest of other settlements, and, passing through the Hercynian forest, spread themselves over the province of Vainonia and Lycurgus, and subsequently made an inroad into Macedonia. From Europe a portion of them then passed into Asia Minor, and at last occupied the central portion of what was called, from its Gallic settlements, Gallatia. Their towns in this country were less numerous than those of their fellow-tribes; but, on the other hand, they could boast of having for their capital the largest and most celebrated city of the whole province, namely, Ancyra. (Vid. Ancyra.—Thierry, Hist. des Gaulois, vol. 1, p. 131, seqq.—Cramer's Asia Minor, vol. 2, p. 91.)

Tegia or Tegsea, a city of Arcadia, next to Mantinea, the most ancient and important in the country. It lay in an eastern direction from the southern part of the Manilian ridge. This place was said to have been founded at a remote period by Tegusus, son of Lycaon. At this early period the republic consisted of several small townships, inclosed by walls, which we are informed were united by Pythaenius, an Arcadian chief, who was thus regarded as the real founder of the city. (Pausan., 8, 45.—Strabo, 337.) The Tegeans were early distinguished for their bravery among the Peloponnesian states: they could boast that their king, Echecmus, had engaged and slain in single combat Hyllus, chief of the Heraclidæ (Herod., 9, 26), and also of many victories obtained over the warlike Spartans. (Herod., 1, 65.—Pausan., 3, 3.) It was not till the latter had, in compliance with the injunctions of an oracle, gained possession of the bones of Creatus, and conveyed them from the Arcadian territory, that they were enabled to vanquish their antagonists, and compel them to acknowledge their supremacy (1, 65). In the battle of Pylos, the Tegeans furnished the most of the soldiers, and disputed the post of honour with the Athenians, to whom it was, however, adjudged by the Lacedaemonians. In the Peloponnesian war they remained firm in their adherence to Sparta. After the battle of Leuctra, however, the Tegeans united with the rest of the Arcadians in forming a league independent of Sparta, which involved them in hostilities with that power. (Xen., Hist. Gr., 6, 5, 16.) Tegea, having thus entered into the Achaean confederacy, was taken by Cleomenes, from whom it was re-captured by Antigonus Doson. (Polyb., 2, 46.) It successfully resisted, some time after, the attack of Lycyrgus, tyrant of Sparta (5, 17, 1), but yielded to Machanidas; after his defeat and death it was, however, reconquered by Philopomen (11, 18, 7; 16, 36). Tegea was the only town in Arcadia which in Strabo's time preserved some degree of property and prosperity (Strabo, 388); and, if we may judge from the description of Pausanias, it still continued to flourish more than a century later. The vestiges of this ancient city are to be seen on the site now called Phali, about an hour east of Tripolizza; but they consist only of scattered fragments, and broken tiles and stones, which cover the fields. Other ruins are to be seen on the site of Palatio Episkopis, some hundred yards from the village of Phali. (Cramer's Anc. Greece, vol. 3, p. 250, seqq.)

Tevs. Vid. Teos.

Telamôn, a king of the island of Salamis, son of Eacus and Endéis. He was brother to Peleus, and father to Teucer and Ajax, the latter of whom is, on that account, often called "Telamonius heros." Telamon was banished, with Peleus, from his father's court, for the accidental murder of his step-brother Phocus; and, embarking on board a vessel which was thrown upon the island of Salamis. Here he was not only hospitably entertained by its king Cychreus, but received from him his daughter Glaucce in marriage, with the promise of succession to the throne. After the death of Glaucce he married Peribcea, the daughter of Alcathous; and, on the conquest of Troy by Heracles, whom he accompanied and aided, he received from that hero the hand of Heasonio, daughter of Lacedaemon, and became the lover of Prium, from which last-mentioned union sprung Teucer, who was, therefore, the half-brother of Ajax. Telamon distinguished himself at the Caldyonian boar-hunt, and also in the Argonautic expedition; and, when the Trojan war broke out, he despatched his sons Ajax and Teucer to sustain that glory, to which the feebleness of age precluded him from any longer aspiring. Ajax he left to himself, who, on account of the arms of Achilles, which had been awarded to Ulysses; and the indignation of Telamon at the supineness of Teucer in not having avenged his brother's death, caused him to banish the young prince from his native island. (Vid. Teucer. Soph. Aj.—Apollod., 3, 12, 6, &c. —Hygin., Fab., 97.)

Telamoniades, a patronymic given to the descendants of Telamon.

Talonius, an ancient race in the island of Rhodes, said to have been originally from Crete. They were the inventors of many useful arts, and, according to Diodorus, passed for the sons of the Sea. (Diod. Sic., 5, 55.) Hence Simmias the Rhodian made Zap (a word meaning "sea") their mother. (Compare Bo-
Telchines, a people of Eolia, also called Taphians. (Vid. Taphius.)

Telmessus, islands between Leucadia and Acarnania. (Vid. Taphius.)

Telegonus, a son of Ulysses and Circe, born in the island of Æaea, where he was educated. When arrived at the years of manhood, he went to Ithaca to make himself known to his father, but he was shipwrecked on the coast, and, being destined to provisio, he plundered some of the inhabitants of the island. Ulysses and Telemachus came to defend the property of their subjects against this unknown invader. He killed Telephus having his mind to have killed his wife, who he was. He afterward returned to his native country, and, according to Hyginus, he carried thither his father's body, where it was buried. Telemachus and Penelope also accompanied him in his return, and soon after the nuptials of Telegonus with Penelope were celebrated by order of Minerva. Penelope had by Telegonus a son called Helenus. Telegonus was said to have founded Tuscum in Italy, and was the ancestor of that lovely "daug of the name of Mamilia, from whom the paticran family of the Mamillii at Rome were descended. (Horat., Od., 3, 29. 8.—Ovid, Fast., 3, 4.—Trist., 1, 1.—Hygin., fab. 127.)

Telemâchus, a son of Ulysses and Penelope. He was still in the cradle when his father went with the rest of the Greeks to the Trojan war. At the end of this celebrated contest, Telemachus, anxious to see his father, went in quest of him; and, as the place of his residence was unknown, he visited the court of Menelaus and Nestor to obtain information. He afterward returned to Ithaca, where the suitors of his mother Penelope had conspired to destroy him; but he avoided their snare, by means of Minerva he discovered his father, who had arrived in the island two days before him, and was then in the house of Eumæus. With this faithful servant and Ulysses, Telemachus consented how to deliver his mother from the importunities of her suitors, and his efforts were crowned with success. After the death of his father, Telemachus is said to have gone to the island of Æaea, where he married Circe, or, according to others, Cassiphe, the daughter of Circe, by whom he had a son called Laertes. (Hom., Od.—Hygin., fab. 95, 125.)

Telesphorus, I., a king of Mycia, son of Hercules and Auge, the daughter of Aeas. He was exposed as soon as born on Mount Parthenius, on the confines of Argolis and Arcadia; but the babe was protected by the care of the gods; for a hind, which had just calved, came and suckled him; and the shepherds, finding him, named Telesphorus from that circumstance (Τῆλεςφόρος, τῆλεςφόρος, a hind). Aeas gave his daughter Auge to Nauplius, the son of Neptune, to sell her out of the country; and he disposed of her to Teuthras, king of Teuthræa, on the Cüster, in Mycia, who made her a "serva sacræ," but, when grown up, consulted the oracle regarding his parents, came to Mycia, where he was kindly received by Teuthras, whom he succeeded in his kingdom. Telephus; after this, married one of the daughters of King Priam, and, as the son-in-law of that monarch, prepared to assist Priam against the Greeks, and with heroic valour attacked them when they had landed on the Myssian coast. The carnage was great, and Telephus would have been victorious had not Baucus, who protected the Greeks, suddenly raised a vine from the earth, which entangled the feet of the monarch, and laid him flat. Achilles immediately rushed upon him, and wounded him so severely that he was carried away from the battle. The wound was mortal, and Telephus was informed by the oracle that he alone who had inflicted it could totally cure it. Upon this, application was made to Achilles, but in vain; till Ulysses, who knew that Troy could not be taken without the assistance of one of the sons of Hercules, and who wished to make Telephus the friend of the Greeks, persuaded Achilles to oblige the directions of the oracle. Achilles consented; and as the weapon which had given the wound could alone cure it, the hero scraped the rust from the point of his spear, and, by applying it to the sore, gave it immediate relief. It is said that Telephus showed himself so grateful to the Greeks, that he accompanied them to the Trojan war, and fought with them against his father-in-law. For other versions of the legend of Telephus, especially in the works of Ovid and Horace, see the remarks of Heyne (ad Apollod., 3, 9, 1). Ennius, in his play entitled Telephus, adopted that form of the narrative which made Telephus and his mother to have been shut up in an ark or coffer, and cast into the sea, the waves of which bore them to the mouth of the river Causus. (Heyne, l. c.) The wanderings and poverty of Telephus, while in quest of his parents, are often alluded to by the poets. (Aristoph., Nab., 918. Id., v., 860.—Horat., Epist. ad Pia., 96.—Hygin., fab. 101.)

Tellus, the goddess of the Earth. (Vid. Ope, and Terra.)

Tellus of Telemessus, I., the last city of Lycia towards the west, and at the head of the Glaucius Sinus. It was famous for the skill possessed by its inhabitants in the art of divination (Arrian, Exp. Alex., 2, 3); and they were consulted at an early period by Croesus, king of Lydia, (Herod., v., 73.) The ruins of Tellus of Telemessus were found at Mi, the part of Matalon. The theatre, and the porticoes and sepulchral chambers excavated in the rocks at this place, are some the most remarkable remains of antiquity in Asia Minor. (Leake's Tour, p. 128.—Compare Clarke's Travels, vol. 3, p. 392, seqq., Lond. ed.; and Fellows, Excursion in Asia Minor, p. 244, seqq.—II. A city of Caria, about sixty stadia to the southeast of Halicarnassus, and on the Sinus Ceramicus (Suid., s. v. Telemessicus.—Lachar., Herod., Tabl. Geogr., s. v.)—III. A city of Pisidia, on the confines of the Solymi, southeast of Themisonium. Its more usual name was Termessium. (Arrian, Exp. Alex., 1, 27.)

Telo Marcus, a city and harbour on the coast of Gallia Narbonensis Secunda, now Toulon. It appears to have been an obscure place among the ancients, and to have grown into a city from a large colony in our establishment commenced here by the Romans in the 5th century. The Rom. Ant. (556) alone makes mention of it. (Bischoff and Müller, Wörterb. der Geogr., p. 953.)

Telphusa, a city of Arcadia, forty stadia from Oaüs, and in a northeaster direction from Hercla. Pausanias found it in ruins and 'nearly deserted; but in earlier times it appears to have been a place of some note, and celebrated for the worship of the goddess Erimina and Apollo. Onceus, whose temples were in this place, called Oenoeum, on the banks of the Ladon. (Pausan., 8, 26. —Steph. Byz., s. v. Oyeoeum.) The city derived its name from Telphusa, a daughter of the river Ladon. There was a fountain
here, the waters of which were so exceedingly cold, that Tiresias was fabled to have died of drinking of them. The site of this place is supposed by Sir W. Gell to correspond with the Kalypshea of Vannus (Itinerary of the Morea, p. 120); but Müller is inclined to identify it with Katsiouta, which is described by Gell as a miserable place in the neighbourhood of a large ruined city. (Dorians, vol. 2, p. 448, Oxford transl. - Crramer's Ancient Greece, 3, p. 322.)

TENÉS, son of Aristomachus, and one of the Heracles. (Vid. Heraclia.)

TENÉRINDA, according to Pliny (6, 7), the Scythian name for the Palus Mactis. -Compare the remarks of Ritter (Vorhalle, p. 161, seqq.)

TENÉS, I. a town of the Brutti, southwest of Terina, and near the coast. It was a place of great antiquity, and celebrated for its copper-mines, to which it was given a liberal supply of water by the great mountains. (Xen. Anab., 1, 4, 4.)

TENÉS, II. (Cramer's Anc. Italy, vol. 2, p. 418.) - II. According to some, the same with Brunisdium. (Vid. preceding article.) - III. A place in the island of Cyprus. (Vid. Tenes I.)

TEMPE (plur. nepes), a valley in Thessaly, between Mount Olympus and the north and Ossa at the south, through which the river Peneus flowed into the Egean.

The poets have described it as a most delightful spot, with cool shades and verdant walks, which the warbling of birds rendered more pleasing and attractive.

Tempe extended about five miles in length, but varied in its breadth so as to be in some places only a plethrum (about 100 feet) or a little more. - Elian has left a very animated and picturesque description of its scenery (Var. Hist., 3, 1). - It appears to have been a generally received notion among the ancients, that the gorge of Tempe was caused by some great convulsion in nature, which, and not the mountain-barrier by which the waters of Thessaly were pent up, afforded them an egress to the sea. Modern travellers differ in their accounts of this celebrated vale. Hawkins (Walpole's Collect., vol. 1, p. 517) states that "the scenery by no means corresponds with the idea that has been generally conceived of it, and that the eloquence of Elian has given rise to expectations which the traveller will not find realized." He would seem, however, to have confounded the Vale of Tempe with the narrow defile which the Peneus traverses between Mount Olympus and Mount Ossa, near its entrance into the sea.

Professor Palmer, of Cambridge, appears to have been more successful in the search. "After riding nearly an hour a little to the bay in which, the Peneus discharges itself, we turned," says the traveller, "south, through a delightful plain, which, after a great discurse, brought us to the junction between Ossa and Olympus; the entrance to a vale, that, in situation, extent, and beauty, amply satisfies whatever the poets have said of Tempe." (Walpole's MS. Journal, Clarke's Travels, pt. 2, s. 3, p. 274. - Consult Cramer's Description of Ancient Greece, vol. 1, p. 378.)

TENENHÄ, a nation of Germany, who, in conjunction with the Usipetis, crossed the Rhine, were defeated by the Romans, and found protection and new settlements among the Scicambri. In their most flourishing period, the Tenchtheri dwelt in the southern part of the Duchy of Cleve, and also in that of Berg; they also took part in the confederacy of the Cherusci. (Cas., B. G., 4, 16. - Tac., Ann., 13, 56. - Id., Hist., 4, 21. - Id., Germ., 32.)

TENÉS, an island of the ,Egean, off the coast of Troas, about 56 miles to the north of Lesbos, whither the Greeks retired, as Virgil relates, in order to surprise the Trojans. (Aen., 2, 21. - Id., 254.) This island was at an earlier period called Leucophry, from its white cliffs (Eustath. ad Il., p. 33. - Lyceophr., 346); and it took the name of Tenedos from Tenes, son of Cucyus. (Vid. Tenes.)

Tenedos received a colony of the Achaeans, led by Nestor, under the command of Thrasylus, 7, 57, which flourished for many years, and was celebrated for the wisdom of its laws and civil institutions. This we collect from an ode of Pindar, inscribed to Aristagoras, ptyanis or chief magistrate of the island. (Nem., 11.) Aristotle is known to have written on the polity of Tenedos. (Steph. Byz., s. v. Tévedor.) Apollo was the principal deity worshipped in the island; as we know from Homer (II., 1, 37). According to the same poet, Tenedos was taken by Achilles during the siege of Troy. (II., 11, 624.) When the prosperity of Tenedos was on the decline, the inhabitants placed themselves under the protection of the flourishing city of Alexandria Troas. At a still later period, it derived again some importance from the granaries which Justinian caused to be erected there, for the purpose of housing the cargoes of corn brought annually, which were mostly produced on this island, and were sometimes by contrary winds blowing from the Hellespont. (Procop., Ad. Justin., 5, 1.)

There were several proverb s connected with the history of Tenedos, which may be found in Stephanus of Byzantium (s. v. Tévedor). It may be worth while to remark, that Nymphiodorus, a geographical writer quoted by Athenæus, affirmed, that the women of Tenedos were of surpassing beauty (18, p. 69). - When Chandler visited this island, which retains its ancient name, he found there "but few remains of antiquity worthy of notice; in the streets, the walls, and burying-grounds were pieces of marble and fragments of pillars, with a few inscriptions." (Travels in Asia Minor, p. 22.)

The position of Tenedos, so near the mouth of the Hellespont, has always rendered it a place of importance in both ancient and modern times. - Bochart derives the name from the Phoenician word Tine, which has been found here and used for earthware. (Cramer's Asia Minor, vol. 1, p. 111, seqq.)

TENES (or, more correctly, TENNES), son of Cycnus, king of Colona, a town of Troas, and of Procles the daughter of Clytius. - After the death of Procles, Cycnus married Philonome, daughter of Cragusus, who became enamoured of Tenes; but, finding it impossible to shake his principles of duty, she accused him to her husband of a dishonourable act of violence. The father believed the charge, and, confining Tenes and his sister in an arx or coffer (ké laivpox), cast them into the sea. They both, however, came safe to Tenedos, then called Leucophry, the name of which Tenes changed to Tenedos after himself, and became monarch of the island. Some time after, Cycnus discovered the guilt of his wife Philonome, and, as he wished to be reconciled to him, he pardoned him, and restored him to Tenedos; but, when he had secured his ship to the shore, Tenes cut the fastenings with a hatchet, and suffered his father's ship to be tossed about in the sea. From this circumstance, the hatchet of Tenes became proverbial to intimate a resentment that could not be pacified. Some, however, suppose that the proverb affords us the severity of a law made by a king of Tenedos against all guilty who were both decapitated with a hatchet, and under which law his own son suffered death. (Sucd., s. v. Ténos, ἦμηγορὸς.)

Tenes, as some suppose, was killed by Achilles as he defended his island against the Greeks, and receiv-
Tenos, a small island in the Ægean, near Andros, called also Hydrussia, from the number of its springs. It was very mountainous, but produced excellent wines, universally esteemed by the ancients. Tenos was about 15 miles in extent. The capital was also called Tenos. It was a town which contained a Temple of Neptune, held in great veneration, and much frequented by the inhabitants of the surrounding isles, who came thither to offer sacrifices to the god. (Strabo, 487.—Mela, 2, 7.—Ovid, Met., 4, 469)

Tentýra (plur.) and Tentýris, a city of Egypt in the Thebaid, situated on the Nile, to the northwest of Koptos. This city was at variance with Ombos, the former killing, the latter adoring, the crocodile; a horrid incident on which place in consequence of this quarrel, forms the subject of the fifteenth satire of Juvenal. About half a league from the ruins of this city stands the modern village of Denderah. Among the remains of Tentýra is a temple of Isis, one of the largest structures in the Thebaid, and by far the most beautiful, and in the best preservation. It contained, until lately, the famous zodiac, which was framed in the ceiling of the temple. This magnificent monument of faith was taken down by a French traveller, M. Lelorrain, after the most persevering exertions for twenty days, and transported down the Nile to Alexandria, whence it was shipped to France. The King of France purchased it for 150,000 francs. The dimensions of the stone are twelve feet in length by eight in breadth, including some ornaments, which were two feet in length on each side. In thickness it is three feet. The planisphere and the square in which it was contained were alone removed, the side ornaments being allowed to remain. To obtain this relic of former ages proved a work of immense labour, as it had actually to be cut out of the ceiling and lowered to the ground. Many conjectures have been advanced by the learned, especially of France, on the antiquity of this zodiac; but recent discoveries have shown the folly of these speculations; the temple having been, in fact, erected under the Roman sway, and the name of the Emperor Nero appearing upon it. (Am. Quarterly, vol. 4, p. 433.)

Teos or Tēos, a city on the east of Ionia, situated upon a peninsula southwest of Smyrna. It belonged to the Ionian confederacy, and had a harbour which Livy calls Garestheticus (37, 27). During the Persian war we learn that the inhabitants, despairing of being able to resist the power of that great empire, abandoned nearly all of them their native city, and retired to the coast. This was the beginning of their extinction, in consequence of that, it quite eclipsed the parent state. (Herod., 1, 168.—Strab., 633.) Teos is celebrated in the literary history of Greece for having given birth to Anacreon, and also to Hecatæus the historian, though the latter is more frequently known by the surname of the Abderite. (Strab., l. c.) This town produced also Protagoras the sophist, Scythmus an Iambic poet, Andron a geographical writer, and a preceptor in rhetoric; all of whom left remains of their literature. For his part, Aristotle is indebted for the preservation of the works of Teos. Though deserted, as we have already remarked, by the greater part of its inhabitants, Teos still continued to exist as an Ionian city, as may be seen from Thucydides (3, 32). The chief produce of the Teian territory was wine (Liv. 37, 27), and Bacchus was the deity principally revered by the inhabitants. It is singular that Pliny (6, 88) should rank Teos among the city states of Greece, as it could only be reckoned as a peninsula. The site once occupied by this ancient city is now called Boukoun. (Cramer's Asia Minor, vol. 1, p. 353.)

Terentia, I. the wife of Cicero. She became mother of M. Cicero, and of a daughter called Tullia. Cicero repudiated her, and she married Sallust, Cicero's enemy, and afterward Messala Corvinus. She lived to her 103d, or, according to Pliny, to her 117th year. (Plut., Vit. Cic. —Val. Max., 8, 13.—Ep. ad Attic., 11, 16, &c.)

Terentianus, I. a Roman, to whom Longinus dedicated his treatise on the Sublime.—II. Mauro, a grammarian, who wrote a Grammar of the Latin Language.

Terentius Pulius, a Latin comic poet, a native of Carthage, born about the 560th year of Rome. In what manner he came or was brought to the latter city is uncertain. He was in his earliest youth the slave of one Terentius Lucanus at Rome, whose name has been perpetuated only by the glory of his slave. Having obtained his freedom, he became the friend of Lucilius and the younger Africanus, and it is both probable and probable that this friendship occasioned the composition of some of his plays. This is a fact by the ancients, that he was assisted in the composition of his dramas by Lucilius and Scipio, as amateur critics. After he had given six comedies to the stage, Terence left Rome for Greece, whence he never returned. According to one account he perished at sea while on his voyage from Greece to Italy, bringing with him a hundred and eight comedies, which he had translated from Menander. According to others he was carried to Italy with the loss of these comedies, which he had sent before him by sea to Rome. In whatever way it was occasioned, his death happened at the early age of thirty-four, and A.U.C. 694.—The titles of his six plays are as follows: the Andria, Evurnuchus, Heautonitironomenos, Adelphi, Phormio, and Heycra.—His Andria was not acted till the year 587; two years, according to the Eusebian Chronicle, after the death of Cecilius; which unfortunately throws some doubt on the agreement so record ed by Donatus, of his introduction, in a wretched garb, into the house of Cecilius, in order to read his comedy to that poet, by whom, as a meanc person, he was seated on a low stool, till he astonished him with thematchless grace and elegance of the Andria, when he was placed on the couch, and invited to partake the supper of the veteran dramatist. Several writers have conjectured that it might be to some other than Cecilius that Terence read his comedy; or, as it is not certain that the Andria was his first comedy, that it might be some of the others which he read to Cecilius. Supposing the Eusebian Chronicle to be accurate in the date which it fixes for the death of Cecilius, it is just possible that Terence may have written and to read him his Andria, two years previous to its representation.—Most, if not all, of Terence's plots were taken by him from the Greek stage. He has given proof, however, of his sagacity and judgment, in the additions and alterations made on those borrowed subjects; and, had he lived an age later, when all the arts were in full glory at Rome, and the empire at its height of power and splendour, he would have found domestic subjects sufficient to supply his scene with interest and variety, and would no longer have accounted it a greater merit " Graces transferre quam proprias scribere."—Terence was a more rigid observer than his predecessor of his own rules of judgment; he was not content with the merits of his predecessors, but he wished them to have the excellencies of his own plays. For this purpose he is accounted to have endeavoured; and, in none of his dramas, with a single exception, has that of plot been adhered to. The simplicity, and exact unity of fable in the Greek comedies would have been insipid to a people not thoroughly instructed in the genuine beauties of the drama. Such plays were of too thin contexture to satisfy the somewhat gross and lumpish taste of a Roman audience. The Latin poets, therefore, bethought themselves of the several rules of Greek comedy, and this junction, which we call the double plot, affording the opportunity of more incidents, and a greater variety of action, was better suited to the tastes of those they had to please. Of all the Latin comedians, Terence appears to have practised this art the most assiduously. Plautus has very frequently single plots, which he was enabled to support by the force of drollery. Terence, whose genius led
another way, or whose taste was abhorrent from all sort of buffoonery, had recourse to the other expedi-
cent of double plots; and this probably gained him the
popular reputation of being the most artful writer for the
stage. The Hecyra is the only one of his comi-
dcies of the true ancient cast; hence the want of suc-
cess with which it met on its first and second per-
sentations. When first brought forward, in 589, it
was interrupted by the spectators leaving the theatre,
attracted by the superior interest of a boxing-match
and rope-dancers. A combat of gladiators had the
like unfortunate effect when it was attempted to be
again exhibited in 594. The celebrated actor, L. Am-
bivius, encouraged by the success which he had expe-
rienced in reviving the condemned plays of Cæcilius,
ventured to produce it a third time in the stage, when it
received a patient hearing, and was frequently repeat-
edy. Still, however, most of the old critics and com-
mentators speak of it as greatly inferior to the other
plays of Terence. On the whole, however, the plots of
Terence are, in most respects, judiciously laid: the
incidents are selected with taste, arranged and con-
ected with inimitable art, and painted with exquisite
grace and beauty. In the representation of characters
and manners, Terence avails himself of the ancient
and surpassing all their comic poets. In this de-
partment of his art, he shows that comprehensive knowl-
edge of the humours and inclinations of mankind,
which enabled him to delineate characters as well as
manner with a genuine and apparently unstudied sim-
licity. All the inferior passions which form the
range of comedy are so nicely observed and accurately
expressed, that we can scarce find a truer or more poeti-
 representation of human nature. Erasmus, one of the
best judges of classical literature at the revival of
learning, says that there is no author from whom we
can better learn the pure Roman style than from the
poet Terence. It has been farther remarked of him,
that the Romans thought themselves in conversation
when they heard his comedies. Terence, in fact, gave
to the Roman tongue its highest perfection in point of
elegance and grace. For this inestimable amanuensis, as
it is called by Heinæus, he was equally admired by his
own contemporaries and the writers in the golden pe-
riod of Roman literature. He is called by Cæsar puri
sermonis amator, and Cicero characterizes him as "Quicquid
come loquens, ac omnia dulcia dicens."

Even in the last age of Latin poetry, and when his
pure simplicity was so different from the style affected
by other writers who were versed in the art of versified
expression, as the model of correct composition. Ausonius, in
his beautiful poem addressed to his grandson, salutes
him, on account of his style, as the ornament of La-
tium. Among all the Latin writers, indeed, from En-
nius to Ausonius, we meet with nothing so simple, so
full of grace and delicacy—in fine, nothing that can be
compared to his comedies for elegance of dialogue,
presentation of character, or purity of language. The un-
affected conversation, which never subsides into vulgar-
ity or grossness, and never rises higher than the ordi-
nary level of polite conversation. Of this, indeed, he
was so careful, that when he employed any sentence
which he had found in the tragic poets, he stripped it
of that air of grandeur and majesty which rendered it
unsuitable for common life and comedy. The narra-
tives in particular possess a beautiful and picturesque
simplicity, which is in accordance with the poetic style
of Terence, it has been generally allowed that
he has used very great license in his versification.
Politian is thought to have been the first who at all
divided his plays into lines; but a separation was af-
terward more correctly executed by Erasmas. Priscian
says that Terence uses more licenses than any other
writer. Bentley, after Priscian, admitted every variet
of iambic and trochaic measure; and much
were the apparent number of licensees and mixture of
different species of verse, that, according to Wester-
hovius, in order to reduce the lines to their original
accuracy, it would be necessary to evoke Lælius and
Scipio from the shades.—As regards the respective
merits of Terence and Plautus, it may be observed
that the former was chiefly desirous of recommending
himself to the approbation of a select few, who were
possessed of true wit and judgment, and the dread of
their censure always kept him within the bounds of
good taste, while the sole object of Plautus, on the
other hand, was to excite the merriment of an audi-
ence endued with little refinement. If, then, we
merely consider the intrinsic merit of their produc-
tions, without reference to the circumstances or situa-
tion of the authors, still Plautus will be accounted su-
perior in that vivacity of action and variety of inci-
dent which inflaine curiosity and hurry on the mind to
the conclusion. We delight, on the contrary, to
dwell on every scene, almost on every sentence of
Terence. Sometimes there are chasms in Plautus's
fables, and the incidents do not properly adhere; in
Terence all the links of the action depend on each
other. Plautus has more variety in his exhibition of
characters and passions, and in the materials from the
different employments and pursuits of men; but his pictures are often overcharged,
where those of Terence are never more highly colour-
red than becomes the modesty of nature. The lan-
guage of Plautus is more rich and luxuriant than that of
Terence, but is far from being so equal, uniform,
and chaste. It is often stained with vulgarity, and
often sounds like the speech of comic dialogue,
while that of Terence is pure similitudo amni.

The verses of Plautus are, as he himself calls them, nu-
meri innumeri; and Hermann declares that, at least
as now printed, they are full of every kind of error.
Terence attends more to elegance and delicacy in
the expression of passion, Plautus to comic expression.
In fact, the great object of Plautus seems to have
been to excite laughter among his audience, and in
this object he completely succeeded; but for its at-
tainment he has sacrificed many graces and beauties
of the drama. The humour of Plautus consists chief-
ly in words and actions, that of Terence in matter.
The pleasurableness of Plautus, which were so often flat,
low, or extravagant, finally drew down the censure of
Horace, while Terence was extolled by that poetical
critic as the most consummate master of dramatic art.
In short, Plautus was more gay, Terence more chaste;
the stage of the former was more gay and effusive,
and solid. Plautus excels in low comedy and ridicule, Terence in drawing just characters, and in
maintaining them to the last. The plots of both are
artful, but Terence's are more apt to languish, while
Plautus's spirit maintains the action with vigour.
His invention was greatest; Terence's art and man-
agement Plautus gives the stronger, Terence a
delicate taste and a sense of beauty; Plautus is the
median of the two, Terence the better poet. Plautus
shone most on the stage, Terence please best in the
closet. (Dunlop's Roman Literature, vol. 1, p. 279,
seqq. Lond. ed.—Malkin's Classical Disquisitions,
p. 5, seqq.)—The best editions of Terence are, that of
Bentley, Cantab., 1726, and Amst., 1727, 4to
(that of Amsterdam being the better of the two);
that of Westerhovius, Hær. Com., 1740; and that of
Lepsius, 1774, 2 vols. 8vo; beautifully,
but not very accurately, reprinted at the London
press in 1820, 2 vols. 8vo.—II. Varro. (Vul. Varro.)

Terens (two syllables), I. a king of Thrace. He
married Progne, the daughter of Pandion, king of
Athens, whom he had assisted in a war against Me-
gara; and he offered violence to his sister-in-law Phio-
foles, whom he was conducting to Thrace by desire of
Proges (Vul. Philemès, and Progne.)
Terminus, a city of Latium, called also Anxur, situate on the seacoast, in a northeastern direction from the Circeean Promontory. Anxur was probably its Volscian name. (Vid. Anxur.) We learn from Horace (Sat., 1, 5, 25) that this city stood on the lofty rock at the foot of which the modern Terracina is situated. According to Strabo (239), it was first named Trachis, and of this name we have an indication of the ruggedness of its situation. Ovid calls it Trachas. (Met., 15, 717.) In Dionysius it is written Taichasia. With the generality of Latin writers it is, however, called Terracina (Meta., 2, 4), and sometimes, in the plural, Terracines. (Liv., 4, 58.) The Romans took this place after a siege of short duration, when it was given up to plunder. (Liv., i. 2.) It was, however, retaken by the Volsci, who surpried the garrison. (Liv., 5, 8.) It subsequently fell again into the hands of the Romans, and became of consequence as a naval station. Its port is noticed by Livy (27, 4), and it is classed by that historian with those colonies which were required to furnish sailors and stores for the Roman fleet (27, 38). It is styled "splendidus locus" by Valerius Maximus, who relates a remarkable trial which took place there (8, 1, 13). From Tacitus we learn that it was a municipia (Hist., 4, 5); and the efforts made by the parties of Vitellius and Vespasian to obtain possession of this place, sufficiently prove that it was then looked upon as a very important post. (Hist., 3, 76, seqq.) The Emperor Galba was born at a village near Terracina. (Cramer's Anc. Italy, vol. 2, p. 100.)

Tertullianus, J. Septimius Florens, a celebrated Christian writer, born at Cartaghes about the middle of the second century, and considered the most early Latin father extant. He was originally a pagan, but as a Christian he was an ardent advocate of the mysteries, and came an able advocate by his writings, which showed that he was possessed of a lively imagination, impetuous eloquence, elevated style, and strength of reasoning. It is not known at what period of life he became a Christian. He himself informs us that he was originally a pagan, and of corrupt morals; but the latter phrase must necessarily be taken in a mild sense, with reference to one who practised such rigid moralities as to be considered as almost a saint. He says that before his conversion he taught rhetoric, and followed the profession of an advocate; at least, his works show a great acquaintance with the principles of law. He became priest at Cartaghes, or, according to the vulgar opinion, at Rome. He soon, however, separated from the Catholic Church to throw himself into the errors of the Montanists, who, exag- gerating the purity, severity, and simplicity of the ancient institution in the pleasures of the world, all communication with individuals attached to idolatry, and even the study of the sciences of the day. St. Jerome says that the envy and the calumnies of the Roman clergy against Tertullian was the occasion of this step on his part; and from this remark some have concluded, though without sufficient grounds, that he was expelled from the Church of Rome by the intolerable
spirit of his clerical brethren. However this may have been, a distinction is carefully observed between the works which Tertullian wrote previous to his separation from the Catholic Church and those which he composed afterward. Modern critics have ranged himself among the followers of Montanus. The former are four in number, his Apologeticus, and those which treat of baptism, of penitence, and prayer. The last of these is regarded as his first production. Some authors add a work in two volumes, addressed to his wife, in which he gives her directions as to the course of conduct which she should pursue in the state of widows. Modern critics consider this work as composed by him at an advanced age. The work written by Tertullian after he had become a Montanist are, Apologies for Christianity, Treatises on Ecclesiastical Discipline, and two species of polemical works, the one directed against heretics, and the other against Catholics. The latter are four in number, De Pudicitia, De Puga in Persecutione, De Jejunio, De Monagama. His principal work is the Apologeticus Adversarum Gentes mentioned above. It is addressed to the governors of the provinces; it refutes the calumnies which had been uttered against the religion of the gospel, and shows that its professors were faithful and obedient subjects. It is the best work written in favour of Christianity during the early ages of the Church. It contains a number of very curious historical passages on the ceremonies of the Christian Church; as, for example, a description of the agape or a dinner for the pious, and on the custom of fasting, which it appeared under the new title Ad Nationes. In its altered state it possesses more method, but less fire than the first. The writings of Tertullian show an ardent and impassioned spirit, a brilliant imagination, a high degree of natural talent and profound erudition. His style, however, is obscure, though animated, and betrays the foreign extraction of the writer. The poetry of Tertullian is very important for the study of ecclesiastical history. He informs us, more correctly than any other writer, respecting the Christian doctrines of his time, the constitution of the Church, its ceremonies, and the attacks of heretics against Christianity. Tertullian was held in very high esteem by the subsequent fathers of the Church. St. Cyprian read his works incessantly, and used to call him, by way of eminence, The Master. Vincent of Lerins used the quotations of Tertullian as a secondary authority, and, every sentence a triumph over error."The best edition of the entire works of Tertullian is that of Semler, 4 vols. 8vo, Hal., 1770; and of his Apology, that of Havercamp, 8vo, L. Bat., 1718.

Tetr., the wife of Oceanus, and daughter of Uranus and Terra. Their offspring were the rivers of the earth, and three thousand daughters, named Oceanides or Ocean-nymphs. (Hes. Theog., 337, seqq.) The name of Tethys (Τηθύς) is thought to mean the Nurse, the Rearing. Hermann renders it Alumnia. (Keightley's Mythology, p. 51.)

Tetrarch, a. A name given to the city of Antioch, the capital of Syria, because divided, as it were, into four cities, each having its separate wall, besides a common one enclosing all. (Vid. Antiochica I.)—II. A name applied to Doris, in Greece (Dorica Tetrarchia) from its four cities. (Vid. Tetrarchia.)

Tetrapods, a kind of part of Tros, son of the Scamander by Ida. His subjects were called Teucri, from his name; and his daughter Batea married Daranus, a Samothracian prince, who succeeded him in the government. Daranus founded the city of the same name, and also gave to the whole adjacent country the name of Daranias. (Apollod. 3, 12, 1. — Virg., Æn., 3, 198.)—II. A son of Telamon, king of Salamis, by Hestione, the daughter of Laomedon. He was one of Helen's suitors, and, accordingly, accompanied the Greeks to the Trojan war, where he singularized himself by his valour and intrepidity. It is said that his father refused to receive him into his kingdom, because he had left the death of his brother Ajax unavenged. This severity of the father did not dishearten the son; he left home and retired to Cyprus, where, with the assistance of Belus, king of Sidon, he built a town which he called Salamis, after his native country.

Teucr., a name given to the Trojans, from Teucer, their king. According to a passage in Virgil (Æn., 3, 108), the Teucr were a colony from Crete, who settled in Tros previous to the founding of Troy, and were the founders of the Trojan race. Apollo darkus, however, follows the custom of Greek writers; on this subject, the Teucr to have been descended from Teucer, a son of the Scamander. Heyne, in an excursus to the passage of Virgil mentioned above, gives the preference to the latter account. It is probable that the Teucr were only a branch of the inhabitants of Tros, and originally of Thracian descent. Such, at least, is the opinion of Mannert, and with him agrees Grimm (Asia Minor, vol. 1, p. 77, seqq.).

Teuta, a queen of Illyricum B.C. 251, who ordered some Roman ambassadors to be put to death. This act of violence gave rise to a war, which ended in her overthrow. (Vid. Illyricum.)

Teutates or Teutates, a name of Mercury among the Gauls, who offered human victims to this deity. — He was worshipped by the Britons also. Some derive the name from the Greek Teuton, to signify God, the parent or creator; a name properly due only to the Supreme Being, who was originally intended by that name. (Lucan, 1, 445.)

Teutthras, a king of Mysia, on the borders of the Caucæus. (Vid. Telephus.)

Teutoburgiennes Saltus, a forest of Germany, lying in an eastern direction from Paderborn, and reaching as far as the territory of Osnabrück. It is famous for the slaughter of Varus and his three legions, by the Germans under Arminius. (Tac., Ann., 1, 60.) For a more particular idea of the locality, consult the remarks of Tappes (Die wahre Gegend und Linie der Germaniusschlacht, Essen, 1820, 8vo).

Teutoni and Teutones, a name given to several united tribes of Germany, who, together with the Cimbri, made a memorable inroad into southern Europe. The modern name of the origin and cause of this migration from the north have led to no definite results, owing to the almost entire ignorance, on the part of the Greeks and Romans, of the nature of the northern population and languages. That the migration was neither purely Scandinavian or German, nor purely Celtic or Gallic, clearly appears from the accounts of the order of march of the Cimbri and Teutones, as well as of their bodily stature and mode of fighting. The barbarian torrent seems to have originally been loosed from the farther side of the Elbe; whence a mongrel horde of Germans and Scandavians, of gigantic stature, savage valour, and singular accompaniments, descended towards the south. On their route, a number of Celtic tribes, of which the Tigurini and Tectosages are distinguished by name above the others, joined them; and, in conjunction with them, threatened to pour upon the Romans, who had then been driving farther and farther on the side of what is now Carinthia towards modern Austria, and on the west from Provence towards Toulouse. On the side of Carinthia, the Romans took the whole of Noricum under their protection; and Carbo was destroyed with his army in endeavouring to keep off the Teutones from that territory. On the other, they had extended their own from the banks of the Danube to the north and protected the native tribes as far as Lugdunum (Lyons) to accept their protection. The barbarians, however, instead of pouring upon Italy after the de-
feet of Carbo, turned back and spread desolation in Gaul; and the Romans despatched an army against them. The Cimbri and Teutones, which was annihilated by the Celtic hordes, who had associated themselves with the Cimbri and Teutones. The barbarians terrified the Romans by their enormous stature, by their firmness in order of battle, and by their mode of fighting, of which the peculiarity consisted in extending their lines so as to enclose large tracts of ground, and in forming barriers around them with their wagons and chariots. The danger to the Romans from the combined German and Celtic populations seemed the greater, as the Jugurthine wars, in the beginning of the contest, engaged their best generals. They therefore sent into Gaul L. Servilius Caepio, a consul, with a consular army. Caepio, quite in the spirit of the senatorial party of his times, plundered the Gauls, and seized their sacred treasures instead of preserving discipline. This was in A.U.C. 647. The next year, Caepio was declared proconsul of Gallia Narbonensis, and Cneius Manlius, the consul, was appointed his colleague. These two generals, neither of whom possessed any merit, happening not to agree, separated their forces, but were both attacked at the same time, one by the Gauls, the other by the Cimbri, and their armies were cut to pieces. The consternation which this occasioned at Rome was increased by the spreading of a report that the enemy were preparing to pass the Alps. But the barbarians, instead of concentrating their force for a descent upon Italy, wasted Spain and scared the Gallic territories. Marius was now chosen consul; and, while the foe were plundering Spain and Gaul, he was actively employed in exercising and disciplining his army. At length, in the third year of his command in Gaul, in his fourth consularship, the Teutones and Ambroses made their appearance in the south of Gaul; while the Cimbri, and all the tribes of the Germanic nations, descended into Italy from the northeast. Marius defeated the Teutones and Ambroses near Aquae Sextiae (now Aix), in Gaul; and, in the following year, uniting his forces with those of Catulus, he entirely defeated the Cimbri in the plain of Vercellae, to the north of the Po, near the Sessites. In these two battles the Teutones and Ambroses are said to have lost the incredible number of 290,000 men (260,000 slain, and 30,000 taken prisoners), and the Cimbri 200,000 men (140,000 slain, and 60,000 taken prisoners).—Liv. Epit., 68.—Vid. Marius.)

Thais, a celebrated Greek hetaerist, who accompanied Alexander on his expedition into Asia, and instigated him, while under the influence of wine, to set fire to the royal palace at Persepolis. (Vid. Persepolis.) After the death of Alexander she attacked herself to Ptolemy, son of Lagus, by whom she had two sons and a daughter. This daughter was named Irene, and became the wife of Ennootus, king of Soli, in the island of Cyprus. There is no good reason for the opinion that she lived with the poet Menander before accompanying the army of Alexander. This supposition arose from Menander's having composed a piece entitled Thais. (Athenaeus, 13, p. 576. D.—Bayle, Dict., s. v.—Michaud, Biogr. Univ., vol. 45, p. 230.)

Thala, a city of Africa, in the dominions of Jugurtha. It is said to be some by the same with Telepte, now Perreaucath, though this seems doubtful. Mannert, however, inclines to this opinion. (Consult Shaw's Travels in Barbary, vol. 1, pt. 2, c. 5.)

Thales, a celebrated philosopher, the founder of the Ionic sect, born at Miletus in the first year of the 35th Olympiad. He was descended from Phoenician parents, who had left their native land, and settled at Miletus. The wealth which he inherited, and his own superior abilities, raised him to distinction among his countrymen, so that he was early employed in public affairs. Like the rest of the ancients, he travelled in quest of knowledge, and for some time resided in Egypt. Under the priests of Memphis he is said to have been taught geometry, astronomy, and philosophy. It is probable, however, that he was more indebted to his own ingenuity than to their instructions; for, while he was among them, he taught them, to their great astonishment, how to measure the height of their pyramids. It cannot be supposed that Thales could acquire much mathematical knowledge from a people incapable of solving so simple a problem. The method pursued by Thales was this: at the termination of the shadow of the pyramid, he erected a staff perpendicular to the surface of the earth, and thus obtained two right-angled triangles, which enabled him to infer the ratio of the height of the pyramid to the length of its shadow, from the ratio of the height of the staff to the length of its shadow. In mathematics, Thales is said to have invented several fundamental propositions, which were afterward incorporated into the elements of Euclid, particularly the following theorems: that a circle is bisected by its diameter; that the angles at the base of an isosceles triangle are equal; that the vertical angles of two intersecting lines are equal; that if two angles and one side of one triangle be equal to two angles and one side of another triangle, the remaining angles and sides are respectively equal; and that the angle in a semicircle is a right angle. Astronomical as well as mathematical science seems to have received considerable improvements from Thales. He was so well acquainted with the celestial motions as to be able to predict an eclipse, though probably with no great degree of accuracy as to time; for Herodotus, who relates this fact, only says that he foretold the year in which it would happen. He taught the Greeks the division of the heaven into five zones, and the solstitial and equinoctial points, and how to determine the true length of the solar revolution, that he corrected their calendar, and made their year contain 365 days. Thales held that the first principle of natural bodies, or the first simple substance from which all things in the world are formed, is water. It is probable that by the term water, Thales meant to express the same idea which the cosmotheists expressed by the word choa, the notion annexed to which was, a chaos, or void, in which all matter was supposed to have originated. His most celebrated pupils and successors in the Ionic school were Anaximander, Anaximenes, Anaxagoras, and Archelaus, the master of Socrates. Thales died at the age of 90, in the 58th Olympiad. (Sesser., ap. Diog. Laert., 1, 38. Clinton. Past. Hellen., vol. 1, p. 3. —Engfeld. Hist. Philos., vol. 1, p. 149 seqq.)

Thalestris, otherwise called Minthya (Justin, 2, 4), a queen of the Amazons, who, accompanied by 300 women, came 25 days' journey, through the most hostile nations, to meet Alexander, in his Asiatic conquests, and receive offering him by. (Justin, 12, 3. — Quint. Curt., 6, 5.)

Thalia (Thailia, "the blooming one"). I. one of the Muses, generally regarded as the patroness of comedy. She was supposed by some, also, to preside over husbandry and planting.—II. One of the Graces. (Vid. Graces.)

Thamyris, an early Thracian bard, son of Philammon and Argoipe. He is said to have been remarkable for beauty of person and skill on the lyre, and to have challenged the Muses to a contest of skill. He was conquered, and the Muses deprived him of sight for his presumption. (Apollon., 1, 1, 3.)—Consult the remarks of Heyne (ad Apollod., 1, c. 4) on the nature of the contest. He also accommodates himself to the Priests. (Hem., II, 2, 595. seq.—Heyne, ad loc.)

Thapusius, a city and famous ford on the Euphrates. The city was situated on the western bank of the
river, nearly opposite to the modern Racca. Geographers are wrong in removing it to Ul-Deer. (Williams, Geogr. of Asia, p. 129, seqq.) This ford was passed by Cyrus the Younger in his expedition against Artaxerxes; afterward by Darius after his defeat by Alexander at Issus; and near three years after by Alexander in pursuit of Darius, previous to the battle of Arbela. (Xen., Anab., 1, 4.—Plut., p. 5, 24.—Steph. Byz., s. v.)

Thaphus, I. now Demas, a town of Africa Propria, on the coast, southeast of Hadrumetum, where Scipio and Juba were defeated by Caesar. It was otherwise a place of little consequence. (Mannert, Geogr., vol. 10, pt. 2, p. 241.)—II. A town of Sicily, on the eastern coast, not far to the north of Syracuse. It was situated on a small island, which was sometimes called an island, and which now bears the name of Macaron. The place probably obtained its name from the peninsula producing the Ψυγος, a sort of plant or shrub used for dying yellow. (Thucyd., 6, 4.—Bloomfield, ad Thucyd., l. c.)

Thasus, an island in the Egean, off the coast of Thrace, and opposite the mouth of the Nestus. It received, at a very remote period, a colony of Phoecian settlers; and was the seat of the Phocaean航运 (Herod., 6, 37.—Stecyn., Ch. v. 660), that enterprising people, who had already formed settlements in several islands of the Egean. (Thucyd., 1, 8.) They were induced to possess themselves of Thasus, from the valuable silver-mines which it contained, and which, it appears, they afterward worked with unremitting assiduity. Herodotus, who visited this island, reports that a large mountain on the side of Samothrace had been turned upside down (σηροποντευσας) in search of the precious metal. Thasus, at a later period, was recolonized by a party of Parians, pursuant to the command of an oracle to the father of the poet Archilochus. From this document, quoted by Stephanus, we learn that the ancient name of the island was Kria. (Pliny, 4, 12.) It is said by others to have been also named Chryse. (Eustath., ad Dion. Periegr., p. 97.) His- tius the Milesian, during the disturbances occasioned by the Ionian revolt, fruitlessly endeavored to make himself master of this island, which was subsequently conquered by Mardonius, when the Thasians were commanded to pull down their fortifications, and remove their ships to Abdera. (Herod., 6, 44.) On the expulsion of the Persians from Greece, Thasus, together with the other islands on this coast, became tributary to Athens; disputes, however, having arisen between the islanders and that power on the subject of the Thasian possessions, a war was insensibly commenced, and the Thasians were besieged for three years. On their surrender their fortifications were destroyed, and their ships of war removed to Athens. (Thucyd., 1, 101.) Thasus once more revolted, after the great failure of the Athenians in Sicily, at which time a change was effected in the government of the island from democracy to oligarchy. (Thucyd., 8, 64.) According to Herodotus the Thasians were four thousand, and the ships about one hundred, and sometimes three hundred, talents annually. These funds were principally derived from the mines of Scapte-hyle, in Thrace (6, 48).—The capital of the island was Thasus. —Thasus furnished, besides gold and silver, marbles and wine, which were much esteemed. (Plin., 35, 6.—Senec., Epist., 86.—Athen., 1, 51.) The soil was excellent. (Dion. Periegr., v. 523.) The modern name of the island is Thasos or Tasso. (Cramer's Anc. Greece, vol. 1, p. 333.)

Thaumes, a city of Thessaly, in the district of Phthiotis, and in a northwest direction from the head waters of the Sinus Malicus. It is said to have derived its name from the singularity of its situation, and the astonishment (θαυμα) produced on the minds of travellers upon first reaching it. Livy, who describes it as placed on the great road leading from Thermopylae by Lamia to the north of Thessaly, speaks of it in the following terms: "You arrive," says the historian, "after a very difficult and rugged route over hill and dale, when you suddenly open on an immense plain like a vast sea, which stretches below as far as the eye can reach." The town was situated on a very lofty and perpendicular rock, which rendered it a place of great strength. The modern name is Thaumomen. Dodwell describes the view from this place as the most wonderful and extensive he ever beheld. Sir W. Gell gives Thaumakon as the modern name. (Cramer's Anc. Greece, vol. 1, p. 414.)

Thaumantias, an appellation given to Iris, the goddess of the rainbow, as the daughter of Thaurus (Wonder.—Hea., Thog., 265.).

Thaumus, a daughter of Thaurus and sister of Hecuba. She married Antenor, and, being priestess also of Minerva, was prevailed upon by her husband to deliver up to him the Palladium, which he treacherously gave into the hands of the Greeks. (Hom., II, 6, 298. —Pausan., 10, 27.—Dict. Cret., 5, 8. )—II. The wife of Pythagoras. She was a native of Croton, and the first female, it is said, that turned her attention to philosophy. She was also a poetess. (Plin., Nat. Hist., 8, 43.—Menag., ad Dion., l. c.)—III. A daughter of Pythagoras. (Auct., Vit. Pythag., ap. Plut.—Menag., ad Diad., 8, 42.)—IV. The mother of Pausanias. She was the first, as it is reported, who brought a stone to the entrance of Minerva's temple to shut up her son, when she heard of his perfidy to his country. (Vid. Pausanias 1.)

Theatron: under this head it is proposed to give a brief sketch of the ancient drama, arranged under proper heads:

1. History of Tragedy from its rise to the time of Aeschylus.

The drama owes its origin to that principle of imitation which is inherent in human nature. Hence its invention, like that of painting, sculpture, and the other imitative arts, cannot properly be restricted to any one specific age or people. In fact, scenic representations are found among nations so totally separated by situation and circumstances, as to make it impossible for any one to have borrowed the idea from another. In Greece and Hindustan the drama was at the same period in high reputation and perfection, while Arabia and Persia, the intervening countries, were utter strangers to this kind of entertainment. The Greeks, who have from time immemorial possessed a regular theatre. The ancient Peruvians had their tragedies, comedies, and interludes; and even among the savage and solitary islanders of the South Sea, a rude kind of play was observed by the navigators who discovered them. Each of these people must have invented the drama for themselves. The only point of connexion was the sameness of the cause which led to these several independent perceptions: the instinctive propensity to imitation, and the pleasure arising from it when successfully exerted.—The elements of the Grecian Drama are to be sought in an age far antecedent to all regular historic record. In those remote times, the several seasons of the year had among the Greeks their respective festivals. That religion, which people with divinities wood, hill, and stream, and gave to every arm of every ocean, to every river, every valley, every plain, to every city, and every town, the appellation of its deity, entered largely into the feelings and customs of these annual festivities. Among an agricultural population like that of early Greece, Dionysus, at what time soever his name and worship had been introduced, as the inventor of wine and god of the vineyard, possessed, of necessity, a distinguished sacrifice and feast. —Music and poetry, wherever they exist, are almost invariably employed in the services o.
THEATRUM.

divine worship. In Greece, pre-eminently the land of the song and the lyre, this practice prevailed from the most ancient times. At the periodic festivals of their several deities, bands of choristers, accompanied by the pipe, the lute, or the harp, sang the general praises of the god, and recited narrations of the sacred rites and ceremonies. The feasts of Bacchus had, of course, their sacred choruses; and these choruses, from the circumstances of the festival, naturally fell into two classes of very different character. The hymns addressed immediately to the divinity, round the hollow altar during the solemnity of the service, were grave, lofty, and restrained. The songs inspired by the carousal of the banquet, and uttered amid the revelry, were curious, fantastical, humor-ous, and satirical, interpersed with mutual jest and gibe. The hymn which accompanied the opening sacrifice was called *diethyrambos*, a term of doubtful etymology and import. Perhaps, like the repulsive symbol of the Phallic rites, its origin must be referred to an Eastern clime.—Besides the chanter of the Dithyramb and the singers of the Phallic, there was, probably from the first introduction of Bacchic worship, a third class of performers in these annual festivals. Fauns and Satyrs were, in popular belief, the regular attendants of the deity; and the received character of these singular beings was in admirable harmony with the merry Dionysia. The goat, as an animal especially injurious to the vines, and, therefore, peculiarly obnoxious to the god of the vineyard, was the appropriate offering in the Bacchic sacrifices. In the horns and hide of the victim, all that was requisite to furnish satyric guise was found; and parts of it were struck with the insignificance: to add to the amusements of the village carnival. In these rude festivities the splendid drama of the Greeks found its origin. The lofty poetry of the Dithyramb, combined with the lively exhibition of the Satyric chorus, was at length wrought out into the majestic tragedy of Sophocles. The Phallic song was expanded and improved into the wonderful comedy of Aristophanes.—In the first rise of the Bacchic festivals, the rustic singers used to pour forth their own unpolished and extemporaneous strains. By degrees, these rude choruses assumed a more artificial form. Emulation was excited, and contests between neighbouring districts led to the successive introduction of such improvements as might tend to add interest and effect to the rival exhibitions. It was probably now that a distinction in prizes was made. Herefore a goat appears to have been the ordinary reward of the victorious choristers; and this term *tragodia* (πράγον υδατος), or goat-song, to have comprehended the several choral cantings in the Dionysia. To the Dithyramb a bull was now assigned, as a nobler need for its sacred ode; the successful singers of the Phallic received a basket of figs and a vessel of wine; while the goat was left to the Satyric chorus. Subsequently, when the Dithyramb and the drama had been popularised in their perfection throughout the Greek cities, the goat-song or goat-chorus was a tripod, which was commonly dedicated by the victor to Bacchus, with a tablet, bearing the names of the successful composer, choragus, and tribe.—The Dithyramb was at a very early period admitted into the Doric cities, and there cherished with peculiar attention by a succession of poets; among whom Archilochus of Paros, Arion of Methymne, Simonides of Ceos, and several others, were noted choragists. Under their hands the rude extemporaneous hymn of a peasant chorus was gradually refined into a laboured composition, lofty in sentiment, studied in diction, and adorned with all the graces which music, rhythm, and the dance could supply. Thus fostered by the patronage of city communities, and so improved by the skill and talent of rival poets, the Dithyrambic choruses, in the sublimity of its odes and splendour of the accompaniments, became one of the most imposing shows among the public spectacles of Greece.—In the mean- time, the representation of the laughter-loving Satyrs had been moulded into a more regular body, and continued to delight the populace with their grotesque appearance, furious acts, and singular acrobatic exertions. To discover something of a dramatic nature. The singers of the Dithyramb were mere choristers; they assumed no characters, and exhibited no imitation. The performers in the Satyric chorus had a part to sustain; they were actors in the strictest sense of the word. Moreover, in their extemporaneous bursts of description, remark, jest, and repartee, a kind of dialogue was introduced; irregular, no doubt, and wild, yet still a dialogue. Here then, in this amalgamation of the dialogue, we have, at once, the elements and the essence of the drama.—The Satyric chorus, like the Dithyramb, had found an early entrance into the Doric cities, and was particularly cultivated at Phlius, a town of Sicyon. In Attica, the future scene of the perfected drama, there remains no direct record of these Dionysian representations until the middle of the sixth century before our era. At that time Thes- phis, a town of Boeotia, and at Athens first struck with the possibility of introducing various improvements to the Satyric chorus. He saw that an incessant round of jest and gambol, and grimace became, in the end, exhausting to the performers and tiresome even to the spectators. Accordingly, the Icarian contrived a break in the representation (Diog. Laeret., 47. 60), by coming forward in person (Plat., Vit. Sol., c. 29), and, from an elevated stand, describing in gesticulated narration some mythological story. When this was ended the chorus again commenced their performances. The next step was to add life and spirit to these monologues, by making the chorus take part in the narrative through an occasional exclama- tion, question, or remark. This was readily suggested by the practice of interchanging observations already established among the members of the chorus. And thus was the germ of the dialogue still farther de- veloped. In order to disguise his features, and so produce a certain degree of hisatric illusion, Thes- phis is said first to have smeared his face with vermilion, then with a pigment prepared from the herb purslain, and lastly to have contrived a kind of rude mask made of linen. (Suid. s. v. Θεσπης)—Besides the addition of the actor, Thesphus did much for the improvement of the chorus itself. He invented dances, which were handed down through four subsequent ages of the world: (Arist., Rhet., 4. 1470.) They were, as might be expected from the chorus for which they were devised, of a nature more energetic than graceful. Yet their protracted existence proves them to have possessed popularity and comparative excellence. In these dances he assiduously trained his choristers. Whatever advantages could be derived from the sister art of music were no doubt added, and care extended to the general organisation and equipment of the chorus. Thesphus, of his recitative was apparently troagic ; the measure in which, amid frolic and dance, the Satyric choras gave vent to its ebullitions of joke and merriment. (Aristot., Poet., 4. 17.) Indeed, from its formation, the troacies is peculiarly adapted to lively and sportive movements. (Aristot., Rhet., 3. 7.) Thesphus probably reduced the whole performance into some kind of unity, by causing this intermittence of song and action to be continued in a somewhat loosely, to the setting forth of some one passage in Bacchic history. But the language of both actor and choristers was of a light and ludicrous cast; the sub- jects of the short episodes were handled in a jocose and humorous manner; and the whole performance, with its dance, song, story, and buffonery, resembled a wild kind of ballet-fair. —The introduction of an
actor with his episodic recitations was so important an advance, as leading directly to the formation of dramatic plot and dialogue; and the other in move-
ments, which imparted skill, regularity, and unity to the movements of the chorus, were of so influential a description, that Thespis is generally considered the inventor of the drama. Of tragedy, properly so called, he does not appear to have had any idea. Stories, more or less ludicrous, generally turning upon Bac-
chus and his followers, interwoven with the dance and the song of satyrs, formed the drama of Thespis.—The Satyrichorus achieved by this time had been admitted into Athens; contests were set on foot; and the success which attended the novelties of Thes-
pis sharpened, no doubt, the talents of his competi-
tors. This emulation would naturally produce improve-
ment upon improvement: but we discover no leading change in the line of the inceptive drama until the appearance of Phrynichus, the son of Polyphon-
mon and the pupil of Thespis. At the end of the six-
th century before Christ, the elements of tragedy,
though still in a separate state, were individually so fitted and prepared as to require nothing but a master hand to unite them into one whole of life and beauty. The Dithyramb presented in its solemn tone and lofty strains a rich mine of chordal poetry; the regular narra-
tive and mimetic character of the Thespian chorus furnished the form and materials of dramatic exhibi-
tion. To Phrynichus is owing the union of both.
Dropping the light and farcical cast of the Thespian drama, and dismissing altogether Bac-
chus with his satyrs, he sought for the subjects of his pieces in the grave and striking events registered in the mythology or history of his country. This, however, was not a practice altogether original or unexampled. The fact, casually mentioned by Herodotus (5, 67),
that the tragic choruses at Sicyon sang, not the adven-
tures of Bacchus, but the tale of the murder of the Thracian king, that, in the Cyclic chorus at least, melancholy incident and mortal personages had long before been intro-
duced. There is also some reason for supposing that the young tragedian was deeply indebted to Homer in the formation of his drama. Aristotle distinctly at-
tributes to the author of the Iliad and Odyssey the primary suggestion of tragedy, as in his Margites was or the Justinianus (Proel., 1085 a 32 N.). In this case, it is an historical fact, that, a few years before Phry-
 nichus began to exhibit, the Homeric poems had been collected, revised, arranged, and published by the care of Pisistratus. (Cic., de Orat., 3, 34.) Such an event would naturally attract attention, and add a deeper interest to the study of this mighty master; and it is easy to conceive how his μιχραὶς διάφορα
καὶ, as Aristotle terms them, would strike and operate upon a mind acute, ready, and ingenious, as that of Phrynichus must have been. At any rate, these two facts stand in close chronological connexion—the first edition of Homer, and the birth of tragedy properly so called.—Taking, then, the ode and the tone of the Dithyramb, the mimetic personifications of Homer and the themes which additional tradition or even recent events supplied, Phrynichus combined these several materials together, and so brought them framed in the
form of the Thespian exhibition. Thus, at length, does tragedy dawn upon us.—These changes in the character of the drama necessarily produced corresponding alterations in its form and manner. The recitative was no longer a set of disjointed, rambling episodes of humorous legend, separated by the wild dance and noisy song of a Satyr choic; but a connected succession of themes, and so brought to a close, coagulated
in a chorus composed of personages involved in the story, all relating to one subject, and tending all to one result. This recitative again alternated with a series of choral odes, composed in a spirit of deep thought and lofty poetry, themselves turning more or

8 C

THEATRUM.

les directly upon the theme of the interwoven dia-
logue.—In correspondence with these alterations in tone and composition, the actor and the chorists
must have had alteration different as to the nature of performers were now the representatives, not of Silenus and the Satyrs, but of heroes, princes, and their attendants. The goat-like guise and obstreperous sportiveness were laid aside for the staid deportment of persons engaged in matters of serious business or deep affliction, and a garb befitting the rank and state of the sev-
eral individuals employed in the piece. Nor are we to suppose that only a woman was introduced, never more than one personage was introduced. For
it is very probable that this one actor, changing his dress, appeared in different characters during the course of the play; a device frequently employed in later times, when the increased number of actors made such a contrivance less necessary. This actor sometimes
represented female personages; for Phrynichus is sta-
mented, but we discover no leading change in the line of the inceptive drama until the appearance of Phrynichus, the son of Polyphon-
mon and the pupil of Thespis. At the end of the six-
th century before Christ, the elements of tragedy,
though still in a separate state, were individually so fitted and prepared as to require nothing but a master hand to unite them into one whole of life and beauty. The Dithyramb presented in its solemn tone and lofty strains a rich mine of chordal poetry; the regular narra-
tive and mimetic character of the Thespian chorus furnished the form and materials of dramatic exhibi-
tion. To Phrynichus is owing the union of both.

Hermeas and Proclus, the commentators on Plato, the loss is not very great. — Pratinas was a native of Phlius, and a poet of higher talent. He too attempted the new style of dramatic composition, and once obtained a tragic victory. But the manifest pre-eminence of the youthful Æschylus probably deterred the Phliasian from continuing to cultivate the graver form of the art, and led him to contrive a novel and mixed kind of poems (v. Epic.). — Long from this external form and mythological materials, Pratinas added a chorus of Satyrs, with their lively songs, gestures, and movements. This new composition was called the Satyric Drama. The novelty was exceedingly well-timed. The innovations of Thespis and Phrynichus had banished the Satyric chorus, with its wild pranks and merriment, to the great displeasure of the commonalty, who retained a strong regret for their old amusement amid the new and more refined exhibitions. The Satyric drama gave them back, under an improved form, the favourite diversion of former times; and was received with such universal applause, that the tragic poets, in compliance with the humour of their auditors, deemed it advisable to combine this ludicrous exhibition with their graver pieces. One Satyric drama was added to each tragic trilogy, as long as the custom of contending with a series of plays, and not with single pieces, was maintained. Acharnians, Oresteia, and Eumenides were all distinguished Satyric composers; and in the Cyclopes of the latter we possess the only extant specimen of this singular composition. As regards the changes produced by Æschylus in the drama, vld. Æschylus.

2. Dramatic Contests.

The precise time at which the contests of the drama commenced is uncertain. — The Arndel Marble would make them coeval with the first inventions of Thespis. On the other hand, Plutarch assures us that no scenic contests were established until some years after the early Thespians exhibitions. (Vit. Sol., 29.) The true account appears to be this: The contests of the Dithyrambic and Satyric choruses were almost contemporaneous with their origin. Those of the Dithyramb continued without interruption to the latest period of theatrical spectacle in ancient Greece; and although the great innovations of Thespis might, for the moment, excite admiration rather than competition, yet doubtless his distinguished success soon stimulated others to attempt this new and popular kind of entertainment, and rival the originator. Under Æschylus and his immediate successors the theatrical contests advanced to a high degree of importance. They were placed under the superintendence of the magistracy; the representations were given with every advantage of stage decoration; and the expenses defrayed as a public concern. These contests were maintained at Athens with more or less splendour and talent for several centuries, long surviving her independence and grandeur. — In accordance with the origin of the drama, its contests were confined to the Dionysia, or festivals of Bacchus, the patron deity of scenic entertainments. These festivals were four in number, and occurred in the 6th, 7th, 8th, and 9th months respectively of the Attic year. (Donaldson, Theatre of the Greeks, p. 132, and the authorities quoted by him, in notis.) — 1. The "Country-Dionysia" (Τα κατ' αγροι Διωνίσες) were held in all the townships and villages throughout Attica, in Poseidoon, the sixth Athenian month, corresponding to the latter part of December and the beginning of January. Aristophanes has left us a picture of this festival in the Acharnians (v. 838, 1049, 1050). The players, to Bacchus. Dicamophas appears on the stage, with his household marshalled in regular procession. His young daughter carries the sacred basket; a slave bears aloft the mystic symbol of the host; the ancient old countryman himself comes last, chanting the Phallic song, while the wife, stationed upon the house-top, looks on as spectatress. The number of actors is here, of course, limited to one family, as Dicamophas had purchased the truce for himself alone. In times of peace and quiet the whole population of the dîmos joined in the solemnities.— 2. The "Festival of the wine-press" (τα Ἀγραία) was held in the month Ga¬Joseph, the seventh, in the month Le¬*eon, and to part of January and February. It was, like the rural Dionysia, a vintage-festival, but differed from it in being confined to a particular spot in the city of Athens, called the Lenæon, where the first wine-press (Αγραία) was erected.— 3. The "Anthe¬teria" (τα Ἀνθέθετα, or τα εν Διωνυσά) were held on the 11th, 12th, and 13th days of the month Anthen¬terion. This was not a vintage-festival like the other two. 'The new wine was drawn from the eves of the first day of the feast, which was called Πιθούαια, or "the Broachings." It was tasted on the second day, which was called Χαός, or "the drinking-cups;" while the third day was called Ξηραία, on account of the banqueting which went on then. At the Χαός, each of the citizens had a separate cup, a custom which arose, according to tradition, from the presence of Omastes at the feast before he had been duly purified. At this festival a prize was awarded to the patron of the best entertainment, which, however, to refer to a difference of cases among the worshippers at the time of the adoption of the Dionysian rites in the city.— 4. The "Great Dionysia" (τα εν Διωνυσία) were held in the month Cle¬a¬neon, in February. (Moren., p. 36.) This festival is always to be understood when the Dionysia are mentioned without any qualifying epithet. — At the first, second, and fourth of these festivals, the number of theatrical exhibitions that took place. The exhibitions at the country Dionysia were generally of old pieces. Indeed, there is no instance of a play being acted on those occasions for the first time, at least after the Greek drama had arrived at perfection. At the Lenæa and the great Dionysia, both tragedies and comedies were performed; at the latter, the tragedies at least were always new pieces. — At the time of the greater Dionysia there was a great sacrifice at the theatre called the Long-anes: deputation bringing the tribute from the several dependant states, visitors from the cities in alliance, and foreigners from all parts of the civilized world: for these Ληψανία were the dramatic Olym¬pia of Greece. (Aristoph., Acharm., 474.) — We may estimate the importance attached to these scenic exhibitions from the care manifested in providing for public enactment for their due regulation and support. They were placed under the immediate superintendence of the first magistrates in the state: the representations at the great Dionysia under that of the chief archon, those at the Lenæa under that of him called the king-archon. (Jul. Pollux, 8, 89, seqq.) To this presiding archon the candidates presented their pieces. He selected the most deserving compositions, and assigned to every poet thus deemed worthy of admission to the contest three actors by lot, together with a greater or lesser number of choristers. — The equipment of these cho¬ruses was considered a public concern, and, as such, like the fitting out of triremes and the other λειτουρ¬gies, or state duties, was imposed upon the wealthier members of the community. The ἐπιμεληταί of each tribe selected one of their body to bear the cost and superintend the training of a chorus. This in¬dividual was termed Χορηγός, his office Χορηγία. The Choruses were considered as the religious representatives of the people, of the person and the ornaments which he procured for the occasion were sacred. (Demosth. in Mid., p. 519.) He was said to do the state's work for it (λειτουργεῖν. — Con¬sul Valchenae ad Athen. 2, 16. — Ruhnck, Epist.
THEATRUM.

Crti, p. 54.). The Choragia, the Gymnasiarachi, the Feasting of the Tribes, and the Architeors, belonged to the coast of regularly-recurring state burdens (Eisiontioa Aecramvnyv), to which all persons whose property exceeded three talents were liable. It was the business of the Choragia to provide the chorus in all plays, whether tragic or comic, and also for the lyric choruses of men and boys, Pyrrhichists, Cylcian dancers, and others. His first duty, after collecting his chorus, was to provide and pay a teacher (qorodoiOion), who instructed them in the songs and dances which they were to perform in it, and it appears that Choragia drove lots for the first chance. Choragia had also to pay the musicians and singers who composed the chorus, and was allowed to press children, if their parents did not give them up of their own accord. He was obliged to lodge and maintain the chorus till the time of performance, and to supply the singers with such aliment as conduce to strengthen the voice. In the laws of Salamone, the age prescribed for the Choragia was forty years, but this law does not appear to have been long in force. The relative expense of the different choruses in the time of Lysias is given in a speech of that orator. (Apol. &poph, p. 698.) We learn from this that the tragic chorus cost nearly twice as much as the comic, though neither of the dramatic choruses was so expensive as the chorus of men or the chorus of flute-players. (Demost. in Mtd., p. 565.) No foreigner was allowed to participate in the offering of the plays of the state. It did not appear to be long in force. If any Choragia was convicted of employing one in his chorus, he was liable to a fine of a thousand drachmae. This law did not extend to the Lenta (Petit, p. 533); the Minoi also might be Choragia. The rival Choragia were termed avravopayv; the contending dramatic poets, and the composers for the Cylcian or other choruses, avravidioaioi; the performers, avravevov. (Attikron, 3, 49.) During one period in the history of the Athenian stage, the tragic candidates were each to produce three serious and one Satyric drama, together entitled a memlo- loyia; otherwise, omitting the Satyric drama, the three tragedies, taken by themselves, were called a treplaoyia. The earliest treplaoyia on record is that of Eschylus which contained the Peraz, and was exhibited B.C. 472. From that date down to B.C. 415, a space of fifty-seven years, we have frequent notices of tetral- ogyes. In that time Andocides represents Alcme- noy, one of the dramas in which was the Troades. After this time it does not appear from any ancient testimony whether the custom was continued or not. Indeed, it is matter of great doubt whether the practice was at any time regular and indispensable. Sometimes, as in the Orestie of Eschylus, and the Pand- idiom of Philectes, the three tragedies were on a common and connected subject; in general we find the case otherwise. (Aristoph., Rho, 1122—Id., Av, 260.) The prize of tragedy was, as has already been noticed, originally a goat; of comedy, a jar of wine and a basket of figs: but of these we have no indication after the first stage in the history of the drama. In later times the successful poet was simply rewarded with a wreath of ivy. (Athen., 5, p. 217.) His name was also proclaimed before the audience. His Choragia and performers were adorned in like manner. The poet used also, with his actors, to sacrifice the eviuvia, and provide an entertainment, to which his friends were invited. The victorious Choragia in a tragic contest dedicated a tablet to Bacchus, inscribed with the names of himself, his poet, and the archon. In comedy the Choragia likewise consecrated to the same god the dress and ornaments of his actors. The descriptions of the theatrical entertainment generally received a tripod as a reward or prize. This he was at the expense of consecrating; and in some cases he built the monument on which it was placed. (Lysias, ub. supp., p. 202. —Wordsworth's Athens and Attica, p. 153, seqq.) Thus the beautiful choragic monument of Lysicrates, which is still standing at Athens, was undoubtedly surrounded by a tripod. —The mystery of the candidates were decided by judges appointed by lot, and they were generally, but not always, five in number. The archon administered an oath to them, and in the case of the Cylcian choruses, any injustice or partiality was punishable by fine. No prize drama was allowed to be exhibited a second time; but an unsuccessful piece, after being altered and retouched, might be again presented—The plays of Eschylus were exempted by a special decision from this regulation. (Aust., 7, 5) The privilege was extended to those of Sophocles and Euripides; but as the superiority of these great masters was so decided, few candidates could be found to enter the lists against their produced tragedies. A law was consequently passed, forbidding the future exhibition of these three dramatists, and directing that they should be read in public every year. —The whole time of representation was portioned out in equal spaces to the several candidates, and the number of plays was determined by a clepsydra, and seems to have been dependent upon the number of pieces represented. (Aristot., Pост, 7.) It was the poet's business, therefore, so to limit the length of his play as not to occupy in the acting more than the time allowed. It is impossible now to ascertain the average number of pieces produced at one representation. Perhaps from ten to twelve dramas might be exhibited in the course of the day. (Donaldson, Theatre of the Greeks, p. 128.)

3. The Theatre.

In the first stage of the art no building was required or provided for its representations. In the country, the Dionysian performances were generally held at some central point, where several roads met; as a rendezvous, most easy of access, and convenient for a distance to all the neighbourhood. (Verg., Georg., 2, 382.) In the city the public place was the ordinary site of exhibition. But when, at Athens, tragedy began to assume her proper dignity, and dramatic contests were becoming matter of national pride and attention, the need of a suitable building was soon felt. A theatre of wood was erected. (Photus, s. v. Κητ.) Through the weakness of the material or the passage of time some defects in the structure might be observable, and the edifice fell; the, weight of the crowds assembled to witness a representation, in which Eschylus and Pratinas were rivals. (Livan, Arg. in Olynth., 1.—Suidas, s. v. Παρηγώς.) It was then that the noble theatre of stone was erected, within the Agorai, or enclosure dedicated to Bacchus. The building was commenced in the year 600 B.C., but not finished till about 391 B.C., when Lycurgus was manager of the treasury. The student who wishes to form an adequate notion of the Greek theatre must not forget that it was only an improvement upon the mode of representation adopted by Thespis, which resembled in its general features. The two necessary parts were the θησος, or altar of Bacchus, round which the Cylcian chorus danced, and the σωλων, or stage, from which the actors or exarchus spoke. It was the business of the wood-completers to erect the edifice, which was also called θεσικας. (Jul. Polluz, 4, 123.) To form an accurate conception of the Athenian theatre in its all its minuteness, as it stood in the days of Pericles, is now impracticable. The only detailed accounts left us on this subject are two, that of Vitruvius, the architect of Augustus, and that of Julius Pollux, his junior, by two of his sons. The original descriptions of the scenes are not unworthy, and aided and explained by incidental hints in other ancient authors, and a reference to the several theatres remains in Greece, Asia Minor, Sicily, and Italy, Genelli, an able scholar and architect.
of Berlin, has drawn up a statement, in the main satisfactory. (Genelli, Das Theater zu Athen. Berlin, 1818.)—The theatre of Bacchus at Athens stood on the southeastern side of the eminence crowned by the noble buildings of the Acropolis. From the level of the plain a semicircular excavation gradually ascended up the slope of a hill to a considerable height. Round the concavity, seats for an audience of thirty thousand persons arose range above range; and the whole was topped by a lofty, square, portico surrounded by a balustraded terrace. The tiers of benches were divided into two or three broad belts, by passages termed diametros (called in the Roman theatres praecinctiones). Again, of the borders of seats laid a level space, partly enclosed by the portico, and partly, extending outward, and left in a long parallelogram. This was the Orchestra. In the middle of this open flat stood a small platform, square and slightly elevated, called the omphalos, which served both as an altar for the sacrifices, that preceded the exhibition, and as the central point to which the choral movements were all referred. That part of the orchestra which lay without the concavity of the seats, and ran along on either side of the boundary wall, was called the Drophi (the Roman Iter). The wings, as they might be termed, of this Drophi, were named Parodoi, and the entrances which led in from them through the boundary wall, were entitled Elidou (the Roman Aditus).—On the side of the orchestra opposite the amphitheatre of benches, and exactly on a level with the lowest range, stood the platform of the skene or stage, in breadth nearly equal to the diameter of the semicircular part of the orchestra, and communicating with it by a passage that divided the two parts. This stage was cut breadthwise into two divisions. The one in front, called the Aigeidion (the Latin pulpitum), was a narrow parallelogram projecting into the orchestra. This was generally the station of the actors when speaking, and therefore was constructed of wood, the better to reverberate the voice. The front and sides of the Aigeidion, twelve feet in height, adorned with columns and statues between them, were called the triclinium.—The part of the platform behind the Aigeidion was called the proskeenion, and was built of stone, in order to support the heavy scenery and decorations, which were placed there. The proscenium was backed and flanked by lofty buildings of stonework, representing externally a palace-like mansion, and containing within, withdrawing-rooms for the actors and receptacles for the stage machinery. In the central edifice were three entrances upon the proscenium, which, by established practice, were designed to indicate the rank of the characters as they came on; the highly ornamented portal in the middle, with the altar of Apollo on the right, being assigned to royalty, the two side entrances to inferior personages. (Pollux, 4, 9.) In a similar way, all the personages who made their appearance by the Elidou on the right of the stage, were understood to come from the country; while such as came in from the Aigeidion, were from the city. Accordingly, they approached from the town.—On each side of the proscenium and its erections ran the Paradoses, high lines of building with architectural front, which contained spacious passages into the theatre from without, communicating on the one hand with the stage and its contiguous apartments; on the other, through two halls, with the Parodoi of the orchestra, and with the portico which ran round the topmost range of the seats. Behind the whole mass of stage buildings was an open space, covered with turf and planted with trees. Around this ran a portico, called the eunacium, which was the place of rehearsal for the chorus, and, with the upper portals, afforded a ready access for audience during a sudden storm. There, too, the servants of the wealthier spectators awaited the departure of their masters.—Such was the construction and arrangement of the great Athenian theatre. Its dimensions must have been immense. If, as we are assured, 30,000 persons could be seated on its benches, the length of the Drophi could not have been less than 400 feet, and a spectator in the central point of the topmost range must have been 500 feet from the actor in the Aigeidion. (Genelli, p. 52.)—The scenery of the Athenian stage was doubtless corresponding to the magnificence of the theatre. The catalogue which Julius Pollux has left us bespeaks great variety of devices and much ingenuity of contrivance, although we may not altogether be able to comprehend his obscure descriptions. We may, however, safely conclude that the age and city which witnessed the dramas of Aeschylus, Sophocles, and Euripides, also possessed of a Zeus, possessed too much taste and too much talent to allow of aught mean and clumsy in the scenery of an exhibition, which national pride, individual wealth, and the sanctity of religion conspired to exalt into the most splendid of solemnities. The massive buildings of the proscenium were well adapted for the generality of tragic dramas, where the chief characters were usually princes, and the front of their palace was the scene of action. Buried, however, in the fealty of the locality the play was very different. Out of the seven extant pieces of Sophocles, there are but four which could be performed without a change of proscenium. The Oedipus Coloneus requires a grove, the Ajax a camp, and the Philoctetes an island solitude. In comedy, which was exhibited on the same stage, the necessity of alteration was still more common. To produce the requisite transformations various means were employed, either excavation or the construction of new scenic buildings, which masked them from the view, and substituted a prospect suitable to the play. These decorations were formed of woodwork below; above were paintings on canvas, resembling our scenes, and, like them, so arranged on perspective principles as to produce the proper illusion. (Pollux, 4, 19.) No expense or skill seems to have been spared in the preparation of these scenic representations; nay, it is not improbable that even living trees were occasionally introduced, to produce the better effect. The stage-machinery appears to have comprehended all that modern ingenuity has devised. As the intercourse between earth and heaven is very frequent in the mythologic dramas of the Greeks, the number of aerial contrivances was proportionately great. Were the deities to be shown in converse aloft there was the theoëleusma, a platform surrounded and concealed by clouds, where gods or heroes to be seen passing through the void of the sky, were the Alopor, a set of ropes, which, suspended from the upper part of the proscenial building, served to support and convey the celestial being along. The Machain, again, was a sort of crane turning on a pivot, with a suspender at the end, placed on the right, or country side of the stage, and employed suddenly to dart out a god or hero before the eyes of the spectators, and there remain concealed. As such a contrivance probably supposition, and then as suddenly withdraw him. The Theron (Pollux, 4, 19) was something of the same sort, with a grapple hanging from it, used to catch up persons from the
of the public funds these two oboli to any one who might choose to apply for it, provided his name was registered in the book of the citizens (ληφθαίρειν γράμματα). The entrance-money was paid to the treasurer of the three (φορέας, διατροφόλογος, ατρικτέκτων), who paid the receipts, and made the necessary repairs out of the proceeds. The sum obtained for this purpose from the public funds was drawn from the contributions originally paid by the allies towards carrying on war against the Persians. By degrees, the expenses of the festivals engrossed the whole of this fund; and that money, which ought to have been employed in supporting a military force for the common defence of Greece, was actually cast away upon the idle pleasure of the Athenian people. This measure proved most ruinous to the republic; yet so jealous were the multitude of any infringement upon their theoret expenses, that, when an orator had ventured to propose the restoration of the sums then squandered upon spectacles foreign to their original purpose, a decree was instantly framed, making it death to offer any such scheme to the general assembly. Democtenes twice repeated his efforts, encouraged to convince the people of their folly and injustice; but, finding his exhortations were ill-received, he was constrained reluctantly to acquiesce in the common resolution.—The lessee sometimes gave a gratuitous exhibition, in which case tickets of admission were distributed. (Theophrast, Charact, 11.) Any citizen might buy tickets for a stranger residing at Athens. (Theophrast, Charact, 9.) We have no doubt that women were admitted to the dramatic exhibitions. Julius Pollux uses the term theorpa (2, 55; 4, 121), which is alone some evidence of the fact. It is stated, however, expressly by Plato (Gorgias, p. 502, 8.—Leg., 2, p. 568, D.—Id., 7, p. 817, C), and by Aristophanes (Eccles., 21, seqq.).—The spectators hastened to the theatre at the dawn of day to secure the best places, as the performances commenced very early. After the first exhibition was over, the audience retired for a while, until the second was about to commence. There were three or four such representations in the course of the day, thus separated by short intervals. During the performance the people regaled themselves with wine and sweetmeats. The number of spectators in the Athenian theatre amounted occasionally to thirty thousand. (Plato, Soph., 245.) The spectators did not want to express in no gentle terms their opinion of the piece and actors. Murmurs, jeers, hootings, and angry cries were directed in turn against the offending performer. They not unfrequently proceeded still farther; sometimes compelling the unfortunate object of their dissatisfaction to pull off his mask and expose his face, that they might enjoy his disgrace; sometimes, assaulting him with every species of missile at hand, they drove him from the stage, and ordered the herald to summon another actor to supply his place, who, if not in readiness, was liable to a fine. In the time of Machon it was even customary to pelt a bad performer with stones. (Athenaeus, 6, p. 245.) On the other hand, where the impetuous spectators happened to be gratified, the clapping of hands and shouts of applause were as loud as the expression of their displeasure. In much the same manner the dramatic characters themselves were treated.

5. Actors.

In the origin of the drama the members of the chorus were the only performers. Theopompus first introduced an actor distinct from that body. Aschylus added a second, and Sophocles a third actor; and this continued ever to be the rule. Hence, when three characters happened to be already on the stage, and a fourth was to come on, one of the three was obliged to retire, change his dress, and so
THEATRUM.

the duties of the chorus (Ep. ad Pis., 138.) Sometimes, again, the chorus was divided into two groups, each with a coryphæus stationed in the centre, who represented some person, or evoked their fears, or their hopes; and sometimes, on critical occasions, several members, in short sentences, gave vent to their feelings. Between the acts, the chorus poured forth hymns of supplication or thanksgiving to the gods, didactic odes upon the misfortunes of life, the instability of human affairs, and the excellence of virtue, or dirges upon the unhappy fate of some unfortunate personage; or they re-enacted their cases more or less interwoven with the course of action. While engaged in singing these choral strains to the accompaniment of flutes, the performers were also moving through dances in accordance with the measure of the music; passing, during the aurope, across the orchestra, from right to left; during the antistrophe, back, from left to right; and stopping, at the epode, in front of the spectators. Each department of the drama had a peculiar style of dance suited to its character. That of tragedy was called ἀμέλεια; that of comedy, κύρος; that of the Satyric drama, ἀικών.—The music of the chorus was of a varied kind, according to the nature of the occasion or the taste of the poet. The Doric mood seems to have been originally preferred for tragedy (Athensius, 14, p. 624); it was sometimes combined with the Mixo-Lydan (Plut., de Mus., p. 1136), a pathetic mood, and therefore adapted to Tragedy. The Choral odes when they assumed its austerer and elevated character, well suited to tragedy. (Athén., 14, p. 625.) Sophocles was the first who set choral odes to the Phrygian mood. Euripides introduced the innovations of Timotheus, for which he is severely attacked by Aristophanes in the Rana.—The choruses were all trained with the greatest care during a length of time before the day of contest arrived. Each tribe felt intensely interested in the success of the one furnishing the Choruses, and the Choragi themselves, animated with all the energies of rivalry, spared no expense in the instruction and equipment of their respective choruses. They engaged the most celebrated choral performers, employed the ablest χρωδοδίδακτοι to perfect the choristers in their music and dancing, and provided sumptuous dresses and ornaments for their decoration. The first tragic poets were their own χρωδοδίδακτοι; Äeschylus taught his chorus figure-dances.

7. SCENIC DRESSES AND ORNAMENTS

In the first age of the drama, the rude performers disguised their faces with wine-leeves, or a species of pigment called βαρβαζείον. (Schol. ad Aristoph., Eq., 320.) Äeschylus, among his many improvements, introduced the mask, first termed προςώπον, and subsequently προσῳδον. The mask was made of bronze or copper, and was so constructed as to give greater power to the voice, and enable the actor to make himself heard by the most distant spectators. This was effected by connecting it with a tire or periwig (περνίκη, φενάκη), which covered the head, and left only one passage for the voice, which was generally circular, converging inward, and from its shape, and its being lined with brass, resembled the opening of a speaking trumpet. The voice, therefore, might be said to be enhanced, and to receive a Latin name for a mask, persona, a personando. (Aul. Gell., 5, 7.) These masks were of various kinds, to express every age, sex, country, condition, and complexion; to which they were assimilated with the greatest skill and nicety. (Jul. Poll., 4, 153.) With equal care, the dresses of the actors were adapted to the characters represented. Gods, heroes, satyrs, kings, soothsayers, soldiers, huntsmen, peasants, shepherds, and parasites, young and old, the prosperous and the unfortunate, were all arrayed in their appropri-
ate vestments; each of which Julius Pollux has separately and minutely described in a chapter devoted to the subject. This writer divides the tragic masks alone into twenty-six classes (4, 133, seqq.). The comic masks were divided into four classes (6). The names only five or four kinds of Satyric mask. Most of the male wigs were collected into a forestop (δύοις), which was an angular projection above the forehead, shaped like a Α, and was probably borrowed from the κραθόλων of the old Athenians. (Jul. Poll., 4, 133.

—Theact., 1, 6.) The female masks, however, were often surmounted in a similar manner. The object of this was to give the actor a height proportioned to the size of the theatre, and this expression of which the cothurnus was also intended. It appears from Pollux (4, 141) that the masks were coloured; and the art of enamelling or painting bronze seems to have been one of great esteem in the time of Ἀκησυλυς. (Aischyl., Agam., 623. —Welcker, Nachtrag, p. 42.)

—Another peculiarity which distinguished the Greek manner of acting from our own, was the probable neglect of everything like by-play and making points, which are so effective on the modern stage. The distance at which the spectators were placed would prevent them from seeing those little movements, and hearing those low tones, which have made the fortune of many a modern actor. The mask, too, precluded all attempts at varied expression; and it is probable that nothing more was expected from the performer than good recitation. —The buxum, or cothurnus (κόθο- 

urnus), was a long white sleeve, and its length was such that it was soiled by the sweat of the performer. The tragic use it was soled with several layers of cork, to the thickness of three inches. It was laced up in front as high as the calf, which kept the whole tight and firm, in spite of the enormous sole. —It was not worn by all tragic characters, nor on all occasions. Agamemnon is introduced by Ἀκησυλυς in sandals. The sandal, raised by a cork sole was called ἐμβάρτς. The buxum and sandal was also the buxum, but that of the latter had only an ordinary sole. These buxums were of various colours. White was commonly the colour for ladies, red for warriors. Those of Bacchus were purple. Slaves wore the low shoe called the σακτόν, which was also the ordinary covering for the foot of the comic actor. —As the cork sole of the cothurnus gave elevation to the stature, so the κόθολεμά, or stuffings, swelled out the person to heroic dimensions. The projection was to carry the body forward, the chest and shoulders, muscular fulness to arm and limb.

—The dresses were very various. There was the χιτών pανδήριος for gods, heroes, and old men. That for hunters, travellers, and young nobles and warriors when unarmed, was shorter, and sat close to the neck. The girdle for heroes was that called the Persian. It was very broad, made of scarlet stuff, and fringed at the lower edge. Goddesses and ladies wore one broad and plain of purple and gold. The āρομα was a long purple robe for queens and princesses, with a train which swept the ground. The lower part of the sleeve was brocaded with white. —The Ἀτίτην was a short train with short sleeves drawn over the χιτών pανδήριος. Slaves wore the ἄμυατον, a kind of short shirt, or the ἔνως, a shirt with only one sleeve for the right arm; the left was bare to the shoulder. Herodians and shepherds were clad in the ἄσφθρα, a kind of goat-skin, with lower parts of hair or beard, and a short horseman's cloak of a dark colour. If they were great personages, they were dressed in a tunic of deep scarlet, with a rich and embroidered mantle. Warriors were arrayed in every variety of armour, with helmets adorned with plumes. The plait or mantle for heroes was ample enough to cover the whole person. So large, also, was the ladies' Ἥς- 

παλω, of fine cloth, embroidered. Matrons wore this peplos fastened veil-like on the head; virgins, clasped the peplos of a queen like that assigned to Juno, decked with golden stars and fastened behind the diadem. The dress of the gods was particularly splendid. Bacchus, for instance, was represented in a saffron-coloured inner vest, rich with cup-like figures, glittering with golden stars, and falling in many folds to the ground. The women were gilt, female fashion, high up under the breast and shoulders, with a broad girdle of dark purple set with gold and jewels. Over this inner robe was thrown the palla, of purple also, and such was the colour of his buskins. The comic dresses were, of course, chiefly those of ordinary life, except during an occasional burlesque upon the tragic equipment. (Theatre of the Greeks, p. 135, seqq.)

Thebae. (arum.), I. (or, more correctly, Thebe, Θήβα, a city of Mycia, north of Adramyttium, and called, for distinction sake, Hypopolaia. This name it received from the adjacent district, which was styled Hypopolaia, because lying at the foot of Mount Plakos (ὑπὸ καὶ Πλάκασ). As regards the existence, however, of such a mountain, some doubt exists. (Com. Hymn. ad I., 6, 396.) The other account, we have derived its name from a daughter of Cilix. (Diod. Sic., 5, 49.) It was the native city of Andromache, and was taken and destroyed by Achilles during the Trojan war. It never rose from its ruins; but the name remained throughout antiquity attached to the surrounding plains, famed for their fertility, and often ravaged and plundered by the different armies whom the events of these times brought into this part of Greece. (Xen., Anab., 7, 9, 4. —Polyb. 16, 1, 7. —Id. 21, 8, 13. —Lis., 37, 19. —Pomp. Mcl., 1, 18.) II. (and Thebe, Θήβας and Θήβας, more frequently the former), one of the most ancient and celebrated of the Greek cities, the capital of Boeotia, situated near the river Lamæmus, and in a northerly direction from Plataea. It was said to have been originally founded by Cadmus, who gave it the name of Cadmeia, which in after times was confined to the citadel only. Lyceophor, however, who terms it the city of Cadyimus, from one of its ancient kings, leads us to suppose that it already existed before the time of Cadmus (v. 1209). Nonnus affirms that Cadmus called this city Thebes, after the Egyptian one of the same name. (Dionys., 5, 85.) He also reports that it was at first destitute of walls and ramparts (5, 59), and this is in unison with the account of counts traced by Heyne, and brought into this part of Asia. (Dio., 46, 5, seqq.) It was the scene of many various events, which all agree in ascribing the erection of the walls of the city to Amphion and Zethus. (Hom., Od., 11, 262. —Eurip., Phæ., 842. —Hom., Hymn in Apoll., 225.)—Having already mentioned much of what is common to Thebes, in the general history of Boeotia, it will be here sufficient to notice briefly those events which have peculiar reference to that city. —Besieged by the Argive chiefs, the allies of Polynices, the Thbeans successfully resisted their attacks, and finally obtained a signal victory; but the Epigoni, or descendants of the seven warriors, having raised an army to avenge the defeat and death of their fathers, the city was on this occasion taken by assault and sacked. (Cassian., 9, 9.) It was invested a third time by the Grecian army under Pausanias, after the battle of Platæa; but, on the surrender of those who had proved themselves most zealous parties of the Greeks, they were not only compelled to evacuate the place by Polopidas and his associates. —Philip, having defeated the Thbeans at Charonea, placed a garrison in their citadel, but, on the accession of Alexander, they revolted against their conqueror and the confederates withdrew from the Theban territory. (Herod., 9, 88.) Many years after, the Cadmeia was surprised, and held by a division of Lacedaemonian troops until they were compelled to evacuate the place by Polopidas and his associates. —Philip, having defeated the Thbeans at Charonea, placed a garrison in their citadel, but, on the accession of Alexander, they revolted against their conqueror and the confederates withdrew from the Theban territory. (Herod., 9, 88.) Many years after, the Cadmeia was surprised, and held by a division of Lacedaemonian troops until they were compelled to evacuate the place by Polopidas and his associates. —Philip, having defeated the Thbeans at Charonea, placed a garrison in their citadel, but, on the accession of Alexander, they revolted against their conqueror and the confederates withdrew from the Theban territory.
Cassander, when the Athenians are said to have generously contributed their aid in rebuilding the walls, an exemplum which was followed by other places. (Paus., 9, 7.—Plut., Polit. Rraces, p. 814, B.) Subsequently we find that Thebes was twice taken by Demetrius Poliorcetes. (Plut., Vit. Demetr., c. 39.) Dicearchus has given a very detailed and interesting account of this great city about this period. (Stat. Gr., p. 14.) At a later period Thebes was greatly reduced and impoverished by the rapacious Sylla. (Paus. 7, 41.) Subsequently, a third settlement was attempted, but that was still more a village. (Strab., 403.) Thebes, though nearly deserted towards the decline of the Roman empire, appears to have been of some note in the middle ages (Nicet., Ann., 2, p. 50.—Leune, Ann., p. 267), and it is still one of the most populous towns of northern Greece. The natives call it Thrina. It retains, however, according to Dodwell, scarcely any traces of its former magnificence. Of the walls of the Cadmeia a few fragments remain, which are regularly constructed. These were probably erected by the Athenians when Cassander restored the town. (Tours, vol. 1, p. 264.—Cramer's Anc. Greece, vol. 2, p. 223, sqq.)—III. Phthiotis, a city of Thessaly, in the district of Pthiotsis, situated, according to Polybius, about 300 stadia from Larissa, and not far from the sea. In a military point of view its importance was great, as it commanded the avenues of Magnesia and Thessaly, from its vicinity to Demetrius, Sylla, and later, by Sir W. Gell describes some ruins between Armira and Volo, which he suspects to be those of this town. (Itin., p. 258.—Cramer's Anc. Greece, vol. 1, p. 402.)—IV. A celebrated city of Upper Egypt, the capital of Thebes. The name is corrupted from the Topale of the Coptic, which, in the Memphitic dialect of that language, is pronounced Thebs. Pliny in one place writes the name of Thebes in the singular: "Thebe parum fame."

Sir W. Gell's name of "Thebe parum fama," from the report of Dioscorus, often applied to it by the Greeks, was a translation of Amunet, or "the abode of Ammon," who represents the Egyptian Jupiter. Another name given to it by the Greeks was Hecatompylos, which will be considered below. The origin of this great city is lost amid the obscurity of fable. By some it was ascribed to Osiris, by others to one of the earliest of the Egyptian kings. The probability is, that it was at first a settlement of emigrants, connected with commercial operations, which must have been going on in the early cities of Egypt, and that it gradually attained to its vast dimensions in consequence of the additions made by successive monarchs. The Egyptians, however, according to Diodorus (1, 50), believed Thebes to have been the first city founded upon the earth; and, in truth, we have no account at the present day of any of earlier origin. Its most flourishing period appears to have been prior to the building of Memphis, when Thebes was the capital of all Egypt, the royal residence, and abode of the highest sacerdotal college in the land. It must, from its very situation, have been the middle point for the caravan trade to the south, and through it passed, very probably, all the productions and wares of Asia. Homer, therefore, who describes it as a powerful city, containing a hundred gates, must have derived his information from the Phoenicians engaged in the overland trade. It is idle to suppose that Homer, in his wanderings in the south of the rest of Egypt he knew nothing but the mere name, and had but a confused idea even of the Mediterranean coast. The poet informs us that out of each of these 100 gates, Thebes could send forth 200 chariots to oppose an enemy: an evident exaggeration, either originating in his own fancy, or received from, and characteristic of, the Phoenician traders. It is to its numerous portals that the epithet of Hexatomepylos ("hundred-gated") refers. As the city, however, contrary to the usual belief, was never surrounded by walls, these gates or portals must either be those of its numerous palaces, or else they were mere entrances to a more secure residence, that was in the neighbourhood of the city. This circus enclosed a space of 2000 metres in length and 1000 in breadth, and was surrounded with triumphal structures that gloriously announced the approach to the ancient capital of Egypt. Thebes sank in importance when Lower Egypt began to be more thickly inhabited, and the new capital Memphis arose. A second and a third college were established in the same quarter; but, too, trade and commerce interfered of all kinds directed their course, and Thebes, in consequence, became almost a deserted city compared with its former splendour. It still remained, however, the chief seat of the religion of Egypt; a circumstance which enabled it to retain a tolerable population, until the fury of Cambyses, or, more correctly speaking, his religious fanaticism, destroyed most of its priesthood, and overthrew its proudest structures. From this period it rapidly declined. Herodotus visited the city during the Persian government of Egypt, and speaks of the temple of Zeus; but his silence respecting the condition of the rest of the city must always remain an enigma. Diodorus, who speaks of Thebes as of a city already in ruins, takes particular notice of four principal temples. He mentions sphinxes, colossal figures decorating the entrances, porticoes, and the numerous curious and grand fragments of buildings, which form a noble magnificence which entered into their structure. In the descriptions given by modern travellers, these monuments are still recognised. Browne tells us that "there remain four immense temples, yet not so magnificent nor in so good a state of preservation as those of Denderah." Norden remarks, "It is surprising how well the gilding, the ultra-marine, and various other colours still preserve their brilliancy." The present state of the numerous ruins in the vicinity of Amurru are still standing; of platforms, preserved galleries, and other remains of antiquity, which he has represented in his plates, and which he thinks the more worthy of attention as they appear to be the same that are mentioned by Philostratus in his account of the temple of Memnon. No description can give an adequate idea of these wonders of antiquity, both in regard to their incredible number and their gigantic size. Their form, proportion, and magnificence are almost as astonishing as their magnitude. The mind is lost in a mass of colossal objects, every one of which is more than sufficient to absorb its whole attention. On the western side of the river stood the famed Memnonium; here also are numerous tombs in the form of subterranean excavations, and containing many human bodies in the state of mummies, sometimes accompanied with pieces of papyrus and other ancient curiosities. These have been the subject of ardent research; and the trade of digging for tombs and mummies being found gainful, has been resorted to by numerous Arabs belonging to the place. With respect to the mummies, some are found in wooden cases shaped like the human body. These belong to persons superior to the lower rank, but differing from one another in the quantity and quality of the linen in which the body had been wrapped. The mummies of the poorest classes are found wrapped and wrapped in the coarsest linen. These differ from the former also in being often accompanied with pieces of papyrus, on which Belzoni supposes that an account of the lives of the deceased had been written, while a similar account was carved on the cases of the more opulent. These cases are generally of Egyptian sycamore, but very different from one another with respect to plainness or ornament. Sometimes there are one or two narrower cases besides the outer one. Leaves and flowers of gacia are often found round the body, and sometimes...
lumps of asphaltum about two pounds in weight. 

The case is covered with a cement resembling plaster of Paris, in which various figures are cast. The whole is painted, generally with a yellow ground, on which are hieroglyphics and figures of greeks. But, when the return to the ruin of thebes: on the east side of the Nile, at Karnac and Luxor, amid a multitude of temples, there are no tombs; these are confined to the west bank. An iron sickle was lately found under one of the buried statues, nearly of the shape of those which are now in use, though thicker; it is supposed to have lain there since the invasion of Cambyses, when the idols were purchased by the superstitious to save them from destruction. Belzoni and others un- covered and carried away many specimens of these antique remains, such as sphinxes, obelisks, and statues.

On this same side of the river, no palaces or traces of ancient human habitations are met with; whereas, on the western side, at Medinet Abou, there are not only propylæa and temples highly valued by the antiquarian, but dwelling-houses, which seem to point out that place as having been once a royal residence. (Mannert, Geogr., vol. 10, pt. 1, p. 334, seqq. — Wilkenson, Topography of Thebes, London, 1835, 8vo.)

Thebes, I. the southernmost division of Egypt, of which Thebes was the capital. (Vid. Egyptus, page 37, col. 1, § 4.) — II. The title of a poem by Statius. (Vid. Statius.)

Thebes, the home of the hero, or of the philosopher, in the fourth century of the Christian era. He was a native of Paphlagonia, but passed the greater part of his days at Constantinople, where he enjoyed the highest favour with the Emperor Constantius, who elevated him to the rank of senator. He stood high also in the estimation of Julian, who made him prefect of Constanti nople, and kept up an epistolary correspondence with him. He was highly regarded, too, by the successors of this prince down to Theodrais the Great, who confided to Theophrastus, although the latter was a pagan, the education of his son Arcadius. He was employed, also, in various public matters, and on sev eral embassies. Theophrastus was the master of Libanius and St. Augustin, and, what was of rare occurrence in his day, presented a model of religious toleration and forbearance; hence we find an intimate friendship between him and Gregory of Nazianzus, and the latter styling him "the true father of eloquence" (Βασιλεὺς δο λογοῦ). Theophrastus resided for some time also at Rome, and, both in this city as well as in Constantinople, he lectured on the systems of Pythagoras, Plato, and Aristotle, but more particularly the latter. He received no fees from his auditors; on the contrary, though not rich himself, he was liberal in ministering to the necessities of his less wealthy followers. The public discourses which remain to us of this orator, as well as his philosophical works, justify the high opinion which his contemporaries entertained of him. His style, formed by an attentive perusal of Plato, is marked by great perspicuity, elegance, and sweetness; nor is it, at the same time, at all wanting in strength and energy. Although the greater part of his discourses have for their subject the praises of em perors, and although this kind of rhetoric is in itself somewhat cold and destitute of interest, yet Theophrastus succeeded in attracting the attention of his readers by the numerous allusions which he makes both to the mythology and the history of the Greeks, and by the instructive examples which he draws from the works of the ancient philosophers.—A memorable instance of the liberal spirit of Theophrastus is related by ecclesiastical historians. The Emperor Valens, who favoured the Arian party, inflicted many hardships and sufferings upon the Trinitarians, and daily threatened them with still greater severities. Theophrastus, to
THEMISTOCLES.

whom these measures were exceedingly displeasing, addressed the emperor upon the subject in an eloquent speech, in which he represented the diversity of opinions among the Christians as inconsiderable compared with that of the pagan philosophers, and pleaded that this diversity could not be displeasing to God, since it did not prevent men from worshipping him with true piety. By these and other arguments Themistocles prevailed upon the emperor to treat the Trinarians with greater lenity.—Themistocles illustrated several of his arguments with Aristotle, particularly the Analytics, the Physics, and the Book of Eudemus, from whose discourses Photius enumerates thirty-six: we have only, at the present day, thirty-three, and one other, the thirty-third, in a Latin translation. An edition of the entire remains of Themistocles appeared from the Aldine press in 1534, fol. Of the orations, the best edition used to be that of Petau (Petau), Paris, 1684, fol.; but now, for the text of Themistocles, the best edition is that of Dindorf, Choiseul, 1832, 8vo.

Themistocles, a celebrated Athenian statesman and leader. His father Neocles was a man of high birth after the Athenian standard, but his mother was not a citizen, and, according to most accounts, not even a Greek. His patrimony, seems to have been ample for a man of less aspiring temper. The anecdotes related of his youthful wilfulness and waywardness; of his earnest application to the pursuit of useful knowledge; of his neglect of the elegant arts, which already appeared to form a part of his life, are all the more of profession and his aversion; of the sleepless nights in which he meditated on the trophies of Miltiades, all point, with more or less of particular truth, the same way; to a soul early bent on great objects, and formed to pursue them with steady resolution, inseparable from his exertions, and his ambition, as a great mind, to command in a large sphere. The genius with which nature had endowed him warranted this noble ambition, and it was marvellously suited to the critical circumstances in which he was placed by fortune. The peculiar faculty of his mind, which Thucydides contemplated with admiration, was the quickness with which it seized every object that came in its way, perceived the course of action, the consequences of every situation, and penetrated into remote consequences. Such were the abilities which, at the period when he came forward, were most needed for the service of Athens. At the time when Themistocles was beginning to rise into credit with his fellow-citizens, another man of very different character already possessed their respect and confidence. This was Aristides, son of Lysimachus. (Vid. Aristides.) Like Themistocles, he too had the welfare of Athens at heart, but wisely and singly, not as an instrument, but as an end. On this he kept his eye, without looking to any mark beyond it, or stooping to any private advantage that lay on his road. It is not surprising that a man of such a mould should have come into frequent conflict with a statesman like Themistocles, though their immediate object was the same, and though there was no great discordance between their general views of the public interest. The empire of Persia was the subject of their discourse. In every discussion, it was evident that their object was to promote the glory of Athens, and that they neglected no occasion of a maritime war. Themistocles, the more ambitious of the two, was the leader in every battle. At Salamis, the first battle which Themistocles had induced Persia to venture upon, was won with the assistance of an Athenian officer, who, on hearing the issue of the conference, exclaimed that Greece was lost if such a counsel were adopted; for the allies, if now allowed to retreat, could no longer be kept together, but would be scattered to their several cities. This suggestion falling in with the opinion of Themistocles, induced him to return to the Spartan Eurybiades who commanded in chief, and pressing on him, with many additions, the arguments of Miniphius, he persuaded him to reconvene the council.
THEMISTOCLES.

Themistocles now urged the commanders to remain, both on account of the advantage which the narrow straits of Salamis gave to the Greeks, inferior as well in the speed as in the number of their ships, and also because, by so doing, they would preserve Megara, Salamis, and Ægina, with the Athenian women and children, if they should escape to the latter places. When he found them still obstinate, he told the Athenians, if their feelings and interests, after all they had done, were so little regarded, would abandon the armament, and, taking on board their families, would seek a settlement elsewhere. This threat prevailed, and it was agreed to remain; but at the approach of the enemy the Peloponnesians again were eager to depart and provide for the defence of their own territories; on which Themistocles, in order to prevent this, he foresaw, and partly, also, with the double purpose of marked his character, to secure to himself, in case of defeat, an interest with the conquerors, sent private information to the Persian admiral of the flight which was meditated by the Greeks, and advised him to guard against it by occupying both ends of the strait between Salamis and the main-land. After the glorious day of Salamis, when the remnant of the Persian fleet had been pursued as far as the island of Andros, Themistocles proposed to continue the chase, and then to sail to the Hellespont and break down the bridge. Eurybiades opposed him, on the ground that there was danger lest the Persians, being rendered desperate, might yet be successful; and the Peloponnesians generally agreed with Eurybiades, the proposal was rejected. On this, Themistocles persuaded the Athenians, who had been most eager for pursuit, to acquiesce; while, if we believe the motives commonly ascribed to him, he took advantage of the incident to secure for himself, in case of banishment, a refuge in Persia, by sending a secret messenger to Xerxes, to inform him of the plan which had been proposed, and say that Themistocles, through friendship to him, had procured its rejection. This view of the case, however, can hardly be the correct one. It may be easily conceived that a man like Themistocles loved the arts in which he excelled for their own sake, and might exercise the faculties with which he was pre-eminently gifted upon very slight occasions. In devising a plan, conducting an intrigue, surmounting a difficulty, in leading men to his ends without their knowledge and against their will, he might find a delight which might often be in itself a sufficient motive of action. We should be led, therefore, to suppose that this was the inducement which caused him to send this other secret message to Xerxes. For that, in the very moment of victory, when he had just risen to the highest degree of reputation and influence among his countrymen, he should have foreseen the changes which fortune had in store for him, and have conceived the thought of providing a place of refuge among the barbarians, to which he might fly if he should be driven out of Greece, is a conjecture that might very naturally be formed after the events of the Ionian colonnade, already dated in the light of what has been already related. All Greece now resounded with the fame of Themistocles. The deliverance just effected was universally ascribed, next to the favour of the gods, to his foresight and presence of mind; and when the Grecian commanders met in the temple of Neptune on the Isthmus, to award the palm of individual merit, no one was generous enough to resign the first place to another, but most were just enough to award the second to Themistocles, though, perhaps, unexpectedly. However, awaited him from Sparta, a severe judge of Athenian merit. He went thither, according to Plutarch, invited; wishing, Herodotus says, to be honoured. The Spartans gave him a chaplet of olive leaves: it was the reward they had bestowed on their own admiral Eurybiades. They added a chariot, the best the city possessed; and, to distinguish him above all other foreigners that had ever entered Sparta, they sent the three hundred knights to escort him as far as the borders of Tegenas on his return. He himself subsequently dedicated a temple to Diana, as the goddess of good counsel. Immediately after the battle of Platæa, the Athenian people had begun to bring back their families, and to rebuild their city and ramparts. But the Peloponnesians, by the power and spirit which Athens had derived from the different than their gratitude for what it had done and suffered in the common cause. An embassy arrived from Peloponnesus to urge the Athenians not to go on with their fortifications, but rather, as far as in them lay, to demolish the walls of all other cities out of the Peloponnesus, that the enemy, if he again returned, might have no strong place to fix his headquarters in, as recently Thebes had done. If this demand were accepted, Athens would have become entirely subject to Lacedaemon. At the same time, it was dangerous to refuse, since from the past conduct of Lacedaemon there was little ground to expect that gratitude would prevent it from any action prompted by jealousy or ambition; while it was vain to hope, that the military force of Athens, weakened by the number of citizens absent with the fleet, would be able to maintain itself without the aid of walls against the enormous forces at the disposal of Peloponnesus. In this difficulty Themistocles advised them immediately to send away the Lacedaemonian ambassadors, to raise up the walls with the utmost possible celerity, men, women, and children joining in the work, and, choosing himself and some others as ambassadors to Sparta, to send him thither at once, to detain his colleagues until the walls had attained a sufficient height for defence. He was accordingly sent to Lacedaemon, where he put off his audience from day to day, excusing himself by saying that he waited for his colleagues, who were daily expected, and wondered that they were not come. But when reports arrived that the walls were gaining height, he bade the magistrates not to trust to rumour, but to send some competent persons to examine for themselves. They sent accordingly, and, at the same time, Themistocles secretly directed the Athenians to detain the Lacedaemonian commissioners, but with the least possible show of compulsion, till himself and his colleagues should return. The latter were now arrived, and brought news that the walls had gained the height required: and Themistocles declared to the Lacedaemonians that Athens was already sufficiently fortified, and that henceforth, if the Lacedaemonians and their allies had anything to do, they must do it as to persons able to judge both of the common interest and their own. The Spartans were secretly mortified at their failure, and probably not the less from the consciousness that the attempt had been an unhandsome one; but their discontent did not break out openly, and the ambassadors on each part went home unquestioned — No Greek had yet rendered services such as those of Themistocles to the common cause; no Athenian except Themistocles had been trusted or consulted by the Thracians and the Lacedaemonians. Themistocles was not unconscious of his own merit, nor careful to suppress his sense of it. He was thought to indicate it too plainly when he dedicated his temple above mentioned to Diana, and the offence was aggravated if he himself placed his statue there, where it was still seen in the days of Plutarch, who pronounces the form no less heroic than the soul of the man. In the same spirit are those allusions to Plutarch, who gives him the preference which he sometimes alluded to the magnitude of the debt which his countrymen owed him. He would seem, indeed, not to have discovered, till it was too late, that there are obligations which neither princes nor nations can endure, and which are forfeited if they are not discharged. After the battle of Salamis, and while the terrors of the invasion were still fresh, his influence at Athens 1915
THEMISTOCLES.

was predominant, and his power consequently great wherever the ascendency of Athens was acknowledged: and he did not always scruple to convert the glory with which he ought to have been satisfied into a source of petty profit. Immediately after the retreat of Xerxes, he exacted contributions from the islanders who had sided with the barbarians, as the price of diverting from them the resentment of the Greeks. Another opportunity for enriching himself he found in the factions by which many of the maritime states were divided. Almost everywhere there was a party or individuals who needed the aid of his authority, and were willing to purchase his mediation. Themistocles, in short, had acquired a power by which he was able to enrich himself at the expense of moderate fortune. When his troubles had commenced, a great part of his property was secretly conveyed into Asia by his friends; but that part which was discovered and confiscated is estimated by Theopompos at a hundred talents, by Theophrastos at eighty; though, before he engaged in public affairs, all he possessed did not amount to so much as three talents. (Plut., Vit. Themist., c. 25.)—But if he made some enemies by his selfishness, he provoked others, whose resentment proved more formidable, by his firm and enlightened patriotism. Sparta never forgave him the shame he brought upon her by thwarting her insidious attempt to suppress the independence of her rival, and he farther exasperated her animosity by detecting and baffling another stroke of her artful policy. The Spartans proposed to punish the states which had aided the barbarians, or had abandoned the cause of Greece, by depriving them of the right of being represented in the Amphictyonic council. By this measure, Argos, Thebes, and the northern states, which had hitherto composed the majority in that assembly, would have been excluded from it, and the effect would probably have been that Spartan influence would have preponderated there. Themistocles frustrated this attempt by throwing the weight of Athens into the opposite scale, and by pointing out the danger of reducing the council to an instrument in the hands of two or three of its most powerful members. The enmity which he thus drew upon himself would have been less honourable to him, if there had been any ground for a story, which apparently was never heard of till it became current among some late collectors of anecdotes, from whom Plutarch received it: it has been popular because it seemed to illustrate the contrast between the characters of Themistocles and Aristides, and to display the magnanimity of the Athenians. Themistocles is made to tell the Athenians that he had something to propose which will be highly beneficial to the commonwealth, but which must not be divulged. The people depute Aristides to hear the secret, and to judge of the merit of the proposal. Themistocles discloses a plan for firing the allied fleet at Pagenae, or, according to another form of the story adopted by Cicero (Off., 3, 11), the Lacedaemonian fleet at Gythium. Upon this, Aristides reports to the assembled people that the measure was most absurd, and contrary to the counsel of Themistocles, but nothing more dishonourable and unjust. The generous people reject the proffered advantage, without even being tempted to inquire in what it consisted.—Themistocles was gradually supplanted in public favour by men worthy indeed to be his rivals, but who owed their victory less to their own merit than to the towering pre-eminence of his deserts. He himself, as we have observed him by his conduct, was in his endeavours to persuade the people that he had risen too high above the common level to remain a harmless citizen in a free state: that his was a case which called for the extraordinary remedy prescribed by the laws against the power and greatness of an individual which threatened to overlay the young democracy. He was condemned to temporary exile by the same process of ostracism which he had himself before directed against Aristides. He took up his abode at Argos, which he had served in his prosperity, and which welcomed, if not the savour of Greece, at least the enemy of Sparta. Here he resided many years, during which he occasionally visited other cities of the Peloponnesus, when Pausanias was convicted of his treason. In searching for farther traces of his plot, the ephori found some parts of a correspondence between him and Themistocles, which appeared to afford sufficient ground for charging the Athenian with having shared his friend's crime. They immediately sent ambassadors to Athens to accuse him, and to insist that he should be punished in the same manner as the insulter had been in the other case. The Athenians were of opinion that there was no reason to believe that there was any more solid foundation for the charge than what Plutarch relates; that Pausanias, when he saw Themistocles banished, believing that he would embrace any opportunity of avenging himself on his ungrateful country, opened his project to him in a letter. Themistocles thought it the scheme of a madman, but one which he was not bound, and had no inducement, to reveal. He may have been tempted to produce his prudence renders it improbable, assuming his knowledge of the secret. But his cause was never submitted to an impartial tribunal: his enemies were in possession of the public mind at Athens, and officers were sent with the Spartans, who tendered their assistance, to arrest him and bring him to Athens, where, in the prevailing disposition of the people, almost inevitable death awaited him. This he foresaw, and determined to avoid. In the Peloponnesus he could no longer hope to find a safe refuge. He sought it first at Corinth, and afterwards at Athens. But the Corinthians, however willing, were unable to shelter him from the united power of Athens and Sparta, and he crossed over to the opposite coast of Espirus. The Molossians, the most powerful people of this country, were now ruled by a king named Admetus, whom Themistocles, in the day of his power, had thwarted in a suit which he had occasion to make to the Athenians, and had added insult to disappointment. Themistocles adopted the desperate resolution of throwing himself upon the mercy of this his personal enemy. The king was fortunately absent from home when the stranger arrived at his gate, and his queen Pthia, in whom no vindictive feelings stifled her womanly compassion, received him with kindness, and instructed him in the most effectual manner of disguising himself while he was in her house, and concealing his body. She also warned him to repair to his mansion, by refusing to surrender his guest. Themistocles, however, would seem not to have intended to fix his abode among the Molossians, and he had probably very early conceived the design of seeking his fortune at the court of Persia. He is said to have consulted the oracle at Dodona, perhaps less for a direction than for a pretext: the answer seemed to point to the great king; and Admetus, practising the hospitality of the host, entertained him with the most cordial respect, and even gave his property to his use. At the Macedonian port of Pydna he found a merchant-ship bound for Ionia, and, after a narrow escape from the Athenian fleet, which was then besieging Naxos, and to the coast of which island he had been carried by a storm, Themistocles was safely landed in the harbour of Ephesus. It was by letter that he first

1316
made himself known to Artaxerxes, who was then on
the Persian throne. In his communication he ac-
knowledge the evil he had inflicted on the royal house
in the defence of his country, but claimed the merit of
having saved it. The king, however, being unable to
effect his retreat from Salamis in safety, and of hav-
ing diverted the Greeks from the design of
intercepting him. He ventured to add, that his perse-
cution and exile were owing to his zeal for the inter-
est of the King of Persia, and that he had the power
of proving his attachment by still greater services; but
he desired that a year might be allowed him to acquire
the means of disclosing his plans in person. His re-
quest was granted, and he assiduously applied himself
to study the language and manners of the country, with
which he became sufficiently familiar to conciliate the
favour of Artaxerxes by his conversation and address,
no less than by the promises which he held out, and
the prudence of which he gave proofs. If we may be-
lieve Plutarch, he even excited the jealousy of the
Persian courtiers by the superior success with which
he cultivated their arts; he was continually by the
king's side at the chase and in the palace, and was ad-
mitted to the presence of the king's mother, who hon-
oured him with especial marks of condescension.
He was at length sent down to the maritime provinces,
perhaps to wait for an opportunity of striking the blow,
by which he was to raise the power of Persia upon the
ruin of his country. In the mean time, a pension
was conferred upon him in the Oriental form; three flour-
ishing towns were assigned to him for his maintenance,
of which Magnesia was to supply him with bread, Myus
with viands, and Lampsacus with the growth of her
celebrated vineyards. He fixed his residence at Mag-
nesia, in the vale of the Maeander, where the royal
grant invested him with a kind of princely rank.
There death overtook him, hastened, as it was com-
monly supposed, by his consciousness of being unable to
perform the promises which he had made to the
king. Thucydides, however, evidently did not believe
the story that he put an end to his own life by poison.
That fear of disappointing the Persian king should
have urged him to such an act is indeed scarcely cred-
ible. Yet we can easily conceive that the man who
had been kept awake by the trophies of Miltiades,
must have felt some bitter pangs when he heard of the
rising glory of Cimon. Though his character was not
so strong as his mind, it was great enough to be above
the wretched satisfaction implied in one of Plutarch's
anecdotes, where he tells how the splash of the
Grecian table, he one day exclaimed, "How much we
should have lost, my children, if we had not been ruined."
It must have been with a far different feeling that he
desired his bones to be secretly conveyed to Attica,
though the uncertainty which hangs over so many ac-
tions of his life extends to the fate of his remains.
A splendid monument was raised to him in the public
place at Magnesia; but a tomb was also erected by the
Doric, who were in the port of Piraeus, which was
generally believed to contain his bones. His descend-
ants continued to enjoy some peculiar privileges at
Magnesia in the time of Plutarch; but neither they
nor his posterity at Athens ever revived the lustre of
his name. Themistocles died in his 65th year; about
449 B.C. (Thirwall's History of Greece, vol. 2, p. 260, seqq.)—There are certain letters which go under the
name of Themistocles, and which have come down to
our times. These letters have been ascribed to the
Athenian commander of the same name, but without
sufficient evidence. They are the production of some
one who has amused himself with this species of li-
terary imposture, and has placed himself, in imagina-
tion, in the position occupied by the conqueror of Sal-
amis, after he had experienced the ingratitude of his
countrymen. The deception is well kept up. The best
edition is that of Schoettgen, London, 1710, 4to, republi-
cated in 1722. Bremer's edition is little more
than a reprint of this, Lemmon., 1776, 8vo. (Hoff-
mann, Lex. Bibliograph. vol. 3, p. 661.)
Thucydi-
s, a celebrated Greek Bucolic poet, a native of Syracus,
derived his name from Syracuse. He is com-
menced his career under Polye一门, king of Egypt, and Hiero II. of Syra-
cuse, B.C. 270. He was instructed, in his earlier
years, by Asclepiades of Samos, and Philetas of Cos;
subsequently he became the friend of Aratus, and pass-
ed a part of his days at Alexandria, and the remain-
der in Sicily. It has been supposed that he was stran-
gled by order of Hiero, king of Sicily, in revenge for
some satirical invectives; but the passage of Ovid, on
which the supposition rests, mention only a Syra-
cusan poet, and it does not follow that this was our
bard. (Ovid, Bk. 561.) Theocritus distinguishes
himself by his poetical compositions, and has carried
Bucolic verse to its highest perfection. No one of
those who have endeavoured to surpass him, whether
among the ancients or moderns, has been able to equal
his simplicity, his naïveté, and his grace. He is not,
however, free from the faults of his age, in which the
decline of pure taste had already set in. His doc-
trine is most frequently embodied in his works. His
Bucolics are written in the Doric dialect. They consist
of thirty poems, which bear the title of Idyls (Elī多la),
and twenty one other smaller pieces un-
der the name of epigrams. The thirty Idyls, how-
ever, are not all by Theocritus. It appears that they
had been composed by different poets, and united into
one body by some grammarians. These thirty pieces
are not all, strictly speaking, the Bucolic ordin-
ary of some primitive age. Many are copies of others;
and even if we turned them all into a single poem
they would seem to resemble mimes; several belong
to lyric poetry.—Theocritus has sometimes been cen-
sured for the rusticity, and even indelicacy, of some of
his expressions. The latter charge admits of no de-
fence. With regard to the former, it must be observed,
that he who conceive that the manners and sen-
timents of shepherds should always be represented,
not only with that frankness which has been in some
cases, and perhaps even commonly, greatly embellished
or refined, do not seem to have a just idea of the
nature of pastoral poetry. The Idyls of Theocritus are,
in general, faithful copies of nature, and his characters
hold a proper medium between rude-
ness and refinement. —The "Epitaphium of Helen," one of the thirty, has been supposed to bear a resem-
bance to the Song of Solomon. Some have conclu-
sed from this that Theocritus was acquainted with the
latter, and made use of it in his composition in ques-
tion; but he who examines his poems, and can for biblical critics; since, if it can be shown that
Theocritus knew of the Song of Solomon, the commonly
received opinion, according to which this poem did not
exist in Greek at the time of Theocritus (Ptolemy
Philadelphus having only caused the Pentateuch to be
translated into Greek), is completely refuted. Our
limits forbid any investigation of this subject. It
is believed, however, that an examination of the
point will end in proving that Theocritus never saw
the composition in question.— "The poetry of Theo-
critus," observes Elton, "is marked by the strength
and vivacity of original genius. Everything is distinct
and peculiar; everything is individualized; and is
brought strongly and closely to the eye and under-
standing of the reader, so as to stamp the impression
of reality. His scenes of nature, and his men and
women, are equally strong, and the effects of
which may be best described by the epithet pic-
turesque. His humour is chiefly shown in the port-
traiture of middle-rank city-life, where it abounds
with strokes of character that are not confined to ancient
times or national peculiarities, but suit all ages and all
climates. He is not limited to rustic or comic dia-
logue or incident, but passes with equal facility to
refined and elevated subjects; and they who have heard
only of the rusticity of Theocritus, will be unexpect-
edly struck by the delicacy of his thoughts, and the

1317
in chronological exactness, yet it contains many valuable data, and some remarkable circumstances which other ecclesiastical historians have neglected. He wrote, besides his history, commentaries on the Scriptures, epistles, lives of famous authors, dialogues, books on heresy, and discourses on Providence and against the pagans.—His works have been edited by Sirmond and Garnier, Paris, 1642–84, 5 vols. fol., and also published at Halle, 1769–74, 5 vols. fol. 

Theodoros, I. a philosopher, disciple of Anicerris, and a native of Cyrene. For the freedom with which he spoke concerning the gods, he was stigmatized with the name of atheist, and banished from Cyrene. He took refuge in Athens; but his impiety would have proved fatal to him, had not Demetrius Phalerus interposed in his favour. Under his protection he gained access to the court of Ptolemy Lagi. Venturing, after a long interval, to return to Athens, it is related that he suffered death by hemlock; but whether his offence was, in reality, atheism, or whether it was merely contempt for the Grecian superstitions, has been much disputed. (Enfild, Hist. Philos., vol. 1, p. 196).—II. A rhetorician of Gadara, or, as he is more commonly called, of Rhodes. He was the preceptor of Tiberius, who was afterward emperor, and hit off his character so well when he described him as a mixture of mud and blood (πηλαχρος τεφεραμυνήν). Suidas, however, ascribes these words to Alexander of Aegae when speaking of Nero. (Sueton., Vit. Tib., 57.)—III. An Englishman, who wrote several works (3, 1, 18). His writings, which have perished, were recommended by Dio Chrysostomus as models of style. (Dio Chrys., της λόγ. άτκ. — Schill, Gesch. Gr. Lit., vol. 2, p. 529).—III. A writer on architecture. (Consult the remarque of Finder in Schill, Gesch. Gr. Lit., vol. 3, p. 601).—IV. A Greek monk, surnamed Prodomus, who lived in the early part of the 12th century. He has left various poems, which are only a few of the several hundred he wrote. His author, also, of a very poor romance, entitled "The Loves of Rhodanthe and Dosicles." There is only one edition of this work, that of Gauvin, Paris, 1625, 8vo. 

Theodosia, a town on the southeast side of the Tauric Chersonese, called also Capha, now Caffa or Feodosia. (Melas, 2, 1.) 

Theodosiopolis, I. a town of Armenia, built by Theodosius. It was situate east of Arzé, on the river Araxes, and was a large and strong town of the lower empire. It is now called Hasana-Cala, and otherwise Cali-cala, or the Beautiful Castle. (Procop., Pers., 1, 10.—Id., de Edif., 3, 5).—II. Another in Mesopotamia, on the river Chaboras. Its previous name was Resaina, and it was founded by a colony in the reign of Septimus Severus. Hence it was sometimes called Colonia Septimiana Resainorum. The modern name Ras-sin is one of Arabic origin, and signifies the fountain of a river, in allusion to the numerous springs which are here. The ancient name Resaina was in all probability of similar origin, and was merely retained when the Roman settlement was made here. (Amm. Marcell., 23, 14.—Bischoff und Möller, Worterb. der Geogr., p. 334). 

Theodosius, I. a distinguished officer in the reign of Valentinian I., whose brave and skilful conduct preserved Britain and recovered much of the territory lost by Gratian, shortly after the latter's accession to the throne.—II. Flavius, surnamed "the Great," a celebrated Roman emperor, son of the preceding. He was invested with the imperial purple by Gratian, who made him his colleague, and gave him the eastern empire, with the addition of Illyricum. Theodosius, thus raised to a share of the sovereign authority, speedily showed himself worthy of the trust committed to him, that of restoring the fortunes of a falling empire. The courage of the Romans had been so much shaken by a recent defeat near Adrian-
opolis; in which the Emperor Valens and almost two other emperors of his house were slain by the Goths, that Theodosius did not deem it prudent to hazard the great engagement with the superior skill, policy, and authority of Theodosius. Great numbers of them received the pay and were incorporated into the armies of that empire which they had recently been on the brink of destroying, and the remainder voluntarily engaged to defend the Danube against the Huns. Thus, in about four years, the Eastern Empire was rescued from the most formidable danger by which it had ever been assailed, and seemed once more in a state of security. While Theodosius was thus employed, another calamity befell the Western Empire. Maximus revolted against Gratian, and the latter, who was then in Gaul, having fled towards Italy, was overtaken and put to death at Lugdunum. The death of this prince left his young brother, Valentinian II., nominal emperor of the West, though the usurper Maximus assumed that title. Theodosius was unable by his letters, in which he represented him as the murderer of his benefactor, not being yet in a condition to quit his own dominions; and he even entered into a treaty with him, leaving him in undisputed possession of Gaul and Britain. But Maximus, encouraged by the success with which his rebellion had been attended, resolved to deprive Valentinian of even the nominal power which he enjoyed in Italy. Unable to defend his territories, the latter fled to Theodosius and besought him to take action that might complete the pacification of his own dominions, immediately marched against the usurper, defeated him in two successive engagements, and, his own troops having yielded him up, put him to death. Valentinian II. was thus restored to the throne of the Western empire; a throne which his weak character did not enable him to fill and to defend. Theodosius, after his triumph over Maximus, resolved to visit Rome, and aid his imperial predecessor in the murder of his successor in the city. This visit is mentioned on account of the decrees published by Theodosius for the complete suppression of idolatrous worship at Rome. All sacrifices were prohibited under heavy penalties, the idols were defaced, and the temples of the gods were abandoned to ruin and contempt. These decrees met but a feeble resistance, and from that time may be dated the complete and final overthrow of pagan idolatry in Rome. Having thus completed the triumph of Christianity over paganism, Theodosius returned to the East, and employed himself in the kindred task of putting an end to the heresies of the Church, and establishing the predominance of the orthodox over the Arian party. Valentinian II. had but a short time recovered possession of the empire of the West, when he was murdered by Arbogastes, a Frank of a bold and warlike character, who had obtained a great ascendency over him. Arbogastes did not himself assume the purple, but gave it to Eugenius, deeming it more safe to possess the power than the name of emperor. Theodosius once more prepared to avenge the murder of a colleague. He raised a powerful army, forced the passes of the Alps, encountered the army of the usurper, and, inflicting on him a decisive overthrow. Eugenius was killed by his own defeated troops; and Arbogastes, fearing the just resentment of the victor, died by his own hand. The whole Roman empire might have been once more reunited under one imperial sovereign, had Theodosius been ambitious of that sole dominion. But, being perfectly persuaded of the necessity of an emperor in each of the imperial cities, he assigned the designation of son of Honorius to the scepere of the Western empire, and associated with himself in the East. Scarcely had he completed this arrangement, when his constitution, which had always been feeble, was overtasked with the exertions of this campaign and the cares of state, yielded to the shock, and he expired, to the universal regret of the empire, which beheld the splendour of the Roman name passing away with him, its last great emperor. This event took place A.D. 395. Arcadius, at the time of his death, was 60 years of age, and had reigned 16 years. Few of the Roman emperors, indeed, died more lamented than Theodosius the Great. His sincere attachment to Christianity, and the efforts which he made to further its progress, contributed, it is true, very materially to the advancement of his fame among a large and influential class of his subjects; but his character, on other accounts, exhibited so many points deserving of applause, that even the most determined of his enemies among pagan writers are compelled to acknowledge his merits, and to praise the mild and impartial spirit in which he conducted his government. The welfare of his people seems to have supplied the ruling motive of his policy in peace and in war; and, although bred a soldier and desirous of military glory, he on all occasions appeared more willing to sacrifice his reputation for courage than to earn the renown of a hero at the expence of life. He was in the last estate, perhaps, which attaches to his character, is the severity which he employed in punishing a popular insurrection which had taken place at Thessalonica. This event occurred A.D. 390. The origin of the catastrophe was in itself very trivial, being simply the imprisonment of a favourite charioteer of the circus. This provocation, added to some former disputes, as the emperor did not hesitate to make use of his influence to murder his governor and several of his officers, and dragged their mangled bodies through the mire. The resentment of Theodosius was natural and merited, but the manner in which he displayed it was in the highest degree inconsistent. An invitation was given, in the emperor’s name, to the people of Thessalonica, to an exhibition at the circus; and, when a great concourse had assembled, they were massacred by a body of barbarian soldiers, whom he had engaged to perform the task, at a very cheap rate, of 1000 dinars each. This atrocity was so gross, that a sentence to the repentance of his master could be of no possible avail. (Hethc- crington’s History of Rome, p. 254, seqq. — Enceyclo. Metrop., div. 3, vol. 3, p. 238.)—III. The second emperor of the name, the son of Arcadius, emperor of the West, and grandson of the preceding. His father died when he was only eight years of age; the minority of the prince was faithfully directed by the wisdom of Anthemius, the prefect, whose excellent abilities were not unequal to the arduous task committed to his care. But he found it expedient, either with the view of removing jealousy, or of gratifying the ambition of Pulcheria, the sister of the young emperor, to associate her in the management of affairs; for, though she was only two years older than Theodosius, he was too weak in his character and in his better respects, and was afraid to take a share in the duties of government. At the age of sixteen, accordingly, she was saluted with the title of Augusta. Pul-
chera, in fact, though arrayed in female attire, was the only individual among the descendants of Theodotius who exhibited any tokens of his manly spirit. She superintended at the same time the education of her brother, whose mind she soon discovered to be incapable of rising above the mere forms of polished life; and for this reason alone, it has been candidly supposed, she limited her instructions to those external observances which would qualify him for the majesty of the East, while the real authority and principal office of his age might still be retained in her own hands. She even chose a wife for him in the person of Eucodia, an Athenian maid, who first presented herself at court as a suppliant, and who, as the consort of Theodotius, was destined to experience a great variety of fortune. (Vid. Euzodia I.) The reign of Theodotius, therefore, was virtually that of Anthemius and Pulcheria. The principal event during its continuance was the invasion of the Huns under the celebrated Attila, who carried fire and sword to the very gates of Constantinople, and only granted peace on conditions most favourable to himself and humiliating to the empire.—Theodotius met his death by a fall from his horse in hunting, A.D. 450. In the reign of this emperor was compiled the Theodosian Code, consisting of all the constitutions of the Christians from the times of Constantine to his own time. (Heinecc. Antiq. Rom. proem. 22.)—IV. A mathematician of Tripolis, in Lydia, who flourished probably under the Emperor Trajan, about A.D. 100. He wrote three books on the doctrine of the sphere, of which Ptolemy and succeeding writers availed themselves. They were translated by the Arabians into their language from the Greek, and afterward translated from the Arabic into Latin. The best edition is that of Halley, printed at London, 1707.

Theognis, a native of Megara, in Greece, born B.C. 583, and who attained to the age of eighty-eight years. He is one of the Greek Gnomic poets. Theognis was exiled from Megara for his political sentiments, and retired in consequence to Thebes, where he took up his abode. He was a considerable traveller for those days, a warm politician, a man of the world, and, as it should seem, of pleasure too; and his pithy maxims upon public and private affairs, whatever may now be thought of them by the printers, booksellers, and creditors, drinking, dressing, and spending, seem the fruits of personal experience, the details of which other parts of his poetry very sufficiently celebrate. If we understand Suidas correctly, there existed in his time three collections of Theognidean vers: 1. Miscellaneous Gnomie elegies, to the number of 2800 lines. 2. A Gnomology of the same sort, addressed to Cynus. 3. Other didactic and admonitory poems.—The total number of lines constituting the mixed mass which we now have under the name of Theognis, inclusive of the 159 new verses discovered by Bekker, in 1815, in a Modena manuscript, amounts to 1392 or thereabout. They are all exclusively in elegiac metre, but are evidently a farrago huddled together from the voluminous originals anciently existing, and also, in numerous instances, ignorantly interpolated with passages from the elegies of Solon and Mimererus. It must, indeed, be immediately obvious to the reader, that poems of such a nature, verses consisting of so many hundreds of gnomic couplets like these, could no more be expected to go down the stream of time entire than a ship without bolts; quotation alone would infallibly break the continuity, or, rather, collection of the lines; and intentional compilations of passages, having a generally similar tendency, would almost ensure the loss of such parts as were not added in any of the larger selections. In the new existing Theognis, Cynus is certainly the person principally addressed; but Polyppaes is also not unfrequently named, and Simonides, Onomacritus, Cleartius, Democles, Academus, and Timagoras are mentioned; it is clear, therefore, that there has been an utter confusion, and we must now take it as it is, without vainly endeavouring to pick out and sort the different ingredients which enter into its composition. (Quarterly Review, No. 95, p. 89, seqqu.)—Some ancient authors accuse Theognis of disseminating immoral voluptuousness in the guise of moral precept. Nothing of this kind appears in those relics of his poetry which have reached us, though little can be said for many of his notions of morality. His verses, indeed, like those of Hesiod, were learned by heart in the schools; but with this application of them a modern moralist would readily dispense. The versification of Theognis is marked in general by rhythmical fluency and metrical neatness.—The best editions of Theognis are, that of Brunck, in the Poetae Gnomici; that of Bekker, Laps. 1815, 8vo; and especially that of Welecker, Francez, 1826, 8vo. (Hefm. lexi. Lex. Bibliogr., vol. 3, p. 706.)

Theognides, a Greek poet who probably lived about the commencement of the second century of our era. He was a Platonist in his tenets, and wrote a treatise on the works of Plato, so far as they related to four branches of mathematical science; namely, geometry, arithmetic, music, and astronomy. We have only remaining the part that relates to arithmetic and music. It was first published in 1644, with notes by Bouilleval, Paris, 4to. Another edition was given in 1827, with notes by De Gelder, Lugd. Bat., 8vo.—II. A native of Alexandria, contemporary with Pappus, taught mathematics in the capital of Egypt, and flourished towards the end of the fourth century of our era. Theon observed a solar and lunar eclipse A.D. 365. We have from his pen a "Commentary on the Elements of Euclid," under the title of Συνοικία (Conferences), unless, indeed, this work is by another Euclid, who flourished about A.D. 1000. A commentary, of which we have a promiscuous mass, has been rather given a revised edition of it. He afterward composed Commentaries (Εγκυκλία) on the manual tables of Ptolemy, on the Almagest of the same writer, and on the poems of Aratus. As to the Commentary on the Almagest, it must be remarked that the labours of Theon do not extend farther than the first two books, on the fourth, on a part of the fifth, on books 6, 7, 8, 9, and 10, and on the 13th. The commentary on the third book is lost, and the book is not included in any of the commentaries on the first five books of Pappus. The commentary of Theon on Euclid is found in the editions of the latter. That on the Almagest has only been printed twice; namely, in the edition of the latter work by Grynaeus and Camerarius, Basili, 1538; fol., and separately, with a French translation, by the Abbé Halm, Paris, 1821, 4to. The scholia on Aratus, which have come down to us in a very interpolated state, are found in the editions of that poet. The commentary on the tables of Ptolemy was first given entirely by Halm, Paris, 1821. Before this only two fragments had been published. (Scholl. Hist. Lit. Gr., vol. 7, p. 49.)

Theophanes, 1. A Greek historian, born at Mytilene. He was very intimate with Pompey, and from his friendship with the Roman general his countrymen derived many advantages. Theophrastes wrote a "History of the wars of the Romans in various countries, under the command of Pompey." Of this work there remain only a few fragments, quoted by Strabo, Plutarch, and Stobaeus. Plutarch gives him a very unfavourable character for historic veracity. (Plut. Vit. Pompei.)—II. A Byzantine historian. He was a rich and noble family, and turned monk. When Nicephorus, patriarch of Constantinople, was exiled by the Emperor Leo the Armenian, Theophanes paid him extraordinary honours, and was himself banished to the isle of Samothrace, where he died in 818. His Chronicle, beginning where that of Syncellus terminated, was extended to the reign of Michael Cucropolcus. It is valuable for its facts, but displays the credulity and weak judgment of a superstitious mind. It was printed at
THEOPHRASTUS.

Theophrastus, I. the associate of Tribonian and Dorotheus in compiling the Institutes, of which he has left a paraphrase in Greek, a production of great utility for the knowledge of Roman law. He also wrote a commentary in the same language, on the Pandects, of which some fragments remain. The best edition of Theophilus is that of Reitz, Hag. Com., 1751, 4to. — II. A physician who flourished under Heraclius about A.D. 630. He wrote a treatise "De opibus" (De Utris), the best edition of which is that of G. R. Baynes, 1726. 8vo. The best edition of another work of his, on the Human Frame, is that of Morell, Paris, 1556, 8vo. — III. A bishop of Antioch, ordained to that see in 168 or 170 A.D. In his zeal for orthodoxy, he wrote against Marcion, and also against Hermogenes, and he composed other tracts, some of which are preserved. We have extant also three books against Autolycus. These works display, it is said, the earliest example of the use of the term "Trinity," as applied to the three persons of the Godhead. His work against Autolycus was published by Conrad Gesner, at Zurich, in 1546. It was annexed, also, to the Supplement of the Bibliotheca Patrum in 1624.

Theophrastus, a Greek philosopher, a native of Eresos in the island of Lesbos. He was born B.C. 382, and received the first rudiments of education under the eyes of his own country, after which he was sent by his father, who was a wealthy man, to Athens, and there became a disciple of Plato, and, after his death, of Aristotle. Under these eminent masters, blessed by nature with a genius capable of excelling in every liberal accomplishment, he made great progress both in philosophy and eloquence. He was on account of his high attainments in the latter that, instead of Tyrtamus, his original name, he was called, as some say, by his master, but more probably by his own followers, Euphrastus ("the fine speaker"), and subsequently Theophrastus ("the divine speaker"). When he undertook the charge of the Peripatetic school, he conducted it with such high reputation that he had about two thousand scholars; among whom were Nicomachus, the son of Aristotle, whom his father had intrusted by will to his charge; Erasistratus, a celebrated instrument maker, who sided with him in the same house. His erudition and eloquence, united with engaging manners, recommended him to the notice of Cassander, and also of Ptolemy, who invited him to visit Egypt. So great a favourite was he among the Athenians, that, when one of his enemies accused him of teaching impious doctrines, the accuser himself escaped with difficulty the punishment which he endeavoured to bring upon Theophrastus. — Under the archonship of Xenippus, B.C. 305, Sophocles, the son of Amphidicles, obtained a decree (upon what grounds we are not informed), making it a capital offence for any philosopher to open a public school without an express license from the senate. Upon this all the philosophers left the city. But the next year, the person who had proposed the law was himself fined five talents, and the philosophers returned with greater weight. B.C. 304, an edict respecting schools. Theophrastus, who had suffered, with his brethren, the persecution inflicted by this oppressive decree, shared the honour of the restoration, and continued his debates and instructions in the Lyceum. — Theophrastus is highly celebrated for his industry, learning, and eloquence, and for his generosity and public spirit. He is said twice to have freed his country from the oppression of tyrants. He contributed largely toward the founding of the schools by the public meetings of the philosophers, which were held, not for the sake of show, but for learned and ingenuous conversation. In the public schools he commonly

8 E

THEOPHRASUS.

ly appeared, as Aristotle had done, in an elegant dress, and was very attentive to the graces of elocution. He lived to the advanced age of eighty-five. To avoid the close of his life he grew exceedingly infirm, and was consoled in his melancholy by the pressing great regret on account of the shortness of life; and complained that nature had given long life to stage and crow, to whom it is of so little value, and that to man, who, in a longer duration, might have been able to attain the summit of science; but now, as soon as he arrives in sight of it, is taken away. — Theophrastus wrote many valuable works, and composed a great deal of verse, and his principal work of a philosophical, or, rather, ethical character, is entitled "Hēkoi Χαρακτῆρες ("Moral Characters"), in thirty chapters. We must take care not to be misled by this title; no moral characters appear in the work, but the author merely traces such as are of a ridiculous stamp. Hence Schneider, one of the editors of Theophrastus, has been led to the opinion, that the Characters of Theophrastus, as we now have them, are only extracts from different moral works published by the philosopher; extracts made at different times and by different persons. He founds this supposition on the unconnected style, so prevalent in the "Characters," on the forms of expression which often occur there, and on the following inscription or title of a manuscript: "Εκ τῶν Θεοφραστου Χαρακτηρων ("Ex-

tracts from the Characters of Theophrastus"). This is not altogether satisfactory, as the original extracts contain many verses, and the whole is a collection of these, rather than a selection from different works. More unanimity prevails among critics relative to the spuriousness of the preface. Its style, totally different from that of the rest of the work and of the other writings of Theophrastus; the errors in dates; the mention made of his children; in fine, the passage where Theophrastus is made to say that, after having carefully compared the good and the bad, he has believed it to be his duty to commit to writing an account of the mode of life accustomed to be pursued by each, and to arrange them into classes (whereas he merely gives ridiculous characters, and his portraits offer neither vices nor their opposite virtues), all these circumstances combined make a very strong case against the authenticity of the preface in question. The "Characters" of Theophrastus stand very high as a classical work. They are, for precision of the facts, the style and its great precision, as well as from the exactness and fidelity of the portraits. Theophrastus has sketched with admirable art the various figures which he had proposed to represent on his moral canvas: his designs are executed with a perfect finish; and his numerous imitators, among whom La Bruyère stands most conspicuous, will never conceal from view and produce a forgetfulness of the beauties of their original. We must not, however, bring to the perusal of this work that delicacy of taste, and that general tone of feeling which result from the present relations of society; we must remember that Theophrastus selects his portraits from amid a licentious democracy. — We have also, under the name of Theophrastus, "A book or fragment of Metaphysics" (Τέλη μετα τα φυσικα αποσπασματικα η βιβλιον απο- Theophrastus is also included as the author of a treatise, Ἰππαχους ("On Perception"), treating of the senses, the imagination, and the understanding. This work has come down to us, and also a commentary upon it, in the form of a paraphrase, by Priscian of Lydia, who lived in the sixth century. — Porphry, in his commentary on the Harmonics of Ptolemy, has preserved for us an interesting fragment of the second book of Theophrastus' treatise on Music. A loss which we have much to regret is that of three works of Theophrastus on Laws, which made a kind of appendage to Aristotle's treatise on Politics. The first of those productions was entitled Περὶ Νόμων ("Of Laws"); the second, Νόμων κατά στοιχείον κτο
THEOPOMPUS.

("Twenty-four books of Laos, in Alphabetical order"); and the third, Nougætives ("Of Legislators"), in four books. Stobaeus cites a fragment of the first work. Athenaeus mentions other works also of Theopompus, on Flattery, Pleasure, Happiness, &c., which are now lost. —Independently, however, of his metaphysical, ethical, and political speculations, Theopompus also turned his attention to Mineralogy and Botany. As the philosopher of Stagira is the father of Zoology, so is Theopompus to be regarded as the father of Botany. His vegetable physiology contains some very just arrangements: he had even a glimpse of the sexual system in plants.—Of the numerous works on natural history written by Theopompus, the following alone remain: 1. 

Proclidae, Phocas.

2. Peri physou lito-

riais ("Of the Causes of Plants"), in ten books, of which only six have come down to us. It is a system of botanical physiology.

3. Peri Aithon ("Of Stones"). This work proves that, after the time of Theopompus, mineralogy retrograded. —We have also other treatises of his, on Oscura, Winds, Prognostics of the Weather, domestic arrangements of various kinds, of Agriculture, of Animals that change Colour, on Bees, &c. All these fragments have been preserved for us by Photius. —The best edition of the works of Theopompus is that of Schneider, Lips., 1818-1821, 5 vols. 8vo. The treatise on Stones has been translated into English by Sir John Hill, and is accompanied by very useful notes, Lond., 1777, 8vo. The best edition of the "Characters" are, that of Casaubon, L. Bat., 1704, 2 vols. 4to; that of Fischer, Coburg, 1765, 8vo; and that of Ast, Lips., 1816, 8vo. This last, critically speaking, is perhaps the best.

Theophylactus, I. Simocata, a Byzantine historian. His history of the reign of the Emperor Maur- rix is comprehended in eight books, and terminates with the massacre of this prince and his children by Phocas. Casaubon considers this writer one of the best of the later Greek historians. He wrote also other works, of which the earliest, the best edition of his history is that of Fabrizi, Paris, 1648, fol. The best edition of his Physical Questions and Epistles is that of Boissoneau, Paris, 1835, 8vo.

II. One of the Greek fathers, who flourished A.D. 1070. Dupin observes that his Commentaries are very useful for the literal explanation of the Scriptures; and Dr. Lardner remarks that he quotes no forged writings or apocryphal books of the New Testament, many of which he excludes by his observations on John, 1, 31—34, that Christ wrought no miracle in his infancy, or before the time of his public ministry. His works were edited at Venice, 4 vols., 1754 to 1763.

Theopompus, a name given to Antioch because the Christians first received their name there. Theopompus, I. a king of Sparta, of the family of the Prochide, who distinguished himself by the many new regulations he introduced. He died after a long and peaceful reign, B.C. 753.—II. A Greek historian, a native of Chios, born about B.C. 360. His father, Damastissara, became an object of strong dislike to his fellow-citizens on account of his attachment to Sparta, and was eventually exiled, together with his son. The latter came to Athens, and there had for an instructor the celebrated Isocrates. At the age of 50, Theopompus, returned to his native city, on the recommendation of Alexander the Great; but after the death of that prince he was again driven out. He then retired to Egypt, but was badly received by Ptolemy I, who regarded him as an intriguing and trouble-making man, and even wished to put him to death. It was in ac-

cordance with the advice of Isocrates, that Theopompus undertook to write a continuation of the history of Thucydides. He added, in the first place, according to some, an eighth book to the work, which the historian had left incomplete. After this he composed a History of Greece (Ἐλληνικά) in eleven books, and an abridgment of Herodotus in two books. He also wrote a history of Philip, father of Alexander the Great, in 88 books. Of these 58 there were still existing in the time of Longinus; the remaining half, however, makes us acquainted with the contents merely of the twelfth book, which embraced the history of Pacorus, king of Egypt. He informs us that the History of Philip contained very many digressions, and that Philip, the king of Macedon, who was defeated by the Romans, having caused all that did not relate to the father of Alexander to be thrown out, there remained merely what would amount in the whole to 16 books. Some blame Theopompus for a certain harshness and illiberality in his remarks; but Dionysius of Halicarnassus, on the other hand, praises the order and perspicuity that appeared in his works; and he commends, too, the long preparatory toil through which he went before entering on the composition of his work, and the researches which he made, and the pains he took to confer with those who had been eye
dwitnesses of some of the events which he had written. In speaking of the history of the Philip, Dio-

nysius also makes the following remarks in relation to his general manner, which may serve in some degree, perhaps, to explain the charge of harshness and of il
derful feeling accustomed to be brought against this historian: "Not content with relating whatever has passed before the eyes of the world, Theopompus penetrates to the inmost souls of his principal actors, scrutinizes narrowly their most secret intentions, removes the masks from them, and brings to light those vices which their hypocrisy had hoped to con
cel. Hence some have charged him with calumnia
ting, because he has blamed boldly what deserved to be blamed, and has lessened the glory which sur
rounded some individuals. In my opinion, however, he has merely done what physicians do, who apply the steel and the fire to those parts that are diseased and gangrenous, and remove the corruption thereby us. said.

—As for his diction, it is altogether like that of Isocrates, pure, clear, noble, elevated, flowing, full of sweetness and harmony." (Dion. Hal., Ep. ad Cn. Pomp.—Op., ed. Reiske, vol. 6, p. 783.) —It would be wrong in us to oppose to the latter part of this eulogium the criticism of Longinus (§ 42) on a passage of Theopompus, because there is a wide dif
dference between blaming an isolated phrase employed by a writer, and condemning his general style. The ap
droach uttered by Longinus agrees rather with what

the rhetorical Herogenes also condemned, namely, too great a fondness for digressions, and a relating, sometimes, of things actually sily in their nature. (De Vet. Script. Censura, ed. Reiske, vol. 5, p. 429.) Cornelius Nepos has made much use of Theopompus, although he calls him and Timaeus two of the most calumniating of men, " duo maledictissimi." (Vit. Alch., 11, 1.) From an observation, moreover, made by Photius, he would appear to have been a very vain writer, and to have regarded those who had gone be

fore him as not worthy even of the second rank. (Phot., Cod., 176; vol. 1, p. 121, ed. Bekk.) —In 1803, Koch announced a critical edition of the fragments of Theopompus as about to appear, in a dissertation en
tituled " Protogomena ad Theopompum Chion," Stet-

tini, 4to. The promised edition, however, has never

been published. The same author subsequently reunited the frag

ments of the Abridgment of Herodotus in a disserta
tion bearing the title "De Theopompi Chii Epitomes. Hera
dota." It is found in Creuzer's Meletematum, 1322

THE THERMAE

Thera, the celebrated of the Sporades, situate, according to Strabo, about seven hundred stadia from the Cretan coast, in a northeast direction, and nearly two hundred stadia in circumference. (Strab., 484.) The modern name is Santorini. This island was said by mythologists to have been formed by the sea by a cloud of earth thrown from the ship Argo, and on its first appearance obtained the name of Calliste. (Plin., 4, 12.) It was first occupied by some Phoenicians, but subsequently colonized by the Lacedemonians, who settled there the descendants of the Minya, after they had been expelled from Lemnos by the Pelasgi. The colony was headed by Theras, a descendant of Cadmus, and maternal uncle of Eurystheus and Proclus; he gave his name to the island. (Herod., 4, 147. — Pausan., 3, 1. — Callim., ap. Strab., 347.) Several generations after this event, a colony was led into Africa by Battus, a descendant of the Minya, who there founded the city of Cyrene. (Herod., 4, 150. — Pind., Pyth., 4, 10.) Thera appears to have been produced by the action of submarine fires. (Cramer’s Anc. Greece, vol. 3, p. 412, seqq.) It is bounded on the north and east by Miletus, on the south and west by Malte-Brum, "as to the existence of an ancient volcano, to which crater of which occupied all the basin between Santorin and the smaller islands of the group; the mouth of the crater has been partly overthrown, and the aperture enclosed by the accumulation of dust and ashes. The lava, the ashes, and pumice-stone discharged from that volcano have covered part of Thera (Mem. de Trévoux, 1715), but the greater portion, which consists of a large bed of fine marble, has never been in any way changed by the action of volcanic fire. (Tournefort, vol. 1, p. 321.) There is not now, however, covered with ashes and pumice-stones; it is fertile in corn, and produces strong wine and cotton, the latter of which is not, as in the other islands, planted every year. The population amounts to about 10,000, and all the inhabitants are Greeks." (Malte-Brun, Geogr., vol. 6, p. 162.)

Thermae, a pupil of Socrates, and afterward one of the Athenian generals along with Alcibiades and Thrasybulus. He was appointed by the Lacedemonians one of the thirty tyrants; but the moderation of his views giving offence to his colleagues, he was condemned to drink hemlock. From the readiness with which Theramenes attached himself to whatever party chanced to be uppermost, he was nicknamed o κόβορος, this being an appellation for a sort of sandal, not made right and left, as sandals usually were, but being equally adapted to both feet. (Suid., s. v. Κόβορος. — Blomf. in Mus. Crit., vol. 2, p. 212.)

Therapne, a town of Laconia, southeast of Sparta, and near the Eurotas. It received its name from Therapne, daughter of Lelex. Here were to be seen the temple of Menelaus, and his tomb, as well as that of Helen. Here also was the temple of Pollux, and the god of this deity and his brother were said to have been born here. Pindar has often connected Therapne with the mention of the Tyndarides. (Pind., Isth., 1, 42. — Id., Pyth., 11, 95. — Id., Nem., 10, 106.) Therapne probably corresponds with the village of Chrysapha, about two miles to the southeast of the ruins of Sparta. (Cramer’s Anc. Greece, vol. 3, p. 212.)—II. A town of Bocotia, between Thebes and the river Asopus, and in a line nearly with Ptoinon. (Suid., s. v. Therapna.)

Theras, a son of Autes of Lacedemon, who conducted a colony to Calliste, to which he gave the name of Thera. (Vid. Thera.) He received divine honors after death. (Pausan., 3, 1, 15.)

Therasia, a small rocky island in the Ægean, separated from the northwest coast of Thera by a narrow channel. According to Pliny (4, 12, 13), it was detached from Thera by a concussion of the earth. Therasia still retains its name. (Biondellini, Int. Archipel., p. 78, ed. De Sinner.)

Thermia, a town of Macedonia, afterward called Thessalonica, in honour of the wife of Cassander, and now Saloniki. (Vid. Thessalonica.)

Thermicus Sinus, a large bay setting up between the coast of Thera and that of Chalcidice, and deriving its name from the ancient Thera. Thermicos Sinus, those adjacent to Himera on the northern front of Sicily, now Termini, which has also become the modern name for the remains of the ancient city. So, also, in speaking of the warm baths constructed at Rome by various emperors, we read of the Thermæ of Dioclesian, &c.

Thermódon, a river of Pontus, rising in the mountains on the confines of Armenia Minor, and pursuing a course nearly due west until it reaches the plain of the Thermopylae. From the mouth of these rivers emptying into the Sinus Aminus. According to Strabo (548), it was formed by the junction of several minor streams. Apollonius Rhodius makes these rivulets not less than ninety-six in number. (Arg., 2, 972.) Xenophon also describes the Thermodor as a considerable river, not less than three pletreth in width, and not easy for an enemy to cross. (Anab., 5, 6, 3.) Diemius Perieges affirms that crystal and jasper were found in its banks (v. 773-182). This river, which retains the name of Thermach, is frequently mentioned in the poets, from the circumference of the Amazonis having been fabled to have dwelt at one time on its banks. (Cramer’s Asia Minor, vol. 1, p. 269, seqq. — Herod., 9, 27. — Virg., Aen., 11, 659. — Propert., 3, 14. — Pind., 6, 3.)

Thermopolis, a celebrated pass leading from Thessaly into Lower and southern Greece. The word Thermopolis (θερμοπόλις, "Warm Gates or Pass") denotes both the narrowness of the defile, which is formed by the sea on one side and the cliffs of Mount Cithaeron on the other, and also the vicinity of certain warm springs, still called Thermas, and which are seen to issue principally from two mouths at the foot of the precipices of Cithaeron. The following description of Thermopolis is given by Herodotus: "On the western or sea side of the pass is a lofty mountain, so steep as to be inaccessible; on the eastern side are the sea and some marshes. In this defile is a warm spring called Chytria (Χύρια) by the inhabitants, where stands an altar dedicated to Hercules. A wall has been constructed by the Phocians to defend the pass against the Thessalians, who came from Thessalia to take possession of Thessaly, then named Kólis. Near Thermopolis is a river, which is broader than half a plethron (50 feet); but it is narrower still both before and after Thermopolis, at the river Phenik, near Antehele, and at the village of Alpeni." (Herod., 7, 176.) It was here that Leonidas and his band of heroes withstood the attack of the immense Persian host, and nobly died in defending the pass. Here, too, was fought, at a later day, a battle between the Roman army under Gaius Verus and the forces of Antiochus, in which the latter were entirely routed. (Suid. Cäl- dromus. — Lit., 36, 15. — Pind., 4, 7.)—The history of the affair at Thermopolis is as follows: At the time when the congress at the Isthmus resolved on defending the pass in question, the Olympic festival was
THERMOPYLÆ.

The danger of Greece did not seem so pressing as to require that these sacred games, so intimately connected with so many purposes of pleasure, business, and religion, should be suspended. And it was thought sufficient to send forward a small force, to bar the progress of the enemy until they should leave the Persians world at leisure for action. That the northern Greeks had determined that, notwithstanding this delay, Sparta did not mean to abandon them, the little band that was to precede the whole force of the federates was placed under the command of her king Leonidas. It was composed of only 300 Spartans, attended by a body of Helots whose numbers are not recorded, 500 men from Thebes, and as many from Mantinea, 120 from the Arcadian Orchomenus, and 1000 from the rest of Arcadia. Corinth armed 400, Philiius 200, and Myconten 80. Messengers were sent to summon Phoci and the Locrics, whose territory lay nearest to the post which was to be maintained, to raise their whole force. "They were reminded that the invader was not a god, but a mortal, liable, as all human greatness, to a fall: and they were bidden to take courage, for the sea was guarded by Athens and Eginæ, and the other maritime states, and the troops now sent were only the forerunners of the Peloponesian army, which would speedily follow."

Herodotus mentions merely that "the Thermopylaeans, with 1000 men, and the Locrics of Opus with all the force they could muster. On his arrival in Bootia Leonidas was joined by 700 Thespian, who were zealous in the cause; but the disposition of the Thebes was strongly suspected; her leading men were known to be friendly to the Persians; and Leonidas probably believed that he should be counteracting their intrigues if he engaged the Thesians to take part in the contest. He therefore posted them upon guard for instance, and they sent 400 men with him; but, in the opinion of Herodotus, this was a forced compliance, which, if they had dared, they would willingly have refused. With this army Leonidas marched to defend Thermopylae against two millions of men. It was a prevailing belief in later ages—one, perhaps, that became current immediately after the death of Leonidas—that when he sat out on his expedition he distinctly foretold it. And Herodotus gives some colour to the opinion by recording that he selected his Spartan followers from among those who had sons to leave behind them. But Plutarch imagined

THERMOPYLÆ.

the sea it was once guarded no less securely than by the cliffs; for down along the edge of a deep morass, which the mud, brought down by the flood of winter, gushes up in a copious stream, and other slenderer veins trickle across the road. This is the pass properly called Thermopylae. On the side of

neat at hand, and also one little less respected among many of the Doric states, especially at Sparta, that of the Carnean Apollo, which lasted nine days. The
however, stood their ground as before, or, if ever they gave way and turned their backs, it was only to face suddenly about and deal tenfold destruction on their pursuers. The Thibians, who with mindless assaults the king was seen to start up from his throne in a transport of fear or rage. The combat lasted the whole day: the slaughter of the barbarians was great; on the side of the Greeks, a few Spartan lives were lost; as to the rest, nothing is said. The next day the attack was renewed with no better success: the bands of the several cities that made up the Grecian army, except the Thibians, who were mindless assaulters, the scene was, relieved each other at the post of honour; all stood equally firm, and repelled the charge not less vigorously than before. The confidence of Xerxes was now changed to despondence and perplexity.

The secret of the Anopoea could not long remain concealed after it had become valuable. Many tongues, perhaps, would have revealed it: two Greeks, a Ca- rystian, and Cordylalus of Anticyra, shared the reproach of this foul treachery; but, by the general opinion, confirmed by the solemn sentence of the Amphi- cyonic council, which set a price upon his head, Ephialtes, a Malian, was branded with the infamy of having guided the barbarians round the fatal path. Xerxes, overjoyed at the discovery, ordered Hydarnes, the commander of the Ten Thousand, with his troops, to follow the traitor. They set out at nightfall: as day was beginning to break, they gained the brow of Thermopylae, and the wall behind them was dark and still, and the universal silence was first broken by the trampling of the invaders on the leaves with which the face of the woody mountain was thickly strewed. The Phocians started from their couches and ran to their arms. The Persians, who had not expected to find an enemy on their way, were equally surprised at the sight of an armed band, and thought that they might be Spartans; but when Ephialtes had intimated them of the truth, they prepared to force a passage. Their arrows showered upon the Phocians, who, believing themselves the sole object of attack, retreated to the highest peak of the ridge, to sell their lives as dearly as they could. The Persians, without turning aside to pursue them, kept on their way, and descended towards Alpenus. Meanwhile, deserters had brought intelligence of the ene- my. They returned to their own posts; and their report was confirmed at daybreak by the sentinels who had been stationed on the heights, and now came down with the news that the barbarians were crossing the ridge. Little time was left for de-liberation: opinions were divided as to the course that prudence prescribed or honour permitted. Leonidas did not restrain, perhaps encouraged, those of the ali-ies who wished to save themselves from the impend- ing fate; but for himself and his Spartans he declared his resolution of maintaining the post which Sparta had assigned them to the last. All withdrew except the Thebians and the Thebans. The Thebians re- mained from choice, bent on sharing his glory and his death. We should willingly believe the same of the Thebans, if the event did not seem to prove that their stay was the effect of compulsion. Herodotus says that the Thebans, who were in number about one thousand, had come to Thermopylae, because they knew them to be disaffected to the cause of freedom; yet, as he was himself cer-tain of perishing, it is equally difficult to understand why and how he put this violence on them; and Plu- tarch, who observes the inconsistency of the reason assigned by Herodotus, would have triumphantly indi- cated the honour of the Thebans, if he could have done so. Unless we suppose that their first choice was on the side of hon-our, their last, when death stared them in the face, on the side of prudence, we must give up their conduct and that of Leonidas as an inscrutable mystery.—Me- gistias, an Acarnanian soothsayer, who traced his lin- eage to the ancient seer Melampus, is said to have read the signs and auguries, and got his companions in the en- traits of the victims before, and announced the arrival of their danger. When the presage was confirmed, Leonidas pressed him to retire: a proof, Herodotus thinks, that the Spartan king did not wish to keep any one who desired to go. Megistias, imitating the ex- ample of the heroic prophet Theocles, who, after pre- dicting the fall of Ira to Aristomenes, refused to sur- vive, gave the prophecy of the ruin of his country, would not quit the side of Leonidas and the Thebians. Present and away went the chief, who had accompanied him, that the line of Melampus might not end with him. Leonidas would also, it is said, have saved two of his kinsmen, by sending them with letters and messages to Sparta; but the one said he had come to bear arms, not to carry letters; and the other, that his deeds would tell all that Sparta wished to know.—Before Hydarnes began his march, Eph- altes had reckoned the time he would take to reach the southern foot of the mountain, and Xerxes had, accordingly, fixed the hour when he would attack the Greeks in front. It was early in the forenoon when the Ten Thousand had near finished their round, and the preconcerted onset began. Leonidas, now less careful to husband the lives of his men than to make havoc among the barbarians, no longer confined himself, as before, within the pass, but, leaving a guard of five hundred to guard the pass, he advanced to the enemy. His little band, reckless of everything but honour and vengeance, made deep and bloody breaches in the ranks of the Persians, who, according to an Oriental custom, were driven into the conflict by the lash of their commanders. Many perished in the sea, many were trampled under foot by the throng that pressed on them from behind; yet the Spartans too were hard pressed; so hard that the fight was hottest over his body, which was rescued after a hard struggle, and the Greeks four times turned the enemy. At length, when most of their spears were broken, and their swords blunted with slaughter, word came that the band of Hydarnes was about to enter the pass. Then they retreated to the wall, and pressed on to a knoll on the other side, where they took up their last stand. The Thebans, however, did not retreat through their own fear, but they begged for quarter. This, it is said, the greater part obtained: Herodotus heard a story, about which Plu- tarch is, with good reason, incredulous, that they were afterward all branded like runaway slaves; but it is not denied that they placed themselves at the mercy of the barbarians. The Persians rushed forward unresisted, broke down the wall, and surrounded the hillock where the little remnant of the Greeks, armed only with a few swords, stood a butt for the arrows, the javelins, and the stones of the enemy, which at length overwhelmed them. Where they fell they were afterward buried; their tomb, as Simonides sang, was an altar; a sanctuary, in which Greece revered the memory of her second founders. (Diod. Sic., 11, 11.) The inscription of the monument raised over the slain, who died from first to last in the face of the Persians, was marked with the sword of Peleon, and the inscription indicates the valour and constancy of the Persians, who, for the sake of the sword of Peleon, and the victory of their country, had fought at Thermopylae with three hundred myriads. We ought not to expect accuracy in these numbers: the list in Herodotus, if the Locrian force is only supposed equal to the Phocian, exceeds six thousand men: the Phocians, it must be remembered, were not engaged. But it is not easy to reconcile either account with the historical fact, that the Grecian dead were amounted to four thousand, unless we suppose that the Helots, though not numbered, formed a large part of the army of Leonidas. The lustre of his achievement is not diminished by their presence. He himself and his Spartans no doubt considered their
persuading stand in the post intrusted to them, not as an act of high and heroic devotion, but of simple and indispensable duty. Their spirit spoke in the lines inscribed upon their monument, which bore the passing traveller to tell their countrymen that they had fallen in obedience to their laws. How their action was viewed at Sparta may be collected from a story which cannot be separated from the recollection of this memorable day. When the band of Leonidas was nearly enclosed, two Spartans, Eurytus and Aristodemus, were staying at Alpenus, having been forced to quit their post by a disorder which nearly deprived them of sight. When they heard the tidings, the one called for his arms, and made his helot guide him to the place of combat, where he was left, and fell. But the other's heart failed him, and he saved his life. When he returned to Sparta he was shunned like a pestilence: no man would share the fire of his hearth with him, or speak to him; and he was branded with the name of "the trembler Aristodemus" (γρέας Ἀριστοδήμος). According to another account, both these Spartans had been despatched from the camp as messengers, and there being sufficient time for both to return, Eurytus did so, but Aristodemus lingered on the way. — The Persians are said to have lost at Thermopylae 20,000 men: among them were several of royal blood. To console himself for this loss, and to reap the utmost advantage from his victory, Xerxes sent over to the fleet, which, having heard of the departure of the Greeks, was now stationed on the northern coast of Euboea, and by public notice invited all who were curious to see the chastisement he had inflicted on the men who had dared to defy his power. That he had previously buried the greater part of his own dead seems natural enough; and such an artifice, so slightly differing from the universal practice of both ancient and modern belligerents, scarcely deserved the name of a stratagem. He is said also to have mutilated the body of Leonidas; and, as this was one of the foremost which he found on a field that had cost him so dear, we are not at liberty to reject the tradition, because such ferocity was not consistent with the respect usually paid by the Persians to a gallant enemy. To cut off the head and right arm of slain rebels was a Persian usage. (Plut., Vit. Artax., c. 13.—Strab., 733.—Herod., 7, 206, seqq.—Thirlwall's Hist. of Gr., vol. 2, p. 282, seqq.) — According to modern travellers, the warm springs at Thermopylae are about half way between Bodonita and Zeiton. This source of the two springs, called the limestone precipices of Ξέτα. The temperature in the month of December, was found to be 111° Fahrenheit. Dr. Holland found it to be 103° or 104° at the mouth of the fissures. The water is very transparent, but deposits a calcareous concretion (carbonate of lime), which adheres to reeds and sticks, like the waters of the Anio at Tivoli, and the sulphureous lake between that place and Rome. A large extent of surface is covered by these deposits, which are covered with oxalic acid, lime, muriate of soda, and sulphur. The ground about the springs yields a hollow sound like that within the crater of the Solfasserta near Naples. In some places Dr. Clarke observed cracks and fissures filled with stagnant water, through which a gaseous fluid was rising in large bubbles to the surface, its foetid smell bespeaking it to be sulphuretted hydrogen. The springs are very copious, and immediately form several rapid streams, passing into the sea, which is apparently about a mile from the place. Baths were built here by Herodes Atticus. The defile or strait continues for some distance beyond the hot springs, and then the road, which is still paved in many places, bears off all at once across the plain to Zeiton, distant three hours from Thermopylae. Near the springs there are faint traces of a wall and circular tower, composed of a thick mass of small stones, and apparently not of high antiquity. The foot of the mountain, however, Mr. Dodwell says, is so covered with trees and impenetrable bushes as to hide any vestiges which may exist of early fortifications. The wall, of which mention has already been made by us, was, at a later day, renewed and fortified by Antiochus when defending himself against the Romans; and was afterward restored by Justinian, when that monarch thought to secure the tottering empire by fortresses and walls: he is stated also to have constricted cisterns here for the reception of rain-water. The question is, whether this be the site of the ancient wall, as Dr. Holland and Mr. Dodwell suppose, or whether the spring referred to by Herodotus be not the fountain mentioned by Dr. Clarke, who describes the wall, not as traversing the marsh, but as extending along the mountainous chain of Ξέτα from sea to sea. The cisterns built by Justinian would hardly be in the marshy plain, but must be looked for within the fortified pass. Formidable, however, as the defile of Thermopylae may seem, it has never opposed an effectual barrier to an invading army; the strength of these gates of Greece being rendered vain by the other mountain routes which avoid them. "The Persians," says Procopius, "found only one path over the mountains; now there are many, and large enough to admit a cart or chariot." A path was pointed out to Dr. Clarke to the north of the hot springs, which is still used by the inhabitants in journeying to Salonica. After following this path to a certain distance, another road branches from it towards the southeast, according to the route pursued by the Persians. Dr. Holland ascended Mount Ξέτα by "a route equally singular and interesting, but difficult, and not free from danger." When the Gauls under Brennus invaded Greece, the treacherous discovery made to him of a path through the mountains compelled the Greeks to retreat, to prevent their being taken in rear. Antiochus was in like manner forced to retreat with precipitation, on the heights above the pass occupied by Roman soldiers, who, under the command of M. Porcius Cato, had been sent round to seize these positions. In the reign of Justinian the army of the Huns advanced to Thermopylae, and discovered the path over the mountains. When Bajazet entered Greece towards the close of the fourteenth century, there appears to have been little need of these artifices: a Greek bishop is stated to have conducted the Mohammedan conquerors through the pass to enslave his country. During the latest wars, the two mountain passes formed a barrier against the Turkish forces. The passes of Calidromus and Cnemus were disputed on one occasion with success by a body of Armenoites under Os- zess; but the foe were afterward repeatedly suffered to cross the ridges of Othrys and Ξέτα without opposition.

Thermopylae, an unvalled city of Εὐξίος, northeast of Stratos, regarded as the capital of the Pisistratid family of Thessalians; its name from some warm springs in the neighbourhood, and Polybius (5, 7) speaks of it as τόπον ἐν τοῖς θέμοις. Its situation among the mountains rendered it, notwithstanding the want of walls, a place very difficult of access, and hence it was regarded as a kind of citadel for all Εὐξίος. It was here that the assemblies for deciding the elections of magistrates were held, as well as the most splendid festival and competitions. Hence it was not only with abundance of provisions and the necessaries of life, but with the most costly furniture, and with utensils of every kind adapted for entertainments. Philip III. of Macedon surprised the place by a rapid march, and obtained great booty, although many of the more valuable articles were either carried off or de stroyed by the inhabitants. (Polyb., 5, 9.) In the village of the town, the Macedonians did not spare
THESEUS.

THESEUS, a son of Polyneices and Argia. He was one of the Epigonii, and, after the capture of Thebes, received the city from the hands of his victorious fellow-chiefians. (Pausan., 9, 8. — Heyne, ap. Apollod., 3, 7, 4.) At a subsequent period, when already advanced in years, he accompanied the Greeks to the Trojan war, but was slain on the shores of Myasia by Telephus. (Dict. Cret., 2. — Heyne, ap. Virg., Æn., 2, 2, 24.) Theyrtras, one of the Greeks in the army before Troy. Homer describes him as equally deformed in person and in mind. Such was his propensity to indulge in contumelious language, that he could not abstain from directing it against not only the chiefs of the army, but even Agamemnon himself. He ultimately fell by the hand of Achilles, while he was ridiculing the sorrow of that for the slain Penthesilea. (I. H. II., 2, 2, seqq.)

Theseus a political given to the Athenians from Theseus, one of their kings. (Virg., G., 2, 383.) Theseus (two syllables), king of Athens, and son of Ægeus by Æthra, the daughter of Pittheus, monarch of Troæe, was one of the most celebrated heroes of antiquity. He was reared in the palace of his grandfather; and, when grown to proper age, his mother led him to the rock under which his father had deposited his infant. He there found a tablet inscribed with his name and the names of his parents, and his fate was foretold. He was early and took them out. He was now to proceed to Athens, and present himself to Ægeus. As, however, the roads were infested by robbers, his grandfather Pittheus pressed him earnestly to take the shorter and safer way over the Saronic Gulf; but the youth, feeling in himself the spirit and the soul of a hero, resolved to signalize himself like Hercules, with whose fame all Greece now rang, by destroying the evil-doers and the monsters that oppressed and ravaged the country; and he determined on the more perilous and adventurous journey by land. On his way to Athens he met with many adventures, and destroyed Periphatés, Sinis, Sciron, Procrustes, and also the monstrous sow Phaëa, which ravaged the country in the neighbourhood of Crommyon. Having overcome all the perils of the road, Theseus at length reached Athens, where new dangers awaited him. He found his father's court all in confusion. The Pallænids, or sons and grandsons of Pallas, the brother of Ægeus, had long seen with jealousy the sceptor in the hands of an old man, and now meditated wresting it from his feeble grasp. Thinking, however, that his death could not be very remote, they resolved to wait for that event; but they made no secret of their intentions. The arrival of Theseus threatened to disconcert their plan. They feared that if this young stranger should be received as a son of the old king, he might find in him a protector and avenger; and they resolved to poison his mind against him. Their plot so suc-

ceeded that Ægeus was on the point of sacrificing his son, when he recognised him, and then acknowledged him to be his long-lost son. All the Pallænids had recourse to arms, but Theseus defeated and slew them. Medea, it is also said, who was married to Ægeus, fearing the loss of her influence when Theseus should have been acknowledged by his father, resolved to anticipate that event; and, moved by her calumnies, Ægeus was presenting a cup of poison to his son, when the sight of the sword left with Æthra discovered to him who he was. The bull which Hercules had brought from Crete was known to the Athenians, and the country was in terror of its ravages. Theseus went in quest of him, overcame, and exhibited him in chains to the astonished Athenians, and then sacrificed the animal to Apollo Delphinus. The Athenians were at this period in deep affliction on account of the tribute which they were forced to pay to Minos, king of Crete. (Vid. Androgeus and Minotaurus.) Theseus resolved to deliver them from this calamity, or die in the attempt. Accordingly, when the third time of sending off this tribute came, and the youths and maidens were, according to custom, drawn by lot to be sent, in spite of the entreaties of his father to the contrary he voluntarily offered himself as one of the victims. The ship departed, as usual, under black sails, which Theseus promised his father to change for white ones in case of his returning victorious. When they had been five years beside the shores of Crete, Theseus had reached the isle of Dia or Naxos. (Vid. Ariadne.) Before Theseus returned to Athens, he sailed to Delos to pay his vow; for, ere setting out on his perilous expedition, he had made a vow to send annually, if successful, to the sacred island a ship with gifts and sacrifices. (Vid. Delia II.) He also consecrated in Delos a statue of Venus, made by Daidalus, on account of the aid she had given him. He, moreover, to commemorate the event, accompanied with his ships, when he sailed for Athens, the procession of the inhabitants of which mimicked the windings of the labyrinth. (Compare Hom., II., 18, 590, seqq.) On approaching the coast of Attica, Theseus forgot the signal appointed by his father, and returned under the same sails with which he had departed; and the old king, thinking he was deprived of his newly-found son, destroyed himself. (Vid. Ægeus.) The hero now turned his thoughts to legislation. The Attic territory had been divided by Cecrops into twelve demi or boroughs, each of which had its own government and chief magistrate, and was almost wholly independent. The consequence was, frequent and sanguinary wars arose among them. Nothing but pressing external danger forced them to union, which was again dissolved as soon as the storm was over. Theseus therefore invited not merely the people of Attica, but also all strangers, to come and establish themselves at Athens, then nothing but a small settlement on a rock. By his prudence and his authority he induced the heads of boroughs to resign their independent power, and intrust the administration of justice to a court, which should sit constantly at Athens, and exercise jurisdiction over all the inhabitants of Attica. He abolished the previous division of the people of Attica into four tribes, and substituted there three classes: Nobles, the Husbandmen, and the Artisans (Εὐπάρτιδαι, Γεωμόροι, and Δημομοροί). This object he is said to have accomplished partly by force, partly by persuasion. With the lower classes,
THESEUS.

we read, he found no difficulty; but the powerful men were only induced to comply with his proposals by his promise that all should be admitted to an equal share of the government, and that he would resign all his royal prerogatives except those of commanding in war and of watching over the laws. To the nobles, therefore, he reserved all the offices of state, with the privilege of ordering the affairs of religion, and of interpreting the sacred laws. The result of these and other regulations was the increase of the city and of the population in general. Thucydides fixes this on as the epoch when the lower city was added to the ancient one, which had covered, as we have remarked, little more than the rock that afterward became the citadel. And hence there may seem to have been some foundation for Plutarch's statement, that Theseus called the city Athens, if this name properly signifies the whole enclosure of the Old and New Town. As a farther means of uniting the people, Theseus established numerous festivals, particularly the Panathenaea, solemnized with great splendour every fifth year, in commemoration of this union of the inhabitants of Attica. Theseus firmly established the boundaries of the Attic territory, in which he included Megaris, and set up a pillar on the Isthmus of Corinth to mark the limits of Attica and the Peloponnese. He also carried on wars in Thrace, from taking part in military enterprises: he accompanied Hercules in his expedition against the Amazons, who then dwelt on the banks of the Thermodon; and he distinguished himself so much in the conflict, that Hercules, after the victory, bestowed on him, as the reward of his valour, the hand of the vanquished queen. (Vid. Antiope.) When the Amazons afterward, in revenge, invaded the Attic territory, they met with a signal defeat at the hands of the Athenian prince. (Vid. Amazons.) Theseus was also a sharer in the dangers of the Calydonian hunt; he was one of the adventurous band who sailed in the Argo to Colchis; and he aided his friend Pirithoüs and the Lapiths in their conflict with the Centaurs. The friendship between the two was such as to make Pirithoüs one of the most intimate nature, yet it had originated in the midst of arms. (Vid. Pirithoüs.) Like faithful comrades, they aided each other in every project: such was, indeed, the character of the prince; a son of heaven, both in his rights and in his duties. (Vid. Theseus.) Theseus was a daughter of the gods. Theseus, in whose favour, the lot had fallen, carried off, with the assistance of his friend, the celebrated Helen, daughter of Leda, then a child, but nine years, though already of surpassing loveliness, and placed her under the care of his mother Æthra, at Aphidnae, whence she was subsequently rescued by her brothers Castor and Pollux. He then prepared to aid his friend in a bolder and more perilous attempt, the abduction of Proserpina from the palace of Pluto: an attempt which resulted in the imprisonment of both by the monarch of Hades. From this confinement Theseus was released by Hercules; but Pirithoüs remained ever a captive. (Vid. Pirithoüs.) After the death of Antiope, who had borne him a son named Hippolytus, Theseus married Phaedra, the daughter of Minos, and sister of Ariadne. Hippolytus lost his life in consequence of a false charge preferred against him by his stepmother: Phaedra endeavored to prevail on the affections of her son; for, ascending, with Lycomedes, a lofty rock, to take a view of the island, he fell or was pushed off by his companion, and lost his life by the fall. The Athenians honored his memory by feasts and temples, placed him among the gods, and at a later day obtained his bones from the island of Scyros, and interred them beneath the soil of Attica. (Keightley's Mythology, p. 387, seqq.—Plut., Vit. These.—Theseus, whose name signifies the Orderer or Regulator (Greek, ὁ Ὠρει-στής, ὁ ὢρει-στής, "to place" or "establish"), seems rather to indicate a period than an individual, though it is very possible that the name may have been borne by one who contributed the largest proportion to the magnificence and order of life in Athens. The excellence of his government, the magnificence of the public buildings, his noble and humane spirit, is, indeed, represented by the ancients in quite an ambiguous light; as, on the one hand, the founder of a government which was, for many centuries after him, rigidly aristocratical; and, on the other, as the parent of the Athenian democracy. If we make due allowance for the exaggerations of poets or rhetoricians, who adorn him with the latter of these titles in order to exalt the antiquity of the popular institutions of later times, we shall perhaps find that Theseus' description is entirely groundless, though the former is more simply and evidently true. His institutions were aristocratical, because none were then known of any other kind. The effect of the union would even be, in the first instance, to increase the influence of the noble class, by concentrating it in one spot; and hence it proved too powerful for both the king and the democracy. (Vid. Plutarch, Theseus.) To Plutarch, that Theseus gained the assent of the great men to his plan by surrendering his royal prerogatives, which they shared equally among them. The king was no more than the first of the nobles; the four kings of the tribes (Φυλανταίοι—Polt. 8, 111), all chosen from the privileged class, were his constant assessors, and acted rather as counsellors than as counsellors. The principal difference between them and him appears to have consisted in the exercise of the office, which was probably never long enough to leave them independent of the body from which they were taken and to which they returned. But there was also a sense in which Theseus might, without impropriety, be regarded as the founder of the Athenian democracy, both with respect to the tendency and remote consequences, and to the immediate effect of the institutions ascribed to him. The incorporation of the seven tribes into one body, as is considered, would probably have been a salutary measure. The city of Athens, in which the habitations of the Greeks were scattered, was in many, perhaps in most, parts of Greece the first stage in the growth of a free commonalty, which, thus enabled to feel its own strength, was gradually encouraged successfully to resist the authority of the nobles. And hence, in later times, the dismemberment of a capital, and its re-division into a number of rural communities, was esteemed the surest expedient for establishing an aristocratical government (Thucydides' Hist. of Greece, vol. 2, p. 9, seqq.).—Regarded as the patron-hero of that people of Greece among whom literature flourished most, Theseus is presented to us under a more historic aspect than the other heroes of mythology. Though his adventures are evidently founded on those of Hercules, whom he is said to have emulated, we are struck by the absence of the marvellous in them; indeed, the exploits of Theseus are generally such facts as would be produced in historical times by the course of events in the formation of a polity: such, at least, are his achievements in and about Attica. Theseus yielded few subjects, therefore, to the Attic dramatists. When they brought him on the stage, it was hardly ever as the principal character of the piece. He always, however, appears as the model of a just and moderate ruler, the example of a strict obedience from the subjects of law and equity, the protector of the suppliant, the scourge of the evil-doer, and the author of wise and good regulations. (Keightley, l. c.)

THROMOTHEUS, a name given to the six remaining archons at Athens, after the chief archon, the Basileus or King-Archon, and the Polemarch. (Vid. Archontes.)
Thespius, king of Thespia, and father of the Thermia. (Apollod., 2, 4, 10.) The name is sometimes erroneously written Thestius. (Consult the remarks of Heyne, not crit. ed. Apollod., 2, 1, 8.)

Thespia, a district of Epirus, along the coast opposite to Corcyra, and extending also some distance inland. Of all the Epirote nations, the Thespians may be considered as the most ancient. This is evident from the circumstance of their being alone noticed by Homer, while he omits all mention of the Molossians and Chaonians. (Od., 14, 319.) Herodotus also affirms that all the Thespians, but one, were descended from Thespius; and whence descended the Thessallians, who expelled the Illyrians from the country afterward known by the name of Thessaly. The Thespians, indeed, appears to have been in remote times the great seat of the Pelasgic nation, whence they disseminated themselves over several parts of Greece, and sent colonies to Italy. (Herod., 2, 58.—Strabo, 327.) Even after the Pelasgic nation become extinct in these two countries, the oracle and temple of Dodona, which they had established in Thespia, still remained to attest their former existence in that district. — We must infer from the passage of Homer which has been referred to, that the government of Thessaly was at first monarchical. How long this continued is not apparent. Some change must have taken place prior to the time of Thucydides, who assures us that neither the Thespians nor Chaonians had kings. (Herod., 2, 80.) Subsequently we may, however, suppose them to have been included under the dominion of the Molossian princes. It were as needful to attempt to define the limits of ancient Thessaly as those of Chaonia: we must therefore be content with ascertaining that it was mainly situated between the rivers Thamas (Calama) and Acheron (Sousai), while it extended beyond this line to the left of the former, and to the right of the Axios. (Cramer's Anc. Geography, p. 107.)

Thessalia, a country of Greece, bounded on the north by the Cambonian Mountains, extending from Pindus to Olympus, and separating it from Macedonia; on the west by the chain of Pindus, dividing it from Epirus; on the south by Mount OETA, and on the east by the Aegean Sea. It seems to have been the general opinion of antiquity, founded on very early traditions, that the Pelasgians, who inhabited the Prespa mountains just specified was at some remote period covered by the waters of the Peneus and its tributary rivers, until some great revolution of nature had rent asunder the gorge of Tempe, and thus afforded a passage to the pent-up streams. This opinion, which was first reported by Herodotus, in his account of the celebrated march of Xerxes (7, 129), is again repeated by Strabo, who observes, in confirmation of it, that the Peneus is still exposed to frequent inundations, and also that the land in Thessaly is higher towards the sea than towards the more central parts. (Strabo, 430.) According to the same geographer, this province was divided into four districts, distinguished by the name of Phthiotis, Estina, Thessaliota, and Pelaegiota. In his description, however, of these, he appears to have no room for Thessaliota, which is, in fact, rarely noticed by the ancient writers; and though we cannot doubt the propriety of Strabo's division into tetrarchies, as it derives confirmation from Harpocration (s. v. Tetrapachia) and the scholiast to Apollonius Rhodius. (Argon., 3, 1089.)—There is hardly any district in Greece for which nature seems to have done so much as for Thessaly. It may with justice be called the land of the Peneus, which, descending from Pindus, flowed through kind lands and fertile plains, and on the way to the sea added to its vastness by means of a multitude of tributary streams poured from the north and the south into this river. No other district had so extensive an internal navigation; which, with a little assistance from art, might have been carried to all its parts. Its fruitful soil was fitted alike
for pasturing and the cultivation of corn; its coasts, especially the Sinus Pagasaeus, afforded the best harbours for shipping; nature seemed hardly to have left a wish ungratified. It was in Thessaly that the tribe of the Hellenes, according to tradition, first applied themselves to agriculture; and thence its several branches spread over the more southern lands. (Vid. Hellas.) Almost all the names of its towns recall some association connected with the primitive history and heroic age of the nation.—Early traditions, preserved in the poems and inscriptions of Homer, and of the Thessalian territory among the two former appellations, which belong rather to the age of mythology, the latter may afford us matter for historical reflections, as referring to that remote period when the name of Thessaly was occupied by the Æolian Pelasgi, to whom Greece was probably indebted for the first drawings of civilization, and the earliest cultivation of her language. (Strabo, 220.) This people originally came, as Herodotus informs us, from Thesprotia (Herod., 7, 176. —Strab., 444); but how long they remained in possession of the country, and at what precise period it assumed the name of Thessaly, cannot, perhaps, now be determined. In the poems of Homer it never occurs, although the several principalities and kingdoms of which it was composed are distinctly enumerated and described, together with the different cities and towns in which they were subject: thus Hellas and Phthia are assigned to Achilles; the Mellian and Pagasian teritories to Protesilaus and Eumelus; Magnesia to Philectae and Euryppus; Estiaotis and Pelasgia to Medon and the sons of Æsculapius, with other petty leaders. It is from Homer, therefore, that we derive the earliest information relative to the history of this fairest portion of Greece. This state of things, however, was not of long continuance; and a new constit- tution, dating probably from the period of the Trojan expedition, seems to have been adopted by the common consent of the Thessalian states. They agreed to unite themselves into one confederate body, under the direction of one supreme magistrate or chief, distinguished by the title of Tagus (Taygo), and elected by the consent of the whole republic. The details of this federal system are little known; but Strabo assures us that the national council and the decemvirs were the most conspicuous authorities, as well as the earliest, society of the kind established in Greece. (Strab., 420.) How far its constitution was connected with the celebrated Amphictyonic council, it seems impossible to determine, since we are so little acquainted with the origin and history of that ancient assembly. There can be little doubt, however, that this singular coalition, which embraced matters of a political as well as a religious nature, first rose amongst the states of Thessaly, as we find that the majority of the nation who had votes in the council were either actually Thessalians, or connected in some way with that part of Greece. This mode of government, however, seems to have succeeded as little in Thessaly as in the other Hellenic republics where it was adopted; and that province, which, from its local advantages, ought to have ranked among the most powerful and leading states of Greece, we find, if we except a period of about three centuries, to have been one of the most weak and insignificant. We learn from Herodotus, that when Xerxes meditated the invasion of Greece, he was encouraged in the design by the Aleuadae, whom the historian terms kings of Thessaly, but who, probably, like the Pisistratidæ, had only usurped the regal power, and, upon being deprived of their authority, sought the aid of the Persian monarch to recover their lost dominion. (Herod., 7, 6.) It is evident that the Thessalian nation did not concern in their projects, as we find they applied for assistance in this emergency to the rest of Greece; but, as it was not deemed expedient to join forces against the common enemy, from the impossibility of doing any effective resistance to the north of Thermopylae, the Thessali- ans were left to their own resources, and consequently submitted to the Persian arms (Herod., 7, 172, seqq.), which Herodotus insinuates they did the more readily, that they might thus profit by foreign aid in averting themselves on the Phocians, with whom they had been engaged in frequent but unsuccessful hostilities.

Herodotus' title notice is taken by the Greek historians of the affairs of Thessaly, from the Persian invasion to the battle of Leuctra, except the fact mentioned by Thucydides of an expedition having been undertaken by the Athenians, under the command of Myronides, with a view of reinstating Orestes, son of Eecheratidas, prince of Thessaly, who had been banished from his country. The Athenian general, on that occasion, advanced as far as Pharsalus; but his progress being checked by the superiority of the Thes- salian cavalry, he was forced to retire without having accomplished any of the objects of the expedition. (Thucyd., 1, 111.)—The Thessalians appear to have taken no part in the Peloponnesian war, though they might naturally be inclined to favour the Athenian cause, from their early alliance with that state. Hence it was that Brasidas felt it necessary to use such secrecy and despatch in traversing their territory on his march towards Thrace. (Thucyd., 4, 79.) Some processory reports of the Peloponnesian statesmen, therefore, that the Thessalians in order to re-engage their army in that quarter, met with a more determined opposition, and were compelled to retreat their steps. (Thucyd., 5, 13.)

On another occasion we find the Thessalians in league with the Boetians, endeavouring to harass and intercept the march of Agesilaus through their country, on his retreat from Asia Minor. This attempt, however, was rendered abortive by the skilful manoeuvres of the Spartan prince. (Xen., Hist. Gr., 4, 3, 2.)—While Sparta, however, was struggling to make head against the formidable coalition, of which Boeotia had taken the lead, Thessaly was acquiring a degree of importance and weight among the states of Greece which it had never possessed in any former period of its history. This was effected, apparently, solely by her successful efforts in the war of Persia; for being a great and powerful state, she might with reason have expected to bear the brunt of the conflict, and, by the strength and constancy of her resistance, to have obtained an equal share of glory with Athens and Sparta. (Xen., Hist. Gr., 6, 4, 23.)—This brilliant period of political influ- ence and power was, however, of short duration, as the Spartan king, Leonidas, who had enjoined an inva- sassin, during the celebration of some games which he had instituted; and Thessaly, on his death, relapsed into that state of weakness and insignificance from which it had so lately emerged. (Xen., Hist. Gr., 6, 4, 32.) The Thessalians, finding themselves unable to defend their liberties, continually threatened by the tyrants of Phocis, successors of Jason, first sought the protection of the Boeotians, who sent to their aid a body of troops commanded by the brave Pelopidas. They next applied for assistance to Philip of Macedon,
THE THE

who succeeded in defeating, and finally expelling these oppressors of their country; and, by the important services it rendered to the Thessalians, secured their lasting attachment to his interests, and finally obtained the presidency of the Amphictyonic council. (Polby., Ecc., 9, 28.) Under his skilful management, the troops of Thessaly became a most important addition to the resources he already possessed; and to this powerful re-enforcement may probably be attributed the success which attended his campaign against the Boeotians and Athenians. On the death of Philip, the states of Thessaly, in order to testify their remembrance for his memory, issued a decree, by which they confirmed to his son Alexander the supreme station which he had held in their councils; and also signified their intention of supporting his claims to the title of commander-in-chief of the whole Grecian confederacy. The long absence of that enterprising prince, while engaged in distant conquests, subsequently afforded his enemies an opportunity of detaching the Thessalians from his interests; and the Lamiae war, which was chiefly sustained by that people against his generals Antipater and Craterus, had nearly proved fatal to the Macedonian influence, not only in Thessaly, but over the whole continent of Greece. By the conduct and ability of Antipater, however, the contest was brought to a successful issue, and Thessaly was preserved to the Macedonian crown (Polby., 4, 76.) until the time when it was wrested from the Romans after the victory of Cyrus of Pharsalia. All Thessaly was then declared free by a decree of the senate and people (Liv., 33, 32), but from that time it may be fairly considered as having passed under the dominion of Rome, though its possession was still disputed by Antiochus (Liv., 36, 9, sqq.), and again by Perseus, the son of Philip. Thessaly was already a Roman province, when the fate of the Macedonians was decided on the field of Philippi. With the exception, perhaps, of Boeotia, this seems to have been the most fertile and productive part of Greece, in wine, oil, and corn, but more especially of the latter, of which it exported a considerable quantity to foreign countries. (Xen., Hist. Gr., 6, 1, 4.—Theophr., Hist. Plant., 8, 7, et 10.) Hence, it might be expected, the Thessalians were the wealthiest people of Greece; nor were they exempt from the molestation of even their own countrymen, by which their train. (Athen., 12, 5, p. 624.—Theopomp., ap. eunud., 6, 17, p. 260.—Plat., Crit., p. 50.)—Like the Lacconians, they employed slaves, who were called Penestae; these probably were a remnant of the first tribes that inhabited the country, and that had been reduced to a state of servitude by their invaders. The Penestae formed no inconsiderable part of the population, and not unfrequently endeavoured to free themselves from the state of oppression under which they groaned. (Xen., Hist. Gr., 6, 1, 4.—Aristot., de Repub., 2, 9.—Cramer’s Anc. Greece, vol. 1, p. 343, sqq.)

THESALIOTS, a part of Thessaly lying below the Peneus, and to the west of Magnesia and Phthiotis. (Vid. Thessalia, near the beginning of the article.)

THESALONICA, I. a city of Macedonia, at the north-eastern extremity of the Sinus Thermaicus. It was at first an inconsiderable place, under the name of Thone, by which it was known in the times of Herodotus, Thucydidcs, Æschines (Fals. Legat., 29), and Sclavus. The latter speaks also of the Thermaen Gulf. Thermae was occupied by the Athenians prior to the Peloponnesian war, but was restored to them by Pericles shortly after. (Thucyd., 1, 51.—Id., 2, 28.) We are informed by Strabo that Cassander changed the name of Thermae to Thessalonica, in honour of his wife, who was daughter of Philip. (Epic., 7, p. 330.—Scymn., Ch., v. 625.—Zonar., 12, 26.)

Stephanus of Byzantium asserts that the former name of Thessalonica was Halis, and quotes a passage from a work written by Lucilius of Tarra on this place, for the reason which induced Philip to call his daughter Thessalonica. Cassander is said to have collected together the inhabitants of several neighbouring towns for the agrandizement of the new city, which thus became one of the most important and flourishing ports of northern Greciae. It surrendered to the Romans after the battle of Pydna (Liv., 44, 10), and was made the capital of the second region of Macedonia. (Id., 45, 29.) Situated on the great Egyptian Way, 237.—(from Dyrrhachium to Aulonia,) on an excellent harbour, well placed for commercial intercourse with the Hellespont and Asia Minor, it could not fail of becoming a very populous and flourishing city. The Christian will dwell with peculiar interest on the circumstances that connect the name of St. Paul with the history of this place. It will be seen, from the epistles which he addressed to his converts here, how successful his exertions had been, notwithstanding the opposition and enmity he had to encounter from his misguided countrymen.—Pliny (4, 10) describes Thessalonica as a free city; and Lucian as the largest of the Macedonian towns. (Asin., 46.—Compare Ptol., p. 84.—Herod., p. 638.) Later historians name it as the residence of the prefect, and the capital of Illyricum. (Theodor., Hist. Etetcs., 5, 17.—Socrat., Hist. Etetcs., c. 11.) For an account of the destruction of this place, consult the article Theodosius II.—The modern name of the place is Saloniki. (Cramer’s Anc. Greece, vol. 1, p. 326, sqq.—Compare Clarke’s Travels, vol. 7, p. 443, sqq.)—II. A daughter of Philip, married to Cassander, and from whom the city of Thessalonica is said to have received its name. (Vid. preceding article.)

THESTOR, son of Idmon and Aethotho, father to Calchus. From him Calchas is often called Thestorides. (Ovid, Met., 12, 19.—Stat., Ach., 1, 497.)

THESTIS, one of the sea-daughters, daughter of Nereus and Doris. To reward the virtue of Peleus (eid. Peleus), the king of the gods resolved to give him a goddess in marriage. The spouse selected for him was Thestis, who had been wooed by Jupiter himself and his brother Neptune; but Themis having declared that the child of Theseus would be greater than his sire, the gods resolved to make Peleus a god. According to another account, she was courted by Jupiter alone till he was informed by Prometheus that her son would dethrone him. (Apollod., 3, 13, 1.—Schol. ad II., 1, 519.) Others, again, maintain that Theseus, who was reared by Juno, would not listen to the suit of Jupiter, and that the god, in his anger, condemned her to expouse a mortal (Apollod., l. c.), or that Juno herself selected Peleus for her spouse. (II., 24, 59.—Apoll. Rhod., 4, 793, sqq.) Chiron, being made aware of the will of the gods, advised Peleus to aspire to the hand of the nymph of the sea, and instructed him how to win her. Peleus therefore lay in wait, and held her fast, though she changed herself into every variety of form, becoming fire, water, a serpent, and a lion. The wedding was solemnized on Mount Pelion: all the gods, except Discord (eid. Discordia), were invited, and they allail made Thetis honour it with their presence (II., 24, 62), and bestowed armour on the bridegroom. (II., 17, 195.—Ib., 18, 84.) Chiron gave him an ashen spear, and Neptune the immortal harpy-born steeds Balus and Xanthus. The muses sang, the Nereides danced, to celebrate the wedding, and Ganymedes poured out nectar for the guests. (Ennep. Eph. in Amst., 109 sqq.—Cassius, Nuptia, 3.) The offering of this union was also celebrated Achilles. When the goddess wished to make this her child immortal, the indiscrct curiosity of Peleus frustrated her design, and, leaving her babe, she abandoned for ever the mansion of her life. (Hist. Mys., 1361)
husband, and returned to her sister Nereides. (Vid. Achilles, where a full account is given.)

THERMIDIA, a town in the interior of Numidia, where Hiempsal was slain by the soldiers of Jugurtha. (Sall., Jug., c. 12, 41.) The site is unknown. (Mannert, Geogr., vol. 10, pt. 2, p. 372.)

Thisbe, I. a beautiful female of Babylon, between whom and her youth named Pyramus, a name of the same place, a strong attachment subsisted. Their parents, however, being averse to their union, they adopted the expedient of receiving each other's addresses through the chink of a wall which separated their dwellings. In the sequel, they arranged a meeting at the tomb of Ninus, under a white mulberry-tree. Thisbe, enveloped in a veil, arrived first at the appointed place; but, terrified at the appearance of a lioness, she fled precipitately, and in her flight dropped her veil to the ground, as if on the fatal sword, which was, as it was, with the blood of her lover. According to the poets, the mulberry that overhung the fatal scene changed the hue of its fruit from snow-white to a blood-red colour. (Ovid, Met., 4, 55, seqq.—II. A town of Boeotia, northwest of Asca, and near the confines of Phocis. It was famed for its abounding in wild pigeons. (Hom., Il., 2, 502.—Strabo, 411.) Xenophon writes the name in the plural, Thisbas. (Hist. Gr., 6, 4, 3.) The modern Kahossi marks its site. Sir W. G.是由 justices that the place is responsible for the immense number of rock-pigeons still found here. This circumstance, he observes, is the more striking, as neither the birds, nor rocks so full of perforations, in which they build their nests, are found in any other part of the country. (Ibn., p. 115.)

Thoas, I. a king of the Tauric Chersonese when Orestes and Pyrlades, in concert with Iphigenia, carried off from that country the statue of the Tauric Diana. (Vid. Orestes and Iphigenia.—II. King of Lemnos, and father of Hypsipyle. (Vid. Hypsipyle.)

Thorax, I. a mountain near Magnesia ad Meandrum, in Lydia, on which the poet Daphidas was crucified for having written some satirical lines against Attalus, king of Pergamus. Hence the proverb, πειδράτων τὸν θόρακα, "Take care of Thoraz." (Strab., 647.—Cic., de Fat., c. 3.—Erasmus, Ch. 2, cent. 4, n. 52.)

Thorax, a mountain of Laconia, north of Sparta, and forming part of the range called Menelaium. It is now Thronika. On this mountain was a temple of Apollo, with a statue of the god, to which a quantity of gold was presented by Croesus (Herod., 1, 69); but the Lacedaemonians made use of it afterward to adorn the more revered image of the Amymone Apollo. (Pausan., 3, 10.—Cramer's Ancient Greece, vol. 3, p. 219.)

Thorn, an Egyptian deity, corresponding in some degree to the Grecian Hermes and the Latin Mercury. (Vid. remarks under the article Mercureius.)

Thracian, the inhabitants of Thrace. (Vid. Thracia.)

Thracia, I. a name of frequent occurrence in the earliest history of Greek civilization, and designating, in all probability, not the country called Thracia in a later age, but the district subsequently known by the appellation of Pieria.—By far the most remarkable circumstance in the accounts that have come down to us respecting the earliest minstrels of Greece is, that several of them are called Thracians. It is utterly inconceivable that, in the later historic times, when the Thracians were contemned as a barbarian race, a notion should have sprung up that the first civilization of Greece was due to them; consequently we cannot doubt that this was a tradition handed down from a very early period. Now if we are to understand it to mean that Eurymolos, Orpheus, Musaeus, and Thamyris were the fellow-countrymen of those Ædilises mentioned (Hdt., iv., 1), and, of the historical ages, occupied the Thracian territory, and who spoke a barbarian language, that is, one unintelligible to the Greeks, we must despair of being able to comprehend these accounts of the ancient Thracian minstrels, and of assigning them a place in the history of Grecian civilization; since it is manifest that at this early period, when there was scarcely any intercourse between different nations, or knowledge of foreign languages, a new and strange language could not have had more influence on the mental development of the people than the twitting of birds. Nothing but the dumb language of mimicry and dancing, and musical strains independent of articulate speech, can at such a period pass from nation to nation, as, for example, the Phrygian music passed over to Greece; whereas the Thracian minstrels are constantly represented as the fathers of poetry, which, in the form of epic and lyric poetry, was the true expression of a nation. When we come to trace more precisely the country of these Thracian bards, we find that the traditions refer to Pieria, the district to the east of the Olympus range, to the north of Thessaly, and to the south of Ema- thia or Macedonia. In Pieria, likewise, was Libethra, where the Muses are said to have sung the lament over the tomb of Orpheus: the ancient poets, moreover, always make Pieria, not Thrace, the native place of the Muses, which last Homer clearly distinguishes; and yet the first Thracians, Olympeians, who, it is supposed, until the Pierians were pressed in their own territory by the early Macedonians, that some of them crossed the Strymon into Thrace proper, where Herodotus mentions the castles of the Pierians in the expedition of Xerxes (7, 112). It is, however, quite conceivable that, in early times, either on account of their close vicinity or because all the north was comprehended under one name, the Pierians might, in southward progress, become a part of the Thracian or Piri- cians, from the intellectual relations which they maintained with the Greeks, appear to have been a Grecian race which supposition is also confirmed by the Greek names of their places, rivers, fountains, &c., although it is probable that, situated on the limits of the Greek nation, they may have borrowed largely from neighbouring tribes. (Müller's Dorians, vol. 1, p. 472, 488, 501.) A branch of the Phrygian nation, so devoted to an enthusiastic worship, once dwelt close to Pieria, at the foot of Mount Bermius, where King Midas was said to have taken the drunken Silenus in his rose-gardens. In the whole of this region a wild and enthusiastic worship of Bacchus was diffused among both men and women. It may be easily conceived, that the excitement which the mind thus received contributed to prepare it for poetical enthusiasm. These same Thracians or Pierians lived, up to the time of the Doric and Æolic migrations, in certain districts of Boeotia and Phocis. That they had dwelt about the Boeotian mountain of Helicon, in the district of Thespiae and Acra, was evident to the ancient historians, as well from the traditions of the cities as from the agreement of many names of places in the country near Olympus (Libethtra, Pimpeles, Helicon, &c.). At the foot of Parnassus, too, in Phocis, was said to have been situate the city of Daulis, the seat of the Thracic king Tereus, who is the legend of the Albanian king Pandion, and by the figure of the metamorphosis of his wife Procne into a nightingale.—From what has been said, it appears suf-
ficiently clear that these Pthioians or Thracians, dwelling
about Helicon and Parnassus, in the vicinity of
Attica, are chiefly signified when a Thracian origin is
ascribed to the mythical bard of Attica. (Müller, Hist.
Gr. Lit., p. 26, seqq.)—II. A large tract of country
between the Strymon and the Euxine from west to
east, and between the chain of Mount Ha\udian and
the shores of the Egean and Propontis from north to
south. Such, at least, are the limits assigned to it by
Herodotus and Thucydidês, though great changes took
place in ages posterior to these historians. That
the Thracians, however, were at one period much more
widely disseminated than the confines here assigned
them would lead us to infer, is evident from the facts
recorded in the earliest annals of Greek history rela-
tive to the migrations to the southern provinces of
that country. We have the authority of Thucydidês
for their establishment in Phocis (2, 49). Strabo (p.
401, 410) certifies their occupation of Bocotia. And
numerous writers attest their settlement in Elenia of
Attica, under Eumolpus, whose early wars with Ereach-
theus are related by Thucydidês (2, 15), Pausinius
1, 38), and others. But, in all probability, they
are the Thracians referred to under the name of Troi.
Nor were their colonies confined to the European
coast alone; for, allured by the richness and beauty of the
Asiatic soil and clime, they crossed in numerous bod-
ies the narrow strait which parted them from Asia Mi-
nor, and occupied the shores of Bithynia, and the
fertile plains of Mysia and Phrygia. (Herd., 7, 73.—
Strabo, 303.) On the other hand, a great revolution
seems to have been subsequently effected in Thrace
by a vast migration of the Teucri and Mys, who, as
by Herodotus asserts, conquered the whole of Thrac-
ian and penetrated as far as the Adriatic to the west, and
to the river Peneus towards the south, before the Tro-
jan war.—Wence and at what period the name of
Thracians was first applied to the numerous hordes
which inhabited this portion of the European continent,
is left open to conjecture. Bochart and others have
supposed that it was derived from Tiraz, the son of
Japheth; certain it is, we find the name already ex-
stisting in the time of Homer, who represents the
Thracians as joining the forces of Priam in the siege
of Troy, under the conduct of Rhesus, their chief (II.,
10, 435), said to be the son of the river Strymon. (Eurip.
Rhes. Arg.)—Herodotus affirms that the Thracians
were, next to the Indians, the most numerous and pow-
erful people in the world; and that, if all the tribes had
been united under one monarch or under the same gov-
ernment, their force would have been immense. The
subdivision of their subjects was therefore resorted
to, and that of Thracians aboriginally to a petty class, distinct from each
other, they were rendered insignificant. (Herd., 5,
3.) They are said by the same historian to have been
first subjugated by Seeostris (2, 103), and, after
the lapse of many centuries, they were reduced under
the sway of the Persian monarchy, by Megabazus,
general of Darius. (Herd., 5, 2.) But, on the failure of the several expeditions undertaken by that
successor of the Teucrians against the Elenians, the
Thracians apparently recovered their independence,
and a new empire was formed in that extensive coun-
y, under the dominion of Sitalces, king of the Odry-
ses, one of the most numerous and warlike of their
tribes. Thucydidês, who has entered into considera-
table detail on this subject, observes, that all of the em-
pires situated between the Ionian Gulf and the Eux-
ine, this was the most considerable, the bold and
aggressive spirit of which was, however, very
inferior to that of Scythia, both in strength and
numbers. The empire of Sitalces extended along the
coast, from Abdera to the mouths of the Danube, a
distance of four days' and nights' sail; and in the
interior, from the sources of the Strymon to Byzantium,
a journey of thirteen days. The founder of this em-
pire appears to have been Teres (Herod., 7, 75),
Thucyd., 2, 29), whose son Sitalces, at the instiga-
tion of the Athenians, with whom he was allied, un-
dertook an expedition into Macedonia. Having raised
a powerful army of Thracians and Paeonians, the sov-
ereign of the Odrysae penetrated into the territory
of Perdices, who, unable to oppose in the field so for-
didally as the antagonist, confined his resistance to the de-
fenсе of the fortified towns; and by this mode of war-
craft he at length wearied out the Thracian prince,
who was persuaded by his nephew Seuthes to abandon
the expedition and return to his dominions. In re-
turn for this service, Seuthes, we are told, received
in marriage Statronice, the sister of Perdices. (Thu-
cyd., 2, 97, seqq.) Sitalces, some years after, having
been defeated and slain in a battle with the Triballi,
another considerable Thracian clan was subdued by
Seuthes, who carried the power of the Odrysae em-
prise to its highest pitch. (Thucyd., 4, 101.—Id., 2,
97.) The splendour of this monarchy was, however,
short of duration, as on the death of Seuthes it began
to decline; and we learn from Xenophon that, on the arrival of the ten thousand in Thrace, the
power of Medocus, or Amadocus, the reigning prince
of the Odrysae, was very inconsiderable. (Anab.,
7, 2, 17.—Id., 7, 2.) On the death of Amynatas, ascended the throne of Macedon, the Thra-
cians were governed by Cotys, a weak prince, whose
territories became an easy prey to his artful and enter-
pprising neighbour. The whole of that part of Thrace
situate between the Strymon and the Nestus was thus
added to Macedonia, whence some geographical writ-
ers term it Macedonia Adjecta. Cotys having been
assassinated not long after, was succeeded by his son
Chersoleipus, whose possessions were limited to the
Thracian Chersonese; and even of this he was eventu-
ally stripped by the Athenians (Died. Sic., 16, 34.—
Demosth. in Aristoc., p. 678), while Philip seized on
all the maritime towns between the Nestus and that
peninsula. On Alexander's accession to the throne,
the Triballi were by far the most numerous and pow-
erful people of Thrace; and, as they bordered on the
Paeonians and extended to the Danube, they were for-
midable neighbours on this the most accessible fron-
tier of Macedonia. Alexander commenced his reign
by an invasion of their territory; and, having defeated
them in a general engagement, pursued them across
the Danube, whither they had retreated, and compell-
ed them to sue for peace. After his death, Thrace
fell to the portion of Lysimachus, one of his generals,
by whom it was erected into a separate state. On this
his sons were distracted to Macedonia, and remain-
ed under the dominion of its sovereigns until the con-
quest of that country by the Romans. The divisions
of Thrace under the Roman sway were as follows:
1. Thracia, a name applied, in a limited sense, to the
country around the Hebrus in the earlier part of its
course: the capital was Philippopolis. — 2. Hemimoni-
tus or Hemimontus, including the country along the
Hebrus in the later part of its course, extending
northward to Haemus; it stretched off also to the
northeast until it struck the coast: the capital was Hi-
drianopolis. — 3. Europa, the coast along the Propon-
tis and Hellespont, including the Thracian Cherson-
ese; the capital was Perinthus. — 4. Rhodpm, the
south coast from the Sinus Melas to the mouth of
the Nestus. — 5. Macedonia Secunda, north of Haemus:
6. Scythia, below the Danube, mentioned by Cera-
mer's Anc. Geogr., vol. 1, p. 284.—Mannert, Geogr.,
vol. 7, p. 69.)

THRACIAN, Paeus, a Roman senator in the reign of
Nero, distinguished for his integrity and patriotism.
He was a native of Patavium, educated in stoical ten-
eta, and a great admirer of Cato of Utica, whose life
he wrote. His contempt of the base adulation on the
senate, and his open and many animadversions on the
enormities of the emperor, were the occasion of his
THU

being condemned to death. He died A.D. 66, in the 13th year of Nero's reign. Tacitus says that Nero endeavoured to extirpate virtue itself by the destruction of Petus and Soranus. (Juv., 5. 96.—Martial, 1. 19.—Tac., Ann., 15, 16.)

THAT AS THE HERO, the ship was slaughtered, and all theirPROPERTY was consumed. The Athenian general, one of the commanders in the naval battle of Arginusæ. He subsequently headed the party from Phylæ which overthrew the government of the thirty tyrants. Thrasylalus was afterward sent with an Athenian fleet to the coast of Asia, where he gained some considerable advantages. Having, after this, proceeded to the collection of tribute from the towns, and having, in the course of this, come to the city of Aspendus, the inhabitants of this place were so exasperated by some irregularity of his soldiers, that they attacked his camp at night; and he was killed in his tent. Thrasylalus was a man of tried honesty and patriotism, and had shown uncommon ability in some very trying situations. The only cloud that rests upon his memory is an appearance of having concurred with Tharanesæus in the accusation of their six colleagues at Arginusæ, if not actively, at least by withholding the testimony that was demanded to them while they themselves declare we have is sufficient to warrant us in decidedly fixing so dark a stain on a character otherwise so pure. (Corn. Nep., Vit. Thrasyl.—Diod. Sic., 13, 98.—Id., 13, 101.—Id., 14, 33; 94, 99.)

THERAPYLLUS, one of the Athenian commanders at the battle of Arginusæ, condemned to death with his colleagues for omitting to collect and bury the dead after the action. (Vid. Arginusæ.)

THRYMENOS LACUS. Vid. Trasmnæus Lacus.

THRYMHNES, one of the surnames of Bacchus.

THIRANIA, an island mentioned in the Odyssey, on which the flocks and herds of the Sun-god fed, under the care of his daughters Phaethous and Lampetia, and to which Ulysses came immediately after escaping Sylla and Charybdis. On reaching this sacred island, his companions, in defiance of the warning of Ulysses, slaughtered some of the oxen while he slept. The hero, on awaking, was filled with horror and despair at what they had done; and the displeasure of the gods was manifested by prodigies: for the hides crept along the ground, and the flesh flowed on the spits. They fed for six days on the sacred cattle; on the seventh the storm which had driven them to Thrinakia fell, and they left the island, but as soon as they had lost sight of land, a terrible west wind, accompanied by thunder, lightning, and pitchy darkness, came on. Jupiter struck the ship with a thunderbolt; it went to pieces, and all the sacrilegious crew were drowned. The resemblance between Thrinakia and Trinacria, a name of Sicily, has induced both ancients and moderns to acquiesce in the opinion of the two islands being identical. Against this opinion it has been observed, that Thrinakia was a desert isle (βρυχος κυπαν).—Od., 12, 351), that is, an uninhabited isle; and that, during the whole time that Ulysses and his men were in it, they did not meet with a thousand, and could see no birds and fish; that it is called "the excellent isle of the God" (Odys., 12, 261), whose peculiar property it therefore must have been; that, according to the analogy of the Odyssey, it must have been a small island, for such were Æaea, Ogygia, and all we meet; not one of which circumstances agrees with Sicily. It seems, therefore, the more probable supposition, that he poet regarded Thrinakia and Æa, as the same island, while Calypso, the Sun-god, and tenanted only by his flocks and herds, and his two daughters their keepers. He must also have conceived it to lie much more to the west than Sicily, for it could not have been more than the third day after leaving Æaea that Ulysses arrived at it. (Keightley's Mythology, p. 273, seq.)

THRONIUM, I. a town of the Locri Epizephiriæ, in

Greece, noticed by Homer as being near the river Bœotius. (II., 2, 533.) It was thirty stadia from Scarphe, and at some distance from the coast, as appears from Strabo (428). Thronium was taken by the Athenians during the Peloponnesian war (Thucy., 2, 26), and after thirty years after the Peloponnesian war. Onomarchus, the Phocian general, who enslaved the inhabitants. (Diod. Sic., 12, 44.—Aesch. de Fals. Legat., p. 46.—Liæ, 32, 36.—Polyb., 17, 9, 3.) Dr. Clarke conjectured that Thronium was situated at Bodomitza, a small town on the chain of Mount Cita; but Sir W. Gell is of opinion that this point is too far distant from the sea, and that it accords rather with an ancient ruin above Longachi (Era., p. 235); and this place, which is also referred to in the statement of Meleagris, the Greek geographer, who cites an inscription discovered there, in which the name of Thronium occurs (vol. 2, p. 323.—Cramer's Anc. Greece, vol. 2, p. 114) —II. A town of Illyricum, at some distance from the coast above Oricum, and near another place called Amantia. Both these places are said to have been founded here by the Abantes, in conjunction with the Locrians, they having been driven hither by adverse winds on their return from Troy. (Cramer's Anc. Greece, vol. 1, p. 65.)

THYCÜDIDES, I. a celebrated Greek historian, born in Attica, in the village of Halinusia, and in the tribe of Leontium, B.C. 471. His father's name was Olorus, or, as some write the name, Oroclus, and on the mother's side he was descended from Cimon, son of Miltiades. Of the boyhood and education of the historian we have little information. The first remarkable circumstance of his early youth is one which the biographers of Thucydides never fail to relate. It is stated, on the authority of Lucian (de conscrib. Hist., c. 16), Suidas, and Photius, that Thucydides, when a youth of fifteen, stood with his father near Herodotus when the latter was reciting his history at the Olympic festival; and was so much interested with the work, and affected at the applause with which it was received, that he shed tears. On observing which, Herodotus exclaimed to his father, 'Οτιγαίως δ' ἐνοικάν ἐν ἀυξήσει προς τὰ μάθημα, "Your son burns with ardour for learning." This recitation is proved by Dodwell to have taken place at the 81st Olympic, B.C. 456. Now, if what is said by Pamphila, a female author of the age of Nero, be true, the age of Thucydides at the period of this recitation was fifteen. The grounds on which the whole account rests have been carefully examined by Poppo, Dahlmann, Goller, and other German critics, and we refer the reader to the above-cited summaries. (Marcellinus informs us that the preceptor of Thucydides, in oratory and rhetoric in general, was Antipho, on whom the historian has passed a short but significant encomium in a part of his work (8, 68). In philosophy, and the art of thinking and reasoning, he was instructed by Anaxagoras. Of the manner in which he spent his early manhood we have no certain information, and he叙事 the part that he played in the oratory, of which he has passed the time, we cannot doubt. How he spent the period from his militia-service to that of his appointment to command the fleet in Thrace we have no way of ascertaining. An ancient anonymous biographer of the historian says that he had participated in the Athenian colony sent to Thrace. But if he had by inheritance any considerable property in Thrace, which is highly probable, none of it can be alleged to belong in this colony. If, however, that statement be correct, Dodwell seems to have proved the circumstance must have taken place in his twenty-seventh year. Why he went, or how long he stayed, we are not informed. If he went at all, he probably did not remain very long; and there is no doubt that he had returned to his country long before the commencement of the Peloponnesian war,
THUCYDIDES.

otherwise it would make his marriage with the Thracian lady of Sceaptseyle (by which he obtained rich property in mines, &c.) an improbable late one. Whether he was employed in military service in the first seven years of the war is uncertain; it is probable, however, that he was. In the eighth year of the war and the forty-seventh of his age, B. C. 433, he was appointed to the command of the Athenian fleet off the coast of Thrace, which included the direction of affairs in the various Athenian colonies there. He occupied with his fleet a station at Thasus, and, being suddenly summoned to the defence of Amphiloch, he hastened thither; but, owing to unavoidable circumstances, was too late by only half a day. He, however, succeeded in saving Eion, though, had he not arrived at the time he did, the place would have been occupied by Brasi- das the very next morning. It is plain, that to save Amphiloch was a physical impossibility, and great activity was used in saving Eion. He fears that his ed praise rather than censure. And yet the Athenian people, out of honour with the turn which things were taking in Thrace, condemned him to banishment; though, with a magnanimity scarcely paralleled, he makes no mention of it in his history of that period, and only touches upon it incidentally afterward, in order to show his advantages for arriving at the truth, and then without a word of complaint. Discharged from his former banishment without the necessity of declaring an eighth year, he was left without any attachments but to simple truth, and proceeded to qualify himself for commemorating exploits in which he could have no share. On his banishment he retired to Scapteyseyle, the property of his wife, and thus dedicated his leisure to the formation of his great work, and (as Marcellinus, the ancient biographer, says) employed his wealth liberally in procuring the best information of the events of the war, both from persons and Lacondemon. However, the period of his exile may, then, be very well imagined; nor is it necessary to fill up that space, as Dodwell does, with such events as the death of Perdicas, king of Macedon; the accession of Archelaus, his successor; the end of the ηήλια σπαρτασμος of Thucydides;* for his military life had virtually been deunct eighteen years before. As to the period of his exile, it was, as he himself tells us (5, 26), twenty-two years; the beginning of his, B. C. 403 B. C., at the time when an amnesty was passed for all offences against the state; by others, to the year before, when Athens was taken by Lysander, and the exiles mostly returned. The former opinion has been shown by Krueger to be alone the correct one; "for," argues he, "since Thucydides says that he was banished for twenty years in the eighth year of the war, which also, he affirms, lasted twenty-one years, It must have been in the year after Athens was taken." To which it may be added, that the high-minded historian would have disdained to avail himself of such an unauthorized way of returning to his country as that eagerly snatched at by the bulk of the exiles, but would wait until the public amnesty should give him a full right to do so. Perhaps, however, the real truth of the matter is what Pausanias relates, which is, that Pausanias, among all the many causes to the memory of one *Eoebius, for being the mover of a separate decree of the assembly for the recall of Thucydides (1, 23). It is probable that, besides the general amnesty by which the former exiles were permitted to return, a particular decree was made for Thucydides; and, considering the gross injustice of his banishment, this was no more than he had a right to expect. It is not necessary to notice all those many improbable and sometimes controv- ersial assertions concerning the life of Thucydides which are found in some of the later Greek writers; as, for instance, Pausanias, who, besides making Thucydides descended from Pisistratus (which is inconsistent with plain facts, for the genealogies of Miltiades and Pisistratus show no sort of affinity), relates that Thucydides was assassinated immediately on his return. And Zoephos, referred to by Macrobius, relates that such an event took place, but some years afterward. Had, however, that really been the case, it would have been perfectly known, and could scarcely but have been alluded to by Cicero, or some other great writer of antiquity. Poppo, indeed, maintains that he lived many years after his return; but his reason (namely, that after his return he digested his history into order), can hardly be held sufficient. For it surely would not require many years to do that, especially when the last book was, after all, left in a rough and undigested state. Besides, the probability is rather that a man of sixty-seven should not live many years. The strongest proof adduced is, that the historian (3, 116) makes mention of the third eruption of Etna, which is said to have taken place B. C. 395. But this argument de- pends entirely upon the interpretation of the words of that passage, which product gave a countenance not to the above opinion. It seems, therefore, to be uncertain how many years he lived after his recall from banishment. The manner in which he speaks of the conclusion of the war, and his having lived throughout the whole of it in the full enjoyment of his faculties, strongly confirms the statement of Pamphila, from which it follows that he was sixty-seven years old at its conclusion. We therefore cannot but adjudge it possible that he might have not arranged the work before the conclusion of the war, the moulding of the whole into its present form might consume some years of the life of an aged man. Yet its being at last left incomplete is unfavourable to the opinion of Dodwell, that 'Thucydides lived beyond his eightieth year. (Bloomfield's Thucydides, vol. 1, p. 16, sep.)—The title of the work is as follows: Συγγραφη τησ ετων ηω φλωρων των Πλωμονονων κατ' Χρονοις τοιωτων ("History of the Peloponnesians and Athenians"). It is in eight books, and extends to near the close of the twenty-first year of the war; but the eighth book is not so finished as the rest, and, indeed, there is a gradual decline of vigour and finished execution after the first five books. This falling off and abrupt termination of his history may best be explained by a gradual deprivation of health, terminating in a sudden death. —With the Peloponne- "sians and Athenians."
THUCYDIDES.

THU

Hark is it dei, a possession for everlasting. He was far from the necessities of servile writers, either to fear or to flatter. In fine, if the truth of a history did ever appear by the manner of relating, it doth so in this history."—Smith also has a discourse on the qualifications of Thucydides as an historian which merits perusal. He therein shows him to have had all the qualifications that can be thought necessary; namely, "to be abstracted from every kind of connexion with persons or things that are the subject matter; to be of no counsellor of any person or matter; to give up all part from every light; entirely unconcerned who is pleased or displeased with what he writes; the servant only of reason and truth. He was wholly unconcerned about the opinion of the generation in which he lived. He wrote for posterity. He appealed to the future world for the value of the present he had made them. The judgment of succeeding ages has approved the compliment he thus made to their understandings. So long as there are truly great princes, able statesmen, sound politicians—politicians that do not rend asunder politics from good order and the general happiness, he will meet with candid and grateful acknowledgments of his merits.”—Thucydides has been sometimes censured for the introduction of harangues into his history, and this has been made an argument, by some, against his general veracity as an historian. The truth is, however, that the writer never meant them to be regarded by the reader as having been actually pronounced by the speakers. To question the presence of these harangues might be to question the vehicle by which he is supposed to have conveyed his own sentiments on passing events, for painting more distinctly the characters of those whom he brings forward in the course of his narrative, and for relating circumstances to which he could not well refer in the main body of his history. The harangues of Thucydides impart frequently to his work a kind of dramatic character, and agreeably interrupt the monotonous occasioned by his peculiar arrangement. Pomponius Mela, an admiral of them, that he is said to have copied them over ten times, in order to appropriate to himself the style of this great writer. The finest is the funeral oration of Pericles, in honour of those who had fallen in the service of their country.—Another charge made against Thucydides is the division of his work into years, and even into seasons, for he divides each year into two seasons, summer and winter. This arrangement of Heliodorus was severely blamed, imparts to the work a kind of monotonous character; and yet, on the other hand, it must be confessed, that if this plan be in some respects a defective one, it is less so for the history of a single war, which naturally divides itself into campaigns, than it would be for a work intended to embrace the history of a people, or of some extended period of time.—Thucydides wrote in the Attic dialect: after him no historian ventured to employ any other, and his work is regarded as the canon, or perfection of Atticism. His style, however, is not without its faults: his conciseness sometimes degenerates into obscurity, particularly in his harangues; nor does he seem to be always very solicitous about the elegance of his diction, but more ambitious to communicate information than to please the ear. Against these and similar charges, of careless collocation, embarrased periods, and sotieistic phrases, Thucydides is only to be excused, as active in elucidating, the historian has been very successfully defended by one of his recent editors, Poppo. Two among the Roman writers have taken Thucydides for their model, namely, Sallust and Tacitus; but they have imitated him each in a different manner. Tacitus has appropriated to himself the general manner of the Greek historian, his conciseness, his depth of thought; Sallust has conformed to him in his sentences and phrases more than in his ideas.—The most celebrated parts of Thucydides are the oration of Pericles, already referred to, and the description of the plague which ravaged Athens during the summer of O. 874, B. C. 429. The fearful part which Thucydides here traces has been imitated by Lucretius and Virgil, particularly the former. The best editions of Thucydides are, that of Hudson, Oxon., 1696, fol.; that of Duker, Amst., 1731, 2 vols. fol.; that of Gotleber and Bauer, Lips., 1790-1804, 2 vols. 4to; that of Haack, Stend., 1819, 2 vols. 8vo, reprinted by Valpy, Lond., 1823, 3 vols. 8vo; that of Bekker, Oxon., 1821, 4 vols. 8vo; that of Arnold, Oxford, 1826, 3 vols. 8vo; and especially that of Poppo, Lips., 1821-37, 12 vols. 8vo.—Dr. Bloomfield, view of Biskroote. Rutland, England, has published a small edition with English notes, in 3 vols. 12mo, and also a new English version of the historian, with copious and valuable notes, in 3 vols. 8vo, Lond., 1819.—II. A poet, mentioned by Marcellinus, the biographer of Thucydides. (Compare Poppo, Proleg., i, p. 27.—Gudler, Vit. Thucyd.)

THULE, an island in the most northerm parts of the German Ocean, called ultima, "farthest," on account of its remote situation, and its being regarded as the limit of geographical knowledge in this quarter. The Thule mentioned by Tacitus in his life of Agricola (c. 10), and which that commander discovered in circumnavigating Britain, coincides with Mainland, one of the Shetland Isles. The Thule spoken of by Pytheas, the ancient Greek navigator, was different from this. The part of the world which Pytheas mentions is, perhaps, from its features; as, for example, when he states that its climate was neither earth, air, nor sea, but a chaotic confusion of these three elements: from other parts of his narrative, however, many have been led to suppose that this Thule was modern Iceland or Norway. Mannert declares himself in favour of the former; D'Anville opposes it. Ptolemy places the middle of this Thule in 63° of latitude, and says that at the time of its discovery, it was a frontier of the Roman empire, which could not have been true at the equinoxes, but must have referred to the solstices, and therefore this island is supposed to have been in 66° 30' latitude, that is, under the polar circle. The Thule of which Procopius speaks, D'Anville makes to correspond with the modern canton of Tylemark, in Norway. The details of Procopius, however, seem to agree rather with the accounts that have been given of the state of the British Islands under the Romans, than with the island that by Thule the ancients mean merely Scandinavian, of which their knowledge was very limited. (Mannert, Geogr., vol. i, p. 78.)

THURIS, a city of Lucania, in Lower Italy, near the site of the more ancient Sybaris, and which was founded by a colony from Athens about fifty-five years after the overthrow of the latter city. Two celebrated characters are named among those who joined this expedition, which was collected from different parts of Greece: these were Herodotus, and Lyons the orator. (Aristot., de Rhéth., 3, 9.—Dion. Hal., de Lyse, p. 452.—Suid., s. v. Ἡροδότος καὶ Λύσιας.) Diodorus gives us a very full account of the foundation of this town, the form and manner in which it was built, and the constitution it adopted: its laws were framed chiefly after the code of the celebrated legislators Zaleucus and Charondas. (Diod. Sic., ix, 10.) The Honourable Mr. Northworth observed that the attention of Aristotle on more than one occasion. (Petit, 5, 4, seqq.) This Athenian colony attained a considerable degree of prosperity and power; it entered into an alliance with Corinth, and engaged in hostilities with Tarentum, in order to obtain possession of the territory which formerly belonged to Siris. (Strabo, 264.) In the Peloponnesian war, the Thuriens are mentioned as allies to the Athenians, who were furnishing them with some few ships and men for their Sicilian expedition. (Thucyd., 7, 35.) Subsequent-
ly, the attacks of the Lucani, from whom they sus-
tained a severe defeat, and, at a still later period, the
enmity of the Tarentines, so reduced the power and
prosperity of the Thuriens, that they were compelled
to seek the aid of Rome, which was thus involved in
a war with Tarentum. About eighty-eight years af-
fterward, Thrur, being nearly deserted, received a Ro-
man colony, and took the name of Copis. (Strab.,
282.—Livy, 2, 42.)—That Thrur, however, calls it Thrur,
and designates it a municipal town. (Bell. Civ.,
3, 22.) The remains of ancient Thrur must be placed
between the site of ancient Sybaris and Terra Nova.
(Cramer's Ancient Italy, vol. 2, p. 359.)

were natives of Thrur, or because his father Octavius
had been successful in some military operations near
Thur- a short time after the birth of Augustus. (Stuc-
ton, Vit. Avg., 7.—Consult Oudendorp, ad loc.)

Thymis, a river of Epirus, anciently dividing
Thresprotia from the district of Cestrine. (Thucyd.,
1, 46.) The historian Phylarchus, as Athenaeus
reports (3, 3), affirmed that the Egyptian bean was never
known to grow out of Egypt except in a marsh close
to this river, and then only for a short period.—It
appears as if the ancient historian had an eye on the
banks of the Thymis. (Ad. Att., 7, 7.—Compare
Pausan., 1, 11.) The modern name of this stream is
the Calama. (Cramer's Anc. Greece, vol. 1, p. 108)
—II. A promontory of Epirus, near the river of
the same name, now Cape Nissi.

Thyatira (τὰ Θαυτηρία), a city of Lydia, near
the northern confines, situate on the small river Ilyus,
not far from its source. According to Pliny (5, 29);
it original name was Polypia; and Strabo (622) makes
it to have been founded by a colony of Macedonians.
It was enlarged by Seleucus Nicator, and was selected
as a place of arms by Andronicus, who declared
himself heir to the kingdom of Pergamus after the
death of Attalus. Thyatira, according to Strabo, be-
longed originally to Mysia; from the time of Pliny,
however, we find it ascribed to Lydia. Its ruins are
now called Ab-Hisar, or the white castle. This was
one of the churches mentioned in the Apocalypse.
For Paul, in his travels round the coast of church in Thyatira,
consult Milner's History of the Seven Churches of
Asia, p. 277, sqq., Lond., 1832.

Thyestes, a son of Pelops and Hippodamia,
and grandson of Tantalus; for the legend relating to whom,
consult the article Atreus.

Thymbra, a plain in Troas, through which a small
river, called Thymbrias, flows in its course to the
Scamander. According to Cramer, it is now the
Kamar-tou. (Cramer's Asia Minor, vol. 1, p. 103.) Apollo had a temple here, whence he
was surnamed Thymbraeus. (Il., 10, 430.—Virg.,
Æn., 3, 85.—Europ., Rhes., 224.) It was in this
temple that Achilles is said to have been mortally
wounded by Paris. (Eustath. ad Il., 10, 433—
Serv. ad Æn., l. c.)

Theymbusa, a surname of Apollo. (Vid. Thymb.
bra.)

Thymeres, I. a king of Athens, son of Oinobus,
the last of the descendants of Theseus who reigned
at Athens. He was deposed because he refused to
meet Xanthus, the Boarit monarch, in single comba-
t. Melanthus the Messenian accepted the challenge,
slew Xanthus, and was rewarded with the kingdom of
Attica. (Vid. Melanthus.)—II. A Trojan prince,
whose wife and son were put to death by order of Pri-
amus. (Virg., Æneid, 2, 92.—Serv. ad Æn., l. c.)—III. He is said, on this account, to
have used his best endeavours to persuade his coun-
trymen to admit the wooden horse within their walls.
(Virg., Æn., 2, 32.—Serv. ad Æn., l. c.)—III. A
son of Hicetaon, who accompanied Æneas into Italy,
TIBERIUS.

Tiberius, Claudius Druses Nero, a Roman emperor, born B.C. 42. He was the son of a father of the same name, of the ancient Claudian family, and of Livia Drusilla, after the celebrated wife of Augustus. Rapidly raised to authority by the influence of his mother, he displayed no inconsiderable ability in an expedition against certain revolting Alpine tribes, in consequence of which he was raised to the censorship in the twenty-eighth year. On the death of his father by the gravity and austerity of Tiberius having gained the emperor's confidence, he chose him to supply the place of that minister, obliging him, at the same time, to divorce Vipsania, the daughter of Agrippa, and wed Julia, the daughter of Augustus, whose flagitious conduct at length so disgusted him that he retired in a private capacity to the isle of Rhodes. After experiencing much discontentment from Augustus, the deaths of the two Caesars, Caligula and Claudius, induced the emperor to take him again into favour and adopt him. During the remainder of the life of Augustus he behaved with great prudence and ability, concluding a war with the Germans in such a manner as to merit a triumph. On the death of Augustus he succeeded without opposition to the empire.—The first act of the new reign was the murder of young Postumus Agrippa, the only surviving son of M. Vipsanius Agrippa, and whom Augustus had banished during his lifetime to the island of Plancia. From his bodily strength, although taken by surprise and defenceless, he was with difficulty overcome by the centurion employed. Like Elizabeth of England, Tiberius disavowed his own order. Surnise hesitated between himself and Livia; and an incredible pretext was set up of a command of the late emperor to the tribune who had the custody of the youth, that he was not to be suffered to survive him. While Tiberius proceeded immediately to the actual exercise of several of the imperial functions, such as delivering their standard to the pretorian guard, having them in attendance on his person, and despatching letters to the armies to announce his accession, he affected to depend on the pleasure of the senate, and to consider himself unequal to the weight of the whole empire. In the confused, dilatory, and ambiguous mode of his expressing, or rather hinting, his sentiments, which he often designed to be conveyed by his sons; that vague, enigmatic sense of what he was pleased to bear, he strongly resembled Cromwell.—The servility of the senate ran before his ambition. They had afterward leisure for repentance. Tiberius soon began to practise the dark, crooked, and sanguinary policy which marks the jealousy, distrust, and terror of a conscious and suspicious tyrant. Those who had formerly offended him, as Asinius Gallus, who had married his divorced wife Vipsania, and even those who had taken a current benefit by his elevation, were thenLik.ed by their talents or aspiring minds, to supply princes to the empire, should the road be open to them, were watched, circumvented, immured, and destroyed. The law of high treason was made an instrument of punishing, not actions merely, but looks, words, and gestures, which were construed as offences against the majesty of the prince. A spy-system was organized, which embraced informers and agitators of plots, who, when taken, were condemned by his order, and executed by his own hand, by his intrigues, or by the society of the treasury; and as a man's slaves, and the guests at his table, might themselves be secret pensioners of this new police of inspection, social confidence and domestic security were at once destroyed. Those who were suspected were presumed to be guilty; judges were easily found to condemn them; and confiscations and executions succeeded each other.—The share which the people had retained of the right of election was entirely taken from them; the nomination of the consuls assumed by the emperor; and the choice of the other magistrates, though ostensibly referred to the senate and determined by him. While Tiberius, by abolishing the comitia or assemblies, swept away the last vestige of popular liberty, and while he weakened the internal strength of the empire by shedding the best blood of Rome, and creating around him the solitude of death, he sacrificed her external glory to the same sleepless and devouring jealousy. This sentiment was not excited by those only who were aliens from his name, for those closest to him and nearest to his heart were objects of his most feverish dread and his most implacable malice. His own mother, who had shielded herself with crime to secure his elevation, was the first to attract his gloomy envy; which was awakened by her having been named in the will of Augustus as co-heiress with himself, and adopted into the Julian family by the name of Julia August; and by the flateries of the senator, who bestowed on her the surname of Mother of the Country, and who received from Tiberius the reproach that "generative honours were suitable to women." His forbidding her the state of a licitor to walk before her, and his irritation on her addressing the soldiery to animate their exertions in extinguishing a fire, may be traced to the same feeling. That another should divide with him the attributes of sovereignty was intolerable to his mind; but he was equally unable to endure that another should be popular in the city, or successful in the field; and in his son's elevation he beheld only presumptuous rivals of his own past renown in arms, supplacers of his power, and pretenders to his throne. Weighed against this sentiment of egoism, the security of the empire and the glory of the Roman eagles were as dust in the balance. Resting on his former laurels, he no longer led the armies in person, but substituted for open war the cunning of a mean, perfidious policy. It was thus that he detained in his dominions, after inviting them with the fair words of a specious hospitality, Marbdusius, king of the Suevi, and Archelaus, king of Cappadocia, whose kingdom was reduced to a Roman province; and in the latter part of his life he fell into a total apathy and indifference respecting the state of the legions or of the foreign departments: left Spain and Syria for several years without governors, and allowed Armenia to be overrun by the Basians, and Gaul by the neighbouring Germans. His submission to the state of his house and value was supported in the beginning of his reign by the second Drusus and Germanicus, whom he therefore envied, detested, and destroyed. By both the son and the nephew, the most essential and faithful services were rendered to Tiberius before his authority could well be said to be established. The Roman legions in Pannonia, either discontented with their stipend, or making that a pretence for expressing their discontent by open mutiny, the Roman soldiery being fomented by foreign adventurers, sometimes rose, or raised a mutiny, which Drusus suppressed. The same part was acted by the legions in Lower Germany, whom Germanicus harangued from the camp tribunal; and on their persisting to choose him emperor, pointed a sword at his breast, with the exclamation that "he had rather die than forfeit his fidelity." A soldier audaciously offered him another sword, telling him that "it was sharper:" his person was seized, and he was carried to the camp by his friends; but, determined on the expedit of awakening the shame of the troops by expressing his distrust of their attachment and honour, he sent his wife Agrippina, the grand-daughter of Augustus, from the camp, which she passed through, accompanied by her infant son Caio, and a retinue of weeping ladies. The soldiers, struck with compunction, crowded around her, imploring her to...
turn, made their submission, and demanded to be led against the enemy. Germanicus carried devastation into the fields and cities of the Marsi, the Usipetes, and the Catti, whom he everywhere overthrew; covered the standard of Varus, and, coming to a spot in the woods where the mounting trenches of his camp were still visible, and the ground was covered with the whitened bones of his followers, collected them with funeral honours. Arminius, however, at the head of the Cherusci, by retiring into the forests, posting ambuscades, and inveigling the Romans into woody and marshy defiles, gained some advantages over the Caesar himself, as well as his lieutenant Cacina, though they were retrieved by extraordinary efforts of courage. Arminius, however, made the most active devotion to the service of the troops, not only tending the wounded, but preventing, by her intrepidity, the breaking of a bridge on the Rhine, on a rumour of the advance of the Germans. Her conduct in these circumstances, as well as her previous share in the suppression of the mutiny, and even the fondling name of Catigina, bestowed by the camp on her young son, from the circumstance of his wearing the nailed sandals of the decimated Tiberius, excited the deep suspicion and long-concealed resentment in the breast of Tiberius, which were fostered by the arts of insinuation familiar to his worthless minister Sejanus.

—The appearance of commotions in the East, where Vonones, the king set over Parthia by the Romans, had been expelled by Artabanus, and had taken refuge in Armenia, afforded a pretext to the emperor for the recall of the Caesar from the command of the legions in Germany. Obeying the mandate with dilatory hand, Germanicus signalized his departure by a final campaign with the Cherusci, whom he attacked on the Weser, and, surrounding their rear and flanks with his cavalry, defeated with prodigious slaughter (A.C. 18); Arminius himself owing his escape to the fleetness of his horse and the concealment of his visage, which was bathed in blood. After pushing his success as far as the Elbe, and sending to Rome the spoils and captives of his victories, and the painted representations of the rivers, mountains, and battles, Germanicus, as a mark of dissembled favour, was chosen by Tiberius his colleague in the consulate; and the province of Syria was assigned to him by a decree of the senate. But, previously to this appointment, his kinsman Silanus had been removed from the Syrian prefec- ture, and Oneus Piso, a man of a violent disposition. Agrippina displayed a high spirit, and was induced to make a treaty with Artabanus, by virtue of which Vonones was made to retire into Cilicia, and after placing Zo- nones on the throne of Armenia, Germanicus set out on a tour of curiosity and science to Egypt, where he sailed up the Nile and inspected the ruins of Thebes, the Pyramids, and the statue of Memnon, which emitted a sound when touched by the rays of the rising sun. Returning from Egypt, and finding that Piso had been removed from his post on orders of the emperor, he contrived for him to quit the province, and enforced it, on being detained at Antioch by an illness, which he suspected had been produced by poison. After urging on Agrippina resignation and an absence from Rome, an advice which her proud courage forbad her to follow, he ex- pired at a little more than thirty years of age (A.C. 19).—After his body had been burned in the forum of Antioch, his accusers repented of their base action, and sentenced themselves and their posterity for it. She landed at Brundisium amid the mingled sobs and tears of women and men, and advanced slowly, with downcast eyes, attended by two of her children, and bearing in her arms the urn which con- tained the ashes of her husband. The pratorian bands sent to escort the remains were followed by the whole senate and innumerable people, who beset the roads, and with audible condolence and sympathy at- tended her to the city. The emperor and Livia for- bore to show themselves in public. The people wrote on the walls of the palace, "Restore Germanicus." Piso and his wife Plancina entered Rome amid the popular indignation, which was increased by the festiv- ity apparent in their house, which was situated near the forum. Piso, however, was accused of treason by the praetor Lucius Fulcinus; was neglected by Germanicus, who, affecting the coolest impartiality, referred the cause to the senate; and stabbed himself in prison. His wife, who had also deserted him, enjoyed afterward the favour of Liv- ia and the emperor, to whom she was useful in calum- niating Agrippina; but was at last herself exposed to criminal accusations, and died also by her own hand.

—The widow of Germanicus remained at Rome, and persisted with a lofty determination to assert her rights. Claudius Pulcher being accused of nuptial infidelity and treasons, was delivered into the sen- ato; and, finding the emperor sacrificing at the altar of Augustus, reproached him with the inconsistency of persecuting the Augustan posterity, to which he replied by catching her hand, and quoting a line from a Greek tragedy:

"Child! if thou canst not reign, deemst it a wrong?"

He contrived an excuse for not inviting her to his table by having it suggested that some apples were poi- oned, and then resenting her suspicions when she de- clined to accept them from his hand; and at last, on the plea that she had threatened to appeal to the army, and to take sanctuary at the statue of Augustus, he banished her to the Isle of Pandataria. On this, she addressed him with spirited reproaches, when the das- terly traitor had his eyes thrust out with rods by the hand of a centurion. Agrippina resolved to put an end to her life by abstinence from food (A.C. 26). Vianda were forced into her mouth by the emperor's order, but his fear or his malice was disappointed by her unconquerable resolution. In the senate he mag- nified his own clemency in not having sentenced the wife of Germanicus to be strangled in the dungeon, exposed like a felon on the prison steps, and dragged by a hook into the Tiber. Drusus, the surviving heir, and the son of Tiberius by Agrippina Vipsania, who had been decreed a triumph for his services in Illyri- cum and in Germany, and had been admitted to a share of the tribunican power, was poisoned by Seja- nus (A.C. 23), who had long cherished a sentiment of revenge for a blow received from Drusus, and had cor- rupted his wife Livia. The emperor entered the sena- to house, and ordered the body of Germanicus to be interred, and shortened the time of public mourning, directing the shops to be opened as usual. His own mother, Livia Augusta, afforded him, by her death (A.C. 29), a similar occasion of evincing his superiority to the feelings of human nature; as he not only ab- sented himself from her sick-bed, but, on a pretence of modesty, curtailed the funeral honours decreed to her by the senate.—The deadly favour of Tiberius was ex- ercised by the sentence and its exe- cution. Nero was starved to death in the isle of Pon- tia, and Drusus in a secret chamber of the palace.

—The daughters of Germanicus were spared by the tyr- ant, and disposed of in marriage: Agrippina to Cneus Domitius, the grandson of Octavia, sister of Augustus; Drusilla to Lucius Cassius; and Julia to Marcus Vici- nius.—The presumptive heirs of the imperial family being removed, Sejanus thought the empire within his
prétorian bands, of which he was prefect, to a fortified camp without the city, between the Viminal and Esquiline gates; in the senate he secured to himself partisans by the distribution of provinces and honours, and gained entire ascendency over the emperor by relieving him of the labours of state as well as administering to his luxury; by studying his humours, and breathing into him the spirit of his inconstancy and infatuation.

A dissembler to all others, Tibers was open to Sejanus; and easily yielding to him entire and unsuppositional confidence, was persuaded to withdraw from the cares of state. The plot was detected, and Antonian, the mother of Germanicus, was the accuser of Sejanus. Impeached by letters from the emperor, condemned by the senate, and deserted by the prætorian guards, he was strangled by the public executioner, and, as a preservative of some of his adherents, was buried in a grotto with a fair posthumous crown. His enemies were avenged, and the tyranny was finally established.

Tibullus continued to hide himself from the gaze of Rome and from the light of day, among the groves and grottoes of the island of Capreol, which he peopled with the partners of his impure orgies, dressed in fantastic disguises of wood- nymphs and satyrs. But the time approached when the world was to be rid of this especial object of suspicion attended by that Caligula, the only surviving son of Germanicus, whose cunning had baffled the insidiousness of his agitators of treason, and whose obsequiousness imposed upon himself; but who had not been always able to elude his penetration, and of whom, when his life was begged, which had been three times threatened, he had predicted, with the tact of a connoisseur, that "he would prove a serious danger to the empire, and a Thracian Thracian, in the day." For the purpose of ascertaining whether the lethargy in which the emperor lay was actually death, Caius approached and attempted to draw the ring from his finger; it resisted; and on the bold suggestion of Macro, the new prætorian prefect, pillows were pressed upon him, and the hand of her son avenged, though late, the manes of Agrippina (A.D. 31, aged 78).—Tibullus was a crafty speaker, was literary, addicted to astrology, and, like Augustus, apprehensive of thunder, as a preservative against which he wore a golden crown. In his person he was tall and robust, broad in the shoulders, and so strong in the muscles that he could bore a hard apple with his finger, and wound the scalp of a boy with a filip. His face was fair complexioned, and would have been handsome if it had not been disfigured by carbuncles, for which he used cosmetics. His eyes were prodigiously large, and could discern objects in the dark. He wore his hair long in the neck, contrary to the Roman usage; walked erect, with a stiff neck; seldom accosted any one; and, when he spoke, used a wave of the hand as in condensation. —The news of the tyrant's death was received at Rome with popular cries of "Tiberius to the Tibers!" His body was, however, borne to the city by the soldiers, and burned with funeral rites. In his will, Caius, and Tibers the son of the younger Drusus, were named as his heirs, with a reversion to the survivor. (Sueton. Vit. Tib. — Tacit., Ann., lib. 1, 2, 3, 4. — Elton's Roman Emperors, p. 47, seq.)

Tibullus, now the Teisse, a river of Dacia, called also Pathysus, falling into the Danube, and forming the western limit of Dacia. (Plin., 4, 12. — Ammian. Marcell., 17, 3.)—(II. of Tibiscum), a city of Dacia, on the river Temenus, one of the tributaries of the Danube, and near the junction of the Bistra with the former stream. It is now the Caravans. (Bischoff and Möller, Wörterb. der Geogr., p. 970.)

Tibris. Vid. Tibersis.

Tibúla, a town of Sardinia, on the northern coast, and on the strait which separates that island from Corcyra; hence it became a usual landing-place. It is now Longo Sardo. (Ptol.—Itin. Ant., 72.)

Tibullus, Julius Albius, a Roman knight, celebrated for his poetical compositions. There exists some doubt respecting the period of his birth. Petrus Crinitus and Lylius Gyraldus, the ancient but inaccurate biographers of the Roman poets, relying on two lines erroneously ascribed to Tibullus, and inserted in the fifth elegy of the third book,

*Natalem nostri primum videre parentes* Quum ecce dicto consul uterque pari,

had maintained that he was born A.U.C. 711, in which year the two consuls Hirtius and Pansa were mortally wounded at the battle of Mutina. Julius Scaliger was the first commentator who suspected that these verses had been interpolated, and his opinion has been confirmed by Janus Dousa, who, has shown, at great length, that the chronology they would establish could by no means be reconciled with dates which must be assigned to various events in the life of the poet. He conjectures that the lines which had occasioned the common error with regard to the birth of Tibullus were interpolated in his elegies from the works of Ovid, in whose *Tristia* they occur (4, 10). Dousa was followed by Broukhusius and Vulpinius, who all erroneous, has been noted in his book *Tibullus*, A.U.C. 711; but it would not appear that they had added sufficient authority for carrying it quite so far back as 690, which they have fixed on for the epoch of his birth. It appears from an epigram of Domitius Maras, a contemporary of Tibullus, that he ceased to live about the same time with Virgil. But Virgil died in 734, and, had Tibullus been born so early as 690, he must have reached the age of forty-four at the time of the *Teares* of Tibullus. But the premature death deplored by his contemporaries, or the epitaph *Jubens* applied to him in this very epigram of Domitius Maras. On the whole, his birth may be safely conjectured to have occurred between A.U.C. 695 and 700. It has been remarked, that few of the great Latin poets, orators, or historians were born at Rome, and that, if the capital had always confined the distinction of Romans to the ancient families within the walls, her name would have been deprived of all its pontiffs. Tibullus, however, is one of the exceptions, as his birth, in whatever year it may have happened, unquestionably took place in the capital. He was descended of an equestrian family of considerable wealth and possessions, though little known or mentioned in the history of their country. His father had been engaged on the side of Pompey in the civil wars, and died soon after Caesar had finally triumphed over the liberties of Rome. It is said, but without any sufficient authority, that Tibullus himself was present at Philippi, along with his friend Messala, in the ranks of the republican army. He retired in early life to his paternal villa near Pedum. In his youth he had tasted the sweets of affluence and fortune, but the ample patrimony he had inherited from his ancestors was greatly diminished by the partitions of land made to the soldiery of the triumvirs. Dacier and other French critics have alleged that he was ruined by his own dissipation and extravagance, which has been denied by Vulpinius and Broukhusius, the learned editors and commentators of Tibullus, with the same eagerness as if their own fame and fortune depended upon the question. The partition of the lands in Italy was probably the chief cause of his indigence; but it is not unlikely that his own extravagance may have contributed to his early difficulties. He utters his complaint of the vanity of his pursuits in terms which show that he had already suffered from their rapacity. Nevertheless, he expresses himself as if prepared to part with everything to gratify their cupidity. It seems probable
TIBULLUS.

that no part of the land of which Tibullus had been deprived was restored to him, but he found no in his elegies a single expression of gratitude or compliment, from which it might be conjectured that Augustus had stoned to him for the wrongs of Octavius. It is evident, however, that he was not reduced to extreme want. It might even be inferred, from a distich in one of his elegies (2, 4), that his chief paternal seat had been preserved to him:

"Quin etiam sedes jubeat si vendere avitas / Its ub imperium, sub titulumque, Lares."

Horace, too, in a complimentary epistle (1, 4), written long after the partition of the lands, says that the gods had bestowed on him wealth, and the art of enjoying it:

"Di tibi divitias dederunt, artemque fruendi."

His own idea of the enjoyment of such wealth as he possessed seems to have been (judging, at least, from his poems) a rural life of tranquillity and repose, of which the sole employment should consist in the peaceful avocations of husbandry, and the leisure hours should be devoted to the Muse or to pleasure. His friendship, however, for Messala, and, perhaps, some hope of improving his moderate and diminished fortune, induced him to attend the emperor to command in various military expeditions. It would appear that he had accompanied him in not less than three. But the precise periods at which they were undertaken, and the order in which they succeeded each other, are subjects involved in much uncertainty and contradiction. The first was commenced in 719, against the Sallasi, a fierce and warlike people, who inhabited the Pennine or Graian Alps, and from their fastnesses had long held defiance against the forces made by a regular army for their subjugation.—His next expedition with Messala was to Aquitanic Gaul. That province having revolted in 724, Messala was intrusted with the task of reducing it to obedience; and he proceeded on this service immediately after the battle of Actium. Several sharp actions took place, in which Tibullus signalized his courage; and the success of this campaign, if we may believe himself, was in no small degree attributable to his bravery and exertions.

In the following season, Messala, being intrusted by the emperor with an extraordinary command in the East, requested Tibullus to accompany him; and to this proposal our poet, though, it would appear, with some reluctance, at length consented. He had not, however, been long at sea, when his health suffered so severely that he was obliged to be put on shore at an island, which Tibullus names by its poetical appellation of Phasia, but which was then commonly called Corcyra, now Corfu. He soon recovered from this dangerous sickness, and, as soon as he was able to renew his voyage, he joined Messala, and travelled with him through Syria, Cilicia, and Egypt. Having returned to Italy, he again retired to his farm at Pedum, where, though he occasionally visited the capital, he chiefly resided for the remainder of his life.—Tibullus was endowed with elegant manners and a handsome person, which involved him in many licentious connexions. But, though devoted to pleasure, he at the same time drew closer his connexion with the most learned and polished of his countrymen, as Valgius, Macer, and Horace. He continued, likewise, an uninterrupted friendship with Messala, who was now at the height of his reputation, his home being the resort of the learned, and his patronage the surest passport to the height of fame. Tibullus' enjoyment of this sort of life was considerably impaired by the state of his health, which had continued to be delicate ever since the illness with which he was attacked at Corcyra. His existence was protracted till 734, and his death, which happened in that year, was deplored by Ovid in a long elegiac poem.—The events and circumstances of the life of Tibullus have exercised a remarkable influence on his writings. Those occurrences to which he was exposed tended to give a peculiar turn to his thoughts, and a peculiar colouring to his language. The Roman fair of the highest rank had become alike licentious and venal; and the property of those ancient possessors of the Italian soil, who had adhered to the republican party, was divided by unprincipled usurpers among their rapacious soldiery. Unhappy in love, and less fortunate in fortune than he had reason to anticipate, all that he utters on these topics is stamped with such reality, that no reader can suspect for a moment either that his complaints were borrowed from Greek sources, or were the mere creations of fancy. His feelings seem to have been too acute to permit him the possession of that perfect pose and equanimity of spirit which he justly accounted the chief boon of fortune in its power to eminence and wealth, which Horace perhaps enjoyed, and which seems to have been so earnestly desired by Tibullus, was rather pretended by him than actually felt; and his inability to procure either the advantages of fortune or delights of contentment is the source of constant struggle and disappointment. Hence the irritability, melancholy, and changeable-ness of his temper. Such circumstances in the life, such a character as his, are but rarely found explanatory and illustrative of much which we find in his elegies. These elegies have been divided by German writers into Erotic, Rural, Devotional, and Panegyrical. The chief ingredients in his poems are no doubt derived from such topics; but many of his elegies partake of all these qualities, and there are few of them which can be accounted purely belonging to any of the above classes. The elegies, however, in which his most Euter sentiments are expressed are by far the most numerous.—One can scarcely be a poet and in love, it has been said, without also loving the country. Its scenes supply the sweetest images; there the shepherds have their cool retreats, and lovers have their echoes. Accordingly, the pastoral delineations which occur in the elegies of Tibullus are closely interwoven with the erotic sentiments; and there are few of his poems that are not beautified by that reference to rural feelings which forms the great and characteristic charm of the works of the Latin poets. Again, as rural pictures are intermixed, in the elegies of Tibullus, with amatory sentiments and feelings, so his poems, which have been classed together as devotional, are closely connected with his pastoral verses. They are full of images of rural theology, and it is to the rustic and domestic gods that his devotion is chiefly paid. He renders thanks to these deities for the prosperity of his little farm, or piously prepares a festival to their honour.—His panegyrics on his friends form the least pleasing and least valuable part of the writings of Tibullus. This subject was not suited to the elegiac strain, or to the soft and tender genius of the poet. When he assumes the tone of familiar friendship, as in the poems on the birthdays of his friends Cornutus and Cornelius, the elegies are easy and graceful. But his long and laboured panegyric on Messala, in the fourth book, written on occasion of his patron obtaining the consulship, shows how little he was qualified to excel in this species of composition. The compositions evidently most adapted to the genius of Tibullus are poems not merely written in elegiac verse, but which answer to some understanding of the word Elegy in the subject and sentiments. The tone of complaint best accords with his soul. He seems naturally to have been possessed of extreme sensibility; and at that period of life when the mind lays in its store of ideas for the future voyage, he had been subjected to much suffering and disappointment.
TIG

Hence, though his fortune afterward improved, he had acquired the habit of viewing objects as surrounded with a continual gloom; nor does any other poet so often introduce the dismal images of death. Even to the most joyous thoughts of Tibullus, some mournful or plaintive sentiment is generally united, and his most gay and smiling figures wear chaplets of celery, or thorn branches. It thus appears, that Tibullus was no imitator of the Greeks, and least certainly the most original of the Latin poets. His elegies were the overflowings of his sorrows, his mistress alone was the Muse that inspired him. In the few instances in which he has followed the Greeks, he has imitated them with much good taste, and sometimes even with improvements on the original. The elegies of Tibullus are divided into four books—

The first volume commonly printed along with those of Catullus and Propertius. Of the editions of Tibullus separately, the best are, that of Brouckhuisius, Amstelod., 1708, 4to; that of Vulpius, Patav., 1749, 4to; that of Heyne, Lips., 1755—77—83, 8vo; that of Wunderlich, Lips., 1817, 8vo; that of Lachmann, Berol., 1829, 8vo; and that of Dissen, Gotting., 1835, 2 vols. 8vo. (Dunlop's Roman Lit., vol. 3, p. 283, seqq.)

Tibur, an ancient town of Latium, northeast of Rome, on the banks of the Anio. According to Dionysius of Halicarnassus, it was originally a town of the Siculi, the most ancient inhabitants of Latium; and, as a proof of this fact, he mentions that the name of Siccian was still attached to a portion of the place. (Don. Hal., 1, 16.) Tibur, however, lays claim to a more illustrious, though a later origin, having been founded, according to some authors, by Catullus, an officer of Evander, while others pretend that this Catilina was the son of this Evander. But it is a well known fact that two brothers, migrated to Italy, and, having conquered the Siculi, gave to one of their towns the name of Tibur, from his brother Tiburtus. From this account of Solinus (c. 8), as well as that of Dionysius, we may collect that Catilina was one of the Pelasgic chiefs, who, with the assistance of the Aborigines, formed settlements in Italy. Tibur is one of the places that appear most frequently to have afforded an asylum to Roman fugitives. From what period it enjoyed the rights of a Roman city is not precisely known, but it was, in all probability, anterior to the civil wars of Marius and Sylla. The latter, indeed, is said to have deprived the Tiburtini of these privileges, but they regained them upon his abdication, and they were confirmed by the Emperor Claudius. Hercules was the deity held in the greatest veneration at Tibur; and his temple, on the foundations of which the present cathedral is said to be built, was famous throughout Italy. (Strabo, 328.) Hence the epithet of Herculean given by the poets to this city. The modern name of Tibur is Tivoli.—As regards the Sibyl of Tibur, vide Albunea. (Cramer's Anc. Italy, vol. 2, p. 56.)

Tiburtus, a brother of the founder of Tibur, which is hence often called Tiburtia Maior. (Vid. Tibur.) He was one of the sons of Amphiarhus. (Virg., Ene., 7, 670.)

Ticinum, a city of Cisalpine Gaul, situate on the river Ticinum, near its junction with the Padus. It was founded, according to Pliny (3, 17), by the Lavi and Marici, but, being placed on the left bank of the Ticinum, it would, of course, belong to the Insubres; and, in fact, Ptolemy (p. 64) ascribes it to that people. Tacitus is the first historian that makes mention of it. According to that historian (Ann., 3, 5), Augustus advanced as far as Ticinum to meet the corpse of Drusus, the father of Germanicus, in the depth of winter, and thence escorted it to Rome. It is also frequently noticed in his Histories. Ancient inscriptions give it the title of municipium. Under the Lombard kings, Ticinum assumed the name of Papia, which, in process of time, has been changed to Papia. (Paul. Dioni., Rec. Lang., 2, 15.—Cramer's Anc. Italy, vol. 1, p. 53.)

Ticinus, now the Teseino, a river of Gallia Cisalpina, rising in the Leopontine Alps, near the sources of the Rhodanus, and falling into the Po near Ticinum. It traversed in its course the Lacus Verbanus, or Lago Maggiore. At the mouth of this river, the kings of Armenia, under Cornelius Scipio, the father of Scipio Africanus the Elder, were defeated by Hannibal.——Consult, in relation to this battle, the remarks of Cramer (Anc. Italy, vol. 1, p. 54, seqq.).

Tiffata, a mountain range of Campania, about a mile to the east of Capua. It was a branch of the Apennines, and now takes its name from the village of Maddaloni, near Caserta. The original signification of the word Tiffata, according to Festus, answered to that of the Latin ticeta. This ridge is often noticed by Livy as a favourite position of Hannibal when in the vicinity of Capua (23, 36 et 39; 26, 5). Here also were two celebrated temples consecrated to Diana and Joye. (Cramer's Anc. Italy, vol. 2, p. 205.)

Tiferennum, I. a town of Umbria, near the Metaurus, called hence, for distinction sake, Metauerense. It is now known as the town of the Metaurus, towards the sources of the river Metauros, on the right bank of the river Tifernus (now Biferno). The Mons Tiferennus was near the source of the same river, above Bovano, and is now called Monte Matese. (Cramer's Anc. Italy, vol. 2, p. 231.)

Tiferennus, a mountain of Campania. (Vid. Tiferennum III.)

Tigellius, Sophonius, an infamous character in the reign of Nero, whose vices secured to him the favour of that corrupt emperor. He was prefect of the praetorian guards when the conspiracy against Nero was discovered, and for his services on that occasion the emperor bestowed upon him triumphal honours. Having gained, according to Tacitus, an entire ascendant over the affections of Nero, he was, in some instances, the adviser of some of the worst acts of that prince, and in others the chief actor, without the knowledge of his master. He corrupted Nero at first, and then deserted him; and at last, to the great joy of all, he was compelled to put an end to his existence by order of Otho. (Tacit., Ann., 14, 51, seqq.—Id. ib., 15, 72.—Id., Hist., 1, 72.)

Tigellius, M. Hermogenes, a singer and musician, who stood high in the favour of Julius Caesar, and after in that of Augustus. He seems to have been indebted for his elevation to a fine voice, and a courtly and insinuating address. His moral character may be inferred from those who are said in Horace (Sat., 1, 3, 3) to have deplored his death, and on whom he would appear to have squandered much of his wealth. Cicero, in a letter to a friend, numbers Tigellius among the "familiorissimi" of Caesar, and describes him as "dominum post Tiberinum patriam sua," in allusion to the unwelcome atmosphere of Sardina, of which island this individual was a native. (Cic., Ep. ad Fam., 7, 24.) The scholiast informs us that Horace attacked Tigellius in the poetry because the latter derided his verses. (Schol. ad Horat., 1, c.)

Tigranes, king of Armenia, the son-in-law and ally of Mithradates. He rendered himself master of Armenia/Mnner, Cappadocia, and Syria, but lost all
these conquests after the defeat of Mithradates. Lucullus, the Roman commander, invaded Armenia, and defeated, near Tigranocerta, the mixed and numerous army of Tigranes. (Vid. Lucullus.) The peace concluded in the year 68 B.C. left him only Armenia. (Vid. Mithradates VII.)

Tigranocerta, the capital of Armenia, built by Tigranes during the Mithradatic war. It was situated to the east of the Tigris, on the river Nicephorus, and according to Tacitus, stood on a hill not far surrounded by the latter river. It was a large, rich, and powerful city. It was inhabited not only by Orientals, but also by many Greek colonists, and likewise by captives who had been carried off by Tigranes from some of the Greek cities of Syria which had been conquered by him from the Seleucids. Lucullus, during the Mithradatic war, took it with difficulty, and found in it immense riches, and no less than 8,000 talents in ready money. The Roman commander sent home the greater part of the foreign inhabitants, but still the city remained, after this, no unimportant place.

The remains of Tigranocerta are at Sered on the Bitlis-Soo. (Tac., Ann., 12, 50.—Id. ibid., 14, 24.—Plin., 6, 9.)

Tigris, a large river of Asia, rising in the mountains of Armenia Major, in the district of Sophene, and falling into the Euphrates. A rising ground prevents it from joining the Euphrates as the source of thirty-six of its course. A deep ravine in the mountains above Amida, or Diarbekir, opens a passage for it, and it takes its speedy course across a territory which is very unequal, and has a powerful declivity. Its extreme rapidity, the natural effect of local circumstances, has procured for it the name of Tigr in the Median language, Digtio with the Syrians, Delkat or Diakhlat in Arabic, and Hiddekel in Hebrew; all which terms are derived from the root Tigr, the name of the mountain. The identity of its waters is shown by the reappearance of light bodies at its issue that have been thrown up into it above the place where it enters the mountains. It passes also by the Lake Thospis, near Arzanaen or Ezren, buries itself again in subterranean caverns, and reappears at the distance of twenty-five miles below, near Nymphsium. This branch joins the western Tigris. As the Tigris and Euphrates approach, the intermediate land loses its elevation, and is occupied by meadows and morasses. Several artificial communications, perhaps two or three of which are natural, form a preface to the approaching junction of the rivers, which finally takes place near the modern Koma. The river formed by their junction was called Pasitigris, now Shat-el-Arab, or the river of Arabia. It has three principal mouths, besides a small outlet; three sums are a pace of thirty-six miles. For farther particulars, vid. Euphrates. The Tigris, though a far less noble stream than the Euphrates, is one of the most celebrated rivers in history, and many famous cities, at various periods, have decorated its banks: among these may be mentioned Nineveh, Seleucia, Ctesiphon, and, in modern times, Mostajeran, Mosul, Diarbekr. The length of the Tigris is equal to the distance.

Tigrina, a warlike people among the Helvetii, whose territory is supposed to have answered to the modern Zolow. Considerable doubt, however, has been thrown upon the correctness of this opinion. (Consult Lemaire, Ind. Geogr. ad Cas., z. — Oberlin. ad Cas., B. G., 1, 27.)

Timacus, now the Timok, a river of Messiai falling into the Danube. (Plin., 3, 26.)

Timaeus, I. a Pythagorean philosopher, a native of Locri, born about B.C. 380. He was a preceptor of Plato's. We have remaining of his productions only a single work (that of the Timaeus), written in the Doric dialect, and treating "of the Soul and the World and of Nature" (περί ψυχής καὶ κόσμου καὶ φύσεως). There exists, however, much uncertainty as to its being the work of Timaeus or not. Tenmannen (Synt. der Plat. Phil., vol. 1, p. 93) attempts to prove that it is merely an extract from the Timaeus of Plato. Other critics, on the contrary, charge Plato with copying from this into his dialogue. We owe the preservation of this piece of Timaeus to Iamblichus, who has placed it at the head of his commentary on Plato's Timaeus. (Scholl, Hist. Lit. Gr., vol. 2, p. 313.)

II. A native of Tauromenion, in Sicily, who flourished about 250 B.C. Having been driven into exile by Agathocles, he repaired to Athens, where he occupied himself with the composition of a great historical work on the affairs of Greece, on those of Sicily, the campaigns of Timaeus of Tauromenion and his successors. It bore the title of Ελληνικά καὶ Σικελικά, or, τίτλοι Βατικός καὶ Σικελικά, and was divided into more than 40 books. It appears, from a passage in Polybius (3, 32), that this work did not contain a synchronistic relation of events, but consisted rather of detached portions of history, in each of which the author treated separately of some important event. Cicero calls Timaeus a model of what was called the "Asiatic" style. (Brut., 93.) He says of Timaeus: "Ille homines et eventa, et historiae, atque operis infinitos, profusos, et ingeniosos Siculcam, habuit Timaeus cum credulitate et unquam. Naturally gloomy and morose, he was exasperated by the treatment which he had experienced from Agathocles. His ill-humour, however (if it may be so termed), never degenerated into misanthropy; he was even open at times to kindly affections. Timoleon was the hero whom he admired; and Cicero says that the former owed a part of his glory to the latter. Having been himself an historian of his exploits as Timaeus. (Ep. ad Fam., 4, 12.) The ancients praised his geographical knowledge, and his care in indicating the chronology of the events which he describes. He appears also to have composed another work, on the "Olympiads," and it is said he was the first historical writer that employed this era. Longinus, after speaking of Timaeus as in general an able, well-informed, and sensible writer, charges him with frequent puerilities and frigid expressions which he ascribes to an over-eagerness for novelty of ideas and language. (Long., § 4.) We have only some fragments remaining of the historical work. These have been collected by Goller, in his treatise "De Situ et Origine Syracusarum," p. 209, seqq. (Scholl, Hist. Lit. Gr., vol. 3, p. 219, seqq.)—II. A work of the third century of our era, which is called Historia Lacedaimonica. It was edited with great ability by Ruhnken, Lugd. Bat., 1754, 8vo. A later edition of this same, containing all Ruhnken's notes, appeared from the Leipzic press in 1828, 8vo, under the editorial care of Koch.—As regards the period when he is supposed to have flourished, consult the remarks of Ruhnken (Pref. p. xiv.)

Timagenes, a native of Alexandria, son of the banker of Ptolemy: Alexander. Having been reduced to slavery, after the death of his master was taken by Gabinus (55 B.C.), he was brought to Rome, and sold to Faustus, the son of Sylla, who gave him his freedom. He exercised, after this, the profession of a cook, and then that of a litter-bearer (lectecarios). Abandoning, subsequently, this
humble employments, he set up as a teacher of rhetoric, and met with brilliant success. His society was much sought after on account of his agreeable manners and intellectual qualities; but his passion for uttering bonum motus ruined all his prospects. Augustus, it seems, had appointed him his historiographer, and extended his power over the market of his art. He was offended by a witty speech of Timagenes, he forbade his presence. In the resentment of the moment, Timagenes burned the history which he had composed of the reign of Augustus, and retired to Tusculum, where he enjoyed the patronage and protection of Asinius Pollio. In this retreat he wrote a History of Alexander and his successors, entitled peri batallion ("Of Kings"). This work formed one of the principal sources whence Quintus Curtius drew the materials of his historical romance. Timagenes, after this, fixed his residence at the very extremity of the empire, in Drapanum, a city of Oerhoea, where he ended his days. It is on account of his residence in this part of the East that some authors give him the epithet of "the Syrian." Besides his History of Alexander, Timagenes also published a work on the Gauls, which is cited by Ammianus Marcellinus and Plutarch. (Bonamy, Recherches sur l'histoire Timagené, vol. 1, p. 50.) Yossius distinguishes between Timagenes the Alexandrian and Timagenes the Syrian, but in this he is wrong. (Schöll, Hist. Lit. Gr., vol. 4, p. 75.)

TIMANthes, I. a painter, said by Eustathius (ad Il., 24, 163) to have been a native of Sicily, but by Quintillian (2, 13), of Cythus. He was a contemporary of Zeuxis and Parrhasius (Plin., 35, 9, 36), and must, consequently, have lived about Olymp. 96. The most important passage relating to him is in Pliny (35, 10, 36).—Timanthes has not been so much brought forward in the annals of art as Zeuxis and Parrhasius; but, as far as we have means given us of judging, he was, at least, inferior to neither in genius. He seems to have thrown a large share of intellect and thought into his productions. He appears to have been unequalled both in ingenuity and feeling, of which we have some remarkable examples. One of these was discovered in relation to the painting which, on the occasion of the sacrifice of Ipigenia, in which he represented the tender and beautiful virgin standing before the altar awaiting her doom, and surrounded by her afflicted relatives. All these last he depicted as moved by various degrees of sorrow, and grief seemed to have reached its utmost expression in the face of Meneleus; but that of Agamemnon was left; and the painter, heightening the interest of the piece by a forbearance of judgment, often erroneously regarded as a confession of the inadequacy of his art, covered the head of the father with his mantle, and left his agony to the imagination of the spectator.—In Fuseli's Lecture on Ancient Art, this painting of Timanthes is made the subject of a full and very able criticism, in the course of which he dissents expressly from the opinion of Sir Joshua Reynolds, who agreed with M. Falconet in regarding the circumstance of the mantle-enveloped face of Agamemnon as a little better than a trick on the part of the artist. The remarks of Fuseli, in answer to this and similar animadversions, are worthy of being quoted: "Neither the French nor the English critic appears to me to have comprehended the real motive of Timanthes; they ascribe to impotence what was the forbearance of judgment. Timanthes felt like a father; he did not hide the face of Agamemnon because it was beyond the power of his art, nor because he wished to conceal it, but because it was beyond the dignity of expression; because the inspiring feature of paternal affection at that moment, and the action which, of necessity, must have accompanied it, would either have destroyed the grandeur of the character and the solemnity of the scene, or sub-

jected the painter, with the majority of his judges, to the imputation of insensibility. He must either have represented him in tears, or convulsed at the flash of the uplifted steel, forgetting the chief in the father, and in that state of stupefaction which levels all features and deadens expression. He might, indeed, have conveyed to the mind the sensation of horror he might have exhibited him fainting and palsied in the presence of the altar, and, by this confusion of male and female character, merited the applause of every theatre in Paris. But Timanthes had too true a sense of nature to expose a father's feelings or to tear a passion to rags; nor had the Greeks yet learned of Rome to steal the face. If he made Agamemnon bear his calamity as a man, he made him also feel it as a man. It became the leader of Greece to restore the ceremony with his presence; it did not become the father to see the dagger beneath the dagger's point: the same nature that threw a real mantle over the face of Timoleon, when he assisted at the punishment of his brother, taught Timanthes to throw an imaginary one over the face of Agamemnon; neither height nor depth, but propriety of expression, was his aim." (Fuseli, Lecture on Anc. Art.—Works, vol. 2, p. 49.)—This celebrated piece was painted, as Quintilian informs us, in contest with the works of Zeuxis and Parrhasius (vitr. Arat. 13, c. 5). Yossius delineates of Phidias, and it was crowned with victory at the rival exhibition. (Quintil., 2, 13. —Cic., Orat., 22, § 74.—Eustath., i. c.)—On another occasion, having painted a sleeping Cyclops in an exceedingly small compass, yet wishing to convey the idea of his gigantic size, he introduced a group of Satyrs, measuring his thumb with a thrysus. A deep meaning was to be discovered in every work of his pencil: yet the tendency to expression and significant delineation did not detract from the beauty of the forms which he created; for his figure of a prince was so perfect in its proportion and so majestic in its air, that it appears to have reached the utmost height of the ideal. This picture was preserved in the temple of Peace at Rome. (Encyclop. Metropol., div. 2, vol. 1, p. 407.—Sillig, Dict. Art., a. v.)—I. a painter, who flourished in the age of Aratus, and made a picture representing the battle between his general and the Etolians, near Pellene. (Plot., Vit. Arat., c. 82.—Sillig, Dict. Art., a. v.)

TIMAUS, a celebrated stream of Italy, in the territory of Venetia, northeast of Aequileia, and falling into the Adriatic. Few streams have been more celebrated in antiquity or more sung by the poets than the Timavus. Its numerous sources, its lake and subterranean passage, which have been the theme of the Latin muse from Virgil to Claudian and Ausonius, are now so little known, that their existence has even been questioned, and ascribed to poetical invention. It has, however, been well ascertained, that the name of Timas is still preserved by some springs which rise near S. Giovanni di Carso and the castle of Duno, and form a river, which, after a course of little more than a mile, falls into the Adriatic. The number of these sources seems to vary according to the difference of the seasons, when circumstance will account for the various statements made by ancient writers respecting them. Strabo, who appears to derive his information from Polybius, reckoned seven, all of which, with the exception of one, were salt. According to Posidonius, the river really rose in the mountains at some distance from the sea, and disappeared under ground for the space of fourteen miles, when it issued forth again near the sea at the springs above mentioned. (Strabo, 3, 6, 11, but here, 3, 5, 10.) This account is confirmed by actual observation. (Cramer's Anc. Italy, vol. 1, p. 130.)

TIMOLEON, a Corinthian of noble birth and distinguished ability as a warrior and statesman. His broth-

er Timophras having, partly by popularity and part
by the aid of a mercenary force, made himself tyrant of Corinth, Timoleon, after vain remonstrance, came to
him with a kinsman of his, brother to the wife of Ti-
mon, and a friend named Theopompus; and, cover-
ing his own face, stood by while the others slew him. When the Syracusan ambassadors arrived to seek aid
from Corinth against their tyrants, the deed was recog-
nized, and all Corinth was in a ferment; some extolling Ti-
oleon as the most magnanimous of patriots, others execrating him as a fratricide. The request of the
Syracusans offered to the Corinthians the means of
calming their dissensions by the removal of the ob-
noxious individual, and to Timoleon a field of honour-
able action, in which he might escape from the misgiv-
ings of his own mind and the reproaches of his moth-
er, who never forgave him. Timoleon proceeded to
Sicily with a small band of mercenaries, principally
raised by his own credit. On arriving he received
considerable re-enforcements, and soon gained a foot-
ing in Syracuse. The greater part of the population,
ready been taken by Hicetes from Dionysius, and
the whole was divided between three parties, each hostile
to the others. Timoleon was, in the end, success-
ful. Hicetes withdrew to Leontini, and Dionysius
surrendered, himself and his friends retiring to Cor-
thin; while two thousand mercenaries of the garrison
engaged in the service of Timoleon. This final ex-
pulsion of Dionysius took place fifty years after the rise
of Hicetes, and sixty after Timoleon's. Dionysius
in Sicily (B.C. 543). Timoleon remained master of a
city, the largest of all in the Grecian settle-
mens; but almost a desert, through the multitudes
slain or driven to banishment in successive revolu-
tions. So great, it is said, was the desolation, that
the horses of the cavalry grazed in the market-place,
while the grooms slept at their ease on the luxuriant
herbage. The winter was passed in assigning deserted
lands to Grecian adventurers; and to all who were
acquainted with the policy of Timoleon, the
mercenaries instead of pay, which the general had not to
give. In winter, when Grecian warfare was slackened
or interrupted, the possession of good houses would
doubtless be gratifying; but to men unused to peace-
ful labour, lands without slaves and cattle were of lit-
tle worth; and it was necessary, in the spring, to find
them some profitable employment. Unable sufficient-
ly to employ the enemy, Timoleon sent one thousand men into
the territory belonging to Carthage, and gathered thence
abundance of spoil. The measure may seem rash,
but he probably knew that an invasion was preparing,
and that quiescence would not avert the storm, while
a rich booty would make his soldiers meet it better.
The Carthaginians landed in Sicily. Their force is
stated at seventy thousand foot and ten thousand horse;
while Timoleon had only mustered three thousand
Syracusans and nine thousand mercenaries. Never-
theless, he advanced to meet them in their own pos-
sessions; and, by the union of admirable conduct with
singular good fortune, won a glorious victory, which
was soon followed by an honourable peace. Timoleon,
professing to be the liberator of Sicily, next directed
his arms against the various chiefs or tyrants who held
domination in the island. They probably have been
acted by a sincere hatred of such governments; but
he frequently seems to have little consulted the
wishes of the people, whose deliverer he declared him-
self. Most of the smaller chiefs withdrew; the more
powerful, resisting, were conquered; and, being given
up to their political adversities, were put to death
in some cases with studied cruelty. Among the victims
was Hicetes, who was submitted: with his whole fam-
ily, that mixed with the Syracusan people, and all were put to death. There is much appearance that Hicetes deserved his
lot; but what shall we say of the people which doom-
ed to death his unoffending wife and daughters! and
what of the general, who, holding little less than abso-
tute authority, referred such a mat-
ter to the decision of such a body? Hap-
y everywhere established for Syracuse and for himself a su-
perintending authority, which rested on the support of
a prevailing party, the control of Athens or Laced-
demon over their allies, Timoleon sought to restore
good order, abundance, and population to the long-affec-
ted island. Syracuse was still very thinly peopled,
and it was torn by mutual jealousy between the remai-
nant of the Syracusan, and the numerous mer-
cenaries and foreign adventurers who had been re-
warded for their services with lands and houses, and
admission to all the rights of citizens. At one time the
struggle ripened to a civil war, of which we know not
the circumstances or the issue; but probably it was
suppressed without the ruin of either party. At once
to supply the void in the city and to strengthen his gov-
ernment by a body of adherents who owed their all to
him, Timoleon invited colonists from Greece, and set-
tled at one time four thousand families on the Syra-
cusan territory, and on a neighbouring plain of great
extent and fertility no less than ten thousand. Simi-
lar measures were adopted in many of the other cities
under his control. He revised the ancient laws of Sy-
racuse, and restored them with amendments skillfully
adapted to the altered state of the commonwealth.
But this existence of so many bodies of men of various interests, and more especially of
men who lived by war and violence, was a work only to be accomplished by the
energy of one able man; and in accomplishing that
work, Timoleon was both enabled and obliged, by the
lawless habits of his followers, to exercise an author-
ity not less arbitrary than that of any tyrant he had over-
thrown. In one most important particular he is supe-
rior, not only to those chiefs, to Gelon and Dionysius,
and to all who ever held like power in Sicily, but
perhaps to all, with the single exception of Washington,
who have ever risen to the highest power in times of
tumult; for he appears to have directed his efforts
honestly and wisely to the object, not of establishing
a dynasty of princes, but, of so settling the government and training the people that they should be able, after
his death, to govern themselves without an arbitrary
leader. He did not follow the example of
those who, for many years after his death, the whole
of Sicily continued in unusual quiet and growing
prosperity. Yet, in doing justice to the great qualities
of Timoleon, and the sincerity of his zeal for the public
good, we cannot but own that he was unscrupulous in
the choice of means, even beyond the ordinary laxity of
political morality in Greece, and that his fame is tarn-
ish by some acts of atrocious cruelty and of gross in-
History of Greece (Lib. Us. Knowl.), p. 119, seq.)
TIMONACHUS, a painter of Byzantium, who flourished
in the age of Caesar the Dictator, and executed for
him pictures of Ajax and Medea, which were placed
in the temple of Venus Genetrix. For these paintings the
artist received 80 talents. (Plin. 35, 11, 40. —
Id., 35, 4, 9.) The Medea is the subject of an epi-
gram in the Anthology. (Anth. Palat., p. 317.) This
epigram has been assigned to Ausonius, in the 22d of his
collection. For an account of other pieces of
Timonachus, consult Siliig (Dict. Art., s. v.).
TIMON, I. a disciple of Pyrrho, who flourished in the
time of Perikles Philomelus, and lived to the age of
90 years. He first professed philosophy at Chalcedon,
and afterward at Athens, where he remained till his
death. He took little pains to inquire, so far as he
could, into the opinions and disputes of the philosophers with contempt; for he wrote a
poem called Silli, in which he inveighs with bitter sarcasms against the whole body. He was addicted to
intemperance. With him terminated the succession

of the public professors in the school of Pyrrho. The fragments of Timon were edited, in 1820, by Wölke, Varsae, 8vo, and in 1821, by Paul, Berol., 8vo.—II. Surnamed the Misanthrope, was a native of the borough of Colyvthus in Attica, and remarkable for the whimsical severity of his temper, and his hatred of mankind. Born some time before the commencement of the Peloponnesian war, it is possible that the vices and crimes of his time and country during a long period of trouble may have contributed to the development of that morose spirit which procured for him the surname by which he is always known. It appears from the ancient writers, and indirectly from the testimony of Plato himself (Phaedon, p. 67, ed. 1602), that this hatred towards his fellow-men was originally excited by the false and ungrateful conduct of others. He caused those around him a large fortune in presents and in services of all kinds, and, when his wealth was all expended, he found that he had lost not only his property, but his friends. Misanthropy then succeeded to unbounded liberality; and, shunning the society of his fellow-men, and retiring to a small spot of ground in the suburbs, he gave himself up to the workings of an irritated and deeply disappointed spirit; or, if ever he did mix on any occasion with the busy world at Athens, it was only to applaud, with cruel irony, and cast stinging insinuations at the cold and repulsive to all others, he appeared to take a lively interest in the young Alcibiades; but it was only because he saw in him the future author of evil to his country. He even publicly declared the motives that prompted him to this singular attachment; for, happening one day to meet Alcibiades returning from the place of assembly, accompanied by a large concourse, in place of turning away and avoiding him as he was accosted, he came dashing up, and, grasping his hand, exclaimed, "Go on, my master: now you do well to augment your own power, for you are only augmenting it to the lasting injury of these." One account says that Timon, having subsequently become possessed of a new fortune, probably by agriculture, changed to a complete miser, and shut himself up, together with his riches, in a kind of tower, which was called, for a long time afterward, the tower of Timon. The tradition is, that the tower was so provided with various objects, that the rank which Pliny (7, 19) assigns him among the "auciores maxima sapientia," nor with the appellation ascribed to him by Stobaeus (Serm., 7, p. 107), that "cupidity and avarice are the cause of all human ill;" but nothing ought to surprise us in so whimsical a character; and besides, if in the folly of avarice we see nothing of the sage, we certainly see enough of the misanthrope. The end of Timon was worthy of his life. Having broken a limb by a fall, and having, in his aversion for his fellow-men, refused all assistance, a gangrene set in and he died. But this was not all. Nature herself seems to have seconded the intentions of Timon, by separating him, even after death, from the habitable world; for in his tomb having been erected near the seashore, the ground around it was gradually covered by the water, and the spot thus rendered inaccessible. The character of Timon is made a frequent subject for epigrams in the Greek Anthology, and many sayings of his are quoted by the ancient writers. The two following are the best: Timon, after having renounced the society of his fellow-men, still kept up a kind of intimacy with another misanthrope named Apimantis. During a repast in which they were celebrating the second day of the Anthestheria (ποιείς), Apimantis, charmed with the tête-à-tête, exclaimed, "Oh, Timon! what an agreeable situation!" replied his companion, "let us therefore say "we are not going away." On another occasion, the people of Athens were surprised to see him ascend the tribunal, and waited in profound silence to hear what he would say, "Athenians," exclaimed the new orator, "I have a small field, and in this field a fig-tree, on which many citizens have already hung themselves. I intend now to build a house on this spot, and wish to give you notice before I begin, in order that if there be any more of you who intend to hang yourselves, you may come before the fig-tree is cut down." (Diog. Laert., 9, 112.—Suid., s. v.—Lecter, in Biogr. Univ., vol. 46, p. 83, seqq.) Timon, a Corinthian, brother to Timoleon. He attempted to make himself tyrant of his country by means of the mercenary soldiers with whom he had fought against the Argives and Cleomenes. Timo- lon wished to convince him of the impropriety of his measures; and, when he found him unmoved, he caused him to be assassinated. (Vid. Timoleon, at the commence- ment of the article.) Timóphanés, I. a poet and musician of Miletus, born 446 B.C. He was received with hisses the first time he was exhibited in public at Athens, and farther applications would have been totally abandoned, had not Eu- ripides discovered his abilities, and encouraged him to follow a profession in which he afterward gained so much applause. According to Pausanias, he perfect- ed the cithara, by the addition of four new strings to the seven which it had before. Suidas, however, states that it had nine before, and that Timotheus, a pupil of the famous Praxagoras, was the first to add a ninth string to the cithara. The truth appears to have been that the lyre of Terpander had seven strings; that of Phrynis, a musical opponent of Timotheus, nine strings; and that of Timotheus, eleven. Hence, no doubt, the remark of Suidas, that the last-mentioned individual added only two strings. As, however, the two strings added by Phrynis were ordered to be removed by a public decree, Pausanias might say, without impropriety, that Timotheus had added four strings. This innovation was not well received by the Lacedaemonians, and it was proposed for us in Boèthius (de Musica, 1, 1, p. 1372, ed. Bas- il, 1570), and which furnishes, also, a good specimen of Doric prose. (Maittaire, Dialectic, p. 385, ed. Sturz.) The decree concludes with ordering that the kings and the ephori do publicly reprimand Timotheus, and compel him to cut off the newly-added strings of his lyre, and come back to the old number of seven. Athenaeus remarks, that when Lacedaemonians, in point of being carried into execution, Timotheus showed the Lacedaemonians that they had in their own city a small image of Apollo holding a lyre which had ex- actly the same number of strings as his own, and that, upon this, he was acquitted. (Athenaeus, 14, p. 636, e. f.) His new system of music met with numerous adversaries throughout Greece; and Plutarch and Athenaeus have preserved many of the sacrifices that were launched at him in consequence by the comic poets of the day. All these attacks, however, only served to confirm the reputation of the musician. Af- ter having distinguished himself in most of the Gre- cian cities, Timotheus retired to Macedonia, to the court of King Archelaus, where he died at a very advanced age, two years before the birth of Alexander the Great. Timotheus composed pieces in almost every department of poetry. A hymn in honor of Diana obtained for him a very large sum of money from the Ephesians, for whom he had composed it. The ancients cite his Nomes, his Proems or preludes, eighteen Dithyrambs, twenty-one Hymns, two Poems, entitled Danaiè and Semele; four Tragedies, &c. We have merely a few fragments of his productions re- maining. They are given by Grotius, in his Excerpta ex tragediis et comediis Graecis, &c., Paris, 1636, 4to. (Recherches sur la Vie de Timothée, et sur les morts de ses discipulz, par M. de Retz; par l'Auteur des Desirs, vol. 10.—Weiss, Biogr. Univ., vol. 46, p. 92, seqq.)—II. A celebrated musician, a native of Thebes in Boeotia. He was one of those who were invited to attend at the celebration of the nuptials of Alexander the Great. He excelled
particularly in playing on the flute; and his performance is said to have animated the monarch in so powerful a degree, that he started up and seized his arms; an incident which Druden has so beautifully introduced into English poetry. (Burette, Recherches, 46. — Weis, Biogr. Univ., vol. 46, p. 93.) III. An Athenian commander, son of Conon, inherited the valour and abilities of his father. In 375 B.C. he gained a signal victory over the Lacedaemonian fleet off Corcyra, and made himself master of this island. Then directing his course towards Thrace, he took several prominent cities of that country, and after driving Cyzicus from the foe. He subsequently shared the command of the fleet with Iphicrates. The latter, having wished to attack the enemy during a violent tempest, and not obtaining the consent of Timotheus to so hazardous a step, caused him to be brought to trial at Athens. Timotheus was condemned to pay a fine of 100 talents; but, being unable to raise so large a sum, he retired to Chalcis, where he ended his days. His disinterestedness equalled his courage and military talents. He never appropriated to himself any portion of the booty taken from the foe. On one occasion he paid into the public treasury 1200 talents. There existed a very close intimacy between Timotheus and Plato. (Corn. Nep., in Vit. — Allain, V. Hi., 2, 10. — Aesch., vol. 1, p. 247, ed. Reiske. — Cic., Off., 1, 32. — Id., de Orat., 3, 34.)

The capital of Mauritania Tingitana, on the northwestern coast of Africa, and a short distance to the east of the Ampelusian promontory. It was fabled to have been built by the giant Anteus. Sertorius took it; and as the tomb of the founder was near the place, he caused it to be opened, and found in it a skeleton six cubits long. Some editions of Plutarch read ἐξαρατον (60) instead of ἐξαρατον (6); the latter, however, is decidedly the true reading. Plutarch copies here a tradition respecting the stature of Anteus. — The modern name of the place is Tangier. (Mela, 1, 5. — Id., 2, 6. — Plin., 5, 1.)

Tyrphæ, the pilot of the ship of the Argonauts, was son of Hagnius, or, according to some, of Phorbas. He died before the Argonauts reached Colchis, at the court of Lycurgus, in the Propontis, and Erginus was chosen in his place. (Apollod., 1, 9. — Hygin., fab., 14.)

Tiresias, a celebrated prophet of Thebes, son of Eneres and the nymph Chariclea, of the race of Udeaus, one of the Sparti. (Vid. Sparti.) Various accounts are given as to the cause of his blindness; one ascribes it to his having seen Minerva bathing (Pherecyd., ap. Apollod., 3, 6, 7. — Callim., Lap. Pall., 75, seqq.) another to his having divulged to mankind the secrets of the gods. (Apollod., 1, 38.) The Melamäus related that Tiresias, happening to see two serpents together on Mount Citharon, killed the female, and was suddenly changed into a woman. In this state he continued for seven years; at the end of which period, observing two serpents similarly circumstanced, he killed the male, and thus returned to his pristine state. On some occasion, Jupiter and Juno fell into a dispute as to which derived more power from the earth, the nurse, or the parent of a female. Unable to settle it to their satisfaction, they agreed to refer the matter to Tiresias, who had known both states. His answer was, that of ten parts but one falls to man. Juno, incensed at this, deceived Jupiter, the guiltless arbitrator of the power of vision. Jupiter thereupon, as one god cannot undo the acts of another, gave him, in compensation, an extent of life for seven generations, and the power of foreseeing coming events. — Tiresias lived at Thebes, where he was contemporaneous with all the events of the times of Lausus and CEdipus, and the two Theban wars. At the conclusion of the last he recommended the Thebans to abandon their city, and he was the companion of their flight. It was still night when they arrived at the fountain of Tiphys. Tiresias, whose period of life was said to be coextensive with that of the city of Thebes, died. The victorious Argives sent his daughter Manto, along with a portion of the spoil, to Delphi, according to the vow which they had made. In obedience to the command of the oracle, Manto afterward went thence, and, marrying Rhakios of Mycenæ or Crete, founded the town and oracle of Clarus. She bore to Rhakios (or, as others said, to Apollo) a son named Triopas, a celebrated prophet. (Schol. ad Apollon. Rhod., 1, 308. — Pausan., 7, 3, 2. — Tzetz. ad Lycurg., 980.) The name Tiresias (Τηρεσιας) is apparently derived from τηρεσ (old form τήρος), a prodigy, and that of his daughter from μάντις. (Keightley's My thology, p. 344, &c.)

Tiridates, a monarch of Parthia, raised to the throne after Phraates had been expelled for his cruelty and oppression. Tiridates, however, upon learning that Phraates was marching against him with a numerous army of Scythians, fled with the infant son of Phraates to Augustus. Augustus restored his son to Phraates, but refused to deliver up Tiridates. (Vid. Parthia.)

Tiro, M. Tullius, a freedman of Cicero's, held in high esteem by his master, and made eventually his private secretary and the superintendent of all his affairs. He performed many important services for Cicero, and received from the liberality of his grateful master a small rural domain, where he passed the rest of his days in retirement. Tiro wrote a Biography of Cicero, now lost; and made a collection of his bons mots (jocis) in three books. This has shared the fate of his other work. He was the author, likewise, of several other works; and a passage in one of Cicero's letters (Ep. ad Fam., 6, 19) gives the reason to suppose that he had attempted, among other things, even tragic composition. It is to the care of Tiro that we are indebted for the preservation of the letters of Cicero. To him, likewise, is ascribed the invention of stenography or short-hand writing. This is hardly correct. He would merely seem to have reduced to a more perfect system an art which had existed long before. The poet Ennius was the first who used the manner of writing. Isidore ascribes to him the invention of the art; in all likelihood, however, he merely borrowed it from the Greeks. (Ist. Orig., 1, 21, 1. — Weis, in Biogr. Univ., vol. 46, p. 128, seq.)

Tiryns of Tirynthius, a city of Argolis, southeast of Argos, and about twelve stadia from Nauplia. It was celebrated for its massive walls, and is said to have been founded by King Proetus, brother of Acrisius, who, as Strabo reports, employed for the construction of his citadel workmen from Lycia. These are the Cyclopes, or Chirgostases as they are sometimes called, who built the treasury at Athens, and the great doorway, which is still to be seen at Mycenæ. The poets have also ascribed to them the construction of the walls of Argos. (Strab., 379. — Apollod., 2, 2, 1. — Pausan., vol. 3, 15.) Astatthus, a king of Tiryns, was succeeded by Pseustus, who transmitted Trynus to his descendant Electryon. Alcmena, the daughter of this prince, was married to Amphitryon, on whom the crown would have devolved had he not been expelled by Theneleus of Argos. His son Hercules, however, afterward regained possession of his inheritance, whence he derived the name of Tirynthius. (Hercules, vol. 81. — Apollod., 5, 4, 6. — Pind., O. 10, 37. — Id., Id., 13.) Homer represents the city of Tiryns as subject to the kings of Argos at the time of the Trojan war. (II., 2, 559.) But it was afterward destroyed by the Ar.
TITANES, a name given to Alcmaeon, as being a native of Tityra. (Vid. Tityra.)

TITANES, a son of Orestes and Hermione the daughter of Menelaus, who succeeded on the throne of Argos and Lacon. The Heraclidæ entered his kingdom in the third year of his reign, and he was obliged to retire with his family into Achaia. He was some time after killed in a battle against the Ionians near Helice. (Apollod., 2. 7.—Pausan., 3. 1.)

TITANIS, one of the Furies. (Vid. Furis.)

TITARESIUS, a heap of Persia, commander of part of the forces of Artaxerxes at the battle of Cunaxa against Cyrus, and the one who first gave information to Artaxerxes of the designs of his brother. He afterward obtained a daughter of Artaxerxes in marriage, and all the provinces over which Cyrus had been governor. This was the same Tissaphernes who seized Alcibiades, and sent him prisoner to Sardis, after the naval victory which the latter had gained over the Persians. He was afterwards murdered by his enemies, the states of Asia, and the Persians, under Pausanias, upon which the King of Persia sent Tithraustes, another satrap, against him, who cut off his head. (Plut., Vit. Alcib.—Id., Vit. Ages.—Xen., Anab. I, 2.)

TITAN OR TITANES, I, a son of Ceæus (or Uranus) and Vesta (or Terra), brother to Saturn and Hyperion. He was the eldest of the children of Ceæus; but he gave his brother Saturn the kingdom of the world, providing for his own children, the eldest of whom was Jupiter, Neptune, and Pluto were concealed from him, Titan, discovering the deception, made war against Saturn, and imprisoned him till he was replaced on his throne by his son Jupiter. (Lactantius, de Fals. Rel., I, 14.) This legend differs, it will be perceived, from the ordinary one, as given under the article Titænes.—II. A name applied to the sun, as the offspring of Hyperion, one of the Titans. (Tibull., 4. 1, 56.—Verg., Aen., 4. 118.)—III. An epithet sometimes applied to Prometheus by the poets. (Soph., Od. Col., 56.—Juvenal, 14, 34.—Vid. Prometheus.)

TITANES, a name given to the sons of Ceæus (or Uranus) and Terra. They were six males, Oceanus, Coeus, Crios, Hyperion, Iapetus, and the youngest of them Cronus; and six females, Theia, Rhea (or Rhea), Themis, Mnemosyne, Phoebe, and Tethys. These children, according to the commonly-received legend, were hated by their father, who, as soon as they were born, thrust them out of sight into a cavern of Earth, who, grieved at his unnatural conduct, produced the "substance of hoary steel," and, forming it into a sickle, roused her children, the Titans, to rebellion against him; but fear seized on them all except Saturn (Cronus), who, lying in wait with the sickle with which his mother had armed him, mutilated his unsuspecting sire. The other gods were threatening an attack from the wound gave birth to the Erinyes, the Giants, and the Melian nymphs: what fell from this sea sprang Aphrodite or Venus, the goddess of love and beauty. When Saturn succeeded his father he married Rhea; but he devoured all his children, as he had been informed by an oracle that he should be dethroned by them as a punishment for his cruelty to his father. The wars of the Titans against the gods are very celebrated in mythology. They are often confounded with that of the Giants; but it is to be observed that the war of the Titans was against Saturn, and that of the Giants against Jupiter.—Pezron (Antiqu. des Celtes) indulges in some whimsical remarks on the subject, and makes the Celts to be the same with the Titans, and their princes the same with the Giants in Scripture. According to him, the Titans were the descendants of Gomer, the son of Japheth. He adds that the word Titæs is perfect Celtic, and he derives it from tit, earth, and den or ten, man; and hence, he says, the reason of the Greek appellation of Tyrræus, or earth-born, which was applied to them. The Titans, according to Bryant, were those Cushites, or sons of Chus, called Giants, who built the Tower of Babel, and were afterward dispersed.—Constant regards the legend of the gods and the Titans as the tradition of a warfare between two rival religious sects, the Titans being considered by him as having worshipped the elements and stars. (Constant, de la Religion, vol. 2, p. 315.)—The best solution, however, appears to be that which makes the Titans mere personifications of the elements, and their warfare with the gods the representation of the battle of the sons of heaven with the forces of the elements in the earliest ages of the world. (Compare Hermann und Creuzer, Briefe, p. 158.)

TITANIDES, the daughters of Ceæus and Terra. (Vid. Titanæs, where their names are given.)

TITANS, a river of Thessaly, called also Eurotas, flowing into the Peneus a little above the vale of Tempe. The waters of the two rivers did not, however, mingle; as those of the Peneus were clear and transparent, while those of the Eurotas were muddy and dirty, and often stifled with a thick unctuous substance, which floated like oil upon the surface. (Strabo, 441.) Hence the fabulous account of its being a branch of the infernal Styx. (Hom., Ili., 2, 751.—Lucan, 6, 375.) It is now the Saranta Poras. (Cramer's Anc. Greece, vol. 1, p. 369.)

TRYNNES, a son of Laomedon, king of Troy, by Strymo, the daughter of the Scamander. He was so disposed of that after the war, he went down with the bireme which Caridas carried away. She now besought Jove to bestow on him immortality. The sovereign of Olympus ascended, and Tithonus became exempt from death; but the love-sick goddess, having forgotten to have youth joined in the gift, began, with time, to discern old age creeping over the visage and limbs of her beautiful consort. When she saw his hairs blanching, she abstained from his bed, but still kept him, and treated him with fond attention, in her palace on the eastern margin of the Ocean stream, "giving him ambrosial food and fair garments."

But when he was no longer able to move his limbs, she deemed it the wisest course to shut him up in his chamber, whence his feeble voice was incessantly heard. (Hom., Ilium, in Ven., 218, seqq.) Later poets say that, out of compassion, she turned him into a cicada (terræs). (Stehl ad Ili., 11, 1—Teetz ad Iliacam., 18.)

Thus were the children whom Aurora bore to Tithonus. (Keightley's Mythology, p. 63.)

TITHE, a city on Mount Parnassus, called also Neaon, for the name of Tithorea was only properly applied to one of the peaks of Parnassus. (Herod., 8, 32.—Strabo, 439.) This place, as we learn from Herodotus, was taken and burned by the army of Xenæus (8, 33). In its vicinity, Philomelus, the Phoenix (or Phoenix) was the origin of the myth of the myrsine. (Pausan., 10, 2.)—Delphi and Tithorea, on different sides of the mountain, were the halting-places of those passing over Parnassus, at the distance of 80 stadia.
from each other; being situate as the towns of Aoste in Piedmont, and Martainach in the Vallais, are with regard to Mont St. Bernard. The whole district on the southern side was the Delphic; while all the country, and even the sea, were the land of Titus. The olives of this city were so highly esteemed that they were conveyed as presents to the Roman emperors; they still maintain their ancient reputation, being sent as an acceptable offering to the pashas and other grandees of Turkey. The ruins of Tithorea were first observed by Dr. Clarke, near the modern village of Villata. ‘We arrived,’ says that traveller, ‘at the walls of Tithaea, extending in a surprising manner up the prodigious perpendicular cliffs which rise behind the village of Veltine. These remains are visible to a considerable height upon the rocks.’ (Travels, vol. 7, p. 274.—Compare Dodwell, Tour, vol. 2, p. 139.—Gell’s Itin., p. 214.)

Titus Flavius Vespasianus, son of Vespasian, succeeded his father on the imperial throne. Previous to his accession, his military talents had been proved by a series of victories which had brought the sanguinary and protracted war which was waged with the Jews, and which ended in the destruction of Jerusalem. After the battle of the Jewish war he was received at Rome with the title of Caesar, and admitted to the honour of a joint triumph with his father the emperor. He soon became the depositary of all power, and the source of the executive authority in all its branches; discharging the office of censor, which Vespasian had assumed, and even watching over the duties of pretorian prefect; he was at the same time ministering, but by a Roman knight. The only stain which was ever attached to the life of Titus belongs to this period of his history, before his accession to sovereign authority, when his situation drew down upon him all the invindiciveness of power, without supplying him with the means of securing popular affection. He is accused of having acted in some cases hastily and severely; and even of having gratified his personal resentment by condoning the deeds of rank to which it had led. He is, moreover, charged with avarice and bribery on the authority of Suetonius, who asserts, that those who had caused before the emperor knew how to obtain a favourable hearing, by placing a sum of money in the hands of the Caesar. He had given offence, too, by an unwise attachment to Berenice, the sister of King Agrippa. (Vid. Berenice VII.) In a word, a man of great fortune, not the prince in the character of their prince, that they anticipated in his reign a renewal of the flagitious, tyrannical, and sanguinary deeds which had condensed to infamy the name and government of Nero. But from the hour that Titus ascended the throne of his father, a total change took place in all that was previously vicious and objectionable in his character. He discarded all the ministers of his loose days, and, being resolved to reform the state of public morals, began by reforming himself. Although still strongly attached to the beautiful Berenice, he dismissed her to her own country, because he knew that such a connexion was disagreeable to the senate and people. He abolished also the law of treason, under the sanction of which so many acts of tyranny had been committed; and he not only disconsecrated, but severely punished, all spies and informers. He even tried in secret, devoted to the duties of his high station, and his chief pleasure consisted in rendering services and kindnesses to his friends and to his people. His benevolence and goodness of heart would doubtless find ample scope; yet it is recorded of him, that one evening, recalling to mind the events of the day, and not finding that he had done anything during its course beneficial to mankind, he exclaimed in accents of regret, ‘My friends, I have lost a day!’ This well-known exclamation, and the course of benevolent deeds by which it was accredited, procured for him the truly glorious title of the ‘Delight of the Human Race’ (Deliciae humanae generis).—A fresh war which broke out in Britain was the occasion of drawing forth the extraordinary qualities of Cnaeus Julius Agricola, who pushed his conquests far into the country; and from the bloody scene of battle, he returned victorious, ‘having been worsted in a skirmish, taking to their bark, and being driven by the wind and tide to a Roman camp on a distant coast, he conceived the idea, and completed the discovery, that Britain was an island. But the public prosperity was clouded by a terrible convulsion of Nature—the eruption of Mount Vesuvius. After an interval of extreme heat and drought, the whole plain was shaken, as in an earthquake, with a sound of subterranean thunder, and a roaring agitation of the air and sea; at the same time, a torrent of smoke and flame, accompanied by showers of stones, bursting from the crater, darkened the sun like an eclipse. Suddenly a column of black ashes rose perpendicularly into the air, hovering like a cloud, and fell; and in its fall overwhelmed the towns of Herculanum and Pompeii. This memorable event took place in the year A.D. 79, and serves to suggest to melancholy interest to the first year of Titus’s sovereignty. The dark cloud of smoke and dust carried dismay even to the walls of the capital. The darkness which sank down upon the city terrified the inhabitants of Rome to such a degree, that many of them threw themselves, with their families, into ships bound for Africa and Egypt, by enduring that Italy was about to be submerged for its inhabitants by the overwhelming waters of the sea; but which our modern readers have a right to do, since the personage thus treated was a Roman king. The only stain which was ever attached to the life of Titus belongs to this period of his history, before his accession to sovereign authority. That stain was a mere accident, the result of the situation in which he was placed, and which did not affect his character in any material degree.
ans to the pollution which was supposed to have in-
fected the air in consequence of the eruption of the
mountain; but it is more probable that it originated
in the poverty and filth occasioned by the sudden in-
crease made to the population of the capital, when the
fugitives from the ruined towns and villages of Cam-
pania sought an asylum within its walls. Such mis-
fortunes wounded deeply the compassionate heart of
Titus. He felt, says Suetonius, not only like a prince,
but as a father, for the sufferings of his people, and
 spared neither labour nor expense to relieve their dis-
tress. Hastening in person to Campania for the pur-
pose of assisting the sufferers in that quarter, Titus
was recalled to his capital by another frightful calam-
ity. A fire broke out at Rome, which raged three
days and nights with the greatest violence, destroy-
ing an immense number of buildings both public and
private. Among the former were the Pantheon, the Oc-
tavian Library, and the Capitol, which last had been
but recently rebuilt after the demolition which it had
sustained at the hands of the infuriated Germans du-
ring the reign of Vitellius. No sooner had this af-
lictive event reached the ears of the emperor, than he
had known his determination to indemnify, out of his
own coffers, all the losses which had accrued either to
the state or individuals. So unwilling, in fact, was
he that any one besides himself should have a share
in the honour of relieving the fortunes of Rome, that
he is said to have refused the contributions which were
offered by some of his royal allies, by other cities of
the empire, and by certain of the richest among the
nobility. Such was now the constitution of Roman
society, that attention to the amusements of the lower
class of citizens in time of peace had become no less
essential to the tranquillity of the empire than military
ventures during the period of war. With this view
Titus proceeded to finish the amphitheatre, of which
his father had laid the foundation; adding to it baths
and other conveniences of the greatest luxury. This
was the famous Colosseum, or Flavian Amphitheatre,
the remains of which, at the present day, still present
so striking a feature among the an-
tiquities of Rome. The dedication of this superb edi-
cifice was celebrated by games of the most magnificent
character. The sports lasted a hundred days, during
which invention was racked to discover new modes of
pleasing the eye, and of stimulating the depraved fan-
cy of the age. It was observed that, as the last day of the games, the emperor appeared greatly
dejected, and even shed tears. Hoping that his nerves
would be strengthened by the purer air of the country,
he retired to the neighbourhood of Reate, whence his
family originally sprang, and whither he was accom-
panied by his brother Domitian. A fever with which
he was seized was unduly checked by the use of the
bath, to which he had become much addicted; and it
is added by Suetonius, that the symptoms of the dis-
 ease were greatly aggravated by adopting a suggestion
of Domitian's, that the patient should be put into a
tub filled with snow. Thus died, on the 13th day of
September, A.D. 81, Titus, in the same house where
his father had expired, after a pacific reign of two
years and nearly three months. The character of this
prince has been given in the history of his actions;
and his name, even at the present day, conveys to the
reader, with the memory of justice, charity, wisdom,
and benevolence, which enter into the conception of a
good sovereign; and his virtues were prized still more
highly when contrasted with the violent and un gover-
nable temper of his brother, who succeeded him on the
throne. (Sueton., Vit. Tit.—Die Cass., 66, 15, seqq.

Titus, a celebrated giant, son of Terra; or, ac-
cording to others, of Jupiter, by Elara, the daughter
of Orценomous. Titus happened to see Latona, on
one occasion, as she was going to Delphi. Inflamed
with love, he attempted violence; but the goddess
called after children, she her aid, and he was thus lay
slain by their arrows. His punishment, however, could
endure with life. He lay extended in Erebos, covering
with his vast frame nine entire jugera, while a vulture kept
feeding upon his liver and entrails, which were con-
tinually reproduced. (Od., 11, 576, seqq.—Apollod.,
1, 4, 1. — Virg., Aen., 6, 595. — Schol. ad Apollon.
Rhod., 1, 761.) Heyne makes Tityus to have been an
ancient hero, and supposes that part of the fable which
relates to the nine acres to have been founded on
the circumstance of his having had, after death, a
tumulus of vast size covering his remains. (Antiqua-
rischer Aufsätze, vol. 1, p. 66.)

Tmolus, a. broad and elevated mass of moun-
tains in Lydia, which sends several tributary torrents
to the Hermus on the one side, and into the Cay-
sus on the other, and, in fact, the valleys through which those two rivers flowed. It was said to
derive its name from Tmolus or Tomlos, a Lydian
king, having been previously called Carmorinus. (Aes-
t. de Flor. in Past. 97.) This mountain was
much celebrated for its wine. (Plin., 5, 29.—Virg.,
Georg., 2, 97.—Senec., Phæn., 602.) Hence the
frequent reference to it in the Bacchæ of Euripides
(v. 64, 55, &c.). It appears also to have abounded with
shrubs and evergreens (Callim., fragm. 93); nor was
it less noted for its mineral productions. It yielded
tin; and the Pactolus washed from its tributaries
supercalcareous gravel (610, 625.) Strabo reports,
that on the top of Tmolus there was a watch-
tower erected by the Persians; it was of white
marble, and commanded an extensive view of the sur-
rounding country. Tmolus is now called Bouz Dagh
by the Turks. (Cramer's Asia Minor, vol. 1, p. 441,
seqq.—Compare Arundell's Asia Minor, vol. 1, p. 55,
34, 54.)—I. a city of Lydia, in the vicinity of Mount
Tmolus. According to Tacitus, it was destroyed by
an earthquake in the 13th century. (Ann., 2, 47.—Com-
pare Nieprch. Cal. 1, 17.)

Toaat, an epithet applied to Cisalpine Gaul, where
the inhabitants wore the Roman toga, i.e., enjoyed
the rights of Roman citizenship. The cities of Cis-
pine Gaul obtained the privilege of Latin cities, and,
consequently, the right of wearing the Roman toga,
by a law of Pompeius Strabo, about A.U.C. 665. (As-
con., Comm. in Pison., p. 490.—Vid. Gallia Cisal-
pinum.)

Toletum, now Toledo, a town of Hispania Tarra-
conensis, on the river Tages, and the capital of the
Carpetani. According to Sylva and other Spanish his-
torians, this city was founded by a considerable body
of Jews, who, on their emigration from captivity
540 years before the vulgar era, established them-
themselves here, and called the place Toletodh or Toledath,
that is, mother of the people. This is all a mere fa-
cile. Caesar made this city a place of arms, and Au-
gustus rendered it one of the seats of justice in Spain.
Modern Toledo was formerly celebrated for the ex-
quise temper of its sword-blades, for which, accord-
ing to some of the ancient writers, Toledo was also
famous. (Plin., 3, 4.—Itin. Ant., 438, 446.—Grat
Falisc., Cyneg., 351.)

Tolstobono, one of the Celtic tribes in Galatia, in
Asia Minor. They occupied the region of the country
which, from the left bank of the Sangarius from its
junction with the Thymbris to its source, and
was separated from Bithynia by this river. The prin-
cipal town of this tribe was Pessinus. (Cramer's Asia
Minor, vol. 2, p. 85.)

Tolosa, now Toulouse, a town of Gallia Narbonen-
sis, which became a Roman colony under Augustus.
The situation of Tolosa was very favourable for trade,
and under the Romans it became the centre of the
traffic which was carried on between the Mediterranean
and Atlantic coasts of this part of Gaul. Minerva
had a rich temple there, which Cæsaro the consul plundered; and as he was never after fortunate, the words aurum Toleranum became proverbial. Cæsaro is said to have plundered 15,000 talents. The wealth seems to have belonged, for the most part, to private individuals, who had placed it in the temple for safe keeping. (Mela, 2, 5.—Cic., N. D., 3, 20.—Cass., B. G., 3, 20.)

TOLMÆNIUS. Vid. Lars Tolumnius.

Tomærius, a mountain of Epirus, on the declivity or at the foot of which stood the celebrated Dodona. Callimachus (Hymn. in Cer., 28) calls it Toma-rus. Pliny, 4 (1, 1), on the other hand, assigns it a hundred springs around its base. Cramer makes it the same with the modern Mount Chamour. (Consult remarks under the article Dodona, page 451, col. 1, and also Cramer’s Anc. Greece, vol. 1, p. 115, seq.)

TOMOS or Tomi, a town situate on the western shores of the Euxine Sea, about 36 miles below the mouth of the Danube. The name was fabled by the Greek mythologists to have been derived from τόμος, "a cutting" or "separation." because Medea had here, as they maintained, cut to pieces her brother Absyrtus, and strewed his remains along the road in order to stop her father’s pursuit. (Vid. Ovidius, page 949, col. 2.) Tomi is still called Tomesærus, though sometimes otherwise styled Baba. It is celebrated as being the place where Ovid was banished by Augustus. (Vid. Plin., vol. 1.)

Toméra, a queen of the Massagetae in the time of Cyrus the Great. The Persian monarch sent ambassadors to her, asking her hand in marriage; but the Scythian queen, well aware that the king was more anxious for the crown of the Massagetae than the possession of her own person, interdicted his entrance into her territories. Cyrus thereupon marched openly against the Massagetae, and began to construct a bridge over the river Araxes. While he was thus employed, Tomyrus sent an ambassador, recommending him to desist from his enterprise; but adding that, if he still persisted in his design, the Scythian forces would retire for three days’ march from the river, and would thus allow him an opportunity of crossing without the aid of a bridge: when once on the opposite side of the river, he could then try his strength with her subjects. Or, if he did not like this plan, he might wait. (Plin. 4, 1, 1.) Yet another embassy also arrived from the river, and the Massagetae would then cross over into the Persian territories, and contend with him there. Cyrus, by the advice of Cresus, accepted the former part of the offer, and, having crossed the Araxes, planned the following stratagem, suggested to him by Cres- sus. He advanced one day’s march into the territories of the Massagetae, and then, leaving his camp full of provisions and wine, and his worst troops in charge of it, he returned with his best to the banks of the Araxes. What he had foreseen took place. The Massagetae came with the third part of their entire force, under the command of Spargapseis, the son of Tomyrus, attacked the Persian camp, cut to pieces the troops stationed there, and then banqueted on the abundant stores which they found in the camp, and drank to excess of the wine. Cyrus, returning on a sudden, surprised the whole, number, and mistook, many, and took a much larger number prisoners; among the latter, the son of Tomyrus himself. This prince, on recovering from the intoxication into which he had fallen, slew himself through a feeling of shame; and Tomyrus, soon after, assembling all his forces, engaged in battle with Cyrus, whom she totally defeated. The Persian monarch himself was numbered among the slain: and the head of the king of the Massagetae was cut off the head, and plunged it into a skin-bag full of human blood, exclaiming at the same time, "I will give thee thy fill of blood" (τα αίματος κορεος).
the course of which no fewer than 10,000 gladiators are said to have fought for the amusement of the multitude. And indeed no other form of public entertainment, also, of the conquest of Dacia, that the famous edict of Trajan was erected, although it was not completed till the seventeenth year of his reign.—The deepest stain which rests on the memory of Trajan is the sanction which he gave to the persecutions of the Christians. This persecution raged chiefly in the Asiatic provinces, where Christianity was most prevalent; and when Pliny the younger, at that time proconsul of Bithynia, wrote to Trajan for instructions respecting a matter which was causing the death of so many men, who could not be convicted of any public crimes, the emperor returned an ambiguous answer, the purport of which was, 'that the Christians should not be sought for, nor indicted upon anonymous information, but that, on conviction, they ought to be punished.' Such an answer was contrary to every principle of justice; for, if criminal, they ought to have been sent for; if not criminal, they ought not to have been punished. The persecution, being somewhat discouraged, was gradually suffered to abate.—

Trajan's passion for military fame had been but excited, not satiated, by his Dacian conquests. He next directed his attention to the East, and resolved to wrest from the Parthians, the most formidable foes of Rome, the empire of Central Asia. The first scene of his glory was Armenia, which he speedily reduced to obedience to a man whom he had already chosen. After being converted to Christianity by his deported subjects, he descended the Tigris to behold the Persian Gulf; and it is said, that, seeing a vessel there ready to sail for India, he exclaimed, that if he were a younger man, he would carry his arms against the inhabitants of India. While he had been dreaming of the invasion of India, his conquests of the preceding year were vanishing from his grasp. As soon as he heard of the death of Nerva, he recovered the Parthian provinces, and, levying an army, marched against the Dacians, who had already resumed their predatory incursions. The hostile armies soon came to an engagement, for both were equally eager; and, after a desperate struggle, the Dacians were routed with dreadful carnage. But so great was the loss of the Romans that for some time they were unable to follow up their victory. It was, however, decisive; and the Dacians were compelled, not only to forgo their demands, but even to become tributaries to Rome. But, unaccustomed to servitude, and led by their gallant King Decebalus, they mustered fresh forces as soon as they had some of what recovered from their overthrow, and prepared for another contest. The warlike emperor was equally ready for the shock of arms. Not satisfied with expelling the invaders, he now determined to carry the war into the country, to forge his demands, but even to erect a stupendous bridge over the Danube, with a strong fortification at each end, defeated the Dacians in every battle, marched into the heart of their country, and made himself master of their chief town. Decebalus, despairing of success, killed himself, and Dacia was restored to a Roman province, and secured in subjection by colonies and standing camps. On his return from the Dacian war, Trajan gratified the people by rejoicings celebrated on the most magnificent scale; for, according to Dio Cassius, the different shows that were exhibited lasted for four months.
eign, his popularity during his lifetime was equalled by the regard entertained for his memory by posterity; and his claim to the title of Optimus, which the senate solemnly bestowed upon him, was fully confirmed by the voice of succeeding ages. Thus, as for two hundred years after his death, the senate, in pouring forth their prayers for the happiness of a new emperor, were accustomed to wish that he might surpass Augustus in prosperity and Trajan in goodness of character. (Plin., Paneg.—Aurcl. Vict., Vit. Traj.—Dio Cass. 68, 4, seqq.—Metherington's History of Rome, p. 195, seqq.—Encylopaedia Metropol., div. 3, vol. i, p. 64, seqq.)

Trajano, of Rheni, now Utrecht.—II. Mons, now Maastricht.

Tralles, a town of Lydia, a short distance north of Magnesia ad Meandrum. In Strabo's time it was one of the most flourishing cities of Asia Minor, and was noted for the opulence of its inhabitants. It was said to have been founded by some Argives, together with a body of Thracians, from whom it took the name of Tralles. (Strab., 649.—Hebrew, s. v. Τραλλες.—Diod. Sic., 17, 65.) It had passed through the hands of Anthea or Enantha, Erymana, Charis, &c. The shape of the town was that of a trapezium, and it was defended by a citadel and other forts. The river Eu- don or Euxus flowed near the walls. The citizens of Tralles, on account of their great wealth, were generally elected to the office of ariarchs, or presidents of the games celebrated in the province. The country round Tralles was full of earthquakes. Chandler mistook the ruins of Tralles for those of Magnesia, as M. Barbier du Bocage has well proved in his notes to the French translation of his work. They are situated above the modern Ghiasoul-hissars, in a position corresponding with Strabo's description. (Cramer's Asia Minor, vol. i, p. 464, seqq.—Compare Pelonos' Asia Minor, p. 276.)

Trapezus, a city on the northeastern coast of Pontus, founded by Sinope. Its ancient name was derived from the square form in which the city was laid out, resembling a table (τράπεζα). Trapezus is celebrated for the hospitable reception which its inhabitants gave to the ten thousand Greeks on their retreat, this being the first Greek colony which the latter had reached after the battle of Cunaxa. It fell subsequently into the hands of the Romans, and was embellished and improved by the Emperor Hadrian. It was taken from the Romans, however, by the Scythians or Tartars in the reign of Valerian. The Greek emperors became afterward masters of it. A separate dynasty was here established, beginning with Alexius Comnenus, in 1204, which ended with the capture of the city by Mohamed II. in 1462. The princes who reigned in this city are the Greek emperors of whom so much mention is made in romance and so little in history: they must not be confounded with the imperial line called the Palaeologus. Trapezus is now called Trebizon, or, as the Turks pronounce it, Trebeshown. (Arrian, Peripl. Pont. Eux. in Huds. G. M., 1, 17.—Mela, 1, 19.—Plin., 6, 4.)—II. A city of Arcadia, in the southwestern angle of the country, and between the Achelous and Alpheus. The inhabitants of this place, in consequence of having refused to join in the colonization of Megalopolis, were expelled by the city of Corinth, and retired to the city of Trapezus, on the Euxine, where they were received as a kindred people. (Paus., 8, 27, seqq.)

Treasiménus Lacus, a lake of Eutria, a few miles to the south of Cortone, on whose shores Hannibal gained his third victory over the forces of the Romans. It is now Lago di Perugia. (Vid. Hannibal.)

Trebia, a town of the Sabines, near the source of the Anio, now Arezzo. (Plin., 3, 12.—Ptol., p. 65.) This place appears to have been farther distinguished by the name of Augusta; but after which emperor it was so called is uncertain. (Front., de Agrud., 2.)

Trebius Tusta, C., a distinguished lawyer in the time of Julius Caesar and Augustus, and a man well known for his wit. Both Caesar and Augustus held him in high estimation, and Cicero, on one occasion, even allowed him a higher rank. Cicero, for communicating to him of the former of these, at that time proconsul in Gaul. The correspondence between Cicero and Trebius is itself occurs in the Ep. ad Fam., 7, 6. Trebius stood highly also as a poet. (Schol. ad Horat., Sat., 2, 1, 4.—Compare the dissertation of Gudung: "C. Trebius Tusta, Icitus, ab injuriis veterum et recensione liberatus," Hal. Sazo., 1710, and Menage, Annal., 14.)

Trebellius Pollio, one of the "Historiae Augustae Scriptores." He lived under Constantine the Great, and, according to Vopiscus (Vit. Aurel.), wrote the lives of the Roman emperors from Philip to Claudius II. We have remaining, however, at the present day, merely a fragment of the life of Valerian I., the lives of the two Gallieni, and of the so-called thirty tyrants. It was Trebellius Pollio who first made use of this expression "thirty tyrants," as applied to the emperors between the time the empire was torn in pieces by competitors for the throne. Although the style of Trebellius Pollio is somewhat less vicious than that of the other writers of his time, still his cannot be ranked even among the ordinary class of historical writers.—The remains of Trebellius are given in the "Historiae Augustae Scriptores." (Schill, Hist. Lit. Rom., vol. 3, p. 155.)

Tresia, a river of Gallia Cisalpina, which ran from north to south, commencing in Liguria, south of the valley inhabited by the Friiates, and falling, after a course of about fifty miles, into the Po near Placentia. At the mouth of this river Hannibal obtained a victory over the Romans, and defeated them with the loss of 20,000 men. Both the consuls, Scipio and Sempronius, were present at the fight. This victory was acknowledged by that of Ticonius, and followed by those of Trasymenus and Cannae. The early defeat of the Roman cavalry at the Trebia occasioned the loss of the day. (Polyb., 3, 66.—Liv., 21, 43, seqq.)

Trebonia Lex, de Provinciis, by L. Trebonius, the tribune, A.U.C. 698. It assigned provinces to the consuls for five years: Spain to Pompey; Syria and the Parthian war to Crassus; and prolonging for a time the command in Gaul, which had been bestowed on Cicero, for opposing this law, was led to prison. According to Dio, however, he was only dragged from the assembly.

Tres Tarentini, a station on the Appian Way, about seven miles from Aricia, and where it was joined by a cross-road from Antium. It is mentioned by St. Paul in his journey to Rome (Acts, 28, 18), and likewise by Cicero when proceeding thither from Antium. (Ep. ad Att., 2, 12.)

Tresvir, a nation of Gallia Belgica, between the Mosella or Moselle, and Silva Arduenna. Their chief city, Augusta Treverorum, called afterward, from its inhabitants, Treveri, now Trier, stands on the east banks of the Moselle. (Cos., B. G., 3, 3.—Id. ibidem, 6, 2.—Tac., Ann., 1, 41. —Id. ibid., 3, 42. —Id., Germ., 28. —Mela, 3, 2.)

Triballi, a Thracian people, by far the most numerous and powerful of all the tribes in that country. As they bordered on the Pannonians, and extended to the Danube, they were formidable neighbours on this the most accessible frontier of Macedonia. Alexander commenced his reign by an invasion of their territory, and, having defeated them in a general engagement, pursued them across the Danube, whither they had retreated, and compelled them to sue for peace. (Thuc., 2, 96.—Strabo, 318.)

Tricocii, a German tribe on the left bank of the Rhine, and between that river and the Mediomatri
TRIBONIANUS.

Tribonianus, a celebrated jurist, who was mainly instrumental in the compilation of Justinian, was a man of great erudition, and his father was from Macedonia. His learning was most extensive; he wrote upon a great variety of subjects, was well versed both in Latin and Greek literature, and had deeply studied the Roman civilians, of which he had a valuable collection in his library. He practised first at the bar of the praetorian prefects at Constantinople, became afterward questor, master of the imperial household, and consul, and possessed for about twenty years the favor of his sovereign Justinian. His manner of writing has been said to have been remarkably mild and conciliating; he was a courtier, and fond of money, but in other respects he appears to have been calumniated by his enemies. His death took place A.D. 545. He was a superior man, and most valuable to Justinian. — This appears to be a proper place to give some account of Justinian's legislation. Soon after ascending the throne, this monarch gave orders (Feb., 529 A.D.) to a commission of emperors, consuls, and other persons, among whom were Tribonian or Tribunian and Theophilus, to make a general compilation of the best and most useful laws or constitutions which had been promulgated by the emperors his predecessors, beginning from Hadrian's perpetual edict down to his own time. Partial compilations had been made in the time of Constantine by private individuals, Gregory and Hermogenes, of which only fragments remain, and a more complete one was effected than Theodosius II. All these were now merged in the new Code of Justinian. A remarkable difference of style and manner is observable between the older constitutions issued before Constantine and those promulgated afterward. The former, being issued at Rome, and framed upon the decisions or "responsa" of learned jurists, are clear, sententious, and elegant; the latter, which were promulgated chiefly at Constantinople, in the decay of the Roman language, are verbose and rhetorical. Joannes and his nine associates completed their task in fourteen months, and the new Code, having received the imperial sanction, was published in April, A.D. 529.

A few years after, Justinian, by the advice of Tribonian, ordered a revision of his Code to be made by Tribonian and four others. These commissioners suppressed several laws as either useless or inconsistent with present usage, and added many constitutions which had hitherto been promulgated in his own time, as well as fifty decisions on intricate points of jurisprudence. The Code, thus revised, was published in December of the year 534, under the title of "Codex Justinianei repetitio praelationum," and thenceforth had the force of law. The Code is divided into twelve books; every book is subdivided into titles, and each title into laws. The learned Gothofredus, in his prolegomena attached to his edition of the Theodosian Code, says, "That Tribonian, and his annotators have been guilty of several faults in the compilations of the Code; that the order observed in the succession of the titles is confused; that some of the laws have been mutilated and have been rendered obscure; that sometimes a law has been divided into two, and at other times two have been reduced into one; that laws have been attributed to emperors who were not the authors of them, or who had given quite contrary decisions; and that the constant pursuit of the study of the Roman law, if we had not the Theodosian Code, which is of great use towards rightly understanding many laws in the Code of Justinian. In the year following the publication of his Code, Justinian undertook a much greater and more important work: to extract the spirit of jurisprudence from the decisions and conjectures, the questions and disputes, of the Roman civilians. In the course of centuries, under the republic and the empire, many thousands of volumes had accumulated, filled with the learned lucubrations of the jurisconsults, but which no fortune could purchase and no capacity could digest. The work of Tribonian had divided into opposite schools, and thus conflicting opinions were often produced, which only served to puzzle those who had to decide what was law. To put order into this chaos was the object of Justinian. In December, 530, he commissioned seventeen lawyers, with Tribonian at their head, with full authority to use their discretion as to the works of their predecessors, by making a choice of those whom they considered as the best versed in jurisprudence. Tribonian and his associates were to divide forty out of Tribonian's library, most of them jurisconsults who had lived during that period of the empire which has been sometimes called the age of the Antonines, from Hadrian to the death of Alexander Severus. From the works of these writers, said to have amounted to two thousand treatises, the commission appointed by Justinian was to extract and compress all that was suited to form a methodical, complete, and accurate code. The Code was therefore given the title of "Pandectae," or "Pandecta," and was published in the same year. The work was styled "Digesta," and also "Pandectae" (embracing all), and was published in December, 533. It was declared by the emperor that it should have the force of law all over the empire, and should supersede all the text-books of the old jurists, which, in future, were to be of no authority. If the whole "Digesta" is divided into three equal parts, the contributions of Ulpian are somewhat more than one third. The "Digesta" is divided into fifty books, each book being also divided into titles, and subdivided into sections. Of the merits and imperfections of the "Digesta," Juwas, Hotomannus, Heineccius, Gravina, Schulting, Bynkershoek, and many others, have amply spoken. With all its faults, it is a noble work, and much superior to the Code in its style, matter, and arrangement; it has, in great measure, imbodied the wisdom of the most learned men of the best age of the empire; men who grounded their opinions on the principles of reason and equity, and who, for the most part, were personally uninterested and disinterested in the subjects on which they gave their opinions. Tribonian and his colleagues are charged with making many interpolations, with altering many passages in the writings of their predecessors, and the law as they had transmitted it, and passing them off to the world under the name of the ancient jurists. Justinian himself acknowledged that he was obliged to accommodate the old jurisprudence to the altered state of the times, and to "make the laws his own." Another charge, which is, however, unsupported by evidence or probability, is, that Justinian and his civilians purposely destroyed the old text-books that had served them for the compilation of the "Pandectae," substituting their own, to the great disadvantage of the ancient jurisprudence. For some time the works of the ancient jurists were partly lost, and the vicissitudes of the ages that followed may easily have obliterated the rest. While the Digest was being compiled, Justinian commissioned Tribonian and two other civilians, Theophilus and Dorotheus, to make an abridgment of the first principles of the law, for the use of young students who should wish to apply themselves to that science. This was called "Institutiones," the name of which was adopted by a decree of Justinian's time, about one month before the appearance of the Digest. The "Institutiones" were mainly based on an earlier work of the same description and title. They are arranged in four books, and subdivided into titles. As the law has three objects, persons, things, and actions, the first book treats of persons or status the second and third, and first
five titles of the fourth, treat of things; and the remaining titles of the fourth book treat of actions. Besides these three compilations, the Code, the Institutes, and the Digest, Justinian, after the publication of the second edition of his Code, continued to issue new laws or constitutions, chiefly in Greek, upon particular occasions, which were collected and published together, after his death, under the name of Neapai Diagnostes, or Novae, or Constitutions Novellae, or Authenticae. The Novellae are divided into nine Codices and 168 Constitutions, or, as they are now often called, Novellae. The Novellae, together with the thirteen Edicts of Justinian, make up the fourth part of his legislation. There are four Latin translations of the Novellae, two of which were made soon after Justinian’s death; the third is by Halvander, printed at Nürnberg in 1531; and the fourth was printed at Basle, by Hervagius, in 1561. This last translation is that which is printed in the editions of the Corpus Juris opposite to the Greek text, and is very valuable, notwithstanding it has been stigmatized by some with the name “barbarous,” it is sometimes called Authentica Interpretatio, or Vulgata. The version of Halvander is also printed in some editions of the Corpus Juris. The Novellae made many changes in the law as established by Justinian’s prior compilations, and they are an evidence that the emperor was seized with a passion for legislating; a circumstance which enables us to form a more correct judgment of his real merits, and which is important to the formation of the modern jurisprudence, and to the numerous editions of the Corpus Juris Civilis, the best is that of Gothofredus, Col. Monum., 1756, 2 vols. folio. Pothier’s edition of the Digest, reprinted at Paris, in 5 vols. 4to, 1818–1829, is a useful edition: there is a very cheap edition of the Corpus Juris recently published in Germany by Beck, 3 vols. small folio, Leipzig, 1829. (Encycl. Us. Knowl., vol. 13, 163–5. — Lodewig, Vit. Justin. Mag. et Theod., nec non Amm. Marci, 1731. — Zumbrun. Geschichte des Röm. Privatrechts bis Justinian. Heidelberg, 1836. — Hugo, Lehrbuch der Gesch. des Röm. Rechts, Berlin, 1832. — History of the Roman or Civil Law, by Ferriere, trans. by J. Beaver, London, 1724. — Hommelii, Palimpsestia. — Brinkmannus, Institutiones Juris Romanis, Schlesius, 1822. — System des Pandekten-Rechts, by Thibaut, 7th ed., Jena, 1828. — Das Corpus Juris in 3 Deutschen ubersetzt von einem korreln Rechts- gelehrten, herausgeg. von H. von Speno. — Sintenis, Leipzig, 1831. — Les cinquantaine livres du Digeste, &c., traduits en Francais par feu Henri Heslot, Paris, 1805. — Pandectes de Justinien mises dans un nouvel ordre, &c., par J. R. Pothier, traduites par Brard Neuville, reueus et corrigees par M. Moreau de Montalbin, Avocat, Paris, 1810.)

TRI A, a mountain fortress and town in Sicily, near the lower coast, east of Selinum, and north of the mouth of the Cridanus. It was also called Triocalla and Triocla. This place came into notice during the Servile war in Sicily, as being the residence of the slave-king Tryphon. Facellius places its site near the modern Calata Bellota, but Reichard by Calatras Castello. (Steph. Byz., s. v. — Ptol. — Sil. Ital., 14, 271.)

TRIACS, a people of Gaul, northeast of the Seine, and who during these territories flows the Sequana, or Sarn, in the earlier part of its course. Their chief city was Augusta Bona, now Troyes. (Ptol.—Amm. Marc., 15, 11. — Id., 16, 2.)

TRICCA, a city of Thessaly, southeast of Gomphi, and near the junction of the Peneus and Khis. It is mentioned as early as the time of Homer, and placed by him under the dominion of the sons of Euclealpus. (Ili., 2, 729; 4, 227.) Some account of Triocolla passed to the city of Triocollus, a city of Cretan, named Triocollus in ancient documents. (Strabo, 437.) The modern Triocolla appears to correspond to the site of the ancient city. From the Byzantine historians we see that the name had already been corrupted in their time to the present form of Tripolis. (Procop. Adid., 4, 3. — Harrodius, p. 643. — Crummer’s Anc. Greece, vol. 1, p. 357, seqq.)

TRICORRI, a Gallic tribe in Gallia Narbonensis, in the territory of Massilia and Aquitania. (Livy, 21, 31. — Plin., 3, 4. — Amm. Marcell., 15, 10, seqq.)

TRIDENT, now Trent (or, as the Italians write the name, Trento), a city of Itabia, on the river Ath- esus or Adige, and a short distance from the northern confines of Venetia. It was built by the Cenomani, who were displaced by the Romans. (Justin, 20, 5. — Iunius Sabinus, Paul Warnef. de Gest. Long., 5, 36, &c.) Some authors affirm that the name of the Tri- dentum is derived from Neptune’s sceptre or trident, to which god they say the city was once consecrated; this opinion took its rise from an ancient marble being found there, on which was Neptune holding a trident. Others derive the name from three rivers that fall into the Adige near the city; while others, again, ascribe the name to the circumstance of there being three high rocks in the neighbourhood which appear like three teeth (tres dentes). All these etymologies are false; the name is most probably one of Celtic origin. —Trent is famous in modern history for the council of ecclesiastics which sat there for the purpose of regulating the church. It was assembled by Paul III. in 1545, and continued by twenty-five sessions till the year 1563, under Julius III. and Pius IV. It had been convened (p. 534) to Bologna, in consequence of a false rumour of a pestilence in Trent, but was reassembled at the latter city in 1551.

TRIGAILA, a town of Italy, in the territory of Ven- etia, where the Padusa, or southern arm of the Po, separates itself from the main stream. Its site is near that of the modern Ferrara. (Polyb., 2, 16.)

TRINACRIA, one of the ancient names of Sicily, from its three prominent peaks (p. 537 to 541) to Bologna, in conse- quence of a false rumour of a pestilence in Trent, but was reassembled at the latter city in 1551.

TRINACRIA, one of the ancient names of Sicily, from its three prominent peaks (p. 537 to 541) to Bologna, in conse- quence of a false rumour of a pestilence in Trent, but was reassembled at the latter city in 1551.
and founded this city (16, 41). It had a good harbour and extensive commerce. (L. Phocas, c. 4.—Worsay, Itin., p. 149.)—The town was taken and destroyed in 1299 by the sultan of Egypt, but was afterward rebuilt, though at some distance from the ancient site. (Abulfeda, Tab. Syr., p. 101.) At the present day the sand has so accumulated that the city is separated from the sea by a small triangular plain, half a league in breadth, at the point of which is the village where the vessels land their goods. The commerce of the place consists almost entirely of coarse silks.—II. A region of Africa on the coast of the Mediterranean, between the two Syrtes. It received this name from its containing three principal cities: Leptis Magna, Ceæ, and Sabrata. The second of these is the modern city of Tripoli.—III. A city of Pontus, on the coast, at the mouth of the river Tripolis, and northeast of Cerasus, now Triboli. (Mannert, Geogr., vol. 6, pt. 2, p. 384.)—IV. A city of Lydia, on the western bank of the Meander, northwest of Hierapolis, and near the confluence of the Meander and Cladius. Ptolemy and Stephanus ascribe it to Caria, Pliny and Hierocles to Lydia. Mannert considers it to have been a Phrygian city. (Geogr., vol. 6, pt. 3, p. 137.)

TRIPTOLEMUS, son of Celeus, king of Eleusis, and the same with Demophon. (Vid. Ceres, page 330, col. 1.) The vanity of the people of Attica made them pretend that corn was first known and agriculture first practiced in Attica, according to them, taught Triptolemus agriculture, and rendered him serviceable to mankind by instructing him how to sow corn and make bread. She also, if it was fabled, gave him her chariot, which was drawn by two dragons, and in this celestial vehicle he travelled over the whole earth, and distributed corn to all the inhabitants of the world. At his return to Eleusis, Triptolemus restored Ceres her chariot, and is said to have established the festivals and mysteries in honour of that deity. He is also said to have retired to a time, and received divine honours.—There seems to be an allusion in the name Triptolemus (derived probably from τριπτολεύς and τολέω) to an improvement introduced in early agriculture by treble ploughing. (Hygin., fab. 147.—Pausan., 2, 14; 8, 4.—Justin, 2, 6.—Apollod., 1, 5.—Callim., H. in Cerr., 22.—Oed., Met., 5, 646.)

TRIQUETERA, a name given to Sicily by the Latins, from its triangular form.

Trireme, a vessel celebrated Egyptian priest and philosopher, of whom some mention has been already made in a previous article. (Vid. Mercurius Trismegistus.) It remains but to give here a brief sketch of his works, or, rather, of the productions that have come down to us in his name. —1. The most celebrated of these is entitled "Poemander," Ποιμανδρυς (from ποιμ, "pastor," and treating of "the nature of all things," and of the creation of the world." It is in the form of a dialogue. This work has sometimes cited under the following title, "Of the Divine Power and Wisdom." —2. A second work is entitled "Ἀκλήστιος, Ἔσσελιπας." It is a dialogue between Hermes (Mercurius) Trismegistus and his disciple, and treats of God, man, and the universe. It bears also the name of Δόγος τέλειος, but it exists only in the shape of a Latin translation, which some critics ascribe to Apuleius. (Vid. Theocritus.)—3. The third is the lower work of the same name: Ιατρομαθηματικά ἢ περὶ κατάλληλων νοσουσιῶν Προγνωστικά ἐκ τῆς μαθηματικῆς ἐπιστῆς, πρὸς Ἀμωνα Αλγήπτων, "Iatriomathematics, or the Art of presaging the Issue of Maladies by means of Mathematics (i. e., by the planets or astrol.) a work addressed to Ammon the Egyptian." As Julius Firmicus, a great admiral of Egyptian astrology, and who speaks of Hermes, makes no mention of this work, the probability is that it did not exist in the year 340 B.C., the period when Firmicus wrote.—4. A treatise "De Revolutionibus Natiuritatis," which exists merely in a Latin translation. It is in two books, and treats of the mode of drawing horoscopes. Some authors in this work would seem to indicate that it is translated rather from the Arabic than the Greek.—5. The Aphorisms of Hermes or Mercurius, also in a Latin version. The work consists of astrological sentences or propositions, translated from the Arabic about the time of Manfred, king of Sicily. It is sometimes cited under the title of Centiloquium. —6. Κατά τινας, "Cyranides," a work, the title of which has given rise to much speculation. Some authors derive the term from the Arabic, and make it equivalent to the French expression mélange, while others pretend that it is Greek, and that it is used in astrology to denote the power of the stars (from κύριος). Be this as it may, the Cyranides of Trismegistus treat of the magic powers and medical virtues of precious stones, of plants, and of animals. The Greek text of this work exists in manuscripts in some of the European libraries, but it is only known, thus far, to the public through the medium of a Latin translation. —Besides these astrological works, there is others connected with chemistry, or, more correctly speaking, alchemy, of which the following are the titles: 1. A chemical treatise on the secret of producing the philosopher's stone. This work is cited among adepts under the pompous appellation of "the Seven Seals of Hermes Trismegistus."—7. "The Egyptian Tablet," the title of this treatise, which is supposed to be used for making gold is known. According to the adepts, Sara, the wife of Abraham, found this emerald tablet in the tomb of Hermes, on Mount Hebron.—The two works of which we have just spoken exist only in Latin. A third, entitled Φυσικά βιβάλια, "Chemical Textures," exists, it is said, in manuscript in some libraries. —We have also a treatise of Hermes on "Precious Stones;"—Stobæus has also preserved fragments of "two books of Philo, the Egypt.," the first of which is "The Art of Masonry," the second "On the Conversion of a Virgin or, or Proper Τατ, or Proper "Ακλήστιον, Όυσις, "The Birth of Venus," alone, or "To Tat," or "To Esclusiapus."—2. Πρὸς Ἀμωνορ περὶ τῆς ἀληθοσοφίας, "On the Economy of the Universe, a work addressed to Ammon."—3. "Horæ Cæsarem," "The Virgin of the World." Isis is thus named. The work is a dialogue between Isis and her son Horus, on the Origin of the World.—4. "Ἀφορίστικον, "Venus," a work on General Science, "Invenit, "At the Bottom of the Sea, or On Destiny." The latest edition of the Poemander is that of 1630, Col. Agrripp., 6 vols. fol.—The Esclusiapus is found united to most editions of the Poemander.—The Iatromathematics are found in the astronomical collection of Camerarius, and were also published separately by Hoeschel, Argent., 1597, 8vo.—The treatise "De Revolutionibus Natiuritatis" was edited by Wolf, Bassi, 1559, fol.—The Aphorisms were printed at Venice, 1496, fol., with the Tablest of Ptolemy, and again, in 1661 and 1674, in 12mo.—The Cyranides were edited by Rüvinus (Bachmann), Lips., 1688, 8vo, and Francof., 1681, 12mo.—The Chemical Treatise was printed at Leipsic, 1610, in 8vo. It is found, also, in the 4th volume of the Theatrum Chemicum, Argent., 1613, 8vo. (Schöll, Hist. Lit. Gr., vol. 5, p. 118.)

TRIPEX, a city of Asia Minor, southw' of Ægæum, and near the coast of Eliss. It was said to have been founded by Callidas, who came from Cumæ in Italy, or, according to other accounts, by Menalippos, son of Mars and Triptis. It was made dependant on Patra by order of Augustus. Its remains are generally supposed to correspond with those observed by modern travellers at Gunmenitz. These ruins, which are very extensive, are sometimes called St. Andrea, from a church dedicated to that apostle in the immene Vicinity. (Gell, Isis. of the Morea, p. 135.—Cramer's Anc. Greece, vol. 3, p. 75.)
TRO

TROGENIA, a surname of Pallas. (Vid. Minerva, page 849, col. 2.)

TRITON, i. a sea-deity, the son, according to He- niod, of Neptune and Amphitrite. (Theog. 930.) Later poets made him his father’s trumpeter. He was also multiplied and made one of the spectators of the Numantian war. Like the Nereids, the Tritons are said to have been bred of fish. (Verg. Aen. 2, 171.)—II. A place in the district of Kasos, near Myndus. (Herod. 2, 13.)

TROES, a district on the Aegean coast of Mysia, in Asia Minor, extending as far south as the promontory of Lectum, now Cape Baba, of which Troy was the capital. The kingdom of Priam, if we form our ideas of it from the poems of Homer, must have had very limited extent. Strabo, indeed, through partiality for his favourite poet, seeks to enlarge the limits of Priam’s kingdom, and makes it to have comprised the country on the coast of the Propontis as far as the river Euxinos, near Cyzicus. Homer, however, names many expressly as allies of the Trojans whom Strabo would wish to consider as the subjects of Priam. The northern part of Troas was termed Dardania, from Dardanus, a city founded by Dardanus, one of the an- cestors of Priam. The Trojans were very probably of Thracian origin. (Vid. Troja.)

TROES, a people of Galatia, on the side of Cap- docia, and between the Helys and the last-mentioned country. (Polyb., 31, 13.—Liv., 38, 16.—Plin., 5, 32.)

TROEZEN, a city of Argolis, situate on the Sinus Saronicus, near the southeastern extremity of that country, and northeast of Hermione. The Trozeni- ans prided themselves upon the great antiquity of their city, which had borne the several names of Ores, Altheia, and Posidonia, before it received that of Troz- ene from Trozen, the son of Pelops, one of the earli- est sovereigns of the country. He was succeeded by Pithens, whose daughter, marrying Aegeus, became the mother of Theseus. This hero was born at Trose- zen, where he long resided. Many of his adventures, as well as some of the inhabitants and approach to the city by the tragic poets. The Trozeni- ans could also boast of having colonized Myndus and Halicarnassus in Caria, and likewise the borough of Spheitus and Anaphylatus in Attica. (Herod., 7, 99.—Pausan., 2, 30.) On the arrival of the Heraclei- dians and Dorians, Trozen was occupied by their forces, and became a republic independent of Argos, to which it had been subject at the time of the Trojan expedi- tion. (Pausan., 1, c.—Herod., 8, 43.) In the Per- sian war, the Trozenians received most of the Athe- nian families who were forced to abandon their city. (Herod., 8, 41.) They sent five ships to Artemisium and Salamis, and 1000 heavy-army soldiers to Platea (Herod., 8, 1.—Id., 9, 29); they are also named among the confederates who fought at Mycale. (Herod., 9, 192.)—The harbour of Trozen obtained the name of Pogen from its shape, being bounded by a curved strip of land which resembled a beard (πτερόν). The ruins of this ancient city are to be seen near the village of Damala, in a plain situate at the foot of a lofty range of mountains, which runs from the Saronic Gulf to that of Hermione. (Cramer’s Anc. Greece, vol. 3, p. 362, seqq.) “This place,” observes Sir Wm. Gell, in speaking of Trozen, “now represented only by a mean village of only forty-five habitations, a very ancient of considerable extent, the longest side of the city having been at least one mile in length. It was probably, like most of the Grecian cities, of a form approaching to a triangle, having a wall on the plain, from the extremities of which other fortifications ran up the mountain to the Acropolis, on a craggy and detached summit, now very prettily spotted with wild olives.” (Compare Leake’s Morea, vol. 2, p. 442, seqq.)

TROGIUM, three small islands near Samos, named Pelon, Argennon, and Sandalion. (Plin., 5, 31.) Strabo names only one, which he calls Trogilium, probably the same alluded to in the Acts of the Apostles (20, 15).

TROGIUM PROMONTORIUM, a bold promontory of lonis, nearly opposite to Cape Lestos, in the island of Samos, and sometimes from it by a strait not more than seven miles wide. (Strab., 636.) The Trogilium promontory is mentioned in the Acts, in the ac- count of St. Paul’s voyage from Tros to Miletus, by Mytilene, Chios, and Samos. From the latter island they crossed over to Trogillum, and after remaining there, it appears, one night, they reached Miletus the following day. (Acts, 20, 15.) The modern name of this promontory is Cape Santa Maria. (Cramer’s Asia Minor, vol. 3, p. 378.)
TROJA.

TROJOLD\'YE, an appellation denoting a people who dwelt in caves (τρόγλυθη, a cave, and οί
cave, to enter). The ancients found Troglodytes in various parts of the world, but the name remained peculiarly appropri-
ted to the inhabitants of the western coast of the Sin-
cus Arabiae in Æthiopia; and from them the entire coast was named the land of Troglodytes (Τρωγλοδύτων). It commenced to the south of Ber-
ce, and reached to the southernmost extremity of the gulf.

(Πιψ., 6, 29.—Id., 2, 70.—Id., 6, 19.)

TROJUS POMPEIUS, a Latin historian, who flourished in the time of Augustus. He was descended from a Gallic family, to which Pompey the Great had extend-
ed the rights of Roman citizenship, and from him, in all probability, the name Pompeius was derived, the family having been Trojan. The father of the historian was secretary to Julius Cæsar. (Justin, 43, 5, 11.) Trogus Pompeius wrote an historical work in forty-four books, compiled from some of the best of the ancient historical writers. An abridgment of this work was made by Justin, and has come down to us; but the original work itself is lost. (Consult re-
marks under the article Justinus I.)

TROJUS, I, a celebrated city, the capital of Tros, which, according to Homer, had been founded in the immediate vicinity of the sources of the Scamander, on a rising ground between that river and the Simois. The Tro-
jans or Teucri appear to have been of Thracian origin, and their first monarch is said to have been Teucer. In the reign of this king Troy was not as yet built. Dardanus, probably a Pelasgic chief, came from the island of Samothrace to the Tascaran territory, re-
ceived from Teucer his daughter Bætia in marriage, together with the cession of part of his kingdom, and founded the city of Dardanus, and called the adjacent region Dardania. Dardanus had two sons, Ilus and Eriehthonious. Ilus died without issue, and was suc-
cceeded by Eriehthonious, who married Aysyoche, daugh-
ter of the Simois, and became by her the father of Tros. This last, on succeeding to the throne, called the country Troas or Troja, and had three sons, Ilus, Assaracus, and Ganymedes. Ilus, having come off victorious in certain games at the court of a neigh-
bouring monarch of Phrygia, received from the latter, among other rewards, a dappled heifer, and permission to
found a city wherever the heifer should lie down. The animal, having come to a place called the " hill of Abe" (Α'γθ'όκος), lay down thereon, and here, accordingly, Ilus founded his city, which he called Ilium, and which afterward obtained also the name of Troy. (Apoliod., 3, 12, 1, seqq.) This place, the citadel of which was called Pergamus, became now the capital of all Troas, and, during the reign of La-
omedon, the successor of Ilus, was surrounded with walls, which the poets fabled were the work of Apollo and Neptune. (Vid. Laomedon.) During the reign of this last-mentioned monarch, Troy was taken by Hercules, assisted by Telamon, son of Eæcus, but was restored by the victor to Priam, the son of its conquered king. (Vid. Laomedon, and Priamus.) Priam reigned here in peace and prosperity for many years, having a number of adjacent tribes under his

came to the banquet of the gods at the nuptials of Peleus and Thetis, and flung down a golden apple, in-
scribed " The Apple for the Fair One" (Τη ναίκα το πολύ

Juno, Minerva, and Venus, claiming it, Ju-
piter directed Mercury to conduct them to Mount Ída, to
be the question to be determined by Paris, the son of Priam. The gods assembled, and Venus, who had promised the judge the beautiful Helen in marriage. Venus then directed him to build a ship, and desired her son Æneas to be the companion of his adventures.

The soothsaying Helenus and Cassandra announced in vain the woes that were to follow; the vessel put to
sea, and Paris arrived at Lacedemon, where he shared the hospitality of Menelaus, the husband of Helen. The Trojan, at the banquet, bestowed gifts on his fair hostess, and shortly after left her to return to Crete, directing his wife to entertain the guests while they stayed. But Venus caused Helen and Paris to become mutually enamoured; and the guilty pair, fill-
ing the ship with the property of Menelaus, embark and depart, accompanied by the son of Anchises. Mene-
laus, returning to his home, consulted with his brother Agammenon about an expedition against Troy. He then repaired to Nestor at Pylos, and, going through Greece, fetched Helen by sea. At last they reached Troy. The

ersal place of rendezvous was Aulis in Boetia. From
this port the combined Grecian fleet proceeded to Troy; but, reaching Teuthrania, in Mycia, on the coast of Asia, and taking it for the Trojan territory, they landed and ravaged the country. Telephus, the mon-
arch of the land, came to oppose them, and killed Thersander, the son of Polynices, but was himself severely wounded by Achilles. As they were sailing thence, their fleet was dispersed by a storm. Tele-
phus, after this, having, by direction of an oracle, come
to Argos in search of a cure for his wound, is healed by Achilles, and undertakes to conduct the Greeks to Troy. The fleet again assembled at Aulis, where the affair of Iphigenia occurred. (Vid. Iphigenia.) The

wind, after the anger of Diana had been appeased, no

longer proving adverse, the fleet made sail, and reached the

isle of Tenedos, where Philoctetes received a wound from a water-snake, and the smell from this

proved very repulsive, they carried him to the isle of

Lemnos and left him there. (Vid. Philoctetes.) When the

Achaean host appeared off the coast of Troy, the
Trojans came down to oppose their landing, and Pros-
teius fell by the hand of Hector; but Achilles, hav-
ing slain Cyrus, the son of Neptune, put the enemy to flight. An assault on the city having failed, the

Greeks turned to ravaging the surrounding country, and took several towns. Then followed a war of

four years, the principal events of which have been

given elsewhere. (Vid. Achilles, Chryses, Briesis,
Agammenon, Penthesilea, Memnon, &c.) In the last year of the

war, Ulysses took Helenus by stratagem, and,

having learned from him how Troy might be captured, Diomed was sent to Lemnos to fetch Phi-

loctetes, who, being cured by Machaon, killed Paris. Minerva then directed Epeus to construct a huge horse of

wood; and, the horse being completed, the bravest

among the Greeks, Athens, carried it, and the rest set fire to the tents and sail away to Tenedos. The

Tro-

ians, thinking their toils and dangers all over, lay down a part of their walls, and, drawing the horse into the city, indulge in festivity. There was a debate what to do with the horse; some were for throwing it from the rock, others for burning it, others for con-
secrating it to Minerva. The last opinion prevailed, and the banquets were spread now upon the dead and destroyed Laocoön and his sons; dismayed by which prodigy, Æneas forthwith retired to Mount Ída. Simón, then, who had got into the city by means of a forged tale, raised torches as a

signal to those at Tenedos. They return, the war-

riors descend from the horse, and the city is taken.
Such is the narrative of the Trojan war as it appeared in the 
Ilid of Homer, in the Little Iliad, and in the 
 Destruction of Troy, by the bard Arctinus. It was a 
subject, however, of all others open to variation and 
addition, as may be seen, in particular, from the 
Æneid of Virgil, and also in the other form of the story, 
which made Æneas and Antenor to have betrayed Troy to 
the Greeks. (Keightley's Mythology, p. 485, seq.)

2. How far the story of the Trojan War is credible.

The poems of Homer have made the story of the 
Trojan war familiar to most readers long before they 
are tempted to inquire into its historical basis. It is, 
consequently, not to enter upon the question of truth 
without some prepossessions unfavourable to an 
impartial judgment. Here, however, we must not be 
deterred from stating our view of the subject, by the 
certainty that it will appear to some paradoxical, while 
others will think that it savours of excessive credulity.

The reality of the siege of Troy has sometimes been 
questioned, we conceive, without sufficient ground, 
and against some strong evidence. According to the 
rules of sound criticism, very cogent arguments are 
ought to be required to induce us to reject as a mere fiction 
a tradition so ancient, so universally received, so defi-
nite, and so interwoven with the whole mass of the na-
tional recollections as that of the Trojan war. Even 
if unfounded, it must still have had some adequate oc-
casion and motive; and it is difficult to imagine what 
this could have been, unless it arose out of the Greek 
colonies of Italy, which number Homer’s description 
in Greece itself is not easily explained.

The leaders of the earliest among these colonies, which 
were planted in the neighbourhood of Troy, claimed 
Agamemnon as their ancestor; but if this had sug-
gested the story of his victories in Asia, their scene 
would probably have been fixed in the very region oc-
cupied by his descendants, not in an adjacent land. 
On the other hand, the course taken by this first (Æto-
lian) migration falls in naturally with a previous trad-
tion of a conquest achieved by Greeks in this part of 
Asia. We therefore conceive it necessary to admit the 
reality of the Trojan war as a general fact, but beyond 
this we scarcely venture to proceed a single step. Its 
causes and its issue, the manner in which it was 
conducted, and the parties engaged in it, are all involved 
in an obscurity which we cannot pretend to penetrate.

We find it impossible to adopt the poetical story of 
Helen, partly, as the foundation of its imaginary facts 
and partly because we are convinced that Helen is a 
merely mythical person. (Vid. Helena.) The common 
account of the origin of the war has indeed been 
defended, on the ground that it is perfectly con-
sistent with the manners of the age; just as if a pop-
ular tale, whether true or false, could be at variance 
with them. The feature in the narrative which ap-
pears in the highest degree improbable, setting the 
character of the persons out of the question, is the in-
tercourse implied in it between Troy and Sparta. As 
to the heroine, it would be sufficient to raise a strong 
suspicion of her fabulous nature to observe that she is 
classed by Herodotus with Ion, and Europa, and Me-
des, all of them persons who, on distinct grounds, 
must clearly be referred to the domain of mythology.

This suspicion is confirmed by all the particulars of her 
legend; by her birth; by her relation to the Divine 
Twins, whose worship seems to have been one of the most 
ancient forms of religion in Peloponnesus, and especially in 
Laconia; and by the divine honours paid to her at Sparta and elsewhere. (Herod., 6, 61— 
Pausan., 3, 19, 10.—Id., 2, 22, 6.—Id., 2, 32, 7. 
Plut., Vit. Thea., c. 20, seq.) But a still stronger 
reason for doubting the reality of the motive assigned by 
Homer for the Trojan war is, that the same incident 
recurs in another circle of fictions, and that, in the ab-
duction of Helen, Paris only repeats an exploit also at-
tributed to Theseus. This adventure of the Attic 
hero seems to have been known to Homer; for he in-
troduces Æthra, the mother of Theseus, whom the 
Dioscuri were said to have carried off from Attica 
when they invaded it to recover their sister, in Helen’s 
company at Troy. Theseus, when he came to bear 
her away, in each case had been discovered in the 
temple of the goddess, whose image (Phigenna) was 
believed to have brought home subsequently from Scyth-
a; a feature of the legend which perhaps marks the 
branch of the Lacedaemonian worship to which she 
belonged. According to another tradition, Helen was 
carried off by Idas and Lyuceus, the Messenian pair 
of heroes who answer to the Spartan twins; vari-
ations of the same legend, which show that Troy was 
a theme for poetry originally independent of the Trojan 
war, but which might easily and naturally be associa-
ted with that event. (Thirlwall’s History of Greece, 
vol. 1, p. 151, seq.)

3. Connexion between the Trojan War and the 
Argonautic Expedition.

If we reject the traditional occasion of the Trojan 
war, we are driven to conjecture in order to explain 
the real connexion of the events; yet not so as to be 
wholly without traces to direct us. It has been 
elsewhere observed (vid. Argonauta, p. 188, col. 2), 
that the Argonautic expedition was sometimes repre-
sented as connected with the first conflict between 
Greece and Troy. This was according to the legend 
that Mysia was the land of Theseus, whose hero 
had conquered Troy, and to which he returned. 
Theseus, it is said, having landed at Troy, sailed 
forthwith home (Enea, seq.) There seems to be 
no reason for treating this either as a fictitious 
episode, or as a fact really belonging to the 
history of the Trojan war. It may have been origi-
ally a distinct legend, grounded, like that of Hercu-
les, on a series of events which had some connexion 
with the coast of Asia, whether merely for the sake of plunder, 
or with a view to permanent settlements. (Thirl-
wall’s History of Greece, vol. 1, p. 153, seq.)

4. Historical View, and Consequences, of the Trojan 
War.

As to the expedition which ended in the fall of 
Ilium, while the leading facts are so uncertain, it must 
clearly be hopeless to form any distinct conception of 
its details. It seems scarcely necessary to observe, 
that no more reliance can be placed on the enumer-

1859
tion of the Greek forces in the Iliad, than on the other parts of the poem which have a more poetical aspect, especially as it appears to be a compilation adapted to a later state of things. That the numbers of the arma-
tories had left as conquerors: it seemed as if the jeal-
ousy of the gods had been roused by the greatest
achievement of the Achaeans to afflict and humble
them. The changes and sufferings of several genera-
tions were naturalised into a short period fol-
lowing the event which was the best known of
and were represented in the adverse fortune of
the principal chiefs of the nation. (Thirkill's History
of Greece, vol. 1, p. 164, seq.)

5. Topography of Ancient Troy.

The topography of Troy, which will always be in-
teresting to the classical reader, has been so much
discussed by modern travellers and antiquaries, that no additional light can be
expected to be derived from subsequent researches.
A brief summary of what has been collected from the
different authors who have expressly written on the subject will be here presented to the reader, referring
the student, who is desirous of investigating it more
deeply, to the list of works at the end of this article.
This, the most classical of all lands, has been so com-
pletely trodden and examined, that it may be truly said
that the ancient writers, who took the subject
were much less acquainted with the actual topography of the
Trojan plain than our best-informed modern
travellers. The researches of these intelligent men
have not only confirmed the great historical facts con-
ected with the fate of Troy, which few persons, in-
deed, either in ancient or modern times, have ventured
to question, and those evidently for the purpose
of maintaining a paradox; but they have served beauti-
fully to illustrate the noblest poem of antiquity, and
to bear witness, with due allowance for poetical ex-
aggeration, to the truth and accuracy of Homer's local
descriptions. They have proved, that as in every other
point he was the most close and happy delineator of
nature, so here he has still copied her most faithfully,
and has taken his description from scenes actually ex-
isting, and which must be familiar to his eyes.
In order that this may be proved to the reader's satis-
faction, as far as it is possible, without an actual in-
spection of the country, we purpose first to lay before
him all the general and most striking features in the
Homerian chorography, and then to illustrate them by
a continued reference to modern travellers and anti-
quaries. It will be seen, then, from the Iliad, that the
Greeks, having arrived on the coast of the Hellespont,
and effected a landing, drew up their vessels in sever-
al rows on the shore of a small bay confined between
two headlands (Strab. iv. 5. 14). Elsewhere he states
that Achilles was posted at one extremity of the line,
and Ajax at the other. (I., 8, 224; 11, 7.) He
where names the two promontories which enclosed the
bay and the armament of the Greeks; but all writers,
both ancient and modern, agree in the supposition that
these are the capes Rhetum and Sigeeum, between
which tradition attached to different spots the names
of Nausithous, the port of the Greeks, and the
promontory of Guemel. (Strab. xiv. 5. 5.) Agreeing
with Pliny, the distance from headland to headland was thirty sta-
dia (5, 33.). Strabo reckoned sixty stadia from Rhet-
ium to Sigeeum, and the tomb of Achilles close to
the latter (l. c.); and these distances agree sufficiently
well with actual measurements. (French Strabo, 4,
170, in not.) Considerable changes, however, have
taken place during the lapse of so many ages in the
appearance of the coast. The promontory of Rhetum,
completely filled up by the de-
pósito of rivers and the accumulation of sand and soil,
and the shore now presents scarcely any indenture be-
 tween the headlands; but we are assured by Choiseul
Gouffier, and others who have explored the ground,
that there is satisfactory proof of the sea having ad-
anced formerly some way into the land in this
territory. (Voy. Pittoresque, 2, 216.—Leake's Asia Mi-
1360
TROJA.

not, p. 273.) The next great feature to be examined in the Homeric chorography is the poet's account of the rivers which flowed in the vicinity of Troy, and discharged their waters into the Hellespont. These are the Axios or Scamander, and the Simois, whose junction is especially alluded to. (II, 5, 774.) And again (5, 2), where it is said that the conflict between the Greeks and Trojans took place in the plain between the two rivers. One of the first questions, then, to be considered, in reconciling the topography of ancient Troy with the existing state of the country, is this: Are there two streams answering to Homer's description, in a plain on a rise, which flows from the sea, and fall into it between the Rhodanian and Sigean promontories? To this question it certainly appears, from recent observations, that we must reply in the negative. There are two streams which water the plain, supposed to be that of Troy, but they do not meet, except in some marshes formed principally by the Menderes, the larger of the two, which seems to have no exit into the Hellespont, while the smaller partly flows into these stagnant pools, and partly into the sea near the Sigean cape. (Choiseul Gouffier.) It appears, however, from Strabo, or, rather, from Demetrius, whom he quotes, that when he wrote the junction did take place; for he says, "The Scamander and Simois advance, the one towards Sigeum, the other towards Rhesium, and, after uniting their streams a little above New Ilium, fall into the sea near Sigeum, where they form what is called the Scamander. This is a conspicuous spot, which he speaks of the Palaeascarmander, evidently leading to the notion that the channel of that river had undergone a material alteration (5, 32). The observations of travellers afford likewise evidences of great changes having taken place in regard to the course of these streams; and it is said that the ancient common channel is yet to be traced, under the name of Menderes, near the point of the latter.

The ancients themselves were aware of considerable alteration, having taken place along the whole line of coast; for Histiaeus of Alexandria Troas, a lady who had written much on the Illiad, affirmed that the whole distance between New Ilium and the sea, which Strabo estimates at twelve stadia, had been formed by alluvial deposit (598); and recent researches prove that their distance is now nearly double. (Leake's Asia Minor, p. 293.) The greater part of the Anadolu has been formed by the flowing-in of the two rivers alluded to, and on which the whole inquiry may be said to turn, is, Which is the Scamander, and which the Simois of Homer? If we refer for the solution of this question to Demetrius of Scissis, who, from his knowledge of the Trojan district, appears to have been best qualified to decide upon it, we shall find that he looked upon the river now called Menderes as corresponding with the Scamander of Homer, a supposition which is evidently derived in a large degree from the similitude of names; while he considered the Simois to be the stream now called Histiaeus, which unites with the Menderes near the site of Paleo Akthis, supposed to represent the Pagus Ilissium, and which Demetrius himself identified with ancient Troy. But it has been rightly observed by those modern writers who have bestowed their attention on the subject, that the similitude of names is not a sufficient criterion of identity, since the same name has often been known to vary; and that, after all, we must refer to the original account, where we find the characteristics of the two rivers described in a manner which must eventually settle the whole question as far as regards their identity. A reference to the Iliad itself is the more necessary, as Demetrius does not appear to have satisfactorily explained, even to himself, certain doubts which naturally arose from comparing his system of topography with that suggested by the perusal of the poet. Now it appears from more than one passage that the Simois, according to Homer, had its source in Mount Ida (II, 4, 475; 12, 22); and, though in the latter passage, the same thing is affirmed of the Scamander, it will be seen elsewhere that the sources of that river are so plainly marked, as almost to indicate close to the city of Troy, that they never could be identified with the main chain, unless Troy itself was placed there likewise. When speaking of the pursuit of Hector by Achilles beneath its walls (II, 22, 143), he mentions certain marks, which point out the double sources of the Scamander, so peculiar and striking a manner, that the discovery of them would, it seems, be decisive of the question, not only as regards the Trojan rivers, but also, in all probability, as to the situation of Troy itself, which, according to the poet, must have stood in the immediate vicinity of the sources. It is in tracing this remarkable and most distinguishing feature of the Homeric description, that modern research and industry have been particularly conspicuous, and have enabled us to solve a question which the ancients, from the want of similar information, could never understand. It is to Monsieur Choiseul Gouffier that the merit of first discovering the springs of the Scamander undoubtedly belongs; and though the phenomena of heat and cold, described by Homer, have not been so convincingly observed by subsequent travellers as by himself, yet, by taking the positive testimony of the natives themselves, who repeatedly corroborated the statement made by the poet, as well as the several experiments made by Choiseul Gouffier, as related by Du Cange, (Voyage, p. 267—8.)—Leake's Asia Minor, p. 283, we cannot refuse to acknowledge, at least, that there is a very sufficient foundation for the poetical picture formed of the spot by Homer. M. Choiseul describes the hot source "as one abundant stream, which gushes out from different chinks and apertures formed in an ancient structure of stonework. About 400 yards higher up are to be seen some more springs, which fall together into a square stone basin, supported by some long blocks of granite. These limpid rills, after traversing a charming little wood, unite with the first sources, and together form the Scamander." (Voy. Pitt, 223.) The latter, which are the cold springs of Homer, are called Kirk Gueszer, or the Forty Pools, by the Turks. (Ib., 385.) If we besides, look to the general character of the spot, we shall find that the Simois of Homer, which we have described, agrees remarkably with the beautiful little river of Bournaraschi, which is formed by the sources above mentioned, while the rapid Simois finds a fit representative in the impetuous Menderes-sou, which descends from the summits of Gargara, and fills its bed with trees torn from their roots, and huge fragments of rock. The former is described as a copious, mild, and clear stream, whose banks are spread with flowers and shaded with various sorts of trees. (II, 21, 1—Ib., 124; 2, 467; 21, 350.) According to Mr. Chevalier, the river of Bournaraschi "is never subject to any increase or diminution; its waters are as pure and pellucid as crystal; its borders are covered with flowers; the same sort of trees and plants which grew near it when it was attacked by Vulcan, grow there still, and the ash-trees, and oaks are yet to be seen on its banks, and eels are still caught in it." (Descr. of Plain of Troy, p. 83.)—Compare Voy. Pitt, 2, 283.) It was doubless on account of the beauty and copiousness of its stream that divine honours were paid to the Scamander by the Trojans. (II, 5, 77.—Compare Eich., Epist. 10, p. 868.) The Simois, on the contrary, bears all the marks of a rapidly flowing-down from the mountains with furious haste and restiless force. This is evident from the address of the Scamander to his brother god, invoking his aid against Achilles (II., 21, 398); and all modern travellers and topographers concur in allowing that this is precisely
the character of the **Mendere**, which takes its rise in a deep cove below the highest; summit of Mount Ida, and, after a tortuous course, between steep and craggy banks, of nearly thirty miles, in a rugged bed, which is nearly dry in summer, finds its way out into the plain of **Bournarbach**. It is true, that when Demetrius of Scepsis wrote, which is some years after the defeat of Antiochus by the Romans (Strab., p. 593), the **Mendere** certainly bore the name of Scamander, for he describes it as a river that rises in the district of Ida very accurately (ap. Strabo, p. 602). I should admit, also, that the Scamander, which, according to Herodotus, was drained by the army of Xerxes (42), is the **Mendere**; Hellanicus likewise was of this opinion (ap. Schol. Il., 21, 242); but this objection may be fairly disposed of by supposing that the name of Scamander, which is certainly much oftener mentioned in Homer, had, in process of time, been transferred to the river which rises further to the west than the Mendere, and which was longer, and body of water more considerable; whereas it is impossible, I conceive, to get over the difficulty presented by Homer's description of the double sources of the Scamander. The question may be fairly summed up in this way: either we must allow that Homer drew his local descriptions from real scenes, or that he only applied historical names to fanciful and ideal localities; in the latter case, all our interest in the comparative topography of Troy ceases, and it is a fruitless task to look for an application of the name to the same site in the poet's geographical sketch of things. But if a striking resemblance does present itself, we are bound, in justice to the poet, to take our stand on that ground, and, without regarding any hypothesis or system which may have been advanced or framed in ancient times, to seek for an application of the remaining local features traced in the Iliad in the immediate vicinity of the sources of **Bournarbach**. Here, then, travellers have observed, a little above that village, an ancient name of the same, rising from the plain, generally well calculated for the site of a large town, and, in particular, satisfying many of the local requisites which the Homeric Troy must have possessed; such as a sufficient distance from the sea, and an elevated and commanding situation. This is evident from the epithets ἕνεκες, ἀπεκέ, and ὕφεκσωσα, which are so constantly applied to it. If, however, we have, besides, a rock behind the town answering the purpose of such a citadel as the Pergamus of Troy is described (Il. x. 397), the name of the peak, rising precipitously above the city, and presenting a situation of great strength, we shall have all that the nature of the poem, even in its historical character, ought to lead us to expect. (Compare Voy. Pitt., 2, 238, and the plan there given.) With respect to minor objects alluded to by Homer in the course of his poem, such as the tombs or mounds of Ilus, Euyetes, and Myrina, the Scopie and Erinus, or group of wild fig-trees, it is, perhaps, too much to seek to identify, as the French topographers have somewhat fancifully done, with present appearances. It is certain that such indications cannot be relied upon, since the inhabitants of New Ilium, who also pretended that their town stood on the site of ancient Troy, boasted that they could show, close to their walls, these dubious vestiges of antiquity. (Strabo, 599.) With respect to the objection which may be brought against the situation here assumed for the ancient Troy, that it was not possible for the flight of Hector to have taken place round the walls, as the poet has represented it, since the heights of Bournebach are skirted to the north-east by the deep and narrow gorge of the Mendere, which leaves no room even for a narrow footpath along its banks, the opinion is undoubtedly correct of those commentators and critics who think that we ought not to take the words of the poet in the sense which has commonly been assigned to them, but that it is better to suppose that Hector and Achilles ran only round that portion of the city which fronts the plain from the Scamian gates to the sources of the Scamander, and back again. (Voy. Pitt., 2, p. 228-40.—Le Chemelier's Description of Plain of Troy, p. 135.—Leake's Asia Minor, p. 304.) The difficulty in that case will be satisfactorily removed, and there will then remain, we conceive, no valid objection to the system which recognizes the hill of Bournebach as the representative of the ancient city of Priam, and which has been almost universally embraced by modern travellers and scholars. (Crammer's Asia Minor, vol. 1, p. 89, seq.)

The student who is desirous of investigating the Trojan question more deeply, is referred to the following works on this subject: *A comparative View of the ancient and present State of the Troad, by Robert Wood, subjoined to his essay on the Genius and Writings of Homer.—Description of the Plain of Troy, by M. Chemeler, Edinburgh, 1807, 1791 (Dalzell's translation).—The same work in German, by Heyne, with notes.—Le Chevalier, Voyage dans le Troade, Paris, 8vo, 1802.—Observations on the Topography of the Plain of Troy, by James Rennell, London, 1814, 4to.—Chandler's History of Ilium or Troy, London, 1802, 4to.—Voyage Pittoresque de la Grece, par Choiseul-Gouffier.—Gell's Topography of Troy, fol., London, 1804.—Clarke's Travels, vol. 3, p. 234, seqq. ed. London.—Leake's Geography of Asia Minor, ch. 6.—Hobhouse's Journey, vol. 2, p. 128, seqq.—Edinburg.—Leake: Anatomy of Homer.—Review, vol. 9, p. 170, seqq.—Madelung's Dissertation on the Topography of the Plain of Troy, London, 1822, 8vo—Turner's Tour to the Levant, vol. 3, p. 222, seqq. II. A small town, or rather village, in Egypt, to the east of, and near Memphis. The name probably owes its origin to a corruption, on the part of the Greeks, of some Egyptian appellation. The Greeks, however, had a fabulous tradition that it was the place where the flock of the pious Delphi, led by Menelaus (Strabo, 808) In its vicinity was the Mons Trosicus, where were quarries whence the stones for the Pyramids were obtained.

Trollius, a son of Priam and Hecuba, slain by Achilles during the Trojan war. According to another legend, he was the son of Apollo and Hecuba. (Tzet. ad Lycurp., 307.—Eutoc. p. 494, in the latter of whom τρόλλος must be supplied, and the arrangement of the text altered.)—Troilus, or Troylus, a name remarkable for youth and beauty. The manner of his death is differently related by ancient writers. (Consult Dict. Cret., 4, 9.—Anna Palfr., ad loc.—Virg., En., 1, 478.)

Trophonius, according to the common account, a celebrated architect, son of Erginus, king of Orchomenus in Boeotia. The legend relating to him is as follows: When Erginus had been overcome by Hercules, his affairs fell into so reduced a state, that, in order to retrieve them, he withdrew to a place on the hill of Tybridales, near Thebes, for protection (Pausan. x, 37, 3.) Erginus accordingly, following the counsel of the Pythia, married and had two sons, Trophonius and Agamedes, though some said Apollo was the father of the former. They became distinguished architects, and built the temple of Apollo at Delphi, and a treasury for King Hyrcanus. As he grew rich and old, he wished to have a family; and, going to Delphi, he consulted the god, who gave him, in oracular phrase, the prudent advice to marry a young wife. (Pausan., 9, 37, 3.) Erginus accordingly, following the counsel of the Pythia, married and had two sons, Trophonius and Agamedes, though some said Apollo was the father of the former. They became distinguished architects, and built the temple of Apollo at Delphi, and a treasury for King Hyrcanus. As he grew rich and old, he wished to have a family; and, going to Delphi, he consulted the god, who gave him, in oracular phrase, the prudent advice to marry a young wife. (Pausan., 9, 37, 3.) Erginus accordingly, following the counsel of the Pythia, married and had two sons, Trophonius and Agamedes, though some said Apollo was the father of the former. They became distinguished architects, and built the temple of Apollo at Delphi, and a treasury for King Hyrcanus. As he grew rich and old, he wished to have a family; and, going to Delphi, he consulted the god, who gave him, in oracular phrase, the prudent advice to marry a young wife. (Pausan., 9, 37, 3.)
lowed up by the earth. (Pausan., l. c.) According to Pindar, when they had finished the temple of Delphi, they asked a reward of the god. He promised to give it on the seventh day, desiring them, meanwhile, to live cheerful and happy. On the seventh day they died in their sleep. (Pind., ap. Plut., de Const.—Op., vol. 7, 235, pl. Hesiodi.) Thus is the celebrated oracle of Trophonius at Lebadea in Boiotia. During a great drought, the Boiotians were, it is said, directed by the god at Delphi to seek aid of Trophonius in Lebadea. They came thither, but could find no oracle; one of them, however, happening to see a swarm of bees, they followed them to a chasm in the earth, which proved to be the place sought. (Pausan., 9, 40.)

The writer just quoted gives a detailed account of the mode of consulting this oracle, from his own personal observation (9, 39). After going through certain ceremonies, the individual who sought to inquire into futurity was conducted to a chasm in the earth resembling an oven, and a ladder was furnished him by which to descend. After reaching the bottom of the chasm, he lay down on the ground in a certain posture, and was immediately drawn within a cavern, as if hurried away by the velocity of a most rapid river. Then he heard a voice, which was here interpreted as one in the Chasm. In some cases this was given to the applicants through the medium of the sight; at others through the hearing; but all returned through the same opening, and walked backward as they returned. It is a common notion, which we meet with in many modern works, that a visitor to the cave of Trophonius never smiled after his return. The language of Pausanias, however, expressly disproves this; for he observes that after- ward the person recovering the use of his reason, he laughs just the same as before (φατερι μνήν τά τε ἄλλα οὖν τε φρόνημα μείναν ἢ πρότερον, καὶ γέλως ἐπανειμερ). It is probable that the gloom, the morbid vapours, and perhaps some violence from the priests, which the applicant encountered in his descent, might seriously affect his constitution, and render him melancholy; and thus Aristophanes strongly expresses terror by an observation in the Clouds (v. 507), which became proverbial, ὡς δέθων ἐγὼ Ἑσίον καθάλανεν ὁπατί ἐς Τροφωνίων. One man, indeed, is noticed by Athenaeus (14, p. 614, a), who did not recover his power of smiling until assisted by another oracle. Parmenius of Metapontum, finding himself thus wofully dispirited, went to Delphi for a remedy, and Apollo answered that he would find a cure if he resorted to his (Apollo's) mother. The hypochondriac intact, he accordingly proceeded to the island of Melos, in the Levant; but, on being disappointed in his hope there, he sought relief in travelling. Touching by accident at Delos, he entered a temple of Latona; and, unexpectedly casting his eyes upon a statue of that goddess (Apollo's mother) most grotesquely sculptured, he burst into an involuntary fit of laughter.—Of other recorded descents into the cave of Trophonius, that of Timarchus, described by Plutarch (De Socrate & Apol. Op. 419, 5), was witnessed by the writer himself as a mere fable (ο μὲν Τύμαρχος μὲνος οὖν οὐκοῦν). That of Apollonius of Tyana (Philosrat., Vit. Apollon., 4, 8) was an irruption, not a legitimate visit. The impostor appears to have bullied the priests, and to have done exactly according to his pleasure both above and below ground. (Encycl. Metropol., pt. 33, p. 664.)

Trophonius was named Zeus-Trophonius, that is, the Nourishing or Sustaining Zeus or Jupiter (from τρόφος, "to nourish"). He is probably a deity of the Pelasgian times, a giver of food from the bosom of the earth, and hence worshiped in a cavern. Agamedes (the Thoughtful or Provident) is, perhaps, only another title of the same being; and as corn was preserved in underground treasuries or granaries, the brothers may in one sense have been the builders, in another the plunderers of these receptacles. (Muller, Orchom., p. 198, seqq., 242—Strabo, 421.—Liv., 45, 27.)—The same trick related above in the case of Hyrieus, is said to have been played off on Augæas, king of Elis, by Trophonius, the steppos, or Agamedes, the Arcadian architect. (Charax, ap. Schol. ad Aristoph., Nub., 509.) It also formed an episode in the Telegónia; and there is likewise a very strong similarity between it and the legend related by Herodotus of the Egyptian king Rhamses (2, 121). Valckenaer thinks that the story was of Egyptian origin, and that some Greek transferred it from the pages of Herodotus to Trophonius and Agamedes. (Valck. ad Herod., l. c.) Igen adopts the same opinion (ad Hom., Hymn., p. 304). Bähr also coincides in this view of the subject, and refers the legend at once to early Egyptian or Phrygian agriculture; (Bähr, Excurs., 7, ad Herod. l. c., vol. 1, p. 912.) On the other hand, Miller (Orchom., p. 97) considers the fable as of Greek origin, and makes it to have been borrowed by the priests of Egypt at a later day. (Compare Buttimmann, Die Minya der ältesten Zeit.—Mythol., vol. 2, p. 298, seqq.) The opinion of Valckenaer, however, is undoubtedly the true one.

Tros, son of Erichthonius and grandson of Dardanus. He married Callirhoe, daughter of the Scamander, by whom he had Ilus, Assaracus, and Gymnes. He gave the name of Troja to the adjacent country. (Apollod., 3, 12, 2.—Vit. Troja.)

Tros'olosùm, a town of Eturia, to the west of Ferentinum, some remains of which have been discovered at a place which bears the name of Tros. Plyn tells us that this town, having been taken by cavalry alone, the Roman horse or equites, obtained, from that victory, the name of Trosalia. (Plin., 33, 2.—Compare Testus, s. v. Trosulli.)

Thyrophoróus, a Greek poet supposed to have flourished about the fifth century of our era. He was a native of Egypt, but of his history nothing is known. Thyrophoros wrote a poem under the title of Marathonica (Marathwaniak), another styled καβ ἱπτοdos- μετον; a Lipogrammatic Odyssey; and a poem on the destruction of Troy, styled ἴδιον ὁλοκλ. The last is the only one of his productions which has reached us. It is in 681 verses, and appears rather to be the argument of some larger poem, which the poet had perhaps intended at one time to write. The Lipogrammatic Odyssey had this name given to it from a peculiar piece of affectation by which it was marked. The poet, according to some, interdicted himself, in each of his twenty-four books, the use of a particular letter; and some who do not believe this, states that the letter Σ was banished from the entire poem. The best edition of the poem on the destruction of Troy is perhaps that of Wernicke, Lips., 1819, 8vo. The edition of Northmore is also a good one, Cantab., 1791, 8vo, and Lond., 1804, 8vo. (Schöttl, Hist. Lit. Gr., vol. 6, p. 112.)

Trypho, a grammarian of Alexandria in the age of Augustus. He was the pupil of his remaining; one entitled Ἐρυθ Λέξεως, and another Περὶ Τροπωνίων. The best edition of these two is given in the Museum Criticum (vol. 1, p. 32, seqq.).

Tubero, Q. Alius, a Roman consul, son-in-law of Paulus, the conqueror of Perusus. He is celebrated for his integrity. Sixteen of the Tuberos, with their wives and children, lived in a small house, and maintained them with the proceeds which they cultivated with their own hands. The first piece of silver plate that entered the house of Tubero was a small cup which his father-in-law presented to him after he had conquered the king of Macedonia.

Tuburbo, two towns of Africa, called Major and Minor. The first was situated directly to the south of Tunis, and appears to be now Tuburnon; the latter was southwest of Carthage, on the Bagradas, and is said to retain the ancient name. (Plin., 5, 4.)

1363
TULLI, a daughter of Servius Tullius, king of Rome. She married Tarquin the Proud after she had made away with her first husband, Aruns Tarquinius. (Vid. Servius Tullius.) — II. A daughter of Cicero by Terentia. She was three times married. Her first husband, Caius Plano, died a short time before Cicero’s return from exile. At the end of about a year, she was married to a second husband, Furius Grassipes, who had been a priest of Janus and dignity. She was afterward divorced from this second husband, and united to P. Cornelius Dolabella. The life and character, however, of this last-mentioned individual proved so contrary to the manners and temper both of Cicero and his daughter, that a divorce ensued in this case also. Cicero entertained the deepest affection for this his favourite child, and her death, at the age of 32, proved to him a source of the bitterest sorrow. (Vid. remarks under the article Cicero, page 345, column 2.)—Caesius Rhodiginus tells us, that in the time of Sixtus IV, there was found near Rome, on the Appian Way, over against the tomb of Cicero, the body of a woman whose hair was dressed up in network of gold, and which, from the inscription, was thought to be the body of Tullia. It was quite entire, and so well preserved by spices as to have suffered no injury from time; yet, when it was removed into the city, it moldered away in three days. But this was only the hasty conjecture of some learned men of the time, which, for want of authority to support it, soon vanished of itself; for no inscription was ever produced to confirm it, nor has it been mentioned by any other author that there was any sepulchre of Cicero on the Appian Way. (Cat. Rhod. Lect. Antiq. 3, 24.—Middleton’s Life of Cicero, vol. 2, p. 149, in not.)

LEX, de Senatu, by M. Tullius Cicero, A. U. C. 690, enacted that those who had a libera legatio granted them by the senate should hold it no more than one year. Such senators as had a libera legatio travelled through the provinces without any expense, as if they were employed in the affairs of the state.—II. Another, de Ambitus, by the same, the same year. It forbids any person, two years before he canvassed for an office, to exhibit a show of gladiators, unless that task had devolved upon him by will. Senators guilty of the crime of Ambitus were punished with the aqua et ignis interdictio for ten years, and the penalty inflicted on the commons was more severe than that of the Calpurnian law. (Dio Cass., 37, 29. — Cic. pro Mur., 32, seqq.)

TULLIANUM, a name given to part of the public prison at Rome. The prison was originally built by Ancus Marcus, and was afterward enlarged by Servius Tullius, who gave that part of the camp that was unoccupied ground, and built by him, received the name of Tullianum. The full expression is Tullianum robur, from its walls having been originally of oak; afterward, however, they were built of stone. (Sall., Cat., 55.)

This dungeon now serves as a subterranean chapel to a small church built on the spot, called San Pietro in Carcere, in commemoration of St. Peter, who is supposed to have been confined there. Its only entrance, when a dungeon, was through the arched roof; now, however, there is a door in the side wall. "Notwithstanding the change," observes Eustace, "it has still a most appalling appearance." (Glass. Tour, vol. 1, P. 365, Lond.)

TULLUS HOSTILIUS, the third king of Rome, and successor of Numa. An interregnum followed the death of the last-mentioned monarch. At length Tullus Hostilius, a man of Latin extraction, was chosen by the curia; and his election having been sanctioned by the auspices, he, like his predecessor, submitted to the comitial curiata the laws which conferred upon him full regal power. The new king was more desirous of increasing the city than of defending it, which may be gained by cultivating the arts of peace. An opportunity was soon offered for indulging his war-like disposition. Plundering incursions had been made into each other's territories by the borderers of the two states of Rome and Alba. Both nations sent ambassadors at the same time to demand redress. The Roman ambassadors had private orders from Tullus to be peremptory in their demands, and to limit their wishes within the limits of the territory of the latter. They did so; the stream not receiving immediate satisfaction, returned to Rome. In the mean time, Tullus amused the Alban embassy by shows and banquets, till, when they opened their commission, he had it in his power to answer that they had already in vain sought redress from Alba, and that now they must prepare for the events of a war, the blame of originating which was chargeable upon them. Under the command of Clulius, the Albens sent a powerful army against Rome, and encamped about five miles from the city. These Clulius died, and the Albens elected Mettius Fufetius in his stead. Tullus Hostilius, at the head of the Romans, now drew near the Albens. But, when the two armies were ready for a general engagement, Mettius, the Alban general, proposed to save the effusion of blood by committing the fortune of the war to the valour of certain champions selected from either side. To this proposition Tullus agreed; and the affair of the Horatii and Curiatii took place. (Vid. Horatius III.) After the termination of this memorable combat, notwithstanding the agreement which had been entered into between the Romans and Albens, the latter were unwilling to forfeit their national independence without an additional struggle. This, however, they were desirous to avoid provoking single-handed. They accordingly encouraged the people of Fidenae to request Tullus Hostilius immediately to levie a Roman army, and summoned the Albens to his aid. A battle ensued, in which Mettius Fufetius endeavoured to act a treacherous part, but wanted courage and decision to fulfil his own perfidious pledge, and, on the morrow, was put to a cruel death by the Roman king. (Vid. Mettius Fufetius.) After the punishment of Mettius, it was decreed that Alba should be razed to the ground, and the whole Alban people removed to Rome, the Albens being thus relieved, and the walls of Alba, but every human habitation, was totally demolished, and the temples of the gods alone standing in solitary majesty amid the ruins. But, though Tullus had thus put an end to the separate existence of Alba, he did not reduce its inhabitants to slavery. He assigned them habitation on the Casian Hill, which had formerly, so said the legend, been employed by the temple of Diana of Gestina; after the Proles, Tullus made war upon the Sabines, and in a bloody, and for some time doubtful encounter, again obtained the victory. Another war arose with the confederate towns of Latium, who began to dread the growing power of Rome, after the destruction of Alba. The Latin war terminated without any decided reverses sustained by either party; and an
alliance was formed between the Romans and the Latins. Tullus had now leisure to direct his attention to the arts of peace, in which, however, he did not equal ally excel. The only public works ascribed to him were the enclosing of a space for the Comitia, or assembly of the people, and the building of a Curia, or senate-house. Towards the end of his reign his mind was disturbed by prodigies, indicating the wrath of the gods for religion neglected and temples left desolate. A shower of stones fell from heaven on the Alban Mount, and the awful accents of a supernaturnal voice were heard to issue from the consecrated summit of the hill. A plague swept away numbers of the Roman people. The king himself sickened; and, having been negligent of religion, became the slave of superstitions terrors. In vain did he supplicate the gods. He had disregarded them in the days of his prosperity, and in his adversity no deity regarded his prayers or sent relief. In his despair he presumed to use the divinities of Numa, by the rites of Jupiter Elicius (vid. Elicius); but the only answer returned was the lightening of the offended gods, by which Tullus himself and his whole household were smitten with many diseases. Another accident occurred, however, ascribed his death to an act of treachery and assassination on the part of Ancus Marcus, who could not brook that he, a descendant of Numa, should be kept from the throne by a man of private origin. Such is the legend of Tullus Hostilius. This monarch is said to have reigned two and thirty years. (Liv., i, 22, seqq.—Dion. Hal.: 3, 1, seqq.—Hetherington's History of Rome, p. 13, seqq.—As for his reigns of Romulus and Numa represent the establishment of two of the tribes or constituent elements of the Roman people, so the reign of Tullus Hostilius seems to comprehend the development of the third tribe, or Luceres. To him, as to Romulus and Numa, is ascribed a division of lands, by which portions were assigned to the needy citizens, who, as yet, possessed no property in the soil. It has been conjectured that the Luceres had hitherto held the lands, not in absolute property, and not as common proprietors of the public domain, but as vassals or tenants of the state, which would be represented in the person of the king. That the distribution of Tullus Hostilius effected the third tribe is rendered probable by its being connected with the assignment of ground for building on the Caelian Mount, and the enclosure of that part of the city within one line of fortification with the older towns—this, indeed, was the argument used by the augurs to show that the town on the Caelian was the settlement of the Luceres. From the circumstance that Hostilius himself dwelt there, and that he derived his origin from the Latin town Medullia (Dion. Hal., 3, 1), it may be conjectured that he himself was considered to belong to the Luceres, as Romulus to the Ramnes, and Numa to the Titienses. (Malden's History of Rome, p. 127, seq.)

Tusculum, a city of Africa, southwest of and near to Carthage, being, according to Polybius (14, 10), only 120 stadia from the latter place. The Peutinger table, however, gives the distance more correctly at ten miles. It first rose into consequence after the fall of Carthage. It is now Tunis. Dioecesus Siculus calls it "White Tunis," perhaps from the chalky cliffs that lie around it when viewed from the sea. (Dion. Hal., 10, vi, 2, p. 262.)

Tuscii, a German tribe, probably the same with the Austadici of Caesar, and the first that crossed the Rhine. They became subsequently a powerful people in Germania Inferior. (Tac., Germ., 2.—Ann. Marc., 15, 11.)

Tusculum, a people of Etruria in Spain, in the southeastern part. They extended along the coast, from the Ams to the Bostuli Penni, and their territory was famed for its beauty and fertility, and by some of the ancient writers was considered the most favoured spot on the whole earth. Here, too, Strabo places the Elysian fields of Homer. This district, besides being very productive, was enabled to carry on an extensive and lucrative commerce with the nations of the interior by the road of the Via Egnatia, which traversed it (Polyb., 34, 9.—Livy., 21, 6.—Id., 24, 49.)

Turdoli, a people of Batiaca in Spain, situate to the north and northeast of the Turduli. (Melas, 3, 1.—Plin., 3, 1.—Id. ibid., 4, 20.)

Tubulius, a river of Spain, in the territory of the Edetani, near Valenitia; now the Guadalquivir. (Melas, 2, 16.—Plin., 3, 3.)

Turens, king of the Rutuli, son of Daunus, king of Apulia. From Turens and Amata, a queen, was descended Amata, the wife of Latinus. Latinus, the daughter of Latinus, was betrothed to him, but the arrival of Æneas as deprived him of his intended bride, and in the war which took place between the Latins and the Trojan Turnus was slain by Æneas. (Virg., Æn., 7, 56, seqq.)

Turgiæ, a people in the interior of Gallia Lugdunensis whose territory borders on the modern Tonraigne. (Ann. Marc., 16, 11.—Tow., 3, 41.)

I. A German tribe, settled in what is now the southern part of Hesse, according to Mannert.

Turing, I. Hannibalis, a small place on the coast of Africa, below Thapsus. From this Hannibal took his departure for Asia, when he was banished by his factious and ungrateful countrymen from Carthage. It is now Mahdia.—II. Stratonis, the previous name of Caesarea, on the coast of Palestine. (Vid. Cesarea.)

Tusc, the inhabitants of Etruria. (Vid. Heturia.)

Tusculum, the name of Cicero's villa near Tusculum, and where the scene of his Tusculan Disputations is laid. (Vid. Cicero, p. 947, col. 2.)

Tuscum, a town of Latin, on the summit of the ridge of hills which forms the continuation of the Alban Mount, and above the modern town of Frascati. The numerous remains of the ancient place still bear the name of il Tuscule. According to Dionysius (10, 20) and Josephus (Bell. Jud., 18, 8), it was distant about one hundred stadia from Rome, or twelve miles and a half. The foundation of Tusculum is ascribed to Telegonus, the son of Circe and Ulysses. (Ovid, Fast., 3, 91.—Id., 4, 91.—Propert., 2, 35.—Sil. Ital., 7, 691.) It must have been one of the most considerable of all the Latin cities in the time of the second Tarquin, since that prince is said to have sought the alliance of Octavius Manlius, chief of Tusculum, and to have given him his daughter in marriage. (Liv., 1, 49.) By this measure Tarquin secured the cooperation of almost all the Latin cities in his subsequent attempts to recover the throne he had lost.—In the second Punic war Tusculum successfully resisted the attack of Hannibal. This place could boast of having given birth to M. Porcius Caton, several of the Fabii, &c. Its proximity to Rome, the beauty of its situation, as well as the salubrity of its climate, made it a favourite summer residence with the wealthy Romans. Strabo, who has given us a very accurate description of its position, says that, on the side towards Rome, the hills of Tusculum were covered with plantations and gardens, the effect of which was to form a delightful landscape. (Strabo, 239.) Of these villas none can be more interesting to us than that of Cicero. (Vid. Tusculanum.) Lucullus also had a celebrated villa and gardens at this place. Horace likewise alludes to a villa of Maccenas here. (Cramer's Anc. Italy, vol. 2, p. 47.)

Tuscum Marsei, a part of the Mediterranean, on the coast of Etruria, called also Tyrrenium Marc and Marc Inferius.

Tyanis, a city of Cappadocia, strongly fortified by nature and art, lying on the main road to Cilicia and...
TYR

Syria, and at the foot of Mount Taurus. Strabo says it was built on what was called the causeway of Semiramis. (Strabo, 537.) Cellarius is of opinion that the town called Dana by Xenophon, and the Anabasis (3, 20, 20), should be identified with Tyana (Geogr. Antiq., vol. 2, p. 291), and this supposition has great probability to recommend it.—The Greeks, always led by a similarity of name to connect the origin of cities with their fables, pretended that it owed its foundation to Thoas, the king of the Tauro Chersonese, in his pursuit thither of Fylades and Orestes. (Arrian, Peripl. Eux., p. 6.) From him it was called Thoanæ, and afterward Tuana. (Steph. Byz., s. v. Týnova.) Tyana is a form of the name of the impostor Apollonus. At a later period it became the see of a Christian bishop, and the metropolis of Cappadocia Secunda. (Greg. Naz., Epist., 33. — Id., Orat., 20. p. 355.) This took place in the reign of Valens. Its capture by the Saracens is recorded by Cedrenus (p. 477). The modern Ketch hissar, near the foot of the central chain of Taurus and the Cilician Pass, is thought to correspond to the ancient city. Captain Kinneir, in one of his journeys, found considerable ruins here. (Cramer's Asia Minor, vol. 2, p. 128, seqq.)

TYANTITUS, a district in the southern part of Cappadocia, near the range of Taurus. Its capital was from, which it derived its name. (Vid. Tyana.)

TYRAS, Vid. Tiberias.

TYCHE, I. one of the Oceanides. (Hesiöd., Th., 360.)—II. A part of the town of Syracuse. It contained a temple of Fortune (Týrýs), whence the name. (Cic., Ver., ii. 4, 53.)

TYDEUS (two syllables), a son of Creon, king of Calydon. He fled from his country after the accidental murder of one of his friends, and found a safe asylum in the court of Aegisthus, king of Argos, whose daughter, Deiphyle, he married. When Aegisthus wished to place his son-in-law Polyneices on the throne of Thebes, Tydeus undertook to announce the war to Eteocles, who usurped the crown. The reception he met with provoked his resentment; he challenged Eteocles and his principal chieftains, and worsted them in conflict. On leaving Thebes and entering upon his way home, he fell into an ambuscade of fifty of the foe, purposely planted to destroy him, and he slew all but one, who was permitted to return to Thebes, to bear the tidings of the fate of his companions. He was one of the seven chiefs of the army of Aegisthus, and during the Theban war he signalized his valor in a marked degree, and became great of Thebans. He was killed at last mortally wounded by Melanippus. As he lay expiring, Minerva hastened to him with a medicine which she had obtained from Jupiter, and which would make him immortal (Bacchylis, ap. Schol. ad Aristoph., Av., 1536); but Amphiaras, who hated him as a chief cause of the war, perceiving what the goddess was about, cut off the head of Melanippus, whom Tydeus, though wounded, had slain, and brought it to him. The warrior opened it and devoured the brain, and Minerva, in disgust, withheld her aid. His remains were interred at Argos, where a monument, said to be his, was still seen in the age of Pausanias. (Hom., ii., 4, 365, seqq.—Apollod., i., 8, 3.—Esch., Sept. C. Theb., 372, seqq., ed. Scholae.—Pausan., 9, 18.)

TYDDEUS, a patronymic of Diomedes, as son of Tydeus. (Vigur., Th., 1, 101.—Horat., Od., i, 15, 20.)

Tiger, the Siamese cat, or cat of the Siamese. The Single-Crested Persian, the Arabian coast, the pearl fishery on whose coasts it has rendered it famous in antiquity; and the same circumstance still contributes to its renown under the name of Bahrain, which in Arabic signifies two seas. (Iul. theophrast., Hist. Plant., 4, 9.—Id. ibid., 5, 6.)

TYNGARIUS, a patronymic of the children of Tyndar, as Castor, Pollux, Helen, &c.

TYNDÉRIS, I. a patronymic of Helen, as daughter of Tyndarus. (Vigur., Th., 2, 669.)—II. A town of Sicily, on the northern coast, southwest of Messana. It was founded by the elder Dionysius, and became in time an important city. A part of the ancient site has been identified by Læt. (ibid., 2.)

TYNDARÉS, a son of Cethalus, king of Lycus. He was king of Lacedaemon, and married the celebrated Leda, who bore him Timandra, Philomæon, &c., and who also became mother of Pollux and Helen by Jupiter. (Vid. Leda, Castor, Pollux, Clytemnestra, &c.)

TYPHHÖUS (three syllables), a monstrous giant, who warred against the gods. (Vid. Typhon.)

TYPHON or TYPHAON, a monstrous giant, whom Earth brought at the appeasement of Zeus after previous giant-progeny, brought forth to contend with the gods. The stature of this being reached the sky; fire flashed from his eyes; he hurled glowing rocks, with loud cries and hissing, against heaven, and flame and storm rushed from his mouth. The gods, in dismay, fled to Egypt, and concealed themselves under the form of different animals. Jupiter at last, after a severe conflict, overcame him, and placed him beneath Ætna, or, as others said, in the Palus Serbonis, or "Serbonian bog." (Pind. Pyth., 1, 29, seqq.—Id., fragm. Epig., 5.—Esch. Prom. V., 351, seqq.—Apoll. Rhod., 2, 1215.)—Typhon is the same apparently with Typhhoeus, though Hesiod makes a difference between them. Their names come from τύφω, "to smoke," and they are evidently personifications of storms and volcanic eruptions. Typhon is made the sire of the Chimæra, Echidna, and other monsters. The Greeks gave his name to the Egyptian demon Baby, the opponent of Osiris.—The flight of the gods into Egypt is a bungling attempt at connecting the Greek mythology with the animal worship of that country. This change of form on their part was related by Pindar. (Porph., de Abstr., 3, p. 251.—Keightley's Mythology, p. 263.)

TYRANNON, a grammarian of Pontus, intimate with Cicero. His original name was Theophrastus, and he received that of Tyrannon from his austerity to his pupils. He was taken by Lucullus, and restored to his liberty by Muranhi. Tyrannion opened a school at Rome, and taught with considerable success. He had access to the library of Apollonius of Teos when brought to Rome, and from him copies of Aristotle's works were obtained by Andronicus of Rhodes. (Vid. Apollon.)

TYRAS, Vid. Daunus.

TYRAS, a city of Phocis. (Vid. Tyrus.)

TYRAS, a city of Etruria.

TYRHENIUM MARE, that part of the Mediterranean which lies on the coast of Etruria. It is also called Insularum, as washing the lower shore of the peninsula. (Vid. Italia.)

TYRTÉUS, a celebrated poet of antiquity. His age is determined by the second Messenian war, in which he bore a part. If, with Pausanias, this war is placed between 685 and 663 B.C., Tyrtæus would fall at about the same time as, or a little later than, the cornerstone of the Cimmerian invasion mentioned by Callinus; and we should then expect to find that Tyrtæus, and not Callinus, was considered by the ancients as the originator of the elegy. As, however, the reverse is the fact, this reason may be added to others for thinking that the second Messenian war did not take place till after 660 B.C., which must be considered as the period at which Callinus flourished. V. M. — There is not a single direct credit to the story of later writers, that Tyrtæus was a late schoolmaster at Athens, sent out of insolence by the Athenians to the Spartans, who, at the command of an oracle had applied to them for a leader in the Messenian war. So much of this account, however, may be received as true, that Tyrtæus came from Attica to the Lacedæmonians; the place of his abode being, according to a precise statement, Amphión, an Athenian town, which is placed by
TYRUS.

the legends about the Dioscuri in very early connexion with J ae. sia. In all probability, his lameness was only a satirical allusion to his use of the elegiac measure, or alternating hexameters, which, in the latter being shorter by a foot than the former. — Tyrtaeus came to the Lacedaemonians at a time when they were not only brought into great straits from without by the boldness of Aristomenes and the desperate courage of the Messenians, but when the state was also rent with internal discord. In this condition of the Spartan commonwealth Tyrtaeus composed the most celebrated of his elegies, which, under the auspice, was called Eumonia, that is, "Justice" or "Good Government" (also Politiea, or "the Constitution"). But the Eumonia was neither the only nor yet the first elegy in which Tyrtaeus stimulated the Lacedaemonians to a bold defence against the Messenians. Exhortations to bravery was the theme which this poet took for many elegies, and wrote on it with unceasing spirit and ever new invention. Never was the duty and the honour of bravery impressed on the youth of a nation with so much beauty and force of language, by such natural and touching motives. That these poems breathed a truly Spartan spirit, and that the Spartans knew how to value them, is proved by the constant use made of them in the military expeditions. When the Spartans were on a campaign, it was their custom, after the evening meal, when the pean had been sung, to compose the following elegies. On these occasions the whole mass did not join in the chant, but individuals vied with each other in repeating the verses in a manner worthy of their subject. The successful competitor then received from the polemarch or commander a larger portion of meat than the others, a distinction suitable to the simple taste of the Spartans. This kind of recitation was so well adapted to the elegy, that it is highly probable that Tyrtaeus himself composed these elegies in this manner. The elegies of Tyrtaeus, however, were never sung on the march of the army, and in the battle itself; for these occasions a strain of another kind was composed by the same poet, namely, the anapestic march. (Muller, Hist. Gr. Lit., p. 110, seq.)—We have several fragments remaining of the elegies of Tyrtaeus. They are written in the Ionic dialect, though addressed to Dorians, and are full of enthusiastic and patriotic feeling. The patriotic manner of this other poet, (μεγάλη πολεμιστική,) were written in Doric. Of these only a single fragment has come down to us.—The best editions of Tyrtaeus are that of Klots. Bremen, 1764, 8vo, and that contained in Gaisford's Poetae Minores Graeci, vol. 1, p. 429, seqq.)

TYRUS or TYROS, a very ancient city of Phoenicia, built by the Sidonians. "The strong city of Tyre" is mentioned in the book of Joshua (19, 29), and its situation is specified as being between "great Zidon" and Achzib. Yet learned men have contended that in Joshua's time Tyre was not built. Homer, it has been remarked, never speaks of Tyre, but only of Sidon; and Josephus states that Tyre was built not above 240 years before the temple of Solomon, which would be A.M. 2790, two hundred years after Joshua. That there was such a city as Tyre, however, is proved by the day, and that, in the reign of Solomon, there was a king of Tyre; and we apprehend that the Scripture text will be held a sufficient proof of its having had an existence before the land of Canaan was conquered by the Israelites. Not is Josephus's chronology so accurate as to render his authority on such a point very important. There was Insular Tyre, and Tyrus on the Continent, or Palae-Tyre; and it is supposed by some learned writers that the island was not inhabited till after the invasion of Nebuchadnezzar. But this last supposition is not merely at variance with the doubtful authority of Josephus, but is scarcely reconcilable with the language of the prophets Isaiah and Ezekiel, who both seem to speak of Tyre as an isle. (Isaiah, 23, 2. 6. — Ezek. 26, 17. — Id., 27, 3. — Id., 29, 2.) Nor is it probable that the advantage of the position of the isle would be altogether neglected by a maritime people, and that, in deed, first be occupied, and the fortified city mentioned in the book of Joshua was in all probability on the Continent; but, as the commercial importance and wealth of the port increased, the island would naturally be inhabited, and it must have been considered as the place of the greatest security. Volney supposes that the Tyrians retired to their isle when compelled to abandon the neighbouring coast, and that, till that time, the dearth of water had prevented its being much built upon. Certain it is, that when, at length, Nebuchadnezzar took the city, he found it so impoverished as to afford him no compensation for his labour. (Ezek. 29, 18, seqq.) The chief edifices were at all events on the mainland, and to these the denunciations of total ruin strictly apply. Palae-Tyre never rose from its overthrow by the Chaldean conqueror, and the Macedonian completed its destruction; at the same time, the wealth and commerce of Insular Tyre were for the time destroyed, though it afterward recovered from the effects of its invasion. — Ancient Tyre, then, probably consisted of the fortified city, which commanded a considerable territory on the coast, and of the port which was "strong in the sea." John that it had little to fear from invaders, as the Tyrians were lords of the sea and destruction. It does not appear that its Chaldean conqueror ventured upon a maritime assault. Josephus, indeed, states that Salamis, king of Assyria, made war against the Tyrians with a fleet of sixty ships, manned by 800 rowers. The Tyrians had but twelve ships, yet they obtained the victory, dispersing the Assyrian fleet, and taking 500 prisoners. Salamis then returned to his native city, never leaving his land-forces before Tyre, which they remained for five years, but were unable to take the city. (Joseph., Ant., 9, 14.) This expedition is supposed to have taken place in the reign of Hezekiah, king of Judah, about A.M. 3287, or 717 B.C. It must have been about this period, or a few years earlier, that Isaiah delivered his oracle against Tyre, in which he specifically declared that it should be destroyed, not by the hands of the Egyptians, nor the Babylonians, nor the Chaldaeans, a people "formerly of no account." (Isaiah, 23, 13.) The more detailed predictions of the prophet Ezekiel were delivered a hundred and twenty years after, B.C. 588, almost immediately before the Chaldean invasion. The army of Nebuchadnezzar is said to have lain before Tyre thirteen years, and it was not taken till the fifteenth year after the captivity, B.C. 573, more than seventeen hundred years, according to Josephus, after its foundation. Its destruction, then, must have been entire; all the inhabitants were put to the sword or led into captivity, the walls were razed to the ground, and it was made "a terror" and a desolation. It is remarkable, that one reason assigned by the prophet Ezekiel for the punishment of this proud city is its exultation at the destruction of Jerusalem, and its "being replenished and made great" (26, 2). This clearly indicates that its overthrow was posterior to that event; and if we take the seventy years during which it was predicted by Isaiah (23, 15) that Tyre should be forgotten, to denote a definite term (which seems the most natural sense), we may conclude that it was not rebuilt till the same number of years after the return of the Jews from Babylon. It is probable that Tyre, in ruins up to the period of the Macedonian invasion, Insular Tyre had then risen to be a city of very considerable wealth and political importance; and by sea her fleets were triumphant. According to Pliny (9, 36), it was 19 miles in circumference, including Old Tyre, but without it about four. It was
the rubbish of old Tyre, thirty furlongs off, that supplied materials for the gigantic mole constructed by Alexander in breaking all the way from the continent to the island, a distance of three quarters of a mile. The sea that formerly separated them was shallow near the shore, but towards the island and it is said to have been three fathoms in depth. The causeway has probably been enlarged by the sand thrown up by the sea, which now covers the surface of the isthmus. Tyre was taken by the Macedonian conqueror after a siege of eight months, B.C. 332, two hundred and forty-one years after its destruction by Nebuchadnezzar, and, consequently, about one hundred and seventy after it had been rebuilt. Though now subjugated, it was not, however, totally destroyed, since, only thirty years after, it was an object of contention to Alexander's successors. The fleet of Antigonus invested and blockaded it for thirteen months, at the expiration of which it was compelled to surrender, and received a garrison of his troops for its defence. About three years after it was invested by Pompey in person, and, owing to a mutiny in the garrison, fell into his hands. Its history is, after this period, identified with that of Syria. In the apostolic age it seems to have regained some measure of its ancient character as a trading town; and St. Paul, in touching here on one occasion, in his way back from Macedonia, found a number of Christian believers, with whom he spent a week, so that the gospel must early have been preached to the Tyrians. (Acts 21, 3.) Josephus, in the time of Hadrian, and afterwards the Emperor Maximus, says, that its houses were built like those in Tyre, and Sidon, and Berytus. Strabo also speaks of the loveliness and beauty of the buildings. In ecclesiastical history it is distinguished as the first archbishopric under the patriarchate of Jerusalem. It shared the fate of the country in the Saracen invasion in the beginning of the seventh century. It was reconquered by the crusaders in the twelfth, and formed a royal domain of the kingdom of Jerusalem, as well as an archiepiscopal see. William of Tyre, the well-known historian, an Englishman, was the first archbishop. In 1289 it was retaken by the Saracens, the Christians being permitted to remove with their effects. When the sultan Selim divided Syria into pachalics, Tyre, which had probably gone to decay with the depression of commerce, was merged in the territory of Sidon. In 1760 it was taken possession of by the Moutaheneen, who repaired the port, and enclosed it, on the land side, with a wall twenty feet high. The wall was standing, but the repairs had gone to ruin, at the time of Volney's visit (1784). He noticed, however, the choir of the ancient church mentioned by Mannert, together with some columns of red granite, of a species unknown in Syria, which Djezzar Pacha wanted to remove to Acre, but could find no engineers able to accomplish it. It was at that time a miserable village: its exports consisted of a few sacks of corn and of cotton; and the only merchant of which it could boast was a solitary Greek, in the service of the French factory at Sidon, who could hardly gain a livelihood. It is only within the past half century that it has once more begun to lift up its head from the dust. (Modern Traveller, pt. 3, p. 46, seq.)

Tyre, a city of Africa Propria, not far from the coast of Africa, which is supposed to coincide as to position with the modern el-Jem. (Ptol. —Auct. Hist. Bell. Afr. c. 36, 76.—Plin., 5, 4.)

VACCA, a people at the north of Spain, occupying, according to Mannert, what is now the greater part of Valladolid, Leon, Palencia, and the province of Toro. (Liv., 21, 5.—Id., 35, 7.)

VACUNA, a goddess worshipped principally by the Sabines, but also by the Latins. According to some authorities, she was the daughter of Mars and Venus, and the sister of Turnus, and the Lake Cutillas was sacred to her. (Arnaud, 3, p. 12, ed. Stevowe.—Spangenberg, De Vet. Lat. Rel. Do—ment., p. 47.) Others made her analogous to Diana, Ceres, or Minerva. This last was the opinion of Varro. (Schol. ad Hortat., Epist., 1, 10, 49.) Her name apparently comes from vaco, the reason of which etymology is given as follows by Varro: "quod cae maxime hi guident qui sepulcra vacant." (Varro, s.v., Schol. L. 1, 46.)

VADOMONIS LACUS, a lake of Etruria, whose waters were sulphureous. It formerly existed close to Basano, but is now filled up with peat and rushes. (Seneca, Nat. Hist. Quaest., 3, 25.—Plin., 2, 95.) This lake is celebrated in the history of Rome for having witnessed the total defeat of the Etuans by the Romans, A.U.C. 444, a defeat so decisive that they never could recover from its effects. (Liv., 9, 39.) Another battle was again fought here by the Etruscans, in conjunction with the Gauls, against the Romans, with the same ill success. (Polyb., 2, 20.—Flor., 1, 12.)

VAES, sometimes, but improperly, written Vaces, a town of Africa, west of Carthage, on the river Rubi- catus, and celebrated among the African and Numid- ian cities for its extensive traffic. D'Anville and Barbic du Bocage recognize traces of the ancient name in the modern Vegeya or Baja, in the district of Tunis. (Sall. Jug., 47.—Plin., 5, 5.—Cramer's Ancient Italy, 3, 177.)

VANAELES, the western arm of the Rhine, now the Waal. (Cassar., 4, 10.—Tac., Ann., 2, 6.)

VALENIS, FLAVIUS, an emperor of the East. His biography will be given in conjunction with that of his brother Valentinian I. (Vid. Valentinianus I.)

VALENTIA, I, a secret and hallowed name of Rome. (Plin., 3, 5.—Id. ibid., 28, 2.—Serr. ad Ezn., 1, 80.) I. A name of the Bithynia Propria, Senoves-sis, Sabini, or Segalini, in Gallia Narbonensis, now Valence. (Plin., 3, 4.) It lay on the eastern side of the Rhodanus, about Alba Augusta.—III. A city of Mauritania Tingitana, north of Volubile Oppidum, and south of Lixam, situated on the river Sura. It was also called Basanas, and is now Murena. (Plin., 5, 1.)—IV. A province of Britain, in which is now Scotland, conquered in the time of Valentinian from the Picts and Scots, and wrested, by Theodosius out of the province. (Amm. Marc., 28, 3.)—V. A city of the Edetani or Contestani, in Hispacia Tarraconensis, near the mouth of the Tusa. It was taken and sacked by Pompey, but was afterward colonized and became an important place. It is now Valencia.—VI. or Vibra Valentia. (Vid. Hippoi- nium.)

VALENTINIUS, I, the first of the name, a man of moderate rank, and born at Cibalae in Hungary, who, having made emperor by the army, being, at the time of Jovi- an's death, the commander of the body-guard. He asso- ciated with himself Valens, his brother, and, after some time, Gratian, his son, who, at eight years old, was presented to the army wearing a purple robe. Valens fixing his court at Constantinople, Valentinian himself repaired to Milan. Soon after the accession of these emperors, both the West and East were disturbed nearly at the same time; the former an irruption of the Alemani into Gaul, the latter by the invasion of the Procopius, who, pretending a promise
of Julian that he would leave him heir of the empire, it was saluted Augustus by the multitude at Constantinople; and, having been joined by the legions sent against him by Valens, redressed his seat at Thrace, Dithynia, and the Hellespont. Deserted by his followers in Dacia, he fled into the mountains, was taken alive, brought bound before Valens, and, being sentenced to be tied by the legs to two trees which were forcibly bent to the ground, was torn andacer by their recol (A.D. 365). The Alemanii defeated the Roman armies in Gaul, killing the commanders, the counts Charitio and Sevier; but were, in their turn, routed by Jovinus, the master of the horse, with the loss of two thousand and four thousand wounded. Valens marched against the Goths, who had assisted Procopius, and in three years reduced them to terms of peace. He also supported the predatory incursions of the Issurians, a sort of mountain robbers, and exacted hostages. The Picts and Scots, who had ravaged Britain, were defeated by Count Theodosius, and their spoil retaken. Valentinian crossed the Rhine, gained a bloody victory over the Alemanii, and fortified the Gallic frontier with camps and castles. The Saxons, who had burst into Gaul, were subdued by treachery. After their proposition of retiring from the country had been acceded to, they were set upon, while passing through a valley, by troops planted in ambush, and cut to pieces. A similar act of perfidy was committed against the Quadi, who had been irritated by the placing of an intrenched camp on their soil. Their king, Gabinius, who was shut up in the castle, with the loss of all his legs, and four thousand wounded. Valens, pressed by the master of the horse, shewed a singular calling. The result was a general insurrection of the Quadi, who overran both Pannonias, and cut to pieces two entire legions. Valentinian crossing the Danube, and wasting the country of the Quadi with fire and sword, the latter sent ambassadors to sue for peace. Valentinian, preparing to answer their address; in a paroxysm of rage, rushed upon his couch, and expired of the effusion of blood (A.D. 375). The choleric and implacable temper of Valentinian, urging him frequently to acts of the most atrocious injustice, is singularly irreconcilable with his religious moderation. It is said that he was about to issue an order for the magistrates of three towns to be put to death, because one of the judges had directed the execution of a sentence legally passed on a Hungarian, and only desired from his punishment. Jovinianus, the praefect of the palace, Valens, who remitted the "most pious of princes" that guiltless persons, if alain, would by Christians be worshipped as martyrs. It is also related that on a certain count complaining to him of a civil action, he sent to execution not only the plaintiff, but the very clerks of the court who served the notice; and that the Christians of Milan gave the place of their interment the name of the "Tomb of the Innocents." That he refused to admit the challenge of judges by defendants in a cause, when preferred on the ground of private enmity, and that he condemned insolent debtors to death, are scarcely credible charges. Not destitute of ingenuity, he invented some new weapons, and had a turn for painting and modelling. Report describes him as tall and muscular, with a florid complexion, hair of a sery colour, and gray eyes, which had a peculiar fire and expression from the colour. The body of Valentinian was conveyed to Constantinople. In the East, another violation of that hospitality which among barbarians is held sacred, took place in the person of Para, king of Armenia. Invited by Valens to Tarasus, and detained there suspiciously as a guest; he escaped on horseback by night to his own kingdom, but was then inveigled to an entertainment by Duke Trajan; and, in an argument, he sustained the authority of the church as he reigned on the upper-couch. Sapor, who had in vain endeavourd to bring Valens into his terms respecting Armenia, over which he desired to place a king of his own election, pressed forward with his army, but was repulsed by Trajan and Vadomair, the allied king of the Alemanii. In the mean time, a plot, having for its object to place Theodosius, a secretary and an accomplished character, on the throne, was discovered, and the conspirators, together with Theodosius, consigned to the executioner. The plot, it is said, originated in an oracle, divulged in Asia, which predicted that one whose name began with Theo should be emperor, and this was afterward interpreted to mean Theodosius. A new enemy had now rolled its congregated numbers on the Roman world, with terror darkening in their wake. Valens were caught in the toils of a plot, and urged forward by the impulsion. They obtained permission of Valens to make a settlement in Thrace, and swore fealty to him, but afterward revolted under their general Fridigerius. Surprised, as they were laden with spoil, by the Roman general Sebastian, they were routed, and the booty was retaken. Gratian, who had defeated another body of Goths by his general Frigeridius, near Strasburg, and permitted the remnant to settle on the Po, advanced to the assistance of Valens; but the latter, eager to distinguish himself and jealous of his nephew, raked a battle with all the confederated Goths, in which the Roman army, after a brave struggle, the band of lachers, in particular, standing firm to the last around their emperor, was put to total rout, and the field heaped with its dead. Valens, taking refuge in a country-house with only a few followers, who were cut to pieces. The Goths, in order to break the door, the latter set fire to the building, and he perished with the rest in the flames (A.D. 378). Valens was of a middle height, with legs rather bowed, somewhat corpulent, and of a high-coloured complexion. One of his eyes was obstructed by a cataract, but it was not discernible at a little distance. Ignorant of art and literature, he was but imperfectly versed in military tactics. With a sanguine and procrastinating habit of mind he united a dogmatical impatience of temper, and in the councils of law, without caring for the merits of the case, was offended by any decision which counteracted his own wishes. Though bitter against those who withheld his will or differed from him in sentiment, he was not incapable of friendship.—II. Valentinian II. was proclaimed Augustus at four years old, as the colleague of Gratian, and reigned at Ravenna and Milan. Valentinian successively with the court of Milan. Maximus, having established himself in Britain and Gaul, drove Valentinian out of Italy. The youth stood as a suppliant before the throne of Constantinople with the empress-mother and his sister Galla. The band of the latter became a pledge of the hospitality and aid of the enanured Theodosius. Valentinian was thus restored, through the aid of Theodosius, to the throne of the Western empire; a throne which his weak character did not enable him to fill and defend. The new reign of this young prince was not of long duration. He removed the seat of the court to Vienna (now Vienna), on the Rhine, where he was assassinated, A.D. 425, by order of Arbogast, general of the Franks, whose authority had long predominated over that of his master. This was a youth of excellent qualities, and affectionate. III. Valentinian III. was the son of Constantius and Placidia, daughter of Theodosius the Great. He was only six years of age when he was proclaimed Emperor of the West, A.D. 423; but he was not actually recognised as such until 425, after the defeat of John the Notary, who had seized upon the empire. Placidia, who possessed all the authority, gave her son with much wisdom. Aetius, warrior, thy, by his great valour and military talents, of the fairest period of the Roman republic, preserved for the empire the territory of Gaul, continually invaded by new enemies, and forced the Franks, the Goths, the Bar-
V A L

VALENS, Publius Licinius, a Roman, proclaimed emperor by the army in Thracia, of which he was commander, A.D. 254. He had been distinguished by his virtues while in a private station, and great expectations were consequently formed of him when he ascended the throne. Having appointed his son Gallienus to be his associate in the empire, he left him to defend it against the incursions of the Goths and Quingiones, and to expel the East German king Sapor. Valerian was defeated and taken prisoner by the Persians, who treated him with great and contemptuous cruelty. His degenerate son Gallienus made no effort to obtain his release, being apparently more satisfied to reign alone. For many years the Roman emperor bowed himself down, that his body might serve as a stepping-stone to the Persian king, and that he might be preserved to be flayed alive, and his skin, stuffed in the form of a human figure and dyed with scarlet, was preserved in a temple in Persia. (Treby Poll, Valerian. Vit.)

VALENIUS, PUBLIUS LICINIUS, a Roman, sur-

named Publicola (vid. Publicola), and who shared with Junius Brutus the glory of having driven out the Tarquins and of founding the Roman commonwealth, B.C. 509. Brutus having fallen on the field of battle, the colleague of Junius Brutus, who had been compelled eventually to retire from Rome in consequence of his relationship to the Tarquin family, Valerius was chosen consul along with Sp. Lucretius Tricipitinus. This last died during the earlier part of his year, and Valerius remained sole consul. As he appeared in no haste to have a new colleague, and was, at the same time, engaged in erecting a mansion on a lofty eminence, which, to the jealous vision of his countrymen, looked like a fortress against their liberties, he was suspected of a design to make himself absolute. On being informed, however, of the dissatisfaction felt on this subject by the people, he immediately caused the edifice to be razed to the ground, so that he seems not to have been actuated by a view of capital punishment, caused the same fæces to be lowered before the people at their next general assembly, and always afterward on similar occasions, and finally had the celebrated law of appeal (lex Provocationis) passed, which protected the rights and persons of Roman citizens against the tyranny of magistrates. (Vid. Valeria Lex I.) This conduct rendered Valerius the idol of the populace, and obtained for him the surname of Publius, in allusion to his great popularity. (Vid. Publicola.) He was also continued in the consulship for the two succeeding years, B.C. 508 and 507. He was chosen consul anew in 504. He appears to have died not long after. The disinterestedness of this illustrious citizen was so great, that, after having been four times consul, he died a poor man, and the expense of his funeral had to be borne by the state. The Roman munera was bestowed on him a whole year. (Liv., i. 584.—Id., i. 584.—Id., i. 586.—Hal., 5. 19.—Flor., 1, 9.—Plut., Vit. Public.—Ha- rat, Sat., 1, 6, 12.)—II. Corvus Corvinus, a tribune of the soldiers under Camillus. When the Roman army was challenged by one of the Senones, remarkable for his strength and stature, Valerius undertook to engage him, and obtained an easy victory by means of a crow or raven (corvis) that assisted him, and attacked the face of the Gaul, whence his surname of Corvus or Corvinius. He obtained the triumph for the Etrurians and the neighbouring states that made war against Rome, and was six times honoured with the consulship. He died in the 100th year of his age, admired and regretted for many private and public virtues. (Val. Max., 8, 13.—Liv., 7, 27.)—III. Antias, a Roman historian, who flourished about A.U.C. 670, B.C. 84. Pliny often refers to him. Aulus Gellius quotes the 12th, 24th, 45th, and 75th books of his activities (Asid. Gell., 7, 9.—Id., 1, 7, 6c.)—IV. Messala. (Vid. Messala.)—V. Maximus, a Roman writer, born at Rome during the reign of Augustus, of a patrician family. According to his own account, he served in Asia under Sextus Pompey, who was consul the year that Augustus died (2, 6, 8). On his return to Rome he abstained entirely from public affairs, and lived until the time of the conspiracy of Sejanus, A.D. 31, when his name was once more brought into action. He was a renowned but ancient author of his life, which has been descended from the Valerian family on the father's side, and from the Fabian on the mother's side. His surname Maximus indicates the latter part of his genealogy. In a work composed originally of ten books, but of which only nine remain, and entitled Dictorum factorumque memorabilium libri, he has collected together the sayings and actions of individuals of various ages who have obtained immortality over historical works, and deemed worthy of being transmitted to posterity. The collection is dedicated to Tibullus. He classifies the individuals of whom he treats, according to some peculiar virtue or vice, of which they are cited as examples. He first confines himself to Romans, and then passes to other nations, especially the Greeks. The titles of his chapters are the work of the grammarians or copyists, as appears very clearly from the use of archaic and obsolete terms, the best age of Roman literature. Valerius displays neither judgment in his choice of anecdotes, nor skill in their arrangement, nor good taste in the use of expressions, and in the transitions which he frequently makes from the natural order of things. No one ever carried flattery to a greater extent: his preface, addressed to Tibullus, is perfectly disgusting. His man- ner of narrating is far from pleasing, and his style is cold, declamatory, and affected. Notwithstanding its
faults, however, the work is interesting both for the history and the study of antiquity, and contains a number of little facts taken from authors whose works have not reached us. Some critics believe, though no very sure grounds, that the work in question is a compilation from a larger one by the same author, and was executed by C. Titus Probus or Julius Paris. Others, in like manner, ascribe it to Janarius Nepotianus. These three individuals are equally unknown.

The best editions of Valerius Maximus are, that of Vorstius, Berol., 1678, 8vo; that of Torrens, Lugd. Bat., 1794, 4to; that of Kappius, Lips., 1780, 8vo; and that of Hase, Paris, 1822, 3 vol. (including Obsequens de Prodigis), which last forms part of the collection of Lemaire.—VI. Flaccus, a Latin poet who flourished under Vespasian. He wrote a poem in eight books on the Argonautic expedition, but it remained unfinished on account of his premature death. The manuscripts of this poem add to the name of Valerius Flaccus that of Setinus Balbus. It has been supposed by some critics that this last was the name of a grammarian who made a revision of the text, or who, perhaps, was the possessor of a remarkable manuscript. The birthplace of the writer is also involved in some doubt. It is believed by many that his native place was Patavium, and this opinion is founded on various passages of Martial. Others suppose that he was born at Setia Campania, and allege the name Setinus in favour of this position. The latter name, however, seems to have been given to him by the writers down to us, among the epigrams of Martial, one addressed to Valerius Flaccus, in which the former advises him to renounce poetry, and apply himself to the studies of the bar, as affording a better means for accumulating a fortune. From this some have been led to believe that his poetical talents were not held in very high esteem by his contemporaries. Quintilian, however, speaks of his death as a great loss to literature. He died A.D. 85, in the reign of Domitian.

The "Argonautica" of Valerius Flaccus are in eight books, the last imperfect. Had the poem been completed, it is thought that it would have occupied ten or twelve books. It is an imitation of the work of Apollonius of Rhodes on the same subject. The critics are far from being agreed as to its merits: some rank it next to the Æneid; while others, who regard beauty as the highest end of poetry, disapprove of it. It is much lower in rank, and gives the preference to the poems of Statius, Lucan, and even Silus Italicus.

In truth, the "Argonautica" are clearly deficient in originality. The principal fault of the poem is, that the enterprise of the Argonauts, which forms the chief interest of the fable, is continually lost sight of amid numerous digressions and episodes. Hence the poem wears in general a cold and monotonous appearance. It is not, however, without beauties; it contains descriptive and exquisite poetry, and some very ingenious compositions.

It is remarkable that in the passages where Valerius does not imitate Apollonius, he is far more elegant than in those where he copies him. His style is concise and energetic, but oftentimes obscure and affected. Frequently, too, he sacrifices nature to art, and to an anxiety for displaying the skill of his erudition. The editions of Flaccus, that of Burmann, L. Bat., 1724, 4to; that of Harles, Altemb., 1781, 8vo; that of Wagner, Götingen, 1805, 8vo; that of Weichert, Mis. ap. Gecd., 1818, 8vo; and that of Lemaire (forming part of his collection), Paris, 1824—5, 2 vols. 8vo. (Schöll, Hist. Lit. Rom., vol. 2, p. 294, seqq.)

Valdés Rufus, a Roman poet in the Augustan age, on whom Tibullus (4, 1, 80) pays a high eulogy ("Multa mea iuvat alter Homero"), which, in all probability, comes rather from the warm friend than the sober critic. Horace speaks of him as one of those by whom he would wish his productions to be commended. (Sat., 1, 10, 82) Quintillian makes no mention of him. (Schöll, Hist. Lit. Rom., p. 227.)

Vandalia, a people of Germany. The Vandals seem to have been of Gothic origin. Pliny and Procopius are the only men among them, and the latter writer more especially affirms, in explicit words, that the Goths and Vandals, though distinguished by name, were the same people, agreeing in their manners, and speaking the same language. They were called Vandals from the Teutonic term wenden, which signifies to wander. They began to be troublesome to the Romans A.D. 169, in the reign of Aurelius and Verus: in the year 429 they made themselves masters of Spain, in conjunction with the Alani and Suevi, and received for their share what from them was termed Vandallia, now Andalusia. In 429 they crossed into Africa under Genericius, who not only made himself master there of Byzacium, Gataulia, and part of Numidia, but crossed over into Italy, A.D. 455, and plundered Rome. After the death of Genericius the Vandal power declined. (Dio Cass., 71, 12.—Eutrop., 8, 13.—Procop., B. G., 1, 5.—Tac., Germ., 2.—Jornand., 22, 27.)

Vangõeses, a German tribe along the Rhine. Their capital was Augusta Vangionum, called also Borbotamagus, now Worms. (Tac., Hist., 4, 70.—Id., Germ., 28.—Plin., 4, 17.)

Vardinio or Vardanieus, a river of Asia, called also Hyanias, which rises in the central part of Caucasus, and falls into the Palus Mysicus by two mouths. It receives in its course all the water of the western branch of the Caucasian chain. The sandy plain, which extends to the north of this river, furnishes it with more. Its two principal mouths embrace the island of Taman, in which the town of Paneagoria, the ancient Phanagoria, attracts a little trade. The modern name Kuban of the river Hyanias preserves traces of the ancient appellation, since, according to the pronunciation of the dialects of the north of Asia, the h, uttered from the throat, becomes k. (Pit.—Malte-Brun, Geogr., vol. 2, p. 43, Am. ed.)

Variius, L. a contemporary of Virgil and Horace, and one of the best tragic poets of his time. He composed a drama entitled Thyestes, which, in the judgment of Quintilian, deserved to be ranked with the finest œuvres of the Greeks. He also distinguished himself by a dissertation on the Tiber, in which he passed a river by the Palus Macedonis, and Horace places him at the head of the epic poets of his time. The Æneid of Virgil, however, had not yet been published. Varius sung the exploits of Augustus and his son-in-law Agrippa, so that his poem appears to have been rather historical than epic in its character. It is entirely lost. Macrobius, however, has preserved for us a few lines from another poem of Varius, on Death. (Sat., 6, 1, 2.) The scholar on Horace, commonly known by the name of the Scholiast of Criculaeus, accuses Varius of having stolen the tragedy referred to above from Cassius Severus of Parma, a poet of the same period, mentioned with eulogium by Horace. (Epist., 1, 4, 3. This charge has been since reiterated by several of the learned, and, among others, by Vossius (de Poet. Lat., p. 29), by Genevra, the Sibyl of the Palatine edition of the West, and also by Burmann. Wieland, however, has shown the inaccuracy of the scholiast, who, in making his accusation, confounds Varius the poet with Quintus Atius Varus, who put Cassius to death at Athens. (Val. Max., 1, 7, 7.—Schöll, Hist. Lit. Rom., vol. 1, p. 211.)

Varro, I. M. Terasius, a Roman consul of ignoble origin, engaged with L. Æmilius Paulus in the year in which the battle of Cannae was fought. His rashness and presumption hastened that memorable conflict. (Vid. Canna, and Hannibal.) After the battle he retreated to Venusia, and put himself in a posture for resisting the enemy till he could receive in-
structions and re-enforcements from Rome. On his subsequent return to Rome he was honourably received, notwithstanding his defeat; and the senate re- admitted him to his undisturbed literary freedom, and for not having deserted the common-wealth. (Liv., 22, 25, seqq. — Id., 22, 41, seqq. — Id., 22, 61, seqq.) He was afterward appointed, as proconsul, to defend Picenum, and raise levies there- in; and his proconsular authority was continued to him year after year. He appears to have filled, at a later period, the office of ambassador to Philip, as well as other public employments. (Liv., 25, 32. — Id., 26 — Id., 30, 26, &c.) | 11. A Latin writer, celebrated for his great learning. He is said to have written no less than 500 different volumes, which are all now lost except a treatise de Re Rustica, and part of another de Lingua Latina, dedicated to the orator Cicero. He was born in the 637th year of Rome, and was descended of an ancient senatorial family. It is probable that his youth, and even the greater part of his manhood, were spent in literary pursuits, and in the acquisition of that stupendous knowledge which has procured him the appellation of "the most learned of the Romans." In A.U.C. 668 he served under Pompey in his war against the pirates, in which he commanded the Greek ships. To the fortunes of that commander he continued firmly attached; and was appointed one of his lieutenants in Spain, along with Afranius and Petreius, at the commencement of the war with Caesar. Hispania Ulterior was especially confided to his protection, and two legions were placed under his command. After the surrender of his colleagues in Iltiberia, Spain, Caesar proceeded in person against him. Varro appears to have been little qualified to cope with such an adversary. One of the legions deserted before his own eyes; and his retreat to Cadiz, where he had meant to retire, having been cut off, he surrendered at discretion with the others, in the vicinity of Corduba. From that period he despised of his protection, and his life was perished under his command. After the capture of his colleagues in Iltiberia, Spain, Caesar proceeded to Dyrachium, to give Pompey a detail of what had passed. This latter place he left almost immediately thereafter for Rome. After his return to Italy, he withdrew from all political concerns, and indulged himself, during the remain- der of his life, in the enjoyment of literary leisure. The only service which he performed for Caesar was that of arranging the books which the dictator had himself procured, &c. He was soon considered an accomplice of those who had preceded him in the management of public affairs. He lived, during the reign of Caesar, in habits of the closest intimacy with Cicero. The greater part of his time was passed at the various villas which he possessed in Italy. After the assassina- tion of Caesar, Varro's principal villa, situate near the town of Casunum, in the territory of the Volsci, was forcibly seized by Marc Antony, along with almost all his other villas, which he had possessed, and which had been in the list of the proscribed, although he was at the advanced age of 70 years. His friends, however, secreted him, and he remained in a place of safety until a special edict was passed by the consul, M. Plancus, under the triumviral seal, excepting him and Mos- sala Corvinsus from the general slaughter. But, though Varro thus escaped, he was unable to save his library, which was placed in the garden of one of his villas, and which had been in the possession of his family, while the battle of Actium, Varro resided at Rome until his decease, which happened A.U.C. 727, when he was 90 years of age. His wealth was restored by Augustus, but his books could not be supplied. It is not improbable that the loss of his books, which impeded the prosecution of his studies, and prevented the com- position of such works as may have required reference and consultation, may have induced Varro to employ the remaining part of his life in delivering those pre- cepts of agriculture which had been the result of long experience, and which need only reminiscence to in- culcate. It was some time after the loss of his books, and the death of the senator, which occurred at the age of eighty, that Varro composed the work on husbandry, as he himself testifies in the introduction. "Varro," observes Martyn, "writes more like a scholar than a man practically acquainted with agricultural pursuits." This work, together with that of de Lingua Latina, are the only two of Varro's productions that have reached us; and the latter is incomplete. It is on account of this philo- logical production that Aulus Gellius ranks him among the grammarians, who form a numerous and important class in the history of Latin literature. This work originally consisted of twenty-four books, and was divided into three great parts. The first six books were devoted to etymological researches. The second di- vision, which extended from the commencement of the seventh to the end of the twelfth book, comprehended the accidents of verbs, and the different changes which they undergo from declension, conjugation, and com- parison. The author admits of but two kinds of words, nouns and verbs, to which he refers all the other parts of speech. He distinguishes also two sorts of declension, of which he calls the one arbitrary, and the other natural or necessary. With the ninth book terminates the fragment we possess of Varro's treatise. The third part of the work, which contained twelve books, treated of syntax. It also contained a sort of glossary, which explained the true meaning of Latin words. This may be considered as one of the most important works of Varro, and was certainly a laborious and in- genious production; but the author is evidently too fond of deriving words from the ancient dialects of Italy instead of recurring to the Greek, which, after the capture of Tarentum, became a great source of Latin terms. There was also a distinct treatise, de Sermonae Latinae, addressed to Marcellus, of which a very few fragments are preserved by Aulus Gellius. The critical works of Varro were also extensive; but nothing is known of their contents. His mytho- logical or theological productions were much studied, and very frequently cited by the ancient fathers, particularly by St. Augustine and Lactantius. This part of his works chiefly contributed to the splendid reputation of Varro, and was extant as late as the begin- ning of the 14th century. Petrarch had seen it in his youth. It subsequently, however, disappeared. In his diagnosis of his own life, Varro, with the same frankness with which he speaks of Roman politics in his life of Romulus, speaks of him as a man of all the Romans most versed in this department of knowledge. The philosophical writings of Varro are not numerous. His chief work of this description, entitled de Philo- sophia liber, appears to have been very comprehensive. St. Augustine informs us that Varro examined in it all the various sects of philosophers, of which he enumerated upward of 250. The sect of the Old Academy was especially examined by him, and his style was also maintained in opposition to all others. Varro derived much notoriety from his satirical compositions. His Tricarrens or Tricritus is a satiric history of the triumvirate of Caesar, Pompey, and Crassus. Much pleasantry and sarcasm were also interspersed in his books, entitled Legistorici; but his most celebrated production in that line was the satire which he himself entitled Menippean. It was so called from the cynic method of composition, which Varro, in imitation of Pliny, places before his eye, and ingeniously就近 upon the most grave and impor- tant subjects. The appellation of Menippean was given to his satires by Varro, because he imitated the philosopher's general style of humour. In its external form it appears to have been a sort of literary anomaly. Greek words and phrases were interspersed with Latin; prose was mingled with verses of various measure, and pleasantry with serious remark. Many frag- ments of this Menippean satire remain, but they are
much broken and corrupted. The heads of the different subjects or chapters contained in it, amounting to nearly 150, have been given by Fabriacus in alphabetical order. Some of them were in Latin, others in Greek. Many minor productions of Varro might be also mentioned did our limits permit. A sufficient number, however, have been cited to justify the panegyric of Cicero: "His works brought us home, as it were, while we were foreigners in our own city, and wandering like strangers; so that we might know who and where we were; for in them are laid open the chronology of his country and the inscription of the very laws of religion, the ordinances of the priests, domestic and military occurrences, the situations of countries and places, the names of all things, divine and human, the breed of animals, moral duties, and the origin of things." (Dunlop's Roman Literature, vol. 2, p. 34, seqq.)—St. Augustine says that it cannot but be wondered how Varro, who read such a number of books, could find time to compose so many volumes; and how he who composed so many volumes could be at leisure to peruse such a variety of books, and to gain so much literary information.—The best edition of the treatise de Rei Rustica is that contained in the Scriptores Rei Rusticae of Gesner, Lips., 1785, 2 vols. 4to; or in the same edited by Schneider, Lips., 1794—97, 7 vols. 8vo. The best editions of the treatise de Lingua Latina are the Bipont, 1788, 2 vols. 8vo, and that of Müller, Lips., 1835, 8vo.—III. Atticusinus, a Latin historian in the 2d century B.C., a supposed, if not, of Narbo itself. He was born about 82 B.C., and died about 37 B.C. Varro translated freely into Latin verse the Argonautica of Apollonius Rhodius. He composed also an historical poem on Caesar's war with the Sequani (De Bello Sequanico). Varro likewise appears as a writer of elegies. (Wermadoff, Poet. Lat. Min., vol. 5, pt. 3, p. 1394, seqq.—Id., Exors. de Varvone Atuncio, &c., p. 1386, seqq.—Rast., L. 190.)

VARUS, I. Quintilius, a Roman commander, belonging to a family more illustrious for achievements than antiquity of origin. His father had fought under the standard of Brutus at Philippi, and, not wishing to survive the destruction of liberty, had caused himself to be slain by one of his freedmen. The son, nevertheless, gained the favour of Augustus, who named him consul along with Tiberius, B.C. 13. He was afterwards to give that fatal succour to the modern Varus, who, on the death of Herod, supported the claim of Archelaüs, the son of that monarch, to the vacant throne, and chastised severely all who resisted the authority of this prince. (Josephus, Ant. Jud., 17, 9, 3.—Flav. Joseph., Vit., p. 6, seqq., ed. Havercamp.)—According to Vellius Paterculus, a contemporary writer, Varus was a man of mild disposition and retiring manners ("eir ingenuo mites, moribus quietus"); but still very active, who entered Syria a poor man and left it a rich one. (Vell. Paterc., 2, 117.) Having been subsequently appointed commander of the forces in Germany, he employed himself not so much in watching the movements of warlike communities jealous of their freedom, as in the foolish attempt to bend them to new institutions, based upon those of the Romans. A strong feeling of discontent arose, of which Arminius, a German leader, secretly availed himself to free his country from the yoke of the Romans. Varus was apprized by Segesta, king of the Catti, of the conspiracy that had been formed: "Arrest me and Arminius, together with the other leading chieftains," said this faithful ally of the Romans; "the people will not venture to attempt anything, and you yourself will have full time allowed you to distinguish between the innocent and guilty." (Tacit., Ann., 1, 4.)—The rash presumption of Varus led him to disregard this salutary advice. He advanced with his army into the interior of the country, where he was surprised and sur-rounded by the foe, led on by Arminius. The Romans made a valiant resistance for three successive days, but were compelled at last to yield to numbers. Three legions were cut to pieces; and Varus, severely wounded and unwilling to survive the ignominy of defeat, slew himself. His example was followed by his principal officers: the tribunes and chief centurions were immolated as victims by the barbarians. (Tacit., Ann., 1, 61.) This disastrous event took place B.C. 9.—The Romans had not experienced so severe a defeat since the overthrow of Cæsar by the Parthians. Augustus was in despair, and for several months allowed his beard to grow to remain unshaved, and, striking his head against the door of his apartment, frequently exclaimed, "Varus, give me back my legions." Great alarm, too, was felt by the emperor, lest the victorious Germans, uniting with other tribes on the frontiers, might form a descent upon Italy; and an extraordinary levy was therefore made to meet the emergency. The scene of the defeat of Varus was the Teutobergenis Salus, lying in an eastern direction from the modern Paderborn, and reaching as far to the territory of Osnabruck. (Suet., Vit Aug., 23, 49.—Id., Vit. Tib., 17, seq.—Tacit., Ann., 1, 3, &c.—Id., Hist., 4, 17.—Id. ib., 5, 9.—Dio Cass., 56, 23.) The remains of the vanquished, that lay whitening the ground, were interred six years after by the victorious Germanians. (Tacit., Ann., 1, 61, seq.)—II. Quintilius, an acute and rigid critic, mentioned by Horace in the same connected with the Punic (p. 437), and whose death is mourned by the same poet in one of his odes (1, 24). St. Jerome calls him a native of Cremona (Chron. Euseb.—Olymp. 189, 1, B.C. 24). Heyne, however, doubts the propriety of giving him the surname of Varus. (Excurs. 2, ad Verg., Elocg.—III. Lucius, an Epicurean, and a friend of Julius Cæsar. He is mentioned by Quintilian (6, 3, 79).—IV. A tragic poet, and the consul of the year 1385, 61.)—V. Alfenus, a barber of Cremona, who, growing out of conceit with his profession, quitted it and came to Rome, where, attending the lectures of Servius Sulpicius, a celebrated lawyer, he made so great proficiency in his studies as to become eventually the ablest lawyer of his time. His name often occurs in the Pandects. (Hor., Sat., 1, 3, 190.)—VI. A river which falls into the Mediterranean, on the coast of Nicæa, in Asia Minor, west of which the Varus is the Varus. At a somewhat late period it formed the western limit of Italy, which in the time of Augustus had been marked by the stone trophy of that emperor placed on the Maritime Alps. (Cramer's Anc. Italy, vol. 1, p. 2, not.)

VASCONES, a people of Spain, between the Iberus and the Pyrenees, in what is now the kingdom of Navarre: their chief town was Pompoo, now Pamplona. (Pliny, 3, 32.)

VATICANUS, Mons, a hill at Rome, forming the prolongation of the Janiculum towards the north, and supposed to derive its name from the Latin word vetus ("a sowthayre") or sanctimum (" a divination"); as it was once the seat of Etruscan divination. (Pestus, s. v., Vaticanum.) The Campus Vaticanum included all the space between the foot of this range and the Tiber. According to Juv., the air of this part of Rome was considered very unwholesome. (Hist. 2, 93.) Here Caligula erected a Circus, in which he placed the great Egyptian obelisk that now stands in front of St. Peter's. (Burton's Antiquities of Rome, p. 252.) The ground now covered by St. Peter's, the papal palace, museum, and gardens, was anciently designated by Vaticanus loci, "places belonging to the Vatican Hill." (Tacit., Hist. 1, c. Martialis, 2, 68.—Burges, Antiquities of Rome, vol. 2, p. 256.)

VATICÂNA LEX, de Provinciis, by the tribune P. Vatinus, A.D. 694. It is an abstract of Caesar governor of Gallia Cisalpinca and Illyricum for five years, with the
command of three legions (Vid. Cesar, page 282, towards the end of the first column.)

VATINIUS, L. A Roman of most impure life. Having been brought forward on one occasion as a witness against an individual whom Cicero was defending, the orator inveighed against him with so much bitterness of reproach, and excited so much odium against himself by the picture which he drew of his vices, that odium Vatiniatium became proverbial for bitter and implicable hatred. (Compare Seneca, de Constant. Sup., 17.2.) A shoemaker of Beneventum, deformed in body, and addicted to scurrilous invective against the members of the higher class. He lived in the reign of Nero, and exhibited a show of gladiators when that emperor passed through Beneventum. He is said to have invented a peculiar species of cup, called after his name. (Tat., Ann., 15, 34.—Marbel, 14, 96.)

Unii, a people of Germany, near the Rhine, transported across the river by Agrrippa. Their chief town, Ubiorum oppidum, or Ara, called after this Appagripa Colonia, from the circumference of Agrippina Colonia, (the daughter of Germanicus, and mother of Nero) having been born there, is now Cologne or Köln. (Tat., G., 28; Ann., 12, 27.—Plin., 4, 17.—Cass., 4, 30.)

VECTIS INSULA, the Isle of Wight, south of Britain. (Suet., V. Vespi., 4.—Plin., 3, 4.)

VEGIES, a Latin writer, who flourished A.D. 386, in the reign of the Emperor Valentinian, to whom he dedicated a De Re Militari. He was probably a military man, his Latinity is pure for the age in which he lived. Modern critics distinguish between this writer and Vegetius who composed a treatise on the veterinary art. The best edition of Vegetius, de Re Militari, is that of Stowecheus, Vesal, 1670, 12mo. The best edition of the work of the other Vegetius, on the veterinary art, is that by Gesner, in the writer's de Rustica.

Veii, a name of the inhabitants of Veii. (Vid. Veii.)

Veii, a powerful city of Etruria, at the distance of about twelve miles from Rome. It sustained many long wars against the Romans, and was at last taken and destroyed by Camillus, after a siege of ten years. At the time of its destruction Veii was larger and far more magnificent than the city of Rome. Its situation was so eligible that the Romans, after the burning of their own city by the Gauls, were inclined to migrate thither, and totally abandon their native home; and it has been thought that they carried on execution if not, opposed by the authority and eloquence of Camillus. (Ovid, Fast., 2, 195.—Cic., de Div., 1, 44.—Horat., Sat., 2, 3, 143.—Liv., 5, 21.) The site of ancient Veii answers to the spot known by the name of P'In-sola Farnese, and situated about a mile and a half to the northeast of the modern poshouse of la Storta. The numerous remains of antiquity found there very recently have placed this fact beyond dispute.—After the capture of Rome by the Gauls, and the attempt made to transfer the seat of Roman power to Veii, we scarcely hear of the latter city. We collect only from a passage in Frontinus (de Col.) that Veii became a Roman colony under Julius Caesar, who divided its lands among his soldiers, but in the civil wars which ensued after his death it was nearly destroyed, and left in a most desolate state, a fact which is confirmed by Lucan (7, 326) and Propertius (4, 10, 97.) It seems uncertain, however, that Veii again rose from its ruins, and was raised to municipal rank, probably under Tiberius, whose statue, with several other monuments relating to his reign, were discovered in the neighborhood of that city. It existed in the time of Pliny (3, 5), and even much later, under the emperors Constantine and Theodosia. (Cramer's Anc. Italy, vol. 1, p. 236, seq.)

VEIUS or VEJUS, an Etruscan divinity worshipped at Rome. He was believed to cast lightnings, and they had the property of causing previous deafness in those whom they were to strike. (Amm., Marcell, 17, 10, 2.) The temple of Vejovis at Rome stood in the hOLLOW between the Aventine and the Capitol ("inter duas lucas."—Ovid, Fast., 3, 430.) His statue was that of a youth with darts in his hand; a she-goat stood beside it, and a she-goat was the victim to him. (Ovid, l. c.—Aul. Gell., 5, 12.) Hence some viewed him as Young Jupiter, while others saw in him the avenging Apollo of the Greeks. (Ovid, l. c.—Aul. Gell., l. c.) He was, however, certainly a god of the under-world. (Mart., Capell., 2, 9.—Id., 2, 7.—Macrob., Sat., 3, 9.) His name is said to have signified "Injurious God." (Aul. Gell, l. c.—Keightley's Mythology, p. 531.)

VEJALBRUM, a name generally applied to all the ground lying on the left bank of the Tiber, between the base of the Capitol and the Aventine. According to Varro, the term was derived from the Latin verb verhere, because this part was originally swampy and subject to floods, when it was necessary to employ boats to pass from one hill to the other. (L. L., 4.) We find the name subsequently restricted to two streets, distinguished from each other by the titles of Velabrum Majus and Minus. Nardini conceives that they ran parallel to each other from the Circus Maximus to the foot of the Capitol, intersecting the Vicus Tuscius, the Vicus Jugarus, and the other streets which led from the forum to the Tiber. In this quarter were the shops of the oil-venders, &c. (Horat., Sat., 2, 3, 229.—Cramer's Anc. Italy, vol. 1, p. 419, seq.)

VELIA, a city of Lucania, on the coast of the Mare Tyrrenenum, between the promontories of Palinurum and Posidium, and situate about three miles from the left bank of the river Heles or Elles. It was founded by the Phocaeans after their abandonment of Alalia in Corsica. (Vid. Phocæa.) The Phocæans called the town Hyene ("Veyæ"), which the Latins afterward changed to Velia; and it is asserted, that in his time the city was called Elea ("Eëæ"), and so Stephanus Byzantinus gives the form of the name. The more correct mode of writing the word, however, is Helia, which the Latins, employing the Æolic digamma for the aspirate, enunciated by Velia. (Compare Plin., 3, 5: "Oppidum Helia, qua nunc Velia."—Strabo informs us, that from the constitution adopted by its founders being so excellent a one, the new colony was enabled to resist with success the invasion of the Gauls. In regard to the Posidionates and the Lucani, though very inferior to the Romans in resources both in population and fertility of soil. (Strab., 252.) Velia is particularly celebrated in the annals of Grecian science for the school of philosophy which was formed within its walls, under the auspices of Zeno and Parmenides, and which is commonly known by the name of the Eleatic sect. This sect was afterward transplanted into Greece, where it degenerated into a school of sophistry and false dialectic. (Bruckner, Hist. Phil., vol. 1, p. 1142.)—Sclay leads us to infer that Velia afterward received a colony of Thuri- rians, an event which we may suppose to have occurred about 440 A.C. (Sclay, Peripl., p. 4.) When the Romans formed the design of erecting a temple to Ceres, they sought a priestess from Velia, where that goddess was held in great veneration, to instruct them in the rites and ceremonies to be observed in her worship. (Cic., pro Balb., 29.—Val. Max., 1, 1.) This place became, subsequently a Roman maritime colony, as may be inferred from Livy; but the period at which this change in its condition took place is not mentioned; it was probably not long after the colonization of Pautum. Mention of Velia frequently occurs in the letters of Cicero, who occasionally resided there with his friends Trebatius and Taula. (Ep. ad Fam., 7, 29; ad Att., 16, 7.) To the situation of the town seems to have been considered very healthy; as Plutarch says that Paulus Æmilius was ordered there by his physicians, and that he derived considerable
VELLEIUS PATRECLUS.

The year of his birth is commonly fixed at 19 B.C., the same year in which Virgil died. We have a very few particulars respecting his life, and these we obtain from the writer himself; for, what is very singular, no other ancient historian makes a mention of him, excepting perhaps Priscian, who cites a Marcus Velleius, and Tacitus (Ann., 3, 39), who speaks of Publius Velleius as commander of an army in Thrace. In his youth Paterculus traversed, along with Caius Cæsar, a part of the East. Augustus named him, at the age of twenty years, a prefect of horse; and in this capacity, and afterward as questor and lieutenant, he accompanied Tiberius to Germany, Thrace, Macedonia, Apulia, and Dalmatia, and was thus, for the space of nineteen years, his companion in arms and the witness of his exploits. He returned to Rome with Tiberius, and held the office of praetor the year that Augustus died. Sixteen years after, during the consularship of M. Vincius, he composed or else completed his historical work. The following year, A.D. 31, he was involved in the disgrace of Sejanus, who had been his patron, and was put to death along with the other friends of that aspiring minister.—The work of Paterculus is entitled Historia Romana, but it is possible that this appellation may be owing to the抄ists. A single manuscript of the work was preserved at the convent of Murbach in Alsace, where Beatus Rhenanus found it. This manuscript, which was in a very bad condition, was subsequently lost. The only other one is known to us, which was published in 1520, and by a collation of the manuscript, made by Burer before Rhenanus returned it to the convent from which he had borrowed it. This collation is added to the edition of 1546.—The beginning of the work is lost, so that we are ignorant of the plan which the author had proposed to himself to follow. It would seem, however, that he had intended to give a summary of Universal History, containing, in particular, what was new, and produced by natural causes. In the first fragment he treats of Greece, the Assyrian empire, and the kingdom of Macedonia; after this there is a lacuna, embracing the first 582 years of Rome. The remains of the first book, and the second, which we have entire, or with the loss, perhaps, of only a few lines, give the history of Rome down to A.D. 30.—The history of Paterculus does not enter into details. It is a general view of the times, and of individual events. The historian states merely results, and is silent respecting the causes which combined to produce them. He loves, however, to develop, and draw the characters of the principal actors, and his work is filled with delineations traced by the hand of a master. We find in him, also, a great many political and moral observations, the fruit of experience and foreign travel. In his style he imitates the concise and energetic manner of Salust. His diction is pure and elegant, without, however, being wholly free from affectation, which shows itself in the search for archaisms or antiquated forms of expression, and in the too frequent use of moral sentences and figures of rhetoric. Some Heilamens are also found in him. The charge of adulation to his prince, which is so often brought against this historian, must be palliated in the fact that it was not until after the death of Sejanus that the tyrannical spirit of Tiberius began openly and fully to develop itself; and of this, if Velleius were involved in the fate of Sejanus, he could not, of course, have been a witness. Besides, Tiberius had been the military chief and the benefactor of Paterculus. The latter praises the good deeds he performed, horrorizes upon his guilt; he treats with indulgence his faults; but he does not push flattery so far as blindly to alter the truth, or assert things that are false. It is unjust, therefore, on account of this venial failing, to rank Paterculus among historians who are undeserving of confidence. He is impartial in the recital of events of which he
was not himself a witness. As for those which pass
under his own eyes, where is the historian who,
in writing the history of his own times, is wholly ex-
empt from such errors? Pliny, in his •Hist. Nat.«,
states that Hercules, in an attempt to capture the
ions of Paterculus are, that of Bornm. Apoll. Bat.
1744, 2 vols. Svo.; that of Ruhnken, 1779, L. Bat.
2 vols. Svo.; that of Krause, Lips., 1800, Svo.; and that
of Lemaire, Paris, 1822, 8vo, which last is, for the
most part, a republication of Ruhnken's. (Scholl, 
Hist. Let. Rom., vol. 3, p. 357.)

VELOCASES or BELOCASES, a people of Gallia Belg.
a, along the northern bank of the Seine, north of the
Belgium and north of the Alemi Ebuvones. Their
capital was Rotomagus, now Rouen. (Cas.,
B. G., 7, 75.—Plin., 4, 18.)

VENETUM, a city of Campania, in the northeast
angle of the country, and near the river Vulturnus.
Strabo, 258.) It is much celebrated for its
excellence as a fertile and healthy place. (Hornet, 
Od., 2, 6, 16. — Id., Sat., 2, 4, 68. — Mart.,
19, 98. — Cat., R. K., 135.—Plin., 16, 2.)

VENETO or VENETIO, a German tribe, on the eastern
bank of the Vistula, near its mouth. They gave
name to the Venedic Sinus, off this coast, and to
the Montes Venedicici, or the low range of mountains
between East Prussia and Poland. (Tac, Germ.,
49.—Plin., 4, 27.)

VENETI, 1. a people of Italy, in Cisalpine Gaul, near
the mouths of the Po, fabled to have come from Paph-
lagonia, under the guidance of Antenor, after the Tro-
jan war. (Vid. Heneti.) On the invasion of Italy
in the fifth century by the Huns, under their king At-
tila, and the general desolation that everywhere ap-
peared, great numbers of the people who lived near
the Adriatic took shelter in the islands in this quarter,
where now stands the city of Venice. These islands
had previously, in A.D. 421, been built upon by the
inhabitants of Patavium for the purposes of commerce.
The arrival of fresh hordes of barbarians in Italy in-
creased their population, until a city was formed,
which gradually rose to power and opulence.
—As regards the origin of the ancient Veneti, the
tradition which makes them of Paphlagonian origin is,
as we have already remarked, purely fabulous. Man-
nert, on the other hand, has started a learned and
plausible theory, in which he maintains, with great abil-
ity, their Northern origin. According to this writer,
they were a branch of the great Scalian race. His
progressive migration of the Veneti is very remarkable:
being not an original people of Italy; 2, the anal-
ogy of their name with that of the Vandals, both being
derived from the old Teutonic word veneden, and
deporting a roving and unsteady mode of life; and,
3, from the existence of the amber-trade among them,
and the proof which this furnishes of a communica-
tion by an overland trade between them and the na-
tions inhabiting the shore of the Baltic and the coun-
tries of the northern Alpine districts. (Man., 10, p. 54, 
seqq.)—The history of the Veneti contains little that
is worthy of notice, if we except the remarkable fea-
ture of their being the sole people of Italy who not
only offered no resistance to the ambitious projects of
Rome, but even, at a very early period, rendered that
power an essential service; if it be true, as Polybius
reports, that the Gauls who had taken Rome were
suddenly called away from that city by the interruption of
the affairs of war; and the Veneti, as the only people who
thither elsewhere expressly states that an alliance was
afterward formed between the Romans and Veneti
(2, 23), a fact which is confirmed by Strabo (216).—
This state of security and peace would seem to have
been very favourable to the prosperity of the Venetian
nation. According to an old geographer, they count-
ied within their territory fifty cities, and a population
of a million and a half. The soil and climate were
excellent, and their cattle were reported to breed twice
in the year. Their horses were especially noted for
their fleetness, and are known to have often gained
prizes in the games of Greece. (Eupr., Hipp., v,
231, et Suev. Hist., sec. 3. Hyen., s. v. Etrusker.)
And Strabo affirms that Dionysian, in the valley of
Sicyo, kept a stud of race-horses in their country. (Strab.,
212.)
The same writer asserts, that even in his day there
was an annual sacrifice of a white horse to Diomed.
When the Gauls had been subjugated, and their coun-
try had been reduced to a state of dependence, the
Veneti do not appear to have manifested any unwill-
ingness to constitute part of the new province, an
event which we may suppose, to have happened not
long after the second Punic war. The territory from
that time was included under the general de-
nomination of Cisalpine Gaul, and they were admitted
to all the privileges which that province successively
obtained. In the reign of Augustus Venetia was con-
considered as a separate district, constituting the tenth
region in the division made by that emperor. (Plin.,
3, 18.) Its boundaries, if, for the sake of amplifica-
tion, we include within them the Tridentini, Medaucli,
Carri, and other smaller nations, may be considered
to be the Athesis, and a line drawn from that river to
the Padus, to the west; the Alps to the north; the
Adriatic, as far as the river Formio (Risano), to the
east; and the main branch of the Padus to the south.
(Cramer's Anc. Italy, vol. 1, p. 113.)—II. A nation
of Gaul, at the south of Armorica, on the western
coast, powerful by sea. Their chief city is now called
Vannes. (Cas., B. G., 3, 8.)

VENETI, the country of the Veneti, in Gallia Cis-
alpina. (Vid. remarks at the end of the article Ven-
eti I.)

VENETUS LACUS, the same with the Lacus Brigan-
tinus, or Lake of Constance. (Mela, 3, 2.)

VENELLA, a nymph, sister to Amata, and mother of
Turnus by Daunus. (Virg., En., 10, 76. — Ovid,
Met., 14, 354.—Varro, L. L., 4, 43.)

VENETA, one of the counties of the county of
British, now Winchester.—II. Silurum, a town of Britain, now Caer-
cwent, in Monmouthshire.—III. Iconerum, now Cash
er, south of Norwich, according to Mannert; but Rei-
chard is in favour of Lynn.

VENTIDIUSS BASSUS, a native of Picenum, was
brought captive to Rome, while yet an infant, along
with his mother. When he had grown up, he follow-
ated for some time the humble employment of hiring out
for a few shillings his father's horses and hawks, of the
Veneti, and by his punctual discharge of the various
tasks confided to him, rose so high in Caesar's favour
that the latter bestowed upon him several important
stations. After Caesar's death he attached himself
to Antony, to whose aid he brought three legions at
Mutina. He subsequently obtained the consulship, an

elevation which exposed him to many pernicious.
Antony sent him afterward against the Parthians, whom
he defeated as far as the region of the Lycus (C. 29.
33, 24), and the Romans paid to him the compliment
of Roman honour with a triumph over this formidable
Parth., 71, seqq.)

VENUS, a Roman or Latin deity, generally regarded
as identical with the Greek Aphrodite ('Aphoridz),
though perhaps with but little correctness. The
Aphrodite of the Hliad is the daughter of Jupiter and
Dione, and by the Alexandrian and the Latin poet
Hesiod says that she sprang from the foam (upókoûs) of
the sea, into which the mutilated part of Uranus had
been thrown by his son Saturn. She first, he adds,
approached the land at the island of Cythera, and
thence proceeded to Cyprus, where grass grew beneath
her feet, and Love and Desire attended her. (Hes.,
Theog., 188, seqq.) One of the Homeric epos

1376

VENUS

(Hymn., 6), that the moist-blowing west-wind wafted her in soft foam along the waves of the sea, and that the gold-filleted Seasons received her on the shore of Cyprus, clothed her in Immortal garments, placed a golden wreath on her head, rings of orichalcum and gold in her pierced ears, and golden chains about her neck; and, filled with the splendor of the Immortals, every one of whom admired, saluted, and loved her, and each god desired her for his spouse. The husband assigned to this charming goddess is usually the lame artist Vulcan or Hephaestus, but her legend is also interwoven with those of Mars, Adonis, and Anchises.—According to Homer, Aphrodite had an embroidered girdle (ξερορία λαίκα), which possessed the power of inspiring love and desire for the person who wore it; and the Romans, on one occasion, bribed the magic girdle from the goddess, in order to try its influence upon Jove. (I., 14, 214)—The animals sacred to Aphrodite were swans, doves, and sparrows. Horace places her in a chariot drawn by swans (Od., 3, 28, 15.—Id., 4, 1, 10), and Sappho in one whose team were sparrows. The bird called lynx or Fritillus, of which so much use was made in amatory magic, was also sacred to the goddess. Venus in the spring, was the god of springs. Her favourite plants were the rose and the myrtle. She was chiefly worshipped at Cythere and Cyprus, in which latter island her favourite places were Paphos, Goigli, Idalion, and Amathus; and also at Chnidos, Miletus, Cos, Corinth, Athens, Sparta, &c. In the more ancient temples of this goddess in Cyprus, she was represented under the form of a rude conical stone. But the Grecian sculptors and poets, particularly Praxiteles and Apelles, were pleased with each other in forming her image the ideal of female beauty and attraction. She appears sometimes rising out of the sea and wringing her locks; sometimes drawn in a conch by Tritons, or riding on some marine animal. She is usually nude, or but slightly clad. The Venus de' Medici remains to us a noble specimen of ancient art and perception of the beautiful.—There is none of the Olympians of whom the foreign origin is so probable as this goddess, and she is generally regarded as being the same with the Astarte of the Phoenicians: the tale of Adonis, indeed, sufficiently proves the identification of this last-mentioned goddess with the Aphrodite of the Greeks; and yet, at the same time, the name of the latter (if we reject the common Greek derivation) appears singularly connected with the mythology of Scandinavia; for there one of the names of the goddess of love and war is Frigga, and we see there the god lurking in a good-fair home. (Compare the English name Friday, the "dies Veneris."—)

—When we turn to the Roman Venus, we find her so thoroughly confounded with the Grecian Aphrodite, that almost everything peculiar to her has disappeared. And yet Venus cannot have been one of the original deities of Rome, as her name did not occur in the Salian hymns, and we are assured that she was unknown in the earliest divinities (Cæs., vol. 1, 15, 5). She seems to have been a deity presiding over birth and growth in general, for, as Venus Hortensia, she was the goddess of gardens. She was held to be the same as Libitina, the goddess of funerals, because, says Plutarch (Quast. Rom., 23), the one and the same goddess superintends birth and death. —There was at Rome a temple of Venus Frutus (Fruitis, s. v. Frutina), which latter term seems to have been borrowed from Aphrodite. However, he be connected with fructus, and refer to her natural character. Perhaps it may form a presumption in favour of the original natural character of Venus, that, like Pales, her name is of both genders. Thus we meet with Deus and Dea Venus; and with Venus alius and Venus alma. (Keightley's Mythology, p. 515, seqq.)

VENUSIA, a city of Apulia, on the great Appian Way, leading to Tarentum, and about fifteen miles to the south of Aedibus. This place appears to have been a Roman colony of some importance before the war against Pyrrhus. (Dion. Hal., Excerpt. Leg.—Vell. Patr., 1, 14.) After the disaster at Cannae it afforded a retreat to the consuls Varro and the handful of men who escaped from that bloody field. The service rendered by the Venusiens on that occasion obtained for them afterward the special thanks of the Roman senate. (Liv., 22, 54.—Id., 27, 10.) Venusia deserves our attention still more, from the associations which connect it with the name of Horace, who was born there A.U.C. 638. We may infer from Strabo (250), that this town was in a flourishing state in his day. Mention of it is also made by Cicero (Ep. ad Att., 5, 5), Appian (Bell. Civ., 1, 59), Pliny (3, 11), and others. The modern Venosa occupies the ancient site. (Cramer's Ancient Italy, vol. 3, p. 238, seqq.)

VERIGRI, an Alpine tribe, living among the Graian and Pennine Alps. Cellarius, however, reckons them as belonging to Gallia Narbonensis. (Plin., 3, 20.)

VERITAS, a lake of Cisalpinia, through which flows the river Ticino. (Curt., 1, 57.)

VERIUS, a lake of Latium, now Lago Maggiore, a lake of Cisalpine Gaul. (Plin., 3, 20.)

VERLANUS LACUS, now Lago Maggiore, a lake of Cisalpine Gaul. (Plin., 3, 20.)

VERCELLUM, a city of Cisalpine Gaul, to the north-west of Ticinum, and the capital of the Libici. It was situate on the river Sesates, now la Sesia, and its site corresponds with that of the modern Borgo Verceil.Tacitus styles this place a municipium (History, 1, 10), and Strabo mentions some gold mines in the neighbourhood, near a place called Ictyomolurus Vicus. (Strab., 218.) Ammianus Marcellinus writes the name Vercellum. (Cramer's Anc. Italy, vol. 1, p. 47.)

VERINGETORIX, a young nobleman of the Arverni, distinguished for his abilities, and for his enmity to the Romans. He was chosen commander-in-chief of the confederate army raised by the states of Gaul, when the great insurrection broke out in that country against the Roman power; and he used every endeavour to free his native land from the Roman yoke. His efforts, however, were unsuccessful; he was besieged in Alesia, compelled to surrender, and, after being taken in triumph to Rome, was put to death in prison. (Cass., B. G., 7, 4, seqq.—Dio Cass., 40, 41.) The name Veringetorix appears to be nothing more than a title of command. Ver-cian-éto-ríx, "a great captain" or "generalissimo." (Thierry, Hist. des Gauw. lois, vol. 3, p. 97.)

VERCELLUM, a small river near Canne, falling into the Auedus. It is said to have been choked with the dead bodies of the Romans on the day of their disastrous overthrow. (Flor., 2, 6.—Val. Max., 9, 2.)

VARSESLAE, a name given to the Pleiades from their rising in the spring (see.—Vid. Pleiades).

VERIBRATUS, a term used among the ancient Gauls as a judicial appellation, and a title of office, Veri-brath, "a man for judging," or "a judge." (Cass., B. G., 1, 16.—Thierry, Hist. des Gauw. lois, vol. 2, p. 115.)

VEROMANDU, a people of Gallia Belgica Secunda, below the Nervii and Attrebiates. Their capital was called Augusta Vercorica, now St. Quentin. (Cass., B. G., 2, 4.—Plin., 4, 17.)

VERGNE, a city of Cisalpine Gaul, in the territory of the Cenomanni, and situated on the river Athesis, in an eastern direction from the southern extremity of the Lucus Benacius. The modern name is the same with the ancient. The history of its foundation is somewhat uncertain; for Pliny (3, 19) ascribes it to the Rhati and Euganei, while Livy as positively attributes it to the Cenomanni (5, 35). It will be easy to
reconcile these two opinions by admitting that the Cenomanni made this settlement in the territory previously possessed by the Rhaeti and Euganei. Under the dominion of the Romans it soon became a large and flourishing city. (Strab., 212.) It is supposed to have been colonized by Pompeius Strabo. Tacitus speaks of it in later times as a most opulent and important town, the possession of which was envied by Verres, a man famous for his public spirit and most offensive conduct, and to which the word was given of cutting off the forces of Vitellius, and to strike a decisive blow. (Tacit., Hist., 3, 8.) The celebrity of Verona is still further established as being the birthplace of Catullus (Ov., Am., 3, 14.— Martial, 14, 193) and of Pliny the naturalist, who, in his preface, calls himself the countryman of Catullus. It was in the neighbourhood of Verona that the famous Rhetic wine, so highly commended by Virgil, was grown. (Georg., 2, 94.—Cramer’s Anc. Italy, vol. 1, p. 70.)

Verres, C., a Roman who governed the province of Sicily as praetor. The oppression and rapine of which he was guilty while in office were of the most flagrant description, and he was accused by the Sicilians of extortion on the expiration of his office. Cicero managed the prosecution, Hortensius appeared for the defence. Of Cicero’s six orations against Verres that have come down to us one was posthumous. Driven to despair by the depositions of the witnesses after the first oration, he submitted, without awaiting his sentence, to a voluntary exile. The other five orations of Cicero, forming the series of harangues which he intended to deliver after the proof was completed, were subsequently published in the same shape as if Verres had actually stood his trial, and had made a regular defence. He perished afterward in the proscription of Antony, whom he had offended. He left two works, one of which was a Cornelian Vases. Verres appears during his exile to have lived in great affluence on his ill-gotten gains. (Cic. in Verr.)

Vertevius Placcus, a freedman and grammarian, famous for his powers in instructing. He was appointed tutor to the grandchildren of Augustus, and also distinguished himself by his writings, which were historical and grammatical. Suetonius also informs us that Celiaus, the father of his fellow-tractist, built a cela in the name of Cato, and that the statue of Cicero was placed in the中新building at Preneste twelve tablets of marblue, on which was cut a Roman calend., which Suetonius and Macrobius often cite. Four of these tablets, or, rather, fragments of them, were discovered in 1770, and published by Poggini in 1779. They contain the months of January, March, April, and December, and throw great light on the Fasti of Ovid. Verrius Flaccus was at the head of a celebrated school of grammarians. His principal work in this line was entitled de Verborum Significatione. It was abridged by Festus, a grammarian of the fourth century. The abridgment has reached us, but the original work is lost. (Vid. Festus.—Aut. Gell., 4, 5,—Sueton., Illuvstr. Gram., 17.)

Vertumnus or Vortumnus, a deity among the Romans. According to some, he was, like Mercury, a deity present over merchandise. (Aen., ad Cid., 2, 1, 59.—Schol. ad Horat., Epist., 1, 20, 1.) Varro, in one place, says he was a Tuscan god, and that, therefore, his statue was in the Tuscan street at Rome (L. L., 4, p. 14); in another, he sets him among the gods worshipped by the Sabine king Titus. (L. L., p. 22.) Horace uses Vertumnus in the plural number (Epist., 2, 7, 14), and the scholiast observes that his statues were in almost all the municipal temples of Italy. The name is a corruption of a Tuscan name, and the most rational hypothesis respecting this god is, that he was a deity presiding over the seasons, and their manifold productions in the vegetable world. (Propert., 4, 2,—Müller, Etym., vol. 2, p. 51, seq.) Ceres and Pomona were associated with him. The Vortunnalia were in October. (Varro, L. L., 5, p. 57.—Keightley’s Mythology, p. 534.)

Verus, L. Aelius, father of the Emperor Verus, was adopted by the Emperor Hadrian, and received from him the title of Caesar, A.D. 136. He died, however, a few months before Hadrian. Verus appears to have been of but moderate abilities, and too much addicted to the pleasures of the table, as well as other indulgences. (Spartian., Vit. Ver.)—II. L. Aelius, Aurelius, Ceionius, Commodus, son of the preceding, was adopted by Antonius Pius, along with Marcus Aurelius, in accordance with the express wish of Hadrian. At the time of his adoption he was only in the seventh year of his age, and he afterward married Lu- cilla, the daughter of his adoptive parent. After the death of Antonius Pius, the senate declared Marcus Aurelius sole emperor, with the skill and valour of his generals, he obtained several victories and settlements in Gaul, and captured several towns, while he himself was revelling in debaucheries at Antioch. At the conclusion of this war, Verus returned to enjoy the honours of a triumph which he had no share in obtaining. Not long after this, when the war of the Macomanni and other tribes of similar origin broke out, the two emperors left Rome to take the field in person against these dangerous antagonists. Verus died, however, soon after the commencement of the war, at the age of 39. In licentiousness and debauchery, Verus equaled the worst Roman emperors, but he was altogether free from the charge of cruel or tyrannical acts. (Capitol., Vit. Ver.)

Verus. Vid. Verusius. Verusianus, Titus Flavius, a Roman emperor, descended from an obscure family at Reate. His valour and prudence, but above all, the ability of 'two of Claudius, obtained him the consulship, A.D. 52, for the last three months of the year. Some years after this, during the reign of Nero, he fell into disgrace with that emperor for having suffered himself to be overthrown by sleep during the reading of some of that prince’s poetry. The Jews having revolted towards the close of the year 64, Nero, who did not wish to place at the head of his forces a man whose birth or talents might win the favour of the sectaries, gave the command to Vespasian. While the latter was prosecuting the war with great success, and was engaged in the siege of Jerusalem, Nero was cut off; Galba hardly reached the capital before he lost his crown and life; Otho, his successor, slew himself after the defeat at Bedriacum; and, amid the ferment and agitation that everywhere prevailed, the ardour of his troops, and the wishes of a large portion of the East, induced Vespasian to contest the crown with Vitellius. He was proclaimed emperor by his legions, July 1st, A.D. 69, and on the 20th December of the same year, his general Antonius Primus made himself master of Rome. Vespasian obtained possession of the throne in his fifty-ninth year, and became the founder of a dynasty which gave three emperors to Rome. He was a man of rare and excellent virtues, thoroughly matured by a life spent in the exercises of public duties, and so purely object to that of promoting the public welfare. Being well aware of the glaring abuses which had long been perpetrated with impunity in all branches of the administration, he set himself vigorously to the dangerous task of effecting a thorough reform. He restored the privileges of the sen
ate, and gave it once more an actual power in the government. Th.: courts of law were also subjected to a most salutary reform, and rendered again, what they had long ceased to be, courts of justice. The insubordination of the army, which had been the cause of so many bloody revolts, he repressed with a firm and steady hand; and, restored, in a great measure, the discipline which had made it so powerful in the time of Sulla. He was attentive also to the treasury, which had been quite exhausted by the prodigal and corrupt expenditure of his predecessors; and, in order to replenish its coffers, he regulated anew the tribute and custom-dues of the provinces, and imposed a number of taxes; by which means, though he was accused of avarice, he placed once more the revenues of the empire on a stable basis, and restored them to a flourishing state. His great and gorgeous procession bore in the train of the conquerors. Soon after this triumph, the Bata-

VESPASIANUS.

venian war came to a close. The island of Caledonia, which had been so formidable were the mountain-fastnesses of Caledonia, that Agricola did not attempt to penetrate farther into the country, contenting himself with constructing a chain of forts between the Firths of Clyde and Forth, to defend the southern districts, and to restrain the re-
coal and assaults of the unconquered Caledonians. Thus glorious abroad and beloved at home, Vesper-

ianus's life began to draw near its termination. Feel-
ing the effects of age and weakness, he retired to Cam-
pania, to enjoy the benefits of a purer air than that of Rome, together with some relaxation from the cares of state. There he was seized with a malady which his own sensations told him would speedily prove mort-

t. His anticipations proved true; and he expired in the arms of his attendants, in the seventeenth year of his age and his reign. But a lasting remark, that Vespasian was the second of the Roman emperors that died a natural death, and the first that was succeeded by his son. (Hetherington's History of Rome, p. 187, seqq.)

Vesta, a goddess among the Romans, the same with the Grecian Hestia ('Eoria). An idea of the sanct

Vespa-
ty of the domestic hearth ('eteria), the point of as-

semblv of the family, and the symbol of the social union, gave the Greeks occasion to fancy it to be under the

guardianship of a peculiar deity, whom they named, from it, Hestia. This goddess does not appear in the

poems of Homer, though he had abundant opportuni-
ties of noticing her. By Hesiod (Theog., 454) she is said to have been the daughter of Saturn and Rhea. The hymn to Venus relates that Hestia, Diana, and Minerva were the only goddesses that escaped the power of the queen of love. When wooed by Ne-

ptune and Apollo, Hestia, placing her hand on the head of Jupiter, vowed perpetual virginity. Jupiter, in place of marriage, gave her "to sit in the middle of the man-
sion, receiving the choicest portions of the sacrifice, and to be honoured in all the temples of the gods." (Hymn. in Ven., 22, seqq.) In the Pryncean of ev-

der Grecian city stood the hearth, on which the sacred fire flamed, and where the offerings were made to Hes-

ria. (Pynthia Nem., 11, 1, seqq.) In that of Athens there was a statue of the goddess.—The same obser-

vity involves the Vesta of the Romans as the corre-

sponding Hestia of the Greeks, with whom she is iden-
tical in name and office ('Eoria, 'Fœria, Vesta). There is every reason to believe her worship to have formed part of the religion of the ancient Pelasgian popula-
tion of Latium ( Dion. Hal., 2, 96), as it is by the farthest testimonies of literature to be traced to the ancient state, and its introduction is ascribed to Numa. (Liv., 1, 20.—Plut., Vit. Num., 9, seqq.) Like Hestia, she was a deity presiding over the public and private hearth: a sacred fire, tended by six virgin-priestesses, called Vestal, flamed in her temple at Rome. As the

safety of the city was held to be connected with its con-

servancy, the neglect of the virgins, if they let it go out, was severely punished, and was punished even from the rays of the sun. —The temple of Vesta was round: it contained no statue of the goddess. (Ovid, Fast., 6, 295, seqq.) Her festival, celebrated in June, was called Vestavtia: plates of meat were sent to the Vestals to be offered up: the millstones were wreathed with garlands of flowers, and the mill-asses, crowned with violet, went about with cakes string round their necks. (Ovid, Fast., 6, 311, seqq. — Propert., 4, 1, 23.) In the forum at Rome there was a statue
of the Stata Mater, placed there that she might pro-
tect the pavement from the effect of the fires which
used to be made on it in the nighttime. The people
followed the example, and set up similar statues in
several of the streets. Stata Mater is generally sup-
posed to have been Vesta. (Keightley's Mythology,
p. 95, 513, seq.)

VESTALES, priestesses among the Romans con-
scrated to the service of Vesta. They are said to
have been first established by Numa, who appointed
four of them; and Servius adds, two more; and the
number continued to be six ever after. The Vesta-
virgins were bound to their ministry for thirty years.
After thirty years' service they might leave the temple
and marry; which, however, was seldom done, and
was always reckoned ominous. (Dion. Hal., 2, 67.)
These priestesses were bound to observe the strictest
purity of morals. If any one of them violated her vow
of chastity, she was buried alive in the Campus Scele-
ratus, and her paramour was scourged to death in the
Forum. (Vid. Vesta.)

VESTINI, a mountaineer race of Italy, whose terri-
tory was bounded on the south and southwest by the
Peligni and Marsi, on the east by the Adriatic, and on
the north and northwest by the Praetutti and Sabines.
The history of the Vestini offers no circumstances of
peculiar interest: they are first introduced to our no-
tice in the Roman annals as allies of the Samnites, to
whom they are said not to have been inferior in valour;
but, being separately attacked by the Romans, the
Vestini, too weak to make any effectual resistance,
were soon compelled to submit, A.U.C. 451. (Liv.,
8, 29.—Id., 10, 3.) This people, however, were not
behind-hand with their neighbours in taking up arms
on the breaking out of the Social war. They bore an
active part in the exertions and perils of that fierce
and sanguinary contest, and received their share of the
rights and privileges which, on its termination, were
granted to the confederates. Their chief city was Pin-
na, now Civita di Puma. (Cramer's Anc. Italy, vol.
1, p. 335.)

VESUVIUS. Vid. VESUVIUS.

VESUVIUS, now Monte Viso, a mountain at the ter-
mination of the Maritime, and commencement of the
Cottian, Alps. It is celebrated in antiquity as giving
rise to the Padus or Po. Pliny (3, 16) mentions the
source as being a remarkable sight. The Po flows from
two immediate lakes, the one situated below the
highest peak of Monte Viso, the other still higher up,
between that peak and the lesser one called
Vesuvio. The waters of this second lake find vent
in a great cavern; and this, probably, is the source
to which Pliny alludes. (Cramer's Anc. Italy, vol. 1,
p. 28.)

VESUVIUS, a mountain of Campania, about six miles
southwest of Naples, celebrated for its volcano. It
appears to have been first known under the name of Ve-
svius (Lucer., 6, 747.—Virg., Georg., 2, 224.—Stat.
Sylv., 4, 8, 4); but the apppellations of Vesuvius and
Vesuvius are less frequently applied to it. (Sil.
Ital., 17, 594.—Val. Flacc., 3, 208.—Mart., 4, 44.)
Strabo describes this mountain as extremely fertile at
its base, an account in which many ancient writers
agree, but as entirely barren towards the summit, which
was mostly level, and full of apertures and cracks, similarly
decorated, formed by the ashes and cinders. From
whence Strabo would lead to conclude that the volcano,
though once in a state of activity, had been exting-
ished from want of fuel. (Strabo, 246.) Diodorus
Siculus (4, 21) represents it also as being in a quies-
cent state, since he argues, from its appearance at the
time he was writing, that it must have been on fire at
some remote period. The volcano was likewise ap-
parently extinct, when, as Plutarch and Florus relate,
Spartacus, with some of his followers, sought refuge
in the cavities of the mountain from the pursuing of
their enemies, and succeeded in eluding their search.
(Plut., Vit. Crass.—Flor., 3, 20.—Cramer's Ancient
Italy, vol. 2, p. 176.) The first great eruption on rec-
took place on the 24th of August, A.D. 79, and
on the same day the towns of Herculeum, Pompeii,
and Stabiae were buried under showers of volcanic
sand, stones, and scoria. Such was the immense
quantity of volcanic sand (called ashes) thrown out
during this eruption, that the whole country was in-
volved in pitchy darkness; and, according to Dion,
the ashes fell in Egypt, Syria, and various parts of
Asia Minor. This eruption proved fatal to the elder
Pliny. He had the command of the Roman fleet on
the coast of Campania, and, wishing to succour those
persons who might want to escape by sea, and also to
observe this grand phenomenon more nearly, he left
the Cape of Misenum, and approached the side of the
bay nearest to Vesuvius. He landed, and advanced
towards it, but was suffocated by the sulphurous va-
pour. After this, Vesuvius continued a burning
mountain for nearly a thousand years, having eruptions
at intervals. The fire then appeared to become nearly
extint, and continued so from the beginning of the
12th to that of the 16th century. Since the eruption
of 1506, it has remained burning to the present time,
with eruptions of lava and ashes at intervals. Vesu-
vius rises to the height of 3600 feet above the sea.
It has two summits, the more northern one of which
is called Somma, the other is properly called Vesuvius.
Somma is supposed to have been part of the cone of
the larger volcano, nearly concentric with its present cone,
which, in some great eruption, has destroyed all but
this fragment.

VETTONES, a nation of Lusitania, lying along the
eastern boundary. The city of Augusta Emerita (now
Merida) took from them the name of Vettoniana Co-
lonia. (Cas., Bell. Cis., 1, 38.—Plin., 4, 20.)

VETULONI, one of the most powerful and distin-
guished of the twelve cities of Etruria, a few miles to
the southwest of Veternia. Its position was long a
matter of uncertainty, until an Italian antiquary, Xi-
menes, proved the ruins of the place to exist in a forest
still called Selva di Vetella.—If we may believe Silius
Italicus (5, 489), it was Vetuloni that first used the
insignia of magistracy common to the Etruscans,
and with which Rome afterward decorated her consuls
and dictators. (Cramer's Anc. Italy, vol. 1, p. 187.)

VETURIA, the mother of Coriolanus. (Vid. Corio-
lanus.)

UFEN, I. the Aufente, a river of Latium, rising in the
Vesuvian Mountains, above Setia and Privernum, and,
in consequence of the want of a sufficient fall in the
Pontine plains, through which it passed, contributing,
with other streams, to form the Pontine marshes. It
communicated its name, which was originally written
Ufens, to the tribe Oufenta, according to Lucullus,
who is quoted by Festus (s. v. Oufenta). Virgil alludes
to its sluggish character. (Cramer's Anc. Italy, vol.
2, p. 97.)—II. A prince who assisted Turnus against
Aeneas, and was slain by Gyas. He was leader of the
Nerussian forces. (Virg., En., 7, 745.—Id. ib.,
10, 518, &c.)

UFINENTIA, or, more correctly, UFFENTO, a Roman
tribe, first created A.U.C. 435, with the tribe Pa-
teria, in consequence of the great increase of popula-
tion at Rome. (Lis., 9, 20.—Festus, s. v. Ufenta.—
Vid. Ufens.)

VIA, I. EMILIA. (Vid. Emilia V. and VI.—II. Appia. (Vid. Appia Via, &c.)

VIAE or VIADUS, a river of Germany, generally
regarded as answering to the modern Oder. Reich-
ard, however, considers the VIADUS as the same with
the Wipper. (Bischoff and Möller, Wörterb. der
Geogr., p. 1, 9.)

VIABUS, I. CRISAPUS, a Latin rhetorician, to whom
some ascribe the description of Cicero which has
VIN

come down to us. (Vid. Porcius.)—II. Sequester, a Latin writer, who has left a geographical work, containing a kind of nomenclature of rivers, fountains, lakes, forests, marshes, mountains, and nations mentioned by the poets. The work was compiled for the use of Virgilianus, the author's son. As no ancient writer refers to it, it is supposed that this work contains no account either of himself, his country, or the period when he wrote, his era can only be fixed by conjecture. Oberlinius believes that he lived after the fall of the Western empire, in the fifth, sixth, or seventh century. The same critic regards the work as a hasty performance, and as containing, besides numerous errors attributable to the copists, some which must be ascribed to the author himself. Still the work is not without its value, from its containing several names nowhere else mentioned. The celebrated Beoccacio compiled a production of a similar nature in the fourteenth century, and made great use of the work of Sequester, without ever citing it. The best edition of Vibiunus is that of Oberlinius, Argent., 1778, 8vo.

Vino, Valens. Valentinus Hippomonia, a Greek goddess of Rome, who presided over victory ("petes vincendi aique potuisse."—Cic., de Leg., 2, 11.)—Consult Goerenz, ad loc. —Sene., Apocolocy thus.—Liv., 2, 7.)

VICENTI, a town of Gallia Cisalpina, in the territory of Venetia, and situated between Patavium and Verona. The name is sometimes written Victia. (Strab., 214.—Elian, V. H., 14, 8.) It is now Vicenza.

VICTOR, Sext. Aurelius, I. a Latin historian, born in Africa of very humble parents, but who raised himself by his merit to some of the highest offices in the state. The Emperor Julian, who became acquainted with him at Sirmium, A.D. 360, gave him the government of the second Pannonia, and erected in honour of him a statue of bronze. Ammianus Marcellinus, who states this fact, informs us also that Aurelius Victor was conspicuous for the purity of his moral character (21, 10).—Sixteen years after this, Theodosius the Great appointed him prefect of Rome. The period of his death is not ascertained. The manner in which he speaks of the apotheosis of Antinous, the favourite of Hadrian, shows that he was not a Christian. Three works are ascribed to this writer. The first bears the title of Origo gentis Romanae, to which a long additional title has been given by the copyists. What remains of this work comprises only the first year of Rome; it contains its beginning, and is now lost, and makes us acquainted with several circumstances of which no other writer speaks. The opinion which assigns this work to Aurelius Victor, however, has no historical fact whatever to serve as a basis; it is contrary, also, to the conviction of the grammarians, to whom we owe the long additional title already mentioned. These grammarians regard the work as a calendar of the ti.me of the world. The second work is entitled "De Viris illustribus Roman," and contains the lives of various illustrious Romans, commencing with the seven kings of Rome, and also biographies of some eminent foreigners, such as Hannibal, Antiochus, and Mithradates. This work, inferior in style to the former, has been sometimes ascribed to Cornelius Nepos, to Scaltonius, or to Pliny the Elder. It is the same work which is mentioned merely of Cornelius Nepos, whose work bears a similar title. The third work is entitled "De Casaribus, suae historiae abbreviatae para altera, ab Augusto Octaviano, id est, a fine Titi Livii usque ad Consulatum decimum Constantii Augusti et Juliani Caesaris tertium." This production is written in a concise and easy style, and the author has had access to good sources of information, of which he avails himself with impartiality.—The best editions of Aurelius Victor are that of Pitiscus, c. n. variorum, Tract, ad Rh., 1696, 8vo, and that of Arntzenius, Amst., 1733, 4to.

—II. Surnamed, for distinction sake, the Younger, a contemporary of Orsosius, who made an abridgment of one of the works of the elder Victor (the third above mentioned), which he entitled "Epitome de Cazariib," or, according to others, "De Vita et Moribus Imperatorum Romanorum," and which he continued down to the death of Theodosius the Great. He made some changes also in the original work, and added some new facts and circumstances. (Scholl, Hist. Lit. Rom., vol. 3, p. 171.)

VICTORIA, one of the deities of the Romans, called by the Greeks Nike. The goddess of Victory was sister to Strength and Valour, and was one of the attendants of Jupiter. Silla raised her a temple at Rome, and instituted festivals in her honour. She was represented with wings, crowned with laurel, and holding the branch of a palm-tree in her hand. A golden statue of this goddess, weighing 300 pounds, was presented to the Romans by Hiero, king of Syracuse, and deposited in the temple of Jupiter on the Capitoline Hill. (Varro, de L. L. —Hygin., pref. fabrica.)

VICTORinus, an African philosopher, who became a convert to Christianity, and flourished in the fourth century. He gained such a degree of reputation by teaching rhetoric at Rome, that a statue was erected to him in one of the public places. He was led to the perusal of the Scriptures by the study of Plato's works. He was the author of several works of no great value contained in the Bibliotheca Patrum.

Vid decision a couple of Gallia Lusignanensia Secunda, on both sides of the river Olona or Orne. Their chief city was Areingeni, now Bayeux. (Plin., 4, 18.)

VIENA, a city of the Allobroges, in Gallia Transalpina, on the banks of the Rhone, famed for its wealth and the civilization of its inhabitants. At a later period it became the capital of the province of Vien- nesia, and in the fifth century the residence of the Bur- gundian kings. It is now Vienne. The classical name of this place must not be confounded with the modern appellation of the ancient Vindobona, on the Danube. (Ces., B. G., 7, 9.—Tac., Ann., 11, 1.—Mela, 2, 5.—Pliny, 3, 4.—Amn. Marc., 15, 11.)

VILLIALEX, Anaullis or Amanaria, by L. Villius, the tribune, A.U.C. 574, defined the proper age required for holding offices. There seems, however, to have been some regulation of the kind even before this. (Livy, 40, 43.—Id, 25, 1.)

VIMINALIS, one of the seven hills on which Rome was built, so called from the number of osiers (rimina) which grew there. Servius Tullius first made it part of the city. Jupiter had a temple there; whence he was called Viminatis. (Livy, 1, 44.—Varro, L. L., 4, 8.—Fontius, s. v. Viminal.)

VINDELICI, a people of Germany, whose territory, called Vindelicia, was detached from the city of Briganta, on the Lacus Brigantinae, or Lake of Constante, to the Danube; while the lower part of the Oenus or Inn separated it from Noricum. Their country answered, therefore, to part of Wurttemberg and Bavaria. This nation derived their name from the two rivers which water their territory, viz., the Vind and Licus, now the Werbach and the Lech. In the angle formed by the junction of the two the capital, Augusta Vindelicorium, now Augsburg. (Cluer, vol. 1, p. 412, seqq.—Mannert, Geogr., vol. 3, p. 518, seqq.—Horat., Od., 4, 4, 18.)

VINDEK, Julius, a governor of Gaul, who revolted against Nero, and determined to deliver the Roman empire from his tyranny. He wrote to Galba, then in Spain, to take the chief command, and aid him in effecting his purpose; but, before any junction could be effected, he was defeated by the forces of Virginius.
Rufus, and destroyed himself. (Sueton., Vit. Gallb, 9.—Id., th. 11.—Plut., Vit. Gallb, 4.— Dio Cass., 63, 23, seqq.)

Virgilius, a slave who discovered the conspiracy to restore Tarquin to his throne. (Vid. Brutus I.)

Virinius, a friend of Galba's, who, on the accession of the latter to the imperial throne, became consul, commander of the praetorian guards, and principal minister of the new monarch. He employed his newly-acquired power, however, in criminal and oppressive acts, plundering others to enrich himself. Virinius advised Galba to adopt Otho for his successor; but, Galba having nominated Piso, Otho revolted, de-throned Galba, and Virinius perished along with the latter, notwithstanding his vehement protestations to the soldiery that Otho had not ordered his death. It is probable that Virinius was implicated in the conspiracy of Otho itself against his friend and protector. (Tacit. Hist., 1, 11, sq.)

Vinula (qui vir his suis), a name given to Hippolytus after he had been brought back to life by Eseclapius, at the instance of Diana, who pitied his unfortunate end. Virgil makes him son of Hippolytus. (En., 7, 762.—Ovid, Met., 15, 544.)

Virgilius, Maro Publius, a celebrated Latin poet, born at the village of Andes, a few miles distant from Mantua, about 70 B.C. It has been disputed whether his name was Virgilius or Virgilius. De scrip- turas nomine," says Heyne, "digladiati sumter in- cum veteres tum recentiores grammatici." The letters s and t were frequently convertible in the old Latin language; and sanction may be found for either mode of spelling, both in MSS. and inscriptions. At the revival of letters, Politian contended strenuously for Virgilius; but even his authority was not sufficient to bring this orthography into general practice. There exist but few authentic materials from which we can collect any certain information concerning the life of this poet. We possess only some scattered remarks of ancient commentators or grammarians, and a life by Donatus, of very dubious authority. It bears the name of Tiberius Claudius Donatus, who lived in the fifth century, some time after Ellius Donatus, so well known as a commentator on Terence. Heyne thinks that the basis of the Life was laid by Donatus, but that it was altered and interpolated from time to time by the hands of later grammarians of the convents. It is thus apparently written without any arrangement in the series of events, and many things are recorded which are manifestly fictitious. The monks, indeed, of the middle ages seem to have conspired to accumulate fables concerning Virgil. It appears that Virgil's father was a man of low birth, and that, at one period of his life, he was engaged in the meanest employ- ments. According to some authorities he was a pot- ter or brick-maker, or mason, according to others, the hireling of a travelling merchant, called Magus or Maus. He so ingratiated himself, however, with his master, that he received his daughter Maia in marriage, and was intrusted with the charge of a farm which his father-in-law had acquired in the vicinity of Mantua. Our poet was the offspring of these humble parents. The cradle of illustrious men, like the origin of cele- brated nations, has been frequenting in the history of Virgilius. "by the favours of a travelling merchant, called Magus or Maus. He so ingratiated himself, however, with his master, that he received his daughter Maia in marriage, and was intrusted with the charge of a farm which his father-in-law had acquired in the vicinity of Mantua. Our poet was the offspring of these humble parents. The cradle of illustrious men, like the origin of cele- brated nations, has been frequenting in the history of Virgilius.

shines so conspicuously in the Æneid, and which he employed with so much judgment as richly to merit the eulogy of Macrobius, "Virgilius quem nullius un- quam disciplinae error involvit." (In Somm., Scip., 8.) During his residence in this city he perused the most celebrated Greek writers, being instructed in their language and literature by Parthenius Nicenus (Macrobi., Sat., 5, 17), well known as the author of a collection of amatory tales, which he wrote for the use of Cornelius Gallus, in order to furnish him with ma- terials for elegies and other poems. Virgil likewise carefully read the Greek historians, particularly Thucy- dydes (Marceti Opera, vol. 2, p. 312, ed. Ruhnkh.), and he studied the Epicurean system of philosophy under Syro, a celebrated teacher of that sect. But medicine and mathematics were the sciences to which he was chiefly addicted; and to this early tincture of geometrical knowledge may, perhaps, in some degree, be ascribed his ideas of luminous order and masterly arrangement, and that regularity of thought, as well as exactness of expression, by which all his writings were distinguished.—Virgil, it is well known, was regarded as a wizard during the dark ages. His character as an adept in magic probably originated in his knowledge of mathematics; in the Pharmacopoeia of his eighth eclogue; in his revelation of the secrets of the unknown world in the sixth book of the Æneid; and in the report that he had ordered his books to be burned, which was afterwards disclosed to them in the mysteries of the black art. In whatever way it may have originated, the belief in his magic powers appears to have prevailed as soon as man-kind lost the refinement of taste which enabled them to appreciate his exquisite productions. The current fictions concerning the magical operations of Virgil were first incorporated about the beginning of the thir- teen century, in the "Oita Imperialis" of Gervase of Tilbury, a monk of Winton, to whom he presented his extravagant compilation. The fables of Gervase were transcribed by Helinandus the monk, in his "Universal Chronicle," and similar tales were related in the work of Neckham, "De Naturia Rerum," and in "The Seven Wise Masters." Such books supplied materials for the old French romances of "Virgilius," and the English "Lye of Virgilius," in which stories are told of miraculous palaces, wonderful legal laws and the like. Virgilius, the sorcerer of the middle ages, is identified and connected with the author of the Æneid, from several circumstances being related of the former. In the romances which actually occurred in the life of the poet, particularly his residence at Naples, and the loss of his inheritance, which he recovered by the favour of the emperor of Rome. It was also a common opinion in the fourteenth and fifteenth cen- turies, as appears from the writings of that age, that the Mantuan bard and the sorcerer were one and the same person. It is somewhat in the same spirit that a learned and ingenious writer of our own days seeks to convert the bard into a member of the Druid priesthood! (Higgins' Celtic Druids, p. 32.)

Donatus affirms, that, after Virgil had finished his education at Naples, he went to Rome, where his skill in the four sorts of animal stories, as appears from the writings of that age, that the Mantuan bard and the sorcerer were one and the same person. It is somewhat in the same spirit that a learned and ingenious writer of our own days seeks to convert the bard into a member of the Druid priesthood! (Higgins' Celtic Druids, p. 32.) Donatus affirms, that, after Virgil had finished his education at Naples, he went to Rome, where his skill in the four sorts of animal stories, as appears from the writings of that age, that the Mantuan bard and the sorcerer were one and the same person. It is somewhat in the same spirit that a learned and ingenious writer of our own days seeks to convert the bard into a member of the Druid priesthood! (Higgins' Celtic Druids, p. 32.)
Tales.—It does not seem certain, or even probable, that Virgil went at all to Rome from Naples. It rather appears that he returned to his native country, and to the charge of his paternal farm; and if, as is generally supposed, he intended to describe his own life and character under the person of Tityrus, in the first canto, it is certain that he did not visit Rome until after the battle of Philippi, and consequently the lands among the soldiers. Some poems which are still extant, as the Culex and Ciris, were at one time believed to have been the fruits of his genius at this early period. We are also told, that, in the warmth of his earliest youth, he had formed the bold design of writing, in imitation of Ennius, a poem on the wars of Rome, but that he was deterred from proceeding by a fear of the vengeance of his names, which wounded the delicacy of his ear. It is probable, at least, that, previous to the composition of his Eclogues, he had made imperfect attempts in the higher departments of heroic poetry. (Eclog., 6, 3.)—The battle of Mutina (Modena) was fought in 711 A.U.C., and the triumvirate having been shortly afterward formed, Asinus Pollio was appointed, on the part of Antony, to the command of the district in which the farm of Virgil lay. So much is known of this Pollio, who was a soldier of the republican name, as to make his elevation enormous consequences from the inhabitants of the territory intrusted to his care; and, in some instances, when the pecuniary supplies failed, he drove the ancient colonists from their lands, and settled his veterans in their place. He was fond, however, of poetry, and was a generous protector of literary man. The rising genius of Virgil had now begun to manifest itself. His poetical talents and amiable manners recommended him to the favour of Pollio; and, so long as that chief continued in command of the Marian district, he was relieved from all exactation, and protected in the peaceable possession of his property. Residing constantly in the country, and captivated with the rural beauties of the Idyllia of Theocritus, Virgil early became ambitious of introducing this new species of poetry into his native land; and, accordingly, he seems to have bent his chief endeavours at this time to imitate and rival the sweet Sicilians. The eclogue entitled "Alecto," which was composed, we believe, about this period, and which is supposed to have been his first pastoral production, and to have been written in 711, the year in which Pollio came to assume the military command of the territory where our poet resided. It was quickly followed by the "Daphnis" and "Silenus," as also by the "Palemon," in which he boasts of the favour of Pollio, and expresses his gratitude for the favour that he had extended to him. But the tranquility he enjoyed under the protection of Pollio was of short duration. Previously to the battle of Philippi, the triumvirs had promised to their soldiers the lands belonging to some of the richest towns in the empire. Augustus returned to Italy in 712, after his victory at Philippi, and found it necessary, in order to satisfy their claims, to commence a division of lands in Italy on a more extensive scale even than he had intended. In this division, the little considerable territories which had been originally and legally the patrimony of the state. But extensive tracts of this species of public property had, from time to time, been appropriated by corporations and individuals, who were unwilling to be disturbed in their possessions. Julius Caesar had set the example of reclaiming these farms and colonizing them with his soldiers. His successor now undertook a similar but more extensive distribution. In the middle and south of Italy, however, the lands were chiefly private inheritance, or had been so long retained by individuals that a claim had been acquired to them by length of possession; but in the north of Italy they were for the most part public property, on which colonists had been more recently settled. These were the lands first assigned to the soldiers, and the district to the north of the Po was, in consequence, chiefly affected by the partition. Cremona had, unfortunately, espoused the cause of Brutus, and thus peculiarly incurred the vengeance of the victorious party. But as its territory was not found adequate to contain the veteran soldiers of the triumvirs, among whom it had been divided, the deficiency was supplied from the neighbouring district of Mantua, in which the farm of Virgil was situated. The district which this oppressive measure created in Italy, being augmented by the artifices of Fulvia and Lucius Antony, the wife and brother of the triumvir, gave rise to the war which terminated favourably for Augustus with the capture of Perugia. Pollio, being a zealous partisan of Antony, and supporting the party of his brother and Fulvia, who unsuccessfully opposed the division of the lands, it probably no longer in his power to protect Virgil from such incursions of soldiers. He was dispossessed under circumstances of peculiar violence, and which even threatened danger to his personal safety; being compelled on one occasion to escape the fury of the centurion Arrius by swimming over the Miscus. He had the good fortune, however, to obtain the favour of Alpnenus Varus, with whom he had studied philosophy at Na破les, under whose protection he either succeeded Pollio in the command of the district, or was appointed by Augustus to superintend in that quarter the division of the lands. Under his protection Virgil twice repaired to Rome, where he was received, not only by Mecenas, but by Augustus himself, from whom he procured the restoration of the property of which he had been deprived. This happened in the commencement of the year 714; and during the course of that season, and the following, he was again the object of the protection of his great friend, and was supplied with a library, which his patron had accumulated. Virgil had now spent three years in the composition of pastoral poetry and in constant residence on his farm, except during the two journeys to Rome which he was compelled to undertake for its preservation. In his pasturals, however, though written in his native fields, we do not find many delineations of Mantuan scenery, or very frequent allusions to the Miscus and its borders. His great object was to enrich his native language with a species of poetry unknown in Latium, and to promote his success, he chose Theocritus as his model. With few attempts at invention, he pretended to little more than the merit of being the first Roman who had imitated the Sicilian poet, and hence he did not hesitate to borrow, not only the sentiments and images, but even the very words of his master.—The situation of Virgil's residence was now low and humbler than it had been in the former sessions of the year. His delicate constitution, and the pulmonary complaint with which he was affected, induced him, about the year 714 or 715, when he had reached the age of thirty, to seek a warmer sky. To this change, it may be conjectured, he was farther instigated by his increasing celebrity and the extension of his poetic fame. His countrymen were captivated by the perfect novelty of pastoral composition, and by the successful boldness with which Virgil had transferred the sweet Sicilian strain to a language which, before his attempt, must have appeared, from its hardness and severity, but little adapted to be the vehicle for the softness of rural description or the delicacy of amorous sentiment, and which had scarcely yet been polished or refined to the susceptibility of such smooth
numbers as the pastoral muse demanded. The
Bucolics accordingly were relished and admired by all
classes of his contemporaries. So universal was their
popularity, that the philosophic eclogue of Silenus,
soon after its composition, was publicly recited in
the theatre by Cytheris, a celebrated actress of verses.—
On quitting his paternal fields, Virgil first proceeded
to the capital. Here his private fortune was consid-
erably augmented by the liberality of Maecenas (Mar-
tius, in order at and following the theatre he proceeded
with his patron, that we find him, soon after his ar-
ival at Rome, introducing Horace to the notice of the
minister (Hor., Sat., 1, 6), and attending him, along
with that poet, on a political mission to Brandusium.
Nor did Virgil enjoy less favour with the emperor him-
self than with his minister. It is said that he never
asked anything of Augustus that was refused; and Do-
natus even affirms, though, it must be confessed, with-
out the least probability, that Augustus consulted him
with regard to his resignation of the government, as
a sort of umpire between Agrippa and Maecenas.
It was probably during this period of favour with
the emperor and his minister that Virgil contributed
the verses in celebration of the deity who presided
over the gardens of Maecenas; and wrote, though without
acknowledging it, that well-known distich in honour
of Augustus,

*Nocte plutei tota; redempt spectacula mane;*

*Divisium imperium cum Joae Caesar habet.*

The story goes on to relate, that Bathyllus, a con-
temptible poet of the day, claimed these verses as his
own, and was liberally rewarded. Vexed at the im-
posture, Virgil again wrote the verses in question near
the palace, and under them,

*Hos ego versiculos fece, tulit alter honores;*

*with the beginning of another line in these words,*

*Si vos non vosis,*

four times repeated. Augustus wished the lines to be
finished; Bathyllus seemed unable; and Virgil at last,
by completing the stanza in the following order,

*Si vos non vosis nudicatias axes;*

*Si vos non vosis vellera fertis ones;*

*Si vos non vosis mellificatias apes;*

*Si vos non vosis fertis aratra boves;*

proved himself to be the author of the distich, and the
poetical usurper became the sport of ridicule in Rome.
Virgil inhabited a house on the Esquiline Hill, which was fur-
nished with an excellent library, and was pleasantly
situated near the gardens of Maecenas. The supposed
site, and even ruins of this mansion, were long shown
to modern travellers.—Yet, however enviable was
Virgil's present lot, the bustle and luxury of an im-
mensely capital were little suited to his taste; to his
early habits, or to the delicacy of his constitution,
while the obscurity and attention he met with were
strongly repugnant to the retiring modesty of his dis-
position. Such was the popularity which he derived
from his general character and talents, that, on one
occasion, when some of his verses were recited in
the theatre, the whole audience rose to salute Virgil, who
was present, with the same respect which they would
have paid to the emperor. (De Caus. corr. eloq., c.
13.) And so great was the annoyance which he fell
on being gazed at and followed in the streets of Rome,
that he sought shelter, it is said, in the nearest shops
or alleys from public observation.—At the period
when Virgil enjoyed so much honour and popularity
in the capital, Naples was a favourite retreat of illust-
rious and literary men. Thither Virgil retired about
A.U.C. 717, when in the thirty-third year of his age;
and he continued, during the remainder of his life, to
dwell chiefly in that city, or at a delightful villa which
he possessed in the Campania Felix, in the neighbour-
hood of Nola, ten miles east of Naples, leading a life
which may be considered as happy when compared
with the fate of the other great epic poets, Homer,
Tasso, and Milton, in whom the mind or the vision
was darkened. About the time when he first went to
reside at Naples, he commenced his Georgics by or-
der of Maecenas, and continued, for the seven follow-
ing years, closely occupied with the composition of
that inimitable poem. During this long period he was
accustomed to dictate a number of verses in the morn-
ing, and to spend the rest of the day in revising and
correcting them, or reducing them to a smaller num-
ber, comparing himself in this respect to a she-bear,
which licks her misshapen offspring into proper form
and proportion. (Aul. Gell., N. A., 17, 10.) Little
is known concerning the other circumstances of Vir-
gil's life during the years in which he was employed in
perfecting his Georgics. He had a dispute, it is said,
with his neighbours, the inhabitants of Nola, from
whom he requested permission to convey a small
stream of water into his villa, which was adjacent to
their town. The citizens would not grant the favour,
and the offended poet enraged the name of Nola from
the following lines of his Georgics,

*Talem dites arat Capua, at Vicina Vesevo
Nola jugo—*

and substituted the word ora instead of the obnoxious
city. (Aul. Gell., N. A., 7, 20.) The story, howev-
er, is entitled to no credit. (Vid. Nola.)—The genius
of Virgil, being attended with some degree of dif-
fidence, seconded by others, was gained by a manifest
expression of confidence which at length emboldened him
to attempt epic poetry. He had begun his experience
in verse with humble efforts in the pastoral line; though
even there he beheld his ardent Muse frequently
bursting the barriers by which she ought naturally to
have been restrained. He next undertook the bolder
and wider topic of history; and it was not till he
had finished this subject with unrivalled success that
he presumed to attempt even the Iliad. He had
occupied him till his death, was commenced in 724,
the same year in which he had completed his Georg-
ics. After he had been engaged for some time in its
composition, the greatest curiosity and interest
concerning it began to be felt at Rome. A work, it
was generally believed, was in progress, which would
eclipse the fame of the Iliad (Propert., 2, 34, 66); and
the passage which does express the fact is of Eneas.
Eneas appears to have been seen by Propertius. Augustus
himself at length became desirous of reading the
poem so far as it had been carried; and, in the year
729, while absent from Rome on a military expedition
against the Cantabrians, he wrote to the author from
the extremity of his empire, entreating him to be al-
lowed a perusal of it. Macrobius has preserved one
of Virgil's answers to Augustus: "I have of late re-
ceived from you frequent letters. With regard to my
Eneas, if by Hercules, it were worth your listening
to, I would willingly send it. But so vast is the un-
derstanding, that I almost appear to myself to have com-
mented such a work from some defect in judgment or
understanding; especially since, as you know, other
and far higher studies are required for such a perform-
ance." (Sat., 1, 24.)—Prevailed on, at length, by
these importunities, Virgil, about a year after the re-
turn of Augustus, returned to him the sixth book, in
presence of his sister Octavia, who had recently lost
her only son Marcellus, the darling of Rome, and the
adopted child of Augustus. The poet, probably, in
the prospect of this recitation, had inserted the affect-
Virgil and the death of the beloved youth:

"O nate, ingenti lactum ne quaere tuorum," &c.

But he had skilfully suppressed the name of Marcellus till he came to the line:

"Tu Marcellus eris—manibus date littia plenis."

It may well be believed that the widowed mother of Marcellus swooned away at the pithes of these verses, which no one, even at this day, can read unmoved. Virgil is said to have received from the afflicted parent 10,000 sesterces (dena sesteria) for each verse of this celebrated passage. It was much the practice among the Roman poets to read their productions aloud; and Virgil is said to have recited his verses with wonderful sweetness and propriety of articulation. During the composition of the Aeneid, he occasionally repeated portions of it to those friends whose criticisms he thought might improve the passage he rehearsed. Eros, his librarian and freedman, used to relate, when far advanced in life, that, in the course of his reciting, his master had extemporarily filled up two hemistichs; the one was "Museum Aediden," to which he immediately added, "qua non praeistentior alter," and the other the half verse following, "Are cirea viros," to which, as if struck by poetic inspiration, he subjoined, "Martemque accendere canto," and he immediately ordered his amanuensis to insert these additions in their proper places in the manuscript of his poem.—Having brought the Aeneid to a conclusion, but not the perfection which he wished to bestow upon it, Virgil, contrary to the advice and wish of his friends, resolved to travel into Greece, that he might correct and polish this great production at leisure in that land of poetic imagination. It was on undertaking this voyage that Horace addressed to him the affectionate ode beginning

"Sic te Diva potens Cypiri," &c. (1, 3).

Virgil proceeded directly to Athens, where he commenced the revision of his epic poem, and added the magnificent introduction to the third book of the Georgics. He had been thus engaged for some months at Athens, when Augustus arrived at that city, on his return to Italy, from a progress through his eastern dominions. When he embarked for Greece, it had been the intention of Virgil to have spent three years in that country in the correction of his poem; after which he proposed to pass his days in his native country of Mantua, and devote the rest of his life to the study of philosophy, or to the composition of some great historical poem. The arrival of Augustus, however, induced him to shorten his stay, and to embrace the opportunity of returning to Italy in the retinue of the emperor. But the hand of death was already upon him. From his youth he had been of a delicate constitution; and, as he advanced, he was afflicted with frequent headaches, asthma, and spitting of blood. Even the climate of Naples could not preserve him from frequent attacks of the maladies, and their worst symptoms had increased during his residence in Greece. The vessel in which he embarked with the emperor touched at Megara, where he was seized with great debility and languor. When he again went on board, his distemper was so increased by the motion and agitation of the vessel, that he expired a few days after he had landed at Brundisium, on the southeastern coast of Italy. His death happened at Naples, on the 19th of March, 1911, year of his age. When he felt his near approach, he ordered his friends Varus and Plotius Tucca, who were then with him, to burn the Aeneid as an imperfect poem. The ancient classical authorities only say that Virgil commanded the Aeneid to be burned. (Plin. 7, 30. — Aud. Gell., N. A., 17, 10. — Maecob., Sat., 1, 24.)

Donatus says that he had ordered it to be burned, but adds, that on Varus and Tucca representing to him that Augustus would not permit it to be destroyed, he committed it to them for revision and correction. Moreri relates the story as it is told by Macrobius, Aulus Gellius, and Pliny; and Bayle, as usual, reproduces him because he has not given it according to the version of Donatus. Augustus, however, is understood, in an interposed extract, to have said, such a thing would at once confer immortality on the poet and on the prince who patronised him. It was accordingly intrusted to Varus and Tucca, with a power to revise and retrench, but with a charge that they should make no additions; a command which they so strictly observed as not to complete even the hemistichs which had been left imperfect. They are said, however, to have strung out twenty-two verses from the second book, where Æneas, perceiving Helen amid the moldering ruins of Troy, intends to slay her, till his design is prevented by his goddess mother. (Consult Cairens. Œuvres de Virgile; Dissert. sur le 2d livre de l'Aeneide, note 10.) These lines, accordingly, were wanting in many of the ancient manuscripts, but they have been subsequently restored to their place. There was also a report long current, that Virgil had made some change in the subject and arrangement of two of the books, by transposing one or at least of the second and third, the latter having stood first in the original manuscript. According to some accounts, the four lines "Ille ego quondam," &c., which are still prefixed to the Æneid in many editions, were expunged by Varus and Tucca; but, according to others, they never were written by Virgil, and are not better than an interpolation of the middle ages.—Virgil bequeathed the greater part of his estate to a brother. The remainder was divided among his patron Maecenas, and his friends Varus and Tucca. Before his death, he had also commanded that his bones should be carried to Naples, where he had lived so long and so happily. This order was fulfilled, under charge of Augustus himself. According to the most ancient tradition and the most commonly received opinion, the tomb of Virgil lies about two miles to the north of Naples, on the slope of the hill of Pausilippo, and over the entrance to the grotto or subterraneous passage which has been cut through its ridge, on the road leading from Naples to Puteoli. Ouvrierus and Addison, indeed, have placed the tomb on the other side of Naples, near the foot of Mount Vesuvius; but the other opinion is based upon the common tradition of the country, and accords with the belief of Petrarch, Sannazzarius, and Bembo: it may still be cherished, therefore, by the traveller who climbs the hill of Pausilippo, and he may still think that he hails the shade of Virgil on the spot where his ashes repose. Notwithstanding, however, the veneration which the Romans entertained for the works of Virgil, his sepulchre was neglected before the time of Martial, who declares that Silius Italicus first restored its long-forgotten honours. What is at present called the tomb, is in the form of a small and ill-built building, placed on a sort of platform, near the brow of a precipice, on one side, and on the other sheltered by a superincumbent rock. Half a century ago, when More travelled in Italy, an ancient laurel (a shoot, perhaps, of the same which Petrarch had planted) overhung the simple edifice. (More's Travels, Letter 65.) Within the low vaulted cell was once placed the urn supposed to contain the ashes of Virgil. Petro Stefano, who lived in the thirteenth century, mentions that he had seen the urn, with the epitaph inscribed on it, which is said to have been written by the poet himself a few moments before his death:

"Mantua me genuit; Calabris rurum; sectat num
Parthenope, Oscini passua, rura, ductis."
It was a common practice among the Latin poets to write their own epitaphs; and, if the above distich be the production of Virgil himself, it is eminently expressive of that modesty which is universally allowed to have been one of the many amiable features of his character, and which is by no means observable in the epitaphs composed for themselves by Ennius and Navius. In its pious justice, however, it is to be observed, that Robert of Anjou, apprehensive for the safety of such a relic during the civil wars, had the urn conveyed to Castel Nuovo. It seems that so much care was taken, that it was concealed too well to be ever afterward discovered.—We have seen that, at Rome, Virgil avoided all public honours, and was disconcerted by marks of general admiration. But, though he loved retirement and contemplation; though he was of a thoughtful and somewhat melancholy temper; and though he felt not that anxiety for paltry distinctions or trivial testimonies of honour which harassed the morbid mind of Tasso, it seems to be a mistaken idea that he was indifferent to glory, as Donatus and Asconius Pedianus have asserted. He was evidently fond of fame, and desirous to obtain the applause of his contemporaries. And while he shunned the vulgar gaze and shrank from the pressure of the multitude, he was wont to give expression to that proud exultation of spirit, that consciousness of high intellectual endowments and strong imaginative powers, which announced to him that he was called to immortality, and destined to confer immortality on his country.—It has already been remarked, that, in his pastoral poetry, Virgil was the professed imitator of Theocritus: his images, indeed, are all Greek, and his scenery such as he found painted in the pages of the Sicilian poet, with what he himself observed in the Italy of the Mincius Ves. Yet, so great is the imitation and resemblance, the productions of the two poets are widely different. Thus, the delineations of character in Theocritus are more varied and lively. His Idyls exhibit a gallery of portraits which entertain by its variety or delights by its truth; and in which every rural figure is so distinctly drawn, that it stands out, as it were, from the canvass, in a defined and certain form. But that want of discrimination of characters, and the confusion of styles, which has so frequently occurred in the Æneid, is also observable in the pastorals of Virgil. His Thyrsis, Daphnis, and Menalca resemble each other. No shepherd is distinguished by any peculiar disposition or humour; they all speak from the lips of the poet, and their dialogue is modelled by the standard of his own elegant mind. A difference is likewise observable in the scenes and descriptions. Those of Theocritus possess that minuteness and accuracy so conducing to poetic truth and reality; Virgil’s representations are more general, and bring only vague images before the fancy. In the Idyls of Theocritus we find a rural, romantic wildness of thought, and the most pleasing descriptions of simple, undisturbed nature, heightened by the charm of the Doric dialect. But Virgil, in borrowing his images and sentiments, has seldom drawn an idea from his Sicilian master without beautifying it by the lustre of his language. The chief merit, however, of Virgil’s imitations lies in his judicious selections. Theocritus’s sketches of manners are often coarse and unpleasing; and his most beautiful descriptions are almost always too crowded. But Virgil refined whatever was gross, and threw aside all that was overloaded or superfluous. He made his shepherds more cultivated than even those of his own time. He represented them with some of the features which are supposed to have belonged to his own country. He has preserved these in his Æneid, and has varied them when they were possessed of great flocks and herds, and had acquired a knowledge of astronomy, cosmogony, and music; when the pastoral life, in short, appeared perfect, and nature had lavished all her stores to render the shepherd happy.——Thus much for the pastoral poetry of Virgil. We come next to the Georgics. This poem, which is in four books, derives its title from the Greek Γεωργίκα, which last is compounded of γῆς (γῆ), "the earth," and ἔργον, "labor." The subject is husbandry in general. The poem of the Georgics is as remarkable for majesty and magnificence of diction, as the Eclogues are for sweetness and harmony of versification. It is the most complete, elaborately finished, and composed in the Latin, or perhaps in any language; and, though the choice of subject and the situations afforded less expectation of success than the pastorals, so much has been achieved by art and genius, that the author has chiefly exhibited himself as a poet on topics where it was difficult to appear as such. Rome, from its local situation, was not well adapted for commerce; and, from the time of Romulus to the Camp of Cæsar, agriculture had been the chief care of the Romans. Its operations were conducted by the greatest statesmen, and its precepts inculcated by the profoundest scholars. The long continuance, however, and fatal ravages of the civil wars, had now occasioned an almost general desolation. Italy was, in a great measure, depopulated of its husbandmen. The soldiers, by whom the lands were newly occupied, had too long ravished the fields in their turn to think of cultivating them; and, in consequence of the pressing want, which was the most natural consequence of the revolution in the forms of government which had nearly ensued. (Georg., I, 505.) In these circumstances, Mæceenas resolved, if possible, to revive the decayed spirit of agriculture, to recall the lost habits of peaceful industry, and to make rural improvement, as it had been in former times, the prevailing amusement among the great: and he wisely judged, that no method was so likely to contribute to these important objects as a recommendation of agriculture by all the arts of persuasion. Agriculture, accordingly, Virgil commenced his Georgics, which were thus, in some degree, undertaken from a political motive, and with a view to promote the welfare of his country; and, as in the eclogue which announces the return of the golden age, he strove to render his woods worthy of a consul, so, in his Georgics, he studied to make his fields deserving of Mæceenas and Augustus. But, though written with a patriotic object, the author has, for the sake of his great work, which is a subject peculiarly Roman, the imitative spirit of Latin poetry still prevailed, and the author could not avoid recurring, even in his Georgics, to a Grecian model. A few verses on the signs and prognostics of the weather have been translated from the Phenomena of Aratus. But the Works and Days of Hesiod are the pattern which he has chiefly held in view. In reference to his imitation of this model, he himself styles his Georgics an Aesopian poem; and he appears, indeed, to have been a sincere admirer of the ancient bard. In the Works and Days, Hesiod, after a description of the successive ages of the world, points out the means for procuring an honest livelihood. Of these the proper exercise of agriculture is one of the principal. He accordingly gives directions for the labour of the field, and enumerates those days on which the various operations of husbandry ought to be performed. It is chiefly, then, in the first and second books of the Georgics (where Virgil discourses on tillage and planting) that he has imitated the Works and Days. Hesiod has not treated of the breeding of cattle or care of bees, which form the subjects of the third and fourth books of the Roman poet. But in the former books he has copied his predecessor in some of his most minute precepts of agriculture, as well as in his instructions regarding the superstitions and burstane of days. Virgil’s arrangement of his topics is at once the most natural, and that which best carries his reader along with him. He begins with the preparation of the inert mass of earth and the sowing of grain, which form the most intractable part of his sub-
jct. Then he discloses to our view a more open prospect and a wider horizon, leading us among the rich and diversified scenes of nature, the shades of vineyards, and blossoms of orchards. He next presents us with pictures of joyous and animated existence. The useful herds, the courageous horse, the Nomades of Africa and Scythia pass before us, and the fancy is excited by images of the whole moving existence. His last length concludes with those insects which have formed a part of the life of society, and which, in their nature, laws, and government, seem most nearly to approach the human species. Many of Virgil's rules, particularly those concerning the care of cattle, have been taken from the works of the ancient agricultural writers of his own country. Seneca, indeed, talks lightly of the accuracy and value of his precepts. But Columella speaks of him as an agricultural oracle ("serissimo vati felici oraculo crediderimus"); and all modern travellers, who have had occasion to examine the mode of agriculture even at this day practised in Italy, bear testimony to his exactness in the minutest particulars. His precepts of the most sordid and trivial descriptions are delivered with dignity, and the most common observations have received novelty or importance by poetic embellishment. It is thus that he contives, by converting rules into images, to give a picturesque concept of agriculture. We see the most trivial things, to scatter roses amid his fields, and to cover, as it were, with verdure the thorns and briers of agricultural discussion. This talent of expressing with elegance what is trilling and in itself little attractive, is one of the most difficult arts of poetry, and no one was better acquainted with it than Virgil. But, though he has incalculately precepts with as much clearness, elegance, and dignity as the nature of the subject admits, and in a style which has greatly improved and to Heisid, still it is not on these precepts that the chief beauty of the Georgics depends. With the various discussions on corn, vines, cattle, and bees, he has interwoven every philosophical, moral, or mythological episode on which he could with propriety seize. In all didactic poems the episodes are the chief embellishments. The noblest passages of Lucretius are those in which he so sincerely paints the charms of virtue, and the delights of temper and content in the life of a sage; the noblest verses of Virgil are his invitations to the gods, his addresses to Augustus, his account of the prodigies before the death of Caesar, and his description of Italy. How beautiful and refreshing are his praises of a country life! how solemn and majestic his encomiums on the sage who had triumphed, as it were, over the powers of destiny; who had shot his ears to the murmurs of Acheron, and dispelled from his imagination those invisible and inaudible phantoms which wander on the other side of death! In these and many other passages, it is evident that Virgil contends with Lucretius, and strives hard to surpass him. There is a close resemblance in the topics on which these two poets descant, but a wide difference between them in tone and manner. Lucretius is more bold and simple than his successor, and displays more of the erida xix animi; but his outline is more grand, and we never find in Virgil any of those rugged verses or unpolished expressions which we so frequently encounter in Lucretius. In the theological parts, and those which relate to a state of future existence, Lucretius assumes, as it were, a tone of defiance, while Virgil is more calm, contemplative, and resigned. As the works of Virgil were never completely forgotten during the dark ages, or, at all events, were as the first classic productions which were illuminated to light or studied at the revival of literature, we find intimations of the Georgics in the earliest poets who appeared after that period. The "Rusticus" of Politian, "in Virgili Georgicorum narratione promuncta," is an abridgment of the subject of that poem, and several passages are nearly copied from it. Of other modern Latin poems which have been written in imitation of the Georgics, Vaniere's Pradium Rusticum approaches nearest to it in the subject; but it is a tedious and languid production. The Italian poem of Alaminus, in six books, entitled "Della Coltivazione," enlarges on the various topics discussed in the first three books of Virgil; while Rucellai, the countryman and contemporary of Alaminus, has, in his poem Le Api, nearly translated the fourth book, omitting, however, the fable of Aristaeus. Both these poems, in versi sciolti, are written with much elegance and purity of style, and contain many passages which might bear a comparison with the most celebrated parts of that immortal work on which they were modelled. A few lines in the fourth book have also given to Rapin the hint for his Latin poem, Horiti; but, as Addison has remarked, "the man who contrives, in the little platform of a garden which Virgil gives us, than in all the spacious walks and waterworks of Rapin." The same subject has been enlarged on by Delille, who was a translator and enthusiastic admirer of Virgil, and has borrowed from him some of the finest passages, both in Les Jardins, and his other poem, L'Homme des Champs, which may be considered as the French Georgics. The following sonnet is to the Latin poem. St. Lambert, in his Saisons, and Roucher, in his Mois, have also frequently availed themselves of the Georgics. It is impossible here to point out particular intimations; but it may be observed of these poems in general, that they are vague and diffuse, and never reach that stagnant brevity of style by which their great original is distinguished. It has been remarked by Wharton, that, of all our English poets, "it is Dryden more than any other who has imitated the Georgics, to us the fullest idea of Virgil's manner, whom he has exactly followed in consistence of style, in throwing in frequent moral reflections, in varying the method of giving his precepts, in his digressions, and in his happy address in returning again to his subject; in his knowledge, and love of philosophy, medicine, agriculture, and antiquity, and in a certain primeval simplicity of manners, which is so conspicuous in Virgil. But no English poet is so much indebted to Virgil for his fame as Thomson. In his Seasons he sometimes assembles together different passages from the Georgics, and sometimes scatters verses belonging to the same passage through different parts of his own production, but at other times he translates straightforward. In his Spring, though Lucretius has contributed a share, he has closely imitated from Virgil the description of the golden age, and the desires which the early seasons excite among the brute creation. From the same source he has borrowed, in his Summer, many circumstances of the thunder-storm, and the panegyric on Great Britain, which is parodied from the praises of Italy. The eulogy which he introduces in his Autumn on a philosophical life may be cited as an example of the closeness with which, on some occasions, he imitates the Latin poet. The Æneid next claims our attention; the subject of which is the settlement of the Trojans in Italy. This production belongs to a nobler class of poetry than the Georgics, and is, perhaps, equally perfect in its kind. It ranks, indeed, in the very highest order, and it was in this exalted species that Virgil was most fitted to excel. Undisturbed by excess of passion, and never hurried away by the current of ideas, he calmly consigned to immortal verse his wishes, which his ardour had first painted as lovely, and which his understanding had afterward approved. The extent, too, and depth of the design proposed in the Æneid, rendered this subjection to the judgment indispensable. It would be absurd to suppose, with some critics, that Virgil intended to give instruction to princes in the art. 1887
of settling colonies (Caton, Œuvres de Virgile, vol. 3, p. 486), or to supply Augustus with political rules for the government and legislation of a great empire; but he evidently designed, not merely to deduce the descent of Augustus and the Romans from Æneas and his companions, but, by creating a perfect character in his hero, to shadow out the eminent qualities of his imperial patron; to recommend his virtues to his countrymen, who could readily apply to the benevolent portrait; and perhaps to suggest, that he was the ruler of the world announced of old by the prophecies and oracles of the Saturnian land. (Æn. 6, 789, seqq.)

No one who has read the Æneid, and studied the historical character of Augustus, or the early events of his reign, can doubt that Æneas is an allegorical representation of that emperor. —The chief objection which critics in all ages have urged against the Æneid, or, at least, against the poetical character of its author, is the defect in what forms the most essential quality of a poet, originality and the power of invention. It has never, indeed, been denied that he possessed a species of invention, if it may be so called, which consists in placing ideas that have been preoccupied in a new light, or presenting assemblages, which have been already exhibited, in a new point of view. Nor has it been disputed that he often succeeds in bestowing on them a new beauty by his skill in the direction of his feet, and by that poetical touch which transmutes whatever it lights on into gold. But it is alleged that he has contrived few incidents, and opened up no new veins of thought. It is well known that the Roman dramatic writers, instead of contriving plots of their own, translated the master-pieces of Sophocles, Euripides, and Menander. The same imitative spirit naturally enough prevailed in the first attempts at Epic poetry. When any beautiful model exists in an art, it is natural that it should be adopted, and for so that, as the Æneid, was imitated, it was natural for Virgil to adopt it also. The mind of Virgil also led him to imitation. His excellence lay in the propriety, beauty, and majesty of his poetical character, in his judicious contrivance of composition, his correctness of drawing, his purity of taste, his artful adaptation of the conceptions of others to his own purposes, and his skill in the combination of materials. Accordingly, when Virgil first applied himself to frame a poem, which might celebrate his imperial master, and emulate the productions of Greece, in a department of poetry wherein he was as yet univalved, he first naturally bent a reverent eye on Homer; and, though he differed widely from his Grecian master in the qualities of his mind and genius, he became his most strict and devoted disciple. The Latin dramatists, in preparing their pieces for the stage, had frequently compounded them of the plots of two Greek plays, melted, as it were, into one; and thus compensated for the want of invention and severe simplicity of composition by greater richness and variety of incident. From their example, Virgil comprehended in his plan the arguments both of the Iliad and Odyssey: the one serving him as a guide for the wanderings and adventures of his hero previous to the landing in Latium, and the other as a model for the wars which he sustained in Italy, to gain his destined bride Lavinia. He blended, without the slightest defects of Homer, as lights to gaze at and as rocks to be shunned, with the judgment of ages on both, as a chart which might conduct him to yet greater perfection.

In the Iliad, however, there was this superior-
transformation into the bird called Ciris, from which the poem derives its title. That part which is introductory to the complaint of Scylla is not very clear in language or lofty in point of conception. The lamentation itself is as good as might be expected, considering the position in which it was uttered, Minos having, on his voyage home, fastened her to the side of his vessel, and thus dragged her along through the sea. Some of the lines are palpable imitations of the soliloquy of Ariadne in Catullus. Perhaps the best passage is one in which that poet has also been closely imitated, describing the effects of unceasing love in the breast of Scylla. From the Ciris, Spenser, who had translated the Culex, imitated a long passage, which constitutes part of the Legend of Britomart, in the third book of the Fairy Queen. —The Moretum would certainly be a curious and interesting production, could it be authenticated as the work of Virgil or Septimius Serenus, to whom Wernadoff has ascribed it, and who flourished at Rome during the reigns of the Flavian family. Its subject is one concerning which few relics have descended to us from antiquity. It gives an account of the occupations and daily life of an Italian peasant; and, so far as it goes, everything is related with the greatest minuteness; but the employment only of the morning are recorded. The peasant Stimulus rises with the dawn. He gathers together the ashes of the yesterday's fire. He then bakes some bread; and, with the assistance of an African female, who was the nurse of Circe, he proceeds to the field, now called Moretum, which gives name to the poem, and was chiefly composed of herbs culled from his garden. This introduces a curious description of a peasant's kitchen-garden, and the sort of plants which were reared in it. The poem concludes with the peasant's yoking his oxen, and beginning to plough his field. It is probable, however, that what is now extant is only the introduction of the Moretum, or the first of a series of rustic eclogues, in which the avocations of a peasant were described in succession through the whole day. The Cena merely contains an invitation from an hostess, who was a native of Syria, to pass the hours merrily in a place of entertainment which she kept beyond the gates of Rome; but a good-humoured drinking-song by the majestic author of the Georgics and Æneid is in itself a curious poetical entertainment. This eclogue, which first appeared from the Leipzic press in 1767—68, 4 vols. 8vo. It has been often reprinted: the most complete is that with the additions of Wagner, Lips., 1831. The edition of Forbiger, Lips., 1826—9, 3 vols. 8vo, is also a very useful one. (Dunlop's Roman Literature, vol. 3, p. 68, &c.)

Virgilia, a daughter of the centurion L. Virginibus. The maiden had betrothed to L. Licinius, one of the tribunes, and the author of the law known by his name. Her beauty, however, inflamed the passions of Appius Claudius, the decemvir, and he caused one of his clients, M. Claudius, to seize her as his slave, intending in this manner to get the person of the damsel within his power. Intelligence was immediately sent to the camp to Virginius, who, obtaining leave of absence, hastened to Rome to protect his daughter. But in vain did he claim his child — indeed, the policy of the times, which vividly cast himself upon the mind of Appius, he cried, "On thee and on thy head be the curse of this innocent blood!" Appius ordered him to be seized, but in vain. Waving aloft the bloody knife, he burst through the multitude, flew to the gates, mounted a horse, and spurred headlong to the camp near Tusculum. The wild and frantic aspect of Virginius, his attire stained with blood, and the bloody knife still held convulsively in his grasp, instantly drew a crowd of the soldiery around him. In brief but burning terms he told his tale, and called aloud for vengeance. One thrilling sentiment of sympathizing indignation filled every bosom; they called to arms, plucked up their standards, and, marching to Rome, seized upon the Aventine. The army near Fidenæ caught a similar spirit, having received information of the tragic drama which was then being played. They, in like manner, threw off the authority of their commanders, chose military tribunes to lead them, and, hastening to Rome, joined their brethren on the Aventine Hill. In the city all was tumult and terror. The decemvirs were unable to make head against the excited multitude, and the senate itself felt its power insubstantial to allay the tempest. They began to treat with the people and the army, yet with dilatoriness, hoping the ferment would soon subside, and they might still retain their power. But the people were in earnest. Leaving a strong body to defend the Aventine for the present, they marched in military array through the city, and once more posted themselves on the sacred mount, followed by vast numbers of the plebeian party, men, women, and children. Then were the patricians compelled to yield, and the decemvirs resigned. (Vid. Appius, and Virginius.)

Virginius, the father of Virginia, made tribute of the people after the affair of his daughter. (Vid. Virginia.)

Viriditus, a shepherd of Latium, a hunter, a robber, and finally a military hero, almost unrivalled in fertility of resources under defeat, skill in the conduct of his forces, and courage in the hour of battle. Like the guerrilla leaders of modern times, he cultivated how to avail himself of the wild chivalry of his countrymen, and the almost impenetrable fastnesses of his country; but, superior to them, he was equally able to guide a troop and to marshal an army. Six years did he maintain the contest; and at length the consul Cæpio, unable to subdue him in the field, procured his assassination. The Latiansians, deprived of their brave leader, were soon afterward completely subdued, B.C. 129. (Flor., I. 7.—Val. Max. 6, 4.)

Vistula, a river falling into the Baltic, the eastern boundary of ancient Germany, now the Waser, and falling into the German Ocean. (Vell. Pater. 2, 105.—Tac., Ann. 1, 70.)

Vista, a river falling into the Baltic, the eastern boundary of ancient Germany, now the Vistula, or, as the Germans write the word, the Weichsel. (Mela, 3, 4.—Plin., 4, 12.—Ann., Max., 32, 9.)

Vitellius, T. Aulus, a Roman emperor, who came after Otho. He was descended from one of the most illustrious families of Rome, and, as such, gained an easy admission to the palace of the emperors. The greatest part of his youth was spent at Caprea, where his willingness to gratify the most vicious propensities of Tiberius raised his father to the dignity of consul and governor of Syria. The applause he gained in this school of debauchery was too great, and after to induce Vitellius to change his life, the longer the emperor continued to hold himself the centres of the vortices of vice. Caligula was pleased with his skill in driving a chariot; Claudius loved him because he was a great gambler; and he recommended himself to the favours of Nero by wishing him to sing publicly in the crowded theatre. With such an insinuating disposition, it is not to be wondered that Vitellius became so great. He did not fall with his patrons, like the other emperors expected to raise him to greater honours, and to procure him fresh applause. He passed through all the offices of the state, and gained the soldiery by donations and liberal promises. He was at the head of the Roman legions in Germany when Otho was pro-
claimed emperor, and the exaltation of his rival was no sooner heard in the camp, than he was likewise invested with the purple by his soldiers. He accepted with pleasure the dangerous office, and instantly marched against Otho. Three battles were fought, and in all Vitellius was conquered. A fourth, however, in the plains between Mantua and Cremona, left him master of the field and of the Roman empire. Vitellius began his reign by endeavouring to conciliate the favour of the populace and the troops by large donations and expensive amusements. He then gave a loose rein to his own debasing appetites, of which the chief was absolute gluttony of the very grossest kind. It is almost incredible, though stated by historians, that in less than four months he expended on the mere luxuries of the table a sum equal to about seven millions sterling. This bloated and pampered ruler was soon regarded by all his subjects with contempt and disgust. The unrestrained licentiousness of the soldiery tended equally to make his reign hated and feared by all who were exposed to the insults and outrages in which they indulged. To supply the funds necessary for the maintenance of his excessive luxury, he resorted to the too prevalent custom of listening to the accusations of spies, and putting to death all such accused persons, that he might seize upon their property. While thus wallowing in the indulgence of the most degrading vices, Vitellius was startled by tidings of a very alarming nature. It had been sent to take the command of the army in Syria in the Jewish war, and had been detained there by the desperate resistance of the Jews, had sent his own son Titus to offer his allegiance to Galba. But, before his arrival, Galba was dead, and Otho and Vitellius were contending for the empire. Titus returned to his father for instructions; and, though Vespasian appealed ready to acknowledge Vitellius, his own troops were eager to raise him. The troops being on the length prevailed on to comply with the wishes of the army, he commenced his march towards Europe. The Illyrian and Pannonian armies immediately declared in his favour; and that of Ilyricum, under the command of Antonius Primus, crossed the Alps and marched towards Rome to dethrone Vitellius. The Vitellian army, commanded by Cestius, encountered that of Antonius near Cremona, but was defeated with great slaughter, and the necessitated his troops continued to advance on Rome, and crossed the passes of the Apennines while the emperor was hastening to secure them. Vitellius fled to Rome, which was soon invested by the victorious army of Antonius. An insurrectionary tumult arose in the city itself, during which the Capitol was burned to the ground, and Sabius, the brother of Vespasian, was killed. The troops of Antonius at length forced an entrance into the city, stormed the quarters of the pretorian guards, and put those turbulent bands to the sword. Vitellius endeavoured to conceal himself, but was discovered, dragged through the streets to the place of punishment for common malefactors, put to death in the most ignominious manner, and his mangled carcass cast into the Tiber amid the execrations of the multitude. Eight months and five days had this despicable wretch seemed to sway the sceptre of supreme dominion. He tried to atone for his crimes by the expenditure of his debauchery and crimes. (Hetherington's History of Rome, p. 185, seqq.)

VITRUVIUS POLLIO, M., a celebrated writer on architecture, born at Verona, and contemporary with Julius Caesar and Augustus. Some, as, for example, Newton, his English translator, have placed him in the reign of Titus, but they have been refuted by Hirt, the author of an elaborate history of ancient architecture (Geschichte der Baukunst bei den alten, Berlin, 1822, 2 vols. 4to), at the end of his dissertation on the Pantheon. (Compare Schöll, Hist. Lit. Rom., vol. 2, p. 189, seqq., in notis.) Under Augustus, who, during the civil contest, had employed him in the construction of military engines, he was appointed inspector of public buildings; and it was at the request of this prince, and availing himself as well of the Greek works already written on that subject, as of the result of his own experience, that Vitruvius published his work on Architecture. It is in ten books. The first seven treat of architecture, in its proper sense; the last three of hydraulic architecture, gymnastics, and mechanics. The style of Vitruvius is inconstant, concise, and sometimes obscure. Its obscurity, however, is owing to the fact of Vitruvius having been the first Roman who wrote on the subject of architecture, and his using, in consequence, new terms and forms of expression to convey the meaning which he intends. The best edition is that of Schneider, Lips., 1807, in 3 vols. 8vo. It is to be regretted that the plans which originally accompanied the work of Vitruvius are lost to us. (The following works may be consulted with advantage in relation to Vitruvius: Hist. Gesch. &c., already referred to.—Steiglitz, Archæologie der Baukunst, Weimar, 1801.—Genelli, Briefe über Vitruv, Braunschweig. and Berlin, 1802.—Rösch, Erläuterungen zu Vitruv's Baukunst, Stuttgart, 1802.—Steiglitz archdolog. unterhalt., 1 Aeth., Leipzig, 1820.)

ULPIA TRAJÀNA, a city of Dacia, the residence of Decebalus. It was taken by Trajan, and called by his name future times. He appointed a governor, who had charge of the province, named the city Sarmizegetusa. The modern name is Varhely or Verhel. (Inscript. ap. Grut.—Inscript. ap. Zamos. Analect. 5.)

ULPIANUS, I. a town of upper Moesia, said by Procopius to have been repaired and embellished by Justinian, and called Justiniana Secunda. It is now Giustianditi. (Procop., B. G., 4, 25.) II. One of the principal towns of Dacia, now perhaps Kődor or Ködor, a small town of those who have conferred the greatest honour on Roman jurisprudence, was born at Tyre. Under Septimius Severus he became the colleague of Sextus Pomponius in the judicial stations which he filled. He continued to discharge these same official duties under Caracalla and Macrinus, but was sent into exile after the death of Heliogabalus. Alexander Severus recalled him, made him one of his council, and treated him with the greatest respect. He died at the age of seventy-six. In this post he rendered himself odious to the soldiery, who complained that he wished to abridge the privileges which they had enjoyed under Heliogabalus. They frequently demanded his death; and, on one occasion, the emperor, to save him, covered him with his purple. Ulpius, however, was at last massacred by them, almost in the very arms of the emperor, to whom he had fled for refuge. The people took up arms to defend him, and a violent contest arose, which lasted during three days. Ulpius wrote the most works of any Roman jurist: he have the titles of more than thirty of his productions, among which was a digest in forty-eight books; a commentary on the Edictum Perpetuum, in eighty-three; and another on the Lex Julia Papia, in twenty. Of all these works there remain twenty-nine chapters of that entitled Regula Juris, and a few chapters of seven other books. They were all inserted in the abridgment of the Roman law made by order of Alaric. We have also his commentaries in Greek on Demosthenes. The heathen writers have concurred in their eulogy of Ulpius, but the Christians have reproached him for inciting the emperor to a persecution of their sect. (Schött, Hist. Lit. Rom., vol. 3, p. 286, seqq.—Bähr, Gesch. der Rom. Lit., p. 566.)

ULÉRBE, a small town of Latium, at no great distance, probably, from Velitrea. Its marshy situation is plainly alluded to by Cicero, who calls the inhabitants 'little frogs.' (Ep. ad Fam., 7, 18.) Horace
and Juvenal give us but a wretched idea of the place. (Horat., Ep. 1, 11, 2 ; Sat., Jan., 101.—Cramer's Ath. Anc. Poesy, 2, 85.)

Ulysses, a king of Ithaca, son of Anticlea and Laertes, or, according to some, of Sisyphus. (Vid. Sisyphus, and Anticlea.) He became, like the other princes of Greece, one of the suitors of Helen; but, as he despaired of success in his application on account of the great number of his competitors, he solicited the hand of Penelope, the daughter of Tereus. Tyndarus, the father of Helen, invited the fleet of Ulysses, as by him he was directed to choose one of his daughter's suitors without offending the others, and to bind them all by a solemn oath that they would unite together in protecting Helen if any violence were ever offered to her person. Ulysses had no sooner obtained the hand of Penelope than he returned to Ithaca, where his father resigned him the crown, and retired to peace and rural solitude. The abduction of Helen, however, by Paris, did not long permit him to remain in his kingdom; and as he was bound, in common with the rest, to defend her against every intruder, he was summoned to the war with the other princes of Greece. Pretending to be insane, not to leave his beloved Penelope, he yoked a horse and a bull together, and ploughed the seashore, where he sowed salt instead of grain. The artifice, however, was soon discovered; and Paris, and in place of burying the hall of Ulysses his infant son, Troilo, convinced the world that the father was not insane, who had the foresight to turn away the plough from the furrow, not to hurt his child. Ulysses was therefore obliged to go to war; but he did not forget him who had exposed his pretended insanity. (Vid. Palamedes.) During the Trojan war, the King of Ithaca distinguished himself by his prudence and sagacity as a warrior. For his means Achilles was discovered among the daughters of Lycomedes, king of Scyros (vid. Achilles); and Philoctetes was induced to abandon Lemnos, and to come to the Trojan war with the arrows of Hercules. (Vid. Philoctetes.) With the assistance of Diomedes he slew Rhesus, and destroyed many of the sleeping Thracians in the midst of their camp (vid. Rhesus, and Dolon); and, in conjunction with the Achaians, he undertook, his name, respecting the medium of Paris. (Vid. Paladium, where, however, other accounts are given.) These, as well as other services, obtained for him the armour of Achilles, which Ajax had disputed with him. After the Trojan war Ulysses embarked on board his ships to return to Greece, but he was exposed to a number of misfortunes before he reached his native country: he was thrown by the winds upon the coasts of Africa, and visited the country of the Locrithoi (vid. Lotus), and afterward that of the Cyclopes, where his adventure in the cave of Polyphemus occurred. (Vid. Cyclopes, and Polyphemus.) He came nex, in the course of his wanderings, to the island of Eolus, monarch of the winds, who gave him, tied up in a bag of ox-hide, all the winds which could obstruct his return to Ithaca; but the curiosity of his companions to know what the bag contained prevented them from opening it; and, when they had put it to sea, and had come towards Italy, they found a ship adrift, and hurried them back to Eolus; the king of which, judging, from what had befallen them, that they were hated by the gods, drove them with reproaches from his isle. Thence he was carried to the land of the Lemstromygonians (vid. Lustrymonges), where he lost all his vessels except the one in which he himself was; and, escaping from this gigantic and cannibal race, he came to the island of Aeolus, the abode of Circe. After an entire year, the warrior and his companions were anxious to depart; but the goddess told the hero that he must previously cross the ocean, and enter the abode of Hades, to consult the blind prophet Tiresias. Accordingly, they left Æolus rather late in the day, as it would appear, and, impelled by a favouring north wind, their ship reached the opposite west coast of ocean, the land of perpetual gloom. Ulysses obeyed the directions of the goddess in digging a small pit, into which he poured mule, wine, water, flour, and the blood of the victims. The dead came tripping out of the abode of Hades, and Ulysses there saw the heroines of former days, and conversed with the shades of Agamemnon and Achilles. Terror at length came over him; he hastened to turn his vessel back to his own country; but the abode of Æolus was Æolus while it was yet night. Leaving Æolus on their homeward voyage, Ulysses and his companions came to the islands of the Sirens (vid. Sirenses), and, after having escaped from these, and shunned the Wandering Rocks, they reached the terrific Scylla and Charybdis. (Vid. Scylla and Charybdis.) As he sailed by Scylla, Ulysses saw six of his followers seized and devoured by the monsters, after which he came to Thrinakia, the island of the sun-god. (Vid. Thrinakia.) Here his companions sacrilegiously fed upon the sacred herds, and were punished immediately after their departure. No sooner had they lost sight of land than a violent storm arose; their vessel was struck by a thunderbolt; it went to pieces, and all were drowned except Ulysses. When his ship had been thus destroyed, he fastened the mast and made a raft, and placed himself upon them. The wind, changing to the south, carried him back to Scylla and Charybdis. As he came by the latter, she absorbed the mast and keel; but the hero caught hold of a wild fig-tree that grew on the rock above, and held by it till they were thrown out again. He then floated along for nine days, and on the tenth reached Ogygia, the island of Calypso. After eight years' residence with this ocean-nymph (vid. Calypso), Ulysses entered on the last stage of his adventure, and made his way to his country. There he was received with such kindness by King Alcinous and his daughter Nausicaa. Here he recited the narrative of his adventures, and after this he was conveyed in a Phaeacian vessel to the shore of Ithaca. He had been absent twenty years, and he found, on his return, his palace beset by numerous suitors for the hand of Penelope, who were indulging day after day in riotous carousals, and wasting the resources of the monarch of Ithaca. Disguising himself as a beggar, Ulysses made himself known merely to his son Telemachus and his faithful herdsman Eumaeus. With them he concerted measures to re-establish himself on his throne. These measures were crowned with success. The suitors were all slain, and Ulysses was restored to the bosom of his family. (Vid. Laertes, Penelope, Telemachus, Eumaeus.) He lived about sixteen years after his return, and was last seen sailing in a Trojan vessel, which he called Telegonus, with the hope of landing in Ithaca with the hope of making himself known to his father. This unfortunate event had been foretold to him by Tiresias, who assured him that he should die by the violence of something that was to issue from the bosom of the sea. (Vid. Telegonus.) The adventures of Ulysses, on his return from the Trojan war, form the subject of Homer's Odyssey. (Keightley's Mythology, p. 259, seqq.)

Umania, a country of Italy, to the east of Etruria and north of the Sabine territory. The Latin writers were evidently acquainted with no people of Italy more ancient than the Umbri (compare Florus, 1, 17. —Plin., 3, 14.), and Dionysius of Halicarnassus assures us that they were one of the oldest and most nu
merous nations of the land (1, 19). From his account, as well as from Herodotus (1, 94), it would appear that the Umbri were already settled in Italy long before the arrival of the Tyrrhenian colony. To the Greeks they were known under the name of ὑπάρχοι, a word which they supposed to be derived from ὑπάρχος, under the idea that they were a people saved from an unusual deluge. (Plin., l. c.—Solin., 5.) Dionysius has further acquainted us with some particulars respecting the Umbri, by quoting the passages in Zenodotus, a Greek of Traezene, who had written a history of this people. This author appears to have considered the Umbri an indigenous race, whose primary seat was the country around Reate, a district which, according to Dionysius, was formerly occupied by the Aborigines. Zenodotus was also of opinion that the Sabines were descended from the Umbri. Connected with the origin of the ancient Umbri, there has been a tradition not unworthy our attention. It was confidently stated by Cornelius Bocchus, a Roman writer quoted by Solinus (c. 8.—Serm. ad Sen., 12, 763) and Isidorus (Orig., 8, 2), that the Umbri were of the same race with the ancient Gauls. This opinion has been rejected, on the one hand, by Cluverius and Maffei, while it has served, on the other, as a foundation for the systems of Freret and Bardetti, who contend for the Celtic origin of the Umbri.—On the rise of the Umbrian nation, the Umbrian name began to decline. They were driven from the districts from which, after the right bank of the Tiber, while nearly the whole of northern Italy fell under the power of their more enterprising and warlike neighbours, though an ancient Greek historian makes honourable mention of the valour of the Umbri. (Nic. Damasc., ap. Stob., 7, 89.) It was then, probably, that the Tuscanans, as we are told, possessed themselves of three hundred towns previously occupied by the Umbri. (Plin., 3, 5.) A spirit of rivalry was still kept up, however, between the two nations; as we are assured by Strabo that, when either made an expedition into a neighbouring district, the other immediately directed its efforts to the same quarter. (Strab., 226.) Both nations, however, had soon to contend with a formidable foe in the Gauls who invaded Italy; and, after vanquishing and expelling the Tuscanans from the Padus, penetrated still farther, and drove the Umbri from the shores of the Adriatic Sea by the Apennines and the Apennine Mountains. These were the Semo-nites, who afterward defeated the Romans on the banks of the Allia, and sacked their city. The Umbri, thus reduced, appeared to offer but little resistance to the Romans; nor is it improbable that this politic people took advantage of their differences with the Etruscans to induce them to remain neutral while they were contending with the latter power. The submission of Southern Umbria appears to have taken place A.U.C. 446 (Liv., 9, 41). The northern and maritime parts were reduced after the total expulsion of the Senones, about twenty-five years afterward. (Cramer's Anc. Italy, vol. 1, p. 251, seqq.—Compare Niebuhr's Roman History, vol. 1, p. 119, seqq.—Cambridge trans.)

UNELLI, a people of Gallia Lugudonensis Secunda, whose country formed part of the Tractus Armoricus, and answers to that part of modern Normandy in which are Valognes, Coutances, and the Channel Islands; in this district were the principal towns. Their capital, however, was Crociatomun, answering to the modern Valognes. Afterward, however, their chief city was Constantini Castra, now Coutances. (Lemaire, Index Geogr. ad Cæs., p. 373.)

VOCONIA LEX, de Testamentis, by Q. Voconius Saxi, the tribune, A.U.C. 584, enacted that no one should make a woman his heiress (Cic. in Verr., 1, 42), nor leave to any one, by way of legacy, more than to his heir or heirs. This law is supposed to have referred chiefly to those who were rich, to prevent the extinction of opulent families. On account of its severity, however, it fell into disuse. (Cic., de Fin., 2, 17.—Aul. Gell., 20, 1.)

VOCONITI, a people of Gallia Narbonensis, in the immediate vicinity of the Alps, on the banks of the Druma or Drome. Their principal cities were Vasio, now Vaison; Lucus Augusti, now Luc; and Dea Vocontiorum, now Die. (Cæs., B. G., 1, 10.—Lemaire, Index Geogr. ad Cæs., p. 401.)

VOEURS, now la Vesle, a mountain of Belgic Gaul, a branch of the chain of Jura, stretching in a northern direction; and in which are the sources of the Arar (now Soâne), the Mosc (now Meuse), and the Mosella (now Moselle). Its greatest height, Donnem, is about 400 toises above the level of the sea, and its length 50 leagues. (Lucan, 1, 397.—Cæs., B. G., 4, 10.)

VOLATERRA, a city of Etruria, northwest of Siena, and northeast of Vetulonii. It stood nearly fifteen miles inland, on the right bank of the river Caucina. The modern name is Volterra; its Etruscan appellation, as appears on numerous coins, was Velathri. Even if we had not the express authority of Dionysius of Halicarnassus (3, 51) for assigning to Volaterra a place among the twelve principal cities of ancient Etruria, the extent of its remains, its massive walls, vast sepulchral chambers, and numerous objects of Etruscan art, would alone suffice to show its antique splendour and importance, and claim for it that rank. This name also indicates that, while it was surrounded within its walls and in the immediate vicinity, no small idea is raised of the power, civilization, and taste of the ancient Etruscans. Its walls were formed, as may yet be seen, of huge massive stones, piled on each other without cement; and their circuit, which is still distinctly marked, embraced a circumference of between three and four miles. The citadel was built, as Strabo reports, on a hill, the ascent to which had been fifteen stadia (Strab., 1, 35), and in which are supposed to have stood the Tyrrhenian city of which Aristotle (De Mirab., p. 1158) speaks, under the name of Cenarres, as being built on a hill thirty stadia high, is Volaterra. The first mention of Volaterra in the Roman history occurs in Livy (10, 12), where an engagement of no great importance is stated to have taken place near this city, at the close of a war, in which the Etruscans were engaged with the Samnites against the Romans, A.U.C. 454. In the annals of the second Punic War, it is mentioned among the other cities of Etruria that were zealous in their offers of naval stores to the Romans. (Liv., 23, 45.) Many years afterward Volaterra sustained a siege, which lasted two years, against Sylla; he besieged consisting principally of persons whom that dictator had proscribed. On its surrender Italy is said to have enjoyed peace for the first time after so much bloodshed. Finally, we hear of Volaterra as a colony somewhat prior to the reign of Augustus. (Front. de Col.—Compare Plin., 3, 5.—Cramer's Anc. Italy, vol. 1, p. 156.)

VOLATERRANA VADA, a harbour on the coast of Etruria, deriving its name from the city of Volaterra, which lies inland. It is still known by the name of Vada. (Cic., pro Quinct., 6.—Plin., 3, 5.—Rudol. Hist., 1, 453.)

VOLCE, a numerous and powerful nation of southern Gaul, divided into two great branches, the Arecomici and Tectosages. I. The Volca Arecomici occupied the southwestern angle of the Roman province in Gaul, and had for their chief city Nemausus, now Nîmes.—II. The Volce Tectosages lay without the Roman province, in a southwest direction from the Arecomici. Their capital was Tolosa, now Toulouse. The nation of the Volca would appear from their name to have been of German origin. Compare the German volca, "people," &c., whence comes the English "folk." The Roman pronunciation of Volce, moreover, was Volca. (Cæs., B. G., 7, 74, seqg.)
Volosēs, a name common to many of the kings of Parthia, who made war against the Roman emperors. (Vid. Parthia.)

Volsci, a people of Latium, along the coast below Antium. No notice appears to be taken by any Latin writer of the origin of this people. According to Cato, they occupied the country of the Abruzzi (ap. Praet. 5), and were at one time subject to the Etruscans. (Id., ap. Serv., 65., 1, 567.) We learn from Titinius, an old comic writer quoted by Festus (s. v. Oscum), that the Volsci had a peculiar idiom distinct from the Oscon and Latin dialects. They used the Latin characters, however, both in their inscriptions and on their coin. Notwithstanding the small extent of country which they occupied, reaching only from Antium to Terracina, a line of coast of about fifty miles, and little more than half that distance from the sea to the mountains, it swarmed with cities filled with a hardy race, destined, says the Roman historian, as it were by fortune, to train the Roman soldier to arms by their perpetual hostility. (Liv., 6, 21.) The Volsci were first attacked by the second Tarquin, and war was carried on afterward between the two nations, with short intervals, for upward of two hundred years (Liv. 1, 53); and though this account is not doubt greatly exaggerated by Livy, and the numbers much overrated, enough will remain to prove that this part of Italy was at that time far more populous and better cultivated than at present. (Cramer's Anc. Italy, vol. 2, p. 82.)

Volturna Panum, a spot in Etruria where the general assembly of the Etrurians was held on solemn occasions. (Liv., 4, 23.—Id., 5, 17.) Some trace of the ancient name is preserved in that of a church called Santa Maria in Volturno. (Lanz., vol. 2, p. 109—Cramer's Anc. Italy, vol. 2, p. 222.)

Volusius, a city in Mauritania Tingitana, between Tescosidetia and Agus Dacica, in a fruitful part of the country. It is now Walili. (Istn. Ant., 23.—Mela, 3, 10.)

Volusinia, the wife of Coriolanus. (Liv., 2, 40.)

Vopiscus, one of the writers of the Augustan History. He was a native of Syracuse, and contemporary with Cato. Having flourished towards the close of the third and in the early part of the fourth century. His father and grandfather lived on terms of intimacy with the Emperor Dioclesian. In the year 291 or 292, the prefect of Rome, Junius Tiberiianus, prevailed upon Vopiscus to write a life of Aurelian, which no Latin historian had as yet taken up. He supplied him with various materials from the private papers of that prince, and also from the epigrphic library. Among the books consulted by him, Vopiscus names some Greek works. This biography was followed by the lives of Tacitus, Florian, Probus, Firmus, Saturninus, Proculus, Bonosus, Carus, Numerian, and Carinus. Flavius Vopiscus is distinguished from his brethren in the Augustan collection by possessing more of order and method: the letters and official papers, moreover, which he has inserted in his history, impart a considerable value to the work. As to style, however, he is on a level with the other writers in the Augustan History. He states, in his life of Aurelian, his intention of writing the life of Apollonius of Tyana, a project which he never executed. His works are given in the Historia Augustae Scriptores. (Schol., Hist. Lit. Rom., vol. 3, p. 156.)

Urania, the muse of Astronomy, usually represented as holding in one hand a globe, in the other a rod, with which she is employed in tracing out some figure. (Vid. Musae.) By some she was said to be the mother of Hymenaeus. (Catullus, 61, 2.—Novmus, 83, 67.)

Uranopolis, according to most geographers, a city on the peninsula of Athos, founded by Alexander, brother of Cassander (Athien., 3, 54), and the site of which is called Callitiz. (Cramer's Anc. Greece, vol. 1, p. 260.) Gaius, however, maintains that no such city ever existed, and that the name was a general appellation for the whole peninsula of Athos, with its five cities. (Gaius, Atlas, p. 21.)

Uranus (Oboavos, "Heaven" or "sky"), a deity, the same as Zeus, the most ancient of all the gods. He married Terra, or the Earth, by whom he had the Titans. (Vid. Titans.)

Urcinum, a town on the western coast of Corsica, east of the Rhium Promontory. It was probably founded by Euryssaces, the son of Ajax, and is now Ajaccio.

Usia (Ureum or Hyreum), a town on the coast of Apulia, giving name to the Sinus Ursus, or Gulf of Manfredonia. The position of this town has never been exactly determined, and it is possible that the name may refer to the circumstance of being another town of the same name in Messapia, and partly from the situation assigned to it by Pliny, to the south of the promontory of Garganus, not agreeing with the topography of Strabo. (Plin., 3, 11.—Strabo, 284.) Hence Cluvierus and Cellarius were led to imagine that there were two distinct towns named Ursus and Hyrium; the former situated to the south, the latter to the north of Garganus. (Holl., Hist. of Italy, vol. 2, c. 9.) It must be observed, however, that Dionysius Periegetes and Ptolomy (p. 62) mention only Hyrium, and therefore it is probable that the error has originated with Pliny. At any rate, we may safely place the Hyreum of Strabo at Rodi. (Cramer's Anc. Italy, vol. 2, p. 273, seqq.)

Usipetés or Usirit, a German tribe. Driven by the Suevi from the interior of Germany, the Usipetes presented themselves on the banks of the Lower Rhine, crossed that stream, and passed through the territories of the Menapi into Gaul. Cesar defeated them and drove them back over the Rhine, and we then find them settling to the north of the Luppar or Lippe, and reaching to the eastern mouth of the Rhine. At a subsequent period they had their settlement between the Sieg and Lahn, but gradually merged into the name of Allemanii. (Manueri, Geogr., vol. 3, p. 153, 239.)

Ustica, a mountain and valley in the Sabine territory, near Horace's farm. (Horat., Od. 1, 17, 11.)

Utica, a city of Africa, on the seacoast, northwest of Carthage, and separated from its immediate district by the river Bagradas. The Greeks called the name Ilxke (Ilxite), probably by a corruption. Utica was the earliest, or one of the earliest colonies planted by Tyre on the African coast, and Dohoch deduces the name from the Phoenician Atica, i. e., "ancient." (Geogr. Sacr., 1, 24, col. 474, l. 1.) Velleius Paterculus makes it to have been founded about the time that Codrus was king at Athens, about 1150 B.C., consequently in the period when the Greeks were beginning to make their settlements along the coast of Asia Minor (1, 2). Justin asserts that Utica was more ancient than Carthage (16, 4, 5). It was originally a free and independent city, like all the other large settlements of the Phoenicians, and had a senate and sultides, or presiding magistrates, of its own. As Carthage, however, rose gradually into power, it assumed a kind of protection over Utica, as would appear in particular from the language of the second treaty between Rome and Carthage, where the latter state speaks not only for itself, but also for the people of Utica. (Polyb., 2, 34.) At a subsequent period we find Utica, it is true, still with a separate constitution of its own, but, in reality, more or less dependent upon the power of Carthage. Hence the disaffection frequently shown by the inhabitants to the Carthaginian cause, the case with which Agathocles made himself master of the place, and its siding with the re-
voiced mercenaries after the first Punic war. (Diod. Sic., 20, 54. — Polyb., 1, 82, 88.) The punishment inflicted by the Carthaginians on the people of Utica, on the quelling of this rebellion, probably drew more closely the connexion between the two cities; at least Scipio besieged Utica in vain during the second Punic war. At the beginning of the third Punic contest, however, the inhabitants of Utica regarded as the same cause to separate their interests from those of Carthage. They gave themselves up, therefore, voluntarily to the power of Rome, and this latter state had now a firm foothold for the prosecution of all her ambitious plans in relation to Africa. (Polyb., 36, 1.) As some recompense to the Uticenses for the valuable aid they had afforded during the war, the Romans, at its close, bestowed upon them a large portion of the territory immediately adjacent to Carthage (Appian, Bell. P.unt., c. 135); and Utica was now, and remained as long as Carthage continued in ruins, the first city of Africa in point of importance, and the seat of the proconsul. And yet it never became a very flourishing city, since in all the civil wars of the Romans detachments of one party or the other invariably landed near this place, and fought many of their battles here. Thus, it was near Utica that Pompey defeated the opponents of Sylla (Oratus, 5, 21); here, too, Curio confronted for Caesar, and, not long after, Caesar’s opponents selected Utica as the chief seat of the war. The issue was an unfortunate one for the republican party, and Cato (hence called Uticensis) found here a death by his own hand. Hitherto Utica had remained a free city, with its old constitution; and hence Hirtius speaks of its senate. (Auct., Bell. Afr., c. 87, 90.) Augustus declared the place a Roman colony. (Dio Cass., 49, 16.—Plin., 5, 4.) It still, however, retained its local measures, its local constitution, and hence is styled by Aulus Gellius a municipium (16, 13). At a later period, Utica was regarded, after Carthage, the latter having been rebuilt, as the second in Africa. Utica had no harbour, but safe roads in front of the town. Its ruins are to be seen at the present day near Porto Farina. (Mammert, Geogr., vol. 10, pt. 2, p. 283, seqq.)

VULCALENIA, festivals in honour of Vulcan, brought to England by Julius Caesar, and observed in the month of August. The streets were illuminated, fires kindled everywhere, and animals thrown into the flames, as a sacrifice to the deity. (Varro, L. L., 5, 3.—Plin., 18, 13.)

VULCINI INSULAE. Vid. Aelius (Insulae), and Lipara.

VULCANUS, the god of fire, the same with the Hephaestus (Θεὸς τοῦ Ἑπείρου) of the Greeks. Hephaestus, the Olympian artist, is in Homer the son of Jupiter and Juno. (I. I, 572, 578.) According to Hesiod, however, he was the son of Juno alone, who was unwilling to be outdone by Jupiter when he had given birth to Minerva. (Theog., 957) He was born lame, and his mother was so shocked at the sight of him that she flung him from Olympus. The Ocean-nymph Eu- rynome and the Nereid Thetis saved and concealed him in a cavern beneath the Ocean, where, during nine years, he employed himself in manufacturing for them various ornaments and trinkets. (I. II, 199, 394, seqq.) We are not informed how his return to Olympus was effected; but we find him, in the Iliad, firmly fixed there; and all the mansions, furniture, ornaments, and arms of the Olympians were the work of his hands. It would be an almost endless task to enumerate all the articles formed by Hephaestus. Only the chief of them will here be noticed. One thing is remarkable concerning them, that they were all made of the various metals; no wood, or stone, or any other substance entering into their composition; they were, moreover, frequently endowed with automatism. Hephaestus made armour for Achilles and other mortal heroes. (I., 8, 195.) The fatal collar of Harmonia was the work of his hands. (Apollod., 3, 4, 3.) The brass-footed, brass-throated, fire-breathing bulls of Æetes, king of Colchis, were the gift of Hephaestus to Æetes’ father Helius. (Apollon. Rhod., 3, 230.) He also made for Alcinous, king of the Phaeacians, the gold and silver dogs which guarded his house. (Od., 7, 91.) For himself he formed the golden maidens, who waited on him, and whom he endowed with reason and speech. (Ili., 18, 419.) He gave to Minos, king of Crete, the brazen man Talus, who each day.com passed his island three times to guard it from the invasion of strangers. (Apollod., 1, 9, 26.) The brazen cup, in which the Sun-god and his horses and chariot are carried round the earth every night, was also the work of this god. The only instances we meet of Hephaestus’ working in any other substance than metal are in Hesiod, where, at the command of Jupiter, he forms Pander and torches at night (in a short time, 60), and where he uses gyppaum and ivory in the formation of the shield which he makes for Hercules. (Scut., Herc., 141.) That framed by him for Achilles in the Iliad is all of metal. — In the Iliad (18, 382), the wife of Hephaestus is named Charis; in Hesiod (Theog., 945), Aglaia, the youngest of the Graces; in the interpolated tale in t.e Odyssey (8, 266, seqq.), Aphrodite, the goddess of beauty. The favourite haunt of Hephaestus on earth was the island of Lemnos. It was here that he fell when flung from Heaven by Jupiter for attempting to aid his mother Juno, whom Jupiter had suspended in the air with anvils fastened to her feet. As knowledge of the earth increased, Ætna and all other places where there was subterranean fire were regarded as the forges of Hephaestus; and the Cyclopes were associated with him as his assistants. In Homer, when Thetis wants Hephaestian armour for her son, she sends to the Cyclopes, but is per- sonated by the artist-god with his own hand. In the Augustan age Venus prevails on her husband, the master-smith, to furnish her son Æneas with arms; and he goes down from Heaven to Hiera (one of the Liparean islands), and directs his men, the Cyclopes, to execute the order. (En., 8, 407, seqq.) It is thus that mythology changes with modes of life. Hephaestus remains the great manufacturer and the communicators unto men of the arts which embellish life and promote civilization. The philosophy of this view of the two deities is correct and elegant. (Od., 6, 233.—Il., 23, 160.—Hom., Hymn., 20.—Plato, Polit., p. 177.—Vöcker, Myth. der d. l., p. 21, seqq.) The artist-god is usually represented as of ripe age, with a serious countenance and muscular form: his hair hangs in curls on his shoulders. He generally appears with hammer and anvil on his shoulder, his arm- tuce, and his right arm bare; sometimes with a pointed cap on his head. The Cyclopes are occasionally placed with him.—Hephaestus must have been regarded originally as simply the fire-god, a view of his character which we find even in the Iliad (29, 73; 21, 330, seqq.). Fire being the great agent in reducing and working the metals, the fire-god naturally became an artist. The former was probably Hephaestus Pachy- logos, the latter his Achaean character. —The Vulcan of the Latins was also, like Hephaestus, the god of fire, but he is not represented as an artist. He was said, in one legend, to be the father of Servius Tullius, whose wooden statue was, in consequence, spared by the flames when they consumed the temple of Fortune in which it stood. (Ovid, Fast., 6, 627.—Dion. Hal., 4, 40.) He was also the reputed father of Cacus, the founder of the Caecean, the legend of whose birth is nearly similar to that of Scævola. (Virg., Æn., 7, 678, seqq.—Servius, ad loc.) Vulcan was united with a female power named Maia. (Keightley’s Mythology, p. 107, 518.)

VULCIUS, Gallicanus, one of the writers of the
Augustan History. He has the title of Vir Clarissimus, which indicates that he was a senator. Vulpinius lived under Dioclesian, and proposed to himself to write a history of all the Roman emperors; we have from him, however, only the life of Avidius Cassius. Some manuscripts even assign this biography to Spartianus.

Vulsini is Vulci, and also Vulcinius or Vulsinius, a city of Etruria, situated on the northern shore of the Lacus Vulsiniensis. It is generally allowed to rank among the first cities of the country. An account of its early contest with Rome is to be found in Livy (5, 31). About the time of the war against Pyrrhus, Vulsinius, which the Roman writers represent as a most opulent and flourishing place, becomes so enervated by its wealth and luxury as to allow its slaves to overthrow the constitution, and give way to the most unbridled licentiousness and excess, till at last the tenets were forced to seek for that protection from Rome which they could not derive from their own resources. The rebels were speedily reduced, and brought to condign punishment. (Val. Max., 8, 1.—Flor., 1, 21.—Oros., 4, 5.) As a proof of the ancient prosperity of Vulsinius, it is stated by Pliny, on the authority of Metrodorus Scepsius, that it possessed, when taken by the Romans, no less than 2000 statues. (Plin., 34, 7.) From Livy we learn that the Etruscan goddess Nortia was worshipped there, and that it was customary to mark the years by fixing nails in her temples (7, 3). Vulsinius, at a later period, is noted as the birthplace of Sejanus. (Tac., Ann., 4, 1.) It is now Bolaena. (Cramer's Anc. Italy, vol. 1, p. 221, seqq.)

Vulturnum, a town of Campania, at the mouth of the river Vulturnus, and on the left bank. It is now Castel di Vulturno. The origin of this city was probably extraneous. It is said to have gained its public name as early as the reign of Augustus. The modern name is the Vulturno. A magnificent bridge, with a triumphal arch, was thrown over this river by Domitian when he caused a road to be constructed from Sinussa to Puteoli; a work which Statius has undertaken to eulogize in some hundred lines of indifferent poetry. (Sylv., 4, 3.—Cramer's Anc. Italy, vol. 2, p. 144.)—II. A name applied by the Latin writers to the southeast wind, and synonymous to Greek Ἕκτωρ. (Asul Gell., 22.—Vitr., 1, 6.)

UXANTIS, an island off the coast of Gaul, now Ushant. (Plin. Histo., 509.)

UXELLODENUM, a city in Aquitanian Gaul, in the territory of the Cadurci; now Pueche d'Issolon. (Cart., B. G., 8, 32.)

UXI, a mountain race occupying the ranges that run on each side of the river Onutes, and separate Persia from Susiana. They were predatory in their habits. (Diod., 27, 67.—Arrian, Ind., 3, 18.—Plin., 6, 27.)

X.

XANTHIPIUS (Σάνθιπις), less correctly XANTHIPPE, the wife of Socrates, represented by many of the ancient writers as a perfect tetragnath. It is more than probable, however, that the informer of this good woman have been exaggerated, and that calumnny has had some hand in finishing her picture; for Socrates himself, in a dialogue with his son Lamprocles (Mem., 2, 2), allows her many domestic virtues; and we find her afterward expressing great affection for her husband during his imprisonment. She must have been as deficient in understanding as she was afterward in disposition if she had not profited by the daily lessons which, for twenty years, she received from such a master. (Enfeld's History of Philosophy, vol. 1, p. 171.—Compare the remarks of Mendeleohn, in his life of Socrates, prefixed to his German version of Plato's Phaedon, p. 17, seqq.)

XANTHIPPE, I, a Spartan leader, who fought on the side of the Corcyraequans in the first Punic war, and defeated Regulus. He is said to have been hanged a short time soon after this success, apprehending evil consequences to himself from the jealousy of the inhabitants. (Vid. Regulus.)—II. An Athenian commander, who led the forces of Athens at the battle of Mycale. He was father of the celebrated Pericles. (Vid. Mycale.)

XANTHUS or XANTHO, I, a river of Tros in Asia Minor, the same as the Scamander, and, according to Homer, was made by the gods to Scamander by men. (Vid. remarks under the article Tros, "Topography of Troy").—II. A river of Lycia, falling into the sea above Patara. It was the most considerable of the Lycian streams, and at an early period bore the name of Sirbe, as Strabo writes it, but Sibrus according to Pausanias (ap. Steph. Byz., s. v. Τρυπαλ). This stream was navigable for small vessels; and at its mouth the distance of seventy stadia from its mouth was Xanthus, the second city of the Lycians. (Cramer's Asia Minor, vol. 2, p. 247.) Bochart, with great probability on this side, regards the name Xanthus as a mere translation into Greek of the Oriental and earlier name, since the term Zirba, both in Arabic and Phoenician, is equivalent to the Greek ξάνθος, "yellow." (Geogr. Sacr., 1, 6, col. 363.)—III. The chief city of Lydia, situate on the river of the same name, at the distance of seventy stadia from its mouth. Pliny says it was fifteen miles from the sea; but that distance is too considerable, there being no doubt that the Lycian capital occupied the site of Akesnide, which occurs in the situation described by Strabo (666.—Compare Ἑκτεαταῖος, ap. Steph. Byz., s. v. Ζάνθος). The Xanthians have twice been recorded in history for the dauntless courage and perseverance with which they defended their city against a hostile army. The first was in the siege of the Persians under Darius, and the other by the army of Cyrus under Harpagus, after the conquest of Lydia, when they buried themselves under the ruins of their walls and houses. (Herod., 1, 176.)

The second event here alluded to took place many centuries later, during the civil wars consequent on the death of Caesar. The Xanthians having refused to open their gates to the republican army commanded by Brutus, that general invested the town, and, after, repelling every assault made by the citizens to break through his lines, finally entered it by force. The Xanthians are said to have resisted still, and even to have perished in the flames, with their wives and children, rather than fall into the hands of the Roman general, who made many attempts to turn them away from their desperate purpose. (Plut., Vit. Brut.—Appian, Bell. Civ., 4, 18.—Dio Cass., 47, 44.)—Mr. Fellowes describes the result of the attack on the same date, and that a very early one. "The walls are many of them Cyclopean. The language of the innumerable and very perfect inscriptions is like the Phœnician or Etruscan; and the beautiful tombs in the rocks are also of very early date. The city has not the appearance of having been very large, but its remains show that it was highly ornamented, particularly the tombs. A detailed account of several of these tombs, and of the sculptures upon them, is also given by the same traveller. (Fellowes's Asia Minor, p. 225, seqq.)—IV. An ancient historian of Lydia. We learn from Suidas (s. v. Ζάνθος) that his father's name was Candaules; that he flourished at the time of the capture of Sardis by the Lourians (Ol. 69); and that he
wrote a History of Lydia in four books. Suidas cites the second. Dionysius of Halicarnassus also quotes this work and it is the source of the term 'xeniophobos' in high commendation. (Ant. Rom., vol. 1, p. 22, ed. Reiske.) The Lydiaca are quoted by Parthenius, in Stephanus of Byzantium, and probably by the scholiast on Apollonius of Rhodos: he quotes them also (p. 14, ed. Gafl., vol. 2, p. 109, ed. Hett.)

The Ode of Xenocrates, an Athenian tragic poet, ridiculed by Aristophanes, and yet the conqueror of Euripides on one occasion (Olyn. 91, B.C. 415). He was of dwarfish stature, and son of the tragic poet Carcinus. In the Pex, Aristophanes applies the term μεγαεισοδοτος to the family. From the scholiast it appears that Xenocrates was celebrated for introducing machinery and stage-shows, especially in the ascent or descent of his gods. (Theatre of the Greeks, 3d ed., p. 66.)

Xenocrates, I. an ancient philosopher, born at Chalcodon in the 95th Olympiad, B.C. 400. If first attached himself to Eschines, but afterward became a disciple of Plato, who took much pains in cultivating his genius, which was naturally too fine. Plato, comparing him with Aristotle, who was also one of his pupils, called the former a dull ass, who needed the spur, and the latter a mettlesome horse, who required the curb. His temper was gloomy, his aspect severe, and his manners little tinctured with urbanity. These material defects his master took great pains to correct, frequently advising him to sacrifice to the Graces; and the pupil was patient of instruction, and knew how to value the kindness of his preceptor. He compared himself to a vessel with a narrow orifice, which receives with difficulty, but firmly retains whatever is put into it. So affectionately was Xenocrates attached to his master, that when Dionysius, in a violent fit of anger, threatened to find one who should cut off his head, he said, "Not before he has cut off this," pointing to his own. As long as Plato lived, Xenocrates was one of his most esteemed disciples; after his death he closely adhered to his doctrine; and, in the second year of the hundred and tenth Olympiad, B.C. 339, he took the chair in the Academy as the successor of Speusippus. Aristotle, who, about this time, returned from Macedonia, in expectation, as it should seem, of filling the chair, was greatly disappointed and chagrined at this nomination, and immediately removed from the school in protestation to that of the Academy where Xenocrates continued to preside to his death. Xenocrates was celebrated among the Athenians, not only for his wisdom, but also for his virtues. (Val. Max., 2, 10.—Cic., ad Att., 2, 16.—Diog. Laert., 4, 7.) So eminent was his reputation for integrity, that when he was called upon to give evidence in a judicial transaction, in which he was actually required, the judges unanimously decreed that his character should be taken, as a public testimonio to his merit. Even Philip of Macedon found it impossible to corrupt him. When he was sent, with several others, upon an embassy to that prince, he declined all private intercourse with him, that he might escape the temptation of a bribe. Philip afterward said, that of all those who had come to him on embassies from foreign states, only Xenocrates declined the bribes he had not been able to purchase. (Diog. Laert., 4, 8.)

During the time of the Laminian war, being sent an ambassador to the court of Antipater for the redemption of several Athenian captives, he was invited by the prince to sit down with him at supper, but declined the invitation in the words of Ulysses to Circe. (Odys., 10, 383.) This pertinent and ingenious application of a passage in Homer, or, rather, the genorous and patriotic spirit which it expressed, was so pleasing to Antipater that he immediately released the prisoners. It may be mentioned as another example of moderation in Xenocrates, that when Alexander, to mortify Aristotle, against whose favorite pupil, the youthful pique, sent Xenocrates a magnificent present of fifty talents, he accepted only thirty minae, returning the rest to Alexander with this message: that the large sum which Alexander had sent more than he should have been able to spend during his whole life. So abstemious was he with respect to food, that his provision was frequently spoiled before it was consumed. His chastity was invincible. Lais, a celebrated Athenian courtesan, attempted, without success, to seduce him. Of his humanity, no other proof can be necessary than the following pithy incident. A sparrow, which was pursued by a hawk, flew into his bosom; he afforded it shelter and protection till its enemy was out of sight, and then let it go, saying that he would never betray a suppliant. (Eli, V. H., 13, 31.) He was fond of retirement, and was seldom seen in the city. He was discreet in the use of his time, and carefully allotted a certain portion of each day to its proper business. One of these he employed in silent meditation. He was an admirer of the mathematical sciences, and was so fully convinced of their utility, that, when a young man who was unacquainted with geometry and astronomy desired admission, he refused his request, saying that he was not yet possessed of the handle of philosophy. In fine, Xenocrates was eminent both for the purity of his morals and for his acquaintance with science, and supported the credit of the Platonic school by his lectures, his writings, and his conduct. (Plut., de Virt. Mor., 2, p. 399.) He lived to the first year of the 116th Olympiad, B.C. 316, or the 82d of his age, when he lost his life by accidentally falling in the dark, into a reservoir of water. The philosophical tenets of Xenocrates were truly Platonic, but in his method of teaching he made use of the language of the Pythagoreans. He made Unity and the principles in nature, or gods; the former of whom he represented as the father, and the latter as the mother of the universe. He taught that the heavens are divine, and the stars celestial gods; and that, besides these diversities, there are terrestrial demons of a middle order, between the gods and man, which partake of the nature both of mind and body, and are therefore, like human beings, capable of passions and liable to diversities. (Dio, 49, 14, p. 244.)

Xenophanes, the founder of the Eleatic sect, was a native of Colophon, and born, according to Eusebius, about B.C. 556. From some cause which is not related, Xenophanes early left his country and took refuge in Sicily, where he supported himself by reciting, at the court of Hiero, elegiac and iambic verses, which he had written in reproduction of the Theognies of Hesiod and Homer. From Sicily he passed over to Cyrene, and there began to teach the profession of philosophy, and became a celebrated preceptor in the Pythagorean school. Indulging, however, a greater freedom of thought than was usual among the disciples of Pythagoras, he ventured to introduce new opinions of his own, and in many particulars to oppose the doctrines of Epimenides, Thales, and Pythagoras. He possessed the Pythagorean chair of philosophy about 70 years, and lived to the extreme age of 100 years. In metaphysics, Xenoph-
XENOPHON.

The prince promised, if he would enter into his service, to send him home in safety after his expedition against the Persians should have terminated. Xenophon, believing the intended expedition to have no other end than this, consented to take part in it, being equally deceived with Proxenus himself; for, of all the Greeks who accompanied Cyrus, Clearchus alone was from the beginning in the secret. The army of Cyrus marched from Sardis, through Lydia, Phrygia, Lycaonia, and Cappadocia, crossed the mountains of Cilicia, passed through Cilicia, and arrived at Euphrates, forded this river, passed through a part of Arabia and Babylonia, until they reached the plain of Cunaxa. After the fatal battle of Cunaxa and the fall of Cyrus, Xenophon advised his fellow-soldiers rather to trust to their own bravery than surrender themselves to the victor, and to attempt a retreat into their own country. They listened to his advice; and, having had many proofs of his wisdom, as well as courage, they elected him one of the five new commanders, chosen to supply the place of their former leaders, who had been entrapped and slain by Tissaphernes. Xenophon was appointed in the room of Proxenus, and soon became the soul of all the movements of the Greeks in their memorable retreat, acquiring great glory by the prudence and firmness with which he conducted them back, through the midst of innumerable dangers. The officers of the five new commanders were related by Xenophon himself, in his Anabasis, or Retreat of the Ten Thousand. In retreating, the object of the Greeks was to strike the Euxine; but the error they committed was in making that sea extend too far to the east. From Cunaxa they turned their course to the Tigris, crossed that river, marched through Media, northward, still following the course of the Tigre; they entered the mountains of the Caspian, and, after great exertions, reached the sources of the river just mentioned. After this they traversed Armenia, crossed the Euphrates not far from its source, lost many of their men in the marshes through the cold and snow, and came to the Phasis. Leaving this stream, they passed through the countries of the Taochi, Chalybes, Macedons, Colchians, and at last reached the Greek colony of Trpezon on the coast of the Black Sea. They found that the sultans of the Circassians were related by Xenophon himself, in his Anabasis, or Retreat of the Ten Thousand. After having crossed over to the latter city, and been deceived by the promises of Anaxibius, the Spartan admiral, they entered into the service of Suthens, king of Thrace, who had solicited their aid. This prince, however, proving faithless, and paying them only a part of their stipulated recompense, they finally entered into the service of Thybrion, who had been directed by the Spartans to raise an army and make war upon the satraps Pharnabazus and Tissaphernes. According to Xenophon, the whole distance traversed by the Greeks, both in going and returning, was 1155 parasangs, or 34,650 stadia. The whole time taken up was fifteen months, of which the retreat occupied less than three months. Having arrived in Greece, Xenophon, after an interval of four or five years, joined Agesilaus, king of Sparta, and fought with him, not only in Asia, but also against the Thebans at home, in the battle of Corona. The Athenians, dispersed at this alliance, brought a public accusation against him for his former conduct in engaging in the service of Cyrus, and condemned him to exile. The Spartans, upon his going to Xenophon as a surety under their protection, and provided him with a comfortable retreat at Scyllunu in Elis, making him a present of a dwelling there, with considerable land attached to it. According to Pausanias (§ 6), they gave him the entire town of Scyllunu. Here he remained, if we believe the same Pausanias, for the remainder of his life.
days, and in this retreat dedicated his time to literary pursuits. Xenophon himself has given us, in the Ana-
basis (5, 3, 7), an interesting account of his residence at Scyllus, where he erected a temple to the Ephesian Di-
an, in performance of a vow made during the famous retreat which he so ably conducted. In this place he
died, in the 90th year of his age. Pausanias, who vis-
ted the ruins of Scyllus, states that the tomb of Xen-
ophon, when it was discovered, was covered with Pentelic marble. He adds, that when the Eleans took
Scyllus, they brought Xenophon to trial for having ac-
ccepted the estate at the hands of the Spartans, but that
he was acquitted, and allowed to reside there without
molestation. The common account, however, makes it
that he left for Corinth when a war had bro-
ken out between the Spartans and Eleans, and to
have ended his days there. The integrity, the piety,
and the moderation of Xenophon rendered him an
ornament to the Socratic School, and proved how
much he had profited by the precepts of his master.
His whole military conduct discovered an admirable
union of wisdom and valor. And his writings, at
the same time that they have afforded, to all succeeding
ages, one of the most perfect models of purity,
simplicity, and harmony of language, abound with sen-
timents truly Socratic.—By his wife Phyesa Xen-
ophon had two sons, Gryllus and Diodorus; the for-
mother of the latter has been identified with Platonic
Scyllus, after having inflicted a mortal wound on Epam-
ionidas, the Theban commander. (Vid. Gryllus.)
—The works of Xenophon, who has been styled,
from the sweetness and graceful simplicity of his lan-
guage, the " Attic bee," are as follows: 1. Ελληνικά
(" Grecian History"), in seven books. In this work Xen-
ophon gives a continuation of the history of Thucy-
dides, down to the battle of Mantinæae. It was un-
doubtedly the outcome of the long residence in Greece
Scyllus, and completed either there or at Corinth.
The work is full of lucane and falsified passages.
The recital of the battle of Leuctra is not given with
sufficient development, and it is evident that Xen-
ophon relates with regret the victory of Epaminondas
over his adopted country. Xenophon does not imitate
in this production the manner of Thucydides. That of
Herodotus accorded better with his general char-
acter. He had been an admirer of the military, and the
style of eloquence that marked the school of Iolocrates
of which Xenophon had been a disciple.—2. Αναδε-
σις (" The Expedition into Upper Asia"), otherwise
called "the Retreat of the Ten Thousand." Xen-
ophon, as has already been remarked, bore a large share
in this glorious expedition. His narrative, written
with great clearness and singular modesty, forms one
of the most interesting works bequeathed to us by an-
tiquity.—3. Κύρος Χαλκήδος (" The Education of Cy-
rus") and commerce. Plato (de Leg., 3.—Op., vol. 8, p.
142, ed. Bip.) denies that Cyrus ὁρικῷ μαθήματι χληθεί, and
this statement is considered by Valckenear as having
been directed against the representations of Xeno-
phon; and hence we need feel no surprise at the op-
position between the Banquet of Xenophon and that
written by Plato. From Aulus Gellius (N. A., 14, 3)
we discern some traces of this personal hostility be-
tween these great philosophers. (Barker, de Xeni.,
Cyp., l. 1—Compare remarks under the article Plato.)—As regards the more received accounts re-
tative to the elder Cyrus, the student is referred to that
article itself.—Some modern critics have thought that
Xenophon, in this work, is not so much as is supposed by
these authors. Xenophon, however, in his third book
of laws by drawing a character of Cyrus quite different
from that which Xenophon had depicted. (Compare
Aulus Gellius, loc. cit.)—In 1819, Genrot published:
early, the Dissertation of Fragui, Mem. de l'Acad.
des Inscr., &c., vol. 2, p. 43.—Sainte-Croix, Observa-
tions, &c., ibid., vol. 46, p. 399.—Baden, Opuscula
Latina, Hann., 1763, 8vo, n. 2.—Damm, Berliner
Monatschrift, 1796, vol. 1, p. 89.) Though the Cyro-
pedia be certainly the work of Xenophon, some doubts
have nevertheless arisen with respect to the latter part
of the history, and which Valckenear, Schneider, F.
F. Wolf, and others, have sought to elucidate. At
the addition of some later writer, who wished to week-
en the favourable impression towards the Persians
which the perusal of the main work could not fail to
produce. (Compare Schulz, De Cyropædiae epilog, &c.
Hal., 1806, 8vo. Bornemann, Epilog, der Cyro-
pædie, &c., Leips., 1819, 8vo.)—4. Λόγος εἰς Ἐγγί-
λαον (" Elage on Agislaus"). Xenophon had fol-
lowed this prince in his expedition into Asia, and had
seen him in the interval of his war in MYSIA. He had
accompanied him also in his Grecian cam-
paigns, and his attachment to this eminent commander
was the secret cause of his banishment from Athens.
No one, therefore, was better qualified to write the
biography of this celebrated Spartan. Cicero, in speaking
of this work of Xenophon's, says that it surpasses all
the statues ever erected to the Lacedaemonian monarch (Ep. ad Pam., 5, 12); and yet some modern
critics, with Valckenear at their head, have regarded
this piece of biography as below the standard of Xeno-
phon's acknowledged abilities as a writer, and the
production of some sort of rhetoric of a subse-
quent age.—5. Απομνημονεύματα Σωκράτους (" Memo-
irs of Socrates"), the best of Xenophon's philo-
osophical works. It gives, first, a justification of Soc-
rates against the charge of having introduced strange
deities instead of worshipping the national ones, and
of having corrupted the young by his example and
maxims. It then goes on to adduce various conver-
sations between Socrates and his disciples on topics of
a moral and religious nature. (Consult Dissen, De phi-
losophia morali in Xenophonis de Socrate comment.
vis tradita, Gött., 1812.) This work, written with
singular grace and elegance, offends in many instances
against the rules and the form of the dialogue, and be-
comes, on these occasions, an actual monologue.
It is divided into four books, but is thought to have been
anciently more voluminous.—6. Σωκράτους Ἀπολο-
γία πρὸς τοὺς δικαστάς (" Defence of Socrates be-
fore his Judges".) This piece is not, as the title
indicates, a pleading delivered in the presence of his judges; neither is it a defence of himself, on the part of Socrates, against the vices and crimes laid to his charge; it is rather a development of the motives which induced the sage to prefer death to the humiliation of addressing entreaties and supplications to prejudiced judges. Valckenier and Schneider consider the work unworthy of Xenophon. The former of these critics sees in this the production of an individual who fabricated the latter part of the Cyropedia; while Schneider thinks that it once formed a portion of the Memoirs of Socrates, and that the grammarians, after detaching it from this work, falsified and corrupted it in many places.—7. Συμπόσιον πελόσου ("Banquet of Philosophers"). The object which Xenophon had in view in writing this piece, which is a chef d'œuvre in point of style, was to place in the clearest light the parity of human principles relative to friendship and love, and to render a just homage to the innocence of his moral character. Some of the ancients were persuaded that Xenophon had another and secondary object, that of opposing his "Banquet" to Plato's dialogue which bears the same title, and in which Socrates had not been depicted, as Xenophon thought, with all the simplicity that marked his character. Schneider and Weishe, two celebrated critics of our time, say that in this work Xenophon manifests, in a true sage, such originality of mind that the judge in matters of taste, the distinguished Wieland (Attische Museen, vol. 4, p. 76), has adopted this same opinion; but it has been attacked by two other scholars, Bockel and Ast. The former believes that Plato wrote his dialogue after having read the Banquet of Xenophon, and that, in place of Socrates as he really was, the founder of the Academy wished to trace, under the name of this philosopher, the ideal of a true sage, such as Xenophon had conceived the character to be. (Commentatio Academica de simulatae que Platonii cum Xenophonte interestesse furtur, Berol, 1811, 4to.) Ast goes still further, and pretends to find in the Banquet of Xenophon indications of its having been one of the works of his youth. (Ast, Platons Leben und Schriften, p. 314)—8. Περί ζόζης Τιπανονος ("Hierno"), a dialogue between the Sycu-

man monarch and Socrates, in which Xenophon lays down the principles relative to friendship and love, and renders a just homage to the innocence of his moral character. The object of this work is to show that the revenues of Attica, if well regulated, are sufficient for its population, without the need of the Athe-

nians rendering themselves odious by exactions from their allies or subjects.—14. Λακεδαιμονιών πολειτα ("Government of the Laecdemomians").—15. Ἀθηναίων πολειτα ("Government of the Athenians"). These two small works are very probably not Xenophon's.—We have also seven letters of the same writer.—The critical editions of the works of Xenophon are, that of Schneider, Lips., 1798; of Dunlop, 1812, 6 vols. 8vo, and that of Weiske, Lips., 1793-1802, 5 vols. 8vo. There are numerous editions also of the separate works, some very useful.—II. A Greek romance writer, a native of Ephesos, whose era and his-

try are equally unknown. With the exception of Suidas, no ancient writer makes any mention of him, not even Photius, who has recorded the names of so many writers of the middle class. The Baron di Laccia places him in the age of the Antonines, and others in the fourth and fifth centuries. Peerlkamp, on the other hand, one of his editors, considers him to be the earliest of the Greek romancers, and fancies that he is able to detect the imitations of the rest. The same author affirms that Xenophon is an assumed name, and, farther, that no Greek romancer, with the exception of Heliodorus, has written in his real name. W. H. B. Heard, Mr. Dunlop, and Mr. Peake, place Xenophon, who lived about the time of Chariton; but Chariton must have lived in or after the fifth cen-

tury, at a distance of no less than 300 years from the time in which we have placed Xenophon, on the best authorities we can find. The three Xenophons, according to Mr. Dunlop, were Antiochus, Cyprus, and Ephesus, and their works, "Babylonica," "Cyriaca," and "Ephehniaca." Of these, only the last has been published. It is entitled "Ερωτευμάτοι τα κατὰ Αθηνᾶν καὶ Ἀθηναίων ("Ephesiaca, or the Loves of Abro-

cos and Anthia"). The story is commonplace, and yet improbable; but the style is simple, and the action busy without confusion. For a long time the existence of this work was denied. In the fifteenth century, Angelo Poliziano quoted a passage from this romance; but the incredulity of the learned was still manifested two centuries after. At length, in 1813, an Italian translation was published by Antonio Maria Salvinii, and in the same year the Greek text appeared in print. Even this, however, was insufficient; for, eight years after, we find Lenglet du Fresnoy, in his pseudonymous work on the customs of the Romans, asserting that "neither the original Greek, nor any other version, was known." The best edition of Xenophon's Ephesiaca is that of Peerlkamp, Harlem, 1818, 4to. There is also a good edition by Passow, Lips., 1833, 12mo. (Foreign Quarterly Review, vol. 5, p. 124, seq.) Διαθήκης, I. son and successor of Darius Hystaspis on the throne of Persia. He was, in fact, the second son of that monarch, but the first born unto him of Atossa, the daughter of Cyrus, whom Darius had married after he came to the throne. The elder brother, named Artabanus, was born unto him yet in private station. The two princes contended for the empire, Artabanus grounding his claim on the common law of inheritance, Xerxes, the younger, on his descent from the founder of the monarchy. Demaratus, the exiled king of Sparta, sided Xerxes with his counsels, and suggested to him another argument, drawn from the Spartan rule of succession, by which a son was preferred to his elder brother. Darius decided in his favour, and declared him his heir; swayed, perhaps, much more by the influence of Atossa, which was always great with him, than by reason or usage. In the following year (B.C. 485), before he had ended his preparations against Egypt and Attica, he died, and Xerxes ascended the throne. Thus the Persian sceptre passed from the hands of a
prince who had acquired it by his boldness and prudence, to one born in the palace, the favourite son of the favourite queen, who had been accustomed, from his infancy, to regard the kingdom as his inheritance, perhaps to think that the blood of Cyrus which flowed in his veins raised him above his father. Bred up in the pompous luxury of the Persian court, among slaves and women, a mark for their flattery and intrigues, he had none of the experience which Darius had gained in that period of his life when Tryphon's cloak was a welcome present. He was probably inferior to his father in ability; but the difference between them in fortune and education seems to have left more traces in their history than any disparity of nature. Ambition was not the prominent feature in the character of Xerxes; and, had he followed his unbiased inclination, he would, perhaps, have been content to turn the preparations of Darius against the revolted Egyptians, and have abandoned the expedition against Greece, to which he was not spurred by any personal motives. But he was surrounded by men who were led by various passions and interests to desire that he should prosecute his father's plans of conquest and revenge. Mardonius was eager to renew an enterprise in which he had been foiled through unavoidable mischance, not through his own incapacity. He had reputation to retrieve, and might look forward to the possession of a great European strait, at such a distance from the coast, as to form an interminable barrier to any invasion.

He was warmly seconded by the Greeks, who had been drawn to Susa by the report of the approaching invasion of their country, and who wanted foreign aid to accomplish their designs. The Thessalian house of the Aeoleus, either because they thought their power insecure, or expected to increase it by becoming vassals of the Persian king, sent their emissaries to invite him to the conquest of Greece. The exiled Persian and Egyptian generals, the emissaries of Athens. They had brought a man named Onomacritus with them to court, who was one of the first among the Greeks to practise an art, afterward very common, that of forging prophecies and oracles. While their family ruled at Athens, he had been detected in fabricating verses, which he had interpolated in a work ascribed to the ancient seer Musaeus, and Hipparchus, before his patron, had banished him from the country. After this disaster he had used them to make of his talents, and had taken them into his service. They now recommended him to Xerxes as a man who possessed a treasure of prophetical knowledge, and the young king listened with unsuspecting confidence to the encouraging predictions which Onomacritus drew from his inexhaustible stores. These various engines at length prevailed. The imagination of Xerxes was inflamed with the prospect of rivalling or surpassing the achievements of his glorious predecessor. He was overawed by the spectacles, he saw the whole extent of his dominion to the ends of the earth. (Herod., 7.8.) He resolved on the invasion of Greece. First, however, in the second year of his reign, he led an army against Egypt, and brought it again under the Persian yoke, which was purposely made more burdensome and galling than before. He intrusted it to the care of his brother Achemenes, and then returned to Persia, and beheld him in his glorious presence. (And one of his counsellors, his uncle Artabanus, is said to have been wise and honest enough to endeavour to divert him from the enterprise, and especially to dissuade him from risking his own person in it.) If any reliance could be placed on the story told by Herodotus about the deliberations held on this question in the Persian cabinet, we might suspect that the influence and arts of the Magian priesthood, which we find in this reign rising in credit, had been set at work by the adversaries of Artabanus to counteract his influence over the mind of his nephew, and to confirm Xerxes in his martial mood. The vast preparations were continued with doubled activity, to raise an armament worthy of the presence of the king. His aim was not merely to collect a force sufficient to ensure the success of his undertaking, and to scare away all opposition, but also, and perhaps principally, to set his whole enormous power in magnificent array, that he might enjoy the sight of it himself, and display it to the admiration of the world. For four years longer Asia was still kept in restless turmoil; no less time was needed to provide the means of subsistence for the countless host that was about to be poured out upon Europe. Besides the stores that were to be carried in the fleet which was to accompany the army, it was necessary that magazines should be formed along the whole line of march as far as the confines of Greece. But, in addition to these prudent precautions, two works were begun, which scarcely served any other purpose than that of showing the power and majesty of Xerxes, and proving that he would suffer no obstacles to bar his progress. It would have been easy to transport his troops in ships over the Hellespont; but it was better suited to the dignity of the monarch, who was about to unite both continents under his dominion, to join them by a bridge laid upon the subject channel, and to march across as along a royal road. The storm that had destroyed the fleet which accompanied Mardonius in his unfortunate expedition, had made the coast of Athis terrible to the Persians. The simplest mode of avoiding this formidable obstacle was to lead their ships over the narrow, low neck that connects the mountain with the mainland. But Xerxes preferred to leave a monument of his greatness and of his enterprise, in a canal cut through the isthmus, a distance of about a mile and a half. This work employed a multitude of men for three years. The construction of the two bridges which were thrown across the Hellespont was intrusted to the skill of the Phoenicians and Egyptians. The plans were drawing to a close, Xerxes set forth for Sardis, where he designed to spend the following winter, and to receive the re-enforcements which he had appointed there to join the main army (B.C. 481). During his stay at Sardis, the Phoenician and Egyptian engineers completed their bridges on the Hellespont; but the work was not strong enough to resist a violent storm, which broke it to pieces soon after it was completed, and far broke the pride of the great Xerxes, and the defects in its construction, which might have been avoided by ordinary skill and foresight, does not appear. But Xerxes is said to have been so much angered by the accident that he put the architects to death. Such a burst of passion would be credible enough in itself, and is only rendered doubly doubtful by the extravagant fables that gained credit on the subject among the Greeks, who, in the bridging of the sacred Hellespont, saw the beginning of a long career of calamitous misfortune, and gradually transformed the fastenings with which the passage was finally secured into fetters and snares, with which the barbarian, in his madness, had thought to chastise the aggression of the rebellious stream. The construction of new bridges was committed to other engineers, perhaps to Greeks; but their names have not passed down, like that of Mardonius. By their art the firm long career of calamitous misfortune, it was ferried from the neighbourhood of Abyssus to a projecting point in the opposite shore of the Chersonesus, resting each on a row of ships, which were stayed against the strong current that bore upon them from the north by anchors and by cables fastened to both sides of the channel; the length was not far short of a mile. When all was in readiness, the mighty armament was set in motion. Early in the spring (B.C. 480), Xerxes started from Sardis, in all the pomp of a royal progress. The baggage led the way; it was followed by the first division of the armed crowd that had been brought together from the tributary nations; a motley throng, in
XERXES.

...many strange varieties of composition, dress, and language, commanded by Thessalian generals, but retaining each tribe its national armour and mode of fighting. An interval was then left, after which came 1000 picked Persian cavalry, followed by an equal number of spearmen, whose lances, which they carried with the points turned downward, ended in knobs of gold. Next, ten sacred horses, of the Niemen breed, were led in gaudy caparisons, preceding the chariot of the Persian king, which might have been drawn by white horses, the driver following on foot. Then came the horses, also drawn by Persian horses, in which Xerxes sat in state; but from time to time he exchanged it for an easier carriage, which sheltered him from the sun and the changes of the weather. He was followed by two bands of horse and foot, like those which went immediately before him, and by a body of 10,000 Persian infantry, the flower of the whole army, who were called the Immortals, because they had already given, under other articles, a brief summary of their exploits. (Virt. Artém. Thesp., Thessal., &c.)—Among the most stupendous events of that time, Xerxes felt desirous of escaping from a state of things which was now becoming troublesome and dangerous, and Mardonius saw that he would gladly listen to any proposal that would facilitate his return. He was aware, that, without a fleet, the war might probably be tedious, in which case the immense bulk of the present army would be only an encumbrance, from the difficulty of subsisting it. Besides, the ambition of Mardonius was flattered with the idea of his becoming the conqueror of Greece, while he feared that, if he now returned, he might be made answerable for the ill success of the expedition which he had advised. He therefore proposed to Xerxes to return into Asia with the body of the army, and to bring Salamis, with 3000 of the best troops, to complete the conquest of Greece; and the army having retired into Boeotia, Mardonius made his selection, and then, accompanying the king into Thessaly, there parted from him, leaving him to pursue his march towards Asia, while he himself prepared to winter in Thessaly and Macedonia.—The entry of the army into Greece, and the preparation of the host, the general armament of the Greeks, and the preparations of Xerxes for the campaign, in the last stages of the war, were exactly as at the first, except that the army was large, and the provisions were scanty and unwholesome from the herbage of the plains, the bark and leaves of the trees. Sickness soon began to spread its ravages among them, and Xerxes was compelled to consign numbers to the care of the cities that lay on his road, already impoverished by the cost of his first visit, in the hope that they would tend their guests, and would not sell them into slavery if they recovered. The passage of the Strymon is said to have been peculiarly disastrous. The river had been frozen in the night hard enough to bear those who arrived first. But the ice suddenly gave way under the heat of the morning sun, and numbers perished in the waters. It is a little surprising that Herodotus, when he is describing the miseries of the retreat, does not notice this disaster, but on this point, as well as on those which are given as our deductions from the Persian messenger in Xerxes. There can, however, be no doubt as to the fact; and perhaps it may furnish a useful warning not to lay too much stress on the silence of Herodotus, as a ground for rejecting even important and interesting facts which are only mentioned by later writers, though such as he must have heard of, and might have been expected to relate. It seems possible, that the story, in the manner which he mentions Xerxes embarking at Eton (8, 118) may have been based on the tragical passage of the Strymon. In forty-five days after he had left Mardonius in Thessaly, he reached the Hellespont; but the bridges had been broken up by foul weather, but the fleet was there to carry the army over to Abydos. Here it rested from its fatigues, and found...
plentiful quarters; but intemperate indulgence rendered the sudden change from scarcity to abundance almost as pernicious as the previous famine. The remnant that Xerxes brought back to Sardis was a wreck, a fragment, rather than a part of his huge host.

—The history of Xerxes, after the termination of his Greco-Persian campaign, may be comprised in a brief compass. He gave himself up to a life of dissolute pleasure, and was slain by Artabanus, a captain of the royal guards, B.C. 464. (Vid. Artabanus II. — *Thirwival’s History of Greece*, vol. 2, p. 315, seq.)—II. A son of Artaxerxes Mmnon, who succeeded his father, but was slain, after a reign of forty-five days, by his brother Sagobrian. (Vid. Sagobrian.)

Xota, a city of Egypt, situated on an island in the Phænetic branch of the Nile, below Sebenytus. Mannert takes it to be the same with the Phænetis of Herodotus (Geogr., vol. 10, p. 571).

Xuthus, a son of Hellen, grandson of Deucalion. (Vid. Hellsa, § 1).

Z.

ZABATUS, a river in the northern part of Assyria, rising in Mount Zargis, and falling into the Tigris. It is called Zabatus by Xenophon, but otherwise Zabus or Zerbiz, and traverses a large portion of Assyria. This stream was also termed Lycus (?luς), or "the wolf," by the Greeks; but it has assumed its present denomination of Zab, or, according to some modern travellers, Zarb. (Polyb., 5, 51. — Amm. Marc., 23, 14. — Xen., Anab., 2, 5. — Plin., 6, 26.) Farther down, another river, named Zabus Minor, and called by the Macedonians Caprus (Καπρός), or "the bear," is also received by the Tigris, and is now called by the Turks Altison, or the river of gold. (Polyb., 5, 51.)

ZABDIOCÉNE, a district in Mesopotamia, in which was situated a city named Zabda or Bezabda. It was yielded to the Persians by Jovian. (Amm. Marc., 25, 7.)

ZABIS, a river of Assyria, falling into the Tigris. (Vid. Zabatus.)

ZACYNTHOS, (Ζάκυνθος), an island in the Ionian Sea, to the west of the Peloponnesus, and below Cephalenia. Pliny affirms that it was once called Hyrie; but this fact is not recorded by Homer, who constantly uses the former name (Ili., 2, 634. — Od., 1, 246), which was said to be derived from Zacyntus, the son of Dardanus, an Aretian chief. (Pausan., 8, 24.) A very ancient tradition ascribed to Zacyntus the foundation of Saguntum in Spain, in conjunction with the Rutuli of Ardeia. (Lan., 21, 7.) Thucydides informs us that, at a later period, this island received a colony of Achaeans from Peloponnesus (2, 66.) Not long before the Peloponnesian war, the island was reduced by Tolimedes, the Athenian general, from which period we find Zacyntus allied to, or, rather, dependant upon, Athens. It subsequently fell into the hands of Philip III., king of Macedon (Polyb., 5, 4), and was afterward occupied by the Romans, under Val. Levius, during the second Punic war. On this occasion, the chief city of the island, which bore the same name, was captured, with the exception of its citadel. (Livy, 26, 24.) Zacyntus, however, was subsequently restored to Philip. It was afterward sold to the Achaeans, and given up by them to the Romans on its being claimed by the latter. The modern name is Zanto. (Cramer’s Anc. Greece, vol. 2, p. 56, seq.)

ZALECUS, a lawgiver in Magna Græcia, and the founder of the Locrian state in that quarter of Italy. Eusebius places him in Olympia, 29, which is 40 years before Draco, and 60 before Pythagoras was born. (Bentley, on Phalaris, vol. 1, p. 380, ed. Dyce.) According to the ordinary account, he was of obscure birth, and in his youth lived in servitude, in the capacity of a shepherd. But his extraordinary abilities and merit obtained him his freedom, and at length raised him to the chief magistracy. The laws which he framed were severe; but they were so well adapted to the situation and manners of the Locrians, that their several ages, highly celebrated. So vigorous was the discipline of Zaleucus, that he prohibited the use of wine except in cases where it was prescribed as a medicine; and he ordained that adulterers should be punished with the loss of their eyes. When his own son had subjected himself to this penalty, Zaleucus, in order, at the same time, to preserve the authority of the laws, and show some degree of paternal lenity, shared the punishment with the offender, and the person deprived of one eye, submitted to lose one of his own.

ZALUSION (Ταλησίων), a private man of Samos, who is said to have been the last of the oracular sages. He was the first to have a private name, and to give himself the title of Sages. (Dion. Ch., 15, 18.)—ZALUSION, a town on the head of the promontory of Zanone, now Zanone, about three miles from the town of Messana, was the birth-place of a celebrated personage, Zalusius. (Strabo, 7, 3, 7.)—ZALUSIUS, a remarkable personage among the Greeks; or, rather, it appears, as a Pythagorean, expressly says (4, 95), that he flourished at a much earlier period than Pythagoras. The whole story of the connexion of Zalusius with Pythagoras seems to have been invented by the Pythagoreans, to advance the fame of their master. (Engel, Hist. Philos., vol. 6, p. 118.)

ZAMA, I. a city of Africa, called Zama Regia, and lying some distance to the southwest of Cartaghe, and to the northwest of Hadrumetum. Sallust describes it as a large place, and strongly fortified. It became the residence subsequently of Juba, and the depository for his treasures. (Acctu, Bell. Afr., 91.) Strabo speaks of it as being in his days a ruined city; it probably met with this fate during the civil wars. It appears to have been afterward rebuilt, and to have become the seat of a bishopric. The modern Zecarria marks the ancient site. (Mannert, vol. 10, p. 2, 355.)—II. A city of Numidia, five days’ journey west of Cartaghe, according to Polybius (15, 5). Near this place was fought the famous battle between the elder Africanus and Hannibal. (Mannert, Geogr., vol. 10, pt. 2, p. 386.)

ZANCLE, the earlier name of Messana in Sicily. (Vid. Messana.)

ZARGRÆI OF DRANGÉI, a nation of Upper Asia, southeast of Aria, having for their capital Prophthasia, now Zarang. (Plin., 6, 23. — Arrian, Exp. Alex., 3, 2.) Some authorities, however, make the Zargræi only a part of the Drangéi. (Bischoff and Möller, Wörterb. der. Geo—.)

ZARIASPA BACTRÆ, the capital of Bactrians, on the river Jaxartes, now called the Arak. (Plin., 6, 16.)

ZELA, a city of Pontus, southeast of, and not far from, Amasea. It was originally a village, but Pompey increased it, and raised it to the rank of a city. Here Mithrades defeated the Romans under Titrarius; and here, too, Caesar defeatedPharnaces. It was in writing home word of this victory that Caesar made
of the well-known expressions, "Veni, vidi, victus."—The modern village of Zile or Ziel occupies the site of the ancient city. (Plin., 63.—Hirtus, B. A., 72.)

Zeno, I. the founder of the sect of the Stoics, born at Citium, in the island of Cyprus. His father was by profession a merchant, but, from a strong propensity towards learning, he early devoted himself to the study of philosophy. In his mercantile capacity, the former had frequent occasions to visit Athe- ns, where he purchased for the young Zeno several of the writings of the most eminent Socratic philosophers. These he read with great avidity; and, when he was about thirty years of age, he determined to take a voy- age to a city which was rich both as a mart of trade and of science. Whether this voyage was in part mercantile, or wholly undertaken for the sake of conversing with those philosophers whose writings Zeno had long admired, is uncertain. If it be true, as some writers relate, that he brought with him a va- luable cargo of Phoenician purple, which was lost by shipwreck upon the coast of Attica, this circumstance will account for the facility with which he at first at- tached himself to the sect of whose doctrines he was contempt of riches. Upon his first arrival in Athens, going accidentally into the shop of a bookseller, he took up a volume of the commentaries of Xenophon, and, after reading a few passages, was so much delighted with the work, and formed so high an idea of its author, that he asked the bookseller where he might meet with such men. Crates, the Cynic philosopher, happening at that instant to be passing by, the bookseller pointed to him, and said, "Follow that man." Zeno soon found an opportunity of attending upon the instruc- tions of Crates, and was so well pleased with his doctrine that he became one of his disciples. But, though he highly admired the general principles and spirit of the Cynic school, he could not easily reconcile him- self to their peculiar manners. Besides, his inquisi- tive turn of mind would not allow him to adopt that indifference to every scientific inquiry which was one of the characteristic distinctions of the sect. He there- fore attended upon other masters, who professed to instruct their disciples in the nature and causes of things. When Crates, displeased at his following other philosophers, attempted to drag him by force out of the school of Stilpo, Zeno said to him, "You may seize my body, but Stilpo has laid hold of my mind." After continuing to attend upon the lectures of Stilpo for several years, he passed over to other schools, particularly those of Xenocrates and Diodo- rus Chronus. By the latter he was instructed in dia- lectics. At last, after attending almost every other master, he offered himself as a disciple of Polemo. This philosopher appears to have been aware that Ze- no's intention in thus removing from one school to another was to collect materials from various quarters for a new system of his own; for, when he came into Polemo's school, he exclaimed, "If I am stranger to your Phcenician arts, Zeno; I perceive that your design is to creep slyly into my garden and steal away my fruit." Polemo was not mistaken in his opinion. Having made himself master of the ten- ents of others, Zeno determined to become the found- er of a new sect. The place which he made choice of for his school was called the Pætice (House of Στόα), or Painted Portico; a public place in the city, the Portico of Pætice, and other eminent mas- ters, with which it was adorned. This portico, being the most famous in Athens, was called, by way of dis- tinction, Στόα, the Porch. It was from this circum- stance that the followers of Zeno were called Stoics, i. e., the men of the Porch. Zeno excelled in that kind of subtle reasoning which was then popular. At the same time, he taught a strict system of moral doc- trine, and exhibited a pleasing picture of moral dis- cipline in his own life. The Stoic sect, in fact, was a branch of the Cynic, and, as far as respected morals, differed from it more in words than in reality. Its founder, while he avoided the singularities of the Cyn- ics, retained the spirit of their moral doctrine: at the same time, from a diligent comparison of the tenets of other masters, he framed a new system of specula- tive philosophy. It is not at all surprising, therefore, that he obtained the applause and affection of numerous followers, and even enjoyed the favour of the great. Antigonus Gonatas, king of Macedon, while he was resident at Athens, attended his lectures, and, upon his return, earnestly invited him to his court. He possessed so large a share of esteem among the Athenians, that, on account of his approved integrity, he was frequently the object of the enmity of his morenumerous and various enemies. His constitution was feeble, but he preserved his health by great abstemiousness. The supplies of his table con- sisted of bread, and a few small dishes, amongst which, he was frequently honoured with the company of great men. He paid more attention to neatness and decorum in his personal appearance than the Cynic philosophers. In his dress, indeed, he was plain, and in his expenses frugal; but this is not to be in- puted to avarice, but to a contempt of external magni- fication. He showed as much respect to the poor as to the rich, and conversed freely with persons of the meanest occupations. He had only one servant, or, according to Seneca, none. Although Zeno's so- briety and continence were even proverbial, he was not without enemies. Among his contemporaries, sev- eral philosophers of great ability and eloquence em- ployed their talents against him. Arcesius and Car- neades, the founders of the Middle Academy, were his professed opponents. Towards the close of his life he found another powerful antagonist in Epictetus, whose temper and doctrines were alike inimical to the severe gravity and philosophical pride of the Stoic sect. Hence mutual invectives passed between the Stoics and other sects, to which little credit is due. (Vid. remarks under the article Epictetus.) Zeno lived to the extreme age of 93, and at last, in conse- quence of an accident, put an end to his life. As he was walking in the street, the stool upon which he stood broke one of his fingers. He was so affected, upon this, with a consciousness of infirmity, that, striking the earth, he exclaimed, "Εργωναυ, τι μ' αδείς; "I am coming, why callest thou me?" and immediately went home and strangled himself. He died B.C. 264. The Athenians, at the request of Antigonus, erected a monument to his memory in the Ceramicus. From the particulars that have been related concerning Zeno, it appears that he was of that kind of influence his circumstances and character must have had upon his philosophical system. If his doc- trines be diligently compared with the history of his life, it will appear that, having attended upon many eminent preceptors, and been intimately conversant with their opinions, he compiled out of their various tenets a heterogeneous system, on which he super- posed those which he assumed to be the true doctrines of a founder of a new sect. When he resolved, for the sake of establishing a new school, to desert the philosophy of Pythagoras and Plato, in which he had been perfectly instructed by Xenocrates and Polemo, it became necessary ei- ther to invent opinions entirely new, or to give an air of novelty to old systems by the introduction of new terms and definitions. Of these two undertakings, Cicero says concerning him, that he had little reason for de-
serving his masters, especially those of the Platonic school, and that he was not so much an inventor of new opinions as of new terms. That this was the real character of the Porch will fully appear from an attentive perusal of the clear and accurate comparison which Cicero has drawn between the doctrines of the Old Academy and those of the Stoic, or Zenoian, School. As to the moral doctrine of the Cynic sect, to which Zeno adhered to the last, there can be no doubt that he transferred it almost without alloy into his own school. In morals, the principal difference between the Cynics and the Stoics was, that the former disdained the cultivation of nature, the latter affected to rise above it. On the subject of physics, Zeno received his doctrine from Pythagoras and Thales. He received its principles into Platonic school, as will fully appear from a careful comparison of their respective systems. The moral part of the Stoical philosophy partook of the defects of its origin. It may as justly be objected against the Stoics as the Cynics, that they assumed an artificial severity of manners and a tone of virtue above the condition of man. Their doctrine of moral wisdom was an ostentatious display of words, in which fictitious and artificial wisdom consisted in raising human nature to a degree of perfection before unknown; but its real effect was merely to amuse the ear and captivate the fancy with fictions that can never be realized. The Stoical doctrine concerning nature is as follows: according to Zeno and his followers, there existed from eternity a dark and confused chaos, in which were contained the first principles of all future beings. This chaos being at length arranged, and emerging into variable forms, became the world as it now subsists. The world, or nature, is that whole which comprehends all things, and of which all things are parts and members. The universe, though one whole, contains two principles, distinct from elements, one passive and the other active. The passive principle is pure matter without qualities; the active principle is reason, or God. This is the fundamental doctrine of the Stoics concerning nature. If the doctrine of Plato, which derives the human mind from the soul of the world, has a tendency towards enthusiasm, much more must this be the case with the Stoical doctrine, which supposes that all human souls have immediately proceeded from, and will at last return into, the divine nature. As regards a divine providence, if we compare the popular language of the Stoics upon this head with their general system, and explain the former with the fundamental principles of the latter, we shall find that the agency of deity is, according to them, nothing more than the active motion of a celestial ether, or fire, possessed of intelligence, which at first gave form to the shapeless mass of gross matter, and being always essentially united to the visible world, by the same necessary agency, preserves its order and harmony. Providence, in the Stoic creed, is only another name for absolute necessity, or fate, to which God and matter, or the universe, which consists of both, is immutably subject. The Stoic doctrine of the resurrection of the body, upon which Seneca has written with so much elegance, must not be confounded with the Christian doctrine; for, according to the Stoics, men return to life, not by the voluntary appointment of a wise and merciful God, but by the law of fate; and are not renewed for the enjoyment of a better and happier condition, but drawn back into their former state of imperfection and misery. Accordingly, Stoics say, this mortal body, when it is raised, will be exactly as it was when the person was passive, and were they not that their renovated life is accompanied with a total oblivion of past events? Upon the principles of physics depends the whole Stoic doctrine of morals. Conceiving God to be the principal part of nature, by whose energy all bodies are formed, moved, and arranged, and human reason to be a portion of the Divinity, it was their fundamental doctrine in ethics, that, in human life, one ultimate end ought for its own sake to be pursued; and that this end is to live agreeably to nature, that is, to be conformed to the law of fate by which the world is governed, and to the reason of that divine and celestial fire which animates all things. Since man is himself a microcosm, composed, like the universe, of matter and spirit, the Stoic says, it becomes him to live as a part of the great whole, and to accommodate all his desires and pursuits to the general arrangement of nature. Thus, to live according to nature, as the Stoics teach, is virtue, and virtue is itself happiness; for the supreme good is to live according to a just conception of the real nature of things, choosing that which is itself eligible, and rejecting the contrary. Every man, having within himself a capital virtue called wisdom, will only value riches, honour, beauty, and other external enjoyments as means and instruments of virtue; for, in every condition, he is happy in the possession of a mind accommodated to nature. Pain, which does not belong to the mind, is no evil. The wise man will be happy in the midst of torture. All external things are indifferent, since they cannot affect the happiness of man. Every virtue being a conformity to nature, and every vice a deviation from it, all virtues and vices are equal. One act of beneficence or justice is not more truly so than another; one fraud is not more a fraud than another; therefore there is no difference in the essential nature of moral actions, except that some are vicious and others virtuous. This is the doctrine which Horace ridicules in the 4th satire, 1st book. The Stoics advanced many extravagant assertions concerning their wise man; for example, that he feels neither pain nor pleasure; that he exercises no pity; that he is free from faults; that he is divine; that he does all things well; that he alone is great, noble, ingenuous; that he is a prophet, a priest, a king, and the like. These paradoxical vaunting are humorously ridiculed by Horace. In order to understand all this, we must bear in mind that the Stoics did not suppose such a man actually to exist, but that they framed in their imagination an image of perfection, towards which every man should continually aspire. All the extravagant notions which are to be found in their writings on this subject may be referred to their general principle of the entire sufficiency of virtue to happiness, and the consequent indifference of all external circumstances. The sum of man's duty, according to the Stoics, with respect to himself, is to subdue his passions of joy and sorrow, hope and fear, and even pity. He who is, in this respect, perfectly master of himself, is a wise man; and, in proportion as we approach a state of apathy, we advance towards perfection. A wise man, moreover, may justly and reasonably withdraw from life whenever he finds it expedient; not only because life and death are among those things which are in their nature indifferent, but also because life may be less consistent with virtue than the death of man. Concerning the whole doctrine of the Stoics, it must be remarked, that, although deserving of high encomium for the purity, extent, and variety of its doctrines, and although it must be confessed that, in many select passages of the Stoic writings, it appears exceedingly brilliant, it is nevertheless founded in false notions of nature and of man, and is raised to a degree of refinement which is
extravagant and impracticable. The piety which it teaches is nothing more than a quiet submission to irresolvable fate; the self-command which it enjoins annihilates the best affections of the human heart; the indulgence which it grants to suicide is inconsistent, not only with the general principles of piety, but even with that constancy which was the height of Stoical perfection. A doctrine of benevolence and justice is tinctured with the fanatical principle of the foundation of the whole Stoical system, that every being is a portion of one great whole, from which it would be unnatural and impious to attempt a separation.

(Enfleid's History of Philosophy, vol. 1, p. 315, seqq.)—II. A philosopher, a native of Tarsus, or, according to some, of Sidon, and the immediate successor of Chrysippus in the Stoic school. He does not appear to have been a great thinker, except in the amount of their work. The invention of the dialectic art has been improperly ascribed to him; but there can be no doubt that this philosopher, and other metaphorical disputans in the Stoic seat, employed much ingenuity and subtlety in exhibiting examples of most of the logical arts which were afterward reduced to rule by Aristotle and others. According to Aristotle, Zenno of Elea called the Eleatic, to distinguish him from Zeno the Stoic. He flourished about 444 B.C. Zeno was a zealous friend of civil liberty, and is celebrated for his courageous and successful opposition to tyrants; but the inconsistency of the stories related by different writers concerning him is a great obstacle to their credit. The invention of the dialectic art has been improperly ascribed to him; but there can be no doubt that this philosopher, and other metaphorical disputans in the Stoic seat, employed much ingenuity and subtlety in exhibiting examples of most of the logical arts which were afterward reduced to rule by Aristotle and others. According to Aristotle, Zenno of Elea taught that nothing can be produced either from that which is similar or dissimilar; that there is only one being, and that is God; that this being is eternal, homogeneous, and spherical, neither finite nor infinite, neither quiescent nor moveable; that there are many worlds; that there is in nature no vacuum, &c. If Seneque's account of this philosopher despises credit, he reaches the highest point of scepticism, and denied the real existence of external objects. (Seneque, Ep., 58.—Enfleid, Hist. Philos., vol. 1, p. 419, seq.)

ZENOBA, a celebrated princess, wife of Odenatus, and after his death queen of Palmyra. (Vid. Odenatus, and Palmyra.) With equal talents for jurisprudence and finance, thoroughly skilled in the arts and duties of government, and adapting severity and clemency with nice discernment to the exigency of the circumstances, her agile and elastic frame enabled her to direct and share the labours and enterprises of war, without the least effect on her own spirit, or the utmost. Disdaining the female litter, she was continually on horseback, and could even keep pace on foot with the march of her soldiers. History has preserved some reminiscences of her personal appearance, her dress, and her habits, which represent this apparent amazon as a woman of the most engaging beauty, gifted with the versatile graces of a court, and accomplished in literary endowments. In complexion a brunette, her teeth were of a whiteness, as well as her eyes, highly bright and sparkling; her mien was animated, and her voice clear and powerful. With a helmet on her head, and wearing a purple mantle fringed with gems and clasped with a buckle at the waist, so as to leave one of her arms bare to the shoulder, she presented herself at the council of war; and affecting, from the policy of her country, a regal pomp, she was worshipped with Persian adoration. Prized in her manners for her beauty, her grace, and her refined taste and temperate in her habits, she would nevertheless challenge in their cups her Persian and Armenian guests, and retire the victor without ebriety. Chiefly versed in the languages of Syria and Egypt, her modesty restrained her from conversing freely in Latin; but she had read the Roman history in Greek, was herself an elegant historian, and had compiled the Annals of Alexander and the East. Her authority was acknowledged by a large portion of Asia Minor when Aurelian succeeded to the empire. Envious of her power, and determined to dispossession her of some of the rich provinces comprehended in her dominions, he marched at the head of a powerful army to Asia. Having defeated the queen's general near Antioch, he compelled her to retreat to Emess. Under her new most illustrious governor, this city another engagement was fought in which the Persians were again vic- torious. The queen fled to Palmyra, determined to support a siege. Aurelian followed her, and, on making his approaches to the walls, found them mounted in every part with mural engines, which ploied the besiegers with stones, darts, and missile fires. To the summons for a surrender of the city and kingdom, on the condition of her life being spared, Zenobia replied in a proud and spirited letter, written in Greek by her secretary, the celebrated Longinus. Her hopes of victory soon vanished; and, though she harassed the Romans night and day by continual sallies from her walls and the working of her military engines, she de- parted in success when she heard that the armies which were marching to her relief from Armenia, Persia, and the East had either been intercepted or gained over to her. She fled from Palmyra in the night on her dromedaries, bade farewell to the Roman horse while attempting to cross the Euphrates, and was brought into the presence of Aurelian, and tried before a tribunal at Emess, Aurelian himself presiding. The soldiers were clamorous for her death; but she, in a manner unworthy of her former fame, saved her own life by throwing the blame on her counsellors, especially on Longinus, who was, in consequence, put to death. Zenobia was carried to Rome to grace the emperor's triumph, and was led along in chains of gold. She is said to have almost sunk beneath the weight of jewels with which she was adorn- ed on that occasion. She was treated with great humanity, and Aurelian gave her large possessions near Tibur, where she was permitted to pass the remainder of her days. Her two sons afterward married into distinguished families at Rome. (Flacc. Vopisc., Vid. Aurel.—Trebl. Pellic, Trigintyr. Tyrran.—Vit. Herennian.)

ZENODORUS, a statuary, whose native country is uncertain. He exercised his art in Cialpine Gaul, and also in Rome during the reign of Nero. Pliny speaks of a Mercury of his, and also of a colossal statue of Nero, afterward dedicated to the sun on the downfall of that emperor. (Thiersch, Epoch. 3, Adnot. 102.—Sillig. Dict. Art. s. v.)

ZEPHIRIUS, I. a promontory of Magna Gracia, on the eastern coast of the lower extremity of Bruttium, whence the Locrians derived the appellation of Epe- zephyrii. It is now Capo di Bruzzano. (Strabo, 259.)—II. A promontory on the western coast of the island of Cyprus, and closing the Bay of Baja to the west. (Strabo, 683.)

ZEPHYRUS, one of the winds, son of Astraus and Aurora, which, according to the Famosii of the Latins, he had a clear name Carpus (Karpoç, fruit) by one of the seasons. (Serv. ad Virg., Eclog. 5, 48.) Zephyrus is described by Homer as a strong-blowing wind; but he was afterward regarded as gentle and soft-breathing. In the days of Homer, the idea of darkness was also associated with the western regions of the world, and hence the wind Zephyrus derived its name from Zeus, "darkness," "gloom." In a succeeding age, when the west wind began to be regarded as genial in its influence both on man and all nature, the name was considered as synonymous with Zepho- ðoros life-bearing. (Hesiod, Theog. 377.—Virgil, Aen. 1, 135.—Ovid, Met. 1, 64; 15, 700.—Propertius, 1, 16, 34, &c.)

ZEIZA, a son of Boreas, king of Thrace, and Orius.
ZEU 

yia, who accompanied the Argonauts to Colchis along with his brother Calais. In Bithynia, the two brothers, who are represented with wings, delivered Phineus from the persecution of the Harpies, and drove these monsters as far as the islands called Strophades. (Vid. Strophades, and Harpyias.—Apollod., 1; 9; 3, 15. —Hygin., fab. 14. —Oed., Met. 8, 716. —Pausan., 3, 16.)

Zeuxis, a son of Jupiter and Antiope, brother to Amphion. (Vid. Amphion.)

Zeugis or Zeugytana, a district of Africa in which Carthage was situated. It extended from the river Tusca to the Hermean promontory, and from the coast to the mountains that separated it from Byzacium. (Ind., Hist., 14, 5. —Plin., 5, 4.)

Zeuxis, or the Bridge, the name of the principal passage of the river Ephesus, southwest of Edessa. An ancient fortress by which it was commanded is still called Roum-Cula, or the Roman Castle; to which may be added, that on the opposite shore there is a place called Zeugme. (Plin., 5, 24. —Curt., 3, 7. —Tacit., Ann., 12, 12.)

Zeus, the name of Jupiter among the Greeks. (Vid. remarks under the article Jupiter.)

Zeuxis, a celebrated painter, born at Heraclea, in Magna Graecia, and who flourished about B.C. 400. (Plin., Nat. Hist. 35, 10. —Dion. Hal. C. M., 228. —Vid. Plin., I. c.—Sillig., Dict. Art., p. 130, note.) He studied under either Demophilus or Neseas, artists respecting whom nothing is known but that one of them was his master. Soon, however, he far outstripped his instructor, as Apollodorus intimated in verses expressive of his indignation that Zeuxis should have moulded to his own use all previous inventions, and stolen the graces of the best masters; thus paying a high though involuntary compliment to his gifted rival. Apollodorus could not endure that his glory should be eclipsed by a younger artist, who availed himself of his improvements to rise to a higher degree of excellence. Zeuxis seems to have rapidly risen to the highest distinction in Greece, and acquired by the exercise of his art, not only renown, but riches. Of the latter advantage he was more vain than became a man of exalted genius. He appeared at the Olympic games at Athens in a redick, and was made the reward of a prize. He was also provided with a chest of cypress, in letters of gold, a piece of most absurd display in one whose name was deeply impressed on the hearts and imaginations of those by whom he was surrounded. He does not, however, seem to have been chargeable with avarice; or, at least, this passion, if it existed, was subservient to his pride; for, when he had attained the height of his fame, he refused any longer to receive money for his pictures, but made presents of them, because he regarded them as above all pecuniary value. In the earlier part of his career he was accustomed, however, to exhibit his productions for money, especially his most celebrated painting of Helen. The truth seems to have been, that the ruling passion of Zeuxis was the love of pomp, an ever restless vanity, a constant desire and craving after every kind of distinction. Very little is known respecting the events of the life of this celebrated painter. He was not only successful in securing wealth and the applause of the multitude, but was honoured with the friendship of Archelaus, king of Macedon. For the palace of this monarch he executed numerous pictures. Cicero informs us, that the habitants of Crotona prevailed on Zeuxis to come to their city, and to paint there a number of pieces, which were intended to adorn the temple of Juno, for which he was to receive a large and stipulated sum. On his arrival, he informed them that he intended only to paint the picture of Helen, with which they were satisfied, because he was regarded as peculiarly excellent in the delineation of women. He accordingly desired to see the most beautiful maidens in the city, and, having selected five of the fairest, copied all that was most beautiful and perfect in the form of each, and thus completed his Helen. Pliny, in his relation of the same circumstance, omits to give the particular subject of the painting, or the terms of the original contract, and states that the whole occurred, not among the people of Crotona, but those of Agrigentum, for whom, he says, the last of the works was still a vow made by them to the goddess. This great artist, on several occasions, painted pictures for cities and states. He gave his Alcema, representing Hercules strangling the serpents in his cradle, in the sight of his parents, to the Agrigentines, and a figure of Pan to his patron Archelaus of Macedon. The most celebrated of the pictures of Zeuxis, besides the Helen and the Alcema, were, a Penelope, in which Pliny assures us that not only form, but character, was vividly expressed; a representation of Jupiter seated on his throne, with all the gods around doing him homage; a Marsyas bound to a tree, which was preserved at Rome; and a wrestler, beneath which was inscribed a verse, to the effect that it was easier to envy than to imitate its excellence. Lucian has left us an admirable description of another painting of his, representing the Centaurs, in which he particularly applauds the delicacy of the drawing, the beauty of the colouring, the softness of the blending shades, and the proportion. He left many draughts in a single colour on white. Pliny censures him for the too great size of the heads and joints, in comparison with the rest of the figures. Aristotle complains that he was a painter of forms rather than of manners, which seems contrary to the eulogium passed by Pliny on the representation of Penelope.—The story respecting the contest between Zeuxis and Parrhasius has been frequently told. It is the case, that Zeuxis painted a cluster of grapes with such perfect skill that the birds came and pecked at them. Elated with so unequivocal a testimony of his excellence, he called to his rival to draw back the curtain, which he supposed concealed his work, anticipating a certain triumph. Now, however, he found himself entrapped, for what he took for a curtain was only a painting of one by Parrhasius; upon which he ingenuously removed the curtain for further inspection. Parrhasius had purchased a piece of skin or cloth of that hue, but his antagonist had beguiled the senses of an experienced artist. Another story is related of a similar kind, in which he overcame himself, or, rather, one part of his work was shown to have excelled at the expense of the other. He painted a boy with a basket of grapes, to which the birds as before resorted; on which he acknowledged that the boy could not be well painted, since, had the similitude been in both cases equal, the birds would have been deterred from approaching. From these stories, if they may be credited, it would appear that Zeuxis excelled more in depicting fruit than in painting the human form. If this were the case, it is strange that all his greater efforts, of which any accounts have reached us, were portraits, or groups of men or deities. The readiness which Zeuxis has, in these instances, been represented as manifesting to acknowledge his weakness, is scarcely consistent with the usual tenour of his spirit. At all events, the victory of Parrhasius proved very little respecting the merit of the two artists. The man who could represent a curtain to perfection would not necessarily be the greatest painter in Greece. Even were exactness of imitation the sole excellence in the picture, regard must be had to the cast of the objects imitated, in reference to the skill of the artists by whom they were chosen. Zeuxis was the first who has taken a long time to finish his chief productions, observing, when reproached for his slowness, that he was painting for eternity. Festus relates that Zeuxis died with laughter at the picture of an old woman which he himself had painted. So
extraordinary a circumstance, however, would surely have been alluded to by some other writer, had it been true. There seems good reason, therefore, to believe it fictitious. ([Encyclop. Metropol., div. 2, vol. 1, p. 405, seqq.)

Zoïlus, a sophist and grammarian of Amphipolis, who rendered himself known by his severe criticisms on the poems of Homer, for which he received the name of Homoeromastix, or the chastiser of Homer, and also on the productions of Plato and other writers. Aelian (V. H., 11, 10) draws a very unfavourable picture of both his character and personal appearance. In all this, however, there is very probably much of exaggeration. Dionysius of Halicarnassus (Ep. ad Pomp.) appears, on the other hand, to praise the man; he ranks him, at least, among those who have censured Plato, not from a feeling of envy or enmity, but as a desire for the truth. The age of Zoïlus is uncertain. Vitruvius (Praf., add lib. 7) refers to him as Plutomon, the Plutonomy Philadelphus, and is followed by Vossius. Reinsius, however (Var. Lect., 3, 2), and Ionsius (de Script. Hist. Phil., c. 9) are opposed to this, because Zoïlus is said to have been a hearer of Polycrates, who lived in the time of Socrates. (Consult the remarks of Perizionius on this subject, ad Aelian., V. H., i. c.) Some say that Zoïlus was stoned to death, or exposed on a cross, by order of Plutonomy, while others maintain that he was burned alive at Smyrna. According to another account, he recited his invectives against Homer at the Olympic games, and was thrown from a rock for his offence. (Aelian, V. H., i. c.—Longin., 9, 4.)

Zonaras, a Byzantine historian, who flourished towards the close of the eleventh and the commencement of the twelfth centuries. He held the offices originally of Grand Dungarius (commander of the fleet) and chief secretary of the imperial cabinet; but he afterward became a monk, and attached himself to a religious house on Mount Athos, where he died shortly, according to the preceding, to A.D. 1118. His Annals, or Chronicle, extend from the creation of the world down to 1118 A.D., the period of the death of Alexi I. They possess a double interest: for more ancient times, he has availed himself, independently of Eutropius and Dio Cassius, of other authors that are lost to us; and at a later period he details events of which he himself was a witness. Though deficient in critical spirit, he has still displayed great good sense in adding nothing of his own to the extracts which he has inserted in his history, except what might serve to unite them together in regular order. There results from this, it is true, a great variety of style in his work, but this is easily pardoned, and the only regret is, that Zonaras had not indicated with more exactness the authors whence he drew his materials. The impartiality of the writer is worthy of praise. This work is found in the collections of the Byzantine Historians. Zonaras was the author also of a Glossary or Lexicon, in the manner of Hesychius and Suidas. It was published by Tittman, in 1803, at the Leipzig press, along with the Lexicon of Photius, in 3 vol. 4to, of the first two volumes being devoted to the Lexicon of Zonaras. (Scholl, Hist. Lit. Gr., vol. 6, p. 288.)

Zorobba, a Persian, son of Megabyzus, who gained possession of Babylon for Darius Hystaspis by a stratagem similar to that by which Sextus Tarquinius gained Gabii for his father. (Vid. Tarquinius III.—Herod., 3, 154, seqq.)

Zoroaster, a celebrated reformer of the Magian religion, whose era is altogether uncertain. In what points his doctrines may have differed from those of the preceding period is an obscure and difficult question. It seems certain, however, that the code of sacred laws which he introduced, founded, or at least enlarged, the authority and influence of the Magian caste. Its members became the keepers and expounders of the holy books, the teachers and counsellors of the king, the oracles from whom he learned the Divine will and the secrets of futurity, the mediators who obtained for him the favour of Heaven, or propitiated its anger. According to Hyde, Prideaux, and many others of the learned, Zoroaster was the same with the Zerdusht of the Persians, who was a great patriarch of the Magi, and lived between the beginning of the reign of Cyrus and the latter end of that of Darius Hystaspis. This, however, seems too late a date. The so-called "Oracles of Zoroaster" have been frequently published. (Consult, on this whole subject, the very learned and able remarks of Parisot, Biogr. Univ., vol. 52, p. 434, seqq., and also Rhode, die heilige Sage, &c., der Baktier, Meder, &c., p. 112, seqq.)

Zosimus, I. a Greek historian, who appears to have flourished between A.D. 430 and 591. He was a public functionary at Constantinople. Zosimus wrote a history of the Roman emperors from the age of Augustus down to his own time. His object in writing this was to trace the causes which led to the downfall of the Roman empire, and among these he ranks the introduction of Christianity. There are many reasons which induce the belief that the work of Zosimus was not published in his lifetime, one of the strongest of which is the boldness with which he speaks of the Christian emperors. It is probable that he intended to continue the work to his own times, a design which his death prevented. A certain negligence of style, which indicates the absence of a revision on the part of the author, strongly countenances this supposition. The best editions of Zosimus have been that of Celarius, 8vo, Jenæ, 1728, and that of Reitember, 8vo, Lips., 1784. The best edition now, however, is that by Bekker in the Corpus Byz. Hist., Bonn, 1837, 8vo. -II. A native of Panopolis, in Egypt, who wrote, according to Suidas, a work on Chemistry (Xyneriad), in 28 books. The Paris and Vienna MSS. contain various detached treatises of this writer, which formed part, in all likelihood, of this voluminous production; such as a dissertation on the sacred and divine art of forming gold and silver, &c. There exist also five other works of this same writer, such as "On the Art of making Beer" (παρα την ποτηριαν.), &c. An edition of this last-mentioned work was published in 1814, by Grüner, Soitabae, 8vo. (Hoffman, Lex Bibligr., vol. 3, p. 830.—Scholl, Hist. Lit. Gr., vol. 7, p. 210.)
SUPPLEMENT.

ABAS, III. the twelfth king of Argos. He was the son of Lyceus and Hypermena, and grandson of Danaus. He married Ocaleia, who bore him two sons, Acrisius and Pretus. (Apollod., 2, 2, 1.—Hygin., Fab., 170.) When he informed his father of the death of Danaus, he was rewarded with the shield of his grandfather, which was sacred to Juno. He is described as a successful conqueror, and as the founder of the town of Abas in Phocis (Paus., 10, 35, 1), and of the Pelasgic Argos in Thessaly. (Strab., 9, p. 431.) The fame of his warlike spirit was so great, that even after his death, when people revolting whom he had subdued, they were put to flight by the simple act of showing them his shield. (Verg., Aen., 3, 388.—Serv., ad loc.) It was from this Abas that the kings of Argos were called by the patronymic Abas or Abas; Abascantus (Ἀβασκάντος), a physician of Lugdunum (Lyons), who probably lived in the second century after Christ. He is several times mentioned by Galen (De Compos. Medicam. secund. Locos., 9, 4, vol. 13, p. 278), and has also preserved an antidote invented by him against the bite of serpents. (De Antit., 2, 12, vol. 14, p. 177.) The name is to be met with in numerous Latin inscriptions in Gruter's collection, five of which refer to a freedman of Augustus, who is supposed by Kühn (Addit. ad Etlench. Medic. Vet. a J. A. Fabrieco in "Bibl. Gr." Ezech.) to be the same person that is mentioned by Galen. This, however, is quite uncertain, as also whether Παράκλητος Ἀβασκάντος in Galen (De Compos. Medicam. secund. Locos., 7, 3, vol. 13, p. 71) refers to the subject of this article.

Abdis (Ἀβδίς), the pretended author of an Apocryphal book, entitled The History of the Apocryphal context. This work claims to have been written in Hebrew, to have been translated into Greek by Eutropius, and thence into Latin by Julius Africanus. It was, however, originally written in Latin, about A.D. 910. It is printed in Fabricius, Codex Apocryphi Novi Test., p. 402, 8vo, Hamb., 1703. Abdis was called, too, the first Bishop of Babylon.

Abelio is the name of a divinity found in inscriptions which were discovered at Comminges in France. (Gruter, Inscr., p. 37, 4.—J. Scaliger, Lec- tiones Ausonianae, 1, 9.) Buttman (Mythologus, 1, p. 167, &c.) considers Abelio to be the same name as Apollo, who in Crete and elsewhere was called Άβδλος, and by the Italians and some Dorian Apello (Fest., s. v. Apellinem.—Eustath. ad II., 2, 99), and that the deity is the same as the Gallic Apollo mentioned by Caesar (B.D. Gall., 6, 17), and also the same as Belas or Helenus mentioned by Tertullian (Apologet., 23) and Herodian (8, 3.—Comp. Capitol., Maximin., 22). As the root of the word he recognizes the Spartan Βλα, i. e., the sun (Hesych., s. v.), which appears in the Syriac and Chaldæa Belus or Baal.

Abisares or Abisares (Ἀβίσαρης), called Em- bisarus (Ἐμβισαρῆς) by Diodorus (17, 90), an In- dian king beyond the river Hydaspes, whose terri- tory lay in the mountains, sent embassies to Alex- ander the Great, both before and after the conquest of Paros, although inclined to espouse the side of the latter. Alexander not only allowed him to retain his kingdom, but increased it, and on his death appointed his son as his successor. (Arrian, Anat., 5, 8, 20, 29.—Curt., 8, 12, 13, 14; 9, 11, 10, 1.)

Abittenos (Ἀβίττηνος), the author of a Greek treatise De Urinis inserted in the second volume of Ideler's Physici et Medicis Graecis Minores, Berol., 8vo, 1842, with the title Per Ὑφρων Πραγματείαι Ἀριστή ὑπὸ τοῦ Σωφρίνου παρὰ μὲν Ἰνδοῦ Ἀλλὰ Ἐπάνω τοῦ Συμφορίου παρὰ δὲ Ἰνδοῦ Ἀλληπόταν. He is the same person as the celebrated Arabic physician Asicenna, whose real name was Abū Ἁ莉 Ἰβн Sinā, A. H. 375 or 376-425 (A.D. 980 or 985-1038), and from whose great work Κηλῆ αὐτοῦ ὑπὸ τῆς Τεββ. Liber Canonis Medicinae, this treatise is probably translated.

Abiades (Ἀβίαδος), I. a physician on whose death there is an epigram by Theocritus in the Greek Anthology (7, 554), to which he is considered as inferior only to Hippocrates and Galen. With respect to his date, it is only known that he must have lived after Galen, that is, some time later than the second century after Christ.—II. The illustrious (Ἰλλαστῖστος), the author of an epigram in the Greek Anthology (9, 762) "on the quot of Asclepiades." Nothing more is known of him, unless he be the same person as Abilabitis, the Nova- cian bishop of Nicea, who was a disciple of the rhetorician Tropius, and himself eminent in the same profession, and who lived under Honorius and Theodosius II., at the end of the fourth and the beginning of the fifth centuries after Christ. (Socrates, Hist. Ec., 7, 12.)

Abrocomas (Ἀβροκόμας), II. one of the satraps of Artaxerxes Mennon, was sent with an army of 300,000 men to oppose Cyrus on his march into Upper Asia. On the arrival of Cyrus at Tarsus, Abrocomas was said to be on the Ephors; and at Issus four hundred heavy-armed Greeks, who had deserted Abrocomas, joined Cyrus. Abrocomas did not defend the Syrian passes, as was expected, but marched to join the king. He burned some boats to prevent Cyrus from crossing the Ephors, but did not arrive in time for the battle of Cunaxa. (Xen., Anab., 1, 3, § 90; 4, § 3, 5, 18; 7, § 12.—Herodot. and Susida, s. v.)

Abson of Hiber (Ἀβῦσνος or Ἀβῦσνος), I. son of the Attic orator Lycurgus. (Plut., Vit. dic. Orat., p. 843.)—II. The son of Callias, of the deme of Bate in Attica, wrote on the festivals and sacri- fices of the Greeks. (Steph. Byz., s. v. Βατς.) He also wrote a work περὶ παραγώγων, which is frequent- ly referred to by Stephanus Byz.: (s. v. Ἀγαθίς, Ἀργά- γος, &c.) and other writers.—III. A grammarian, a Phry- gian or Rhodian, a pupil of Tryphon, and originally a slave, taught at Rome under the first Caesars. (Suidas, s. v., Ἀβῦσνος.—IV. A rich person at Argos, from whom the proverb Ἀβῦσνων βίος, which was applied to extravagant persons, is said to have been derived. (Suidas, s. v.)

Abvonichus (Ἀββώνιχος), the son of Lysicles, an Athenian, was stationed at Thermopylae with a vessel to communicate between Leonidas and the fleet at Artemisium. He was subsequently sent as ambassador to Sparta with Themistocles and Aristides respecting the fortifications of Athens after the Persian war. (Herod., 3, 21.—Thuc., 1, 91.)

Abutilum (Ἀβυτιλόντυς), the satrap of Susiana,
surrendered Susa to Alexander when the latter ap-
proached the city. The satrapy was restored to
him by Alexander, but he and his son Oxyathres
were afterward executed by Alexander for the
crimes they had committed in the government of
the satrapy. (Curt., 5, 2.—Arrian, Anab., 3, 16; 7,
4.—Dio., 17, 65.)

The Greeks, plebeian. On the coins of this
gens we find the cognomen Gem., which is perhaps
an abbreviation of Geminus. The coins have no
heads of persons on them. The most distinguished
members of this gens were—I. C. Aemilius, one of
the ambassadors sent to Masinissa and the Cartha-
ginians, B.C. 171. (Liv., 42, 35.)—II. M. Aemilius,
tribune of the plebs, B.C. 187, opposed M. Fulvius,
the proconsul, in his petition for a triumph, but with-
drew his opposition chiefly through the influence of
his colleague T. Gracchus. (Liv., 39, 4, 5.)

He was praetor peregrinus, B.C. 176. (Liv., 41, 18, 13.)

ABERNUS VALENZ, a Roman lawyer, probably the
same with the Valens who formed one of the con-
silium of the Emperor Antoninus Pius. (Capi
tolium, Ant. Pius, 12.) We have, in the Pandects,
selections from his seven books of "Fidei eonamni-
sa." (Zimmerm. Gesch. d. Rom. Privatrechts, 1, 1,
5.)

ACACALLIS (Ἀκακάλλη), daughter of Minos, by
whom, according to a Cretan tradition, Hermes
began Cydon; while, according to a tradition of the
Tegetans, Cydon was a son of Tegetes, and im-
migrated to Crete from Tegea. (Paus., 8, 53, § 2.)

Apollo beget by her a son, Miletus, whom, for fear
of her father, Acacallis exposed in a forest, where
wolves watched and snuckled the child until he was
found by shepherds, who brought him up. (Anton.
Lib., 30.) Other stories combine Acacallis with
Alcmene, with whom, for fear of her father, she
suckled a son (Acállh), and does not mention Miletus as her
son. Acacallis was in Crete a common name for a nar-
cissus. (Athén., 15, p. 691.—Hesych., s. v.)

AQAUS (Ἀκαυς), a son of Lycaon and king of
Acæsian in Acadia, of which he was believed to be
the founder. (Paus., 8, 9, 1.—Steph. Byz., s. v.
AQAUS.)

ACARAN (Ἀκάραν), one of the Epigones, was
a son of Alcmeon and Callirrhoe, and brother of
Amphoterus. Their father was murdered by Phe
geus when they were yet very young, and Callirrhoe
prayed to Zeus to make her sons grow quickly, that
they might be able to avenge the death of their fa-
thers. The prayer was granted, and Acaran, with his
brother, slew Phegeus, his wife, and his two sons.
The inhabitants of Peosph, where the sons had been
slain, pursued the murderers as far as Tegea, where,
however, they were received and rescued. At the
request of Achelous, they carried the necklace and
pephus of Harmonia to Delphi, and from thence they
went to Epirus, where Acaran founded the state
called after him Acarania. (Apollod., 3, 7, § 6—
Or., Met., 9, 419, 13c.—Thucyd., 2, 192.—Strab.,
10, p. 469—Paus., 8, 9, 1.—Steph. Byz., s. v.
Acara.)

AYRIUS, or Attius, L., an early Roman tragic
poet and the son of a freedman, was born, accord-
ing to Jerome, B.C. 170, and was fifty years younger
than Pacuvius. He lived to a great age; Cicero,
when a young man, frequently conversed with him.
(Brut. 28.) His tragedies were chiefly imitated from
the Greeks, especially from Eschylus, but he also
wrote some on Roman subjects (Praetexta); en
titled Brutus, he was probably in hon-
our of his patron D. Brutus. (Cic., De Leg., 2, 21;
Pro Arch., 11.) We possess only fragments of his
tragedies, of which the most important have been
preserved by Cicero, but sufficient remains to justi-
fy the terms of admiration in which he is spoken of
by the ancient writers. He is particularly praised
for the strength and vigour of his language and the
sublimity of his thoughts. (Cic., Pro Pison., 24;
Pro Sest., 56, &c.—Hor., Ep., 2, 1, 56.—Quintil.,
10, 1, § 97.—Gell., 13, 2.) Besides these tragedies,
he also wrote Annales in verse, containing the his-
tory of Rome, like those of Ennius; and three prose
works, "Cursus," "On the Actives," which seems to
have been a history of poetry, "Libri Plurimumacon,"
and "Parerga," of the two latter no fragments are
preserved. The fragments of his tragedies have been
collected by Stephanus in "Frag. vet. Poet. Lat."
Paris, 1564; Maittaire, "Opera et Frag. vet. Poet.
Lat.," Lond., 1713; and Bothe, "Poet. Scenicci Latin.
," vol. v., Lips., 1834; and the fragments of the
Didascalia by Madvig, "De L. Attii Didascaliis Com-
ment." Hafn., 1831.

ACERANDER (Ἄκερανδρος) wrote a history of Cy-
rene. (Schol. ad Apoll., 4, 1561, 1750; ad Pind.,
Pyth., 4, init., 57.) Plutarch (Symp., 5, 2, § 8)
speaks of a work of his respecting Libya (πεπι
Ἄθηνα), which may, probably, be the same work as
the history of Cyrene. The time at which he lived
is unknown.

ACIAS (Ἄκιας), a native of Salamis in Cyprus,
trained for Egypt, he was one of those who invented
the so-called "sugar cubes" (polymentarius). He and his
son Helcón, who distinguished himself in the same art,
are mentioned by Athenæus (2, p. 48, b.). Zenobius
speaks of both artists, but says that Acias (or, as he
calls him, Aecias, "Axious") was a native of Patare,
and Helcón of Castyus. He tells us, also, that they
were the first who constructed a peplos for Athena Polias.
When they lived, we are not informed; but it must
have been before the time of Euripides and Plato,
who mention this. (Eur., Med., 1217, 16, 1; Plato,
Euthyr., § 6.) A specimen of the workmanship of
these two artists was preserved in the temple at
Delphi, bearing an inscription to the effect that Pal-
las had imparted marvellous skill to their hands.

ACIÆS (Ἄκιας), an ancient Greek physician,
whose age and country are both unknown. It is
ascertained, however, that he lived at least four
hundred years before Christ, as the proverb "Aeciä-
Aciae, aciae curas curavit," is quoted on the author-
ity of Aristophanes. This saying (by which only
Aciæas is known to us) was used when any per-
son's disease became worse instead of better under
medical treatment, and is mentioned by Suidas (s. v.
Aciæas); Zenobius (Proverb. Cent., 1, § 52), Dioge-
nianus (Proverb., 2, 3), Michael Apostolius (Proverb.,
2, 23), and Plutarch (Proverb. quinaxes Alloc. usi
unt, § 98). See also Proverb. e Cod. Bodl., § 82, in
Gaisford's "Paramiographi Graeci," svo, Oxon.,
1836. It is possible that an author bearing this name,
and mentioned by Athenæus (12, p. 516, c.) as having
written a treatise on the Art of Cooking (ἰατρικ
titik), may be one and the same person, but of this
we have no certain information. (J. J. Baier, "Agric.
Medic. Cent.," 4to, Lips., 1718.)

ACIÆVS (Ἄκιας), II. a bishop of the Novatians
in the reign of the Emperor Constantine, A.D. 325,
who was present at the Council of Nice, and advo-
cated the exclusion from the communion of those
who were found guilty of gross sin after baptism.
(Socrat., Hist., 1, 10.—Sozom., 1, 2.)

ACIÆDOTUS (Ἄκιαεδώτος), a Greek historical
writer, who is cited by Plutarch (Them., 13), and
whose work contained, as it appears, an account of
the battle of Salamis among other things. The
name at Delphi has been conjectured, Stephanus,
(s. v. Μέγαλα πόλις) speaks of an Acedotus of
Megapolis, who wrote a work on cities (πεπι
πόλεων), but whether this is the same as the above-
mentioned writer is not clear.

ACODES (Ἄκόδες), II. a surname of Apollo
which characterizes him as the god of the healing art, or, in general, as the averter of evil, like 'Achéitos. ([Eurip., Androm., 901.])—III. surnamed Saca (Σάκα), on account of his foreign origin, was a tragic poet at Athens, and a contemporary of Aristophanes. He seems to have been either of Thracian or Mysian origin. ([Aristoph., Aesop, 31.]—Schol., ad loc.—Vespas, 1216.—Schol., ad loc.—Plat. & Straw., ου κατασται.—Walck, Die Griech. Traged., p. 113.)

Achilles (Ἀχιλλῆς), V. son of Andromachus, whose sister Laodice married Seleucus Callinicus, the father of Achillas the Great. Achaeus himself married Laodice, the daughter of Mithradates, king of Pontus. ([Polyb., 4, 51, § 4; 8, 22, § 11.])

He accompanied Seleucus Cearanus, the son of Callinicus, in his expedition across Mount Taurus against Attalus, and after the assassination of Seleucus, avenged his death; and though he might easily have assumed the royal power, he remained faithful to the family of Seleucus. Antiochus the Great, the successor of Seleucus, appointed him to the command of all Asia on this side of Mount Taurus, B.C. 223. Achaeus recovered for the Syrian empire all the districts which Attalus had gained; but having been falsely accused by Hermeias, the minister of Antiochus, of intending to revolt, he did so himself deserting, after being deposed, the throne he had ruled over the whole of Asia on this side of the Taurus. As long as Antiochus was engaged in the war with Pontyly, he could not march against Achaeus; but after a peace had been concluded with Pontyly, he crossed the Taurus, united his forces with Attalus, deprived Achaeus in one campaign of all his dominions, and took Sardis, with the exception of the citadel. Achaeus, after sustaining a siege of two years in the citadel, at last fell into the hands of Antiochus, B.C. 214, through the treachery of Boli, who had been employed by Sosibius, the minister of Pontyly, to deliver him from his danger, but betrayed him to Antiochus, who ordered him to be put to death immediately. ([Polyb., 4, 2, § 6; 4, 48; 5, 40, § 7, 42, 57; 7, 15-18; 8, 17-23.])

Achillas (Ἀχιλλᾶς) IV. III. one of the guardians of the Egyptian king Pontyly Dionysius, and commander of the troops when Pompey fled to Egypt, B.C. 48. He is called by Caesar a man of extraordinary daring, and it was he and L. Septimius who killed Pompey. ([Cas., B. C., 3, 104.—Liv., Epit., 104.—Dion Cass., 42, 4.) He subsequently joined the emnuch Pothinus in resisting Caesar, and having had the command of the whole army intrusted to him by Pothinus, he marched against the city of Alexandria, with 20,000 foot and 2,000 horse. Caesar, who was at Alexandria, had not sufficient forces to oppose him, and sent ambassadors to treat with him, but these Achillas murdered to remove all hopes of reconciliation. He then marched into Alexandria, and obtained possession of the greatest part of the city. Meanwhile, however, Arsinoë, the younger sister of Pothinus, escaped from Caesar and joined Achillas and the other conspirators, who, though at first they had dissensions breaking out among them, she had with Achillas put to death by Ganymedes, a eunuch, B.C. 47, to whom she then intrusted the command of the forces. ([Cas., B. C., 3, 108-112; B. Alex., 4.—Dion Cass., 42, 36-40.—Lucan, 10, 519-523.)

Achlys (Ἀχλῆς), according to some ancient cosmogonies, the eternal night, and the first created being which existed even before Chaos. According to Hesiod, she was the parent of the Demigoddesses of darkness, and as such she was represented on the shield of Heracles (Scut., Herc., 264, &c.): pale, emaciated, and weeping, with chattering teeth, swollen knees, long nails on her fingers, bloody cheeks, and her shoulders thickly covered with dust.

Achmet, son of Seirim (Ἀχμέτ ὁ βασιλικὸς Σειριμ), the author of a work on the Interpretation of Dreams, Οἰστοροφήσις, is probably the same person as Abd Bekr Mohammed Ben Sirfn, whose work on the same subject is still extant in Arabic in the Royal Library at Paris (Catalog. Cod. Musæ. Biblioth. Reg., Paris, vol. I, p. 230, cod. ccxc.), and who was born A. H. 33 (A.D. 653-4), and died A. H. 110 (A.D. 728-9). (See Nicol and Pusey, Catal. Cod. Musæ. Arab. Biblioth. Bod., p. 816.) This conjecture will seem the more probable to us, when we recollect that the two names Ahmed or Achmet and Mohammed, however unlike each other they may appear in English, consist in Arabic of four letters each, and differ only in the first. There must, however, be some difference between Achmet's work, in the form in which we have it, and that of Ibn Sirfn, as the writer of the former (or the translator) appears from internal evidence to have been certainly a Christian (c. 2, 150, &c.). It exists only in Greek, or, rather (if the above conjecture as to its author be correct), it has only been published in that language. It consists of three hundred and four chapters, and consists of being derived from what has been written on the same subject by the Indians, Persians, and Egyptians. It was translated out of Greek into Latin about the year 1160, by Leo Tuscus, of which work two volumes of the city in an ox-yen form the same Ahmed or Achmet and Mohammed, and was published in Greek and Latin by Rigaltius, and appended to his edition of the Oneirocrinia of Artemidorus, Lutet., Paris, 1603, 4to, and some Greek various readings are inserted by Jac. De Rhoer in his Oius Daemonienses, p. 338, &c., Devent., 1762, 8vo. It has also been translated into Italian, by M. Giorgio Vossman.

Aeneidus held the office of Magister Admissionum in the reign of Valerian (B.C. 253-260). One of his works was entitled Acta, and contained an account of the history of Aurelian. It was in nine books at least. (Vespas., Aurel., 12.) He also wrote the life of Alexander Severus. (Lamprid., Alex. Sec., 14, 48, 68.)

Aeneides, a family name of the Mania gens. Cicero speaks of the Acinidi as among the first men of a former age. (De leg. agr., 2, 24.)—L. M. ANULIUS, prator urbanus in the year B.C. 210, was sent by the senate into Sicily to bring back the consul Valerius to Rome to hold the elections. (Liv., 26, 23; 27, 4.) In B.C. 207, he was with the troops stationed at Narnia to oppose Hasdrubal, and was the first to suffer the vengeance of the latter. (Liv., 27, 50.) In B.C. 206, he and L. Cornelius Lentulus had the province of Spain intrusted to them, with proconsular power. In the following year he conquered the Aureat and Ilergetes, who had rebelled against the Romans in consequence of the absence of Scipio. He did not return to Rome till the year B.C. 199, but was prevented by the tribune of the people, Marcus Laeca, from entering the town of an ovation, which the senator had commanded him. (Livy, 28, 38; 29, 1-3, 13; 32, 7.)—L. M. AMULIUS PULVINUS, originally belonged to the Fulvia gens, but was adopted into the Mania gens, probably by the above-mentioned Acidinus. (Vell. Pat., 2, 8.) He was prator B.C. 188, and had the province of Hispania Citerior allotted to him, where he remained till B.C. 188. In
last year he defeated the Celibiri, and had it not been for the arrival of his successor, would have reduced the whole people to subjection. He applied for a triumph in consequence, but obtained only an ovation. (Liv., 38; 39; 51, 29.) In B.C. 183, he was one of the ambassadors sent to Gallia Transalpina, and was also appointed one of the triumvirs for founding the city of Arax on the Rhodope. He died in the latter year, not till B.C. 181. (Liv., 39, 54, 55; 40, 34.) He was consul B.C. 179 (Liv., 40, 43), with his own brother, Q. Fulvius Flaccus, which is the only instance of two brothers holding the consulship at the same time. (Fast. Capitol. — Vell. Pat., 2, 8.) At the election of Aecidius, M. Seipio declared him to be virum bonum, egregiumque civein. (Cic. De Or., 2, 64.) III. L. Manlius, who was proconsul in B.C. 168 (Liv., 45, 13), is probably one of the two Manlii Aecidii, who are mentioned two years before as illustrious youths, and of whom one was the son of M. Manlius, the other of L. Manlius. (Liv., 42, 49.) The latter is probably the same as the questor, and the son of No. II. — IV. A young man who was going to pursue his studies at Athens at the same time as young Cicero, B.C. 45. (Cic. de Att., 12, 52.) He is, perhaps, the same Aecidius who sent intelligence to Cicero respecting the death of Marcellus. (Cic. ad Fam., 4, 12.)

AECIDYNUS. GREGORIUS (Γρηγόριος Ἀκινδύνου), a Greek monk, A.D. 1341, distinguished in the controversy with the Hesychast or Quietist monks of Mount Athos. He supported and succeeded Bardam in his opposition to their notion that the light which appeared on the Mount of the Transfiguration was uncreated. The emperor, John Cantacuzenus, took part (A.D. 1347) with Palamas, the leader of the Quietists, and obtained the condemnation of Aecidynus by several councils at Constantinople, at one especially in A.D. 1351. Remains of Aecidynus are, De Essentia et Operatione Dei adversus imperiam Gregorii Palamae, &c., in “Variorum Pontificum ad Petrum Gapheum Eutychianum Epistol.” p. 77, Greete, 4to, 1618, and Carmen Iambicum de Haeresibus Palamae, “Gregorius Orthodoxus” (Use of Saint Gregory), by Leo Allatius, p. 755, vol. 1, 4to, Rome, 1652.

ACETES (Ἀκέτης), according to Ovid (Met., 3, 582, &c.), the son of a poor fisherman in Macedon, who served as pilot in a ship. After landing at the island of Naxos, some of the sailors brought with them on board a beautiful sleeping boy, whom they had found in the island, and whom they wished to take with them; but Aecetes, who recognised the boy, the god Bacchus, dissuaded them from it, but in vain. When the ship had reached the open sea, the boy awoke, and desired to be carried back to Naxos. The sailors promised to do so, but did not keep their word. Hereupon the god showed himself to them in his own majesty: vines began to twine around the vessel, tigers appeared, and the sailors, seized with madness, jumped into the sea and perished. Aecetes alone was saved and conveyed back to Naxos, where he was initiated in the Bacchic mysteries, and became a priest of the god. Hyginus (Fab., 134), whose story, on the whole, agrees with that of Ovid, and all the other writers who mention this adventure of Bacchus, call the crew of the ship Tyrrhenian pirates, and derive the name of the Tyrrhenian Sea from them. (Comp. Hom., Hymns. in bacch. — Apoll., 3, 5, &c. — Socin.)

ACAEUS (Ἀκαῖος), king of Egypt, entered into alliance with Evagoras, king of Cyprus, against their common enemy Artaxerxes, king of Persia, about B.C. 385, and assisted Evagoras with ships and money. On the conclusion of the war with Evagoras, B.C. 376, the Persians directed their forces against Egypt. Acoros collected a large army to oppose them, and engaged many Greek mercenaries, of whom he appointed Chabrias general. Chabrias, however, was recalled by the Athenians on the complaint of Pharnabazus, who was appointed by Artaxerxes to conduct the war. When the Persian army entered Egypt, which was not till B.C. 373, Acoros was already dead. (Diod., 15, 3, 4, 8, 9, 99, 41, 42. — Theopomp. ap Phot., cod. 176.) Synkellos (p. 76, a, p. 557, a.) assigns thirteen years to his reign.

AÇREA (Ἀκραία), I. a daughter of the river-god Asterion, near Mycenae, who, together with her sisters Eubea and Prosymna, acted as nurses to Aecetis. A hill, Acerea, opposite the temple of Juno, near Mycenae, derived its name from her. (Paus., 2, 17, § 2.) II. Acerea and Acraea are also attributes given to various goddesses and gods whose temples were situated upon hills, such as Jupiter, Juno, Venus, Minerva, Diana, and others. (Paus., 1, 1, § 3; 2, 24, § 1. — Apollod., 1, 9, § 28. — Vitruv., 1, 7. — Spanheim, ad Callim., Hymn. in Jun., 82.)

ACROPOLITA, GEORGIUS (Γεωργιός Ἀκροπολίτης), the son of the great logotheta Constantinus Acropolita the elder, belonged to a noble Byzantine family which stemmed from the house of the Ducas. (Acropolita, 97.) He was born at Constantinople in 1220 (ib., 39), but accompanied his father in his sixteenth year to Nicaea, the residence of the Greek emperor John Vatatzes Ducas. There he continued and finished his studies under Theodorus Exaptenergos and Nicephorus Blenimda. (Ib., 32.) The emperor employed him afterward in diplomatic affairs, and Acropolita showed himself a very discreet and sagacious minister. In 1255 he commanded the Nicaean army in the war between Michael, despot of Epirus, and the Emperor Theodore II., the son and successor of John. But he was made prisoner, and was only delivered in 1260 by the mediation of Michael Paleologus. Previously to this he had been appointed great logotheta, either by John or by Theodore, whom he had instructed in logic. Meanwhile, Michael Paleologus was proclaimed Emperor of the entire empire, and in 1265 he expelled the Latins from Constantinople, and became emperor of the whole East; and from this moment Georgius Acropolita becomes known in the history of the Eastern empire as one of the greatest diplomats. After having discharged the function of ambassador at the court of Constantine, king of the Bulgarians, he retired for some years from public affairs, and made the instruction of his soul the sole occupation. But he was soon employed in a very important negotiation. Michael, afraid of a new Latin invasion, proposed to Pope Clement IV. to re-unite the Greek and the Latin churches; and negotiations ensued, which were carried on during the reign of five popes, Clement IV., Gregory X., John XXI., Nicolas III., and Martin IV., and the happy result of which was almost entirely owing to the skill of Acropolita. As early as 1274, Acropolita was sent to Pope Gregory X., and in 1274, at the Council of Lyons, he confirmed, by an oath in the emperor's name, that that confession of faith which had been previously sent to Constantinople by the pope had been adopted by the Greeks. The reunion of the two churches was afterward broken off, but not through the fault of Acropolita. In 1582, Acropolita was once more sent to Bulgaria, and shortly after his return, in the month of December of the same year, in his 62d year.

Acropolita is the author of several works: the most important of which is a history of the Byzantine Empire, under the title Χρονικοί ὡς ἐν συνώπιοι τῶν ἐν θρόνω, that is, from the taking of Constantinopole.
tinople by the Latins in 1504, down to the year 1261, when Michael Palæologus delivered the city from the foreign yoke. The MS. of this work was found in the library of Georgius Cantauczenus at Constantinople, and afterward brought to Europe. (Fabricius, Bibliotheca Graeca, vol. 7, p. 768.) The first edition of this work, with a Latin translation and notes, was published by Theodorus Douza, Lugd. Batav., 1614, 8vo; but a more critical one by Leon Allatius, who used a Vatican MS., and divided the text into chapters. 

It has the title Τεγρυον του Ἀκροπολίτου τος μεγάλου λογοθέτου χρονική συγγραφῆς, Georgi Apocrofia, magi Logodse, Historia, &c., Paris, 1651, fol. This edition is reprinted in the "Corpus Byzantinorum Scriptorum," Venice, 1729, vol. 12. This chronicle contains one of the most remarkable periods of Byzantine history, but it is so short that it seems to be only an abridgment of another work of the same author, which is lost. 

Acropolita perhaps composed it with the view of giving it as a compendium to those young men whose scientific education he superintended, after his return from his first embassy to Bulgaria. The history of Michael Palæologus by Pachymeres may be considered a continuation of Acropolita. 

Besides this work, Acropolita wrote several orations, which he delivered in his capacity as great logotheta, and as director of the negotiations with the pope; but these orations have not been published. (Fabricius (vol. 7, p. 471) speaks of a MS. which has the title Περὶ τῶν ἀπὸ πτίσεως κόσμου ἐτῶν καὶ περὶ τῶν βασιλεύσαντος μέρη ἄλλως Κωνσταντινουπόλεως. Georgius, or Gregorius Curpnius, who has written a short encomium of Acropolita, calls him the Plato and the Aristotle of his time. 

This "encomium" is printed, with a Latin translation, at the head of the edition of Acropolita by Th. Douza: it contains useful information concerning Acropolita, although it is full of adulation. Farther information is contained in Acropolita's history, especially in the latter part of it, and in Pachymeres, 4, 23; 6, 26, 34, seq.

Ἀκτυάριος Νασώ, M., seems to have written a life of Julius Cæsar, or a history of his times, which is quoted by Suetonius (Jul., 9, 52). The time at which he lived is uncertain, but from the way in which he is referred to by Suetonius, he would almost seem to have been a contemporary of Cæsar.

Ἀκτυάριος (Ἀκτωρίωρος), the surname by which an ancient Greek physician, whose real name was Zacharias, and who was called Zacharias; he himself practised at Constantinople, and, as it appears, with some degree of credit, as he was honoured with the title of Actuarius, a dignity frequently conferred at that court upon physicians. (Dict. of Ant., p. 631, b.) Very little is known of the events of his life, and his date is rather uncertain, as some persons reckon him to have lived in the eleventh century, and others bring him down to the beginning of the fourteenth. He probably lived towards the end of the thirteenth century, as one of his works is dedicated to his tutor, Joseph Racendyles, who lived in the reign of Andronicus II. Palæologus, A.D. 1281–1328. One of his schoolfellows is supposed to have been Apecaucus, whom he describes (though without naming him) as going to study farther north. (Dict. of Antiq., p. 139, 169.)

One of his works is entitled Περὶ Ἐνεργείων καὶ Παθῶν τοῦ Φυσικοῦ Πνευμάτου, καὶ τῆς κατ' αὐτὸν Διάτης. "De Actionibus et Affectibus Spiritus Animalis, ejusque Nutritione." This is a psychological and physiological work in two books, in which all his reasoning, says Freind, seems to be founded on the principles laid down by Aristotle, Galen, and others, with relation to the same subject. The style of this tract is by no means impure, and has a great mixture of the old Attic in it, which is very rarely to be met with in the later Greek writers. A tolerably full abstract of it is given by Burchausen, Hist. Medici, Dial. 14, p. 338, &c. It was first published, Venet., 1547, 8vo, in a Latin translation by Julius Alexandrinus de Neustain. The first edition of the original was published, Paris, 1557, 8vo, edited, without notes or comments, by J. Corulle. This Greek edition appeared in 1774, 8vo, Lips., under the care of J. F. Fischer. Ideler has also inserted it in the first volume of his Physici et Medici Graeci Minores, Berol., 8vo, 1841; and the first part of J. S. Bernardi Reliquiae Medico-Criticæ, ed. Gruner, Jene, 1795, 8vo, contains some Greek scholia on the work.

Another of his extant works is entitled Θεραπευτικὴ Μεθοδία, "De Methodo Medendi," in six books, which have hitherto appeared complete only in a Latin translation, though Dietz had, before his death, collected materials for a Greek edition of this and his other works. (See his preface to Galen, De Dissect. Musc.) In these books, says Freind, though he chiefly follows Galen, and very often Attius and Paulus Egineta without naming him, yet he transmits to us a very considerable amount of material, both in the old and modern writers, as well barbarians as Greeks; and, indeed, we find in him several things that are not to be met with elsewhere. The work was written extemporary, and designed for the use of Apecaucus during his embassy to the north. (Pref., 1, p. 139.) A Latin translation of this work by Corn. H. Mathiæus was first published, Venet., 1554, 4to. The first four books appear sometimes to have been considered to form a complete work, of which the first and second have been inserted by Ideler in the second volume of his Phys. et Med. Gr. Min., Berol., 1842, under the title Περὶ Διάγνωσης Πάθων, "De Morborum Dignitione," and from which the Greek extracts in H. Stephensi's Dictionarium Medicum, Par., 1584, 8vo, are probably taken. The fifth and sixth books have also been taken for a separate work, and were published by themselves, Par., 1599, 8vo, and Basile., 1540, 8vo, in a Latin translation by J. Ruellius, with the title "De Medicamentorum Compositione." An extract from this work is inserted in Fernel's collection of writers, De Febris, Venet., 1576, fol.

His other extant work is Περὶ Οἰδων, "De Urinis," in seven books. He has treated of this subject very fully, and in several instances adds materials for the plan which Theophilus Protospatharius had marked out, yet he has added a great deal of original matter. It is the most complete and systematic work on the subject that remains from antiquity; so much so that, till the chemical improvements of the last hundred years, he had left hardly anything new to be said by the moderns, many of whom, says Freind, al. h., have been indebted to this work. The work was first published in a Latin translation by Ambrose Leo, which appeared in 1519, Venet., 4to, and has been several times reprinted; the Greek original has been published for the first time in the second volume of Ideler's work quoted above. Two Latin editions of his collected works are said by Chouant (Handbuch der Bücherkunde für die ältere Medizin, 1833, p. 163) to have been published in the same year, 1556, one at Paris, and the other at Lyons, both in 8vo. His three works are also inserted in the Medicus Artis Principia of H. Stephensi, Par., 1567, fol. (Freind's Hist. of Physic.—Sprengel, Hist. de la Méd.—Haller, Biblioth. Med. Pract.—Burchausen, Hist. Med.)

Aculeo occurs as a surname of C. Parius, who was questor of L. Scipio, and was condemned of peculium. (Lis., 38, 55.) Aculeo, however, seems
not to have been a regular family-name of the Turia gens, but only a surname given to this person, of which a similar example occurs in the following article.

C. Acélo, a Roman knight, who married the sister of Helvia, the mother of Cicero. He was summoned to the Senate this day in his knowledge of the Roman law, and possessed great acuteness of mind, but was not distinguished for other attainments. He was a friend of L. Licinius Crassus, and was defended by him upon one occasion. The son of Acélo was C. Velleius Varro; whence it would appear that Acélo was only a surname given to the father from his acuteness, and that his full name was C. Velleius Acélo. (Cic., De Or., 1, 43: 2, 1, 65; Brut., 76.)

Aémenés (Ἀκαμήνης), a physician of Athens, who lived in the fifth century before Christ, and is mentioned as the friend and companion of Socrates. (Plat., Phdr., init.—Xen. Memor., 3, 13, § 2.) He was the father of Eryximachus, who was also a physician, and who is introduced as one of the speakers in Plato's Symposium. (Plat., Protag., p. 332 Ed., a 1.) Aémenés was mentioned in the collection of letters first published by Leo Allatius, Paris, 1637, 4to, with the title Epist. Socrae et Socratierum, and again by Orellius, Lips., 1815, 8vo, ep. 14, p. 31.

Aédon de Aédonis (Ἀδάος ο Αδάοιος), a Greek epigrammatist, a native, most probably, of Macedonia. The epithet Macedonios is appended to his name before the third epigram in the Vat. MS. (Anth. Gr., 6, 229); and the subjects of the first, eighth, ninth, and tenth epigrams agree with this account of his origin. He lived in the time of Alexander the Great, to whose death he alludes. (Anth. Gr., 7, 240.) The fifth epigram (Anth. Gr., 7, 305) is inscribed ' Αδάοιο Μακεδονιον, and there was a Mitylenean of this name, who wrote two prose works, Peri Ἀγαλατοποιν, and Peri Διαθέσεων. (Athen., 13, p. 606, A; 11, p. 471, F.) The time when he lived cannot be fixed with certainty. Reiske, though on insufficient grounds, believes these two to be the same person. (Anth. Grac., 6, 223, 238; 7, 51, 238, 240, 305; 10, 20.—Bruneck, Anal., 2, p. 124.—Jacobs, 13, p. 831.)

Afar Nautri (Ἀφαρναυτρί), an ancient physician, bearing the title of Ituroepistata (ἱταρωτάτων λόγων σοφίτης: Socrates, Hist. Eccles., 7, 13), for the meaning of which see Dict. of Art., p. 528. Little is known of his personal history, except that he was by birth a Jew, and that he was one of those who fled from Alexandria at the time of the expulsion of the Jews from that city by the Patriarch St. Cyril, A.D. 416. He went to Constantinople, was persuaded to embrace Christianity, apparently by Atticus, the patriarch of that city, and then returned to Alexandria. (Socrates, l.c.) He is the author of a Greek treatise on physiology, except that he was by birth a Jew, and that he was one of those who fled from Alexandria at the time of the expulsion of the Jews from that city by the Patriarch St. Cyril, A.D. 416. He went to Constantinople, was persuaded to embrace Christianity, apparently by Atticus, the patriarch of that city, and then returned to Alexandria. (Socrates, l.c.) He is the author of a Greek treatise on physiology, with notes on two books, which is still extant, and which is borrowed, in a great measure (as he himself confesses, 1, Proem., p. 314, ed. Franz.), from Polemo's work on the same subject. It is dedicated to Constantius, who is supposed by Fabricius (Bibloth. Graec., vol. 1, p. 171; 13, 34, ed. ret.) to be the person who married Placidia, the daughter of Theodosius the Great, and who reigned for seven months after the death of Theodosius in 395. It was first published in Greek at Paris, 1540, 8vo, and Polemo's work. It was in Greek and Latin at Basle, 1544, 8vo, and afterword in Greek, together with Eileen, Polemo, and some other writers, at Rome, 1545, 4to; the last and best edition is that by J. G. Franzius, who has inserted in it its collection of the Scriptorum Physiognomae Veteres, Gr. et Lat., Athen., 1789, 8vo. Another of his works, Peri 'Aýmus, Nautri, is quoted by the scholar to Herodotus, and an extract from it is given by Aetius (tetrah. 1, serm. 3, c 169); it is said to be still in existence in manuscript in the Royal Library at Paris. Several of his medical prescriptions are preserved by Orsinius and Aetius.

Aephrates (Ἀερφράτης), son of a tetrarch in Galatia, belonged to Antony's party, who killed all the Romans in Hercules shortly before the battle of Actium. After this battle he was led as prisoner in the triumph of Augustus, and put to death with his younger son. His elder son, Deyteus, was subsequently made priest of the celebrated goddess in Comana. (Strab., 12, p. 543, 558, 559.—Cic. ad Fam., 2, 19.)

Aianthus (Ἀἰαίνατος), I., the son of Ocylus, the Corinthian commander in the invasion of Greece by Xerxes. Before the battle of Artemisium he threatened to sail away, but was bribed by Themistocles to remain. He opposed Themistocles with great insolence in the council which the commanders held before the battle of Salamis. According to the Athenians, he took to flight at the very commencement of the battle, but was slain by the Corinthians and the other Greeks. (Herod., Hist. Gr., 8, 5, 56, 61, 94.—Plutarch, Themistocles, 11.) II. The son of Leucophonus, an Athenian, was one of the commanders with Alcibiades in the expedition against Andros, B.C. 407. (Xenophon, Hell., 1, 4, § 21.) He was again appointed one of the Athenian generals after the battle of Arginusse, B.C. 406, and continued in office till the battle of Ægospotamis, B.C. 401, where he was one of the commanders, and was taken prisoner. He was the only one of the Athenian prisoners who was not put to death, because he had opposed the decree for cutting off the right hands of the Lacedaemonians who might be taken in the battle. He was accused by many of treachery in this battle, and was afterwards impeached by Conon. (Xen., Hell., 1, 7, § 1; 2, 1, § 30—32.—Paus., 4, 17, § 2, 10, 9, § 5.—Dem., De fala legis., p. 401.—Lyra, e. Alc., p. 143, 21.) Aristophanes speaks of Aianthus in the " Frogs" (1513), which was acted in the year of the battle, as one whose death was wished for; and he also calls him, apparently out of jest, the son of Leucophonus, that is, " White Crest." In the "Protagoras" of Plato, Aianthus is also spoken of as present on that occasion (p. 315, e).—III. The brother of Plato, who is frequently mentioned by the latter. (Apol., Sor., p. 34, 4; De Rep., 2, p. 367, e, p. 548, d, e.)

Admete (Ἀδμήτη), I. a daughter of Eurytheus and Antimache or Admete. Hercules was obliged by her father to fetch for her the girdle of Mars, which was worn by Hippolyte, queen of the Amazons. (Apolloor, 2, 5, § 9.) According to Tzetzes (ad Lycephon., 1327), she accompanied Hercules on all his travels on the earth, and was a tradition (Athens., 15, p. 447), according to which Admete was originally a priestess of Juno at Argos, but fled with the image of the goddess to Samos. Pirates were engaged by the Argives to fetch the image back, but the enterprise did not succeed; for the ship, when laden with the image, could not be made to move. The men then took the image back to the coast of Samos and sailed away. When the Samians found 40, they tied it to a tree, but Admete purified it and restored it to the temple of Samos. In commemoration of this event, the Samians celebrated an annual festival called Tona. This story seems to be an invention of the Argives, by which they intended to prove that the worship of Juno in their place was older than in Samos.

Adranor, Abdanimus, or Abdantor, a contemporary of Apollonius of Tarentum, who wrote a commentary in
five books upon the work of Theophrastus, entitled Περὶ Ἡθῶν, to which he added a sixth book upon the Nicomachian Ethics of Aristotle. (Athen., 15, e, with Schweighäuser's note.)

Adraste (Ἀδράστη), a Sicilian divinity who was worshipped in all the island, but especially at Adrastus. (Bibl., 12, 13 — Dio, 14, 37.) He was shown (x. e. Πάλακος represents the god as the father of the Palici. According to Ἀιλία (Hist. Anim., 11, 20), about 1000 sacred dogs were kept near his temple. Some modern critics consider this divinity to be of Eastern origin, and connect the name Adrastus with the Persian Adar (fire), and regard him as the same as the Phrygian Adraste, and as a personification of the sun, or of fire in general. (Bechert, Geograph. Sacra, p. 630.)

Adrastus (Ἀδράστος), 1. a son of Talas, king of Argos, and of Lysimache. (Apol., 1, 9, § 13.) A Phokaean, and thus a brother of Amphiaraus, was slain by his sister Lysimachus, who was guarding her manor from his dominions, fled to Polybus, then king of Sicily. When Polybus died, without heirs, Adrastus succeeded him on the throne of Sicily, and during his reign he is said to have instituted the Nemean games (Hom., II, 2, 572. — Pind., Nem., 9, 30 &c. — Herod., 5, 67. — Paus., 2, 6, § 3.) Afterward, however, Adrastus became reconciled to Amphitaurus, gave him his sister Eriphyle in marriage, and returned to his kingdom of Argos. During the time he reigned there, it happened that Tydes of Calydon, and Polyneices of Thebes, both fugitives from their native countries, met at Argos, near the palace of Adrastus, and came to words, and from words to blows. On hearing the noise, Adrastus hastened to them and separated the combattants, in whom he immediately recognised the two men that had been promised to him by an oracle as the future husbands of two of his daughters; for one bore on his shield the figure of a boar, and the other that of a lion, and the oracle was, that one of his daughters was to marry a boar, and the other a lion. Adrastus, therefore, gave his daughter Deipyle to Tydes, and Argèia to Polyneices, and at the same time promised to lead each of these princes back to his own country. Adrastus now prepared for war against Thebes, although he had promised to the Thebans that he would not engage in it should perish, with the exception of Adrastus. (Apoll., 3, 6, § 1, &c. — Hygin., Fab., 69, 70.)

Thus arose the celebrated war of the "Seven against Thebes," in which Adrastus was joined by six other heroes, viz., Polyneices, Tydes, Amphiaratus, Cepaneus, Hippomedon, and Parthenopaeus. Instead of Tydes and Polyneices, other legendary accounts substitute Adrastus and Meecestrus. This was ended as unfortunately as Amphiarus had predicted, and Adrastus alone was saved by the swiftness of his horse Areion, the gift of Hercules. (Hom., II, 23, 346, &c. — Paus., 8, 25, § 5. — Apoll., 3, 6.) Creon of Thebes refusing to allow the bodies of the six heroes to be buried, Adrastus went to Athens and implored the assistance of the Athenians. Theseus was persuaded to undertake an expedition against Thebes: he took the city, and delivered up the bodies of the fallen heroes to their friends for burial. (Apoll., 3, 7, § 1. — Paus., 9, 9, § 1.)

Ten years after this, Adrastus persuaded the seven sons of the heroes who had fallen in the war against Thebes, to make a new attack upon that city, and Amphiarus now declared that the gods approved of the undertaking, and promised success. (Paus., 9, 9, § 2. — Apoll., 3, 7, § 2.) This war is celebrated in ancient history as the war of the Epigoni (Έπιγόνοι). Thebes was taken and razed to the ground, after the greater part of its inhabitants had left the city on the advice of Tiresias. (Apol., 3, 7, § 2-4. — Herod., 5, 61. — Strab., 7, p. 325.) The only Argive hero that fell in this war was Αἰκελαύνω, the son of Adrastus. After having built a temple of Artemis at the border of Thebes (vind. Adrastus), he set out on his return home. He weighed down by old age and grief at the death of his son, he died at Megara, and was buried there. (Paus., 1, 43, § 1.) After his death he was worshipped in several parts of Greece as at Megara (Paus., l. c.); at Siecyon, where his memory was celebrated in tragic choruses (Herod., 5, 67), and in Attica (Paus., 6, 33, § 4). The legends about Adrastus and the two Theban kings form of the richest, and most ample materials for the epic as well as tragic poets of Greece (Paus., 9, 9, § 3), and some works of art relating to the stories about Adrastus are mentioned in Pausanius (3, 18, § 7; 10, 10, § 2).

From Adrastus the female patronymic Adrastine was formed. (Hom., II, 5, 412.)

Adrastea (Ἀδράστη), 1. a Greek rhetorician, born at Tyre, who came and resided under the Emperors M. Antoninus and Commodus. He was the pupil of the celebrated Herodes Atticus, and obtained the chair of philosophy at Athens during the lifetime of his master. His advancement does not seem to have impaired their mutual regard: Herodes declared that the unfinished speeches of his scholar were the "fragments of a colossus," and Adrianus showed his gratitude by a funeral oration which he pronounced over the ashes of his master. Among a people who railed one another in their zeal to do him honour, Adrianus did not show much of the discretion of a philosopher. His first lecture commenced with the modest encomium on himself πάνιν εκ δοσιάς γραμμάτω, while, in the magnificence of his dress and equipage, he affected the style of the hero of philosophy. A story may be seen in Philostratus of his trial and acquittal for the murder of a begging sophist who had insulted him: Adrianus had retorted by styling such insults δύσματα κόρων, but his pupils were not content with weapons of ridicule. The visit of M. Antoninus to Athens made him acquainted with Adrianus, whom he invited to Rome and honoured with his friendship: the emperor even condescended to set the thesis in a rhetorical style which the death of Antoninus, he became the private secretary of Commodus. His death took place at Rome in the eightieth year of his age, not later than A.D. 192, if it be true that Commodus (who was assassinated at the end of this year) sent him a letter on his deathbed, which he is represented as kissing with devout earnestness in his last moments. (Philos., Vit. Adrianus, § 5. — Suidas, s. v. 'Αδραστής.) Of the works attributed to him by Suidas, three declarations only are extant. These have been cited by Leo Allatius in the Excerpta Varia Graecorum Sophistarum ac Rhetoricorum, Rome, 1641, and by Walz in the first volume of the Rhetores Graeci, 1832. — II. A Greek poet, who wrote an epic poem on the history of Alexander the Great, which was called 'Αλέξανδρος. Of this poem a single book is extant. (Steph. Byz., s. v. Σάνων), but it does not contain only a fragment consisting of one line (Steph. Byz., s. v. 'Αστραπή). Suidas (s. v. 'Αδραστής) mentions, among other poems of Arrianus, one called 'Αλέξανδρος, and there can be no doubt that this is the work of Adrianus, which he by mistake attributes to his Arrianus. (Meineke, in the Abhandl. der Berlin. Akademie, 1832, p. 124.) — III. Flourished, according to Archbishop Ussher, A.D. 433. There is extant of his, in Greek, Ιεράγωγο Σακαραριύον.
The text provided is a page from a historical or classical work, discussing various aspects related to the Greek mythological figure Eacus. The text mentions historical figures, their beliefs, and their roles in mythology. The text also refers to other historical and mythological figures, such as Eacus, Hyginus, Plato, and others, and their contributions to the understanding of the gods and their stories.

Here is a brief summary of the content:

- **Eacus**: A son of Jupiter and Eganis, a daughter of the river god Asopus. He was born in the island of Egesia, which was inhabited by Pelasgians. Eganis was carried by Jupiter to secure her from the anger of her parents, and when this island was afterward called Eginis. (Apollod., 3, 12, § 6. — Hygin., Fab., 52. — Paus., 2, 29, § 2. — Comp. Nonn. Dionys., 6, 212. — Ovid., Met., 6, 113; 7, 472, &c.) According to some accounts, Eacus was a son of Jupiter and Europa. Some traditions related that, at the time when Eacus was born, Eganis was not yet inhabited, and that Jupiter changed the name of the latter, by sending a plague or a fearful dragon into it, by which nearly all its inhabitants were carried off, and that Jupiter restored the population by changing the ants into men. These legends, as Müller justly remarks (Eginetica), are nothing but a mythical account of the colonization of Eganis, which seems to have been originally inhabited by Pelasgians, and afterward received colonists from Phthiotic, the seat of the Myrmidones, and from Phlius on the Asopus. Eacus, while he reigned in Eginis, was renowned in all Greece for his justice and piety, and was frequently called upon to settle disputes, not only among men, but even among the gods themselves. (Pind., Isth., 8, 48, &c. — Pausan., 1, 39, § 5.) He was such a favourite with the latter, that, when Greece was visited by a drought, in consequence of a murder which had been committed (Diod., 4, 60, 61. — Apollod., 3, 12, § 6), the oracle of Delphi declared that the calamity would not cease unless Eacus prayed to the gods that it might; which he accordingly did, and it ceased in consequence. Eacus himself showed his gratitude by erecting a temple to Zeus Panhellenis on Mount Panhellonion (Paus., 2, 30, § 4), and the Eginetians afterward built a sanctuary in their island called Excceum, which was a square place enclosed with walls, and within which a statue of the god was to be preserved, in later times, to be buried under the altar in this sacred enclosure. (Paus., 2, 29, § 6.) A legend preserved in Pindar (Ol., 8, 39, &c.) relates that Apollo and Neptune took Eacus as their assistant in building the walls of Troy. When the work was completed, three dragons rushed against the wall, and while the two of them which attacked those parts of the wall built by the gods fell dead, the third forced its way through the breach which the other two had made, by Eacus. Hereupon Apollo prophesied that Troy would fall through the hands of the Eadicis. Eacus was also believed by the Eginetians to have surrounded their island with high cliffs to protect it against pirates. (Paus., 2, 29, § 5.) Several other incidents connected with the story of Eacus are mentioned by Ovid (Metam., 7, 506, &c.; 9, 435, &c.). By Eidesis, Eacus is said to have begotten a son, Phocus, whom he preferred to the two others, who contrived to kill Phocus during a contest, and then fled from their native island. (Vid. Phil. Bier., 7, 26.) After his death Eacus became one of the three judges in Hades (Or., Met., 13, 25. — Hor., Carm., 2, 13, 22), and, according to Plato (Gorg., p. 523., — Compare Apology, p. 41. — Ixion., 5.,) especially for the shades of Europeans. In works of art, he was represented bearing a sceptre and the keys of Hades. (Apollod., 3, 12, § 6. — Pind., Isthm., 8, 47, &c.) Eacus had sanctuaries both at Athens and in Eginis (Paus., 2, 29, § 6. — Hyg., Schol. ad Pind., Nem., 13, 155), and the Eginetians regarded him as the tutelary deity of their island. (Pind., Nem., 8, 52.)

**Eidesis** (Aldesia), a female philosopher of the new Platonic school lived in the fifth century after Christ, at Alexandria. She was a relative of Syrianus and the wife of Hermetas, and was equally celebrated for her beauty and her virtues. After the death of her husband, she devoted herself to relieving the distress of the poor, and to the education of her children. She composed treatises on the subject where they went to study philosophy, and was received with great distinction by all the philosophers there, and especially by Proclus, to whom she had been betrothed by Syrianus when she was quite young. She lived to a considerable age, and her funeral oration was pronounced by Damascius, who was then a young man, in hexameter verses. The names of her sons were Ammonius and Heliodorus. (Suidas, s. v. Damascus, ap. Phot., cod. 242, p. 341, b, ed. Bekker.)

**Ega** (Alya), according to Hyginus (Poet. Astr., 2, 13), a daughter of Olenus, who was a descendant of Hephaestus. Ega and her sister Helice nursed the infant Jupiter in Crete, and the former was afterward changed by the god into the constellation called Capella. According to other traditions mentioned by Hyginus, Ega was a daughter of Melisseus, king of Crete, and was chosen to suckle the infant Jupiter; but, as she was found unable to do it, the service was performed by the goat Almachea. According to others, again, Ega was a daughter of Helios, and of such dazzling brightness, that the Titans, in their attack on Olympus, became frightened, and requested their mother Eae to conceal her in the earth. She was accordingly confined in a cave in Crete, where she became the nurse of Jupiter. In the fight with the Titans, Jupiter was commanded by an oracle to cover himself with her skin (agia). He obeyed the command, and raised Ega among the stars. Similar, though somewhat different accounts, were given by Eucemer and others. (Eratoth., Catast., 13. — Antonin. Lab., 36. — Lact., Instit., 1, 22, § 19.) It is clear that in some of these stories Ega is regarded as a nymph, and in others as a bee; a legend which was very generally received in antiquity. (Com. Buttman in Adler's Ursprungs und Bedeutung der Sternnamen, p. 309.)

**Egon II. (Aliaw)**, a son of Uranus by Gaia, Egeon, and his brothers Gyges and Cotus, are known under the name of the Uranids (Hes., Theog., Bk. 2, 12, &c.; Apollod., 2, 19, 5.) The Uranids were a giant race, and were esteemed the most perfect of men. (Schol. ad Pind., Nem., 13, 155.) Most writers mention the third Uranid under the name of Egon instead of Egeon, which is explained in a passage of Homer (II., 1, 403, &c.), who says that men called him Egeon, but the gods Briareus. On one occasion, when the Olympian gods were about to put Jupiter in chains, Thetis called in the assistance
of Ἑγεών, who compelled the gods to desist from their intention. (Hom. II., 1, 398, &c.) According to Hesiod (Theog., 154, &c., 617, &c.), Ἑγεών and his brothers were hated by Uranus from the time of their birth, in consequence of which they were concealed in the depth of the earth, where they remained until the Titans began their war against Jupiter. In the advice of a goddess Jupiter delivered the Uranids from their prison, that he might present them to him. The hundred-armed giants conquered the Titans by hurling at them three hundred rocks at once, and secured by victory to Jupiter, who thrust the Titans into Tartarus, and placed the Hecateontheis at its gates, or, according to others, in the depth of the ocean, to guard them. (Hex. Theog., 616, &c., 816, &c.) According to a legend in Pausanias (2, 1, 18; 4, 7, 2), the Erinyes are seated on the earth, and NEPTUNE—in the same place, lights them under Mount Ætna. The scholiast on Apollonius Rhodius (1, 1165) represents Ἑγεών as a son of Gaea and Pontus, and as living as a marine god in the Ægean Sea. Ovid (Met., 2, 10) and Philostratus (Vit. Apollon. 4, 6) likewise regard him as a marine god, while Virgil (En., 10, 565) reckons him among the giants who stormed Æolus' grotto. Callimachus (Hymn. in Del., 141, &c.), regarding him in the same light, places him under Mount Ætna. The scholiast on Theocritus (Idyll., 1, 65) calls Briareus one of the Cyclopes. The opinion which regards Ἑγεών and his brothers as only personifications of the extraordinary powers of nature, as such are manifested in the violent commotions of the earth, as earthquakes, volcanic eruptions, and the like, seems to explain best the various accounts about them.

Ἀθηναίοι (Ἀγριόαι), the eponymous hero of the phyle called the Ἑγεών, was a son of Celectus, and grandson of Theras, the founder of the colony in Thera. (Herod., 4, 149.) All the Ἑγεών were believed to be Cadmeans, who formed a settlement at Sparta previous to the Dorian conquest. There is only this difference in the accounts, that, according to some, Αἴγινος was the leader of the Spartan colonists at Sparta, while, according to Herodotus, they received their name of Ἑγεών from the later Ἑγεῶν, the son of Celectus. (Pind., Pyth., 5, 101; Isth., 7, 18, &c., with the schol.) There was at Sparta a heroum of Ἑγεῶν. (Paus., 3, 15, § 6.—Compare 4, 7, § 3.)

Ἄθλινος or Ἀλλινος (Αθλίνος or Αλλίνος), one of the most ancient words, is thus understood by writers, who is said by Galen (De Differ. Puls., 1, 2; 4, 2; 11; vol. 8, p. 498, 716, 752) to have been the first person who wrote a treatise on the pulse. He was a native of Velia in Lucania, and is supposed to have lived before the time of Hippocrates, that is, in the fifth century before Christ. His work was entitled Περὶ ἀθλίνου, De Palpitationibus (a name which alone sufficiently indicates its antiquity), and had now in existence. Callimachus (ap. Athen. 14, p. 643, e) mentions an author named Ἀθλίμος, who wrote a work on the art of making cheesecakes (παλάκοντουτοικών σύγγραμμα), and Pliny mentions a person of the same name (H. N., 7, 49), who was said to have lived two hundred years; but whether these are the same or different individuals is quite uncertain.

Ἠᾶλος (Ἤλος), I. the most beautiful of the Nabatean daughters of Jupiter and Neera (Virg., Elog., 6, 20), by whom Helios begot the Charites. (Paus., 9, 35, § 1.)—II. A sister of Phaethon, and daughter of Helios and Clymene. (Hygin., Fab., 154, 156.) In her grief at the death of her brother she and her sisters were changed into poplars.—III. One of the Hesperides. (Apollod., 2, 5, § 11.—Serv. ad Aen., 4, 484.—Comp. Her. Epit. 6.)—IV. A nymph, daughter of Panopeus, who was beloved by Theeaces, and for whom he forsook Ariadne. (Plut., Thea, 13, p. 557.)—V. One of the daughters of Ἑσακλίας (Pitn., H. N., 35, 40, § 8) by Lampetia, the daughter of the Sun, according to Hermippus (ap. schol. in Aristoph., Plut., 701), or by Epione, according to Suidas (s. v. Ἡσακλίας). She is said to have been venerated by the Greeks, the Britons, or "Splen- dourt," either from the beauty of the human form when in good health, or from the honour paid to the medical profession. (J. H. Melborn, Comment. in Hippocr., "Jasuhr," Lugd. Bat., 1643, 4to, c. 6, § 7, p. 55.)

Ἑλίας (Ἀλλιας) a daughter of Hyacinthus who had emigrated from Lacedaemon to Athens. During the siege of Athens by Minos, in the reign of Ἑγεῶν, she, together with her sisters Antheis, Lytae, and Orthea, were sacrificed on the tomb of Gerarcus the Cyclopes, for the purpose of averting a pestilence then raging at Athens. (Apollod., 3, 15, § 8.)

Ἑλίανος, III. Lucius, one of the thirty tyrants (A.D. 259-268) under the Roman Empire. He assumed the purple in Gaul after the death of Postumus, and was killed by his own soldiers, because he would not have the Roman name of Augustus. Trebellius Pollio and others call him Lucanius. Fechhel (Doctr. Num., 7, p. 448) thinks that his true name was Laelianus; but there seems most authority in favour of Ι. Ἑλίανος. (Europ., 9, 7.—Trebell. Poli., Trig. Tyr., 4.—Aurdi. Vict., De Caz., 33; Epit., 32.)—IV. Μεζίνος (Μέζινος Μέζινος), an ancient physician, who must have lived in the second century after Christ, as he is mentioned by Galen (De Therica ad Pamphus, init., vol. 14, p. 290) as the oldest of his tutors. His father is supposed to have also been a physician, as Ἑλίανος is said by Galen (De Dissect. Muscul., c. 1, p. 2, ed. Dietz) to have made an epitome of his father's anatomical writings. Galen speaks of that part of his work which treated of the Dissection of the Muscles as being held in some repute in his time (ibid.), and he always mentions his tutor with respect. (Ibid., c. 7, 22, p. 11, 57.) During the prevalence of Pliny the Elder says, that at Athens they are said by Galen (De Therica ad Pamphus., init.) to have used the Therica (Dict. of Ant., art. Ther. Med.) with great success, both as a means of cure, and also as a preservative against the disease. He must have been a person of some celebrity, as this same anecdote is mentioned by the Arabic historian Abū'l-Faraj (Hist. Compend. Dynast., p. 70), with exactly the same circumstances, excepting now that he makes the epidemics to have broken out at Antioch instead of in Italy. None of his works (as far as the writer is aware) are now extant.

Ἑλίσ, VIII. Παμφύλης (Παμψύλης), an ancient physician of Alexandria, of whose personal history no particulars are known, and whose date is uncertain. He is supposed by Villiores (Anntl. Græc., 2, vol. 2, p. 4, ed. Dietz), who has placed Pompey the Great, that is, in the first century before Christ; by others he is considered to be much more ancient; and by Choulant (Handbuch der Bäckerkunde für die ärztere Medicin, ed. 2, Leipzig, 1840, 8vo), on the other hand, he is placed as late as the second half of the first century after Christ. He is most probably the same person who is quoted by Galen (De Medic., 27, vol. 15, p. 730) by the name of Θήλιος. He wrote several Greek medical works, which are still to be found in manuscript in different libraries in Europe, but of which none (as far as the writer is aware) have ever been published, though Kühn intended his works to have been included in his collection of Greek medical writers. Some extracts from one of his works entitled Αναξαράγα, Medic-
nium Formularum Collectio, are inserted by C. G. Kuhn in his Additam. ad Elench. Med. Vet. a J. A. Fabricio in "Bibl. Gr.,” Exiliz., and by Bona in his Tractatus de Scorbuto, Verona, 1781, 4to. Δωρική-
póv is a word used by the later Greek writers, and is explained by Du Cange (Gloss. Med. et Infim. Graec.)) to mean εις, virtus. It is, however, frequently used by the ancients, as in the works of Lec. Lec.
Conspect. Med. 4, 1, 11, ap. Ermerin., Anec. Med. Graec. p. 153, 167. Two other of his works are quoted or mentioned by Hieron. Mercurellis in his Varia Lectiones, 3, 4; and his work De Venenis et Morbis Venenosis, 1, 16; 2, 2; and also by Schneid.
der in his Prefaces to Nicander's Theraica, p. 11, and Alexipharmac., p. 19.

*Æmilia Gen*, originally written *Æmilia*, one of the most ancient patrician houses at Rome. Its origin is referred to the time of Numa, and it is said to have been descended from Mamarces, who received the name of *Æmilius* on account of the persuasiveness of his language (cf. *alūnīa* λαύον). This Mamarces is represented by some as the son of Pythagoras, and by others as the son of Numa, while a third account traces his origin to Ascanius, who had two sons, Julius and *Æmilius*. (Plut. *Julius*, 11; *Festus*, s. v. *Æmilius*.) *Æmilius* is also mentioned as one of the ancestors of the *Æmili*. (Sil. Ital., 8, 397.) It seems pretty clear that the *Æmili* were of Sabine origin; and Festus derives the name Mamarces from the *Oscan*, Ma-
mers in that language being the same as Mars. The Sabines spoke *Oscan*. Since, then, the *Æmili* were supposed to have come to Rome in the time of Numa, and Numa was said to have been intimate with Pythagoras, we can see the origin of the le-
gend by which makes the ancestor of the house the son of Pythagoras. The first member of the house who obtained the consulsiphip was L. *Æmilius* Mamarces, in B.C. 484.

The family names of this gens are: *Barbula*, *Bucal, Lepidus, Mammecres of Mammecinus, Papa, Paulus*, *Regillus, Scaurus*. Of these names, the Bucal, Lepidus, Paulus, and Scaurus are the only ones that are in use now.

*Æmilius*, IV, (who is also called *Æmilius*) lived in the fifth century after Christ, and is known as a physician, confessor, and martyr. In the reign of the Vandal King Hunneric (A.D. 477-484), du-
ring the Arian persecution in Africa, he was most cruelly put to death. The Romish Church cele-
brates his memory on the sixth of December; the Greek Church on the seventh. (Martylol. Rom., ed.
Baron,—Victor Vitruin., De Persicaut. Vandal., 5, 1, with Ruinart's note, Paris, 8vo, 1694.—Bennuus, Nomenclator Sanctorum Professions Medicorum.)

*Æsara* (Αἰσάρα) of Lucania, a female Pythago-
rean philosopher, said to be a daughter of Pythago-
radas. She wrote a work "about Human Nature," of which a fragment is preserved by Stobeus. Some editors attribute this fragment to Arexas, one of the successors of Pythagoras; but Bentley pre-
fers reading *Æsara*. She is also mentioned in the life of Pythagoras (ap. Phot. cod. 249, p. 438, b, ed. Bekker), where Bentley reads *Åsáná* instead of *Σάρα* (Disertation upon Phalaris, p. 277).

*Æschirion*, III, a native of Pergamus, and a phy-
sician in the second century after Christ. He was one of Galen's tutors, who says that he belonged to the sect of the Empirici, and that he had a great knowledge of Pharmacy and Materia Medica. Sortorion was a remedy for a neglected superstition, a remedy for the bite of a mad dog, which is mentioned with approbation by Galen and Oribasi-
sus (Sympos., 3, p. 55), and of which the most im-
portant ingredient was powdered crawlfish. These were directed to be caught at a time when the sun and

moon were in a particular relative position, and to be baked alive. (Gal., De Simpl. Medici. Facult., 11, 34, vol. 12, p. 356.—C. G. Kuhn, addit. ad Elench. Med. Vet. a J. A. Fabric. in Bibl. Gr. Exiliz.)

*Æschylus*, II, an epic poet, a native of Alex-
drea, who must have lived previous to the end of the second century of our era, and whom Athenaeus quotes as a writer upon medicine. One of his poems bore the title of "Amphitryon," and another that of "Messenaica." A fragment of the former is pre-
served in Athenaeus (12, p. 599). According to Zenobius (5, 85), he had also written a work on Po

verbs (Πεπί Παρομοίων : compare Schneidepin., Praefat. Param. ingr., p. 11.)III. A native of Rhodes, ap-
pointed by Alexander the Great one of the inspector,
s of the governors of that country, after its con-
quest, in B.C. 332. He is next mentioned, B.C. 319, as conveying, in four ships, 600 talents of gold from Cilicia to Macedonia, which were detained at Ephe-
sus by Antigonus, to pay his foreign mercenaries.

*Æsop*, an Athenian orator, was a contemporary of Demosthenes, with whom he was educated. (Suid.
*æsop*, s. v. *Δαμος*.) To what party he belonged du-
ring the Macedonian time is uncertain. When he was asked what he thought of the orators of his time, he answered, "I have heard the other orators, but I have admired their beautiful and true relations with the people, but the speeches of Demos-
thenes, when read, excelled all others by their skil-
ful construction and their power. Aristotle (Rhet.,
3, 10) mentions a beautiful expression of *Æsop.*

*Æsop*, IV, a Greek historian, who wrote a life of Alexander the Great. The original is lost, but there is a Latin translation of it by Julius Valerius, of which Fr., Fr. pand. Jureus has held, he says (ad Sym-
mach. Ep., 10, 54), a manuscript. It was afterward published, however, by Mai from a manuscript in the Ambrosian Library, Milan, 1817, 4to; reprinted, Frank., 1818, 8vo. The title is "Itinerarium ad Con-
stantinum Augustum, etc., accedunt Julii Valerii Res Gestae Alexandri Macedonice, etc." The time when *Æsop* lived is uncertain, and even his ex-
istence has been doubted. (Bart. *Adversar., 2*.). Mai has preserved to us that the work was written before 389 A.D., be-
cause the temple of Serapis at Alexandria, which was destroyed by order of Theodosius, is spoken of in the translation as still standing. But serious ob-
jections to this inference have been raised by Le-
ronne (Journ. des Savans, 1818, p. 617), who refers it to the seventh or eighth century, which the weight of internal evidence would rather point to. The book is full of the most extravagant stories and glaring mistakes, and is a work of no credit.

*Æsynnēs* (Ἀεύνης), a surname of Bacchus, which signifies the Lord, or Ruler, and under which he was worshipped at Aroé in Achaia. The story about the introduction of his worship there is as follows: There was at Troy an ancient image of Bacchus, the work of Vulcan, which Jupiter had once given as a present to Dardanus. It was kept in a chest, and Cassandra, or, according to others, *Æneas*, left this chest behind when she qutet the city, because she knew that it would do injury to him who possessed it. When the Greeks divided the spoils of Troy among themselves, this chest fell to the share of the Thessalian Eurylypus, who, on opening it, suddenly fell into a state of mad-
ness. The oracle of Delphi, when consulted about his recovery, answered, "When thou shalt see a human sacrifice, there shalt thou dedicate the chest, and there shalt thou settle." When Eurylypus came to Aroé in Achaia, it was just the season at which its inhabitants offered every year to Artemis Tricaria a human sacrifice, consisting of the fairest youth and the fairest maid-
en of the place. This sacrifice was offered as an atonement for a crime which had once been committed in the temple of the goddess. But an oracle had declared to them that they should be released from the necessity of making this sacrifice, if a foreign prince should be brought to them by a foreign king. This oracle was pronounced by Ethyrrippylus, on seeing the victims led to the altar, was cured of his madness, and perceived that this was the place pointed out to him by the oracle; and the Aoreans also, on seeing the god in the chest, remembered the old prophecy, stopped the sacrifice, and instituted a festival of Dionysus Ε λαμένης, for this was the name of the god in the chest. No ceremony was observed in connection with this sacrifice. It took place in a place which is said to be in the Scythian province of Rhyippylus, so the place was left to the king.

During one night of this festival a priest carried the chest outside the town, and all the children of the place, adorned, as formerly the victims used to be, with garlands of corn-ears, went down to the banks of the river Meilichius, which had before been called Aelmealichius, hung up their garlands, purified themselves, and then put on other garlands of ivy, after which they returned to the city. This practice was observed for about a hundred years. The measuring of the Roman world under four heads, Orientalis, Occidentalis, Septentinantis, Mediriana pars. Then came series of lists of names, arranged under heads, Maria, Insulse, Montes, Provinciae, Oppida, Flumina, and Gentes. These are bare lists, excepting that the rivers have an account of their rise, course, and length annexed. This is the end of the first part, the Expositio. The second part is called Alia totius orbis Descriptio, and consists of four divisions: (1.) Asiae Provinciae situs cum limitibus et populis suis; (2.) Europeae situs, &c.; (3.) Africæ situs, &c.; (4.) Insulae Nostri Maris. This part, the Descriptio, occurs, with slight variations, in Orosius, 1, 2. In Æthicus, what looks like the original commencement, Maiores nostri, &c., is tacked on to the preceding part, the Expositio, by the words Hæc quadrupartitam totius terrae continentiam hic qui dimensi sunt. From this it would appear that Æthicus borrowed it from Orosius.

The work abounds in errors. Sometimes the same name occurs in different lists; as, for example, Cyprus and Rhodes both in the north and in the east; Corsica both in the west and in the south; or a country is put as a town, as Arabia. Noricum is put among the islands. Mistakes of this kind only appear in the copying lists, especially if in double columns. But from many reasons, and from quotations given by Dicuil, a writer of the 9th century, from the Cosmographia, differing from the text as we have it, the whole appears to be very corrupt. The work is a very meager production, but presents a few valuable points. Many successful emendations have been made by Salmasius in his Exercitationes Philologicæ, and others, and some are given in the notes. But a whole subject by Ritschel in the Rheinisches Museum (1842), 1, 4.

The sources of the Cosmographia appear to have been the measurements above described, other official lists and documents, and also, in all probability, Agrippa's Commentarii, which are constantly referred to by Pliny (Hist. Nat., 3, 4, 5, 6) as an authority on this subject. The Cosmographia was founded on his Commentarii. (Plin., Hist. Nat., 3, 2.)

Cassiodorus (De Institut. Divin., 25) describes a cosmographical work by Julius Honorius Crator in terms which suit exactly the work of Æthicus; and Salmasius regards Julius Honorius as the real author of this work, to which opinion Ritschel seems to lean, reading Ethicus instead of Æthicus, and considering it as a mere appellation. In some MSS.
the appellatives Sophista and Philosophus are found.

One of the oldest MSS., if not the oldest, is the Vatican one. This is the only one which speaks of the west in the introduction. But it is carelessly written: consulsus (e. g.) is several times put for consultatum. Suis is found as a contraction (t) for anno, and this introduction is very different in this and in the other MSS.

The first edition of the Cosmographia was by Simler, Basel, 1575, together with the Itinerarium Antonii. There is an edition by Henry Stephens, 1577, with Simler's notes, which also contains Dionysius, Pomponius Mela, and Solinus. The last edition is by Gronovius, in his edition of Pomponius Mela, Leyden, 1722.

(Augustine), the author of a work entitled "Samian Annals" (Ἰουω Συμφωνία), the fifth book of which is quoted by Athenaeus, although he expresses a doubt about the genuineness of the work (14, p. 650, d, 653, f). Athelius is also referred to by Clemens Alexandrinus (Protr., p. 30, a), Eustathius (ad Od., 7, 120, p. 1573), and in the Etymologicum Magnum (σ. v. βερόνα), where the name is written Athilaus.

Galla or Galla, the wife of the senator Licinius Bucio, a very litigious woman, who always pleaded her own causes before the prætor, and thus gave occasion to the publishing of the edict which forbade all women to postulate. She was, perhaps, the sister of L. Afranius, consul in B.C. 60. She died B.C. 48. (Val. Max., 5, 3, § 1 — Dig., 3, tit. 1, s. 1, § 5.)

Afrania gens, plebeian, is first mentioned in the second century B.C. The only cognomen of this gens, which occurs under the republic, is Stellio: those names which have no cognomen are given under Afranius. Some persons of this name evidently did not belong to the Afrania gens. On coins we find only S. Afranus and M. Afranus, of whom nothing is known. (Eckhel, 5, p. 132, &c.) Africannus (Ἀφρικαννος), III. a writer on veterinary surgery, whose date is not certainly known, but who may, very probably, be the same person as Sex. Julius Africannus, whose work entitled Kerroï contained information upon medical subjects. (Vid Africannus, Sex. Julii.) His remains were published in the Collection of Writers on Veterinary Medicine, first in a Latin translation by J. Ruellius, Par., 1530, fol., and afterward in Greek, Bas., 1587, 4to, edited by Grynaeus.—IV. Sex. Cecilius, a classical Roman jurisconsult, who lived under Antoninus Pius.

He was probably a pupil of Salvius Julianus, the celebrated reformer of the Edict under Hadrian. He consulted Julian on legal subjects (Dig., 25, tit. 3, s. 3, § 4), and there is a controverted passage in the Digest (Africanus libro circesso Epistolarum apud Julianum quari, &c. — Dig., 30, tit. 1, s. 39), which has been explained in various ways; either that he published a legal correspondence which passed between him and Julianus, or that he commented upon the epistolarly opinions given by Julianus in answer to the letters of clients, or that he wrote a commentary upon Julianus in the form of letters.

On the other hand, Julianus "ex Sexto" is quoted by Gais (2, 218), which shows that Julianus annotated Sextus, the formula "ex Sexto" being synonymous with "ad Sextum." (Newer, Die Jurist. Klassiker, 8, 9.) Who was Sextus but Africanus! Africanus was the author of "Libri"! Of course, nothing from this writer can be extracts made in the Digest, as may be seen in Homel's "Palingenesia Pandectarum," where the extracts from each jurist are brought together, and those that are taken from Africanus occupy 26 out of about 1800 pages.

From his remains, thus preserved in the Digest, it is evident that he was intimately acquainted with the opinions of Julianus, who is the person alluded to when, without any expressed nominative, he uses the words ait, existimavit, negavit, putavit, inquit, respondit, placet, notat. This is proved by Cujas, from a comparison of some Greek scholia on the Basilea with parallel extracts from Africanus in the Digest: and Ulpian is of the same opinion as Julianus the honour of citing his authority. He was fond of antiquarian lore (Dig., 7, tit. 7, s. 1, pr., where the true reading is S. Cecilius, not S. Elius), and his "Libri IX. Questions," from the conciseness of the style, the great subtlety of the reasoning, and the knottiness of the points discussed, so puzzled the old glossators, that, when they came to the extracts, they were wont to explain Aferiani lex, id est difficilis. He was, indeed, jurist. Jur. Rom., § 306, n.) Mascovius (De Sectis Jur., 4, § 3) supposes that Africanus belonged to the legal sect of the Sabiniain, and as our author was a steady follower of Salvius Julianus, who was a Sabiniain (Caiaus, 2, 217, 218.), this supposition may be regarded as established. In the time of Antoninus Pius, the distinction of schools or sects had not yet worn out its force.

Among the writers of the lives of ancient lawyers (Pancirroll, Jo. Bertrandus, Grotius, &c.), much dispute has arisen as to the time when Africanus wrote, in consequence of a corrupt or erroneous passage in Lampridius (Lamp., Alex. Sen., 68), which would make him a friend of Severus Alexander and a disciple of Papinian. Cujas ingeniously and satisfactorily disposes of this anachronism by referring to the internal evidence of an extract from Africanus (Dig., 30, tit. 1, s. 109), which assumes the validity of a legal maxim that was no longer in force when Papinian wrote.

For reasons which it would be tedious to detail, we hold, contrary to the opinion of Ménage (Amaan, Jur., c. 25, that our Sextus Ceccilus Africanus is identical with the jurist sometimes mentioned in the Digest by the name Ceccilius or S. Cecilius, and also with that S. Ceccilius whose dispute with Favorinus forms an amusing and interesting chapter in the Notices Atticæ. (Gell., 20, 1.) Gellius, perhaps, draws to some extent upon his own invention, but, at all events, the lawyer's defence of the XII. Tables against the attacks of the philosopher is "ben trovato." There is something humorously cruel in the concluding stroke of the conversation, in the pedantic way in which our jurisconsult indicates the decemviral law against debtors, partis secans, &c.:—by the example of Metius Fufius, and the harsh sentiment of Virgil:

"At tu dictis, Albane, manere."

The remains of Africanus have been admirably expounded by Cujas (ad Africanum tracticum IX., in Cujac, Opp., vol. 1), and have also been annotated by Scipio Gentili. (Scip. Gen. Italia, Diss. I—IX. Africanum, 4to, Aldianf, 1602—7. Struve, partes veterum jurisconsultorum, 8vo, Jen., 1723. —I. Zimmerm., Röm. Rechtsgeschichte, § 94.)—V. Julius, a celebrated orator in the reign of Nero, seems to have been the son of Julius Africanus, of the Gallic state of the Sontani, who was condemned by Tiberius, A.D. 32. (Tac., Ann., 6, 7.) Quintilian, who had heard Julius Africanus, speaks of African and Africanus, as the best orators of their time. The eloquence of Africanus was chiefly characterized by vehemence and energy. (Quintil., 10, 1, § 118; 12, 10, § 11: comp. 8, 5, § 15. — Dial. de Orat., 15.) Pliny mentions a grandson of this Julius Africanus, who was also an advocate, and was opposed to him upon one occasion. (Ep., 7, 6.) He was consul suffectus in A.D. 108.
AGACLITUS (Ἀγακλῖτος), the author of a work about Olympia (Περὶ Ὀλυμπίας), which is referred to by Suidas and Photius (ὑπ. Κωστῖλον).

AGALLIS (Ἀγαλλίς), of Coreya, a female grammarian, who wrote upon Homer. (Atheneis, i, p. 14, d.) Some have supposed, from two passages in Suidas (ὑπ. Αγάλλις and Ὀρθῆς), that we ought to read Agamallis in this passage of Athenaeus.

The scholiast upon Homer and Eustathius (ad II., 18, 491) mention a grammarian of the name of Agallias, a pupil of Aristophanes the grammarian, also a Coreycean and a commentator upon Homer, who may be the same as Agallis, or, perhaps, her father.

AGAMÈDE (Ἀγάμηδα), i. A daughter of Augeias and wife of Mulius, who, according to Homer (II., 1, 739), was acquainted with the healing powers of all the plants that grow upon the earth. Hyginus (Fab., 157) makes her the mother of Belus, Actor, and Dictys, by Poseidon.—II. A daughter of Maecaria, from whom Agamède, a place in Lesbos, was believed to have derived its name. (Steph. Byz., ὑπ. Ἀγάμηδα.)

AGAPÈTUS (Ἀγαπὴτος), i. Metropolitan Bishop of Rhodes, A.D. 457. When the Emperor Leo wrote to him for the opinion of his suffragans and himself on the council of Chalcedon, he defended it against Timotheus Ælius, in a letter still extant in a Latin translation, Conciliorum Nova Collectio ad Manili, vol. 7, p. 680.—II. St., born at Rome, was archdeacon, and was made Metropolitan of Athens. He was no sooner consecrated than he took off the anathemas pronounced by Pope Boniface II. against his deceased rival Dioscorus on a false charge of simony. He received an appeal from the Catholics of Constantinople, when Anthimus, the Monophysite, was made their bishop by Theodora. The fear of an invasion of Italy by Justinian led the Goths Theodatus to oblige St. Agapetus to go himself to Constantinople to exorcise the plains of Athens. He was laid up by a fall, and died without having been consecrated. (Vid. Bresbrianum S. Liberati, ap. Manili, Concilia, vol. 9, p. 695.) As to this last object, he could make no impression on the emperor, but he succeeded in persuading him to depose Anthimus; and when Mennas was chosen to succeed him, Agapetus laid his own hands upon him. The council and the Synodal (interpreted into Greek) sent by Agapetus relating to these affairs may be found (ap. Manili, vol. 8, p. 809, 921. Cagaries) or were sent him from various quarters against the Monophysite Acheiropal; but he died suddenly, A.D. 536, April 22, and they were read in a council held on 2d May, by Mennas. (Manili, ibid., p. 874.) There are two letters from St. Agapetus to Justinian in reply to a letter from the emperor, in the latter of which he refuses to acknowledge the Orders of the Arians; and there are two others: 1. To Theodatus, on the same subject; 2. To Reparatus, bishop of Carthage, in answer to a letter of congratulations on his elevation to the pontificate. (Manili, Concilia, 8, p. 846–850.)—III. Deacon of the Church of St. Sophia, A.D. 527. There are two other Agapeti mentioned in a council held by Mennas at this time at Constantinople, who were archimandrites, or abbots. Agapetus was the most austere, and was put in prison before the latter to the emperor, addressed to him Admonitions on the duty of a Prince, in 72 sections, the initial letters of which form the dedication (λατιν. κεφαλαίων παρακλήσεων σχεδόν λαβονάτων). The reputed in which this work was held appears from its common title, viz., the Royal Sections (σχέδια βασιλείας). It was published, with a Latin version, by Zach. Colledge, 5vo, Ven., 1590, afterward by J. Brunck, 8vo, Lips., 1673; Géebel, 8vo, Lips., 1753, and in Galland’s Bibliotheca, vol. 11, p. 255, &c., Ven., 1676, after the edition of Bandurius (Benedicte). It was translated into French by ‘Louis XIII., 8vo, Par., 1613, and by Th. Paynell into English, 12mo, Lond., 1650.—IV. An ancient Greek physician, whose remedy for the gout is mentioned with approbation by Alexander Turlianus (11, p. 303) and Paulus Aegineta. (3, 78, p. 497; 7, 11, p. 661.) He probably lived between the third and sixth centuries after Christ, or certainly not later, as Alexander Turlianus, by whom he is quoted, is supposed to have flourished about the beginning of the sixth century.

AGAPUS (Ἀγαπὸς), an ancient physician of Alexandria, who taught and practised medicine at Byzantium, with great success and reputation, and acquired immense riches. (3) It only be determined, that he must have lived before the end of the fifth century after Christ, as Damascius (from whom Photius, Biblioth., cod. 242, and Suidas have taken their account of him) lived about that time.

AGARISTA (Ἀγαρίστα), ii. daughter of Cleisthenes, tyrant of Sicyon, whom her father promised to give in marriage to the best man to come to Sicyon. Suiters came to Sicyon from all parts of Greece, and among others Megacles, the son of Alcmeon, from Athens. After they had been detained at Sicyon for a whole year, during which time Cleisthenes made trial of them in various ways, he gave Agarista to Alcmeon. From this marriage came the Cleisthenes who divided the Athenians into ten tribes, and Hippocrates. (Herodotus, 6, p. 273, b, c, 12, 541, b, c.)

AGATHÉMÉRUS, II. CLAUDIUS (Κλαύδιος Ἀγαθήμερος), an ancient Greek physician, who lived in the first century after Christ. He was born at Lacedaemon, and was a pupil of the philosopher Cornelius, in whose house he became acquainted with the poet Persius, about A.D. 50. (Pseudo-Sueton., vita Persii, 2, 28.) In the old editions of Suetonius he is called Agaturus, a mistake which was first corrected by Reinsius (Syntagma Inscript. Antiq., p. 610), from the epitaph upon him and his wife, Myrtale, which is preserved in the Marmor Oaziomisa et the Greek Anthology, vol. 3, p. 381, § 224, ed. Tauchn. The apparent anomaly of a Roman prænomen being given to a Greek, may be accounted for by the fact, which we learn from Suetonius (Tiber., 6), that the Persians, who were the hereditary clients of the emperor, were admitted into the imperial service. (C. G. Kühn, Additam. ad Elench. Medic. Vet. a J. A. Fabricio, in “Biblioth. Græca,” exhibit.)

AGATHIUS (Ἀγάθιος), an eminent ancient Greek physician, the founder of a new medical sect, to which he gave the name of Episyntethic. (Dict. of Ant., s. v., Episyntethic.) He was born at Sparta, and must have lived in the first century after Christ, being the pupil of Athenæus, and the tutor of Archigenes. (Galen, Deipn. Med., c, 14, vol. 19, p. 353.—Suidas, s. v. Ἀγαθίεσσα.—Endoec. Violar., ap. Villoison, Anec. Gr., vol. 1, p. 65.) He is said to have been once seized with an attack of delirium, brought on by want of sleep, from which he was delivered by his pupil Archigenes, who ordered his head to be fomented with a great quantity of warm oil. (Aetius, tetr. 1, serm. 5, 172, p. 196.) He is free from all species of apocryphal and exotic opinions of this sect, and is expressly known, but they were probably nearly the same as those of the Eclectic. (Dict. of Ant., s. v.)
SUPPLEMENT.

AGATHODEMON (*Agathodémon*), a mistress of the profi-
gigate Ptolemy Philopator, king of Egypt, and sis-
ter of his no less profligate minister Agathocles. She
and her brother, who both exercised the unbound
ed influence over the king, were introduced to him by
their ambitious and avaricious mother, Oenanthe.
After Ptolemy had put to death his wife and sister
Eurydice, Agathoclea became his fa-
vourite. On the death of Ptolemy (B.C. 205), Agath-
ocles, his brother, presumed to seize, or plot to
seize, that they might have an opportunity of plundering
the royal treasury. They also formed a conspiracy for
setting Agathocles on the throne. He managed for
some time, in conjunction with Sosibius, to act as
guardian to the young king Ptolemy Epiphanes.
At last, the Egyptians and the Macedonians of Alex-
drea, exasperated at his outrages, rose against him,
and Teipolus placed himself at their head. They
surrounded the king in the night, and forced their
way in. Agathocles and his sister implored in the
most abject manner that their lives might be spared,
but in vain. The former was killed by his friends,
that he might not be exposed to a more cruel fate.
Agathoclea, with her sisters, and Oenanthe, who
had taken refuge in a temple, were dragged forth,
and in a state of nakedness exposed to the fury of the
people. The king afterwards had his right arm cut
off. All their relatives, and those who had any
share in the murder of Eurydice, were likewise put
to death. (*Polyb.*, 5, 63; 14, 11; 15, 25-34.—*Justin*.,
30, 1, 2.—*Athenasius*, 6, p. 251; 13, p. 576.—*Plut.*,
*CLEOM*., 33.) There was another Agathoclea, the daughter
of a man named Aristomenes, who was by birth an
Acaranian, and rose to great power in Egypt.

(*Polyb.*, 1, c.)

AGATHOCLES (*Agathoklēs*), VI. a Greek historian,
who wrote the history of Cyzicus (*tēp. Kyzikon*). He
is called by Athenaeus both a Babylonian (1, p. 30;
a; 9, p. 375, a) and a Cyzican (14, p. 649, f). He
may originally have come from Babylon, and have
settled at Cyzicus. The first and third books are
referred to by Athenaeus (9, p. 375, f; 12, p. 516, a).
The time at which Agathocles lived is un-
known, and his work is now lost; but it seems to
have been written at a time when the Cyzicians,
as is referred to by Cicero (*De Divin.*., 1, 24). *Pliny* (*Hist. Nat.*
Elenchus of books 4, 5, 6), and other ancient writ-
ers. Agathocles also spoke of the origin of Rome.

(*Festus*, s. v. Romanus.—*Solinus*, *Polyb.*, 1.) The
scholiast on Apollonius (4, 761) cites Memoir (tēp-
avuvaxta) by an Agathocles, who is usually supposed
to be the same as the above-mentioned one. (Compare
Schol. ad Hes., Theog. 486.—*Hesych. Byss.*, s. v.
Bαρκας.—*Etymolog. M.*, s. v. Δικτυ.)

There are several other writers of the same
name. 1. Agathocles of Atax, who wrote a work on
Fishing (διονυσιακά: *Suidas*, s. v. *Kiklòs*).—II. Of
Chios, who wrote a work on Agriculture. (*Varro*
*Coloniœ, De Re Rust.*, 1, 1.—*Pliny*, H. N., 22,
44).—III. Of Miletus, who wrote a work on Rivers.
(*Pliny*, *De Fluv.*, p. 1153, c).—IV. Of Samos, who
wrote a work on the Constitution of Pessinus
(*Plut.*, *ibid.*, 1159, a.)

AGATHODEMON (*Agathodémon*), III a native of Alex-
drea. All that is known of him is, that he was the
designer of some maps to accompany Ptolemy's Geography.
Copies of these maps are found app-
ended to several MSS. of Ptolemy. One of these is
at Vienna, another at Venice. At the end of each
of these MSS. is the following notice: "Ex *tēn*
Kλανδίων Πολεμαίων Περιγραφιών βιβλίων διέχει την
οικονύμην πέαν *Agathodémon Ἀλεξανδρεὺς ὑπετη-
πας* (Agathodemon of Alexandria delineated the
whole inhabited world according to the eight books
on Geography of Cl. Ptolemaeus). The Vienna MS.
of Ptolemy is one of the most beautiful extant.
The map attains to 4, 2 in number, comprising 1 gen-
eral map, 10 maps of Europe, 4 of Africa, and 3 of
Asia, are coloured, the water being green, the mount-
ains red or dark yellow, and the land white.
The climates, parallels, and the hours of the longest
day, are marked on the east margin of the maps, and
the meridians on the north and south. We have no
evidence as to when Agathodemon lived, as the
only notice preserved respecting him is that quoted
above. The name Agathodemon is supposed to whom some extant letters of Isidore of Pelusium
are addressed. Some have thought him to be the
Agathodemon in question. Heeren, however, con-
siders the delineator of the maps to have been a con-
temporary of Ptolemy, who (8, 1, 2) mentions certain
maps or tables, (*mivae*) which agree in number and
arrangement with those of Agathodemon in the
MSS.

Various errors having, in the course of time, crept
into the copies of the maps of Agathodemon, Nico-
laus Donis, a Benedictine monk, who flourished
about A.D. 1470, restored and corrected them, sub-
stituting Latin for Greek names. His maps are
applied to the Ehemian MS. of Ptolemy. They are
the same in number and nearly so in order
with those of Agathodémon. (*Heeren, Commentatio
Ptolomæorum Cosmographiarum, instrumento anno
1619.*).—Rudel, *Commentatio critico-literaria de
Cl. Ptolomaei Geographia ejusque codicibus, p. 7.)

AGATHON (*Agathon*), II. the son of the Macedon-
ian Philotas, and the brother of Parmenion and
Asander, was given as a hostage to Antigonus, in
B.C. 313, by his brother Asander, who was satrap
of Caria, but was taken back again by Asander in a
few days. (*Diod.*, 19, 75) Agathon had a son named
Asander, who is mentioned in a Greek inscription
(*Böckh, Corp. Inscr.*, 1053).—II. Of Samos, who
wrote a work upon Scythia and another upon Rivers.

(*Plutarch*, *De Fluv.*, p. 1156, c, 1159, a.—*Stobæus*,
*Syn.*, l. 100, 10, ed. *Gaisford*.)

AGATHOTCeOUS (*Agathótceos*), an ancient veteri-
ary surgeon, whose date and history are unknown,
but who probably lived in the fourth or fifth century
after Christ. Some fragments of his writings are
extant. He was the author of a work on the horse,
which first published in a Latin translation by Jo.
Ruellius, *Veterinaria Medicina Libri duo*, Paris,
1530, fol, and afterward in Greek by Grynæus,
Basil, 1537, 4to.

AGRAULOS, II. a daughter of Cecrops and Agrau-
los, and mother of Alceipe by Mars. This Agrau-
los is an important personage in the stories of At-
tica, and there were three different legends about
her. 1. According to Pausanias (1, 18, § 2) and
Hyginus (Fab., 168), Athena gave to her and her
sisters Erichthonius in a chest, with the express
command not to open it. But Agraulos and Herse
could not control their curiosity, and opened it;
whereupon they were seized with madness at the
sight of Erichthonius, and threw themselves from
the steep rock of the Acropolis, or, according to Hy-
ginus, into the sea. *Academica* to Ovid (*Met.*, 2, 710,
3c). Agraulos and her sister survived their
opening the chest, and the former, who had insti-
gated her sister to open it, was punished in this
manner. Hermes came to Athena during the cel-
bration of the Panathenaea, and fell in love with
Hers. As it were, however, she even attempted to
prevent the god entering the house of Hers. But, indignant
at such presumption, he changed Agraulos into a
stone. 3. The third legend represents Agraulos in

Digitized by Microsoft ®
a totally different light. Athens was at one time involved in a long-protracted war, and an oracle declared that it would cease if some one would sacrifice himself for the good of his country. Agraullos came forward, and threw herself down at the Acropolis. The Athenians, in gratitude for this, built her a temple on the Acropolis, in which it subsequently became customary for the young Athenians, on receiving their first suit of armour, to take an oath that they would always defend their country to the last. (Suid. and Hyg., s. v. Ἀγραυλός—Ovian, ad Deo nam, De fatis leg.—Herod. 8, 53.—Plut., Alcibiades, 5.)

One of the Attic ἄγγελοι was called after this heroine, and a festival and mysteries were celebrated at Athens in honour of her. (Steph. Byzant., s. v. Ἀγραυλός.—Lobeck, Aglaoph., p. 89.—Dict. of Ant. s. v. Agraulio.) According to Porphyry (De Abst. ad animal., 1, 2), she was also worshipped in Cyprus, where human sacrifices were offered to her down to a very late time.

Agyrrhios (Ἀγγέρριος), native of Collytus in Attica, whom the ancients ironically calls τοῦ καλὸς κάγαῦν (De Myst., p. 65, ed. Reiske), after being in prison many years for embezzlement of public money, obtained, about B.C. 395, the restoration of the Theoricon, and also tripled the pay for attending the assembly, though he reduced the allowance previously given to the comic writers. (Horpropat., s. v. Ωρηάκας, Ἀγγέρριος.—Suidas, s. v. ἐκκλησιαστικὸν ἀνάλογον.—Eustath., Thes. 7 Mor., p. 742.) By this expenditure of the public revenue Agyrrhios became so popular, that he was appointed general in B.C. 389. (Xen., Hell., 4, 8, § 31.—Diod., 14, 99.—Böckh, Publ. Econ. of Athens, p. 223, 224, 316, &c., 24 ed., Engl. transl.—Schömann, De Comitis, p. 65, &c.)

Ahala, the name of a patrician family of the Servilia gens. There were also several persons of this gens with the name of Structus Ahala, who may have formed a different family from the Ahalæ; but as the Ahalæ and Structi Ahalæ are frequently confounded, all the persons of these names are given here.—I. C. Servilius Structus, consul B.C. 478, died in his year of office, as appears from the Fasti. (Liv., 2, 49.)—II. C. Servilius Structus, magister equitum B.C. 439, when L. Cincinnatus was appointed dictator on the pretence that Sp. Mælius was plotting against him. (Livy, 4, 13, 14.—I. Cat., ras., 20, 21.—Diod., Exc. Mai., 1, p. 3.) This act is mentioned by later writers as an example of ancient heroism, and is frequently referred to by Cicero in terms of the highest admiration (in Catil., 1, 1; Pro Mil., 3; Cat., 16); but it was, in reality, a case of murder, and was so regarded at the time. Ahala was brought to trial, and only escaped condemnation by a voluntary exile (4, 39, 35.—3, 2.—2, 9.—39. Dom., 39.) Livy passes over this, and only mentions (4, 21) that a bill was brought in three years afterwards, B.C. 436, by another Sp. Mælius, a tribune, for confiscating the property of Ahala, but that it failed.

A representation of Ahala is given on a coin of M. Brutus, the murderer of Cæsar, but we cannot suppose it to be anything more than an imaginative likeness. M. Brutus pretended that he was descended from L. Brutus, the first consul, on his father's side, and from C. Ahala on his mother's, and thus was sprung from two tyrannicides. (Comp. Cic. ad Att., 13, 40.—III. C. Servilius Q. f. C. N. Structus, consul B.C. 427. (Liv., 4, 30.)—IV. C. Servilius P. f. Q. N. Structus, consul tribune B.C. 408, and magister equitum in the same year; which latter dignity he retained. (The proceedings of the Senate in support of this tribune against his colleagues, who did not wish a dictator to be appointed. For the same reason, he was elected consul tribune a second time in the following year, 407. He was a consular tribune a third time in 402, when he assisted the senate in compelling his colleagues to resign, who had been defeated by the enemy. (Liv., 4, 55, 57; 7, 5, 8.)—V. C. Servilius, magister equitum B.C. 389, when Camillus was elected a third time. (Liv., 6, 2.) Ahala is spoken of as magister equitum in 385, on occasion of the trial of Manlius. Manlius summoned him to bear witness in his favour, as one of those whose lives he had saved in battle, but Ahala did not appear. (4, 20.) Pliny, who mentions this circumstance, calls Ahala P. Servilius. (H. N., 7, 39.)—VI. Q. Servilius Q. f. Q. N. was consul B.C. 363, and an officer of the Roman fleet. In the latter of which years he appointed Ap. Claudius dictator, after his plebeian colleague L. Genucius had been slain in battle. In 360 he was himself appointed dictator in consequence of a Gallic tumultus, and defeated the Gauls near the Colline Gate. He held the comitia as interrex in 355. (Liv., 7, 1, 4, 6, 11, 17.—VII. Q. Servilius Q. f. Q. N., magister equitum B.C. 351, when M. Furius, an appointed dictator to frustrate the Lician law, and consular B.C. 342, at the beginning of the first Samnite war. He remained in the city; his colleague had the charge of the war. (Liv., 7, 22, 38.)

Ahenobarbus, I. Cn. Domitius L. f. L. n., plebeian wïde B.C. 196, prosecuted, in conjunction with his colleague C. Curio, many pecunari, and with the fines raised therefrom built a temple of Faunus in the island of the Tiber, which he dedicated in his pretorship, B.C. 194. (Liv., 33, 42; 34, 42, 43, 53.) He was consul in 192, and was sent against the Boii, who submitted to him; but he remained in their country till the following year, when he was succeeded by the Consul Scipio Nasica. (Liv., 35, 10, 20, 22, 40; 36, 37.) In 190, he was legate of the Consul L. Scipio, in the war against Allobroges, who, he says, ‘impacted the Gauls in their retreat’. (Liv., 37, 39.—Plut., Apophth. Rom. Cn. Domit.) In his consulship one of his oenix is said to have uttered the warning “Roma, cave thii.” (Liv., 35, 21.—Val. Max., 1, 6, § 5, who falsely says, Bello Punico secundo.)—II. Cn. Domitius Cn. f. L. n., son of the preceding, was chosen pontifex in B.C. 172, when a young man (Livy, 42, 28), and in 169 was sent with two others as commissioner into Macedonia (44, 18). In 167 he was one of the ten commissioners for arranging the affairs of Macedonia in conjunction with Œmusilius Paulus (45, 17); and when the consuls of 162 abdicated on account of some fault in the auspices in their election, he and Cornelius Lentulus were chosen consuls in their stead. (Cic., De Nat. Deor., 2, 4; De Div., 2, 35.—Val. Max., 1, 1, § 3.)—III. Cn. Domitius Cn. f. Cn. n., son of the preceding, was consul B.C. 122, against the Allobrogues in Gaul, because they had received Teutomalius, the king of the Saluvii and the enemy of the Romans, and had laid waste the territory of the Æduli, the friends of the Romans. In 121 he conquered the Allobrogues and their ally Vituttius, king of the Arverni, near Vinduli, at the confinence of the Sulga and the Rhenus; and the Taurians, who were punished for the terror caused by his elephants. He commemorated his victory by the erection of trophies, and went in procession through the province, carried by
an elephant. He triumphed in 120 (Liv., Epit., 61. — Florus, 3, 2. — Suet., 4, p. 91. — Cic., Pro Font., 89. — Flor., 26, Vell., 10, 39. — Oros., 13. — Suet., N. C., 2, who confounds him with his son.) He was censor in 115 with Caecilius Metellus, and expelled twenty-two persons from the senate. (Liv., Epit., 62. — Cic., Pro Client., 42.) He was also pontifex. (Suet., L. c.) The Via Domitia in Gaul was made by him. (Cic., Pro Font., 8.)

IV. CN. DOMITIUS CN. F. CN. N., son of the preceding, was tribune of the plebs B.C. 104, in the second consulship of Marius. (Ascon. in Corn., p. 81, ed. Orelli.) When the college of pontiffs did not elect him in place of his father, he brought forward the law (Lex Domitia), by which the right of election was transferred from the priestly colleges to the people. (Dict. of Ant., p. 790, b; 791, a.) The people afterward elected him Pontifex Maximus out of gratitude. (Liv., Epit., 67. — Cic., Pro Deiot., 11. — Val. Max., 8, 5, § 5.) He prosecuted, in his tribunate and afterward, several of his private enemies, as Caecilius Scaurus and Junius Silanus. (Val. Max., l. c. — Dion Cass., Fr. 100. — Cic., Div. in Caecil., 20; Vett., 2, 47; Cornell., 2; Pro Scaur., 1.) He was consul B.C. 96 with C. Cassius, and censor B.C. 92 with Lucinius Crassus, the orator. In his censorship he and his colleague shut up the schools of the Latin rhetoricians (Cic., De Orat., 3, 24. — Gell., 15, 11), but this was only the beginning of his measures. The censorship was long celebrated for their disputes. Domitius was of a violent temper, and was, moreover, in favour of the ancient simplicity of living, while Crassus loved luxury and encouraged art. Among the many sayings recorded of both, we are told that Crassus observed, "that it was no wonder that a man had a beard of brass, who had a mouth of iron and a heart of lead." (Plin., H. N., 18. 4. — Suid., 155.) Cicero says that Domitius was not to be reckoned among the orators, but that he spoke well enough, and had sufficient talent to maintain his high rank. (Cic., Brut., 44.)

V. L. DOMITIUS CN. F. CN. N., son of No. III. and brother of No. IV., was praetor in Sicily, probably in B.C. 96, shortly after the Service war, when slaves had been forbidden to carry arms. He ordered the first of the five hundred contingents to be armed with a hunting-spear. (Cic., Verr., 5, 3. — Val. Max., 6, 3, § 5.) He was consul in 94. In the civil war between Marius and Sulla, he espoused the side of the latter, and was murdered at Rome, by order of the younger Marius, by the pretor Damausippus. (Appian, B. C., 1, 88. — Vell., 2, 26. — Oros., 5, 20. — VI. CN. DOMITIUS CN. F. CN. N., apparently a son of No. IV., married Cornelia, daughter of L. Cornelius Cinna, censor in B.C. 87, and in whose favor the civil war between Marius and Sulla espoused the side of the former. When Sulla obtained the supreme power in 82, Ahenobarbus was proscribed, and fled to Africa, where he was joined by many who were in the same condition as himself. With the assistance of the Numidian king, Hiarbonas, he collected an army, but was defeated near Utica by Cn. Pompeius, whom Sulla had sent against him, and was afterward killed in the storming of his camp, B.C. 81. According to some accounts, he was killed after the battle by command of Pompey. (Liv., Epit., 89. — Plut., Pomp., 10, 12. — Zonaras, 10, 2. — Pros., 5, 21. — Val. Max., 6, 2, § 8.) VII. L. DOMITIUS CN. F. CN. N., son of No. IV., is first mentioned in B.C. 70 by Cicero, as a witness against Verres. In 61 he was curule aedile, when he exhibited a hundred Numidian lions, and was followed by the games so long, that the people were obliged to leave the circus before the exhibition was over in order to take food, which was the first time they had done so. (Dion Cass., 37, 46. — Plut., H. N., 8, 54.) This pause in the games was called diutium, and the.measures were executed, in B.C. 59, by the instigation of M. Cato, and in his sedition supported the latter in his proposals against bribery at elections, which were directed against Pompey, who was purchasing votes for Afranius. The political opinions of Ahenobarbus coincided with those of Cato; he was, throughout his life, one of the strongest supporters of the aristocratical party. He took an active part in opposing the measures of Caesar and Pompey against their enemies, and in 59 was accused by Vettius, at the instigation of Caesar, of being an accomplice to the pretended conspiracy against the life of Pompey.

Ahenobarbus was praetor in B.C. 58, and proposed an investigation into the validity of the Julian laws of the preceding year, but the senate dared not entertain his propositions. He was candidate for the consulship of 58, and threatened that he would, in his consulship, carry into execution the measures he had proposed in his pretorship, and deprive Caesar of his province. He was defeated, however, by Pompey and Crassus, who also became candidates, and was driven from the Campus Martius, in the day of election, by force of arms. He became a candidate again in the following year, and Caesar and Pompey, whose power was firmly established, did not oppose him. He was, accordingly, elected consul in the same year of Pompey, but was not able to effect anything against Caesar and Pompey. He did not go to a province at the expiration of his consulship; and as the friendship between Caesar and Pompey cooled, he became closely allied with the latter. In B.C. 52, he was chosen by Pompey to preside, as quaestor, in the court for the trial of Cicodius. For the next two or three years, during Cicero's absence in Spain, his name is principally derived from the letters of his enemy Cælius to Cicero. In B.C. 50, he was a candidate for the place in the college of augurs, vacant by the death of Hortensius, but was defeated by Antony through the influence of Caesar.

The senate appointed him to succeed Caesar in the province of farther Gaul, and on the march of the latter into Italy (49), he was the only one of the aristocratical party who showed eagerness to join him. He threw himself into Corinium with about twenty cohorts, expecting to be supported by Pompey; but as the latter did nothing to assist him, he was compelled by his own troops to surrender to Caesar. His own soldiers were incorporated into Caesar's army, but Ahenobarbus was dismissed by Caesar uninjured: an act of clemency which he did not expect, and which he would certainly not have showed if he had been the conqueror. Despairing of life, he had ordered his physician to administer to him poison, but the latter gave him only a sleeping draught. Ahenobarbus's feelings against Caesar remained unaltered, but he was too deeply offended by the conduct of Pompey to join him immediately. He retired for a short time to Etruria, and afterward sailed to Massilia, of which the inhabitants appointed him governor. He prosecuted the war vigorously against Caesar; but the town was eventually taken, and Ahenobarbus escaped in a vessel, which was the only one that got off.

Ahenobarbus now went to Pompey in Thessaly, and proposed that after the war all senators should be brought to trial who had remained neutral in it. Cicero, whom he branded as a coward, was not a little afraid of him. He fled there, and fled again to Brundisium, where he commanded the left wing, and, according to Cicero's assertion in the second Philippic, by the hand of Antony. Ahenobarbus was a
man of great energy of character; he remained firm to his political principles, but was little scrupulous in the means he employed to maintain them. (The passages of Cicero in which Ahenobarbus is mentioned are given in *Orcili's Omissiones Tacitii*.)

Suetonius, *Ner.,* 2.—*Domitius,* civic. VIII. Cn. Domitius L. f. Cn. n., son of the preceding, was taken with his father at Corfinium (B.C. 49), and was present at the battle of Pharsalia (48), but did not take any farther part in the war. He did not, however, return to Italy till 46, when he was pardoned by Caesar. He was therefore induced to join the victorious side in the civil war (44), though some writers expressly assert that he was one of the conspirators; but he followed Brutus into Macedonia after Caesar's death, and was condemned by the Lex Pedia, in 43, as one of the murderers of Caesar. In 43 he commanded a fleet of fifty ships in the Ionian Sea, and completely defeated Domitius Calvinus on the day of the first battle of Philippi, as the latter attempted to sail out of Brundisium. He was saluted, imperator in consequence, and a record of this victory is preserved in a coin, which represents a trophy placed upon the prow of a vessel. The head on the other side of the coin has a beard, in reference to the reputed origin of the family.

After the battle of Philippi (42), Ahenobarbus conducted the war independently of Sex. Pompeius, and by his victories, regard and honors, and two legions plundered the coasts of the Ionian Sea.

In 40, Ahenobarbus was reconciled to Antony, which gave great offence to Octavius, and was placed over Bithynia by Antony. In the peace concluded with Sex. Pompeius in 39, Antony provided for the safety of Ahenobarbus, and obtained for him the promise of the consulship for 32. Ahenobarbus remained a considerable time in Asia, and accompanied Antony in his unfortunate campaign against the Parthians in 35. He became consul, according to agreement, in 32, in which year the open rupture took place between Antony and Augustus. Ahenobarbus fled from Rome to Antony at Ephesus, where he found Cleopatra with him, and endeavoured, in vain, to obtain her removal from the army. Many of the soldiers, disgusted with the conduct of Antony, offered the command to Ahenobarbus, and were prevailed upon by him to agree to the union, and accordingly went over to Augustus, shortly before the battle of Actium. He was not, however, present at the battle, as he died a few days after joining Augustus. Suetonius says that he was the best of his family. (Cic., *Phil.,* ii. 11; 10, 6; Brut., 25; ad Fam., 6. 22.—Appian, B. C., 5, 55, 63, 65.—Plut., Anton., 70, 71.—*Domitius,* civic. 47. 1.—*Velleius,* 2, 76, 84.)

Suetonius, *Ner.,* 3.—*Teutus,* civic. 4, 44.—IX. Cn. Domitius Cn. f. L. n., son of the preceding, was betrothed in B.C. 39, at the meeting of Octavius and Antony at Tarentum, to Antonia, the daughter of the latter of the Octavi. He was sedile in B.C. 22, and consul in B.C. 16. After his consulship, and probably as the successor of Tibercius, he commanded the Roman army in Germany, and penetrated farther into the country than any of his predecessors had done. He received, in consequence, the insignia of a triumph. He died A.D. 25. Suetonius describes him as haughty, prodigal, and cruel, and relates that in his address he commanded the censor L. Piancus to make way for him; and that in his prætorship and consulship he brought Roman knights and matrons to the circus. He exhibited at the same time wild beasts in every quarter of the city, and his gladiatorial contests were conducted with so much bloodshed, that Augustus was obliged to put some restraint upon him. (Suetonius, *Ner.,* 4.—*Tacitus,* civic. 4, 44.—*Domitius,* 1.)

**8 S**
Postumius as commander in consequence of the name. Livy (30, 45) states expressively, that Scipio Africanus was the first Roman who obtained a surname from his conquests. (Nieduh, Hist. of Rome, 1, p. 556.)—II. Sr. Postumius A. f. P. n. Albus Regiellensis, according to the Fasti, the son of the preceding (though it must be observed, that in these early times no dependence can be placed upon these genealogies), was consul B.C. 406. (Livy, 3, 2.—Dionys., 9, 60.) He was one of the three commissioners sent into Greece to collect information about the laws of that country, and was a member of the first decemvirate in 451. (Livy, 31, 33.—Dionys., 10, 2, 56.) He commanded, as legatus, the centre of the Roman army in those battles in which the Equians and Volsci were defeated in 446. (Livy, 3, 70.)—III. A. Postumius A. P. N. Albus Regiellensis, apparently son of No. I, was consul B.C. 464, and carried on war against the Equians. He was sent as ambassador to the Equians in 458, on which occasion he was insulted by their commander. (Livy, 3, 4, 5, 25.—Dionys., 9, 62, 65.)—IV. Sr. Postumius A. P. N. Albus Regiellensis is mentioned by Livy (39, 6) as consular tribune B.C. 432, and served as legatus in war in the following year. (Livy, 4, 25, 27.—V. P. Postumius A. P. N. Albus Regiellensis, whom Livy calls Marcus, was consular tribune B.C. 414, and was killed in an insurrection of the soldiers, whom he had deprived of the plunder of the Equian town of Bolsa, which he had promised them. (Livy, 4, 49, 50.)—VI. M. Postumius A. P. N. Albus Regiellensis, is mentioned by Livy (39, 23) as consular tribune in B.C. 403, but was, in reality, censor in that year with M. Furius Camillus. (Fasti Capitol.) In their censorship a fine was imposed upon all men who remained single up to old age. (Val. Max., 2, 9, § 1.—Plut., Cam., 5.—Dict. of Ant., s. v. Uzorium.)—VII. A. Postumius Albinus Regiellensis, consular tribune B.C. 397, collected, with his colleague L. Julius, an army of volunteers, since the tribunes prevented them from making a regular levy, and cut off a body of Tarquiniienses, who were returning home after plundering the Roman territory. (Livy, 5, 16.)—VIII. Sr. Postumius Albinus Regiellensis, consular tribune B.C. 394, carried on the war against the Equians; he at first suffered a defeat, but afterward conquered them completely. (Livy, 5, 26, 28.)—IX. Sr. Postumius was consul B.C. 394, and invaded, with his colleague T. Veturius Calvinus, the country of the Thunoi, and put many of the great forces which the enemy had collected, and the report that the Samnites were coming to their assistance, a dictator was appointed. (Livy, 5, 16, 17.) He was censor in 332 and magistrate equum in 327, when M. Claudius Marcellus was appointed dictator to hold the comitia (6, 17, 23). In 321, he was consul a second time with T. Veturius Calvinus, and marched against the Samnites. Cesar, the son of the dictator, and was ordered to surrender with his whole army, who were sent under the yoke. As the price of his deliverance and that of the army, he and his colleague and the other commanders swore, in the name of the Republic, to a humiliating peace. The consuls, on their return to Rome, laid down their office after appointing a dictator; and the senate, on the advice of Postumius, resolved that Nepos should be sent as a prisoner, who had been ordered to be given up to the Samnites. Postumius, with the other prisoners, accordingly went to the Samnites, but they refused to accept them. (Livy, 9, 1–10.—Appian, De Reb. Sann., 2–6.—Cic., De Off., 3, 30; Cato, 12.)—X. A. Postumius A. f. P. n. was consul B.C. 242 with Lutatius Catulus, who defeated the Carththaginians off the Ægates, and thus brought the first Punic war to an end. Albinus was kept in the city, against his will, by the Pontifex Maximus, because he was Flamencus Maritatis. (Livy, Epit., 19; 23, 13.—Eutrop., 2, 27.—Val. Max., 1, f. 2.) He was censor in 234. (Fasti Capitol.)—XI. L. Postumius A. f. P. n., appointed praetor B.C. 234, and again in 229. In his second consulship he made war upon the Ilyrians. (Eutrop., 3, 4.—Dion. Cass., Frag., 151.—Polyb., 2, 11, &c., who erroneously calls him Aulus instead of Lucius.) In 216, the third year of the second Punic war, he was made praetor, and sent into Cisalpine Gaul, and while absent was elected consul the third time for the following year, 215. But he was deprived of his command by the Senate, for he and his army were destroyed by the Boii, in the wood Litana, in Cisalpine Gaul. His head was cut off, and, after being lined with gold, was dedicated to the gods by the Boii, and used as a sacred drinking-vessel. (Livy, 22, 35; 23, 24.—Polyb., 3, 106, 118.—Cic., Tusc., 1, 37.)—XII. Sr. Postumius L. f. A. n., was praetor peregrinus in B.C. 189 (Livy, 37, 47, 50), and consul in 186. In his consulship he suppressed the worship of Bacchus in Rome, in consequence of the abominable crimes which were committed in connexion with it. (Livy, 39, 6, 11, &c.—Val. Max., 6, 3, § 7.—Plin., H. N., 33, 10.—Dict. of Ant., p. 366.) He was also augur, and died in 179, at an advanced age. (Livy, 40, 42.—Cic., Cat., 3.)—XIII. A. Postumius A. f. P. n., was curule edile B.C. 197, when he exhibited the Games, praetor 185, and consul 180. (Livy, 39, 7, 23; 40, 35.) In his consulship he conducted the war against the Ligurians (40, 41). He was censor in 174 with Q. Fulvius. Their censorship was a severe one: they expelled nine members from the senate, and degraded many of equestrian rank. They executed, however, many public works. (Livy, 41, 32; 42, 10.—Comp. Cic., Verr., 1, 41.) He was elected, in his censorship, one of the decemviri aequitatis, in the place of L. Cornelius Lentulus. (Livy, 40, 10.) Albinus was engaged in many public missions. In 175, he was sent into Northern Greece to inquire into the truth of the representations of the Dardanians and Thessalians about the Bastarnæ and Perseus. (Polyb., 26, 9.) In 171, he was sent as one of the ambassadors to Crete (Livy, 42, 35); and after the conquest of Macedon in 168, he was one of the ten commissioners appointed to settle the affairs of the country, with Quintus Paullus (Livy, 39, 14, 19). Livy not unfrequently calls him Luscu, from which it would seem that he was blind of one eye. (XIV. Sr. Postumius A. f. A. n. Albinus Paulullus, probably a brother of Nos. XIII. and XV., perhaps obtained the surname of Paullus, as being small of stature, to distinguish him more accurately from his two brothers. He was praetor in Sicily B.C. 189, and consul 174. (Livy, 39, 45; 41, 26, 43, 2.)—XV. L. Postumius aedile B.C. 172; censor B.C. 171 and 174, was praetor B.C. 180, and obtained the province of farther Spain. His command was prolonged in the following year. After conquering the Vacciæ and Lusitani, he returned to Rome in 178, and obtained a triumph on account of his victories. (Livy, 40, 35, 44, 47, 48, 50; 41, 3, 11.) He was consul in 173, with M. Popillius Lænens; and the war in Liguria and Campania against the Albinus, in 171, was first sent into Campania to separate the land of the state from that of private persons; and this business occupied him all the summer, so that he was unable to go into his province. He was the first Roman magistrate who put the allies to any expense in travelling through their territories. (Livy, 41, 33; 42, 1, 9.) The festival of the Floralia, which had been discontinued, was
restored in his consulship. (Oe., Fast., 5, 329.) In 171, he was one of the ambassadors sent to Masinissa and the Carthaginians in order to raise troops for the war against Perseus. (Liv., 42, 35.) In 169, he was the successful candidate for the censorship (43, 16). He served under Æmilius Paulus in Macedonia in 168, and commanded the second legion in the battle with Perseus (45, 41). The last time he is mentioned is in this war, when he was sent to plunder the town of the Ænii (45, 27).—XVI. A. Postumius, one of the officers in the army of Æmilius Paulus in Macedonia, B.C. 168. He was sent by Paulus to treat with Perseus; and afterward Perseus and his son Philip were restored to his care by Paulus. (Liv., 45, 4, 28.)—XVII. L. Postumius Sr. f. L. n., apparently son of No. XII. was curule edile B.C. 161, and exhibited the Ludi Megalenses, at which the Eunuch of Terence was acted. He was consul in 154, and died seven days after he had set out from Rome in order to go to his province. It was supposed that he was poisoned by his wife. (Obseq., 76.—Val. Max., 6, 8, 8.—XVIII. A. Postumius A. f..—L. f., son of No. XIII., was praetor B.C. 155 (Cic., Acad., 2, 45.—Polyb., 33, 1), and consul in 151 with L. Licinius Lucullus. And his colleague were thrown into prison by the tribunes for conducting the levies with too much severity. (Liv., Epit., 48.—Polyb., 35, 3.—Orat., 4, 21.) He was one of the ambassadors sent in 153 to make peace between Attalus and Prusias (Polyb., 33, 1). It is said by some that he accompanied Posidonius into Greece, in 146, as one of his legates. There was a statue erected to his honour on the Isthmus. (Cic. ad Att., 13, 30, 32.) Albinus was well acquainted with Greek literature, and wrote in that language a poem and a Roman history, the latter of which is mentioned by several ancient writers. Polybius (40, 6) speaks of him as a vain and lighthearted man, who disparaged his own people, and was still more devoted to the study of Greek literature. He relates a tale of himself and the elder Cato, who reproved Albinus sharply because, in the presence of his history, he begged the pardon of his readers if he should make any mistakes in writing in a foreign language; Cato reminded him that he was not compelled to write at all, but that, if he chose to write, he had no business to ask for the indulgence of his readers. This tale is also related by Polibius, and adopted by Suydas (c. a. Tit. Postr. 55). Polybius also says that Albinus imitated the worst parts of the Greek character, that he was entirely devoted to pleasure, and shirked all labour and danger. He relates that he retired to Thebes, when the battle was fought at Phocis, on the plea of indisposition, but afterward wrote an account of it to the senate as if he had been present. Cato, who引用了其他文学作品中的评论，称他为：他叫doctus homo et litteratus et disertus. (Cic., Acad. 2, 45; Brut., 21.) Macrobins (2, 16) quotes a passage from the first book of the Annals of Albinus respecting Brutus, and as he uses the words of Albinus, it has been supposed that the Greek history may have been translated into Latin. A work of Albinus, on the arrival of Zeneus in Italy, is referred to by Suetonius in the life of Brutus, and he is also the author of a work De Origine Gentis Romanae, c. 15. (Krause, Vite et Fragm. Veterum Historicorum Romanorum, p. 127, &c.)—XIX. Sr. Postumius Albinus Magnus, was consul B.C. 148, in which year a great fire happened at Rome. (Obseq., 78.) It is this Sp. Albinus of whom Cicero speaks in the Brutus (c. 25), and says that there were many orations of his.—XX. Sr. Postumius Albinus Sr. f. Sr. n. probably son of No. XII., was consul B.C. 110, and obtained the province of Numidia to carry on the war against Jugurtha. He made vigorous preparations for war, but when he reached the province, he did not adopt any active measures, but allowed himself to be deceived by the artifices of Jugurtha, who constantly promised to surrender. Many persons supposed that his inactivity was intentional, and that Jugurtha had bought him over. When Albinus departed from Africa, he left his brother Anius in command. (Vid. No. XXI.) After the defeat of the latter he returned to Numidia, but, in consequence of the disorganized state of his army, he did not prosecute the war, and handed over the army in this condition, in the following year, to the Consul Petellus. (Cic., Brut., 16, 39, 30; Lp., 4, 15.—Eutrop., 4, 26.) He was afterwards appointed by the Mamilia Lex, which was passed to punish all those who had been guilty of treasonable practices with Jugurtha. (Cic., Brut., 34.—Comp. Sall., Jug., 40.)—XXI. A. Postumius, brother of No. XX., and probably son of No. XIX., was left by his brother as pro-praetor, in command of the army in Africa, in B.C. 110. (Vid. No. XX.) He marched to besiege Carthage, but was defeated by the Carthaginians under Carthage, and was wounded; but Jugurtha, under the promise of giving him a large sum of money, induced him to lead his army into a retired place, where he was suddenly attacked by the Numidian king, and only saved his troops from total destruction by allowing them to pass under the yoke, and undertaking to leave Numidia in ten days. (Sall., Jug., 36—38.)—XXII. A. Postumius A. f. Sr. n., grandson of No. XIX., and probably son of No. XXI., was consul B.C. 99, with M. Antonius. (Plin., H. N., 8, 7.—Obseq., 106.) Gellius (4, 6) quotes the words of a senatorus consulis passed in their consulship in consequence of the spears of Mars having moved. Cicero says that he was a good speaker. (Brut., 35; post Red. ad Quir., 3.)—XXIII. A. Postumius, a person of praetorian rank, commanded the fleet, B.C. 99, in the Marse war, and was killed by his own soldiers under the plea that he meditated treachery, but, in reality, on account of his cruelty. Sulla, who was then a legate of the Consul Porcius Cato, incorporated his troops with his own; but did not punish the offenders. (Liv., Epit., 75.—Plut., Sulla, 6.)—XXIV. A. Postumius, was placed by Caesar over Sicily, B.C. 48. (Appian, B. C., 4, 48.)—XXV. D. Aemilius Postumus, a Roman who during the reign of Nero, about A.D. 63 and 64, succeeded Festus, and was guilty of almost every kind of crime in his government. He pardoned the vilest criminals for money, and shamelessly plundered the provincials. He was succeeded by Florus. (Joseph., Ant. Jud., 20, 8, § 1; Bell. Jud., 2, 14, § 1.) The Lexices Albinus mentioned below may possibly have been the same person. XXVI. Lucius, was made by Nero procurator of Mauretanias Cæsariensis, to which Galba added the province of Tingitana. After the death of Galba, A.D. 69, he espoused the side of Otho, and prepared to invade Spain. Cluvius Rufus, who commanded in Spain, being alarmed at this, sent centurions into Mauretania to induce the Mauri to revolt against Albinus. They accomplished this with much difficulty. Albinus was assassinated and murdered, with his wife. (Tacit., Hist., 2, 58, 39.)

ABERTIFS OR ABET Cuộc, IV. a physician at Rome, who lived, probably, about the beginning or middle of the first century after Christ, and who is mentioned by Pliny (H. N., 29, 5) as having gained by his practice the annual income of two hundred and fifty thousand sesterces (about £300 sterling) (about £1400). Pliny, by Pliny to be a very large sum, and may, therefore, give us some notion of the fortunes made by physicians at Rome about the beginning of the Empire.
ALCEUS ('Αλκέας), II. of Messene, the author of a number of epigrams in the Greek Anthology, from some of which his date may be easily fixed. He was contemporary with Philip III, king of Macedonia, and son of Demetrius, against whom several of his epigrams point, expressing patriotic feelings. One of these epigrams, however, gave even more offence to the Roman general, Flamininus, than to Philip, on account of the author's ascribing the victory of Cynoscephalae to the Ætolians as much as to the Romans. Philip contented himself with writing an epigram in reply to that of Alceus, in which he gave the Messenian a very broad hint of the fate he might expect if he fell into his hands. (Tzetz., Rhet., 1, 9.) This reply has singularly enough led Salmisius (De Cruce, p. 449, ap. Fabric., Biblioth. Græc., 2, p. 89) to suppose that Alceus was actually crucified. In another epigram, in praise of Flamininus, the mention of the Roman general's name, Titus, led Tzetzes (Proleg. in Lycophron) into the error of imagining the existence of an epigrammatist named Alceus under the Emperor Titus. These epigrams of Alceus which bear internal evidence of having been written between the years 319 and 196 B.C.

Of the twenty-two epigrams in the Greek Anthology which bear the name of "Alceus," two have the word "Mytileneus" added to it; but Jacobs seems to be perfectly right in taking this to be the addition of some ignorant抄ist. Others bear the name "Alceus Messenius," and some of Alceus alone. But in the last class there are several which from an internal evidence, have been written by Alceus of Messene; and, in fact, there seems no reason to doubt his being the author of the whole twenty-two.

There are mentioned, as contemporaries of Alceus, two other persons of the same name, one of them an Epicurean philosopher, who was expelled from Rome by a decree of the senate about 173 or 154 B.C. (Perizon. ad Allian. V. H., 9, 32; Attics, 12, p. 547, s.—Suidas, s. v. Ἐπίκουρος). The other is incidentally spoken of by Polybius as being accustomed to ridicule the grammarians Isocrates. (Polyb., 32, 6, B.C. 160.) It is just possible that these two persons, of whom nothing farther is known, may have been identical with each other, and with the epigrammatist. (Jacobs, Antikl. Græc., 18, p. 836—838: there is a reference to Alceus of Messene in Eusèbius, Praepar. Evang., 10, 2.—III. The son of Menander, a native of Mytilene, according to Suidas, who may, however, have confounded him in this point with the lyric poet. He is found exhibiting at Athens as a poet of the old comedy, or, rather, of that mixed comedy which formed the transition between the old and the middle. In B.C. 388, he brought forward a play entitled Paphos, in the same contest in which Aristophanes exhibited his second Plutus; but, although this title is rightly given, he obtained only the fifth place. He left ten plays, of which some fragments remain, and the following titles are known: 'Αθηναία ουρανομάτων, Γαμήλιος, Ενθύμιος, Ιερός γάμος, Καλλιατό, Κομμωταργώμα, Παλαιόστρα. Alceus, a tragic poet, mentioned by Fabricius (Biblioth. Græc., 2, 282), does not appear to be a different person from Alceus the comedian. The mistake of calling him a tragic poet arises, according to some, from the first letter of his "Comœdo-tragœdia." (The Greek Argument to the Plutus.—Suidas, sub voc.;—Polius, 10, 1.—Casaubon on Athen., 3, p. 206.—Meineke, Fragm. Comic. Græc., p. 1, 244; p. 2, 824.—Bode, Geschicht der Dramatischen Dichtkunst der Hellenen, 2, 386.)

ALCÉIMACHUS ('Αλκέιμαχος), a Greek rhetorician, was a native of Eleus in Æolis, in Asia Minor. (Quintil., 3, 1, § 10, with Spalding's note.) He was a pupil of Gorgias, and resided at Athens between the years B.C. 432 and 411. Here he gave instructions in eloquence, according to Eucdocius (p. 100), as the successor of his master, and was the last of that school of sophists, in which the only object of eloquence was to please the ear by the grace and brilliance of words. That the works of Alcimachus bore the strongest characters of this master of his school, is stated by Aristotle (Rhet., § 8), who censures his pompous diction and extravagant use of poetical epithets and phrases, and by Dionysius (De Isaæ, 19), who calls his style vulgar and inflated. He is said to have been an opponent of Ctesias, and to have declared his book "To ibos" in the dress of a "Dichtkunst" (H., 11, 85). Whether the expression means that these stories refer to real personal eminence, or whether it is merely an inference, from the fact that Alcimachus condemned the practice of writing orations for the purpose of delivering them, is uncertain.

The ancients mention several works of Alcimachus, as such a Eulogy on Death, in which he enumerated the evils of human life, and of which Lucian seems to speak with great praise (Tusc., 1, 48); a syllogistic of the same name, and an "Alcaeus" (Tzet., Rhet., 1, 13, § 5); a work on music (Suidas, s. v. Ἀλκιδαμος); and some scientific works, viz., one on rhetoric (Γραμμάτικη διαλεκτική; Plut., Demosth., 5), and another called λόγος φυσικός (Diog. Laërt., 8, 56); but all of them are now lost. Tzetzes (Chil., 11, 752) had still before him several orations of Alcimachus, but we now possess only two declamations which go under his name. 1. Ὅδοιοις εἴνας καὶ Παλαμίδου, τον οἵτινα, in which he is called to accuse Palamedes of treachery to the cause of the Greeks during the siege of Troy. 2. Περὶ σοφιτῶν, in which the author sets forth the advantages of delivering extemporaneous speeches over those which have been previously written out. These two orations, of the second of which is the better one, both in form and thought, bear scarcely any traces of the faults which Aristotle and Dionysius censure in the works of Alcimachus; their fault is rather being frigid and insipid. It has, therefore, been maintained by several critics, that these orations are not the works of Alcimachus; and, with regard to the first of them, the supposition is supported by strong probability; the second may have been written by Alcimachus, with a view to counteract the influence of Isocrates. The first edition of them is that in the collection of Greek orators published by Claudius, Vanders, 1513, fol. The best modern editions are those in Reiske's Oratores Graeci, vol. 8, p. 64, &c.; and in Bekker's Oratores Attici, vol. 7 (Oxford).

ALČIMACHUS, a painter mentioned by Pliny (H. N., 35, 11, s. 40). He is not spoken of by any other writer, and all that is known about him is, that he painted a picture of Dioxippus, a victor in the panathenaeum of Athens, called "Alcimachus, son of Alexander, the Great." (Elian, V. H., 19, 22.—Diod., 17, 100.—Athens, 6, p. 251, a.) Alcimachus, therefore, probably lived about the same time.

ALČIMÊDON (Ἀλκημέδων), I. an Arcadian hero, from whom the Arcadian plain Alcimoden derived its name. He was the father of Phillo, by whom Hercules begat a son, Εχθμαγωρα, whom Alcimodon exposed, but Hercules saved. (Pausanias, 8, 12, § 5.)

ALČIMÉNES (Ἀλκημένης), I. a son of Glauceus, who was unintentionally killed by his brother Bellerophon. According to some traditions, this brother of Bellerophon was called Deliades, or Peiren. (Apollod., 2, 3, s. 1.)—II. One of the sons of Jason and Medea. When Jason subsequently wanted to marry Glauce, his sons Alcmenes and Tisander were murdered by Medea, and were afterward buried by
Jason in the sanctuary of Juno, at Corinth. (Diod., 4, 54, 55.)—III. An Athenian comic poet, apparently a contemporary of Æschylus. One of his pieces is supposed to have been the Κολεσφόας (the Female Swimmers). His works were greatly admired by Tynnichus, a younger contemporary of Æschylus. There was a tragic writer of the same name, a native of Megara, mentioned by Suidas. (Meineke, Hist. Crit. Comiciorum Graec, p. 481. — Suid., s. v. Ἀλκίμης and Ἀλκίμα.)

Alcimus (Ἀλκίμας), I. also called Jacimus, or Joachim (Ἰαχίμος), one of the Jewish priests who espoused the Syrian cause. He was made high-priest by Antiochus Epiphanes and installed in his office by the help of a Syrian army. In consequence of his cruelties he was expelled by the Jews, and obliged to fly to Antioch, but was restored by the help of another Syrian army. He continued in his office, under the protection of the Syrians, till his death, which happened suddenly (B.c. 159), while he was pulling down the wall of the temple that divided the court of the Gentiles from that of the Israelites. (Joseph, Ant. Jud., 12, 9, 7; 1 Macab., 7, 9.)—II. A Greek rhetorician, whom Diogenes Laërtius (2, 114) calls the most distinguished of all Greek rhetoricians, flourished about B.C. 300. It is not certain whether he is the same as the Alcimus to whom Diogenes, in another passage (3, 9), ascribes a work πρὸς Ἀμβέσταν. Athenaeus in several places speaks of a Sicilian Alcimus, who appears to have been the author of a great historical work, parts of which are referred to under the names of Τάλικας and Σκελὶκας. But whether he was the same as the rhetorician Alcimus, cannot be determined. (Athenn., 10, p. 441; 12, p. 519; 7, p. 332.)—III. (Avitus) Ἀλεύθερος, the writer of seven short poems in the Latin Anthology, whom Wernsdorff has shown (Poet. Lat. Min., vol. 6, p. 26, &c.) to be the same person as Alcimus, the rhetorician in Aquitania in Gaul, who is spoken of in terms of high praise by Sismondi Apollinaris (Epiast., 8, 11; 5, 10) and Autonius (Profess. Burdigal., 2). His date is determined by Hieronymus in his Chronicon, who says that Alcimus and Delphidius taught in Aquitania in A.D. 360. His poems are superior to most of his time. They are printed by Meier in his "Anthologia Latina," ep. 254—290, and by Wernsdorff, vol. 6, p. 194, &c.

Alcinoüs (Ἀλκίνοος), II. A Platonic philosopher, who probably lived under the Caesars. Nothing is known of his personal history, but a work entitled Ἐπιτομῇ τῶν Πλάτωνος δογμάτων, containing an analysis of the Platonic philosophy, as it was set forth by late writers, has been preserved. The treatise is written rather in the manner of Aristotle than of Plato, and the author has not hesitated to introduce any of the views of other philosophers which seemed to add to the completeness of the system. Thus the parts of the syllogism (c. 6), the doctrine of the mean and of the ἐξῖς and ἐνέργεια (c. 2, 8), are attributed to Plato, as well as the division of philosophy which was common to the Peripatetics and Stoics. It was impossible from the writings of Plato to get a system consistent with the parts of this treatise, and if the temptation of later writers, who sought for system, to join Plato and Aristotle, without perceiving the inconsistency of the union, while everything which suited their purpose was fearlessly ascribed to the founder of their own sect. In the treatise of Alcinous, however, there are still traces of the spirit of Plato, however low an idea he gives of his own philosophical talents. He laid down the doctrine of an everlasting world, incidentless, in which the soul of the universe (ἡ ψυχή τοῦ κόσμου) was not created by God, but, to use the image of Alcinous, it was awakened by him as from a profound sleep, and turned towards himself, "that it might look upon intellectual things (c. 14), and receive forms and ideas from the divine mind." It was the first of a succession of intermediate beings between God and man. The idea proceeded immediately from the mind of God and were the highest object of our intellect; the "form" of matter, the type of all possible things, having a real being in themselves (c. 9). He differed from the earlier Platonists in confining the ideas to general laws: it seemed an unworthy notion that God could conceive an idea of things artificial or unnatural, or of individuals or particulars, or of anything relative. He seems to have aimed at a synthesis of Plato and Aristotle on the ideas, as he distinguished them from the "forms" or the ideas, forms of things which, he allowed, were inapplicable: a view which seems necessarily connected with the doctrine of the eternity and self-existence of matter. God, the first founder of the ideas, could not be known as he is: it is but a faint notion of him we obtain from negations and analogies: his nature is equally beyond our power of expression or conception. Below him are several series of beings (ἀριστουργοί), who superintend the production of all living things, and hold intercourse with men. The human soul passes through various transmigrations, thus connecting the series with the lower classes of being, until it is finally purified and rendered acceptable to God. It will be seen that his system was a compound of Plato and Aristotle, with some parts of other Greek philosophers and writers, and was a product of a study of the Pythagorean system. (Ritter, Geschichteder Philosophie, 4, p. 243.) Alcinous first appeared in the Latin version of Pietro Baiili, which was published at Rome, with Apuleius, 1469, fol. The Greek text was printed in the Aldine edition of Apuleius, 1521, 8vo. Another edition is that of Fell, Oxford, 1667. The best, however, is that of J. H. Fischart, Leipzig, 1753, 8vo. It was translated into French by J. J. Combes-Donnous, Paris, 1800, 8vo, and into English by Stanley, in his History of Philosophy.

Alcin (Ἀλκίς), that is, the Strong, I. a surname of Athena, under which she was worshipped in Macedonia. (Lis. 42, 51.) — II. A deity among the Naharvai, an ancient German tribe. (Taci, Germ., 49.) Grimm (Deutsche Mythol., p. 98) considers Alcis in this light. Alcis is mentioned in Homer, who calls him Axl, which, according to him, signifies a sacred grove, and is connected with the Greek ἄλκος. Another Alcis occurs in Apollodorus, 2, 1, § 5.

Alcmen (Ἀλκημῆς) V. one of the most eminent natural philosophers of antiquity, was a native of Crotona, in Magna Graecia. His father's name was Pitirhus, and he is said to have been a pupil of Pythagoras, and must, therefore, have lived in the latter half of the sixth century before Christ. (Diog. Laer., 8, 83.) Nothing more is known of the events of his life. His most celebrated anatomical discovery has been noticed in the Dict. of Ant., p. 772 a; but whether his knowledge in this branch of science was derived from the dissection of animals or of human bodies is a disputed question, which it is difficult to decide. Chalcondyles on whose authority Christ rests, merely says (Comment. in Plat., Tim., p. 368, ed. Fabr.), "qui primus exsectionem aggregati est ausus," and the word exsectio would apply equally well to either case. He is said also (Diog. Laer., 1, c.—Clemens Alexand., Strom., 1, p. 308) to have been the first person who wrote on natural philosophy (φυσικὰ φαινόμενα), and to have invented fasting (fastus), the mind of which was studied in several other medical and philosophical works, of which nothing but the titles and a few fragments have been preserved by Stobæus (Eclog., Phys.), Plutarch (De Phys., Philos. Decr.), and Galen (Hs.)
tor. Philosop.) A further account of his philosophical opinions may be found in Menage's Notes to Diogenes Laertius, 2, 83, p. 387.—Le Clerc, Hist. de la littérature de l'Antiquité, vol. 4, 2d ed., p. 501. (Brändis, Geschichte der Philosophie, vol. 1, p. 507.)—Aristotle (Metaphys., A., 5) mentions him as nearly contemporary with Pythagoras, but distinguishes between the στοιχεῖα of opposites, under which the Pythagoreans included all things, and the double principle of Alcmeon, according to Aristotle, less extended, although he does not explain the precise difference. Other doctrines of Alcmeon have been preserved to us. He said that the human soul was immortal, and partook of the divine nature, because, like the heavenly bodies, it contained in itself a principle of motion. (Arist., De Anima, 1, 2, p. 405.—Cic., De Nat. Deor., 1, 11.) The eclipse of the moon, which was also eternal, he supposed to arise from its shape, which, he said, was like a boat. All his doctrines, which have come down to us relate to physics or medicine, and seem to have arisen partly out of the speculations of the Ionian school, with which, rather than the Pythagorean, Aristotle appears to connect Alcmeon, partly from the traditionary lore of the earliest medical science. (Brändis, vol. 1, p. 508.)

Alcman (Ἀλκμαῖων), called by the Attic and later Greek writers Alkman (Ἀλκμαῖων), the chief lyric poet of the seventh century B.C., of which he is said to have been one of the Lydians. His father's name was Damos or Titarius. He was brought into Laconia as a slave, evidently when very young. His master, whose name was Agesidas, discovered his genius, and emancipated him; and he then began to distinguish himself as a lyric poet. (Suidas, s. v.—Heraclid. Pont., Polit., p. 206. —Vell. Pat., 1, 18.—Alcman, fr. 11, Wehler.—Epigrams by Alexander Bichias, Leonidas, and Antipater Thamus. J. S. Sprengel, Gesch. d. Altertums, 2, p. 175, No. 92; 7, p. 227, No. 9; 2, p. 110, No. 56; in the Anthol. Palat., 7, 709, 19, 18.) In the epigram last cited it is said that the two continents strove for the honour of his birth; and Suidas (i.e.) calls him a Laconian of Messos, which may mean, however, that he was enrolled as a citizen of Messos after his emancipation. The above statements seem to be more in accordance with the authorities than the opposite; but it is best to read Lycia or Sardis. From Sardis to Sparta as a slave, and that Alcman himself was born at Messos. It is not known to what extent he obtained the rights of citizenship.

The time at which Alcman lived is rendered somewhat doubtful by the different statements of the Greek and Armenian copies of Eusebius, and of the chronographers who followed him. On the whole, however, he is more correctly placed in the second year of the twenty-seventh Olympiad (B.C. 671). He was contemporary with Ards, king of Lydia, who reigned from 678 to 629 B.C., with Lesches, the author of the "Little Iliad," and with Terpander, during the later years of these two poets; he was older than Steichorus, and is said to have been the teacher of Arion. From these circumstances, and from the fact which we learn from himself (Fr., 29), that he lived to a great age, we may conclude, with Clinton, that he flourished from about 671 to about 631 B.C. (Clinton, Past., 1, p. 189, 191, 355.—Hermann, Antiq. Lacon., p. 76, 77.) He was, like other ancient poets, said to have been a ἀκαδημικὸς, or ἀκαδημιακός, poet, and to have learned from the ἀκαδήμας peculiarīs. (Aristot., Hist. Anim., 5, 31 or 52.—Plut., Sulla, 36.—Plin., H. N., 11, 33, § 39.)

The period during which most of Alcman's poems were composed was that which followed the conclusion of the second Messenian war. During this period of quiet, the Spartans began to cherish that taste for the spiritual enjoyments of poetry which, though felt by them long before, had never attained to a high state of cultivation while their attention was absorbed in war. In this process of improvement Alcman was immediately preceded by Terpander, an Æolian poet, who, before the year 676 B.C., had removed from Lesbos to the mainland of Greece, and had introduced the Æolian lyric into the Pelopponnesus. This new style of poetry was speedily adapted to the choral form, in which the Doric poetry had hitherto been cast, and gradually supplanted that earlier style which was nearer to the epic. In the 33d or 34th Olympiad, Terpander made his great improvements in music. (Vid. Terpander.) Hence arose the peculiar character of the poetry of his younger contemporary, Alcman, which presented the choral lyric in the highest excellence which the music of Terpander enabled it to reach. But Alcman had also an intimate acquaintance with the Pyrgian and Lydian styles of music, and he was himself the inventor of new forms of rhythm, some of which bore his name.

A large portion of Alcman's poetry was erotic. In fact, he is said by some ancient writers to have been the inventor of erotic poetry. (Athen., 13, p. 600.—Suidas, s. v.) From his poems of this class, which are marked by a freedom bordering on licentiousness, he obtained the epithets of "sweet" and "pleasant" (γλυκός, ἀρσένικός). Among these poems the Ionic metres were made use of, and the Parthenia, which form a branch of Alcman's poems, must not be confounded with the erotic. They were so called because they were composed for the purpose of being sung by choirs of virgins, and not on account of their subjects, which were very various: sometimes, indeed, erotic, but often religious. Alcman's other poems embrace hymns to the gods, Peans, Prosodia, songs adapted to different religious festivals, and the songs of the goddesses, of which the Parthenia is disputed whether he wrote any of those anapæstic war-songs, or marches, which were called ἱππαρχία; but it seems very unlikely that he should have neglected a kind of composition which had been rendered so popular by Tyrtaeus.

His metres are very various. He is said by Suidas to have been the first poet who composed any verses but dactylic hexameters. This statement is incor-
There is no trace of an epopee following the strophe and antistrophe in his poems.

The first ten years of the Auleas was the Spartan Doric, with an intermixture of the Αἰολικ. The popular idioms of Laconia appear most frequently in his more familiar poems.

The Alexandrian grammarians placed Auleman at the head of their canon of the nine lyric poets. Among the proofs of his popularity may be mentioned the tradition that his songs were sung, with those of Theocritus, in the first performance of the games at Pergamum at Sparta (B.C. 486, 450), and the ascertained fact, that they were frequently afterward used at that festival. (*Athens.,* 15, p. 678.) The few fragments which remain scarcely allow us to judge how far he deserved his reputation, but some of them display a true poetical spirit.

Auleman's poems comprised six books, the extant fragments of which are included in the editions of Neander, H. Stephens, and Fulvius Ursinus. The latest and best edition is that of Welecker, Giessen, 1815.

AUCON, II. a surgeon (πυρετον μεδικος) at Rome in the reign of Claudius, A.D. 41–54, who is said by Pliny (H. N., 23, 8) to have been banished to Gaul, and to have been fined ten millions of sesterces: H. s. centes cent. mill. (about £78,125). After his return from banishment, he is said to have gained by his practice an equal sum within a few years, which, however, seems so enormous (compare ALBUSVUS and ARBUSVUS), that there must probably be some mistake in the text. A surgeon of the same name, who is mentioned by Martial (Epigr., 11, 84) for a contemporary, may possibly be the same person.

AULCTOR (Αλεκτώρ), I. the father of Leitus, the Aulead (Ovid, *Metam.* 1, 9, § 16). Homer (II., 17, 692) calls him Alcetron.—II. a son of Anaxagoras, and father of Iphis, king of Argos. He was consulted by Polyneices as to the manner in which Amphipolis might be compelled to take part in the expedition against Thebes. (Apollod., 3, 6, § 2. —Paus., 2, 18, § 4.) Two others of the same name are mentioned in Homer. (Od., 4, 10. —Eustath. ad loc.)

ALEUADAE and ALEUAE (Ἀλευάδαι and Ἀλευαίς) Auleas is the ancientus hero of the Thesealians, or, more particularly, of the Larissian family of the Auleadae. (Pind., *Pyth.,* 10, 8, with the *Schol.* The Auleadae were the noblest and most powerful among all the families of Thessaly, whence Herodotus (7, 6) calls its members βασιλεῖς. (Comp. *Diod.,* 16, 61; 16, 14.) The first Auleas, who bore the surname of Ποδηρ, that is, the red-haired, was crowned king (here synonymous with Tagus: *vid. Dict. of Ant.* p. 915) of Thessaly, and a descendant of Hercules through Thessalus, one of the many sons of Hercules. (Suidas, s. v. Ἀλευάδας. —Ulpian ad Dem., *Olynth.,* 1. —Schol. ad Apollon. *Rhod.,* 3, 1090. —Vellei, 1, 3.) Flutarch (*De Am. Prat.,* in loc., in fact) states that he was hated by his father, on account of his ugliness and savage character. According to Aristophanes (as *Hephaest.,* 4. 2. *Taurapaqai,* the division of Thessaly into four parts, of which traces remained down to the latest times, took place in the reign of the first Auleas. Buttmann places this hero in the period between the so-called return of the Heraclids and the age of Pisistratus. But even earlier than the time of Pisistratus the family of the Auleadae appears to have been divided into two branches, the Auleadae and the Scopadae, called after Scopas, probably a son of Auleas (cf. Ovid, *Fast.* 4, 350). The Scopadae inhabited Crannon, and perhaps Pharsalos also, while the main branch, the Auleadae, remained at Larissa. The influence of the families, however, was not confined to these towns, but extended more or less over the greater part of Thessaly. They formed, in reality, a powerful aristocratic party (basileis) in opposition to the great body of the Thesealian.

The earliest historical person who probably belongs to the Auleadae is Eurylochus, who terminated the war of Cirrha about B.C. 550. (*Strabo,* 9, p. 418.—*Vid. Eurylochus.*) In the time of the poet Simonides we find a second Auleas, who was a friend of the poet. He is called a son of Echeocrates and Syris (Schol. *ad Theocrit.,* 18, 34); but, besides the suggestion of Ovid (ibid. 225) that he had a tragic end, nothing is known about him. At the time when Xerxes invaded Greece, three sons of this Auleas, Thorax, Eurylyps, and Thrasydeus, came to him as ambassadors, to request him to go on with the war, and to promise him their assistance. (*Herod.,* 7, 6.—*Vid. Thorax.*) When, after the Persian war, Leotychides was sent to Thessaly to chastise those who had acted as traitors to their country, he allowed himself to be led by the Auleadae, although he might have subdued all Thessaly. (*Herod.,* 6, 72.—*Paus.,* 3, 7, § 8.) This fact shows that the power of the Auleadae was then still as great as before. About the year B.C. 460, we find an Aulead Orestes, son of Echeocrates, who came to Athens as a fugitive, and persuaded the Athenians to exert themselves for his restoration. (*Thuc.,* 1, 112.) He had been expelled either by the Thessalians, or, more probably, by a faction of his own family, who wished to exclude him from the dignity of βασιλεῖς (i.e., probably Tagus), for such feuds among the Auleadae themselves are frequently mentioned. (*Xen.,* *Anab.,* 1, 1, § 10.)

After the end of the Peloponnesian war, another Thessalian family, the dynasts of Phere, gradually reduced those to subjection, and gained the ascendency, as far as power went, of the power of the Auleadae. As early as B.C. 375, Jason of Phere, after various struggles, succeeded in raising himself to the dignity of Tagus. (*Xen.,* *Hell.,* 2, 3, § 4.—*Diod.,* 14, 82; 15, 60.) When the dynasts of Phere became tyrannical, some of the Larissian Auleadae conspired to put an end to their rule, and for this purpose they invited Alexander, king of Macedon, the son of Amyntas, to bring about (Diod., 15, 61.) Alexander took Larissa and Crannon, but kept them to himself. Afterward, Pelopidas restored the original state of things in Thessaly; but the dynasts of Phere soon recovered their power, and the Auleadae again solicited the assistance of Macedonia against them. Philip willingly complied with the request, broke the power of the tyrants of Phere, restored the Auleadae to their dominions, and made the Auleadae his faithful friends and allies. (*Diod.,* 16, 14.) In what manner Philip used them for his purposes, and how little he spared them when it was his interest to do so, is sufficiently attested, (*Dem.,* *De Cor.,* p. 241. —*Polyben.,* 4, 2, § 11. —Ulpian, l. c.) Among the tetrarchs whom he intrusted with the administration of Thessaly, there is one (Dio, *p.* 8, 6, p. 249) who undoubtedly belonged to the Auleadae, just as the Thesealian Mideus, who is mentioned as one of the companions of Alexander the Great. (*Plut.,* *De Tranquil.,* 13. —*Comp. Strab.,* 11, p. 530.) The family now fell into insignificance, and the last certain trace of an Aulea-
ad is Thoas, a friend of Antigonus. (Plut., Demetr., 29) Whether the sculptors Aleuas, mentioned by Pliny (H. N., 34, 8), and Scopas of Paros, were in any way connected with the Aleuadæ, cannot be ascertained. See Bockh’s Commentary on Pind., Pyth., 10; Schneider on Aristotle, Polit., 5, 5, 9; and more particularly Buttmann, Von dem Geschlecht der Aleuaden, in his Mythol., 2, p. 245, &c., who has made out the following genealogical table of the Aleuadæ.

ALEUAS ΠΕΡΓΕΩΝ,

KING, OR TAGUS, OF THESSALY.

Mother Archedice.

ALEXANDER (Ἀλέξανδρος), of Teos, was, according to Aristotle, in his work upon poets (πεποίησεν), the first person who wrote dialogues in the Socratic style before the time of Plato (Athen., 11, p. 503, b, c—Diog. Laërt. 3, 48.)

Alexander, IV. ('Ἀλέξανδρος), the Paphlagonian, a celebrated impostor, who flourished about the beginning of the second century (Lucian, Alex., 6), a native of Abonoteichos on the Euxine, and the pupil of a friend of Apollonius Tyaneus. His history, which is told by Lucian with great nàvëtë, is chiefly an account of the various contrivances by which he established and maintained the credit of an oracle. Being, according to Lucian’s account, at his wit’s end for the means of life, with many natural advantages of manner and person, he determined on the following imposture. After raising the expectations of the Paphlagonians with a reported visit of the god Åsceulapius, and giving himself out, under the sanction of an oracle, as a descendant of Perseus, he gratified the expectation which he had himself raised, by finding a serpent, which he juggled out of an egg, in the foundations of the new temple of Æsceulapius. A larger serpent, which he brought with him from Pella, was disguised with a human head, until the dull Paphlagonians really believed that a new god Glycon had appeared among them, and gave oracles in the likeness of a serpent. Dark and crowded rooms, juggling tricks, and the other arts of more vulgar magicians, were the chief means used to impose on a credulous populace, which Lucian detects with as much zeal as any modern skeptic in the marvels of animal magnetism. Every one who attempted to expose the impostor was accused of being a Christian or Epicurean; and even Lucian, who amused himself with his contradictory oracles, hardly escaped the effects of his malignity. He had his spies at Rome, and busied himself with the affairs of the whole world: at the time when a pestilence was raging. Many were executed at his instigation, as the authors of this calamity. He said that the soul of Pythagoras had migrated into his body, and prophesied that he should live a hundred and fifty years, and then die from the fall of a thunderbolt: unfortunately, an ulcer in the leg put an end to his imposture in the seventieth year of his age, just as he was in the height of his glory, and had requested the emperor to have a medal struck in honour of himself and the new god. The influence he attained over the populace seems incredible; indeed, the narrative of Lucian would appear to be a mere romance, were it not confirmed by some medals of Antoninus and M. Aurelius.—VII. An Arvannahian, who had once been a friend of Philip III. of Macedonia, but forsook him, and insinuated himself so much into the favour of Antiochus the Great, that he was admitted to his most secret deliberations. He advised the king to invade Greece, holding out to him the most brilliant prospects of victory over the Romans, B.C. 192. (Liv., 35, 18.) Antiochus followed his advice. In the battle of Cynoscephalae, in which Antiochus was defeated by the Romans, Alexander was covered with wounds, and in this state he carried the news of the defeat to his king, who was staying at Thronium, on the Malac Gulf. When the king, on his retreat from Greece, had reached Cenarea in Euboea, Alexander died and was buried there, B.C. 191. (Liv., 36, 20.)—VIII. Åcerlus (Ἀλέξανδρος ὁ Ἀτρηλός), a Greek poet and grammarian, who lived in the reign of Ptolemaeus Philadelphiaus. He was the son of Satyrus and Stratoclea, and a native of Pleuron in Ætolia, but spent the greater part of his life at Alexandria, where he was reckoned one of the seven tragic poets who constituted the tragic pleiad. (Suid., s. v.—Eutoc., p. 62—Paus., 2, 25, § 7.—Schol. ad Hom. Il., 16, 233.) He had an office in the library at Alexandria, and was commissioned by the king to make a collection of all the tragedies and satyric dramas that were extant. He spent some time, together with Antagoras and Aratus, at the court of Antigonus Gonatas. (Aratus, Phainomena et Disceum, 2, p. 431, 448, &c., 446, ed. Buhl.) Notwithstanding the distinction he enjoyed as a tragic poet, he appears to have had greater merit as a writer of epic poems, elegies, epigrams,
S U P P L E M E N T

and cynædi. Among his epic poems, we possess the titles and some fragments of three pieces: the Fisherman (Ἠθέρες: Athen., 7, p. 296), Kirka or Kirka (Athen., 7, p. 283), which, however, is designated by Atheneus as doubtful, and Helena. (Bekker, Anecd., p. 96.) Of his elegies, some beautiful fragments are still extant. (Athen., there, 170, 11, p. 496; 15, p. 589.—Strab., 12, p. 556; 14, p. 681.—Parthen., Esot., 4.—Teiccis. ad Lycophr., 266.—Schol. and Eustath. ad Hl., 3, 314.) His Cynædi, or ΤΩΝΔΙΝΑ ΠΟΙΜΑΤΑ, are mentioned by Strabo (14, p. 638) and Athenæus (14, p. 620). Some anapæstic verses in praise of Euripides are preserved in Heliuss (15, 20). All the fragments of Alexander Antoninus which are found in "Antonius" are preserved (Lamberti coll. et ill. A. Capellmann, Bonn, 1829, § 2).—Comp. Welcker, Die Griech. Tragödien, p. 1263, &c.—Dünner, Die Fragm. der Epis. Poesie der Griechen, von Alexandria, dem Grossen, &c., p. 7, &c.—X. Commander of the horse in the army of Antinous Dioson during the war against Cleomenes III., of Sparta. (Polyp., 2, 66.) He fought against Philopomen, then a young man, whose prouder achievement was the negotiation of the truce after the engagement at Sellasia (2, 68). This Alexander is probably the same person as the one whom Antigonus, as the guardian of Philip, had appointed commander of Philip's body-guard, and who was calumniated by Apelles (4, 87). Subsequently he was sent by Philip as ambassador to Thebes, to persecute Megalæus (5, 28). Polybius states, that at all times he was the principal part of a most extraordinary attachment to his king (7, 12).—X. Son of Antonius the triumvir, and Cleopatra, queen of Egypt. He and his twin-sister Cleopatra were born B.C. 40. Antonius bestowed on him the titles of "Helios" and "King of Kings," and called his sister "Selene." He also destined for him, as an independent kingdom, Armenia, and such countries as might yet be conquered between the Euphrates and Indus, and wrote to the senate to have his grants confirmed; but his father was not suffered to be read in public (B.C. 34). After the conquest of Armenia, Antonius betrothed Jotape, the daughter of the Median king Artavasedes, to his son Alexander. When Octavianus made himself master of Alexandria, he spared Alexander, but took him and his sister to Rome, to adorn his triumph. They were generously received by Octavia, the wife of Antonius, who educated Alexander with the utmost care, overrode all prejudices of Carvîna, 49, 32, 40, 41, 44; 50, 25; 51, 21.—Plutarch, Antonius, 36, 54, 87.—Livy, Epit., 131, 132.)—XI. Brother of Molo. On the accession of Antiochus III., afterward called the Great, in B.C. 224, he intrusted Alexander with the government of the satrapy of Persis, and Molo received Media. Antiochus was then only fifteen years of age; and this circumstance, together with the fact that Hermeias, a base flatterer, and the arch-seducer, whom every one had to fear, was all-powerful at his court, induced the two brothers to form the plan of causing the upper satrapies of the kingdom to revolt. It was the secret wish of Hermeias to see the king involved in as many difficulties as possible, and it was on his advice that the war against the rebels was intrusted to men without courage and without ability. Molo himself undertook the command. Molo was deserted by his troops, and avoided falling into the hands of the king, put an end to his own life. All the leaders of the rebellion followed his example; and one of them, who escaped to Persis, killed Molo's mother and children, persuaded Alexander to put an end to his life, and at last killed himself upon the bodies of his friends. (Polyp., 5, 40, 41, 45, 54.)—XIV. Aphiropodios. Besides the works universally attributed to Alexander Aphiropodios, there are extant two others, of which the author is not certainly known, but which are by some persons supposed to belong to him, and which commonly go under his name. The first of these is entitled Ἰστρικά Ἀρχοντάματα ἐν Ὀλυμπία, "Questions Medicæ et Problemati Physicæ," which there are strong reasons for believing to be the work of an enemy. In the first place, it is not mentioned in the list of works given by the Arabic author quoted by Casiri (Biblioth. Arabico-HISP. Eusevial, vol. 1, p. 243); secondly, it appears to have been written by a person who belonged to the medical profession (2, prof. et § 11), which was not the case with Alexander Aphiropodios; thirdly, the writer refers (1, 87) to works entitled "Aphiropodios of Olbia," Omastia, &c., "Ἀντίκειναι τῶν Πυθαγορίων Ιστορίας," "Allegorici Historiarum Credibilium de Dii Fabricatum," which we do not find mentioned among Alexander's works; fourthly, he more than once speaks of the soul as immortal (3, prof. et § 63, 67), which doctrine Alexander Aphiropodios denied; and, fifthly, the style and language of the work seem to belong to a later period. Several recent critics suppose it to belong to Alexander Trallianus, but the same authorities, though they believe that a Christian writer would have composed the mythological work mentioned above. It consists of two books, and contains several interesting medical observations, along with much that is frivolous and trifling. It was first published in a Latin translation by George Valla, Veneti, 1485, fol. The Greek text is to be found in the Aldine edition of Chrétien de Tarentelle, Veneti, fol., 1484, and in that by Sylburgius, Francor., 1585, 8vo; it was published with a Latin translation by J. Davion, Paris, 1540, 1541, 16mo; and it is inserted in the first volume of Ideler's Physici et Medicæ Graecæ Minores, Berol., 1841, 8vo. The other work is a short treatise, Papyri Heretici, De Pæriabus, which is addressed to a medical pupil whom the author offers to instruct in any other branch of medicine; it also is omitted in the Arabic list of Alexander's works mentioned above. For these reasons it does not seem likely to be the work of Alexander Aphiropodios, while the whole of the twelfth book of the great medical work of Alexander Trallianus (to whom it has also been attributed) is taken up with the subject of fever, and he would hardly have written two treatises on the same disease. But the slightest allusion to the other. It may possibly belong to one of the other numerous physicians of the name of Alexander. It was first published in a Latin translation by George Valla, Veneti, 1498, fol., which was several times reprinted. The Greek text first appeared in the Cambridge Museum Criticæ, vol. 2, p. 359—389, transcribed by Demetrios Scinias, from a manuscript at Florence; it was published with Valla's translation, by Frans Passow, Vratslav., 1822, 4to, and also in Passow's Opusc. Academ. Lips., 1835, 8vo, p. 521. The Greek text alone is contained in the first volume of Ideler's Physi. et Med. Graeci Minores, Berol., 1841, 8vo.—XVII. Surnamed Isusa, the chief commander of the Étolians, was a man of considerable ability and eloquence for an Étolian. (Livy, 32, 33, 29.) Polyb., 7, 32, 14. B.C. 219, he presided at a colloquy held at Nisaea on the Malic Gulf, and spoke against Philip III., of Macedonia, saying that the king ought to be compelled to quit Greece, and to restore to the Étolians the towns which had formerly been subject to them. Philip, indignant at such a demand being made by an Étolian, answered him in a speech from his own mouth. Soon after this meeting, he was sent as ambassador of the Étolians to Rome, where, together with other Étolians, he was to treat with the senate about peace,
Alexander named poet. This work, which was compiled by Philip, was referred to in ancient literary sources. The book, which is dedicated to Alexander, was a separate work and the second book of it is quoted by Aetheneus. Diogenes Laertius (1, 28) mentions a work of Myndus the author on myths, of which he quotes the ninth book. This author being otherwise unknown, Menage proposed to read Αλέξανδρος δ' Μύνδος instead of Αλέξ.

But everything is uncertain, and the conjecture, at least, is not very probable.—XX. N u m e n i u s (Αλέξανδρος Νουμηνίος or δ' Νομηνίου, as Suidas calls him), a Greek rhetorician, who lived in the reign of Hadrian or that of the Antonines. About his life nothing is known. Two works of his are ascribed to him. The one which certainly is his work bears the title Περί τῶν γίγαντων καὶ Διάνοιας καὶ Λέξεως Χρημάτων, i.e., "De Figuris Sententiariis et Elocutionis." J. Ruinianus, in his work on the subject (p. 195, ed. Ruhkten), expressly states that Aquila Romanus, in his treatise "De Figuris Sententiariis et Elocutionis," took his materials from Alexander Numenius's work mentioned above. The name of Alexander Numenius, entitled Περί Εφρονίας. "On Show-speeches," is admitted on all hands not to be his work, but of a later grammarian of the name of Alexander; it is, to speak more correctly, made up very clumsily from two distinct ones, one of which was written by one Alexander, and the other by Menander. (Vales. ad Euseb. Hist. Eccl., p. 28.) The first edition of these two works is that of Antoninus, in his collection the Rhetores Graeci, Venice, 1568, fol., vol. 1, p. 574, &c. They are also contained in Walze's Rhetores Graeci, vol. 8. The genuine work of Alexander Numenius has also been edited, together with Minucianus and Phebusamon, by L. Normann, with a Latin translation and useful notes, Upsala, 1890, 8vo. (Vid. Ruhkten, ad Aquil. Rom., p. 139, &c.—Westermann, Gesch. der Griech. Beredsamkei, § 95, n. 13, § 104, n. 7.) XXI. Surnamed Πελοπάτων (Πελοπάτων), a Greek rhetorician of the age of the Antonines, was a son of Alexander of Seleucia, in Cilicia, and of Seleucia. (Philost., Vit. Soph., § 2, § 1, compared with Epist. Apollon. Tyana, 13, where the father of Alexander Pelopatôn is called Straton, which, however, may be a mere surname.) His father was distinguished as a pleader in the courts of justice, by which he acquired considerable property, but he died at an age when his son yet wanted the care of a father. His place, however, was supplied by his friend; especially by Apollonius of Tyana, who is said to have been in love with Seleucia on account of her extraordinary beauty, in which she was equalled by his son. His education was intrusted, at first, to Phavorinus, and afterward to Dionysus. He spent the property which his father had left him upon pleasures, but, says Philostratus, not contemptible pleasures. When he had attained the age of manhood, the town of Seleucia, for some treason, unknown, sent Alexander as ambassador to the Emperor Antoninus Pius, who is said to have ridiculed the young man for the extravagant care he bestowed on his outward appearance. He spent the greater part of his life away from his native place, at Antioch, Rome, Tarsus, and travelled through all Egypt, as far as the country of the Τυρίων (Ethiopias). It seems to have been during the reign of Dioscorus that he was appointed Greek secretary to the Emperor M. Antoninus, who was carrying on a war in Pannonia, about A.D. 174. On his journey to the emperor he made a short stay at Athens, where he met the celebrated rhetorician Herodes Atticus. He had a rhetorical contest with him, in which he not only conquered his famous adversary,
but gained his esteem and admiration to such a degree, that Herodas honoured him with a munificent present. One Corinthian, however, of the name of Sockets, when asked what he thought of Alexander, expressed his disappointment by saying that he had found "the clay (Iēylos), but not Plato." This saying is a pun on the surname of Pelopton. The place and time of his death are not known. Philostратius gives the various statements which he found about these points. Alexander was one of the greatest rhetoricians of his age, and he is especially praised for the sublimity of his style and the boldness of his thoughts; but he is not known to have written anything. An account of his life is given by Philostратius (Vit. Soph., 2, 5), who has also preserved some of his sayings, and some of the subjects on which he made speeches. (Comp. Suidas, s. v. Ἀλέξανδρος Ἀγατος, in fin.—Eudoc., p. 52.)—

XXII. PHILAŁETHES (Ἀλέξανδρος Φιλάληθης), an ancient Greek physician, who is called by Octavius Horatianus (4, p. 102, d, ed. Argent., 1532), Alexander Amator Veri, and who is probably the same person who is quoted by Caelius Aurelianus (De Morb. Acut., 2, 1, p. 74) under the name of Alexander Laodicenus. He lived, probably, towards the end of the first century before Christ, as Strabo speaks of him (12, p. 589) as a contemporary; he was a pupil of Asclepiades (Octav. Horat, l. c.), succeeded Zeuxis as head of a celebrated Herophilic school of medicine, established in Phrygia between Laodicea and Carura (Strab., l. c.), and was tutor to Aristaenetus and Demosthenes Philalethes. (Galen, De Differ. Puls., 4, 4, 10, vol. 8, p. 727, 746.) He is several times mentioned by Galen, and also by Soranus (De Arte Obstetr., c. 93, p. 210), and appears to have written some medical works, which are no longer extant.—XXIII. Assumed the title of Emperor of Rome in A.D. 311; he was, according to some accounts, a Phrygian, and according to others a Pannonian. He was appointed by Maxentius governor of Africa, but discovering that Maxentius was plotting against his life, he assumed the purple, though he was of an advanced age and a timid nature. Maxentius sent some troops against him under Rufus Volusianus, who put down the insurrection without difficulty. Alexander was taken and strangled. (Zosimus, 2, 12, 14.—Aur. Vict., De Cas., 40; Epit., 40.—XXIV. Theophrastus (Τειφροσ Ἀλέξανδρος), was born at Alexandria, of Jewish parents. His father held the office of Alabarch in Alexandria, and his uncle was Philo, the well-known writer. Alexander, however, did not continue in the faith of his ancestors, and was rewarded for his apostacy by various public appointments. In the reign of Claudius he succeeded Fadius as procurator of Judaea, about A.D. 46, and was promoted to the equestrian order. He was subsequently appointed by Nero procurator of Egypt; and by his orders 50,000 Jews were slain on one occasion at Alexandria, in a tumult in the city. It was apparently during his government in Egypt that he accompanied Corbulo in his expedition into Armenia, A.D. 64; and he was, in this campaign, given as one of the hostages to secure the safety of Tirdates, when the latter visited the Roman camp. Alexander was the first Roman governor who declared in favour of Vespasian; and the day on which he administered the oath to the legions in the name of Vespasian, the Kalends of July, A.D. 69, is regarded as the beginning of that emperor's reign. Alexander afterward accompanied Titus in the war against Judaea, and was present at the taking of Jerusalem. (Joseph, Ant. Jud., 20, 4, § 2; Bell. Jud., 2, 11, § 6; 15, § 1; 18, § 7, 8; 4, 10, § 6; 4, § 3.—Tac., Ann., 15, 29; Hist. 1, 11; 2, 74, 79.—Suet., Vesp., 6.)

ALEXARCHUS (Ἀλέξαρχος), a Greek historian, who wrote a work on the history of Italy (Ἰταλία), of which Plutarch (Parallel., 7) quotes the third book. Servius (ad Æn., 3, 334) mentions an opinion of his respecting the origin of the names Epirus and Campania, which unquestionably belonged to his work on Italy. The writer of this name whom Plutarch mentions in another passage (De Is. et Os., p. 363), is probably a different person.

ALEXIAS (Ἀλεξίας), an ancient Greek physician, who was a pupil of Thrasyas of Mantinea, and lived, probably, about the middle of the fourth century before Christ. Theophrastus mentions him as having lived shortly before his time (Hist. Plant., 9, 16, § 8), and speaks highly of his abilities and acquirements.
AN

ESSAY

ON THE

MEASURES, WEIGHTS, AND MONEYS

OF THE

GREEKS AND ROMANS.
THE MEASURES, WEIGHTS, AND MONEYs OF THE GREEKS AND ROMANS.

The metrological systems of the Greeks and Romans, and the methods pursued in the determination of their standards, have been regarded with interest by those curious in antiquarian researches. While the relations of the various parts of each system have been satisfactorily ascertained, the values which have been assigned to their units, whether of length, capacity, or weight, when referred to those of modern times, exhibit considerable discrepancy. This may not excite surprise when it is remembered that these values have been deduced from observations, made with different degrees of nicety, upon models possessing conflicting claims to perfection. A learned professor of Sturgard* has reviewed the labours of his predecessors in these inquiries with masterly skill, and has imparted to his investigations a precision which entitles them to reliance. His results have been adopted, and his mode of procedure exhibited in the following pages. In conformity with his plan, and for the reason that we possess more numerous specimens of the Roman standards than of those of the Greeks, which furnish more accurate data for the estimate of both, the former will be first treated of.

§ 1. ROMAN MEASURES OF LENGTH.

The Romans, like other nations of antiquity, derived their measures of length from the different members of the human body, the unit of which was the foot. Their pes was divided both into 12 uncia and 16 digiti. The first division, by which it was recognised as the A or unit, and its parts expressed by uncia, was generally adopted. Thus, when authors make mention of pes uncialis, they understand the 1/12 of pes; thus, also, pes dodrantalis means 1/2, besessatis 3, quindecumqalis 1/2, trientali 1/3, quadrantralis 1/4, and semiuscindal in of pes. The second division, into 16 digiti, is the more natural, and was principally used by architects and land surveyors; and, though it latterly came into more general use, is seldom found in the specimens of the pes, unaccompanied by the first. Palma, the palm, or the width of the hand, is the segment of the Greeks, and was invariably received by the Romans as the fourth of pes; but St. Jerome, in his comment on Escheciel (cap. 40), has assumed it as the third fourths, by which admeasurement it nearly answers to the Greek stadiu, and the modern Italian Palm. Cubitus is sexages or 1/2 pes, and is seldom met with except when it was used in translating the Greek πῆχυ. It is sometimes improperly confounded with Uina. Uina is the Greek ólygos ("dicta ulna undi àélów, id est a brachii; proprius est spatium in quantum utrque extensitur manus."—Servius ad Virg., EcL, 3, 105.) Pes aecertiunis = 23 ped. is rendered by Boethius and Frontinus gradus or "step," a term, however, not found in any classical writer. Passus ("a passus pedibus") was a pace, equal to five pedes. Decempeda or Pessa (modern Parch) was employed in measuring roads, buildings, land, &c. Actus is the length of a furrow, or the distance a plough is sped before it turns, and corresponds to our Furlong; it equalled 120 ped. The Itinerary unit, by which the Romans assigned the length of their own roads, was milliare (mille passuum) = 5000 ped.; that by which they expressed the valuation of maritime distance, or that between places situated in Greece, was the stadium = 125 passuum = 725 ped.; and that employed in measuring the roads of the Gauls was the leuca or leuga (whence our League is derived, though more than double in value) = 1/2 milliare.

§ 2. ROMAN MEASURES OF EXTENT.

The unit of extent was Jugerum (near 4 of our acre), which was also distributed into uncia: Columella describes it as being 240 pedes in length and 120 in breadth = 28,800 pedes quadrati; and, consequently, uncia = 2400, Sicilicus = 600, Sextula = 400, and Scrupulum = 100 ped. quad.; which last is evidently a decempeda quadrata. These were used by surveyors; but those more commonly mentioned by writers on husbandry were Ovinus, Jugerum, Heredium, Centuria, and Saltus. Chima is a square whose side is 60 ped. (Columella, 5, 1.) Actus quadratus ("in quo boves aegerentur cum aratro, cum impetu justo."—Plin., 18, 3) is thus explained by Columella: "Actus quadratus undique finitur pedibus 120, et hoc duplicatum facit jugerum, et ab eo, quod erat iunctum, nomen jugeri usurpavit." (Colum., L. a.) Actus minimus or simplex was 120 ped. in length and four in breadth. Varro (R. R., 1, 10) thus describes the Hereditium, Centuria, and Saltus: "Bina Jugera, qua Romulo primum divisa diebantur vir- tim, quod heredom sequeruntur, heredium appellavant. Heredia centum centuria dicit. He porro quatuor centuriae conjunctae, ut sint in utrunque partim binas, appellatuar in agris virtima divisitis publicis saltus." Verus = 10,000 ped. quad. answers to the Greek ἁλαβον.

§ 3. ROMAN MEASURES OF CAPACITY.

1. For liquids. The standard measure of capacity was the Quadrantal or Amphora (derived from the Greek ὁλοφόρης), being a cubic vessel each of whose sides was a Roman foot; and, according to an old decree of the people preserved by Festus, it contained 80 libras (Roman pounds) of wine. Columella fre-
quently makes cadus synonymous with it, and by the Greeks it was called *kupos*, *copos*, and *pertiyos* **Traite**. The greatest liquid measure was the **Calius** or **Cullus**—20 amphora. The divisions of the amphora are easily inferred from the plebsium just mentioned, and from the following passage of Volusius Macrianus: "**Quadrantal, quod, nunc pleurique amphoram vocant, habet urbana 2, modiosi 3, semimodiosi 6, conosios 8, sextarios 48, heminasi 96, quartarios 192, cyathi 576." The divided workmanship, in like manner, was noted not, hoc est meretur, ut wintorat." Congius was the cube of half a pes; one of Vespasian's is still extant, marked with the letters P. X., which denote *pondo decem*, ten being the number of pounds it contained by law. Congii of wine or oil were given to the emperors and chief magistrates on holydays, which gifts were hence called *congrarius*, and persons frequently derived surnames from the number of congii of wine they were in the habit of drinking at a draught; hence Cicero's son was called *Biconius*, and Novellus Torquatus, a Milanese, *Tricongius*. (Plin., 14. 22.)

**Sextarius** was ⅓ of the congius—2 heminae—4 quartarii—12 cyathi; hence the sextarius, from the fact of its containing 12 cyathi, was regarded as the ae or unit of liquid measures, and its *uncia* or cyathi were denominated, according to their numbers, sextans, quadranus, &c. It may be remarked that the ancients, at their entertainments, were in the habit of drinking as freely as the modern Greeks in their feasts, their mistresses. (Martial, Epig., 9, 93; 1, 72.) There were two kinds of sextarius, the *castrensus* and *urbicus*, the former being double of the latter, or common sextarius. *Acetabulum* was half the quartarius, and was so called, in imitation of the Greeks (to whose *digsapow* it corresponded), from acetum, since it was first used for holding sauce for meat. *Ligula* or *lignula* at first simply signified a spoon, but was afterward placed in the hands of a fourth of the cyathus; Pliny and Columella make cockliner or *cockless* synonymous with it.

2. For things dry. The unit of this measure was the *modius*, which contained two *semimodii*, and was ⅔ of the amphora, as is apparent from the passage of Volusius Macrianus above quoted. The remaining measures, *sextarius*, *hemina*, &c., bear the same relation to the amphora in the dry as in the liquid measure.

§ 4. **DETERMINATION OF THE ROMAN MEASURES.**

The measures of Length, Extent, and Capacity are so intimately connected that the determination of their values will easily be deduced from that of the pes. Various measurements have been made, and various modes of investigation have been pursued, for the purpose of assigning the value of the Roman foot; which, from the impertinence of instruments, was ascertained by the scribes, to the degree of observation, and of attention paid to the degree of injury which the specimens examined may have suffered, differ considerably in their results. We shall give a brief account of most of these observations, and, as far as possible, assign to each its proper degree of credence. All that has served as a means of calculating the value of the Roman foot may be arranged under the following classes: (a) the lengths of the pes found in monuments; (b) Foot-rules; (c) Mint-rules; (d) Distances of places. (e) Congii. (f) Dimensions of ancient buildings at Rome.

(a) There remain four celebrated specimens of the Roman foot represented on tombstones, which have been respectively named the Statilian, Cossuitian, *Ebis*-, and Capponian feet. 1. The Statilian foot was discovered in the 16th century in the Vatican Gardens at Rome, on the tombstone of a certain Statilius; though in a state of good preservation, it is of clumsy workmanship, and carelessly subdivided. Greaves found it .972 feet, which measurement, however accurately it may have been determined, can now be of little use, insomuch as the present standard foot is greater than that employed by him, by an excess not easily ascertained, though it has been estimated by Raper at .993, which, applied as a correction, would give the Statilian foot .970056 ft. Azout, according to Raper, found it .96996 ft., and Revillas .96979 ft. The mean value of the Statilian foot deduced from these observations is then 11.63224 inch.—2. The Cossuitian foot was found on the tombstone of Gm. Cossuitus (probably the same with a celebrated architect mentioned by Vitruvius), and dug up about the same time with the Statilian, in the gardens of Angelo Colozzi, from whom it has taken the name of Colonian; the divisions are scarcely perceptible; Greaves found it .967 ft., which, corrected, is .965066 ft.—3. The *Ebusian* foot was discovered on the monument of M. Ebusius, in the Villa Mattai; it is but rudely divided into palms, and its mean length is 11.6483 inch.—4. The Capponian foot was found on a marble without inscription in the Via Aurelia, and presented by the Marquis Capponi to the Capitoline Museum, where it is preserved with the three others. Revillas found it 11.625 inch. The value of the pes, if considered as the mean of these four feet, is 11.623325 inch.

(b) From the foot-rules we might expect to derive a result more worthy of reliance, since they were constructed for the direct purpose of measurement, these rules being generally on the marble slabs of the profession of the individuals to whose memory they were erected. The foot-rules were bars of iron or brass, of the length of a pes. Those most celebrated are the three discovered by Patus, equal in length, of which a model, cut in marble, was placed by him in the Capitol, whence the foot has been styled the Capitoline, and has been generally considered as the true Roman foot. From the numerous measurements it has undergone, especially by physicians, a fourth of the cyathus; which value must be assumed—128.635 Par. lin., its original determination by Patus, reduced to the French standard by Wurm. Now the Paris line being (according to the mean value of the toises of Canivet and Lenoir, as given by Mr. Hassler) equal to .007401829 English feet, the Capitoline foot equalled .35258 feet. Besides the Patusian, other foot-rules remain, not, however, celebrated; their values are mostly between .967 and .977.

(c) The distances between the milestones might furnish a correct determination of the Roman foot, were it not that none are now standing within 30 miles of Rome, and, therefore, none to be much relied on as having been originally measured off with accuracy. Bianchius, however, a celebrated Italian philosopher and mathematician of the 17th century, from the distances of the milestones on the Appian road, deduced the Roman foot=190.6 Par. lin. =1.60015 inch.

(d) The measures of the public roads recorded in the Itinerary of Antoninus and in the Peutinger Table, can be of little assistance in our inquiry, since those records not only omit fractions, which must have existed, but are frequently at variance with each other. Besides; it is not known whether the distances are reckoned from the market-places or from the gates; and an error of half a mile in sixty, being equivalent to an error of .942 of a pes, no exact value of the Roman foot could be hence derived, even though the measurements of Cassini, Riccioli, and others were totally unexceptionable.

(e) In the description of the measures of capacity, it was stated that the congius, in accordance with a plebeium (the Sillian law), contained ten Roman pounds of wine or water. By the determination of the libra, which is given in section v., the congius weighed 60495.3064 grs.; now as a cubic inch of distilled water, at maximum density, weighs 252.632
The Romans made their weights of marble, iron, or brass. A few specimens of these are now extant, and have been weighed by Rome de l'Isle and Eisen- schmid, whose results vary from 4900 to 6100 grs. Others have sought the determination of the weight of the Roman pound from the relation existing between the libra and the Congius, the latter having been determined to contain 197.8 cub. inch. nearly. If we assume the weight of a cubic inch of water = 253 grs., a Congius of water would weigh 49992 grs., and the Libra would equal 4999.2 grs.; but if we suppose a cubic inch of the Roman wine, which was employed in the adjustment of the libra and Congius with regard to another, to weight 256 grs., the Libra would be 5058.5 grs.

It is then evident that, from our ignorance of the specific gravity of the ancient wine, we can arrive at no more accurate conclusion with regard to the value of the Libra from a knowledge of the exact dimensions of the Congius, than from the weight of those rough specimens just noticed. This assertion may be substantiated by mentioning the valuations given by different metrologists, who have employed either the congius or the specimen as the basis of their calculations. Bodinus makes the Libra = 5904 grs., Rome de l'Isle 4958, Auzout 5105, Eisenenschmid 5097, Pacount 5175, and Arbuthnot 5245 grs. The mode of investigation founded on the hypothesis that the ancients exercised at least a tolerable degree of nicety in standardizing their monies, has been justly recommended as the most perfect we can employ. It consists in ascertaining the value of the Libra in terms of the Libra, from certain aurei which are extant, and which were coined of the weight of a certain number of scrupula, indicated by the stamp they bear. Letronne, whose accurate and laborious experiments on the ancient coins have entitled him to implicit reliance, from the weight of 54 aurei deduced the scrupulum = 21.4 Par. grs.; hence 288 scrupula or the Libra = 6163.2 Par. grs.

If we may safely put the Libra at 6160 Par. grs., since an error of the hundredth part of a grain in the value of the scrupulum just assigned would produce one of 2.88 grs. in that of the Libra. The Libra then equals 6160 Par. grs. = 5049.53 minum-pound grs., and the remaining weights are hence easily calculated. (See Tables VIII. and IX.)

§ 6. Roman Moneys.

Festus informs us that the Romans during the reign of Romulus had not established coined money as a medium of exchange, but used for this purpose leather, painted wood, and pieces of metal, the values of which were determined by weight. That Numa caused copper to be cut into rough pieces (terra radia) of the weight of a libra, is ascertained by some authors, while others are of opinion that leather, &c., were still used in the time of Numa, and that Servius Tullius first ordered round pieces of copper to be made, of a pound weight, called asses librales, with the images of cattle (pecudes) rudely sketched on them, and that hence the term pecunia was applied to money. Copper continued to be in general circulation till A. U. C. 483, when silver was first coined at Rome, though forgeries of this coinage had been previously introduced; the coinage of gold followed 62 years after. The temple of Juno Moneta was appropriated as the general depository of standards, and the coins were issued from it, having been previously inspected by Nummularii or

* The Paris grain equals .817265 minum-pound grs., or .800072 Troughton's, since the French Kilogram equals 1855.17 Par. grs., 1543.159 minum-pound grs., or 1540.619 Troughton's. It may be remarked, however, that the minum-pound of the Libra Euphrasii, of which the minum-pound contains 7000, in assigning the values of the Greek and Roman weights, and those who wish to retain them in Troughton's grs. can effect their object by multiplying those which we have given by 1.000418. (See Mr. Haseler's Report.)
assaymasters. The entire mint was under the general superintendence of three men, appointed by the people at the Comitia Tributa, denominated Trinumiri Montecrates. The Romans counted by asses, sesterces, denarii, and aurei. The ae (originally assis, from aee, or aspundium, was at first libralis, and bore the impression of Janus genius, or bifrons, on one side; on the reverse, the reverse of denarius, and was used for fishery, and eventually, libralis; but in the first Punic war, in consequence of the scarcity of money, the republic ordered asses to be struck weighing 2 unciae, by which, as Pliny informs us, it gained 2/3 and discharged its debt; it was subsequently reduced, when Hannibal invaded Italy, to the weight of an uncia, and lastly by the Papirian law to that of a semuncia; and though this rapid diminution of its weight was required by the necessities of the commonwealth, it would eventually have been unacceptable to the Romans, because of the abundance of silver and gold. The as thus reduced was, in reference to its original weight, denominated libella, and the older coins are distinguished from it by later writers who speak of as grave. Besides the as, its subdivisions, viz., semisses, tritenses, quadrantes, sextantes, stipes unciales, semunciae, and sextulae (the smallest of the Roman coins according to Varro), and its multiples, dupondii, quadrupasses, and decasses, were coined; specimens of which remain at the present day, and are to be found in the most valuable collections of ancient coins. But those pieces less than the as which were most frequently coined, were the semissis and quadrantes, bearing the impress of a boat instead of the rostrum of a ship; the former was also named semell or quasi semillibra, the latter teruncius. The sesterces, quinarii, and denarii were silver coins, and called bigati or quadrigati, from the impression of a chariot drawn by two or four horses, which they bore on one side, and on the reverse the head of Roma with a helmet. The sesterces (or semistertius) was so called by a figure borrowed from the Greeks, and equalled 2 hemidrachm, its symbol is H. S., abbreviated from L. L. S., the initials of libra, libra, semis. The sesterctium, or 1000 sesterces, was expressed by the symbol HS; it was not a coin, but was employed by the Romans, together with the sesterces, in computing large sums of money. Their method of notation was effected by combining the symbols with their numeral characters; thus HS MC indicates 1100 sesterces; but if the number is over 1000, it is denoted by S, and milliaries 100,000 is understood; thus HS MC. means 110 millions of sesterces. When the numerals are separated by points into two or three orders, the 1st on the right hand denotes units, the 2d, thousands, the 3d, hundred thousands; thus, III. XII. DC. HS. denotes 300,000 = 12,000 = 600 = 31,260 sesterces. The following illustration may be also added. Pliny says, that seven years before the first Punic war there were in the Roman Treasure "auri pondo XVI, DCCXX, et argenti LXXV, et LXXI, LXXVI, CCC." (33; 3) that is, 16,810 pounds of gold, 22,070 pounds of silver, and 6,275,400 sesterces of ready money. The quinarius was equal to 5 asses, and marked V; by the Clodian law it was impressed with the figure of Victory, and hence called Victoriatus. The denarius, at its first institution, equalled 10 asses, and was stamped with the numeral X or X. But when the Romans were pressed by Hannibal, A. U. C. 537, the as having been made uncialed, the denarius passed for 16 asses, the quinarius for 8, and the sesterces for 4; and when the as was made semunciaed the same proportion was retained, except in the payment of the soldiers, with whom the denarius preserved its original value. The denarius was not used as a weight until the Greek physicians came to Rome, when, finding it nearly equal to their drachm, prescribed by it; it was then considered, as we are informed by Corn. Celsus, as the ⅜ of an uncia. But it gradually diminished in weight under the Cæsars (see Table XII.); and having subsequently regained its original weight, though with a considerable abatement of its purity, it continued to be the current silver money of the empire till Constantine substituted the milliarenes in its stead. Letronne having carefully weighed 1350 consular denarii, deduced the weight of the denarius=73 Par. grs. = 59.84 minims. Now its purity being 97; its value is easily calculated = 8d. 2.17 far. = 15 cts., 4.7 mills. (See Tables X. and XI.)

The golden coins of Aurei were issued A.U.C. 546, weighing 1 or more scrupula, the scrupulum of gold passing for 20 sestertii. Some few remain with the numerals XX. and XXXX., which indicate their weight, and in addition three twenties, and then the denomination of the aureus, which, when the imporium was reduced, was denominated the Solidus. Soon after, the coinage, becoming irregular, was entirely remodelled by Constantine, who coined 72 solidi out of the pound, each weighing then 4 scrupula or 70.13 grs., and made the pound of gold equal to 1000 milliarenes; so that the solidus equalled 13½ milliarenes, though it passed for 14.

The ratio of gold to silver during the republic and the twelve Cæsars is given in Tab. XII. 

§ 7. GREEK MEASURES OF LENGTH.

The unit of linear measure adopted by the Greeks was the foot (ποδί), of which the δάκτυλος, or finger's breadth, was ⅜, and the παλαιστήρ, or palm, 1. The latter was also understood by δύσια from δύσιοι "to receive," by the compound term δυστυλόδυρυ, and by δωρον, which properly signifies a gift; the application of the latter term to this measure is commonly explained by the fact, that the palm of the hand is naturally extended in receiving a gift. Στεφαθή or span, equals 13 δακτυλιον, and is defined by Hesychius to be the distance from the extremity of the thumb to that of the little finger, when the hand is opened with a view of grasping or measuring any object. The divisions of the ποδί, more rarely employed, are κόμνους, δύσια, λεγών, and ορθόδωρον; the first being 2 δάκτυλοι, and the second ½ ποδί, hence entitled by Theophrastus ευπολον. The λεγών was 10 δάκτυλοι, and the ορθόδωρον, being the length of the hand from the wrist to the extremity of the middle finger, equalled 11 δάκτυλοι. Pollux (lib. 2), from whom the word is derived, says it has been deduced from the πεψελθολογον, which was the distance from the elbow to the extremity of the metacarpal bone of the middle finger, while that reckoned to the extremity of its first phalanx was πεψελθολογον, and that πεψελθον = 20 δάκτυλοι, and that πεψελθον = 24 δάκτυλοι, was the cubit, or the distance from the elbow to the extremity of the middle finger. The πεψελθον then contained 1½ ποδί. The βημα was 2½ ποδί, and corresponded to the pes sestertii of the Romans. It was employed by the people at large as the unit of distance, whence βηματικά mean measures of
of horn; and ἰμαφορέης, from ἰμαφορέης, receiving its name from the two handles by which it was carried.

Another sand, by comparing the Roman and Greek cubic measures, we will perceive that the χόος corresponded in value to the conicus, ξιοῦς to sextarius, and κοτόλα to hemina.

Certain festivals at Athens were called χόος, because, according to Suidas, every man had a χόος of wine given him, and, as Athenæus declares, because Demophoön, king of Athens, offered a sweet-cake, and Dionysius the tyrant a crown of gold, as a prize to the first person who drank a χόος of wine.

Kotός derived its name from its cavity, and Galen mentions, that the κοτόλα and hemina were applied by the ancient physicians to the same use with the modern graduated glasses of our apothecaries, being vessels of horn, of rectangular or cylindrical shape, divided on the outside, by means of lines, into 12 parts, which they called ounces of measure (οὐργαί μετρακά), and corresponded to a certain number of ounces by weight (οὐργαί φοί), and were equal to χόος of the amphora, weighed, when filled with wine, 10 uncia, so that the gallon of Galen is involved in doubt, inasmuch as the ounce by measure was hence 1/12 of that by weight.

Tētrapro, δέβδαρα, and καλός were respectively equal to the quartarius, acetabulum, and ephah of the Romans.

The remaining measures are κόχλης, μικρόν, χήμα, and κολχίλων, concerning which we are slighting at variance.

Oleopraia makes a greater, and the other two smaller, measure of the δέβδαρα, the less 1/7 of the κοτόλα, and by Pliny (12, 25) makes the κόχλη a determinate measure.

Mικρόν or μικρόν was borrowed, as its name imports, from the shell of the sea-mouse, and was of two kinds, the less and more common being 4 κοτόλα, the greater 1/12 of the κοτόλα. χήμα, derived also from some shellfish, was divided into the greater or rustic, or κοτόλα, and the less, or that used by physicians, or κολχίλων. χήμα was equal to 4 κοτόλα.

There are also other measures of uncertain value, such as the gspanai, which inexact, and the demetria, which are still more uncertain, but all were in the time of the Romans.

2. For things dry.—The largest measure employed in the measurement of grain was Μεδίρων = 6 libræ.

its divisions were τρίτος, λέκτος, and ἵμιεκτον, and it contained 48 χολίαι; so that the χολίον equalled 1/4 of the κοτόλα. The remaining measures were the same with the liquid measures. (See Tab. XVI. and XVII.)

The unit of weight was ψρεική or drachm = 6 ὅλοι. Ὅλος equalled, according to Pollux, 8 χαλκοί, and the χάλκος, on the authority of Suidas = 7 πέπτα; though Pliny makes the ὅλον = 10, and Suidas = 8 χαλκοί. The Romans translated χάλκος σαλβίδος, and λεπτόν minuta or minuita. Though Rhemnius Fannius asserts that the Greeks used no weights less than the ὅλοι, the physicians employed some smaller, as the καλχίλων, equal to the σιλίγα of the Romans, ν. τ. κεράνων, equal to the σιλίγα of the Romans, and, τινάχιν, or σιλίγα, or grain, 1/3 σιλίγα. The multiples of the ponderal unit, or the weights greater than the ψρεική, were the μικρόν or mina = 100, and τάλαντον = 6000 ψρεική. From libra, the later Greeks derived their λίτρα, which, in imitation of the Romans, they divided into 12 ὁγγεία; the τάλαντον being, according to Livy (38, 38), 50 libræ, the libra = 76 drachm on the 3727 grs.; which result differs very little from that assigned by Wurm. Considering that a more correct value of the ψρεική might be obtained from the coins extant, he has followed the determinations of Letronne, and

Grecian measures of weight.

The unit of weight was ψρεική or drachm = 6 ὅλοι. Ὅλος equalled, according to Pollux, 8 χαλκοί, and the χάλκος, on the authority of Suidas = 7 πέπτα; though Pliny makes the ὅλον = 10, and Suidas = 8 χαλκοί. The Romans translated χάλκος σαλβίδος, and λεπτόν minuta or minuita. Though Rhemnius Fannius asserts that the Greeks used no weights less than the ὅλοι, the physicians employed some smaller, as the καλχίλων, equal to the σιλίγα of the Romans, ν. τ. κεράνων, equal to the σιλίγα of the Romans, and, τινάχιν, or σιλίγα, or grain, 1/3 σιλίγα. The multiples of the ponderal unit, or the weights greater than the ψρεική, were the μικρόν or mina = 100, and τάλαντον = 6000 ψρεική. From libra, the later Greeks derived their λίτρα, which, in imitation of the Romans, they divided into 12 ὁγγεία; the τάλαντον being, according to Livy (38, 38), 50 libræ, the libra = 76 drachm on the 3727 grs.; which result differs very little from that assigned by Wurm. Considering that a more correct value of the ψρεική might be obtained from the coins extant, he has followed the determinations of Letronne, and
and its value was the most advantageous. The \( \delta \rho \alpha \rho \gamma \nu \mu \) varied in different countries determining the \( \tau \delta \alpha \lambda \zeta \gamma \nu \) of corresponding value; that of \( \text{AEgin}a \) was called \( \tau \gamma \gamma \varepsilon \zeta \), since it equaled \( 1 \frac{1}{2} \) Attic drachmas, in contradistinction to the Attic, called \( \lambda \varepsilon \nu \tau \gamma \). The \( \tau \nu \rho \alpha \mu \rho \alpha \mu \) and \( \sigma \tau \alpha \tau \gamma \) appear to have been the coin most generally in use among the Greeks. Livy informs us, that between the years 564 and 566 A.C, there were brought to Rome by M. Fulvius 118,000, by M. Acilius 113,000, by L. A. Regillus 34,700, and by Scipio Asiaticus 22,400 \( \tau \tau \rho \alpha \mu \rho \alpha \mu \). So many specimens of them remain, that they are to be found at the present day in almost every collection. Letronne having accurately examined 500 of them, and arranged them according to the centuries in which they were struck, deduced the mean weight of the old Attic \( \delta \rho \alpha \rho \gamma \nu \mu \), coined two centuries and more B.C., was \( 89 \frac{1}{2} \) Par. grs. = 67.3349 grs.; and its purity being .97, its value is 9d. 2.86 far., or 17 cts. 5.93 mills Federal currency. The latter Attic \( \delta \rho \alpha \rho \gamma \nu \mu \) was also found=77\frac{1}{2} Par. grs.=63.826 grs.; and its value thereby determined is 9d. 0.457 far., or 16 cts. 5.22 mills. The \( \chi \nu \omicron \omega \omicron \omicron \sigma , \)= \( \sigma \tau \alpha \tau \gamma \), weighed 2, and was valued at 20 \( \delta \rho \alpha \rho \gamma \nu \mu \); golden pieces were coined of double and half its weight; and though no Attic stater remains at the present day, there have been preserved some darics and Philippi, whose purity is very remarkable, being .979. The ratio of gold and silver varied at different periods. Herodotus estimates it as 13 to 1; in the dialogue of Hipparchus, commonly ascribed to Plato, it is 12 to 1; and Lysias, the orator, assumes it as 10 to 1, which last ratio was preserved without alteration. The Mina (\( \text{Mn} \alpha \)), according to Plutarch, equalled 75 \( \delta \rho \alpha \rho \gamma \nu \mu \), till the time of Solon, who made it contain 100. The Attic talent of silver equalled 600 mina, that of \( \text{AEgin}a \), which was current at Corinth, was 100; and the Attic talent of gold was 600 minas, according to the proportion of gold and silver just premised. For the values of the different coins, see Tables XX. and XXI.
